TELEGRAPHIC COMMUNICATION WITH EUROPE.

(CORRESPONDENCE RESPECTING.)

Presented to both Houses of Parliament, by Command.

SCHEDULE.

No.	PAGE.
1. Principal Under Secretary to Under Secretary for Lands and Public Works, transmitting Despatch from Secretary of State on the above subject, with two letters from Mr. Gisborne with enclosures. 11 August, 1859	2
2. Mr. F. Gisborne to the Honorable the Chief Secretary, on same subject, with enclosures. 8 August, 1859	6
3. Commissioner for Internal Communication to Secretary for Lands and Public Works, reporting with reference to the above, and transmitting documents in connection therewith. 16 September, 1859.. .. .	8
4. Secretary to Chamber of Commerce, Sydney, to the Honorable the Chief Secretary, transmitting copy of Resolution with respect to Mr. Gisborne's proposal relative to the above subject. 23 August, 1859	37
5. Secretary to the Red Sea and India Telegraph Company to the Honorable the Colonial Secretary, placing this Government in possession of the present state of the Telegraph question as regards that Company, &c. 15 January, 1859	37
6. The Honorable the Chief Secretary to the Secretary of the Red Sea and India Telegraph Company, in reply. 13 April, 1859	38
7. Principal Under Secretary to Under Secretary for Lands and Public Works, forwarding a further Despatch from the Secretary of State for the Colonies relative to Telegraphic Communication. 20 September, 1859	39
8. Despatch referred to, dated 13 July, 1859	40

TELEGRAPHIC COMMUNICATION WITH EUROPE.

No. 1.

THE PRINCIPAL UNDER SECRETARY to UNDER SECRETARY FOR LANDS AND PUBLIC WORKS

Colonial Secretary's Office,

Sydney, 11 August, 1859.

SIR,

With reference to the printed correspondence laid before Parliament on the 30th March, 1859, respecting Telegraphic Communication between Europe and Australia, I am directed by the Colonial Secretary to transmit to you the accompanying copy of a despatch from the Secretary of State on this subject, together with two letters from Mr. Gisborne, dated the 6th of July, and one of the 8th instant, and to request that you will suggest to the Secretary for Lands and Public Works that a report should be obtained from Captain Martindale, on the proposals contained in Mr. Gisborne's communication.

I have &c.,

W. ELYARD.

THE UNDER SECRETARY

FOR LANDS AND PUBLIC WORKS.

[Enclosure 1 in No. 1.]

Melbourne, 6 July, 1859.

Sir,

I have written this day to Sir Wm. Denison, enclosing various documents which explain the actual position of the Australian Telegraph, to execute which I am come out to make a proposal.

I wish to add, that as the plan can only be carried out by the joint co-operation of all the Australian Colonies, it is of vital importance that the several Governments should communicate upon the subject at the earliest opportunity.

Being only this day arrived from England, I am ignorant of the most effectual mode to bring about such a mutual understanding, but I trust that the importance of the subject, and the maturity to which the question has been brought by the construction now in progress of the Indian Telegraph, and of the Dutch line between Singapore and Java, and also that the promoters are prepared to carry out the Australian line in two years, will recommend the matter to your serious attention, and cause you to take active steps for a proper consideration of the subject by all parties interested.

I hope to be in Sydney in a few weeks. I beg to enclose a map shewing the course of the proposed Telegraph.

I have, &c.,

F. GISBORNE.

The Honorable Chas. Cowper,
Chief Secretary.

[Enclosure 2 in No. 1.]

Melbourne, 6 July, 1859.

Sir,

I have the honor to enclose a letter of introduction given me by Sir E. B. Lytton to you; also, a copy of a document dated the 19th March last, containing the arrangement I have made with the Netherland Government, on behalf of the promoters of the Australian Telegraph, for the construction, by that Government, of a sub-marine line from Singapore to Batavia this year, and other matters also set out in it; I also enclose the conditions under which Her Majesty's Government granted the Netherland Government permission to land their cable, and to establish a station at Singapore for the purpose of working the line; also, a map shewing the course of the proposed Australian Telegraph, and an extract out of the prospectus of the Red Sea and India Telegraph Company. I send a sample of the Red Sea Cable.

I am come out on behalf of the promoters of the Australian Telegraph to make a proposal to the several Colonial Governments to complete the link of Telegraphic Communication between England and Australia, which will still be wanting when the lines now in course of construction by Her Majesty's and the Netherland Governments are completed.

The Indian line is now laid to Aden, and the remaining portion to Kurrachee is manufactured, and will be laid next December. From Kurrachee there exist land lines as far as Rangoon, and the Indian Government has bound itself to complete the Telegraph to Singapore.

The Dutch cable from Singapore to Batavia is manufactured, and will be laid next October. From Batavia there exists a land line to Banjouwangi (E. Java), so that my mission

mission is to induce the Australian Governments to extend the Dutch lines from E. Java to Moreton Bay as a sub-marine line, and thence to Sydney by land.

An examination of the Admiralty charts will shew that the sub-marine cable will, throughout its course, follow a chain of islands or the Australian coast, in very shallow seas, whence it can be easily picked up for repairs, and where intermediate stations can be multiplied at pleasure, and will, everywhere, lie on a soft bed of sand or mud.

The promoters propose that £800,000 be raised for the sub-marine line between E. Java and Moreton Bay—this sum includes a sufficient reserve fund—and that the several Colonies contribute towards it in the same proportions as they now contribute towards their moiety of the postal subsidy.

This basis would leave New South Wales, as I am informed, to contribute 22 $\frac{2}{3}$ per cent. of the capital.

This is, of course, merely a suggestion, but it proceeds upon the supposition that the number of messages sent and received will be in analogy to the number of letters sent and received.

The class of cable on which the estimates have been founded, and the prices *mutatis mutandis*, are the same as have been approved of in the case of the India Telegraph by Her Majesty's and Indian Governments.

The Australian line will be completed in two years at farthest, and will be laid at the risk of the contractors.

Whether the line shall be held and worked by the several Colonial Governments as their joint property, or whether a private company shall hold and work it, are points which the promoters desire to leave entirely to the decision of the Colonies.

If the line is to belong to the Colonial Governments, the necessary capital will have to be raised either out of surplus revenue or as a public debt by means of bonds.

If a company is to be formed a guarantee of 6 per cent. on the capital must be given.

In either case there will be a liability to be apportioned among the Colonies.

I have as yet seen none of the Colonial authorities, having only arrived to-day from England, and am ignorant of their views, but I will ask you to communicate upon the subject with the other Governors.

I hope in a few weeks to reach Sydney.

His Excellency Governor
Sir W. Denison, K.C.B.

I have, &c.,
F. GISBORNE.

[Enclosure 3 in No. 1.]

Downing-street,
2 May, 1859.

Sir,

The bearer of this Despatch is Mr. F. Gisborne, a brother of the gentleman whose plan for effecting a Telegraphic communication by way of India, between this country and Australia, was announced to you in my predecessor's circular of the 29th May, and referred to in my own of the 27th July last.

Mr. Gisborne has been represented to me as a gentleman of character and intelligence, and of great experience in all matters of the above description, and I have willingly consented to give him the introduction he has asked for; but I must leave him to explain for himself the object he has in view, for although I consider that the execution of such a scheme would confer the greatest benefit on the Australian Colonies and the Empire, I cannot undertake to express an opinion on the merits of particular plans for accomplishing the object.

I take this opportunity of calling your attention, in connexion with this subject, to two principles which, after considerable recent discussion, have been at length acquiesced in, and adopted generally, and on which Her Majesty's Government are prepared to act in cases of a character similar to the present,—first to grant no exclusive privileges, and secondly to provide that any guarantees of interest should only take effect after the lines are in working order, and for so long only as they continue to remain in that condition.

I have, &c.,
GARNARVON,
(In the absence of Sir E. B. Lytton.)

Governor Sir W. Denison, K.C.B.

[Enclosure 4 in No. 1.]

Conditions on which the British Government granted permission to the Netherland Government to land a Submarine Telegraphic Cable, and to establish and administer a Station at Singapore.

1st Condition.—That the Netherland Government will not grant any monopoly tending to prevent the establishment at any future time of new telegraphic lines between its Indian Possessions and Australia on the one hand and Singapore on the other, but they may exercise their discretion in admitting the principle of competition.

Protection may however be granted to the promoters of any Australian line during a reasonable period of construction.

As regards the Telegraphic Communication between the Netherland Indian Possessions and Singapore, the Netherland Government is not bound to admit the competition of any other

Communicated
to me by H. E. M.
Rochussen, Min-
ister of the Dutch
Colonies, on the
24th March, '59.
F. G.

other line with that in their own hands except in the case provided for in the clause marked *b* of the 5th Condition.

2nd Condition.—That the Telegraph in question shall always be available for the use of the British Government and public, and be considered as a component part of the line between Great Britain and Australia.

3rd Condition.—That the British Government shall be placed on the same footing as the Dutch Government as regards priority of Messages.

4th Condition.—That the Messages of the British Government may be sent in cypher, and shall not be subject to examination.

5th Condition.—That in case of the Government cable between Singapore and Batavia should at any time be proved inadequate to meet the requirements of the public, the Netherland Government will, at their option, (a) lay down one or more additional cables, or (b) grant a concession for laying such additional cable or cables either to the British Government or to a private company.

The Netherland Government shall always provide the requisite number of land wires between Batavia and the points where the Australian cables are landed.

6th Condition.—That the employment of British Agents shall be allowed at all stations corresponding to points of junction of a submarine cable with a land line on the direct route between the British Possessions and Australia.

7th Condition.—That the tariff for through messages shall be adjusted in connection with Her Majesty's Government, and shall not be fixed or altered without their previous consent.

Her Majesty's Government will admit the principle of reciprocity in the application of these conditions to that portion of the Telegraphic Line of Communication with Her Majesty's Dominions, which is the hands of Her Majesty's Government.

[Enclosure 5 in No. 1.]

EXTRACT out of Prospectus of Red Sea and India Telegraph Company.

Abstract of the terms agreed with the Lords Commissioners of Her Majesty's Treasury.

The Red Sea and Indian Telegraph Company to contract with the Lords Commissioners of Her Majesty's Treasury for the construction of a line of Telegraph from Alexandria to Kurrachee, by the Red Sea and Aden, on the following terms:—

1. The immediate operation is to be limited to Aden.
2. A capital to be raised not exceeding £800,000, and 5 per cent. upon the whole amount of capital subscribed to be paid up forthwith.
3. The Treasury to guarantee a rate of interest on the amount of capital paid up from time to time of $4\frac{1}{2}$ per cent. per annum, payable half-yearly, for the term of fifty years certain.
4. The portion of the line between Alexandria and Aden to be immediately commenced, through the agency of contractors of the largest experience in Telegraphic operations, who are to lay the line, and transfer it to the Company in an efficient state, on their own responsibility.
5. The Company to work the line, and to keep proper accounts.
6. The appropriation of the half-yearly receipts to be as follows:—
 - 1st. To defray the working expenses.
 - 2nd. The surplus receipts above the working expenses to be applied in relief of the Government guarantee.
 - 3rd. If the surplus receipts should exceed the guarantee, one-third to repay any advance of interest made by Government, one-third to be applied towards forming a reserve fund not exceeding £800,000, and the remainder to increase the dividend of the shareholders up to 10 per cent per annum.
 - 4th. If there should be no debt for Government advances, and no deficiency in the reserve fund of £800,000, the whole profits to be applied to make up a dividend at the rate of 10 per cent per annum.
 - 5th. All surplus and unappropriated profits beyond 10 per cent per annum, to be applied either in reduction of the tariff, the creation of a fund to redeem the guarantee, or otherwise, at the discretion of the Government.
7. The reserve fund and surplus, or unemployed capital, to be applicable to the maintenance or restoration of the cable, and to make good any deficiency in the receipts to cover the working expenses, should such a contingency arise, so that the Government guarantee of $4\frac{1}{2}$ per cent. shall be the minimum rate of dividend.
8. All Government messages subject to the terms of the concession from the Turkish Government, are to have priority over private messages, but will be paid for at the same rate.
9. The Lords Commissioners to appoint two ex officio Directors, without whose sanction and concurrence no contracts or other proceedings of the Company will be valid.
10. In case of default by the Company in completing or re-instating the line, or working it efficiently, the Directors of the Company to be required to give up the line to the Lords Commissioners of the Treasury, on the latter paying off the capital paid up, with interest at $4\frac{1}{2}$ per cent. per annum from the date of the last dividend.
11. The powers to give effect to the arrangement are to be obtained through an Act of Parliament, to be applied for with the sanction of Her Majesty's Government.

[Enclosure

[*E. closure 6 in No. 1.*]*La Haye, le 19 Mars, 1859.*

Monsieur,

J'ai l'honneur de porter à votre connaissance que sa Majesté le Roi m'autorise à accepter la proposition que vous avez faite au Gouvernement de sa Majesté, au nom de votre frère le Sieur Lionel Gisborne, tendant à annuler la concession qui lui a été accordée sous date du 16 Janvier, 1858, pour l'établissement, le service et l'exploitation d'une ligne sous-marine et de Stations Télégraphiques dans les possessions du Royaume des Pays—bas aux Indes orientales, reliant les lignes télégraphiques des possessions Anglaises aux dites Indes et celles du continent de L'Australie.

Quant aux trois conditions qui servent de base à la dite proposition, je m'empresse de vous faire part :—

1. Que je viens de signer un contrat entre le Gouvernement de sa Majesté le Roi et Messieurs Newall et Cie., pour la pose d'un télégraphe sous-marin entre Batavia et Singapore, dans le cours de l'année 1859.
2. Que le Gouvernement de sa Majesté le Roi autorise les entrepreneurs du télégraphe Australien qui sont ou seront représentés par vous, d'établir et d'administrer une station à Coupang (Timor), et de rattacher leur fils télégraphiques, venant de l'Australie, aux lignes télégraphiques du Gouvernement des Indes Néerlandaises à Banjouwangi (côte orientale de Java), et que le dit Gouvernement ajoutera un fil à la ligne existante de Batavia à Banjouwangi, aussitôt que ce dernier lieu sera relié à l'Australie, pour la transmission des dépêches allant à ou venant de l'Australie; le Gouvernement de sa Majesté le Roi se réserve la faculté d'employer ses propres agents pour la transmission des dépêches Néerlandaises à la station de Coupang, et à trois autres stations sur la ligne qui unira les possessions Néerlandaises avec l'Australie.
3. Que les bases pour la transmission des dépêches privées allant à ou venant de l'Australie sur les lignes du Gouvernement de sa Majesté le Roi entre Singapore et Banjouwangi sont acceptées par le Gouvernement de sa Majesté le Roi comme suit :—

1.

Les dépêches privées allant à ou venant de l'Australie, pourront être transmises sur les lignes télégraphiques Néerlandaises entre Singapore et Banjouwangi en chiffres ou autres signes aussi bien, que de la manière ordinaire.

2.

Les dites dépêches ne seront examinées que pour le contrôle du tarif.

3.

Les employés de la Compagnie à former pour l'établissement du télégraphe Australien, nécessaires pour la transmission des dites dépêches aux stations de Singapore, de Batavia, et de Banjouwangi, seront agréés par le Gouverneur Général des Indes Néerlandaises, sur la proposition d'un agent de la dite compagnie.

4.

Le tarif des dites dépêches sera réglé entre les Gouvernements Britannique et Néerlandais, de commun accord avec la compagnie à former.

5.

On observera de part et d'autre parfaite égalité quant à l'ordre de l'expédition ou la transmission des dépêches privées.

6.

Les dépêches officielles et privées Néerlandaises seront sur un pied égal quant au tarif sur les lignes qui uniront l'Australie aux possessions Néerlandaises, avec les dépêches officielles et privées Britanniques.

Le Gouvernement de sa Majesté le Roi sera libre de tout engagement envers les entrepreneurs du télégraphe Australien représentés par vous si dans le terme de quatre ans, à partir de ce jour, ils n'auront pas réuni les possessions Néerlandaises dans l'Inde avec l'Australie; mais pendant ce terme il ne traitera qu'avec eux.

Dans le cas que les Gouvernements de l'Australie préféreront de tenir dans leurs mains la pose et l'administration des lignes télégraphiques qui uniront l'Australie avec l'Inde Néerlandaise, ils seront admis à remplacer les entrepreneurs ou la compagnie privée sous tous les rapports.

Le Ministre d'Etat, Ministre de Colonies.
ROCHUSSEN.

A Monsieur Francis Gisborne,
Hôtel Paulez.

[*Translation from the French.*]

The Hague,
19 March, 1859.

Sir,

I have the honor to inform you that His Majesty the King authorises me to accept the proposition which you have made to His Majesty's Government in the name of your brother, Mr. Lionel Gisborne, tending to cancel the concession which was granted to him

him at the date of the 16th January, 1858, for the establishment, the service, and the working of a submarine line, and of telegraph stations, in the Possessions of the Netherland Kingdom, in the East Indies, connecting the telegraph lines of the British Possessions in the said Indies with the Continent of Australia.

As regards the three conditions which form the bases of the above proposition, I hasten to inform you:—

- 1st. That I have just signed a Contract between the Government of His Majesty the King and Messrs. Newall & Co., for the laying of a submarine cable between Batavia and Singapore, in the course of the year 1859.
- 2nd. That the Government of His Majesty the King authorises the promoters of the Australian Telegraph who are or shall be represented by you to establish and administer a station at Coupang, (Timor,) and to connect their telegraph wires arriving from Australia to the telegraph wires of the Government of the Netherland Indies, at Banjouwangi, (east coast of Java,) and that the said Government will add a wire to the existing line between Batavia and Banjouwangi, so soon as the latter place shall be connected with Australia for the transmission of messages to or from Australia, the Government of His Majesty the King reserves to itself the power to employ its own Agents for the transmission of Netherland messages at the station of Coupang, and at three other stations on the line, which shall unite the Netherland Possessions with Australia.
- 3rd. That the basis for the transmission of private messages to and from Australia, over the lines of the Government of His Majesty the King, between Singapore and Banjouwangi, are accepted by the Government of His Majesty the King as follows:—
 1. Private messages to and from Australia may be transmitted over the Netherland telegraph lines between Singapore and Banjouwangi in cypher or other symbols, as well as by the ordinary method.
 2. The said messages are only to be examined in order to determine the tariff.
 3. The Agents of the Company to be formed for the establishment of the Australian Telegraph necessary for the transmission of the said messages at the stations of Singapore, Batavia, and Banjouwangi, are to be approved of by the Governor General of the Netherland Indies on the proposition of an Agent of the said Company.
 4. The tariff of the said messages shall be regulated by the British and Netherland Governments in conjunction with the Company to be formed.
 5. Perfect equality shall be observed on the one side, and on the other as regards the order of expedition or the transmission of private messages.
 6. Netherland official and private messages shall be on an equal footing as regards tariff on the lines which shall unite Australia to the Netherland Possessions with British official and private messages.

The Government of His Majesty the King is to become freed from every engagement towards the promoters of the Australian Telegraph represented by you if within the period of four years from this day they have not connected the Netherland Possessions in India with Australia, but during that period it will treat with none but them.

In case the Governments of Australia shall prefer to retain in their own hands the laying and administration of the telegraph lines which shall unite Australia with Netherland India, they will be admitted to replace the promoters or the private Company in every respect.

The Minister of State, Minister of the Colonies,

Monsieur Francis Gisborne,
Hotel Paulez.

ROCHUSSEN.

No. 2.

MR. F. GISBORNE to THE HONORABLE THE CHIEF SECRETARY.

Sydney, 8 August, 1859.

SIR,

Having come from England, as I had the honor of stating to you this morning, on behalf of the promoters of the Australian Telegraph, to ask the different Colonies to join in getting constructed a Submarine Telegraph Line from the east end of Java to Moreton Bay, I beg to inclose for your information, in copy, a letter addressed to me by Lord Stanley on the 7th of April last; also a letter from Dr. Evans, the Postmaster General of the Victorian Government, to me, dated the 3rd instant.

I will here repeat, shortly, that the estimated cost of the proposed line is £720,000, and the proposed capital £800,000; that the promoters are prepared to form a company to carry out the line on receiving from the several Colonies a 6 per cent. guarantee of interest on the outlay for fifty years, on the basis of the 4½ per cent. guarantee of Her Majesty's Government to the Red Sea and Indian Line; that they suggest that the basis of the postal subsidy be adopted in apportioning the liability of each Colony, so that the contribution of

New

New South Wales to the guarantee will be in the proportion of 22 per cent, or £9,504 yearly on the estimated cost. As the line will take 18 months in constructing, the interest will have to be paid during that period on the amount of capital from time to time paid up; but after the line is opened, the difference only, if any, between the receipts of the line and the amount of guaranteed interest, will have to be provided for. This question would be much simplified were this Colony and Victoria severally to guarantee the whole amount to the Company, and then to obtain from the other Colonies their respective contributions in aid of such guarantee. The east end of Java will be in telegraphic communication with London by the end of this year, except as regards the section between Singapore and Pegue, which, however, the Indian Government are taking steps to execute. Some persons, both in South Australia, Victoria, and here, desire to make the through communication with England depend in part on a land line in some direction across Central Australia, either to Cambridge Gulf or to some point on Gulf Carpentaria. As this will affect the amount of the Company's capital, by shortening the sub-marine portion of the line, a decision will have to be obtained upon this point from the several Colonies should it be seriously urged.

As this is a national question, requiring the common agreement and action of all the Colonies upon several matters, and a work which will produce equal advantages to all, as regards through communication with England, I hope, Sir, that your Government will undertake the task of obtaining such a common agreement and action, and will propose to Parliament that New South Wales shall bear its fair proportion of the burden.

I have, &c.,

F. GISBORNE.

THE HONORABLE

C. COWPER, M.P.,

Colonial Secretary.

[Enclosure 1 in No. 2.]

Government House, Hobart Town,
July 13, 1859.

Sir Henry Young acknowledges the receipt, yesterday, of Mr. Gisborne's letter of the 6th July, from Melbourne, and, having laid before his Executive Council the proposals for completing the Electric Telegraph through Australia, he is enabled to say that when Mr. Gisborne visits Hobart Town to discuss the subject further, there will be a disposition on the part of the local Government of Tasmania, to enter into consideration of the proportionate interest which this Island should take in the project relatively to that which may then be ascertained to be taken in it by the Governments on the main land of Australia.

F. Gisborne, Esq.,
Sydney.

[Enclosure 2 in No. 2.]

General Post Office,
Melbourne, 3 August, 1859.

Sir,

I am directed to inform you, with reference to the correspondence that has taken place on the subject of Telegraphic Communication between Europe, the East, and Australia, that the Postmaster General has brought your proposal under the notice of his colleagues, who are fully impressed with the importance of the subject, and aware of the great advantages that would arise were an Electric Telegraph Line to be established between Europe, India, and the Australian Colonies.

I am also directed by Dr. Evans to state, that although the Government cannot be pledged to recommend any particular scheme, the whole subject will be submitted, as early as possible, for the consideration of the Legislature.

I have, &c.,

WILLIAM TURNER.

[Enclosure 3 in No. 2.]

India Office,
7 April, 1859.

Sir,

The Secretary of State for India, in Council, has had under consideration your letter, dated the 30th ultimo, representing the measures which have been taken, and which are in contemplation, for laying down a Telegraphic Cable between Singapore and Australia, and urging the Government of India to construct the only remaining section that will be required to complete the Telegraphic Communication between this country and Australia, viz.:—from Pegue to Singapore, and I am instructed, in reply, to inform you, that Lord Stanley

Stanley is now in communication with the Lords Commissioners of Her Majesty's Treasury upon the measures which should be taken for constructing the line in question, and that a further letter shall be addressed to you when a decision upon the subject has been arrived at.

I have, &c.,
J. COSMO. MELVILL.

No. 3.

REPORT, to the Honorable the Secretary for Lands and Public Works, by Captain Martindale, R.E., Commissioner for Internal Communication, on the proposition submitted by Mr. Francis Gisborne, for the establishment of Telegraphic Communication between Europe and Australia.

*Department of Internal Communication,
16 September, 1859.*

SIR,

The advantages to be derived from the possession of the fullest and most rapid means of Communication between Europe, the East, and Australia, whether in times of peace or war are too apparent to require enumeration, and their importance is enhanced by the present disturbed state of Europe and the probabilities of the future. It is natural, therefore, that any project for the establishment of through Telegraphic Communication should be welcomed with general interest and satisfaction, and excite an earnest feeling for its success.

The proposition to effect this object now submitted by Mr. Gisborne, on behalf of the promoters of the Australian Telegraph, is as follows:—

“A submarine line to be laid from Moreton Bay to Banjoewangi (E. Java), the estimated cost being £720,000, and the Capital to be raised not to exceed £800,000 (a).

“The line to be constructed, held, and worked either by the several Colonial Governments, as their joint property, or by a Company to be formed (b).”

In the former case the different Governments would, of course, by their accredited agent or agents, make their own arrangements.

In the latter case Mr. Gisborne proposes that a subsidy should be given to the Company by each Government, or a guarantee of 6 per cent. interest on the outlay for 50 years on the basis of the 4½ per cent. guarantee (c) of Her Majesty's Government to the Red Sea and India Telegraph Company, the Shareholders to receive full interest on the amount of capital from time to time paid up during the period of the line being in course of construction, which is estimated at eighteen months, and subsequently the difference between the net receipts and 6 per cent.; the basis of the postal subsidy to be adopted in apportioning the liability of each Colony.

For the construction and working of the line, I should prefer the agency of a Company to the joint action of the several Colonial Governments.

No great force appears to exist in the objection that a Company is not yet formed; it may be assumed that such a guarantee can be given as would ensure the formation of a suitable Company.

I should prefer also to guarantee a fixed rate of interest, rather than to give a subsidy, but the proposed guarantee is such as, in my opinion, should not be assented to.

In the first place it assumes that Telegraphic Communication with the Mother Country, by way of India, would benefit Australia alone, whereas the Home Government have throughout recognized (d) that the execution of such a scheme would confer the greatest benefit on the Empire, as well as on the Australian Colonies. Whatever, therefore, be the guarantee given, I submit that the liability should be shared, at least, equally by the Imperial Government.

In

(a) Letter from Mr. Gisborne to the Honorable Charles Cowper, Esq., dated 8th August, 1859. Letter from Mr. Gisborne to His Excellency Sir W. Denison, dated 6th July, 1859.

(b) Letter of Mr. Gisborne of 6th, above referred to.

(c) Clause 6.—Schedule to Red Sea and India Telegraph Act, 1859, 22 Vic., Session, 1859.

(d) Letters from Mr. Merivale to Sir G. Clerk, dated 8th April, 1858, and from the Earl of Carnarvon to Sir W. Denison, dated 2 May, 1859.

In the second place the guarantee asked is contrary to one of the two great principles (a) named by the Home Government, as having been after considerable recent discussion at length acquiesced in and adopted generally, and as being those on which Her Majesty's Government are prepared to act in cases of a character similar to the present, viz.,—to provide that any guarantee of interest should only take effect after the lines are in working order, and for so long only as they continue to remain in that condition.

In the third place, the rate of interest (6 per cent.) asked, if it is to be guaranteed on the outlay during the construction, and subsequently whether the line be in working order or not, is excessive.

Provided, however, that the Imperial Government will adopt one-half of the entire liability, and that the guarantee take effect only while the line is in working order, I should feel no hesitation in recommending that interest should be guaranteed at the rate of six per cent., and that this Colony should take its share of such liability on the basis of the postal subsidy (b.)

The interest should, however, be paid only on the actual outlay, the probable amount of which is, I think, over estimated by Mr. Gisborne. The entire capital upon which interest should be guaranteed should not, in my opinion, be more than £650,000, or at the outside £700,000, so that the liability of this Colony would, under the arrangements proposed, not exceed £4,775 per annum (c.)

In estimating this outlay, I have among other matter assumed that the submarine portion of the line would not be brought further south than Port Curtis; first, because there is no valid reason why the cheaper land line should not be adopted thus far to the north; and, secondly because, if I am correctly informed, the influence of the barrier reef is not sufficient to protect the coast south of Port Curtis from heavy swells calculated to injure or destroy the cable.

Whether the land line should be extended from Port Curtis to the south of the Gulf of Carpentaria is worthy also of consideration.

From Gladstone, (Port Curtis) a practicable route could probably be found by following up the Rivers Burdakin, Lynd, and Mitchell, falling into the gulf near the fifteenth parallel, and running as far as 18° south latitude within 120 miles of the eastern coast which is indented with convenient bays and harbours for landing materials.

The main advantages of this line would be the opening up of so much new country; for as it would be necessary to take unusual precautions to secure the line from fire and injury, and also to build posts at short intervals, and to maintain a force for its protection from destruction by the Natives, the cost of construction and maintenance would be proportionately heavy; while it is possible that the Governments not directly concerned in developing north-eastern Australia might either prefer a different land line, (supposing one to be practicable) or might consider that the entire expense of that adopted should be borne by the Colonies more immediately interested in it.

The most ready plan, and that which appears most likely to commend itself generally, is the submarine line from Port Curtis to Java.

For this service Mr. Gisborne proposes that a cable should be laid, at the risk of the contractor, similar (d)—with the exception of the weight being increased from 21 to 22 cwt. per nautical mile—to that manufactured for the Red Sea and India Telegraph Company, and which is now working successfully between Suez and Aden.

From an examination of the charts there appears no reason to doubt that such a cable could be laid and worked successfully. The soundings along the proposed route will not as a rule, exceed 40 or 50 fathoms; the bottom is shewn as soft sand and mud, and the sea is said to be naturally calm.

From

(a) The other being "to grant no exclusive privileges"—letter from the Earl of Carnarvon to Sir W. Denison, 2 May, 1859.

(b) Mr. Gisborne suggests that, with the view of simplifying the necessary arrangements, the entire amount to be paid by the Colonies should be guaranteed by Victoria and New South Wales only; they obtaining from the other Colonies their respective contributions.

(c) Instead of £9,500 as suggested by Mr. Gisborne in his letter of 8th August above referred to.

(d) Letter to Sir W. Denison, of 6 July, above referred to, and Estimate for Cable.

From Banjoewangi (E. Java) to Batavia (W. Java) a land line exists, and the Netherlands Government has contracted for a submarine line, to be completed this year, to Singapore, and has undertaken to grant such terms, either to the Governments concerned or to a Company, as are sufficient to ensure telegraphic communication through its territory. (a)

The Secretary of State for India in Council was, in April last, in communication with the Lords Commissioners of Her Majesty's Treasury, upon the measures which should be taken for constructing the line from Singapore to Pegue; and it may be anticipated that this link in the telegraphic chain will be early supplied (b)

From Pegue to Kurrachee, and from Aden to Alexandria, there are existing lines. Between Kurrachee and Aden the cable which is manufactured is to be laid this year; over this entire length Her Majesty's Government exercise control; and the necessary concessions for the protection and working of the lines have been obtained from the Turkish and Egyptian Governments, where they pass through their territories. (c)

Between England and Alexandria the arrangements are both more complicated and not so complete. Between England and the Continent the lines belong to private companies. On the Continent and in Turkey they are in the hands of the State. Throughout Germany a Telegraphic Convention exists, fixing the charges, order of precedence, &c.; and there are similar conventions between France, Belgium, Prussia, and Switzerland. From these England is, in every case, excluded, except that, as I am informed, an arrangement exists by which her official messages can be sent in cypher, and have precedence over private messages; these latter, I presume, are under the protection of the State who first receives them.

At any rate, from England to Constantinople, and thence *via* the Dardanelles and Khio, continuous telegraphic lines exist; those from the Dardanelles to Candia and Egypt being held by an English Company; between Alexandria and Candia, however, the line has been twice lost, but it may be anticipated that the attempt will again be made to lay it.

Negotiations have also been in progress for some years past for a line from Ragusa *via* Corfu, and perhaps Candia, to Alexandria; and the Turkish Government, at one time, determined to undertake a line from Seutari to the Tigris, and *via* Bagdad to the Persian Gulf, but I believe the project is at a stand.

A very probable future line is one running from England *via* Gibraltar, Malta, Corfu, and Candia, to Alexandria; for the first portion to Gibraltar is to be laid next spring, and looking to the vast importance to the Empire of uncontrolled telegraphic communication, it may fairly be presumed the remainder will follow.

Under existing circumstances, however, it does not appear desirable that this Colony should give any guarantee, except upon condition of satisfactory arrangements being first made for the due transmission of its messages, at rates and in an order of precedence to be agreed upon by the Home Government, the Governments of these Colonies, and the representatives of *all* the lines along which they would pass.

There is, however, no reason why such arrangements should not be made; the concessions given by the Netherlands, Turkish, and Egyptian Governments, and the terms contained in the agreement made between the Lords Commissioners of Her Majesty's Treasury and the Red Sea and India Telegraph Company, already referred to, being taken as a guide.

The basis for negotiations with Mr. Gisborne would therefore be somewhat as follows:—

The Governments of New South Wales and Queensland (if concurrent) to continue the Australian land system to Port Curtis.

A company to be formed for the construction of a sub-marine line to place Australia in telegraphic communication with England—but to have no exclusive privileges.

The company to be formed within six months after an agreement for its formation shall have been entered into between the several Governments concerned and Mr. Gisborne acting for the promoters thereof.

The

(a) Conditions on which the British Government granted permission to the Netherlands Government to land a Sub-marine Cable, and to establish and administer a Station at Singapore; and letter from the Minister for the Colonies, dated The Hague, 19 March, 1859. See Appendix.

(b) Letter from Mr. Dickinson to Sir G. Clerk, dated 14 July, 1853, and from Mr. Melvill to Mr. Gisborne, dated 7 April, 1859.

(c) Concession granted to Mr. Gisborne by the Egyptian Government, and Agreement for the Establishment of the Telegraph Stations of the Red Sea Submarine Line.

The work to be undertaken by the company to be the laying down of a line of Electric Télégraph from Port Curtis to Banjoewangi.

The construction and laying down of the said line to be commenced immediately upon the formation of the company, and to be completed, and the line open for use, within two years.

The company to enter into a contract for the construction and laying down of the said line with contractors of high position and extensive experience in telegraphic operations; whereby the said contractors shall bind themselves to construct and lay down the said line from Port Curtis to Banjoewangi for a fixed sum, at their own risk and upon their own responsibility; and to hand over the line to the company in efficient working order within the said period of two years.

The company themselves efficiently to work the line for the transmission and delivery of messages.

All messages from or to Her Majesty or other Sovereign, or on public service, whether transmitted by the Home, Colonial, or Foreign Governments, to have priority over private messages; and if received from different Governments simultaneously to be dispatched alternately, the rates and charges to be paid thereon to be the same as those for private messages.

Private messages to be transmitted in the order in which they are received, and to be paid for at rates to be agreed upon between the several Governments concerned and the company.

The Imperial Government to guarantee during the period of fifty years one moiety, and the Colonial Governments the other moiety, of such sum as shall be sufficient to provide that the net receipts available for dividend upon each half-yearly statement of accounts, shall after payment of working expenses, be equal to interest at the rate of 6 per cent. per annum, upon the amount of outlay: Provided that the said outlay shall not exceed the sum of seven hundred thousand pounds, and that the said guarantee of interest shall be hold only to take effect after the line is in working order, and for so long as it continues to remain in such order, and only to supplement the net receipts so far as to provide that the half-yearly dividend shall be at the rate of 6 per cent. per annum upon the outlay.

The Government of New South Wales to be liable, upon the above conditions, for the half-yearly payment of interest at the rate of 6 per cent. per annum, on any sum not exceeding 22½ of £350,000.

All amounts paid by the several Governments under the above guarantee, to be a charge upon the Company, to be paid out of future surplus profits as hereinafter provided.

The company to keep proper and accurate accounts of capital and revenue expenditure, and of all moneys received for the working of the line; and all reasonable means to be furnished to the representatives of the several Governments interested to examine into and verify the correctness of such accounts.

The working expenses to include management, and to be paid in the first instance out of gross receipts, and should these be insufficient, then out of the reserve fund hereafter mentioned, or, failing that, out of the capital of the Company.

If upon any half-year during, or after, the said fifty years, the net receipts shall be more than sufficient to pay a dividend at the rate of 6 per cent. per annum upon the outlay, the surplus shall be applied as follows:--

- (a) One-third to repay any debt due for payments made by the several Governments under their guarantee, in proportion to their payments; one-third towards a reserve fund not to exceed 10 per cent. of the outlay; one-third to increase the dividend to 10 per cent. per annum upon the outlay.
- (b) If there be no debt, two-thirds to be applied to increase the dividend to 10 per cent., and the remaining third, and any portion of the two-thirds not required so to increase the dividend, towards the reserve fund.
- (c) If the reserve fund be completed the dividend to be made up to 10 per cent., and any surplus remaining to be applied, either in reduction of the rates and charges,

charges, in the creation of a fund for the redemption of the Government guarantee, or, as shall be agreed upon by the several Governments interested.

The reserve fund to be applied, as occasion may require, for such purposes of restoration and construction as are not justly chargeable to working expenses, and if the reserve fund be not sufficient for these purposes they shall be paid out of the capital of the Company.

The reserve fund, if reduced by any such payments, to be made good in the same manner as upon its original formation, and to be invested and the interest carried to revenue receipts.

In case the line from Port Curtis to Banjoewangi should not be laid and at work within the period specified, any agreement made to become null and void.

In case the Company, during the said period of fifty years after the line is opened for work, fail to reinstate or restore, as occasion require, or efficiently to work the said line, the said Company shall, on demand being made by the Governments interested, transfer to their agents, after six months notice, all their Telegraph lines, works, instruments, and machinery, together with all their rights and privileges, on terms similar to those made between Her Majesty's Government and the Red Sea and India Telegraph Company.

The several Governments interested to be entitled to appoint Agents to represent them in the Board of Directors, and to remove the same and appoint others in their stead, and such representatives shall possess all the powers and perform all the duties assigned to the *ex officio* Directors, under the Red Sea and India Telegraph Company Act, and in addition, shall have the right to initiate and lay before the Board such measures as appear to them necessary; and in cases of difference of opinion between such representatives they shall vote among themselves, and act in accordance with the decision of the majority.

The Board of Directors shall sit either in London or in one or other of the Colonies, or the Board of Directors shall sit in London and a local Board in one or other of the Colonies, as may be agreed upon.

Any Government or the Company shall have the right to establish a station on payment of the cost of so doing, and on giving a guarantee to cover its working expenses.

In case one wire should be found insufficient for the purposes of communication, the Company shall lay down an additional wire or wires on terms similar to those now proposed.

The Governor in and over any of the Australian Colonies may, in case of necessity, take possession of the stations of the said Telegraph line within such Colony, under provisions similar to those contained in the Red Sea and India Telegraph Act.

The provisions of that Act* would apply generally to the line now contemplated, and it might form the basis for the Imperial and Colonial Acts required for its construction and working.

I have been unable to obtain any reliable information as to the probable tariff for messages, but I apprehend that the important results to be derived from such rapid communication would altogether outweigh the expense of the transmission of messages, and that the line would be freely used.

I have given some consideration to the probable amount of working expenses, but until the length and character of the line, and the number, position, and character of its stations are decided, no estimate sufficiently accurate to record, can be given.

My attention has also been turned to the other lines that have been projected, for connecting Australia by telegraph with England and the East; these are,—

From Ceylon to Western Australia *via* Keeling's Island, and thence overland, or by a sub-marine line, to Adelaide.

From Java to Adelaide *via* Western Australia.

From Coepang (Timor) to Cambridge Gulf, and across the Continent to Adelaide.

The Superintendent of Electric Telegraphs † in Victoria at one time preferred the first of these routes, but I believe he has since seen cause to modify that opinion, and to agree

* The copy of the Act attached is as "amended in Committee,"—not as finally passed, but I am informed there is little or no difference between them.

† Report by Mr. M'Gowan, dated 1 January, 1859.

agree with the Superintendent of South Australia* in favor of that proposed by Mr. Gisborne. I concur in thinking it the best route yet proposed.

Should Mr. Gisborne, therefore, be disposed to enter into arrangements on the terms above stated, I submit that the risk entailed upon this Colony by the guarantee will be so trifling, as compared with the advantages to be derived from the proposed work if successfully carried out, that, under the sanction of Parliament, negotiations should at once be entered into with the Home Government, the neighbouring Colonies, and Mr. Gisborne, for its execution, and that a pledge should be given that this Colony will take its share of the guarantee on conditions such as those detailed in this Report.

I have, &c.,

THE HONORABLE THE SECRETARY
FOR LANDS AND PUBLIC WORKS,
&c., &c., &c.

B. H. MARTINDALE.

[Enclosure 1 in No. 3.]

Boulton Row,
17 April, 1859.

My dear Sir,

I send you, enclosed, the exact proportions of the Australian Correspondence, on which the division of the Postal subsidy is calculated.

Yours, &c.,

F. Gisborne, Esq.,
&c., &c., &c.

W. H. STEPHENSON.

[Enclosure 2 in No. 3.]

(Circular.)

Downing-street,
29 May, 1858.

Sir,

I transmit, for your information, the copy of a letter from Mr. Lionel Gisborne, relative to a project which he has in view for effecting a telegraphic communication, by way of India, with Australia. I also annex copies of a correspondence between this department and the India Board on the subject; and I shall be glad to be favored with any remarks which may occur to you on a question which, it is almost superfluous to add, promises to be of the utmost importance to the interests of the Colony under your Government.

20 March, 1858.

Colonial Office,
8 April, 1858.
India Board,
24 May, 1858.

I have, &c.,

Governor
Sir W. T. Denison, K. C. B.,
&c., &c., &c.,
New South Wales.

STANLEY.

Downing-street,
8 April, 1858.

Sir,

I am directed by Lord Stanley to transmit to you, for the consideration of the Commissioners for the affairs of India, the enclosed copy of a letter from Mr. L. Gisborne, on the question of a telegraphic communication, by way of India, with Australia. Mr. Gisborne's plan is, 1st, to endeavour to obtain from the Indian Government a contract for the line from Tenasserim (where it could join the Indian telegraphic system) to Penang and Singapore.

2nd. From thence with the aid of a subsidy of which he states that he has already obtained the promise from the Dutch Government to carry it (without aid from England or from any Colony) to the north coast of Australia.

3rd. To induce the Governments of the various Australian Colonies to carry it on down the east coast to Moreton Bay, and thence to Melbourne.

Each

* Report by Mr. Todd, dated 18 July, 1859.

Each part of this plan is dependent for success on the success of the rest.

I am to request that you will express Lord Stanley's opinion that the execution of this project, if it can be successfully carried into effect, would confer great benefits on Australia and the Empire, and that on this ground his Lordship begs to recommend it to the consideration of the Commissioners for the affairs of India, with whom, however, it must rest to decide on its feasibility and also its expediency, so far as regards India. Should they find sufficient grounds to authorise the execution of the Indian part of the work, Lord Stanley will be prepared to recommend the plan to the Australian Governments, but without the concession of exclusive privileges or the expectation of assistance from Imperial Funds, neither of which objects, it is to be observed, are asked for in the proposal in the shape in which it is at present submitted.

Sir G. Clerk, K.C.B.

I am, &c.,

H. MERIVALE.

6, Duke street, Adelphi (W. C.),
20 March, 1858.

My Lord,

On the 12th of October last I addressed a communication to Her Majesty's Colonial Minister upon the question of telegraphic communication with Australia.

Your Lordship favoured me with an interview upon this matter, during the course of this morning.

The two points I am desirous of calling your Lordship's attention to are:—

1. That the Indian Government should give an assurance that they will execute a telegraphic line between their possessions in the Continent of India and Singapore.

2. That when such an assurance is given, your Lordship will communicate to the Australian Government the project I have had the honor to submit, and will place me in a position to negotiate the execution of it through the Australian Government.

I have, &c.,

The Right Honorable
Lord Stanley.

LIONEL GISBORNE.

India Board,
24 May, 1858.

Sir,

The Commissioners for the affairs of India have communicated with the Court of Directors of the East India Company, on the subject of your letter of the 8th ultimo, recommending, by order of the Secretary of State for the Colonies, to the consideration of this Board, a plan proposed by Mr. Lionel Gisborne for a telegraphic line to Australia—one portion of the plan being that the Government of India shall, at their own cost, carry the line from the Continent of India to Singapore; and I am instructed to transmit to you, for the information of Lord Stanley, a copy of a letter, dated the 18th instant, which the Board have received from the India House, and a copy of a Despatch on the subject, which will be sent to the Governor General of India in Council by the Mail of the 25th.

I am, &c.,

Herman Merivale, Esq.,
&c., &c., &c.

GEORGE CLERK.

East India House,
18 May, 1858.

Sir,

The Court of Directors of the East India Company have had under consideration Sir George Clerk's letter of the 13th ultimo, with its enclosed letter from the Colonial Office, and its accompaniment regarding a scheme proposed by Mr. Lionel Gisborne for effecting telegraphic communication, by way of India, with Australia—one of the proposals connected with the project being, that the Indian Government should give an assurance that they will execute a telegraph line between their possessions on the Continent of India and Singapore.

2. In considering this important proposition, the Court have, with the Board, assumed that the main object of the undertaking is to connect Australia with *England* by means of the telegraph. The first obvious step towards the attainment of that object is the completion of telegraphic communication between this country and India, and it appears to the Court that it would be premature to adopt measures in regard to a line beyond India, while the question as to the manner in which the European line of telegraph is to be extended to India is still undecided.

3. Having made these preliminary observations, the Court desire me to state, that it would afford them much pleasure to promote the project now brought to their notice in such a manner as should be consistent with the interests of India. The Court would observe, however, that the section which it is proposed should be executed by the Government of India would be an extensive and difficult undertaking, and they are unable to pass a judgment upon

upon its feasibility or cost, without a previous survey of the coast, and without a report by the local authorities upon the question. They accordingly propose at once to invite the consideration of the Government of India to the subject.

I have, &c.,

J. D. DICKINSON.

The Secretary
of the Indian Board.

COPY of a letter from the Court of Directors of the East India Company to the Governor General of India in Council.

May, 1858.

1. We forward in the packet copy of a letter, and of its enclosures, which has been received from the Board of Commissioners for the affairs of India, and of our reply thereto, regarding a scheme proposed by Mr. Lionel Gisborne for effecting telegraphic communication, by way of India, with Australia.

2. You will observe that one of the proposals is that the Government of India should undertake the construction of a line from the point on the eastern coast of the Bay of Bengal, where the Indian system terminates, to Singapore. We desire, therefore, that you will take such steps as may enable you to form a judgment upon the cost and feasibility of this section, and report your opinion to us as soon as practicable.

(Circular.)

Downing-street,
27 July, 1858.

Sir,

With reference to my predecessor's circular Despatch of the 29th May, forwarding, for any remarks which might occur to you, copies of communications which had passed between this Office and the Commissioners for the affairs of India, relative to a plan proposed by Mr. Lionel Gisborne for laying down a telegraphic line of communication, by way of India, between this country and Australia, I transmit herewith, for your information, copies of a further correspondence which has passed upon the subject.

Mr. Gisborne,
8 June, 1858.
C. O. to India
Board, 22 June,
1858.
India Board,
17 July, 1858.
C. O. to Mr.
Gisborne.

I have, &c.,

E. B. LYTTON.

Governor Sir William Denison, K.C.B.,
&c., &c., &c.

Downing-street,
22 June 1858.

Sir,

With reference to your letter of the 24th ultimo, I am directed by Secretary Sir Edward Bulwer Lytton to transmit to you, for the consideration of the Commissioners for the affairs of India, the enclosed copy of a letter from Mr. Lionel Gisborne, submitting some remarks on the subject of the conclusion signified on the subject of that part of his proposed line of telegraphic communication from England to Australia, which lies between the Continent of India and Singapore.

June, 1858.

I am, &c.,

H. MERIVALE.

Sir George Clerk.

6 Duke-street, Adelphi,
8 June, 1858.

My Lord,

I have the honor to acknowledge your Lordship's letter of the 3rd instant, enclosing correspondence with the Board of Control and H. E. I. Co., upon the subject of telegraphic extension to Australia.

Mr. Dickinson, in his letter of the 18th of May, states—after acknowledging the importance of the project, and the desire of the H. E. I. Co. to see it carried out—"The Court would observe, however, that the section which it is proposed should be executed by the Government of India would be an extensive and difficult undertaking, and they are unable to pass a judgment upon its feasibility or cost without a previous survey of the coast, and without a report by the local authorities upon the question. They accordingly propose at once to invite the consideration of the Government of India to the subject."

I would observe that the proposed communication between the continent of India and Singapore is not difficult, and that there exists all the information upon the subject necessary to decide the feasibility and cost. The chart sent herewith shews that detailed soundings, &c., exist the whole way between Rangoon and Singapore, and there exists at the Hydrographical Office most detailed charts of the places where it is proposed to land the cable. My estimate for the whole line between Tenasserim and Singapore is under £150,000, and I am prepared to find a responsible contractor to execute it for that sum, at his own risk, as far as laying the cable and handing it over to the H. E. I. Co. in an efficient working state.

I am unaware of any length of cable laid in a sea where, judging from the charts and the reports of mariners, such remarkable facilities exist as in the reach between Tenasserim and Singapore.

I had the honor of informing Lord Stanley, at the interview he favoured me with, that the concession granted by the Netherland Government was limited in time for carrying out its provisions, and that I am under engagement to that Government to send, without delay, to Australia to negotiate the extension of the telegraph within that Colony.

A reference of the Singapore section to the Governor General in India will delay the question for many months, and, I respectfully submit, without any practical object being attained towards prosecuting the Australian project.

The Dutch Government, with the same charts and information before them as the H. E. I. Co. have access to, admitted the feasibility and importance of the *whole* question, and gave the necessary facilities for carrying out their link. It appears that your Lordship's department are prepared to recommend the same course to the Australian Colonies; all I ask is, that the H. E. I. Co. shall, when the whole project is ripe, undertake to carry out the portion which specially comes under their control.

Should the Court consider the Singapore telegraph of such importance *per se*, as to warrant them to have it carried out at *once*, I am prepared to undertake it through responsible contractors; but my proposition to Lord Stanley was that the Court should decide upon doing their section when the remainder of the Australian line was finally in hand, his Lordship remarking most truly, in his letter of the 8th of April, 1858, that "each part of this plan is "dependent for success on the success of the rest."

What I am desirous of obtaining is an assurance from Her Majesty's Government, or the Honorable Court, to the Australian Authorities that the Singapore section shall not remain unmade as a link in the Australian and China Telegraph.

I have, &c.,

LIONEL GISBORNE.

The Right Honorable
The Earl of Carnarvon.

Downing-street,
July, 1858.

Sir,

17 June, 1858.

With reference to my letter of the 22nd ultimo, in which you were informed that a copy of your further letter of the 8th June, relative to the execution of that part of your proposed line of telegraphic communication from England to Australia which lies between the Continent of India and Singapore, had been referred for the consideration of the Commissioners for the affairs of India, I am directed by Secretary Sir E. Bulwer Lytton to transmit, for your information, a copy of the answer which has been returned on the subject by that Board.

I am, &c.,

CARNARVON.

Lionel Gisborne, Esq.

India Board,
17 July, 1858.

Sir,

With reference to the communication which you made to this Board on the 22nd ultimo, I am desired by the Commissioners for the affairs of India to transmit, for the information of the Secretary of State for the Colonies, a copy of a letter, dated the 14th instant, which has been received from the Court of Directors of the East India Company respecting the plan of Mr. Lionel Gisborne for a telegraphic line between England and Australia, by way of Rangoon and Singapore.

I am, &c.,

GEORGE CLERK.

H. Merivale, Esq.

East India, House,
14 July, 1858.

Sir,

I have laid before the Court of Directors of the East India Company Sir George Clerk's letter of the 26th ultimo, transmitting copy of a letter which has been addressed by Mr. Lionel Gisborne to the Colonial Office, in consequence of that department having forwarded to him a copy of my letter of the 18th May, regarding his scheme for telegraphic communication with Australia by way of India.

2. The Court were given to understand by the enclosures to Sir George Clerk's letter of the 13th April, that the main object of Mr. Gisborne's scheme was to establish telegraphic communication between Australia and this country, and that a part of his plan was to "obtain from the Indian Government a contract for a line from Tenasserim to Penang and "Singapore."

3. The Court desire me to state that, notwithstanding Mr. Gisborne's statement as to the easy nature of that part of the undertaking, they do not feel in a position to enter into arrangements for the execution of a work of this description without a previous communication with the Government of India, with a view of obtaining the report of their Superintendent of Electric Telegraphs, or of some competent officer upon the subject, and it did not appear to them that the time employed in obtaining a reply to that reference could delay the completion of a work, which is to form the continuation of one to India, for the construction of which arrangements have not yet been made.

4. As, however, it appears from Mr. Gisborne's letter, now under notice, that the concession granted to him by the Netherlands Government is limited in time, and is conditional upon an assurance that the link between Rangoon and Singapore will not be left undone, the Court cannot hesitate to express their opinion, that when measures have been matured for making such remaining portions of the line as may be required to complete the telegraphic communication between this country and Australia, it would be the duty of the Indian Government to take steps for the simultaneous construction of that part of the line which lies within its jurisdiction.

I have, &c.,

The Secretary, India Board.

J. D. DICKINSON.

[Enclosure 3 in No. 3.]

Communicated by me to Captain Martindale, R.E., Commissioner for Internal Communication, New South Wales.

F. GISBORNE.

11 August, 1859, Sydney.

[Enclosure 4 in No. 3]

6 Duke-street,
Adelphi, 23 August, 1858.

ABSTRACT of Specification and Estimate to Board of Red Sea and India Telegraph Company, this day agreed to by Messrs. Newall & Co.

Specification:—

7 copper wires in a strand, at per knot 180lbs. Gutta percha, } 2 coverings, and 2 Chatterton's patent at 212.....	3½ cwt.
Yarn	1½ cwt.
18 iron best selected charcoal wire, weighing	16 cwt.
Total per knot, deep water sample	21 cwt.

Shore ends:—

Same, gutta percha and copper wire, per knot.....	3½ cwt.
Yarn	2½ cwt.
9 iron best selected charcoal, weighing	61 cwt.

Shore ends, per knot..... 67 cwt.

Deep water cable, per knot, f. o. b. £105.

Shore ends..... £160.

Slack, 25 per cent. ; risk of laying and staff, 20 per cent. + £5,000

to Aden, or £10,000 to Kurrachee.*

Ships and Coals..... £110,000.

LIONEL GISBORNE.

* For ship's fittings.

[Enclosure 5 in No. 3.]

Aden, 2 June, 1859.

Sir,

We authorise you to accept on our behalf a Contract for a Submarine Telegraph Line, from the East End of Java to Moreton Bay, on an estimated direct distance not exceeding 3,004 nautical miles, for a sum of six hundred and sixty-five thousand pounds, the Contract to be based on that we have with the Red Sea and Indian Telegraph Company.

The above sum of £665,000 to include manufacture of cable and risk of laying it, ships, and their insurance.

The cable to be the same as the Red Sea and India Cable, excepting that the outer covering of hemp and wire is to be made slightly heavier to give a more perfect protection to the gutta percha, and the cable to weigh 22 cwt. instead of 21 cwt. per nautical mile, and to include, also, instruments for six stations, by Siemens & Halske of Berlin.

The insurance of the cable is to be put upon the same footing as that for the Indian Cable, excepting that a margin for our profit must be insured at the same time, which is to be agreed upon.

We reserve the right to increase the price of the cable or withdraw from the Contract should any rise occur in the price of materials between this date and the day the Contract is communicated to us.

We undertake to lay the lines and deliver them over in complete working order, and capable of transmitting a minimum of ten words per minute over any direct distance not exceeding 500 nautical miles, within two years of the Contract being communicated to us.

This offer not to be binding on us after the 31st December, 1859.

We are, &c.,

Francis Gisborne, Esq.

R. S. NEWALL, & Co.

[Enclosure 6 in No. 3.]

MEMORANDUM of AGREEMENT made and entered into between the Red Sea and India Telegraph Company, of the one part, and Robert Sterling Newall, Charles Liddell, and Lewis Dunbar Brodie Gordon, all of Abingdon-street, Westminster, in the County of Middlesex, and of Birkinhead, in the County of Chester, trading under the firm of R. S. Newall and Co., of the other part.

—Dated the twenty-third day of October, 1858.

THE said parties agree to enter into a Contract for the manufacture and laying down of a Submarine Telegraph Cable from Alexandria to Kurrachee by Aden, upon the following terms and conditions:—

1. The said Messieurs Newall and Company shall manufacture and lay down the cable from Suez to Kurrachee at their own risk and responsibility, and deliver over the same to the Company complete in full working order, and in condition to transmit ten words per minute by means of recording instruments of the most improved construction, to be selected by the Board of Directors of the said Company, for the following sums:—

From Suez to Aden for the sum of £225,000

From Aden to Kurrachee for the additional sum of 246,425

2. The above payments are to include all expenses of every kind connected with the manufacture and laying, except as hereinafter mentioned, of a cable according to the specification annexed to this agreement, and according to the sample delivered at the Office of the Company in the course to be specified by the engineer between Suez and Kurrachee, Messrs. Newall and Company being under the obligation of making the cables of requisite length to unite the several stations specified in the annexed Table.

3. The cable is to be landed and attached to stations at the points specified in the said Table, or not exceeding three principal and six intermediate stations throughout the whole routes, and to include connections with the stations by wires placed under ground for distances not exceeding two hundred yards above high water spring tides, the Board of Directors of the said Company to have the power to vary the intermediate stations if they think fit, but so as not to increase the total distance as specified in the said Table, excepting on the conditions hereinafter mentioned in clause eleven.

4. The Board are to have the right of inspecting and testing the cable and materials during manufacture and while laying by their own members, and by their officers and other persons appointed by them, in such manner and at such times as they may think fit, so as not to interfere with the progress of the work.

5. The above payments for the cable between Suez and Aden, and Aden and Kurrachee, are to be made as under, namely:—Eleven thousand pounds on signing this agreement, ninety pounds per nautical mile to be paid at the end of each calendar month, on the quantity of cable made, according to the terms contained in article 2, and certified by the Company's officers, not exceeding in all the length of one thousand seven hundred nautical miles for the line from Suez to Aden, and two thousand nautical miles for the line from Aden to Kurrachee, the balance of the proportions of the amounts of two hundred and twenty-five thousand pounds, and two hundred and forty-six thousand four hundred and twenty-five pounds, calculated according to the annexed Table to be paid at the expiration of thirty days after completion in all respects, according to the terms of this contract, of each section or division between station and station, and no part of the money is to be considered as due until the cable for each section shall have been efficiently at work as hereinbefore specified for one clear calendar month. The cable as made and paid for under this agreement to become the property of the Company; any surplus cable remaining after the final completion of the contract is to belong to the parties of the second part.

6. Five per cent. to be deducted from all payments made under the last clause, and the amount of such deductions to remain in the hands of the Company at interest, after the rate of four pounds ten shillings per cent. per annum, and to be paid over to Messieurs R. S. Newall & Co. on the final completion of this contract.

7. Messrs. R. S. Newall & Co. shall provide all necessary ships, including coals and all necessary supplies and wages, and fit them out with all proper machinery for laying the cable, for the sum of one hundred and ten thousand pounds, that is to say:—Fifty-five thousand pounds for the line to Aden, and fifty-five thousand pounds for the line from Aden to Kurrachee, which ships the Company shall have the option of purchasing, at a valuation, after the Cable has been laid down, if the property of Messieurs Newall. Notice of desire to purchase to be given in writing, within one month before the sailing of the ship from the Country with the last section of the cable. The amount payable in respect of the ships is to be paid as follows, videlicet:—

Thirty thousand pounds on the execution of this agreement.

Thirty thousand pounds when the vessels are fitted and ready for receiving the cable on board.

The remaining fifty thousand pounds to be paid in nine equal monthly instalments, commencing from the sailing of the first vessel.

8. Messrs. Newall's shall put up and attach suitable and proper Telegraphic wires by land, from Alexandria to Suez, upon the poles of the existing lines of telegraph of the Egyptian Government, or upon new poles to be erected for the Company by Messieurs Newall, at their own cost, according to the specification to be furnished to them by the Company's Engineer, communicating with the European Telegraph at one end, and the Telegraphic Cable in the Red Sea at the other, for a sum to be agreed upon, and not to exceed a cost to the Company—estimated at about or under fifteen thousand pounds—to be paid by the Company, on the Certificates of their Engineer, as the materials are supplied and the work proceeds, and at the expiration of one month after the date of each certificate. The wires to be put up and insulated, and completed in all respects according to the conditions of this agreement.

9. Messrs. R. S. Newall & Co. shall construct, or provide, suitable stations throughout the line, and supply the same with household furniture, and all instruments requisite for the Telegraph, to be approved by the Board, for a sum to be agreed upon—not to exceed a cost estimated at about fifty thousand pounds for the whole route from Alexandria to Kurrachee, or about twenty-five thousand pounds for the route from Alexandria to Aden. The payments under this clause to be made when the work contracted for has been completed in all respects in accordance with this Contract.

10. Messrs. R. S. Newall & Co. are, at the cost of the Company, to insure the cable against risk of damage by sea and fire, in the usual manner, to the full amount of the advances made to them; the policies to be effected in the name of the Company, and to be placed in the hands of the Company, and in the event of their failing to comply with either provision the Company themselves to be at liberty to insure.

11. Any additional cable required, by reason of any increased number of stations, or alteration in their position, as specified in the said Table, to be paid for at the same rate per knot of direct distance, between station and station, as shewn on the said Table, and any additional number of stations, including instruments and fittings as aforesaid, to be paid for by the Company as may be agreed between Messrs. Newall and the Company's Engineer.

12. The Cable is to be laid between Suez and Kurrachee within twelve months from the date of this Contract.

13. The Contract necessary to give effect to these arrangements, and to carry out the objects, is to be prepared by Messrs. Freshfield and Newman, the Company's Solicitors.

The

The Company will apply for a Government steamer to assist the steamers in the operations of laying the cable, or supply another suitable for the purpose.

As witness the Seal of the Company, and the hands and seals of the parties hereto of the second part.

Scaled by order of the Board.

C. L. PEEL,
Secretary.

As I do attest under my Notarial Firm and Seal, to serve and avail where need may require.

London, the fifth day of November, one thousand eight hundred and fifty-eight.

SALEM C. HARRIS,
Notary Public.

[Enclosure 7 in No. 3.]

Concession accordée à M. Léon Gisborne par le Gouvernement Egyptien.

Preamble.

S. A. Mohammed-Said Pacha, Vice-Roi d'Egypte, accorde à M. Léon Gisborne, ingénieur Anglais, et à ses cessionnaires, la concession dont les conditions sont déterminées par les Articles suivants pour l'établissement d'une communication télégraphique entre le télégraphe sousmarin qui doit être posé des Dardanelles à Alexandrie, et un autre télégraphe sousmarin qui doit aussi être posé de Suez jusqu'aux Indes.

ART. 1.

Les fils peuvent être posés sur les poteaux du télégraphe Egyptien.

La communication télégraphique concédée par les présentes à travers le territoire Egyptien sera composé d'autant de fils télégraphiques que le sus-dit Léon Gisborne, et ses cessionnaires, jugeront nécessaires. Ces fils seront posés sur les poteaux de télégraphe Egyptien entre Alexandrie et Suez, autant qu'ils y trouveront place. Le nombre des fils sous-marins nécessaire au service général aboutira aux stations d'Alexandrie, de Suez, et de Kosseir.

ART. 2.

ART. 2.

Les sus-dits fils et les établissements des stations seront posés, établis, entretenus et exploités par le Sr. Léon Gisborne, et ses cessionnaires, à leur seuls frais, pendant quatre-vingt-dix-neuf années, à dater de leur mise en œuvre. Les poteaux entre Alexandrie et Suez seront entretenus par le Gouvernement Egyptien et le Sr. Gisborne, et ses cessionnaires, à frais communs, en proportion du nombre de fils qu'ils auront respectivement sur les dits poteaux.

Les fils et stations seront entretenus pendant 99 ans.

ART. 3.

Dans le cas où le Sr. Gisborne, et ses cessionnaires, trouveraient plus convenable de se dispenser de poteaux et d'établir à leur frais, et sur la ligne du chemin de fer Egyptien, la communication télégraphique concédée au moyen de fils souterrains l'entretien des poteaux entre Alexandrie et Suez, resterait à la seule charge du Gouvernement Egyptien.

Les fils peuvent être posés sous terre.

ART. 4.

La communication télégraphique concédée, ainsi que ses stations et constructions, sera surveillée et protégée par le Gouvernement Egyptien sans qu'il puisse en résulter aucune responsabilité pour lui.

Gouvernement Egyptien protégera les fils et stations.

ART. 5.

Le Sr. Gisborne, et ses cessionnaires, auront le pouvoir de nommer de payer et de congédier à leur volonté tous les employés nécessaires à l'établissement à l'entretien, et à l'exploitation de la communication télégraphique concédée avec ses stations et constructions.

Compagnie nommera tous les employés.

ART. 6.

Le Sr. Gisborne, et ses cessionnaires, auront la jouissance des terrains et constructions nécessaires à l'établissement et à l'entretien de la communication télégraphique concédée aux stations d'Alexandrie, de Suez et Kosseir, soit qu'ils obtiennent cette jouissance du Gouvernement Egyptien soit qu'ils l'acquieient des particuliers, et ils acquitteront les charges et impôts auxquels les dits terrains et constructions seront assujettés d'après les lois du pays.

Compagnie aura la jouissance de terrains pour stations.

ART. 7.

Toute dépêche provenant des fils sous-marins de la Méditerranée et de la Mer Rouge, adressée à une personne quelconque qui se trouve en Egypte et ses dépendances, ne sera communiquée que par l'intermédiaire du bureau télégraphique Egyptien. Toute dépêche expédiée originairement du territoire Egyptien sera remise aux stations établies par le Sr. Gisborne, et ses cessionnaires, par l'intermédiaire du bureau télégraphique Egyptien.

Dépêches locales sous contrôle du Gouvernement Egyptien.

ART. 8.

Les dépêches officielles du Gouvernement Egyptien, et de tout autre Gouvernement seront transmises par priorité, sur toutes les autres et d'après l'ordre de leur remise à la station télégraphique. Pour celles qui seront remises simultanément ou suivra dans la transmission la règle de l'alternat.

Priorité des dépêches officielles.

ART. 9.

Les dépêches privées seront transmises d'après l'ordre de leur remise à la station télégraphique.

Transmission des dépêches privées.

ART. 10.

Le Gouvernement Egyptien jouira pour ses dépêches d'une réduction de moitié sur le tarif que payeront les dépêches commerciales.

Tarif des dépêches officielles Egyptiennes.

ART. 11.

Le Gouvernement Egyptien accordera toutes les facilités nécessaires pour que le télégraphe sous-marin qui doit être posé des Dardanelles à l'Egypte, puisse y prendre terre et arriver sûrement à Alexandrie.

Gouvernement Egyptien aidera Compagnie quant à la ligne des Dardanelles à Alexandrie.

ART. 12.

Il promet son aide et sa protection pour que le Sr. Gisborne, et ses cessionnaires puissent exercer les droits et les pouvoirs accordés par les présentes.

Gouvernement Egyptien aidera Compagnie.

ART. 13.

Les matériaux et les mécanismes nécessaires pour l'établissement et l'entretien de la sus-dite communication télégraphique jouiront de l'exemption des droits de douane.

Matériaux exempts de douane.

ART. 14.

En compensation des avantages et facilités accordés par le Gouvernement Egyptien, le Sr. Léon Gisborne, et ses cessionnaires, lui abandonneront cinq pour cent. des taxes établies sur les dépêches mentionnées dans l'article sept.

Taxe de 5 pour cent sur dépêches locales.

ART. 15.

Le Gouvernement Egyptien sera libre en tous temps d'établir des embranchements avec la communication télégraphique concédée.

Gouvernement Egyptien pourra établir embranchement.

[Translation from the French original.]

Concession granted to M. Léon Gisborne by the Egyptian Government.

Preamble.

His Highness Mohammed Said Pasha, Vice-Roy of Egypt, grants to M. Léon Gisborne, an English engineer, and his assigns, the concession of which the conditions are determined by the following articles for the establishment of a telegraphic communication between the submarine telegraph which is to be laid between the Dardanelles and Alexandria, and another telegraph which is also to be laid between Suez and India.

ARTICLE 1.

The wires may be placed on the posts of the Egyptian Telegraph.

The telegraphic communication conceded by these presents through the Egyptian territory, shall consist of as many telegraph wires as the said L. Gisborne, and his assigns, shall deem necessary; the above wires are to be placed on the posts of the Egyptian territory, between Alexandria and Suez, to the extent that they shall find room; the submarine wires necessary for the general service are to touch at the stations of Alexandria, Suez, and Kosseir.

ARTICLE 2.

The wire stations are to be maintained during 99 years.

The said wires, and the establishments for the stations, are to be laid, established, maintained, and worked by the said L. Gisborne, and his assigns, at their sole cost, for ninety-nine years, to date from their commencing work; the posts between Alexandria and Suez are to be maintained by the Egyptian Government, and the said L. Gisborne and his assigns, at their common cost, in proportion to the number of wires which they respectively shall own upon the said posts.

ARTICLE 3.

The wires may be placed under ground.

In case the said Gisborne and his assigns find it more convenient to dispense with posts, and to establish the telegraphic communication hereby conceded at their own cost, along the line of the Egyptian railway, by means of under ground wires, the maintenance of the posts between Alexandria and Suez is to remain at the sole charge of the Egyptian Government.

ARTICLE 4.

Egyptian Government to protect wires and stations.

The telegraphic communication hereby conceded, as well as its stations and buildings, shall be watched over and protected by the Egyptian Government without there resulting any responsibility to it on that account.

ARTICLE 5.

Company to appoint all employes.

The said Gisborne and his assigns shall have the power of appointing, paying, and dismissing at their will, all employes necessary for the establishment, maintenance, and working of the telegraphic communication hereby conceded with its stations and buildings.

ARTICLE 6.

Company to have the occupation of land for stations.

The said Gisborne and his assigns shall have the occupation of the lands and buildings necessary for the establishment and maintenance of the telegraphic communication hereby conceded, at the stations of Alexandria, Suez, and Kosseir, whether they obtain such occupation from the Egyptian Government, or from the grant of private persons; and they are to pay the charges and taxes to which the said lands and buildings shall be subject by the laws of the country.

ARTICLE 7.

Local messages to be under the control of the Egyptian Government.

Every message coming from the submarine wires of the Mediterranean and Red Seas, addressed to any person whatsoever who shall be in Egypt and its dependencies, shall only be communicated through the medium of an Egyptian telegraph station. Every message originally expedited from Egyptian territory shall be sent to the stations established by the said Gisborne, and his assigns, through the medium of the Egyptian Telegraph Office.

ARTICLE 8.

Priority of official messages.

The official messages of the Egyptian and of every other Government shall be transmitted in priority of all other messages, and according to their delivery at the telegraph station, as regards those messages which are simultaneously delivered, the alternate rule shall be observed in their transmission.

ARTICLE 9.

Transmission of private messages.

Private messages shall be transmitted according to the order of their delivery at the telegraph station.

ARTICLE 10.

Tariff of official Egyptian messages.

The Egyptian Government is to enjoy for its messages a reduction of half on the tariff which commercial messages shall pay.

ARTICLE 11.

Egyptian Government to give its aid as regards the line from the Dardanelles to Alexandria.

The Egyptian Government is to grant every necessary facility to the submarine telegraph which is to be laid between the Dardanelles and Egypt, so as to enable it to land and reach Alexandria in security.

ARTICLE 12.

ARTICLE 12.

The Egyptian Government promises its aid and protection to enable the said Gisborne, and his assigns, to exercise the rights and powers granted by these presents. Egyptian Government to aid the Company.

ARTICLE 13.

The materials and instruments necessary for the establishment and maintenance of the said telegraphic communication shall enjoy exemption from Custom duties. Materials to be exempt from Customs duties.

ARTICLE 14.

In compensation for the advantages and facilities granted by the Egyptians, the said L. Gisborne, and his assigns, are to abandon to it five per cent. of the tariff established in respect of the messages mentioned in Article 7. Duty of 5 per cent. on local messages.

ARTICLE 15.

The Egyptian Government is to be free at any time to establish branch lines with the telegraphic communication hereby conceded. Egyptian Government may establish branch lines.

[Enclosure 8 in No. 3.]

Couvention pour l'établissement des Stations télégraphiques de la ligne sous-marine de la mer Rouge. Preamble.

S. A. Mchemmed-Said Pacha, Gouverneur Général d'Egypte, ayant accordé une concession, en date du 20 Djemad Akher, 1272, pour la construction d'une ligne télégraphique d'Alexandrie à Suez, et pour l'établissement d'une station à Kosseir à M. Francis Gisborne, et à son frère Lionel Gisborne, et leurs concessionnaires et S. M. le Sultan, ayant confirmé la dite concession par son Firman en date du commencement de Ramazan de la même année le Gouvernement Impérial Ottoman accorde à M. M. Lionel et Francis Gisborne et à leurs concessionnaires la concession dont les conditions sont déterminées par les articles suivants pour l'établissement des stations télégraphiques, pour le service et l'exploitation des fils sous-marins qui doivent être posés de Suez jusqu'aux Indes.

ART. 1.

Les Sieurs Lionel et Francis Gisborne et leurs concessionnaires pourront poser les sus-dits fils à Jeddah, ou à Sivakin, et à l'île de Camaran ou à un point du Yemen, et dans le cas qu'ils voudront leur faire prendre terre à d'autres points de l'une ou de l'autre côte de la mer Rouge ou sur d'autres îles situées dans cette mer tels points et telles îles seront indiquées au Gouvernement et soumis à son approbation six mois au moins avant la pose des fils. Stations à établir.

Le Gouvernement dera donner sa réponse dans un délai de quatre mois au plus tard à dater du jour ou telle indication lui aura été communiquée autrement son consentement sera censé avoir été donné. Tous les arrangements spéciaux relatifs à la station de Jeddah, seront au préalable convenus avec le Gouvernement.

ART. 2.

Les Sieurs Lionel et Francis Gisborne et leurs concessionnaires pourront établir des stations aux points où prendront terre les sus-dits fils. Stations à établir.

ART. 3.

Les Sieurs Lionel et Francis Gisborne et leurs concessionnaires pourront établir poser entretenir et exploiter les sus-dits fils et stations aux points où ceux-là prendront terre à leurs seuls frais pendant quatre-vingt-dix-neuf années à dater de l'ouverture de la ligne télégraphique concédée par les présentes. Maintien des fils et Stations pendant 99 ans.

ART. 4.

Les Sieurs Lionel et Francis Gisborne et leurs concessionnaires auront le pouvoir de nommer de payer et de congédier à leur volonté tous les employés nécessaires à l'établissement à l'entretien et à l'exploitation des sus-dits fils et stations aux points où ceux-là prendront terre. Nomination des employés.

ART.

ART. 5.

Gouvernement
cède terrain pour
Stations pour 99
ans.

Les Sieurs Lionel et Francis Gisborne et leurs concessionnaires auront la jouissance des terrains et constructions nécessaires à l'établissement et à l'entretien des sus-dits fils et stations aux points où ceux là prendront terre et le Gouvernement Ottoman cèdera trente mètres soit quarante cinq piques au maximum en longueur et autant en largeur pour l'emplacement de chaque station à titre de bail gratuit pour 99 années. Si le Gouvernement ne possède pas le terrain disponible il achètera le terrain d'un particulier et le donnera à titre de bail. Les Sieurs Lionel et Francis Gisborne et leurs concessionnaires acquitteront toutefois les charges et impôts aux quels les dits terrains et constructions seront assujettés d'après les lois du lieu où ils se trouvent.

ART. 6.

Cie. cédera un fil
un Govt. sous
certain condi-
tions.

Les Sieurs Lionel et Francis Gisborne et leurs concessionnaires s'obligent à mettre à la disposition exclusive du Gouvernement Impérial un des fils télégraphiques d'Alexandrie à Jeddah ou à la dernière station au Sud sur le territoire Ottoman pour toute la durée de la concession aux conditions qui seront déterminées entre le Gouvernement et les dits concessionnaires.

ART. 7.

Transmission
des dépêches
officielles.

Les dépêches officielles du Gouvernement Ottoman et de tout autre Gouvernement seront transmises par priorité sur les dépêches privées et d'après l'ordre de leur remise à la station télégraphique. Pour les dépêches officielles appartenant à des Gouvernements différents et qui seront remises simultanément ou suivra dans la transmission la règle de l'alternât.

ART. 8.

Transmission
des dépêches
privées.

Les dépêches privées seront transmises d'après l'ordre de leur remise à la station télégraphique.

ART. 9.

Matériaux
exemptés de
douane.

Les matériaux et les mécanismes nécessaires pour l'établissement et l'entretien des fils et stations de la mer Rouge jouiront de l'exemption des droits de douane.

ART. 10.

Gouvernement
protégé les
Stations.

Les sus-dits fils et stations aux points où ceux-là prendront terre seront surveillés et protégés par le Gouvernement Ottoman partout où il aura un agent d'autorité sans qu'il puisse en résulter aucune responsabilité pour la Sublime Porte.

ART. 11.

Gouvernement
peut établir
embranche-
ments.

Le Gouvernement Ottoman aura la faculté en tous temps de faire établir pour son compte de nouveaux fils télégraphiques dans la mer Rouge et de les unir avec les sus-dits fils des Sieurs Lionel et Francis Gisborne et de leurs concessionnaires.

ART. 12.

Dépêches locales
sous contrôle du
Gouvernement.

Toute dépêche adressée à une personne quelque soit qu'elle se trouve sur le territoire Ottoman ne lui sera communiquée que par l'intermédiaire d'un Agent du Gouvernement Ottoman. Toute dépêche expédiée originairement du territoire Ottoman sera remise aux stations sur le territoire Ottoman par l'intermédiaire d'un agent du Gouvernement.

ART. 13.

Taxe de 5 pour
cent sur
dépêches locales.

Les Sieurs Lionel et Francis Gisborne et leurs concessionnaires devront attribuer au Gouvernement Ottoman cinq pour cent sur les recettes annuelles de toutes les dépêches indistinctement qui passeront par la ligne de la mer Rouge provenant originairement de Suez ou de tout autre point du territoire Ottoman en destination pour les provinces de Jeddah ou Yemen ou de ces deux provinces en destination pour Suez sur toute autre partie de l'Empire Ottoman. Il est entendu que les dites recettes ne seront dans aucun cas calculées sur un parcours plus long que celui d'Alexandrie à la dernière station vers les Indes du territoire Ottoman dans la mer Rouge.

ART. 14.

Changement
dans le tarif des
dépêches locales.

La diminution ou l'augmentation du tarif des dépêches officielles et privées mentionnées dans l'article treize ne pourra avoir lieu qu'après une entente préalable avec le Gouvernement.

ART. 15.

Govt. possèdera
la ligne après,
99 ans.

Si à l'expiration de la durée de la concession le Gouvernement ne la renouvelle pas les stations et les fils de Suez à la dernière station vers les Indes sur le territoire Ottoman dans la mer Rouge à l'époque de la dite expiration lui appartiendront à titre gratuit.

ART. 16.

Terme de la pose
des lignes de la
Méditerranée et
de la mer Rouge.

Cette concession est accordée sous la condition expresse que la ligne sousmarine du Cap Helles à Alexandrie sera posée dans un délai de deux ans au maximum de la date des présentes et que la ligne de la mer Rouge sera posée dans un délai de deux ans au maximum à partir du jour de l'ouverture de la ligne du Cap Helles à Alexandrie. Si à l'expiration de ces délais ces lignes ne sont pas posées la présente convention sera considérée comme nulle et non avenue.

ART. 17.

Cie. soumise
quant aux
stations aux lois
générales de
l'Empire.

En tout ce que concerne les stations télégraphiques concédées par les présentes sur les côtes et les îles Ottoman dans la mer Rouge Les Sieurs Lionel et Francis Gisborne et leurs concessionnaires seront dans leur ensemble soumis aux lois et réglemens généraux de l'Empire existants ou à intervenir de même que les individus destinés au service de ces stations seront individuellement sous la protection de la nation à laquelle ils appartiennent et toute

toute action civile ou criminelle intentée contre eux aura cours suivant les antécédens établis en pareils cas. Il est entendu toutefois que les dépêches qui ne font que traverser le territoire Ottoman en route à leur destination ne sont soumises à aucun contrôle on surveillance de la part du Gouvernement.

Dépêches en transit soumises à aucun contrôle.

ART. 18.

Le cas survenant quel y ait un différend entre la Compagnie qui exécutera la ligne de la mer Rouge et le Gouvernement Ottoman une Commission mixte sera nommée de membres désignés ou nombre égal de part et d'autre lesquels avant d'examiner la question éliront un Président et procéderont alors à la détermination de la matière qui leur sera soumise à la majorité des voix et sans appel le Président ne votant qu'en cas de partage égal des voix.

Arbitrage sur différend entre Cie. et gouvernement.

La Présente convention a été vue et examinée au Conseil du Télégraphe d'abord et au Haut Conseil du Tanzimat ensuite ainsiqu'au Conseil des Ministres d'état et a été soumise à S. M. le Sultan qui ayant donné ses ordres y relatif la dite convention a été faite signée et scellée en double dont l'une vient d'être remise au Sieur Francis Gisborne. [Translation from the French original.]

CONVENTION for the establishment of the Telegraph Stations of the Submarine Line of the Red Sea.

H. H. MEHEMMED Said Pasha, Governor General of Egypt, having granted a concession dated 20 Djomad Akhir, 1272, for the construction of a Telegraph Line from Alexandria to Suez, and for the establishment of a Station at Kosseir, to Mr. Francis Gisborne and his brother L. Gisborne, and their concessionaires, and H. M. the Sultan, having confirmed the said concession by his Firman, dated the commencement of Ramazan of the same year, the Imperial Ottoman Government grants to Messrs. Lionel and Francis Gisborne, and their concessionaires, the concession of which the conditions are determined by the following Articles for the establishment of Telegraphic Stations for the service and working of the Submarine Wires which are to be laid from Suez to India.

Preamble.

ARTICLE 1.

Messrs. Lionel and Francis Gisborne and their concessionaires may lay the said wires to Jeddah, or to Sivakin, and to the Island of Camaran, or to some point of Yemen; and in case they shall desire to land the said wires at other points of either coast of the Red Sea, or on other islands situated in the said sea, such points and such islands shall be indicated to the Government and submitted to its approval six months at least before the laying of the wires. The Government is to give its answer in an interval of four months at the latest, to date from the day when such indication shall have been communicated to it, otherwise its consent is to be considered as having been given. All the special arrangements regarding the station of Jeddah are to be agreed upon beforehand with the Government.

Stations to be established.

ARTICLE 2.

Stations to be established.

The said Messrs. L. and F. Gisborne, and their concessionaires, may establish stations at the points where the said wires shall land.

ARTICLE 3.

Maintenance of the wires and stations for ninety-nine years.

Messrs. L. and F. Gisborne, and their concessionaires, may establish, lay, maintain, and work the said wires and stations at the points where the said wires shall land, at their exclusive cost, for ninety-nine years, to date from the opening of the telegraph line conceded by these presents.

ARTICLE 4.

Appointment of employes.

Messrs. L. and F. Gisborne, and their concessionaires, shall have the power of appointing, paying, and of dismissing at their will all the employes necessary for the establishment, maintenance, and working of the said wires and stations, at the points where the said wires shall land.

ARTICLE 5.

Government grants land for station for ninety-nine years.

Messrs. L. & F. Gisborne, and their concessionaires, shall have the occupation of the lands and buildings necessary for the establishment and maintenance of the said wires and stations at the points where the said wires shall land; and the Ottoman Government shall grant thirty metres or forty-five piques at most in length and as much in breadth for the site of each station gratuitously, on a lease title for ninety-nine years. If the Government does not possess disposable land, it will buy land from a private individual and will grant it on a lease title. Messrs. L. and F. Gisborne, and their concessionaires, shall pay all the charges and imposts to which the said lands and buildings shall be subject by the laws of the place where they are situate.

ARTICLE 6.

Company to place one wire at the disposal of Government on certain conditions.

Messrs. L. and F. Gisborne, and their concessionaires, oblige themselves to place at the exclusive disposal of the Imperial Government one of the telegraph wires between Alexandria and Jeddah, or the last station to the south on Ottoman territory, for the whole duration of the concession, on the conditions which shall be determined between the Government and the said concessionaires.

ARTICLE 7.

Transmission of official messages.

The official messages of the Ottoman, and every other Government are to be transmitted in priority over private messages, and according to the order of their delivery at the Telegraph Station; as regards official messages, the property of different Governments, which shall be simultaneously delivered at a station, the alternate rule of transmission shall be observed.

ARTICLE 8.

The transmission of private messages.

Private messages shall be transmitted according to the order of their delivery at the Telegraph Station.

ARTICLE 9.

Materials to be exempt from Customs duty.

The materials and instruments necessary for the establishment and maintenance of the wires and stations of the Red Sea shall enjoy exemption from Customs duty.

ARTICLE 10.

Government to protect the stations.

The said wires and stations at the points where the former shall land, are to be watched over and protected by the Ottoman Government, wherever it shall have an agent with authority, without their resulting to the Sublime Port any responsibility on that account.

ARTICLE 11.

Government may establish branch lines.

The Ottoman Government is to have the power at any time to cause to be established on its account separate telegraph lines in the Red Sea, and to join them on to the said wires of Messrs. L. and F. Gisborne and their concessionaires.

ARTICLE 12.

Local messages to be under Government control.

Every message addressed to any person whatsoever who shall be on Ottoman territory, is only to be communicated to him through the medium of an Agent of the Ottoman Government. Every message originally expedited from Ottoman territory is to be delivered at the stations on Ottoman territory through the medium of an Agent of the Government.

ARTICLE 13.

Duty of 5 per cent. on local messages.

Messrs. L. and F. Gisborne, and their concessionaires, are to set apart for the Ottoman Government five per cent. on the annual receipts from all messages indistinctively which shall pass through the Red Sea line, whose point of departure shall originally be from Suez or any other point of Ottoman territory in destination for the provinces of Jeddah or Yemen, or whose point of departure shall be from those two provinces in destination for Suez or any other portion of the Ottoman Empire; it is, nevertheless, to be understood that the said receipts are in no case to be calculated upon a longer transit than that from Alexandria to the last station towards India on Ottoman territory in the Red Sea.

ARTICLE 14.

Alteration in the tariff of local messages.

The lowering or raising of the tariff of the official and private messages mentioned in Article 13, is not to take place without a previous understanding with the Government.

ARTICLE 15.

Government have reversion after 99 years.

If at the expiration of the duration of the concession the Government does not renew it, the stations and wires from Suez to the last station towards India on Ottoman territory in the Red Sea, at the date of the said expiration, are to belong to it gratuitously.

ARTICLE 16.

ARTICLE 16.

This concession is granted on the express condition that the submarine line from Cape Helles to Alexandria is to be laid within an interval of two years at the utmost from the date of these presents, and that the Red Sea line is to be laid within an interval of two years at the utmost from the day of the opening of the line from Cape Helles to Alexandria; if, at the expiration of these intervals, the said lines are not laid, the present convention is to be considered null and void.

Period for the laying of the Mediterranean and Red Sea lines.

ARTICLE 17.

In all that concerns the telegraph stations conceded by these presents on the Ottoman Coasts and Islands in the Red Sea, Messrs. L. & F. Gisborne, and their concessionaires, shall, in their corporate capacity, be subject to the general laws and regulations of the Empire which exists or shall come into force in the same manner as the private individuals affected to the service of such stations shall individually be under the protection of the nation to which they shall belong; and every civil or criminal proceeding commenced against them, is to take its course according to the precedents established in such cases. It is nevertheless to be understood, that the messages which only traverse Ottoman Territory in transitu to their destination, are subjected to no control or supervision on the part of the Government.

At the stations the Company to be subject to the general laws of the Empire.

Through messages to be subject to no control.

ART. 18.

In the event of there arising any matter, in difference between the Company who shall carry out the Red Sea Line, and the Ottoman Government, a mixed commission is to be appointed of members designated in equal numbers by either side, who before examining the matter are to elect a President, and shall then proceed to the determination of the matter, which shall be submitted to them by a majority of votes, and without appeal the President only voting, in the event of an equal division of the votes.

Arbitration in matters in difference between the Company and Government.

The present convention has been submitted to and examined by the Telegraph Council, in the first place, and next by the High Council of Tanzimat, as well as by the Council of the Ministers of State; and has been submitted to H. I. M. the Sultan, who having issued his orders to that effect, the said convention has been done, signed, and sealed, in duplicate of which one has just been handed to Mr. Francis Gisborne.

Done at Constantinople, the twenty-sixth Rebiuel Akhir, 1273, of the Hegira, or the 24th December, 1856.

(L.S.) The Minister of the Foreign affairs of H. M. the Sultan Ibrahim Edhem.

I certify the above to be the true and authentic seal of H. M. Ibrahim Edhem Pacha, Minister of Foreign Affairs.

Pera of Constantinople.

AN ACT (as amended in Committee) to incorporate the Red Sea and India Telegraph Company, and for enabling the Company to establish and work Telegraphs between Great Britain and India and other countries, and for other purposes connected therewith.

Preamble.
Constitution of
Company under
Joint Stock
Companies Act.

WHEREAS in the month of July, one thousand eight hundred and fifty-eight, a Joint Stock Company was duly constituted under "The Joint Stock Companies Act, 1856," by a memorandum of association filed in accordance with the said Act, whereby it was declared that the name of the Company was "The Red Sea and India Telegraph Company" (Limited); that the registered office of the Company was to be established in England; that the object for which the Company was established was to establish telegraphic communication between England and India by the Red Sea; that the liability of the shareholders was limited; and that the nominal capital of the Company was eight hundred thousand pounds divided into forty thousand shares of twenty pounds each:

And whereas all the said forty thousand shares have been subscribed for and issued:

And whereas by an indenture of agreement, bearing date the eighteenth day of November, one thousand eight hundred and fifty-eight, and made between the Right Honorable Edward Geoffrey, Earl of Derby, and the Right Honorable Benjamin Disraeli, two of the Lords Commissioners of Her Majesty's Treasury, of the one part, and the Company of the other part (a copy of which indenture is set forth in the Schedule to this Act), it was agreed that the Company should lay down a line of electric telegraph from Alexandria to Kurrachee by the Red Sea and Aden, and that the construction and laying down of such line of telegraph should be commenced forthwith and proceeded with with all diligence, upon such terms and conditions as in the said agreement were mutually agreed upon:

And whereas the telegraphic cable or wire intended to be laid down by the Company is in course of being constructed, and agreements have been entered into by the Company with contractors and other persons in order to the completion and working of their said telegraph,

telegraph, and the Company are otherwise engaged in carrying out the objects for which they were so constituted :

And whereas the said undertaking is one of great public and national importance, and it is desirable, in order to the better and more speedy execution of the same, that the Company as originally constituted should cease to exist, and that the present shareholders therein should be incorporated by special Act of Parliament, and that the Company so incorporated should be substituted for the original Company, and that powers should be conferred upon the Company so incorporated to execute all works necessary and convenient for the purposes of their undertaking; but these objects cannot be effected without the authority of Parliament :

May it therefore please YOUR MAJESTY,

That it may be enacted, and be it enacted by the QUEEN'S Most Excellent MAJESTY, by and with the advice and consent of the Lords Spiritual and Temporal and Commons in this present Parliament assembled, and by the authority of the same as follows (that is to say);

I. This Act may be cited for all purposes as "The Red Sea and India Telegraph short title.
" Act, 1859 "

II. The following words or expressions shall have the several meanings hereby Interpretation.
assigned to them, except where the subject or context shall be inconsistent therewith (that is to say): the expression "the original Company," shall mean "the Red Sea and India Telegraph Company (Limited)," as constituted immediately before the passing of this Act: the expression "the Company," shall mean the Company incorporated by this Act: the word "share," shall include "stock:" the word "shareholder," shall include stockholder: and the word "India," shall mean the territories vested in Her Majesty, by the Act 21 and 22 Victoria, chapter 106.

III. "The Companies Clauses Consolidation Act, 1845," shall be incorporated with Act of 8 and 9
Vict., c. 16, in-
corporated.
and form part of this Act, and shall apply to the Company in India and elsewhere, as well as in England, and shall be construed and have effect accordingly; and in the construction of that Act, for the purposes of this Act, and also in the construction of this Act, the following words and expressions shall have the following meanings, except where the subject or context shall be inconsistent therewith (that is to say):

The expression "superior courts," shall include Her Majesty's supreme courts of judicature at the several Presidencies in India respectively:

The word "justice," and the expression "master in chancery," shall respectively include a justice of the peace or magistrate in India, or any officer authorized to take an affidavit or declaration in the supreme court of any Presidency in India:

The expression "two justices," shall mean, with respect to India, any one justice of the peace or magistrate in India, and whatsoever proceedings or act for the purposes of this Act, if had or done in England, might be had or done by, under, before, or with respect to two justices, may, if had or done in India, be had or done by, under, before, or with respect to any one justice of the peace or magistrate in India.

IV. The Red Sea and India Telegraph Company (Limited), as constituted under Cesser of exist-
ing constitution
of Company.
"The Joint Stock Companies Act, 1856," shall, as from the time of the passing of this Act, cease to exist.

V. The several persons and corporations who immediately before the passing of this Existing pro-
priators incor-
porated
Act were respectively the holders of the shares in the original Company, shall become and be shareholders in the Company hereby incorporated, and they and all other persons and corporations who shall from time to time become shareholders in the last-mentioned Company, and their executors, administrators, successors and assigns respectively, shall, while respectively continuing to be such shareholders, be united into and be a Company for the purposes herein mentioned, by the name of "The Red Sea and India Telegraph Company," and by that name shall be a body corporate, with perpetual succession, and shall have power to purchase and hold lands in England and in India and elsewhere for the purposes of this Act.

VI. Upon the passing of this Act, all lands, property, rights and privileges of or to Existing pro-
perty to be vested
in the Company.
which the original Company or any person in trust for them was possessed or entitled immediately before the passing of this Act, and all moneys due or accruing due, and all securities, books, accounts, documents and choses in action belonging to the original Company immediately before the passing of this Act, shall be and are hereby vested in the Company hereby incorporated for such estate or interests as the original Company or their trustees had in the same; to hold to the Company, their successors and assigns, for the purposes of this Act, subject nevertheless to such charges and liabilities as the same premises were respectively subject to immediately before the passing of this Act.

VII. All deeds, contracts, and agreements entered into or made by the original Com- Contracts prior
to Act to be
binding.
pany, or by the subscribers of the said memorandum of association acting on behalf of the original Company, and now in force, shall bind and be enforceable against the Company hereby incorporated, and shall also be enforceable by the Company against the respective persons and corporations parties thereto or liable thereon, in the same manner and to the same extent as if the same respectively had been entered into or made by the Company hereby incorporated instead of the original Company.

VIII. This Act shall not release, discharge, or suspend any action, suit, or other pro- Action, &c., not
to abate.
ceeding at law or in equity, which shall be pending against the original Company, or to which the original Company shall have been a party at the time of the passing of this Act; but such action, suit, or other proceeding may be maintained, prosecuted or continued, and execution had thereon, by or in favour of or against the Company hereby incorporated, in the same manner as if the Company were the original Company.

IX.

- Rights of action saved.** IX. This Act shall not prejudice or affect any right of action or suit, or any remedy which the original Company may now have, or, but for the passing of this Act, might afterwards have had, against any person and Corporations, or which any person and Corporations may now have, or but for the passing of this Act, might afterwards have had, against the said last-mentioned Company, but such rights and remedies may be enforced or prosecuted by or against the Company hereby incorporated, in like manner and with the same effect as if the Company were the original Company; and all debts owing to or by the original Company immediately before the passing of this Act may be sued for and recovered by or against the Company hereby incorporated, in the same manner as, but for this Act, they might have been by or against the original Company.
- Certificates and transfers to remain in force.** X. All certificates, sales, transfers or dispositions and agreements, made or executed of, or in respect of, any share in the original Company, shall be of force and effect as certificates, sales, transfers, or dispositions and agreements respectively, of or in respect of the corresponding shares in the Company hereby incorporated.
- Officers under existing Company to account.** XI. All officers and persons who immediately before the passing of this Act shall have had in their possession or under their control, any money, books, documents, papers, securities, goods, and other effects, belonging to the original Company, shall account for and deliver up the same respectively to the Company hereby incorporated, or to such persons as they shall appoint to receive the same, in the same manner, and subject to the same process and penalties for refusal or neglect, as if such officers or persons had been appointed, and had become possessed of such money, book, documents, papers, securities, goods or other effects under the provisions of this Act.
- Present officers continued.** XII. All officers and persons who shall be in the service of the original Company, at the time of the passing of this Act, shall continue in the service of the Company hereby incorporated, in the same respective offices and employments, according to their respective appointments, until removed therefrom according to the provisions of this Act, and all such officers and persons shall have the same powers and privileges, and they and their respective sureties shall be liable to the same conditions, penalties, obligations and regulations, as if such officers and persons had been appointed, and such sureties had become bound under this Act.
- Saving previous rights and liabilities.** XIII. Notwithstanding the change of name of the Company by this Act effected, and except only as by this Act otherwise expressly provided, everything before the passing of this Act done and suffered by the original Company shall be as valid as if this Act were not passed; and such change of name and this Act, respectively, shall accordingly be subject and without prejudice to everything so done and suffered respectively, and to all rights, liabilities, claims and demands, both present and future, which, if such change of name had not happened, and this Act were not passed, would be incident to and consequent on any and every thing so done and suffered respectively, and with respect to all such rights, liabilities, claims and demands, the Company shall, to all intents and purposes, represent the original Company: Provided always, that the generality of this enactment shall not be restrained by any of the other provisions of this Act.
- Present capital.** XIV. The present capital of the Company shall consist of the said sum of eight hundred thousand pounds, divided as aforesaid, into forty thousand shares of twenty pounds each.
- Shareholders in existing Company to be shareholders in new Company.** XV. Every person who, immediately before the passing of this Act, was the holder of one or more shares in the original Company shall, immediately after the passing of this Act, become entitled to the same number of shares in the Company hereby incorporated as he previously held in the capital of the original Company, which shares shall be indicated in the register by the same number as and be made in all respects to correspond as nearly as possible with those held by him in the original Company.
- Power to increase the capital.** XVI. The Company may by a resolution passed with the assent of two-thirds of the votes of the shareholders voting personally or by proxy at any general meeting of the Company convened with notice of such object, from time to time increase the capital of the Company, so as the total amount of capital, including the present capital, shall not exceed the sum of one million five hundred thousand pounds sterling, and for that purpose may from time to time create a sufficient number of additional shares of twenty pounds each as they may by such resolution determine, and such new or additional shares shall be allotted and issued by the Board of Directors to such persons on such terms, and subject to such conditions as may be prescribed by such resolution, or (if not thereby prescribed) as the Directors may in each such case think fit.
- New or additional capital to be part of general capital.** XVII. Any capital to be raised by the creation of new shares shall be part of the general capital of the company, and shall be subject to the same provisions, with reference to the payment of calls, or the forfeiture of shares for non-payment of calls, or otherwise, as the original capital, except as to the times for making calls for such additional capital and the amount of such calls which respectively the Directors may and shall fix, as they shall think fit: Provided always, that no portion of such additional capital shall be entitled to the guarantee of interest under the said recited indenture, unless such portion shall be required for the purpose mentioned in the eighteenth clause of the same indenture.
- In case of increase of capital separate accounts to be kept.** XVIII. In the event of any increase of the capital of the company under the powers of this Act, beyond the amount guaranteed under the said recited indenture, the Company shall keep a separate account of the receipts from and expenditure upon that portion of their undertaking, in respect of which such guarantee has been given.
- Ordinary meeting.** XIX. The ordinary general meetings of the Company shall be held some time in the month of February in each year, or within twenty days next after, and the first of such ordinary general meetings shall be held some time in the month of February next, after the passing of this Act, or within twenty days next after that month.
- XX.

- XX. The number of shareholders who shall be entitled to require the Directors to convene an extraordinary meeting shall be ten at least, holding shares of an aggregate nominal amount of not less than fifteen thousand pounds. Extraordinary meetings.
- XXI. Every general meeting shall be held in London, at the Company's principal office for the time being, or at such other convenient place within five miles thereof, as the Directors shall from time to time appoint. Place of holding meetings.
- XXII. The quorum of every general meeting shall be twenty shareholders holding shares of an aggregate nominal amount of not less than fifty thousand pounds. Quorum of general meeting.
- XXIII. At all general meetings of the Company, every shareholder shall be entitled to one vote for every share up to ten, and he shall have an additional vote for every five shares beyond the first ten shares held by him up to one hundred, and an additional vote for every ten shares held by him beyond the first hundred shares. Votes of shareholders.
- XXIV. The principal office of the Company and its corporate domicile shall be in London. Principal place of business.
- XXV. The number of Directors shall for the present be eight, but a general meeting may, with the consent in writing of the Lords Commissioners of Her Majesty's Treasury, from time to time increase or reduce the number of Directors, provided that the whole number be not more than fourteen or less than six, and may make and direct the necessary changes in the rotation of their retirement. Number of Directors.
- XXVI. The qualification of a Director shall be the holding in his own right of shares of an aggregate nominal amount of not less than one thousand pounds. Qualification
- XXVII. Sir Samuel George Bonham, Baronet, Sir Rowland Macdonald Stephenson, John Clark Marshman, William Dent, Samuel Gregson, William Hutcheon Hall, Eric Carrington Smith, and Alexander Wilson, shall be the first Directors of the Company. First Directors.
- XXVIII. The Board of Directors shall from time to time fix the number necessary to constitute the quorum of a meeting of Directors, so as the number shall never be less than three. Quorum of Directors.
- XXIX. The number of Directors of which committees appointed by the Directors shall consist, shall not be less than two, nor more than six, and the quorum of each such committee shall be such number as the Board of Directors shall prescribe. Committees of Directors.
- XXX. The qualification of an auditor shall be the holding, in his own right, of shares of an aggregate amount of not less than two hundred pounds. Qualification of Auditor.
- XXXI. The remuneration of the Directors and of the auditors shall from time to time be fixed by a general meeting of the Company, and paid out of the funds of the Company, but shall be subject to the approval of the Lords Commissioners of Her Majesty's Treasury. Remuneration of Directors and Auditors.
- XXXII. In addition to the ordinary Directors of the Company above-mentioned, it shall be lawful for the Lords Commissioners of Her Majesty's Treasury to appoint two ex officio Directors on behalf of Her Majesty's Government, for the purpose of seeing to and securing as well the due fulfilment by the Company of their contracts for the time being in force with the Government for the transmission of messages and signals for Her Majesty, or on Her Majesty's service, as the working of the Company's electric telegraphs, with due attention to the wants and interests of the public. Ex officio Directors on behalf of Government.
- XXXIII. Such ex officio Directors shall not go out of office by rotation in the same manner as the other Directors of the Company, but the said Lords Commissioners may at any time remove from his office any such ex officio Director, and may appoint a new ex officio Director in the place of any one dying, retiring, or being removed. Ex officio Directors not to retire.
- XXXIV. Such ex officio Directors may be shareholders in the Company or not, as the said Lords Commissioners shall think fit: they shall be entitled to be present at all meetings of the Directors and of the Company, and to take part in all discussions thereat, and to inspect and examine all minute books, books of account, and other books and accounts of the Company, but they shall not have a right of vote, and no remuneration shall be paid them by the Company. Powers of ex officio Directors.
- XXXV. Such ex officio Directors or any such ex officio Director shall have power, in case they or he shall be of opinion that any course proposed to be taken or act proposed to be done by the Company will or may be prejudicial to or inconsistent with the due fulfilment of their contracts with the Government or the regular, speedy, and impartial transmission of messages and signals for the public, or otherwise disadvantageous to the Government or the public, to veto the taking of such course or the doing of such act, and to require that the matter shall be submitted to the Lords Commissioners of Her Majesty's Treasury for their decision; and the said Lords Commissioners shall thereupon decide whether or not the objections of such ex officio Directors or Director was well founded, and whether or not such course shall be taken or act be done, and the decision of the said Lords Commissioners thereon shall be final and conclusive upon the Company, unless the Board of Directors shall, within seven days after the decision of the said Lords Commissioners shall have been notified to them, give to the said Lords Commissioners notice in writing that they are dissatisfied with such decision, and in that case the matter shall be referred to any two of the judges of Her Majesty's superior courts of common law at Westminster who shall be willing to hear and determine the same, and the decision of such two judges, as to whether or not such objection was well founded, and whether or not such course is to be taken or act to be done by the Company, shall be final and conclusive on all parties. Special power of ex officio Director to veto proceedings in certain cases, and references thereon.
- XXXVI. Except as is otherwise provided by this Act, every ex officio Director appointed by the said Lords Commissioners shall have the same rights and powers as any other Director of the Company. Ex officio Directors to have same right as other Directors, except where otherwise provided.
- XXXVII. The Company, from time to time, may appoint and remove such committees, persons, or person, as the Company think fit to act on behalf of the Company in India, or elsewhere, with respect to the laying down, maintaining, working, and using of their Committees in India, &c.

their telegraphic cables, or their lines of telegraph, and the control and conduct of any of the affairs in India, or elsewhere, of the Company, and may delegate to any such committee, persons and person respectively, all or any of the powers of the Company, and of the Directors and officers thereof, which the Company think it expedient that such committee, persons and person respectively, should possess for the purposes of their or his respective appointment.

Regulation of Committees.

XXXVIII. The Company may from time to time determine the quorum of any such committee or persons, and may determine and regulate the authority, duties, procedure, liabilities and remuneration of any such committee, persons and person respectively, and generally may make such provisions and regulations for their and his respective government and conduct as the Company think expedient.

Validity of acts of such Committees.

XXXIX. All the proceedings and acts of such committees, persons and person respectively, within their and his respective authority, shall (but subject to any regulations of the Company requiring such proceedings and acts or any of them to be confirmed by the Directors) be as valid and effectual as if they were proceedings and acts of the Directors.

Indemnity Committees.

XL. The committees, persons and person respectively, so from time to time appointed, shall, with respect to all their and his lawful proceedings and acts, within the limits of the authority conferred on them and him respectively, have the like discretions and indemnities, as if they and he respectively were or was Directors or a Director of the Company.

Undertaking of the Company.

XLI. The undertaking for which the Company is incorporated shall be the constructing and laying down of one or more submarine telegraphic cables or wires, or other telegraphic communication, between Alexandria or some other place in Egypt and India by way of the Red Sea, and if ultimately thought desirable, between Great Britain and India, by the same or by such other routes as may be deemed advisable, with such branches and extensions as may be found necessary or expedient, and the working and using the said line or lines of telegraph for the transmission of messages.

Power to lay down wires.

XLII. For the purpose of better enabling the Company to complete and maintain the said line or lines of telegraphic communication, it shall be lawful for the Company to place, lay down and maintain upon, over, and along the shore of the sea, or of any bay or inlet of the sea, on the coast of India, below high-water mark of the highest spring tide, any cables, wires, works, or apparatus for the purposes of any telegraph belonging to or to be established by the Company, and from time to time to alter and repair the same respectively, and in order to and in the course of such placing, laying down, altering and repairing, to dig up and cut channels in the said shore or shores below such high-water mark, and to construct, lay down, moor, fix and maintain in the direction of any of such lines of telegraph, such buoys, sea-marks and other things of the like kind for indicating the position and direction of such lines of telegraph as they may from time to time think fit; the Company, in the execution of such works, doing as little damage as may be, and making compensation for all damage to be caused thereby: Provided always, that nothing in this Act contained shall exempt the Company in the execution of such works from the jurisdiction of the Secretary of State in Council of India, of the Governor General or Governor of any Presidency in India, or other Government authority having jurisdiction over any such shore, bay, or inlet.

Saving clause for London Commissioners of Sewers.

XLIII. Provided always, that it shall not be lawful for the Company to take up the pavement or soil of any street or place within the City of London or the liberties thereof for the purpose of laying down any wire, pipe or tube, or for any purpose whatsoever, without the consent in writing of the Commissioners of Sewers of the City of London, under the hand of their clerk first had and obtained for that purpose, and under and subject in all respects to the powers and provisions contained in the "City of London Sewers' Act, 1848," and that nothing in this Act contained shall extend to prejudice, alter, or take away any of the rights, powers, or authorities vested in the Commissioners of Sewers of the City of London, but all the rights, powers, and authorities vested in them shall be as good, valid and effectual as if this Act had not been passed.

Works connected with the Thames to be executed under the direction of the Conservators of the river.

XLIV. All works executed under the authority of this Act in or connected with the river Thames, or the towing path thereof, within the jurisdiction of the Conservators of the river Thames, shall be executed according to a plan to be approved by such Conservators, and to be deposited at their office, and such works shall be executed and performed to the satisfaction of the engineer for the time being of such Conservators, and that nothing in this Act contained shall extend to prejudice or derogate from the estates, rights, interests, liberties, privileges or franchises of the Conservators of the river Thames, or to prohibit, defeat, alter, or diminish any power, authority, or jurisdiction which at the time of the passing of this Act the said Conservators did or might lawfully claim, use, or exercise.

Power to agree with other Electric Telegraph Companies for facilitating telegraphic communication.

XLV. The Company shall be authorized and empowered to enter into and make with all other Companies and persons now or at any time hereafter owning or working any electric telegraph or other telegraphic communication in England or India, or elsewhere, and with any one or more of them, such agreements or arrangements for the working or using of any line of electric or other telegraphs in England or India, or elsewhere, and whether submarine or not, or for the through or onward transmission of messages and intelligence requiring to be transmitted by or along any line of telegraph of any such other Company or person, as well as those of the Company hereby incorporated, and for the payment or apportionment of the rates or charges to be made for such use or for such through or onward transmission, or any services connected therewith, and generally as to the terms on which the lines of telegraph of this Company and of the other Companies and persons respectively are to be worked in connection, as the parties to any such agreement or arrangement may from time to time agree on and determine.

Company may become interested in certain patents.

XLVI. The Company may agree with the original grantee of any letters patent granted to any person for any inventions or improvements or additions to inventions of electric telegraphs, or of the apparatus thereof, or of the giving or transmitting of signals,

or

or of the regulating the transmitting or applying of electric currents, or other processes for the purposes of telegraphic communication, or which may be available for the purposes of the Company, or with any person in whom, for the time being, any such patent and privileges, or any part thereof, may be vested for the granting to them of the license or permission to use the privileges, or any of them, granted by the said letters patent, and may accordingly purchase and become entitled to the same, and accept such grant upon such terms and conditions as they may in any such case agree on.

XLVII. In case the Company shall, in pursuance of the Acts of Parliament 5 and 6 William Fourth, chapter 83, or the 7 and 8 Victoria, chapter 69, or of "The Patent Law Amendment Act, 1852," obtain the leave of Her Majesty's Attorney General or Solicitor General for England or Ireland, or of Her Majesty's Lord Advocate or Solicitor General for Scotland, to enter at the office, in the last-mentioned Act prescribed in that behalf, any disclaimer of any part of either the title of the invention mentioned or comprised in any letters patent belonging to the Company, or of any part of the specification of any such invention, or to enter in such office a memorandum of any alteration in any such title or specification as aforesaid, such disclaimer or memorandum of alteration may be made under the seal of the Company, and signed by two Directors of the Company, and when so made may, in pursuance of such leave as aforesaid, be entered, filed, and enrolled according to the provisions of the said Acts respectively, and no acknowledgment of any such disclaimer or memorandum of alteration shall be necessary previous to the enrolment thereof.

Disclaimer may be made under the Company's seal.

XLVIII. The Company shall be entitled to demand, receive and recover from all persons from whom any messages or signals shall be transmitted by the Company by means of any telegraph belonging to them or under their control, such reasonable charges as they shall think fit, and such charges may be demanded and taken either by them or on their behalf by any other Company or person by or along whose line of telegraph such messages or signals shall be transmitted before passing to and being transmitted by and along any line of telegraph of the Company, and payment of any such charges may be required to be made before the transmission of such messages and signals, respectively: Provided always, that if, by and under any agreement or any arrangement for the time being in force made under the powers hereinafter contained, with the Lords of Her Majesty's Treasury, the Company shall have bound themselves to demand and receive from the persons transmitting messages and signals by their lines of telegraph certain charges for such transmission, they shall demand, receive and recover those charges only, and no others, and if they shall have so bound themselves to demand and receive from such persons charges not exceeding certain maximum charges, they shall not be entitled to demand, receive, or recover for the transmission of such messages and signals by their lines of telegraph, charges, greater than such maximum charges.

Company may take charges for use of telegraph.

XLIX. The Company shall also be entitled to demand, receive and recover from all persons for whom they shall undertake to transmit and shall transmit any messages or signals along any line of telegraph of any other Company or person after the transmission thereof by and along any of their own lines of telegraph, the through charges as fixed for the time being under any such agreements or arrangements for through transmission as aforesaid, or if there shall not be a fixed through charge, then, in addition to the charges of this Company, to demand, receive and recover on behalf of such other Companies or persons the further charges for such message or signal which may be payable to such other Companies or persons, and no more, for the transmission of the said messages or signals over the lines of telegraph of such last-mentioned Companies or persons, respectively, and such through charges or additional charges (as the case may be) may also be demanded and required to be paid before the transmission of such message and signals respectively.

And also charges for such through transmission by telegraphs of other Companies.

L. The use of the Company's lines of telegraph and of all other lines of telegraph which they may for the time being have the right to use, shall, subject to the rights of priority hereinafter mentioned, and the Company's right of priority for their own purposes, and subject also to such reasonable regulations as may from time to time be made by the Company, be open for the sending and receiving of messages by all persons alike without favor or preference, and, subject to such priority and reasonable regulations respectively, all messages and signals shall be transmitted and delivered according to the order of time in which they shall have been received by the Company.

Lines of telegraph to be open to all persons.

LI. All lines of telegraph constructed or worked by the Company shall at all reasonable times be open for the transmission of intelligence for Her Majesty or on Her Majesty's service, and the Company shall receive, transmit, and deliver all such messages and signals as shall from time to time be tendered for transmission for Her Majesty or on Her Majesty's service.

Electric telegraphs to be open to the use of Her Majesty's Government at all reasonable times.

LII. Any message for Her Majesty or on Her Majesty's service shall at all stations within the territories or dominions of Her Majesty have a right of priority over all other messages whatsoever.

Messages on Her Majesty's service to have priority in Her Majesty's dominions.

LIII. All agreements and arrangements, of what nature or kind soever, which at the time of the passing of this Act shall have been entered into between the Lords Commissioners of Her Majesty's Treasury and the Company, and especially the said indenture of agreement of the eighteenth day of November, one thousand eight hundred and fifty-eight, shall be and continue as valid and effectual to all intents and purposes whatsoever, as if this Act had been passed before the making of such agreements and arrangements, and all such agreements and arrangements are hereby confirmed, and shall and may be enforced against the Company.

Agreements entered into with Treasury confirmed.

LIV. The Lords Commissioners of Her Majesty's Treasury may make and enter into, on behalf of Her Majesty, and all Departments of Her Majesty's Government, such agreements or arrangements with the Company as to the rates or charges to be paid to the Company for the use of their lines of telegraph, and for the assistance of their officers and servants

Power to Treasury to make agreements with Company for use of telegraph on Her Majesty's service.

in the transmission and delivery of messages for Her Majesty or on Her Majesty's service, and may introduce into any such agreements or arrangements such terms and provisions as to the amount of the rates and charges to be demanded, as well from Her Majesty as from the public at large, and as to securing to the Company a minimum annual payment for the transmission and delivery of messages and signals for Her Majesty, or on Her Majesty's service, or a minimum dividend on the capital, and generally in relation thereto, as they may think proper, and may be able to agree on.

Remuneration where no agreement in force.

LV. When there shall be no agreement or arrangement in force as to the amount of such remuneration as aforesaid, the Company shall be entitled to such reasonable remuneration for the use of their lines of telegraph and the assistance of their officers and servants for Her Majesty, or on Her Majesty's service as aforesaid, as shall be determined by arbitration in the manner hereinafter provided; but the Company shall not be entitled to refuse or delay to transmit or deliver any messages or signals for Her Majesty, or on Her Majesty's service, by reason of such remuneration not having been then agreed on or determined.

Arbitration.

LVI. Every such matter to be determined by arbitration as in the last section mentioned, shall be referred to the award of two persons, one to be named by the said Lords Commissioners and the other by the Company; and if such two arbitrators cannot agree as to the amount of such remuneration, then to the umpirage of some third person to be appointed by such two first-named persons previously to their entering on the inquiry, and the said award or umpirage shall be binding and conclusive on all parties thereto.

Further provisions thereon.

LVII. In any such reference each of the parties thereto shall nominate their arbitrator within fourteen days after notice from the other party requiring such nomination, or in default the arbitrator appointed by the party giving such notice shall act as sole arbitrator, and the matter to be determined shall be left to the umpire in case the arbitrators shall not have made their award within three months after the appointment of the one of them last appointed, and if any umpire shall not make his award within three months after the matter shall have been left to him, then a new umpire shall be appointed by the arbitrators, who shall in like manner make his award within three months from his appointment or be superseded, and so toties quoties; and in the event of the arbitrators failing to appoint an umpire, an umpire shall be appointed by the Chief Justice for the time being of the Court of Common Pleas, who is hereby authorized in that behalf.

Power to make arrangements with foreign Governments for transmission of messages for them, and rates.

LVIII. Subject to the provisions of this Act, it shall be lawful for the Company from time to time to make and enter into agreements and arrangements with the Turkish and Egyptian and any other Government for the transmission of messages and signals on the service of such Government, and as to the rates and charges or other remuneration in respect thereof.

Provision for cases of public emergency.

LIX. At all times from and after the opening by the Company of any line of telegraphic communication for the transmission of messages, whenever the Governor General of India, or the Governor of any Presidency in India in which the Company shall for the time being have any station, shall be of opinion that circumstances render it expedient so to do, it shall be lawful for him by warrant under his hand to cause possession to be taken of all the telegraphs and telegraphic apparatus of the various stations of the Company if the warrant be signed by such Governor General within any part of India, or if it be signed by the Governor of any Presidency within his Presidency, for the space of one week from the date of such warrant, for the purpose of preventing any communication being made or signal given, save such as shall be directed and authorized by the officer signing such warrant, and also by further successive warrants to cause possession of the said telegraphs and telegraphic apparatus to be retained from week to week so long as such officer shall deem such possession expedient for the public service: Provided always, that for every week during which possession shall be so taken or retained the Company shall receive from, and be paid by, the said Lords Commissioners the same amount of profits as the Company, their licencees or assignees, might have made in case they had continued the working of the telegraphs of which possession shall be so taken, such profits to be computed upon an average of the weekly profits of the Company for the three months next before the issuing of the first of such warrants, or, in case of successive warrants, of the first of the current series of warrants during which the Company shall have had the uninterrupted working of their undertaking.

In case of extension of Company's lines, same provisions to apply.

LX. In the event of the Company extending their lines of telegraphic communication, the powers contained in the preceding section with reference to causing possession to be taken of the telegraphs and telegraphic apparatus of the Company, and with reference to causing such possession to be retained, shall apply to and may be exercised subject to provisions of the same section by Her Majesty's Government at any station of the Company, for the time being, in Great Britain, and by the Governor of every place within the territories or dominions of Her Majesty at which the Company may for the time being have any station.

Penalty on officers of Company for neglect.

LXI. If any person in the employment of the Company shall wilfully or negligently omit or delay to transmit or deliver any message or signal, or shall wilfully or negligently do any matter or thing whereby the transmission or delivery of any message or signal shall not take place, or shall be delayed or prevented, or shall wilfully or negligently omit to perform any act, matter or thing, by reason whereof any message or signal shall not be transmitted or delivered, or shall be delayed in its transmission or delivery, every such person shall, for every such offence, forfeit a sum of money not exceeding twenty pounds.

Wilfully injuring an electric telegraph a misdemeanor.

LXII. If any person shall wilfully remove, destroy or damage any electric telegraph belonging to or under the control of the Company, and which may have been lawfully constructed, or any apparatus or part of any such telegraph, or any works connected therewith, he shall be guilty of a misdemeanor.

Power to apprehend unknown offenders.

LXIII. Any officer or servant of the Company, and all persons called by any such officer or servant to his assistance, shall or may seize or detain any person who shall or may, in

in the presence of such officer or servant, wilfully have broken, injured or obstructed the working of any telegraph of the Company, or any of the apparatus or works belonging to or connected with the same, and whose name and residence shall be unknown to such officer or servant, and shall convey such offender with all convenient speed before some justice without any other warrant or authority than this Act, and such justice shall proceed with all convenient speed to the hearing and determining of the complaint against such offender.

LXIV. If any person shall wilfully or negligently break, throw down, destroy, or injure any such telegraph apparatus, buoys or works as aforesaid, and shall not on demand make sufficient satisfaction for the damage thereby done, the Company may recover such damages from the person so offending as any two justices think reasonable and adjudge, and the recovery of such damage shall not relieve such person from liability to any other punishment or penalty. Recovery of satisfaction for accidental damages.

LXV. The justice or magistrate by whom any penalty or forfeiture is imposed in India may award to the Company such part thereof as he does not award to the informer. Penalties in India.

LXVI. The appeal from any determination or adjudication of any justice or magistrate in India may be made to the court having ordinary jurisdiction over his adjudications, and the court may hear, proceed on, and determine the appeal accordingly. Appeal from justice in India.

LXVII. The bye-laws from time to time made by the Company to have effect in India shall not be repugnant to the laws of that part of India where they are to have effect, and shall be approved of by such judicial or other authority as the local Government of such part of India may think fit. Bye-laws in India.

LXVIII. The clauses of "The Railways Clauses Consolidation Act, 1845," with respect to the recovery of damages not specially provided for, and of penalties, and to the determination of any other matter referred to justices, shall be incorporated with and form part of this Act, and shall apply to the Company, and be construed in the same manner as is hereinbefore provided with respect to "The Companies Clauses Consolidation Act, 1845." Certain provisions of 8 & 9 Vict., c. 20 incorporated.

LXIX. Nothing in this Act contained shall be deemed to confer upon the Company any monopoly of telegraphic communication from, to, or between any places whatsoever. Act not to confer exclusive privileges.

LXX. All the costs and expenses of and incidental to the applying for and passing of this Act shall be paid by the Company. Expenses of Act.

THE SCHEDULE REFERRED TO IN THE FOREGOING ACT.

An Agreement made the eighteenth day of November, in the year of our Lord one thousand eight hundred and fifty-eight, between the Right Honorable Edward Geoffrey, Earl of Derby, and the Right Honorable Benjamin Disraeli, two of the Lords Commissioners of Her Majesty's Treasury, of the one part, and the Red Sea and India Telegraph Company (Limited), of the other part. Whereas, the above-mentioned Company are incorporated under the "Joint Stock Companies Act, 1856," with a capital of eight hundred thousand pounds, the whole of which has been subscribed for, and ten per cent. upon the amount thereof has been paid up; And whereas, the objects of the said Company are the establishing telegraphic communication between England and India by the Red Sea under concessions granted by the Turkish and Egyptian Governments, and for this purpose they are entering into arrangements for the construction, laying down, and working of a line of telegraph from Alexandria to Kurrachee, by the Red Sea and Aden; And whereas, the last-mentioned line of telegraph when laid down and in work is likely to be extensively used on Her Majesty's service, and it is therefore expedient that the Lords Commissioners of Her Majesty's Treasury acting on behalf of Her Majesty, and the various departments of Her Majesty's Government, should make arrangements with the said Company for the proper transmission and delivery of messages on Her Majesty's service, and for the rates and charges to be made for the same; And whereas, in consideration of the difficulties of the Company's undertaking, and the great importance and value of the said line of telegraph when laid down and in work as well for Her Majesty's service as to the public at large, it has been deemed proper that some encouragement and assistance should be given by the Government to the said Company in the prosecution of their undertaking, and for this purpose the said Lords Commissioners are willing to enter into an agreement, subject to such confirmation as hereinafter mentioned, for guaranteeing to the Company such rate of interest or dividend for such period, and upon such terms as hereinafter mentioned: Now, therefore, the said Lords parties hereto as such Commissioners for Her Majesty's Treasury, for themselves and their successors, and the Red Sea and India Telegraph Company (Limited), for themselves, their successors and assigns, hereby mutually covenant as follows:—

1. That the work to be undertaken by the Company shall be the laying down a line of electric telegraph from Alexandria to Kurrachee, by the Red Sea and Aden, as above-mentioned.
2. That the construction and laying down of the line of telegraph from Alexandria to Aden, and thence to Kurrachee, shall be commenced forthwith, and proceeded with with all diligence.
3. That the Company shall employ for the construction and laying down of the said line of telegraph from Alexandria by Aden to Kurrachee, contractors of high position and extensive experience in telegraphic operations, and shall immediately enter into a contract with such contractors, whereby the contractors shall bind themselves to construct and lay down the said line of telegraph from Alexandria to Aden for a fixed sum, and within a fixed period, at their own risk, and upon their own responsibility, and to hand over the line to the Company in efficient working order.
4. That the Company shall themselves well and efficiently work all their lines of telegraph for the transmission and delivery of messages.
5. That all messages and signals from or to Her Majesty, or on Her Majesty's service, shall, subject to the terms of the concessions from the Turkish and Egyptian Governments, be transmitted and delivered by the Company in preference and priority to all private messages whatsoever, and the rates and charges to be paid for the same shall be the same as may at the time being be paid in the like cases by private persons.
6. That the Lords Commissioners of Her Majesty's Treasury shall guarantee to the Company (subject to such confirmation by Act of Parliament as hereinafter mentioned) that during the period of fifty years from the fourth day of August, in the year of our Lord one thousand eight hundred and fifty-eight, the net receipts available for dividend upon each half-yearly statement of accounts, after payment of working expenses as hereinafter mentioned, shall be equal to interest or dividend at the rate of four-and-a-half per cent. per annum at the least, upon the amount of the capital for the time being bona fide called and paid up for the purpose of the Company's undertaking, not exceeding in any case, except as hereinafter mentioned, the sum of eight hundred thousand pounds, and shall, if and so often as during the said period of fifty years, upon any half-yearly statement

- statement of accounts, the net receipts available for dividend, after the payment of working expenses, shall not be equal to interest or dividend at the rate of two-and-a-quarter per cent. for the half-year upon the above-mentioned amount of capital, pay and make good such deficiency to the Company: Provided always, that in the calculation of the amount to which the Company are entitled upon this guarantee, all capital paid up in the course of the current half-year shall be taken to be entitled to interest or dividend at the above-mentioned rate only, from the time when the same was so paid up: Provided also, that all amounts paid by the Lords Commissioners under this guarantee shall be a charge upon the Company, to be repaid out of future surplus profits, as hereinafter provided.
7. That the Company shall keep proper and accurate accounts of all moneys received and all payments made by them which are properly attributable to "capital account," so as at all times to shew the amount of capital actually called and paid up by them, and the manner in which the same has been expended, and the cash account of the Company shall be kept at the Bank of England.
 8. That the Company shall also keep proper and accurate accounts of all moneys received by them for the working of their lines of telegraph, of all their working expenses, and of all other receipts and payments properly attributable to "Revenue Account," and these accounts shall be made up half-yearly to the first day of January and the first day of July, so as to shew the net receipts (if any) of the half-year.
 9. That a certified abstract and balance sheet of the accounts of the Company, as well upon the capital account as upon the revenue account, and shewing also the appropriation of the net receipts (if any), and the amount (if any) to be paid by the Lords Commissioners upon their guarantee, shall be made out half-yearly to the first day of January and the first day of July in each year during the said period, and shall be presented to the Lords Commissioners within thirty days after those half-yearly days respectively, and all reasonable means and opportunities shall be afforded to the Lords Commissioners, or any persons nominated by them for that purpose, to examine into and verify the correctness of such accounts.
 10. That the working expenses shall be taken to include all expenses of the management of the Company, and all other expenses usually carried to revenue account.
 11. That the working expenses of each half-year shall in the first instance be paid out of the gross receipts upon revenue account of that half-year, and if these shall be insufficient for the purpose, the deficiency shall be made good out of the reserve fund hereinafter mentioned, or, failing that, out of the capital of the Company.
 12. That if upon any half-year, as well during as after the said period of fifty years, the net receipts available for dividend, after payment of working expenses, shall be more than sufficient to pay a dividend at the rate of four-and-a-half per cent. per annum upon the above-mentioned amount of capital, the surplus shall be applied as follows:—
 - (a) If there remains any debt or charge outstanding in respect of payments made in the preceding half-years by the Lords Commissioners under their guarantee, one-third of such surplus shall be applied in or towards the payment of such debt or charge; another third shall be applied towards the formation of a reserve fund, not exceeding ten per cent. on the amount of capital from time to time called up and paid as hereinafter mentioned; and the remainder shall be applied to increase the dividend payable to the shareholders to an amount not exceeding in the whole the rate of ten per cent. per annum upon the paid-up capital of the Company.
 - (b) If there shall be no such outstanding debt or charge, and if the reserve fund shall not at the time being amount to the full sum of ten per cent. as aforesaid, two-thirds of such surplus shall be applied to increase the dividend payable to the shareholders to an amount not exceeding in the whole that above limited; the other one-third, and also any portion of the first-mentioned two-thirds, remaining after the dividend of the shareholders has been increased to the amount above limited, shall be applied to or towards making up the reserve fund after such rate as aforesaid.
 - (c) If there shall be no such outstanding debt or charge, and the reserve fund shall amount to the full sum of ten per cent. as aforesaid, the whole of such surplus shall be applied to increase the dividend payable to the shareholders to an amount not exceeding in the whole that above limited.
 - (d) Any portion of such surplus remaining unappropriated, after the dividend of the shareholders has been increased to the amount above limited, shall be applied either in reduction of the rates and charges of the Company for the transmission and delivery of messages, in the creation of a fund for the redemption of the Government guarantee, or in such other manner as the Lords Commissioners shall from time to time direct or approve.
 13. That the reserve fund shall be applied and used as occasion may require to and for the restoring or replacing of the telegraphic cables and for all repair and maintenance of the telegraphs and telegraphic cables, stations, instruments, and machinery of the Company, not being such as are defined in Article 11 as the ordinary working expenses, and shall also be applied and used in any half-year when the receipts of the Company shall not be sufficient to defray the working expenses to and for or towards the payment of the balance of such working expenses; and if the reserve fund shall not be sufficient for these purposes, or any of them, the further amount required shall be supplied or paid out of the capital of the Company.
 14. That whenever the reserve fund shall be reduced by any payments made out of it below the said amount of ten per cent. as aforesaid, it shall be again raised to that amount in the same manner as upon its original formation. The reserve fund shall be invested, and all interest or profits arising from such investment shall form part of the receipts of the Company upon revenue account.
 15. That in case the Company shall make default, or fail in laying down the line of telegraph from Alexandria to Aden, or, having laid down that line, shall make default or fail in laying down the line of telegraph from Aden to Kurrachee, or shall at any time during the said period of fifty years fail to maintain the said lines of telegraph, or either of them, or to reinstate and restore them if and when necessary, or efficiently to work the said lines, or either of them, for the transmission of messages, the said Lords Commissioners may by notice in writing to that effect, require the Company to give up and transfer their lines of telegraph and other property to the said Lords Commissioners, or to any other department of Her Majesty's Government, and thereupon the Company will, at the expiration of six months from such notice, give up and transfer to the Lords Commissioners, or to such other department of the Government, all their lines of telegraph (if any) then laid, and the benefit of all their concessions with the Turkish and Egyptian Governments, and all their stations, instruments, and machinery, and all their moneys, including the reserve fund, and other property whatsoever, and shall receive and be paid for the same a sum equal to the amount of the capital of the Company so by these presents authorized to be raised at the time being, called and paid up (all debts by the Company being discharged) together with interest thereon at the rate of four-and-a-half per cent. per annum, from the day of the last half-yearly payment of dividend to the day on which such giving up and transfer is to take place.
 16. That the Lords Commissioners shall be entitled to nominate any two persons whom they shall think fit, whether shareholders in the Company or not, to be ex officio Directors of the Company, and represent the Government in the Board of Directors, and shall be entitled at any time to remove

- remove any such Directors, or either of them, and appoint another to act in his stead. The sanction and concurrence of one of the two ex officio Directors shall be necessary to the validity of all contracts made by the Company, to the fixing and altering of the rates and charges for the transmission and delivery of messages, and generally to all proceedings of the Directors and of the Company, and the provisions as to ex officio Directors contained in the "Atlantic Telegraph Act, 1857," shall apply to the ex officio Directors hereby agreed to be appointed.
17. The Board of Directors of the Company shall consist of a Chairman and Vice-Chairman and six Directors, exclusive of the ex officio Directors.
18. That in the event of the Lords Commissioners deciding not to provide ships for laying down the said lines of telegraph as originally contemplated, and of its being necessary or expedient to increase the capital of the Company for the purpose of providing such ships, the guarantee provided for by clause 8 of this agreement shall be extended to such increased capital so to be raised, not exceeding with the eight hundred thousand pounds therein mentioned, the sum of one million sterling.
19. That all questions and differences which may arise between the parties hereto, upon, or in respect of this agreement, or the confirmation thereof, by Act of Parliament as hereinafter mentioned, or the carrying out of this agreement by either party, or the rights or claims of either party thereunder, shall be decided by arbitration in a manner similar to that provided by section 59 and 60 of the said "Atlantic Telegraph Act, 1857," except that if the arbitrators shall fail to appoint an umpire, as in the said Act is provided, the umpire shall be appointed by the Chief Justice of the Common Pleas, and the necessary clauses and provisions for that purpose shall be introduced into the Act hereinafter mentioned.
20. That an Act of Parliament shall be applied for by the Company in the next Session of Parliament, for the purpose of confirming and giving effect to this agreement. The Act shall contain all necessary and proper clauses and provisions for this purpose, which shall be submitted to and approved by the Lords Commissioners, and the Lords Commissioners will sanction and further the application by the Company for such Act of Parliament. In witness whereof, the said Red Sea and India Telegraph Company (Limited) have hereunto caused their common seal to be affixed, and the said other parties have hereunto set their hands and seals, the day and year first above written.

Scaled with the common seal of the Red Sea and India Telegraph Company (Limited), by order of the Board, November, 1855.

C. L. PEEL, Secretary. (L.S.)

Signed, sealed, and delivered by the above-named Earl of Derby and the Right Honorable Benjamin Disraeli, in the presence of William H. Stephenson, Treasury, Whitehall.

DERBY. (L.S.)

B. DISRAELI. (L.S.)

No. 4.

SECRETARY TO CHAMBER OF COMMERCE to THE COLONIAL SECRETARY.

Chamber of Commerce,

Sydney, August 23, 1859.

SIR,

I am instructed by the Chairman of this Chamber to hand you copy of a resolution passed unanimously at a meeting of the Members held yesterday to meet Mr. Francis Gisborne, and hear from him an explanation of his proposal to connect these colonies with England, by means of a Submarine Telegraph.

I have, &c.,

THE HONORABLE

CHARLES COWPER, ESQ.,

COLONIAL SECRETARY,

New South Wales.

HENRY CHERRY,

Secretary.

Moved by Thomas C. Breillat, Esq., seconded by Jacob L. Montefiore, Esq., and carried unanimously,—

"That this Chamber, fully recognising the great importance to this Colony of
"Telegraphic Communication with the Mother Country, are of opinion that
"a plan somewhat similar to that suggested by Mr. Gisborne is the most
"feasible for attaining that object: And, therefore, recommend the proposals
"made by that gentleman to the immediate, and earnest attention of the
"Government."

No. 5.

SECRETARY TO THE RED SEA AND INDIA TELEGRAPH COMPANY to THE COLONIAL SECRETARY.

Red Sea and India Telegraph Company (Limited),

62, Moorgate-street, E.C.,

London, 15 January, 1859.

SIR,

I am instructed by the Directors of the Red Sea and India Telegraph Company (Limited) to submit for your information the following statement of the steps which have been taken to promote the establishment of Telegraphic Communication between
England

England and the Australian Colonies, and at the same time to solicit the assistance of your Government in the promotion of that most important work.

2. This Company was originally formed nearly two years ago, for the purpose of constructing a Telegraph, in the first instance to India, and eventually to Australia and China, and circulars to this effect were forwarded at the time to the principal firms in Sydney and Melbourne.

3. The first portion of this comprehensive scheme is now in active progress, Her Majesty's Government having granted an unconditional guarantee of $4\frac{1}{2}$ per cent. for 50 years on the capital required to complete the line from Alexandria to Kurrachee, in Scinde, where it joins the Indian Telegraphic System; the Cable is in course of manufacture, and will, it is hoped, be laid, and in full operation by the end of the present year.

4. Mindful of the ulterior object which they have always had in view, the Directors had no sooner secured the co-operation of Her Majesty's Government in the Indian Line than they submitted to the Treasury a proposition for the extension of the Telegraph System of the Indian Government from Singapore to Australia and China.

5. At the same time they have ventured solely upon public grounds to urge upon Her Majesty's Government the expediency of keeping the whole communication between this Country and the Colonies in English hands, by the establishment of a direct line from Falmouth to Alexandria, the advantage, of which over the course at present adopted are too obvious to require further comment.

6. The Directors are most anxious to see this principle adopted and carried into effect, either by themselves or by some other body enjoying the confidence of the Imperial and Colonial Governments, as they feel convinced that it is only by a cordial co-operation with these authorities that the whole system of Telegraphic Communication with the Eastern Hemisphere can be placed upon a satisfactory basis.

7. They are aware that numerous schemes for a Telegraph to Australia have been propounded both by public companies, and by private individuals whose independent action so far from promoting the object in view has considerably complicated the question, and thereby retarded its final settlement.

8. They have themselves abstained from making any appeal to the public on the subject, and the object of this communication is to place your Government in possession of the present state of the Telegraph question as regards this Company, with a view to preventing the possible adoption of any incomplete scheme before the final decision of the Home Government is made known.

9. I am further instructed to solicit the favor of your communicating to the Directors the general views of your Government upon this subject, and informing them, at the same time, whether (in the event of this most important work being intrusted to the Red Sea and India Telegraph Company) it would be willing to assist the undertaking, either by granting a guarantee upon the capital required, or in any other manner which may be considered most conducive to the interests of the Colony.

10. A copy of this communication has been transmitted to the First Lord of the Treasury, the Secretary of State for the Colonies, and the Secretary of State for India.

I have, &c.,

THE HONORABLE

THE SECRETARY TO THE GOVERNMENT,
OF NEW SOUTH WALES, Sydney.

C. L. PERL,
Secretary.

No. 6.

THE COLONIAL SECRETARY TO THE SECRETARY TO THE RED SEA AND INDIA
TELEGRAPH COMPANY.

*Colonial Secretary's Office,
Sydney, 13 April, 1859.*

SIR,

I had the honor to receive, on the 25th ultimo, your letter of the 15th of January last, stating the steps which have been taken by the "Red Sea and India Telegraph Company" to promote the establishment of Telegraphic Communication between England and

and the Australian Colonies, and soliciting the assistance of the Government of New South Wales in the promotion of that most important object.

2. The Company which you represent appears to have been formed originally for the purpose of constructing a Telegraph in the first instance to India, and eventually to Australia and China; and you mention that, having secured the co-operation of Her Majesty's Government in the first portion of the scheme, and this being now in active progress, the Directors have submitted to the Lords of the Treasury a proposition for the extension of the Telegraph system of the Indian Government from Singapore to Australia and China.

3. The object of your communication is stated to be to place the Government of New South Wales in possession of the present state of the question as regards the Company, with a view of preventing the possible adoption of any incomplete scheme before the final decision of the Home Government is made known, as well as to ascertain the general views of this Government upon the subject, and whether (in the event of the work being entrusted to the Company) the Government would be willing to assist the undertaking either by granting a guarantee upon the capital required, or in any other manner which may be considered most conducive to the interests of the Colony.

4. I have now to acquaint you, for the information of the Directors of the Company, that the establishment of Telegraphic Communication with the Mother Country is an object the importance of which is fully recognised by the Government of this Colony, and that the deepest interest is felt in any proceedings tending to afford a nearer prospect of its accomplishment.

5. This Government will, therefore, be prepared to afford every facility to the operations of any Company to whom the undertaking may be committed, and who may prosecute it with success, and to entertain any reasonable proposition with respect to a guarantee that may be submitted for their consideration. At the same time I am to intimate to you, that a Line of Telegraph by way of Torres Straits and the north-eastern portions of New Holland, and uniting with the Telegraphic system now in operation and projected of this Colony, will, in the opinion of the best authorities, be found the only reasonable and practical scheme. There is at present Telegraphic communication between New South Wales and Victoria and South Australia, and it is in contemplation to extend the line from Sydney to the Northern Districts of the Colony, in the direction of Moreton Bay and Port Curtis.

I have, &c.,

CHARLES COWPER.

C. L. PEEL, Esq.,

Secretary to the Red Sea and India

Telegraph Company,

62, Lombard-street, (E. C.) London.

No. 8.

(No. 7.)

UNDER SECRETARY OF STATE FOR THE COLONIES to THE GOVERNOR GENERAL.

Downing-street,

13 July, 1859.

SIR,

I have received your Despatch, No. 34, of the 12th of April last, forwarding an extract from the Minutes of the Proceedings of your Executive Council, as shewing the views entertained by your Responsible Advisers with regard to the proposed establishment of Telegraphic Communication between this Country and the Australian Colonies, and on this subject I have to refer you to my predecessor's Despatch of the 2nd of May last, which introduced to your notice Mr. F. Gisborne, who has proceeded to Australia for the purpose of furthering the establishment of the line of communication proposed by his brother. You will, however, observe that Sir E. B. Lytton, at the same time, declined to express any opinion on the merits of any particular plan for establishing such Telegraphic Communication.

I have, &c.,

NEWCASTLE.

GOVERNOR

SIR WILLIAM DENISON, K.C.B.,

&c., &c., &c.,

New South Wales.

Australia and China TELEGRAPH.

--- Lines Proposed or in Progress (1859)
 — Lines Existing (1853)

Dutch Line extends from Singapore to E. Java 1160 nautical miles
 Colonial Line extends from Moreton Bay to East Java 3024

MEMO: The distances are in nautical miles for Submarine Lines and in Statute miles for Land Lines.

1859.

NEW SOUTH WALES.

TELEGRAPHIC COMMUNICATION WITH EUROPE.

(DOCUMENTS RESPECTING MORETON BAY AND EAST JAVA SUBMARINE TELEGRAPH.)

Presented to both Houses of Parliament, by Command.

Boulton Row,

17 April, 1859.

MY DEAR SIR,

I send you, enclosed, the exact proportions of the Australian Correspondence, on which the division of the Postal subsidy is calculated.

Yours, &c.,

F. GISBORNE, ESQ.,
&c., &c., &c.

W. H. STEPHENSON.

Victoria	58 ⁵ / ₁₆
New South Wales	22 ¹³ / ₁₆
South Australia	7 ⁴ / ₁₆
New Zealand	5 ¹¹ / ₁₆
Tasmania	5 ¹ / ₁₆
West Australia	¹³ / ₁₆
	100

MEMO.

Proposed capital.....	£800,000
Estimated outlay	720,000

N. S. Wales is, as regards the Company, asked to contribute 27 ¹/₂ per cent. of the whole amount of guarantee or subsidy, and Victoria to contribute ... 72 ¹/₂ per cent.

100

The subsidy of N. S. Wales will represent £220,000 of the capital of the Company, and that of Victoria	£580,000
	220,000
	£800,000

The subsidy or guarantee is only to run upon the outlay.

The manufacture of the Cable for the Line from Moreton Bay to East Java will occupy five months.

The Cable will be paid for at the end of each month on the quantity of Cable made, all but about 15 per cent., which the Contractor will only receive on the completion of his whole contract.

As regards the ships, about one-third of the cost will be paid the Contractor on the signing of the Contract; one-third when the ships are ready for receiving the Cable on board; and the remainder in monthly instalments from the sailing of the first ship.

Such are the arrangements as regards the Red Sea and Indian Line, and will, no doubt, be adopted in substance, as regards the Australian Telegraph.

Under a subsidy of £35,000 yearly, New South Wales is asked for 27 ¹ / ₂ per cent of the whole amount, or.....	£ 9,625
Victoria, 72 ¹ / ₂ per cent, or	25,375

£35,000

The

TELEGRAPHIC COMMUNICATION WITH EUROPE.

The share of New South Wales will be reduced to 22 per cent, or £7,700, if the other Colonies contribute in the proportions of the Postal subsidy. The share of Victoria will in the same way be reduced to 58 per cent., or £20,300; this will leave £7,000 to be contributed by the other Colonies...

£ 7,700
20,300
7,000
£35,000

In the above statement fractions have been omitted. Taking the working expenses at £20,000 a-year, the subsidy will cover them, and further leave a dividend of about 2 per cent. upon the estimated outlay—(£720,000.)

The exact proportion of New Zealand to the Postal } 5 ¹¹ / ₁₆ per cent.,
subsidy is, at present..... } 15
and that of Western Australia..... } 16
6 ¹⁰ / ₁₆

Assuming that New Zealand and Western Australia contribute nothing towards the Telegraph, the contributions of the other Colonies towards the £35,000 subsidy will stand as follows:—

Victoria	62.450 per cent.
New South Wales	24.350, or £8,522.
South Australia	7.765
Tasmania.....	5.422
	99.987—say 100.

In the whole of the above statement the proportionate contribution of New South Wales includes that of Queensland.

If the submarine line is made to terminate at Broad Sound instead of Moreton Bay 352 nautical miles of distance will be saved, which will represent £61,000, assuming nothing is saved in freight, or £82,000 if the freight be saved.

If Port Curtis be substituted for Moreton Bay 240 nautical miles of distance will be saved, representing £42,000, if nothing be saved in freight, or £56,000 if the freight be saved.

It is extremely doubtful whether the ships will cost less, on account of a few hundred miles less of cable that they may carry.

F. GISBORNE.

Sydney, 14 December, 1859.

6, Duke-street,
Adelphi, 23 August, 1858.

ABSTRACT of Specification and Estimate to Board of Red Sea and India Telegraph Company, this day agreed to by Messrs. Newall & Co.

Specification:—

7 copper wires in a strand, at per knot 180lbs. Gutta percha, } 3 ¹ / ₂ cwt.	
2 coverings, and 2 Chatterton's patent at 212..... } 1 ¹ / ₂ cwt.	
Yarn	16 cwt.
18 iron best selected charcoal wire, weighing	
Total per knot, deep water sample	21 cwt.

Shore ends:—

Same, gutta percha and copper wire, per knot.....	3 ¹ / ₂ cwt.
Yarn	2 ¹ / ₂ cwt.
9 iron best selected charcoal, weighing.....	61 cwt.
Shore ends, per knot.....	67 cwt.
Deep water cable, per knot, f. o. b.	£105.
Shore ends.....	£160.
Slack, 25 per cent; risk of laying and staff, 20 per cent. + £5,000 to Aden, or £10,000 to Kurrachee.*	
Ships and Coals	£110,000.

LIONEL GISBORNE.

*For ship's fittings.

Aden, 2 June, 1859.

Sir,

We authorize you to accept on our behalf a Contract for a Submarine Telegraph Line, from the East End of Java to Moreton Bay, on an estimated direct distance not exceeding 3,004 nautical miles, for a sum of six hundred and sixty-five thousand pounds, the Contract to be based on that we have with the Red Sea and Indian Telegraph Company.

The above sum of £665,000 to include manufacture of cable and risk of laying it, ships, and their insurance.

The

The cable to be the same as the Red Sea and India Cable, excepting that the outer covering of hemp and wire is to be made slightly heavier to give a more perfect protection to the gutta percha, and the cable to weigh 22 cwt. instead of 21 cwt. per nautical mile, and to include, also, instruments for six stations, by Siemens & Halske of Berlin.

The insurance of the cable is to be put upon the same footing as that for the Indian Cable, excepting that a margin for our profit must be insured at the same time, which is to be agreed upon.

We reserve the right to increase the price of the cable or withdraw from the Contract should any rise occur in the price of materials between this date and the day the Contract is communicated to us.

We undertake to lay the lines and deliver them over in complete working order, and capable of transmitting a minimum of ten words per minute over any direct distance not exceeding 500 nautical miles, within two years of the Contract being communicated to us.

This offer not to be binding on us after the 31st December, 1859.

We are, &c.,

R. S. NEWALL & Co.

Francis Gisborne, Esq.

Legislative Assembly.

NEW SOUTH WALES.

TELEGRAPHIC CABLE BETWEEN SINGAPORE AND BATAVIA.

(DESPATCH ANNOUNCING COMPLETION OF.)

Ordered by the Legislative Assembly to be Printed, 25 April, 1860.

SECRETARY OF STATE FOR THE COLONIES to GOVERNOR GENERAL.

Downing-street, 17 February, 1860.

SIR,

I transmit herewith, for your information, the copy of a note from the Netherlands Minister at this Court, which has been received through the Foreign Office, announcing the completion of the Telegraphic Cable between Singapore and Batavia, and communicating the desire of his Government to see this line placed in communication with the British Telegraphic Lines in the East Indies, as well as with those which are intended to be laid down to China and Australia.

I have, &c.,

NEWCASTLE.

[Enclosure.]

Foreign Office, February 6, 1860.

Sir,

I am directed by Lord John Russell to transmit to you, to be laid before His Grace the Duke of Newcastle, a copy of a note from the Netherlands Minister at the Court, announcing the completion of the Telegraphic Cable between Singapore and Batavia, and communicating the desire of the Netherlands Government to see this line placed in communication with the British Telegraphic Lines in the East Indies as well as with those which are intended to be laid down to China and Australia.

I have, &c.,

JAMES MURRAY.

Herman Merivale, Esq.
&c., &c., &c.

[Sub-Enclosure.]

Londres, le 4 Fevrier, 1860.

My Lord,

V. S. aura sans doute appris avec intérêt que le Cable Télégraphique destiné à relier Singapore à Batavia vient d'être posé avec un heureux succès. Le Gouvt. du Roi tout en appréciant l'utilité de ce nouveau moyen de communication est cependant persuadé que l'importance de cette mesure ne sera complétée que lorsque que cette ligne aura été reliée au Réseau Télégraphique dans les Indes Britiques. et plus particulièrement lorsque que la Chine et l'Australie seront un également en communication avec l'Europe. Je viens d'être chargé par mon Gouvernement de fixer l'attention de V. S. sur ce sujet et de lui témoigner combien le Cabinet de la Haye serait heureux de voir le Gouvt. Britique. procéder dans le delai le plus bref possible à cette jonction si désirable, maintenant surtout que de sa côté le Gouvt. du pays bas a reussi dans la pose du Cable Télégraphique reliant ses possessions à celles de S. M. Bque.

J'ai l'honneur, &c.,

BENTINCK.

S. E.
Lord John Russell,
&c., &c., &c.

Sydney: Thomas Richards, Government Printer.—1860.

MESSAGES will be delivered free within one mile of Sydney, and half-a-mile of all other Stations. PORTERAGE, or CAB HIRE, will be charged beyond those distances.

1859-60.

Legislative Assembly.

NEW SOUTH WALES.

EXTENSION OF ELECTRIC TELEGRAPH.

(PETITION FROM ARMIDALE.)

Ordered by the Legislative Assembly to be Printed, 28 February, 1860.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned residents of the Township and District of Armidale,—

HUMBLY SHEWETH :—

That your Petitioners, being conscious of the great advantages arising from the extension of the Electric Telegraph throughout the Colony, are desirous that the same should be extended from Maitland to Armidale, by which means graziers and others of your Petitioners could avail themselves of the benefits arising from such speedy means of communication, not only with Maitland and Sydney, but also with Bathurst, Albury, and Melbourne,—which, under present circumstances, in the sale of stock, and other commercial transactions, would materially advance the interest of the district, and facilitate the business transactions which now and must continue to exist between the two Colonies.

Your Petitioners further beg to bring under the notice of your Honorable House the great importance of such an extension, for, in a geographical point of view, an Electric Telegraph extended to Armidale would be the most direct means of connecting the Australian Colonies with Europe; and, considering that electric communication has been fully tested by the Mother Country and is now being extended all over the British dominions, your Petitioners, in consideration of its being extended throughout the Australian Colonies, embracing the northern townships, namely, Wide Bay and Port Curtis, in Queensland, beg to call the attention of your Honorable House to the fact that, in its further extension to Europe, Armidale being on or near the boundary of the two Colonies would partly limit the expenditure, in as far as the Colony of New South Wales would be concerned.

Your Petitioners, independent of the above considerations, most respectfully submit to your Honorable House that the district of New England, in mineral wealth, agricultural products, and grazing capabilities, must ever constitute Armidale the capital of the Northern Districts; and, therefore, your Petitioners respectfully submit that they are entitled to the same facilities for communication which are now enjoyed by townships of minor importance. Your Petitioners, therefore, humbly pray that your Honorable House will take the premises into consideration, and for which, as in duty bound, your Petitioners will ever pray.

(Here follow 111 Signatures.)

Sydney: Thomas Richards, Government Printer.—1860.

1859.

Legislative Assembly.

NEW SOUTH WALES.

ELECTRIC TELEGRAPH FROM PARRAMATTA TO BATHURST.

(RETURN RESPECTING CONTRACTS FOR.)

Ordered by the Legislative Assembly to be Printed, 1 December, 1859.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 6 October, 1859, That there be laid upon the Table of this House,—

- “ (1.) A copy of the original (or modified, if any,) conditions of
“ Tender for the erection of the line of Telegraph from Parra-
“ matta to Bathurst.
- “ (2.) Copies of all Tenders made and Contracts entered into
“ for the performance of the work.
- “ (3.) Copies of Reports of authorised Inspectors or Superin-
“ tendents as to the progress of the work, and statement of
“ payments made on account of same.
- “ (4.) Any correspondence with the Government relating to
“ said Contracts and Works.”

ELECTRIC TELEGRAPH FROM PARRAMATTA TO BATHURST.

THE COMMISSIONER FOR INTERNAL COMMUNICATION to THE UNDER SECRETARY FOR
LANDS AND WORKS.

*Electric Telegraph Branch,
Department of Internal Communication,
Sydney, 1 April, 1859.*

SIR,

In reference to your B.C. Minute of the 15th ultimo, enclosing tenders for the construction of the Electric Telegraph to Bathurst, I have the honor to transmit for the information of the Secretary for Lands and Public Works a Schedule of Tenders sent in.

From this it will be seen that the tender of Mr. Jno. Rogers is the lowest, being at the rate of £40 a mile.

I greatly doubt if Mr. Jno. Rogers can do the work at the price, and I fear lest, should he obtain the contract, difficulties should hereafter arise from this cause in carrying out the works.

But as the tender of Mr. Jno. Rogers is the lowest, I presume that if he can find approved security the contract must be given to him.

I have, &c.,

B. H. MARTINDALE.

THE UNDER SECRETARY
FOR LANDS AND WORKS.

SCHEDULE of TENDERS sent in for the construction of the ELECTRIC TELEGRAPH to Bathurst.

No.	NAME.	AMOUNT PER MILE.	SURETIES.
4	B. Rush	42 0 0	W. Crane and Thomas Farrell.
5	J. M. Hancock	56 0 0	Lewis Samuel and Saul Samuel.
6	William and Charles Tunks...	51 0 0	None.
7	John Rogers	40 0 0	John Madden and J. Mahoney.
8	Joseph Thompson	42 10 0	J. B. Morris & Sons & R. B. Hines.
9	F. Wiseman and Co.....	43 0 0	Phillip Hart and John Suttie.

MINUTES on the Contracts for the Construction of the Line of Electric Telegraph to Bathurst.

Captain Martindale has not said whether he has made the provision he promised to make, that swamp oak posts should not be used; and whether Mr. Rogers has agreed to that provision.

JOHN R.

The suggestion of Captain Martindale was, that it should form part of the agreement with the successful tenderer that swamp oak should not be used, as directed by the Minister; he now encloses an undertaking from Mr. Rogers not to use swamp oak should he obtain the Contract.

B. H. M.

4/3.

The above Minute of the Commissioners would seem to indicate that I had, in the first place, directed that swamp oak should be permitted to be used, instead of that I had objected to such being the case, and pointed out the objection to Captain Martindale—of course that is not what was intended to be conveyed by the words used. The contract may be accepted now, the only condition remaining for attention is, that the security be sufficient; and inquiry should be made as to the sureties, and report furnished.

JOHN R.

7 April.

Mr.

ELECTRIC TELEGRAPH FROM PARRAMATTA TO BATHURST. 3

Mr. Rogers' tender for the Bathurst Line was accepted (£40 per mile), contingent on his giving sufficient security.

He has offered names on three different occasions, which, on inquiry, have all been rejected as insufficient.

The security would be about £500. The whole of the tenders with the accompanying schedule are enclosed for the information of the Secretary for Lands and Works, and for instructions as to what further steps are to be taken.

J. RAE. 2/5.

Transmit to the Under Secretary for Lands and Works.
B. C. 2/5. J. R.

It appears to me that we are where we were months ago. Surely the Department of Internal Communication has some suggestion or recommendation to make; if not, I might as well have decided the matter when the tenders came in.

Commissioner for Internal Communication.
B. C. 3 May.

JOHN R.*
3 May.

I understood from Mr. Robertson that he merely wished me to state whether the sureties offered by Rogers were responsible, and he would then arrange the next steps.

I have now disposed of the other tenders in their order up to Rush and Tunks. Wiseman & Co. cannot be found at their address. Mr. Thompson, of Melbourne, offers three Sydney sureties, but two of them decline to act, and the other has not replied to my letter.

Mr. Tunks' tender for the Bathurst line is £51. Mr. Cracknell states that he will agree to the exclusion of swamp oak.

Although, nominally, he gives no sureties, yet, virtually, he offers the best security, viz. :—to allow the Government to retain £500 of the first moneys that would be due to him for works as security, of course, over and above the usual 10 per cent. retained from payments.

Mr. Cracknell considers both these tenders reasonable, and states that Tunks performed his last contract entirely to his satisfaction; under these circumstances, as the Commissioner telegraphs that it would be better to call for fresh tenders than accept of one so high as £75, I would, in his absence, recommend that the tender of Tunks at £51 per mile be accepted for the Bathurst Line, it being understood that swamp oak is not to be used.

J. RAE.

The Under Secretary
for Lands and Works.
B. C. 11-5.

THE UNDER SECRETARY FOR LANDS AND WORKS to THE COMMISSIONER
FOR INTERNAL COMMUNICATION.

*Department of Lands and Public Works,
Sydney, 12 May, 1859.*

SIR,

I am directed to inform you that the undermentioned tender has been accepted by the Government, under the terms and conditions stated in your blank cover report of the 11th instant, viz., Mr. Tunks' tender to construct Electric Telegraph from Parramatta to Bathurst, at £51 per mile.

I am to request that you will have the goodness to apprise the parties interested, to this effect, and take from them the necessary bonds for the due fulfilment of their Contracts.

I have, &c.,
MICL. FITZPATRICK.

THE COMMISSIONER
FOR INTERNAL COMMUNICATION.

P.S.—It is understood that swamp oak is not to be used.

Department

*The Commissioner was at this time absent from Sydney inspecting the Southern Road and Telegraph.

*Department of Lands and Public Works,
Sydney, 21 February, 1859.*

ELECTRIC TELEGRAPH TO BATHURST AND THE HUNTER.

TENDERS will be received at this Office until Tuesday, the 22nd day of March next, at noon, from persons desirous of contracting for the material (wire excepted) and for the workmanship necessary for the erection of two lines of Electric Telegraph—first, from Parramatta by the line of Railway or Main Road, according to the directions of the Superintendent, to Bathurst; and second—from a point upon or near the Blacktown Road to Windsor; and thence *via* Wiseman's Ferry, Wollombi, West Maitland, and Maitland, to Newcastle, according to the specification hereto.

Separate tenders to be sent in for each line at a price per mile, completed, the Government supplying the Telegraph and binding wire in Sydney.

Each contract must be completed and the works handed over to the Government within 6 months from the notification of the acceptance of the tender, time being considered of the essence of the contract.

Payments will be made in fortnightly instalments to the extent of £80 per cent. on the value of the work certified by the Superintending Officers to have been completed.

Attached to each tender there must be a memorandum signed by the party tendering, and two responsible persons as sureties, agreeing to be answerable for the due performance of the contract, in the event of the tender being accepted, and undertaking in that event that they will severally execute and deliver at the Office of Internal Communication in Sydney, within one month from the notification of the acceptance of the tender, a bond to Her Majesty for securing such performance, in a sum equal to 10 per cent. on the amount of the tender.

The Government does not bind itself to accept the lowest tender.

JOHN ROBERTSON.

SPECIFICATION.

Posts, which may be heavy rough saplings, with the bark removed; to be provided of sound hardwood, such as box (not bastard box), iron-bark, stringy-bark, or swamp oak, and to be not less than 9 inches in diameter at the base, and 5 inches at the top, of 23 feet lengths; the base to be charred thoroughly over a space of 6 feet, and well coated with coal tar; the top to be firmly bound at one inch from its extremity with good hoop iron, not less than one inch wide; a hole of proper size to receive the insulating pin, to be bored vertically in the centre of the top of the post to the depth of $5\frac{1}{2}$ inches.

Insulators to be of well baked and highly glazed earthenware of an uniform pattern, to be submitted for approval; insulating pins to be of box or stringy-bark of suitable size, and prepared by soaking in a boiling mixture of equal parts of gum shellac, resin, and Venice turpentine, and to be firmly fitted at the tops of the posts.

The conducting wire, which will be furnished by the Government in Sydney, to be of the best quality of No. 6 galvanized iron, weighing not less than 560 lbs. to the mile, to be so stretched that the deflexion shall not exceed two feet in any sixty feet length of wire, and to be securely fastened to the insulators with annealed charcoal wire, No. 15 gauge, to be also supplied by the Government in Sydney. The metallic connections or jointings of the main wire to be made in the best manner, and according to directions, which will be given by the officers appointed to superintend the work.

The posts to be not more than 60 yards apart, unless by special permission. They must be fixed in the ground to a depth of 5 feet, and firmly wedged and embedded in a perpendicular position.

An additional price per post to be given for such posts as may require to be planed and chamfered, to be set up through towns or villages, and painted with three coats of white or black paint, as may be directed by the Superintendent of Electric Telegraphs.

All trees and branches which in the judgment of the Superintending Officer may endanger the line are to be removed, and all brush, underwood, and grass cleared away for a space of twenty feet round each pole. All staking or marking out of the line that may be necessary in the judgment of the Superintending Officers to be performed for its proper direction, must be done by contractor at his own cost, under the direction of the Superintending Officers, and before the work is commenced.

Insulating brackets, angle insulators, and terminals, according to the patterns approved by the Superintendent of Electric Telegraphs, are to be provided where required for turnings and intermediate stations.

All materials used in the construction of the work, or any part of it, are to be of the best quality, and, together with the workmanship, are to be subject to the approval or rejection of the Superintendent of Electric Telegraphs.

Should the contractor fail to proceed in the execution of, or to complete the work in the manner and at the rate of progress required by the Superintendent of Electric Telegraphs, it shall be at the option of the Government either to make use of all labor and materials which the Superintendent may deem necessary for the prosecution thereof, deducting the cost of such labor and material from the money that may be then due, or thereafter to become due, to the Contractor, or on the notification to that effect being inserted in the *New South Wales Government Gazette*, to consider the contract void so far as relates to the work remaining to be done, and all sums of money that may be due to the contractor, together with all materials and implements in his possession on the ground, and all sums of money, whether named in the bond to be entered into by the contractor, or otherwise, as penalties for the non-fulfilment of the contract, shall be forfeited to the Government, and the amount shall be considered as ascertained damages for breach of contract.

Electric

ELECTRIC TELEGRAPH FROM PARRAMATTA TO BATHURST. 5

Electric Telegraph to Bathurst.

I offer to contract for the supply of material (wire excepted) and workmanship necessary for the erection of an Electric Telegraph from Parramatta, by the line of Railway or Main Road, according to the direction of the Superintendent, to Bathurst, according to the published specification, dated Sydney, February 21st, 1859, at the rate of fifty-six (£56) per mile.

JOHN MILL HANCOCK.

We the undersigned agree, in the event of the above tender being accepted, to become sureties for the due performance of the contract, and undertake to execute, within one month from the acceptance of the said tender, a bond to Her Majesty for securing such performance, in a sum equal to £10 per cent. on the amount of the tender.

LEWIS SAMUEL, Merchant, Sydney.
SAUL SAMUEL, ditto.

The Honorable
The Secretary for
Lands and Public Works.

65, *Princes-street*,
Sydney, 14 March, 1859.

Gentlemen,

In accordance with an advertisement in the public papers, calling for tenders for the performance of works required for the Electric Telegraph to Bathurst and Newcastle, I am willing to undertake the performance of the said works, according to the advertised specifications, viz., from Parramatta to Bathurst, for £40 per mile; and from Blacktown Road to Newcastle, for £42 per mile; and will complete the same according to the required time. I submit the undermentioned persons as my sureties.

I remain, &c.,
JOHN ROGERS, Contractor.

Sureties:—

JOHN MADDEN, Harrington-street.
MICHAEL MAHONEY, Haymarket.

Melbourne, 14 March, 1859.

I hereby tender for the completing of the following work for the Electric Telegraph from Bathurst to the Hunter, and complete the same according to your specification, at the following prices, namely:—

From Parramatta to Bathurst at the rate of forty-two pounds ten shillings per mile, and five shillings each for posts, planed and painted.

Second Contract:—From Blacktown Road to Newcastle, at the rate of forty-seven pounds per mile (£47 per mile) and nine shillings each for posts, planed and painted.

Having been engaged in similar works in Victoria, and having completed some of the principal lines, any reference which you may require addressed to Mr. M'Gowan, Master Superintendent of the Electric Telegraph, Melbourne.

JOSEPH THOMPSON.

John Robertson, Esq.,
Department of Lands and Works,
Sydney.

We hereby agree to become security for the due fulfilment of the above tender.

RICHARD HUMES, Solicitor.
J. B. MORRIS & SONS, Timber Merchants, Melbourne.

Princes-street,
1 March, 1859.

Sir,

I, the undersigned, am willing to construct the line No. 1 to Bathurst for £43 per mile, and No. 2 for £45 per mile; should these terms meet your approval, I will perform all the works required.

I remain, &c.,
T. WISEMAN & CO.

The Honorable
The Secretary of Lands and Works.

MEMO:—The undersigned gentlemen will become the required guarantees,—

MR. PHILLIP HART, Sussex-street.
JOHN SUTTIE, York-street.

Berrima,

Berrima,
21 March, 1859.

Sir,

I have the honor to tender for the contract for the material (wire excepted) and for the workmanship necessary for the erection of the line of Electric Telegraph, from Parramatta, by the line of Railway or Main Road, according to the directions of the Superintendent, to Bathurst, for the sum of £42 per mile.

I undertake to provide the materials, and to execute the work within the time specified in your call for tenders, and according to the specifications published in the *Sydney Morning Herald*, and dated 21st February, 1859.

I have the honor to refer you to the memorandum hereto attached, signed by myself and sureties.

The Honorable
John Robertson, M. L. A.,
Secretary for Lands and Public Works.

I have, &c.,
BARTHOLOMEW RUSH.

Balmain,
22 March, 1859.

Sir,

We beg to state that we will be willing to erect the line of Electric Telegraph from Parramatta to Bathurst, in accordance with the specification for such work exhibited by your Department, at the sum of fifty-one pounds per mile. In the event of this offer being accepted, we propose, instead of sureties, to expend on the work without delay the sum of five hundred pounds, which sum may be held by the Government as security for the due performance of the contract.

The Honorable
The Secretary for Lands and Public Works.

We have, &c.,
WILLIAM TUNKS.
CHARLES TUNKS.

Know all men by these presents, that we, William Tunks and Charles Tunks, of Balmain, in the Colony of New South Wales, Contractors, are held and firmly bound unto Our Sovereign Lady Victoria, by the Grace of God of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, in the sum of Five hundred pounds of good and lawful money of Great Britain, to be paid to Our said Lady the Queen, Her Heirs or Successors, to which payment well and truly to be made we bind ourselves, and each and every of us, jointly and severally, for and in the whole, our and each of our heirs, executors, and administrators, and every of them, firmly by these presents. Sealed with our seals, dated the twenty-fifth day of August, in the year of Our Lord one thousand eight hundred and fifty-nine.

WHEREAS the above bounden William Tunks and Charles Tunks made the tender hereunto annexed, under the terms and conditions of a notice dated the twenty-first day of February now last past, and published in the *New South Wales Government Gazette* of the twenty-second day of February (of which notice a copy is also hereunto annexed), and at the prices and under the stipulations in the said tender mentioned or referred, to provide the materials (wire excepted) for and perform the various works required in constructing an Electric Telegraph from Parramatta by the line of Railway or Main Road, under the directions of the Superintendent to Bathurst, according to the specification hereto annexed marked with the letter A; and to complete the same within three months from the date of these presents, for the sum of Fifty-one pounds per mile, to the satisfaction of the Officer charged with the superintendence of the work, or such other person as Ben Hay Martindale may appoint for that purpose; and shall allow the first five hundred pounds that becomes due or payable under the said contract to remain in the hands of the Colonial Treasurer of the said Colony, as a collateral security for the faithful performance of their contract, and shall not withdraw the said sum until the due fulfilment of the same contract to the satisfaction of the Officer charged with the superintendence of the work, or such other person as Ben Hay Martindale may appoint for that purpose. And whereas the said tender has been duly accepted by His Excellency the Governor of the said Colony on condition that this bond should be entered into by them the said William Tunks and Charles Tunks. Now the condition of the above written bond and obligation is such, that if the said William Tunks and Charles Tunks shall and do well and truly perform and fulfil the said tender and the contract arising out of such tender, and the acceptance thereof as aforesaid, and all and every the terms, conditions, and stipulations thereof, within the time hereinbefore in that behalf mentioned, and shall allow the first five hundred pounds that becomes due or payable under the said contract to remain in the hands of the Colonial Treasurer of the said Colony, as a collateral security for the faithful performance of their contract, and shall not withdraw the said sum until the due fulfilment of the same contract to the satisfaction of the Officer charged with the superintendence of the work, or such other person as Ben Hay Martindale may appoint for that purpose, then

ELECTRIC TELEGRAPH FROM PARRAMATTA TO BATHURST. 7

then this obligation to be void and of none effect, otherwise to remain in full force and virtue.

Signed, sealed, and delivered by the said }
William Tunks in the presence of } WILLIAM TUNKS. (L.S.)
J. J. LEE.

Signed, sealed, and delivered by the said }
Charles Tunks in the presence of } CHARLES TUNKS. (L.S.)
J. J. LEE.

Memorandum from Secretary for Lands and Works.

I have been told by Mr. Rotton, M.P., that there is timber of an inferior quality being used for the telegraph posts on the Bathurst Line—say apple-tree, white gum, &c.

JOHN R.
8 Sept.

I transmit the following report from Mr. Cracknell on this subject, to which I have only to add that no payments will be made without a certificate, that no white gum or apple-tree poles have been used.

The Under Secretary
for Lands and Public Works.

B. H. M.
14 Sept.

I have only inspected the Western Line as far as Mount Victoria, and am not aware of any timber being used of the description mentioned by Mr. Rotton. I took every care when last on the line to inquire the nature of the timber, and could not hear of a single white gum or apple-tree pole being used.

The Inspector on this contract, Mr. Merrewether, is well acquainted with Colonial timber, and is a man I have every confidence in; but it will be impossible for me to say what timber has been used beyond Mount Victoria, until after my next visit of inspection; no part of the work has yet been passed.

To Captain Martindale, R. E.

E. C. C.

Sec. for Lands and Works, B.C.

I am told by Mr. Rotton that much inferior timber has been used on this side of Mount Victoria, and that by using such timber and not that contracted to be used, the contractor will make a large saving; indeed, that many persons would have contracted at a much lower price had they been permitted to depart from the specifications in this particular.

It would be well to call on an additional officer to report, say Mr. Dawson, the Superintendent of the Western Road.

JOHN R.
B.C. 20 Sept.

*Road Branch,
Department of Internal Communication,
Sydney, 6 October, 1859.*

Sir,

I am directed by the Commissioner to request that you will meet Mr. Cracknell at the Post Office, Emu Plains, on Monday next, at about 2 p.m., to proceed with him to inspect telegraph posts to Bathurst, and to report whether any inferior timber or wood—contrary to specification—has been used; if so, to state particulars; also, whether posts have been properly charred and tarred, and work generally properly executed.

I have, &c.,
JOHN RAE,
Secretary.

B. B. Dawson,
Bowenfels.

In accordance with your instructions I have, in company with Mr. Dawson, carefully inspected the Western Line of Telegraph to Bathurst, and beg to hand you the following Report:—

*Poles:—*The specification is worded as follows: "Poles to be of heavy rough saplings, with the bark removed—of sound Colonial hardwood, such as box (not bastard box,) iron-bark, stringy-bark, &c.," which, of course, implies timber equal in quality to the above woods. From all the information I can collect and the facts that I can deduce, the letter as well as the spirit of the specification has been adhered to. Every one must be aware of the difficulty of recognizing Colonial timber when the bark is removed; it requires not only a Colonial but in most cases a local knowledge to determine its durability, but as you have kindly directed Mr. Dawson to report on the quality of the timber used, that gentleman's opinion on this point may be considered more satisfactory. Nine-tenths of the poles are considerably larger than the size specified, and perfectly sound.

Clearing:

Clearing :—The clearing is well and satisfactorily performed, and I may state that when on my way to Bathurst, the country in many places was visited with alarming bush fires, frequently consuming the timber felled along the line, but in no instance even charring a pole, which will prove beyond a doubt, that the twenty feet clearing round each pole is sufficient for its safety.

Tarring and Charring :—This has in most cases been well and sufficiently done, but in some instances the charring has not been carried high enough from the surface; this defect I have pointed out to Mr. Tunks, who has given directions for its completion. I do not consider it necessary to char the extreme end of the pole, *i. e.*, the flat part where cut from the stump. I never saw a pole of sound wood decay five feet in the ground.

Ramming :—The ramming round the poles will also in some places require attention, the packing having been performed in wet weather has since dried and contracted, leaving a small space between it and the pole; where this is found to be the case, it will be re-rammed by the wire men as they return to Sydney.

Wire :—The wire which was supplied by the Government is well annealed, and of good quality, which can be proved by the fact that to the present time there has not been a single breakage during its suspension, which is a very unusual circumstance, as most of the weak places are discovered when the wire is first subjected to a strain; the zinc is not quite so evenly coated as in some wire, but that is not of the slightest importance, and will in no way interfere with its durability; but it will perhaps be remembered that this was reported by me at the time, and a reduction of £3 10s. per ton on the marked price was allowed.

In conclusion I beg to add, that from my own experience in South Australia, and from what I have seen in Victoria, the Western Line (when the contractor has completed the few alterations pointed out by me) will be the most creditable piece of work of the kind yet executed in the three Colonies; and I can no longer delay to certify, that the work has been performed according to contract.

EDWD. CHAS. CRACKNELL.
18/10/59.

Commissioner for
Internal Communication.

Bowenfels, 18 October, 1859.

Sir,

Referring to your communication of the 6th instant, instructing me to proceed with Mr. Cracknell to inspect the Telegraph posts from Emu Plains to Bathurst, and to report as to the timber used, the charring and tarring of the saplings, and generally as to the proper execution of the work, I have now the honor to report as follows, taking *seriatim* the conditions of the specification, so far as they relate to my instructions.

1.—Description of Timber.—To be rough saplings, with the bark removed, of sound hardwood, such as box (not bastard box), iron-bark, stringy-bark, or *swamp oak*.

It is extremely difficult to state accurately of what description of timber a sapling may be when the bark has been stripped from it. Most old bushmen are diffident of expressing a confident opinion, and among those who have least hesitation scarcely any two agree in their identification. As far as my judgment goes, the posts set up between Emu Plains and Mount Victoria consist mainly of stringy-bark, bloodwood, turpentine, and the gum generally known as mountain ash; and I consider that any of these timbers may be properly designated sound hardwood; while I am not aware of any box or iron-bark on the mountain road suitable for the work required.

From Mount Victoria to Bathurst most of the posts seem to me to be yellow gum, with an admixture of stringy-bark whenever that timber is to be procured, either of which woods I consider to be sound and durable. Between Duracks and Bolton's flat, however, it was alleged that some poles of an inferior wood, there called white gum, had been set up; but I did not perceive, upon examination, that any of the poles in that locality were of this description of timber; nor did the flat whence these inferior posts were said to have been taken contain any stumps of sufficient size to match the posts set up. On the whole, I consider that on this section sound hardwood saplings have been *mainly* used for the Telegraph Line, and such as the neighboring settlers are in the habit of selecting to construct buildings or fences for their own use.

Neither box nor iron-bark, of sufficient dimensions, are to be obtained within any reasonable distance of the line.

2.—Dimensions of Posts.—To be 23 feet lengths, not less than 9 inches in diameter at the base and 5 at the top.

In these points the specification has been almost uniformly exceeded. On measuring many of the smaller poles no one was found less than specification, while the majority far outmeasured the dimensions required.

3. Charring and Tarring.—To be thoroughly done over a space of six feet at the base.

Though the charring and tarring have been in general well executed, there are in many parts of the line a few saplings here and there, upon which these operations have not been carried high enough above the ground surface—such posts can and should receive an additional charring and tarring. With respect to the underground portion of the work I can only state that such posts as came under my observation during my journeys up and down the road, were being properly charred from the base upwards.

3a. Distance apart.—To be not more than sixty yards unless by special permission. This condition has been properly carried out.

4.

Not swamp oak.
Ask Mr. Cracknell if he drew Mr. Dawson's attention to this.
B. H. M.

Mr. Dawson's attention was called to this.
E. C.

Mr. Dawson must be asked whether any posts not coming under the description of sound hardwood have been used, and, if so, how many, as they will have to be removed.
B. H. M.

Contractor must be called upon to do this, and Mr. Cracknell must see that it is done.
B. H. M.

The Contractor has been informed, and he has given directions for it to be done. I have also informed Mr. whether to see it done.
E. C.

4. Depth in the ground.—To be five feet. On this point I can only speak from former examinations while the holes were being dug, and my own observation corroborated by that of many others leads me to believe that this condition has been properly fulfilled.

5. Posts to be firmly wedged and imbedded in a perpendicular position.—This has been effected in all cases by digging out the hole to about half the required depth, and then excavating the remainder (with a jumper) to a diameter scarcely greater than that of the pole to be imbedded. This is a good method of firmly imbedding the posts, and taken together with the large diameter of the timber will account for an overplus of excavated soil frequently remaining at the ground surface of the holes, especially where rock or slate has been removed. I consider the posts to be *in general* well imbedded, but there are some cases where the ground has shrunk and cracked at the surface. The line, therefore, should be carefully gone over by the overseer, and such posts should receive extra ramming. I may observe on this head that my inspection took place after several days of high and dry winds, at which time any defective imbedding would be most apparent.

Contractor must be called on to do this, and Mr. Cracknell to see that it is done.
B. H. M.
Mr. Tunks has been called upon to do this, and Morrewether informed to see it done.
E. C.

6. All trees, branches, brush, grass, &c., to be cleared away for a space of 20 feet round each pole.

This operation has been done thoroughly. Between Busses and Weatherboard a great part of the line had just been on fire when I inspected it, the fire being fanned by a furious westerly wind, yet in no instance did any post appear to have been damaged by the flames.

7. The top of each post to be bound at one inch from its extremity with good hoop-iron, not less than one inch wide; the iron binding exceeds the specified width, being from 1 1/8 to 1 1/4 wide.

Taking the line as a whole, I consider the woodwork to be well executed, and that when the supplementary charring, tarring, and ramming, above recommended, shall have been completed, no complaint against the contractor can be reasonably urged. The fixing, binding, and insulating of the wire appeared to me to be well done, as far as the work had proceeded. I have, however, no experience in these matters, and presume that Mr. Cracknell's report will take into consideration all the details connected with this portion of the work, upon the due execution of which he is so much better qualified than myself to speak with assurance.

I have, &c.,
R. B. DAWSON,
S. W. R.

The Commissioner for Internal Communication.

Road Branch,
Department of Internal Communication,
Sydney, 24 October, 1859.

Sir,

I am directed by the Commissioner to transmit the enclosed papers, and to request that you will, at your earliest convenience, reply to the two first marginal remarks in red ink.

I have, &c.,
R. COOPER WALKER,
(pro Secretary.)

R. B. Dawson, Esq.,
Bowenfels.

Bowenfels, 29 October, 1859.

Sir,

I have the honor to acknowledge your communication of the 24th October, No. 59-1165, enclosing copy of my report on the Telegraph Line to Bathurst, and directing me to reply to the two first marginal remarks in red ink.

1. "Not swamp oak. Ask Mr. Cracknell if he drew Mr. Dawson's attention to this?"

Mr. Cracknell told me no swamp oak was to be used. I did not perceive any posts of this description of timber; nor, in fact, could any be obtained, excepting at the points where the line crosses Cox's River.

2. "Mr. Dawson must be asked whether any posts not coming under the description of sound hardwood have been used, and if so, how many, as they will have to be removed?"

Two of the older residents near Meadow Flat expressed to me a suspicion that in that neighborhood some of the posts were composed of a description of timber alleged to be inferior; they were neither of them, however, able to identify positively any particular post, as being of that description, nor could I take upon myself to do so now that the bark has been so long stripped. I have, nevertheless, good reason to think that the line as now set up will, throughout, prove serviceable for twelve or fifteen years, and I should be glad to contract for the renewal of any posts which may become unserviceable through decay within that period, at a very moderate per centage.

I have, &c.,
R. B. DAWSON,
S. W. R.

The Commissioner for
Internal Communication.

MINUTE from Assistant Superintendent to Superintendent, on the completion of the Bathurst Line of Telegraph.

Merrewether has returned from Bathurst and reports the clearing, ramming the posts, replacing the broken insulators, setting some of the angle-posts upright, and the additional clearing to have been satisfactorily completed and according to directions given by me.

E. C. C.

Captain Martindale, R.E.,
&c., &c., &c.

Sir,

I forward you a report of the works that have been completed from Bathurst to Penrith. Everything has been done according to your orders—falling the extra trees, ramming the posts, and replacing the broken insulators; the angle-posts have been set upright and the charring has been completed satisfactorily.

T. MERREWETHER.

E. C. Cracknell, Esq.,
&c., &c., &c.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY EXPENDITURE.

(BETWEEN THE TERMINUS AT CLEVELAND AND THAT AT PYRMONT.)

Ordered by the Legislative Assembly to be Printed, 21 September, 1859.

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 25 March, 1859, That there be laid upon the Table of this House,—

“ (1.) A Return, shewing what amount of public money has
 “ been expended in the present uncompleted continuation of the
 “ Railway, between the present Terminus at Cleveland and
 “ that originally contemplated at Pyrmont, whether in the
 “ cost of work thereon, or in the acquisition of land for the
 “ continued line and intended Terminus; and if the purchase
 “ money of any such land has been reduced, in consideration of
 “ the estimated improvement in value to be conferred on
 “ adjacent property by the proposed Works, specifying the
 “ amount of any such reduction.

“ (2.) Copies of any Petitions or other applications to the
 “ Government, urging the completion of the continued line to
 “ Pyrmont and Terminus, and of any answers thereto.”

SCHEDULE.

NO.	PAGE.
1. A Return of Money expended on Railway between the Terminus at Cleveland and that contemplated at Pymont	3

CORRESPONDENCE RESPECTING THE EXTENSION OF THE RAILWAY
TO PYRMONT.

1. R. Morehead, Esq., to Principal Secretary, requesting to know what time he can receive a Deputation relative to the above matter. 23 November, 1857	4
2. Chairman and Vice-Chairman of the Pymont Bridge Company to Principal Secretary, submitting certain points for consideration on this subject. 23 November, 1857	4
3. Captain Martindale to Secretary for Lands and Public Works, reporting with reference to the above. 28 November, 1857	5
4. Memorial with 140 signatures attached, praying that the Railway may be extended to Pymont, near the Company's Bridge	6
5. Captain Martindale to Secretary for Lands and Public Works, reporting on cost of extending the Railway, as prayed for. 4 December, 1857	7
6. Captain Martindale to Secretary for Lands and Public Works, reporting on the whole question. 25 January, 1858	7
7. Under Secretary for Lands and Public Works to Captain Martindale, conveying the decision of the Executive Council, that they are not at present prepared to recommend the Government to carry out this extension. 20 February, 1858	8
8. Same to Chairman and Vice-Chairman of the Pymont Bridge Company, conveying the above decision. 22 February, 1858	8
9. Same to Memorialists, conveying above decision. 22 February, 1858	8

RAILWAY EXPENDITURE.

A RETURN showing what amount of public money has been expended on the present uncompleted continuation of the Railway between the present Terminus at Cleveland and that originally contemplated at Pymont.

Amount expended in the formation of the Darling Harbour Branch Line, as per the Engineer's certificate, dated December, 1856		35,332 19 1
Estimated value of the Rails thereon		1,200 0 0
Compensation for land and premises taken or severed for the purposes of the Line, viz. :—		
To Anne Malprus	300

No. 1.

R. MOREHEAD, ESQ., to THE COLONIAL SECRETARY.

Sydney, 23 November, 1857.

MY DEAR SIR,

The Board of the Pymont Bridge Company are to have a meeting at twelve to-day. An important part of our business will then be the consideration of our position with the Government in relation to the Railway Terminus at Pymont. This being a matter of pressing importance, I take the liberty to ask you if it would suit you to name an hour this afternoon to receive a Deputation* from the Board to confer with you with reference to that subject.

*The Deputation was received at 4 o'clock on the 23rd November.

I have, &c.,

R. MOREHEAD.

THE HONORABLE

THE COLONIAL SECRETARY.

No. 2.

CHAIRMAN AND VICE-CHAIRMAN OF THE PYRMONT BRIDGE COMPANY to THE COLONIAL SECRETARY.

*Pymont Bridge Company's Office,
23 November, 1857.*

SIR,

Referring to the various communications which this Company has had with the Government and the Railway Department, relative to the establishment of a Railway Passenger Terminus at or near the Pymont abutment of the Darling Harbour Bridge, and in particular to a recent conversation on the subject between the Vice-Chairman and yourself, and the Honorable the Treasurer, in the absence of the Honorable the Secretary for Lands and Public Works,—we do ourselves the honor, on behalf of the Company, to submit the following points for the consideration of the Government.

Our Engineer and the Contractor informs us that the above-mentioned Bridge will be completed in the course of next month.

As part of the work undertaken by the Company consists of the construction of a Road from the Pymont abutment of the Bridge to the Darling Harbour Terminus, as originally designed, it is evidently a matter of immediate importance to the Company to be informed of the intention of the Government with respect to that Terminus. Four courses appear to be open relative to it:—

1. The original design of constituting it a mere Goods Terminus may be simply carried out.
2. The Station, or Terminus, may be placed, as originally proposed, but arrangements for Passengers may be superadded.
3. The Passenger Terminus may be brought close up to the abutment of the Bridge, and the Wharves appertaining to the Goods Department may be formed along the deep water frontage extending below the Bridge.
4. The project of a Branch, or Line, to Darling Harbour may be entirely abandoned.

Perhaps, as merely addressing you on behalf of the Pymont Bridge Company, we ought to be content to conclude by asking for such a reply to the present communication as will enable the Board to shape their proceedings so as to conform to the plan the Government may decide upon. Seeing, however, that the question of a more central Railway Terminus, in Sydney, than the wretchedly incommodious one at present in existence, is now under discussion, we trust we shall not be deemed intrusive if we submit some observations relating thereto. We venture the more confidently to do this, because we believe the question to be one of pressing general importance which has been hitherto, to an unaccountable extent, overlooked, and that the plan we seek to direct attention to involves the only Railway outlay practicable in this Colony which will, at once, be attended with a profitable return.

In

In favor, then, of No. 3, (or failing it, of No. 2,) of the preceding possible arrangements, we beg to submit the following propositions :—

The situation indicated adjoins a thickly peopled part of the City,—is fairly entitled to be called Central,—and will become more so, as Sydney extends in its natural direction—that is, towards the interior of the country.

The proposed work will cost a mere fraction of the amount required to form a Terminus in Hyde Park, and will involve much less delay in furnishing the Metropolis with that crying necessity—a convenient access to and from the Southern Railway. Such an accommodation will at once give rise to an increased traffic; for it is well known that the discomforts of Brickfield Hill deter many people from using the Railway.

This arrangement will promote economy and convenience by bringing the Goods and Central Termini together.

The proposal to obtain access to the water by further narrowing Pitt-street—which is already inadequate for the safe accommodation of the existing traffic—a very little consideration will shew to be entirely untenable.

If it is contemplated—as has been hinted—to obliterate the Darling Harbour Branch of the Railway, it ought to be borne in mind that the owners of the Ultimo Estate were charged with between ninety and a hundred thousand pounds for the benefit they were to derive from that Line.

Their land has been taken; and if not paid for to the above extent by the completion of this Branch, it is obvious—on the estimate adopted by those who acted for the Railway—the above amount must be paid in cash to the Messrs. Harris. It is scarcely, however, to be conceived that the idea of abandoning this useful and well chosen Line can be seriously entertained.

In conclusion, we beg to state that the Directors have for some time had it in view to fix the charge to Foot Passengers crossing the Darling Harbour Bridge at one-half the rate the Act of Incorporation authorises, and that the decision to complete the Darling Harbour Terminus will cause them at once to make this charge. This will reduce the charge to a penny, and effect a clear saving of five-pence per trip to the numerous class of persons using the Railway, who will be brought, by the proposed arrangement, within walking distance of a Station.

We have, &c.,

GEO. ALLEN, Chairman.

R. MOREHEAD, Vice-Chairman.

THE HONORABLE

THE COLONIAL SECRETARY.

Referred for the Report of Capt. Martindale.

B. C.

24 November, 1857.

No. 3.

CAPTAIN MARTINDALE to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

Railway Department,

Sydney, 28 November, 1857.

SIR,

In reference to your Minute of the 24th instant on a letter from the Chairman and Vice-Chairman of the Pyrmont Bridge Company, of the 23rd instant, I have the honor to observe that Mr. Moriarty, the Engineer of the Company, had an interview with me this week upon the subject of the above-named letter. I suggested for his consideration, whether it might not be worth the while of the Pyrmont Bridge Company to apply for permission to complete themselves the Darling Harbour Branch to the Bridge, and to enter into arrangements with the Railway Commissioners to work it.

Mr.

Mr. Moriarty has since called upon me, and requested I would furnish him with any plans, or other information in my power, to enable him to submit an estimate for this work to the Directors of the Company.

This I have done with pleasure, and I presume, therefore, it will be now advisable to wait for some further intimation from them.

THE HONORABLE
THE SECRETARY FOR
LANDS AND PUBLIC WORKS.

I have, &c.,
B. H. MARTINDALE,
Chief Commissioner.

No. 4.

To His Excellency the Governor General, and the Honorable the Executive Council of New South Wales.

The Memorial of the undersigned persons interested in the Traffic of the Sydney Railway,—

SHEWETH:—

That your Memorialists sustain great inconvenience from the present position of the Railway Terminus, especially with regard to Passenger Traffic, the communication therewith from the centre of business within the City causing to many of your Memorialists more delay, expense, and fatigue, than the whole subsequent journey to their comparatively distant residences.

That your Petitioners look forward with pleasure to the opening of a new communication with Sydney by the Pyrmont Bridge, as affording an opportunity for establishing a Terminus far more desirable, and this without the necessity of any considerable expense or delay.

With regard to delay, however, your Memorialists beg to represent that this can only be averted by rendering the completion of a new Terminus at the Pyrmont end of the Bridge simultaneous with that of the Bridge itself, and commencing at once with this view the work required, to take advantage of its opening, which may be expected before the close of the present year.

Your Memorialists can only anticipate one objection to a compliance with their wishes, namely, a suggestion of the expediency of first disposing of the proposition for a still more convenient Terminus in Hyde Park, or near the Circular Quay.

Your Memorialists would, however, earnestly represent, that even if this assumed greater improvement be ultimately resolved on, the serious expense and labor which it involves preclude its accomplishment within any such limit of time as would justify the postponement of an intermediate advantage of so comparatively cheap and easy attainment.

Your Memorialists further represent that, irrespectively of the convenience of the persons now using the Railway, it is manifest the suggested improvement would lead to an increase of Railway travelling, and augment the revenue thence arising, while the growing inconveniences attendant on the passage of the whole Metropolitan Traffic through the present solitary line of entrance to the south, render the encouragement of a new mode of access highly expedient.

Your Memorialists therefore pray that means may be at once adopted to prepare and to render available, as soon as the Pyrmont Bridge shall be completed, a Railway Terminus adjacent thereto.

[Here follow 140 signatures.]

Will Captain Martindale have the goodness to report (B.C.) upon the probable cost of a new Terminus at Pyrmont.

T. A. M.
2 December, 1857.

No. 5.

CAPTAIN MARTINDALE to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

*Railway Department,
Sydney, 4 December, 1857.*

SIR,

In accordance with your Minute (B.C.) of 2nd instant, and referring to my letter to you of date the 28th ultimo, I have the honor to state that, although the Engineer-in-Chief has no documents prepared from which any exact estimate can be formed of the cost of extending the Pymont Branch of the Railway to the Pymont Bridge, still he is of opinion that the cost, including temporary booking offices, of a single line of way, but inclusive of land and compensation, and goods arrangement of Wharf, will be about ten thousand pounds (£10,000.)

I have, &c.,

B. H. MARTINDALE.

THE HONORABLE

THE SECRETARY FOR

LANDS AND PUBLIC WORKS.

Before the Government decides upon this application, Captain Martindale should be called upon to report upon the whole question.

B. C. 8 December, 1857.

C. C.

7 December.

No. 6.

CAPTAIN MARTINDALE to THE SECRETARY FOR LANDS AND PUBLIC WORKS.

*Railway Department,
Sydney, 25 January, 1858.*

SIR,

In reference to your Minute of the 8th ultimo, on my letter of the 4th ultimo, herewith, with enclosures, returned, I have the honor to report that I cannot recommend the Government to incur the expense of extending the Darling Harbour Branch of the Great Southern Railway to the Pymont Bridge, and of forming a Terminus there.

If, however, the Pymont Bridge Company desire to carry out such an extension, I see no objection to the Company applying to the Legislature next Session for the necessary powers, on the following general conditions:—

1. The entire cost of the extension, including purchase of land, station buildings, and all other works, to be borne by the Company, and the extensions to be their property.
2. The extension to be constructed to the satisfaction of the Commissioners, or their Engineer-in-Chief.
3. The line to be worked by the Railway Commissioners (under powers to be taken in the Bill) on the following general terms, viz.:—

The working expenses to be first paid out of the receipts upon the branch.

The charge for transit, and all matters connected with the working of the line, to be regulated by the Railway Commissioners.

In case the receipts exceed the working expenses, the balance to be divided proportionately between the Commissioners and the Company, according to the length of line constructed by each.

The Government to have the power of purchasing the extension at 10 per cent. increase upon the original cost, at any time after seven years, dating from the completion of the same.

All articles intended for the Public Service, or for Railway purposes, while the Railways remain the property of the Public, to be landed, free of wharfage dues, at any jetty or wharf belonging to the Company, and permitted to pass free of charge to the Railway.

I have, &c.,

B. H. MARTINDALE,

Chief Commissioner.

THE HONORABLE

THE SECRETARY FOR

LANDS AND PUBLIC WORKS.

No. 7.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to CAPTAIN MARTINDALE.

*Department of Land and Public Works,
Sydney, 20 February, 1858.*

SIR,

Referring to your letter of the 25th ultimo, respecting the proposed extension of the Darling Harbour Branch of the Great Southern Railway to the Pyrmont Bridge, I am directed by the Secretary for Lands and Public Works to inform you, that the matter having been laid before the Executive Council, the Council, upon a full consideration of all the bearings of the question, are not at present prepared to recommend the Government to carry out the extension proposed.

I have, &c.,

MICL. FITZPATRICK.

THE CHIEF COMMISSIONER OF RAILWAYS.

No. 8.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to THE CHAIRMAN AND VICE CHAIRMAN, PYRMONT BRIDGE COMPANY.

*Department of Land and Public Works,
Sydney, 22 February, 1858.*

GENTLEMEN,

With reference to your letter of the 23rd November last, addressed to the Honorable the Colonial Secretary, submitting suggestions for the extension of the Darling Harbour Branch of the Great Southern Railway to the Pyrmont Bridge, and the establishment of a Railway Passenger Terminus at or near the Pyrmont abutment of the Bridge in question, I am directed by the Secretary for Lands and Public Works to inform you that the matter having been laid before the Executive Council, the Council, upon a full consideration of all the bearings of the question, are not at present prepared to recommend the Government to carry out the extension proposed.

I have, &c.,

MICL. FITZPATRICK.

THE CHAIRMAN AND VICE CHAIRMAN,
Pyrmont Bridge Company.

No. 9.

THE UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to MEMORIALISTS.

*Department of Land and Public Works,
Sydney, 22 February, 1858.*

GENTLEMEN,

With reference to a Memorial presented to His Excellency the Governor General in December last, by certain persons interested in the traffic of the Sydney Railway, praying for the extension of that Railway to the Pyrmont Bridge, and the establishment in its vicinity of a Passenger Terminus, I am directed by the Secretary for Lands and Public Works to inform you that the matter having been laid before the Executive Council, the Council, upon a full consideration of all the bearings of the question, are not at present prepared to recommend the Government to undertake the extension prayed for.

I have, &c.,

MICL. FITZPATRICK.

HENRY CORY, Esquire, JOHN DUNSMURE, Esquire,
and the other Gentlemen signing the Memorial.

Legislative Assembly.

NEW SOUTH WALES.

PITT STREET TRAMWAY BILL.

(PETITION OF CERTAIN PROPRIETORS, &c., OF PITT STREET.)

Ordered by the Legislative Assembly to be Printed, 23 September, 1859.

The Honorable the Legislative Assembly.

The humble Petition of the Proprietors of Property, Householders, and others,
residing in Pitt-street, and adjoining streets, Sydney,—

RESPECTFULLY SHEWETH:—

That they have long felt the great inconvenience of the Railway Terminus being so far distant from the business part of the Town, and also experienced great loss from the high rates of cartage and damage to goods from frequent removals.

We, the undersigned Petitioners, seeing that a Bill to authorize the making a Tram-road, down Pitt-street from the present Railway Terminus to the Circular Quay, has been laid before your Honorable House to remedy this present great inconvenience and loss, respectfully request that you will be pleased to pass the same into a law.

*
And your Petitioners will ever pray.

[Here follow 321 signatures.]

REPORT FROM THE SELECT COMMITTEE

ON THE

PITT-STREET TRAMWAY BILL;

TOGETHER WITH THE

PROCEEDINGS OF THE COMMITTEE

AND

MINUTES OF EVIDENCE.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,

25 May, 1860.

SYDNEY :

THOMAS RICHARDS, GOVERNMENT PRINTER, PHILLIP-STREET.

1860.

EXTRACTS FROM THE VOTES AND PROCEEDINGS OF THE
LEGISLATIVE ASSEMBLY.

VOTES No. 18. THURSDAY, 29 SEPTEMBER, 1859.

8. Pitt-street Tramway Bill:—Mr. Robertson moved, That this Bill be “now read a second time.”
Debate ensued.
Mr. Samuel moved, That the Question be amended by the omission of the words “now read a second time,” with a view to the insertion in their place of the words “referred for the consideration and report of a Select Committee, consisting of Mr. Atkinson, Mr. Black, Mr. Elliott, Mr. Jones, Mr. Broughton, Mr. Morris, Mr. Nott, Mr. Robertson, Mr. Hay, and the Mover,”—
Debate continued.
Question,—That the words proposed to be omitted stand part of the Question,—put and negatived.
Question,—That the words proposed to be inserted in place of the words omitted, be so inserted,—put and passed;—
Whereupon Question,—That this Bill be referred for the consideration and report of a Select Committee, consisting of Mr. Atkinson, Mr. Black,* Mr. Elliott, Mr. Jones,† Mr. Broughton, Mr. Morris, Mr. Nott, Mr. Robertson,‡ Mr. Hay, and the Mover,||—put and passed.

* Seat declared vacant, 26 October, 1859.
† Seat declared vacant, 10 April, 1860.
‡ Seat declared vacant, 8 March, 1860.
§ Seat declared vacant, 26 October, 1860.

VOTES No. 21. WEDNESDAY, 5 OCTOBER, 1859.

7. Pitt-street Tramway:—Mr. Samuel moved, without previous notice, That there be laid upon the Table of this House,—
(1.) Copies of all Plans, Sections, and Estimates, which may have been made, under the authority of the Railway Department, of the proposed extension of the Great Southern Railway from the Terminus at Redfern to Hyde Park.
(2.) Copies of all Plans, Sections, and Estimates of the proposed Tramway from the Great Southern Railway Terminus at Redfern to the Circular Quay, and of any other Lines which may have been surveyed for the purpose of extending the said Railway through the City of Sydney.
Question put and passed.

VOTES No. 28. TUESDAY, 18 OCTOBER, 1859.

19. Pitt-street Tramway:—Mr. Robertson laid upon the Table certain Plans of Railway Extension into the City of Sydney.
Referred to the Select Committee on the Pitt-street Tramway Bill.

VOTES No. 38. WEDNESDAY, 7 DECEMBER, 1859.

13. Pitt-street Tramway Bill:—Mr. Samuel moved, pursuant to notice, That Mr. Samuel and Mr. Gordon be added to the Pitt-street Tramway Committee.
Question put and passed.

VOTES No. 102. FRIDAY, 25 MAY, 1860.

2. Pitt-street Tramway Bill:—Mr. Broughton, as Chairman, brought up the Report from, and laid upon the Table the Proceedings of, and Minutes of Evidence taken before, the Select Committee, for whose consideration and report this Bill was referred on the 29th September last.
Ordered to be printed.

1859-60.

PITT-STREET TRAMWAY BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, for whose consideration and report was referred, on the 29th September, 1859, the "*Pitt-street Tramway Bill*," and to whom were also referred, on the 18th October following, "*Certain Plans of Railway Extension into the City of Sydney*," have agreed to the following Report:—

Your Committee have considered the Bill referred to them by your Honorable House, and have examined thereupon Captain Ben Hay Martindale, R. E., Commissioner of Railways; John Whitton, Esq., Chief Engineer of Railways; Edward Bell, Esq., M. Inst. C. E., City Engineer; together with certain witnesses, owners of property in Pitt-street.

Your Committee are of opinion that the construction of a Tramway to the Semi-Circular Quay would lessen the cost of conveying railway stock and goods to and from the present Railway Terminus, and that it would also facilitate the passenger traffic.

That Pitt-street is the most direct line from the Railway Terminus to the Circular Quay, and passes through the very heart of the city. It is, however, the narrowest of any thoroughfare approaching the Semi-Circular Quay, and contains a greater amount of Municipal property than any other street in the city, amounting, it would appear by the evidence before us, to upwards of £100,000; and Mr. Bell states that the interests of the Sydney Municipal Council will be injuriously affected by the formation of the proposed Tramway, and urges objections which he conceives to be of so formidable a character as to be insuperable.

In this opinion your Committee do not coincide, but consider that there are no difficulties which may not be overcome by proper arrangements; and recognizing the importance of affording, within the city, additional facilities for Railway traffic, your Committee recommend that this experiment should be fairly and fully tried. With this view, and considering the improbability of passing an amended Bill during the present Session, your Committee recommend,—

1. That a new Bill, to authorize the construction of a Tramway along Pitt-street, be brought before Parliament, when assembled, after the approaching recess.
2. That the Clauses of such measure, as indeed of any enactment for the introduction of Rail or Tram ways within the boundaries of the city, be drawn in conformity with the following principles :—
 - (1.) That instead of taking the full powers under the Railways Act of 1858, such powers only should be sought as are necessary to enable the Railway Commissioner to maintain the Tramway and to provide for its effectual working.
 - (2.) That the rails shall be laid at the same level as the surface of the street, and that no alteration shall take place in the permanent levels except by mutual agreement of the Railway and Municipal authorities.
 - (3.) That the Commissioner of Railways repair all damage done in the execution of the works, and keep the metal of the roadway between the rails and for one foot on each of the outsides of them level with the surface in perfect order and repair.
 - (4.) That in working the line the Commissioner be limited to the use of horse traction.

*Legislative Assembly Chamber,
Sydney, 23 May, 1860.*

THOMAS BROUGHTON,
Chairman.

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 5 OCTOBER, 1859.

MEMBERS PRESENT :—

Mr. Samuel,		Mr. Hay,
Mr. Elliott,		Mr. Atkinson,
Mr. Broughton.		

S. Samuel, Esq., called to the Chair.

The Committee deliberated as to the best course to be pursued in carrying out their inquiry, and decided firstly,—That the inquiry should be confined as closely as possible to the Bill now before them; and secondly,—That evidence should be taken in reference to its details without delay.

Motion made (*Mr. Hay*) and *Question*,—That the Chairman do move in the House, by leave, this day, the following order (*without notice*), viz. :—

That there be laid upon the Table of this House,—

(1.) Copies of all Plans, Sections, and Estimates, which may have been made, under the authority of the Railway Department, of the proposed extension of the Great Southern Railway from the Terminus at Redfern to Hyde Park.

(2.) Copies of all Plans, Sections, and Estimates of the proposed Tramway from the Great Southern Railway Terminus at Redfern to the Circular Quay, and of any other Lines which may have been surveyed for the purpose of extending the said Railway through the City of Sydney—*agreed to*.

[Committee adjourned till Tuesday, 11th instant, at 11½ o'clock.]

TUESDAY, 11 OCTOBER, 1859.

MEMBERS PRESENT :—

S. Samuel, Esq., in the Chair.

Mr. Atkinson,		Mr. Elliott,
Mr. Morris,		Mr. Black,
Mr. Nott.		

Captain B. H. Martindale, *R.E., Commissioner of Railways*, called in and examined.

John Whitton, Esq., *M. Inst. C.E., Engineer-in-Chief*, called in and examined.

Committee deliberated, and

[Adjourned till Friday, 14th instant, at 10 o'clock.]

FRIDAY, 14 OCTOBER, 1859.

The meeting, called for this day, by order of the Chairman, postponed until Wednesday, 19th instant, at 10 o'clock.

WEDNESDAY, 19 OCTOBER, 1859.

MEMBERS PRESENT :—

S. Samuel, Esq., in the Chair.

Mr. Nott,		Mr. Elliott,
Mr. Atkinson,		Mr. Morris,
Mr. Broughton.		

Certain plans of Railway Extensions into the City of Sydney, referred, by the House, to the Committee, on the 18th instant, produced and laid before Committee.

E. Bell, Esq., *M. Inst. C.E., City Engineer*, called in and examined.

The Chairman produced a letter from Mr. E. Teillard, Pitt-street, volunteering Evidence on the subject under consideration.

Direction given for summoning Mr. Teillard, as a witness, at the next sitting.

[Committee adjourned till Tuesday, 25th instant, at 10 o'clock.]

TUESDAY, 25 OCTOBER, 1859.

MEMBERS PRESENT :—

S. Samuel, Esq., in the Chair.

Mr. Jones,		Mr. Elliott,
Mr. Hay,		Mr. Black.

E. Teillard, Esq., called in and examined.

[Committee adjourned.]

THURSDAY,

THURSDAY, 22 DECEMBER, 1859.

MEMBER PRESENT:—

Mr. Samuel.

There not being a Quorum present, no meeting of the Committee was held this day.

TUESDAY, 24 JANUARY, 1860.

MEMBERS PRESENT:—

Mr. Samuel, | Mr. Morris,
Mr. Atkinson.

The former Chairman (*Mr. Samuel*) having, by reason of his acceptance of office as Colonial Treasurer, vacated his seat in the House—

T. Broughton, Esq., called to the Chair.

Mr. Broughton not being present,—

[Committee adjourned.]

THURSDAY, 16 FEBRUARY, 1860.

MEMBERS PRESENT:—

T. Broughton, Esq., in the Chair.

Mr. Morris, | Mr. Atkinson.

Mr. S. Hebblewhite called in and examined.

Mr. A. Foss called in and examined.

Committee deliberated as to the steps to be next taken in their inquiry, and
Resolved:—

“ That the Chairman draw up the heads of a Report, for consideration at the
“ next meeting.”

[Committee adjourned.]

THURSDAY, 12 APRIL, 1860.

In consequence of the adjournment of the House from the 11th to the 13th instant, the meeting called for this day lapsed.

TUESDAY, 24 APRIL, 1860.

MEMBERS PRESENT:—

Mr. Broughton, | Mr. Hay,
Mr. Samuel.

The Chairman not taking the Chair within one hour of the time (12 o'clock) appointed for the meeting of the Committee to-day, such meeting lapsed.

FRIDAY, 27 APRIL, 1860.

MEMBERS PRESENT:—

None.

In the absence of a Quorum, no meeting of the Committee was held this day.

FRIDAY, 4 MAY, 1860.

MEMBERS PRESENT:—

T. Broughton, Esq., in the Chair.

Mr. Hay, | Mr. Morris,
Mr. Samuel.

The Chairman submitted his views in reference to contents of Report.
Committee deliberated.

[Adjourned.]

WEDNESDAY,

WEDNESDAY, 23 MAY, 1860.

MEMBERS PRESENT :—

T. Broughton, Esq., in the Chair.

Mr. Atkinson, | Mr. Hay,
Mr. Samuel.

Committee met pursuant to summons.

The Chairman laid before Committee a Draft Report.

Committee deliberated,—and Draft *verbally* amended.

Proposed Report read.

Motion made (*Mr. Hay*) and *Question* proposed,—That the Report, as read, be the Report of this Committee.

Amendment proposed (*Mr. Samuel*),—That the *Question* be amended by the omission of all the words after the word “That,” with the view of inserting an Amendment, as follows :—
“In lieu of certain recommendations of a contrary nature in the proposed report, the following paragraph be inserted, viz : That whilst your Committee consider a Tramway from the Terminus, at Redfern, to the Circular Quay, would facilitate the traffic by the Railway, and is therefore desirable, they cannot recommend that it should be carried along Pitt-street, that street being too narrow, and barely sufficient for the ordinary traffic, which a Tramway is calculated to obstruct.”

Question—That the words proposed to be omitted stand part of the *Question*—*put*.
Committee divided.

Ayes, 2.	No, 1.
Mr. Atkinson,	Mr. Samuel.
Mr. Hay.	

Amendment negatived.

Original Question—That the Report, as read, be the Report of the Committee—*put*.
Committee divided.

Ayes, 2.	No, 1.
Mr. Atkinson,	Mr. Samuel.
Mr. Hay.	

Report agreed to.

Chairman requested to report to the House.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

PITT-STREET TRAMWAY BILL.

TUESDAY, 11 OCTOBER, 1859.

Present :—

Mr. ATKINSON,
Mr. BLACK,
Mr. ELLIOTT,

Mr. MORRIS,
Mr. NOTT,
Mr. SAMUEL.

SAUL SAMUEL, ESQ., IN THE CHAIR.

Captain Ben Hay Martindale, R.E., Commissioner of Railways, called in and examined :—

1. *By the Chairman* : You are aware that the Bill to authorise the construction of a tramway from Redfern to the Circular Quay, along Pitt-street, has been referred to this Committee? I am.
2. You are desirous of having this tramway constructed? I think it would be a convenience to the public.
3. Will you be kind enough to state what in your opinion will be the advantages that will arise from its construction? The advantages that would arise from its construction, to passengers, would be the substitution of commodious public carriages for very inconvenient ones, and the power of getting to and from the station at Redfern at cheaper rates than at present; and, as regards goods, the power of conveying them between Redfern and the Circular Quay at cheaper rates than at present.
4. Do you propose to use upon this tramway the same carriages and trucks as are at present in use upon the Great Southern Railway? Not the same carriages, but the same trucks.
5. The passengers would still have to change carriages at the station as at present? Yes.
6. From the carriages that ran on the tramway to those that ran on the line? Yes; but if I found that the public were desirous of taking their places at once in the carriages by which they were to travel on the railway, I should endeavor to arrange for that.
7. How many carriages do you propose to have in a train on this tramway? I only propose to have one to accommodate from forty to sixty passengers.
8. How do you propose to run the trucks? Singly, but that would depend on the weight.
9. How do you propose to lay the rails? To sink them into the centre of the roadway to a level with the surface.
10. Can you tell the Committee the width of the opening of the groove for the flange of the wheel? No groove will be required; the flange will keep itself clear, that is, it will form for itself a groove of about an inch and a half in width, alongside the rail.
11. Will it not be necessary to keep that groove open in some way? No, the flange will keep itself clear.
12. What kind of rails do you intend to lay down? Barlow's rails; because we have them on the spot. The flange will run along on the inside of each rail, and clear a way for itself.

Captain B. H. Martindale, R.E.
11 Oct., 1859.

- Captain B. H. Martindale, R.E.
 11 Oct., 1859.
13. *By Mr. Black*: Have you seen such tramways in operation in large cities? I have not.
14. You have no doubt it will keep itself clear? I have no doubt of it.
15. *By the Chairman*: Do you not think such a tramway would present all the disadvantages of a common road if the wheel had to make a way for itself? I do not think so.
16. Where do you propose to have the terminus of the tramway? On the Circular Quay, in the yard of the present Ordnance stores.
17. *By Mr. Atkinson*: Will that be sufficiently commodious? It is proposed, if the public convenience should require it, to extend the tramway round the Circular Quay, either to the woolshed or beyond it, as necessity arises.
18. *By the Chairman*: Do you propose to have any other stations along the streets for goods? No.
19. It has been stated that it is proposed to convey the goods traffic early in the morning and late in the evening—is that so? That is the intention.
20. Will you be kind enough to state why? With the view of interfering as little as possible with the existing traffic.
21. Do you not think that the necessity of continual approach to the large water main and the sewer, which both run down the centre of Pitt-street, will obstruct your line? I do not see why it should, any more than it would obstruct the ordinary traffic.
22. The ordinary traffic can get out of the way of any openings that may be made in the street for these purposes, but your carriages could not do so? The rails could always be propped up from below. There ought not to be any obstruction.
23. Not while the rails were out of place? They need not be taken out of place; they could be supported from below.
24. That would cause additional expense to the city authorities, would it not? I do not see why. Trains are run over railway bridges while repairs are in progress, which is a much more difficult matter.
25. Can you inform me what is the width of the carriage way in Pitt-street? Not accurately; I think it is about thirty-five feet between the pavements.
26. *By Mr. Black*: I suppose the width of the street varies? It varies a good deal.
27. *By the Chairman*: What will be the gauge of the tramway? Four feet eight and a-half inches.
28. What will be the extreme width of the carriages and trucks? About seven feet.
29. *By Mr. Morris*: That will be the only portion of the street that will be taken up? Yes; and that will be only taken up while the carriages are actually passing; not permanently taken up.
30. *By the Chairman*: It is proposed that the carriages used on this tramway shall be drawn by horses? Yes.
31. You are aware that no provision is made in the Bill to prevent the use of locomotives on this line? I am.
32. *By Mr. Black*: Do you see any serious objection to the use of locomotives? Not in the early morning; on the contrary, I think a small locomotive might be a great advantage for taking down goods at that time.
33. I presume you are aware they do run on the streets in some cases in America? Yes.
34. *By the Chairman*: Would not the gradients prevent a locomotive running in Pitt-street? No; but it would run with greatly reduced effect.
35. *By Mr. Black*: I presume that, unless the traffic becomes very much larger than it is likely to be for some time, horse power will be preferable? I would not desire to run locomotives down Pitt-street, under any circumstances, during the busy part of the day; because the street is so narrow, and the risk of persons becoming frightened would be great.
36. *By Mr. Atkinson*: What do you call the busy part of the day? Between nine o'clock and five.
37. *By the Chairman*: Do you not think that even the proposed mode of propulsion by horses would interfere with the ordinary traffic? No; I do not think it would interfere with it nearly as much as the cabstand opposite the Oriental Bank.
38. *By Mr. Atkinson*: Have you considered the extra rates to be charged for passenger and goods traffic on this tramway? I think for passengers three-pence would be the outside rate, and for goods, without pledging myself, one shilling a ton.
39. *By the Chairman*: Do you think that would be any saving to the majority of the public? I do.
40. Would not many of them, whose stores are not near the Circular Quay, still have to pay the carriage from them to the terminus at the Circular Quay, in the same way as they do at present to Redfern? No doubt, but not the same price.
41. Are you aware what is the lowest rate carters charge from any part of the city to the Circular Quay? I am not.
42. Do you propose that the Government shall provide horses or let out the drawing of these trains? Probably the Government would contract for the haulage.
43. The horsing does not form part of your estimate for the cost of construction and rolling stock? No.
44. *By Mr. Atkinson*: What is the estimated cost of the line? £6,000, including the store in the Ordnance yard.
45. Does that include the rolling stock? No; the estimate for rolling stock is £1,500, making a total of £7,500.
46. How do you propose to lay the rails—on what principle? Simply to lay them in the macadamized road and tie them together with iron rods, at intervals of nine or ten feet. Their own weight will keep them in place.
47. Do you propose to keep the centre of the street, between the rails, in order, so as not to

to entail any expense on the Corporation? I propose that we should keep the rails themselves in order, but not the street. Any damage to the street by the railway traffic would be very small; and it might lead to a clashing of authority if the Commissioner kept one part of the street in repair and the Corporation the other.

Captain B.H.
Martindale,
R.E.

11 Oct., 1850.

48. *By Mr. Black*: Have you taken into consideration the advisability of having sleepers laid longitudinally under the rails? I have discussed that point with Mr. Whitton; but the conclusion arrived at is, that it is not necessary to have any sleepers, and that the rail merely laid in the roadway, with iron guage rods will be sufficient. It may be as well to mention that if we had a lighter rail, or a grooved rail, on the spot we should use it in preference; but as we have the Barlow rails, and as the whole matter is an experiment only, we propose using them.
49. *By Mr. Atkinson*: What is the distance from the proposed terminus at the Circular Quay to the Railway Station at Redfern? Nearly two miles.
50. Would not the rate of one shilling a ton be rather extravagant for that distance? A shilling a ton would be the outside rate.
51. *By the Chairman*: At present you have an arrangement for receiving goods from merchants' stores and carting them to the railway? We have.
52. What is the nature of that arrangement? That any merchant sending notice to the traffic manager, or to the Railway Department, can have his goods sent for and taken to the station at a fixed rate.
53. What is that rate? Four shillings a ton.
54. By dray? Yes.
55. Is it proposed to do away with that arrangement? No.
56. Do you propose to alter the gradients of Pitt-street at all? Not without the consent of the Corporation.
57. Do you not think it would be rather unfair to the citizens to cast the whole charge of keeping the centre of this line in repair on them? I think not. A street or road is cut up far more by wheels than by the feet of horses; but with the tramway the wheels of the carriages and trucks could not cut up the street at all. At present the railway has a heavy traffic passing along Pitt-street, for which it pays no special rate; and I see no reason why it should pay a special rate after the formation of the tramway, which it would do were it to maintain part of the street in repair.
58. As you propose to have no inner guard, as it were, to prevent the earth from falling against the rail, so as to keep the way open for the wheel, do you not think the traction will be very difficult indeed? I do not think so.
59. You think there would not be sufficient resistance to make it as heavy as an ordinary road? No. If ever it should be found necessary, we could easily make an arrangement for a permanent groove.
60. Do you not think a permanent groove would be preferable? I discussed the point with the engineer-in-chief, and it was considered unnecessary.
61. Do you think the hours you mentioned, between daylight in the morning and nine o'clock, and after dark in the evening, will be sufficient for the requirements of the goods traffic? If they are not we shall have to take some of it during the day.
62. *By Mr. Black*: Is it intended, with this tramway, besides conveying goods and passengers between the two points at Redfern and the Circular Quay, to also convey goods and passengers between the different intermediate points along the line? Passengers, but not goods.
63. *By the Chairman*: How do you propose to take up passengers and put them down? The proposal was to stop before crossing each main street. It was quite a matter of detail. The rate of travelling would not exceed six miles an hour, and breaks similar to railway breaks could be used.
64. So as to stop the carriage at once? Yes.
65. Do you think there would be any danger of collision from these carriages not being able to leave the centre of the road in case of meeting or having to pass other vehicles? I do not.
66. The street is very narrow, and it is possible I imagine that a vehicle may be driven suddenly on to the centre of the line just as the train may be coming—do you not think there would be any danger then? I should prefer a wider street, but I do not apprehend collision.
67. *By Mr. Elliott*: Why has Pitt-street been selected? As the most favorable line.
68. *By the Chairman*: Have you considered at all the desirability of extending the present line of railway for locomotives into the city, and placing the terminus in a more central position? I have.
69. Have any plans or surveys been prepared for that purpose? There was a plan prepared I believe before I came into the colony, shewing the continuation of the Railway to Hyde Park.
70. On what particular portion of the park was it proposed to place the terminus? Close by the end of Market-street.
71. Did that line present any great engineering difficulties? No.
72. Were any specifications or estimates prepared? I believe not.
73. What is your opinion of that site as a desirable one for a terminus? It would be a convenient site for passengers, but it is open to the objection of intruding upon Hyde Park; and the formation of the line from Redfern to the Park, with the purchase of the ground and the erection of the necessary stations, would cost a large sum of money.
74. Have any other sites been proposed for a terminus in the city? I believe the site originally proposed—I am merely speaking from hearsay—was in the Haymarket.
75. Are these the only two places you are aware of? I am not aware of any other having been proposed, except Darling Harbor.

- Captain B. H. Martindale, R.E.
 11 Oct., 1859.
76. Would the site at the Haymarket present any greater advantages than the present terminus at Redfern? It is rather nearer the commerce of the city.
77. It would not have the effect that you expect from the tramway down Pitt-street? No; the object is to connect the harbour with the railway.
78. *By Mr. Atkinson*: Have any surveys or sections of any other street than Pitt-street been made? No; because all the other streets are higher up the hill, and plainly you must ascend and descend more than would be necessary in Pitt-street.
79. *By Mr. Morris*: There is less traffic in Elizabeth-street? Yes, but it is much higher up the hill, and therefore open to the objection I have just stated.
80. *By Mr. Black*: Would that circumstance involve much more labor in the formation of the tramway? I do not know that the labor would be much greater, but the line would not be so straight by any means; and the fall from the street to the Circular Quay is much greater.
81. *By the Chairman*: Is the cost of the rails and the rolling stock included in the estimate you have mentioned, £7,500? Yes.
82. *By Mr. Atkinson*: That is the total cost? That is the total cost.
83. *By Mr. Black*: Exclusive of horses? Yes; the cost of horses would be part of the working expenses.
84. *By the Chairman*: You do not propose to bring up more than one truck at a time with goods? No; depending on the weight.
85. *By Mr. Black*: I suppose that if one truck was found to be sufficient for the conveyance of goods, very likely one carriage, of the description you have mentioned, would be sufficient for the conveyance of passengers? As soon as it was found that more were required, more could be put on; but it is not at present proposed to run more than one carriage at a time.
86. *By Mr. Nott*: What number of horses would be employed to each? At present we propose three.
87. *By Mr. Elliott*: Have you heard it stated that it would be a better plan to bring the line up George-street, crossing over into York-street through the vacant ground near the Cathedral, and make the terminus in Wynyard-square? I have never, till now, heard of such a proposal. The object I have always had in my mind is to connect the harbor with the railway.
88. *By the Chairman*: Have you seen the flat iron tramways, for ordinary wheels, at Walker's Wharf and Macnamara's Wharf? I have not.
89. Is there any other information you could afford the Committee, or any observation you wish to make? I may state generally, that, without binding the Commissioner, the object is to ascertain and provide, as far as practicable, for the convenience of the public; and it is not desirable to fetter the Commissioner too closely in matters of detail.

John Whitton, Esquire, called in and examined:—

- J. Whitton, Esq.
 11 Oct., 1859.
90. *By the Chairman*: You are Chief Engineer of Railways in this Colony? I am.
91. Would you be kind enough to favor the Committee with your opinion on the desirability of constructing a tramway from the terminus of the railway at Redfern, along Pitt-street, to the Circular Quay? I do not see any engineering objection to the construction of the proposed tramway.
92. Do you think it will interfere with the ordinary traffic of the street in any way? I do not think it would, although the street is certainly narrow.
93. Do you not think that from the circumstance of the carriages running in the centre of the street, unable to move either to the right or left, collisions might take place when they were met by other vehicles? I think not; the other vehicles could move either to the right or left as might be necessary.
94. You think then there will be ample room for the ordinary traffic of the street? I think there will be room enough; there will be sixteen feet on each side of the tramway. The total width of the street is thirty-seven feet as an average, between the kerb stones.
95. What is the intended gauge of the tramway? It will be 4 feet 8½ inches inside the rails, and outside about 5 feet 2 inches; and the total width of the street being thirty-seven feet, will leave sixteen feet on each side.
96. What would be the extreme width of the carriages and trucks? About seven feet.
97. They would encroach on the street beyond the tramway then? The carriages would, the trucks would only do so very slightly.
98. It has been stated to the Committee by Captain Martindale that you propose to use Barlow's rail, which is to be sunk into the roadway until it is level with the surface, and that the centre of the road will be filled in, no groove being left for the flange of the wheel? The flange of the wheel only requires a groove of an inch and a quarter in depth, and will always make its own groove. I do not think it necessary to leave a groove, in fact, it would be rather an objection, as the wheels of ordinary vehicles might get into it.
99. Do you think there would be less resistance on a tramway thus constructed than on an ordinary road? No doubt of it.
100. What is the steepest gradient in Pitt-street? One in twenty.
101. What quantity of goods is it proposed to carry on the trucks at one time? Four or five tons; that is about the ordinary loading. We never load the trucks to more than five tons, or, including the weight of the truck, seven to seven and a-half tons.
102. Captain Martindale has stated that only one truck will be used at a time? One truck at a time would be as much as two horses would be able to take up the incline of one in twenty; but on any other part of the tramway they would take more.

103. You feel satisfied this tramway will not interfere with the ordinary traffic of the street? I do not think it will interfere much with it; I do not see why it should. No doubt if the street were wider it would be better. J. Whitton,
Esq.
104. Are you aware that one of the principal water-mains runs up the centre of Pitt-street? I am not aware of it; but even assuming that it does, I do not see that that is any great objection. 11 Oct., 1859.
105. Do you not think the necessity of continual approach to it would obstruct the traffic on the tramway? I think not. The tramway could be easily carried on timber for any reasonable distance—fifteen, twenty, or thirty feet, or longer, if necessary—by putting proper supports under it.
106. The main being beneath the centre of the tramway, would not the transit of goods be interrupted whenever the main required repair? I think the repairs of the main might be effected without interfering with the traffic on the tramway. No doubt they might be made in such a way as would interfere with it.
107. *By Mr. Black:* Supposing extensive repairs of this main pipe were going on, how would it be possible for the horses employed to draw the trucks or carriages on the tramway to do their work, when the ground would be taken from under them? Of course, if you cut away the ground for any long distance it would obstruct the traffic; but I am assuming that only a small piece at a time will be broken up.
108. Supposing the main were uncovered for a length of fifty feet at a time, what possible means could there be of conveying the traffic along the tramway? The horses might travel on timber planking put in for the purpose. I do not think there need be any difficulty. I do not see that there would be any greater interruption than there is to the ordinary traffic now under similar circumstances.
109. Probably the horses might be attached to the trucks in such a manner as to work outside the tramway while repairs to the water-main were being effected? They might be, or even a diversion of the line might be made at any spot where extensive repairs were required.
110. *By the Chairman:* Would it be possible for a locomotive to work up Pitt-street? Not unless one were made for the purpose.
111. Do you not think it would be desirable to make special provision in the Tramway Bill to prevent locomotives being used? It might be as well to do so; but ordinary locomotives could not possibly run on the present gradients and curves.
112. The gradients might be altered? Not without altering the general level of the adjoining streets. I do not think it would be advisable to have locomotives passing in Pitt-street, as such a course would be open to many serious objections in crowded thoroughfares.
113. *By Mr. Black:* What do you think the principal objections to their employment? They would be likely to interfere with the general traffic in the street, from horses becoming frightened.
114. Then in your opinion the use of locomotives is decidedly objectionable on various grounds? I think it is objectionable; but I am not aware that it has been contemplated.
115. *By the Chairman:* Have you considered the question of bringing the Railway Terminus itself into the city, independently of this tramway to the Circular Quay? In 1857, shortly after my arrival here, I prepared a section of a line from the present terminus to Hyde Park; I think that line should be carried out, and I have no doubt it ultimately will be carried out. The terminus—which is very inconvenient in its present position—would then be placed in the centre of the town. (*The witness produced a plan of the proposed line to Hyde Park.*)
116. Does that proposed line present any great engineering difficulties? None whatever.
117. You think that would be even more central than the proposed terminus at the Circular Quay? It would be more convenient, and certainly better than the proposed tramway, because it would bring all the passenger traffic to Hyde Park, while the other would only bring a fraction of it. A terminus at Hyde Park would be convenient for the whole city.
118. *By Mr. Atkinson:* It would not be so convenient for the goods traffic as the Circular Quay? No; but I do not see why both should not be carried out.
119. *By the Chairman:* It is proposed at present, that passengers shall change from the carriages on the tramway to the present railway carriages at Redfern? Yes.
120. Do you imagine that passengers who happen to be in George-street will not go to the Railway Station by the present omnibuses, in preference to coming into Pitt-street, to go by the carriages on the tramway? I think if comfortable omnibuses were provided, passengers would get into one that might happen to be passing, in preference to waiting for the tramway carriages; but the accommodation in the omnibuses at present in use is very bad.
121. There is a very large traffic in Pitt-street, consisting of the carriages of ladies visiting the different drapers' shops—do you think this tramway would interfere with that traffic at all? I do not think it would.
122. Has any specification or any estimate ever been prepared of the cost of the line you proposed to the terminus in Hyde Park? No detailed estimate was made; but I made a rough estimate, in the beginning of 1857, for a double line into Hyde Park, including passenger station, amounting to about sixty thousand pounds.
123. Exclusive of the purchase of land? Yes. The only land to be purchased would be from Hay-street to Liverpool-street. I believe the land in the paddock near Carter's Barracks belongs to the Government. The line shown on the plan was laid down so far east of Elizabeth-street, in consequence of there being a piece of ground adjoining Liverpool-street not then built upon; but since this plan was made that ground has been built upon.

- J. Whitton, Esq.
 11 Oct., 1859.
124. Would that line destroy the Park, as a place of recreation? Not at all, I think. I have not observed that the western portion of it opposite Market-street, where I proposed to place the terminus, is much used for purposes of recreation.
125. *By Mr. Morris*: How much ground would you require for a terminus? For a passenger terminus, about five acres—eighty or ninety yards in width from Elizabeth-street.
126. *By Mr. Nott*: Do you think it would deteriorate the value of property in Elizabeth-street? No, I think it would increase it.
127. *By the Chairman*: Have you seen the flat iron tramways at Walker's Wharf and Macnamara's Wharf, for vehicles with ordinary wheels? I have.
128. Do you think a plan of that kind would answer in Pitt-street? No, I think it would be more inconvenient, because, at the wharf alluded to, the sides are raised considerably above the road, which would form a serious obstruction to vehicles crossing it.
129. Your rails you propose to sink into the roadway level with the surface, and to leave the wheel to make a groove for itself? Yes, the wheel will always make a groove for itself; in fact, it would be difficult to pack up the road metal sufficiently close to prevent its doing so.
130. *By Mr. Black*: I suppose a little care would be necessary at first to see that pieces of the road metal did not get placed so as to block up this groove; but, as to the mud, you count upon the wheel clearing a way for itself? Yes. I think by not leaving a groove there will be less liability to getting stones wedged in than if a groove were made, into which they might become firmly fixed. Some attention would have to be bestowed upon it at first, until the stone became properly consolidated between the rails.
131. *By Mr. Morris*: If the terminus were made at Hyde Park, as proposed in the plan you referred to just now, would there be any difficulty in carrying a tramway from that point to the Circular Quay; and, if it could be done, by what route would you take it? There would be no great engineering difficulty, but there would be considerable expense. The original proposition I made was to continue the goods traffic through the centre of the passenger station, and commence the incline down to the Circular Wharf before arriving at the passenger terminus, making a tunnel close by the Supreme Court, and passing between Elizabeth-street and Phillip-street. The ground between these streets was not then built upon. We could have made an open cutting and arched it over, and the ground would then have been quite as useful for building purposes as it is now. I proposed also to have the terminus at the Circular Wharf so arranged as to load and unload ships, by means of cranes, direct to and from the trucks.
132. *By Mr. Atkinson*: Have you seen similar tramroads carried out at home? They are proposing them now in London.
133. You have not seen any? No.
134. *By the Chairman*: Do you know the description of rail they are using in England for horse tramways? A grooved rail, I believe. We have no grooved rails here, and we propose to use Barlow's because we have them by us.
135. Would there be any difficulty in pulling up suddenly, if necessary, on the proposed tramway? No; all the trucks used would have breaks, and the omnibuses also would have breaks of the ordinary construction.
136. *By Mr. Black*: From Captain Martindale we have learnt that the kind of carriage intended to be used for the conveyance of passengers is one made to carry from forty to sixty passengers; do you think such carriages would be more comfortable than the ordinary omnibuses now running in the streets? No doubt they would.
137. *By Mr. Atkinson*: Is it proposed to provide for the different classes of passengers in these tramway conveyances? I do not know that the details are entirely decided, but it could be done, if necessary.
138. Have you made any calculation to give an idea of what the extra cost of conveying passengers and goods between the present terminus and the Circular Quay would be? I believe the present cost is about four shillings a ton for goods, and I should think they might be carried on the tramway for about the present railway rates.
139. There would still be the charge for the cartage of goods from stores in other parts of the town to the Circular Quay? Yes; but that would be but small, I should think.
140. Do you know the lowest charge the carter's make? I do not.
141. What is the estimated cost of this undertaking? £6,000.
142. Does that include rolling stock? No; the estimate for rolling stock is £1,500, making a total of £7,500.
143. *By the Chairman*: That does not include the purchase of horses? No; but the expense for horses would not be great.
144. *By Mr. Nott*: Do you think the construction of this tramway would increase or decrease the ordinary traffic in Pitt-street? I do not think it would make any difference to the passenger traffic, any more than the ordinary omnibuses; but it would take from the street a large portion of the heavy traffic.
145. *By Mr. Morris*: And thereby save expense to the Corporation in the repairs of the streets? Yes.
146. *By the Chairman*: Would the tramway interfere with the main sewer? I think not; I do not see how it possibly can; we only require four and a-half inches for the depth of the rail.
147. *By Mr. Nott*: Would not this line have a tendency rather to increase the passenger traffic of the street? I do not know that it would.
148. *By Mr. Atkinson*: You do not propose to interfere with the general passenger traffic of the city—not to take passengers from one place to another and set them down along the line of the tramway? No.
149. *By the Chairman*: Do you think the tramway would put the Corporation to any greater

- greater expense in keeping the street in repair? I think it would cost them less, because all the heavy traffic, which now does the principal damage to the street, would be taken entirely on the tramway. J. Whitton,
Esq.
11 Oct., 1859.
150. What will be the rate of travelling with the passenger traffic on this tramway? Not more than the ordinary speed of the omnibuses, say five or six miles an hour.
151. You are aware that the Bill to authorise the construction of this tramway has been referred to this Committee? Yes.
152. Do you not think it advisable that in the Bill certain restrictions should be introduced as to the time the goods traffic should be conveyed? I do not know that it would be necessary; I do not think the goods traffic would interfere much with the ordinary traffic, more than the passing of an ordinary carriage down the centre of the street.
153. *By Mr. Atkinson:* How long would it take to form this line? I think it might be done in three or four months from the time of its commencement.
154. Have you particularly examined the stores, where the terminus of the tramway is proposed to be placed? No, but if they should be found insufficient the tramway might be extended to other parts of the wharf, so as to relieve them to a great extent.
155. *By Mr. Black:* You mentioned that it is not intended to convey goods and passengers on this tramway excepting in connection with the Railway Terminus? I am not aware that it is; that has not been the intention so far as I have understood it.
156. Do you see any objection to an arrangement being made, supposing the tramway constructed, to convey both goods and passengers between intermediate points along the line? I do not see the slightest objection; on the contrary, I think it would be a great convenience to carry passengers from street to street.
157. Do you not think that under proper arrangements it might not only conduce to the public convenience, but also to the profitableness of the undertaking? I think it might.
158. *By the Chairman:* Have you had any experience in the working of horse tramways? I have not; I have known them at work, but have had no immediate connection with them.
159. Have you ever heard of this particular description of rail—Barlow's—being used for a horse tramway, in the way you propose to use it? No; but I do not think the rail had anything to do with the origin of the word "tramway;" I think the name was originally applied to the ways constructed of iron plates on which trams were drawn from coal mines.
160. A tram being a truck? Yes.
161. They were originally flat ways? Yes, all the plates I have seen have been flat.
162. Do you think there will be more resistance on the proposed tramway from the circumstance of their being no groove for the flange of the wheel? I think not. There might be for a few trips, but the wheel will soon make a groove for itself, and the road metal will become firmly embedded.
163. *By Mr. Black:* Do you not think a groove made in the rail would be quite as liable to get filled up with the mud or stones of the street as the groove, formed by the flange itself, that is intended to run along the line of this railway? I think it would be more liable, because stones would get wedged into it, but if there be no groove such could not be the case.

WEDNESDAY, 19 OCTOBER, 1859.

Present:—

MR. SAMUEL,
MR. ELIOTT,
MR. NOTT,

MR. MORRIS,
MR. ATKINSON,
MR. BROUGHTON.

SAUL SAMUEL, Esq., IN THE CHAIR.

Edward Bell, Esq., M. Inst. C.E., called in and examined:—

164. *By the Chairman:* You are City Engineer? Yes. E. Bell, Esq.,
M.I.C.E.
19 Oct., 1859.
165. I presume you are aware that the Railway Commissioners are desirous of constructing a tramway from the Terminus at Redfern to the Circular Quay? I am.
166. You are aware also, that the Bill to enable them to construct that tramway has been referred to this Committee? Yes, I have understood so.
167. Are you aware of the kind of rail which it is proposed to use for the construction of this tramway? Yes; it is a rail commonly known as the Barlow rail.
168. You have, I believe, considered this question well? Yes; I have had occasion, at two different periods, to report upon it to the City Council; first, on the 6th of April, and again on the 25th October, 1858.
169. Will you be kind enough to state to the Committee your views in reference to the expediency of constructing this tramway? My views were laid down with tolerable clearness in the two reports I have just mentioned; that is, so far as I was, on these occasions, called upon to report. You see the objections generally stated in those reports are many of them technical; but I think the greatest objection to the formation of a tramway along Pitt-street to the Circular Quay is, that the street is too narrow for the purpose for which it is required.
170. Have you had any experience of the working of tramways similar to that which it is proposed to lay down along Pitt-street? I have had considerable experience in the working of

E. Bell, Esq., of tramways, but not in cities. I have seen them, however, in the city of New York; they were constructed with wooden sleepers, laid longitudinally, with a flat bar of iron screwed upon their surface.

19 Oct., 1859.

171. Was that for a flange wheel? It was for a flange wheel. The street through which it came was called the Bowery, in New York, and was, I suppose, at least four or five times the width of Pitt-street. The cars which travelled upon it were omnibusses of ordinary size, mounted upon the ordinary railway wheel, with a flange; and they were drawn, generally, by two horses. The track on which the horses travelled was, through the city, made of pitch paving; outside the city, the ordinary metal road was used.

172. When this tramway is in use, what will be the width taken up by the carriages? About seven feet six inches. It ought to have a clear width of eight feet allowed for the handles of the doors, &c., that is, if the railway trucks are used.

173. Do you think the existence of a tramway along Pitt-street would in any way interfere with the ordinary traffic of the street? I fear so. I think it will interrupt it entirely.

174. Do you think there will be any danger of collisions between the ordinary vehicles and the tramway carriages? I think so; very great danger. The most dangerous spot I consider to be at the junction of Hunter and Pitt streets. The grade of Pitt-street, as you approach the junction of those two streets from the south, is one in forty-one feet, and Hunter-street is one in sixteen.

175. *By Mr. Elliott:* That is the junction of Hunter-street? Yes. As you approach Hunter-street from the south the grade is one in forty-one.

176. *By the Chairman:* And you believe there would be danger of collision in that portion of the street? I think there would be great danger of collision at the junction of all the streets which descend into Pitt-street.

177. It is proposed that the passenger carriages shall pull up at the corner of each street, before they come to the crossing-places, for the purpose of landing passengers—would not that get over the danger of collision? It would mitigate it very much; but at these grades to which I was about to draw your attention, such as at Hunter-street, it would be difficult for them to draw up on all occasions, unless a man were stationed on the carriages in command of a break. Much would then depend upon the attention, steadiness, and coolness of the man in charge. If it were a regulation that they should stop at every street as they passed along, that would mitigate the danger very much indeed, as far as collision is concerned; but no such regulation would be enforced unless by enactment in the Bill.

178. You think, then, that if this tramway be made it will be necessary to provide by enactment for having a man constantly at the break? No doubt of it.

179. *By Mr. Atkinson:* Does it require an enactment to enforce such a provision? Yes, or as soon as the Commissioner who made the regulation found it impracticable to work the railway advantageously under such a regulation, he would rescind it. It is seldom the case at home that they allow level crossings to be made near a city. You must either go under or above the surface of the street, or you cannot obtain a Bill.

180. *By Mr. Nott:* That is in the case of locomotive travelling? In any case.

181. We are speaking merely of employing horses? Yes. The answers to the questions you are putting to me depend upon the carriages intended to be used. If you are going to use the ordinary omnibusses, which are used on the line in New York, drawn by two horses, you would have power to stop the carriages in a very short space; but if it is intended, or if is ever brought about that the ordinary carriages of the railway are used upon that line, no horses can have power to stop them. Their impetus, arising from their weight alone, would be far too great for any horses to control them. The reason I make this remark is, that I have seen in reports of the Railway Office suggestions for using carriages fifty or sixty feet in length, similar to those on the American Railways, and I wish to guard my observations from misinterpretation by shewing the distinction. If you have light omnibusses, you can stop them with horses; if you have heavy carriages, no horses can stop them, and you must apply some sort of break similar to that used on railways to check them.

182. *By the Chairman:* You referred to some reports which you furnished to the Corporation, have you those reports with you? I have only one printed copy of each.

183. Have you any objection to furnish the Committee with those reports? They are the only ones I have.

184. Could we not take copies of them? They have both been published in the Papers of the House, under date, respectively, 6th April, 1858, and 25th October, 1858; and, I presume, may be had from the Government Printer.

185. Are you acquainted with the description of rail known as the Barlow rail? Yes.

186. Do you think that kind of rail is adapted for the purposes of a tramway? No; I do not think it is so well adapted as the ordinary tram plate, or the grooved rail that was originally proposed. The grooved rail is not the ordinary rail.

187. Is the ordinary tram plate adapted for a flange wheel? No; the ordinary tram plate is for an edge-wheel.

188. An edge-wheel? Yes, a wheel that runs on its edge. The ordinary tram plate is an angular bar, forming two sides of a square, one side is laid flat upon the ground for the tram wheels to run upon, and the other side stands up vertically within the gauge of, and acts as a flange or guide for, the tram wheels, which run close to it; the ends of the bars rest on a cast-iron tie-bar, which passes from one side of the tramway to the other. The peripheries of the tram wheels are very narrow, but the thickness increases towards their centres. As that description of wheel passes along the tram plate any stone or obstruction coming in the way or lying on the plate is moved off by the wheel. The track on which the horses travel is retained between the edges or vertical sides of the two tram plates, and this would be the depth

depth of the flange or guide above the ordinary level of the ground beyond. Those are what are known to engineers as tramways. I have seen it stated somewhere lately that the tramway takes its name from its inventor, but that is ridiculous; it takes its name from the trucks which run upon it, and which are called "trams" in contradistinction to railway trucks. The Croydon and Wandsworth Railway, for instance, was made of angular bars like that I have described. In many places, particularly across highways, the edges of the tram plates were serrated so as to prevent the feet of horses from slipping when coming on to the rail or tram plate at an oblique angle.

E. Bell, Esq.,
M.I.C.E.

19 Oct., 1859.

189. Captain Martindale and Mr. Whitton have informed the Committee that the Barlow rail, with which it is proposed to construct the tramway, is to be sunk level with the centre of the road, and that the sides are to be backed up on a level with the surface of the rail—do you think that plan is likely to answer the end it is intended to accomplish? The first question would be, whether it is possible to keep the road level with the surface of the rail? It is quite possible to lay down the broken metal level with the surface of the rail, but when it consolidates it will be below the level of the surface of the rail. To make a roadway which, when consolidated, will be level with the surface of the rail, it would be necessary to lay the metal 2 or 3 inches above the level of the surface of the rail, to allow for consolidation; and this would render the railway impracticable.

190. It has been said that the wheel will make a groove for itself? Yes, it would along any surface which would not give a great resistance. There is no metal of which you could make a road that would not give way to the rim of the wheel.

191. Would not the ordinary traffic be likely to fill up that groove? Yes, always. The horses' feet, in passing along in front of the carriages, would disturb the new metal and throw it over the rail.

192. *By Mr. Nott:* But still you think the wheel would make a road for itself? If it is smooth, and there is nothing to disturb the surface.

193. But supposing anything to be thrown on the line, would the wheel clear itself? No; it would possibly jump off, unless you paved the track with pitch paving stones. In using the Barlow rails it would never be safe unless you pitched the track. Stone pitchers or pitch paving stones should be used on the horse track, and also outside the rail for, at least, one or two feet on either side of the track.

194. In travelling along a gradient such as there is in Pitt-street, would not the interruptions likely to arise from the groove being filled up offer such an amount of resistance as to make it a great check upon the power of the horses? Undoubtedly; I conceive that it would be impossible to work the line if metal were used. The metal would never properly consolidate in the track where the horses run, particularly on the inclines, and, consequently, the surface of the road would always be disturbed sufficiently to cover the surface of the rail.

195. What would be the effect of a stone getting on to the rail, supposing the rails to be level with the surface of the road? Well, the effect would be, generally, to throw the truck off the rail.

196. And if thrown off the rail would there be any difficulty, with the number of horses that would be probably used, in bringing back again to the line one of those trucks heavily laden? They could soon get it back again, with means and appliances.

197. You think that extra power would be required? Yes, temporary levers of some kind. If the road were paved, and the wheels had not left the paving stones, the truck would be easily returned to its place. If, however, it were on a macadamized road, and the flanges of the wheels had cut into the surface, there would be difficulty in getting it back unless with appliances such as levers and screw jacks.

198. *By Mr. Elliott:* Horses could not get it back? No.

199. *By the Chairman:* You are aware that it is proposed to carry this line along the centre of Pitt-street? Yes.

200. The main sewer and the water-main, where do they run? Along the centre of Pitt-street. I expressed an opinion, in the first instance, that the greatest objection to the tramway being brought through Pitt-street was the narrowness of the street—that had reference merely to the bringing of the line through a narrow street. Now you are beginning to touch upon another great objection, and that is the public works buried under that street. As far as the city authorities and city property are concerned that is equally objectionable. It is so objectionable that I consider it would be quite impossible to work the railway through that street and carry out the intention of the Sewerage and Water Acts, or the Roads Act. This is a plan which I prepared. I did not know that it would be necessary for me to leave it or I would have had the explanations more clearly written. (*Witness handed in plan.*)

201. The plan you produce—? Shews five sections of Pitt-street taken at different parts of the street.

202. It shews the positions, respectively, of the sewerage, the water-main, the gas-main, the water-locks, and the man-holes? Yes.

203. Is it necessary frequently to have recourse to those sewers and water-mains? On every application for permission to connect a drain we have to send a man into the sewer to see that the connection is properly made.

204. And the water-main? Wherever there is a defect in any of the water service pipes we have to open the street to discover where the defect is and to remedy it.

205. Do you frequently have to do that? Frequently; particularly in Pitt-street at the present time. The main is very old, and the water service pipes have been laid down a very considerable length of time; consequently they have now frequently to be taken up and replaced by new. That pipe is also so very hard (this is a feature peculiar to Pitt-street) that every opening made in Pitt-street requires two or three days before it can be covered.

E. Bell, Esq.,
M.I.C.E.
19 Oct., 1859.

206. When these repairs are made shall you have occasion frequently to open the street? Yes; for every new connection. An application is made at our office; the applicant comes in and signs his bond, and having paid for the water half a-year in advance he is entitled to make his connection, and to employ his own plumber.

207. To approach the main it will be necessary to open up the centre of the street? Undoubtedly that is necessary.

208. *By Mr. Nott*: The main is under the centre of the street? Yes; it is under the centre, and two feet below the surface only. The fire-plugs and water-locks are also in the centre of the road where the line is intended to be. The fire-plugs are twenty-six in number, and there are thirteen water-locks on that large main.

209. *By Mr. Elliott*: In the centre of the street? Yes.

210. Where the horse-track would be? Yes; the fire-plugs being in the centre of the road would almost be rendered useless in case of fire unless the centre of the track was high enough on all occasions to let the water run out of the track into the gutters. It might form a stream on the track along which the horses run, and flow away elsewhere, where there would be no means of catching it. The water-locks require to be opened occasionally; when the water is short in the town, frequently.

211. *By the Chairman*: And during that time would the transit of the carriages along the tramway be impeded? The carriages would not be able to pass at the time the man was shutting off the lock; but it is only right to observe that the man, seeing the train coming could always get his key out before it came up; and he could put it in again after the carriages had passed.

212. In cases where they were effecting repairs to the sewerage or where they were approaching the sewerage or water-mains would it not be practicable, by means of planking, to form a roadway for the horses? Not so that the work could be going on, because there is not room sufficient, between the surface of the ground and the water main, for a man to work in. It must be open.

213. It must be open? Yes.

214. *By Mr. Elliott*: It is often a very short distance from the surface? Yes, sometimes only two feet.

215. And in some places less? Yes, it varies from 1 foot 9 inches to 2 feet 3 inches from the surface. It is necessary, however, that I should offer a little more explanation about that main, because it may be spoken of afterwards when I may not be in a position to explain it. That main was cast in the town, of old iron, and it is as hard as a flint. There is no means of making a hole in it without having recourse to extraordinary methods for hardening the tools. When it was necessary some time ago to perforate the main between the junction of Hunter-street and Pitt-street, to connect the water-fountains, the drills had to be hardened in mercury constantly, and it took three days to make the hole in the main. They had to resort to most extraordinary measures to get a tool to drill the main.

216. *By the Chairman*: The residents of Pitt-street have petitioned in favor of the construction of this tramway, believing that it will bring additional traffic to their street—have you formed any opinion upon that point? My idea is that it will drive all the traffic from the street excepting that which comes from the railway. I think no one who had any regard for his horse or his cattle would venture to turn them into Pitt-street from any street which intersects it, and slopes towards it, because 15 feet 8 inches is the utmost room there would be to turn in any part, and the horses' feet must necessarily frequently come on to the rail itself.

217. *By Mr. Elliott*: But is there any harm in that—could they not turn over the rail—it is supposed to be level with the street? Yes; but I am quite sure that is impossible. I am speaking on broad grounds of the danger; unless you pave it, I look upon it as an utter impossibility to have the road level with the rail. You must either have your metal put down above the rail to enable it to consolidate so as to be, when consolidated, on a level with the rail; or, you must put your metal down level with the rail, and necessarily, when it is consolidated, you will have it below the surface of the rail. I cannot conceive that it is possible practically to obviate that, unless you pave the track with stone or wood.

218. *By Mr. Morris*: The cost of paving I apprehend would be very great? As far as I have been able to test it, and to learn from prices which we have received on different occasions of stone pitchers—that is, flat paving stones from Gabo Island and other places—I consider it would make a difference of £1 per superficial yard to the city, if they had to pitch-pave the tramway instead of metal it with blue metal. That you must have "pitchers" and not pebbles I am certain.

219. *By Mr. Nott*: I imagine it would have to be four yards wide at least? It would have to be 4 feet 8 inches between the rails. The edges of the stones would then have to be knocked off, to allow the rim of the wheels to pass.

220. *By the Chairman*: To leave a groove? Yes; and the outside of the rail would have to be pitched also.

221. *By Mr. Nott*: To what width? About two feet on each side of the railway. If you look at the section C D of Barlow's rail (lying on the table), you will see that it is a very awkward place to pitch contiguous to the rail. The depth from the surface of the rail to its sole-plate being only about four inches. That is too shallow to place a stone pitcher that would hold and maintain itself in its position.

222. Then it would have to be cut? They would have to be shaped, so as to leave an opening, and prevent the sole-plates of the rail from being in contact with the stone. The stone should not be allowed to rest on the rail, but it ought to be dependent upon the main body of the stone, which would be carried more into the centre of the track.

223. *By the Chairman*: If this tramway is made, it is proposed to cast upon the Corporation the duty of keeping in repair both the centre and the sides of the road? Upon the Corporation? E. Bell, Esq.,
M.I.C.E.

224. Yes—do you see any objection to that? Very great objection. I conceive that the powers proposed to be given in the Bill would enable the Commissioner to exact paving from the city, if that were deemed necessary. 19 Oct., 1859.

225. To exact paving? Yes; he has the sole control of what is to be done. He orders everything. The Surveyor and the Council have no power whatever on the line of railway. If the Corporation put down blue metal and the Commissioner deem (as I deem it) that it would be repugnant to the railway, he would have the power to make the Corporation put down some material which was not "*repugnant to the railway*,"—(I think those are the words used in the Bill.) The Bill proposes to repeal the 82nd, 83rd, and 84th sections of the Act, 14 Victoria, No. 41; 12th section of the Act, 17 Victoria, No. 33; 10th section of the Act, 20 Victoria, No. 36, or so much and such parts as are inconsistent or at variance with, or repugnant to, any provision of the proposed Act. These several sections being repealed, he has sole power. He takes the authority out of the hands of the Municipal Council and the City Surveyor. It devolves upon the Commissioner only. There is one clause—the 84th or 85th—which they might as well have repealed at the same time as the others; I mean that which obliges the City Surveyor, in the event of any works being carried on along Pitt-street, to hoard and light them, and to keep a watchman to watch those lights. The 14 Victoria, No. 41, obliges the City Surveyor, as part of his duty, to do that. There is another reason why it occurs to me they should have repealed that 85th clause, if they repealed the others, and that is, because it leaves the City Surveyor and Municipal Council power to put hoardings or bars across the streets, and to stop the carriage-way, which they could do at the time repairs were going on at the railway. They repeal the sections of those various Acts mentioned in the 14th Victoria, No. 41—the 82nd, 83rd, and 84th sections. The 12th section of the Act of Victoria, No. 33—the Corporation Abolition Act—and the 10th section of the 20th Victoria, No. 36, in so far as they are inconsistent or at variance with, or repugnant to, any provision of this Act, are repealed. In those sections I think you will find that the Corporation are required to repair the roads with what they think proper. You repeal those sections and you must then act strictly in accordance with what the Railway Commissioner may deem consistent with, and not repugnant to, the working of his line of railway. I look upon it so. The City Corporation must provide the funds for doing it well, let it cost what it may.

226. If the rail be laid down in Pitt-street, according to the plan proposed, do you think it possible that a locomotive steam-engine could be brought up the street? If it is put down in the manner proposed a locomotive could be brought up the street, but it would be exceedingly dangerous to bring such locomotives as are used on the railway.

227. You think it would be possible for trucks or carriages to be drawn by a locomotive steam-engine along this tramway? I must admit that it is possible, but I cannot admit that it is possible to do it with the ordinary engines and rails now in use. There is a gradient of one in twenty between Goulburn-street and Campbell-street. With the ordinary engines and rails you could not overcome that.

228. You think it would be impossible? Quite impossible with those engines; but engines may be made, and means devised, by which it can be done.

229. You think it objectionable, under any circumstances, that a locomotive should be brought up the street? Such locomotives as those.

230. Any steam locomotives? I do not see so much objection to locomotives such as the "*Megathon*," which was here some time ago.

231. I am referring now to the ordinary locomotive steam-engines; and the object of my question is to ascertain from you, whether you think it would be objectionable (if it were possible) that such locomotives should at any time come up Pitt-street, in continuation from the railway terminus at Redfern? I think it would be highly objectionable.

232. *By Mr. Nott*: If the tramway were constructed according to Mr. Whitton's plan—either with the ordinary macadamized road, or paved, as you think it necessary to be—there would be no difficulty, I apprehend, in the ordinary traffic passing over those rails? There would be no difficulty beyond that which attends the ordinary traffic of carriages in passing over the road—much less if paved.

233. But in either case there would be no real difficulty, I imagine? Only in this respect,—if a horse caught his foot upon the rail, after coming down the steep inclines, such as that at Hunter-street, which is 1 in 16. It all depends upon the load he has behind him. If it were an omnibus, it would be impossible to stop the horses, if they were going at any speed; and if they got their feet upon that smooth surface, down they must go in all probability. The danger is, I should consider, great. If the road were paved, and the surface of the rail kept a little below that of the road, there would be much less danger than if the road were not paved; because, I conceive, it would be impossible to keep the surface of the rail below the surface of the metal.

234. If that were the case, do you think it would interrupt the ordinary traffic of the street—you have mentioned that you thought it would drive all other traffic from the street? I do.

235. For what reason? If your carriages occupy a space of eight feet in the middle of the street, you would not have above fourteen feet of space between the carriages and the kerb stones. That is quite insufficient.

236. But it is only intended, I presume, to travel at the rate of four or six miles an hour—the ordinary rate of omnibuses? They cannot well go more; but if you do not restrict them by enactment they can go at what pace they please.

- E. Bell, Esq.,
M.I.C.E.
- 19 Oct., 1859.
237. But if one of these railway omnibuses were coming down the street a cart would have plenty of time to get out of the way, even if it were on the line? Yes, if the driver saw it coming there would be plenty of time.
238. Or they could pull up if they saw it on the rail? Yes, they could pull up if they had proper provision for stopping, and did not use those heavy carriages; there is great difficulty in stopping them in a short space.
239. *By the Chairman*: If a carriage was coming down at a rapid rate, do you think they would be able to stop it suddenly? No, not down a gradient; or, if the carriage weighed, we will suppose, a couple of tons, and with passengers two and a-half or three tons, there would be great difficulty in stopping it on a smooth surface, for if you apply the pressure of the brake so as to prevent the wheels revolving, they will skid or slide upon the rails for a considerable distance afterwards.
240. *By Mr. Nott*: If the work is constructed on the principle of what is called the ordinary tramway, what height would the flange be above the road? Two and a-half inches. You must bear in mind that I am not recommending this tramway.
241. In that case vehicles could not cross? Oh yes, they could.
242. Would there be any difficulty in crossing? You would have to put a wooden guard on the sides of the tram plates at all the level crossings.
243. They could not cross at any part of it? No.
244. They would then be confined to one side of the street or the other? To one side or the other, unless you bring your horse at right angles with the tramway, which is a difficult and dangerous thing at all times; you can then get over anywhere.
245. Suppose the grooved railway were used, would there not be danger of the groove getting filled up? No, I think a simple apparatus might be made to keep it clear. Loose stones might be kept out of the way of the groove, and the upper surface of that rail might be made so that horses feet would not slip upon it, while it still formed a perfect track for the wheel.
246. Without danger of its getting filled up with stones and mud? Yes; I would not exactly serrate the edge, but I would notch it at intervals. I consider that objectionable, but it is the least objectionable mode I know of.
247. There would not then be any difficulty of its getting filled up? It could very easily be cleared if it did get filled up—an operation which could not be so well performed upon the flat surface of the Barlow rail if bedded in metal.
248. *By Mr. Scott*: Would it not clear itself? No; in the groove it would be more likely to clear itself. The wheel coming in the centre would be likely to turn it off, as the tram wheels generally do upon tram plates.
249. *By Mr. Nott*: If the Barlow rail were laid, and pitched in the way you mentioned, would it be necessary to pitch the whole street? No.
250. You could have the other part macadamized? Yes; it would be necessary to pitch the track and about two feet outside.
251. And there would be no difficulty in getting the macadamized road to join properly with that part which was pitched? Oh, no; you see why I say it should be pitched two feet from the rail is, that there should be the least possibility of loose metal getting on to the rail.
252. *By Mr. Atkinson*: Have you calculated the extra cost of thus pitching the road? I think it would be about £1 per superficial yard more than the macadamized road.
253. *By Mr. Nott*: About £3 a lineal yard? I reckon it would cost us—about a mile and three-quarters—£8,000 or £9,000 to pitch that street to the width required. I think, from a calculation I made, £8,000 or £9,000 is something like the sum it might be done for.
254. *By Mr. Elliott*: Simply the pitching? Yes.
255. *By Mr. Nott*: You think the water supply would be very materially affected by the construction of a tramway along Pitt-street? I think there is no doubt of it, if the Commissioner objected to our opening the road when required.
256. Could the rail be worked while the road was open? No.
257. What would be the ordinary time one of these openings would take—a few hours or a few days? In the lower part of Pitt-street, it would take half a day at the shortest. Those parts of Pitt-street where that hard piping before mentioned extends would take from two to three days.
258. *By Mr. Elliott*: And then the man-holes besides, you have to open them? Yes, the man-holes for the sewers would require to be open the whole width of the track for at least a day.
259. *By Mr. Nott*: How often would that be necessary, judging from past experience, once a week or once a month? It has happened twice in the same week, and then perhaps it would not occur for three weeks or a month. It depends on the number of applications.
260. *By Mr. Atkinson*: While these works were being carried out, could the carriages pass along the line? The carriages could travel over the rails while the man-hole was open in the middle of the track, but the horses could not travel along the track. And when side connections are making, for house draining, the open cutting must be made under the rail. The horses might travel on those occasions along the track, but it would not be safe for the carriages to pass without support to the rail. That would involve increased expense to the householder to connect his sewer—and it is now excessively heavy. There would also be this additional circumstance to meet—he would be obliged to pay all the expenses of keeping that line in order.
261. *By the Chairman*: The object of this proposed tramway is to facilitate the traffic of the railway; have you considered the desirability of bringing the terminus at Redfern further into the city? To other places?

262. To a more central position in the city? I think there would be no harm in bringing it to the Haymarket, for one place. E. Bell, Esq.,
M.I.C.E.

263. Have you considered any other sites for a terminus? Yes, some considerable time back when the subject was being spoken of. In the first place it was the intention to bring the railway through Hyde Park, or along between Phillip and Elizabeth streets, to the Circular Quay, under ground. I think I had that from Mr. Whitton. I then drew Mr. Whitton's attention to a line that seemed to me would answer all the requirements; and that was to follow his own line as far as Liverpool-street from the present railway terminus, passing under the corner of Hyde Park, under William-street, over Boomerang-street, and by a curved line with cuttings, through the Domain to the Circular Quay. 19 Oct., 1859.

264. That would be a more expensive line, would it not? It would cost more than the other lines, but I do not think it would be a more expensive line in itself, because most of the land along the line belongs to the Government. The Government would have no more land to buy than was suggested in the report of the Chief Commissioner of Railways. It was proposed to purchase about two acres between the Haymarket and Liverpool-street. The ground in the Park belongs to the Government. It would pass at the back of the College under ground, between the National School and the Museum and William-street. It would then cross Government land either in a direct line to Woolloomooloo Bay or by a curved line to the Circular Quay.

265. Would that interfere in any way with the Hyde Park reserve? No; it would only pass under the corner of it.

266. Have you formed any estimate of the cost of constructing such a line as that? No, I have not. I have run the levels so as to know that it is practicable, but it would cost considerable time and expense, which is not at my disposal, to make an accurate estimate of the cost.

267. On the table is a plan, together with a section of a line proposed by Mr. Whitton, the terminus of which is to be at Hyde Park—will you be kind enough to look at it? I am already sufficiently acquainted with it.

268. Will you be kind enough to state what you think of that proposal? I do not think, as far as carrying it to the Park, approaching Liverpool-street, that it would be objectionable; but I do think it would be objectionable to take Hyde Park for a railway, or for a terminus. Does that extend to Market-street?

269. Yes, it extends to Market-street, taking off a portion of Hyde Park? You see Park-street is omitted here altogether. They are going to cross on a level, and consequently shut up Park-street. The greatest objection is going into Hyde Park, and necessarily depriving the public of its use for recreation.

270. That plan contemplates a certain portion of the Park for a reserve? Yes. It would occupy nearly all the western side of the park.

271. *By Mr. Nott:* It is not intended to do so I imagine? It would come through the centre of the Park. As you pass Park-street, on a level, you must have an open cutting, which will divide the park from one end to the other. This would deprive the public, in a great measure, of the use of it.

272. *By the Chairman:* Having looked at this plan, do you think it would be advisable, in accordance with the proposition, to make the terminus at Hyde Park? No, I think not.

273. *By Mr. Nott:* There are several objections to it? Oh, yes; great objections.

274. *By the Chairman:* It would interfere with the recreation ground? Yes.

275. Having heard the object of the construction of this tramway—the facilitation of the traffic of the railway—do you think it will have the effect intended? I think it will be a great advantage to the railway to be able to pass through the city to the water side in any direction. I think all the benefit is to be gained by the railway and by the Circular Quay.

276. Do you think any other plan less objectionable than a tramway down Pitt-street could be devised, for the purpose of facilitating the traffic of the railway, without carrying the terminus to the Circular Quay? If it is a settled point that railways are to be brought into the city I think you may find a better way; but I do not want to advocate any plan for bringing a railway into thickly populated parts of the city otherwise than round the suburbs as it were.

277. On the plan you have mentioned before? There is a line already existing to Pyrmont; that I need not allude to.

278. *By Mr. Atkinson:* Round the suburbs in what way? Round by Woolloomooloo and through the Domain, and not through populous districts.

279. Have you considered the possibility or feasibility of carrying a railway round the harbor? If you make a large quay alongside the shore line. I think, however, this will be exceedingly objectionable at the Circular Quay, where the quay is only seventy-five feet in width.

280. *By Mr. Elliott:* That is for the terminus? Yes. They are now confined for room to discharge vessels.

281. *By the Chairman:* You are now alluding to the tramway; and you think the terminus on the Circular Quay would be objectionable? Yes. They cannot do with one line there, and they must tell you so. They cannot do with one line along the quay if they are going to conduct the business of the country so as to make it advantageous to the railway. We have no space of ground at the quay which is sufficiently large for a terminus, unless they take in the Mariner's Church in addition to the Commissariat Stores, and take in also Campbell's Wharf. I do not mean to say then that a tramway along Pitt-street will do the business of the country. It may do very well as an experiment, to shew that an increase of traffic would be obtained from the Pitt-street railway. I think it

E. Bell, Esq., M.I.C.E. it would develop the fact that a good serviceable line to the Circular Quay would not only be a great advantage to the country generally, but to the railway.

19 Oct., 1859. 282. The great cost of a line such as you propose, for bringing locomotive steam-engines to the Circular Quay, would form a serious obstacle to its construction, would it not? I do not think the cost of the line would be anything in comparison to the real good which would result from its construction. When you get railways two hundred miles into the interior—when you get two hundred miles of railway, not one line, but feeders included—you will find that the Circular Quay is no more capable of doing the business which will be required from it than the Pitt-street single line will be equal to the traffic you will require of it. You will no sooner get a line into the interior than you will find that you must take your railways, either in the shape of costly lines or tramways, to three or four points in the harbor.

283. Do you think that the Circular Quay is a central point? No, I do not think it is central. It has occurred to me for some time past that Wynyard-square would be a much more central point for passenger traffic, and would afford equal accommodation to all the wharfs, and favor none in particular. At the present time the greater part of the wool is shipped from the lower end of Kent-street. A great deal of the wool is brought in by the steamers from both north and south, and it is either carted or boated from Darling Harbor to the Circular Wharf. In that case it will be shipped in barges to go round to the Circular Quay. I have been told that half the wool at least does go from that side to the Circular Quay. By this Pitt-street line you will give increased preference to the Circular Wharf.

284. I understood you to say that Wynyard-square would be an eligible site for a terminus? Yes.

285. How would you propose to bring the line to that terminus? Along the widest part of George-street, as far as the Cathedral.

286. *By Mr. Nott*: By tramway? By tramway; that is, I would bring it by the grooved rail.

287. *By the Chairman*: But you do not advocate the construction of a tramway at all? No; but if you decide upon bringing tramways through the city, take it up George-street as far as Bathurst-street, where you can have a space wider than Pitt-street,—60 or 70 feet the whole distance in a direct line along George-street. You will have the same width as you now have for your tramway track; and you can have fifteen feet between that and the kerb stones on the western side of George-street,—a space as great as you have on both sides of the proposed line in Pitt-street,—for the convenience of shopkeepers to have their carts stand to load and unload.

288. *By Mr. Nott*: Then where would you carry it from Bathurst-street? Over the surface of the burial-ground to York-street, and from thence to Wynyard-square. There is scarcely a person in York-street who can consider that he has a vested right to be deprived of, such as the good-will of a business. They have every thing to make in York-street. In Pitt-street they have settled business, and they have every thing to lose by their trade being disturbed.

289. *By Mr. Nott*: You are aware that a great majority of the inhabitants of Pitt-street are favorable to the line? I think you will find the reverse. In fact, I have been assured, that if a petition were put forward against the line being made in Pitt-street, or against any line being brought into the city, without pointing out some more favorable locality, it would be generally signed throughout Pitt-street.

290. Have you prepared any plans for continuing the line to Wynyard-square? Yes.

291. Did you bring them with you? No.

292. Would there be any possibility, if it were considered desirable, of continuing the line from Wynyard-square to any central wharf? Oh, yes, it would be quite possible. I say that Wynyard-square is the most advantageous for passengers; but, I strongly recommend, if a permanent goods line is to be made, that it shall be brought round by the Domain. This would be a really serviceable line.

293. *By the Chairman*: And on that ground you would propose to work locomotive steam-engines? On that line you might work locomotives with safety.

294. Would there be any steep gradients? No.

295. *By Mr. Elliott*: How do you propose to cross Boomerang-street? Over. There is another reason why the Wynyard-square terminus would be less objectionable than a terminus at the Circular Quay, and that is, the approach from the railway terminus at Redfern to Wynyard-square would be along a ridge instead of a valley. The streets intersecting the line of railway would all ascend to York-street, while those intersecting Pitt-street all descend to Pitt-street, and, consequently, render the crossing more dangerous.

296. *By the Chairman*: I understand you to recommend the line to Wynyard-square particularly for the passenger traffic? Yes, for the passenger traffic.

297. And not for the goods traffic? And not for the goods traffic.

298. *By Mr. Nott*: That would be left out of the question altogether? No, not altogether. I would include provisions. The railway would in the first instance pass the Hay-market, and in the second instance it would pass the George-street Markets. There is a very wide space in York-street at the markets, which would admit of a siding for trucks containing meat, vegetables, fruit, poultry, milk, eggs, and all kinds of provisions from the interior. Those trucks could draw up alongside the markets, and dispose of their produce without the slightest interruption. This would be really a great advantage to the citizens, inasmuch as provisions brought along the Pitt-street line must be either taken to the Circular Quay and then carried back again to the market or they must be deposited at Redfern, and conveyed from thence to the market. This line to Wynyard-square would enable the goods to be delivered at the markets, instead of requiring intermediate cartage between

between the railway and the market. It would put the country producers directly, through the railway, in the hands of the salesman at the market, and thus enable them not only to send their goods to the market at a much cheaper rate, but also, the consignments being direct, would be an inducement to send produce which would not otherwise find its way into the market. E. Bell, Esq.
M.L.C.E.
19 Oct., 1859.

299. *By Mr. Atkinson* : There are great advantages in that? Yes; the markets would become stalls for salesmen and not for petty dealers.

300. *By Mr. Nott* : Are you aware whether on the line proposed by you for locomotive steam-engines to the Circular Quay, there would be much private property to purchase? No.

301. But is the majority of it Government land? There is no more private property to purchase than is shewn in the Commissioner's report upon the line projected for a terminus in Hyde Park. It is public property all the way; and if it is not determined to make a line there now, I would suggest that the land should be reserved until the line is eventually made,—at least until it is determined whether the line ought to be carried out in that direction or not.

302. Would it interrupt the traffic of any streets now in existence? No, they could get under Liverpool-street and College-street, and go under William-street and over Boomerang-street.

303. It would not go down any particular street? No, it crosses considerably below the inhabited part of Macquarie-street.

304. And from the proposed terminus at the Circular Quay a line could be taken round the whole of the quays? Undoubtedly locomotives might go round there. Then, you see, by making the railway on the eastern side, you bring the sidings and the different lines which you require for a terminus, to a site where there is plenty of room; but on the other, the western side proposed, you have not fairly room for one line without obstructing the discharge and loading of vessels.

305. I presume there would be about two miles of railway? About two miles.

306. And you can form no idea of the expense? I should not like to guess at the expense; but that it is an easy and a cheap line, I am quite satisfied.

307. Is there any tunnelling? Yes, under the corner of Hyde Park. It would be mostly an open cutting, and covered over. It would, in point of fact, be cheaper to make it an open cutting, and cover it afterwards.

308. *By the Chairman* : That tunnel would not be of great length? No; in fact it might not all be tunnelled; it would appear as a tunnel after it was made. But just at the back of the College I think I should tunnel it.

309. *By Mr. Nott* : Would there be any very heavy cutting? There would be no heavy cuttings at all.

310. Embankments? There would be the same gradients on this line as far as Liverpool-street, as shewn on Mr. Whitton's plan.

311. *By the Chairman* : And it would neither destroy the appearance of the street, nor of the Domain? No; as the cutting would be open, I think the appearance of the Domain would rather be improved than deteriorated. The grass banks and walks would be ornamental, and the appearance of the place might be considerably improved by bridges, which might also be ornamental.

312. *By Mr. Nott* : And do you think there is sufficient room for this? Yes, on the west side.

313. Without interfering with existing buildings? Yes.

314. *By Mr. Atkinson* : Would you suggest that sufficient land should be taken for a double line? Yes; I have not the slightest doubt that you cannot do with less. I conceive that any money spent on an experiment such as that contemplated in Pitt-street would be entirely lost; that it would be better to face the thing at once in a proper way, and that if you lay only one line at present, leaving works for a double line, you would not only save money in the end, but shew that, in the great experiment, the welfare of the country and the prosperity of the railway would be enhanced. (*Plan produced.*) I produce a plan of a railway or tramway from the railway station at Redfern to Wynyard-square, which, if railways are to be brought into the thickly populated parts of the city at all, I conceive to be the best, in every respect, for a passenger line, and for the transport of provisions, as I before described. I produce, also, a plan of Pitt-street, from Bathurst-street to the Circular Quay, shewing—tinted in pink—a new system of sewers which has been laid down in the street; a black dotted line along the centre of the street shewing the water-mains; black crosses at intervals shewing the water-locks; green lines showing the old sewers which are still in existence, and cannot be removed until the house connections made to them are transferred to the new system of sewers; red crosses shewing the entrances to the new system of sewers; and a blue dotted line shewing the gas-main. The width of Pitt-street, between the kerb lines, is 36 feet. In the proposed plan the width between the eastern kerb of George-street and the proposed tramway shews an average of 46 feet throughout. The water mains, as shewn on the plan by a black dotted line, are generally speaking, from eight to ten feet from the western kerb line, and in no place do the water-mains interfere with the projected line of tramway, excepting where the branch into the market crosses a 3-inch main, and where it passes over the waterpipes, which run transversely with George-street. At Bathurst-street I propose to cross the burial-ground (it would be above the burial-ground two or three feet, so that there would be no digging or disturbing the ground), at the rear of the temporary Cathedral, and in front of St. Andrew's Cathedral, now building. When the old or temporary building is removed, the line may be continued in a straight line from York-street to George-street, and that would bring it at a greater

E. Bell, Esq.,
M.I.C.E.
19 Oct., 1859.

greater distance from the Cathedral. From this place it would pass by a single line up York-street until it approaches the George-street Markets, where it was proposed to make a siding for waggons containing produce to deliver their loads at the market. Then the line proceeds to Wynyard-square. I propose that the land on the western side of Wynyard-square should be retained as the site for that railway station.

315. *By Mr. Broughton*: Did you submit your plans to the Mayor and Aldermen of the city? I did; and I received the authority of the Aldermen to say that they deemed this to be the least objectionable line that could be made, and also that they would be disposed to support the construction of such a line, as being of the greatest advantage of any to the citizens, and the least likely to interfere with the avocations of the people, or to interrupt the business generally.

316. *By the Chairman*: Do you think the proposed tramway along Pitt-street would interfere with the drapers in that street? I think it would interfere entirely with the retail drapery trade in Pitt-street.

317. *By Mr. Atkinson*: As you seem to have given this matter considerable attention, I would ask you if you have thought of the feasibility of connecting the Circular Wharf round Darling Harbor with the station? Yes; I think it quite possible to do so; but, at the same time, I am not aware how the right of water frontage is held by the different parties having wharfs upon Darling Harbor—whether by taking a quay in front of their wharfs you would not deprive them of rights for which you might have to pay heavily. As far as Woolloomooloo Bay and Farm Cove are concerned it would be practicable. Good harbors may be made in all these bays eventually, when the traffic of Sydney through the railway becomes great.

318. My question was simply whether it is practicable? Quite.

319. *By the Chairman*: Have you any other suggestions or observations you would like to make to the Committee upon this question? I think I have touched upon most of them. With regard to the repealing of those several clauses of the Act, I think I made sufficient observations upon them for the Committee to understand that it would be quite impossible to carry out the Sewerage and Water Act, and also the repairs of the road in that street under the very comprehensive powers proposed to be obtained through this Bill. The General Railways Bill is embodied in this, in the third clause; and by that Act the powers are most arbitrary, and I may say admirably adapted for going through forests, but for going through towns highly objectionable, inasmuch as the city authorities are entirely deprived of the power of exercising any control over that line of street through which the contemplated tramway is to pass.

320. *By Mr. Nott*: Excepting that they are bound to keep it in repair? Their duty is to keep it in repair, to light and to hoard the railway works when necessary; and if the 85th clause is not repealed the city authorities will have power to bar or stop up the street when they please. As, however, a small fine only is to be imposed upon persons breaking them down, this would not be a formidable obstacle, and so probably they did not think it advisable to repeal that clause.

321. *By Mr. Broughton*: Then you think, in making tramways through the city, provision should be made for keeping those roads and streets in repair? Yes.

322. Distinct from the Tramway Bill? I think the railway authorities should keep it in repair. And then, if we are to pitch it, how are we to get at the sewers? At this time we have reason to believe that persons are making surreptitious connections with these sewers. Two or three instances have occurred within the last three or four months, where persons have cut through to the main tunnel before we have been enabled to find them out. On every occasion when a connection is made it is necessary for the persons making those connections—particularly where there are no stench traps inserted in the sewers—to make the connection with care; and it is necessary that a workman should go down inside to make the connection properly, and so that no damage shall be done.

323. Then you think, in the event of a tramway being brought into the city, those streets through which it passes should be kept in repair at the expense of the Commissioners or of the Government? Decidedly, at the expense of the persons holding the railway or tramway, whichever it is.

324. *By the Chairman*: You refer more particularly to the centre of the street? Yes, to the track. There is another thing sought to be done by this Bill. I think, at a very moderate computation, it will be seen that the city possesses a property underground of the value of about £100,000 in that street. Now the Railway Commissioner seeks to invest property on the surface of the street to the extent of £6,000; and in order to enable him to utilise this property he (of course I am not making personal allusions to any one) seeks, —or it is sought—to set aside all control of the parties holding £100,000 worth underneath it—to give them no power excepting what the Commissioner or the person in charge of the railway works shall think proper. In fact they are to be deprived of the power of utilising their property in order that the railway authorities may utilise theirs to the fullest extent. And this Act is so comprehensive you will observe. The tramway is to be constructed under this Act (3rd clause) notwithstanding anything in the several Acts given in the first section of this Act or in any other Act. The Commissioner has undoubted powers to do as he pleases, regardless of anything the inhabitants who are interested in such a railway may desire. There is another objection I would like to name in reference to the 2nd clause, where it says, “the tramway shall be constructed and completed as soon as conveniently may be, commencing at the Redfern terminus, and terminating at a point on the Circular Quay, Sydney Cove, to be determined on by the Governor with the advice of the Executive Council, for the purpose of conveying passengers, goods,” and so on. Now, certainly, when this clause was framed, the framer could not have had any idea that it was likely to
come

come before a Committee or to be canvassed by the House, or he would have thought it necessary to submit to the House, not only plans of the line proposed through Pitt-street, but also to have given some kind of definition of the sort of station required, and what extent of ground would be necessary—how much space would be required for rails, turn-tables, and apparatus to approach the station; and he certainly would have pointed out some place by which the House could have guided the Executive Council if the House were not disposed to leave the selection of a site to the Executive Council. I conceive that under this power, which is so general, the Executive Council might say that they would take half George-street, as the site originally intended was too narrow. It is in their power to say we will take the new extension of Argyle-street, which has lately been made at considerable expense—or, “we will take the ground beyond that,” regardless of the sentiments of the House or of the Municipal Council, or of the interests of the citizens generally. I think the determination of a site for the station is quite as important as the selection of a route for the line. Then there is another thing which I should like to draw the attention of the Committee to—that the provision at the end of the clause might be more distinctly defined than at present; because, I conceive, that after this line is once formed on the general level of Pitt-street, the railway authorities will have power to do as they please with Pitt-street, under the General Railways Act. I am inclined to believe that they would find a necessity for altering the levels of Pitt-street, on the ground alone that the gradients which now exist are too steep for locomotive engines, or at least the present style of locomotive engines.

**E. Bell, Esq.,
M.I.C.E.**
19 Oct., 1859.

325. *By the Chairman* : It is not proposed to bring locomotive engines up Pitt-street? I do not think it is proposed, but I am sure the line will never do the business of the country without. This very clause would empower the Railway Commissioner, in future, to alter the gradients to suit locomotives; after having, in the first instance, laid the tramways in accordance with the general level of Pitt-street.

TUESDAY, 25 OCTOBER, 1859.

Present:—

MR. ELIOTT,		MR. JONES,
MR. HAY,		MR. BLACK.

SAUL SAMUEL, ESQ., IN THE CHAIR.

Mr. Edward Teillard called in and examined:—

326. *By the Chairman* : You are a wine and spirit merchant, residing in Pitt-street? Yes, sir.

**Mr. Edward
Teillard.**

327. You are aware, I presume, that the proposal to construct a tramway down Pitt-street has been referred to this Committee? I am.

19 Oct., 1859.

328. You have expressed a desire to offer some information to the Committee,—will you be kind enough to state what that information is? I would say that I consider a tramway down Pitt-street would be an improvement to property in the street, as, of course, it would bring passenger and goods traffic in that direction, which, instead of being an injury, as has been stated, would be an advantage to the property in this street. It is said by some persons that the tramway would be an obstruction to the traffic of the street; but I do not think that would be the case, because the gauge of the tramway being the same as that of the railway, namely, a five feet gauge, the trucks running on the line might be six feet, though I know some trucks running on the Parramatta line are seven feet six inches; but for the tramway they might be made six feet. You are, no doubt, aware that Pitt-street, in the narrowest part, is thirty-three feet in width from kerb to kerb, that is opposite the Metropolitan Hotel; and if the tramway is five feet in gauge, and the trucks six or seven feet wide, there will still be left twenty-six and a-half or twenty-seven feet from kerb to kerb, which will be sufficient for the passage of carriages and other vehicles; as on a space of twenty-six and a-half or twenty-seven feet in width, three drays could run on a parallel line. With such a tramway there would be plenty of room in Pitt-street. Besides, except between Market and King streets, Pitt-street is almost deserted as far as vehicles are concerned, and, consequently, the tramway would be no obstruction there. Now, it is very likely that the tramway will be laid down in the middle of the street, and then it would leave, during the time the train is running, room for one dray on each side, with five feet on each side to spare for horsemen. The pavement along Pitt-street, except a small portion on the east side, between King-street and Hunter-street, is from ten to twelve feet wide. Pitt-street, in its narrowest part, is wider than some portions of George-street; George-street, from Fort-street to Argyle-street, is narrower by several feet; from Argyle-street to Essex-street, it is the same width as Pitt-street; George-street, from Charlotte-place up to Park-street, is only fourteen feet wider than Pitt-street, but that advantage is lost by the number of teams, drays, carriages, and omnibusses which clog this main artery. In fact, Pitt-street is the best adapted as the route for a tramway, even for cheapness, as it is the straightest line between the railway terminus at Redfern and the Circular Quay. By going along the western side of the city, it would cost, at least, £90,000 more, and then I do not see how the tramway could be brought to the wharf, as the wharf is a great deal lower than the level of the main street, which is not the case with Pitt-street, through which the tramway might be brought from the

Mr. Edward
Teillard.

19 Oct., 1859.

railway terminus to the Circular Quay without having to alter the level in any part. By this line the railway might be brought to that part of the Circular Quay adjoining Campbell's Wharf, where there is an extent available for shipping greater than at all the other wharfs put together. Then again it is the most central part. I do not believe any one will dispute that George-street is in the very heart of the city, but it must be borne in mind that not only does Pitt-street run in a parallel line with George-street, but that they are only a small distance from each other, that is, about one minute's walk distance. Therefore it could not be urged against Pitt-street that it is not a central part of the city. It has been given as a reason, by the Mayor and Corporation, against the tramway being brought down Pitt-street, that it would give an unfair advantage to Pitt-street over other streets of the city. Indeed, we consider it would be only a very fair advantage for the benefit of Pitt-street. It was stated in the report of Mr. Bell, about a year ago, that if you were to establish a tramway in Pitt-street it would give a benefit to that street to the detriment of George-street. I recollect also reading a report from the city engineer, in favor of a tramway round to the harbor by Hyde Park, or even in Castlereagh-street.

329. *By Mr. Hay:* To Woolloomooloo Bay? To Woolloomooloo Bay. Now, if George-street would be the loser by the tramway going down Pitt-street, it would also be injurious to George-street to take it by Hyde Park. It will be seen that George-street has numerous advantages compared with other streets, if we notice. At its extremity stands the University, and along its line there are the Railway Station, the Benevolent Asylum, the Haymarket, the Police Office, the General Market—on which the Corporation, despite its poverty, is at present expending £8,000 for mere embellishment, not from real necessity. George-street possesses the Post Office, the Ordnance Store, besides three churches and one cathedral. George-street has manufactory establishments of the highest class, such as brewery, sugar works, steam flour mills, and foundries; it has all the trade, and nearly all the banking establishments; it is the starting point of all the omnibuses to the suburbs; in fact, nearly every advantage is possessed by George-street. It has been said in Parliament that it would be unjust to lay the tramway in Pitt-street while a sum of £98,000 had been voted in order to get the railway terminus to the western side of the harbor. But, I would ask, how it could be considered unjust and unsatisfactory to lay the tramway in Pitt-street, in order to arrive in a straight line to the very best part of the harbor for the landing of goods at the small expense of £8,000, instead of having the tramway on the western side, or in another part of the city, at the enormous expense of £98,000? The tramway down Pitt-street will be an enormous advantage to the trade of the place, in being able to bring goods from the country direct to the ship's side, without the great expense of loading and unloading at intermediate stages. The present expense of bringing goods from the railway terminus in town by drays is enormous; for instance, there is 4s. a ton to pay for the carriage between Parramatta and the terminus in Sydney, and 4s. a ton from the Redfern terminus to the city. If the goods come from the Campbelltown station to the terminus in Sydney, the railway charges 7s. a ton, while a dray from Redfern terminus in town asks 4s. for a load.

330. *By the Chairman:* Are you aware what would be the charge by the tramway? From 9d. to 1s. from the Circular Quay to the railway terminus.

331. Do you know the lowest rate of dray charges for taking a load inward? Generally 3s.

332. I understand you to state that at present it costs 4s. a load from the railway terminus to any part of the city, and you state that the Railway Commissioners propose to charge from 9d. to 1s. a ton, and that the lowest rate by drays inward is 3s. a ton; now, taking that to be the case, what benefit will be gained by parties who do not reside on the Circular Quay, or who have no stores there? We should make the calculation on 4s. a ton by dray hire in town. The Railway Commissioners could make one or two stations on the line in Pitt-street, and send the goods to the different parts of the city by their own vehicles at a very small premium. It has been said that the tramway would injure the sewerage; but I do not see how a few sleepers laid over the sewers can injure them. It has also been said, that if branch sewers were to be connected with the main sewer, when the tramway was laid down it would occasion a largely increased expense. But, I do not think it will be necessary to open the middle of the street to get to the main sewer; the tramway being only five feet gauge you could always get to the sewer without interfering with it, as you would have to excavate much lower in the street. As to the difficulty there would be in repairing the sewers on account of the tramway, the sewers being a new work it is not likely that they would, for some considerable time, require repairs in such an extensive way as to necessitate the removal of any portion of the tramway. Again, it was said that the public road would want repairing occasionally; but, such repairs would not obstruct the tramway; though even if it did it would only be at long intervals. For a long time past Pitt-street has not been interfered with on that account.

333. *By the Chairman:* Are you not aware that the principal water-main runs up Pitt-street? I am.

334. And that the connections with that water-main have to be made up the centre of the street? Yes.

335. Do you not think the continual opening of these water-mains will obstruct the tramway? I do not think so. I would ask, how many times it is necessary to open them in the year. For a long time I have never seen them open. It would be very seldom that the tramway would be obstructed by the opening of the mains. Then, if it were necessary to open them so frequently, openings might be left with something like a skeleton covering.

336. Have you had any experience in the working of tramways? Yes.

337. Where? In France.

338. What part of France? In Paris.

339. *By Mr. Elliott:* In the city? No; in the suburbs.

340. Are the places where you have seen them narrow or wide streets? I have seen them round the Boulevards, near the fortifications.

341. Did you ever see a tramway working in a narrow street like Pitt-street? I have seen them working near the docks in the city, where, far from being an obstruction, they were a convenience, as you can always remove a large portion of your goods by the main line, without interfering with the side.

342. Are you aware that it is proposed by the Railway Commissioners not to have stations along the line, but simply to deliver goods at the Circular Quay? I am aware of that; but, as I before said, the Railway Commissioners will be in a position to deliver goods to different parts of the city cheaper than any one else, in consequence of the quantity of goods coming down to the Circular Quay by the tramway.

343. It has been stated to the Committee that there will be great danger of collision between the carriages running on this tramway and the ordinary vehicles that run in the streets; now, if such collisions did unfortunately take place would not that have a tendency to drive the ordinary traffic out of the street? Not at all, because the tramway train would be drawn by horses, and the conductor of the train will be always at liberty to stop them when deemed necessary; it will be more easy to avoid collision, the collision being generally the case by the racing of two omnibuses, who by careless driving do not keep straight their own line in order to outrun the one a-head. On the Continent of Europe the railway frequently cuts the Imperial road into two, and in that case the railway does not interfere with the road for the use of carriages.

344. Does the ordinary road run parallel with the line? No, it crosses it.

345. *By the Chairman*: Not above the level of the road? Just on the level, so that the train can always run on the line without interfering with drays or carriages.

346. Do you know the description of rail used on those tramways you have seen? I know well, but I could not tell you in technical terms.

347. Suppose that no arrangements were made for the delivery of goods in Pitt-street, except at the Circular Quay, in what way would the tramway improve the value of property in that street? The value would be improved by the passenger traffic; passengers could be put down at the corner of every street, and Pitt-street being nearly as central as George-street, a large number would pass in that direction, by which traffic the shopkeepers of course would benefit.

348. *By Mr Black*: It would improve the value of property by making the place one of greater resort? Yes; even if you do not make intermediate goods stations, but brought the goods to the Circular Quay, there would be an improvement in the value of property in Pitt-street, because parties looking after their goods would generally pass through it. Passengers proceeding by railway into the country would also come through Pitt-street, and thus advantage would be derived both from passenger and goods traffic on the line. Passengers would of course come to every corner where the train stopped to pick them up, and thus the whole line of the street would be a place of greater resort.

349. *By the Chairman*: Do you not think it would be better to fix the railway terminus so that locomotive engines might be used—of course by a proper route, so as not to interfere with ordinary traffic? I understand it is intended to make a trial with this tramway, and no other mode of commencing the experiment could be cheaper than taking it from the terminus, down Pitt-street, to the Circular Quay. After seeing how this worked you will be enabled to judge whether it is more desirable to make a railway for a locomotive engine. That would require a larger outlay of money, at least £100,000. If the traffic increased to such an extent as to necessitate the use of a locomotive engine, then from the experience you will have had of the working of the tramway, you will be in a position to say whether it is desirable to expend so large a sum of money in bringing the railway round the city in order to use a locomotive engine upon it. One great consideration is to obtain the advantage cheaply.

350. Do you not think that if the tramway carriages pulled up at the corners of different streets in order to take up or set down passengers, it would have a contrary effect to that you have indicated—namely, to drive the traffic out of the street? I do not think that, because when you go to meet a train you always come, if possible, some few minutes before it starts; and, if there are to be no stations along the line, those who have to wait will, no doubt, walk leisurely along the street, and thus give some benefit to the shopkeeper.

351. Why should they not go to the terminus by the omnibuses in George-street, as at present? George-street is the starting point for all omnibuses for the suburbs; and if, when you want to get to the station in time for a train, you get into an ordinary omnibus, it is not unlikely that the driver would make a little free on the road in order to pick up fresh passengers, and thus delay you till you are too late; and passengers, wishing to be in time for the railway, will take in preference the omnibus tramway.

352. Suppose you had a railway omnibus in Pitt-street, and another in George-street, would there be any particular advantage to be derived from travelling by the tramway? You will always have room, which occasionally is not the case in omnibuses.

353. You think they would be sure to miss the train if they went by an ordinary omnibus in George-street? Yes. The main thing is to get passengers, say for the Glebe or Newtown; then, if they can get one for the railway they will pick him up with pleasure; but, although he might wish to arrive at the station quickly, they would wait as long as they considered necessary to get fresh passengers for the Glebe or Newtown.

Mr. Edward
Teillard.

19 Oct., 1859.

THURSDAY, 16 FEBRUARY, 1860.

Present:—

MR. ATKINSON,

MR. MORRIS.

THOMAS BROUGHTON, ESQ., IN THE CHAIR.

Samuel Hebblewhite, Esq., called in and examined:—

- Samuel Hebblewhite, Esq.
16 Feb., 1860.
354. *By the Chairman:* You are a resident in Pitt-street? I am.
355. You are desirous, I believe, of being examined on the subject of the Pitt-street Tramway Bill? I am.
356. Will you favor the Committee with your opinion as to the advantages to be derived from a tramway down Pitt-street? One of the great advantages is the immense saving in the carriage of goods in the first place, and another is the great convenience to passengers in being able to be put down at any point.
357. Are there any other advantages you can point out? Those are the two main advantages. The difficulty of getting down at the present station is so great that passengers from Parramatta in many instances prefer going by the steamers; and the expense on goods brought from the station to any where in Pitt-street amounts to about 3s. a ton, which is very considerable on heavy goods, such as flour, wool, and other things of a similar kind. I can speak particularly to the feelings of many inhabitants of Pitt-street, especially of the drapers who signed the petition that has been presented to the House—the owners of the large drapery establishments who it is said would be most likely to be damaged. Having personally solicited them for signatures to the petition, I know that nineteen out of twenty signed it without the slightest hesitation.
358. Do you think there would be an objection to the tramway going down Pitt-street on account of the street being so narrow? I do not think there would be, as the rails are to be laid flush with the street, and I therefore do not see that any difficulty would arise.
359. Do you know what is the width of the street generally—some parts are wider than others? The narrowest part is that between Hunter and King streets, but that is the part where there is the least traffic.
360. Do you know the width of the street there? I have not measured it.
361. Do you think it exceeds thirty or thirty-two feet? I think the carriage road would average about forty feet from kerb to kerb.
362. In that particular locality? I have not measured; but I should think the carriage-way, in the narrowest part, would be upwards of thirty-five feet.
363. Would there be any difficulty in loading and unloading drays in Pitt-street during the time the carriages were passing? If there were two drays opposite each other there might be, but it is illegal for drays to stand in that way.
364. They are allowed a sufficient time to load and unload? My impression is that they are not, and if only one dray were standing across the line would run free of the horse's head—as free as the omnibuses do at the present time.
365. Do you know the style of carriage it is proposed to use on the tramway? No, I do not. I do not suppose the plan is decided upon yet by the authorities.
366. Supposing the authorities have decided to have carriages of greater length than omnibuses, would it be possible for horses to pull up suddenly at steep gradients? The steepest gradient is between Liverpool and Goulburn streets, and I should think two horses would do that very well.
367. Supposing a carriage to be coming down the steep gradient of Hunter-street into Pitt-street, would it be easy to stop at the time carriages were passing? I do not see that there would be any danger whatever. No doubt there would be if a man was furiously driving, but not otherwise.
368. In your opinion there would be no difficulty in pulling up the horses suddenly at the point where carriages were passing? I do not think there would be the slightest difficulty in the matter. Persons knowing there was a tramway in Pitt-street would be careful. Besides, the carriages on the tram would not go more than six miles an hour.
369. You would not apprehend any danger to vehicles passing down either King or Hunter street at the same time carriages were passing on the tramway? No. Besides, they are to be drawn with horses, not with a steam-engine.
370. Do you consider it at all objectionable to have a tramway along Pitt-street where the main sewer is—to pass over the man-holes into the main sewer? Not at all.
371. Would there, in your opinion, be any inconvenience caused to the traffic along the street by the connections into the sewers? No; from what I have seen of the system of tunnels I do not think there could possibly be.
372. Are you not aware that all the connections are by open cuttings and not by tunnel? They are not compelled to make them by open cutting. I know that in Park-street I made a tunnel twenty feet long.
373. Are you not aware that in Pitt-street an open cutting is insisted upon? The Corporation have insisted upon some unreasonable things sometimes; I do not see any necessity for open cuttings.
374. If this must be ———? If people choose to be unreasonable and to insist upon open cuttings they ought to be compelled to have it done in the way in which it is possible to be done.
375. Are you aware of the amount invested by the Corporation along Pitt-street in sewers and water mains? I am not aware of the amount, but I am aware that the persons who have

have signed the petition have invested in property in Pitt-street to the amount of £200,000, and they are willing to stand the risk.

Samuel
Hebblewhite,
Esq.

376. Are you aware that the Corporation have invested £150,000 in sewers and water-mains? I know they have thrown away a great deal of money.

16 Feb., 1860.

377. Was that done by the Corporation or by the Government? It was done by the authorities.

378. The Corporation having invested £150,000 - — — ? I consider that I, as a citizen, have an investment in the sewers. Who are the Corporation? The citizens. I have an investment in that street to the extent of £15,000, which I am willing to risk.

379. I ask the question: supposing the Corporation to have an investment of £150,000 in Pitt-street, do you think the management of that street should be taken out of the hands of the Corporation, to be placed under the sole management of the Commissioner of Railways? I do not agree with what you lay down; it is a matter for the consideration of the owners of property in that street.

380. You are looking to your own personal interest? I am looking to my own personal interest, also to the interest of my neighbors, and to the interest of the country. Mine is a general interest, anything that benefits me has a tendency to benefit the country. I am one of those fashionable patriots, a pocket patriot, and I say if it is for my benefit, it is for the benefit of the city generally.

381. Do you think it for the interest of the Colony generally that the control of this street should be placed under the hands of a Commissioner and not of the Corporation? I do not agree with the idea which appears to be entertained by you. I consider the Corporation, the Commissioner, and the Government as members of one body corporate; and I do not think it likely that the Commissioner would act in opposition to the general interest, as he is under the control of this House.

382. Should this street be under the control of the Commissioner, would you take it out of the hands of the Corporation? I would, decidedly; because he is responsible.

383. *By Mr. Atkinson:* You mean only as to the working of the tramway? Yes.

384. Your answer to the question would convey that you would take the whole matter from the Corporation? As far as the railway is concerned.

385. *By the Chairman:* You think the investment of the Corporation should be entirely subservient to this tramway? I do not approve of that way of putting the question. The tramway is a great undertaking for the benefit of the Colony generally, as every squatter now sending down his wool to the wharf is taxed by extra cartage.

386. Would you object to the tramway being laid down in a wider street than Pitt-street? I should object to a tramway leading the traffic out of the city.

387. You would object to a tramway in any other street than Pitt-street? If it were away from the centre of the city. The great object should be to keep the traffic where the larger amount of money has been invested. From what I have seen in England, where the railway terminates there the trade concentrates.

388. You consider Pitt-street superior to any other street in the city for a tramway? Yes; because it will cost so little money; it cannot go down any other street without a larger expenditure of money. £7,000 or £8,000 would be the cost of it I believe if it were carried down Pitt-street, and as these are all matters of experiment in a new country, I think the cheapest plan would be the best.

389. Do you approve of the experiment being tried in any other street than Pitt-street? I object purely because it can be done cheaper in Pitt-street than elsewhere; there will be no buildings to take down at either end.

390. Supposing the tramway to run down Pitt-street, would it avoid the necessity of cartage to the railway, or to the station at the tramway? I think it would, under regulations which might be made, having the goods brought up the street at an early hour of the day.

391. At the northern end of the city would they not still have to cart to the tramway? A short distance.

392. From your experience, does it not cost almost as much to cart a short distance as a long distance? Decidedly not. The station on the Circular Wharf would be on low ground, and we all know that carting goods on a level costs less than taking them up steep roads from wharfs.

393. Supposing the station to be on the Circular Quay, would it not cost almost as much to cart goods from Darling Harbor to the station as it now does to cart them to the railway? No; it is a much shorter distance. They would have to come up the hill from Darling Harbor, which is the great difficulty, and they would then have to go a mile or more further in the other direction.

394. Would not the expense of the two, the cartage to the station, and of carriage by the tramway, be almost as great as the present cost of cartage? Decidedly not.

395. What would be the amount of saving? From Botts' Wharf for instance, if there were any amount of goods they could be brought round in a boat, which would cost very little indeed. The cost of taking a load of goods from Botts' Wharf to Circular Quay would be about half-a-crown, while, from Botts' Wharf to the present Railway Station, it could not be done under 4s. 6d.

396. Is not 4s. the regular charge? Whatever is the regular charge I can never get it done. There is a great hill there, and it takes a good horse to draw a load up that hill.

397. Taking the west side of the city from George-street, would it not cost as much to cart goods thence to the proposed station at the Circular Quay as it would to cart them down to the railway? Decidedly it would not cost so much.

398. Is there not the second expense to be taken into account—first, the expense of cartage to the proposed station, and then the expense by the tramway? I do not consider that there

Samuel Hobbblewhite, Esq.

16 Feb., 1860.

would be any extra expense for going by the tramway, because that would encourage the general business.

399. Do you not know that it is proposed to make a charge? I do not.

400. Supposing it be the intention to make a charge of one shilling a ton for taking goods by the tramway, would not that, with the cartage to the tramway, be almost as great an expense as carting to the Railway Terminus at present? I think, considering the great convenience it would be, there would still be an advantage in favor of the tramway. If an employer has his own dray he would save the cost in the saving of the time of the man and horse while engaged in making the journey.

401. Do you think it desirable to make the Railway Terminus more in the centre of the city? If it were to be in the centre of the city, somewhere in the neighborhood of Hyde Park, near Elizabeth-street, it would be an advantage, but not if it were to be in the place I have heard mentioned—below the hill near William-street.

402. Would it be more desirable to have the railway run round the harbor—supposing the terminus to be in Hyde Park and the railway to run round the harbor by the Domain to Circular Quay? The shortest cut if the terminus were to be in Elizabeth-street would be by Bligh-street, but it would cost a great deal of money. I think in the present state of the country it is far better to go the cheaper way about it. I understand it would cost more than £100,000 to take it that way—while you can get a tramway for £7,000 I am decidedly in favor of the cheapest line. There is very little trade in Pitt-street just now, and very little obstruction.

403. You consider that running the tramway down that street would improve the trade? I do, and I think there would be very little obstruction of any kind there. I know I speak the feelings of the persons who signed the petition; they were enthusiastic in its favor.

404. *By Mr. Morris:* Can you explain how it would improve the trade of Pitt-street? It is proposed to drop passengers at every street corner, and we know that where passengers are dropped the shops in the neighborhood are likely to get the custom and that I think is powerfully in favor of Pitt-street. The people there are very anxious in that respect. The town is springing up in the neighborhood of the present terminus; I can remember when there was scarcely a house there, and there is now more trade done there than in all the centre of the city where all the money has been expended in improvements. The prosperity of the northern end of the city is going back in consequence of passengers making their purchases at that end of the town, and they often go back without coming into the old part of the city.

405. I apprehend the object of the tramroad is to facilitate the traffic of the railway, would it not therefore be better to have the terminus in the city itself instead of at Redfern? If it could be done at such a cost as the country could afford; but there would be great expense attending the bringing of the terminus into the heart of Sydney.

406. But the interests of the citizens and of the railway would be better consulted by the terminus being in the city than by this tramway down Pitt-street? Of course it would, but it would obviate any of these extra expenses of cartage to which I have referred to; but I think the citizens have an objection to the creating of a new neighborhood, and of taking the railway down the hill by William-street, because that would be a great distance from the heart of Sydney.

407. You have no objection to having a terminus in Elizabeth-street? No, somewhere near George and Pitt streets.

408. *By Mr. Atkinson:* Do I understand you to recommend that as a terminus for goods as well as for passengers? If the room could be spared it would be far better to make a tramway thence down to Circular Quay, for that is the great centre of all business.

409. *By the Chairman:* Do you think it would be desirable to have a tramway along George-street into York-street, passing the Markets, and the station to be at Wynyard-square? You would not then get down to Circular Wharf, the great shipping place, and I think that would be very objectionable; besides, I do not think the people of Wynyard-square would take that in exchange for the proposed Post Office.

410. Would it not be a great accommodation if country people could have their produce brought down to George-street Market? It would be a great improvement.

411. Would it not be equally desirable for passenger traffic? I think it would, if it could be done, be a very good thing; but there would be a great objection to bringing steam carriages through the streets.

412. I am speaking now of a tramway for the bringing down produce and passengers? You would not then get the advantage of bringing down the produce for shipping—heavy goods, as wool and tallow—which are very important items.

413. Beyond wool and tallow, the tramway down Pitt-street would not serve the purpose of bringing down Colonial produce? I think it would.

414. How would you get butter, cheese, and fruit back from the wharf? These are very small items, and they come by the steamers chiefly.

415. The meat? That is provided for in another way.

416. Supposing the slaughter-houses at Liverpool to be used, and this were sent down by railway, would it not be more desirable that it should be brought by way of the markets than that it should be carried on to the wharf? Meat is a very secondary affair, the main staple is wool, tallow, and hides for shipment, and at Circular Wharf there is all convenience for depôts.

417. Is there room at the Circular Quay for a railway station? I consider there might be a very efficient station if the old Commissariat Store were devoted to that purpose.

Ambrose Foss, Esq., called in and examined :—

418. *By the Chairman* : You are a resident in Pitt-street, I believe ? I have business A. Foss, Esq. premises there.
419. You are anxious to be examined on the subject of the tramway down Pitt-street ? I 16 Feb., 1860. am not particularly anxious, but I was asked to come before the Committee, and I am glad of the opportunity.
420. Will you favor the Committee with your idea of the advantages to be derived from a tramway down Pitt-street ? I am not prepared to say what advantage would result from it, for I have not given that a thought.
421. Do you believe that it would enhance the value of the trade or bring a larger amount of trade down that particular street ? Yes.
422. That is one of the advantages you think would be derived from having a tramway there—that it would increase the passenger traffic ? I think so.
423. Do you know any other advantage that would be derived from having a tramway down the street ? I think it would be a very important one with reference to wool and other produce sent down from the western and southern districts for export.
424. Do you think it would lessen the expense of transport ? I think so.
425. Are you aware that the Corporation have a sum of £150,000 invested along that street, in the way of sewers and water-mains ? I am aware that they have incurred a very large expense for those works.
426. Would you give the control and management of those works over to the Commissioner of Railways, and take them out of the hands of the Corporation entirely ? That is a question I am not prepared to answer.
427. Do you know that under the provisions of the Act for the management of railways the street must necessarily fall under their management if the tramway runs down that street ? I am not aware of the fact.
428. Supposing that to be the fact would you, for the sake of running the tramway down there, take the management and control of that street out of the hands of the Corporation and place it in the hands of the Commissioner ? I think it is likely to be more effectually managed under the Railway Commissioner than under the Corporation.
429. Could he manage the water-works in that street without taking the water-works entirely into his hands ? I am not aware that it would be necessary for the Commissioner to take the entire control of the water-works. I should think he need simply have charge of the main down Pitt-street.
430. There are sewers also, as well as the water-main ? Yes, but other streets have sewers as well.
431. Do you think that there should be two conflicting interests—the Commissioner having the management of the surface and the Corporation having the control of the sewers and water-mains underneath ? I should judge that the Commissioner of Railways would manage the thing as efficiently as the Corporation, but I am not prepared to say whether it would be desirable that he should have the control of the whole of the water-works or of the sewerage.
432. Do you think it would be desirable to have a tramway running along the street where the man-traps are for getting into the sewers—where the fire-plugs and locks are for water ? I imagine that, in laying down the tramway, provision will be made for communicating with the plugs and man-traps, and probably in a much better way than at the present time.
433. In what way much better ? I apprehend that in laying down the tramway they would make such openings that the sewers could be got at with greater facility than now.
434. Could the tramway be employed while men were at work at the man-holes ? As a matter of course.
435. Would it not stop the working of the tramway for the day ? Of course everything would depend upon the manner in which these man-traps were covered ; at present, from the immense labor of opening them, they obstruct the traffic through the street when they are opened.
436. Would not the same evil exist with regard to the tramway ? I doubt that, for I think the tramway sleepers and rails would be so constructed—I am merely supposing this, for I have not seen the plan—that there would be greater facility in communicating with the sewers by the man-traps.
437. Would not the traffic of the tramway be interfered with while communication with the sewers from the open cuttings were made ? I do not know the gauge or width of the tramway at all. I have not seen a plan, and do not know whether it is the narrow or the broad gauge.
438. You are aware that Pitt-street is about the narrowest street we have in the city ? It is much narrower than some parts of George-street.
439. Towards the northern end of Pitt-street before you get to Hunter-street ? Yes, I am aware that Pitt-street in some parts is narrower than it should be, but then you are aware that some of the obstructions must in the course of time be removed.
440. Could drays conveniently load and unload during the time the carriages on the tramway were passing ? I think so.
441. Would there be sufficient space ? I know with reference to my own premises that a dray can load and unload without any difficulty, and without obstructing the traffic up or down ; and I imagine they would do so with the same facility when the tramway should be laid down.
442. Would it be desirable to try the experiment of a tramway upon a wider street than Pitt-street ? There might be a difference of opinion upon that. The only two streets that

A. Foss, Esq. I conceive are adapted for that purpose are either George or Pitt street, from the facility of approaching the Circular Quay; and that I imagine is the principal object of the Railway
 16 Feb., 1860. Commissioner.

443. You would give the preference to Pitt-street over all other streets? I am not so thoroughly wedded to Pitt-street as to think that the only street; still I think, as a direct communication between the present Railway Terminus and the Circular Wharf, that Pitt-street has the advantage of the other streets.

444. Supposing a terminus to be erected at Hyde Park, would that be more desirable than a tramway along Pitt-street, or any other street? Most decidedly not; I think that would be a suicidal act.

445. To have a terminus any where near Hyde Park? Yes, to have the whole traffic of Sydney to come up hill. The great object, I think, is to carry the railway to the centre of commerce.

446. But supposing a railroad to be laid down round the Circular Quay from a terminus to be established in Hyde Park, would you consider that desirable? So far as the conveyance of produce from the interior to the shipping, I think there would be no advantage beyond the present terminus.

447. Would there be any saving of expense in the shape of cartage to the people along Darling Harbor by having the terminus at the Circular Quay? To a portion of them, but I do not think, as a whole, it would. The great advantage of this tramway would be the facility it would give to persons in the western and southern parts of the Colony in sending down their wool and other produce to the shipping for export.

448. You think it would not be much saving of expense in the cartage of goods to the tramway in lieu of to the terminus as at present, taking into account the cost of carriage by the tramway itself? I think it would, to a certain portion of the merchants and trading community of Sydney; and I think, to facilitate the business, it should be optional to parties to send their goods either to the tramway station or to the present terminus. I do not think it should be obligatory upon the trading community to send all their goods to the Circular Wharf.

449. Have you any further observations to offer to the Committee? None.

1859.

Legislative Assembly.

NEW SOUTH WALES.

FREIGHT ON RAILWAY CHAIRS & KEYS PER "MADURA."

(PETITION OF J. C. PROST, VICE-CONSUL FOR THE NETHERLANDS.)

Ordered by the Legislative Assembly to be Printed, 5 October, 1859.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned Vice-Consul of the Netherlands,—

SHEWETH:—

That your Petitioner most respectfully begs to represent to your Honorable House, on behalf of Captain T. A. N. Schagen Van Leeuwen, Commander of the Dutch barque "Madura," now arrived from Amsterdam and laying in this port, a contract, the particulars of which you find below, which his owner, Mr. W. C. Versluys, at Rotterdam, has entered into with Messrs. Lloyd, Beilby and Co., the agents of the New South Wales Government, by their agents in Rotterdam.

This contract or charter party, dated Rotterdam, 22 February, 1859, in substance, sheweth:—

1.—That Messrs. Lloyd, Beilby and Co. have chartered the Dutch barque "Madura" for a voyage from Amsterdam to Sydney for a sum of *f*15,600, at the exchange of *f*12 per £ st.—equal to £1,300 in full for the use and hire of the said vessel.

2.—That, however, all passage money is to be for ship's benefit.

3.—That the above stipulated freight or charter money of £1,300 is to be paid to the owners, as follows:—

One-third by charterers' acceptance at three months date from the day of the ship's final sailing from Holland, and the remainder on right and true delivery of the cargo in port or ports of discharge, the portion payable in Australia to be secured by bills of lading.

4.—That the master is to sign bills of lading at any rate of freight the charterers may choose, without prejudice to this charter.

5.—A penalty for non-performance of this charter—amount of freight.

Your Petitioner further begs to submit to your Honorable House, that amongst a general cargo of merchandize the vessel has also loaded—9,180 Railway Chairs, 24 casks Elm Keys for the New South Wales Government, and shipped by their agents, Messrs. Lloyd, Beilby & Co., in London, according to bill of lading dated Amsterdam, 13 April, 1859.

That in the bill of lading is stated "freight paid in London," and that according to the terms of the charter party the Captain was bound to sign his name thereunto.

That there cannot be any doubt that the Captain has signed such bill of lading in full reliance that the acceptance of the one-third of the charter money ($\frac{1}{3}$ of £1,300=£433 Gs.) would be given by Messrs Lloyd, Beilby and Co., agents of the New South Wales Government, and duly honored at maturity.

That,

2 FREIGHT ON RAILWAY CHAIRS & KEYS PER "MADURA".—PETITION.

That, however, the bill of £433 Gs. when presented to Messrs. Lloyd, Beilby & Co., in London, was refused acceptance and accordingly protested, and is now laying with the protest in the office of the Dutch Consulate.

That the amount of freight due upon the above-mentioned Railway Chairs and Elm Keys amounting to £203 2s., which forms part of the bill of £433 Gs. (the entire one-third of the charter money) is therefore not paid to the owner of the vessel and still due upon these goods.

Your Petitioner therefore respectfully prays that your Honorable House will take the matter into your best consideration, and afford Captain T. A. N. Schagen Van Leeuwen such relief as your Honorable House may see fit.

J. C. PROST.

Vice-Consul of the Netherlands.

Sydney, 4 October, 1859.

1859.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY FARES.

(LANDED PROPRIETORS AND RESIDENTS OF THE COUNTY OF CUMBERLAND,
IN PUBLIC MEETING ASSEMBLED.)

Ordered by the Legislative Assembly to be Printed, 11 October, 1859.

To the Honorable the Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The humble Petition of the Landed Proprietors and Residents of the County
of Cumberland, in Public Meeting assembled,—

SH EWETH :—

That your Petitioners have long suffered under a variety of grievances caused
by the high rates of charge for passengers and goods traffic imposed by the Board of Manage-
ment for the Great Southern Line of Railway, in the County of Cumberland, New South
Wales.

That, notwithstanding numerous and repeated complaints having been made to the
aforesaid Board, little or no attention has been paid to them.

Your Petitioners, therefore, pray that your Honorable House will be pleased to call
for all correspondence, as well as all reports, and minutes of all deputations, that have been
directed to, and have waited upon the aforesaid Board of Management, on and from the date
when Government assumed the control and management of Railways in this Colony, in order
that the grievances alluded to may have immediate attention and redress.

And your Petitioners will ever pray.

[Here follow 6 Signatures.]

1859.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY FARES.

(PETITION OF CERTAIN INHABITANTS OF BURWOOD RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 7 October, 1859.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned Inhabitants of Burwood and its neighborhood,—

SH EWETH :—

That your Petitioners, recognizing Railways as calculated to confer immense advantages, both material and moral, in their peculiar adaptation to the circumstances of this Colony, are of opinion that, in consequence of the system of fickle management and high charges hitherto adopted, those advantages have not been obtained.

That your Petitioners are of opinion that the following Scale of Fares, permanently fixed, would be calculated, not only to make these great and essential public works popular, but yield, ultimately, a much larger revenue, and render the resources of the Colony available to the public.

SCALE OF FARES.

	CLASS CARRIAGES.									
	First.			Second.			Third.			
	£	s.	d.	£	s.	d.	£	s.	d.	
Single fares	0	0	2	0	0	1½	0	0	1	} per Mile.
Return fares.....	0	0	1	0	0	0¾	0	0	0½	
Monthly fares	0	5	6	0	4	0	0	2	6	
Quarterly fares	0	15	0	0	10	0	0	7	0	
Half-yearly fares.....	1	5	0	0	18	0	0	12	6	
Yearly fares	2	0	0	1	10	0	1	0	0	

Together with a corresponding reduction in all other charges.

That the foregoing statements having been repeatedly pressed on the attention of the Commissioners, and disregarded by them, your Petitioners, therefore, have no confidence in their management, and are further of opinion that the appointment of a responsible Minister for Railways and Internal Communications would contribute powerfully to the development of this great national enterprise.

That, as there is no public question of more permanent importance to this Colony, nor one in which the public at large are more deeply interested, than the progress and proper management of Railways, your Petitioners respectfully but earnestly pray that you will see fit to cause such steps to be taken as will give effect to the subject matter of this Petition.

[Here follow 139 Signatures.]

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY EXTENSION CONTRACTS.

(CORRESPONDENCE RELATIVE TO.)

Ordered by the Legislative Assembly to be Printed, 3 February, 1860.

(Return on Motion of Mr. Piddington.)

CORRESPONDENCE relating to the construction of the Railway Extensions, between the Commissioner, and the Engineer-in-Chief for Railways, and the Agent of Sir S. M. Peto, Brassey, and Betts.

Laid upon the Table in satisfaction of the Address of the House, dated 29 September, 1859.

N.B.—Such letters only between the Government and the Commissioner for Railways have been included as appeared absolutely necessary to elucidate the Correspondence between the Commissioner, the Engineer-in-Chief, and the Agent of Sir S. M. Peto, Brassey, and Betts.

The Correspondence now laid upon the Table of the House terminates with the date of the Order of the House; but it is intended to lay upon the Table all further Correspondence of importance between the Commissioner and the Agent of Sir S. M. Peto and Co., and also all Correspondence between the Government, the Commissioner, and the Agent of that firm.

RAILWAY EXTENSION CONTRACTS.

SIR S. M. PETO to COMMISSIONER FOR RAILWAYS.

9, Great George-street,
Westminster, 10 January, 1859.

SIR,

I beg to inform you that Mr. William Rhodes, the confidential Agent of Mr. Brassey, Mr. Betts, and myself, goes to Sydney by this Mail, fully empowered by us to examine into the question of the construction of Railways in New South Wales, with a view to the matter being taken up by my firm. Mr. Rhodes having a brother in Melbourne is anxious to remain there a day or two on his way to Sydney, but will lose no time unnecessarily in getting to his destination.

I have, &c.,
S. MORTON PETO.

P.S.—Mr. Gabrielli is accompanying Mr. Rhodes, to assist him in carrying out the negotiations already entered into.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 2 April, 1859.

SIR,

Referring to your communication to Sir S. M. Peto and partners, under date the 11th August, 1858, and to the enclosures therewith transmitted, I have the honor, on their behalf, to acknowledge the receipt of these documents, and to inform you that I have been deputed by that firm to visit this Colony, for the express purpose of carrying out the negotiations which formed the subject of such communication, and that I am armed with full powers to conclude a definite arrangement.

Sir S. M. Peto, Brassey, and Betts, are willing to contract with the Government of New South Wales, for the construction in the first instance of the unformed portions of the lines between Parramatta and Penrith, and Campbelltown and Picton, and I am authorised on their behalf to propose terms, of which the following is a general statement, and which, if acceded to, will form the basis of the contract to be hereafter entered into, subject to such modification as may be suggested.

This I believe will be found in perfect consonance with the agreement and schedule of prices enclosed in your communication. >

Sir S. M. Peto, Brassey, and Betts will agree to execute the whole of the works above-mentioned, at the prices specified in the schedule herewith sent, subject to the fluctuation hereinafter mentioned, provided the Government should wish it.

The prices aforesaid have been fixed on the assumption that labor can be procured in respect of the first six items mentioned in the schedule at seven shillings and sixpence, and in respect of the last item at eleven shillings, per diem; should, however, these rates from time to time increase or diminish, rateable increase or deduction shall be made to or from the said prices in proportion that the prevailing rates of wages (to be ascertained as hereinafter mentioned) shall vary from the standard on which the present calculations are based, and such increase or diminution shall commence from time to time from the period at which any variation in the prevailing rate of wages shall be ascertained as hereinafter mentioned.

The prevailing rates of wages to be ascertained monthly, and agreed to between myself and the Chief Commissioner of Railways, and if any difference of opinion shall arise, the points in difference to be referred to arbitration.

Should the Government not adopt the sliding scale above named, and the price of labor increase to the extent of fifteen per cent. above the standard aforesaid, Messrs. Peto, Brassey, and Betts to have the option of discontinuing the works for the period of eight months.

Sir S. M. Peto, Brassey, and Betts will accept payment, either in cash or in debentures, bearing interest at 5 per cent., redeemable within twenty-five years, at such prices as shall be mutually agreed upon at the time of the Contract being executed.

Such payment, as well for work performed, and as also for materials supplied, shall be made monthly, and shall be in the proportion of ninety per cent. on the estimated value thereof, and the Government Engineer shall certify as to the performance of the work, and a final settlement shall be arrived at once in every three months, when the balance of such payment shall be made.

The Engineer's certificate to be final unless Sir S. M. Peto, Brassey, and Betts' agent in the Colony shall, within fourteen days, express his dissatisfaction therewith, in which case the matter in dispute shall be referred to arbitration.

Sir S. M. Peto, Brassey, and Betts to undertake to complete the said works within the period of _____ months, but, in the event of any discontinuance of such works on the ground of the excessive increase of the prevailing rate of labor, as aforesaid, then the period to be correspondingly enlarged.

Sir

Sir S. M. Peto, Brassey, and Betts to have the option of purchasing, at a valuation to be made in the usual way, all the plant and implements now upon or used and employed in or about the portions of the lines referred to, already commenced, and to be allowed the use of all such iron rails and chairs belonging to the Government as may be by them required.

Sir S. M. Peto, Brassey, and Betts presume that the Government will interpose no objection to free passages being, from time to time, allowed to the Contractors, their servants, and laborers, by all ordinary trains, during the continuance of the Contract, and that arrangements will readily be made for the conveyance of the materials, plant, and machinery requisite for the prosecution of the works in question, upon such a reduced scale as may be agreed on.

Messrs. Sir S. M. Peto, Brassey, and Betts to be entitled to remission orders to the extent of eighty per cent. of the amount usually allowed in aid of Immigration, according to the Emigration Regulations, in respect of all laborers and artisans who may be brought to the Colony by them for the execution of the works.

It must also be understood that the whole of the works, of whatever nature and description required in making the railway up to, and including the laying of the rails and ballasting them, to be included in the Contract.

Messrs. Peto, Brassey, and Betts are induced to enter into this small Contract with a view of shewing the Government in what efficient manner railway works can be carried out in New South Wales; with a view of obtaining hereafter the making of the extensive lines contemplated, and can scarcely venture to calculate on obtaining much (if any) profit upon this transaction, as the large amount of railway plant and the staff of skilled officers and men they will be obliged to introduce into this country will entail upon them a vast expense they do not expect to be repaid upon the profits arising from so small a Contract.

I may finally point out to the Government that, as it will be necessary for us to introduce a vast amount of labor of the very best description, it must be evident that the Government will be largely benefited by such important immigration.

I have, &c.,
A. RHODES.

[Enclosure.]

GREAT RAILWAY.

EXTENSION

2nd April, 1859.

FORM OF TENDER.

I HEREBY propose to execute the whole of the _____ required in the construction of that portion of the Great _____ Railway, comprised in Contract No. _____, commencing at or near to _____, and being a length of _____, or thereabouts, in strict accordance with the plans and specification at the following prices:—

	£	s.	d.
EXCAVATION from cuttings taken to embankments named in the disposal sheet not exceeding half a mile lead, at per cubic yard	0	2	9
Ditto from road approaches taken to embankment, not exceeding a quarter of a mile lead, at per cubic yard	0	2	6
Ditto from side cuttings to embankment not exceeding three runs, at per cubic yard	0	1	9
Ditto extra for any additional run, at per cubic yard	0	0	3
Ditto from side ditches, including forming of mound alongside the ditch, at per cubic yard ..	0	2	0
Ditto, if rock, taken to embankment, named in disposal sheet not exceeding half a mile lead, at per cubic yard	0	5	6
BRICKWORK, in mortar, to piers to bridges, wing-walls, foundations, &c., at per cubic yard ..	3	0	0
Ditto in cement to ditto, at per cubic yard	3	5	0
Ditto in mortar to culverts, all sizes, at per cubic yard	3	0	0
Ditto in cement to ditto, at per cubic yard	3	5	0
Excavation in foundations to bridges, culverts, &c., at per cubic yard	0	2	6
Ditto if rock to ditto, at per cubic yard	0	4	0
TIMBER (Ironbark) in bridges, including the fixing of all ironwork, at per cubic foot	{	hewn	0 4 6
	{	sawn	0 6 0
IRONWORK, including bolts, nuts, and straps, at per lb.	0	0	6½

The prices in the preceding schedule include all labor, materials, scaffolding, and workmanship of every kind necessary for the full and perfect completion of the works, and to the entire satisfaction of the Engineer-in-Chief.

Name
Address

To the Railway Commissioners.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR S. M. PETO & Co.

Railway Branch,
Department of Internal Communication,
2 April, 1859.

SIR,

I am directed by the Commissioner to acknowledge the receipt of your letter of this day's date, conveying the terms and conditions upon which you offer to construct certain railway lines in this Colony, and to inform you that your letter shall be transmitted to the Government for their consideration.

I have, &c.,
JOHN RAE,
Secretary.

COMMISSIONER.

COMMISSIONER FOR RAILWAYS to UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Railway Branch,
Department of Internal Communication,
Sydney, 2 April, 1859.*

SIR,

Three Enclosures.

I have the honor to transmit herewith, for the consideration of the Secretary for Lands and Public Works, a communication received from Mr. Rhodes, dated this day, conveying the terms and conditions upon which, as agent for Sir S. M. Peto and Co., he is prepared to undertake the construction of the authorised railway extensions to Picton and Penrith, together with the schedule of prices alluded to therein, and a copy of my letter, dated this day, to Mr. Rhodes, acknowledging the receipt of his communication.

In forwarding these papers without delay, I must not be understood as recommending the acceptance of Mr. Rhodes' proposals as they now stand.

I enclose also a tender, dated 31st ultimo, from Mr. Gibbons, on behalf of Messrs. Randle and Co., to execute the whole of the railway extensions now authorised, as well as any lines that may hereafter be sanctioned, at the same schedule of prices that Mr. Gibbons is now executing the first portion of the Great Western Railway Line; together with a copy of a letter from myself to Mr. Gibbons, dated 1st instant, requesting an explanation of the tender sent in, and Mr. Gibbons' reply, dated this day.

Although the tender of Messrs. Randle and Co. was entirely uncalled for, I think it my duty to forward it for the information of the Government.

I have, &c.,

B. H. MARTINDALE.

AGENT FOR SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 5 April, 1859.

SIR,

Referring to my letter of the 2nd instant, I find that it did not contain a proposal on the part of Messrs. Peto, Brassey, and Betts, to perform the Northern Line of Railway from Maitland to Singleton. I now, on the part of that firm, beg to include that portion of railway works, and propose performing them on the same terms and conditions as those contained in my letter for the performance of the railways to Picton and Penrith.

I have, &c.,

A. RHODES.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF
SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
9 April, 1859.*

SIR,

I am directed by the Commissioner to acknowledge your letter of the 5th instant, proposing to construct the remaining portion of the extension of the Great Northern Railway from Maitland to Singleton on the same terms and conditions, and at the same schedule of prices, as submitted by you in your letter of the 2nd instant for the Great Southern and Western Lines, and to inform you that your letter has been transmitted to the Government for their consideration.

I have, &c.,

JOHN RAE,
Secretary.

COMMISSIONER FOR RAILWAYS to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 15 April, 1859.*

SIR,

The proposals contained in your letters of the 2nd and 5th instant, which were acknowledged by me on the 2nd and 9th instant, having since been fully considered at your interviews with the Government, I have the honor now, by the direction of the Government, to state the particulars of the arrangements finally made with you in lieu of the proposals contained in your letters already referred to.

2. The Government agree to contract with Sir S. M. Peto, Brassey, and Betts for the construction of the authorised lines of Railway from Menangle to Picton, from the Blacktown Road to Penrith, and from Lochinvar to Singleton, at the prices specified in the Schedule attached to this communication, and marked A.

3. In the event of its being shewn to the satisfaction of the Government that an extraordinary pressure exists for labor, the Government will be prepared to extend the period within which the works are by the contract required to be performed.

4. The Government accept the proposition to pay at their option, either in cash or debentures to be issued at 98, bearing interest at 5 per cent., and redeemable within 25 years.

5.

5. Payment will be made once in every month, on the Engineer's certificate, as the work proceeds, in the proportion of 90 per cent. of the work actually executed, and the remaining 10 per cent. will be paid after the Engineer has certified that the whole of the works have been completed to his satisfaction.

6. The whole of the extensions herein named shall be completed, and ready to be opened for public traffic on or before the 31st December, 1860.

7. The Government will allow Sir S. M. Peto and Co. to purchase, at a fair valuation, any plant or implements in their possession which they can spare, and the Government will allow Sir S. M. Peto and Co. the use of such rails and chairs as they can spare, on payment of 10 per cent. per annum on their value, and on condition that any rails or chairs destroyed or rendered useless shall be paid for at their cost to the Government.

A free pass will be allowed to Mr. Rhodes upon any Government line of railway, and to one agent upon each extension, while employed upon the construction of railways for the Government.

The whole of the works, of whatever nature and description required in making the extensions herein named, shall be included in the contract, and any work for which a price is not given in the schedule hereunto attached, and marked A, shall be paid for at a price to be agreed upon at the time.

But should the Government and the contractors not agree to the prices not specified in the schedule, the Government retains the right of otherwise executing the work.

The usual bond and contract in accordance with the above arrangements will be prepared by the Civil Crown Solicitor.

The Government entertain no doubt that Messrs. Peto, Brassey, and Betts will carry out the railway works intrusted to them in such a thoroughly efficient manner as to justify the unusual course that has been taken in departing from public competition.

I have, &c.,

B. H. MARTINDALE.

A.

GREAT RAILWAY.

EXTENSION

Date 18

FORM OF TENDER.

I HEREBY propose to execute the whole of the _____ required in the construction of that portion of the Great _____ Railway comprised in Contract No. _____, commencing at or near to _____, and being a length of _____, or thereabouts, in strict accordance with the plans and specifications, at the following prices:—

	£	s.	d.
Excavation from cuttings taken to embankment, at per cubic yard	0	2	7½
Ditto from road approaches taken to embankment, not exceeding a quarter of a mile lead, at per cubic yard	0	2	7½
Ditto from side cuttings to embankment, not exceeding three runs, at per cubic yard	0	1	9
Ditto extra for any additional run, at per cubic yard	0	0	3
Ditto from side ditches, including forming of mound alongside the ditch, at per cubic yard	0	2	0
Ditto, if rock, taken to embankment, at per cubic yard	0	4	9
Brickwork, in mortar, to piers, to bridges, wing-walls, foundations, &c., at per cubic yard	2	15	0
Ditto in cement to ditto, at per cubic yard	3	0	0
Ditto in mortar to culverts, all sizes, at per cubic yard	2	15	0
Ditto in cement to ditto, at per cubic yard	3	0	0
Excavation in foundations to bridges, culverts, &c., at per cubic yard	0	3	0
Ditto if rock to ditto, at per cubic yard	0	6	0
Timber (ironbark) in bridges, including the fixing of all ironwork, at per cubic foot	0	5	0
Ditto (Memel or Riga) at per cubic foot	0	5	0
Ironwork, including bolts, nuts, and straps, at per lb.	0	0	6½

The prices in the preceding Schedule include all labor, materials, scaffolding, and workmanship of every kind necessary for the full and perfect completion of the works, and to the entire satisfaction of the Engineer-in-chief.

To the Railway Commissioners. Name Address

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 15 April, 1859.

SIR,

Having reference to my former letters of the 2nd and 5th instant, I now offer, on behalf of Messrs. Peto, Brassey & Betts, to perform the railway work between Campbelltown and Menangle, at the same rate of schedule prices as may ultimately be agreed to between us in respect of the other portions tendered for.

I also agree to take upon myself the performance of all contracts which may have been entered into by the Government in respect of this portion, and to purchase at cost price the plant purchased by the Government for the making of the above-mentioned portion of railway.

I have, &c.,

A. RHODES.

COMMISSIONER,

COMMISSIONER FOR RAILWAYS to UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Railway Branch,
Department of Internal Communication,
Sydney, 15 April, 1859.*

SIR,

I have the honor to transmit herewith, for the information of the Secretary for Lands and Public Works, a letter of this day's date from Mr. A. Rhodes, containing an offer for the construction of the Railway works between Campbelltown and Menangle.

I recommend that the construction of this line should be intrusted to Messrs. Peto, Brassey & Betts, under arrangements similar to those agreed upon for the extensions to Pieton, Penrith, and Singleton;—Messrs. Peto & Co. also taking upon themselves the performance of all engagements entered into by the Government in respect of this line, and purchasing at cost price the whole, or such part as the Government can spare, of the plant purchased by the Government for the making of this line.

The works to be completed, and the line ready to be opened for public traffic on or before the 31st December, 1859.

I have, &c.,

B. H. MARTINDALE.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 19 April, 1859.

SIR,

I have the honor to acknowledge your letter of the 15th April, informing me that the proposals contained in my letters of the 2nd and 5th instant had been fully considered by the Government; and that, by direction of the Government, you would state the particulars of the arrangement finally made with me, in lieu of the proposals made by me.

2. In reply I have to state, that although I acquiesce generally in the terms of your letter, several of its clauses will require some modifications.

3. On behalf of Messrs. Peto & Co. I agree to paragraph No. 2.

4. I also accede to No. 3, with this modification, which is in accordance with the agreement prepared by you for Messrs. Peto's acceptance, namely,—that if labor should exceed fifteen per cent. on the present prices, then that the period agreed on for the completion of the works shall be extended, in order to afford Messrs. Peto & Co. an opportunity of making such arrangements for carrying on the works without incurring a severe loss, which the very small margin of profit left by the Government would undoubtedly expose them to.

5. I also accede to paragraphs 4 and 5.

6. No. 6:—I agree to the time within which the works are to be completed, assuming that all the plans and the lines are now ready for immediate operations. Should not this be the case, then within twenty months from the day in which I shall be placed in that position.

7. No. 7:—As the work is to be completed by so early a period, and as, in order to accomplish this work, great exertions will have to be made on various portions of the line simultaneously, a great quantity of rails and chairs will be required; and as, by the wording of this clause, the Government only propose to allow me the use of such rails and chairs as can be spared,—in agreeing to the clause, I do so on the assumption that the Government will send for and procure the rails which will be necessary for the line at once, in order that I may have sufficient to proceed with the work. Indeed the Government will require these for the opening of the Railway when the works are completed; and would, I presume, as a matter of course, for their own sakes, adopt this suggestion. The next clause, relating to extra work, is far too indefinite. I have no objection to setting forth a schedule of prices for all extra work that may be required; or if it be left to after settlement, then it appears to me, that in case of disagreement the Government should not be the judges in their own case, but that the prices should be left to some indifferent person agreed to by both parties.

8. I am lastly to call your attention to the question of the importation of labor. By the agreement sent to Messrs. Peto, and drawn since the new Emigration Regulations, Mr. Gabrielli, acting for Messrs. Peto, was to be allowed remission orders to the extent of 80 per cent. on all labor imported by them for the Railway.

I understand the Government would prefer, that in the matter of emigration Messrs. Peto should avail themselves of the Emigration Regulations as they now stand; and this I am willing to agree to, on this understanding,—that the Emigration Regulations (so far as Messrs. Peto are concerned) shall continue in force during the period of their contract; or in other words, that they shall be at liberty to import so much labor as they require, on payment of the usual deposit under the present regulation.

I have, &c.,

A. RHODES.

COMMISSIONER

RAILWAY EXTENSION CONTRACTS.

7

COMMISSIONER FOR RAILWAYS to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 21 April, 1859.*

SIR,

I have laid before the Government your letter of the 19th instant, in which you propose that some alterations should be made in the agreement entered into on the 14th instant with you, on behalf of Sir S. M. Peto and Co., for the construction of certain railways, and I am directed to reply that, although the Government cannot admit your right to re-open the consideration of any of the particulars then discussed and determined upon, they are willing, as far as possible, to meet your present views.

2. The Government cannot accede to the proposal contained in the fourth paragraph of your letter, but I am authorised to say that they would consider 12s. (twelve shillings) a day wages for laborers, and 18s. (eighteen shillings) a day wages for mechanics, as indicating such a pressure as would warrant their acting upon the provisions contained in the third clause of my letter of the 15th instant. It may, perhaps, be as well that I should here notice that the tenor of your letter would seem to imply that the agreement which the Government were willing in 1858 to have made with Mr. Gabrielli is in force; of course that is not intended.

3. In reference to the sixth paragraph of your letter, I am to observe that all the information necessary to enable you to make your arrangements for proceeding with the works can be at once supplied to you; and that the plans and sections will be placed in your hands as required, so that your operations will not be delayed for want of them.

4. In reference to the seventh paragraph of your letter, the rails, chairs, &c., necessary for the whole of the authorised extensions, have long since been sent for, and these will be in the Colony when required. But as these cannot, as you have already been informed, be permitted to be used for temporary purposes, the progress of the work up to the formation level is in no way dependent on their arrival. The Government, however, will, as stated in my letter of the 15th instant, afford you in this, as in other matters, such facilities as they can.

5. As regards the schedule of price for all extra work, the Government are willing that this should be at once determined as far as practicable, and they consider that for any work for which the price cannot now be settled ample protection is afforded to you by the power you possess of representing your views to the Government at the time of fixing the rates.

6. In reference to the eighth paragraph of your letter I am to observe, that in the draft agreement to which you refer the clause providing for the importation of labor was a restrictive and not an enabling clause, as will be seen by reference to it; and while the Government have not thought it necessary to insist upon that restriction in the present contract they cannot consent to embarrass the operations of the Government with reference to immigration by adopting your proposal, that the present Immigration Regulations shall continue in force during any fixed period. At the same time the Government are willing to render you every reasonable facility in this matter.

I have, &c.,

B. H. MARTINDALE.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

21 April, 1859.

SIR,

I have the honor to acknowledge your letter of the 21st April instant, in reply to mine of the 19th.

2. During your absence I had the favor of an interview with the Government, and having carefully considered the various points in dispute, I now transmit to you the terms of arrangement which have been finally agreed to between us.

3. The time for the completion of the contract is settled at twenty-six months from this date; the Government undertaking to deliver over immediately the five miles Menangle Extension, to furnish us with plans, and put us in possession of fifteen continuous miles of railway within two months, and the plans and lines for the remainder of the contract within three months.

4. I am to be entitled to all such rails and chairs as may be in possession of the Government and necessary for carrying on the works (including those which may have been sent for the permanent way), and which may not be required by the Government, upon the terms previously arranged, and subject to my payment for all damage or injury that may be done to them whilst in my occupation.

5. A schedule of prices for all extra work, as far as practicable, is to be prepared at once and agreed to between us, and any extra work for which the price cannot now be settled is to be left to future arrangement.

6. I waive the eighth paragraph contained in my letter of the 19th April, and accept in its stead the sixth paragraph of your letter of the 21st April.

I have, &c.,

A. RHODES.

COMMISSIONER

RAILWAY EXTENSION CONTRACTS.

COMMISSIONER FOR RAILWAYS to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 23 April, 1859.*

SIR,
I have laid before the Government your letter of the 21st instant, and I am directed to reply that the Government have no objection to make to the terms as named therein, with the exception of those contained in the 4th paragraph of your letter, to which the Government cannot accede, but they are prepared, as you have already been informed, to render you such facilities as they can.

The working plans and sections will be ready as required.

I have &c.,

B. H. MARTINDALE.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 23 April, 1859.

SIR,
I have the honor to acknowledge the receipt of your letter of to-day's date, and I beg in reply to state that I agree to the fourth paragraph of my letter of the 21st instant being excepted from the terms thereof, and that I am willing to rely upon the assurance which you mention to me: that the Government is prepared to render such facilities as they can in reference to the matters to which such 4th paragraph relates.

I have, &c.,

A. RHODES.

COMMISSIONER FOR RAILWAYS to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 26 April, 1859.*

SIR,
I have laid before the Government your letter of the 23rd instant, and I am directed in reply to inform you that the Civil Crown Solicitor has been directed to prepare the usual contract and bond.

I have, &c.,

B. H. MARTINDALE.

COMMISSIONER FOR RAILWAYS to AGENT OF SIR S. M. PETO & Co.

*Department of Internal Communication,
Sydney, 26 April, 1859.*

SIR,
I have laid before the Government your letter of the 15th instant, offering, on behalf of Messrs. Peto, Brassey, and Betts, to perform the railway work between Campbelltown and Menangle, and I am directed to inform you that the Government will intrust the construction of this line to Messrs. Peto and Co., as communicated to you by my letter of the 23rd instant, under arrangements similar to those agreed upon for the extension to Singleton, Penrith and Picton; Messrs. Peto and Co. also taking upon themselves the performance of all engagements entered into by the Government in respect of this line, including those with the laborers now at work upon it, and purchasing at cost price the whole, or such part as the Government may desire, of the plant purchased for the making of this line, and the line to be completed by the 31st December 1859.

The Civil Crown Solicitor has been requested to prepare the usual contract and bond.

I have, &c.,

B. H. MARTINDALE.

COMMISSIONER FOR RAILWAYS to UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Railway Branch,
Department of Internal Communication,
Sydney, 26 April, 1859.*

SIR,
I have the honor to transmit herewith for the information of the Secretary for Lands and Public Works two further letters from Mr. Rhodes, of the 21st and 23rd instant, together with my replies of the 23rd and 26th instant, the whole of which have been already submitted to the Government, and I have to request that the Civil Crown Solicitor may be directed to prepare the necessary bond and contract.

I have, &c.,

B. H. MARTINDALE.

AGENT

RAILWAY EXTENSION CONTRACTS.

9

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 21 May, 1859.

SIR,

In your favor of the 21st April, paragraph No. 5, you say "a schedule of prices for all extra work is to be prepared at once (as far as practicable) and agreed to between us."

I now beg to hand you the prices at which I propose to perform the following works:—

No.	Description	£	s.	d.
1.	Ballast, $\frac{1}{2}$ cubic yard	0	8	0
2.	Road laying, $\frac{1}{2}$ lineal yard	0	3	2
3.	Cartage of rails and chairs, $\frac{1}{2}$ lineal yard	0	1	8
4.	Sleepers, each	0	5	6
5.	Ashlar, for bridges, $\frac{1}{2}$ cubic yard	10	5	0
6.	Fencing posting rails, $\frac{1}{2}$ lineal yard	0	2	3

I have, &c.,

A. RHODES.

COMMISSIONER FOR RAILWAYS to AGENT OF SIR S. M. PETO & Co.

Railway Branch,
Department of Internal Communication,
Sydney, 10 June, 1859.

SIR,

Your letter of the 21st ultimo has not been replied to until this date, owing to my absence from Sydney.

I have now the honor, in reference to my interview with you of this day, to inform you that, after consulting with the Engineer-in-Chief, I am unable to recommend the Government to accede to the schedule contained in your letter.

I learn, however, with reference to the following items,—

No.	Description	s.	d.
1.	Ballast, $\frac{1}{2}$ cubic yard	8	0
2.	Road laying, $\frac{1}{2}$ lineal yard	3	2
3.	Cartage of rails and chairs, $\frac{1}{2}$ lineal yard	1	8

that you now propose to substitute for these items a price of 17s. 6d. $\frac{1}{2}$ lineal yard for laying and ballasting the permanent way, in accordance with the specification, and I am prepared to recommend this proposition to the Government for their acceptance.

With reference to items 4 and 6, viz.:—

4.	Sleepers, each	5s.	6d.
6.	Fencing, $\frac{1}{2}$ lineal yard	2s.	3d.

I am prepared to submit, for the consideration of the Government, the following prices in place of those proposed by you:—

No.	Description	£	s.	d.
4.	Sleepers, Western Line, each	0	3	0
	Southern Line "	0	3	3
6.	Fencing, per mile	160	0	0

With reference to item 5:—

5.	Ashlar, for bridges, per cubic yard	10	5	0
----	--	----	---	---

It is most probable that but very little of this description of work will be required, and as the price must depend on the vicinity of the stone to the work, I consider it advisable that the price should be settled by the Government as the work is required.

These prices are for the Southern and Western Lines only, as I am informed that Mr. Wilcox is desirous to settle himself such terms as have not already been agreed to by you for the Northern Line.

I have, &c.,

B. H. MARTINDALE.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 13 June, 1859.

SIR,

I have the honor to acknowledge the receipt of your letter of the 10th instant, in reply to mine of the 21st ultimo.

I am willing to perform the work of laying and ballasting the permanent way in the manner and according to the verbal understanding between myself and the Chief Engineer, at the rate of 17s. 6d. per lineal yard.

As to the items 4 and 6, viz.:—Sleepers, each, 5s. 6d.; fencing, 2s. 3d. per lineal yard, and for which you propose to substitute, for sleeper on the Western Line, 3s.; and 3s. 3d. for those on the Southern Line; and £160 for fencing per mile;—upon the best consideration I have been able to give, I find it will be impossible for me to perform the work at those prices either with credit to myself or satisfaction to the Government. I, therefore, must beg to decline accepting your offer. No person can perform the work at the rates proposed by you except at a loss.

363—B

With

With respect to the item of ashlar for bridges, as you inform me that there will probably be but little of this description of work required, I am willing to let this matter remain open for future agreement; as I fully agree with you, that the vicinity of stone to the work would necessarily make an important ingredient in the calculation of its value.

I also understand that these prices apply only to the Southern and Western Lines.

I have, &c.,
A. RHODES.

COMMISSIONER FOR RAILWAYS to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 23 June, 1859.*

SIR,

In reference to your letter of the 13th instant, and your subsequent interviews upon the matters referred to therein with the Colonial Secretary, the Engineer-in-Chief, and myself, I have the honor to inform you that I have this day written to the Government, requesting that I may receive their formal approval of the final terms verbally agreed upon at your interview with the Colonial Secretary and myself yesterday.

These terms were:—Laying and ballasting the permanent way complete according to specification, at the rate of 17s. 6d. per lineal yard; sleepers, Western Line, each, 3s.; sleepers, Southern Line, each, 3s. 3d.; fencing, per mile, £160. The item for ashlar work to remain open for future arrangement.

The specifications for the permanent way, fencing, and sleepers, and the prices agreed to, will form part of the general contract and schedule.

I have, &c.,
B. H. MARTINDALE.

COMMISSIONER FOR RAILWAYS to UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Railway Branch,
Department of Internal Communication,
Sydney, 23 June, 1859.*

SIR,

I have the honor to transmit herewith two letters in original, from Mr. Rhodes, dated 21st May and 13th June last, together with copies of my replies thereto; and I have to request that I may receive the formal sanction of the Government to the terms as arranged verbally between the Colonial Secretary and Mr. Rhodes yesterday.

I have, &c.,
B. H. MARTINDALE.

AGENT FOR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 21 July, 1859.

SIR,

Will you be kind enough to furnish us with a copy of the contract made with Mr. Jolly for timber for wooden viaducts on the Menangle and Campbelltown Extension.

We are, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

COMMISSIONER FOR RAILWAYS to UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Railway Branch,
Department of Internal Communication,
22 July, 1859.*

SIR,

In settling with Mr. Rhodes the terms of the contract for the construction of those portions of the authorised extensions which are to be carried out by Sir S. M. Peto, Brassey, & Betts, it was agreed on the part of the Government that the whole of the plans should be furnished to Mr. Rhodes by the 21st instant.

The Engineer-in-Chief, however, having informed me that circumstances had prevented his having the plans ready as he had anticipated they would be by the 21st instant, I requested him to state the causes of the delay, and to suggest the measures necessary to avoid a similar delay in future. I enclose a copy of my minute and of Mr. Whitton's report in reply.

By this it will be seen that Mr. Rhodes has now possession of 17½ miles of line. Six more miles were transmitted by me on the 14th instant for the approval of the Government previous to proclamation; and Mr. Whitton states that the plans for the remainder of the line to Picton will be completed by the end of this month, nine miles of the Northern Line in about a fortnight's time, and the remainder of the Northern Line as early as possible.

possible. I recommend that whatever delay there may be in furnishing the plans to the contractor a similar extension of time should, if required, be granted to them for the completion of the works. The Engineer-in-Chief states that the delay in the completion of the plans has arisen entirely from the utter impossibility of procuring the requisite assistance in this Colony.

As soon as the estimates for my department were passed in March last I requested Mr. Whitton to recommend six gentlemen for the appointments of railway trial surveyors then sanctioned; and previous to this, such assistance as was required and as could be procured was obtained, and the cost defrayed from the votes for the extensions upon which the assistance was employed. Mr. Whitton experienced the greatest difficulty in finding persons whom after examination he could consider competent railway surveyors, but ultimately four were appointed in March last; of these two are at present at work in the field, and the remaining two it was found necessary to dismiss after a trial of two months; their work could not be relied on, and their failure was a cause of vexatious delay.

Finding upon my return to Sydney in June last, after inspecting the Southern Road, these difficulties and delays existing, I consulted with Mr. Whitton, and with the sanction of the Secretary for Lands and Public Works, to whom I communicated how matters stood, I advertised in the daily papers for competent railway surveyors. I had already when at Melbourne in May on my homeward journey, been informed by the Inspector General of Works and the Engineer-in-Chief for Railways there, from whom I made inquiries, that they were not acquainted with any surveyors wanting employment whom they could recommend to me.

Every applicant of good character was examined by the Engineer-in-Chief, but it will be seen from his report that out of eleven applicants Mr. Whitton was unable to recommend one, and that he suggests that if railway works are to be carried on at a rapid rate, additional assistance should be procured from England.

The staff at present employed upon the authorised extensions and trial surveys, is as follows:—

The Engineer-in-Chief	£1,500	} Permanent Establishments.	
1 Assistant Engineer.....	700		
1 do. do.	400		
1 Draftsman	500		
1 do.	350		
1 Clerk	250		
1 Surveyor.....	500		} Defrayed from Votes.
1 Architectural Draftsman	350		
1 Assistant Surveyor.....	150		
1 Assistant Draftsman	156		
1 Assistant Engineer.....	780*		
2 Surveyors	1,360*	} Trial Survey Vote.	
15 Sappers.....	3,504†		
	10,500		
2 Inspectors of Works	800‡		
2 Inspectors of Bridges.....	730‡		
	£12,030		

The amount of additional assistance to be obtained, and its character, must depend upon the rapidity with which it may be decided that railways shall in future be proceeded with; presuming, however, that it will not be less rapid than heretofore, I recommend, after consultation with the Engineer-in-Chief, that four assistant railway engineers should be procured from England, at salaries at the rate of not less than £600 a year each.

It may be necessary to observe that in the above staff are not included the assistant engineer and inspectors of permanent way in charge of *lines opened for traffic*, as it will be in the recollection of the Secretary for Lands and Public Works that in the commencement of the present year it was found necessary to relieve the Engineer-in-Chief of the charge of these lines and to place them entirely under Mr. Thomas, retaining only the benefit of Mr. Whitton's experience and skill when a second opinion is required. But as the lines opened for the traffic increase in length, and as the traffic itself increases, it is evident that both the safety of the public and true economy will necessitate an increase to the strength of this branch of the department, and I anticipate that this increase will also require to be procured from England. It may, however, be better that its extent and character should form the subject of a separate communication.

I have, &c.,

B. H. MARTINDALE.

[Enclosure 1.]

As I learn from Mr. Whitton that the plans for the Northern Line, and for the remainder of the Southern Line, will not be ready on the 21st instant, I request he will be so good as to state the causes of the delay, and to suggest the measures necessary to avoid a similar delay in future.

B. H. M.

18 July.

The Engineer-in-Chief.

[Enclosure

* Including all allowances.

† Two of these have been absent all the year at Norfolk Island.

‡ Exclusive of wages of laborers and special vote for Grose Valley.

[Enclosure 2.]

In the arrangement with Mr. Rhodes, the plans and sections of 15 miles of railway were to be ready for him on the 21st June.

On the 4th May the plans and sections of the line between Campbelltown and Menangle were handed to him, and on the 21st June the plans and sections were ready for the Western Line, a distance of 11½ miles between the Blacktown Road and Penrith; therefore, up to the 21st June, plans and sections of 17½ miles were ready, being 2½ more than stipulated for by Mr. Rhodes.

The remainder of the plans and sections for the Southern and Northern Lines to Picton and to Singleton were to be ready on the 21st July. To-morrow being the 21st July, six miles of the Southern Line will be ready for Mr. Rhodes, and by the end of this month the remainder of the plans for the Southern Line to Picton will be completed.

In the North I regret that the plans are not in so forward a state as on the Southern Line; but this has arisen entirely from the utter impossibility of procuring the requisite assistance in this Colony.

Every facility has been given to me by the Commissioner to obtain the necessary assistance I am fully aware, and every means that I could devise has been adopted to meet this necessity; but I am fully satisfied that there is not in this Colony assistants not already engaged by this department capable of performing the description of work required. In reply to the advertisement issued by the Commissioner for assistants in the railway branch of the department, eleven applications have been made, but on examining the applicants I found there was not one that I could recommend with the hope of obtaining anything approaching to efficient assistance. The few good assistants I already have, have exerted themselves to the utmost to complete these plans by the time stated in the arrangement with Mr. Rhodes, but it has been found impossible to do so. Last week I staked out about five miles of the Northern Line in order to have these plans ready as early as practicable, and by the end of next week I hope the assistants I left there will have about nine miles staked out and the section taken.

If they succeed in doing this, I shall be able to have nine miles ready for Mr. Wilcox in about a fortnight from the present time.

With reference to the future I would suggest that, if railway works are to be carried out at a rapid rate, additional assistance be procured from England.

J. W.
23/7/59.

The Commissioner for Railways.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Elizabeth-street, Sydney,
22 July, 1859.

SIR,

I have the honor to call your attention to the following facts connected with the lines of railway intrusted to us, with a view of placing on record the difficulties which have impeded our progress, and that the delays in the completion of the line may not be a matter of future complaint against us:—

1. Not a single bridge is set out between Campbelltown and Menangle, and I am, therefore, prevented from commencing upon any one.

2. Even the cuttings, embankments, and fencing, I have been compelled to set out myself at the risk of, perhaps, having the work to do over again if it should not meet the approval of the engineer.

3. I have had no plans or sections for river diversions or road approaches.

4. Although strictly not within the province of Messrs. Peto & Co., as co-partners, I feel myself bound to point out that I consider the wooden viaducts proposed to be erected—the plans of which have been furnished to me—will not, when erected, be safe for the probable traffic after a very short period. Messrs. Peto, Brassey, and Betts' character as contractors will be at stake if after a short time these bridges should have to be rebuilt.

5. With regard to the extension between Menangle and Picton,—

6. No plans or sections have as yet been delivered to me, although I have been in readiness to commence the works from the date of the acceptance of the contract; and I was led to believe that part of this line was to be furnished with five miles extension to Menangle immediately. I was also to be provided with plans, and be put in possession of 15 miles of line by the 21st last month—this, you are aware, was not done. Having received a ground plan and longitudinal section of 12½ miles only, and these on the 5th July.

7. I have no plans or bridges, nor are the cuttings, embankments, road approaches, or river diversions set out yet.

8. By our agreement I am entitled to have the plans, &c., and to be put into possession of the whole of the remaining lines of railway by the 21st of this month, and I have yet received none of them—our staff is idle. We are losing money, and the reputation of Messrs. Peto & Co. is at stake, as whenever they have hitherto been employed they have ever earned the character of doing their work well and with expedition, and the public do not know that the blame does not rest with them.

9. In entering into my contract with the Government, I was induced to accept the work at low prices upon the faith of my being able to begin at the time when men were to be obtained at a more reasonable rate, and at a period of the year, not only more suited for this work in this climate, and when labor would be less liable to be withdrawn by the operations of harvesting and shearing, and this formed a great consideration in the calculation I then made. I trust, therefore, the Government will bear this in mind, and press on the performance of their part of the agreement.

I have, &c.,
A. RHODES.

AGENT

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 24 July, 1859.

SIR,

We beg to say that we think the Government should not charge us for carriage of rails. This was not mentioned in the agreement, only 10 per cent. on the value of them for wear and tear.

We have, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

Railway Branch,
Department of Internal Communication,
Sydney, 27 July, 1859.

SIR,

I am directed by the Commissioner, in reply to your letter of the 22nd instant, to transmit to you the accompanying memorandum from the Engineer-in-Chief, to whom it was referred for any observations which he might have to offer.

Mr. Whitton has so fully replied to the various statements which you have made that it is unnecessary for the Commissioner to enter into detail; but he desires to state his opinion that so far as the works intrusted to you for construction are concerned, no difficulties have arisen sufficient to warrant any delay in the completion of the line within the specified time.

As, however, the whole of the plans could not be given to you on the 21st instant, as agreed upon, the Commissioner has recommended the Government to extend the time for the completion of the works by whatever period may intervene between the 21st instant and the date upon which you may receive the remaining plans. At the same time the Commissioner has to observe that under existing circumstances the delay of a few days in their receipt cannot be a matter of any moment to you.

The Commissioner thinks it right to recall to your recollection that in no single instance have you applied to him, either personally or in writing, for any facilities for carrying on the works which he has not given to you when it was consistent with his duty and in his power to comply with your requests.

The Commissioner has transmitted, for the information of the Government, copies of this correspondence.

I have, &c.,
JOHN RAE,
Secretary.

[Enclosure.]

MINUTE 59-463.

Mr. Rhodes complaining of certain difficulties which he states are impeding his progress with the works on the railway extensions.

Engineer-in-Chief for any observations he may have to offer.

B. H. M.
22/7/58.

For the convenience of reference I have numbered the paragraphs in Mr. Rhodes' letter.

No. 1.—Mr. Rhodes has made no application to me to have any bridges set out on the Menangle Extension; and, had he desired to have them set out, Morgan, the Inspector of Works, is on the ground, and would readily have done so for him. Indeed, I understand from Morgan that Mr. Rhodes has not up to the present time been in a position to commence driving the piles for any of the timber bridges.

No. 2.—The fencing on the Menangle Extension has, I believe, been entirely set out by Morgan, the Inspector. Mr. Rhodes is not the contractor for the fencing, and consequently can have nothing to do with setting it out.

The cuttings and embankments for the first portion of the Menangle Line were set out by Mr. Morgan, but since these works were left to Mr. Rhodes, he (Mr. Rhodes) may have set out the remainder. Mr. Rhodes has not, however, made any application to me to have these works set out for him, and Morgan has always been on the spot to set them out, had Mr. Rhodes requested it.

Mr. Rhodes is responsible for the correctness of the works, whether set out by himself or not, under the following clause in his specification (clause No. 6):—"The works will be set out for the contractor, but he must satisfy himself of their accuracy, as no work incorrectly set out or improperly executed will be paid for by the Commissioner."

No. 3.—There are no river diversions on the Menangle Line, and consequently no plans or sections have been made for them. There are only two public road approaches, and these require no plans, the instructions of the Inspector on the line are quite sufficient.

No. 4.—This is entirely an engineering matter, for which I am responsible, and no blame can attach to Sir S. M. Peto & Co., for any failure, if only Mr. Rhodes faithfully carries out the plans, sections, and working drawings furnished to him.

Nos. 5 & 6.—In reference to the line from Menangle to Picton, it was never contemplated to furnish Mr. Rhodes with part of the plans for its construction with those for the Menangle Line, but the plans and sections of 15 miles of railway were to be ready and given to him by the 21st ultimo. On the 4th May, the plans and sections of the line between Campbelltown and Menangle were handed to him, and on the 21st June the plans and sections were ready for the Western Line, a distance of 11½ miles, between the Blacktown Road and Penrith, and were given to Mr. Rhodes as soon as proclaimed, viz., on the 5th instant; therefore, within a few days of the date named, plans and sections of 17½ miles of railway were given to Mr. Rhodes, being 2¼ miles more than stipulated for by him; and Mr. Rhodes, as a contractor's agent, should know that a working plan and section are all that a contractor requires to enable him to proceed with the earthworks.

No.

No. 7.—There are only five bridges on the Penrith Line, the drawings for which will be ready in a few days, but Mr. Rhodes has not applied for them, nor could they be of any use to him at present if he had them. On the 6th July (the day after the Western Line was proclaimed), Mr. Burrows was sent down to Penrith to set out the fencing and slopes of cuttings and embankments for Mr. Rhodes, and everything requisite to enable him to commence all the excavations on this length has been done. There are no road approaches which require to be set out, and there are only two diversions of water-courses, which, although not set out on the ground, are shewn on the working-plan furnished to Mr. Rhodes.

No. 8.—The plans for six miles of the line from Menangle to Picton were ready by the 21st instant, and have since been proclaimed, and copies forwarded to Mr. Rhodes; the plans for the remainder of this line were unavoidably not ready by the 21st instant, the date agreed upon, but they will be ready by the end of this month; and I must observe, that Mr. Rhodes is in possession of so ample an extent of line that the delay of a few days in the receipt of the remaining plans can be a matter of no moment to him whatever, as he has quite sufficient to afford full employment for the staff which he has, to prevent any necessity for losing money, and to obviate the shadow of a chance of any injury to the reputation of Messrs. Peto and Co., as contractors, provided only Mr. Rhodes will proceed with vigor with these works for which he has all the information requisite for him to do so.

No. 9.—When Mr. Rhodes entered into his contract with the Government the dates when the plans were to be furnished to him were fixed, and it is not, therefore, possible that Mr. Rhodes could have been induced to accept lower prices than he otherwise would have done, upon the faith of being able to commence work before those dates; and the few days of delay in furnishing the plans neither can nor have had any influence on the labor market. Possession of the Menangle Line was offered to Mr. Rhodes before he was able to take it, and since he has had possession of it he has by no means pushed the works with such vigor as to entitle him to complain in any degree of not having employment for labor. Five hundred men might be usefully employed upon the 17 miles in Mr. Rhodes' possession, while he has upon them about two hundred men.

Mr. Rhodes' complaints appear to me frivolous and vexatious. I have throughout been anxious to afford him every assistance in carrying on the works, but I regret to say that I have experienced constant difficulties in working with him, and instead of receiving that assistance from him which I anticipated, and which I am sure Sir S. M. Peto & Co. would desire should be rendered to me, I have met with the greatest obstruction. I can only trust Mr. Rhodes will see the necessity of pursuing, for the future, an entirely different course of action.

JOHN WHITTON.

26/7/59.

Captain Martindale, R.E.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 29 July, 1859.

SIR,

We beg your kind consideration of the matters referred to in the copy of the letter at foot. We have written to Mr. Whitton on the subject, to which he replies,—“I have only to remark, that this is a matter exclusively belonging to yourself as contractor, and you must form your own opinion.” We contend that he should furnish us with the lengths of the piles for the different bridges.

We shall be glad to have your view of the matter.

We have, &c.,
(Pro Peto, Brassey, and Betts.)
A. RHODES.

[Enclosure.]

Campbelltown, 25 July, 1859.

Dear Sir,

I have seen Morgan to-day, in reference to the depths the piles are to be driven for bridge at 23 m. 45 c.

He refused to give me any information on this head; in fact, he said he had nothing to do with the piles, and knew nothing about the depths they are to go.

He does not intend boring trial holes, and refused to go and see the hole Mr. Wakefield is now sinking, which is about 7 feet deep to-night. The position of it is about 15 to 20 feet on the south side of the waterhole, and between it and the small dry watercourse. The material passed through is dry clay.

I shall acquaint you when a reasonable depth has been attained, and wait your instructions.

I need not remind you of the importance attached to getting the bridge alluded to erected as soon as possible; but, in the present state of affairs, I am at a loss how to proceed.

With regard to the temporary bridge over creek, Camden-road crossing, before commencing operations Morgan wants to know what you will put the bridge up for? Pray advise me.

I am, &c.,

G. THORNTON.

A. Rhodes, Esq.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 29 July, 1859.

SIR,

We wrote some time since to Mr. Whitton for certificate of work done on the Menangle and Picton extensions.

We think it well to advise you of having so done, and shall be obliged for cash due on such certificate.

We have, &c.,
(Pro Peto, Brassey, and Betts.)
A. RHODES.

AGENT

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 29 July, 1859.

SIR,

We wrote some time ago to your Traffic Manager, inquiring whether we could not come to some arrangement for carrying plant, materials, &c., (to the extent of about 1,000 tons) at a less rate for quantity than the specified rate we are at present being charged; he has referred us to you.

We beg to inform you that we shall shortly have upwards of 1,000 tons material, &c., &c., to despatch from, say Darling Harbor, to the railway works on the extensions intrusted to us, all of which will be packed in manageable packages. We should be glad to enter into an arrangement with you if it can be done.

We are, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 30 July, 1859.*

SIR,

In reference to your letter of the 21st instant, requesting a copy of the contract made with Messrs. Jolly and Co. for timber for wooden viaducts on the Menangle and Campbelltown extension of the Great Southern Railway, I am directed by the Commissioner to inform you that no contract was made with Messrs. Jolly and Co., but that an order was given for certain quantities of timber, at 3s. per cubic foot.

The Engineer-in-Chief, however, informs the Commissioner that the delivery of the timber not being carried on to your satisfaction he, at your request, released Messrs Jolly and Co. from an understanding between them to the effect that the whole of the timber named in the orders was to be delivered by them; stipulating, however, that sufficient was to be delivered to complete two bridges, and that you were to pay for all timber delivered beyond the quantity required for the two bridges at the said rate of 3s. per cubic foot.

I have, &c.,
R. MOODY,
(*Pro Secretary.*)

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 30 July, 1859.

SIR,

We wrote you, on the 21st July, for copy of contract with Mr. Jolly for timber for wooden viaducts on the Menangle and Campbelltown extension.

Your kind compliance in this matter, as well as for all other contracts in which we may be interested in the extensions intrusted to us, will much oblige us.

We have, &c.,
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 30 July, 1859.

SIR,

I have the honor to acknowledge the receipt of your letter of the 27th July, in answer to mine of the 22nd, enclosing Mr. Whitton's remarks thereon.

Without entering into any detailed reply to those remarks, which would be productive of no good, I will simply confine myself to stating that every portion of my letter of the 22nd is substantially correct, and that I am able to prove it. My object has been answered by bringing those matters under your consideration, and with this observation I leave this matter.

I cannot, however, refrain from calling your attention to a clear error of Mr. Whitton in stating that I have been furnished with two and a-half more miles of railway than I was entitled to, whereas I have not received, by two and a-half miles, what was promised to be given to me on the 21st June.

The statement that the Campbelltown and Menangle extension formed a part of the fifteen miles to be given cannot be in any way supported; and this endeavor to escape blame will not answer, for on referring to my letter of the 21st April, which was replied to by you on the 23rd,—and the terms of which were accepted—it is distinctly stated as follows:—"The Government undertaking to deliver over immediately the five miles
" Menangle

"Menangle extension; to furnish us with plans; to put us in possession of fifteen continuous miles of railway within two months, and the plans and line for the remainder within three months."

In Mr. Whitton's remarks, No. 2, he says, Mr. Rhodes is not the contractor for the fencing, I beg to deny this.

As to the concluding remarks of Mr. Whitton's, which are particularly personal and offensive, I shall not trouble myself to reply.

I hope as we have now stated our real and supposed grievance, that hereafter we may proceed more amicably, otherwise it will be impossible to carry on the works either with satisfaction to the Government, or credit to the contractors.

For my part I am willing to exert myself to the utmost to accomplish this object, and if Mr. Whitton will do the same, and comply with the terms of my agreement with the Government, no further difficulties need arise.

The extension of time proposed by the Government, of a day for each day the Government are behindhand, can, however, (for the reasons pointed out in my letter) be no equivalent compensative to me.

I have, &c.,

A. RHODES.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 2 August, 1859.*

SIR,

I am directed by the Commissioner to acknowledge the receipt of your letter of the 29th ultimo, stating that you do not think you should be charged for the carriage of rails, and to inform you that your letter has been referred to the Secretary for Lands and Works for the decision of the Government.

I have, &c.,

JOHN RAE,

Secretary.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 2 August, 1859.*

SIR,

In answer to your letter of the 29th ultimo, with reference to your obtaining payment for work done on the Menangle and Penrith Extensions, I am directed by the Commissioner to inform you that the Engineer-in-Chief has been requested to furnish a certificate of the work done by you on these extensions, on the receipt of which a payment may be made to you in accordance with contract.

I have, &c.,

JOHN RAE,

Secretary.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney 3 August, 1859.*

SIR,

In reference to your letter of the 30th ultimo, requesting a reply to your note of the 21st ultimo, relative to the supply by Messrs. Jolly and Co., of timber for wooden bridges, I am directed by the Commissioner to inform you that your letter of the 21st ultimo was fully replied to on the 30th ultimo, and in reply to your request to be furnished with any other contracts in which you may be interested in the extensions entrusted to you, I am to state that the Commissioner is not aware of any outstanding contracts of the kind.

I have &c.,

JOHN RAE,

Secretary.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 3 August, 1859.

SIR,

When I accepted your terms for the fencing, it was on consideration that the specifications were to be the same as those for the Western Line.

Mr. Morgan, the Inspector, insists upon having a much stronger fencing. I shall be glad to have your opinion on this subject, as I really cannot do the fencing as he requires it for the money.

I beg to observe that if the fencing on the Western Line suits, the same should do all through, and there would be uniformity.

I have, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 3 August, 1859.

SIR,

I beg your attention to the under letter, received this day from my engineer, Campbelltown.

I have, &c.,
A. RHODES.

[Enclosure.]

Campbelltown, 3 August, 1859.

Sir,

After waiting for the gentleman who was to have been sent to give us our starting levels, &c., for the cuttings, I have commenced myself, in order to employ the number of men who would have been kept idle; but I find I am placed in rather a difficult position, being unable to arrive at the mile stations, the fencing widths, and other dimensions, as there are no pegs to shew these points, more especially as the plan will not scale to a tenth or any other scale.

If some person was to be sent up it would greatly expedite the progress of the works. I have to bring before your notice a circumstance likely to create annoyance and difficulties, &c. It is, that many of the sleepers that have been branded by the Inspector and adzed by me, for the chairs, are now, at the end of many weeks, condemned and cast out, the brands being erased by blows of the hammer. If this is to be allowed it will be a precedent for many encroachments of this kind, and we shall never arrive at the exact quantity of materials we have in stock, or to proceed with the works.

I am, &c.,
R. CORBY.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 4 August, 1859.*

SIR,

In reply to your letter of the 3rd instant, stating that Mr. Morgan, the Inspector, insists upon a much stronger fencing than you considered would be necessary when you contracted with the Government for its erection, I am directed to acquaint you that the Commissioner learns, on reference to the Engineer-in-Chief, that you applied to that officer on the 1st June last for a copy of the specification for the fencing, who informed you on the 2nd that the specification and plan of the fencing could be seen at his office; that you subsequently (about the 4th June) called, when he lent you the specification for the fencing of the line between Campbelltown and Menangle to copy, and that you accordingly had the specification in your possession long before you entered into the contract.

Under these circumstances, and considering that the price to be paid to you is 10s. a rod in place of 9s. 6d., the price at which similar fencing to that required from you is now being done between Campbelltown and Menangle, the Commissioner is of opinion that you are bound to carry out the fencing in accordance with your contract and the specification furnished to you.

I have, &c.,
Secretary.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 4 August, 1859.

SIR,

Enclosed I beg to hand you account of work done up to the 27th of July. I will thank you to have deducted the amount paid by the Government, and oblige me with an order on the Colonial Treasurer for the balance.

I have, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

E. & O. E.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.Railway Branch,
Department of Internal Communication,
Sydney, 5 August, 1859.

SIR,

I am directed by the Commissioner to acknowledge the receipt of your letter of the 4th instant, enclosing an account for work done by you on the extensions, as agent for Sir S. M. Peto and Co., and requesting settlement of the same, and in reply to refer you to the Commissioner's letter to you of the 2nd instant on this subject.

I have, &c.,

JOHN RAE,

Secretary.

SECRETARY

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 9 August, 1859.*

SIR,

In reply to your letter of the 3rd instant, I am directed by the Commissioner to inform you that the Engineer-in-Chief, to whom it was referred for report, states that no gentleman was to have been sent to give starting levels. The Engineer-in-Chief further states that stakes are driven into the ground in the centre of the double line of railway at every 22 yards, each stake having a ring cut round it (thus ⊙); every tenth stake being marked also (thus ⊕); and every mile stake also (thus ⊖); that on the section furnished to you the height is given from the datum to the top of each stake; also the level of the formation at each stake above the datum, and the difference in feet, and decimals figured on the section; so that at each stake the section shews the depth of cutting, and the height of embankment; and that nothing can possibly be more complete than the information furnished to you.

The plan is drawn to a scale of 10 chains to one inch.

Under these circumstances the Engineer-in-Chief considers it quite unnecessary to detach an officer expressly for the purpose of reiterating upon the ground the information so fully given as stated above; but should your Engineer still experience any difficulty in proceeding with the works, Mr. Morgan, the Inspector of Works, has instructions to give him any explanation which he may require—and would have done so before had any request been made to him for information, so that no men need have been kept idle.

In reference to the rejected sleepers, the Engineer-in-Chief reports that the sleepers which have been rejected by the Inspector of Works are 23 in number, most of which have been delivered within the last fortnight, and that they had been branded by the men employed by the Inspector to assist him, and on the Inspector rejecting them the brand was removed by blows of a hammer; but that these sleepers, prior to being rejected by the Inspector, had already been rejected, with several hundreds more, by your Engineer himself, for not being properly adzed, and payment refused for the same on that account.

I have, &c.,
JOHN RAE,
Secretary.

UNDER SECRETARY FOR LANDS AND PUBLIC WORKS to COMMISSIONER FOR RAILWAYS.

*Department of Lands and Public Works,
Sydney, 11 August, 1859.*

SIR,

In reference to your letter of the 22nd ultimo, respecting the delay in furnishing the plans of the authorized extensions of the railway which are to be carried out by Sir M. Peto & Co., I am directed to inform you that the explanations therein given of the delay in this matter, and those offered in answer to the statement made by Mr. Rhodes in his letter to you, dated the 22nd ultimo, appear to be satisfactory, and Mr. Secretary Robertson regrets that Mr. Rhodes should consider that he has cause of complaint.

2. I am also to apprise you that the Secretary for Lands and Public Works approves of the suggestion made by you, which appears to him to afford a fair settlement of the matter, namely, that whatever delay there may be in furnishing the plans to the contractors, a similar extension of time should, if required, be granted to them for the completion of the works.

I have, &c.,
MICL. FITZPATRICK.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 12 August, 1859.*

SIR,

In reference to paragraph 5 of your letter of the 22nd ultimo, in which you bring under the attention of the Commissioner that you consider the wooden viaducts proposed to be erected, the plans of which have been furnished to you, will not, when erected, be safe for the probable traffic after a very short period, I am directed by the Commissioner to request you will be so good as to state the particular viaducts to which you allude, and also, in detail, why you consider they will not prove safe.

I have, &c.,
JOHN RAE,
Secretary.

SECRETARY

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 12 August, 1859.*

SIR,

In reference to your letter of the 29th ultimo, requesting to be furnished with the length of the piles for the different bridges, I am directed by the Commissioner to inform you that the Engineer-in-Chief has reported to him that he has never before had such an application made to him, and that it is entirely your business to ascertain what length of piles you will require for the bridges you have to construct under your contract.

Under these circumstances, the Commissioner must decline to direct Mr. Whitton to furnish you with the length of the piles, and by so doing, to relieve you of that responsibility which fairly falls upon you.

This letter was written on the 3rd instant. but has been accidentally overlooked in this Office till now.

I have, &c.,
JOHN RAE,
Secretary.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 18 August, 1859.*

SIR,

With reference to your letter of the 29th ultimo, requesting to be informed whether any arrangement can be made with you for the carriage of railway materials for the extensions at a less rate than the one now in force, I am directed by the Commissioner to inform you that having referred your letter to the Secretary for Lands and Works for his decision, he is requested to apprise you that under the existing regulations the arrangement suggested by you cannot be made.

I have, &c.,
JOHN RAE,
Secretary.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 19 August, 1859.*

SIR,

In answer to your letter of the 29th ultimo, stating that you do not think the Government should charge you for the carriage of rails, I am directed by the Commissioner to acquaint you that he has referred your letter for the decision of the Secretary for Lands and Works, and has been requested to inform you that if any of the rails, &c., for which you pay carriage, shall be hereafter required by the Government for permanent works, at the places to which they are taken by you, any charge previously paid by you for their conveyance, will be repaid to you.

I have, &c.,
JOHN RAE,
Secretary.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 20 August, 1859.

SIR,

I am in receipt of a letter from Mr. Rac of the 12th instant, wherein he states :

“I am directed by the Commissioners to request you will be so good as to state the “particular viaducts to which you allude, and also detail why they will not prove safe.”

In reply I have to state that although I conceive my observations as to the wooden viaducts apply with more or less force to the whole of them.

The one which I consider not only unfit for its intended purpose but highly dangerous, is the one at peg 23-65.

This viaduct is not only on an incline of 1 in 70, but also on a curve, and I consider that the piles and other wood work are much too weak.

The oscillation which would be occasioned by a heavy engine down such an incline will be very dangerous, the more particularly as it is a single line.

The height of the viaduct on such a base is, I think, sufficient of itself to justify my having called your attention to the matter.

I have, &c.,
A. RHODES.

Refer to Engineer-in-Chief for any observations he may have to offer.

B. H. M.
22/8/59.

Minute

Minute of Engineer-in-Chief to Commissioner, in reference to Mr. Rhodes' letter of 20 August, 1860.

With reference to Mr. Rhodes' statements generally, I may say that I consider the timber viaducts, if executed faithfully, and in accordance with the drawings, will be the strongest structures in wood that I have ever seen, and amply sufficient for the probable traffic on these lines, until such time as its increase warrants the erection of more costly works. I can easily understand Mr. Rhodes' strong objection to these viaducts, and more particularly to the one at 23 m. 65 c. Mr. Rhodes, as the Commissioner is aware, has made repeated applications to be allowed to substitute brick bridges for timber on the Menangle Line, but as brick bridges, giving the same amount of waterway, would cost more than three times those I propose to build in timber, the request has been declined. The timber for the bridge at 23 m. 65 c. will require to be in long lengths, and as this will increase the price—Mr. Rhodes will have to pay for the timber—he is naturally anxious to substitute brickwork, more particularly as his price for the latter is good, and will leave a better profit than if built with timber. I pledge my professional character for the stability and fitness of all the Railway Works, provided they be faithfully executed in accordance with the drawings furnished from this office.

J. W.
15/9/59.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 20 August, 1859.

SIR,

We have to acknowledge your favor of yesterday's date, in reply to our letter soliciting the lengths of the piles for the different wooden viaducts.

We must beg to say that we cannot start any wooden viaducts until this information has been given to us.

It appears so arbitrary, that you should give detailed plan of all above the surface, and not for the essential or dangerous portion.

Why should we have to do this work without the proper plans?

We assure you, without this information we must consider the plans as incomplete. We can prove to you, if necessary, that it is quite customary in such instances as this to give it, and that it has been given on previous similar occasions by yourselves.

We have, &c.,
(*Pro* Peto, Brassey, and Betts,)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 22 August, 1859.

SIR,

We have repeatedly requested the Engineer-in-Chief to let us have rails and chairs. He has replied that they should be sent, but we have not yet received those for which we wrote him.

As you are aware, the works between Menangle and Picton are very heavy, and not one day ought to be lost in getting the rails and chairs on the ground.

Our waggons and materials have arrived from England, but we cannot use them until we have rails and chairs. I would suggest, providing you have not sufficient rails, to permit us to use the rails we have for permanent purposes, and devote fresh arrivals from England to the permanent road.

We may assure you, that if this matter is not arranged, it may prove serious to both Government and ourselves, from the delay with the heavy cuttings.

We have not as yet received the plan for the Menangle viaduct on the Picton Line.

We have, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 2 September, 1859.

SIR,

We will thank you to arrange that our payments be made regularly on the 26th of each month.

Enclosed we beg to hand you note from Mr. Morgan, stopping us from making any more bricks than the 40,000 at peg 22:60. We shall want a great many more. Will you therefore please be so good as give us a general order permitting us to make bricks on your land, where it will not be detrimental to the line? It is really troublesome to be always writing about such trivial matters.

(For Peto, Brassey, and Betts,)
A. RHODES.

REPORT

REPORT from the Engineer-in-Chief to Commissioner.

I enclose, for the consideration of the Commissioner, a telegraphic message received by me from Morgan, the Inspector of Works on the Southern Railway.

It appears that Mr. Rhodes is removing rails and using them for temporary purposes, in defiance of Morgan's remonstrances.

These rails were forwarded to Campbelltown at Mr. Rhodes' request, and were to be used for the *permanent way*; positive instructions being given by me to Morgan not to allow them to be used for temporary work.

Mr. Rhodes' conduct in removing these rails in direct opposition to the instructions given by me to the Inspector, and with the full knowledge that such orders had been given, is wholly indefensible; and I suggest that Mr. Rhodes be compelled to return every rail so removed.

Stringent measures must be adopted in cases of this kind, or Mr. Rhodes may carry away without any permission, and for his own purposes, everything which he may consider will be useful.

It is also necessary that officers in charge of Government property, should feel that in the execution of their duty they will be supported when subjected to premeditated insults of this character.

J. W.
1/9/59.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 2 September, 1859.*

SIR,

The Engineer-in-Chief has reported to the Commissioner that your agents have been removing rails sent to Campbelltown for the permanent way, and using the same for temporary purposes, and that this has been done by them in defiance of the remonstrances of the Inspector of Works, acting under the instructions of the Engineer-in-Chief, and with full knowledge that such instructions had been given.

As you are aware, you have repeatedly urged that you might be permitted to use the permanent way rails for temporary purposes, and you have been as often informed, both verbally and in writing, that the Government could not permit them to be so used.

Under these circumstances, I am directed by the Commissioner to desire that you will cause all such rails as have been taken to be returned without delay.

I have, &c.,
JOHN RAE,
Secretary.

Sydney, 6 September, 1859.

MEMO.—Peto, Brassey, and Betts, beg to inform the Commissioner that they will have a quantity of waggons, &c., put down at the railway, Darling Harbor, and have to request permission to have the waggons put on the line; of course Messrs. Peto, Brassey, and Bretts' own men will put the waggons together, if the Commissioner grants the favor.

CAPTAIN B. H. MARTINDALE,
Railway Commissioner.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 6 September, 1859.

SIR,

I am in receipt of your communication of the 2nd instant referring to rails and chairs.

Its contents certainly surprised me very much after the communications which have passed between myself and the Government on the subject, these I propose shortly to recapitulate.

In my letter, 2nd April, 10th clause, I propose that Messrs. Peto & Co. should be allowed the use of all such iron rails and chairs belonging to the Government as might be by them required. This led to several personal discussions; and by your letter of 15 April, 7th paragraph, you state "The Government will allow Messrs. Peto & Co. the use of such rails and chairs as they can spare on payment of 10 per cent. per annum, and on condition that any rails and chairs destroyed or rendered useless shall be paid for at their cost to the Government."

The necessity for a large quantity of rails and chairs in order to carry on the work with even ordinary speed was felt by me to be so necessarily indispensable that in my letter of the 19th April, paragraph No. 7, I wrote as follows:—"As the work is to be completed by so early a period, and as, in order to accomplish this work great exertions will have to be made on various portions of line simultaneously, a great quantity of rails and chairs will be required, and by the wording of this clause the Government only propose to allow me the use of such rails and chairs as can be spared. In agreeing to this clause, I do so on the assumption that the Government will send for and procure the rails which will be necessary for the line at once, in order that I may have sufficient to proceed with the work.

"Indeed

" Indeed the Government will require these for the opening of the railway when the works are completed, and would, I presume, as a matter of course, adopt this suggestion for their own sakes."

You are aware that this proposition, that the Government should send for the rails, was made because I thought you had not sufficient rails in the Colony to keep us going, and upon this point I was so anxious that I informed the Government I should rather decline the contract than not have the means of carrying it on properly. This led to several meetings between me, Mr. Cowper, and Mr. Robertson, and subsequently in a long conference between myself and Mr. Robertson the terms were finally agreed to. By my letter of the 21st April to you I state as follows:—" During your absence I had the favor of an interview with the Government, and having carefully considered the various points in dispute, I now transmit to you the terms of arrangement which have been finally agreed to between us; and in paragraph 4, I state I am entitled to all such rails and chairs as may be in possession of the Government and necessary to carry on the works, including those which may have been sent for for the permanent way, and which may not be required by the Government upon the terms previously arranged, and subject to my payment for all such damage or injury that may be done to them whilst in my occupation."

This was accompanied by a memorandum signed by the Minister of Lands and Works, certifying that my letter to you contained the terms which he had agreed to, with the exception of the time for furnishing the plans which was to be left for your consideration, so that by this agreement we were clearly entitled to all the rails which the Government did not require. I may here mention that I have been employed by Messrs. Peto & Co. since the year 1839 on the following works, and that in every instance we have been allowed the use of the permanent rails:—the Glasgow Railway, 21 miles long; the Paris and Rouen, Havre and Dieppe, 250 miles long; the Orleans and Bordeaux, 480 miles; East Lancashire, 70 miles; Paris and Cherbourg, 275 miles; and Amiens to Boulogne, 110 miles.

These works could not have been possibly done without the use of the permanent rails. In this Colony for the first time have I heard such a proposition. In the lines above enumerated I have had to work under the first engineers in England, and such an objection was never thought of. In your letter, 21st April, paragraph 4, you state " In reference to the 7th paragraph of your letter, rails, chairs, &c., necessary for the whole of authorised extensions have long since been sent for, and these will be in the Colony when required; but as these cannot, as you have already been informed, be permitted to be used for temporary purposes, the progress of the works up to formation level is in no way dependent on their arrival. The Government will, however, as stated in my letter of the 15th instant, afford you in this as in other matters such facilities as they can."

This led again to several personal communications, and it being pointed out to me that the demand was too general, and being assured that the Government would afford us every possible facility, by my letter of the 23rd April I agreed to the fourth, as follows:—" I am willing to rely upon the assurance which you mention to me, that the Government is prepared to render such facilities as they can in reference to the matter to which such 4th paragraph relates."

In reply to those parts of your letter, in which you complain of my having taken the rails from Campbelltown, I can only say that I felt perfectly justified in taking them under the assurance above mentioned. I have repeatedly written and asked for rails and chairs without reply until Saturday last, when I received a note from the Engineer-in-Chief to the effect that there were no rails and chairs. As I found plenty of both lying idle on the works, and being anxious to proceed with the works, I took these fully assured that the Government would be anxious to keep faith with me and glad to see the work progressing. If, however, I cannot be furnished with rails I shall be obliged at once to discharge a great number of men, and take probably considerably more time in doing the work than I otherwise should were I furnished with these facilities.

Finally, I may state that I consider myself the more entitled to the rails as my contract was entered into on the understanding that the leads were not to be more than half a mile, whereas many are considerably longer, some even more than a mile.

The great quantity of plant introduced by Messrs. Peto & Co. will enable them, if they have the rails, to save the Government considerable expense, as the cuttings need not be put into spoil, and a considerable saving may be effected by not going into side cuttings to make up the banks, a plan which has been pursued through the line between Sydney and Campbelltown at a very considerable expense.

I have, &c.,
A. RHODES.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF
SIR S. M. PETO & Co.

Railway Branch,
Department of Internal Communication,
Sydney, 7 September, 1859.

SIR,

I am directed by the Commissioner to acknowledge your letter of the 20th August, relative to the length of piles for the wooden viaduct.

In reply, I am to state, that the Engineer-in-Chief reports that some misapprehension must exist, on your part, as it is not customary to give to contractors the length of the piles, and as no such information has ever previously been asked for from him, neither has such information ever been given on similar occasions by him.

As,

As, however, you state that you consider the Commissioner's decision arbitrary, it is his intention to lay the correspondence in this matter before the Government for their instructions.

I have, &c.,
JOHN RAE,
Secretary.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT TO
SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 7 September, 1859.*

SIR,

In reply to your letter of the 2nd instant, stating that you enclose a note from Mr. Morgan, stopping you from making any more bricks than the 40,000 at peg 22-60, I am directed by the Commissioner to inform you that no such enclosure came to hand.

In reference to your request for a general order to make bricks on the railway land, where it will not be detrimental to the line, the Commissioner regrets that he cannot give you such a general order; but he has directed the Engineer-in-Chief, for the future, on receiving any request from you to make a specified number of bricks at any defined spot upon the railway lands, to permit you to do so, where it will not be detrimental to the interests of the public.

I have, &c.,
JOHN RAE,
Secretary.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 7 September, 1859.

SIR,

I will thank you for an account of material, &c., supplied by the Government to us.

Also, a copy of the Engineer's certificate for work done last month.

I beg to state to you that the Engineer's certificate had no allowance for rock, and a full price was not allowed for ironwork.

I have, &c.,
A. RHODES.

COMMISSIONER FOR RAILWAYS to UNDER SECRETARY FOR LANDS AND PUBLIC WORKS.

*Railway Branch,
Department of Internal Communication,
Sydney, 7 September, 1859.*

SIR,

I have the honor to transmit, for the information of the Secretary for Lands and Public Works, a copy of a correspondence between Mr. Rhodes and myself relative to a request made by him to be furnished with the lengths of the piles required for the wooden viaducts on the railway works.

The request, it will be seen, was, in the first instance, made to the Engineer-in-Chief and refused.

It was subsequently made to me, and after conference with the Engineer-in-Chief on the subject, I declined to instruct him to furnish the information required.

As, however, Mr. Rhodes states that he considers my conduct arbitrary, and that he cannot start any of the wooden viaducts without the information, I take leave to bring the matter under the consideration of the Secretary for Lands and Public Works.

The grounds upon which my refusal was based were, that it is not customary to furnish such information, and that upon the contractor fairly devolves the responsibility of ascertaining the length of the piles he requires for his work.

I may add, for the information of Mr. Secretary Robertson, that if this department were to furnish the length of the piles as requested, it would be in the power of Mr. Rhodes to make a claim upon the Government for payments in addition to the net measurement provided for by his contract. For, if the whole of the piles were not required of the exact length stated, Mr. Rhodes might claim payment for scarfing those which proved too short, as well as for the whole of those found to be too long—a claim which cannot of course be made while the responsibility rests upon him of ascertaining the proper lengths of the piles.

I am informed, also, that Mr. Rhodes has commenced these works.

Under these circumstances, I have to request the approval of the Secretary for Lands and Public Works to my having declined to furnish Mr. Rhodes with the information sought for by him.

I have, &c.,
B. H. MARTINDALE.

SECRETARY

RAILWAY EXTENSION CONTRACTS.

25

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 9 September, 1859.*

SIR,

I am directed by the Commissioner to acknowledge the receipt of your letter of the 6th instant, referring to rails and chairs, and to acquaint you that he will reply by a separate communication to the various statements relative to your contract which it contains.

In the meantime the Commissioner has been directed by the Government, before whom he has laid the correspondence on the subject, to acquaint you that the Crown Solicitor will be instructed to take immediate steps to procure the restoration to this department of the rails, &c., illegally taken and detained by you, and to prevent the removal of any more; and further, that the Government will bring this matter under the attention of Sir S. M. Peto, Brassey, & Betts.

I have, &c.,
JOHN RAE,
Secretary.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 10 September, 1859.*

SIR,

I am directed by the Commissioner to acknowledge the receipt of a note from Messrs. Peto, Brassey, and Betts, of the 6th instant, relative to a quantity of waggons, &c., being put down at the Railway, Darling Harbor, and requesting permission to have them put on the line.

If, as the Commissioner presumes, this note comes from you, I am to request that you will be good enough to state exactly what you intend by the term, "put on the line."

I have, &c.,
JOHN RAE,
Secretary.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 10 September, 1859.*

SIR,

In further reply to your letter of the 6th instant, referring to rails and chairs, I am directed by the Commissioner to observe that, as you are aware, in every communication made to you by the Government, when the Commissioner was present, and in every communication made to you, whether verbal or otherwise, from this department, you have been in the most unqualified terms informed that the Government would not permit the rails for the permanent way to be used for temporary purposes.

The Commissioner has no knowledge of your having informed the Government that you would rather decline the contract than not have the means of carrying it on properly.

In reference to your letter of the 21st April, communicating the result of an interview between yourself and the Government, in the Commissioner's absence, in paragraph 4 of which you state, "I am entitled to all such rails and chairs as may be in possession of the Government, and necessary for carrying on the works (including those which may have been sent for the permanent way), and which may not be required by the Government, upon the terms the Commissioner previously arranged." I am to observe, that those terms were modified by mutual consent at the final interview between the Secretary for Lands and Public Works, the Commissioner, and yourself, which took place on the 23rd April last, the terms then agreed to being contained in the following words of the Commissioner's letter to you of that date, written in your presence at that interview:—"The Government have no objection to make to the terms as named therein, with the exception of those contained in the 4th paragraph of your letter, to which the Government cannot accede; but they are prepared, as you have already been informed, to render you such facilities as they can."

Your reply, of the same date, being,— "I have the honor to acknowledge the receipt of your letter of to-day's date, and I beg in reply to state, that I agree to the 4th paragraph of my letter of the 21st instant being excepted from the terms thereof, and I am willing to rely upon the assurance you mention to me that the Government is prepared to render such facilities as they can in reference to the matters to which such 4th paragraph relates."

Since that period the Commissioner has, as you are aware, and as is fully shewn by the correspondence that has taken place between you and him, in every way kept faith with you, by giving you not only such rails and chairs as could be spared, but also by affording you every other facility consistent with his duty.

So far from replies not having been sent to your application for rails and chairs, the Commissioner finds, by the memorandum appended hereto, that your letters to the Engineer-in-Chief on this subject have all been promptly answered, and your requests complied with as far as possible.

On the 22nd ultimo you addressed to the Commissioner a letter, in which you stated, "We have repeatedly requested the Engineer-in-Chief to let us have rails and chairs; he has replied that they should be sent, but we have not yet received those for which we wrote him."

The Commissioner was unable to reply to this letter at the time, because the Engineer-in-Chief was absent from Sydney, and he could not, therefore, refer the above statement for his report,—the more so as Mr. Whitton was daily expected to return; but, on the 26th August you called upon the Commissioner, who informed you that he had on the receipt of your letter written to the promoters of a Company who had a promise of about 400 tons of rails from the Government, to state that they must at once determine either to take or leave them, as if not wanted by the Company they would be used for other purposes, and the Commissioner added that he would reply to your letter as soon as he was in a position to do so.

The Commissioner only received a decided reply to this communication on the 5th instant, and he immediately directed the Engineer-in-Chief to ascertain if you had returned the rails illegally taken by you, with the view of arranging that a portion of the 400 tons should be sent to you if the others were returned.

Such, I am to observe, were the steps taken by the Commissioner in this matter, and the Commissioner desires in the strongest terms to repudiate any insinuation that he has not kept faith with you.

In reference to your statement that you found plenty of rails and chairs lying idle on the works, and, therefore, took those now under consideration, I am to observe that those rails were, as you are aware, sent to Campbelltown for permanent way purposes, and that there were no rails in store that could be lent for temporary purposes.

In reply to your statement, that you consider yourself the more entitled to the rails as your contract was entered into on the understanding that the leads were not to be more than half a mile, I am to observe that no such understanding was ever come to or implied; but that, on the contrary, the Engineer-in-Chief reports that you inserted such a condition in a schedule which you submitted to him, and that he struck it out, and gave you as his reasons that some of the leads would exceed that distance, and that the specification provided that the earthwork from the cuttings should be deposited in the embankments named for its reception, or to any other place of equal lead.

In reference to the final paragraph of your letter, I am to observe, that under the contract Messrs. Peto and Co. are bound to deposit the earthworks in the specified embankments without any particular quantity of rails being lent to you by the Government; and also that it was never intended, nor have you ever been instructed, to run the earthworks from the cuttings to spoil, or to make up the deficiency that would thus arise in the embankments from side-cuttings, nor can such a proceeding be permitted. On the contrary, I am to request that particular attention may be paid to the earthworks from the cuttings being deposited in accordance with the directions you have received. The system by which you state considerable expense might be saved to the Government is that which you have throughout been instructed to carry out.

I am to add that the Engineer-in-Chief reports, that whenever side-cutting has been resorted to between Liverpool and Campbelltown, the effect has been to decrease expense, and that he has never certified vouchers for any earthwork run to spoil.

The Commissioner desires me to add the expression of his regret that, under all the circumstances, you should justify the removal and retention of the rails and chairs taken by you, this being done, as pointed out to you in my letter of the 2nd instant, contrary to the terms of your contract and in defiance of the remonstrances of the Inspector of Works, acting under the instructions of the Engineer-in-Chief, and with full knowledge that such instructions had been given; and also, that you have not only not returned the rails, as requested by his letter of the 2nd instant, but that you have since continued to take them, thus compelling the Commissioner to lay the matter before the Government and to address you in the terms of his letter upon this subject of the 9th instant.

I have, &c.,

JOHN RAE,
Secretary.

[Enclosure.]

Mr. Rhodes' applications for Rails, Chairs, &c.

17th May, 1859.—Application for 500 rails.

Memo: No. 381, 17th May.—Morgan directed to let Mr. Rhodes have all the rails he can spare.

1st June, 1859.—Calling attention to letter of 17th May.

"I have requested Morgan to point out to your assistants such rails as can be spared for temporary purposes, but every cost of removal must be borne by you."—Page 387. 1/6/59.

1st June.—Application for 2,000 rails for permanent way.

Order No. 198, 4th June, 1859, page 390. 2/6/59.—"As you are not yet ready for laying one mile of permanent way, these rails are not urgently required. I will, therefore, order the permanent way materials to be forwarded to Campbelltown as rapidly as possible."

17th

17th June.—Application for three sets of points and crossings.
Memo. No. 398. 18/6/59.—Morgan directed to supply three sets of crossings and three sets of points. Page 400. 18/6/59. Mr. Rhodes informed that instructions have been given to Morgan accordingly.

22nd June.—Application for 1,000 rails for temporary purposes, to be sent to Campbelltown.
Memo. No. 401. 23/6/59.—Morgan directed to point out to Mr. Rhodes' assistants any rails that can be spared; cost of carriage to be paid by Mr. Rhodes.

Memo. 403. 27/6/59.—“If we have not 1,000 rails to lend to Mr. Rhodes to use for temporary purposes, it is clear that he cannot have them. Take care that the rails forwarded for permanent way purposes to Campbelltown are not used by him for temporary purposes.”

Page 436. 23/6/59.—“I have given instructions to Morgan, the inspector, to point out to your assistants such rails as can be spared for temporary purposes, but the cost of carriage to Campbelltown, and loading into trucks, &c., must be paid by you, as previously stated in my letter of 1st June, 1859.”

12th July, 1859.—Application for 1,000 chairs and 1,500 spikes.
Order No. 209. 18th July, 1859.—The carriage to be paid by Mr. Rhodes. Page 417. 21/7/59.

21st July.—“I will thank you to give instructions to your agents to fulfil the different orders for rails, spikes, and chairs.”

“Your letter for 1,000 chairs and 1,500 spikes was written on 12th July, during my absence in the North. I returned on the 18th July, and gave the order on the same day.”

3rd August, 1859.—Mr. Rhodes, stating that he will soon be waiting for rails, and that there are 2,000 rails on the branch line leading to Pymont which might be used for temporary purposes.

26th August, 1859.—Application for 1,760 lineal yards Barlow rails, 3,500 chairs, and 400 spikes.

Page 441. 31/8/59.—“With reference to the rails required by you for temporary purposes, I have to state that there are no rails at present that can be lent to you for that purpose.”

List of Rails, &c., supplied to Mr. Rhodes for temporary purposes.

16th June, 1859:—
4,234 lineal feet Barlow rails.
4,561 do. double-headed rails,
No. 223 saddles for Barlow rails.
„ 457 ordinary chairs.

23rd July, 1859:—
No. 1,000 chairs.
„ 1,500 spikes.

25th August, 1859:—
5,493 lineal feet double-headed rails.
100 do. standard rails.
No. 21 in. 10 crossings.
„ 14 ft. 6 in. Barlow check rails.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 13 September, 1859.*

SIR,

In reply to your letter of the 22nd ultimo, relative to rails and chairs, I am directed by the Commissioner to refer you to his communications to you, upon that subject, of the 9th and 12th instant.

I have, &c.,
JOHN RAE,
Secretary.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 15 September, 1859.

SIR,

I have the honor to acknowledge the receipt of your letter, dated 12th September, only received yesterday, in answer to mine of the 6th.

Your previous answer to the same letter, in which you threatened proceedings against me for what I considered was my duty, compelled me to send copies of the correspondence to the Minister of Lands and Works, complaining of the continued interruption I experienced at the hands of the Chief Engineer; I shall, therefore, not enter further into the question of the chairs and rails with your department until I receive a reply to that communication.

I feel, however, that I cannot for an instant delay replying to that part of your letter where you state—“That the Engineer-in-Chief reports that I inserted a condition in a schedule which I submitted to him, as to the leads, and that he struck it out, and gave as his reasons that some of the leads would exceed that distance, and that the specifications provided that the earthwork from the cutting should be deposited on the embankments named for its reception, or to any other place of equal lead.” I can only say that if such a specification should be offered me to sign, I should certainly refuse to do so, as by this I might be compelled to remove earthwork from Campbelltown and deposit at Picton, whereas any person conversant with the usual length of leads in England will inform you that half a mile is the usual distance, and that beyond that an extra price is paid. Therefore, if the schedule of prices is silent on this point the usual custom is a half-mile lead.

I am astonished beyond measure at the statement of the Chief Engineer, that there was no understanding that the leads should be half a mile. I do state most positively that this was the understanding, that Mr. Whitton did inform me there were to be half-mile leads, a few hundred yards more or less, and what is more I am fortunately in a position to prove this most conclusively, independent of my own testimony.

I have, &c.,
A. RHODES.

Mr. Rhodes further respecting rails, chairs, and leads.
Submitted, 15/9.

Engineer-in-Chief for any observations he may have to offer.
Mr. Whitton, 16/9. B. H. M. 15/9.

ENGINEER-IN-CHIEF to COMMISSIONER FOR RAILWAYS.

Mr. Rhodes letter shews most clearly that I did not arrange with him that the leads should not exceed half a mile, for he states (in his letter of the 15th instant) that "Mr. Whitton did inform me that there was to be half-mile leads, a few hundred yards more or less." Even taking this statement, the length of lead is left entirely unsettled, as a "few hundred yards" is not only indefinite, but a distance which is difficult to determine. I, however, state most positively that I never did make any arrangement with Mr. Rhodes that the length of lead should not exceed half a mile, although the matter was frequently discussed, but, on the contrary, I distinctly told him (*which he himself admits*) that some of the leads would exceed half a mile, and I therefore refused to sanction the limit of half a mile lead being inserted in the schedule finally agreed upon. I consider it a serious waste of time, which should be usefully spent, to be perpetually arguing questions with Mr. Rhodes with reference to what he states were verbal understandings, when these are directly at variance with the written conditions agreed upon between himself and the Government.

In the specification under which Mr. Rhodes accepted his contract, clause 21 is the following:—

"The contractor must deposit the earthwork from the cuttings either to the embankments named for its reception, or to such other place of equal lead that may be directed by the Engineer during the progress of the works."

Mr. Rhodes, therefore, binds himself to deposit the earthwork to the embankments named for its reception without any stipulation as to the length of lead.

The schedule also forwarded to Mr. Rhodes after the arrangement had been made relative to the prices, states:—

"Excavation from cuttings taken to embankment at per cubic yard."

There is no stipulation here made that the lead shall be restricted to half a mile, but, on the contrary, the form of tender provides that the work shall be carried out in strict accordance with the plans and specification at the prices named.

With reference to Mr. Rhodes' statement relative to the leads, that in England "half a mile is the usual distance, and that beyond that an extra price is paid," I have to observe, that in nearly every instance when contracts are entered into in England for railway works the leads beyond half a mile are not paid for as an extra upon the price of the earthwork; but that the price stated for the earthwork includes whatever length may be necessary for the proper disposal of the cuttings. In addition I may state that the prices for the various works in the contracts entered into with Sir S. M. Peto & Co. were finally approved by the Government, and in the correspondence which took place between Mr. Rhodes and the Government no allusion is made to the length of lead; it was, therefore, not in my power to supplement the contract by any restriction of this kind, nor have I had any conversation with Mr. Rhodes relative to the leads since the prices were finally agreed upon.

J. W. 20/9/59.

MR. S. W. WARBURTON to COMMISSIONER FOR RAILWAYS.

*Department of Lands and Works,
Sydney, 21 September, 1859.*

SIR,

Referring to your letter of the 7th instant, requesting the approval of the Secretary for Lands and Public Works to the course followed by you in declining to comply with Mr. Rhodes' application that he might be furnished with the length of the piles required for the wooden viaducts on the railway works, I am directed to inform you that the Secretary for Lands and Public Works, after consultation with his colleagues, is of opinion that there is no other course open to him in a professional question of this kind than to approve of the position assumed by you.

2. Mr. Secretary Robertson desires me to observe that it will be proper nevertheless for you to take every means in your power to satisfy yourself that you are right, if any doubts are in your mind on this matter.

I have, &c.,
S. W. WARBURTON,
(For the Under Secretary.)

AGENT

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 22 September, 1859.

SIR,

We beg your notice of the copy (at foot) of a letter received this day from our agent at Campbelltown, Mr. Dinham. We will thank you at your convenience to oblige us with such particulars as may guide us in the matter.

"If you have the account of timber delivered by Messrs. Jolly and Co. at the different bridges on the Menangle Extension, I should like to have a copy to compare with the quantity of timber that is on the ground at present, because Messrs. Jolly and Co. have taken some away after we had carted it to the bridges.

" B. DINHAM."

We have, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 27 September, 1859.*

SIR,

In further reference to your letters of the 22nd ult. and 6th inst., and my replies of 9th and 12th inst., I am directed by the Commissioner to inform you that he has received the instructions of the Government to permit you to have and use on the terms specified in your contract, all the single headed rails that he can spare without prejudice to the question at issue relative to the rails removed by you without his sanction from Campbelltown.

The Commissioner has therefore directed the storekeeper to issue to you at once, on your application, the whole, or any part of such rails, now in his possession, not exceeding 350 tons.

I have, &c.,
JOHN RAE,
Secretary.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 27 September, 1859.*

SIR,

In compliance with your particular request that you may receive this month as large a payment as possible, I am directed by the Commissioner to enclose you a cheque in payment of the work certified to by the Engineer-in-Chief this month, as done by you, without any deduction on account of any sums due by you to the Government.

I have, &c.,
JOHN RAE,
Secretary.

AGENT OF SIR S. M. PETO & Co. to SECRETARY FOR LANDS AND PUBLIC WORKS.

Sydney, 27 September, 1859.

SIR,

We have received no further communication since that from your office dated 21st September, respecting rails and chairs. We are at a stand-still in consequence.

We must, therefore, request your earliest convenient arrangement of this matter; otherwise we are sorry to inform you we shall be necessitated to discharge a great number of men.

We have, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 28 September, 1859.*

SIR,

In reference to your letter of the 15th instant, relative to the length of leads and the disposal of the earthwork, I am directed by the Commissioner to inform you that the Engineer-in-Chief adheres to his previous report, and I am to draw attention to your own statement, that "the leads were to be half-mile leads, a few hundred yards more or less."

The

The Commissioner has never recognised any verbal understanding either with himself or the Engineer-in-Chief, nor has he authorised that officer to come to such understandings; on the contrary, you have been continually informed that all agreements must be in writing—so much so, that you have thought it necessary to complain to the Minister on the subject, and the Minister, in reply, approved of the course pursued by the Commissioner.

I have, &c.,
JOHN RAE,
Secretary.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 28 September, 1859.*

SIR,

I am directed by the Commissioner to acknowledge the receipt of your letter of this day's date, and to inform you that the matter therein referred to shall have his early attention after he receives the letter, with full particulars, which you propose to send him this afternoon.

I have, &c.,
JOHN RAE,
Secretary.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 28 September, 1859.

SIR,

I beg to protest against the certificate or form certified by the Engineer-in-Chief, dated 28th September, shewing a balance of £4,011 19s. 3d., and which form I am forced to sign in receipt of this amount before I can receive it. I sign the forms required by your office, not because I acquiesce in their contents, but to enable me to receive the amount, which I must now inform you I receive as a payment on account, not in any way as a payment in full.

I protest against both the measurement and prices contained in those forms; and I beg to inform you that this afternoon I shall write you with full particulars, and point out what I consider the errors and omissions of the certificates in question.

I have, &c.,
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to COMMISSIONER FOR RAILWAYS.

Sydney, 29 September, 1859.

SIR,

When I commenced the construction of the Railway Extensions in New South Wales, I entered into the matter with that zeal and spirit requisite to construct the works with the expedition anticipated, as being to the interest of the Colony, and expected from Messrs. Peto, Brassey, & Betts. Accordingly I commenced at once to provide materials, and everything that I (in my capacity as contractor) considered requisite for carrying on the contract with the required expedition.

I have in previous communications explained to you, that the Government have not placed me in the position for executing the contract as promised, viz. :—

I have not had the plans, &c.—matters *in statu quo*; as the lengths of piles for bridges, the Menangle viaduct, &c.; which matters your replies have in part confirmed; the plans not having been furnished to me yet.

I have no doubt, therefore, you will see the propriety of my being reimbursed somewhat for the advances I am under for materials, &c., which are not credited me in the Engineer's certificate (as I imagine) because they have not been yet used in the construction of the works; while it must be obvious in so providing material that I was correct; which material would ere this have been used on the works and credited me in the certificate, if I had been furnished with plans, &c., as agreed.

You must be well aware that Messrs. Peto, Brassey, & Betts are under very heavy outlay sending plant, &c., &c., and that such a distance.

We are thus urgent in requesting further cash than the amount certified as due to us, for the reason that the rate of interest here current is an item of such magnitude that no profits we can anticipate in the present contract will pay.

Herewith I hand you a statement of items for which I am under cash advance, being for materials, &c., &c., provided, but which have not been credited in the certificate, and that not through any fault on the part of the contractors.

I must beg to point out to you what I consider errata in the certificate as to prices.

Ironwork 6d. per lb. should be 6½d. per schedule.

Clearing land £7 per acre should be £7 10s.

RAILWAY EXTENSION CONTRACTS.

31

I read the communication from your office, dated 27th instant, handing cheque £4,011 19s. 3d., to the effect that no reduction for expenses paid by the Government "for materials" would be made for some time; but I find from the certificate that the sum of £2,205 11s. 7d. is deducted.

A favorable reply at your earliest convenience will greatly oblige me.

I have, &c.,
A. RHODES.

SECRETARY

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 30 September, 1859.*

SIR,

In reference to your letter of the 22nd instant, relative to the delivery by Messrs. Jolly & Co. of timber required for the bridges on the Menangle Extension, and requesting to be furnished with particulars, I am directed by the Commissioner to transmit to you a copy of a report from the Engineer-in-Chief on this subject, and to request that, under the circumstances, you will perhaps be good enough to explain more fully what you desire.

I have, &c.,
JOHN RAE,
Secretary.

REPORT of Engineer-in-Chief in reference to Mr. Rhodes' Letter of 22nd inst.

Scott & Jolly have not, I believe, delivered any timber at the different bridges. I understand the whole of the timber has been removed from the Campbelltown Station to the different bridges by Mr. Rhodes or his agents; I cannot, therefore, give any account of the timber delivered at the bridges.

J. W.
23/9/59.

SECRETARY TO DEPARTMENT OF INTERNAL COMMUNICATION to AGENT OF SIR
S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 30 September, 1859.*

SIR,

I am directed by the Commissioner to acknowledge the receipt this day of your letter of yesterday's date, and in reply to inform you that, as you have addressed the Secretary for Lands and Public Works on the subject to which it relates, in a letter which has been referred to and reported on by the Commissioner, he must of course defer taking any steps in the matter, or making any further communication upon it, until he receives Mr. Secretary Robertson's instructions.

I am, however, to observe, that no deduction was made by the Commissioner from the amount certified by the Engineer-in-Chief, as due to you, on the 27th instant, the amount named by you, £2,205 11s. 7d., having been deducted from the August Certificate, when it was paid on the 26th ultimo.

I have, &c.,
JOHN RAE,
Secretary.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 17 May, 1859.

SIR,

I would thank you to be so good as to give your people instructions to let me have say 500 rails at the Campbelltown Station at the earliest possible convenience.

I am, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

ENGINEER-IN-CHIEF to MR. WILLIAM MORGAN.

*Great Southern Railway,
Engineer's Department,
Sydney, 17 May, 1859.*

(No. 381.)

Please to let Mr. Rhodes have as many rails as you can spare immediately. Take a receipt for the number you supply him with, and send it to me as early as practicable.

JOHN WHITTON,
(Per W. H. Quodling.)

ENGINEER-

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 18 May, 1859.*

SIR,

I forward per bearer the following drawings for the Menangle Extension, viz., Nos. 4, 5, 6, 7, 9, 10, 11, 12, 13, and 14. Drawings Nos. 1, 2, 3, and 8, you have already received, and I shall feel obliged if you will send me a receipt for the whole of the above drawings (Nos. 1 to 14 inclusive) at your earliest convenience.

Yours, &c.,

JOHN WHITTON,
(Per William Mason.)

Sydney, 19 May, 1859.

Received from John Whitton, Esq., Railway Branch, Department of Internal Communication, Nos. 1 to 14 inclusive, drawings of the Menangle Extension.

A. RHODES,
(Per R. W. Ferguson.)

ENGINEER-IN-CHIEF to MR. WILLIAM MORGAN.

*Great Southern Railway,
Engineer's Department,
Sydney, 25 May, 1859.*

(No. 386.)

Please to send to Campbelltown, for Mr. Rhodes, as early as practicable, 300 rails.

JOHN WHITTON,
(Per W. H. Quodling.)

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 1 June, 1859.

SIR,

Some time since I wrote you to have 500 rails sent to Campbelltown; I find they have not yet been sent.

Will you be so good as to expedite this matter, that we may have the carting done before the wet weather sets in.

I am, &c.,

A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 1 June, 1859.

SIR,

I will thank you to let me have plans and sections for the different river diversions; a level book shewing the heights and distances from centre peg to top of slope, for cuttings and embankments; or, if you would be kind enough to lend your book, a copy can be made in our office, and save you trouble.

To prevent all dispute, would it not be well to furnish us with copy of how the excavations are to be distributed, that is to say, to shew where there is spoil and side cutting, &c.; in fact, precisely the position in which the work is to be done.

I am, &c.,

A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 1 June, 1859.

SIR,

Will you be so good as order 2,000 rails for the permanent line, to be sent to Campbelltown Station, for the Campbelltown and Menangle Extension.

I will thank you to furnish me with dimensions for the permanent sleepers, half-round and square; also, plan for fencing.

I am, &c.,

A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 1 June, 1859.

SIR,

We passed over the Menangle Extension yesterday, and carefully enquired where the different bridges have to be made.

It appears to us that instead of putting *wooden* bridges between 20 miles 40 chains to 23 miles 10 chains, bridges may be built of *brick*, and at almost the same cost. The brick being permanent; the wood only a 20 years job, which will hereafter involve the Government in considerable expense.

We feel a delicacy in expressing this opinion, but we think, were you to go over the ground and ascertain for yourself, you would, we have not the least doubt, coincide with us. Our desire is to do the work in so good and substantial a manner as to give complete satisfaction hereafter.

We are, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 1 June, 1859.*

SIR,

I have to acknowledge the receipt of your letter of this day's date, suggesting the substitution of brick for timber for the bridges on the Menangle Extension, and expressing your opinion that the former can be built at almost the same cost as the latter.

In reply I have to say that if you will build these bridges in brick, to my satisfaction and at the same cost as they would be if executed according to the drawings furnished to you from this office, I have not the slightest objection to your doing so, but otherwise I shall decline to allow you to make any alteration in the designs.

With reference to your opinion that were I to go over the ground and ascertain for myself I should, you have not the least doubt, coincide with you, I have only to remark that I have been repeatedly over the ground, long before you came into the Colony, and I have ascertained everything which I think it necessary for me to know on this matter; but, even supposing that I had not done so, it certainly forms no part of your duty to offer such suggestions to me.

Yours, &c.,
JOHN WHITTON.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 1 June, 1859.

SIR,

My agent, Mr. Durham, informed me yesterday that Mr. Morgan wished him to pay some men; as it is generally understood that these things should not be done without orders from you.

I would therefore thank you to give Mr. Morgan the necessary order. His production thereof will save any dispute hereafter.

I am anxious to assist in every shape and form, but you are aware I must, on the reckoning day, shew for the expenditure.

I am, &c.,
A. RHODES.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 1 June, 1859.*

SIR,

I forward, per bearer, drawings Nos. 15, 16, 17, and 18 of the Menangle Extension, and I shall feel obliged if you will acknowledge their receipt at your earliest convenience.

Yours, &c.,
JOHN WHITTON,
(Per W. H. Quodling.)

1 June, 1859.

Received from John Whitton, Esq., four drawings, Nos. 15, 16, 17, and 18.
(Pro Peto, Brassey, and Betts.)
JNO. FRASER.

ENGINEER-

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 1 June, 1859.*

SIR,

In reply to your letter of this day's date, relative to your request to have 500 rails sent to the Campbelltown Station, I have to inform you that the delivery of rails at Campbelltown for temporary purposes forms no portion of your agreement with the Government. A number of rails are now at Campbelltown which were sent during my absence in the North, but the expense of loading and the cost of carriage must be paid by you. I have requested Morgan to point out to your assistants such rails as can be spared for temporary purposes, but every cost of removal must be borne by you.

I have no doubt that the men's wages, which Morgan requested Mr. Durham to pay, were for loading and unloading the temporary rails forwarded to Campbelltown, and in my opinion it would be better for you to pay these wages direct to the men than for the Commissioner to have to make a charge for the services hereafter.

Yours, &c.,
JOHN WHITTON.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 2 June, 1859.*

SIR,

With reference to your letter of the 1st instant, requesting to be furnished with plans and sections of the river diversions on the Menangle Extension, I have to state that there are no river diversions on any of the proposed extensions, and the diversions of the small creeks are not of sufficient importance to require plans or sections.

The setting out of the slopes of both cuttings and embankments is a work which I think devolves upon you, and can be so readily done upon the ground that it is not necessary to make out any list of widths in this office. The heights and depths of both embankments and cuttings are figured on the section at distances of one chain apart.

I must express my surprise that after the section of the Menangle Line has been in your possession for a month you should write, requesting "to prevent all dispute" to be furnished with a copy of "how the excavations are to be distributed." If you will refer to the section furnished to you from this office you will find that the disposal of the earthwork is clearly stated.

Yours, &c.,
JOHN WHITTON.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 2 June, 1859.*

SIR,

In reply to your letter of the 1st instant asking for the delivery of 2,000 rails at the Campbelltown Station, for permanent purposes, I may observe that 2,000 rails at 20 feet each would be 40,000 feet, or equal to 4 miles of single way.

As you are not yet ready for laying one mile of permanent way these rails are not urgently required; I will, however, order the permanent way materials to be forwarded to Campbelltown as rapidly as possible.

Before any portion of the permanent way be laid the formation must be satisfactorily trimmed, permission will then be given by me, in writing, for you to proceed with this work.

By your arrangement with me the other day, the pitching for the bottom ballast must always be kept in advance of the permanent way; it will, therefore, be necessary for you to have a portion of this pitching done before commencing to lay the road.

The permanent sleepers are half round, 9 feet long, 9 inches by 4½ inches, and may be either ironbark or boxwood; the drawing and specification for the fencing can be seen at this office.

I have, &c.,
JOHN WHITTON.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 3 June, 1859.

SIR,

We will thank you (if it can possibly be done, and as it will prevent dispute) to furnish us with a definite cube of all rock, dirt, &c., to be excavated in the cuttings on the Peurith and Picton Lines.

This will greatly facilitate our settlement with the parties employed, as well as the final arrangements with yourself.

We are, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

ENGINEER-

ENGINEER-IN-CHIEF to STOREKEEPER.

(No. 193.)

Great Southern Railway,
 Engineer's Department,
 4 June, 1859.

Please to supply the following articles to the Campbelltown Station, for the permanent way of the extension from Campbelltown to Menangle:—2,000 double-headed rails, with the necessary chairs, fish-plates, bolts, nuts, spikes, and keys.

JOHN WHITTON.

ENGINEER-IN-CHIEF to MR. WILLIAM MORGAN.

(No. 391.)

Great Southern Railway,
 Engineer's Department,
 Sydney, 4 June, 1859.

I have given an order to the Storekeeper to forward to the Campbelltown Station, for the permanent way of the Menangle Extension, 2,000 rails, with the necessary chairs, fish-plates, &c. These materials must *not* be used for temporary purposes; but, if Mr. Rhodes should so employ any of them, please to inform me at once.

JOHN WHITTON,
 (Per W. H. Quodling.)

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

Railway Branch,
 Department of Internal Communication,
 Sydney, 6 June, 1859.

SIR,

In your letter of the 3rd of June, you say, "We will thank you (if it can possibly be done, and as it will prevent dispute) to furnish us with a definitive cube of all "rock, dirt, &c., to be excavated in the cuttings on the Penrith and Picton Lines.

"This will greatly facilitate our settlement with the parties employed, as well as the "final arrangement with yourself."

I regret that you should have thought it advisable to ask such a question, as you must be perfectly aware that it is one which cannot possibly be answered until the whole of the excavations are completed, and, as you are paid on a schedule of prices, I cannot see that the information, if obtained, could be of the slightest use.

The quantities, if given to you, could not be "definitive," but *assumed*, and such information would not facilitate but greatly retard any settlement with the "parties employed," as well as the final arrangement with myself.

Yours, &c.,
 JOHN WHITTON.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

Railway Branch,
 Department of Internal Communication,
 Sydney, 6 June, 1859.

SIR,

With reference to my verbal arrangement with you on Saturday last, relative to the substitution of a brick for a timber bridge on the Menangle Extension, I have to request that a drawing be furnished to me shewing in detail the bridge you propose to build in brick before any portion of the work be commenced.

No alteration whatever must be made in any of the drawings forwarded to you, unless you receive from me a written permission to do so.

Yours, &c.,
 JOHN WHITTON.

AGENT OF SIR S. M. PETO & Co., to ENGINEER-IN-CHIEF.

Sydney, 17 June, 1859.

SIR,

Will you please give instructions to your Inspector, Mr. Morgan, to let us have three sets of points and crossings for Barlow's rails.

Yours, &c.,
 (For Peto, Brassey, and Betts.)
 A. RHODES.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

Railway Branch,
 Department of Internal Communication,
 Sydney, 18 June, 1859.

SIR,

In compliance with the request contained in your letter of the 17th instant, I have given instructions to Morgan relative to the crossings you require for temporary purposes.

Yours, &c.,
 JOHN WHITTON.

ENGINEER-

ENGINEER-IN-CHIEF to MR. WILLIAM MORGAN.

*Great Southern Railway,
Engineer's Department,
Sydney, 18 June, 1859.*

(No. 398.)

If we have any old crossings made originally for the Barlow rail, and which are not required for permanent purposes, you may let Mr. Rhodes have three (3) sets for his temporary way.

Mr. Rhodes also asks for three sets of "points," by which, I presume, he requires switches; if we have any which are so much worn as to be *utterly unfit for permanent way*, you may let him have them, but not otherwise.

JOHN WHITTON.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 18 June, 1859.

SIR,

I will thank you as early as possible to oblige me with plans and sections. I have two draftsmen in my office, and must keep them employed.

I am, &c.,
A. RHODES,
(Per Jno. Fraser.)

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 20 June, 1859.*

SIR,

In reply to your letter of the 18th instant, I have to inform you that copies of the working plan and section of the Western Line, from the Blacktown Road to Penrith, will be ready to-morrow, and will be forwarded to you immediately after the proclamation of the line.

Yours, &c.,
JOHN WHITTON.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 22 June, 1859.

SIR,

We will thank you to give instructions for 1,000 rails for temporary purposes, to be sent to Campbelltown Station at the earliest convenience.

We are, &c.,
(For Peto, Brasscy, and Betts.)
A. RHODES.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO AND Co.

*Railway Branch,
Department of Internal Communication,
23 June, 1859.*

SIR,

In accordance with the request contained in your letter of yesterday's date, I have given instructions to Morgan, the Inspector, to point out to your assistants such rails as can be spared for temporary purposes; but the cost of carriage to Campbelltown, and loading into trucks, &c., must be paid by you, as previously stated in my letter dated June 1st, '59.

I have, &c.,
JOHN WHITTON.

ENGINEER-IN-CHIEF to MR. WILLIAM MORGAN.

*Great Southern Railway,
Engineer's Department,
Sydney 23 June, 1859.*

(No. 401.)

Mr. Rhodes has made application for an additional supply of rails for temporary purposes,—viz., 1,000 rails. I have written to him to say that you will point out to his assistants any rails that we can spare for such purposes.

If, therefore, we have any rails which have not been sent to Campbelltown for permanent way purposes you may allow him to have the use of them, but he must not use any rails which have been taken by us to Campbelltown at his request for permanent work. Of course you will take a receipt for all rails lent to him, in the same manner as you did for those previously forwarded. I have written to Mr. Nealds relative to the unloading of the rails.

JOHN WHITTON.

Received

Received Drawing No. 20, being cross-section of Great Western Railway from Parramatta to Penrith.

7 July, 1859.

A. RHODES,
(Per R. M. Ferguson.)

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 12 July, 1859.

DEAR SIR,

Will you please be so good as to have sent to Campbelltown Station,—1,000 chairs and 1,500 spikes, for temporary purposes.

We have, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 14 July, 1859.

SIR,

Yesterday I walked over the line from Penrith to Blacktown, and I am sorry to say that I did not find one peg for slopes, nor any person on the line setting out for you. There are some pegs put in for the fencing, but as you are aware it is only so short a time since the Government agreed about the fencing that we do not want this setting out all at once.

I should feel obliged if you would give orders to set out the different cuttings, river diversions, road approaches, &c., in such order as will facilitate the progress of the works. Also to give us the lengths of the piles for the different wooden bridges on the Penrith Line.

I have, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 14 July, 1859.

SIR,

Will you be so good as to let us know the length of piles required for the wooden viaducts at 23 miles 47 chains, 23 miles 65 chains, 24 miles 24 chains, 25 miles 53 chains, between Campbelltown and Menangle.

We are, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 14 July, 1859.

SIR,

Annexed I beg to hand you copy of a letter from one of my Superintendents, Campbelltown. In calling your attention to the matter, I beg that Mr. Morgan may be furnished with instructions in writing for any proceedings of this kind in future.

Yours, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

[Enclosure.]

Campbelltown,
July 13, 1859.

Dear Sir,

I beg to ask instructions in the following matter:—Mr. Morgan has given his men instructions to pull up the fence which encloses our Depot on the southern side, and is part of an old fence apparently existing previously to the bank being made which it crosses.

Mr. John Rhodes seeing them remove it, and also one of our notice boards of "no admittance," asked them the reason for removing it: said they only carried out Mr. Morgan's instructions; when he requested them to leave it (as it left the yard open at this side) until we knew how to act in the matter. They said they would leave it until Mr. Morgan returned to-night.

The line of railway is now fenced in at this point, but of course the removal of the fence leaves the yard exposed.

Mr. Morgan being from home I have not been able to see him, and Mr. Durham being absent I thought it advisable to acquaint you of the matter. Until I hear from you, I shall let them proceed as they think proper.

Yours, truly,
G. THORNTON.

This matter is too frivolous to reply to. See Morgan's explanation, dated July 6, 1859.

J. W.

AGENT

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 14 July, 1859.

SIR,

Annexed I beg to hand you Extract of a letter from my Agent, South Creek, begging your attention to the matter therein referred to.

Yours, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

(Extract.)

"The pegs put in for the fence line are very bad, and not driven well in the ground. When there is much clearing the pegs will be lost before the ground is cleared."
"South Creek, July 13."

A most frivolous complaint; surely if Mr. Rhodes has no assistance competent to set out fencing and slopes, he can find a man able to drive a stake. If trees were fixed they might be knocked down by carelessness in clearing.

J. W.
19 July, 1859.

MR. WILLIAM MORGAN to ENGINEER-IN-CHIEF.

Great Southern Railway,
Engineer's Department,
Campbelltown, 16 July, 1859.

(No. 211.)

SIR,

In reply to yours of yesterday respecting Mr. Rhodes' complaint, I beg to explain, in the first place, the fence in question was no safeguard whatever to the depôt, one portion being buried within 2 feet 6 inches of the top, with the embankment of the Menangle Extension at 20 miles 43 chains; secondly, since the main fence has been completed on both sides of the line from 20 miles 43 chains to 20 miles 75 chains, the slip rail originally used for carting materials has not, to the best of my recollection, been used since, and but seldom before, and only one then, and that being 4 feet 6 inches from the ground, so that a thief even then would find no difficulty in walking under.

Thirdly. Knowing the fence to be the property of the Commissioner, and, as I understood from Mr. Thornton, one of Mr. Rhodes' engineers, that they intended laying the permanent way at once; knowing the permanent way could not be laid without its removal, I thought I was in duty bound to remove it; consequently I instructed Pollock, the man I have examining sleepers on the Great Western as well as the Great Southern Railway, to take down and stack the same for the Commissioner's use; accordingly the man had taken down one panel, measuring 16 feet, when Mr. John Rhodes, the depôt foreman, requested the man to let it remain until he (Mr. John Rhodes) had seen me; the man did so, I then being at Douglas Park, on the Picton Extension; however, I saw the foreman next morning. My reply to him was, had I known their views of the fence I would not have ordered its removal; consequently, the fence now stands, with the exception of the two panels in question. I cannot see what Mr. Rhodes has to complain of.

I am, &c.,
WILLIAM MORGAN.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

Railway Branch,
Department of Internal Communication,
Sydney, 18 July, 1859.

SIR,

In consequence of my absence from Sydney, some delay has unfortunately taken place in replying to your letter of the 14th instant. I left Sydney for the North on the 7th instant, and previous to my departure Mr. Burrows had left for Penrith, to set out the fencing and slopes of cuttings and embankments on Contract No. 2 of the Western Line; I am, therefore, at a loss to understand the meaning of your statement, that there was no one on the line setting out this work during your visit to Penrith on the 13th.

With reference to your request to be furnished with the lengths of the piles for the bridges, I have only to remark that this is a matter exclusively belonging to yourself, as contractor, and you must form your own opinion as to the length of the piles required for the different bridges.

Yours, &c.,
JOHN WHITTON.

ENGINEER-

ENGINEER-IN-CHIEF to STOREKEEPER.

*Great Southern Railway,
Engineer's Department,
18 July, 1859.*

Please to supply the following articles to Mr. Rhodes, Campbelltown Station, for temporary purposes:—

1,000 chairs,
1,500 spikes.

JOHN WHITTON.

The carriage of the above to be charged to Mr. Rhodes, and a return of the quantity supplied to be sent to this Office.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 19 July, 1859.

SIR,

We are in receipt of your favor yesterday's date, and note your remarks concerning the length of the piles, viz. :—

"That this is a matter exclusively belonging to yourself, as contractor, and you must form your own opinion as to the lengths of the piles required for the different bridges."

In reply we would remind you, that this is not a *lump sum* contract, but *measurement*, and consequently the matter rests with the engineer, not the contractor. We fear until we are furnished with the lengths of these piles we cannot proceed.

We are, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 19 July, 1859:

SIR,

We will thank you for certificate of work done on the Campbelltown and Penrith Extensions, to the end of this month.

We are, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 19 July, 1859.

SIR,

On careful examination of the slopes given in your section for the Penrith Line, I fear some of the cuttings must be $1\frac{1}{2}$ to 1 instead of 1 to 1, or $1\frac{1}{4}$ to 1.

I also observe that some of the culverts will not be large enough for the watercourses.

If you could possibly spare time to go over the lines with Mr. Rhodes, we think these matters could be better arranged, and save so much writing.

Yours, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

ENGINEER-IN-CHIEF to THE AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 20 July, 1859.*

SIR,

With reference to your letter of yesterday's date relative to the length of the piles for the timber bridges, I have little to add to my letter to you on the same subject, dated the 18th instant. You are, no doubt, aware that for all timber in bridges, and for all other work, you are to be paid on the net measurement as executed, and it therefore forms exclusively a portion of your duty to determine as to what particular length of pile shall be pitched for each bridge.

Yours, &c.,
JOHN WHITTON.

ENGINEER-

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 20 July, 1859.*

SIR,

In reply to your letter of the 19th instant relative to the slopes of the cuttings on the Penrith Line, I have to request that you will be good enough to carry out the works in accordance with the instructions you have already received from this office.

No alteration whatever must be made by you either to the slopes of the cuttings, or in the sizes of the culverts.

Yours, &c.,
JOHN WHITTON.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 21 July, 1859.

SIR,

I beg your attention to the under copy of a letter received from my Agent Campbelltown:—

Campbelltown, 20 July, 1859.

Dear Sir,

I received the enclosed tracing for Turnpike Road Bridge at Camden road crossing, 20 miles 75 chains, from Mr. Morgan yesterday. I wish to know whether we are to go on with the bridge according to the drawing or not. If so please return drawing at once so that we can commence getting timber for it. Please also send along with drawing instructions in reference to the temporary bridge that will have to be erected before the old one can be removed.

Yours, &c.,
B. DURHAM.

A. Rhodes, Esq.

I cannot understand Mr. Morgan giving plans, &c., to my Agents, and trying to treat with them for pulling down bridge, &c., without my being informed, as it was thoroughly understood that all plans and orders were to proceed from your office to me.

I am, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 21 July, 1859.

SIR,

I have to request your consideration of the matter alluded to in the under copy of letter received from my Campbelltown Agent.

Yours, &c.,
A. RHODES.

Campbelltown, 20 July, 1859.

Dear Sir,

We are now ready to lay the permanent way from 20 miles 40 chains to 20 miles 75 chains, but before doing so we wish to know if the formation is correct; in fact, we require general instructions as to levels and centres for this portion before we can proceed with the road laying. We also wish to know what height we are to keep the banks above formation, and what width we should give to allow for settlement.

Yours, &c.,
B. DURHAM.

A. Rhodes, Esq.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 21 July, 1859.

(No. 1.)
SIR,

Our banks on the Penrith Line are stopped for want of the culverts being set out. Please be so good as to send some one immediately to set them out, that the works be not stopped.

We are, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 21 July, 1859.

(No. 2.)
SIR,

On examination of the wooden viaduct at 23 miles 47 chains I find the bridge is stopping our carrying on the bank. Although any suggestions I may make go for nothing, I cannot be passive when I perceive matters going wrong.

There is an incline of 1 in 70. The stream can be diverted at half the expense of making the bridge, and allow us to proceed with the bank.

I have made a section thereof, and I think you would do well to send some one to see the propriety of what I urge, for your own satisfaction.

Yours, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

(No. 3.)

Sydney, 21 July, 1859.

SIR,

We duly received your favors of yesterday respecting the lengths of the piles for bridges, &c. I beg to say that, according to the contract between us and the Government, the work was to be set out, and plans given to us, of all we had to do.

You may be firm in your dealings with us, but we look to the Government to carry out the terms of the contract.

We are, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

(No. 4.)

Sydney, 21 July, 1859.

SIR,

Some time ago I desired you to let me know the different quantities of dirt and rock in each cutting on the Picton and Penrith Extension.

This we particularly wish done, to save any dispute hereafter.

We are, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

(No. 5.)

Sydney, 21 July, 1859.

SIR,

I will thank you to give instructions to your agents to fulfil the different orders for rails, spikes, and chairs.

I am, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

(No. 6.)

Sydney, 21 July, 1859.

SIR,

We wish to proceed with the permanent road between 20 miles 40 chains to 20 miles 75 chains on the Menangle Extension, and we beg you will send some one to verify the formation before we lay the permanent road.

We want plans and sections for river diversions and road approaches between Campbell town and Menangle.

We are, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

Railway Branch,
Department of Internal Communication,
Sydney, 21 July, 1859.

SIR,

I have to acknowledge the receipt of the following letters from you of this day's date:—

- No. 1.—Relative to setting out the culverts on the Penrith Line.
- No. 2.—Stating that a bridge not having been built on the Campbelltown and Menangle Line, at 23 miles 47 chains, you are prevented carrying on the bank.
- No. 3.—Relative to the length of piles for bridges.
- No. 4.—Asking for the "quantities of rock and dirt" on the Penrith and Picton Extensions.
- No. 5.—Requesting me to give instructions to my agents to fulfil orders for rails, chairs, &c.
- No. 6.—Relative to the laying of the permanent way on the Campbelltown Extension.

With reference to letter No. 1, I have to remark, that your request to have the culverts set out "that the works be not stopped," is not only unusual, but one which few contractors ever require. I will, however, send some one down for this purpose, but you will please to bear in mind that you are responsible for the accuracy of all work, both as regards the setting out and the execution.

Letter No. 2.—If your works be "stopped" in consequence of the bridge not having been built at 23 miles 47 chains on the Campbelltown Line, you really have no one to blame but

but yourself, as the drawing for this bridge was given to you on the 1st June. I decline to make the alteration you suggest.

Letter No. 3.—There is nothing in your contract with the Government authorising me to give to you the lengths of the piles for the bridges. I must, therefore, decline to do so.

Letter No. 4.—I can only refer you to my letter to you on the same subject, dated June 6th.

Letter No. 5.—Your letter for 1,000 chairs and 1,500 spikes was written on the 12th July, during my absence in the North; I returned on the 18th July, and gave the order the same day.

Letter No. 6.—The permanent way must not be laid on the formation. The pitching must first be done, and then the permanent way can be laid, assuming that the formation be properly trimmed and otherwise satisfactory.

Yours, &c.

JOHN WHITTON.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
22 July, 1859.*

SIR,

In reply to your letter of the 21st instant, relative to the centres and levels for the permanent way on the extension from Campbelltown to Menangle, I have to inform you that these will be given to you on Monday next. As the works proceed it will be requisite, to avoid disappointment, that you take the usual precaution to preserve the centre line, so that it can be set out until the completion of the excavations without any further assistance from this department.

With reference to your request to be furnished with the allowance to be made by you for settlement in the banks, I have to observe, that as you have to lay and ballast the permanent way, and hand over the line to the Commissioner, on the day of opening, in a satisfactory condition, I cannot at all interfere with you as to what allowance should be made for settlement; this allowance will of course depend upon the nature of the material of which the banks are composed, and is altogether a matter for the exercise of your own judgment.

It will be my duty to see, when the line is handed over by you to the Commissioner, that the work has been performed in accordance with the conditions named in the specification.

Yours, &c.,

JOHN WHITTON.

MR. W. H. QUODLING to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 25 July, 1859.*

SIR,

I am directed by the Engineer-in-Chief to request you to return to this office, at your earliest convenience, the undermentioned drawings, which you received from him on the 20th ultimo, viz. :—No. 1, drawing of public road gate extension, Liverpool to Campbelltown; No. 2, drawing of occupation gate; No. 3, drawing of level crossings, occupation road, and public road.

Yours, &c.,

W. H. QUODLING.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 25 July, 1859.

SIR,

Enclosed is a section of the proposed diversion I mentioned to you in my letter the other day, between 23 miles 47 chains and 23 miles 65 chains, to shew you that the viaduct at 23.47 can be very well dispensed with. Please to give your last decision in the matter.

I am, &c.,

(For Peto, Brassey, and Betts,)

A. RHODES.

ENGINEER-

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 25 July, 1859.*

SIR,

I have to acknowledge the receipt of your letter of this day's date, containing a second request to be allowed to dispense with the timber bridge on the Campbelltown Line at 23 miles 47 chains, and I beg to inform you that having again considered the subject, I cannot sanction the alteration you suggest.

Yours, &c.,
JOHN WHITTON.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 25 July, 1859.*

SIR,

With reference to your letter of the 21st instant, relative to the instructions given to your agent by Morgan, the Inspector, I have to observe that Morgan, in communicating with your agent, was acting by my orders, and that the tracing furnished by him to Mr. Durham had upon it my initials.

As it is impossible for me to give written instructions for every minor matter on works of such magnitude as railways, I have to request that for the future any verbal or written instructions given by Morgan may be acted upon as if given by myself, and that you instruct your agents accordingly.

The erection of a temporary bridge over the creek at Camden is a work for which no arrangements have been made relative to the cost, neither does it form any portion of your existing contract; it was, therefore, by my direction that Morgan named this matter to Mr. Durham, as I considered that he acted for you in your absence. Under these circumstances, I see no impropriety in Morgan's conduct.

With reference to your remark, that "it was thoroughly understood that all plans and orders were to proceed from your office to me," I have to state that no proposition of the kind was ever made to me, nor should I consider such an arrangement judicious.

Yours, &c.,
JOHN WHITTON.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

SIR,

Sydney, 28 July, 1859.

I have the letter of which the under is a copy to-day from Mr. Durham. May I request your kind attention thereto.

I am, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

Campbelltown, 28 July, 1859.

Dear Sir,

We are in want of a template to adze the sleepers by, and a guage to lay the permanent road with. The above are required for to keep in the office, so that all the others can be made from them.

I am, &c.,
B. DURHAM,

A. Rhodes, Esq.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 29 July, 1859.

SIR,

We beg to call your attention to the matter referred to in the under letter from Mr. Durham.

Yours, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

Campbelltown, July 26, 1859.

Sir,

The engineers have put in the centres and levels on the line between pegs 20 miles 40 chains and 20 miles 76 chains, but the pegs are very bad, not well driven in.

The centres are put in for the single line and not for the double, so that when the road is laid, the peg will be between the rails instead of being outside; and perhaps when the road is put in, a sleeper will require laying where a peg stands, and then it must be taken up and the centre will be lost. Whereas if they were outside the rail, they would be clear of everything.

A. Rhodes, Esq.

I am, &c.,
B. DURHAM.

ENGINEER-

*Railway Branch,
Department of Internal Communication,
Sydney, 30 July, 1859.*

SIR,

In reply to your letter of yesterday's date, enclosing copy of a letter from Mr. Durham, I have to inform you that I have given instructions that a template for adzing sleepers, and a guage for the permanent way be made and forwarded to your office at Campbelltown, as early as practicable.

With reference to your second letter of the same date, relative to the centres for the permanent way, I will, as you request, have the centres and levels in future put in for the double instead of the single line, care being taken by your agents to observe, in all cases, that the centre for the single line (the one you are now constructing) is five feet six inches on the east side of the centre for the double line; or five feet six inches on the left hand side, looking from Campbelltown towards Picton.

Yours, &c.,
JOHN WHITTON.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 30 July, 1859.

SIR,

In your letter dated to-day, you say,—“ That the centre for the single line “ (the one you are now constructing) is five feet six inches on the east side of the centre for “ the double line, or five feet six inches* looking on the left hand side from Campbelltown “ towards Picton.”

Will you please give us a section, shewing exactly the position of the rails to be laid on the sleepers, with full dimensions as the permanent road is to be laid in the cutting or embankments. It is customary (we may say latterly it has been the case) to allow half an inch extra on curves. Of course this is only our suggestion, but from experience, we can say it is productive of much saving to wheel tires to pay attention to the matter. In fact, we have known many miles of road new spiked in consideration thereof.

We are, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 30 July, 1859.

SIR,

Some time ago when I verbally asked you to give instructions to your engineers to put in formation pegs as a kind of bench mark at each end of the cuttings on the Picton and Penrith Lines, you were so good as to say it should be done. May I request as early attention thereto as convenient.

Yours, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 1 August, 1859.

SIR,

I am, &c.,
(For A. Rhodes,)
JNO. FRASER.

MR. W. H. QUODLING to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 22 August, 1859.*

SIR,

I am directed by the Engineer-in-Chief to inform you that he can form no opinion of the quality of the mortar when mixed ready for use for the several railway works from the specimens of lime and limestone forwarded to him, accompanied by your letter of yesterday's date.

The inspector on the line will give an opinion as to the quality of the mortar you propose to use when the works are in progress.

Yours, &c.,
W. H. QUODLING.

AGENT

* Incorrectly quoted. The correct quotation is as follows : “ or 5 feet 6 inches on the left hand “ side, looking from Campbelltown towards Picton.”

RAILWAY EXTENSION CONTRACTS.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 3 August, 1859.

SIR,

I should be glad to be informed what day I may have the pleasure of your company over the Penrith and Picton Lines, for the arrangement of matters which I urge can be so much better settled on the ground than by writing for.

I am, &c.,
A. RHODES.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

Railway Branch,
Department of Internal Communication,
Sydney, 4 August, 1859.

SIR,

One of my assistants will leave here to-morrow to set out the fencing and slopes for the extension of the Southern Railway, from Menangle to Douglas Range, and will, also, as early as possible, put in bench marks at the end and commencement of each cutting in this district, as requested in your letter of the 30th July.

In reply to your letter of yesterday's date, requesting me to accompany you over the Penrith and Picton Lines, I have to state that I cannot, at present, name any day for this purpose. You appear to think it necessary that I should go over the lines with you to settle various matters on the ground; but as you are in possession of every information to enable you to proceed energetically with the whole of the earthworks, I am at a loss to understand what matters can require settlement on the ground. Verbal arrangements are always unsatisfactory; and if you will be good enough to state to me in writing the nature of the information you require, I shall be most happy to give the matter every attention; and, in so doing, if I find it requisite to go over the line with you, I will name for this purpose the earliest day possible.

With reference to your letter of the 30th July, relative to the position of the rails when permanently laid, I have to remark that in adzing the sleepers for the chairs care must be taken to leave, as nearly as possible, the same distance from each end of the sleeper to the chair; that the road, when laid, is to be of the 4 feet 8½ in. gauge, and laid in the centre of the single line both in cuttings and embankments, as described in the specifications.

No part of the road to be laid to any other gauge than 4 feet 8½ in., either on curves or straight portions, without an order from me in writing.

Yours, &c.,
JOHN WHITTON.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 3 August, 1859.

SIR,

I beg your kind attention to the under letter from my agent, Mr. Durham, at Campbelltown.

Yours, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

Campbelltown, 2 August, 1859.

Dear Sir,

I have examined the ground taken for side-cutting at Menangle, and I find it is all taken on the low side. I think it would be a deal better if the Engineer would allow us to take it from both sides of the line, from peg 26-31 to 26-53. It will take a strip of land about 11 yards wide and 1½ deep to make up the off-side-cutting required in the bank, deducting the opening for the bridge at peg 26-33.

A. Rhodes, Esq.

I am, &c.,
B. DURHAM.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 3 August, 1859.

SIR,

Will you be so good as to send some person to set out the cuttings, embankments, &c., &c., between Menangle and Douglas Park. On going over the ground yesterday we find that this work has not been done yet.

We are, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

AGENT

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 3 August, 1859.

SIR,

We shall soon be waiting for rails for temporary purposes. Will you be good enough to hasten the orders we have sent to you for them.

We find the Government has about 2,000 rails at your branch road leading to Pyrmont bridge. It would be a great pity if we should be stopped when we get into full work for want of these rails, when they are lying there doing nothing. In fact, it would be better to work them than have them lying there rusting.

We are, &c.,
(Pro Peto, Brassey, and Betts,)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 4 August, 1859.

SIR,

On looking over the cross sections for cuttings and embankments on the different extensions, we find that the distances the fencing is to be from the bottom of embankments and top of cuttings is not stated.

Will you kindly oblige us with these particulars.

We are, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

MR. W. H. QUODLING to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 4 August, 1859.*

SIR,

I am directed by the Engineer-in-Chief to call your attention to a letter from this office, dated the 25th ult., requesting you to return three drawings of levels, crossings, &c.

Yours, &c.,
W. H. QUODLING.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 6 August, 1859.*

SIR,

In reply to your letter of the 3rd instant relative to the land taken for side cuttings at Menangle, I have to state that I can see no sufficient reason for making the alteration you suggest. From the cross section you forwarded, I am induced to believe that you are under the impression that in taking out side cutting it is only necessary to leave a sufficient cess between the foot of the slopes of the single line and the top of the slope of the side cutting.

This, however, is not the case, the land is taken throughout for a double line, and no side cutting or other work must interfere with the after construction of the works required for a double line. The top of the slope of the side cutting, therefore, at Menangle, must not, on the west side, be nearer to the foot of the slope of the embankment for the single line than seventeen feet (17 feet), leaving six feet from the foot of the slope of the double line when constructed to the top of the slope of side cutting.

No side cutting must be nearer to the foot of the slope of any embankment than six feet; care being always taken to leave the proper width in addition for the construction of the double line.

Yours, &c.,
JOHN WHITTON.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney 6 August, 1859.

SIR,

In reply to your letter of 6th August, wherein you say, "Relative to the land taken for cutting* at Menangle, I have to state that I can see no sufficient reason for making the alteration you suggest."

When I agreed with the Government, it was well understood that every facility was to be given me for carrying on these works. I beg to inform you that I am sure that any person

* "Side" cutting in the original.

person who has a knowledge of these works, would see quite sufficient reason for making the alteration suggested in my letter of the 3rd.

I will thank you to send us cross sections where side cuttings are to be made, &c., as on this occasion, through your plan not indicating sufficiently the dimensions, we have made a mistake.

I am thoroughly persuaded the works will not be executed with any expedition or any harmony until you put resident engineers on the line; and I here beg to inform you that I have expressed myself to this effect to the Government.

I am, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 6 August, 1859.

SIR,

In setting out the line your pegs are set out for the centre of the double line. Please give us a cross section, shewing the position of the double line, so that we can calculate always from the centre pegs. Also to give us the distances from tops of slopes to bottoms of embankments to the fencing.

In fact a general section of the cross section of the line from fence to fence.

We are, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 6 August, 1859.

SIR,

I have again been over the line, from Penrith to Blacktown, and have not seen one of your assistants. I will not here enter into discussion on this matter, but I will again observe that I think it would be so beneficial if you and I together went over the line, that you may see and hear my explanations of how matters are.

Whatever arrangements you and I make verbally can be put in writing, and placed in just the same official position as though emanating primarily from your office in Phillip-street.

I am, &c.,
(For Peto, Brassey, and Betts.)

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 8 August, 1859.*

SIR,

In reply to your letter of the 4th instant, asking to have the distances from the fencing to the top of the slopes "stated" on the cross section for cuttings and embankments, I have to refer you to the plans of the lines in your possession, which will shew you the impossibility of my being able to give, on a general section, the information you request.

The land is principally taken parallel to the centre line of railway, and as the distance from the fencing to the slopes of both cuttings and embankments must vary with the depth of the former, and height of the latter, the information you ask for would not only be useless, but might lead your agents into the commission of very serious errors during the construction of the works. In addition to which I may observe, that as the fencing and the slopes of cuttings and embankments are all set out for you on the Western Line, and are now being set out on the Southern Line, this information, even assuming that it could be supplied, is not necessary.

Yours, &c.,
JOHN WHITTON.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 8 August, 1859.*

SIR,

With reference to your letter of the 6th instant, relative to your request that I should accompany you over the Penrith Line, I have little to add to my letter of the 4th instant on this subject.

The pressure of important duties will not allow of my leaving Sydney at present, nor do I see that by so doing I could render you any assistance on the ground that I cannot give you here.

In

In reply to the statement that you "have again been over the line from Penrith to Blacktown, and have not seen one of your assistants,"—

I have to remark that Mr. Burrows has been engaged upon the Penrith Line from July 6th to 12th, from July 15th to 19th, and from the 25th July to 2nd August; that during these periods you have not been over the line, to Mr. Burrows' knowledge, except on two occasions, and that you have not applied to him for any information relative to the works.

Mr. Hall is now on the Penrith Line, and will report to me if any information be required by you which he is not in a position to furnish.

Yours, &c.,
JOHN WHITTON.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 9 August, 1859.

SIR,
Will you be so good as to let us have the borings of the cuttings on the Penrith and Picton Line.

We are, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

Railway Branch,
Department of Internal Communication,
Sydney, 10 August, 1859.

SIR,

In reply to your letter of the 6th instant, requesting to be furnished with cross sections of the proposed side cutting at Menangle, I have to observe that such information is not at all necessary to enable you to carry out the works. Probably it will be advisable for me to recapitulate the information with which you have been already supplied.

1. The centre of the double line of railway is staked out on the ground, the stakes being 22 yards, or 1 chain apart.
2. A working section (accompanied by a general plan) has been furnished to you shewing the height of each stake above the datum, and the height of the formation at each stake above the datum.
3. The height of embankment or depth of cutting, at each stake, is figured on the section.
4. A complete disposal of all the earthworks was forwarded to you with the working section.
5. The width of fencing has been set out for you on the ground.
6. The slopes of all cuttings and embankments (for the single line) have been, or are being, set out for you on the ground.
7. The centre for the single line is stated in the specification to be 5 feet 6 inches (for the Southern Line) on the east side of the stakes for the double line; I also stated this to you in my letter of July 30th, and this information is given on the working drawings of the bridges.
8. I also informed you by my letter of the 6th instant in reply to yours of the 3rd instant, that the side cutting was not to be commenced, on the west side, nearer to the foot of the slope of the embankment for the single line than (17 feet) seventeen feet, leaving 6 feet from the foot of the slope of the double line, when constructed, to the top of the slope of side cutting.

More complete information than you have already obtained it is impossible to give, and I can do nothing further to assist you unless I send some one to discharge the duties exclusively belonging to yourself as contractor.

Yours, &c.,
JOHN WHITTON.

MR. W. H. QUODLING to AGENT OF SIR S. M. PETO & Co.

Railway Branch,
Department of Internal Communication,
Sydney, 11 August, 1859.

SIR,

I have been directed by the Engineer-in-Chief to forward to you the under-mentioned drawings of viaducts for Contract No. 2, Great Western Railway, Parramatta to Penrith; and also to request, that you will be good enough to acknowledge their receipt at your earliest convenience, viz. :—

	M.	C.
No. 23. Eastern Creek Viaduct at	11	8
24. Rope's Creek do. „	14	67
26. South Creek do. „	16	63
27. Viaduct..... „	16	76
28. Do. „	18	58

Yours, &c.,
W. H. QUODLING.

RAILWAY EXTENSION CONTRACTS.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 11 August, 1859.

RECEIVED from the Department of Internal Communication, Drawings, viz. :—

	M.	C.
No. 23. Eastern Creek Viaduct at	11	8
24. Rope's do. do. „	14	67
26. South do. do. „	16	63
27. Viaduct	16	76
28. Do.	18	58

A. RHODES,

(Per R. W. Ferguson.)

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 12 August, 1859.

SIR,

I have to acknowledge the receipt of the undermentioned drawings of viaducts for Contract No. 2, Great Western Railway, Penrith to Parramatta, viz. :—

	M.	C.
No. 23. Eastern Creek Viaduct at	11	8
24. Rope's do. do. „	14	67
26. South do. do. „	16	63
27. Viaduct	16	76
28. Do.	18	58

for which I am obliged.

I must again remind you, that I have not been furnished with the lengths of the piles for bridges, and inform you that it will be quite impossible for me to proceed with these portions of the works until I am furnished with this information.

I am, &c.,

(For Peto, Brassey, and Betts,)

A. RHODES.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

Railway Branch,
Department of Internal Communication,
Sydney, 15 August, 1859.

SIR,

In reply to your letter of the 12th inst., relative to the lengths of the piles for the bridges, I beg to refer you to my previous letters on this subject.

Yours, &c.,

JOHN WHITTON.

MR. WM. MASON to AGENT OF SIR S. M. PETO & Co.

Railway Branch,
Department of Internal Communication,
Sydney, 16 August, 1859.

SIR,

I intend going over the Penrith Extension on Thursday, and over the Menangle Extension on Friday next, for the purpose of measuring up your works for certificate.

I am, &c.,

WM. MASON.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 24 August, 1859.

SIR,

I regret to be obliged to write so frequently, but I consider it my duty to keep you informed as to what is going on on the works.

Sometime since you promised to send one of your engineers to put a large bench mark at the end of each cutting, on the Penrith and Picton Extension. This has not yet been done. The slopes are not set out between 32 miles 20 chains and Picton. I observed, yesterday, when at Penrith, that Mr. Burrows had set out a culvert at 19 miles 50 chains, and when the foundations were got out, Mr. Hall altered and changed it to another place. Who is to be responsible for these changes made by your people? It is quite impossible for me to get on with road approaches, river diversions, cuttings, &c., unless you give orders to your assistants to have them set out.

You wrote me to the effect that any information, &c., I wanted at Penrith, I should get from Mr. Hall. He states that he has no orders to set out road approaches, river diversions, side cuttings.

I have not as yet received the drawing for the fencing.

We

We will thank you for the plan of level crossing gate and specification.

On the 9th August we asked you for the borings of the cuttings on the Penrith and Picton Line, and have not since heard from you.

Will you be kind enough to let us have cross sections of every cutting on the Picton and Penrith Extension. This I want to compare with you, so that at final measurement we may agree as to quantities.

We want rails and chairs for temporary purposes, on the Penrith and Picton Extension, for two miles long.

Will you please give orders to have them sent to Parramatta.

We are, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

Mr. Hall states that Mr. Rhodes had no conversation with him on this subject, or asked him for any information. Mr. Hall further states that Mr. Rhodes has only been once over this extension between the 8th of August and 3rd September, and that he has not applied to him for any information.

J. W.
Sept. 5, 1859.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 24 August, 1859.

SIR,

I beg to call your attention to the subject referred to in the copy of a letter at foot received from my agent at Campbelltown.

Yours, &c.,
(For Peto, Brassey and Betts,)
A. RHODES.

Campbelltown, 24 August, 1859.

Dear Sir,

We require starting levels, width of slopes, fence widths, &c., on the Menangle and Picton Extension. Mr. Corby can find three bench marks up to Douglas Park, and he cannot find any for the cuttings that are commenced. There are none given from Douglas Park to Picton.

A. Rhodes, Esq.

Yours, &c.,
G. THORNTON.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

Railway Branch,
Department of Internal Communication,
Sydney, 26 August, 1859.

SIR,

I forward per bearer the undermentioned drawings, and I shall feel obliged if you will acknowledge their receipt at your earliest convenience, viz. :—

Great Western Railway :—
Parramatta to Penrith, Contract No. 2.
Drawing No. 22 (Culverts).
Do. No. 25 (Bridge at 14 m. 7 chs.)

Great Southern Railway :—
Menangle to Picton, Contract No. 6.
Drawing No. 6 (Culverts.)

Yours, &c.,
JOHN WHITTON,
(Per W. H. Quodling.)

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 26 August, 1859.

RECEIVED from the Department of Internal Communication :—

Drawing No. 22 (Culverts), G. W. Railway, Parramatta to Penrith.
Drawing No. 25 (Bridge at 14 m. 7 c.), Parramatta to Penrith.
Drawing No. 6 (Culverts), G. S. Railway, Menangle to Picton.

Yours, &c.,
A. RHODES,
(Per R. W. Ferguson.)

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 26 August, 1859.

SIR,

Will you please be so good as have sent to Campbelltown,—
1,760 lineal yards Barlow rails, equal to 880 yards of road.
3,500 chairs (ordinary).
4,000 spikes for do.

We are, &c.,
(For Peto, Brassey and Betts,)
A. RHODES.

ENGINEER-

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 30 August, 1859.*

SIR,

In reply to your letter of the 24th instant, enclosing a copy of a letter from G. Thornton, wherein it is stated that there are only three bench marks up to Douglas Park, and "none given from Douglas Park to Picton," I have to remark that on this length (Menangle to Picton) there are upwards of a thousand, and the level of each is given on the working section, and the position of each is clearly shewn on the ground.

Yours, &c.,

JOHN WHITTON.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 31 August, 1859.*

SIR,

I have to acknowledge the receipt of your letter of the 24th instant, a reply to which has been delayed in consequence of my absence from Sydney. The levels have been transferred from the centre stakes to side stakes at each cutting between Menangle and Douglas Range, and as the works advance level stakes shall be put in at such places as may be necessary on other portions of these lines. This transfer of levels does not at all interfere with the progress of the works, and is not therefore immediately necessary.

The specification for the fencing was given to you early in June, and on the 2nd June I wrote to you to say that the drawing for the fencing could be seen at this office.

The drawings of the level crossings and gates which you request to be furnished with, I lent you for the purpose of copying on the 20th June, and they were returned to me from your office on the 5th August, but I have not yet received from you any offer for their construction.

The cross sections of the cuttings which you ask for are not at all necessary to enable you to carry on the works, and as my assistants are fully occupied, I am unable to undertake any unnecessary work.

With reference to the rails required by you for temporary purposes, I have to state that there are no rails at present that can be lent to you for this purpose.

Yours, &c.,

JOHN WHITTON.

MR. W. H. QUODLING to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 2 September, 1859.*

SIR,

In compliance with the request contained in your letter of the 24th ultimo, I am directed by the Engineer-in-Chief to forward herewith a list of the borings of the cuttings from Menangle to Picton.

Yours, &c.,

W. H. QUODLING.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 2 September, 1859.

SIR,

Some time since, you were so good as to say you were responsible for all levels given to us in your sections.

We will thank you to give us a note to that effect.

When Mr. Cross was levelling from Menangle to Douglas Park, you said there was no necessity to check the levels.

We are, &c.,

(For Peto, Brassey, and Betts.)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 5 September, 1859.

SIR,

We wrote you on the 1st June, saying—"It appears to us that, instead of putting wooden bridges between 20 m. 40 c. and 23 m. 10 c., bridges might be built of brick,* at almost the same cost; the brick being permanent, the wood only a twenty-years' job, which will hereafter involve the Government in considerable expense."

We

* "and at" in the original.

We have your answer the same date, wherein you say—"If you will build these " bridges * to my satisfaction, and at the same cost as they would be † executed according " to the drawings furnished to you from this office, I have not the slightest objection " to your doing so."

Again, on the 6th June, you say—" ‡ In reference to my verbal § agreements with " you, || I have to request that a drawing may be furnished to me, shewing in detail, the " bridge you propose to build in brick, before any portion of the work be commenced; no " alteration whatever must be made in any of the drawings forwarded to you, unless you " receive ¶ a written permission to do so."

After looking at the sections sent us lately, we have no hesitation in saying that the enclosed section of culvert is more than amply sufficient to take away the water in the different creeks between 20 m. 40 c. and 26 m. 15 c.

We beg to offer to make the culverts, the same size as by the enclosed section, instead of the wooden bridges; and whatever deficiency of earthwork there may be for the banks we will make good.

In short, we will substitute the alteration (according to section delivered to us, between Campbelltown and Menangle) for the same amount that the proposed wooden viaducts will cost.

Thus the Government will have permanent works, and at the same price, instead of works of comparatively short duration.

We may mention that, judging from the tenor of your favor of 1st June, above referred to, we have had bricks made in anticipation of your order for the alteration.

We are, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

ENGINEER-IN-CHIEF to AGENT of SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 6 September, 1859.*

SIR,

I have to acknowledge your letter of the 5th instant, enclosing a tracing of a brick culvert, and requesting permission to substitute such culverts for the timber viaducts to be constructed between Campbelltown and Menangle.

I must observe that the verbal arrangement into which I entered with you was that, if you desired to construct the viaducts required of brick in place of timber, I should make no objection, provided the brick viaducts afforded equal waterway and accommodation with the timber ones, were not more expensive, and were constructed to my satisfaction. Previous to taking any steps in the matter you were to have furnished to me a plan of the viaducts proposed by you, but this has not been done.

The arrangements I made I am still prepared to carry out, provided a plan be submitted by you, and sanctioned by me, before any works are commenced, as already agreed to; but, at the same time, I must be permitted to observe that you have never directly, or indirectly, received any communication from me to lead you to supply the bricks which, you state, you have provided for these viaducts.

While consenting, on the terms above-named, to the substitution of brick for timber viaducts on the line from Campbelltown to Menangle, I beg to inform you that, in future, no deviation will be allowed from the plans furnished to you from this department.

Yours, &c.,
JOHN WHITTON.

ENGINEER-IN-CHIEF to AGENT of SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 6 September, 1859.*

SIR,

In reply to your letter of the 2nd instant, I have to remark that I consider myself responsible for the accuracy of the levels shewn on the working sections in this office, a copy of which has been furnished to you; but, on the other hand, you are responsible for the correctness of the works under the following clause in your specification:—"The works " will be set out for the contractor, but he must satisfy himself of their accuracy, as no work " incorrectly set out or improperly executed will be paid for by the Commissioner."

If, therefore, you have any doubt as to the accuracy of the levels which have been furnished to you, it would probably be advisable to satisfy yourself on this point before proceeding with the works.

I am, &c.,
JOHN WHITTON.

AGENT

* "in brick to" in the original.
† "if executed" in the original.
‡ "With reference."
§ "verbal arrangement."
|| "with you on Saturday last, relative to the substitution of a brick for a timber bridge on the " Menangle Extension," in the original.
¶ "receive from me" in the original.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 9 September, 1859.

SIR,

We wrote you on the 24th August, for plan of level-crossing gate and specification. We wish to know what timber will be required for these gates, and we presume they are to be of different sizes.

As, no doubt, you have only one price for everything which has to be done, we will thank you to favor us with your prices, and if we can make them for the prices we will do so.

By doing this you will save both trouble and correspondence.

Yours, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 9 September, 1859.

SIR,

When I undertook the ballasting at the price, it was mutually agreed between us that any stone or ballasting I might find in the cuttings I might have it for ballasting or any other purpose. At the same time I was to make up the deficiency (in consequence of taking away stone or ballast for any purpose) by going into side cuttings, the paying for land.

Will you please, therefore, give me a note to this effect, to prevent any dispute hereafter.

I am, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 9 September, 1859.

SIR,

Sometime since you mentioned to me that you would use hard stone bonded into brickwork for the Menangle Viaduct, if it could be done at the same price as brickwork.

I think I have found stone that will suit at about 3 miles off; and if you accept the stone, I will do the work at the same price as the brickwork.

I should be obliged if you would give this your earliest convenient attention, as this is the best time for cartage, and the stone is three miles distance.

I may here suggest, that when stone can be found as cheap as brick in similar cases to the foregoing, and where it would make as good a job, your permission for me to use it in lieu thereof would speed the work.

I am, &c.,
(For Peto, Brassey, and Betts,)
A. RHODES.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 9 September, 1859.*

SIR,

In reply to your letter of this day's date, I have to state that I have no objection to your making use of stone or any other materials, for the purpose of ballasting, which you may find in any of the cuttings, provided that such stone or other material be approved by me before being so used, and any deficiency in the banks caused by such use of stone or other material being in all cases made up entirely at your own expense from side cutting.

It must be understood, also, that stone or other material found in the cuttings is to be used only in the construction of works appertaining to your existing contracts with the Government, and, as the stone or other material which may be used for ballasting, &c., must be deducted from the quantities in the cuttings, I have to request that it may be stacked, at your own expense, in some convenient form for measuring, so that there may be no unnecessary difficulty in ascertaining the exact quantity to be deducted.

Yours, &c.,
JOHN WHITTON.

ENGINEER-

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 14 September, 1859.*

SIR,

I have to acknowledge your letter of the 9th instant, relative to the Menangle bridge, and in reply to state that it is my intention to build the piers of this bridge entirely of stone, provided it can be obtained of suitable quality.

If, therefore, stone of good quality and subject to my approval, can be obtained, and the work be executed to my satisfaction, and at the same price as brickwork, I have no objection to the proposals named in your letter.

I think it highly probable that stone of good quality may be found beneath the top bed in the Menangle River, but this can be easily ascertained.

Yours, &c.,
JOHN WHITTON.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 14 September, 1859.*

SIR,

I have to acknowledge your letter of the 9th instant, and in reply to state that, in answer to your letter of the 24th August, relative to the plan of the level-crossing gates, I informed you that on the 20th June I lent to you these drawings for the purpose of copying, and that you returned them to me on the 5th August.

In your letter of the 9th instant you again apply for these drawings, and assuming, therefore, that you have made no copies, I have given instructions for copies to be made, with a specification attached, which shall be forwarded to you as soon as completed.

I may be permitted to state that every necessary information for the making of these gates was given on the drawings furnished to you on the 20th June.

Yours, &c.,
JOHN WHITTON.

AGENT OF SIR S. M. PETO & Co. to ENGINEER-IN-CHIEF.

Sydney, 15 September, 1859.

SIR,

I am much surprised that you should write me, 14th September, that you intend building the piers of the Menangle Viaduct "entirely of stone," when you must be aware that the bricks are made and now carted on to the spot for this viaduct.

In my letter of the 9th I state I can get good hard stone to bond into brickwork three miles distance. As I said before, you stated that this plan you would adopt, and, should you now depart from your previous intention as stated to me, I expect the Government will pay us for any loss we may sustain by making this alteration.

Yours, &c.,
(For Peto, Brassey, and Betts.)
A. RHODES.

MR. W. H. QUODLING to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 15 September, 1859.*

SIR,

I am directed by the Engineer-in-Chief to inform you that Mr. Mason will commence to measure the works on the Western Line on Monday next, the 19th instant, and that he (Mr. Mason) will leave Sydney by the 10 a.m. train on that day.

Yours, &c.,
W. H. QUODLING.

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 19 September, 1859.*

SIR,

In reply to your letter of the 15th instant, relative to the Menangle Bridge, I have to ask that you will be good enough to cause to be pointed out to the Inspector of Works the number of bricks you have had made, the number carted on to the spot, and the number now being made for the purpose of building the piers of this bridge.

Yours, &c.,
JOHN WHITTON.

ENGINEER-

ENGINEER-IN-CHIEF to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 19 September, 1859.*

SIR,

In reply to your letter of the 15th instant, relative to the use of stone found in the cuttings for ballasting, I have to state that as your request involves a question of price, I have referred your letter to the Commissioner.

I take this opportunity however of stating, that no verbal arrangement was ever made by me sanctioning your use of stone from the cuttings for the purpose of ballasting, on the understanding that you would be paid for stone so used as excavation to embankment. Neither was the price arranged with you for the ballasting arrived at on any such assumption.

Yours, &c.,
JOHN WHITTON.

MR. W. H. QUODLING to AGENT OF SIR S. M. PETO & Co.

*Railway Branch,
Department of Internal Communication,
Sydney, 21 September, 1859.*

SIR,

I am directed by the Engineer-in-Chief to forward you copies of the drawings for public road and occupation gates and level crossings, accompanied by a specification, and to request that before commencing these gates you will send in a written tender, stating the price at which you propose to execute the work for each description of gates and crossings.

Yours, &c.,
W. H. QUODLING.

1859-60.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY EXTENSION CONTRACTS.

(PAPERS FORMING A PORTION OF THE CORRESPONDENCE WITH MR. RHODES, AS AGENT
OF SIR S. M. PETO, & CO.)*Ordered by the Legislative Assembly to be Printed, 18 April, 1860.**LETTER from Mr. Rhodes to Captain Martindale, R. E., 13 February, 1860, with
observations thereon by Captain Martindale, R. E., and Mr. Whitton, C. E.**Sydney, 13 February, 1860.*

SIR,

I have to acknowledge the receipt of your letter of the 18th ultimo, enclosing a report from Mr. Whitton in reply to my letter of the 24th November, in which you inform me that Mr. Secretary Eager directs you to observe, that I have had facilities and met with considerations as no other contractor for Railway Works in this Colony has had, and all consistent with the duty of the Commissioner to afford.

As this opinion must necessarily be based upon the report of Mr Whitton, and on the assumption of its veracity, I am not astonished that the Secretary for Works should have arrived at this conclusion. If, however, I shall prove to his satisfaction that the whole of Mr. Whitton's report is untrue, I shall hope for a different reply.

I will now therefore address myself to Mr. Whitton's report, and reply to each paragraph *seriatim*.

Whitton's Report:—

No. 1.—The endeavor to justify his statement that the works were practically suspended, by quoting the amount of certificate for work done, is not only untrue as to the alleged facts, but erroneous as to the inferences deducted therefrom if true.

Mr. Whitton has omitted to report that I claimed to be paid for several thousand pounds more than this certificate for work which he refused crediting me with, on the ground that such work was not completed². Therefore work might have been performed, and material purchased for that work, to the extent of £10,000, although the work might only be completed to an extent which would only allow me to get a certificate for £5,000. If I had been furnished with the plans to which I was entitled from the Engineer such work would have been completed³.

No. 2.—When I stated that I had 700 men on the works, I did not do so without a proper knowledge of the facts, and had the engineer taken those steps to ascertain the number of men, which any party acquainted with works of this nature would have done, he would have found my statement as to number correct⁴. The returns made by my timekeepers gave the number, and it is in accordance with my pay-sheet of that date. I cannot see why
Mr.

1. This is the fact.—B. H. M. 22/2/60.

2. Mr. Rhodes claimed to be paid for the following items:—

Materials, &c., bought in Sydney	£ 5,766	6	7
Horses	1,940	0	0
Harness, &c.	150	0	0
Materials from England	12,530	0	0
	£20,386	6	7

Not one farthing of which amount was he entitled to under the conditions of his contract, and consequently I refused to certify for any portion of such sum.—J. W. 22/2/60.

3. This statement is untrue.—J. W.

4. Whatever Mr. Rhodes' pay-sheet may shew there was not upon the works a greater number of men than stated in my report, dated Dec. 6/59.—J. W.

Mr. Whitton should endeavor to shew my losses; and although in his statement of £1,731 11s. 1d. loss for one month he happens to be nearly correct, though the data on which he forms his judgment are incorrect, and comes with a bad grace from him, as the losses referred to result mainly from the annoyance and obstructions put in my way by him.⁵

Mr. Whitton's statement as to the number of men, is on a par with his general conduct; and though I am willing to believe he has been misled, it only shews how readily he grasps at anything to my prejudice. The attempt to fix me with falsehood thus recoils on himself.

No. 3.—It is inconceivable how Mr. Whitton should persist in stating that every facilities have been given to me to enable me to carry on the works. This I will, once for all, solemnly deny, and the following facts will, I trust, substantiate my statement that I have met with invariable obstruction from the department. And that wherever the performing any work could be so ordered, that a loss, or even less gain to myself, would be the result, it has been done, even although that result has entailed a greater expenditure to the Government.⁶

I must premise that in the first instance Messrs. Peto & Co. were invited, by negotiations entered into between the Government and Mr. Gabrielli, and by letters subsequently sent to that firm by Captain Martindale.

Those letters enclosed plans, specifications, and not only schedules of prices which the Government Engineer had furnished, as being his estimate, but schedules of prices of former contractors, which shewed the sums received by them. They also enclosed copy of the agreement which the Government were willing to sign, had Mr. Gabrielli possessed sufficient authority to bind them.

Trusting to the good faith of the Government, Messrs. Peto & Co. sent me out as their agent, with sufficient power to accept the contract; naturally presuming that, as the Government were willing, and had offered to pay these prices to Mr. Gabrielli for them, had he been in a position to close, their agent would be entitled to the engineer's prices as a minimum.

On my arrival here, I offered to the Government to perform the works at these prices; but the Chief Engineer interfered; and the Government, feeling themselves bound, I presume, by his decision, offered me considerably less than their prices'. As I expected considerable shipments of plant, and hoping that this would be but a preliminary to further large undertakings, I accepted the reduced offer as to price, on the assumption, as stated in my letter, that I should be in a position to commence immediately⁷; the only chances of profit at these altered prices being grounded on that stipulation, which would have enabled me, by the speedy execution of the works, if not to realise any profit, at all events to protect Messrs. Peto and Co. from loss.

Having now entered into the agreement, the first obstruction I encountered at the hands of the Engineer—an obstruction as ruinous as unexpected—was his systematic objection to the supply of rails; knowing full well that without these the work could not be performed except at a loss to Messrs. Peto and Co. fearful to contemplate⁸.

In proof of this assertion I will call your attention to my letter of the 2nd April, 1859, in which I stipulated as follows:—"Sir S. M. Peto to have the option, &c., and be "allowed the use of all such rails and chairs belonging to the Government as may be by "them required." And in his reply of the 15th April, Captain Martindale says the Government will allow Sir S. M. Peto and Co. the use of such rails and chairs as they can spare, on payment of 10 per cent. per annum on their value, and on condition that any rails or chairs destroyed or rendered useless, shall be paid for at their cost to the Government⁹.

From conversations I afterwards had¹¹, I discovered that the Engineer's interpretation of this letter was, that I was to have the use only of the old and not the new rails. This was not affording me much facility; but, in order to prevent any doubt, I wrote in my letter 19th April, 1859, as follows:—"In agreeing to this clause I do so on the assumption "that the Government will send for and procure the rails which will be necessary for the "line at once, in order that I may have sufficient to proceed with the work."

Long negotiations took place, the Chief Engineer opposing the granting of the rails by every means in his power; but ultimately the Minister of Lands and Works agreed (see his memo. attached to my letter, 21 April),—"That I should be entitled to all such rails "and

5. This statement is simply untrue.—J. W.

6. This paragraph is wholly untrue.—J. W.

7. The negotiations were carried on from the first with the Government direct.—J. W.

8. Incorrect. The Menangle Extension was offered to Mr. Rhodes before he was prepared to receive it, and, had it not been for the plant sold to him by the Government, weeks must have elapsed before Mr. Rhodes could have gone on with the works. His own plant did not arrive till long after the contract was taken.—B. H. M. 23/2/60.

9. Mr. Rhodes has on the Southern Line rails, lent to him by the Government, equal to 6½ miles of *single way*, and on the Western the rails lent to him for temporary purposes are equal to 4 miles of *single way*; the total, 10½ miles of *single way*, with chairs, fish plates, bolts, &c., representing a capital of over £15,000. With such assistance any contractor in the Colony would be able to carry on these works more expeditiously than is now being done by Mr. Rhodes, and *far* more satisfactorily.—J. W. 23/2/60.

This is untrue. Mr. Rhodes has always had a larger supply of rails than he could use, and was from the first, and throughout, informed that he could not have the use of the permanent way rails for temporary purposes.—J. W.

Mr. Rhodes was, from the very first, informed he would not be allowed to use the permanent rails for temporary purposes.—B. H. M. 23/2/60.

Mr. Rhodes has, at this very time, lent to him *alone* for temporary use, rails, chairs, &c., to the value of upwards of £15,000.—B. H. M. 23/2/60.

10. In the correspondence it is distinctly stated that Mr. Rhodes shall not use the rails, ordered from England for the permanent way, for temporary purposes, and Mr. Rhodes took these contracts with the full knowledge that these rails were not to be used for the temporary way.—J. W.

11. Incorrect.—B. H. M. 23/2/60.

"and chairs as might be in the possession of the Government, and necessary to the carrying out of the works, including those which had already been sent for the permanent way, and which might not be required by the Government, upon the terms previously arranged."

This agreement, entered into with the Minister for Lands and Works, might reasonably have been deemed conclusive on the subject; but the Engineer, with that *extreme* desire to afford me every facility to which he lays claim, repudiated the Minister's agreement, and in his letter of the 23rd April¹² agrees to all the agreement entered into with the Minister "except the 4th paragraph—(that relating to the rails)—to which the Government," he proceeds, "could not accede, but they were prepared to render me such facilities as they could."

Independent of the positive agreement entered into, you are doubtless aware that no contractor could make a railway, if he had to buy rails, unless he charged a corresponding large price to the employers, and that in England, and all over the Continent¹³, it is the invariable custom to allow the contractors the use of rails without charge. The rails suffer no damage, and the works are greatly expedited¹⁴. It did, therefore, appear to me strange that such an objection should have emanated from the Engineer. It shewed one of two things, either that he was unacquainted with the ordinary custom or that he wished to impede me in my operations.

Again I yielded, but upon the strong and repeated assurance that we were to meet with every facility from the Government¹⁵.

After commencing the work, I applied repeatedly for rails for temporary purposes without obtaining them; I then applied for rails generally, intending to lay them on the permanent way as fast as the road was ready for formation, and with the intention of using them for expediting the works¹⁶. Some of these were sent at my request to Campbelltown; I engaged one hundred horses and carts to cart them, but no sooner had I commenced than I was, "with that extreme desire to afford me every facility," endeavored to be stopped by one of the superintendents on the line¹⁷. I could not, without immense loss, discharge all my men, horses, and carts procured for the occasion, and therefore persisted in going on, satisfied that the Government would never sanction a course so improper and suicidal. For this, in consequence of a statement from the Engineer's department, suppressing many important facts,¹⁸ I was informed the Government, had directed the Crown Solicitor to proceed against me; I appealed to the Government, and the result was, that in consequence of my having put the whole matter before them, the Crown Solicitor was instructed not to sue.

Of course I was obliged to break up the whole arrangements as to carters at a very great loss; still, however, no rails were furnished, and on complaining to the Minister for Lands and Works, he informed me that the Engineer's department had represented that they had given me 1,000 tons of rails. This was not the fact, as 200 tons only had been delivered. Finding I could get no rails, and that I was only incurring an useless expenditure, I was obliged to discharge 150 men, who might but for the obstruction have been most profitably employed¹⁹. If this be affording "every facility," I do not understand the meaning of the words.

Subsequently, owing to repeated applications and conferences with the Government, Mr. Whitton has been compelled to comply with the terms of my agreement as to rails; but the compliance has been so reluctantly yielded that I am justified in asserting, that so far from the Engineer having manifested a desire to afford me every facility, he has interposed every possible obstacle to my carrying on the works with advantage²⁰.

I now leave the question of rails, and beg to call your attention to the delivery of the plans, in which matter I am able to make it appear that I have experienced the same consistent course of obstruction.

In my letter of the 19th April, I stated that I agreed to the time within which the works were to be completed, assuming *all the plans were ready for immediate operation*. The great importance I attached to this question of time is further illustrated by my letter to Captain Martindale, containing the final arrangement as to this matter in the following words:—"I also accede to paragraphs 4, 5, and 6. I agree to the time within which the works are to be completed, assuming that *all the plans and the lines* are now ready for immediate operations."

In reply, dated the 21st April, Captain Martindale informed me that, "All the information necessary to enable me to make my arrangements for proceeding with the

" works

12. This letter was not, as stated by Mr. Rhodes, written by me, but by the Commissioner.—J. W. See my letter dated 23 April, written by direction of the Government, and Mr. Rhodes' letter, dated 23 April; also my letter dated 10 September 1859, 3rd and following paragraphs.—B. H. M. 23/2/60.

13. "In England, and all over the Continent," the use of permanent way rails, for temporary purposes, is always a matter of agreement. In this instance the correspondence with Mr. Rhodes will shew that the agreement between him and the Government was, that he should not use for temporary purposes the rails ordered from England for the permanent way. Now that the works are in progress Mr. Rhodes repudiates his agreement, and insists that he has a right to the free use of *all rails* that he may require for temporary purposes.—J. W.

14. This statement is untrue, as the rails are seriously damaged.—J. W.

15. The permanent way rails being excluded from use.—B. H. M. 23/2/60.

16. A perusal of the correspondence will shew the varying nature of the statements made by Mr. Rhodes in reference to the use to which he intended to put the rails. The rails were always supplied either for permanent use, or temporary use, never for general purposes.—B. H. M. 23/2/60.

17. Mr. Rhodes was stopped because, in defiance of the remonstrances of the officer in charge of them, he took for temporary use rails supplied at his own request for permanent use.—B. H. M., 23/2/60.

18. This is untrue.—J. W.

19. This statement is wholly untrue.—J. W.

20. This statement is most untrue.—J. W.

The rails in question were subsequently granted to Mr. Rhodes for temporary use, on his applying for them for that specific purpose, and would have been so in the first instance had he so applied for them.—B. H. M. 23/2/60.

" works could be at once supplied me, and that the plans and sections would be placed in my hands as required, so that our operations would not be delayed²¹."

This stipulation was not, nor is it to the present day complied with, for reasons which I will hereafter shew.

On the 21st April it was agreed between me and the Minister (see my letter of that date, and his memo. attached) that, " The Government undertook to deliver over immediately the five miles Menangle Extension—to furnish me with plans, and put me in possession of 15 miles of continuous railway within two months, and the plans and line for the remainder of the contract within three months."

The plans were not delivered within the first two months, nor within the three months, and some are wilfully withheld even to the present date²².

This is what Mr. Whitton calls affording " every facility."

I have no plan of the bridge over the Nopcan River to this present moment. I have contracted for a million of bricks, presuming I should be in a position to commence.²³ I have paid to the extent of £1,250 already for the purpose, besides my contract for the remainder. This bridge should have been half built by this time. We should not be losing interest on our money. I have applied over and over again for this plan, but in vain, although the Engineer has had since 19th April to prepare it.

If, however, I had any doubt of this plan being wilfully and for a particular motive withheld, it is entirely cleared up by Mr. Whitton's 10th paragraph; and I do feel astonished that this did not meet, at the hands of the Government, that reprobation which so reprehensible a proceeding demands.²⁴

It seems that Mr. Whitton intended to build the Menangle Bridge of a certain description, viz. :—Brick, with iron girders. He *now*²⁵ discovers that although we lose by our tender for woodwork and brickwork we have a modicum of profit on the ironwork, and he has no hesitation in stating that he intends to alter his original intention in consequence of this, and doubtless in order that we may be obliged to build a bridge, in the building of which he knows we must lose.²⁶ Indeed, in one of the conferences with the Government, when Captain Martindale gave his opinion that Mr. Whitton was wrong in not certifying for the iron at the prices in schedule, Mr. Whitton said in the presence of Mr. Want, my solicitor, " perhaps we'll treat you to a wooden one," meaning the Menangle Bridge.²⁷ I would ask whether this was a proper spirit to shew, and whether the carrying out of the intention to treat me to a wooden bridge is in accordance with Mr. Whitton's assertion.²⁸

That he affords us every facility, in fact, although he has been aware that I have been making bricks and that I have been anxiously waiting, week after week, demanding the plans, he now, eight months after the time, proposes an entirely new plan from that originally intended. Is this treating us fairly?²⁹

I have now to call your attention to another matter where I conceive Messrs Peto have been treated unfairly by the Engineer, and certainly does not support the assertion of treating us with every facility. In Capt. Martindale's letter of the 15th April, the following stipulation appears :—" The whole of the works, of whatever nature and description required in making the extensions herein, shall be included in the contract, and any work for which a price is not given in the schedule hereunto attached, marked A, shall be paid for at a price to be agreed upon at the time; but should the Government and the contractors not agree as to the prices, not specified in the schedule, the Government retains the right of otherwise executing the work."

We refused to accede to the latter portion of the paragraph, and proposed that the prices, in case of difference, should be left to arbitration. This was refused in the following terms :—" They consider that for any work which cannot now be settled, ample protection is afforded, by the power you possess of representing your views to the Government, at the time of fixing the rates."

The spirit, if not the legal construction, of that agreement is, that if the Government offered me a *fair price*, and I refused it, then the Government reserve the right to do those portions of the work for which a price was not fixed by the schedule.

The following are some of the prices offered to me, and I will put it to you whether they were fair prices, or were not such prices as would compel me to refuse.

Some fencing was required on the Northern Line, Mr. Willecox offered to do it for a price leaving him a very small profit; this was declined—and the Engineer caused inquiries to be made among the people, and I believe *sub-contractors*, at what they would perform it. The lowest offer which they could get (and of course the lowest price at which Mr. Willecox could get it done) was 8s.³⁰

In

21. This has been so supplied.—J. W.

22. See previous correspondence. But it may be well to observe, that to facilitate the progress of the works the Commissioner made arrangements with the landowners along the lines to permit the works to proceed without waiting for the usual period required before entering upon the lands.—B. H. M. 23/2/10.

23. Mr. Rhodes had no instructions to make those bricks, and made them entirely on his own responsibility.—J. W.

24. The whole of this matter, relative to the plans, I have previously fully replied to; it is, therefore, not necessary to enter into the question again.—J. W.

25. This is incorrect.—B. H. M. 23/2/60.

26. With reference to the iron bridge, Mr. Rhodes insisted upon being paid £60 a ton for the iron girders which, in England, would not cost more than £18. This was the cause of the change in the design, and the recent floods induce me to prefer timber.—J. W.

27. This statement is untrue.—J. W.

28. Mr. Rhodes has long known that a wooden bridge was to be built.—J. W.

29. The whole of this matter I have previously replied to.—J. W.

30. The negotiation relative to the fencing was carried on with Mr. Willecox, and not with Mr. Rhodes at all. Mr. Willecox stated he would not do the fencing under 10s. a rod; it is now being done for prices varying from 7s. 6d. to 8s. 3d. That Mr. Willecox might have no ground of complaint, he was informed offers had been received to do the fencing at 8s. per rod, and the work was again offered to him, under the instructions of the Government, at anything less.—B. H. M. 23/2/60.

In Captain Martindale's letter to Mr. Willcox, he informs him that 8s. was the lowest offer, and he proposes that Mr. Willcox should do it for something *less*, that is, he offers Mr. Willcox a price which the Engineer must have known could not be accepted. A similar offer was made to Mr. Willcox to take the contract for the work at Newcastle off the hands of the Government.

That Peto and Co. should pay the Contractor the amounts payable by the Government—undertake all the responsibility, supervision, and risk, and what were they to get? Why "*nothing*."

This was the Engineer's offer, and I mention it to shew the spirit exercised towards us.³¹ It is true that when the Government saw the absurdity of the offer they proposed to give me a per centage.³² It does not, however, destroy the sting of such a proposition, and is certainly a proof of the facilities afforded. If further proof were required of our not having received those facilities which Mr. Whitton contends, it is in the refusal to furnish us with plans, shewing the lengths of the piles, and the depths which they are to be driven, contrary to all custom in such matters.³³

The next matter relates to the using of any rock found in any of the cuttings on the line of road, for the purpose of ballasting the line. In every contract that I know of, it is taken as a matter of course, and not even asked for; but I thought it advisable to prefer that request here, and you will doubtless be as much astonished as I was at the reply.³⁴

The following was the request:—"That if, upon the line of road, I took out any rock that could be made available for ballasting, I might be at liberty, instead of throwing it into embankment, to use it for that purpose, *undertaking to put a similar quantity from side cuttings*, at Messrs. Peto's own expense." So that the Government would be placed exactly in the same position as if the rock had been put into the embankment and there buried; this, because it gave me a slight benefit (though no loss to the Government), was refused, except on terms so extortionate that it shewed no disposition to afford me every facility.³⁵

I complain that the Engineer has violated the contract, by giving instead of half mile leads, leads of in some cases above one mile and a half, and it must be apparent to every one if I have to cart the dirt for three times the distance agreed on, it must be at a great loss. Mr. Whitton has denied that he led me to suppose the leads were to be half mile. I fortunately have the draft schedule which he first prepared for me, in which, at my request, in his own handwriting, he says, "the leads are not to exceed half a mile."³⁶

Mr. Whitton can scarcely contend that this is affording us facilities. The next facility offered to us by Mr. Whitton was the refusal to certify for iron at more than 6d. per lb, although by the terms of the schedule it was 6½d.³⁷ I must do Captain Martindale the justice to say that he interfered and prevented the manifest injustice intended, and Mr. Whitton was ordered to allow 6½d. Now an Engineer can always, if he pleases, convert a contract from a profit into a certain loss to the contractors. Therefore, having kept back the plan of the bridge, he now proposes a wooden bridge, instead of the one originally proposed, in order that we may not get the profit on the iron which would have been placed in it.³⁸

I now come to the question of the fencing on the Southern Line. The fencing was done by me exactly the same as Mr. Gibbons on the Western Line, for which he has been paid. As soon as a portion of my fencing was done, I was told that it must be of a much stronger nature. Why there should be a difference between us I must leave you to decide. Either the fence on the Western Road is sufficiently strong or not,—if it is, then the same fence will answer on the Southern Line; if not, then it should not have been paid for. This is but a trifling matter, but only shews that in small as well as in large matters Messrs. Peto have met with obstruction where they ought to have received "every facility."³⁹

I offered to perform the ballasting and plate-laying at £1 per yard; this was thought too much, and on my shewing⁴⁰ the Engineer the manner in which it was done in England, and offering to do it here in the same way, an equally good road might be made for 17s. 6d., he agreed to the mode so proposed by me, and I so tendered.

The Engineer now contends that I must do it in the same manner as originally proposed, and for which I asked £1.⁴¹

The Government proposed I should give it up.⁴² I refused at first; but afterwards, rather than have any dispute about the understanding, offered to accede to their wishes.

No

31. This is untrue. I made *no offer*.—J. W.

32. There was no negotiation with Mr. Rhodes on this matter—the whole was with Mr. Willcox. The correspondence with Mr. Willcox will fully justify the course taken, and was by direction of the Government.—B. H. M. 23/2/60.

33. This matter I have previously replied to.—J. W.

34. Mr. Rhodes' contract is on a schedule of prices, and not a guaranteed one.—J. W.

35. To put this matter intelligibly:—Mr. Rhodes contracted with the Government to supply a certain article at a price agreed upon; but Mr. Rhodes finding that it would be more profitable to himself to keep this article for his own use, insists upon doing so, and charging the Government with its cost.—J. W.

36. The whole of this paragraph is untrue, and has frequently been replied to.—J. W.

37. Mr. Rhodes took his contracts on the same prices as those paid to Mr. Gibbons; and as Mr. Gibbons was only paid 6d. per lb. for pile shoes, I considered Mr. Rhodes was only entitled to the same price.—J. W. The Government afterwards allowed Mr. Rhodes 6½d.—B. H. M. 23/2/60.

38. This matter has been previously replied to.—J. W.

39. Mr. Rhodes contracted to put a different kind of fencing, and at a different price, but, as usual, took the first opportunity to violate the conditions of his contract.—J. W.

40. This is ludicrously untrue.—J. W.

41. This is untrue, Mr. Rhodes entered into a written contract, which he now declines to carry out.—J. W.

42. No; Mr. Rhodes proposed to give it up.—B. H. M. 23/2/60.

No sooner, however, had I agreed to this than I am told I am endeavoring to get released from my contract. I do not consider this as an earnest of the Engineer's intention to afford me every facility. Amongst other matters illustrating my statement that I have not been fairly treated is the offer to pay me 6d. for stacking the stone from the cuttings, whereas in England 1s. is always paid, and I should have to pay the workmen at least 2s. Again, as soon as I had laid in a good supply of hydraulic lime, considering the Government would use the best as well as the least expensive material, I am desired to use cement, by which the Government lose considerably; but, then, I also am a loser.⁴³ I offered to put substantial materials for the same price as unsubstantial and dangerous wooden viaducts, and it was refused, because it was said I would make a profit.⁴⁴

I deny this; but even if it were so, why should the Government go to an unnecessary expense because it might entail a loss on me.

The last evidence of Mr. Whitton's conduct to Messrs. Peto, is that of directing them to make the cuttings in rock perpendicular. Now in all the plans and specifications sent to England for Messrs. Peto's information, the cuttings were stated to be, not less than 1 to 1, that is, a slope on 1 horizontal to 1 vertical foot. There is not any single cutting in any of the lines perpendicular, and in the line made by the Government between Loochinvar and Maitland through rock, the cuttings are as stated in the specification. It is thus attempted to make me perform work we never anticipated, and which cannot now be done at contract price.⁴⁵

The amount paid by Messrs. Peto for these cuttings to the workmen is considerably in excess of the amount paid to them by the Government.⁴⁶

By this violation of their contracts the Government not only would get work done at a less price than Messrs. Peto pay; but, what is of more consequence, may get all the stone from the slopes for ballasting at a very small sum, and at Messrs. Peto's expense.⁴⁷

There are many other matters to which I could have alluded of a similar character, but I will not longer enlarge on the subject.

Finally, I come to the agreement and specification sent to me for signature, and whatever may have been the previous custom of the Government, I should have thought they would hardly have ventured⁴⁸ to ask me to sign an agreement (after all that had been brought under the notice of the Government as to Mr. Whitton) placing Messrs. Peto at the entire mercy of that gentleman, and that they could not recover one single farthing from the Government unless by his certificate,⁴⁹ which could be withheld at any time and without any reason; yet this is what the Engineer insists on. I trust I have now disposed of Mr. Whitton and his statement that he has afforded us every facility, and shewn what reliance is to be placed on his assertion.

No. 4.—I deny that it is the contractor's place to find the length of these piles; but this part of the Engineer's report is needless, as I stated in my letter to Captain Martindale, dated 30th December,—“We are proceeding with the bridges without the length of piles, under the conclusion that we shall be paid for all work not shewn on the plans as extra.”⁵⁰

No. 5.—I can prove that I have not had such rails as the Government could spare, and the rails we did have were obtained from the department after months of delay, and a correspondence wherein I entreated to be furnished with rails which I pointed out as lying idle, and suffering far more from rust than if they had been in use. Any person reading the correspondence between me and the Government, cannot fail to observe the studied and constant refusal to allow me the use of the rails, and that it was not until the Government compelled Mr. Whitton to give them to me, that I received any reasonable quantity.⁵¹

No. 6.—The observations of Mr. Whitton are extremely impertinent. Messrs. Peto & Co. would scarcely employ an agent at this distance with such powers as I have received, unless they were satisfied, from previous experience, of my ability to guard their interests.

No. 7.—No. 7 is answered by previous paragraph in answer to No. 3.

No. 8.—Mr. Whitton must be aware that my not being furnished with the plans must have put Messrs. Peto & Co. to great inconvenience and loss, and therefore, they have strong grounds of complaint on this subject.⁵²

No. 9.—I do not exactly understand what Mr. Whitton means by stating that I have not yet signed the “contracts,” as a contract has been made which consists of the Schedule of prices and the correspondence with the Government, and on such contract I proceeded with the works and have received payment on account. If, however, Mr. Whitton means that I should sign the specification and bond and contract afterwards tendered to me for signature, I reply that no contract has been tendered to me in terms of the agreement with the Government—that I have always been ready to sign any contract which shall embody those terms.⁵³

Mr.

43. Mr. Rhodes has built two culverts in what he calls hydraulic lime, and, as these are tumbling to pieces, it is not advisable to try it again.—J. W.

44. This is untrue, and has been previously replied to.—J. W.

45. This matter has been previously replied to.—J. W.

46. I have every reason to believe that this statement is incorrect.—J. W.

47. If Messrs. Peto & Co. carry out the ballasting and laying of the permanent way this rock can be made use of by them.—J. W.

This has been pointed out to Mr. Willcox.—B. H. M. 23/2/60.

48. 11.—B. H. M. 23/2/60.

49. Cannot now.—B. H. M. 23/2/60.

50. Mr. Rhodes will, of course, be paid for all work completed in accordance with his contract.—B. H. M. 23/2/60.

51. The whole of this statement is untrue.—J. W.

52. I am fully aware that such has *not* been the case, and that Messrs. Peto & Co. have no ground for complaint in this respect.—J. W.

53. I mean the usual bond and contract, embodying the conditions under which Mr. Rhodes accepted these contracts.—J. W.

Mr. Whitton has stated (I am informed) to several parties that "I should get nothing out of the contract if he could help it," and so his conduct towards me shews that the observation was not an idle one.⁵⁴

No. 10.—Any engineer who understands his business would make the drawings for the Menangle viaduct complete, either in brick, timber, or iron, in less than a week or two, and as eight months have now elapsed since I commenced the works, there is no excuse whatever for the design not having been furnished to me long ago. I object to the principle of the Engineer-in-Chief reserving to himself the right to execute work of any particular description, because the price agreed upon in the schedule will leave a profit, and substituting other description of work, at such other price set forth in the schedule as will cause me to sustain loss. The price in the schedule for ironwork, including bolts, nuts, and straps, is 6½d. per lb.; this of course means the large ironwork including the small, such as bolts, nuts, straps, &c., and although I have no objection to build this Menangle viaduct of any material the engineer wishes, yet I must ultimately be paid the profit on the iron girder bridge which was first proposed. Of course the withholding of the drawings has not interfered with the progress of other small bridges, but as this viaduct is the largest work on the line, it will require the most time for execution.⁵⁵ The large quantities of bricks prepared for this work are not used, and consequently not certified for. Mr. Whitton distinctly stated the Menangle viaduct would have brick piers with stone cutwaters, and wrought-iron top. I then proceeded to make the bricks, as of course they would be required.⁵⁶

No. 11.—I can in reply to this portion of the Engineer-in-Chief's report only reiterate what I previously stated in my letter to Captain B. H. Martindale, of the 24th November last, on the subject.

Nos. 12 & 13.—The Minister for Public Works will be well aware that for me to pursue such a course as this, would be prejudicial to the interests of Messrs. Peto & Co., as in a pecuniary point of view their interests would be advanced by pushing on the Works as rapidly as possible.

No. 14.—I request the Minister of Public Works to refer to our correspondence to Mr. Whitton on the subject, where I have stated that I could not proceed with these cuttings owing to the want of proper instructions. With regard to the statement as to the quantity of earthwork excavated, any one acquainted with railway works must know that the light work at the end of each cutting can be done in any indefinite time, however short, it being merely a question of men, barrows, and planks.

No. 15.—Mr. Whitton here denies my statement, "That I had never seen a line of Railway set out in so careless and indefinite a manner, so much so that in many instances it was impossible to trace the line." In proof of this, Mr. Mason, one of the engineers for the department, (with our agent, Mr. Durham) was not merely unable to trace the line, but, as they afterwards discovered, they were a considerable distance off it.^{57 & 58}

No. 16.—The side drains, river diversions, and road approaches, have been set out by me. This should have been done by the engineers. Mr. Whitton states, that the Inspector would give us the necessary information. The Inspector is not an engineer, he is continually making mistakes, and it is impossible for us to receive instructions from such a source.⁵⁹

No. 17.—The answer given to Mr. Whitton, was we expected to be paid the same price as other local contractors were getting for similar work.⁶⁰

No. 18.—Mr. Whitton here refers to my statement "Since the work started there has not been an engineer with a level to start the works." I still adhere to my statement on this subject, in my letter, 24 November, which is quite correct.⁶¹

No. 19.—I adhere to my statement which is quite correct, and which I will prove when necessary.

No. 20.—When the contract was taken, I was informed that bricks would be required, and certainly if used instead of timber, would make a more lasting and better job. I reiterate my statement on this subject, made in my letter of the 24th November. I was informed that I should have liberty to use the land on each side of the line for purposes connected with the works, and to this the Commissioner has been so good as to make no objection.⁶²

No. 24.—Nearly double this number ought to have been returned, and these sleepers were only credited us after a very correspondence on the subject. A proof of the correctness of Mr. Whitton's statement.

No. 25.—The price of brickwork in cement is 60s. per cube yard, and in mortar 55s. The lime I proposed to use is the blue lias formation, is considered the best hydraulic lime, and is far stronger and more durable than the best cement obtainable in the Colonies. Mr. Whitton's report, therefore, that cement is more economical to the Government is untrue, and the Government are paying the higher price, by 5s. per cubic yard, for work so executed independently of having an inferior article.⁶³

No.

54. This statement is utterly untrue.—J. W.

55. This matter has been previously so fully replied to that it is not necessary to go into it again.—J. W.

56. There was a conversation to this effect, but no plans were at the time prepared, and no instructions were ever given to make any preparations for this work.—J. W.

57. I distinctly deny this statement, and say that it is most untrue.—J. W.

58. Neither Mr. Mason nor Mr. Durham had ever been over this line before, and having no plan with them, they, during a conversation, neglected to follow the curve of the line, and walking straight on of course found themselves a considerable distance off the line; but, on retracing their steps, they found all the stakes, and the line most properly marked out.—J. W.

59. The Inspector can do and has done everything required on this length, and he is not continually making mistakes.—J. W.

60. This statement is untrue.—See Mr. Rhodes' letter, dated September 9, 1859.—J. W.

61. I have previously replied to this matter.—J. W.

62. This matter has been previously replied to by me.—J. W.

63. This matter is fully replied to in my Report dated December 6, 1859.—J. W.

No. 26.—The rock in *some* of the cuttings is measured once in every month, but it is frequently returned at earthwork price in the certificate. I may instance the cutting at 23 m. 22 c., which should be returned as rock. The stratum is very hard and of varied thickness, many beds being upwards of three feet thick, and *harder than most sandstone.*⁶⁴

No. 27.—As the settlement of this point is in no way connected with matters at issue between me and the department, I can only reiterate my former statement, per letter 24th November.

No. 28.—This is untrue. I have, as I stated (24th November, 1859), more plant than is requisite. No cuttings have been stopped, except for the want of rails, and the Minister for Public Works will see that 20,000 rails, spoken of as delivered on the Southern Line, would scarcely form 2 miles of single way.⁶⁵

No. 29.—At the date of Mr. Whitton's report I had 244 waggons landed, and distributed over the Extensions; I have also 300 more on the way, daily expected to arrive from England.⁶⁶ The former would have been in use had I had the rails in time. I have quite sufficient Dobbin carts on this line. It is Peto & Co.'s custom to execute their work almost entirely with wagons, and not potted with Dobbin carts.⁶⁷

No. 30.—Answered in reply to clause 3.

Nos. 31 to 34.—This is no reply whatever to my statement; and I feel it my duty to repeat, that if these timber structures are erected strictly in accordance with the designs sent to me, even with the best materials and workmanship, they will be unsafe for the permanent traffic of a railway; as some of them are upwards of 30 feet high, and the roadway and longitudinal girders are fixed with a 1½ inch jagged iron spike only to each pile, or two iron spikes to every 21 feet in length. The vibration caused by the passage of the trains would quickly destroy these iron spikes; and no doubt, in the event of an excursion train passing over the line, with from twenty to thirty carriages and a couple of engines coming upon one of these flimsy structures, the whole train, with its living freight of human beings, would be precipitated to the bottom, with a loss of life frightful to contemplate. I have never known timber viaducts or timber gearing (as it is frequently called) constructed with single piles more than 20 feet high, always braced, strutted and joined together with ironwork, in a firm and substantial manner, with piles 14 inches square instead of 12 inches, and for double lines instead of single. I am not aware that, of late years, in England, any timber gearing has been erected, and it is looked upon as weak and flimsy work for permanent general railway traffic. I have here to inform the Minister of Public Works that an engineer, after having his attention particularly called to the fact that the designs prepared by him for timber bridges had say—single piles 12 inch square only, upwards of 30 feet high, only joined to the girders by a jagged spike 1½ inch in diameter, driven into the head of each pile, (and that lengthway of the grain of the timber). The girder being square-jointed to the head of the pile, and without any strutt, or without any other mode of stiffening the structure or securing the roadway and girders to the piles or supports. Such a structure too, intended to be used for general railway traffic.⁶⁸—And still to be of opinion that such a design was safe, must not have a very comprehensive knowledge of his profession. With regard to my right, as Messrs. Peto and Co.'s agent, to interfere in this matter, or that such interference is not any business of theirs, I reply, that when the safety of the public is concerned, I take higher grounds, and that it is my duty, and I may be allowed to quote as a precedent, that the firm of Bolton and Watt (contractors for one set of engines for the Great Eastern steamship) objected to the steam jackets being applied to the funnels as being dangerous, and had such a precaution been observed with the other engines, the late serious accident would not have occurred.

With respect to the duration of these bridges being 50 years, there is no instance on record of a timber railway bridge lasting half that time. On the Eastern Counties Railway in England, where timber bridges have been erected by Mr. Braithwaite (an engineer of great eminence) of the best Baltic timber, in 12 years they were so rotten that parts were dug out with the spade. The brick culverts proposed by me in lieu of these timber structures would not only have been safe and durable, but according to my offer to the Commissioner, in my letter dated 3rd October, would not have cost the Government one farthing extra; and I propose to satisfy the Commissioner that we would construct them of sufficient capacity. The area of the collecting ground, or water-shed, had been ascertained. The greatest amount of water-fall within any twenty-four hours, in any part of the Colony, was also ascertained. The real hydraulic discharge of different sized culverts correctly calculated, and I was prepared to erect culverts or bridges of sufficient capacity to discharge three times the quantity of water ever known in the Colony to fall, and to uphold the same for 12 months. This mode of constructing the bridges and culverts would be three times the value to the Colony of the timber structures, as the original cost would have been the same to the Government, and it is well known that a sum equal to the first cost of a wooden structure put out to interest would barely keep it in repair and

renew

64. All rock excavated and carried to embankment is included in the monthly certificates.—J. W.

65. If Mr. Rhodes has 2 miles of rails not in use why does he not use them, unless it be that he is short of plant.—J. W.

66. On February 11th Mr. Rhodes had upon the Southern Line only 119 wagons, and on the Western Line only 42 wagons.—J. W.

67. I did not advocate the use of Dobbin carts, but I prefer to see them in use instead of the ordinary road carts, which are not often to be seen on railway works, although used by Mr. Rhodes.—J. W.

68. Mr. Rhodes does not, even at the present time, know in what manner the bridges are put together, and therefore should not give any opinion on such a matter.—J. W.

renew it when rotten; besides the inconvenience in the stoppage of the traffic—the brick bridges being safe, while the timber bridges, as proposed, are not.

So serious an inconvenience has this been found in America (where they have the best of timber, and are the first carpenters in the world) that the United States Government a short time ago commissioned two of their best engineers (Messrs. Colbourn and Holley) to inquire into the English system of railway construction; and they reported that the durable system adopted in England, even with all its extravagance, was far cheaper and more preferable than the American mode of timber structures.

The Minister for Public Works will perceive that, as we have made a *bonâ fide* offer to construct brick bridges and culverts of a strong, substantial, and durable character, and of sufficient capacity, instead of the unsafe timber structures proposed by the Railway Department, and for the same amount of money, that some reason beyond my comprehension exists for refusing it.

No. 35.—Mr. Whitton made inquiries of our sub-contractors that no engineer should, nor any gentleman would, make, and the inference he has drawn from *ex parte* statements by our workmen is only to be expected from one inclined to be too willing to draw an inference damaging or derogatory to me.⁶⁹

No. 36.—I consider the above a reply to this clause.

No. 37.—I adhere to the statement made in my letter, 24 November, 1859.

No. 38.—I contracted with iron founders here to supply the ironwork, and they agreed to supply it of such a quality as to pass the inspection of the Government Engineers; and in consequence of its being unsatisfactory in this instance, it was at once returned to the founders. Mr. Whitton ought to know that this is a common occurrence in all public works.⁷⁰ The other part of this clause is replied to in paragraph No. 31 of this communication.

No. 39.—Needs no reply.

No. 40.—The Engineer-in-Chief well knows that this remark is an equivocation, as Mr. Willcox makes similar complaints to those made by me. But as I took the contract for that portion of the line for which Mr. Willcox is agent (and I also being in Sydney), it necessarily follows that these complaints appear to come from me alone. I intend many of my complaints and remarks to apply to the extension for which Mr. Willcox is agent.

I have, &c.,

CAPTAIN MARTINDALE,
Under Secretary for Public Works.

A. RHODES.

MEMORANDUM on Mr. Rhodes' letter of the 13 February, 1860, addressed to the Under Secretary for Public Works.

*Department of Internal Communication,
Sydney, 7 March, 1860.*

In submitting for the consideration of the Honorable the Secretary for Public Works a Memorandum upon Mr. Rhodes' letter of the 13th ultimo, addressed to the Under Secretary for Public Works, it will probably be most convenient to pass in review the leading circumstances connected with the contracts for railway works entered into with Sir S. M. Peto & Co. from the commencement.

2. In April, 1858, Mr. Gabrielli was at Melbourne, negotiating on behalf of Sir S. M. Peto and Co. for the construction of the Victorian railways. A brief correspondence then took place with Mr. Gabrielli, relative to the firm above referred to undertaking the construction of the railways of this Colony, which terminated on the 30th of that month, without any negotiations being entered into with the Government.

3. In June, 1858, Mr. Gabrielli visited Sydney, and entered into negotiations, having for their object the construction of the railways of this Colony by Sir S. M. Peto and Co. These resulted in an agreement being drawn up which, however, was not completed, because Mr. Gabrielli found himself unable to carry out his part of it.

4. The Legislative Assembly, however, having, in reference to this negotiation, passed a resolution that Railway Contracts should be exempted from the general rule of public competition, the Government in August, 1858, transmitted to Sir S. M. Peto & Co. copies of their correspondence with Mr. Gabrielli and other papers, and intimated that if Sir S. M. Peto & Co. sent, without delay, a person to the Colony fully authorised to act on their behalf, the Government would be prepared to negotiate with him for the construction of any length of railway sanctioned in August, 1858, and not contracted for prior to the arrival of such agent.

5. The circumstances of the Colony in August, 1858, in reference to Railway construction were, that of the three contractors who had tendered when tenders for Railway works were last called for by public competition, one had failed to carry out his contract satisfactorily, one had declared his intention of undertaking, at that time at least, no further work, and the third was Mr. Gibbons, then acting as agent for Mr. Randle. The Government debentures were at a heavy discount, and money on the spot very difficult to be obtained.

6.

69. This, like the majority of Mr. Rhodes' statements, is most untrue. I made no inquiries from sub-contractors relative to the works, although I had a perfect right to do so, and would have done so had I wished.—J. W.

70. It is, I hope, a very uncommon "occurrence" with a firm like that of Sir S. M. Peto and Co., to have improper materials delivered for the execution of works for which they are the contractors; and in this instance, but for the interference of the Government Inspector, there can be no doubt that this ironwork would have been used in the bridges.—J. W.

6. In March, 1859, Mr. Rhodes arrived in Sydney, authorised to act as the agent of Sir S. M. Peto & Co.

7. At that time Mr. Gibbons was engaged in the construction of the line from Parramatta to the Blacktown Road, about $8\frac{1}{2}$ miles, and the Government, under the pressure for employment caused by the failure of the Rockhampton Gold Fields, were carrying out by the Railway Department direct the line from Campbelltown to Menangle, $5\frac{1}{2}$ miles, and from Maitland to Lochinvar, $6\frac{1}{2}$ miles.

8. There remained about 47 miles to be contracted for, and for the construction of this length the Government at once entered into negotiation with Mr. Rhodes; these were subsequently extended to include the line from Campbelltown to Menangle above referred to, making about 53 miles in all.

9. The negotiations were carried on verbally, and the terms agreed upon reduced to writing as soon as settled. These terms are contained in a correspondence commencing on the 2nd April, and terminating on the 26th April, 1859.

10. On the 28th April I left Sydney on duty, and was absent some weeks. Some time after my return I found that Mr. Rhodes had not then complied with one of the terms of his agreement with the Government, viz., to sign the usual bond and contract, and this term has not even yet been complied with by him; the works being carried on under the contract contained in the correspondence.

11. I will now, as briefly as possible, consider the complaints made by Mr. Rhodes in his letter to me of the 13th ultimo, and state what the conduct of the Government and its officers has been towards Mr. Rhodes, and the course which has been pursued by him.

Mr. Rhodes complains of Mr. Whitton's report, that the works on the Southern and Western Lines were practically suspended. He denies that any true inferences can be drawn from the certificates for work done, on the ground that HE CLAIMED to be paid several thousand pounds for work not completed, and that materials might also have been purchased. He states that if he had had the plans to which he was entitled, the work in question would have been completed. (Page 1.)

12. On a representation from Mr. Rhodes soon after measurements commenced to be made, that it was important to him to receive as full payments as practicable, I directed that the measurements should be as full as the contract would permit. I am assured they have since been so, that the certificates furnish a true index as to the quantity of work done monthly, and that Mr. Rhodes cannot fairly urge that the quantity so returned should be increased by several thousand pounds, for work not completed or materials purchased. It is possible Mr. Rhodes may allude to a statement sent in by him of materials bought in England and in the Colony, with which, however, he is aware this Government has nothing to do.

The certificates in reference to earth-works shew the following facts:—

The average earth-work moved by Mr. Rhodes has only been 11,180 yards per month.

The average moved by Mr. Gibbons has been 18,066 yards per month.

The average moved by Mr. Willcox on the Northern Line has been 17,866 yards per month.

I may add, that when I inspected the Western Line in January last, I received so strong an impression that the work was practically suspended, that I called on the Engineer-in-Chief, who was not with me during my inspection, for a special report on the matter.

I am assured that the statement is entirely incorrect that any work has not been completed for want of plans, but that bridges, for which plans have been furnished for months past, are not yet commenced. The Menangle viaduct is the only work for which plans have not yet been furnished, for reasons which will appear hereafter.

Mr. Whitton is prepared to prove the correctness of his statement.

Mr. Rhodes denies the correctness of Mr. Whitton's statements relative to the number of men employed upon the works. (Page 1.)

Mr. Rhodes states generally that he has met with invariable obstruction from the department. (Page 2.)

14. Mr. Rhodes was received in the most friendly manner when he arrived in this Colony. That he might not be delayed in proceeding to work, the Government gave up to him the line between Campbelltown and Menangle, sold him the whole of their plant engaged upon those works at cost price (without which Mr. Rhodes could not have set to work till he had received from England the plant required, or had it made in the Colony), and offered him possession of the line a week before he was prepared to accept it. The Commissioner arranged on the other lines with landowners and tenants to waive their legal rights, and to permit the contractor to enter upon the land as soon as the lines were proclaimed. Mr. Rhodes commenced to make bricks on
railway

railway land without any sanction, and in a place not approved of by the Engineer-in-Chief; yet he was allowed to complete the kiln commenced, and on his subsequent application, also to make bricks at any places approved of by the Engineer-in-Chief; Mr. Rhodes applied for as full payments as possible, and the measurements since have been as full as the contracts would permit; he requested that the money due by him to the Government, on account of the plant sold to him, &c., should not be at once claimed, and with the exception of a first sum of about £2,500, this was granted; he has made application for railway grease, it has been sold to him; finally, he has had lent to him 10 miles of single way for temporary use, equal in value to about £15,000, to assist in constructing only about 30 miles of railway, while Mr. Gibbons has only been lent $\frac{2}{3}$ of a mile for the construction of $8\frac{1}{2}$ miles.

Exclusive of that lent to Mr. Willcox.

What Mr. Rhodes terms obstructions has been the refusal of the department to grant him things inconsistent with the contract and with their duty. It is easy for a contractor by continually making demands for things which he is aware cannot and ought not to be granted to create a momentary impression that he is obstructed, but a very brief investigation reveals the truth.

It may be right to advert to what has been Mr. Rhodes' conduct towards the Government and its officers. As soon as Mr. Rhodes conceived he had any cause of complaint, or considered it advisable to complain, he addressed a letter to the Commissioner, dated 22 July, 1859, stating his complaint. Without waiting for reply, and without informing the Commissioner of the course he was taking, he at the same time addressed a copy of that letter to His Excellency the Governor General, and I believe to every Minister of the then Government. In place of carrying out the designs and instructions of the Engineer-in-Chief he has constantly opposed them, desired to substitute others, affording a larger profit to the contractor, used materials which he was forbidden to use, and forcibly taken possession of Government property, in defiance of the officer in charge of it. In the same spirit he has entered upon and made use of private lands without any authority; he has persisted in proceeding with work condemned by the Engineer-in-Chief; he has refused, after commencing the works, to sign the usual bond and contract; he has endeavoured in various ways to evade the fair fulfilment of his contract, and to make claims not warranted by it; he has, I am informed, spoken in public of the officers of the department in the most derogatory terms, and endeavored to prejudice influential persons, and the public generally, against them. I have never in my experience found such difficulties in dealing with any contractor's agent as with Mr. Rhodes; and I will venture to say that no contractor's agent has ever presumed to write of the officers of a company, or to a company, in the terms Mr. Rhodes has of the officers of this Government, and to the Government itself, nor been met with an equal amount of forbearance. Mr. Rhodes' past conduct forces me to the conclusion that the works will never be satisfactorily carried out while he remains with power to act as the contractors' agent; and he has in my opinion done much to prevent this Colony reaping the benefits I hoped it would have derived from the employment of Sir S. M. Peto and Co. I will say, without fear of contradiction, that had an agent, with a disposition to carry out his contract in a different temper, been present, the railway works for which Sir S. M. Peto and Co. are contractors might have been carried out under the existing contract far more rapidly, with greater benefit to the Colony and with a fair profit to the firm, and without any unpleasantness whatever.

Mr.

Mr. Rhodes refers to the correspondence with Mr. Gabrielli, and states that he took lower prices on the assumption that he would be in a position to commence immediately. (Page 2.)

Mr. Rhodes states that the speedy execution of the works alone would enable him to realize any profit for the firm. (Page 2.)

Mr. Rhodes says that, "having now entered into the agreement, the first obstruction I encountered at the hands of the Engineer—an obstruction as ruinous as unexpected—was his systematic objection to the supply of rails." (Page 2.)

Mr. Rhodes states that he applied for rails generally, intending to lay them on the permanent way as fast as the road was ready for formation, and with the intention of using them for expediting the works. (Page 3.)

Mr. Rhodes states, "I appealed to the Government, and the result was that, in consequence of my having put the whole matter before them, the Crown Solicitor was instructed not to sue." And again, "Subsequently, owing to repeated applications and conferences with the Government, Mr. Whitton was compelled to comply with the terms of my agreement as to rails." (Page 3.)

Mr. Rhodes states, "The Minister for Lands and Works informed me that the Engineer Department had represented that they had given me 1,000 tons of rails." (Page 3.)

15.—The prices were settled before the 15th April, and without any reference to their being dependent on the immediate commencement of the works. Indeed Mr. Rhodes was made acquainted, as soon as he arrived in the Colony, that the whole of the plans were not ready, and could not be so for some months; yet, as already stated, nearly 6 miles were offered to Mr. Rhodes before he was ready to take it, even though the Government found for him rails and plant, without which he could not have commenced for many weeks. The Government conducted the negotiation with Mr. Rhodes direct, who by his whole conduct shewed that he did not anticipate receiving the prices discussed with Mr. Gabrielli, since whose departure the circumstances of the Colony had materially altered.

16.—From the figures and facts already given, it will be seen that Mr. Rhodes has not carried this principle into action.

17. This statement is incorrect. From the very first Mr. Rhodes was informed the permanent way rails for those extensions would NOT be allowed to be used for temporary purposes. There is abundant evidence to prove this, and the correspondence will also prove it. Mr. Rhodes was fully aware of this when he took the contract. He was to receive only such rails as the Government could spare, the permanent way rails being specially excluded. To carry out this stipulation Mr. Rhodes has received above 1,100 tons of rails, exclusive of those furnished to Mr. Willcox, with the necessary chairs, spikes, &c.; in fact, all that the Government had, with the exception of a few rails required for use on the existing lines. To effect this, 350 tons promised to a company, and 125 tons to an individual, to assist them in carrying out works in connection with the Government railways, have been retained and lent to Mr. Rhodes, the parties interested not having been in a position at once to take them. And I am assured that Mr. Rhodes has never been detained one hour for want of rails, and has not, even now, the plant necessary to use effectually the rails lent to him.

18. The correspondence will shew that Mr. Rhodes applied for these rails for permanent way purposes. He then forcibly seized them for temporary use, as he himself acknowledged at the time; he subsequently stated that he intended to use them for permanent way; he now states he intended to use them for both—an act which, if carried out, would have been contrary to his contract. In the case of rails lent for temporary use Mr. Rhodes has to pay for their conveyance by railway, as well as 10 per cent. per annum for their use; but the permanent way rails are conveyed free by railway. It is not difficult, therefore, to see one reason why Mr. Rhodes seeks to confuse permanent way and temporary rails together.

19. This statement is incorrect. The Government suspended the action of the Crown Solicitor, on a statement from Mr. Rhodes that he required the rails for PERMANENT way purposes, for which object he had applied for them to be sent to Campbelltown: he subsequently applied for them for temporary use, when their issue was sanctioned, as it would have been had he so applied in the first instance.

20. I believe that, in conversation with Mr. Secretary Robertson, I myself inadvertently one day used the term "1,000 tons of rails," in place of 1,000 rails; but the error was immediately corrected.

Mr.

Mr. Rhodes states that he had engaged 100 horses and carts to carry rails, and had to dismiss 150 men for want of them. (Page 3.)

Mr. Rhodes states, "The Government undertook to deliver over immediately the 5 miles Menangle Extension, to furnish me with plans, and put me in possession of 15 continuous miles of railway within 2 months, and the plans and line for the remainder within 3 months. The plans were not delivered within the first two months, nor within the three months; and some are wilfully withheld to this date." (Page 4.)

Mr. Rhodes says, "the great importance I attached to this question of time." (Page 3.)

Mr. Rhodes says, "I have no plan for the bridge over the Nepean to the present moment. I have contracted for a million of bricks." (Page 4.)

Mr. Rhodes says, "I have been anxiously waiting week after week, demanding the plans; he (Mr. Whitton) now, 8 months after the time, proposes an entirely new plan." (Page 4.)

21. I have every reason to doubt the correctness of these statements. The Secretary for Public Works assured me at the time that Mr. Rhodes had informed him that he should not have to discharge any men for want of rails.

22. The Menangle Line was tendered to Mr. Rhodes before he could accept it, and he requested a delay of a week. I have already narrated the steps taken to obviate, as far as possible, all delay, and I am assured Mr. Rhodes has never been delayed one hour for want of plans. The line from the Blacktown Road to Penrith was proclaimed on the 5th July; and the plans and line immediately given over to Mr. Rhodes. This length was 11 miles 43 chains, making, with the Menangle Extension, upwards of 17 miles in Mr. Rhodes' possession within a fortnight of the time named. On the 26th July 6 miles of the Southern Line, and on the 9th August about 7 miles more, being the remainder of the Southern Line, were proclaimed and given over to Mr. Rhodes: the whole of the Southern and Western Lines, therefore being given over to Mr. Rhodes within about a fortnight of the time stipulated.

On the Northern Line, the works upon which are being carried out under Mr. Willcox, some delay occurred, owing to the failure of two of the Assistant Surveyors, whose work proved on trial to be erroneous, and therefore useless, and whose services were in consequence dispensed with. However, 9½ miles were proclaimed on the 16th August, and given over within a month of the stipulated time, and the remainder 14½ miles on the 15th September, that is to say, within another month.

It will be apparent to all that Mr. Rhodes could not be really damaged by any such trifling difference in time as is above-named, 26 months being the time given to construct 53 miles of railway. However, as the letter of the stipulation was not fulfilled, the Government consented, on my recommendation, to give Mr. Rhodes day for day for the delay.

The only plan not now furnished is that for the Menangle bridge, the design for which was altered in consequence of a statement of Mr. Rhodes that he would claim 6½d. per lb. for the wrought-iron girders, &c., if the bridge was constructed of iron; a price utterly absurd; and the design has since required further revision, in consequence of the height to which recent events have shewn the flood waters will rise. In the meantime, as already stated, Mr. Rhodes is not proceeding with bridges, the plans for which he has had in his possession for months, and the want of which delays the progress of the works.

23. The real importance attached to the question of time was this: Mr. Rhodes expressed his apprehension of an enormous rise in the labor market should a rush take place to gold fields; he desired therefore to have ample time for the work, so that should such a case arise he might be able, if necessary, to import labor. It will be seen that the trifling delay in furnishing the plans cannot seriously affect this question, with which however Mr. Rhodes has mixed it up.

24. If Mr. Rhodes has contracted for a million of bricks, he has done so without any plan, and without any order from this department.

25. As soon as Mr. Rhodes stated the price he should ask for iron, he was informed that the design must be altered to wood.

Mr. Rhodes says he conceives Messrs. Peto and Co. have been treated unfairly in reference to the following clause:—"The whole of the works, of whatever nature and description required in making the extensions herein, shall be included in the contract, and any work for which a price is not given in the schedule hereunto annexed, marked A, shall be paid for at a price to be agreed upon at the time; but should the Government not agree as to the prices not specified in the schedule, the Government retains the right of otherwise executing the work." We refused to accede to the latter portion of the paragraph, and proposed that the prices in cases of difference should be left to arbitration; this was refused on the following terms:—"They consider that any work for which a price cannot now be settled, ample protection is afforded by the power you possess of representing your views to the Government, at the time of fixing the rates."

Mr. Rhodes then refers to the fencing on the Northern Line not having been given to Mr. Willcox, as prices offered to him (Mr. Rhodes.) (Page 4.)

Mr. Rhodes says "a similar offer was made to Mr. Willcox to take the contract for the work at Newcastle off the hands of the Government—that Peto & Co. should pay the contractor the amounts payable by the Government; undertake all the responsibility, supervision, and risk; and what were they to get? Why nothing. This was the Engineer's offer, and I mention it to shew the spirit exercised towards us. It is true that when the Government saw the absurdity of the offer they proposed to give me a per centage. It does not, however, destroy the sting of such a proposition, and is certainly proof of the facilities afforded." (Page 5.)

Mr. Rhodes complains that the lengths of the piles in wooden bridges have not been furnished him. (Page 5.)

Mr. Rhodes complains that he was not permitted to use the rock found in cuttings for ballasting, &c. (Page 5.)

26. Mr. Rhodes has not stated the conclusion FINALLY arrived at, at his own suggestion, viz.—that all matters for which prices could at once be agreed upon should be so, and that in accordance with that conclusion a price for fencing was determined so far as he was concerned; the negotiation for the fencing required on the Northern Line was carried on with Mr. Willcox, to the exclusion of Mr. Rhodes, who has, therefore, no right to use the expression "the following are some of the prices offered to me," in reference to this fencing.

I must observe, also, that Mr. Rhodes was from the first informed that arbitration would not be consented to, and that he agreed that it should not be resorted to.

Mr. Willcox stated he would not execute the fencing under 10s. a rod; this was considerably over previous prices of the Northern Line. It was ascertained the Government could get it done at 8s. per rod; that Mr. Willcox might have no ground of complaint, the whole was offered to him at anything whatever less than the 8s. Mr. Willcox, however, stated he would not do it under 10s., and it was, therefore, let to others.

27. This matter was not conducted with Mr. Rhodes at all. Mr. Willcox wrote, stating that it would be a matter of convenience to him if the Government would allow him to complete the line from Maitland to Lochinvar, on their (Peto & Co's.) schedule of prices; Mr. Willcox to take all the engagements of the Government, and to repay to the Government all expenditure incurred. The work was so far advanced, and had been carried on by the department direct so economically, that it was found to have complied with this request would have been to have thrown away a large sum of public money. But to meet Mr. Willcox as far as possible, he was informed the construction of a portion of this line from 21.60 to 25.30 would be entrusted to him on the following terms, viz. :—

Messrs. Peto and Co. to accept all agreements which have been made with contractors for the execution of the works, and delivery of materials.

For all contracts which the Government have already made, Messrs. Peto and Co. to receive only the price already settled with the contractors.

For all works not already contracted for, Messrs. Peto and Co. to receive payment at the prices contained in the schedule of prices already agreed upon with them.

The remaining clauses provided for the purchase of Government plant, and the completion of the works.

The Government, before whom the correspondence was laid, subsequently decided that the department should continue to carry out the works direct.

The Secretary for Public Works will judge whether there is anything in these propositions to justify the language used by Mr. Rhodes.

28. These were advisedly refused by the Engineer-in-Chief, with the concurrence of the Commissioner, and subsequently with the sanction of the Government; such information should not have been sought nor given.

29. Mr. Rhodes' proposal was, that he should use stone, &c., found in the cuttings for the purpose of ballasting, and be paid for it as if taken to embankment; he making up the embankment at his own cost.

Mr. Rhodes complains that he understood that he was to have half-mile leads, whereas there are, in some cases, leads above a mile and a half. (Page 5.)

Mr. Rhodes says, "I fortunately have the draft schedule which he (Mr. Whitton) first prepared for me, in which, at my request, in his own handwriting, he says, 'the leads are not to exceed half a mile.'" (Page 5.)

Mr. Rhodes complains that on one of the certificates he was only allowed 6d. per lb. for ironwork, in place of 6½d. (Page 5.)

Mr. Rhodes complains that although he executed some fencing on the Western Line in the same manner as Mr Gibbons, it was not considered satisfactory. (Page 5.)

Mr. Rhodes states it is desired that he should execute the ballasting and lay the permanent way in a different way to that for which he tendered.— (Page 5.)

Mr. Rhodes states the Government proposed that he should give up the above work. (Page 5.)

Mr. Rhodes complains that he is not allowed to use hydraulic lime in place of cement. (Page 6.)

Mr. Rhodes complains that he has not been allowed to put substantial materials for the same price as substantial and dangerous wooden viaducts. (Page 6.)

Mr. Rhodes complains that he was offered 6d. for stacking stone from the cuttings. (Page 6.)

Mr. Rhodes complains that the cuttings in rock are made perpendicular. He states that in all the plans and specifications sent to England for Messrs. Peto's information, the cuttings were stated to be not less than 1 to 1; that it is thus attempted to make him perform work he never anticipated, and which can-

not be acceded to. This matter has been repeatedly under the consideration of the Government, together with the opinions entertained by myself and the Engineer-in-Chief; the decision arrived at by the Secretary for Public Works was, that Mr. Rhodes' proposal could not be acceded to.

30. There was no stipulation limiting the length of leads: the specification provided that the earth was to be taken to the embankments named in the disposal sheet for its reception, and Mr. Rhodes was distinctly informed some of the leads would exceed half a mile.

31. Mr. Rhodes is in possession of a printed schedule containing the words in question in Mr. Whitton's handwriting, but nothing else; no prices, date, names. Mr. Whitton states the words were inserted by him at Mr. Rhodes' request, for Mr. Rhodes to offer a price for half-mile leads; but Mr. Rhodes refusing to make any diminution for the restriction in the length of lead, the matter terminated. When the prices were settled with the Government, there was no restriction as to length of lead.

32. The iron-work certified for was for pile-shoes, for which Mr. Gibbons was paid 6d. per lb. All the prices named in Mr. Rhodes' schedule being the same as those in Mr. Gibbons's schedule, the Engineer-in-Chief certified for the same price for pile-shoes (not named in either schedule) in both cases. The Government subsequently fixed the price, on reference to them, at 6½d. per lb.

33. Mr. Rhodes receives a higher price, and contracted to erect a superior fence to that erected by Mr. Gibbons.

34. This is not the case: Mr. Rhodes tendered on a specification, and all that is required is that he should carry out the works in accordance with it.

35. This is not the case: Mr Rhodes proposed to give it up, and the Government have not acceded to his proposal.

36. Mr. Rhodes was desired to build certain culverts in cement. In opposition to his instructions, he commenced to build them in lime. The mortar has proved extremely bad, and Mr. Rhodes has been directed to continue the use of cement.

37. Mr. Rhodes' offer was to put culverts 8 x 6, with an embankment over the culverts, in the place of wooden viaducts, varying from about 40 to 300 feet in length, which he stated would be ample for all purposes; the price paid to be the same as for the viaducts. The recent floods have shown how perfectly inadequate the provision proposed by Mr. Rhodes would have been. The work, even if adequate, would not have been worth nearly so much. The viaducts are required, in several cases, for the passage of cattle and traffic; and they will be, if properly executed by the contractor, perfectly safe and substantial structures. Had Mr. Rhodes, in place of making suggestions, carried out the instructions he received, the works would have been much further advanced.

38. In a conversation with Mr. Secretary Robertson, Mr. Whitton named 6d. as a safe price to offer, and it was offered.

39. Mr. Rhodes has not a single cutting in rock perpendicular; Mr. Willcox has. In the first case the rock is not compact; in the second it is. No stipulation was made when the prices were settled with the Government, as to the slopes; and as in the North, the rock in some cases will stand perpendicular, the Engineer-in-Chief considered it desirable, as being far cheaper, to make up the banks from side cutting, and not from rock. This matter has been not

not now be done at the contract price; that the amount paid by Messrs. Peto to the workmen for these cuttings is considerably in excess of the amount paid to them by the Government. Mr. Rhodes adds—"by this violation of their contract, the Government not only would get work at a less price than Messrs. Peto pay, but what is of more consequence, may get all the stone from the slopes for ballasting at a very small sum, and at Messrs. Peto's expense." (Page 6.)

repeatedly under the consideration of the Government, together with the observations of the Engineer-in-Chief and myself upon it; and in order, if possible, to meet the difficulties Mr. Willcox appeared to feel in this matter, the late Secretary for Public Works, under my recommendation, suggested that Mr. Willcox should contract for the ballasting, and obtain the rock from the slopes. This Mr. Willcox declined, but the suggestion itself is a sufficient reply to Mr. Rhodes' mis-statements in this matter.

The specifications sent to England by the order of the Government were those prepared for works in progress or completed; they were sent for the information of Messrs. Peto & Co., to shew the condition and terms usually made in the Railway Works of this Colony, and they have been closely adhered to in the specifications for the present extensions. But it is manifest they could be of no value in such a detail as what the slopes should be, on lines the exact direction even of which was not determined when the specifications were sent.

The plans were those of the trial lines, which it was expressly stated might be considerably modified in execution. Upon a copy in his possession, Mr. Willcox has shewn to me the words "slopes to be 1 to 1," or some similar words; but it is remarkable that these words are not upon the original plans in this office, and Mr. Whitton is unable to say how they came to be inserted.

Whatever, however, may have been the information sent to Messrs. Peto & Co., to assist them in deciding whether they would send an agent to this Colony to negotiate with this Government or not, it is plain that the only price the Commissioner can pay is that contained in the Schedule of Prices, the result of the subsequent negotiation on the spot; and it is certain that no stipulation was or could then have been made as to what the slopes in rock should be, since not even the general direction of that portion of the Northern Line, now being carried out under Mr. Willcox, was finally determined, much less the section to be adopted. It would be simply absurd to take out slopes through rock at 1 to 1 when not required.

If the amount now paid by Messrs. Peto's agents to the workmen for cuttings in rock is, as Mr. Rhodes states, considerably in excess of the amount paid to them by the Government, I have every reason to believe they must be paying excessive prices.

The decisions in this matter, as well as in that of the ballasting and laying of the permanent way, and other important matters which have been communicated to Mr. Rhodes and Mr. Willcox, have been made by the Government after considering the views of the Engineer-in-Chief, and such observations as I had to offer upon them. Under these circumstances, whatever those views and observations may have been, it is not right on the part of Mr. Rhodes to endeavour to treat these decisions as personal matters with Mr. Whitton.

Mr. Rhodes observes, "I should have thought they (the Government) would hardly have ventured to ask me to sign an agreement (after all that had been brought under the notice of the Government as to Mr. Whitton), placing Messrs. Peto and Co. at the entire mercy of that gentleman, and that they could not receive one single farthing from the Government unless by his certificate." (Page 6.)

40. Mr. Rhodes has been called upon, in terms of his agreement, to sign the usual bond and contract, under which other contractors find no difficulty in working. Comment on the language Mr. Rhodes thinks fit to use is superfluous.

Under the agreement with the Government contained in the correspondence, the Commissioner can only pay on the certificate of the Engineer-in-Chief for the time being. This agreement all parties acknowledge as valid, and so far it is of no consequence whether the usual bond and contract is signed or not.

Mr.

Mr. Rhodes complains that "Mr. Whitton has stated, (I am informed by several parties,) that 'I should get nothing out of the contract if he could help it.'" (Page 7.)

Mr. Rhodes says, "I must ultimately be paid the profit on the iron girder which was first proposed." (Page 7.)

Mr. Rhodes says, "Mr. Whitton distinctly stated the Menangle viaduct would have brick piers with stone cut waters, with wrought iron top." (Page 7.)

Mr. Rhodes, in his letter of 24th November last, complains of the incompleteness of the plans furnished to him. (Page 7.)

Mr. Rhodes complains that he could not proceed with the cuttings owing to the want of proper instruction. (Page 7.)

Mr. Rhodes states, as proof of the bad staking out of the railway line, that Mr. Mason and Mr. Durham were unable to trace the line. (Page 7.)

Mr. Rhodes complains that he has had to set out side drains, river diversions, and road approaches, and that the Inspector appointed to give him information is continually making mistakes. (Page 7.)

Mr. Rhodes says, "it is impossible for us to receive instructions from such a source," (viz., the Inspector.) (Page 7.)

Mr. Rhodes says, "The answer given to Mr. Whitton was, he expected to be paid the same price as other local contractors were getting for similar work." (Page 7.)

Mr. Rhodes re-iterates a statement that there has not been an Engineer with a level to set out the works. (Page 7.)

Mr. Rhodes re-iterates a statement relative to the Inspector stopping works being executed in a proper manner. (Page 7.)

Mr. Rhodes says the Commissioner has consented to his using the land on each side of the line for purposes connected with the works. (Page 7.)

Mr. Rhodes complains of not having been credited for sleepers furnished. (Page 7.)

Mr. Rhodes complains that rock is returned as earth in the certificates. (Page 8.)

Mr. Rhodes states that he has more than sufficient plant, and observes that 20,000 feet of rails would scarcely form two miles of single way. (Page 8.)

41. Mr. Whitton denies ever having used the language alleged.

42.—Mr. Rhodes is well aware he can and will only be paid under the schedule of prices for work completed by him and certified for by the Engineer-in-Chief.

43.—In a conversation with Mr. Rhodes, the Engineer-in-Chief stated it was intended to build the Menangle bridge with brick piers and an iron superstructure; but no orders were given, nor was anything definite ever arranged.

44.—An inspection of the plans will be the best reply to this statement.

45.—There is ample evidence to prove that Mr. Rhodes has never been delayed for want of instructions.

46.—Mr. Mason, in going over the line for the first time, accompanied by Mr. Durham, while in conversation, at a curve continued straight on, and so missed the line, but on retracing their steps found the line perfectly staked out; there being a stake driven into the ground at every chain with a ring cut round it, and special marks at every tenth chain and every mile.

47.—The fencing was almost entirely set out by this department; the side ditches are mere drains 18 inches deep parallel with the fence; there are no river diversions; every information relative to public road approaches is afforded by the Inspector, a thoroughly competent officer in whom the Engineer-in-Chief has the highest confidence.

48.—It is not for Mr. Rhodes to dictate what officers the Government shall employ.

49.—The answer in writing given by Mr. Rhodes was, "as no doubt you have only one price for every thing that has to be done, we will thank you to favor us with your prices and if we can make them for the prices we will do so."

50.—Mr. Whitton is prepared to prove the incorrectness of this statement.

51.—Mr. Whitton is prepared to prove the incorrectness of this statement.

52.—Subject in each case to the approval of the Engineer-in-Chief, and within the land proclaimed for Railway purposes.

53.—Mr. Whitton states the sleepers were certified for as rapidly as they could be properly examined and passed.

54.—Mr. Whitton states that all rock excavated and taken to embankment, is measured and certified for monthly. It is possible Mr. Rhodes here alludes to shale, but this, under his contract, is to be paid for as earth.

55. The Engineer-in-Chief is prepared to prove that even now Mr. Rhodes has not sufficient plant upon the lines to work the roads properly; and Mr. Rhodes is not justified in speaking of the loan of two miles of single way not being in use, as a matter of no importance. To speak of wanting rails while thousands of feet, lent for use, are lying idle, is not right.

Mr. Rhodes states "it is Peto, Brassey, and Betts' custom to execute their work almost entirely with wagons, and not potter with Dobbin carts." (Page 8.)

Mr. Rhodes re-iterates certain statements relative to the wooden viaducts. (Page 8.)

Mr. Rhodes complains of the inquiries made by Mr. Whitton from the sub-contractors. (Page 9.)

Mr. Rhodes explains the supply of inferior ironwork for the bridges. (Page 9.)

Mr. Rhodes states that he intends many of his complaints and remarks to apply to the extension, for which Mr. Willcox is agent. (Page 9.)

56. So deficient, I am informed, was Mr. Rhodes, even of Dobbin carts, that he was using ordinary carts.

57. Mr. Rhodes speaks of his sense of duty in reference to these viaducts, and the high ground which he takes. Having once pointed out what he may consider defects, Mr. Rhodes' duty has certainly ceased. Had the advice tendered by Mr. Rhodes been followed, it would have resulted in largely increased profits to the contractor, without giving the Colony the works required.

58. Mr. Whitton denies having made any inquiries, while asserting his perfect right to do so should he think fit.

59. It may be observed, however, that this iron, so far as Mr. Rhodes was concerned, would have been used. Its use was stopped by the department.

60. I have every reason to know that Mr. Willcox, so far from concurring generally in the course which Mr. Rhodes has pursued, has most strongly disapproved of it; and Mr. Willcox has been in direct communication in reference to all matters connected with the Northern Line with this office. This department has no communication with Mr. Rhodes in reference to the Northern Line, and Mr. Willcox being at Singleton can be no barrier to his free communication with this department whatever. Mr. Rhodes has no right, therefore, to extend his complaints and remarks to the extension for which Mr. Willcox is agent.

In conclusion, I must ask indulgence for the haste which will be apparent in this memorandum. It is with extreme difficulty that I find time amidst the pressure of public duties to reply to such a communication as that from Mr. Rhodes now under consideration, involving as it does no practical result. It has been impossible for me to re-peruse the mass of correspondence which Mr. Rhodes' letters to this department have created; I have, therefore, written from memory, but the facts given by me are, I have no doubt, correct. I have been compelled to discuss Mr. Rhodes' letter at length because I could in no other way point out the numerous incorrect statements which it contains.

I take leave to repeat that had Mr. Rhodes, in accordance with his agreement, signed the usual bond and contract, and gone quietly on with the works in place of stirring up strife, the works in reference to which he is employed as the agent of Sir S. M. Peto & Co. might have been far more rapidly carried out with a better profit to that firm and with greater advantage to the Colony. As it is, I fear Mr. Rhodes has mistaken courtesy and forbearance for weakness; he has endeavoured by all the means in his power to coerce the department into giving him advantages not warranted by his contract, and failing in this has decried it, and at the same time neglected to proceed with his works satisfactorily. I am thus forced to the conclusion that the works will never be properly carried out while Mr. Rhodes remains in charge of them as the contractors' agent; and that the benefits which the Colony ought to derive from the employment of Sir S. M. Peto & Co., as railway contractors, are being frittered away. I recommend, therefore, that the Government should as early as practicable cease to recognise Mr. Rhodes as an agent of Sir S. M. Peto & Co., and should deal with Mr. Willcox only. For I can expect nothing from the past conduct of Mr. Rhodes but that the works will be ill and slowly carried out, and the Government be involved in interminable disputes and perhaps costly legal proceedings.

THE HONORABLE
THE SECRETARY FOR PUBLIC WORKS.

B. H. MARTINDALE,
Under Secretary and Commissioner.
7 March, 1860.

1860.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY WORKS.

EVIDENCE

TAKEN AT

THE BAR OF THE ASSEMBLY

IN

COMMITTEE OF THE WHOLE HOUSE,

ON THE

CONSTRUCTION AND CHARACTER OF THE RAILWAY
WORKS NOW IN PROGRESS.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
29 May, 1860.

SYDNEY:

THOMAS RICHARDS, GOVERNMENT PRINTER, PHILLIP-STREET.

1860.

1860.

Legislative Assembly.

NEW SOUTH WALES.

EVIDENCE TAKEN AT THE BAR OF THE ASSEMBLY,
IN COMMITTEE OF THE WHOLE HOUSE,
ON THE
INQUIRY INTO THE CONSTRUCTION AND CHARACTER
OF THE RAILWAY WORKS NOW IN PROGRESS.

(APPENDIX TO MINUTES OF PROCEEDINGS, 20 APRIL, 1860.)

A.

FRIDAY, 20 APRIL, 1860.

A. Rhodes,
Esq.

Alexander Rhodes, Esquire, examined as follows:—

1. *By Mr. Parkes*: You represent the firm of Sir Morton Peto and Company, railway contractors? Yes, I was asked by them to come out to form a contract by a letter sent by the Commissioner of Railways to London. These parties—Sir Morton Peto, Brassey, and Betts—delivered this letter to me, and I came out with this letter to negotiate with the Government. 20 April, 1860.
2. Will you state the date on which you arrived in the Colony? I think it was about the latter end of March, I cannot say for the very day.
3. Have you got the papers which were originally transmitted to your principals in London? I have not them with me—they are with my solicitor; but I can explain to the Assembly all their contents.
4. Among those papers was there a letter proposing the terms upon which you were to enter into the contract—the copy of agreement submitted to Mr. Gabrielli, in Sydney? As far as I saw, the papers that were delivered to Sir Morton Peto, Brassey, and Betts—^{they} ~~delivered these papers over to me~~, and I looked into my papers cautiously, and I wished the firm to let these papers and correspondence be submitted to their solicitors, to see if there was a real transaction made between the Government and Mr. Gabrielli. ³ Were the same as those delivered to me.
5. Was the schedule of prices among those papers? ³ “Confidential—engineer's schedule of prices for the proposed extension line.” J. Whitton, Engineer-in-Chief, signed it. There it is. *(The witness handed in a paper. Vide Appendix I.)* ³ Yes.
6. When you arrived in the Colony, did you enter upon the work in accordance with those prices? I was introduced by Mr. Gabrielli to Mr. Cowper, then to Mr. Robertson, then to Captain Martindale, Commissioner; then to the Engineer-in-Chief, with letters of introduction from Sir Samuel Peto and Co.
7. Were these the prices which you brought out from London with you—the prices submitted to you on your arrival? If you look at the head of the schedule of prices that will explain, for these were the prices submitted to Peto and Company.
8. You misunderstand my question—are these the same prices that were submitted to you on your arrival in Sydney? Those are the prices I proposed to the Government when I arrived here.
9. Were those the prices submitted to you for your acceptance by the Government? They were not accepted by the Government.
10. Are these the same prices that were accepted by you from the Government? Those prices were sent Home, as I say now—“The schedule of prices for the proposed extension—.”
11. We understand that, and that these prices you brought out, but are they the same prices that were submitted to you by the Government—on your arrival was there any change in the prices? “Sydney, 2nd April, 1859.” *(The witness commenced reading a printed paper.)*

NOTE.—The alterations printed in the margin were made by the Witness on revision.

A. Rhodes,
Esq.

"Do you look there, you will see I made a proposal to the Government to accept these prices that were sent to London. That is No. 3 page.

20 April, 1860.

⁴ Yes.

⁵ No stop.

⁶ And they strongly expressed that the Colony could.

⁷ They wished, if possible, to reduce the price.

⁸ A.

⁹ And.

¹⁰ An error. Should not be in.
¹¹ An error. Should not be in, or said.

12. Will you go on and state what variations—if any variations were made—what variations were made in the prices submitted to you on your arrival? I sent in this letter to the Commissioner of Railways. The Commissioner sent this letter to the Executive, and the Executive made an appointment with me to meet them. I met Mr. Cowper, Mr. Robertson, Captain Martindale,⁵ Commissioner, and the Engineer-in-Chief. Well, I was with them there four to one; ~~and they went at me in such a manner to say that the Colony thoroughly could not afford such prices.~~ I said, "Why have you sent such prices Home, if you could not afford to pay them?"

13. Then there was a variation from the original prices? That is to say, that ~~the Colony was so, and we wished if it would be possible to reduce a few half pence.~~ Mr. Robertson said, "Really we are only paying our sub-contractors a certain price." "Well then, you ought not to send for people like us, bringing⁸ large quantity of materials. Is it because we have started on the road, because we have sent out a nice little material to the amount of £20,000, and I am here with my family, that you think you can take any advantage?"

14. What variations in the prices were proposed? Well, Mr. Cowper, with Mr. Robertson⁹ Captain Martindale, said, "Had you not better see the Engineer-in-Chief, we do not know how to discuss these small matters? There is a person does a good deal of work with the un-employed labor—"

15. What were the variations? ~~Sixteen.~~ I met Mr. Whitton next morning at half-past nine, and we went into the schedule of prices; ~~and he came to the price about 2s. 8d.~~ It takes a long time certainly to explain these things, but I must explain them in order that I may shew how the prices were reduced. Well, Mr. Whitton, went into details, and he brought the first price down to 2s. 8d.—that is, "Excavation from cuttings into embankments." I thought it was impossible for me to come to any negotiation with the Government as they started rather in a small way. Next morning I met Mr. Cowper, Mr. Robertson, Captain Martindale, and Mr. Whitton; and Mr. Cowper asked me "Have you come to any arrangement?" "Well," I said, "I am afraid we have not." "Well, but really, try." Mr. Whitton said, "Well I think if we give him 2s. 7½d."—(turn over that No. 5)—"If we give him 2s. 7½d., I think this is a very good price." Captain Martindale said "Oh dear me, it would please the Government so much if you could take a penny off, and make it 2s. 6½d." I immediately turned round and said, "Gentlemen, if this is the way you are going to transact business the sooner I leave you the better."

¹² Should be in parenthesis. 16. That was with reference to the first price down in this schedule, were there any other variations? As soon as these prices were agreed upon¹²—it was understood that these prices were put down as low as possible, because the Government were to give me every facility—

17. Will you be kind enough to state in so many words the number of variations in this schedule of prices, without going into particulars as to how these variations were arrived at. Just state if you please in what particular items there was a departure from the schedule of prices sent to London? There was 2s. 9d. sent to London, and what I have agreed to, with the facilities to be given me, is 2s. 7½d.—that is ¹³one difference. Then there is ¹⁴"in rock" the item sent to London was 5s. 6d. a yard, ¹⁵that was reduced to 4s. 9d. This is what they pay me 2s. 7½d. for, after reducing me from 5s. 6d. to 4s. 9d. a yard. This is earthwork. (*The witness here produced a mass apparently of rock.*) I will allow any Honorable Member to look at it.

¹³ One.
¹⁴ The item "Rock" sent in.
¹⁵ Which.

18. We come now to brickwork, was there any reduction in the brickwork? 5s. a yard, but then you will allow me to explain this matter. In taking notice of the prices in this country ~~I see it is a great item in masonry is mortar.~~ Well, I went immediately up and down the country to find out if there was ¹⁶what you call good stone lime for masonry. Shell lime in this country is not good, but there is stone lime in this country, and having been in Foreign countries—in Germany, France, and Spain, I had to go and look out for stone lime, and I found capital lime stone. It seems they found out I had got them good stone lime, and when I procured a certain quantity of this good stone lime, they said they would have cement, which is not half as good as mortar. Now I shall shew it. (*The witness produced a mass of mortar.*) I will ask Mr. Lucas, who says he is a good judge, if that is not good mortar.

¹⁶ That mortar is a great item in masonry.
¹⁷ Should be—If there was, &c.

19. Will you be kind enough to go on and let us get through this schedule of prices—State to the Committee, if you please, what reduction was made in the estimate for brickwork. It is down here at £3, and it was reduced to £2 15s.? Yes.

20. We come to the next item, which is here £3 5s., was there any departure from that? Five shillings.

21. Come to the next head, £3—"Brickwork in mortar to culverts, all sizes, at per cubic yard," any reduction in that? Five shillings.

22. Going on to the next, which is down here at £3 5s., was there any departure from that—"Brickwork in cement to culverts?" Five shillings there.

23. Were there any other reductions? There has been a little put on the ironbark timber, including the iron fixing that has been made 5s., but then we had first 6s. for sawn work, so that we have now an average of 5s. instead of 4s. 6d. and 6s.

24. There were considerable variations from the schedule of prices sent home to Peto and Company? I should say on the contract I have taken ¹⁸£20,000 at least.

¹⁸ OR.

25. Did you consider there was any breach of faith to any extent in the departure from the prices?

Mr. Robertson objected to the question.

The witness withdrew.

Debate ensued.

The witness was again called in by the Sergeant-at-Arms, and examination was ^{A. Rhodes, Esq.} continued. ^{20 April, 1860.}

26. In the variation of prices which took place after your arrival was there any just ground for grievance with you as representing Messrs. Peto and Company? Captain Martindale said that there was some party who had sent in a tender against us, and I said to Captain Martindale, "If that is to be the behaviour I am to receive after I come to the Colony, after "inviting us, I shall retire."

27. With respect to the first item in this schedule, "Excavation from cuttings taken to "embankments named in the disposal sheet not exceeding half a mile lead,"—have any of the leads, as they are called in technical language, exceeded half a mile? Well, the Colonial Secretary, the Minister of Public Works and Lands, the Commissioner, and the Engineer-in-Chief, together, the day before I was to meet the Engineer-in-Chief to arrange about prices, and when I agreed partly, I said to him, "What will be the leads providing I take the "reduced price?" his answer to me was, "In the Colony here we have not a deal of material, "and we never give long leads, and from the cuttings to the embankments are not exceeding "a quarter of a mile lead." I said, "Well, make it half a mile lead if you like, and let us "have no trouble over it." "Well," he said, "that is more than I shall ask you."

28. Did any of the leads exceed half a mile? I asked him to give it me in writing, and he gave it me in writing. (*The witness produced a paper.*)

29. Mr. Rhodes, if you would be kind enough to give an answer to my question in as few words as possible it would much simplify the matter,—if you will just answer my question—Did any of the leads exceed half a mile? I have these leads a mile and ten chains, and I have one lead more than a mile and three-quarters.

30. Have you any objection to hand in the paper you hold in your hand? No. (*The witness handed in the same. Vide Appendix II.*)

31. Previous to your arrival in the Colony had you had practical experience on other railway works? My first apprenticeship was on the Greenock and Glasgow Railway, in 1839; that is past twenty-one years ago.

32. From that time until your embarkation in this Colony have you been constantly engaged in similar works? I have been always on works.

33. You have been engaged with Messrs. Peto and Company? With Mackenzie and Brassey, which is the same company, ¹⁹if you like, for twenty-one years past.

¹⁹ Should not be inserted.

34. Will you state, in as few words as possible, what are the principal railway works you have been engaged upon? The first railway I was engaged upon was Greenock and Glasgow, under Mackenzie and Brassey. I had the superintendence of that; that is, the ²⁰viewing the men, measuring the work, and carrying on the works, and these works were done in eighteen months, under Mr. Locke and Mr. Errington. There was a tunnel on that line in granite a mile and a half long, and a cutting of something like 170,000 yards done in that time.

²⁰ Control of.

35. What other works have you been engaged upon? I was sent to the Paris and Rouen railways by the contractors, Mackenzie, Brassey and Company.

36. On any other? The Bordeaux line, the section from Orleans to Tours. That line is about 400 miles long altogether, and it was done in four sections.

37. Upon these various railways were you allowed by the Engineer the use of rails and chairs for carrying on your works? We were always allowed permanent rails for temporary purposes, and without them the Glasgow and Greenock Railway would not have been done in five years, let alone eighteen months.

38. That was the recognised practice on these works? Yes.

39. Were you required to pay for them, or were you placed under any restrictions or conditions? Never, with the exception of those that were damaged or cut.

40. Since you have been carrying on the railway extension here, have you had the same facility afforded to you—have you had the permanent rails and chairs to assist you in carrying on your work? There were a few yards given, and soon after we started we were obliged to stop and to write for rails, and to this day we have got these cuttings—one a mile and ten chains, and the other a mile and three-quarter lead,—and we cannot get the rails, although there are ten thousand rusting on the Sydney station, and I can assure you these rails would be better employed ²¹to work than standing there rusting.

²¹ In.

41. There has been, I believe, considerable dispute between you respecting these matters going on for some time? Whenever I saw the works were not going on with speed, I wrote for the rails.

42. The Railway Authorities did not meet you, as you think they ought to have done, in affording you the use of the chairs and rails? If I dare make the observation, they have done nothing but obstruction since I came here.

43. Have you taken any steps to elicit from other competent men who have been engaged in railway construction, whether they concur in your views as to the practice of Engineers accommodating the contractors with these articles? I believe Mr. Brassey wrote to the Engineer-in-Chief. He said it was the only correspondence he had between the Government and himself since I left.

44. Will you read that letter? (*The witness read the same. Vide Appendix III.*)

45. That is from Mr. Brassey to whom? John Whitton, Engineer-in-Chief.

46. In the Colony, since this dispute as to the use of permanent rails and chairs has arisen, have you taken any means with the view of supporting your own opinion, and trying to bring about an understanding with the Railway Authorities, of getting the opinion of other competent persons as to the practice? I have had the opinion of several.

47. Can you recollect the names of the gentlemen you have applied to? I wrote to John Keith, which I got last mail, which is as good a letter as can be read.

48. Will you enumerate the names? John Keith, Thomas Rhodes, Mr. Favel, Mr. Willcox, my

A. Rhodes, Esq. my colleague,²² and Mr. Fowler. There is also a letter from Charles Jones, who represents the firm in Paris, and many other letters are coming out.

20 April, 1860.
Locke and Errington, C. Engineers, Hanson, Adelaide, Mr. Jai, C.C.

49. Do these persons concur in your view that it is the practice in the construction of all large railway works for the engineer to accommodate the contractor with these permanent rails and chairs, to assist him in carrying out his operations? Yes.

50. In this Colony, would it be practicable for you to carry on the work unless you had the use of the permanent rails and chairs. It would never answer to import them merely for your use? It never would suit; it never was thought it would suit.

51. You could not carry on the work without the use of the line? Certainly not.

52. Has the work ever been delayed for the want of a sufficient quantity of this material for your operations? If the Railway Department had given me the facilities I have had from other engineers I do not hesitate to say that the Penrith line would have been open.

53. Do you mean to say that it could have been open now by the middle of April? Yes; if I had had the facilities I ought to have had when I arrived here in the month of March last year.

54. When do you now expect to have it open? If the Railway Authorities continue to obstruct me in every manner, not for the next twelve months.

55. You state that if the facilities you have received from other engineers had been afforded you by the Railway Authorities here, the railway would have been open—had they the means in the Colony? These rails at Darling Harbor were here before I came to the Colony, and I drew the attention of the Commissioner of Railways to the fact that they were lying there, and it was only through my writing to him that his attention was directed to these rails. I have got them since the month of January, so you can count from January to now.

56. Having reference to the railway works in Europe you have been employed upon—what was the position of the engineer upon these works; was he resident upon the works? The Government or the Company had a consulting engineer, this consulting engineer lived in London; but he had a principal engineer, who was engineer-in-chief on the permanent works. These engineers-in-chief resided in Paris or Bordeaux. These engineers-in-chief came down with their secondary engineers, and arranged with them their districts; each of these had a length of about ten miles, and the secondary engineer had to set out and inspect the work, and we always reckoned that ten miles, that is, five miles going, and five miles coming, was sufficient for a man to go in a day to superintend the works—so that there were ten engineers to a hundred miles. These sub-engineers had inspectors under them to see that the work was properly executed, so that I think the Government ought to allow an engineer to each ten miles—that is quite sufficient if he looks after the work properly.

57. You say the engineer-in-chief and sub-engineers are always on the works in person looking after the works? Yes, they were with us continually.

58. Will you state to the Committee whether the engineer-in-chief or his subordinates in this Colony occupy the same position upon the railway works? No; there is an engineer who goes to measure the works once a month, and he looks at these works,²³ "They are not satisfactory," and walks on. Then he goes on to another place as I shewed you just now, "Oh this is rock; I don't call that rock, that is earthwork," and walks on; he has not another word to say. There is an inspector left to superintend us—²⁴which, if you want to look into the letters—who sees everything that is done, and although we do the work to the satisfaction of the inspector, the Engineer-in-Chief says it is not satisfactory.

59. How long have you been engaged upon the Southern Railway? On the Menangle Extension—?

60. Altogether, how long have you been employed? I dare say a year.

61. How often has the Engineer-in-Chief been on the viaduct during that period? Once he went over on horseback to look over the line from Picton to Goulburn with the engineer ²⁵that surveys the line from Picton to Goulburn; at another time he came over I think—I rather believe—to find fault with me. I have repeatedly written to him—

62. You have not answered my question, how many times he has been on the line there? Three times.

63. Do you think three is the utmost number of times—could he have been there without your seeing him? He might once or twice, but I am sure not more, for my time-keeper, even when I go myself, books down the time when I go—and he books down everybody's time.

64. Do the engineers and subordinate officers go over the work? The inspector always, and the district engineer goes about once a month.

65. Will you be kind enough to state to the Committee what are the designs for the bridges upon the Southern Railway Extension; and the character of the works generally which you are constructing; and how far they will be suitable for the purposes for which they are being erected? Wooden or brick bridges?

66. Wooden bridges? (*The witness produced a plan and section.*) In the first place, in going over with my colleague, Mr. Willecox, who is on the Northern Line, I drew his attention to these wooden bridges and wooden viaducts, and after we had gone through it we came to the conclusion—

67. Will you describe the number and situation of these bridges before you go into a description of them? 23 miles 65 chains, between Campbelltown and Picton.

68. But where are the bridges situated? Between ²⁶23 miles 63 chains, and 23 miles 66 chains.

69. You have a plan now before you? This is a plan of the viaduct.

70. Is that the viaduct near Menangle? Not far from Menangle, about a couple of miles.

71. Will you describe to the Committee the character of the work of which you have a plan before you, and state your opinion as a practical man, whether it is a work suitable for the purpose

²² Should be 23 m. 40 c. & 26 m. 40 c.

²³ Says.

²⁴ Should not be inserted.

²⁵ Who.

- purpose for which it is to be erected? I built a bridge at ²⁷Erre, upon the Paris and ²⁸ Railway, for a double line, with a height less than this, and less width between the piles; I call them props not piles—props I call them—
72. If you would state the dimensions of the bridge first from the plan before you, so that the Committee might understand the character of the bridge, it would be much the best course? This bridge is 298 feet 9 inches long, the average height is 31 feet 6 inches, the width at the top at that height is 11 feet 6, on an incline of one in seventy.
73. Is there any curve? There is a slight curve.
74. Will you state the width of the bridge at the base? It is perpendicular.
75. It is 11 feet 6 at the base? Yes; they want to have these props or piles ²⁹put with the ³⁰Driven to eighth of an inch, and then they strut it afterwards.
76. What is the width of the strut? About 10 feet more, that would make about 22 feet, I should say.
77. This viaduct is 298 feet 9 inches long, 31 feet 6 inches high, 11 feet 6 inches in width, and on an incline of one in seventy, with a slight curve? Yes.
78. Will you state how this viaduct is constructed; describe the wood framework upon which it rests—which in reality constitutes the structure—in language to be understood by the Committee? It is supported by three props with two struts 31 feet 6 inches high, 11 feet on the top, and the width at the base about double; now I say that a locomotive engine running at the rate of thirty or forty miles going down this incline—
79. What is the size of the pile—the diameter? A foot square.
80. Are they shod? They are shod and pointed.
81. And are driven into the earth what depth? It depends entirely upon these inspectors. They put an inspector there with a hammer a ton weight, and falling fifteen feet, and they drive the piles sometimes—God knows where—they split them all to pieces.
82. Will you at this stage state what progress has been made in the construction of this viaduct? We have not started it; we have got the timber ready.
83. It is only a work projected? Yes.
84. Then the work is to consist of piles 31 feet 6 inches long, and 12 inches diameter, driven into the earth—that is, the piles are to be 31 feet 6 inches above the earth; it does not include the length driven into the earth? No; I do not know what we are to drive; it depends upon these inspectors.
85. Are the piles to be supported by intermediate diagonal braces? Not one, which certainly is the reason I object to this viaduct.
86. Is there no stay or brace of any kind between the piles from the surface of the earth to the bridge itself? No, none. There are cross pieces to brace the pile, but for the length between the piles or props, as I said before, there are none, and there is 20 feet span.
87. How does the bridge itself rest upon these piles—are there any cross pieces—any crutch-like pieces at the top? There are three perpendicular props which take the weight of the locomotive, and two outside struts, as I call them; that is the only thing which keeps the thing together, with the exception of the corbels at the top.
88. What is the space between these piles? 20 feet.
89. Twenty feet between each, and the height is 31 feet? 31 feet 6 inches.
90. The viaduct itself is 298 feet long? 298 feet 9 inches, I think.
91. Will you state your opinion, as a practical man, of the value and durability of a construction of this kind for the purpose for which it is constructed? When I look at that viaduct—of an incline of one in 70, and the top to be 11 feet 6 inches wide, the props driven into the ground pointed—it strikes me very forcibly, that into that ground they do not want to drive any piles. They might have put a platform of timber about a yard below the surface of the ground if the Engineer-in-Chief persisted; but when I reflect upon a bridge that is made for a double line, not for a single one, I think of the Paris and Cherbourg line, which was to have been made with such a bridge, but the Government Engineer said, "We shall not allow trains to go on these bridges; you must build them of brick, iron, or stone," and we thought immediately it was right, and we built a brick viaduct without another word. It was asked of me, "Will you build these bridges at the same price as those on the plan?" I had no objection, and I started immediately on the good faith of that and made bricks. But there was some word or other—people were jealous of this change, and the order was given that we must not change anything. However that bridge can be built now with brick piers and timber tops, and in ten or fifteen years you will have to change these timber tops, when the Colony is more in a state to go out in a large way in expenses. You can easily take off the timber tops and put on iron tops. This has been done with several bridges I know of—not one, but I should say twenty bridges that I can name.
92. Do you consider that this viaduct when finished will be safe for the traffic which will pass upon it; for the uses to which it will be put? If I am to give my opinion, I think not; it may last for a while, but not long.
93. What is the character of the other wooden bridges on this road, similar to this? Not so dangerous; I consider the great danger is the incline of one in seventy on a curve. The other is on a level rail.
94. Are the others as extensive? Yes. My opinion is that there are three bridges on the Western Railway, and another on the Southern, which certainly, to my opinion, ought not to be built.
95. Ought not to be built—why? I think that the height of twenty-three feet six of piles, on a very soft bottom, width on the top eleven feet six, piers or props twelve inches, is not sufficiently strong enough, according to the plan, to carry an engine of thirty or forty tons

A. Rhodes,
Esq.

Erreux.
Cherbourg

- A. Rhodes, Esq.
20 April, 1860.
- tons weight, with a train of thirty or forty carriages behind, going at a speed of thirty or forty miles an hour. This is what I would like to see. (*The witness produced a plan.*)
96. This is the kind of construction you would recommend in the place of the plans proposed? No, I should like to see brick piers.
97. But taking for granted that they were to be built of wood this is the plan you would approve? Yes.
98. Will you describe what the difference is? Between the two piles there is twenty feet; I would suggest to put a longitudinal piece between two struts seven feet long, twelve by fourteen inches; the struts fourteen by twelve, properly braced by a piece of timber uniting the five piles or props, connected with cast iron plates, and well jointed together with bolts.
99. You consider then that the greater danger in the construction of the Menangle viaduct—? Not the Menangle viaduct, the viaduct between Menangle and Camden.
100. The greater danger arises out of the circumstance of the incline and the curve? And the width on the top.
101. As compared with the others, you say you consider that more dangerous, and you attribute that to the curve and the incline? And the width.
102. Are not the others of the same width? Yes, but they are not so high.
103. What is the character of the other bridges—are there any brick bridges? No brick bridges; there are culverts.
104. You have offered to construct brick culverts in lieu of these timber structures? At this very viaduct, 23 miles 65 chains, during the last floods, I put a person on on purpose to see if there was any water on it.
105. What viaduct do you refer to? This very viaduct, 23 miles 65 chains, 298 feet 9 inches long. I had been led to understand that there have been more floods in the last ten or eleven weeks than there have been for many years. We have a time-keeper who goes along to see how the work progresses, and I gave him positive orders to put a man on to see whether any water passed through there at this 298 feet 6 inches viaduct. Well, a six feet culvert will take more than twice the water that passes there. But I understand that there is to be a cattle way through, and I say if you have a cattle way, make it half the length. They say, "Earthwork will cost more money." I said, "Well, I will put in earth-work for the same money." "Oh, that will not do, it is not in accordance with orders given from the Railway Department."
106. Do you consider that the Southern and Western Extensions have been well laid out in an engineering point of view? Certainly not.
107. Would you state what your objections are? During the last flood the road that goes to Campbelltown, the formation level was four feet nine inches under the level of the rail. If the railway had been working, the trains would have been stopped, and the railway washed away. I call that very bad engineering.
108. Have you, at any time, pointed out any alterations in the works which have appeared to you necessary for rendering them of a more durable and useful character? I said, in the first instance, that instead of these wooden bridges we could have given plenty of room by building a couple of arches of fifteen feet, which would have been more durable than timber bridges, and would not have cost any more. I have suggested that the slopes of one to one should have been one to one and a half. I have suggested that, in some places, there should have been more culverts, and ³⁰no others less. I can shew you one instance—it don't do to keep you too long. I will mention one. At Harris' Creek, where there is a bank of 76 feet 4 inches, the first plan I got was for a five feet culvert. I drew the attention of the Railway Department to that; but I suppose they thought it was better for me to mind my own business and not theirs. Now that culvert, if it is built under a bank of 76 feet, I say it is a much dearer affair, and I question that when the first flood comes if it is ³¹not a culvert of ten feet, it will be ³²blowed up. I should say, certainly, that of all the practical engineers I have seen in Europe and in England they never would suggest a culvert, but would have a viaduct built there. One would cost about £3,500 and the other about £4,000.
109. You have not stated very clearly why you consider these timber bridges unsafe. You stated just now, I think, that they might last a short time, leaving us to infer that they would give way before a long period. Would you state in what respect they would give way?—How the traffic upon them and the influences of the atmosphere would be likely to affect them? In a dark night, when it is raining hard, the engine driver cannot see the viaduct or banks; there are no lamps; they have to leave the station at a certain time and to get in at a certain time. They look at their watches, and when they go down an incline like that, where it is not properly strutted, I say there is great danger when they come to the curve, that the long train behind them would swing the engine, would oscillate down the incline, and these long props or piles stuck in the ground would shake tremendously, particularly when they are not properly strutted from one prop or pile to the other; because, if they had strutted them, they would have been one mass as they are not now; they are only united by longitudinal pieces into the pile with jagged spikes.
110. Are you of opinion that the bridge would give way by wear and tear before the wood-work was affected by the usual influences affecting woodwork, in other words, before it was worn out? I am perfectly satisfied that if the bridge were as strong as anyone would wish for it would not last fifteen years. I am satisfied it is not a safe bridge. It is not a safe bridge for a permanent bridge. I would not build one myself for engines and traffic, or even for temporary ballasting.
111. I presume, as you represent the largest firm of railway contractors in the world—Is not your firm the largest? Yes; I think so.
112. As you represent so large a firm I presume the reputation of the house is a much more serious matter of consideration with you than any immediate profit? Of course it is.
- 113.

³⁰ Should not be in.

³¹ Even.
³² Blown.

113. I ask that question with the view of putting this other question. If you had known of the structures you would have been required to have entered upon; if you or your principals had known the character of these bridges, which you have been required to construct, should you have been disposed to refuse the contract on any terms, on account of their unsafe character? Certainly I should, and it was for that very reason I wrote to the Commissioner of Railways to give notice to Government that they were not safe structures. A. Rhodes,
Esq.
20 April, 1860.
114. You mean to say that it would not answer your purpose to construct any works that would give way afterwards, or which might give rise to accident through the defective character of the works? It is invariably the case when an accident occurs, that it is said, "Oh, the contractor has done so and so." It is not the engineer, but it is the contractor's bad work, although the work is done under the superintendence of those gentlemen.
115. If you had had none of the obstructions which you allege have been placed in your way, by what time could you have finished the railway to Picton? I went through the works carefully the other day, and examined all our ³³gangers as to the speed, and there is one bank near Picton 128,000 yards—that is, half the work had been done in five months—we shall have that done in five months. That was the reason I wrote to the Commissioner if he would allow me a certain way of doing the works I could open the line by September to Picton. But if there are obstructions in every manner and form they will not open it in twelve months—I defy ³⁴it.
116. Have you possession of all the plans and specifications of the work? No, the most important—actually when I started with the works the Engineer-in-Chief mentioned that he was going to have brick piers and ashlar ³⁵ceasing with ³⁶a-timber top for the Menangle viaduct, and when I started to get this done—"Oh, what are you doing this for." I said, "I suppose if these important works are to go on, we must get the material ready." "Your price is too much for this;"—I said, "If I have too much for one thing I have too little for another." Till now we have not that plan. ³⁵ Them.
³⁶ Au iron.
117. You were to have the plans within three months? From the 21st April—that was my contract.
118. Has there been any arrangement entered into between you and the Railway Authorities to give you a day longer for every day you are delayed by them? They wrote that to me, but I did not accept it—I accept the contract.
119. I have heard it stated that on one occasion one of the engineers of the Railway Department in attempting to trace a portion of the line got a considerable distance from the line from imperfect knowledge? ³⁷There is my agent Mr. Durham, and the district engineer, Mr. Mason, between Douglass Park and Picton, lost their way and could not find the pegs. ³⁷ Should not be inserted.
120. Have you often seen the engineers on the line setting out the works? They may have been; but to my own knowledge I never saw an engineer with a level on the line to this day. Our people might have seen them—I never did.
121. Besides these permanent rails and chairs, have you met with other obstructions, or what you consider obstructions, from the Railway Department? The length of the piles have never been given. If you look you will see that they are cut off about two feet from the surface, and that is what ³⁸you will call a great obstruction. ³⁸ I consider.
122. *By Mr. Arnold:* I think you said you arrived here for the purpose of treating with the Government for the construction of railways, on behalf of Peto and Co.? I think so.
123. Previous to your coming to this Colony did you see a schedule of prices in the hands of Peto and Co., that had been received from this Government? That is the document (*exhibiting a schedule previously referred to.*)
124. Did you come here for the purpose of accepting that schedule, or for the purpose of treating with the Government? There is the schedule—"Engineer's schedule of prices for proposed extensions."
125. What I ask is this—Did you come here from Peto and Co., instructed by them to accept that schedule of prices, or to treat with the Government? I came here to examine this schedule of prices, because the Government sent these prices to Peto and Co., and I tendered for the works at those prices.
126. Then you had no unreserved instructions from Messrs. Peto? None whatever.
127. You came, in fact, to treat with the Government on behalf of Peto and Co.? Yes.
128. Do you then consider that, under any circumstances of change that might take place between the time of sending home that schedule and your arrival in the Colony, the Government were bound to conclude an agreement with you on that schedule of prices? There was no change, neither for labor, neither prices, nor anything else, only to suit what a certain thing is, that I will not mention unless you force me to do so.
129. That is not an answer to my question at all. Did you —? If you force me, of course I shall.
130. I ask you this question—Did you consider yourself bound to adhere to that schedule of prices when you came out here? I proposed to the Government, after an agent was sent over with me, to allow me to examine this schedule of prices, and knowing that I could not afford to take one half-penny ³⁹out of these prices; but the Government said, "We will give ³⁹you facilities." ³⁹ or :
131. That is not my question—you appear to be evading the question—supposing when you arrived here you had found that you could not undertake this contract on this schedule of prices except at an obvious loss to Peto & Co., would you have concluded an arrangement on that schedule? I concluded in this manner, with our management, and with knowing what works were, and taking the sections sent to London, and taking the trial sections—there may be a laugh on the part of the Government—I say that that is the proper price.
132. I must have an answer to my question, if you please, before I go on any further. What I want to know is this,—if you had ascertained that the contract could not be taken on

A. Rhodes, Esq. on that schedule of prices except with loss to Peto & Co., would you have accepted the contract on that schedule of prices? I say to the Minister of Public Works that these prices were sent to London—"Engineer's schedule of prices for proposed extensions—Signed, 20 April, 1860. "John Whitton, Engineer-in-Chief."

133. When you are prepared to answer the question I have put I will go on with the examination —.

Mr. Faucett suggested that the question should be put in another form, and then the witness might answer it.

134. *By Mr. Arnold*: What I want to know is this:—Whether, when you came to this Colony, and had investigated the circumstances of the Colony, the price of labor, and the various peculiarities which attended the acceptance of a contract here—with regard to the prices of articles, the price of labor, the formation of the country, and various matters of that kind—whether, when you arrived here, and had ascertained that the contract could not be taken on that schedule of prices except at a loss to Peto & Co., would you have considered that schedule of prices as binding on you? When these prices were sent to London there is not the least doubt but what we had a meeting, Sir Samuel Peto, Brasscy, and Betts, together. On my arrival here, as the Minister for Public Works wants to know, word for word, I will not give it you in half a word—I will give it you in the whole—I asked the Commissioner of Railways to come over with me and look at the lines, and the Engineer-in-Chief; what was their proposal? to drive over a nice carriage to see the roads, not —.

135. That is not an answer —? Well, if I cannot explain matters —.

136. *By Mr. Faucett*: Perhaps you will be kind enough to answer the question I put to you;—When you came here, suppose the Government had determined to bind you, and said you are bound by your contract, would you consider yourself as bound by those terms? I consider —.

137. Say yes or no. You came out from your firm to this Colony, with that paper in your hand in your possession as the proposal from this Government; if the Government had said to you when you arrived here, Mr. Rhodes, that is your contract, we bind you to that —? If they had, I would.

138. Would you have considered yourself bound to it? I would after the information I took.

139. Without any further information—At the first interview between you and Mr. Cowper, supposing Mr. Cowper had said "we consider you bound," would you have said, "I admit I am bound by it?" No.

Mr. Plunkett: Now you can explain.

Mr. Parkes: You can follow your answer of "No" by explaining why you would not consider yourself bound.

The Witness: In taking these prices before me, we considered that the Government sent these prices to us according to the "Engineer's schedule of prices for proposed extensions."

140. *By Mr. Arnold*: After you came here, did I understand you correctly if I understood you to say that the first thing you did was to meet the Members of the Executive Government and the Engineer-in-Chief? Yes.

⁴⁰ Them on.

141. With what purpose? To compliment ⁴⁰ my arrival in the Colony.

142. They thought they had never seen such a Colossus before, perhaps. I understood you to say to the Committee that you met the Members of the Executive Government and the Engineer-in-Chief, with a view to arrange about the prices? Yes.

143. As you met the Members of the Executive Government and the Engineer-in-Chief with the view of arranging what the prices should be, I presume there was no contract, or implied contract, so far as fixing prices, before you came to the Colony? If properly well understood between man and man, there was a contract, on the good faith of the Government, sending for me and my family, and materials, when I left the mother country. But then what was done when I got here?

144. In point of fact, you consider that the Government were bound to you, but you do not consider yourself bound to the Government? I never refused at all.

145. Did you, in arranging prices with the Government afterwards, accept lower terms than those named in the schedule? Well, you see, those clever men, Government, that is to say, the Secretary of Public Works, the Colonial Secretary, the Commissioner, and the Engineer-in-Chief, they got me embodied in a bit of a corner, and I do not hesitate to say that I set these prices in; but I was to have rails and chairs, and every facility that a new Colony could afford, to get on with these works.

146. Have you before you the printed copy of the correspondence which has taken place on the railway contracts? Yes.

147. Will you turn to page 3, please—Did I understand you to say that the schedule, as printed at page 3, is the schedule that was sent home to your Company in London as an indication of the prices that would be given? Certainly, and that was the true and most principal manner of carrying on the works to have given that price.

148. That was sent Home? If I am to believe "Engineer's schedule of prices for proposed extensions."

149. I am referring you now to page 3 of this printed correspondence, in which, I think, you will find a copy of the schedule of prices which you enclosed in your first application to the Government here—Is that a copy of the schedule that was sent Home to your firm? Quite so.

150. Precisely a copy? Yes, according to "Engineer's schedule of prices for proposed extensions."

151. Are the prices affixed to the different items in this schedule precisely the same prices that are affixed to the schedule sent home to your firm? Yes.

152. And, in all respects, it is an exact copy of that schedule? I think so, unless some lawyers or some clever people in the Railway Department could change a few words.

153. At all events you never changed any words? As far as my knowledge goes I think not. As far as my knowledge goes I changed nothing. A. Rhodes,
Esq.
154. You would be a little indignant if any body had changed any words, probably? I never wish to produce any thing but what cannot lie. 20 April, 1860.
155. Will you look at the first item in the schedule as it appears in this correspondence:—“Excavation from cuttings taken to embankments named in the disposal sheet not exceeding half a mile lead, at per cubic yard.” Is that precisely copied from the schedule sent Home to your firm in England? If the Minister of Public Works will allow me to explain to the Committee—
156. I should like to have an answer first—is that precisely copied from the schedule sent Home to your firm in England? “Excavation from cuttings taken to embankments.”
157. Then “named in the disposal sheet not exceeding half a mile lead” was not in your schedule? “Excavation from cuttings taken to embankments, at per cubic yard.”
158. These other words “named in the disposal sheet not exceeding half a mile lead —?” That is the first—you are going to the second question.
159. Were those words in the original schedule sent home to England? No.
160. Do you know by whom they were inserted? “Engineer’s schedule of prices for proposed extensions,” signed “John Whitton, Engineer-in-Chief,” sent to London.
161. Ah no, Mr. Rhodes, I am not going to be bamboozled that way —.
- Mr. Faucett begged that the witness might be allowed to retire for a few minutes.*
(After some discussion with reference to the mode of examination, witness re-introduced.)
- The Chairman of Committees:* Mr. Rhodes, the Committee desire that, in your answers to any questions put by Honourable Members, you will give those answers in as direct and simple a manner as possible, not going into any explanations in doing so, but limiting yourself as much as possible to a simple answer of “Yes” or “No.” The Committee do not desire to limit you so strictly as to prevent your making the necessary explanations after giving direct answers.
162. *By Mr. Arnold:* I called your attention to page 3 of the printed correspondence, in which there is a schedule of prices which you submitted to the Government, together with your letter of 2 April, 1859; I now wish to ask you whether the words “named in the disposal sheet not exceeding half a mile lead” are words that are copied from the schedule of prices sent home to England? No.
163. By whom were they added? When the Government wished me to reduce the prices —
164. By whom were those words added? By the Engineer-in-Chief.
165. In the schedule you sent to the Government? No.
166. I am speaking with regard to this schedule you sent to the Government, which you will find at page 3 of the correspondence. By whom were those words added in the schedule which you sent to the Government? By me.
167. In all other respects, except these words, I think you have already said this is precisely a copy of the schedule that was sent home to your firm in England? Yes.
168. I think you produced a schedule of work in which some words are added in the handwriting of the Engineer-in-Chief? Yes.
169. Are any prices affixed to that schedule? No, but they substantiate what was to be done.
170. When was that schedule given to you? The first of April. Allow me to ask which schedule?
171. Do you now hold in your hand the schedule without any prices attached, in which are some words written in the handwriting of Mr. Whitton? This is the handwriting of Mr. Whitton. This is the schedule I sent to you the day afterwards.
172. I am speaking of the schedule in which there are words added, in the handwriting of Mr. Whitton? There may be a day or two difference, and if I had my diary here I could tell you the day and hour he wrote this.
173. Why were no prices attached to that schedule which is now without prices? When the Government asked me, with the Engineer and Commissioner, when they proposed to me 2s. 7½d., and when Captain Martindale said, “Oh, dear me, it would oblige the Government very much if you could take a penny more off,” the day before that the Engineer-in-Chief wrote this.
174. Are you satisfied that that schedule, without the prices attached, was given you by the Engineer-in-Chief before you sent in the schedule to the Government, which I find at page 3? All that the Engineer-in-Chief gave me was this. It was the Government I treated with, not the Engineer-in-Chief.
175. What I ask you is this; was that given you by the Engineer-in-Chief before you sent in to the Government the schedule contained in your letter of the 2nd April? Yes.
176. Was that schedule of prices that you sent in to the Government accepted? Which prices?
177. The schedule contained in your letter of 2nd April which you sent to the Government? No.
178. Were those words that I have alluded to in the first item objected to by the Government—the words that would limit the leads? What page?
179. Page 3—the first item in the schedule that you sent in to the Government—the words “named in the disposal sheet not exceeding half a mile lead”—were those words objected to by the Government? Yes; but, in answer, I said, I do not care for half a mile, one or two or three hundred yards distance.
180. And in the schedule of prices, accepted and agreed to, both by the Government and yourself, these words were omitted,—were they not?—the limitation to half-mile leads was altogether omitted,—was it not?—page 5? Ah! page 5, of course, subsequent.

- A. Rhodes, Esq.
20 April, 1860.
181. In that schedule accepted, the limitation with regard to leads was omitted? I do not understand if you refer to the schedule of prices I sent in, page number 3, or page number 5; if you will tell me which of them you wish me to answer I shall.
182. I asked you to refer to the schedule at page 5, which is the schedule of prices agreed to between yourself and the Government—Is not this limitation with regard to leads excluded from that schedule. I will put the question in another way—? No, no, I will answer you at once if you will give me time. “Excavation from cuttings taken to embankments,”—certainly no half-mile was put down, but thinking that having this document quashed even any manner of supposition, because you will see in the next price, 2s. 7½d., “Ditto from road approaches taken to embankment, not exceeding a quarter of a mile lead, at per cubic yard,” I think it was quite sufficient.
183. Where the leads are limited to a certain distance, as for instance, half a mile, that is where the contractor is not bound to carry the excavation beyond half a mile at the price named, would it not be usual in a contract to fix on a price where the leads were to exceed half a mile? Yes; but in our contract of 21st April, I never — (*Witness reads from letter dated 21 April, 1859, Agent of Sir S. M. Peto & Co., to Commissioner of Railways.*) “A schedule of prices for all extra work, as far as practicable, is to be prepared at once, and agreed to between us, and any extra work for which the price cannot now be settled is “to be left for future arrangement.”
184. Where do you find that? Contract of 21st April. (*Page 7.*)
185. That refers to all work for which a schedule of prices could not then be prepared—any unanticipated work,—surely that would not refer to the most important item in the whole work of the railway? Yes.
186. You think it would? Yes.
187. You think that would refer not only to all work that was not provided for in the schedule, but to all work that is provided for? If you look at my letter of the 15th April, 1859,—“The whole of the works, of whatever nature and description required in making “the extensions herein named, shall be included in the contract.” That is the Commissioner’s letter.
188. Well, at all events, these are the facts, that in the schedule of prices sent home to England there was no limitation with regard to leads; in the schedule of prices you sent in to the Government there was a limitation with regard to leads, that limitation was objected to by the Government; and in the schedule of prices ultimately agreed to between you and the Government there was no limitation with regard to leads? I cannot understand exactly what you say with regard to that.
189. I understand from what you have already said, that it is the case that in the schedule of prices sent home to England by the Government here, before you arrived in the Colony, there was no limitation with regard to leads? No.
190. In the schedule of prices submitted by you to the Government there was a limitation with regard to leads? By the Engineer-in-Chief.
191. No, by yourself I imagine? What cannot speak cannot lie—(*holding up a paper.*)
192. Can you find me any document written by the Engineer-in-Chief in which there is a limitation with regard to leads, and where the price is put down at 2s. 7½d. a yard or 2s. 9d. a yard? I do not know whether I am to say yes or no to that.
193. Can you find any document of that kind? The document is this.
The Chairman: The witness will have the goodness to give a simple answer of yes or no to the question put to him, and then explain.
Witness: No.
194. *By Mr. Arnold:* Now I will ask you the third question, I understand from you that in the schedule you sent to the Government there was a limitation with regard to leads? Yes.
195. And that limitation was inserted by yourself, and was objected to by the Government? Objected to by the Government, but —.
196. And afterwards, in the schedule of prices which both you and the Government agreed to, was not that limitation omitted? The limitation was that I gave instead of half-mile leads two or three hundred yards extra.
197. Is that inserted in the schedule—is there anything in the schedule about half a mile or any other distance? No.
198. Have you with you there any plan—or I think you call it a disposal sheet—shewing the excavations and what is to be done with them? I have not them here, but can give you them off by heart.
199. Were you furnished with your disposal sheet before you sent in your tender, or afterwards? No, about three months after the contract.
200. About three months after the contract you received the first disposal sheet? Yes.
201. Did you see no disposal sheet before that time? Never.
202. Can you tell me the date of your receipt of the first disposal sheet? Well, I should say about a month behind the contract time, and that is within the limit.
203. A month after accepting the contract? No, a month after the contract time. What I call the contract is the contract of the 21st of April.
204. Then you think you received it about the end of May? Oh, no.
205. Not so soon as that? No, they do not go so quick to work as that.
206. Do you think you received it in June? I have got it somewhere here; if you let me have time I can get it for you.
207. I can get it myself. I do not wish to lead you into any mistake. Of course I can ascertain when the disposal sheet was furnished you? I can safely say I did not get the disposal sheet two months after the contract was signed.
208. You are quite satisfied you had not the disposal sheet in the first week in June? Well, there

- there might have been a certain length, not the whole, according to contract; there might have been a little given.
209. Had you any disposal sheet in the month of June, or by the month of June, which would shew you that the leads proposed by the Government exceeded half a mile? The leads were less than half a mile; I should say a quarter of a mile. What the Government intended to do for themselves was a quarter of a mile, and not half a mile. A. Rhodes,
Esq.
20 April, 1859.
210. When did you first make a complaint to the Government that the leads were longer than you had agreed for? It requires a practical man to examine matters.
211. Are you not a practical man? I am; therefore I looked at these disposal sheets, and went on the ground to examine them, and when I found it was not according to contract I wrote, as for the date —.
212. What I ask is this: when did you first point out that the leads upon the works you were expected to execute would exceed half a mile? It would take me half an hour ^{to hunt} ~~to find the~~ ^{the time up.} ~~the date.~~
213. I will ask you another question: how long, after you ascertained that the leads did exceed half a mile, was it that you made your first complaint to the Government on the subject? If you will wait half an hour I shall find it out.
214. I think you said, in answer to questions of Mr. Parkes, that one of the principal obstructions that have been offered to you by the Government, was the refusal of rails and chairs? There is not the least doubt of it.
215. And I think you also said that, on all other railways which you had superintended, the free use of rails and chairs had been given you? Or else no contractor would be so foolish as to take the works.
216. On these works to which you allude, you understood you were to have rails and chairs, or you would not have accepted the contracts? It was never questioned; it was never said you shall not have rails; rails were sent to you because the engineers knew very well you could not get on with the works without them.
217. Had you an understanding that you were to have rails on these other railways? It was a customary thing.
218. Were you entitled to them by the terms of the contract? The same as I have had here?
219. The same as you have had here? Yes.
220. Did you, in any communications to the Government here, state that you would require the use of rails and chairs in order to carry on the work satisfactorily? If the Minister of Public Works will be kind enough to look at the 19th April, 1859, page 6, paragraph 7,—
“As the work is to be completed by so early a period, and as, in order to accomplish this work, great exertions will have to be made on various portions of the line simultaneously, a great quantity of rails and chairs will be required; and as, by the wording of this clause, the Government only propose to allow me the use of such rails and chairs as can be spared,—in agreeing to this clause, I do so on the assumption that the Government will send for and procure the rails which will be necessary for the line at once, in order that I may have sufficient to proceed with the work. Indeed the Government will require these for the opening of the railway when the works are completed; and would, I presume, as a matter of course, for their own sakes, adopt this suggestion.”
221. Now will you turn to the next letter, page 7, paragraph 4, which is an answer to that letter, and see whether I read correctly. This is a letter from Captain Martindale to Mr. Rhodes. “In reference to the seventh paragraph of your letter the rails, chairs, &c., necessary for the whole of the authorised extensions, have long since been sent for, and these will be in the Colony when required; but as these cannot, as you have already been informed, be permitted to be used for temporary purposes, the progress of the works up to the formation level is in no way dependent on their arrival?” The Government know perfectly well that the rails are not now in the Colony, and will not be in the Colony for six months.
222. Will you explain to me how you construed that reply to your application? On the 21st April, 1859,—“I am to be entitled to all such rails and chairs as may be in possession of the Government, and necessary for carrying on the works, including those which may have been sent for the permanent way, and which may not be required by the Government, upon the terms previously arranged, and subject to my payment for all damage or injury that may be done to them whilst in my occupation.”
223. I ask you this: what construction did you put on this 4th paragraph of Captain Martindale's letter of the 21st April? This is the reply;—this is an answer to it.
224. This is your construction? It is an answer to it.
225. I did not ask you that question? Yes you did, sir.
226. No, I ask what construction you put on the language I have now read—did you understand that to be an assent to your proposal? I answered the Commissioner of Railways; he said so, and I said “I am to be entitled to all such rails and chairs, &c.”
227. What I want to know from you is, whether you understood the 7th paragraph in the Commissioner's letter to be an assent to your proposal, or a refusal? I gave a refusal on the 21st April, 1859,—“I am to be entitled,” &c.
228. Did you understand this paragraph in Captain Martindale's letter —? No.
229. You did not understand it at all? No.
230. Did you understand it to be an assent to your proposal, or a refusal to your proposal? No.
231. It was neither? No, not to assent.
232. Did you understand it as a refusal? No, because my previous letters and my answer. If the Minister will only read the letter of 21st April, 1859, you will find out what I have said, and there you will see —.

- A. Rhodes, Esq.
20 April, 1860.
233. I am coming to that letter directly, and will give you all the benefit of it, if you will only answer this question. I will read the paragraph again (*paragraph 4 of Captain Martindale's letter, previously quoted*) —? I never agreed to that.
234. I do not ask whether you agreed to it at all? No.
235. Did you understand that —? No, I did not understand it; I never agreed to it.
236. Did you understand this paragraph to be a refusal of your application? What I understood was, that I did not agree to it.
237. I do not ask that. Did you understand that Captain Martindale refused to give you the permanent rails for temporary purposes? If I am to read words in a straightforward way, no or yes, he takes upon himself to say so, but it never was so.
238. Well, as I cannot get an answer, I will just ask you once more, because I do not think you will do your case any good by refusing to answer a question. I want to know whether you understand from this paragraph in the letter that Captain Martindale refused to give you permanent rails for temporary purposes? He refuses. You will allow me to explain. In our contract we agreed to give ten per cent. on the value of these rails for temporary purposes—what we call for temporary purposes is a hundred yards from the face, that is, into the cutting, and a hundred yards into the embankment. It may be, certainly, that people have a manner of expressing temporary things in permanent ways. I have heard people say temporary work, and seen plenty of buildings in the Colony called temporary and permanent. I consider a railway is never permanent till it is open for seven years, till the works are consolidated; and I must say, if these rails were for a few months over these lines they are not temporary, they are permanent; however, the purport and meaning of temporary rails are this:—The first year that a railway is opened all the embankments settle for a seventh, that is to say, if the embankments are seven yards deep they settle down—all embankments. Now, in carrying on the works, they settle nothing like it, therefore the rails are improving instead of deteriorating.
239. With regard to all the rails you were to have from the Government,—did you not agree to pay ten per cent. on their value for the use of them? Yes.
240. And to replace all damage done? Yes.
241. And to pay the carriage? No.
242. Have you not paid the carriage of the rails you have had for temporary use? No.
243. That is one of the matters in dispute then, is it. At all events, you agreed to pay ten per cent. on the value of the rails supplied to you, and to repair any damage you did to them? Yes.
244. After this refusal contained in the 4th paragraph of Captain Martindale's letter of the 21st April, you continued to be dissatisfied with these rails being refused to you,—I think you say—you continued dissatisfied with the refusal of Captain Martindale to supply you with rails? Yes.
245. What did you do then? If you will look at the letter of the 15th April, 1859, —.
246. That is of a prior date. I want to know, after you received the letter from Captain Martindale on the 21st April, what did you do—did you not see the Minister for Public Works, after this letter of 21st April, on the same day? I have seen the Minister many times.
247. Did you not see the Minister that day? On the 21st of April, I did.
248. Will you look to your letter of 21st April, page 7, and say whether that letter was not written after you received Captain Martindale's letter, and after you saw the Minister? We got the letter of 21st April, 1859. Certainly that was the letter. I said, I had better go and see my solicitor, the only chance I have got now is to go Home.
249. At all events, then, you wrote that letter after receiving Captain Martindale's? My letter of 21st April was in answer to Captain Martindale's of 21st April.
250. And in that letter you say, "I am to be entitled to all such rails and chairs," &c. (*See quotation above.*) That was the paragraph in that letter to reply to Captain Martindale? Yes.
251. Did you receive from the Government any assent or refusal? With this document of 21st April, 1859, the Secretary for Lands and Works attached a document to [the letter of] the Commissioner of Railways, which we have, that he would be rather astonished if the conclusion with Peto and Co. had not been finally discussed, with the exception of the time for plans and sections.
252. After you wrote that letter to Captain Martindale did you not receive this letter from Captain Martindale, dated 23rd April? Yes.
253. In which he says, "I have laid before the Government your letter of the 21st instant, and I am directed to reply that the Government have no objection to make to the terms as named therein, with the exception of those contained in the 4th paragraph of your letter, to which the Government cannot accede; but they are prepared, as you have already been informed, to render you such facilities as they can?" Yes.
254. Did you understand that to be a refusal to concede to you these rails for temporary purposes? Certainly not.
255. Did you, in reply to that letter, write this letter on the same date:—"Sir, I have the honor to acknowledge the receipt of your letter of to-day's date, and I beg, in reply, to state that I agree to the fourth paragraph of my letter of the 21st instant being excepted from the terms thereof, and that I am willing to rely upon the assurance which you mention to me,—that the Government is prepared to render such facilities as they can in reference to the matters to which such 4th paragraph relates?" Yes. Will you allow me to explain something after that. I do not consider that the Government was giving facilities to Peto, Brassey, and Betts, when they had got rails lying at Darling Harbor, and which they only delivered since January of this year. I do not consider that was giving facilities to the contractor,

tractor, nor do I consider they are doing so to this day, when I could put 300 men on the works, and try to the utmost of my power to open the Southern Line by September, while there are 10,000 rails lying now at the station, which would be better in use than lying there rusting. Can any one say it is not obvious to see, when you expend such an amount of money on these public works, and interest lying idle, as well as contractor's interest, that it is a dead sum of money. Why not give every facility? What benefit have we to ask for rails if we do not want them, when we are paying ten per cent. for them, and then pay for all damaged?

256. At all events, whether the Government came to a judicious determination or not, I understood you to say you were aware they refused to give you permanent rails for temporary use? Never.

257. You did not understand that? Certainly not. They were to give every facility.

258. Why then did you give up that agreement? Could I force him to give me rails that he had not got, when he said he had not rails in the Colony.

259. The Commissioner says in the paragraph I read that these rails, as you had already been informed, would not be permitted to be used for temporary purposes, and, therefore, the progress of your work to formation level was in no way dependent on their arrival? Then where was the facility?

260. Had you no rails given to you by the Government? A few.

261. How many? About what would do one cutting.

262. How many miles of railway have you? I have got 10½ miles of railway.

263. Altogether? Altogether for 30 miles.

264. How much have you in your contract? 30 miles.

265. How many miles of rails have you? 10½ miles.

266. Can you tell me what rails you had unemployed on various dates between the beginning of last December and the present time—have you any means of informing yourself? It is a question only a practical man can answer; I cannot say yes or no to it, because we use them as we are going along with the works.

267. On the first of January of this year had you any rails lying idle? Certainly I had, and a very good thing for me, for the roads have been so bad that we could not put a bullock on the road these last six weeks.

268. How many rails had you lying idle on the first of January? I dare say about three miles.

269. Have these since been used? Yes, and there is not one lying idle now. The Commissioner and the Engineer-in-Chief went over with me last Saturday, and I asked them to see those rails that were lying idle, and they could not see one.

270. How many had you on the 7th April? You might as well ask me what head I have; I only manage the works in such a style that the men are always kept at work.

271. Had you any rails lying idle on the 7th April? There might be a few.

272. Do you think you had three miles lying idle on the 7th April? I think not.

273. Between the beginning of December and the 7th of April, while you had these rails lying idle to the extent of three miles occasionally, according to your own admission, were you making application to the Government for more rails? Yes, and very proper indeed; if I had not rails in stock to keep the work going on, it is not to run after letters and red tape that I should get the rails.

274. That is the fact, that while you had three miles of rails lying idle you asked for more? If you will allow me to give an answer —

275. I should like an answer first to my question? Yes, we had; but these three miles were not the half, or the tenth part we required. I have got three cuttings now standing idle for want of rails, and the works are suffering. It is not by letter-writing, and red tape, and annoying people, that these works can be carried on.

276. Are you aware that there is any other contractor going on with railway works besides yourself? Mr. Gibbons has carried on works, but he is behind. He was to have opened in October, but it is not opened now to Parramatta, and that is only a mile and a quarter.

277. Can you tell me what proportion of rails Mr. Gibbons has to the quantity of work he has in hand? Considering that he is carrying on the works in such a slow and impracticable manner, if he had only half a mile it would be quite sufficient.

278. Do you think he has more? Yes.

279. How much? About a mile.

280. How many miles of railway has he made? He has made 8 miles, not finished.

281. And he has had something less than a mile of rails? He ought to have opened last October.

282. By what date ought your contract to be finished? If we ~~did not~~ want to take any advantage of our contract—according to the contract of the 21st April, we have from this day, and until we get our plan of the Menangle viaduct, twenty-three months. ^{**Should not be inserted.}

283. *By Mr. Parkes:* Will you explain what you mean by that? Of the Menangle viaduct, which is one of the largest and most important of all the works on the Southern Railway, I have not, I will assure you, gentlemen, the slightest idea of what it is to be—no idea whatever whether it is to be a wooden bridge, a brick bridge, a stone bridge, an iron top or a timber top.

284. You have twenty-three months from the time you get the last of your plans? Yes.

285. *By Mr. Arnold:* That is your agreement? Yes.

286. Will you shew it me in the correspondence? 21st April, 1859, if you will just read number 3.

287. Where do you find that in the correspondence? Number 3, page number 7, April 21, 1859.

288. Will you please to read it, or shall I read it for you—"21st April, 1859," letter

A. Rhodes,
Esq.
20 April, 1860.

- A. Rhodes, Esq. letter signed "A. Rhodes." — "The time for the completion of the contract is settled at twenty-six months from this date"? Yes, "the Government undertaking to deliver over immediately the five miles Menangle Extension, to furnish us with plans, and put us in possession of fifteen continuous miles of railway within two months, and the plans and lines for the remainder of the contract within three months."
- 20 April, 1860.
289. Now I think you have already said, in explaining how it is that Mr. Gibbons could do with so small a portion of rails for his contract, that he was bound to have it concluded by October—that you are certain about? Yes.
290. You are aware that he has not yet nearly finished? Yes.
291. Both these things you are sure about? Yes.
292. Is Mr. Willcox engaged by the same firm as yourself? I believe I was empowered to treat for the whole three lines, and I have done so.
293. Is Mr. Willcox superintending the Northern Line, or is it still part of your contract—are you at the present moment contractor for the Northern Line? Yes.
294. That contract has never been transferred to any one else? If the Government had looked into the documents, perhaps they would have found out a little flaw in all they have done.
295. I should like to have from you a plain answer to the question—have you transferred the contract which you say you made with regard to the Northern Line to any other person? No.
296. You are still contractor? Yes.
297. And have control of the works? Yes, excepting what Government has taken out of my power.
298. You have said you never authorised the Government to recognise any other person as the contractor? No.
299. Then you are at the present moment, and always have been, contractor for the Northern Line? Yes.
300. Will you please tell the Committee what is the length of your contract on the Northern Line? 23 miles.
301. What proportion of rails have you there? About $4\frac{1}{2}$ miles.
302. Have you gone on with the contract there? It is done in a different style altogether. It is not to be done for twelve months after what I have told you.
303. At all events Mr. Willcox has $4\frac{1}{2}$ miles of rails for 23 miles, while you have $10\frac{1}{4}$ miles for 30 miles? Because one is to be done twelve months after the other, which makes all the difference.
304. Can you point out to me anything in the correspondence which shews this difference of time between the contract completion of the Northern and Southern Lines? The Northern Line was delivered over on the fifteenth of September, and now the line is not all "divulged at this very moment."
305. You told me you had a year longer to complete the Northern Line than to complete the Southern Line? No.
306. Then I misunderstood you. You said, at all events, there was a difference of time given for the completion of the Northern Line and the Southern Line? What I said was this: you asked me what was the reason we had so many rails on the Southern Line, and I said we would open twelve months before the Northern Line, and what I say and maintain it now is, that if we had to deal with practical men who knew their business, the Southern Line and the Western Line could be open within seven months, and no difficulty about it.
307. You have already told us you have twenty-six months for the Southern Line, how long have you for the completion of the Northern Line from the date of the acceptance of the contract? Twenty-three months from the date we have the plans.
308. What is the difference between the two? Because it is the same contract.
309. I understood you to say there was a difference in the time? Not a bit of it.
310. Is there any difference, or is there not? Not in the least.
311. No difference in the time? No, the time they have on the Northern Line I have for the Southern Line; I took the contract for each, twenty-three months from the time we get the plans.
312. Then it cannot be urged that a difference in the time for completing the contract renders it necessary that you should have more rails for one than the other? If the Minister of Public Works will allow me to explain I will shew the difference at once. In some lines the works are more difficult than in others; that is the reason we want more rails for one line than the other.
313. At all events you have told us you are contractor for the Northern Line, and have never recognised the transfer of the contract to Mr. Willcox? No.
314. Will you please turn to the ninth page of the correspondence and explain how you understand this paragraph of Captain Martindale's communication to you of the 10th of June:—"These prices"—it is referring to a schedule of prices—"are for the Southern and Western Lines only, as I am informed that Mr. Willcox is desirous to settle himself such terms as have not already been agreed to by you for the Northern Line"? That was the Railway Department, not mine. Look at my power of attorney and you will see different. If the Government and the Railway Department take this matter in their own hands, let them suffer for it.
315. You say you have a power of attorney to act for Peto and Co.? Yes, for all New South Wales.
316. Has Mr. Willcox no power of attorney? Certainly not. The Railway Department recognised it; it was not for me, as a colleague, to go and say no.
317. Has Mr. Willcox been in the habit of treating with the Government, and receiving payments

- payments from the Government on account of the Northern Railway? Because the Government acknowledged him, and they had no right to do so. A. Rhodes, Esq.
318. Did you protest against it? No, it was not my duty.
319. You thought it a matter of perfect indifference that a person, who, according to your statement, had no right to do so, should receive payments, and make arrangements with the Government, on behalf of Messrs. Peto and Company, for whom you are agent? With a strong firm like the the Railway Department, of course not. 20 April, 1860.
320. Can you tell me what quantity of cubic yards of earthwork are in your contract? I believe I can.
321. Excluding the Northern contract? I believe I can. I have got 230,000 yards in the Western Line, and I have done more than 200,000 yards there, and there is very little to do to finish there, with all this trouble. There are 800,000 yards on the Southern Line, and I have got nearly half done in that. There are 200,000 yards, nearly, of rock, of which I will shew a specimen to any one to look at. (*Lifting the piece of rock previously exhibited.*) I have done one-half of that.
322. Have you, altogether, upwards of a million of cubic yards of excavation? Yes, a million and one hundred thousand.
323. What is the quantity that has been certified for by the Government Engineer up to this time? I have not got it yard by yard, but by memory there are 70,000 yards of rock that I have cut, and which I have measured carefully, that the Government Railway Department does not credit me for. I made out a bill the other day to shew them I was minus according to contract nearly £5,000; and according to what they ought to have given me, by delays, it would be something like £15,000 they owe me.
324. I do not ask any question about that. You said that you have upwards of one million yards of excavation, how much of that has the Government engineer certified for up to this time? I can assure you I am minus £5,000 according to contract, and by keeping me back with plans nearly £10,000 more.
325. Do you know how much the Government engineer has certified for? I should say I do, but I have not got it here.
326. You refuse to answer that question? No, I do not; I do not know exactly now.
327. Is not the quantity he has certified for exactly 325,000 yards? I say it is more—double.
328. And you can produce the certificates? I will try.
329. You are satisfied it is double 325,000 yards, and will produce the certificates? Yes; I will try. I will get professional men.
330. Professional men will not make the certificate larger or smaller? There are always professional men in this country; there is not one or two, there are a dozen.
331. Now, one of your objections to what has been done by the Government, is that some of the excavation has been allowed as earthwork which you claim as rock—is that one of your grievances? Yes.
332. Was it part of your agreement that shale should be charged as earth? No.
333. Have you had an opportunity of seeing the excavations that have been made on other railways besides yours? Yes.
334. And which have been accounted for by the Government as earth to the contractors? No, I have not seen the account; I have seen the work, but not the account.
335. Do you know that shale has been charged by Mr. Gibbons, for instance, as earth in his accounts? I know nothing at all about Mr. Gibbons' affairs.
336. Do you know that it has by Mr. Willcox? Mr. Willcox went over with me the other day and said that he was paid rock for this very work.
337. That looks very like rock to me—(*referring to the specimen produced*)—but I do not allude to that; I do not call that shale; I ask you whether it is not the agreement that you should be paid for shale as earth? Shale is rock; soft shale is not rock; hard shale is rock.
338. That was your agreement with the Government? My agreement with the Government was "Excavation from cutting taken to embankment at per cubic yard, 2s. 7½d.;" "ditto if rock—"
339. I think you said that one of your complaints was that Government designed to construct a work between Campbelltown and Camden, a viaduct which you do not think sufficiently strong? Yes.
340. And you propose to substitute brick culverts? What I substituted was this, that where it was requested to have permanent brickwork we should give you permanent work, that is, brickwork instead of timber in that particular place—the viaduct one in seventy incline—but that does not say all the way through.
341. You desired to substitute brick culverts for wood? No; for that identical place, that is one in seventy.
342. That is the place I am speaking of? You say all viaducts, I say for that one a culvert is quite sufficient.
343. I asked you about the proposed viaduct between Menangle and Camden? At 23 miles 65 chains.
344. That is the place I mean; where the viaduct is 298 feet 9 inches long, and 11 feet 6 inches wide—is that the place? Yes.
345. Where the viaduct is to be supported by three little props? Yes.
346. You say it is on a decline of one in seventy, and has a curve at one end? Yes.
347. And you think this would be a dangerous place for railway carriages to pass? As far as my knowledge goes from what I have seen on other works, I think so.
348. Did you ever see a construction of the same kind used for railway purposes? Yes.
- 349.

A. Rhodes, Esq. 349. Where? On the Paris and Rouen Railway.
 350. Was it the one that broke down? No; it was like all the bridges you have in the Colony, a little shaky.
 20 April, 1860. 351. Was that one you built? I do not say I built it any more than I built the other.
 (The witness was ordered to withdraw, and to attend again on Tuesday next.)

APPENDIX.

I.

(Confidential.)

ENGINEER'S SCHEDULE OF PRICES FOR PROPOSED EXTENSIONS.

FORM OF TENDER.

Date, 18 .

I HEREBY propose to execute the whole of the _____ required in the construction of that portion of the Great _____ Railway, comprised in Contract No. _____, commencing at or near to _____ and being a length of _____, or thereabouts, in strict accordance with the plans and specification, at the following prices:—

	£	s.	d.
Excavation from cuttings taken to embankment, @ $\frac{3}{4}$ cubic yard	0	2	9
Ditto from road approaches taken to embankment, not exceeding $\frac{1}{4}$ of a mile lead.....	0	2	6
Ditto from side cuttings to embankments not exceeding 3 runs	0	1	9
Ditto extra for an additional run.....	0	0	3
Ditto from side ditches, including forming of mound alongside the ditch ..	0	2	0
Ditto if rock, taken to embankment	0	5	6
Brickwork, in mortar, to piers to bridges, wing walls, foundations, &c.....	3	0	0
Ditto in cement to do.	3	5	0
Ditto in mortar to culverts all sizes	3	0	0
Ditto in cement to do.	3	5	0
Excavation in foundations to bridge, culverts, &c.	0	2	6
Ditto if rock, to do.....	0	4	0
Timber (ironbark) in bridges, including the fixing of all ironwork at per } hewn	0	4	6
cubic foot	0	6	0
Ironwork, including bolts, nuts, and straps, at per lb.	0	0	6

The prices in the preceding schedule include all labor, materials, scaffolding, and workmanship of every kind necessary for the full and perfect completion of the works, and to the entire satisfaction of the Engineer-in-Chief.

JOHN WHITTON,
 Engineer-in-Chief.

II.

GREAT RAILWAY.

EXTENSION

Date, 18 .

FORM OF TENDER.

I HEREBY propose to execute the whole of the _____ required in the construction of that portion of the Great _____ Railway comprised in Contract No. _____; commencing at or near to _____ and being a length of _____, or thereabouts, in strict accordance with the plans and specifications, at the following prices:—

	£	s.	d.
Excavation from cuttings to embankments, named in disposal sheet, not exceeding $\frac{1}{2}$ mile lead, at per cubic yard
Ditto from road approaches taken to embankment, not exceeding $\frac{1}{4}$ mile lead, at per cubic yard
Ditto from side cuttings to embankment, not exceeding 3 runs, at per cubic yard
Ditto extra for any additional run, at per cubic yard..
Ditto from side ditches, including forming of mound alongside the ditch, at per cubic yard
Ditto if rock, taken to embankment, not exceeding $\frac{1}{2}$ mile lead, at per cubic yard..
Brickwork, in mortar to piers to bridges, wing walls, foundations, &c., at per cubic yard
Ditto in cement to do., at per cubic yard
Ditto in mortar to culverts, all sizes, at per cubic yard
Ditto in cement to do., at per cubic yard..
Excavation in foundations to bridges, culverts, &c., at per cubic yard
Ditto if rock, to do., at per cubic yard
Timber (ironbark) in bridges, including the fixing of all ironwork, at per cubic foot
Ditto do., sawn, at per cubic foot
Laying permanent way, single line, including the carriage of all materials, at per yard
Broken sandstone ballast to a cube of not more than 2 inches, at per cubic cubic foot
Ironwork, including bolts, nuts, and straps, at per lb.

The prices in the preceding schedule include all labor, materials, scaffolding, and workmanship of every kind necessary for the full and perfect completion of the works, and to the entire satisfaction of the Engineer-in-Chief.

(Copy.)

Paris, 17 November, 1859.

A. Rhodes,
Esq.

20 April, 1860.

DEAR SIR,

In reply to your favor of the 13th September, we regret to find, from the correspondence that has passed between Mr. Rhodes and yourself, a difficulty arises as to the use of the permanent rails for the general execution of the work of the line.

It happens unfortunately that, owing to our absence from London, we have not the provisional agreement entered into with Mr. Gabrielli, on behalf of Sir S. M. Peto, and the Government, for the execution of these works, but we are under the firm impression that one of its conditions was, that we should have the use of the *Permanent Rails* for the execution of the works (as is the case invariably in France under every Engineer, and in England on all the contracts we have executed under the late Mr. Stephenson, Mr. Locke, and Sir Wm. Cubitt), if it had not been so we would never have thought of sending Agents to Australia, and much less send 500 wagons, and all their accompanying materials, without rails.

'Tis self-evident that, if we are to be of any use in the Colony in the construction of its Railways, it can only be by the free use of wagons when advisable, this cannot of course be done without rails, and to send rails from England of any other form than is adopted for the permanent way is clearly undesirable, and, therefore, it appears to us that the difficulty may be removed by our arranging to supply the permanent rails, &c., at the price they would cost you, throwing upon us whatever loss may be sustained by the use of them in executing the works.

If this or some other arrangement cannot be entered into, we feel we are placed in a difficulty which upsets all our arrangements and calculations, and from which it is difficult to see how to extricate ourselves, unless by cancelling the contract—which we are quite prepared to do if the Government would like such an arrangement.

It is very grievous, and very disappointing to us to note the correspondence that you have sent over, and we are now prepared to take any course that may be desirable to remove the difficulty which we assuredly should never have got into if we had not been under the impression at least that we should have had tendered to us the free use of the rails for executing the works, and every reasonable facility that could be afforded.

Yours truly,

THOS. BRASSEY.

John Whitton, Esq., C. E.,
Engineer-in-Chief.

B.

TUESDAY, 24 APRIL, 1860.

Alexander Rhodes, Esquire, further examined, as follows:—

352. *By Mr. Arnold:* I understood you, when you were before examined, to make some objection to the plan upon which it is proposed by the Government engineer to construct part of the railway works, upon the ground that it will be insufficient and unsafe for the traffic? Yes.

353. Have you any objection upon that ground to any other parts of the works except the proposed wooden bridge at Menangle? Yes.

354. But you have spoken of this proposed viaduct between Campbelltown and Camden as peculiarly unsafe? Between Campbelltown and Menangle.

355. Is that the place of the 26 miles — ? 23 miles 60 chains.

356. Is that generally known as the Glenlee viaduct? It is a wooden viaduct.

357. Is it known as the Glenlee — ?

358. *By Mr. Parkes:* Is it near Glenlee? Near Glenlee.

359. This side of Glenlee House? Yes.

360. *By Mr. Arnold:* In what respect do you consider the construction of that viaduct is defective? I consider that on a viaduct with piles of an average height of 31 feet 6 inches, with a width on the top of the level of 11 feet 6 inches, on a decline of one in seventy, with a slight curve at the end, with the oscillation of a train of thirty to forty tons weight, and from thirty to forty carriages, would shake the bridge considerably.

361. Do I understand you to say the oscillation of a train passing over this bridge is sufficient to throw it over the rails? I say it would be dangerous.

362. That would be the danger—the throwing it off the rails? Yes, I think so.

363. You spoke of the danger being very great on a dark night, especially if it were wet—will you explain why it is more dangerous on a dark night, if wet, than at any other time? Because the engineers could see where they were and shut the steam off. They would not go so quick down an incline of one in seventy.

364. They would not go so quick? Generally they do not; in general an engine runs down at the rate of forty or fifty miles an incline of one in seventy, without steam.

365. Have you ever seen wooden viaducts used upon railway works either in England or Europe? Yes.

366. Of what timber were those viaducts constructed? Of different timber; Baltic in general.

367. Were the viaducts you have known in European countries constructed on piles? Those that I have seen were generally about the same height as this wooden viaduct is to be built, but made for a double and not a single line. I never saw one of such a height built for a single line.

368. What is the usual rate of travelling on the railway in England? Generally about twenty-five to thirty miles an hour, and an express train forty-five.

515—C

369.

A. Rhodes,
Esq.

24 April, 1860.

- A. Rhodes,
Esq.
24 April, 1860.
369. From twenty-five to forty-five is the usual rate of travelling? From twenty-five to thirty, or thirty-five; it depends upon the length of the line and where the stations are.
370. What is the usual rate of travelling on the railways here? I believe it is fourteen miles between Sydney and Parramatta, and the train takes about an hour.
371. It travels about fourteen miles an hour, that includes stoppages I suppose? Yes.
372. Therefore the rate of travelling would be greater? Yes, because I reckon five minutes for stoppage at each station.
373. Did you ever know any viaducts constructed of timber to be erected by the firm with which you are connected, Messrs. Peto and Co., in Europe? I never saw a timber bridge constructed by our Company, with the exception of one, and that was condemned—the other bridges over the Seine had stone piers and wooden tops.
374. You never saw any wooden bridges or viaducts constructed of timber in England for railway works? Yes.
375. Were they ever constructed by Peto and Co. on their railway works? They have so many contracts, but I have never been on one where they have.
376. Have you been on the line from Oxford to Worcester? No.
377. Was that line constructed by Peto and Co.? I do not know. I have heard that it was, but I do not know.
378. What length of time is a viaduct constructed of the timber made use of in Europe calculated to last in an European climate? It depends entirely upon the design. I cannot say; some more, some less.
379. Have you had any means of ascertaining the comparative durability of different timbers? Yes.
380. Of Australian timbers? Yes.
381. What length of time do you believe sound ironbark in such situations as the railway viaduct are calculated to last, twelve inches by twelve? Perhaps if put under the ground I believe, what with the white ant and the atmosphere, it will not last above from ten to twelve years; above the surface, fifteen.
382. How long will European timber last? Eight to ten years.
383. Did you ever know a viaduct on an English railway to be constructed at a point where a decline took place and where there was a curve? Never.
384. Do you feel satisfied that there is a general rule against permitting any decline at a bridge or viaduct? A very wrong principle.
385. And that such a curve as there is in this line would be considered very objectionable? And an incline of one in seventy.
386. I think I gather from your correspondence, that in the mode in which the contract is being carried out by the Government with you there would be a loss to Messrs. Peto and Co. upon many parts of the contract? No.
387. For instance, if the Government insisted upon paying for the rock you produced as earthwork, I think you say that would result in loss to Messrs. Peto and Co.? There would be a loss if we were paid according to what is certified.
388. Have you any objection to state what your interest in this contract is? I consider that the letter written by myself to the Commissioner, of 21st April, 1859, consists of the contract.
389. That is not exactly the question I was wishing answered. What I want to know from you is—if you are willing to answer the question—what is your interest in the contract that exists between Sir Morton Peto and the Government—your personal interest? I have a salary, and an interest in the profits.
390. Whether Sir Samuel Peto and Co. and yourself are in point of fact joint contractors—are you a partner in the contract? No.
391. Have Peto and Co. complete control of this contract? After they have arranged with me they have, not before.
392. Then so far as the Government are concerned you do not admit that Peto and Co. have complete control of the contract? Supposing Peto and Co. say to the Government, “We are willing to throw up the contract,” and the Government say, “Very well, “we consider the contract is at an end,” would you feel you had any right to step in and say, “I have an interest in the contract, and insist upon going on?” I should say they have no right to throw up the contract without consulting me.
393. Then, in addition to the remuneration that you receive from the firm by way of salary, your further remuneration depends upon the profit from the works—you do not receive a commission upon the amount expended? I believe this is a private affair between Sir Samuel Peto and myself which ought not to be divulged unless I am obliged.
394. I ask you whether you are willing to answer the question? I believe it is a private affair between myself and the contractors which does not interfere with the contract.
395. Can you tell us what would be the comparative cost of brick piers and timber piles for this work at Glenlee? I do not think there would be much difference.
396. Have you made a calculation? Yes.
397. What would be the quantity of brickwork—supposing we take one pier—what would be the quantity of brickwork in one pier of this bridge? I cannot say exactly what one pier would cost, but I can tell what the difference would be of making solid work and temporary work—what the price would be.
398. Can you not tell what the cost of one would be on account of not knowing the depth of foundation? No; I can tell what the foundation would be exactly.
399. I think one of the objections you made to the Government was that they required you to drive piles without giving you any specified length? No, that was not it.
400. Did you not require the Government to give you the length of the piles—and was it not one of your complaints that you did not receive it? Yes.

401. Then I presume you had some difficulty in determining what the length of the piles should be? Government found difficulty, I found none. A. Rhodes,
Esq.
402. If you found no difficulty, perhaps the best way was to leave the matter in your hands—I think you said the ground is soft and spongy, and therefore you might drive the piles out of sight—did you not say so? No, never. 27 April, 1860.
403. I understood you to say that the ground was so very soft that you might drive them—? Never.
404. What length would they require to be under ground? In that particular viaduct I do not think above ten to twenty feet. It depends entirely upon the nature of the ground.
405. About twenty feet under ground? In some parts.
406. Have you any estimate with you of the cost of this structure in wood and in brick? One is about £1,500 in timber, and making it with brick piers and timber tops, and making the viaduct a little shorter by embankment would come to about the same money.
407. Making it shorter! Would not that involve an additional expenditure upon the railway works which would otherwise be occupied by the viaduct? No.
408. Would not the embankment have to be filled up? Yes.
409. You would not do that for nothing? I have offered to do it.
410. What quantity of brickwork would there be in a single pier of this viaduct? I have not that off my memory, but it is very easy to ascertain.
411. Do you know sufficiently of the matter to know whether this is a tolerably correct estimate I am about to read. This is the estimated cost of a brick pier—"20 cubic yards "excavation"? Wrong.
412. Would you think there would not be so much excavation? Not above twenty yards.
413. Would any concrete be required in this foundation? None whatever.
414. Do I understand you that the earth here is of such a character as to make a solid foundation for a railway viaduct? The foundation is perfectly good a yard below the surface.
415. I understood you to say that the earth was so spongy that you could drive the piles anywhere? No.
416. Would a single pier measure about seventy-two cubic yards? Forty-seven yards.
417. Then seventy-two cubic yards is an extravagant estimate;—What quantity of timber would be consumed on the necessary wall-plates and other parts of the structure that would require to be in timber, piles, planking, and things of that sort, supposing it was made of brick? I do not exactly understand—do you mean the piles or the platform?
418. I mean the superstructure upon the piers? It would be a little more than the present measurement, because I should strut it from the brick piers up to the longitudinal beams between the two piers.
419. Can you say what the cost of a pier, in brickwork, would be, for the pier to be completed? I went into the calculation about seven months ago, and I offered to build brick piers and timber tops, to shorten the viaduct, and make the embankment on both sides for the same cost.
420. What was the difficulty then in accepting your offer? I think it was, they wanted me to give designs, and then when I gave designs they refused them; I think that was the difficulty.
421. Was there any difference between yourself and the Government as to the proper price for iron-girders? The Engineer-in-Chief refused to give the price, but I do not think the Government did.
422. The Engineer-in-Chief would not recommend your plan, or at all events objected to the price named in your plan for the iron girders—was not that the case? He did, but the Commissioner did not.
423. What would have been the price paid for iron girders? 6½d.
424. What would be the price of ironwork of that kind lauded in this Colony—at what price could it be obtained? I have never asked what the price would be. I looked at the schedule of prices and nothing else. Whether below price or too much I kept to the schedule of prices.
425. I gather from what you say that you cannot state in figures what was the difference of prices in the two modes of structure, brick and wood; but that you think they would be about alike? No, they would not be alike.
426. I thought you said the cost of timber piers would be as great as the cost of brick piers? We are going upon a different question altogether—this viaduct—an iron girder bridge was never mentioned.
427. I am now speaking about the comparative price of piers—you are not prepared to state what the amount would be, but you think the amount would be equally as great for a timber as for a brick structure? Yes.
428. In point of fact, the profit to the contractor upon the brick and upon the wooden structure would have been nearly alike? The same, as near as possible.
429. Then you have no motive from regard to your own pecuniary interest in promoting one over the other? Nothing, but to do solid work.
430. You were influenced by the higher motive you describe—? No, not in that viaduct.
431. Will you be good enough to state in what viaduct it was—in the construction of what viaduct it was that the higher motive operated? Are we on the one thing?
432. I wish to know on which viaduct this higher motive influenced you? The Menangle viaduct, which is a different bridge from the one in question.
433. In what way do you pay your sub-contractors—do you pay them by piece or by day-work? Of late all day-work, as near as possible. Since the rush to the gold-diggings I have paid them day-work.
- 434.

- A. Rhodes, Esq.
24 April, 1860.
434. Did you formerly pay them piece-work—did you pay them, I mean, in the same way as you were paid by Government—per cubic foot for timber, and per cubic yard for stonework? For timber we paid by the cubic foot.
435. Have you any objection to state at what price you can get the contract in timber done? I believe the Government paid 3s. a foot—I have paid less, and I have paid more.
436. Could you have got any sub-contractor or contractors to take timber-work from you, leaving a profit to yourself? It depends entirely upon the times; I may have, or I may not.
437. Are you not satisfied that you could have, or are you satisfied that you could have? It depends entirely upon the labor.
438. Have you any memorandum there of any particular prices you have paid to sub-contractors for timber-work? No, but I can tell you—I have had offers from 2s. 6d. to 3s. 6d.
439. Then if you have an equal quantity done at 2s. 6d. and at 3s. 6d., and you have 3s. from the Government, there is no profit left for the contractors? I think there is no loss—I think there is a fair profit.
440. Then do I understand from you that your contract for timber-work would neither result in loss or profit to the contractor? With one and the other we do not complain. At some places we have low prices, and in others good prices.
441. I am speaking of the timber-work? It is not a good price, it is a price that we do not complain of. I should have preferred a better price certainly.
442. In some works you lose, in others you gain? Yes.
443. Upon the whole is there a considerable balance of profit beyond the losses on the timber-work? We do not complain.
444. About the brickwork—at what price have you been getting brickwork done? At £2 15s. in cement, according to my agent's certificate.
445. £2 15s. is what you paid? That is what it has come to.
446. What do you get from Government? £3.
447. Did you ever have any correspondence with the contractor upon another line—I think Gibbons is the name;—are there contractors of the name of Gibbons and Bryant—is there a contractor of the name of Bryant? Yes.
448. A bricklayer or mason? Yes.
449. Did you ever have any negotiations with Mr. Bryant? Yes.
450. Did he ever make any offer to take the brickwork contract off your hands? Yes.
451. At what price? Two guineas, but in mortar not in cement.
452. What is the price you get in mortar? £2 15s.
453. That would be a profit of 13s. a yard—did you accept his offer? No; because if you will allow me to explain, every contractor that has given me a tender is in debt now. I can get plenty to give me a price, but they never fulfil their contracts.
454. Was that the only reason for your refusing the offer? Yes.
455. If he would have taken it and given you security you would have taken it? I did not feel myself justified in the position I was in, to give or let the works out in that manner.
456. What quantity of brickwork have you upon this line? I really cannot tell you, as the plans were altered about a month ago from five feet culverts to ten feet—therefore I cannot give you the exact amount; I never got the quantity from the Railway Department.
457. Can you tell nearly what quantity—can you give us an approximate estimate of the quantity of brickwork? I have no idea. Where Bryant gave me to understand he would do this brickwork—between Campbelltown and Menangle—there was nothing of it, only a few culverts.
458. Did you ever make an objection in reply to the offer that was made by Messrs. Gibbons and Bryant, that the price at which they offered to do the work was too high? None that I remember.
459. Had you a correspondence with them? I believe I wrote to Mr. Bryant to go down and look at it; if the Government altered the wooden bridges into brick bridges I should like to know at what price he would do it, and I had a letter from him.
460. What I want to know is whether you had a correspondence with this contractor upon the subject of this offer? No, not that I am aware of; I had a tender from him, but no correspondence.
461. Did you make any written reply to that tender? Not that I am aware of.
462. Had you ever a tender for the construction of all your timber-work, from any contractor here, shewing a similar profit? Yes, I have had tenders from nearly all the contractors in the Colony.
463. What is the lowest tender you have ever received from responsible contractors, for relieving you from the timber-work—what is the lowest price you have ever been offered? 4s. 6d., but no guarantee.
464. But you get 3s., do you not? I think 5s.
465. For timber-work? That is, for fixing.
466. I understood you to say 3s? 3s. for furnishing the timber at the station; then we have to cart it, to fix it, to put it up.
467. Have any bridges of a similar character to this you object to been already erected in this Colony? Not that I am aware of.
468. Neither upon the Southern nor upon the Northern Railway? No, not that I am aware of.
469. Do you know anything of Mr. Willcox's arrangements with the contractors—does he occupy a similar position with yourself, in regard to Peto and Co.? No.
470. In what respect does his position differ from yours? Because my power-of-attorney is for all the railways in New South Wales.
471. What is Mr. Willcox's power-of-attorney? I never saw it.

- 472. By the by, I think you said Mr. Willcox had no power-of-attorney? I have not seen it.
- 473. Have you seen the bridge at Stoney Creek, on the Northern Railway? No.
- 474. Is that bridge of a similar construction to this you object to? I do not know.
- 475. *By Mr. Wandeyer:* Have you heard that the white ants are already eating, destroying, that bridge at Stoney Creek, on the Northern Railway? I have not heard.
- 476. *By Mr. Arnold:* Is it yet finished—that bridge at Stoney Creek? I do not know.
- 477. What control do you exercise over the management of the contract for the Northern Railway? None.
- 478. I understood you to say that you were the contractor for that railway? According to the agreement I am.
- 479. Is it not a little strange, that in any contract for which you are liable with the Government you exercise no control? The Government took that into their own hands, and of course I did not contradict them.
- 480. Did you object? No.
- 481. You are not in the habit of making objections to anything? When I see anything audacious wrong, for the sake —.
- 482. Have you made any objection to their arrangements in the construction of the Southern Railway? I have merely written when there was anything that I thought was not strong enough. For the sake of the character of my firm I made objections, but I never stopped anything.
- 483. Do you mean to say that you stand in the same position with regard to the contract on the Northern Railway that you do with the Southern, in relation to Government? Yes.
- 484. Do you ever demand payment for work done? No, but I may do.
- 485. You may do hereafter? Yes.
- 486. Do you ever make payments to the persons engaged in the work? No, but I arranged to do so
- 487. You leave the works—you do not go near them—and somehow or other the work still goes on? My agents pay for me.
- 488. Who are your agents on the Northern Line? Mr. Willcox is the agent for Sir Samuel Peto and Co.
- 489. I am speaking of your agents? They are all agents for Sir Samuel Peto.
- 490. I understood you to say that you were the contractor for that railway, and that Mr. Willcox was not under Sir Samuel Peto? The letter of the 15th April, 1859, will distinctly shew you.
- 491. I would refer you to a letter of the 10th June, in which Captain Martindale says, "These prices are for the Southern and Western Lines only, as I am informed that Mr. Willcox is desirous to settle himself such terms as have not already been agreed to by you for the Northern Line"? That is for the fencing, plate laying, ballasting, and sleepers; but if you will be kind enough to look at my letter of the 15th April, 1859, page 4, you will see distinctly.
- 492. Was Mr. Willcox in the Colony at the time that agreement was made? No.
- 493. After Mr. Willcox arrived in the Colony, did you not hand over the Northern Line to him? No, I never did.
- 494. You never recognised Mr. Willcox as occupying the same position as yourself, with regard to that railway? Never; I told him so.
- 495. At the same time, you never objected to the Government recognizing him? No.
- 496. Well then, in what position do you stand now—are you contractor for that railway—liable for it? Yes, I am now—look at my power-of-attorney and you will see.
- 497. But I suppose your power-of-attorney would have given you power to hand over the contract to Mr. Willcox, or to any one else, would it not? Yes.
- 498. And that, in point of fact, you did? No.
- 499. What I mean by "that in point of fact you did" is, that you allowed Mr. Willcox to go to the Hunter River and engage the men, to pay the money, and to receive payments from Government? The Government department recognised him; I never did.
- 500. You positively declare that you never, in any way, authorised the Government to recognise Mr. Willcox as the contractor for the Northern Line? Never.
- 501. And that all that has been done with regard to this has been done without your consent, and without any expression of opposition from you? Yes.
- 502. I think I understood from you just now, that you do not recognise any power on the part of Peto and Co. to deprive you of this contract? I do not—of any one.
- 503. Then, in point of fact, you consider yourself as the principal with the Government, not as the agent for Sir Morton Peto and Co.? —.
- 504. *By Mr. Faucett:* Of course he means the principal here for Sir Morton Peto? That is what I mean.
- 505. *By Mr. Arnold:* Tell us what you do mean—do you recognise the power of Sir Morton Peto and Co. to deprive you of your share in the contract? I do not understand you.
- 506. Supposing Sir Morton Peto wished to deprive you—.

Mr. Faucett objected to the question.
The witness withdrew.
Debate ensued.
The witness was again called in.

- * 507. I would ask you a question that you can answer or not, as you like, with reference to your connection with Sir Morton Peto and Co. The Government have treated with you as the agent of Peto and Co. hitherto—have you received any communication from Peto and Co. since this disagreement between yourself and the Government officers, intimating

A. Rhodes,
 Esq.
 24 April, 1860.

- A. Rhodes, Esq.
 24 April, 1860.
- intimating any desire on the part of Messrs. Peto to withdraw you? No, only to get the contract through, if possible, without loss.
508. To carry the contract through? Only to have the contract taken off our hands now, and to come back immediately.
509. *By Mr. Fauceit*: To give it up to the Government? To give it up now to the Government.
510. *By Mr. Arnold*: You have received some instructions from Sir Morton Peto with regard to ceasing to be their agent here with the Government? No.
511. I understood you to say that you had authority from Sir Morton Peto to get rid of the contract? Yes, if the Government will take this off our hands; but have they accepted this?
512. Did Peto and Co., in their communication with you, make your recal by them contingent upon the Government agreeing to relieve them altogether from the contract? I have had a letter from Peto and Co. to say they were quite willing to give the contract up without loss, and they would hail me back when that was done.
513. *By Mr. Parkes*: Was that the letter which you read to the Committee on Friday, written by Mr. Brassey, and dated from Paris? No, I will read the letter.
514. *By Mr. Arnold*: Have you the letter received by the last Mail from Peto and Co.? No.
515. Not here? No.
516. Then you object to produce it? I have a letter from Mr. Brassey to say, if I could arrange to manage and give up the contract, he would like to have me back. Will you allow me to read this letter?
517. What is the date of it? 19th December.
518. That is not the letter I want—have you a later letter than that? Yes.
519. What is the date of your latest letter? February.
520. Have you any objection to read that letter? I have not it here, but I do not consider that the House have any right to know my private business with Sir Samuel Peto.
521. I think you communicated your correspondence with Peto and Co.—did you not read a letter the other day? I did. If the House wishes to know all my private business—
- Mr. Parkes* said that he thought it desirable the witness should be informed that he was not obliged to read any private business letters.
- The Chairman* said—Perhaps the witness may not clearly understand that he is not compelled to disclose any private communication.
- Mr. Arnold*: I stated before I asked the question, that you are not bound to answer any question at all, if you think proper.
- Mr. Fauceit*: The witness does not understand the difference between refusing to answer any question, and being at liberty to refuse to answer any question respecting private correspondence.
522. *By Mr. Arnold*: All I ask is this—have you received a letter from Peto and Co. dated February? Yes.
523. Have you any objection to read that to the Committee? Yes, it is a private letter to me, not from Peto and Co., but from Mr. Brassey.
524. As representing the firm—is there anything in the letter to do with the contract, in which you as the agent of Peto and Co. and the Government are mutually concerned? It is a private letter, and allows me to use my own consideration in the matter.
525. In any of your communications with Peto and Co., or with Mr. Brassey, or any person representing them at home, has there been any recognition of Mr. Willcox as an agent under Peto and Co., as representing that firm? Mr. Brassey wrote me to say, “I send you enclosed all the communications that have transpired between myself and the Government since you left England.” I have had one letter to that effect, and that is all I know, and I am in possession of all these, although they were sent by the Government to them, and they returned them to me.
526. I will ask you this question, and you can answer it or not as you like;—has there been any suggestion to substitute Mr. Willcox in your place? No, there has not; I have not seen the letter.
527. The only suggestion from Sir Morton Peto to you with regard to your ceasing to be their agent in this contract is that you should get rid of this contract altogether? These are private letters from Peto and Co., and unless the House oblige me to answer—
528. I think one of your matters of complaint was that there had been some delay in furnishing you with the plans of this viaduct at Glenlee? Yes, I will give you the reasons for why.
529. I do not very much care, you can give the reasons if you like. I was going to ask you as to the Menangle bridge—you complain that the plans were not furnished? Yes.
530. Then the other plans were furnished in time? Not complete; they are not complete to this day.
531. Then you complain of both Menangle and Glenlee? I complain of the length of the piles not being given for the viaduct, 23 miles 60 chains.
532. Is it usual in all contracts for pile driving to furnish the length of the piles? Yes, there is a plan given by the Engineer-in-Chief to another contractor (*handing in a plan*), and this is the letter that was sent with the plan. It is a copy.
533. What is this plan? The length of piles to be driven.
534. Where at? At Wallis's Creek, on the Northern Line. If you will allow me, I will read this letter:—

"Newcastle,
"23 January, 1858.

A. Rhodes,
Esq.

"I forward you also a tracing received from the Engineer-in-Chief, in which
"is marked the depth to which the piles will have to be driven in Wallis's Creek. He
"wishes you to press on the work as much as possible. 24 April, 1860.

"I am, &c.,
"F. BELL."

"To
"Mark Favell, Esq.,
"Contractor."

535. *By Mr. Asher*: Is that a railway bridge? Yes.
536. *By Mr. Arnold*: Then you assert that it is a common and usual custom on railway and other works where contracts for pile driving are taken to furnish the length of the piles required? Yes.
537. Have you completed all the bridges up to this time of which the plans have been furnished you? No.
538. In what way would the omission to furnish the plans of the Menangle bridge prevent you from proceeding with the works when you have some other bridges unfinished? Menangle bridge is the most important on the line; it is a £20,000 or £30,000 job; the other is from £1,200 to £1,500; that makes the difference.
539. Are not many of these bridges incomplete now? They are working at them.
540. You spoke of the piles upon which this viaduct at Glenlee is to be erected as insufficient, on the ground that the different piers consisted merely of four props? Three props—
541. Supported by struts on each side? Yes.
542. In point of fact, are not these props you speak of piles driven to the depth to which it is necessary to drive them—from twenty to thirty feet? They are piles, certainly.
543. Are not what you call struts driven in the same way—battering piles? Strut piles.
544. Battering piles? Yes.
545. The only danger you apprehend from a wooden bridge is that the oscillation will be so great, from the weight of the engine and train passing over it, that there will be danger of the engine getting off the rail? Also, that I proposed that it ought to be strutted between the piers twenty feet distant.
546. You anticipate longitudinal oscillation? Yes.
547. You think it will oscillate both ways? Very much—as dangerous one way as the other.
548. Did you ever know an instance of oscillation taking place longitudinally? I never saw bridges constructed in the same manner.
549. You never saw such bridges on the Northern Railway? No.
550. Nor on this railway? No; they are built on brick piers.
551. All brick piers? Yes.
552. Are there any bridges of this description on the Western Line? Yes.
553. Are they completed yet? They are not the same plan on the Western Line.
554. What is the difference in the plan? The height I think is not so great, and it is on a level.
555. Is there any danger of oscillation there? There will be after a certain time.
556. Then do you consider that any present test that can be applied to these bridges will be an indication of their future stability? I think they are not sufficiently strong for public traffic.
557. Upon what data do you ground your belief? I have answered that two or three times, I think.
558. You have already said you have had no experience of bridges of the kind before? I said, one bridge I did build, and it was much stronger.
559. That was in France? Yes.
560. That bridge was very shaky; Yes, and some of the bridges built between Liverpool and Campbelltown now were taken down twelve or fifteen months ago.
561. You think there are no bridges on the Western Line constructed of a similar length to this? I think not.
562. *By Mr. Parkes*: What is the South Creek bridge? That to be built, or built already?
563. *By Mr. Arnold*: To be built? We have started one which I consider equally dangerous as the South Creek bridge.
564. *By Mr. Parkes*: Will you describe the bridge at South Creek? This viaduct at South Creek is 176 feet long on the level; between the piles or props (12 inches by 12 inches) there are four openings over the creek. In driving these piles, we have only driven them about three feet from the bottom of the creek, so that there is no stay whatever three feet under the surface; it is merely mud that it is driven into; therefore I consider there ought to have been a cofferdam made—
565. What is the height of the piles? 23 feet 6 inches.
566. *By Mr. Asher*: Are they only driven three feet into the ground? They come to the rock three feet in the ground.
567. Does that refer to the whole of the piles? Three sets of piles.
568. *By Mr. Garrett*: How many sets of piles are there altogether? Nine.
569. *By Mr. Windeyer*: Are the piles shod with iron? Yes.
570. *By Mr. Parkes*: Those piles which only go into the earth three feet are the centre piles in the creek? Yes.
571. They are in the bottom of the creek? Yes, they are driven through the mud or slush three feet, and then the shoes go into the rock a few inches.
572. *By Mr. Asher*: Were your instructions from the Railway Department to drive these piles in the way you have mentioned? Yes.

- A. Rhodes, Esq.
 24 April, 1860.
573. *By Mr. J. Campbell*: Are they driven down to the bed rock? Yes.
574. *By Mr. Samuel*: Do I understand you to mean that these piles have only three feet of mud to hold them? That is all.
575. *By Mr. Hoskins*: Did you ever see a railway viaduct at Home which had no other support than piles driven into the ground? I never saw piles driven like these in my life before.
576. Is it not customary at Home to bed the piles in timber or stone? Yes.
577. *By Mr. J. Campbell*: These are resting on the bed rock? On the bed rock.
578. *By Mr. Arnold*: Do you know the bridge at Beckett's Creek, on the Western Extension? No.
579. One of the works in Mr. Gibbons' contract? I saw it at a distance.
580. You do not know it sufficiently to speak of its character—can you form any opinion as to its solidity or safety? It is a viaduct that may be safe for a while, but not for a long time.
581. *By Mr. J. Campbell*: Are you a professional engineer, brought up to it from your youth? No.
582. Do you know what timber is used in the construction of these viaducts at Home? Yes.
583. What? Baltic timber in general.
584. You have been some time in the Colony now—from what you have seen of our woods and of Baltic timber, which do you consider the strongest? The timber of this country.
585. Do you know the weight it will bear in proportion to other timbers? Yes.
586. In building this viaduct beyond Campbelltown, I understand you prefer brick piers to wooden piles? Yes.
587. Upon what grounds? Because the one is permanent and the other is not; the brick bridge is a permanent piece of art, and the other is only a temporary piece of art.
588. If you knew, or were convinced, that our timber would last a hundred years which would you prefer then, wood or brick? I have examined the timber of this country, and I am sorry to say the white ant is very destructive to it, and it works very much indeed with the weather; therefore, though it is very much harder in substance, I do not know whether there is much difference between the lasting qualities of Baltic timber and the timber of this country; though I think the timber of this country would last a few years longer than the other.
589. How long do you think a house built of Baltic timber would last? That depends upon where it stands; if it is dry it may last a long time—perhaps 30 or 40 years.
590. As much as that? Yes.
591. If you think our timber so very superior, I suppose you would say it would last double that time? Railway traffic running over and shaking the timber is a different thing to having it standing.
592. Any time you like you shall come and see the house I am living in now which has been built more than forty years, and is as good now as the day it was built. Which would be the cheapest way of constructing these viaducts,—would it be cheaper to do it of wood or brick? I think it is nearly the same.
593. You think the cost would be the same? I think so, according to the calculation I have made.
594. Are you at present going on with the Southern Railroad? Yes.
595. And are you conforming to the Government Engineer's plans? Yes.
596. You are not stopping the works, then? No.
597. Then what is the object of having you examined here? I was called to come here, and I have come.
598. Are you not carrying on an action against the Government? No.
599. I understood there was an action commenced? No.
600. Then at present the railroads are going on? Yes.
601. Only you are demurring to the way they are being made? It was a suggestion I made; but we are carrying on the works according to the instructions we receive from the Railway Department.
602. Then, if you are doing the works according to your instructions from the Government Engineer, and are getting a certificate from him that the work is done, that is all you require? Yes, that is all I require; but I do not get the certificate.
603. Why do you not get the certificate? They consider rock earthwork, and I consider that when it is earthwork I should be paid for earthwork, and when it is rock that I should be paid for rock. That is one of our great disputes.
604. There is no bond drawn up between you? There is a contract, as good a contract as ever was.
605. Did it not state that when there was any difference between you it should go to arbitration,—for instance, in such a case as this, whether it is rock or earthwork? I have made a contract with the Government on the 21st April, in those letters which passed between myself and the Government, and the specification and bond and contract was to be drawn up according to those letters; and I am willing to sign that bond and contract now.
606. Do you draw seventy-five per cent., leaving twenty-five per cent., to be hereafter settled for;—what amount are you drawing? Ninety per cent.
607. Then it is only leaving ten per cent. in dispute with the Government? I think it is a great deal. If I put twenty thousand pounds worth of material on the ground, I think that is a good guarantee.
608. Have you received ninety per cent. up to this date? No.
609. What might you have received? About seventy-five per cent., taking all together. *
610. *By Mr. Asher*: That is upon your estimate? No, seventy-five per cent. upon the contract price.

611. *By Mr. J. Campbell:* And you complain that you are not getting the difference between seventy-five per cent. and ninety per cent.? Yes. A. Rhodes,
Esq.
612. That is one of your complaints? Yes.
613. Have you seen the bridge over Harris's Creek, at the entrance to Parramatta? Yes, at a distance, ^{24 April, 1860.}
614. Have you ever looked at that bridge? At a distance.
615. Have you ever examined it closely—do you know how long it has been standing? Ten to fifteen years. I do not consider any timber bridges can be expected to last more than fifteen years.
616. If you in your contract undertake to put in good timber, and carry that contract out, I am convinced the timber will last one hundred years; now you complain again about their not supplying you with the lengths of the piles, and that you are standing still with the bridges for want of that information? I consider the plan is not perfect without the length of the piles.
617. I always thought that when you took a contract it was your bounden duty to drive the piles a sufficient distance. They have given you the height of the bridge? Yes.
618. Have you not driven in to ascertain how far you can drive the piles? It is not my place.
619. Not your place to do that? No.
620. You are the contractor? But the Government pays the engineer to give me the plans. I never saw a contract taken yet without the company or the Government giving the lengths, and depths, and strengths, and whatever is requisite to complete the plan; they ought to shew and figure it on the plan.
621. The bed of the river is rock? In some places it is rock, in some places mud, and in some places good hard shale.
622. You are standing still, you say, because the Government do not give you the depths of the piles? No; I am going on because they are going to pay me for it as an extra, but it was a long time before I went on; when they said they would pay me extra for it, of course I went on.
623. Then I cannot make out from your replies to me what your grievances are? I am contractor for the works—.
624. Yes, I know that. We are wasting a great deal of time I think; we shall not get any gentleman to come and sit here at all the way we go on. You have been examined by a Committee of this House, have you not? By this Committee.
625. There is a Select Committee sitting, is there not? I have not been examined before it yet.
626. *By Mr. A. Campbell:* In your evidence the other night you stated that you were at a standstill for rails and chairs? Yes.
627. Does that form the chief complaint you have against the Government? It is one particular.
628. That forms one ground of complaint? Yes.
629. Are you at a standstill for want of these rails and chairs? I have got seven cuttings standing idle, and have had these five months; and there are eight cuttings that we cannot go on with as rapidly as we ought, nor with our banks. I have repeatedly written to the Railway Department to let us have rails, and they have refused them. I might have put 300 more men on easily, especially now there are lots of men coming back from the diggings.
630. On what ground did the Railway Department refuse to give you the rails? They think I have sufficient.
631. Have they rails to give you? There are 10,000 rails standing at the Sydney station.
632. You stated the other night that if you had rails and chairs and other facilities that the Government are withholding from you, you would be able to complete the Railway in September next? I think so.
633. You still adhere to that? I think so, though there is a month gone now.
634. How long before the time to which you are bound by the contract? Nine months.
635. At what rate of speed have you been going on with the works—how much cutting have you done per month? 45,000 yards.
636. I think I saw some communication in which the Commissioner stated you were only doing 11,000 yards? It is a mistake of his.
637. You state now that you are doing 45,000 yards? Yes; the average is more than that now.
638. That is one of the points in dispute? The dispute is about the certificate; they do not make the certificate out for the work done.
639. You have not got a certificate for 45,000 yards? The Commissioner states that it is only 11,000 yards for a month; but I have looked into the matter, and I find an average of 45,000 yards a month for every month.
640. Supposing you got these rails, how much more could you do? I think I could get up to 70,000 or 80,000 yards. There are plenty of men now.
641. About this Menangle viaduct, I suppose it forms no part of your duty to make plans of the bridges, or to suggest to the Government what they ought to construct—your duty is to carry out the instructions given you? Yes.
642. Then what is the dispute about the viaduct? When I came out first I was led to understand by the Engineer-in-Chief that he was to have an iron-top bridge, with brick piers, and ashlar cutwaters; and therefore I started immediately, knowing this was a very heavy and important work, and contracted for a million of bricks. But the engineer said he thought my price was too much; I said, Well I have got a good price for this, but for other things I am not paid so much, and, therefore, I think you ought not to take any advantage; that

- A. Rhodes, Esq.
24 April, 1860.
- that was the risk. I think, now, that he has changed his plan, but as I have not seen the plan I do not know anything at all about it.
643. Then you are not objecting to construct the bridge he designs, but your complaint is that you have not got the plans? Yes.
644. How long have you been asking for these plans? About twelve months.
645. Was it not too early to get them twelve months ago? I ought to have had the plan on the 21st July last year.
646. You were promised the plans on that date? Yes.
647. Have you got them now? No.
648. For what reason, can you tell?—Have the Government given any reason why you have not got them? I really cannot say what is the reason.
649. Can you go on with the bridge without these plans? No.
650. Then that work is at a standstill without them? Yes.
651. That is another of your complaints? Yes.
652. You said something about the difference between lime and cement, contending that the lime of this Country was better than cement? Yes.
653. Do you refuse to use the cement the Government direct you to use? No, I only made a suggestion, because the mortar is better than cement.
654. And I suppose you only make these suggestions to secure good work for your own credit hereafter? Yes.
655. There is no complaint on that subject? No.
656. You said something just now about having a letter from your principals, stating that if you could get rid of the contract you were to do so, and they would be glad to see you home again? Yes.
657. Have you any objection to read that part of it? No.
658. Will you do so? (*The witness read the letter. Vide Appendix I.*)
659. That is written by one of the partners of the firm of Peto, Brassey, and Betts? Yes.
660. You mentioned that in a letter you had from Mr. Brassey, dated some time in February, and received by the last Mail, which is a private letter, and I do not want to know the contents, but it contains some enclosures which consist of letters written by this Government, or officers of this Government, to your principals, and are referred to you for your inspection? There have been letters written that I have never got copies of.
661. You got them from your principals? Yes.
662. The originals? Yes.
663. Have you any objection to state the contents of these letters? They are private affairs, and I would rather not.
664. But there have been such letters written and sent home to your principals? These are private letters sent from Government officials home to London to Peto & Co.; and they even sent to private individuals, and those private individuals communicated with our people, worse than that still.
665. But these letters are private, and you do not wish to refer to them? Yes.
666. *By Mr. Fawcett:* Are these the letters you referred to a short time ago as private letters? Yes.
667. *By Mr. A. Campbell:* Was there not a letter from Mr. Brassey to Mr. Whitton, the Engineer? Yes; I think I read that letter.
668. Tell me about the position Mr. Willcox occupies, as regards the firm of Peto, Brassey, and Betts? He is Agent for Peto, Brassey, and Betts.
669. For a particular purpose? Yes.
670. What purpose is that? He had a power-of-attorney to come to Melbourne, but as he did not succeed there, he came on here; he went to the Railway Authorities, and they put him in charge of the Northern Line. They said Mr. Willcox would rather treat for himself, and I said very well, but I never consented to give them power to act.
671. The Government treated with Mr. Willcox for the Northern Line without interference on your part? They treated with me first, and with him afterwards.
672. You took the contract for the whole? Yes, on the schedule of prices, for the first contract; there was extra work to be let afterwards, which is not settled.
673. The letter of the 15th April, signed by Captain Martindale, paragraph 2, says, "the Government agree to contract with Sir S. M. Peto, Brassey, and Betts, for the construction of the authorized lines of railway from Menangle to Picton, from the Blacktown Road to Penrith, and from Lochinvar to Singleton"—the latter is the Northern Line, is it? Yes.
674. That letter was addressed to the agent of Sir Morton Peto and Co.? Yes, to me.
675. You took that contract? Yes.
676. But somehow or other it has fallen out of your hands, and has got into the hands of Mr. Willcox? Yes.
677. You stated that the power-of-attorney you hold from Peto, Brassey, and Betts, includes all New South Wales? Yes.
678. Does it include Victoria? No.
679. Mr. Willcox had a power-of-attorney for Victoria? Yes.
680. Then, if I understand rightly, your power extends over the whole of this Colony, and his over the whole of the other Colony? Yes.
681. Have the Government given you any reason at all why the plans for the Menangle viaduct have not been furnished to you? About a month ago there was a letter to say that they had to alter the plan, owing to the floods. I ought to have had the plans on the 21st of July last year. They have had plenty of time to get ready in eight months.
682. That was the last reason for not furnishing the plans? Yes.

683. How many rails do you want to accomplish the work you have in hand? About ten miles—just double the quantity I have now to carry on with any speed.
684. You have stated that you have seven cuttings now standing still? Yes.
685. You still adhere to that statement? Yes.
686. And for want of rails? Yes.
687. *By Mr. Hoskins*: I understood you to say you considered that particular viaducts on this railway would be insecure? After a certain time.
688. You think they will last but a very short period? Yes.
689. Is it not the fact that there are a large number of timber viaducts on railways in the Mother Country? Yes; but I have not seen any like these. I have seen timber tops, but I never saw any on props like these.
690. Have you not seen a large number of timber viaducts on railways in England? Timber tops I have.
691. Constructed of timber—on timber piles? Not so high as these that I recollect.
692. Are you acquainted with the Great Western Railway? I have travelled it in the first time from Weymouth to London.
693. Have you ever travelled from Swindon to Cheltenham and Gloucester? No.
694. Are you not aware that Mr. Brunel, the great engineer at Home, recently deceased, preferred timber viaducts for their lightness and cheapness? No, I am not aware of it. I have always heard engineers object to timber bridges.
695. You have never seen any timber viaducts, you say, on a curve? Not to my recollection.
696. Have you not heard the opinion expressed, that one reason why a preference is given to timber viaducts is, that they can be so easily repaired without impeding the traffic of the railway? I have heard so; but it would be very expensive.
697. It would be still more expensive to repair brick or stone? Not if properly put together.
698. Have you ever seen a timber viaduct erected, in which the piles were driven into the ground with no other protection—I believe you complain of the construction of timber viaducts here, where the piles are driven into the ground with no other protection—no stay—they are not bedded? They are not bedded.
699. In the Mother Country it is usual to bed the piles on a stone or wood bed? On stone first, then a wooden platform, and then the piles on the top of these; but I have not seen any so high; the bridges I have generally seen of timber are about London, and bridges over rivers with timber tops, and brick or stone piers.
700. The reason why they are bedded on timber, or stone, is to prevent the piles sinking by the trains travelling over them? It is more solid, I consider.
701. Are you not aware that the timbers used for viaducts undergo a curative process—that they cure them with a composition of creosote, to prevent the effect of the weather? They have done so of late.
702. They did so twenty years ago, did they not? Yes.
703. Do you not think, that, if the timber used in the viaducts of this Colony were cured in the same way, they would last much longer? Yes, and the sleepers as well.
704. The sleepers in the Mother Country are always cured? Yes.
705. If this composition were used, would it prevent the action of the white ant and other insects? Yes, certainly.
706. Then I understand you to say, that you think these viaducts insecure because the piles are not driven in a sufficient length, and are not properly braced? Just so; and the bridge is not wide enough, only 11 feet 6 inches; between the piers there is a space of 20 feet, which ought to be strutted.
707. Do you not think that if the timber used for these purposes, for sleepers and viaducts, were cured, that the viaducts would be cheaper, and last as long, if built of wood, as if built of brick or stone? No, I think if you had bricks or stone, they would be always more permanent than timber.
708. I apprehend there have been frequent instances in the Mother Country where brick and stone viaducts have fallen in in a very short time after being erected? Where they are badly done.
709. *By Mr. Forster*: You used an expression, “pushed into a corner,” in allusion to the treatment you say you received from the Government—did you mean by that that the Government took an unfair advantage of you? I think so.
710. Then do you consider that the Government were morally bound by the species of contract or agreement with Mr. Gabrielli? Morally bound, I think so.
711. I think you yourself have admitted that you subsequently have consented to another agreement altogether? Yes.
712. You gave up the original agreement? Yes.
713. Do you consider that you were forced into that assent by the peculiar position in which you were placed? Yes.
714. And that the Government took a somewhat unfair advantage of you? Yes.
715. Would you have been willing, at that time, when you first came to the Colony and found how things stood, to go back at once on payment of the costs and expenses to which Peto, Brassey, and Betts had been put? I should have gone back at once only for my solicitor, Mr. Want, who engaged me to stop; he had an interview with the Government.
716. Then you do not consider that the contract now entered into is as advantageous to you as it ought to have been? If I have the facilities that were promised to me, I am quite willing to go on, and I consider the contract they have made with me quite binding on both parties.
717. You assented yourself to another agreement after your arrival? Yes.
718. Do you consider that the contract you entered into then is now subsisting? Yes; and as binding as any agreement.

A. Rhodes,
Esq.

24 April, 1860.

- A. Rhodes, Esq.
 24 April, 1860.
719. Will you state to the Committee on what documents you consider the contract is based, or how it stands? A schedule of prices was sent to me marked A.
720. That was one portion of the contract? Yes; that was in the letter of the 15th April, 1859, page 4 in the correspondence; then the final settlement, when I accepted the contract, is contained in the letters of the 21st April, 1859, between myself and the Government.
721. Then you consider your contract with the Government is based upon these different letters to which you have referred, and the schedule of prices attached to them? Yes.
722. Would you be perfectly satisfied now if the Government were strictly to adhere to the terms of that contract? Quite.
723. You consider that you have fulfilled your part of the contract, but that the Government have not? Yes.
724. I think you mentioned in what particulars—partly that they have not allowed you the use of as many rails as you required? Yes.
725. And also that they have wished to pay you for earth when you were actually working in rock? Yes.
726. And also that they have not furnished the plans which they were bound to do by the agreement? Yes.
727. In these particulars you consider that the Government have not fulfilled their contract? Yes, certainly.
728. Was not the contract to which you have referred as based upon these documents varied in any way by subsequent correspondence? No; I never acknowledged it.
729. Was there not a long correspondence between you and the Railway Department, and between you and the Government, on the subject of the contract? Yes; because they wanted me to sign a specification; that was to say, that if the Engineer-in-Chief wished to send any one off the works he could do so, that is to say, he could commence by sending me about my business. That was one thing I objected to.
730. You have agreed to sign what is called the usual bond and contract? I am prepared to sign the usual bond and contract by what we have agreed to.
731. "The usual bond and contract" is a well-known expression, is it not? Yes, what we have agreed to.
732. You say the Government wanted to attach something to this bond and contract which you refused to sign? Which was different from what had transpired between us.
733. Did you say you had undertaken, as part of the agreement, to sign the usual bond and contract? According to what we agreed in these different letters that were written before the contract was taken—that was what I agreed to.
734. You have not signed it yet? I consider this a contract.
735. You have not signed it, and therefore you have not fulfilled that portion of your contract? No; but I am quite willing to sign anything that is in accordance with the agreement.
736. You have never refused, then, to execute that part of your contract? Never.
737. But you found the contract the Government wished you to sign was not in accordance with the agreement? It was not according to the agreement I entered into with the Government; they wanted me to sign a different specification, which I refused to do.
738. With regard to the matter of rock and earth, do you not think that might be settled by arbitration, from time to time? I have asked them to do so several times, but they have refused.
739. The Government have always insisted on determining that question on their own authority? Yes.
740. You have declined always to assent to that? Yes.
741. *By Mr. Samuel*: I understood you to say you have not signed any contract? I consider the letters of the 21st April a contract.
742. You have not signed any formal contract? No.
743. Have the Government submitted a contract to you for your signature? Yes.
744. Have you made objections to signing that contract? Yes.
745. Have you stated your reasons why you object? My solicitor has written to the Crown Solicitor, stating his objections.
746. Have you got a copy of that letter here? No, I have not; my solicitor has got it.
747. Were all the objections you have to signing this contract set forth in detail in that letter? Yes.
748. When you left England, did you understand that the schedule of prices submitted to Peto and Company was the schedule of prices you were to receive here? Yes.
749. Did the Government here refuse to pay those prices when you arrived? Yes.
750. Did you intimate to the Government here that those were the prices you expected to receive? Yes.
751. *By Mr. Asher*: You did afterwards agree to a different scale of prices? Yes.
752. *By Mr. Arnold*: Was this specification, which you now refuse to acknowledge as part of the contract, also sent home to England? Yes.
753. And that you now refuse to acknowledge? I refuse because they reduced the prices, and I entered into a new agreement with the Government.
754. With regard to piles for bridges—will all the piles for these bridges be of the same length in the same bridge? Nearly so, not all; there may be a few inches difference.
755. Then if you ascertain the length required for one pile there will be no waste in the construction of the bridge, in consequence of your not knowing what the length required for the other piles will be? There is always waste in bridges.
756. Would not that waste arise from your not being able to know from the length of one pile what would be the length of another? Sometimes some piles may have to be driven further than others; one pile may come against a large stone, while another may sink through soft soil or sand.
- 757.

757. You said you have begun this work in consequence of some concession from the Government; what concession have they made with regard to the piles—you said that it was the duty of the Government to furnish you with the length of the piles, and then that subsequently you arranged to go on because the Government had made some concession, what was it? I am to be paid for the length of the piles, under this condition:—"A schedule of prices for all extra work, as far as practicable, is to be prepared at once and agreed to between us; and any extra work for which the price cannot now be settled is to be left to future arrangement."

A. Rhodes,
Esq.
24 April, 1860.

758. What I ask is this: you said you had agreed to ascertain for yourself what length the piles should be? I did not agree to it; I said if the Government would allow me extra for the pile-driving I should go on with them; there was no answer, and therefore I took it for granted, of course, that they would pay.

759. Are you now finding the length of the piles for yourself? Yes.

760. Do you expect to be paid for any greater length than is necessary for the piles? No.

761. Then whatever length the piles are you expect to be paid for? Yes, and no more; but whatever extra labor I have, of course I will be paid for it, I hope.

762. Then you have now given up that objection about finding the lengths of the piles? Of course I have nothing to say if they allow me to go on according to contract.

763. I understood you to say that it is against the contract? I say it is; according to the contract they ought to furnish them.

764. But you say you have given up that objection, and are going on, finding the lengths of the piles yourself? Because I am to be paid for it, certainly.

765. Has any lime been used by you in any brickwork which has afterwards been condemned by the Government Officer? I asked the Government to allow me to build some bridges in mortar and they said they would not; for my own experience I have built two small culverts to try what this mortar was made of; in one mortar I tried the lime with sharp sand from Menangle River. Sir William Macarthur used a deal of this lime, and Mr. Thompson, the miller, at Camden, and they told me I must try another sort of sand. The one I tried with pure sand from the bed of Menangle River did not succeed, but as to the other a more perfect or better job was never done on any railway. Here is a specimen of the mortar. (*Produced.*)

766. You said, in answer to a question just now, that you would have returned home, on finding the alterations the Government wished to make in the schedule of prices, if you had not been advised otherwise by Mr. Want? Certainly I would.

767. Then you believed you would undertake this contract at a loss? When I saw you did not intend to give me these facilities, and when I saw that the Government was bamboozling me in every shape and form, I thought the best plan was to return.

768. But afterwards you accepted the contract from the Government on the recommendation of Mr. Want? Yes.

769. Notwithstanding you knew facilities were not to be given? —.

Mr. Darvall objected to the use of the word "bamboozling" by the witness.

770. I presume the contractors in undertaking a work of this kind are put to a good many incidental expenses, for which they receive no payment from the Government, as for instance office expenses and superintendence? We do not ask the Government to pay for anything but the contract.

771. These expenses you intend to be covered by the profit on the contract prices? These are private concerns. Of course we can hire an office and do other business independent of the Government business if we like; we are not tied entirely to the Government.

772. Are your legal expenses considerable? Yes, and private—and I can afford it, and the Government won't pay for it either.

773. What are the most considerable incidental expenses of the contract? —.

Mr. Windeyer objected to questions of this kind.

774. *By Mr. Russell:* Allow me to ask, when you left England, for what purpose did you leave—was it to fulfil a contract you considered entered into by the Government of this Colony? Yes.

775. After your arrival here and communicating with the Government what was the result? They got other people to tender against me and reduced my prices.

776. Was it not understood before you came out that there was to be no competition—that the proposal sent Home from here, of the prices to be paid for your work, was to be adhered to after your arrival? Yes.

777. *By Mr. Asher:* Were you bound to accept those reduced prices? No.

778. *By Mr. Hay:* I see in this letter of Mr. Brassey's which you have read, dated 19th December, 1859, and written in consequence of the disputes which have arisen between you and the Railway Department, that Mr. Brassey seems to fall back upon the provisional agreement made with Mr. Gabrielli? He thought so.

779. That appears to be the contract which he would desire to have a settlement made with the Government upon, and not upon the contract which you say you have entered into, as his agent, with the Government here? Yes, that is what Mr. Brassey wishes.

780. Are we to gather from that, that Mr. Brassey disapproved of the provisions of the contract which you entered into with the Government on his behalf? He wrote to say he thought they were very near; but he did not disapprove of my taking lower prices, because he left it entirely to my own judgment.

781. What reason do you give for the fact that Mr. Brassey, in his letter, which he apparently intends as the basis of an arrangement between you and the Government, does not refer to the contract you have entered into with the Government, but goes back to the provisional contract with Mr. Gabrielli? He thought that the Government and themselves would

- A. Rhodes, Esq.
24 April, 1860:
- would arrange the matter in London, and leave all the correspondence we have had on one side, by leaving it be decided by a competent person, to be named by the Foreign Minister, the Speaker of the House of Commons, or the Chairman of the Institute of Civil Engineers.
782. But he seems inclined to leave your contract also on one side, and to go back on the provisional contract made with Mr. Gabrielli? In that letter he does.
783. So that he is evidently not satisfied with the contract you have entered into with the Government? He thought they were rather near, after we had sent materials out, to change the contract for the very little difference.
784. It seems evident from this letter that Mr. Brassey looked upon himself as entitled to rely upon obtaining the provisions of the provisional contract with Mr. Gabrielli? Yes, by that letter.
785. May I ask if that was your impression of Mr. Brassey's intentions, and the intentions of Sir Morton Peto and Co., when you left Home? Yes.
786. That you were to make an agreement on the footing of Mr. Gabrielli's provisional agreement? Yes.
787. And upon the footing of the schedule of prices sent Home along with that? Yes.
788. And you have reason to believe that you departed from the wishes of Sir Morton Peto and Co. when you departed from the provisions of the agreement with Mr. Gabrielli? They have left me entirely to use my own judgment.
789. Do you not think, after reading this letter, that you departed from their wishes in departing from the provisions of the agreement with Mr. Gabrielli? They left me entirely to my own judgment; but, of course, after reading this letter I think they thought it was an agreement for us to take or leave.
790. Mr. Brassey does not in this letter suggest a settlement on the basis of the agreement you have entered into with the Government, but on the basis of Mr. Gabrielli's agreement? That is what he wishes now—to settle all disputes.
791. Your impression, then, is that Sir Morton Peto and Co. would never have sent you out, nor any plant out, unless they had believed you were to obtain a contract substantially the same as that offered to Mr. Gabrielli? They never would have accepted anything unless they had given those prices.
792. With regard to the viaducts of which you have spoken—you have told us that from calculations you have made you have come to the conclusion that timber tops upon brick piers would not have been more expensive than these timber viaducts? I think not.
793. You have told us that is the result of calculation? Yes.
794. Were those calculations made by yourself? Yes.
795. You have not got them with you? No.
796. Have you got them in such a shape that you could furnish them to the Committee? Yes, I have; I do not know where the papers are now; I dare say I tore them up when I found there would be no change. I could go into the calculation again.
797. Did it not strike you, that it would be satisfactory to the Committee to have your opinion fortified by the calculations upon which it is based? No, it did not.
798. Then you cannot produce the calculations? No. I know they shewed that I could build viaducts with brick piers and timber tops, leaving sufficient room to take the water away, at the same expense as building these timber viaducts.
799. You know that in a general way? I know that in a general way.
800. You cannot produce the calculations upon which that opinion, you have said, is founded? Not now.
801. Would not an opinion, not founded upon calculation, as to a work of that kind, be extremely worthless? It is not difficult to come to a calculation of that kind.
802. But it would be very satisfactory to have that calculation? If you had said so last time I was here I should have had it ready.
803. If I may express my opinion I should have said you ought to have fortified your opinion by the calculations on which it was based? I should not certainly have exposed myself to such a large amount of money, and have written to that effect, if I had not gone into the calculation; and allow me to tell you I call this a very little work indeed; if it were something like a hundred miles of railway it might be worth while, but this is only twenty miles of railway, which is very little to think about.
804. We are not talking about the railway, but about the viaduct. You have said that the plans of this viaduct are such that the structure would be very insecure? After a short time.
805. I think you said it would be very insecure, not only from the material being timber but from the plan of the bridge—the way in which the timber is used in the bridge? Yes.
806. That is the opinion you have come to yourself without referring to any other authority? That was my own first opinion, but I took the opinion of half a dozen engineers, and they quite agreed with me.
807. You have said you are not an engineer yourself? I am not here as an engineer.
808. You have said you were not brought up as an engineer nor educated as an engineer? No, nor was the great Telford an engineer either.
809. Just so; but we are not talking of Telford—we are talking of you. The late George Stephenson was not educated as an engineer? No.
810. Did he make his own calculations? Sometimes he did.
811. Did he not employ others? All engineers do.
812. Did he not employ Mr. Biddulph? Yes.
813. Whom do you employ? I do it myself, and employ other engineers to see that I do it right.
814. Who is the engineer you employ? Mr. Fowler sometimes; I pay him when he is consulted.

815. You have not pointed out to the Committee what makes these bridges insecure? I think I have two or three times. A. Rhodes,
Esq.
816. You have not pointed out the particular points in which they would be insecure? I consider the weakest part between the piers, where they are not stayed. I consider that a bridge with a width of only 11 feet 6 inches, such a height as 31 feet 6 inches, down an incline of 1 in 70, and a curve at one end, must be insecure. 24 April, 1860.
817. You proposed a bridge that would answer the purpose better? What I should propose would be a culvert of six feet.
818. I think you produced to the Committee some plan of a viaduct which would answer the purpose better in your opinion? No, I did not shew one.
819. I think I saw one in your hands? (*Several Members*: Yes, a small one)—Oh, yes.
820. You did produce a small plan? Yes, but I have not got it with me.
821. *By Mr. Hoskins*: That was timber, was it not? Yes. (*The witness exhibited a plan.*)
822. *By Mr. Hay*: That was not the plan? It is the same plan on another scale.
823. In places where the foundation is very soft, would not the expense of obtaining a sound foundation for the brickwork be in some cases great? In a boggy country, certainly.
824. What would you have to do there? Go down to a good strong band of clay; if we come to any band of clay a yard thick it is quite sufficient to support the piers. That is the general rule with engineers.
825. A band of clay a yard thick would be quite sufficient to support piers which should carry the heaviest railway traffic? Yes.
826. You would not go farther than that? That is the general rule. We generally bore first, and then if we find clay we build on the clay.
827. In case you did not find this, except at a great depth, would you not have recourse to piles as a foundation? The last place I was at we went through a great deal of boggy country; a cofferdam was placed where the piers were to be built, then we took out the slush, and threw in a concrete of mortar and stone, and then a little under the surface of the ground we built brick piers; iron tops we used.
828. Was it expensive, laying the foundation in that way? In some places very expensive, in others not.
829. Then you do not know of any case where timber viaducts are made resting upon piles? No, never till I came here.
830. And you say such is not the case in England? I never saw any; I saw timber tops. I have seen small bridges ten or eleven feet high near London, but that is no height, and they are built for a double line.
831. *By Mr. Hoskins*: Do you consider that these erections, these viaducts, would be secure if the piles were stayed by braces in the upper part and the lower part? They would be a deal stronger; but I prefer brick piers and timber tops, well stayed.
832. Are not the bricks made in this Colony very much inferior to the bricks in use at Home? I have got bricks made here as good as any Staffordshire bricks.
833. You think the plan of bedding the piles upon a timber or stone foundation much better than driving them into the earth? Where the ground is good it is a much cheaper and better job.
834. But not where the ground is soft? Where the ground is soft you should go down to a good bottom, fill it up with concrete, then with a timber top, and then the piles on the timber.
835. That is for viaducts to be erected according to that plan? To keep the same plan, but make it stronger.
836. Do you think that by having the viaducts erected after that plan they would be secure? I think they would be a deal stronger.
837. Can you tell how long timber viaducts last in England? Eight or ten years.
838. *By Mr. A. Campbell*: You say you have had a million of bricks made, ready for this bridge? I have used about a third of them, and the rest are on the spot waiting for the plan.
839. For the bridge? For the other bridge. I have got seven or eight hundred thousand bricks on the spot.
840. Supposing the bridge is not built of brick, what are you to do with them? I should think the Government, after promising and saying they would have brick piers, stone cutwaters, and iron tops, will take the bricks.
841. Your objection to the timber bridge is not that you object to go on with it—you merely want to guard yourself against putting up work that will not last? Yes.
842. You will do the work as they tell you—you merely remonstrate because you fancy it will not last, or reflect credit on your firm? Yes.
843. *By Mr. Darvall*: You stated that an agreement was sent to you to be signed in the year 1859? Yes.
844. Be good enough to see if that is the agreement that was sent to you by the Government (*handing a document to the witness*)—that that is the draft they sent for your consideration? It is. (*Draft of agreement handed in. Vide Appendix II.*)
845. Do you now hold in your hand the answer sent by your attorney to that proposition of the Government? Yes.
846. Will you be good enough to read it? (*The witness read the same. Vide Appendix III.*)
847. *By Mr. Parkes*: What is the date of that letter? 22nd of September.
848. *By Mr. Rolton*: I think you stated in the course of your evidence that if you were furnished with rails and chairs you could get on with the works three times faster than you are now doing? Twice as fast.
849. Has it not been intimated to you that if you would sign the contract or bond the rails and

- A. Rhodes, Esq.
 24 April, 1860.
- and chairs would be provided? I never objected to sign a bond and contract drawn up in accordance with what is contained in the letters I have before alluded to; I consider those letters an agreement; I consider them a bond.
850. That is not exactly an answer to what I ask you. I ask you whether it has not been intimated to you that so soon as you should sign the bond you should get rails and chairs? No.
851. Has not the Government called upon you—not only the present but the previous one—to sign the contract? I am quite willing to sign the contract which is embodied in these letters.
852. Has not the Government called upon you to sign the contract? Yes.
853. What is the reason you will not sign? Because they want me to sign a specification I did not agree to.
854. You mean to say the contract the Government want you to sign is not, in fact, the one you entered into? Yes.
855. With reference to what you said about the viaduct near Menangle being unsafe, are you not aware that there are some works constructed much in the same way on the line now in use, and which have been, in fact, run over for some considerable period? No.
856. Is there not a work of a very similar character near Liverpool? No; they are not the same.
857. Is there not a viaduct built on piles for some considerable distance, near Liverpool? Not that I am aware of.
858. And a considerable height also? Not that I am aware of.
859. Have you not been over any viaducts on the present line of railroad which are in use, which are built of timber in something the same way as the Menangle viaduct is proposed to be built? Not that I am aware of.
860. You are not aware that there are any works of the same character on the road? No.
861. You were not present at the testing of one of the bridges or viaducts some short time back? No.
862. The new works? No.
863. You do not know as a fact that one of the viaducts has been tested by engines having been driven over it? I heard an engine went over slowly, but I do not know that that viaduct is the same as the viaducts I have to build.
864. With reference to the schedule of prices,—when that schedule of prices was sent Home to Sir Morton Peto and Co., was it not sent merely as a guide to them, not exactly as a schedule of prices which the Government had agreed to, but as a guide to them to shew the prices which then prevailed in the Colony, and which, in the event of any agreement being entered into subsequently, would be liable to adjustment afterwards, provided there should be any alteration in the prices of labor, or other circumstances which should render necessary a deviation from that schedule? I expected to have been paid that schedule sent to England.
865. Is not that the case—that at the time that schedule was sent Home it was intimated to Peto and Co. that it was merely sent as a guide to the contractors? I understood that these prices were offered to Mr. Gabrielli, and that he would have got them if he had had power at the time to close with the Government.
866. But when Mr. Gabrielli intimated that he had not power to enter into a contract, was it not stated to him that the Government would not feel themselves bound to abide by that schedule whenever Peto and Co. should feel inclined to do so, if in the meantime anything should transpire to make them desire an alteration in the prices? Mr. Gabrielli always told me that these were the prices to be given, and if he had had power at the time he would have made the contract.
867. Notwithstanding that, you have submitted to a different arrangement? I saw that materials to a heavy amount were sent out on the faith of this letter that was sent Home, and this schedule of prices; and I saw that it was necessary for me to reduce the prices, in order not to allow the materials when they come here to lie idle. That was my reason for reducing the prices.
868. Supposing that the Government at once provided you with the rails necessary to enable you to carry on your works as quickly as possible—have you the labor at hand, or can you procure a sufficient amount of labor in the Colony, without importing it, to enable you to get on so quickly with the work as you have stated? At that time and now I can.
869. You could at the present time? Yes.
870. *By Mr. Parkes*: I think I noticed that you brought into the Chamber a piece of rock with you? Yes.
871. Have you got it there? Yes.
872. Will you just shew it to us? Yes. (*The witness exhibited the piece of rock referred to.*)
873. Is that the material which you complain of as being charged as earth? Yes.
874. What I want you to do is, to describe to the Committee the appearance of that material in the cutting where the Railway Authorities insist upon its being charged as earth—whether it is in broken strata or in one mass; and if in mass, describe about the size of it, as near as you can? We have about 8 cuttings where we meet with this, about 8 feet below the surface. We have (say) 4 feet of earthwork—that is dirt, 4 feet of shaly stuff that can be picked, and about 20 feet of rock as solid as this. This is what they call shale, and I call it hard rock.
875. Is the 20 feet, down to the level of the cutting, one solid rock, without any fissure or break of any kind? Nearly so.
876. Have you to blast it? Oh, yes.
877. Is it as difficult to blast as sandstone? Worse, a great deal.

878. Upon this Southern Line Extension do the timber bridges extend to a certain distance, and then after that distance are they all brick culverts;—do the wooden bridges extend to a certain distance, and then uniformly all brick culverts? Yes, that is to say from Campbelltown to Menangle they are all wooden viaducts, with the exception of two or three; all the rest from Menangle to Picton, are brick culverts. A. Rhodes,
Esq.
24 April, 1860.
879. Are the bridges which extend from Campbelltown to Menangle, whether over a large watercourse, or over a mere blind creek—are they all bridges alike? The same plan for them all.
880. The piers or supports, whether 7 feet or 30 feet, are the same size? Yes.
881. And the same distance apart? No, not the same distance; some are not so high, nor so wide.
882. Beyond that distance they are brick culverts? Yes.
883. Is it a brick culvert at Harris's Creek? Yes.
884. Will you state the depth of Harris's Creek? About 70 feet—76 feet.
885. Is Harris's Creek the outlet of a large collecting ground that lies up above it? Yes, of a great extent of ground.
886. A large extent of country that collects flood waters? Yes.
887. The creek itself is 76 feet deep? 76 feet 4 inches.
888. And that is a brick culvert? Yes.
889. It is a brick culvert of 5 feet? It was only 5 feet, and now it is altered to 10 feet.
890. Was it altered on your representation? I mentioned that some of the brick culverts would not take all the water away; I do not know whether I mentioned that place.
891. Can you mention the length of the culvert from one side to the other? 227 feet.
892. That is the length of the embankment—the length of the culvert I mean, through the embankment? I have not got it exactly; the embankment is 247 feet in length.

APPENDIX.

I.

COPY of a letter from Mr. Brassey to Mr. Rhodes, suggesting an arbitration.

*Westminster, 4, Great George-street,
19 December, 1859.*

My dear Sir,

I regret very deeply to learn by your favor 13th October, that you are still unable to come to any amicable settlement with Mr. Whitton and the Government.

At this distance it is quite impossible to offer any practical advice to remove the difficulties. Of course, if you even arrange to make such a settlement as will cover your outlay and the plant sent over, I shall prefer your doing so;—for it appears almost impossible to carry on the works to the mutual satisfaction of the Government and ourselves. I trust, however, that some arrangement may be reported in your next letter. The cause of your departure from this Country to Australia was attributable entirely to a contract entered into between the Government and Mr. Gabrielli, acting for Sir S. M. Peto, which proviso contract, as I understand, Mr. Whitton and the Government desired to have very important changes made. Amongst them to withhold from the contractor the use of the rails for the execution of the work, a condition which, if it had been made in the preliminary contract, would have spared all the annoyance;—for it is clear I should not, under such conditions, have thought of sending you or the plant to Sydney. Supposing this letter to have come to hand before you have settled your difficulties (very unlikely) I would suggest that the provisional contract entered into by Mr. Gabrielli, be taken as an agreed base of arrangement between the Government and the contractors, and that all changes therefrom be the subject of arbitration, to be decided by a competent person to be selected by the Foreign Minister, the Speaker of the House of Commons, or the Chairman of the Institute of Civil Engineers in London, at the option of the Colonial Government. Such a proposition cannot be otherwise than acceptable to the Colonial Government authorities in Sydney, and, I trust, put an end to all further discussion.

Believe me, &c.,
THOMAS BRASSEY

II.

ARTICLES OF AGREEMENT made the _____ day of _____, A. D., 1859, between Sir Samuel Morton Peto, of _____ Hall, in the County of Suffolk, in that part of Great Britain called England, Baronet; Edward Ladd Betts, of Preston Hall, in the County of Kent, in England, Esquire, and Thomas Brassey, of _____ Square, in the County of Middlesex, Esquire, trading under the firm of Peto, Brassey, and Betts, of the first part,—and The Commissioner for Railways, a corporation sole, created by the Act of the Legislature of New South Wales, passed in the 22nd year of the reign of Her Majesty Queen Victoria, No. 12, acting for and on behalf of the Government of the said Colony, of the second part.

WHEREAS it hath been agreed between the said parties hereto of the first and second parts respectively, that the said parties hereto of the first part shall perform and execute all the works required for the construction of an Extension of the Great Southern Railway, in the said Colony, from Menangle to Picton, as shown in the plans now deposited in the office of the Commissioner for Railways at Sydney, and according to the specifications hereto annexed, marked A, C, D, and E, at or for the prices set out in the schedules hereto annexed, marked B and F.

Now these presents witness that the said Sir Samuel Morton Peto, Edward Ladd Betts, and Thomas Brassey, hereinafter styled or referred to as the "contractors," for themselves jointly and severally, and for their respective heirs, executors, and administrators, do and each of them doth covenant, promise, contract, and agree with and to the Commissioner for Railways, the party hereto of the second part, his successors and assigns, in manner following, that is to say,—

1. That the contractors, their executors and administrators, shall and will, for the considerations herein mentioned, construct, make, do, perform, execute, complete, and perfect, on or before the 21st day of June, 1861,* all and every the works required in constructing a single line of railway from a point

* The contractors are, however, to be entitled to such further time beyond this date as may have been or may be occasioned by the default of the Engineer's department in furnishing the plans, &c.

A. Rhodes,
Esq.
24 April, 1860.

point near to the Nepean River, in the parish of Menangle, county of Cumberland, marked B on the proclaimed plan of the Extension of the Great Southern Railway to the point near to the town of Picton, in the parish and county of Camden, and Colony aforesaid, marked D on the said plan, being a distance of thirteen miles more or less, and shall provide all material, labor, scaffolding, tools, implements, and every other thing requisite and necessary for the full and proper completion of all the earthwork, brickwork, timberwork, and ironwork required in constructing the said railway in accordance with the plans thereof in the office of the Commissioner for Railways, and with the specification hereto annexed, and also to the satisfaction in all things of the Engineer-in-Chief for the time being of the Commissioner of Railways.

2. That the earthwork, brickwork, timberwork, and ironwork, shall be done, supplied, perfected, and completed by the contractors; for the earthwork and brickwork, per cubic yard; for the timberwork, per cubic foot; and for all ironwork, including straps and bolts, at per lb., at or for the prices named in the schedule marked B, and attached hereto, and that in addition to the said earthwork, brickwork, timberwork, and ironwork, all other works which are or shall or may be requisite to complete and finish the said extension of the Great Southern Railway from Menangle to Picton, and which shall be performed in accordance with the specification marked C, D, and E, and be paid for at the prices named in the schedule marked F attached hereto, and any work not included in the specifications A, C, D, E, and in the abovenamed schedules B and F, shall be performed according to specifications to be prepared by the said Engineer, and at prices to be agreed upon between the parties to these presents before commencing the said work, but if it should happen that the Commissioner for Railways and the contractors shall not agree as to the price to be paid for such works; the contractors shall execute the same to the satisfaction of the Chief Commissioner, and the price shall be decided by arbitration, in manner hereinafter mentioned: Provided, however, the Commissioner of Railways shall have fixed a fair and reasonable price, and the contractors shall have refused to perform the work at that price. The contractors shall find all materials and labor, and the work shall be paid for at the net measurement; the prices named in the said schedule including all materials and labor.

3. The land inside the fences of the railway may be used for the purpose of carting materials, &c., on to the line; all damage that may be done to any land, not actually the property of the Commissioner for Railways, must be paid for by the contractors, whether such damage be caused by the carting of materials or the straying of cattle, in consequence of the destruction by the contractors or their workmen of the original fences, or the fences alongside the railway erected by the Commissioner for Railways, or by any other cause connected with the construction of the works.

The works will be set out for the contractors.

6. All measurements of works shall be made according to the actual dimensions notwithstanding any general or local custom to the contrary.

7. The contractors shall, on or before the 21st June, 1861, complete the whole of the works comprised in this contract.

8. The plan, which is drawn to a scale of 2 chains to an inch, shews the course of the line, the centre red line represents the line of stakes which are driven down at intervals of one chain. These stakes are in the centre for a double line of railway, but as the line is at present intended only for a single way, the actual working centre will be 5 feet 6 inches on the east side of the stakes, and shewn by a blue line on the working drawings and cross sections.

9. The section which is drawn to a horizontal scale of 4 chains to an inch, and a vertical scale of 40 feet to an inch, represents the surface of the ground (in black), and is taken along the centre line shewn on the plan in red; the upper or blue line represents the upper surface of the rails when laid; the lower or red line represents the level of the bottom of the ballasting or formation level of both cuttings and embankments, and is 2 feet below the blue line.

10. The other plans, sections, and drawings, represent generally the form and dimensions of the several works where any discrepancy exists between the dimensions as indicated by the scale, and those marked in figures. The figures are to be considered as correct, and are to be taken in all cases in preference to the measurements by the scale attached, and if there should likewise be any discrepancy between the figures or dimensions or the form of construction, or the material as indicated in the drawings and the dimensions and material given in the specifications, the directions of the specifications shall be adopted, and in all cases of defective description or of any ambiguity, the explanation given by the Chief Engineer of Railways for the time being, shall be binding upon the contractors; provided the contractors shall not have incurred expense thereby. Also, anything contained in the drawings or in the specifications shall be equally binding as if it were contained in both.

11. No addition, reduction, or alteration shall in any way vitiate or set aside the contract; but any addition, deduction, or alteration shall be measured and allowed for according to the schedule of prices annexed to the bond, or if not provided for in the said schedules then at a price to be agreed upon at the time.

12. The said specifications hereto annexed, marked A, C, D, and E, and the said schedules, marked B and F, shall be taken to be, and be read as incorporated in and forming part of this contract, and the conditions, stipulations, and directions therein contained, and on the part of the contractors to be performed, shall be observed, performed, and kept in all things by the contractors as if the same had been written in and formed part of these presents.

13. If from any delay, default, or other cause whatsoever on the part of the Commissioner for Railways, the progress of the said works shall be stopped or retarded, the only effect of such delay shall be that the contractors shall be allowed a like amount of time in finishing and completing this contract, and pay the contractors all losses or damages accrued thereby, which shall not otherwise be affected thereby.

14. All works under this contract shall be made, done, finished, and completed, and materials found and provided to the satisfaction of the Commissioner for Railways; and wherever the term Engineer is used in these presents, or in the said specification, it shall be taken to mean the Engineer-in-Chief, for the time being, of the Commissioner for Railways.

And the Commissioner for Railways, in consideration of the premises for himself and his successors, covenants, contracts, and agrees with the contractors that they their executors and administrators well and truly performing the said works, and performing all covenants in respect thereof on their part; the Commissioner for Railways and his successors shall and will pay to the contractors, their executors and administrators for the said works, at and after the rate of payment mentioned in the said schedule hereto annexed, or where there shall be no prices fixed in the schedules, then a fair and reasonable sum for the works so performed.

That the said Commissioner will sell to the contractors, at a fair price or valuation, all or any plant or implements in his possession, which he can, without inconvenience to the public service, spare, and also allow and permit the contractors to use all such rails and chairs as may be necessary for the performance of the works, the said contractors paying to the Commissioner for Railways for the use of all rails and chairs used for temporary purposes after the rate of 10 per centum per annum upon their value, the contractors agreeing, on their part, that, if any rails or chairs shall be destroyed, injured, or rendered useless, the contractors will pay for the same at the price fixed as the value of the rails or chairs when taken to by the contractors, and from which the calculation of 10 per cent. is made. It being understood that the interest is not chargeable on rails when permanently laid; all rails, whether for permanent or temporary use, shall be delivered at the nearest terminus to the railway works contracted for.

The Commissioner for Railways will allow Mr. Willeox, the agent for the contractors, a free pass over all the Government lines, and a free pass for one agent upon the line between Sydney and Campbelltown while employed upon the construction of this Railway.

And

And lastly it is mutually agreed and declared between the parties hereto of the first and second parts respectively,—

That payments shall be made for the work done under this contract once in every month, on the engineer's certificate, as the work proceeds, in the proportion of 90 per cent. upon the work actually executed, and materials delivered, and that the remaining 10 per cent. shall be made within one month after the Chief Engineer of the Commissioner for Railways has certified that the works have been completed to his satisfaction. Provided that it shall not be necessary or a condition precedent to any action, and his not refusing to give a certificate shall not preclude the contractors from bringing their action against the Government.

That all payments to be made for works done under this contract shall be made at the option of the Commissioner for Railways in cash, or in Debentures to be issued by the Government of New South Wales, bearing interest at the rate of 5 per cent. per annum, payable at twenty-five years from the date of such Debentures being taken at 2 per cent. discount off the amount therein stated (that is to say,) at £98 for the £100.

In witness whereof the said contractors, parties hereto of the first part, have hereto set their hands and seals, and the Commissioner for Railways has hereto caused his common seal to be affixed the day and year first before written.

Signed, sealed, and delivered by the said Sir Samuel Morton Peto in the presence of	}	(L.S.)
Signed, sealed, and delivered by the said Thomas Brassey in the presence of	}	(L.S.)
Signed, sealed, and delivered by the said Edward Ladd Betts in the presence of	}	(L.S.)

A. Rhodes,
Esq.
24 April, 1860

III.

Sydney, 22 September, 1859.

In the matter of Peto, Brassey, and Betts' Contract with the Commissioner of Railways.

Dear Sir,

I return herewith the Agreement and Specifications, with such alterations as Mr. Rhodes and Mr. Willcox have suggested.

One principal and general objection is, that the contract is unnecessary, as the agreement is fully set out in the correspondence which has taken place between Mr. Rhodes and the Government, which appears to me to be amply sufficient for the protection of both parties.

The specification is an unusual proceeding in extensive contracts, the contractors of which are bound by the terms of the agreement to perform their work satisfactorily before receiving payment, and although in little contracts a contractor may put himself entirely at the mercy of the engineer—it cannot be so expected in large ones. Indeed in a late case in England the Judges animadverted strongly upon the folly of persons entering into such one-sided contracts.

Mr. Rhodes is, however, prepared to enter into any agreement on the part of Messrs. Peto, Brassey, and Betts, which shall have the effect of binding them to perform the work in a satisfactory manner.

I cannot conceive the necessity of repeating clause by clause the same matters in both the agreement and specification. I have, therefore, struck out one set of clauses from the specification leaving corresponding one in the agreement; but it is immaterial to me whether they shall be in the specification or in the agreement.

We agree to paragraph No. 1, except that the contractors will not bind themselves to complete by the time mentioned, as by the delay of the engineer in not delivering the plans according to agreement (the whole of which, even at the present time, are not delivered) they cannot *now* fix the amount of damages they have sustained, nor the extra time they may require in consequence.

The last three months, it will be remembered, have been most favorable for them, but this may not continue.

They will, however, do their utmost to complete the contracts within the time if possible, provided they have a sufficiency of rails and chairs.

The contractors would prefer that the Chief Commissioner should be the person to whose satisfaction the work should be done; subject, nevertheless, to the arbitration clause in case of difference, as hereinafter contained.

[No. 2.]—"For wrought iron straps, bolts, &c.," substitute "Ironwork, including nuts, bolts, and straps," as stated in the schedule, which, therefore, comprises every description of ironwork.

I propose to strike out the words "The Commissioner for Railways may, in such way as he may think fit, cause the said to be constructed, without reference to the said contracts," and substitute the following words:—"The contractor shall execute the same to the satisfaction of the Chief Commissioner, and the price, in case of difference, shall be decided by arbitration in manner hereinafter mentioned."

[No. 3.]—This clause must be struck out, it is at direct variance with the agreement contained in the correspondence, and would give the engineer power to dismiss Mr. Willcox or Mr. Rhodes.

[No. 4.]—The contractors cannot accede to this clause,—*First*, Because it substitutes an *indefinite* period for the delivery of possession of the railway land for the *definite* terms before agreed to. *Secondly*, With respect to the liability for damages occasioned by the destruction of the original fences, referred to in this clause, the contractors cannot undertake this liability, as in a large portion of the line the Government have taken the fencing into their own hands, and if it should be necessary, in the formation of the line, to pull down the cross fences, the Government may not have their side fencing performed, and the contractors would, in fact, render themselves liable for the default of the Government. *Thirdly*, They cannot be liable for any damage done by their workmen, except by their order, or in the prosecution of works by their order.

Mr. Rhodes and Mr. Willcox object also to the last part of the clause, which provides that the work shall be *set out* for the contractors, and that if the work is incorrectly set out they are to be liable for the error of the Government.

I have no objection to agree that the work shall be properly executed *according to such setting out*; and that if it should be improperly set out, and require alteration, it must be at the expense of the Government, by whose fault it occurred.

We need not anticipate that the Government Engineers will set out the work improperly, but certainly, if they do, they and not we should bear the loss; we shall also require to be furnished with the length of piles.

[No. 5.]—We refuse to accede to this.

[No. 6.]—Agreed to.

[No. 7.]—Objected to for reasons stated as to clause No. 1.

[Nos. 8, 9, 10, 11, 12.]—Agreed to.

In 13 substitute the following—"If from any delay, default, or other cause whatsoever on the part of the Commissioner for Railways, the progress of the said work shall be stopped or retarded, the contractor

A. Rhodes, Esq.
 24 April, 1860. "contractor shall be allowed such further or other time as may be equivalent to the time so lost, calculated with reference to the price of labor and state of the labor market at the time of the loss, and he also entitles to such compensation for the loss and damages occasioned by such delay, to be decided on by arbitration in case of difference."

[No. 14.]—Substitute the Chief Commissioner for the Chief Engineer, and provide that it shall not be a condition precedent to the contractor's right to recover from the Government, either by arbitration or in the courts of law.

In the paragraph relating to the payment for the work, I propose to add after the words "Schedule hereunto annexed," the words "Or where there shall be no prices in the schedules then a fair and reasonable sum for the work so performed."

I also propose to alter the succeeding paragraph, as to the rails, namely,—That the contractors shall be allowed all such rails and chairs as may be necessary for the performance of the works. Mr. Rhodes informs me that he always expected this, and that he could not have tendered at the price he did unless he felt sure that he would be allowed them; and he further informs me, that the works cannot be done within four years unless he has them.

I proposed to add to this clause the usual and customary clause, and which I have extracted from a specification of Mr. Lock, the President of the Institution of Engineers in England:—

"It is intended to lay a single line of railway. The rails, chairs, spikes, keys, and sleepers, will be furnished by the Commissioner for Railways, and delivered to the contractor. The contractor will be required to give a receipt for them at the time of delivery, and must be responsible." "Should any of the rails or other materials be in any way injured by temporary purposes, the contractor shall compensate the Commissioner for the whole amount of the injury done."

Or the following one, from the specification of Mr. Jee, an engineer of great practice and repute:—

"The rails will be used temporarily during the formation of the cuttings and embankments, for the purpose of conveying the materials. They must, however, be kept in good repair and condition, so that the rails may not be injured, and they will not be allowed to be used within 100 feet of any face in the cutting, but for this purpose temporary rails will be provided by the Government (Spanish)."

In connection with the question of rails, and in order that there may be no mistake as to a custom universally practised in England, I propose the following clause:—

The contractors are to be at liberty to lay the permanent road on formation whenever a quarter of a mile of formation is done; and the contractor shall also be allowed to use such permanent road without any charge being made for the use of the same.

The price for the damaged rails should not be their cost in the Colony, except when new rails are given—but the value of such rails as fixed, and on which the 10 per cent. is payable; no interest to be charged for the rails when laid permanently, and all rails must be delivered at the terminus of the contractor.

With respect to the payment of the final 10 per cent., which is made payable on the certificate of the engineer only, I have no objection to this, provided that the obtaining his certificate shall not be made a condition precedent to their right to recover from the Government the amount claimed to be due by them, in the event of the Chief Engineer, from any particular motive, refusing to give such certificate.

The certificate to be given as soon as any one of the four portions contracted for is ready for public traffic, as far as the contractors are concerned.

In the event of dispute, all matters to be referred to arbitration, to one person to be named by the Government, one person to be named by the contractor. These two to select a third arbitrator, who shall decide in case of difference.

J. Williams, Esq.,
 Crown Solicitor.

I have, &c.,
 R. J. WANT.

C.

FRIDAY, 27 APRIL, 1860.

Charles Fowler, Esquire, called in and examined:—

- C. Fowler, Esq.
 27 April, 1860.
 1864 & 5.
893. *By Mr Parkes:* You are a Civil Engineer? I am.
 894. How long have you followed that profession? About eighteen or twenty years.
 895. Where did you acquire your profession? By being engaged in numerous extensive works in England and Scotland.
 896. Can you name any of the works on which you were engaged? The Sheffield and Lincolnshire Railway—I was engaged in laying out that line; in making the Parliamentary work, the drawing of bridges, among which we had two of the bridges over the River Trent, one of 150 feet span, near Gainsborough; that bridge was designed by me, and was the first large wrought iron bridge that was erected previous to the Menai tube.
 897. When was that? In 1855-6.
 898. When did you arrive in the Colony? About two years ago. I was employed on a number of other works—
 899. I believe you are not filling any particular situation in this Colony, are you? No; I am not engaged by Messrs. Peto and Company or their agents, nor am I influenced by them in any way.
 900. But you have been, on some particular occasions, employed by Mr. Rhodes? Yes; some time ago Mr. Rhodes sent to me a plan of the viaduct 23-65 on the Picton line for report, and I wrote him a short report, assuming that his object was to enter a caveat—
 901. Is that the viaduct which has been so much talked of? Yes, near Glenlee. Assuming his object to be to enter a caveat that he would not be responsible for the work, either as to its having sufficient strength or durability. It is customary for contractors, if they think certain of the works planned are not sufficiently strong, to enter a caveat, in order that the

onus

onus may not be thrown upon them in case of failure. I have also been consulted by Mr. Rhodes on —.

902. Before you leave the viaduct, will you look behind you, and say whether that is a model of the viaduct? (*The witness examined a model.*) There are no cross-ties at the end (as in the model exhibited), they do not belong to it. (*The witness produced several plans, and examined the model with the plans.*)

C. Fowler,
Esq.

27 April, 1860.

903. *By Mr. Gray:* Is that a drawing of the viaduct? That is a drawing of it. I do not know whether the model is correct to scale, but it appears to represent the viaduct, except the ties.

904. *By Mr. Parkes:* Can you describe the situation of that viaduct? Yes.

905. *By Mr. Kemp:* Where did you get the drawings from; are they your own tracings? Mr. Rhodes gave them to me; they are from the Railway Department.

906. *By Mr. Parkes:* Can you describe the situation of the viaduct so that the Committee may understand it? It is near Glenlee House.

907. On this side? On this side, ^{very}near.

908. There are two viaducts near Glenlee House? Yes; it is the one nearest this way.

* Should not be inserted.

909. There is a curve in that viaduct, is there not? Yes, of 90 chains radius.

910. Would you be kind enough to describe the danger of a curve in a bridge, in what way it is dangerous in travelling by a steam locomotive? The effect of a curve is, of course, the centrifugal force of a heavy train at high velocity pressing upon the outer rail,—consequently, the pressure upon the viaduct will be upon the outside of the curve; but that curve is very slight, it is a curve of 90 chains radius.

911. As a point of engineering, is it desirable to avoid any curve whatever upon a bridge, if possible? Bridges are generally made sufficiently strong to render a small curve of no consequence; it is the usual practice.

912. Will you describe to what extent the danger arising from this curve is increased by the viaduct being upon an incline of one in seventy,—is that so? The danger, no doubt, in running down an incline is that if an engine-driver be a little behind time he will go at a high speed, and the train will be more unsteady in going down the incline than in going up it.

913. Would you be kind enough to state your opinion as a professional man of the safety of that kind of construction,—that is, a viaduct of that length erected upon piles 31 feet 6 inches high and only 12 inches in diameter, with no intermediate supports of any kind, and 20 feet apart each? The danger of that viaduct, I believe, has never been stated to be an immediate danger. In the correspondence, which I have carefully read through, none of Mr. Rhodes' remarks tend to that, but to this, that the vibration ~~of the rail~~ caused by the passage of the train, the roadway being fastened only to the head of the piles by two jagged spikes, between a space of forty feet, the vibration caused by the passage of these trains would destroy these iron spikes or render them loose; consequently, in no great length of time, if the traffic were heavy, the road would get out of order and cause an accident. The danger is that there is no strut, no shoulder to it, as is usual with bridges in England. I do not contend that there would be any immediate danger, and it might be perceived before the danger arose that the bridge was not sufficiently strong, and it might then be strutted; but if it were neglected, the line might be turned over to other hands, and the thing be forgotten. It is not often that an Engineer-in-Chief who constructs a line remains in charge, or that he is afterwards consulted, so that a matter of the kind might be overlooked.

* Should not be inserted.

914. Do we understand that from the ordinary wear and tear of the line, and the effect of atmospheric influences, the bridge would shake to pieces, as it were, in the course of a short time? In a short time if there were heavy traffic on it.

915. And it would give way? If not attended to.

916. Is that your opinion? It is.

917. Have you personally inspected that particular bridge? I have inspected the drawing and situation.

918. Have you been on the spot? I have.

919. Have you examined the country round about there? Yes, in the immediate neighborhood.

920. Have you examined the watershed—the area of ground that would collect flood water that would be carried off by that bridge? Yes.

921. Have you measured it? Mr. Rhodes has had it measured. It is, I believe, about 480 acres—a very small area.

922. Is a bridge of that kind necessary for carrying off the flood water that might be collected? It is not at all required, and would not be if there were ten times the amount.

923. Has the amount of water been estimated, upon any reliable ground—upon any meteorological data? Yes. After Mr. Rhodes had had the areas of these collecting grounds measured, he brought them to me, and asked me to calculate the discharge of different sized culverts; and he based his estimate of substituting brick culverts and bridges instead of timber viaducts, on three times the amount of discharge—to give three times the capacity required ^{of the greatest known rain-fall over the watershed—substituting brick bridges for} these wooden ones.

924. That is, you measured the ground, and calculated the collected flood waters by the heaviest rain-fall known in the Colony? In twenty-four hours in the Colony.

925. Will you state the result you arrived at, as to what kind of bridge would be necessary to carry off the water? As to the water there, a seven-foot culvert would take it off; in fact, the last heavy flood was measured by some of Mr. Rhodes' agents, and they came to the conclusion that a five-foot culvert would take it all off.

926. You measured the water running on that level? They measured the section of the water running there at the last flood.

- C. Fowler, Esq. 927. Does that viaduct extend over a kind of valley—a level valley? Yes.
928. Is there any creek there? It is very slight indeed—scarcely perceptible.
929. *By Mr. Windeyer*: Is there any regular watercourse? It is scarcely perceptible.
- 27 April, 1860. 930. *By Mr. Parkes*: I think you were about to say, that you have examined other works of the Southern Railway Extension? Yes.
931. Have you examined that portion of the line near Spaniard's Hill, as it is called? Yes, I have been there.
932. On this side? I have not been on the line, but I have been close to it, on this side Spaniard's Hill.
933. Have you examined a place where a wooden bridge is to be erected, but where originally it was intended to have had brick culverts? Yes, I saw it from a short distance off—I was not on the ground.
934. Do you know what was done in that case—in the case of the bridge on this side Spaniard's Hill? I believe the wooden viaduct has been substituted for a culvert. So I was told. Of course these things do not come direct to me from the office.
935. You do not know of your own knowledge? No.
936. Do you know a creek called Harris' Creek on this Extension? Yes.
937. Do you know what kind of crossing is to be erected there to carry the railway over the creek? Yes; it is an embankment of 76 feet depth, with, now, a ten-feet culvert; it was a five-feet. The ten-feet culvert has an arch two feet three inches thick; the five-feet culvert had an arch eighteen inches thick.
938. Will you describe the character of the country near Harris' Creek? Where the line crosses it is only a crack in the strata. There is an extensive collecting ground above, and a good quantity of water in Harris' Creek.
939. Is the natural collecting ground above Harris' Creek much larger than that you have just spoken of? Yes; much larger.
940. The creek itself is a steep gully? A steep gully.
941. Is it sandstone? Where the line crosses.
942. What is the length of the top of the embankment, from side to side, across the gully? About 140 yards.
943. And the embankment itself you said was—? 76 feet 6.
944. Originally I think you said there was to have been a five-feet brick culvert there? Yes.
945. Do you know the strength of the culvert, as originally designed? It was an eighteen-inch arch.
946. Will you describe it by the number of bricks? Four rings, the half of a brick being four and a-half inches; four bricks would be eighteen inches.
947. That is now altered to a ten-feet culvert? Yes.
948. What will be the length of that culvert through the base of the embankment? 86 yards; 84 is the net distance, but we always allow a yard at each end for wing walls, &c.
949. Do you think a larger quantity of water, in time of flood, will come down this creek, than could possibly come under this viaduct, (Glenlee)? Certainly not.
950. Would there be a larger quantity of water to run off? Yes; the collecting ground is larger.
951. The natural weight of the water I am speaking of? Yes; the natural weight of the water is far greater than what would come through this side of Glenlee.
952. The weight of water to be carried off by this brick culvert at Harris' Creek is far greater than could ever arise to be carried off by this wooden viaduct; is that what you mean? Yes.
953. Can you state to the Committee the reason why a brick culvert is erected in Harris' Creek, with a deep embankment, and a wooden viaduct of that description which you pronounce to be so dangerous near Glenlee. Is there any necessity for this in the formation of the country? There is no necessity at all. I should have thought a viaduct at Harris' Creek a more likely construction than a culvert, or a couple of arches, for a roadway, more likely for that place. I cannot imagine any reason for putting a culvert at Harris' Creek, and a long viaduct at Glenlee.
954. Are you of opinion, as a professional man, that the ten-feet culvert, now ordered at Harris' Creek, will be sufficient for carrying off the water? I have not had the means of ascertaining, correctly, at Harris' Creek, what is sufficient, inasmuch as I have not had the means of making an hydraulic calculation to arrive at a result, but at the last flood the water appears to have reached 18 feet high.
955. You saw the flood marks? Yes.
956. Is the danger of bursting increased or lessened by the length of the brick culvert? I do not think there is much in that.
957. You said, I think, that a viaduct would have been a better structure at Harris' Creek? I should say so.
958. What kind of viaduct would you have ordered if you had been engineer? I should have made the viaduct there for a double line, stone part of the way up, and brick the rest; there is plenty of good stone.
959. Stone piers? Part of the way up, perhaps twelve feet high, and then have built a brick structure above it.
960. For a double line? Yes.
961. Can you state roughly what would be about the expense of the culvert and embankment proposed there—the ten-feet culvert? The ten-feet culvert would cost somewhere between £4,000 and £5,000—nearly £5,000.
962. Can you form any rough estimate whatever, what would be the cost of such a viaduct as you talk of—of brick and stone? I should say it could be built for a double line at about the same cost.

963. A substantial viaduct for a double line at about the same cost as this culvert? ⁶ Yes.
964. Going back to the viaduct on this side Glenlee House, what would be the difference of cost and durability, supposing brick arches were built with a solid embankment, which you say would be sufficient for the purposes required there—what would be the difference in the cost of a construction of that kind at that particular place? I really cannot say at that particular place what was the difference of the estimate. In a letter to the Commissioner of the 3rd October last, Mr. Rhodes made a *bond fide* offer to construct from Campbelltown brick bridges or culverts in lieu of these timber structures, and to satisfy the Commissioner as to their capacity, and to uphold them for twelve months. I forget the individual cost of that one, and perhaps I ought not to divulge it if I did not, as it belongs to Mr. Rhodes' private documents; but he ascertained by going about in a proper manner what would be required, and satisfied himself that he was capable of making that tender to substitute brick in lieu of timber; and to shew that he was in earnest in making that offer, he proposed to uphold them for twelve months, and to satisfy the Commissioner, he included the roadways, gave sufficient capacity for the discharge of all the water that might come down, and three times the quantity.
965. In this letter of the 3rd October, which I presume you have seen, did Mr. Rhodes offer to satisfy the Commissioner from an examination of the country and from calculations that the culverts he proposed would be sufficient? Yes; he offered to satisfy the Commissioner as to their sufficiency.
966. Have you seen the correspondence printed by order of the House, and published, between the Commissioner of Railways and Mr. Rhodes? Yes.
967. Is that letter in it? Certainly not; it is not included in that, nor in the papers laid on the Table of the House by the Minister for Works the other evening.
968. Have you been familiar with the correspondence that has been going on between Sir Samuel Peto and Co.'s agent and the Government? Yes.
969. Are there other letters of importance not included in that printed correspondence? Yes, a great number of other letters are not included in the printed correspondence.
970. You have seen the correspondence? Yes.
971. And are acquainted with the case? I have read all the correspondence.
972. And are acquainted with the case? Yes; I was called in by Messrs. Rhodes and Willcox with reference to these disputes.
973. In your opinion, knowing the nature of the dispute and of the correspondence, do you think the letters which have not been published are necessary to a thorough understanding of the whole case? Certainly they are, as far as the whole truth of the case is concerned. I should say, perhaps, the Government would prefer, or ^{the} this department would prefer, that the whole of the letters should not be published, but that they should publish only what makes for their own case, and ⁷ should leave out the rest.
974. Having reference to the letters which have been published, and to those not published, do you consider those which have not been published of more or of less importance? I consider those not published of more importance than those published, decidedly.
975. If you were an entire stranger to the merits of this dispute, and had to form an opinion of it from the correspondence published, could you form an accurate and correct opinion? No, certainly not; it is impossible to form a correct opinion if you take part of a correspondence, and leave the other part out.
976. With respect to these wooden bridges—would you state, as nearly as you can, what is the smallest, and what the largest? Do you mean the span and height?
977. Yes? I find one here of 10 feet high with 12 feet openings; another of 11 feet 6 inches high, with 12 feet openings.
978. We will stop at that one 10 feet high, where is that? The one 10 feet high with 12 feet openings is 21 miles 74 chains; the one 11 feet 6 inches high, 12 feet openings, is 20 miles 77 chains.
979. Are these wooden bridges, one of which is 10 feet high, and the other 11 feet and a half high, all of timber, of the same dimensions as the one near Glenlee? Yes; the piles are 12 inches diameter.
980. They are all of the same timber? Yes.
981. All the piles of 10 feet and 11 feet and a half are 12 inches square just the same as the 31 feet 6 inches piles? Yes.
982. And they are 12 feet apart, while the 31 feet 6 inches piles are 20 feet apart? The piles that are nearly 32 feet above the ground are 20 feet apart, while the 10 feet and 11 feet 6 above the ground have 12 feet openings.
983. When the object is to gain strength in a wooden structure of this kind, is it not your opinion, as a professional man, that the longer the piles in such a case the nearer they should be together, while the shorter piles need not be so close together? No doubt the more you have of them the stronger the structure.
984. Is there any reason that you can explain why these short piles are only 12 feet apart, while the long piles are 20 feet apart? None whatever; the roadway is the same, and the timber of the same thickness.
985. Will you explain to the Committee where those wooden bridges are mostly situated along the line? From Campbelltown to Menangle.
986. Does Peto and Co.'s contract commence at Campbelltown? On the Southern Line.
987. Could you state the point where it commences? It commences close to Campbelltown.
- They took the work that the Government had in hand; they took it off their hands, so that they may be said to commence at Campbelltown.
988. The wooden bridges are mostly between there and Menangle? Yes.

C. Fowler,
Esq.

27 April, 1860.

⁸ And Embankment.

- C. Fowler, Esq. 989. How many are there? Sixteen.
990. Are there any brick or stone culverts in that part of the extension? I do not recollect any—I believe there are none.
- 27 April, 1860. 991. Have you been all along the line to Picton? Not on the line altogether. I have been to Picton.
992. Have you seen the plans and specifications of the whole line? I have seen the plans; specification there is none.
993. Are there any bridges of any kind from Menangle to Picton? One or two have been sent since, I think, in substitution for brick culverts.
994. There are brick culverts there, are there? There have been two plans, I think, sent since, to substitute for brick culverts.
995. Are there bridges of any kind—of stone, or brick, or any kind? I think not.
996. Are there culverts? Plenty of culverts, of course. I think two timber bridges have been sent since in substitution for two culverts.
997. There are several brick culverts beyond Menangle? Yes.
998. Is there any difference in the situation of the country where those brick culverts are, from that where it is proposed to have the viaduct? I do not know that there is any peculiar difference in the country, why they should put brick in one place and timber in the other.
999. I want you to explain to the Committee whether there is any reason arising—any professional or other reason—why brick culverts should be erected in one part and wooden bridges in the other? I cannot conceive any substantial reason whatever. You may obtain bricks very well.
1000. Is there anything in the formation of the country that would require a timber bridge in one place and a brick culvert in the other? Certainly not.
1001. There are two bridges, I think, at Glenlee? One on this side and the other on the other.
1002. What is the wooden viaduct on the other side of Glenlee House? 28 feet high, 20 feet openings, and 239 feet long.
1003. Do you recollect whether any of those wooden bridges are lower than 12 feet high? I mentioned some 10 feet high I think.
1004. I have been told of one 7 feet high, do you recollect whether there is one or not? I think not.
1005. There is a bridge at 23 miles 47 chains on the road—a bridge on piles, about 15 feet high? (*The witness referred to his papers.*) The greatest height there will be 20 feet.
1006. When you examined these works for Mr. Rhodes did you calculate the rain-fall at that bridge, did you calculate the area of the collecting ground? Yes; Mr. Rhodes had it measured; the area of the collecting ground was 320 acres.
1007. What kind of culvert would carry off the flood water by the same calculation at this locality—what would be the necessary size to carry off the largest weight of flood water that is known? About 8 feet 6 would do it—it would give three times the amount.
1008. In your opinion, as an engineer, would brick culverts have been sufficient to meet the greatest supposable flood water at all these places been Campbelltown and Menangle? Mr. Rhodes' offer was to give three times the capacity.
1009. What is your opinion? Certainly you know what you are doing, and it is not necessary to erect an immense timber structure in the midst of an embankment merely to carry off an imaginary amount of water.
1010. Is there any watercourse at any of those places of any formidable character? Not of any large dimensions, certainly not.
1011. What in your opinion would have been the difference in durability between brick culverts and solid embankments and a structure of that description? Brick I suppose to be permanent; it will last for an indefinite length of time; timber in such situations over creeks where there is loose mud, and where the piles are continually damp, would, in the first place, give way at the surface of the ground; and in these situations timber, even if it were ironbark, would not last an indefinite length of time. I have known timber bridges on the Eastern Counties Railway to be dug out with a spade at the end of twelve years. I remember we put a bridge over the River Lune in Lancashire, with laminated arches—that was taken up after eight years—that was built of the best Baltic timber, and I should say that even the best ironbark could not be depended upon to last over fifteen years. It does not follow because a piece of timber in a certain situation has been known to last a long time, that all timber of the same kind will last the same period under different circumstances. We have in England timber that has lasted an extraordinary length of time, still it cannot be trusted upon in railway structures where there is an immense amount of work to be done and where it is placed in positions where it is peculiarly susceptible of decay. Brick bridges would have been of three times the value to the Colony of these timber bridges; because, if a sum of money is laid out at interest equal to the first cost of these timber bridges, it would barely^s renew them, and besides you have the nuisance of stopping the traffic and the inconvenience of the repair.
1012. How long would brick bridges with solid embankments last? They would last, of course, for ever; such bricks as I saw at Menangle; they are solid, well burned bricks, and, I should say, they would last for ever in this country, where there are no frosts to affect them.
1013. They would last a life-time at all events? Yes; they would last many life-times.
1014. And not be so costly? I beg pardon, I did not state that; I said that Mr. Rhodes made a *bonâ fide* offer in his letter, of the 3rd October, to the Commissioner, to substitute brick in lieu of tim for the same sum of money, and to uphold the work for twelve months.

^s Uphold and

1015. Mr. Rhodes would have supplied these structures, which you say would have lasted for ever, at the same cost as the wooden bridges which you say will not last more than fifteen years, and will come down, possibly at the end of three years? If not strengthened; but I should say they will be strengthened after this inquiry.

C. Fowler,
Esq.

27 April, 1860.

1016. What do you mean by that? I mean this: it is the custom of all engineers to make their works capable of resisting four times the strain that is likely to come upon them. The lives of the public are not of such small importance as that this should be left a matter of doubt.

1017. Why should you suppose that these bridges would be strengthened? I have no doubt they would shew, when the trains commenced to run, where the weak points were, and that, consequently, means would then be taken to strengthen them.

1018. You do not mean then that the railway authorities would voluntarily alter them? I should say that they would voluntarily strengthen them without waiting to see their weakness.

1019. In your experience, did you ever see wooden bridges of the character of these sixteen bridges between Campbelltown and Menangle? No, I never saw similar bridges. Frequently, some years back, we erected what we call "timber gearing," which is a wooden bridge something like that, except having struts at the angle, over swampy ground, where the earthwork for embankments had to be carried a considerable distance; but I do not remember, of late years, any such timber structures as I have spoken of having been built. These were properly braced and strutted. They were fastened to the piles by a shoulder, and not straight-jointed as that is.

1020. Do you say that no kind of timber bridges have been built of late years? Yes, but not of the kind I have spoken of.

1021. That kind being superior to this? Yes, they were superior, they were strutted and braced.

1022. Will you go to the model and describe the difference between these strutted bridges and that? (*The witness pointed out, by reference to the model, wherein the difference consisted.*)

1023. Were the wooden bridges in England with which you were acquainted fastened in the same manner; that is, was the roadway secured by iron spikes through the roadway into the top of the piles, and by no other means? They were always firmly fastened together by a sufficient strength of ironwork and bolting.

1024. Are there any iron knees or braces at the top, do you know? Certainly, there were iron knees at the top.

1025. That is, they were not dependent upon these iron spikes alone? Not upon two iron spikes, certainly not.

1026. Did you ever see a bridge of the dimensions of that on a roadway fastened simply by two iron spikes? Thirty feet high! —

1027. *By Mr. Hoskins:* Did you ever see any railway viaduct depend merely upon the fastening of two iron spikes? Certainly not a viaduct of 30 feet high and 20 feet span.

1028. *By Mr. Parkes:* You have stated in evidence that you have been consulted by Mr. Rhodes, have you also been consulted by Mr. Willcox? Yes.

1029. Do you know, of your own knowledge, whether Mr. Willcox is satisfied with the conduct of the Government in carrying out his contract on the Northern Line? Mr. Willcox is not only dissatisfied, but he has expressed himself more strongly, if not so loudly as Mr. Rhodes, on the conduct of the Government.

1030. When you have been in consultation with these two gentlemen, has Mr. Willcox concurred in the terms of Mr. Rhodes' dissatisfaction? Certainly he has. Mr. Willcox, I may say, is quite as disgusted with the conduct of the Government as Mr. Rhodes is, although perhaps he has adopted a quieter course.

1031. Do you know whether the whole of the plans and specifications have been delivered to the contractor? The plans of the Menangle viaduct, the most important work of the line, have not been delivered to him; and as to the specification, there is not such a thing.

1032. Have you examined the whole of the plans that have been delivered? I have had them shewn to me; I looked through them one day with Mr. Rhodes.

1033. You are sufficiently acquainted with the whole of the works on the Southern Railway Extension to form an opinion as to what length of time it would take to prepare the plans and specifications? It depends upon your staff. I should say for this Menangle viaduct, one active, energetic engineer, who knows his business, would make this drawing complete in ten days in brick, stone, iron, or timber.

1034. How long is it since Mr. Rhodes entered upon his contract? I think twelve months.

1035. And he has not had a plan of this viaduct till the present time? He has not till the present time.

1036. You say it could be prepared in ten days? Certainly; in iron, brick, stone, or timber.

1037. I presume you are acquainted with the dispute which has arisen between the contractor and the Railway Authorities as to the use of the permanent rails and chairs? Yes, I have frequently been consulted on that subject, both by Mr. Rhodes and by Mr. Willcox.

1038. Can you state to the Committee whether the works have been retarded by the contractor not having sufficient rails and chairs to carry on the extension? No doubt they have been retarded.

1039. Is it the practice on works of this kind, is it the invariable practice, for the engineer to accommodate the contractor with as large a number of rails and chairs as he requires? Perhaps I can hardly give a direct answer to that. The custom some time ago in England was to execute the works with lighter rails to the cuttings for a short distance, and as soon as the contractor had a quarter of a mile of roadway ready to lay his permanent way upon,

C. Fowler,
Esq.
27 April, 1860.

I never knew the rails to be asked for by the contractor that they were refused by the engineer, for the purpose of running over his dirt wagons and the convenience of making his line. The late Mr. Robert Stephenson in his works in Egypt and in Canada always allowed the use of the rails and chairs to the contractor, and it was the custom of Mr. Joseph Locke to allow their use also upon his lines. Of course, in the event of any accident happening to the rails, if they were damaged by any accident, such as the fall of a lump of rock, the contractor had to pay for them. The contractor is responsible for them, and responsible that they are in a fit state to be put on the permanent way, otherwise the engineer has the power to refuse them. I cannot conceive that there can be any harm done to them; if they are not fit for a bit of temporary work they cannot be fit for the permanent way. A little work will do them no more harm than to allow them to lie and rust by exposure to the sea air.

1040. In this Colony, would it be practicable to carry on a railway contract at all if the use of the rails and chairs were not allowed to the contractor? It would be practicable at a considerable cost; but Messrs. Peto and Company would not be expected to spend £20,000 upon light rails to carry out a bit of contract like this. The Railway Authorities ought to have known that a firm like Peto and Company were not going to carry on this work with Dobbins carts through the mud and mire for a mile or a mile and a half; and when they required the use of the rails they ought at once to have been granted.

1041. With regard to any abuse that might arise from the contractor taking more rails and chairs than they would require, is there not a sufficient security against that in the cost he would be at to remove them from one place to another—would it not be a serious loss to any contractor to remove, and then to replace a larger number of these things than he would absolutely require? Under the present arrangement Mr. Rhodes agrees to pay ten per cent. for the use of them, and therefore I should think he would not take more than he would require.

1042. Independently of this ten per cent. is it not attended with labor and cost to remove, and then to replace them? No doubt.

1043. And therefore no man who knew his business would ask for more rails and chairs than he required? I should think not.

1043. Do you know anything of the contract between Sir Samuel Peto's agent and the Government? Yes. I believe I have had all the papers shewn to me by Mr. Rhodes and Mr. Willcox.

1044. Do you know whether any arrangement was entered into upon the understanding that the contract was to be carried on in the usual way? The contract was to be carried on in the usual manner, inasmuch as nothing was stated to the contrary by either party, and therefore you must take the custom.

1045. You were not present, I suppose, when the contract was made? I was not present.

1046. Did you ever know the use of permanent rails and chairs to be refused to contractors on any railway with which you have been connected? Never. I never heard of such a thing. When the contractor was ready with his quarter of a mile lead to lay his permanent way, I never heard of his being refused.

1047. Do you know any thing about the dispute that has arisen as to whether certain stuff taken out of the cutting should be considered rock or earth? Do you allude to the material Mr. Rhodes had here the other evening?

1048. Yes? I have seen those cuttings.

1049. Will you name some of the cuttings you have examined? Some at Spaniard's Hill, Douglas Park, and several more on to Picton.

1050. Will you describe the character of these cuttings, as you last saw them—when was it you last saw them? I saw those two cuttings at Spaniard's Hill and Douglas Park last Monday. The bottom part of the cutting is decidedly rock; then, as is not unfrequently the case, there is a transition to shale, and then there is a superstratum of earthwork at the top.

1051. The bottom of the cutting was similar to that produced by Mr. Rhodes at the bar of this House? Yes, precisely.

1052. Was it in one solid mass; or will you describe the state in which you found it? It was not in a solid mass like the sandstone in Sydney, but somewhat stratified. Perhaps four feet from the surface would be earth, then you would come to soft shale which would gradually get harder until it came to what might be considered rock—a material that would stand at half to one slope. That is a material which is considered rock.

1053. Will you explain what you mean by half to one? Six inches horizontal to a foot vertical.

1054. When you visited these cuttings at Spaniard's Hill and Douglas Park, how were they carrying on the excavation of this rock? By blasting and so forth, using gunpowder.

1055. As far as your experience has gone, as a professional man, would such work as that be considered rock according to the terms understood in railway works? For a certain height it would be considered rock. The surface is not solid, but part of the bottom is clearly rock.

1056. By what rules are these matters settled generally in carrying on railway works? It is a thing pretty generally understood among engineers what is rock and what is not. I recollect fifteen years ago, or more than that, we had these disputes continually about rock, and Mr. Locke's mode of settling them was, "Will it stand at half to one?" It is not a question of terms, to be settled by a geological book.

1057. Do you know anything about the misunderstanding that has arisen about ballasting? Yes.

1058. Will you explain what it is; what really is the state of the case, and give us your opinion about it? The arrangement that was first made was in the same way as the other contract,

contract, that the work was to be done in the usual manner, where nothing to the contrary was stated. That there should be seven inches of rough stone, five inches of broken stone, and six of boxing up. I saw a letter a short time after where the contractor was requested to take out the stone from the cuttings and pile it up in some convenient form for measurement and deduction. Such a thing I never before heard of; the contractor has the privilege of getting his ballast where he can most conveniently to himself, and if any good material is found on the works he has the privilege of using it, even of using stone for bridges; providing he makes up for the deficiency in the bank from side cutting.

C. Fowler,
Esq.

27 April, 1860.

1059. Will you explain more fully what is the present condition of things with regard to this ballasting? I believe a specification was sent to Mr. Rhodes stating that each stone at this bottom part should be exactly seven inches thick, like the ring of an arch; that Mr. Rhodes refused to assent to, as the contract was not binding. I believe Mr. Want was consulted, and they decided to give it up.

1060. Is it the practice in the construction of railways to use cement in all cases? I never knew cement to be used in railways except in wet places where you might have a spring under a culvert.

1061. Would not the work be better performed by the use of cement? I should say certainly not.

1062. Will you explain why? I would much prefer mortar of the quality produced in the House the other day to any cement. If you put a culvert in cement and then tip a bank on it, the culvert gives way a little and cracks the cement,—that joint never unites again; but if you build it in mortar, as the work dries, although it may have had a little compression it becomes imbedded in its place. A crack in cement is a crack for ever; besides, cement is liable to be damaged in coming from England.

1063. You do not think Government derive any advantage from having used cement instead of good mortar? Not if they pay five shillings a yard more for it.

1064. I understood you to say that it is not so good, in many cases, as good mortar? I would prefer good mortar at the same cost.

1065. Mr. Rhodes stated that in the case of this Menangle viaduct, it being the largest work upon the line, he ought to have been put in possession of the plans and specifications among the earliest plans and specifications delivered to him, so that he might have made his arrangements for carrying out the work according to its magnitude—is that according to the usual practice? Certainly, the plans of the work which will take the longest time should be given first. It is of no use to begin with the smallest works and then to be pushed for time for the large ones; for if there is a large amount of expenditure for plant this is lying idle, and the interest is lost while the large works are not being carried on. These should be at once proceeded with, and then the small works can be carried on at any time.

1066. Is it the uniform practice of eminent contractors when they take a work of this kind to commence upon the more difficult parts first so as to "break the back" of the work as it is called? Certainly, it is far preferable to begin on the heavier works.

1067. You think this work ought to have been in hand a long time ago? Yes, certainly, when a contractor takes a contract he ought to be put in possession of the plans as early as possible, and should not be driven into a corner, as it might be an inopportune time when the large work was required to be erected. He ought to have the privilege of choosing his own time when he could get the work done most advantageously to himself. He might have had weather, or a difficulty in getting labor, and he ought not to be driven into a corner.

1068. Can you state what is the position of an engineer upon railway works of this kind—is he shut up in an office at one end of the work, or does he inspect the works as they proceed? He ought to be a competent man and continually on the works. Where an engineer has so large a business, that he cannot attend himself; he should have some competent deputy to send on the works.

1069. Is it his habit to go over the works with the contractor frequently to inspect the works? Certainly.

1070. With reference to this part of the question, supposing an engineer entrusted with a work of this kind, for some reason or other determines to do nothing more than by the letter of the agreement he is compelled to do, determines to afford no facilities to meet the contractor in no spirit of accommodation, in fact to do nothing except what by law he may be compelled to do—would it be very easy to carry out that work? Certainly not.

1071. Would it be to the interest of a Government or of a Company, whoever might have charge of such a work, that such a course should be taken? Certainly not.

1072. Did you ever know a work where such a course as this was taken, to prosper and get on? That is utterly impossible.

1073. Then in your opinion, if this position were assumed by the engineer, it must necessarily retard the work, and involve the loss of traffic, and the loss of the interest of the money embarked in the undertaking? It is utterly impossible the work can go on favorably, unless the contractor and the engineer go over the work together frequently. The contractor may have to complain of the inspectors, or the inspectors of the contractor? There are a number of things the engineer ought to see from time to time, or be made acquainted.

1074. Are you acquainted with the firm that is represented in this Colony by Mr. Rhodes? Very slightly indeed.

1075. You are acquainted with them by reputation pretty well? By reputation.

1076. Do you think if they had known the state of things which has taken place here, they would have had anything to do with the contract? Certainly not.

1077. No large contractor would? Certainly not; if they had known of one item, the withholding of rails and chairs, they would never have sent out their agent, I am sure of that.

1078. In your experience in England, have you ever known Royal Engineers to be employed in the construction of railway works? Certainly not; never in any capacity.

- C. Fowler,
Esq.
27 April, 1860.
1079. In no instance? Never.
1080. Did you ever know an engineer have charge of works of this description on any occasion? Certainly not; the only occasions where I have known Royal Engineers to be employed, have been where they have been engaged by the Board of Trade to inspect railways previously to their being opened to the public. That is a delicate matter, and no engineer would like to meet a brother engineer to find fault with his work. In the case of the Torksey Bridge, the Government Inspector, who was a Royal Engineer, objected to the line being opened, on the ground that the bridge was not strong enough; we tested it, and afterwards gave the results to the Institution of Civil Engineers, who discussed the matter, and carefully calculated every part of the bridge, and found there was no part that was not capable of resisting four times the strain that could come upon it; we afterwards took it to the Board of Trade, who set aside the decision of their own officer who was a Royal Engineer. That bridge was designed, and all the calculations made by myself.
1081. As you have been made acquainted with what Mr. Rhodes is doing, and have inspected the works, can you give any opinion as to whether he could have completed the railway extension to Pictou by September, as he states he could have done? If he had all the plans, and the rails, and every engineering assistance requisite to assist a contractor to get on with his works, so that he would not have things left as matters of doubt and uncertainty, and if no obstructions were put in his way, I have no doubt he could complete it by September.
1082. *By Mr. Windeyer*: About this culvert at Harris' Creek, do I understand you to consider it too small? I have not calculated the area of the collecting ground or watershed.
1083. Judging from the flood marks that you saw? I really have not so examined it as to be able to give an opinion. It might have been backwater that made the flood marks.
1084. How came it to be altered from a five to a ten feet culvert? I do not know I am sure.
1085. The original plan from the Government Engineer was for a five feet culvert? Yes.
1086. *By Mr. Parkes*: Do you know whether there were any culverts planned and directed to be constructed of a certain size, against which Mr. Rhodes, as the contractor, remonstrated? There is a letter of Mr. Rhodes' in the printed correspondence, where he calls attention—
1087. Do you know what page? Page 40. In a letter from the agent of Sir S. M. Peto and Co. to the Engineer-in-Chief, dated 19 July, 1859, I find the following:—"I also observe that some of the culverts will not be large enough for the watercourses. If you could possibly spare time to go over the lines with Mr. Rhodes, we think these matters could be better arranged, and save so much writing."
1088. What was the answer sent to that letter—will you read it? The answer is dated the 20th July:—"Sir,—In reply to your letter of the 19th instant relative to the slopes of the cuttings on the Penrith Line, I have to request that you will be good enough to carry out the works in accordance with the instructions you have already received from this office. No alteration whatever must be made by you either to the slopes of the cuttings, or in the sizes of the culverts. Yours, &c., JOHN WHITTON."
1089. Do you know whether an alteration, in conformity with Mr. Rhodes' suggestions, was made afterwards? After the late large flood, Mr. Rhodes received plans to alter a number of culverts, I think seven of them, from 5 feet to 10 feet; I believe there were seven of them—six besides that at Harris' Creek, for which a special drawing was made.
1090. *By Mr. Windeyer*: Before the Government engineers made these plans, ought they not to have calculated with more accuracy the size necessary for these culverts—is it not usual for an engineer to make accurate calculations in matters of this kind before deciding on the plans? He ought to make accurate calculations no doubt.
1091. His calculations ought to be more accurate than to require him to double the size of his work afterwards? Certainly.
1092. *By Mr. Arnold*: I presume, from the disparaging way in which you speak of Royal Engineers, that you are not a Royal Engineer yourself? No.
1093. Are you a civil engineer? Yes.
1094. To what institute do you belong—do you belong to any institute of civil engineers? No; it is not necessary for an engineer to belong to any institute, in order to be an engineer; an engineer is a man who has studied and had large practice in the construction of works.
1095. Some engineers do belong to the institute? Yes, certainly.
1096. You do not? I could if I had wished; I could get elected at any time.
1097. *By Mr. Faucett*: You studied under an engineer? Certainly.
1098. *By Mr. Hoskins*: What engineer, pray? Under Mr. Locke, and under my brother Mr. John Fowler, who is one of the engineers of the largest practice in the present day; I had the management of his business for some time.
1099. *By Mr. Parkes*: You managed Mr. John Fowler's business? Yes, for a considerable length of time.
- Mr. Arnold objected to these interruptions in the course of his examination of the witness.*
1100. *By Mr. Arnold*: Under whom did you study your profession as an engineer? I was with Mr. Locke, on the Caledonian Railway, for some time.
1101. Who else? With my brother a considerable length of time.
1102. Will you have the kindness to state the periods during which you studied under these different gentlemen? I cannot state exactly the time now.
1103. Have you any idea about the time that you studied with Mr. Locke—within ten years? It was about 1855 and 1856,⁹ that I was with Mr. Locke.
1104. And for how long a period? I cannot say whether it was a year and a-half or two years.
1105. Was Mr. Locke a Member of the English Institute of Civil Engineers? Yes.
1106. Is your brother, with whom you studied, a Member of the Institute of Civil Engineers? Yes.

1107. Did you study with any other civil engineer? No; not particularly. I have been engaged on different business with other engineers,—for instance, Mr. Hawkshaw and Mr. Fairbairn,—and I have had business with other engineers very frequently.
1108. Is it usual to serve a regular apprenticeship to an engineer, as it is in other professions—law, for instance? Yes.
1109. What is the period for which it is usual to serve an apprenticeship? Five years.
1110. Did you serve an apprenticeship for five years? Yes.
1111. Under indentures? Yes.
1112. And those indentures, I presume, as you only served a year and a-half, were transferred in the usual way from one engineer to another? Nothing of the kind.
1113. Will you say what was done with your indentures for the unexpired period for which you did not serve. I think you said you served under indentures with Mr. Locke? No, I did not say so; I said I was employed by Mr. Locke in the construction of the Caledonian Railway and other works under him; I said nothing about indentures with Mr. Locke.
1114. Between whom and yourself then were these indentures made,—I understood you to say you had served an apprenticeship under indentures;—between whom and yourself were those indentures made? Do you mean when I was a young man, before I was of age?
1115. I do not ask, as to any particular period—I merely ask the question—You say you served an apprenticeship under indentures, now I do not ask whether you were a young man or an old man; but supposing it is true what you say, that you served an apprenticeship under indentures, between whom and yourself were those indentures made? Those indentures were made between myself and Mr. Flockton, an engineer and architect in Sheffield; I was in delicate health at the time and had to be kept near home. He was a man of great ability.
1116. Was he a member of the Institute of Civil Engineers? No, he was not.
1117. What was his principal business—as an engineer or as an architect? Both.
1118. What engineering works did he construct while you were with him? A number of roads; and he was often engaged in water works engineering, and in railway engineering—chiefly in opposition before Parliament—and a number of other things I really —.
1119. You do not remember the particulars? No.
1120. But, generally speaking, you think he was engaged in the construction of railway works? There were not many railways constructed at that time.
1121. Were there any railways constructed at that time? There was very little work of that kind, and it was confined to very few hands.
1122. Can you remember any railway works in which Mr. Flockton was engaged? Yes; he was employed in opposition on the Sheffield and Rotherham, Sheffield and Manchester, and the North Midland.
1123. Upon what railway works have you been employed yourself? Sheffield and Lincolnshire, Gainsborough and Grimsby, Hull and Lincoln, East Lancashire, Lancaster and Carlisle, the Caledonian, and a number of others.
1124. In what capacity were you employed on these different railways? In different capacities; sometimes in opposition before Parliament, sometimes laying out the line, executing works, and a variety of ways from first to last.
1125. Were you ever employed as engineer to a Railway Company? Yes.
1126. What Company? Sheffield to Chapelton, Chesterfield and Dronfield, —.
1127. Those will be sufficient. I understand you to say you were the Engineer-in-Chief employed in constructing the lines? I did not say so; that was not the question; the question was whether I was employed as engineer to a railway company.
1128. I am now asking you, in regard to these Companies, were you the Engineer-in-Chief employed in the construction of the lines you have spoken of? No.
1129. Your name would not be found upon the prospectus? Yes, and on the plans deposited in Parliament.
1130. As Engineer-in-Chief? As Engineer-in-Chief.
1131. You were, in fact, the Engineer-in-Chief? Yes; I can shew the very documents.
1132. Have you them here? I have them near Sydney.
1133. Will you send them in to append to your evidence? Well, I believe I have them; I am pretty sure I have them.
1134. When did you come out here? About two years ago.
1135. After your arrival here did you propose your services to the Government? Never.
1136. You never in any way, directly or indirectly, applied for employment under the Government? No. Perhaps advantage may be taken of that answer; there may be a play upon words. I clearly see the matter you are alluding to, and perhaps the better course would be to explain it, so that there may be no mistake about it. At the time these plans were to be got ready, in the three months mentioned in the contract, Mr. Rhodes came to me one day, and said, "Fowler, can't you help the department—they cannot get hands to 'get out the plans?'" I said, "Well, for a few months I have no great objections." Of course it was not a question of pay, because there was not much pay in the matter; but Mr. Rhodes had a large staff here, and was at considerable expenses. I went with him to Mr. Robertson, and from Mr. Robertson I went to Captain Martindale, and he and the Engineer-in-Chief had a consultation for two hours and a half. What passed between themselves I do not know; but although I made no conditions as to salary, simply offering to assist them, they declined my assistance. It was not any application of my own; it was taken up by Mr. Rhodes on account of his anxiety to get the plans and commence the works.
1137. Now, as you have made this explanation, you adhere to the answer which you formerly gave, that you never, directly or indirectly, applied to the Government for employment? I recollect no circumstance except the one I have mentioned—none whatever.

- C. Fowler,
Esq.
27 April, 1860.
1138. By whom have you been employed as an engineer since your arrival in this Colony? I have had private business of my own connected with certain objects for which I have been in this Colony, which is a matter exclusively belonging to myself.
1139. I ask you simply by whom you have been employed as an engineer? Not at all; I have not sought employment as an engineer.
1140. You are not practising as an engineer here? No, I have not yet done, nor thought of doing.
1141. Are you not examined here to-day as an engineer? Certainly.
1142. Have your services been availed of by any one in this Colony? I do not think any one in this Colony knew my services were to be had; I never made such a thing known.
1143. Then I still ask you the same question—has any one accepted your services here in your capacity as an engineer? They have never been offered, how then could they be accepted.
1144. Then I understand that they have not been accepted? Certainly not; they have never been offered.
1145. I understood you to say you had been consulted by Mr. Rhodes? Yes.
1146. In what capacity? As engineer. I should have said, with the exception of Mr. Rhodes, if you wish to be particular. I am not aware that there is much engineering work going on except that connected with the Government.
1147. Then you consider Mr. Rhodes nobody? I thought you were speaking with the exception of this case.
1148. I asked the simple question, without alluding to or excepting any case? Certainly, if you include this case, by Mr. Rhodes; but I am not aware of any one else.
1149. Has any one consulted you in this Colony except Mr. Rhodes? And Mr. Willcox.
1150. When did Mr. Willcox consult you? About a month back.
1151. Upon what works? Upon the questions in dispute between them, as agents for Sir Morton Peto and Co., and the Railway Department, with respect to the use of rails, with respect to ballast, with respect to taking the rock cuttings out perpendicularly, and with respect to a number of other matters relating to the contract also.
1152. Were you consulted professionally? Certainly.
1153. And your services were paid for in the usual way? No doubt when I send Mr. Rhodes in a bill he will pay for them; it is a matter of business.
1154. Has Mr. Willcox consulted you in the same way? Yes.
1155. And you will send in your charges to Mr. Willcox? I will send them either to one or the other, to the firm; Mr. Willcox is Sir Morton Peto and Co.'s representative, and so is Mr. Rhodes. No doubt Mr. Willcox will pay part of the charges, as well as Mr. Rhodes the other part.
1156. Have you ever been consulted by Mr. Willcox in any matter connected with his contract—the Northern contract? I have. I have never been over the Northern Line, but I have been consulted by him in matters connected with his contract.
1157. And by Mr. Rhodes in connection with his contract? Yes.
1158. You spoke just now of the means usually employed to determine what was rock and what was earth, and I think I understood you to say that the ordinary mode of determining is, if it will stand half to one; that is, horizontal six inches to twelve inches in height? That is one usual mode.
1159. Is there no kind of earth that will stand that? I am not aware of any.
1160. Would not a cutting through a peat-bog stand in that way? Twenty or thirty feet high!
1161. I was not aware that you said twenty or thirty feet high; I understood you to say the ordinary rule was whether it would stand half to one? Peat is never treated as earth-work.
1162. I do not ask you that—I ask whether it would stand at half to one? Not for a railway cutting.
1163. Would clay? Certainly not.
1164. Would brickearth? Certainly not; it would come down with the weather; it would stand in dry times a day or two perhaps, but it would come down with the weather. So would peat come down with the weather.
1165. You meant to say if it would permanently stand at half to one it was rock? Certainly.
1166. How then could you apply that test on the immediate completion of a contract? An engineer who understands his business knows perfectly well what will stand permanently at half to one, and what will not. It is simply a matter of judgment with a practical man, whether such a material will stand at half to one permanently, or not. If it will do so, no matter what you may call it geologically, it would be treated as rock by nine out of ten engineers in England.
1167. Does it require an engineer to determine whether any material will stand at half to one? The answer I gave was, that rock was hard material which would stand at half to one slope.
1168. As the ordinary mode in which the material is tested on payment being required by the contractors? Of course you look at the material, and if you feel satisfied it will stand at half to one slope it ought to be paid for as rock. Certainly the material Mr. Rhodes had here will stand at half to one slope for a considerable height.
1169. *By Mr. Darvall*: What you mean by half to one is an embankment having that slope? No, a cutting. If material in a cutting will, in the opinion of practical men, stand permanently at a slope of six inches horizontal to a foot vertical, that is rock, and should be paid for as rock. Embankments are always one and half to one.
1170. *By Mr. Arnold*: Have you read the whole of the correspondence which has taken place between the contractors and the Government? I believe I read it through.
- 1171.

1171. The published and unpublished correspondence? Ycs.
1172. You have read the whole of it? I think so; I read the unpublished letters up to a certain date, but I am not sure whether I have read the whole of it.
1173. At all events you have expressed the opinion that the unpublished portion of the correspondence would enable a person to form a clearer idea of the matters in dispute than the published portion? I should say so. There are certain letters in the unpublished portion that would, I think, elucidate the matter.
1174. Can you remember the particular letters? A letter of the 3rd October, about these brick culverts and bridges.
1175. Have you any reason to suppose that the Government have any objection to publish this correspondence? Why not have published it then, instead of something which does not form part of the correspondence, that is, the report of Captain Martindale which yourself laid on the Table about a week back.
1176. I merely ask whether you have any reason to think the Government have any objection to publish the whole of this correspondence? I should say the correspondence ought to be published in its entirety.
1177. Are there any other letters in particular which you think ought to be published? Yes, several other letters; for instance, one of the 24th November.
1178. Do you remember any letter previous to the 29th September that has been omitted from the published correspondence? I cannot carry every letter in remembrance.
1179. Perhaps you have failed to observe that this correspondence was laid on the Table on the 29th September? I spoke of the letter of the 3rd October —.
1180. How could a letter of the 3rd October, be included in a correspondence which only comes up to the 29th of September? Certain portions of the correspondence have been published since.
1181. One letter on each side containing a summary of the matters in dispute? There cannot be a letter on each side, inasmuch as one of the letters you allude to has never been sent to Mr. Rhodes, and, therefore, does not form part of the correspondence at all.
1182. How many bridges are there unfinished on the line at the present moment? I am sure I cannot tell.
1183. Are there any for which plans have been furnished? There are a number, of course; there is no good in finishing the small bridges and leaving the large ones.
1184. I think you stated that the Government furnished no specification to the contractors? I did not. I said no specification existed in this contract; there was none made out when the works were taken.
1185. Then you do not deny that a specification has been furnished by the Government? A specification may be furnished afterwards, and you may make it anything; but I say no specification exists in this contract, because none was made for these works at the time the contract was taken.
1186. I think I understood you to say you were not in the employment of Peto and Co., or of any person here, except as a consulting engineer? Just so.
1187. *By Mr. Darvall:* I wish to ask you whether a calculation has been made of the quantity of earthwork that would have been required to construct a viaduct of earthwork in place of the wooden one? The quantity of earthwork contained in the embankment?
1188. Yes, whether any calculation has been made? A calculation has been made, but I cannot give it.
1189. Can you give the quantity and the cost of constructing it of earthwork, with brick culverts, instead of the wooden bridge? I cannot give you the details of that. Certain calculations were made both by myself and Mr. Rhodes; but I conceive it is not Mr. Rhodes' duty to furnish the Government with calculations.
1190. Can you say whether one could be done as cheaply as the other at the scale of prices to be paid to the Government? I believe Mr. Rhodes offered to substitute brick for timber bridges along the line from 20 miles 40 chains to 26 miles 20 chains; but each part I could not give in detail at present.
1191. You cannot say whether, charging by the Government scale of prices, an earthwork viaduct could have been constructed for the same price as the wooden one would cost? I cannot say as to this particular bridge.
1192. You have spoken of a culvert that was altered at the desire of the Government from five feet in diameter to ten feet,—what is the comparative volume of water that one would discharge as compared with the other? A ten feet culvert would discharge five and a half times the quantity of water that a five feet culvert would.
1193. Are you sure of that? Quite certain of it. A five feet culvert will discharge 12,000 cubic feet per minute, and a ten feet culvert 64,000 cubic feet.
1194. Supposing that the culverts instead of being round were square, would the relative proportion of the water discharged be the same. Supposing one to be 5 feet square, and the other 10 feet square, would the discharge from each be in the same proportion as that from a circular culvert of 5 feet diameter, and a circular culvert of 10 feet diameter? There would not be much difference; practically it would be about the same—about $5\frac{1}{2}$ times.
1195. Would not the discharge of a 10 feet square culvert be exactly four times that of a 5 feet square culvert? No, it will not; on account of the greater depth of the water in the 10 feet culvert it will discharge more rapidly and not in the proportion of the square of the size. It will run off faster owing to its greater depth.
1196. The greater magnitude will facilitate the discharge of the water? Yes, not in the proportion of 4 times, but of $5\frac{1}{2}$ times.
1197. But, at all events, the increase from 5 feet to 10 feet would certainly more than quadruple the power of discharging the water? $5\frac{1}{2}$ times is the correct calculation.

C. Fowler,
Esq.

27 April, 1860.

C. Fowler,
Esq.

27 April, 1860.

1198. Are you aware upon what suggestion, or how that alteration in the size of the culvert came to be made by the Engineer? A letter accompanied the altered plan, stating—I do not recollect the exact words—that the alteration was made owing to the late large flood.

1199. In point of fact until people have seen the operation of a large flood here, I suppose it is very difficult to calculate the fall of water? Not at all. There is a great rain fall here within a short space of time, and consequently there are larger floods than in a country where 3 inches of rain fall in 24 hours is the maximum; as in England, where they are not subject to such large floods. Here you have as much as 20 inches some times.

1200. Were there flood marks on the banks to shew to what height the flood habitually or occasionally arose? At Menangle or Harris' Creek, do you mean?

1201. At the place where the alteration was made in the size of the culvert? I saw some flood marks there about 18 feet high; I did not measure them, but they appeared to me to be about 18 feet high.

1202. You have stated what the curve is on the line on that bridge? 90 chains radius.

1203. An arc of a circle with a diameter of 180 chains? Yes.

1204. What would be the centrifugal force? I have not calculated the centrifugal force, but it would be very slight on that curve.

1205. Then the danger you apprehend from the construction of this bridge is that from the frequent concussion it should be shaken to pieces, as it were? The vibration of the trains passing along that roadway will shake the connection between the tops of these piles and the roadway, in a short time, if there is heavy traffic, and, of course, if it is light traffic, it will be a longer time doing it.

1206. You have suggested the means by which that danger could be obviated? Yes, by struts placed in the usual manner.

1207. Then your objection is not so much to the general idea of a wooden viaduct as to the particular mode of constructing it in this instance? I think wooden viaducts generally very undesirable, inasmuch as they are perishable by fire, by decay, and by the white ant; but with regard to making that one comparatively safe for a length of time, it could easily be done by strutting it, and no doubt will be done if it is erected.

1208. Are you aware of the durability of the hard wood of this country? I do not think there have been a sufficient number of tests for the durability of wood applied to specific cases, like a railway across boggy ground or muddy ground. I do not think there has been sufficient experience of it to enable any one to give a definite opinion as to the durability of this wood. I would more rely on the experience of railway structures in other countries, taking into consideration the relative superiority of ironbark timber over some other woods.

1209. Is any wood in England at all comparable in durability to the mahogany of this country, stringybark, or ironbark? There is the oak —

1210. Is that often used—is it not too expensive? Not often for piles, but it is frequently for the tops of bridges.

1211. Have you alluded in the evidence you have already given to all the imperfections which have struck your notice in this railway, as far as it has gone? I have not had any wish to find imperfections in this railway. The only reason why I have been called here, was from Mr. Rhodes consulting me as to whether he should enter a caveat, in order to protect himself from any failure in these works. I have not come here to find fault.

1212. But, as an engineer, we desire to profit by your knowledge—have you directed the attention of the Committee to all the imperfections you have observed in this railway? I cannot say I have directed attention to all the imperfections there may be in it. I have not looked over the line with the view of finding out imperfections. These are one or two casual things brought forward by Mr. Rhodes.

1213. You have been on the line? Only on part of the line, not the whole of it.

1214. Have any other imperfections been pointed out to you, or have you observed any yourself, to which you have not called the attention of the Committee? I do not recollect any.

1215. *By Mr. Parkes:* Is the line well set out? I have not looked at it sufficiently minutely to say whether it is well set out or well laid out.

1216. *By Mr. Darvall:* Are you aware whether any practice prevails in England as to the length of the leads which shall be made use of—is there any rule in England with regard to paying the contractor more if the leads are beyond a certain length? The custom in England is this: if you let a contract for a lump sum or a guarantee contract, you take out the quantities of earthwork and ascertain the average lead; the contractor then puts on his average price, taking into consideration the length of that average lead. Provided you let a schedule of prices contract, and have not the plans ready, and have not ascertained the lead, you assume half a mile, and put a price for every additional length of lead, generally a quarter of a mile, extra.

1217. *By Mr. Arnold:* I think you said you were aware that Mr. Rhodes had remonstrated against the size of these five feet culverts? Yes, I find that in a letter.

1218. The first proposal was that the culverts should be five feet; is that the case? Yes.

1219. On the Southern railway? Yes.

1220. And Mr. Rhodes remonstrated against the size? Yes; the letter is in the published correspondence.

1221. What is the date? 19th July, 1859.

1222. *By Mr. Darvall:* Was the size of this culvert part of a general instruction, or a particular instruction with regard to that locality—was it a general instruction with regard to all culverts on the line, or that this particular locality was to have a five feet culvert? I should say both general and particular, inasmuch as the letter in answer says—"No alteration must be made by you, either to the slopes of the cuttings or in the sizes of the "culverts;"

“ culverts”; and there are other letters stating that all the works must be carried out strictly in accordance with the plans sent.

C. Fowler, Esq.
27 April, 1860.

1223. Have you stated whether, in your opinion, the piles supporting that bridge would be safer driven into the ground or resting on sleepers buried in the ground? They would be more durable resting on sleepers than buried in the ground.

1224. Would they be less liable to injury from concussion than when driven into the ground? I would make a different plan entirely if I bedded them, either on stone or timber.

1225. Which would be the safest and cheapest? I cannot exactly give a direct answer without having the two plans in juxtaposition.

1226. Which would be the safest in this particular locality? You might make a safer structure, by bedding the piles on sleepers and putting some diagonal pieces to them so as to stay the bridge.

1227. *By Mr. Parkes*: Is it the case that one bridge has been altered or repaired? On the Southern line?

1228. Or the Southern or Western Line? I do not know whether one bridge has been altered. There is a plan come in for a bridge of a different construction recently, which, instead of having the jagged spike driven in it has ^{two} extra piles. The strut pile which is ^{to} One to support this bridge is taken up, and two bolts go right through—it does not depend on the jagged spike only.

1229. *By Mr. Arnold*: I understand you to have represented that the original plans for culverts upon this Southern Line were five feet? In some places.

1230. That Mr. Rhodes remonstrated—entered a caveat, I think was your expression—with the Engineer-in-Chief, upon the insufficient size of the culverts; and that subsequently, the culverts against the sufficiency of whose size he had remonstrated were altered by the Engineer-in-Chief to 10 feet-culverts, discharging five times the quantity of water—is that your representation? Yes.

1231. Have you any other evidence than the letter of the 19th July, that Mr. Rhodes remonstrated against the size of the 5-feet culverts? None, whatever; I find nothing written but that.

1232. Will you please to read that letter? I think I read it a short time ago. (*Witness read the letter as follows*):—

“ Sydney, 19 July, 1859.

“ Sir,

“ On careful examination of the slopes given in your section for the Penrith Line, I fear some of the cuttings must be 1½ to 1 instead of 1 to 1 or 1¼ to 1.

“ I also observe that some of the culverts will not be large enough for the watercourses.

“ If you could possibly spare time to go over the lines with Mr. Rhodes, we think “ these matters could be better arranged, and save so much writing.

“ Yours, &c.,

“ (For Peto, Brassey, & Betts,)

“ A. RHODES.”

1233. Does that relate to the Southern Line? Mr. Rhodes is contractor for both the Western and Southern Line.

1234. Will you tell me what your construction of this is—“ On careful examination of the “ slopes given in your section for the *Penrith Line*, I fear some of the cuttings must be 1½ “ to 1 instead of 1 to 1 or 1¼ to 1. I also observe that some of the culverts will not be “ large enough for the watercourses,”—do you imagine that to apply to the Southern Line? If you read on a little further, I think you will see it applies to the Southern as well as the Western Line—“ If you could possibly spare time to go over the *lines* with Mr. Rhodes, we “ think these matters could be better arranged, and save so much writing.”

1235. But there were many matters in dispute on both lines? This letter only relates to the slopes and the culverts.

1236. You think the inevitable inference from this letter is that Mr. Rhodes objected to the size of the culverts on the Southern as well as the Western Line? Some of them; I read it so, in reading the letter on.

1237. Have any culverts on the Western Line been altered? I have not the slightest idea; I have never been over the Western Line.

1238. I think you said you believed that Mr. Rhodes never remonstrated against these five-foot culverts on the Southern Line except in this letter? I do not know that; I find only this in the correspondence.

1239. *By Mr. Hoskins*: Were you requested by Mr. Rhodes to inspect that viaduct (*the model*), and give him a report on its stability? Yes, some time ago.

1240. Have you any objection to read that report—have you it with you? I haven't it with me, but it is substantially as I have described it to the Committee.

1241. You consider it generally insecure? It is substantially the same, indeed I think the words were copied, as is written in the printed document placed on the Table by the Minister of Public Works, about a week ago.

1242. Are there not piles under these piles 32 feet long—are not these piles driven into other piles? No; there are some piles driven 32 feet into the ground, I am told. That bridge at Glenlec is not executed; they would not require to go that depth in that bridge.

1243. Where are those piles—are they to be used in the construction of that viaduct? Not i that one. I am told there are piles in a bridge on the road from Campbelltown to Camden, where it crosses the railway, 32 feet deep in the ground. I did not see them driven.

1244. Are there no piles driven in the ground—no more piles proposed to be used in the construction of that viaduct than those that you see on the surface? No.

1245. How far are they supposed to be driven into the ground? Until they get to a bearing, that is to say, when a monkey a ton weight will only drive them a quarter of an inch.

- O. Fowler, Esq. 1246. A quarter of an inch in rock? Not in rock; that would smash them perhaps.
1247. Are there many piles used already? Some have been driven in some of the bridges.
1248. In that long viaduct? It is not commenced.
- 27 April, 1860. 1249. You have not inspected the other bridges generally? No; I have only inspected some of them casually.
1250. Have you ever, in the Mother Country, seen a timber viaduct of that length proposed to be erected on piles, those piles to be driven into the ground without any other stay whatever, the same as these? No; I never knew single piles, 20 feet openings, driven in the ground as you state, of a greater height than 20 feet, and in that height of 20 feet strutted. I never knew them 32 feet high square-joined like that—never.
1251. Is it not unusual, in fact, to depend upon driving piles in the ground—are they not generally bedded, perhaps in a bed of concrete, or of stone and timber? That would, in some instances, be made use of, and, perhaps, they would make that as a basis for a structure of stone or brick afterwards. It is not an usual thing for bridges of that class to be resorted to as a general style of bridge for railway purposes—it is not an usual style of bridge.
1252. You think, if diagonal pieces were used to these piles, it would insure the security of the bridge for a time? For a considerable time—perhaps until the timber decayed.
1253. Is it not usual in long viaducts of that kind to have the cross sections, not to depend on diagonal braces? To have cross pieces in viaducts of great height it is.
1254. In viaducts 32 feet high? I do not recollect any timber viaducts of the same height as this. About 20 feet high they are frequently made.
1255. If they are dependent on strutting, they are strutted at the base as well as the top? Yes, if of great height.
1256. If 32 feet high? I have never seen any 32 feet high.
1257. Have you seen the American lattice-work bridges? They use there chiefly lattice-girders.
1258. Yes. Do you not think those would be better for the security of travellers, in preference to that, or even those short struts you name? No; the lattice-girders being small pieces of timber would shortly decay.
1259. You have never seen any piles used in a bridge without having some stay—some support? No, certainly not; I do not know of any.
1260. Timber bridges are being generally discontinued, are they not? Yes, both in England and in America, I believe. So great an inconvenience has the removal of these timber bridges been found in America, that, a short time ago, the American Government employed two of their most eminent engineers to inspect the substantial railway works in England, and report upon them. The result of that report was that, notwithstanding the extravagance, as the Americans term it, of the railway system of engineering in England,—that is durable works, of stone or brick,—with all its extravagance it was reported as far preferable to the mode adopted in America, of timber structures. It was found that with timber bridges, they not only built the line in the first instance, but they were called upon for the same cost again for the bridges, perhaps at an inconvenient time to find the money.
1261. What is the average time that timber bridges are presumed to last? I believe in twelve years some bridges on the Eastern Counties Railway decayed.
1262. Have you not heard one reason assigned for the adoption of timber viaducts, that they are so easily repaired without impeding the traffic? I do not know that that is the case. I think if you had a pile decayed in that viaduct (*pointing to the model*) it would stop the traffic on a single line.
1263. Do you not think that if it were properly stayed with braces, you could remove one or two piles? I think you would have some difficulty in removing one or two piles without stopping the traffic.
1264. One line of railway could still be used? It is only a single line.
1265. Is it not customary in England to preserve the timber by some curative process previous to using it? The favorite mode, and I believe the best one, is by what is called creosoting, that is, by a sort of spirit of cold tar, which by hydraulic pressure is forced into the pores of the timber. That is invariably used now for sleepers.
1266. Are the sleepers in this country kyanised? Creosoted. No, not at all.
1267. Do you not think it would tend to preserve them and prevent the ravages of the white ant? I do not think the white ant would touch timber that had been creosoted; but there is no establishment in this country where the process is carried on.
1268. *By an Honorable Member*: Do they not use tar at all here? Yes, but it is not of much value when put on with the brush.
1269. *By Mr. Windeyer*: It is not used for the sleepers at all, is it? No, not in sleepers. These bridges are, I believe, coal-tarred.
1270. *By Mr. Hoskins*: You say Mr. Rhodes offered to construct brick bridges and keep them up for twelve months? Yes, to uphold them.
1271. Have you inspected any of the bricks used by Mr. Rhodes? I inspected the other day some bricks made for the Menangle viaduct, and they are as durable as any bricks can be.
1272. I presume you are aware that in many instances at Home, brick viaducts and bridges have fallen in very soon after the railway has been opened? If improperly constructed, no doubt they would.
1273. Did you never hear of a large skew bridge on the South Western Railway which fell in? Yes.
1274. Has it not frequently occurred? Yes; if the contractor injudiciously strikes the centre too soon, perhaps in wet weather, when the rain has kept the mortar from setting, there is nothing to help it.
1275. Have not Royal Engineers, who have been deputed to report upon the stability of a railway, frequently reported that the railway was fit to be used, and accidents have occurred a few days after? I cannot recal instances.

1276. You do not recollect the case of the Great Northern, from London to York? I do not recollect the case distinctly. C. Fowler,
Esq.
1277. It is always customary with large contractors on railways in England to provide sub-contractors with abundance of rails; these Dobbin carts are scarcely ever used on railways at Home now? Not of late years. You cannot be trailing Dobbin carts through the mud in wet weather; the thing would be too expensive for anybody in these days. 27 April, 1860.
1278. Is it not the fact, that the largest number of civil engineers practising in England do not belong to the Royal Institution of Civil Engineers? I dare say the larger number do; but many of the most eminent men do belong to the Institute of Civil Engineers. I have been asked myself, by Mr. Bidder and other engineers, frequently to join them; but it did not appear to me an advantage to do so. 13 Mr. Bidder.
1279. Did you ever see any Royal Engineers in charge of large public works in England? Certainly not.
1280. Is it not the fact that the Government, when they have any large works to carry out, usually employ civil engineers? Yes; they employed the late Mr. Rendall, Mr. Walker, and many other civil engineers. The Royal Engineers have no practical knowledge of works of civil engineering; they are not engineers at all, in fact.
1281. I did not gather whether Mr. Flockton was a Member of the Society of Engineers? He was not.
1282. I suppose he was employed on large works in England—canals? Not much in canals. He was both an architect and engineer, and had large practice.
1283. *By Mr. Windeyer*: Do I understand you that you think the published correspondence is a garbled correspondence? I would scarcely like to make use of offensive terms; but I think it highly improper that part of the correspondence should be published.
1284. With annotations? With annotations. The remark I made was, that the last reply was not part of the correspondence, inasmuch as it had not been sent to Mr. Rhodes.
1285. And was an *ex parte* statement by the head of the Railway Department? An *ex parte* statement; and I say it forms no part of the correspondence at all.
1286. *By Mr. Hoskins*: You think that the curve upon that viaduct, or even the incline, would not be dangerous, or even unusual, providing the bridge was constructed securely? Certainly not. If you make every part of the bridge to resist four times the strain that is likely to come upon it, I do not think the curve, or the incline, would make much difference.

D.

TUESDAY, 1 MAY, 1860.

John Whitton, Esq., called in and examined:—

1287. *By Mr. Parkes*: You hold an office under Government? I do. J. Whitton,
Esq.
1288. Will you be kind enough to state what it is? Engineer-in-Chief for the construction of railways in New South Wales. 1 May, 1860.
1289. The office is limited to the construction of railways, I believe? It is.
1290. Will you be kind enough to explain to the Committee the nature of the office—that is, not only the extent of the duties, but the extent of the authority belonging to it; in what respect your authority as an engineer is modified by the authority of any other officer, or whether it is so modified at all? So far as I understand my position, it is to lay out and superintend the construction of all railways in New South Wales.
1291. Is your opinion or your wish in any matter pertaining to your department controlled in any way by that of any other officer? No; I am appointed as engineer to the Commissioners. The terms of my engagement were that I was to be appointed as Engineer-in-Chief for the construction of railways in New South Wales, under the Commissioners of Railways.
1292. There is only one Commissioner now? Only one now—originally there were three.
1293. What I want to elicit is this,—whether in your own department you have absolute authority, or whether you are subject to the control of the Commissioner for Internal Communication as he is called? Of course, to a certain extent, I am limited by the control of the Commissioner.
1294. With reference to the 54 miles of railway extension authorized by Parliament, did you originate the plans of this extension, North, South, and West? I did.
1295. Did the plans originate with you in the first instance or with the Commissioner—that is, in their first inception? From Campbelltown to Picton with me, on the Southern Line; from Parramatta to Penrith, on the Western Line; and from West Maitland to Singleton, on the Northern Line, with me.
1296. These, I believe, constitute the 54 miles I speak of? 53 something.
1297. These constitute the extension generally known as the 54 miles authorized by the Legislature a session or two ago? Yes.
1298. In all these cases the line and plans originated with you? Yes.
1299. Were they in any way modified by any one else? No.
1300. Would you be kind enough to explain to the Committee how your duties as Engineer-in-Chief are generally carried out? It is a matter difficult to explain. I simply know this, that I am directed by the Commissioner as to the course of the line selected—as, for instance, the

J. Whitton, Esq. the Southern, the Northern, and the Western Lines—and am directed by him to lay out the best line for those districts. I do that, and beyond that there is no control whatever exercised by the Commissioner over me. These matters are, of course, all submitted to the Commissioner, and through the Commissioner to the Government, but there is no control exercised over the construction of those railways, beyond requiring occasional reports.

1 May, 1860.

1301. Is your authority carried on by direction from any point of the works, or by continuous visiting of the works, by personal inspection? By continual visiting of the works.

1302. Different parts of the works? Yes; before any extension is proposed I go on the line and satisfy myself, by means of levels, whether that is the best course or not, and, having decided upon that, I recommend the Commissioner to carry out a certain line.

1303. When were these works first designed—these three lines of extension—when were they severally first designed—can you state about the date? The trial surveys have been going on ever since I have been in the Colony—in 1856 or the beginning of 1857. The line to Campbelltown was proclaimed and laid out before I came to the Colony.

1304. Do you know when it was proclaimed? I believe in 1855—the latter end of 1855.

1305. When did you arrive in the Colony? In December, 1856. By the bye, I believe it was proclaimed in 1856, the Campbelltown Line in the latter end of 1856.

1306. How were these various lines of railway extension contracted for,—will you be kind enough to state to the Committee how they were contracted for, and to whom they were let? I believe the Sydney and Parramatta railway was contracted for by Mr. Randle.

1307. We are speaking of these extensions? They were originally contracted for by Sir Morton Peto & Co.

1308. Not all? With the exception of eight miles from Parramatta to Blacktown Road, which was contracted for by Mr. Gibbons.¹

1309. The whole length of 54 miles is in the hands of Sir Morton Peto, with the exception of Mr. Gibbons's contract, which extends from Parramatta to Blacktown? Yes, eight miles.

1310. Were you present when the contracts were entertained? Yes.

1311. And have been a party to all the negotiations which now form what is called the contract? The negotiations were carried on by Mr. Rhodes direct with the Government, but I have generally known what has taken place, and only so far given my opinion when I have been consulted by the Government.

1312. Will you be kind enough to explain to the Committee what you as Engineer-in-Chief consider these contracts to be? The whole of the contracts were taken by Mr. Rhodes on the distinct understanding that they should be carried out on the same terms and under the same conditions as those taken by Mr. Gibbons on the Western Line. That was the final arrangement entered into by the Government in my presence.

1313. Is there any instrument of contract subsisting between the Government and Sir Morton Peto's agent? There are letters which form the contract.

1314. What is it that constitutes the instrument of the contract? The letters.

1315. The letter of the 21st April? The whole of the letters. The distinct understanding with Mr. Rhodes was that the whole contract was to be carried out at the same prices and upon the same conditions as those arranged with Mr. Gibbons for the Western Line.

1316. With regard to the conditions of this contract—what did you exactly understand by the accommodation that was to be afforded to the contractor in the use of rails and chairs? I never understood more than that the contractor was to have the use of all such rails and chairs as the Government could spare; if the Government had not rails in the Colony of course they could not lend them, and they were simply bound to give such rails and chairs as they could spare, limiting that quantity to the quantity actually necessary for carrying out his contract.

1317. That is, under any circumstances that you were only to supply such a quantity as you could spare, and at the same time to give no more than you considered necessary for carrying on the work? In fact they were only compelled to give what they could spare, but at the same time the Government had no objection to give such ~~as they could spare~~ to enable the contractor to carry on his work in accordance with the conditions.

1318. The contractor is very much dissatisfied at not having a sufficient quantity of rails and chairs for his purposes? I believe he is; but I am prepared to say that he has had more than necessary to complete the whole of the works, if they had been properly used.

1319. But he has applied for greater accommodation to you and to the Government? He has; but at the same time he has applied to me when he has had from 35,000 to 18,000 feet, or from three miles to two miles of rails not in use. On the 21st April—the present month—he had 18,022 feet of rails not in use lent to him by the Government for the construction of the railway, although he had complained from the 31st January that he had not rails to go on with. Perhaps I had better read the paper I have in my hand. (*The Witness read the same as follows* :)—On the 14th January he had for use, 31,006 feet of rails not in use; January 28, 26,417 feet of rails do.; February 11, 22,437 feet of rails do.; February 25, 24,613 feet of rails do.; March 10, 22,817 feet of rails do.; March 24, 21,431 feet of rails do.; April 7, 20,594 feet of rails do.; April 21, 18,022 feet of rails do., although writing every day for more rails.

1320. Does the contractor pay anything for the use of the rails? Yes.

1321. Ten per cent., I believe, according to the letters? Yes.

1322. How then do you account for the contractor applying for rails for the use of which he has to pay ten per cent., when he has this large quantity of rails more than he wants? I confess I cannot understand; I can only say if I had been contractor I should have made seven miles quite sufficient for the whole of the work.

1323. By what means do you ascertain the quantity of rails he has not in use? By means of fortnightly returns of the inspectors who measure the whole of the rails not in use.

1324.

¹ And seven miles from West Maitland to Lochinvar which has been made by the Government.

* Rails as would.

1324. Is that part of the established machinery of inspection—what I want to know is, whether it was part of the arrangement you had made, or whether it was special? With any other contractor I would not have insisted upon it, but with Mr. Rhodes I found it absolutely necessary to do so. J. Whitton,
Esq.
1 May, 1860.
1325. Do the figures you have read to the Committee relate to the Southern Line? To both; they are summaries of the two, the Western and Southern.
1326. I presume the Northern is left out? Entirely.
1327. Then upon Mr. Rhodes' contract you gave special instructions for the quantity of rails to be ascertained which he had not in use? When I found applications come in from Mr. Rhodes almost monthly for rails, and knew that he had a large surplus, I sent to the inspector for a return of the rails not in use, and I have now fortnightly returns of all the rails, dobbin carts, wheel-barrow, waggons, horses, &c.
1328. Will you have any objection to state to the Committee the substance of those returns? I have no objection to hand them in. (*The Witness handed in the same. Vide Appendix No. 1.*)
1329. What is the practice, as far as your experience extends, upon the railways of Europe, with reference to the accommodation of contractors with rails and chairs? It is a matter of arrangement. If you let a contractor certain works, when you find the permanent rails for temporary purposes, of course he does not charge the same price as he would do if he provided rails himself; but for a contractor to have the use of permanent rails without the sanction of the engineer, is a thing unheard of; still it is always understood that the contractor shall have the use of such rails and chairs as the company can give him.
1330. I should infer that it would be unheard of that a contractor should have the use of rails and chairs without the permission of the engineer, but is it the practice of the engineer to let him have whatever he applies for? Certainly not, unless he thinks it necessary.
1331. When you say it is matter of arrangement can you say, of your own knowledge, that in some cases the contractor finds his own rails? Yes.
1332. In some works the contractor finds his own rails? Decidedly.
1333. Will you state any? On the Campbelltown Line.
1334. I am speaking of England? In England it is usual for the contractor to arrange with the companies that he shall have the use, under the control of the engineer, of a certain length of permanent rail for his temporary use; but of course that alters the condition of price. If he has to find the whole of the temporary rails his price is more, and therefore the company generally arranges to supply the rails to lessen the cost of the line.
1335. You were in the Colony, I believe, when the question of opening negotiations with Sir Samuel Peto was mooted here? Yes, I was.
1336. Do you know anything of a schedule of prices being sent to London? Yes. There were three schedules sent to London, one upon which I had prepared the estimate for these extensions, and the other two were schedules of the prices upon which Mr. Randle engaged to perform the contracts 3 and 4 of the Campbelltown Line.
1337. With what object were these schedules sent to London—can you state to the Committee? Simply to lay the matter before Sir Morton Peto, in order that he might see whether it was worth his while to send out an agent to negotiate for the construction of the railways in New South Wales.
1338. Was it understood in your department that the schedule of prices sent was sent as the prices offered for Peto and Company's acceptance? No, it was not.
1339. Did you see all the letters written at the time to Sir Samuel Peto, and which accompanied those schedules? Yes.
1340. Was it sufficiently explained that this schedule was not sent as the prices offered for his acceptance? I think so. It was stated when the letters were written to him that these were the prices which had been paid in the Colony, and Sir Morton Peto was invited to send out an agent to negotiate for the construction of railways in New South Wales.
1341. As you understood the matter the schedule was merely sent as a kind of indefinite guide? Certainly; to shew the prices upon which the estimate of the proposed extension had been founded, and upon which works had been executed in the Colony.
1342. Did any letter contain language to the effect that Sir Morton Peto was not to depend upon these prices in their integrity, as then transmitted, as there might be some variation from them? I do not know that it did, but I think from the fact of Sir Samuel Peto being asked to send out an agent to negotiate for the construction of railways, it must be inferred that no distinct offer was made to him.
1343. When did Peto and Company's agent arrive in the Colony? I believe in the latter end of March, or in the beginning of April of last year.
1344. That is, Mr. Rhodes? Yes.
1345. Did any one come out with him, any other person recognised as the agent of Messrs. Peto? I do not know whether he was recognised as the agent for Peto, but Mr. Gabrielli came with him.
1346. Had you an interview with Mr. Rhodes as soon as he arrived? Yes.
1347. Negotiations were opened as to his contracting for these works immediately? Yes.
1348. What was the final understanding come to between you and Mr. Rhodes as the basis of your agreement? The agreement was made between Mr. Rhodes and the Government, but the final understanding was the schedule, which I dare say you will find in the papers—the schedule marked A in the enclosure from Captain Martindale, 15th April, 1859, in page 5. But before this matter was settled, it was distinctly arranged with Mr. Rhodes that the whole of this contract would be carried out at the same prices and on the same conditions as ³ this arranged with Mr. Gibbons in the No. 1 contract for the Western Line; and, on reference to the two schedules, you will find the whole of the prices the same as those of Mr. Gibbons. ³ Those.

- J. Whitton, Esq.
 1 May, 1860.
1349. Will you find that in any of the correspondence the prices and conditions of the contract were to be the same as those in Mr. Gibbons's contract? No, I do not think it will be found in the correspondence, but it was distinctly agreed to in the presence of Mr. Cowper, Mr. Robertson, Captain Martindale, Mr. Rhodes, and myself.
1350. Did Mr. Rhodes in any way recognise the terms of this contract? He recognised the schedule of prices shewn here in page 5. These works were to be carried out in strict accordance with the terms of the specification, and to the entire satisfaction of the Engineer-in-Chief.
1351. How long was this after Mr. Rhodes' arrival? The letter was written on the 15th April, 1859, and the date of Mr. Rhodes's first schedule is 2nd April, 1859.
1352. What arrangement was made between you and Mr. Rhodes at this time as to the delivery of plans and specifications? The arrangements made with him by the Government were precisely the same as with all other parties.
1353. Have you any objection to state the nature of those arrangements? The nature was that the plans for a certain length of the work were to be furnished by a certain time, and that the remainder were to be furnished in another time, stated in the correspondence; but the whole of the plans to enable Mr. Rhodes to go on with his works were furnished to him within the time stated in the original agreement.
1354. The whole of the plans to enable him to go on with the works? Yes.
1355. But not the whole of the plans of the works? It was utterly impossible, and on all railways it would be found impossible to complete the whole of the plans for the whole of the works, and to place them in the hands of the contractors at the commencement of a contract. The only things he requires to commence the works are the working plans and sections, and when he has these he has sufficient to proceed with, and these have been furnished.
1356. Was there an arrangement for all the plans and specifications of the Southern Line to be delivered within a certain time—within three months? I believe the arrangement was that plans of the fifteen miles railway were to be delivered by the 21st June, and the remainder of the plans—working plans and sections—were to be delivered to him in three months, I think, after the first arrangement.
1357. Mr. Rhodes has complained at the bar of this House that the plan of what he describes as the most important work—the Menangle viaduct—has not been delivered to him to the present time,—and he alleges that it is only consistent with the practice of carrying out all works of this description that the plans of the most important works should be delivered earliest? The plan of the Menangle viaduct was not given to Mr. Rhodes for this reason. On his arrival I had prepared a plan for a bridge with stone or brick piers, and wrought iron girders. Mr. Rhodes refused to give me the price of the girders, and I would not let him have the plan until he had given me the price. At a meeting with the Government, I believe, in October, he said he would charge 6½d. a pound for the wrought iron girders. As, therefore, the work would cost £60 a ton, work which in England could be bought for £18 a ton, I recommended the Government to change the design of the bridge, and to make it a timber bridge. The drawings were immediately made for a timber bridge and were ready for copies to be made for Mr. Rhodes, when the floods of February came, which caused an alteration in the design. The floods were found to have risen five feet higher than they had ever been known to rise before, and, therefore, I raised the whole line seven feet, which necessitated fresh drawings of the whole Menangle Bridge. These drawings are now nearly finished, and copies will be forwarded to Mr. Rhodes without delay. With reference to what has been stated by Mr. Rhodes, I may say that he has now got possession of the plans of twenty-five bridges, two only of which are now finished, two nearly finished, and three in hand. So that Mr. Rhodes has drawings—many of which have been in his possession ten months—of many important bridges which are stopping his works, none of which are touched, and for which even the timber has not been provided.
1358. What bridges are these? I have a list of many.
1359. You described one as an important one? The bridge next to this (*Referring to the model, 23 miles 65 chains*), the Menangle, is an important one; and one of the largest cuttings upon the line has been stopped since October last, because Mr. Rhodes has not built the bridge at 24 miles 25 chains there, over which the earth must go.
1360. That is, I think, on the other side Glenlee? Yes; there are two, one on this side and one on the other. Had Mr. Rhodes completed that bridge the whole of ^{the cuttings} might have been completed six months ago. Mr. Rhodes has now drawings for 18 bridges most of which he has had for the last eight months, and not one of which has been touched; but because he has not got the drawings of the bridge over the Menangle River of course he is continually asking for them.
1361. Was there any arrangement between you and the contractor, or between the Government and the contractor, that he was to have twenty-three months to complete his contract from the date of the delivery of the last plan? No, not with me certainly. The arrangement was made by Mr. Rhodes with the Government that he should complete the whole of the works, without any stipulation of the kind, within ^{twenty-three months} from the taking of the contract.
1362. You are aware that Mr. Rhodes has stated at the bar of this House that he is to have twenty-three months from the delivery of the last plan? I can only say that I have not seen such a condition.
1363. As far as your knowledge goes—and you have been conversant with these negotiations all along, you say—there has been no such condition to the contract as that? I say I do not know of such a condition, and that it would be a most injudicious condition to make.
1364. Have you at any time complained of the contractor not going on with the works near Glenlee—the cutting on the other side of Glenlee House? I have written reports to the Commissioner.

* This cutting.

† Twenty-six months.—J. W.

Commissioner. The works have been conducted most unsatisfactorily from beginning to end, and Mr. Rhodes, instead of making progress with the works, has been incessantly complaining that he could not get what he required, when he has had every facility that any contractor could possibly have, and every concession that could reasonably be expected has been made. J. Whitton,
Esq.
1 May, 1860.

1365. These are very general terms, perhaps you will be more specific. With regard to this cutting—when you complained of his not carrying on this part of the work as you, being Engineer-in-Chief, thought he ought to do, what did he say in reply? The fact is, I have not seen Mr. Rhodes to have any conversation with him for the last five or six months.

1366. Have you received, neither by letter nor in any other way, any reason for his not carrying on the work you considered of so much importance? I believe Mr. Rhodes' reason for not carrying on the timber bridges was that he said I would not give him the length of the piles for the bridges. I believe that was his only reason or excuse for not proceeding with them.

1367. Was it part of your duty to give him the length of the piles? Certainly not.

1368. That is his business you consider? Supposing I had given Mr. Rhodes the length of the piles, it may not probably be known to the Committee, but I know that no two piles are driven down to the same depth in one bridge, and the only way of ascertaining how far a pile will go is by pitching and driving one for each bridge; but had I shewn Mr. Rhodes the depth to which he should drive them he would have driven them to that depth and then stopped, and would have refused to drive them further without an extra price.

1369. You say Mr. Rhodes has in his possession plans for twenty-five bridges? I do.

1370. Are these bridges of wood? Yes.

1371. Are all the bridges along the Southern line of railway which are in the hands of Mr. Rhodes of wood? Yes.

1372. In forming the design for these bridges, did you follow any plan of a similar construction with which you are acquainted? No.

1373. Have any objections been raised to the character of the bridges by the contractor, or by any one else? The only objection raised by Mr. Rhodes, when I heard him give his evidence was, that he believed the bridges were too weak, but he was unable to state why. The evidence of the other witness was, that he believed the bridge was strong enough, but that he believed some time or other it would not be strong enough; but I think that is no reason against the bridges. I say, positively, that they are strong enough, and that they will carry eight times the weight that will ever come upon them.

1374. Are there not on the Southern Line culverts of brick projected in situations precisely similar to those where the wooden bridges are? No.

1375. In no part of the Southern Line? No.

1376. There are only two wooden bridges on the other side of the Menangle? Yes.

1377. There are many culverts on the other side of the Menangle? Yes.

1378. Are these brick culverts on the other side of the Menangle in situations so different from those where there are wooden bridges here, that there is a sufficient reason for having timber bridges on the one side and brick culverts on the other? Yes; on the Menangle side we head nearly the whole of the creeks up to Picton, and the fall of the creeks where we do cross is very rapid; the height of the embankment is so great, that to have erected wooden bridges over these creeks would have entailed an enormous cost, such a cost as I did not think it worth while the Government should risk.

1379. I believe you have been in the House and have heard the whole of the evidence given at the Bar? Yes.

1380. On Friday, it was stated here, that at a place called Harris' Creek, where there is a ten-feet culvert, a bridge, with brick or stone piers, would have been much preferable? I heard that statement.

1381. The embankment there, I think, is stated to be about 76 feet high, and the culvert itself will be 80 or 90 feet long, and the span of the creek is something over 100 feet—would you be kind enough to state to the Committee why a brick culvert is preferable there to a viaduct of brick or wood? I heard the evidence the other evening which stated that a viaduct could have been built for £3,000, now I am quite confident it could not be built there under £12,000; in addition to which, the whole of the earthwork which had been provided, must have been thrown away. A ten-feet culvert is quite sufficient for the purpose, for there is a rapid fall from the top of the creek to the Nepean, and the embankment being 76 feet high is so wide at the base that no flood can ever damage it. By the adoption of this culvert we have saved £9,000.

1382. The collecting-ground from which the water is carried to this creek is very large, I believe? It is very limited, and during the recent floods there has never been more than about 11 feet of water in this creek.

1383. The flood level has been stated to be 18 feet? Supposing it to be 20 feet it would never injure the bank there; a 10-feet culvert will be sufficient to carry off any water that may come there.

1384. There is a bridge, if I recollect rightly, on this side Spaniard's Hill—I think, but am not quite sure—the next bridge to Harris' Creek, where a brick culvert was marked upon the drawings originally that was changed to a wooden bridge, was it not? Yes, it was changed after a conference with Mr. Hughes—

1385. One moment, if you please—it was originally marked as a 5-feet culvert upon the drawing, and I am told that it was subsequently altered to a wooden viaduct of great height—will you have the kindness to state upon what calculations it was first designed to be a brick culvert of 5 feet, and then upon what calculations, or upon what experience it was changed to a wooden viaduct, I believe, of over 20 feet high? Originally it was intended to be a 5-feet

J. Whitton, Esq.
 1 May, 1860.

feet culvert, which was quite sufficient for the drainage, but Mr. Hughes, the owner of the property—the bridge, I may remark, is over an occupation road for the use of cattle going to the water—Mr. Hughes represented that it would be a serious inconvenience to have to drive his cattle over a level crossing, which he would have had to do, and we should have had to divert the road about 200 yards. He said that he would make a considerable reduction in his charge for the land, and we considered it desirable to alter the plan as at present. With regard to the cutting spoken of by Mr. Rhodes, rails have been laid down there which for the last five or six months ———

1386. That is, the rails have been laid down and not used for how long? It is five months since they were laid down, and they have since been removed by Mr. Rhodes.

1387. Is it not usual for persons carrying on extensive railway contracts to concentrate all their labor for a time upon certain parts, and to leave others? That would have been the course I should have presumed Mr. Rhodes would have pursued; but he has pursued an opposite course—instead of concentrating his labor he has spread it over the whole line from Campbelltown to Picton, consequently he requires a greater length of rails than any other contractor would have done.

1388. For example, in this deep cutting which you describe as one of the most important cuttings on the line, is it not nearly cut through? The whole cutting is 32,000 yards, and Mr. Rhodes has taken about 18,000 yards. He laid his road, and had everything arranged for completing the whole, but neglected to build a bridge at 24 m. 25 c. over which a portion of the excavation must go, and the consequence was that in October last he suspended the whole of the cutting. He has since taken up the temporary way, and has removed it to some other place.

1389. The whole of the temporary way is not taken up, for part of it was there when I was there yesterday week? There might be three or four rails there, but the majority of the rails were entirely taken up and removed.

1390. Speaking of Harris' Creek, where there is to be a ten-feet brick culvert, was it not intended in the first instance to have a five-feet culvert? Yes; but during the heavy floods of February last I had a report from the inspector that he thought a five-feet culvert would hardly take off the water, and he therefore recommended a ten-feet; but if it had been a five-feet culvert the pressure of the water would not have injured the embankment, which will be 200 feet at the base.

1391. Will it be as much as 200 feet? It is 76 feet high, at a slope of one and a half to one.

1392. When the last floods occurred did you take any means to ascertain the flood level at different parts of the line? Yes, I did, throughout the whole line.

1393. Did you go yourself? No.

1394. Who went—was he an engineer? Mr. Mason.

1395. Does he occupy the position next to yourself? Yes.

1396. Did he visit all the places which had suffered by the floods? Yes.

1397. Did he carefully ascertain the flood level, and in each case report to you? Yes.

1398. Did he report in writing? No.

* On. 1399. There is no report in the office which shews the result of that inspection? No; but I can shew the section in which I made the alteration in the culverts upon his recommendation.

1400. Did you take any similar steps after the floods of last week? I instructed the inspector to go through, but I have not yet had his report.

1401. You have not been yet yourself? I have been as far as Campbelltown, but I have not yet had an opportunity of going myself. I should have gone if I had not been required to be here to-night.

1402. I believe part of a viaduct with brick pillars, between Liverpool and Campbelltown, is seriously damaged? Yes.

* 100. 1403. Perhaps you will describe the damage sustained? One viaduct the brick piers are entirely swept away, and the superstructure has been carried 200 yards into a field, taking the whole of the permanent viaduct.

1404. When you say the superstructure you mean the piers? The piers are carried away and the superstructure. There is nothing left except the brickwork at the bottom.

1405. That is the principal viaduct, which is a structure of wood on brick walls? The whole of the viaducts between Liverpool and Campbelltown are timber structures on brick piers.

1406. There is one larger than the others is there not? The largest is the one at Liverpool.

1407. Has that sustained any damage? No.

1408. That is out of the reach of the floods? Yes.

1409. Will you describe the damage which the other viaducts on this extension have sustained—I believe this was carried out under your direction? The works were carried out under my direction, but the line was not laid out by me. The line was proclaimed before I came into the Colony, and when I came I was told I could not make any deviation from it.

1410. I should understand that you are not responsible for the design in this line, but for the manner in which the works are executed? Yes.

1411. Will you be good enough to state the effects of the late floods? Nearly the whole of the viaducts along the line with brick piers and timber tops have been seriously damaged; one has been entirely swept away; of another three piers have been taken away, and the superstructure has been left standing, and several other bridges have been seriously damaged, but the brick piers shew that the work is well done, for they lie in a solid mass in the bed of the creek.

1412. Do you know what foundation the piers were upon? They were all upon good hard foundations, as must be apparent, for they have withstood floods for two years, without any appearance of injury to them; but the present flood has been higher than any that has been known before, and has been carried entirely over the rails and bridges. The bridge to which

I have referred has been carried away not so much by any pressure against the piers as by the pressure of the trees and brushwood which had accumulated against the superstructure, which has taken away not only the superstructure but the embankment and the rails.

J. Wliffiton,
Esq.

1 May, 1860.

1414. You carefully inspected all the places where this damage has occurred? Yes.

1415. And you are satisfied the work was well and faithfully executed? I am satisfied the work was well done; the piers will shew they were well done. A great deal has been said about the bridges on the Campbelltown Line, and as this is the first opportunity I have had of making an explanation, I may state that, after the line had been at work three months, I found that the mortar which had been used was bad, and I then had a number of piers taken down and re-built with cement, at the cost of the contractor. That this latter work was good can be seen from the piers, which have fallen bodily into the stream.

1416. I should gather from what you have said that you are of opinion the brick piers will not answer? I am quite sure they will not; they are the worst things you can use in this Colony. I have seen no mortar in New South Wales fitted for railway works.

1417. Has this flood satisfied you that timber piers are the safest and best? I was quite satisfied before, and the result of the flood has in no way altered my opinion.

1418. Your judgment is confirmed? Certainly; but this has not led me to the conclusion. I was satisfied before that brick in mortar was not fitted for railway purposes.

1419. Coming back to the timber bridges near Glenlee, what is the character of the country there, and what is the flood of water which requires to be carried away there? I have here a statement made out at the time of the flood in February last, shewing the area of water in the different creeks between Campbelltown and Menangle. (*The witness read the same. Vide Appendix 2.*)

1420. What I wish to know with a view to this particular situation is, the character of the country—whether the viaducts are to afford passage for the cattle traffic, or to carry off the water in the creek? Many of the bridges between Menangle —

1421. I am now alluding more particularly to the two large viaducts by Glenlee? Yes, the first one of which the model is before the House (23 m. 65 c.) is to cross the public road from Camden. Mr. Rhodes, I believe, proposed to shut up this road entirely. I do not know whether he was aware that there was a road there, but he proposed to have an eight-feet culvert there, which would have shut up the road. The arrangement made with Mr. Howe was, that in addition to the bridge required for the Camden Road, openings should be left for his cattle, and finding there was not sufficient earthwork to complete the whole of the embankment without going into side cutting, I thought it advisable to lengthen the viaduct.

1422. With regard to this wooden viaduct, as far as I understand the objections raised to it, they amount to this—no one says that it will give way, even if submitted to the test of two locomotives going over; but it is said that on account of its being upon piles so high—some of them I believe thirty-one feet and a-half? Thirty-one feet and a half is the highest level to the rails, not of the piles. This is the highest (*pointing to the model*)

1423. They are over thirty feet, I presume? No, the average is twenty-eight feet.

1424. Twenty-eight feet I believe, from the statement of some honorable members, is the height of this chamber? I dare say it is.

1425. The objection, as I understand it, is this—that a bridge upon piles of that height only resting in the ground a few feet, with no intermediate stays or braces of any kind, standing apart all of them twenty feet, with a roadway upon the top only eleven feet and a half wide and that fastened into the piles by only an iron spike, in the course of time by the pressure of the traffic and the action of the atmosphere will become crazy as it were, and lead to an accident; but their objections could scarcely be met by any test immediately upon the construction, as I understand them, because time and these agencies are necessary to bring about what they predict will ensue? I do not know a more safe prediction for any one to make than that a viaduct will tumble down some time or other; but for a person to assume that a viaduct will tumble without giving a reason is not to be listened to for a moment. Now this viaduct is strong enough, and will bear eight times the weight that will ever come upon it. With regard to the thirty feet viaduct the bridge is braced with a double set of double walings, and a double set of double braces; it is framed together as strongly as it can be, and there is nothing in the bridge which has the element of weakness in it. There are bridges of precisely the same construction on the Northern Railway, and the greatest deflection we have had in one of the entire openings is one-eighth of an inch; and I have seen bridges tested in England where there have been deflections of four inches.

1426. I think you hardly understand the character or the extent of the prediction, it is not said that it will tumble some time or other, but some witnesses have said that it may lead to an accident in three years? How do they arrive at that conclusion; there is no evidence to arrive at it; there is no sound reasoning to support it. With reference to the jagged spike of an inch and a quarter passing into the pile, there is no action upon that spike, for the inch and a quarter spike upon this model (*referring to the Model exhibited*), is simply a spike passing through the corbel into the head stock; but the corbel is in no way depending upon the spike. The spike is quite sufficient to keep it down, and there is no tendency in the bridge to come up. If there be a tendency at all, it is for the bridge to go down. (*The Witness here referred to the Model, and explained its construction.*) I will take the top beam off that bridge, and run an engine over it without the top beam. There can be no oscillation upon that bridge. The tendency to oscillation is prevented by the curve. If the bridge had been on a straight line, there would have been far more oscillation than on a curve.

1427. You state that the persons who object to your design of this bridge, have given no reasons. I think they have given some reasons; they state there is the absence of any stays such as they have described at the Bar as existing in wooden bridges in England? I know

J. Whitton,
Esq.
1 May, 1860.

perfectly well what you allude to. The only use of struts would be if the lower beam were too weak to carry the traffic, then struts might be put in to support the lower beam; but where you have two beams, as in this viaduct, you do not need struts. If you take out the top beam, and assume that the lower beam is not sufficient to support the traffic, then struts might be necessary, but when you use struts you throw an additional pressure upon the piles, which is not thrown upon them by this construction. If you have a sufficient strength of superstructure without the struts, it makes a better bridge. The strutting of bridges is simply a temporary arrangement, not often resorted to either in England or anywhere else. Where there is a top beam, struts are entirely unnecessary.

1428. Have you taken steps to satisfy yourself of the durability of the timber of which these bridges are constructed? I have a piece, in my office, of ironbark timber taken out of a culvert in Parramatta which has been, as I am informed, in that culvert forty years, and the timber is as sound now as it was at first, excepting the decay of the sap.

1429. What is your calculation of the durability of the bridges you propose to erect? I have endeavored to obtain information from persons in the Colony who have had an opportunity of observing the durability of ironbark; and I believe the timber of the bridge at Camden when it was taken down, after it had been in use twenty-seven or twenty-eight years, was perfectly sound, and that the tenons and mortices were as sound as when they were put down.

1430. How long do you calculate, from such data as you have before you, that these bridges will last? I have not the shadow of a doubt that if these bridges were properly attended to, by being properly tarred, they would last fifty years—I have no reason to doubt it.

1431. You heard it stated at the Bar that they would not, under any circumstances, last twenty years? Yes; and at the same time I knew that the person who said so had no knowledge of ironbark, and was simply giving his experience of American pine and Baltic timber, which will not last twenty years; but I look upon ironbark as superior to any timber I have ever seen for a railway.

1432. On the Western Line I believe there is a viaduct finished over South Creek? No, I believe not; I should be very glad to see some of the bridges finished on the Western Line, for they have been in hand a long while.

1433. Is the bridge finished over the South Creek? I believe not.

1434. I am told it is; in that case I am told that the piles do not go into the mud more than three feet before they strike upon the rock in the creek? That statement I heard from Mr. Rhodes the other night, and the inspector on the line having seen the report in the paper, came down to Sydney on purpose to tell me that the statement was incorrect—that it was not so.

1435. Did the inspector tell you how far they went in? The inspector brought a paper with him to shew the depths they went, and instead of being driven through mud the piles spoken of, which were simply battering piles, they went down—

1436. Were they not driven by Mr. Rhodes? I believe they were.

1437. Does the inspector who denies the statement made by Mr. Rhodes explain how they were driven and to what depth? I have not the paper with me.

1438. Will you state what the depths were? I think the best course would be to examine him at the Bar; I see no objection to that.

1439. Perhaps the House might see some objection; do you not recollect the substance of his statement? The majority of the piles were driven down from seven to ten feet, but there were three or four that were driven down only four feet nine inches, and they were driven through very hard ground, before they arrived at the rock. They were driven down to the rock, and then the driving ceased.

1440. From your evidence, I should gather that the wooden bridges you have caused to be erected on these railway extensions are the most suited to the climate, and, taking into consideration the occasional severe floods, the best that could be constructed? I have not the shadow of a doubt about it. The only difficulty—and I must admit with reference to this viaduct at Menangle that there is a difficulty—is to know the height the flood will rise, for I am sure whatever bridges are put over the Menangle, whether brick, stone, iron, or timber, if the flood rises to the rail level they will be destroyed. That is the only difficulty with the Menangle. I believe the late flood was higher than that of February, and that the flood of February was higher than any known before, and if the next flood is to be higher than that I am quite sure that any bridge that may be put up, whether of brick, stone, iron, or timber, will be destroyed.

1441. I think you have stated that in all these cases you took the precaution to measure the natural collecting grounds along the line, in order to estimate the amount of flood water to be carried off? No I did not. I think the measuring of the natural collecting ground is the most erroneous means of ascertaining the amount of flood water. The only means by which you can ascertain the rain fall is by taking the flood levels, and then as much water-way should be given as possible.

1442. These bridges have not been constructed from any calculation of that kind? The bridges on the Southern Line, between Menangle and Campbelltown, have been constructed to provide for the greatest amount of water-way which could be given for the creeks,—that is to say, the amount of water-way has been given equal to the size of the creeks.

1443. Beyond Harris' Creek, will you state what is the size of the bridges or culverts between there and Picton? I have not the list, but I should say from five to ten feet diameter between Harris' Creek and Picton. The reason that culverts have been adopted is that the creeks have been headed, so that the collecting grounds are very small, and the height of the embankments is very great, hence there is greater power in consequence of the breadth of the base to resist the water. If the embankments had been as low there as they are between

Menangle

- Menangle and Glenlec I should have felt it to be my duty to have put in bridges instead of culverts there. J. Whitton,
Esq.
1444. Are all the situations where culverts are to be put in beyond the Menangle similar to Harris' Creek in the character and formation of the country? Generally they are. The only collecting area is from the side of Razorback; but, as there is a great fall between Razorback and the Nepean River and Stouequarry Creek, where this water flows, it was not necessary for bridges to be built. May, 1860.
1445. Is the model you have there the model of any particular culvert? (*Referring to a model produced at the bar.*) It is a model of the culvert proposed by Mr. Rhodes to be substituted between Menangle and Campbelltown in some places where the area of water is above 9,000 feet.
1446. There has been a dispute between the contractor and the Government as to the mode of payment for the cuttings, as to what is earth and what is rock, I think? Yes, there has.
1447. Mr. Rhodes claims a considerable portion of the stuff as rock, which you, I believe, have decided to be earth? Yes.
1448. What is the difference in the pay? 2s. 7½d. and 4s. 9d., but it should be distinctly understood by the Committee that, under the specification by which Mr. Rhodes took his contract, it is distinctly stated that shale shall only be paid as earthwork, and that only that shall be paid for as rock which is generally known as rock.
1449. You saw the lump of stuff which Mr. Rhodes had in his hand when he was at the Bar? I saw several pieces, one was brought to me that was shale undoubtedly.
1450. Have you recently been over the works? I was over the works on, I think, the 14th of last month.
1451. Have you looked at the cuttings lately, the deep cuttings? Yes, I have.
1452. At what cuttings? At the cuttings at Douglas Park, where Mr. Rhodes claimed to be paid for shale as rock. From Menangle
to.
1453. The shale there is one solid mass at the bottom of the road? Yes, solid shale.
1454. Which they have had to excavate as rock by blasting? Yes, shale has always to be blasted. Generally—
J. W.
1455. Is that included in any special contract to be paid for as earthwork? Mr. Rhodes' contract is this, that earthwork is to include sand, gravel, clay, marl, shale, &c., and no extra price will be paid under the head of earthwork, excepting for what is generally known as rock, and as this happens to be shale, I should not be justified for certifying for it as rock.
1456. Without these special conditions, will you state your professional opinion as to what determines the distinction between rock and earthwork in England—what I wish to arrive at is, whether there is any mode by which it is understood between contractors and engineers how to distinguish between rock and earthwork? There is no understanding whatever. If Mr. Rhodes executes a contract that—
1457. Without regard to these special conditions, I wish to know what is the general understanding as to what is rock? The general understanding is a matter of agreement. Contracts in England are generally let upon what are called guaranteed contracts. A guaranteed contract is simply this, that the contractor agrees with a company to complete the whole of their work, in accordance with a certain specification for a certain amount of money—whether rock or shale, or whatever other material there may be, is paid for by a schedule of prices agreed upon—a certain amount is paid during the progress of the work, and at the end of the contract the total balance is paid in a lump.
1458. Were you ever acting as engineer of any railway in that way you are now doing? I have been engaged in many lines upon which Sir Samuel Peto was contractor, and I have no hesitation in saying, that if the matters now in dispute were submitted to him he would assent to the course I have taken. I never had any dispute with Sir Morton Peto, and I have settled many—
1459. That is not exactly an answer to my question—my question was whether in England you had ever occupied the same position as you now do—in fact, whether you were ever Engineer-in-Chief of a company answerable for the agreement with the contractor? I was the resident engineer and had the entire control over the whole of the Oxford and Worcester Line from 1852 to 1856, and in that capacity I had to settle the whole of the contracts between the company and Peto and Company, and Mr. Tredwell, amounting to three-quarters of a million of money. I settled the whole of the contracts; and although there were disputes they were all ultimately settled satisfactorily.
1460. I wish to ask you what is your experience of the practice in England with reference to the decision of what is rock and what is not? My experience is that it is entirely matter of agreement, and can have nothing whatever to do with what is done in other countries. I say the agreement with Mr. Rhodes is this, that he shall be paid for shale as ordinary earthwork, and not as rock.
1461. Have you, in any instance, allowed Mr. Rhodes to reckon these excavations of shale as rock? No.
1462. In no instance? No, not to my knowledge.
1463. How often do you go over the works? I have, of course, very important duties to attend to in the office, and I simply go over the works when I think it necessary I should do so to examine the works. I never waste my time in going over the works to look at them, simply because I have duties far more important to attend to.
1464. Have you any objection to state to the Committee how many times you have passed over the entire of the Western, Southern, and Northern Lines? Not the slightest. I do not know exactly, but I have been over the Southern Line some five or six times, over the Western Line probably about the same number.
1465. The Northern Line? Perhaps I have been over it three times; but if I had been over

J. Whitton, Esq.
 1 May, 1860.

over these lines once a week I could have seen nothing that required my attention. I always left a person in charge who could see what was going on and report to me. The works have not been neglected in any way; every information required by the contractor has been on all occasions furnished.

1466. Have you any engineer resident upon the works whose duty it is to be generally on the road? It depends upon the name you give him. I have a person on the Southern Line called an inspector, he is not dignified with the name of resident engineer, but he is thoroughly efficient in all the duties he has to perform. He reports to me the manner in which the works are going on; he is always on the works, and when any thing is required by the contractor, if the information cannot be furnished by him it is supplied by me.

1467. There is a dispute between the contractor and the Government, or rather the railway authorities, as to ballasting—would you be kind enough to explain the position in which that dispute stands? Shortly after Mr. Rhodes' arrival he agreed with me on a specification that I wrote, that he would perform the whole of the ballasting on the extensions, North, West, and South, at 17s. 6d. per yard, he finding the stone ballast; the upper part to be boxed up with sand. Shortly after Mr. Rhodes had been at work he wrote to me to ask me if I had any objection to his using the stone found in the work for ballasting. I said I had no objection, only that such stone taken for that purpose must be stacked to be measured, so that the quantity used by him might be deducted from the total quantity in the cuttings. Mr. Rhodes objected to that, and said, that the Government in addition to giving him the stone found in the cutting should pay him 4s. 9d. a yard for the excavation of that stone used for private purposes by himself. Now this appeared to me something more than I could consent to, and I declined to do it, for it simply amounted to this:—that we should be paying Mr. Rhodes, in addition to 17s. 6d. a yard for ballasting, the price of quarrying the stone. This would make the cost of his permanent work more than a pound a yard. I, therefore, declined to give it him.

1468. In the correspondence before you at page 5, there is a letter of Mr. Rhodes with a sort of comment upon it from yourself and Captain Martindale, in which this matter is alluded to—will you be kind enough to read the paragraph 5 from the top, and your note also? “That if, upon the line of road I took out any rock that would be made available for ballasting, I might be at liberty, instead of throwing it into embankment, to use it for that purpose, undertaking to put a similar quantity from side cuttings at Messrs. Peto's own expense” So that the Government would be placed exactly in the same position as if the rock had been put into the embankment, and there buried; this, because it gave me a slight benefit (though no loss to the Government) was refused, except on terms so extortionate that it shewed no disposition to afford me every facility.”

1469. Then there is your note? My note 35?

1470. Will you read it? “To put the matter intelligibly: Mr. Rhodes contracted with the Government to supply a certain article at a price agreed upon, but Mr. Rhodes finding that it would be more profitable to himself to keep this article for his own use, insists upon doing so, and charging the Government with the cost.”

1471. Will you explain what you mean? Mr. Rhodes contracted with the Government to excavate rock if taken to embankment at 4s. 9d. a yard, to perform the ballasting at 17s. 6d. a yard, and to find his own stone, but finding that it would be much more profitable to retain this rock for his own use, he wished to employ it for ballasting, and to charge the Government for the cost of its excavation.

1472. Did not Mr. Rhodes offer to supply the same amount of stuff out of side cutting? Undoubtedly.

1473. Was not this the state of the case:—that when Mr. Rhodes took out the stone he undertook to supply the same amount of stuff out of the side cuttings? Undoubtedly he did; but although he might have made up the bank, that would not have justified me in certifying that he had removed this stone to embankment when he had used it for his own purposes.

1474. But he would, in reality, have removed a substitute for it, which would have been of as much use for the railway as if he had actually used the stone? Undoubtedly, with this exception—if Mr. Rhodes had not been agreed with for the ballasting, I should have insisted upon his stacking this stone by the side of the line, and the Government would have got the benefit which Mr. Rhodes intended to derive.

1475. Would this stone have been of any greater value than earth in the embankment? Not of greater value, but it would have been to the Government;—for if Mr. Rhodes had been allowed to use this stone on the extension for the purpose of ballasting, Mr. Willcox would have been justified in making this a precedent for the Northern Line. Mr. Rhodes had no right to it whatever.

1476. It is understood, I think, that you could have insisted upon his carrying it into embankment? Mr. Rhodes should have sufficiently understood the matter to have known that this was a concession which could not be granted.

1477. I do not clearly see why, if Mr. Rhodes had carried the same amount of stuff into embankment, he should not have been paid at the usual rate? Mr. Rhodes agreed to find all stone for ballasting; but finding in the cuttings stone which would answer for ballasting he applied for permission to use it. After this had been granted, he declined to make use of it unless the Government paid him 4s. 9d. a yard for excavating it, not for the purpose of embankment, but for use as ballasting.

1478. Are there any instances where the contractor himself has represented to you that the brick culverts are not of sufficient capacity, and you subsequently have altered them to a larger size, having at first refused to do so? No.

1479. There is something in this correspondence which Mr. Rhodes so construes? That correspondence relates to the Western Line, and before Mr. Rhodes commenced his works there,

there, he wrote to me to say he thought the slopes of the cuttings of the Western Line should be increased from 1 to 1, to $1\frac{1}{2}$, or $1\frac{1}{2}$ to 1, and that some of the culverts should be increased. As I knew that Mr. Rhodes had not commenced his work at all, I knew he could have no reason for forming such an opinion, and that his object was to save himself a certain amount of lead on the cuttings, and other earthwork would have been tipped to spoil; I declined to accede to his proposal.

J. Whitton,
Esq.

1 May, 1860,

1480. With regard to the leads there is some dispute—Mr. Rhodes asserts that he was to have no lead above half a mile in length, whereas he has one over a mile in length? I have frequently heard that statement made by Mr. Rhodes, and shall be very glad to give an explanation of the matter to the Committee. In the schedule of prices sent Home to Sir Morton Peto, there was no mention made of the length of lead; in the two schedules of prices which were sent of the works executed by Mr. Randle on the Southern Line, no mention whatever was made of the length of lead. In the first schedule, which Mr. Rhodes submitted to the Government after his arrival in the Colony, he inserts the words “not exceeding half a mile lead.”

1481. Are not the words in one of these schedules written in your own handwriting? That is a matter I shall be glad to explain.

1482. *By Mr. Windeyer*: Answer the question Yes or No, and explain afterwards? I will say Yes. Mr. Rhodes frequently called upon me, to ask me to arrange with him a schedule of prices for the restriction of leads to half a mile; on one occasion I told him I had no objection to do so, and took up from my office table a blank schedule, which I believe was produced here the other night; and after the words “Excavations taken to embankment” I inserted the words “not exceeding half a mile lead”——

1483. *By Mr. Parkes*: Is that it? (*Handing a paper to the witness.*) Yes; I inserted in this schedule the words, “not exceeding half a mile lead,” and I then asked Mr. Rhodes what was to be the price; assuming that if the leads were restricted to half a mile, there would be a reduction in the price. He told me 2s. 7 $\frac{1}{2}$ d., which was the price in his original schedule.

1484. That is for excavation? Yes. I told him if that was his decision upon the matter, that the discussion must be at an end, as I had no more to say about it, and should make no such restriction. Now, with reference to this schedule, about which so much has been said, and in which Mr. Rhodes said it was agreed that the leads should not exceed half a mile—this contains no price, no name, no date, and was laid upon my office table simply as a piece of waste paper; there is nothing in it to lead to the assumption that it was sent to Mr. Rhodes, and Mr. Rhodes can best account as to how he became possessed of it; I certainly never gave it him.

1485. Was it in your office you wrote these words? In my office.

1486. It did not occur in some way of this kind—that you, as Engineer-in-Chief, and Mr. Rhodes, as contractor, were consulting with a view to arrive at terms, and that you corrected this blank printed form, leaving the prices you had agreed upon to be filled in? But no prices were agreed upon and arranged for half a mile lead. The price had been agreed upon, but no arrangement had been made that the lead should not exceed half a mile.

1487. Some price had been agreed to between you and him, without reference to this schedule? Between Mr. Rhodes and the Government—not between Mr. Rhodes and myself.

1488. This schedule was drawn by you with a view of having the prices filled in? This schedule was drawn by me with the view of getting a reduction of price upon the assumption that the leads should be half a mile; but upon Mr. Rhodes declining to make any reduction, the paper was pushed from me as a piece of waste paper, and I do not know how it came into Mr. Rhodes' possession at all.

1489. Then there was no such negotiations as this going on at the time—it does not matter whether it was between Mr. Rhodes and you, or Mr. Rhodes and the Government—that the prices were arrived at, and that you filled in explicitly and fully the schedule, so that the prices might be filled in. You did not correct this schedule with a view to the filling in of the prices? Certainly not; that schedule was prepared with a view of having a reduction in Mr. Rhodes' prices upon the restriction of the leads to half a mile, but as Mr. Rhodes refused to make such reduction, I refused to have anything more to do with the matter, and I pushed the piece of paper from me, and saw no more of it.

1490. You say you do not know how Mr. Rhodes became possessed of the paper? Indeed I do not; and it is not the first time I have asked Mr. Rhodes that question.

1491. Can you state to the Committee what length of rails for the whole fifty-four miles of extension has now arrived in the Colony? I really cannot say; but I believe the greater portion of the rails have arrived.

1492. You do not know what proportion of the entire length? No; I have not seen the invoices. I know a great length has arrived, and I dare say the whole will be in the Colony long before they are required, according to the present progress of the works.

1493. It has been stated that you have anything but a friendly feeling towards Mr. Rhodes, did you ever say that you would take care he should make nothing by his contract? I never did; but I said this, that unless Messrs. Peto sent out an agent with sufficient ability to conduct their works, they must expect a heavy loss upon their contracts. That I did say; but I never did say that Mr. Rhodes should never have any profit on the works. I know it has frequently been stated that I have an hostility to Mr. Rhodes, but the only hostility I have shewn has been to endeavor, by every means I could, to insist upon his carrying out his agreement with the Government.

1494. Your denial must be sufficient no doubt, but you must be aware that Mr. Rhodes has been engaged by Sir Morton Peto for many years, and that he has filled, in many parts of the world, the same responsible position he does here in carrying out these works? From all I have heard, I have great reason to doubt that he has ever been in that position.

1495.

- J. Whitton, Esq.
1 May, 1860.
1495. You do not doubt the ability or respectability of Sir Morton Peto or of Mr. Brassey? Not in the slightest degree.
1496. Does it not seem strange that you should have discovered Mr. Rhodes' want of fitness —? I have a strong impression that Mr. Brassey has discovered it himself.
1497. You may have an impression without its being a very accurate impression? I can only say that I have received information that Mr. Rhodes has been requested to go home and to hand over his contracts to Mr. Willcox.
1498. Will you be good enough to state to the Committee, if you have no objection, how you received that information? I do not wish to make use of private communications, I think it always objectionable, but the best course perhaps would be to inquire of Mr. Willcox, who is also the agent of Sir Morton Peto, as to what information he has received.
1499. Do you not think it is quite as objectionable to make a vague statement of this kind as to state distinctly on what authority you speak? I do not think it is a vague statement. Mr. Rhodes was asked the other evening to produce a letter from Mr. Brassey, which he declined.
1500. If I remember rightly he distinctly stated that it communicated nothing of this kind to him? Probably it did not; if it did not, why did Mr. Rhodes refuse to produce it?
1501. He gave the reason that it was of a private character? That it might be, but it might contain the information nevertheless.
1502. It must be very easy to see that a letter to Mr. Rhodes from his employer might contain reference to a hundred different matters besides that, and I do not see how you can draw the inference that because Mr. Rhodes declined to produce that letter therefore it must contain something prejudicial to him? If I had not been asked the question with reference to Mr. Rhodes, I should never have made the remark I have about him; but having been asked that question, and replied to it, it was necessary in order to justify myself, and I do say that I have received information of that kind.
1503. Perhaps you have no objection to state whether you have received this from Mr. Rhodes' principals? No, I have not; but I have at second hand.
1504. Have any letters been written home from the railway authorities to induce them to remove Mr. Rhodes? I have never written to Sir Morton Peto, to Mr. Brassey, or to any member of the firm.¹⁰
1505. Have you heard that such a letter has been sent? Not to any of the firm.
1506. I think you state that the only person upon the Southern Railway is Mr. Morgan, who is designated inspector in the railway department? Yes.
1507. Is there any person who is constantly resident upon the Western Line? Yes, Mr. Storey is inspector.
1508. How often do these gentlemen report to you? Whenever they think necessary; but I receive regular fortnightly reports from them.
1509. You receive extraordinary reports if anything particular arises? Yes.
1510. Does Mr. Mason frequently go over the works? He goes over the works every month to measure up the works.
1511. Not more frequently than every month? No.
1512. Did you state the name of the gentleman who took the flood levels after the February floods? Mr. Morgan.
1513. *By Mr. Lucas:* With reference to these bridges which have been washed away upon the Campbelltown Extension, were they not carried away in consequence of being upon a bad foundation? No.
1514. The foundation still remains? Yes; and the piers are broken down.
1515. The foundation still remains level, I suppose, with the earth? That I cannot tell.
1516. Were there not some piles driven by some of these bridges? Yes; after the bridges were erected I thought it necessary to protect the ends of the piers by driving in piles.
1517. And these piles still remain? Yes.
1518. And the brickwork is washed away? Some of the bridges of brickwork are not entirely washed away.
1519. The piles you caused to be driven down remain—the brickwork has gone? Yes.
1520. With reference to the slope of one to one, do you consider that sufficient for the embankment? The embankments are all made one and a half to one.
1521. Have you, in going along the Parramatta Road, observed the cutting by the University? Yes.
1522. Have you seen that that has slipped? Yes.
1523. That is about one to one, is it not? I do not know. I never paid any attention to it.
1524. If that is one to one, and you see that that has slipped, would that alter your opinion? My opinion would not be altered, because one to one is the least slope at which you can form earthwork, and, if it will not stand at that, you must take one and a quarter or one and a half. If they will stand at one to one they will make a railway much less expensive.
1525. With reference to the strut pieces, would they not increase the strength of the bridge? I do not see that at all. The superstructure is sufficient to carry eight times the heaviest weight that will come upon it.
1526. You do not believe that the strut pieces would increase the strength of the bridge at all? You might put timber all over the bridge until you made it a solid mass; but, I think, it would be perfectly useless, and would increase the expense.
1527. The only way in which it is fastened now is by the weight of the superstructure? —
(*The witness described the construction of the bridge by reference to the model.*)
1528. With reference to the driving of piles, do you not think it would be much better to imbed a cill some four or five feet down, and to mortice the piles into the cill? I do not know any system for making a strong bridge so good as driving piles into the ground. If you find

¹⁰ My answer had reference to the report which I had heard of Mr. Rhodes' recall, and that letters from the department had been the occasion of it. One letter was written by me to Mr. Brassey on the 13th February, 1860, in reply to one from him dated November 17th, 1859. As this letter, from its date, could have had no influence on Mr. Rhodes' reported recall, it did not occur to me as necessary to name it.

J. W.

find rock near the surface, the only mode is to form a cill, and frame the piles into the cill; but there is no bridge you can possibly put up so strong as one formed of piles driven into the ground.

J. Whitton,
Esq.

1. May, 1860.

1529. When you can drive them; but speaking of this bridge on the Western Line, where the piles can only be driven four feet nine inches into the ground, according to the inspector's report, would it not be better to imbed a cill and mortice the piles into it? No doubt, and if I had not been detained here I should have been down to see that that was done. It was Mr. Rhodes' duty, as the contractor, if he found that was the case, to have applied to me and told me what the fact was.

1530. Mr. Rhodes complains that when he does apply to you he cannot get information? I do not think Mr. Rhodes ever wrote a letter to me that I did not reply to at once. I have always been willing to give him every information.

1531. Do you not think, looking to the nature of railway works, that the sending of a cill into the ground would have been a more satisfactory mode? I do not see how you can do it. In the first place, you take out the surface ground if you intend to have a firm foundation upon which to make the bed of your cill; you must then have good concrete, and if the rain gets under the foundation the structure will not be so firm as it would be if it were formed upon piles driven into the ground.

1532. That is, where you can drive them? Of course.

1533. Do you think piles can be driven for the whole of this structure? Not a doubt of it.

1534. Is the land in that locality fit for the driving of piles to any depth? Not a doubt of it.

1535. Speaking of the piles twenty-eight feet long, how far do you suppose they should be driven into the ground to give a good foundation, knowing the description of earth where this structure is to be erected? It is impossible to tell to what depth a pile should be driven. The only way to ascertain it is by pitching the pile and driving it. No person, from any knowledge of the strata the pile has to go through, can tell the distance it will go, unless there be rock at the bottom.

1536. You still believe that cills and spur-piles would not be so strong as driven piles? I am quite sure they would not.

1537. And you believe structures of this sort would last fifty years? It is quite impossible to say how long they may last, but from all the information I can get in the Colony I believe ironbark will last from forty to fifty years.

1538. You believe that wooden bridges are much better than brick or stone bridges? Yes.

1539. *By Mr. Windeyer*: Suppose a contract come before you, in which a certain price was specified for excavation in rock and a certain price for earthwork, how would you determine which was rock and which was earth? I should determine it on the ground.

1540. What general rule would you go by as to which was earth and which was rock? By the general rule that rock is generally known to be rock, and that marl, clay, and shale are usually known to be what they are. I really cannot give any other reason.

1541. Is not the price for excavation fixed according to the difficulty of working the material? No doubt it is.

1542. Then, if you find a material in a cutting which is as hard as rock, and which gives the same trouble as ordinary sandstone in working, would it not be only fair that it should be paid for as rock? Not if there is a special agreement that it should not be paid for as rock, which there is in this instance.

1543. If you find that a material is so hard that it requires blasting, and is in all essential points like rock, would it not be only fair that it should be paid for as rock? Not if I agreed it should not be paid for as rock.

1544. In this shale are there not various degrees of hardness, some of it being crumbling stuff and some as hard as rock? If you go into the question of the degree of hardness you must go into the question of hard rock and soft rock, giving a different price for each.

1545. Does it not differ in hardness? No doubt.

1546. Is not some of it as hard as rock? No doubt it is.

1547. Did not Mr. Rhodes consent to receive payment for shale as earthwork, and only ask to be paid for such stuff as he had here as rock? Mr. Rhodes asked to be paid for shale as rock, it being a condition of his contract that shale should be paid for simply as earthwork.

1548. I want to know whether Mr. Rhodes did not consent to be paid for the soft friable stuff commonly understood as shale as for earthwork, and simply request to be paid for that hard material as rock which required blasting at the bottom of the cutting? Yes, I believe he did.

1549. Was there not some arrangement made under which he was, in one instance, paid for such material as rock? Mr. Rhodes has never been paid for shale as rock.

1550. That is not an answer to my question. I want to know whether there was not one of these cuttings in which he was paid for this material, about which there had been some previous dispute, as for rock? No.

1551. In none of the cutting? Not to my knowledge.

1552. Will you undertake to say, that neither with your consent, nor with the consent of the Commissioner of Railways, was Mr. Rhodes ever paid for material similar to that in dispute as rock? I will undertake to say that, with my consent, Mr. Rhodes has never been paid for shale as for rock; but as the strata are considerably mixed, small beds of stone in some cases intervening between the beds of shale, the average has generally been taken, and no doubt that average has been in favor of Mr. Rhodes.

1553. About this bridge at Menangle—I understand that you at first proposed to build a bridge with brick piers and a superstructure of iron? Yes.

1554. That you afterwards altered that proposed plan into a wooden bridge, and subsequently enlarged the plan of that wooden bridge? I do not know anything about enlarging the plan.

1555.

- J. Whitton, Esq.
 1 May, 1860.
1555. Did you not find it was some five feet too low, and in consequence raise it seven feet? Yes, because I found that the flood in February had risen five feet higher than any that had ever been known before.
1556. Do I understand that the brick bridge originally proposed would have been of the same height as the first wooden bridge? Yes.
1557. And I understand you to say that you found the wooden bridge first proposed was five feet too low? Yes.
1558. Then if Mr. Rhodes had erected a bridge of brick and iron, as originally proposed, it would have been swept away in the last flood? Not a doubt of it; but I do not see that I can be responsible for the height to which the flood waters may rise. I took the height of the highest flood that had ever been known, and designed the bridge to meet such rise; but it is impossible for me to guarantee that the bridges I may erect will withstand any flood that may hereafter take place.
1559. Had you the areas of the collecting grounds measured? No, I think they would be most erroneous data upon which to fix the sizes of the culverts or bridges.
1560. Would not such a measurement afford some data on which to go? Not the slightest.
1561. Why not the slightest? Because I cannot tell, and no other person can tell, the rain fall that will take place in any particular locality. The rain fall has increased ever since I have been in the Colony. The only means of ascertaining what the openings ought to be is to take the area of the largest flood.
1562. Does it not stand to common sense that if you knew whether the area of the collecting ground was five acres or five thousand acres, you would be better able to construct a bridge that would allow sufficient space for the flood waters to escape? If I knew nothing about the Colony, and a person were to tell me that he had a certain amount of collecting ground, and a certain amount of water fall, I should have no difficulty in telling him what sized openings would be sufficient, or what height his bridges ought to be; but my experience in this country has satisfied me that the same reliance is not to be placed on such data here as could be relied upon in other countries where the rainfall is more regular.
1563. Then, in general terms, I understand you to say that exclusively of this country you would be able to form some opinion from such data? I could form a better opinion in any other country than in Australia.
1564. Do I understand then that that is usually done in other countries? In other countries it is usually done by taking the greatest height of flood waters ever known in the district, and making a sufficient amount of water-way to accommodate that.
1565. Do I understand, that when you proposed the first bridge over the Menangle River you had had no experience of the floods here? Yes, I had.
1566. Did I not understand that you could not tell, by seven feet, how high the flood would come? I think it would be a very difficult matter for you, or any one, to say what will be the maximum height of the floods for the next ten years.
1567. Then as you do not profess to know anything about it, would it not have been some guide to you to have had the measurements of the collecting areas? I do profess to know something about it, for I profess to know what the floods have been.
1568. If you knew the extent of the collecting areas, would you not be better able to judge? No, I should not. If I had the height of the largest floods I should be in a better position to judge. That would be far better than to assume any certain amount of rainfall. It is possible the rainfall in any locality may be double what you assume.
1569. With reference to this question about ballasting, how do you explain this note of yours, numbered 35, in the printed correspondence, which you have before you? I explain it simply in this way, that Mr. Rhodes contracted with the Government to take out rock to embankment at 4s. 9d. a cubic yard, and he also contracted with the Government to supply ballast for the permanent way at 17s. 6d. a yard forward; but, having found stone in the cuttings suitable for ballast for the permanent way, he asked the Government to allow him the use of that stone for that purpose. Permission was given to use that stone for the purpose, but he says, in effect, No, I will not have a gift of it unless you also pay me for quarrying it.
1570. I understood you to say that common earth would do just as well in these embankments as this stone? No doubt.
1571. If Mr. Rhodes undertook to make up, from earth which he would have to supply, the deficiency in the embankments caused by the diversion of the stone to the permanent way at his own expense, as far as I have understood you the Government would not have to pay anything more? They would not in that case have to pay anything more, but the stone he excavated from the cuttings would be charged to the Government at 4s. 9d. a yard, instead of Mr. Rhodes finding the stone which he contracted to find at his own expense.
1572. Then, as I understand you, because Mr. Rhodes is lucky enough to come across a quarry which will suit his purposes, he is not to have the advantage of it, although the Government is at no more expense? I do not say he is not to have the advantage of it, but I do not think he should ask the Government to pay him 4s. 9d. a yard for quarrying stone which he is to use for his own purposes.
1573. Was it anything unreasonable for Mr. Rhodes to ask, when he found that he had an opportunity to make something out of the contract, that this should be allowed him? I do not think it was reasonable that he should ask to have a profit which it is inconsistent with my duty to give him.
1574. If the Government would not lose by such an arrangement, what objection is there to allowing him to have it? Because under any circumstances I could have made him remove the stone to the end of the cuttings, and then have had it taken away and stacked, and the Government would have saved the cost in the permanent way.

1575. How would they have saved the cost, they would have had to pay for it? They would have had the benefit of it for the purpose of ballasting, and would not have had to pay for it twice over. J. Whitton,
Esq.
1576. In what way would they pay for it twice over. As I understand Mr. Rhodes is to be paid a certain sum for excavating whatever comes in his way, and he is also to be paid at so much a yard for ballasting; as he goes along he finds a certain material which will do for ballasting, and if he makes up the banks with other material, why should he not have the advantage of it? Because Mr. Rhodes agreed with the Government that he should find stone himself for ballasting, but having been sufficiently fortunate to find stone in the cuttings, he not only asks the Government to make him a present of the stone, but to pay the expense of quarrying it. 1 May, 1860.
1577. If that was his agreement, why should he not have the advantage of it? It was not his agreement.
1578. He was to be paid for quarrying it? He was to be paid for the stone, but certainly the Government had power under the contract to compel him to deliver the stone at the embankments, and therefore it was a concession to him to allow him instead of doing so, to make use of it for ballast.
1579. Why should you compel him to be at the loss of it? He was not at any loss at all.
1580. He was at extra trouble? There was no trouble at all about it.
1581. Had he not to get the stone from elsewhere at greater expense? He contracted to do it.
1582. *By Mr. Scott:* I see at page 30 of the correspondence Mr. Rhodes protests against the certificate, or some form certified by you? Yes.
1583. He objected to the form of certificate required to be sent in to your office in order that he might get his money? He did.
1584. Is that certificate drawn out in the form usual in England or elsewhere? Yes.
1585. There is no deviation? No.
1586. The measurements and prices are made out in your office? Yes.
1587. And Mr. Rhodes must sign this certificate containing your measurements and your prices before he can receive any money? Yes.
1588. Do you conceive that his signature to that document is binding upon him? Undoubtedly.
1589. Provided he protests against it? No.
1590. Supposing it was afterwards discovered that some of the prices or some of the measurements had been incorrect? It was Mr. Rhodes' duty, if he found they were incorrect, to have pointed out where they were incorrect, and not to make a general assertion in objection to the certificate; but Mr. Rhodes did not forward any measurements to shew that they were not correct, or state that the prices were incorrect; he simply objected because there was not so much money coming to him as he expected to receive.
1591. I think you stated that Mr. Rhodes was frequently behind his time in the work? No; I simply said that very slow progress had been made with the works; there is no time fixed upon for anything except the completion of the contract.
1592. I believe you have another contractor of the name of Gibbons? Yes.
1593. Has he ever been behind his time? I do not understand the meaning of the term "behind time," as you apply it. I only understand that a contractor is behind his time provided he agrees to carry out the works within a given time, and fails to do so.
1594. Has Mr. Gibbons failed? No. The works on the Western Railway in Mr. Gibbons's contract were to have been completed by the first of October, but in consequence of the difficulty which we had in obtaining some land in Parramatta, he was allowed six weeks extra. The permanent way contract was a contract entirely beyond that of the completion of the work.
1595. It was no fault of Mr. Gibbons that the delay took place? It was no fault of Mr. Gibbons that we could not get possession of the land at Parramatta.
1596. Could you state what number of cubic yards Mr. Gibbons has averaged during each month? Of course there were a great number of months that he was not fully at work, but I believe the average of his work was about 18,000 yards a month.
1597. You are positive it was about 11,800? I am positive I stated 18,000, and I believe I did so on very correct data.
1598. Were there any parties who entered into agreements with you for the supply of timber for the various contracts that were being carried on? Perhaps you would be good enough to say what contracts you allude to.
1599. The contracts that Mr. Rhodes afterwards took? The only arrangement was one with Scott and Jolly, to deliver a certain quantity of timber at a certain price, for works on the Campbelltown and Menangle Line, which the Government were then constructing by the unemployed.
1600. Did Mr. Rhodes take over the contracts made by these parties? Yes; and at his request, I afterwards released Scott and Jolly from their agreement to supply timber for these bridges.
1601. Were these agreements mentioned in the contract with Mr. Rhodes? Mr. Rhodes was aware of them I believe.
1602. Were they mentioned in the writings? Yes; in the letters which constituted the contract I believe it is stated that Mr. Rhodes should take over the whole of the existing contracts with the Government on account of the works that were going on.
1603. Did you give Mr. Rhodes copies of these agreements? Mr. Rhodes wrote to the office for copies of the agreement with Scott and Jolly, and the reply was that the agreement was simply an understanding.
1604. You had no written agreement? No.

- J. Whitton, Esq. 1605. I think you stated that ironbark timber would last a very considerable time in this Colony? I believe it will.
1606. If I were to state to you that Mr. Close, senior, of Morpeth, put in forty years ago a fence entirely made of ironbark timber, and that the Bishop of Newcastle pulled down that fence only the other day, would you believe that the chief part of that timber was still perfectly sound? Most decidedly I would. I have timber in my possession now which has been in the ground forty years, and is still perfectly sound.
1607. *By Mr. Hoskins*: Can you say whether any letters have been sent by persons in this Colony to their London agents requesting them to make representations to Sir Morton Peto and Company as to Mr. Rhodes incompetency to carry out the works? No.
1608. Do you know whether any representations have been made to Sir Morton Peto and Co. with reference to Mr. Rhodes' incompetency? No.
1609. Have you never heard that they were? No. If you are alluding to private letters which I have written home to my friends in England I may say that I have written home private letters, but I never requested that those private letters should be shewn to Sir Morton Peto, Mr. Brassey, or Mr. Betts. I simply wrote home to my friends letters in which I mentioned what was my opinion of Mr. Rhodes' conduct, but with no reference whatever to the matter being mentioned to his firm.
1610. Do you know whether Mr. Brassey or Sir Morton Peto have heard that your opinion of Mr. Rhodes' competency is unfavorable? I have heard they are dissatisfied with his conduct, but I am not aware that they have become so from my representations.
1611. You have heard that they are dissatisfied with his conduct in consequence of its having been represented to them that he is incompetent? I simply say that I have heard they are dissatisfied with his conduct here, but I am not aware on what representations.
1612. You say you were resident engineer on the Oxford, Worcester, and Wolverhampton Railway? I was.
1613. Who was the consulting engineer? At that time Mr. John Fowler. For the last two years I had the sole charge myself.
1614. What was the length of the line? 94 miles.
1615. Was not the late Mr. Brunel the Engineer-in-Chief? No.
1616. He never had anything to do with it? Yes, he constructed the line, but he left before I went there, and before Mr. Fowler was appointed.
1617. There are a large number of timber viaducts on that railway? Yes, more than on any other line I ever saw.
1618. You are aware that Mr. Brunel always had a number of timber viaducts on the lines which he constructed? Yes.
1619. Did you ever see timber viaducts on railways at Home which were not strutted, or that had not some stays? All timber viaducts are strutted or have stays of some kind or other.
1620. Did you ever see any construction on that plan (*pointing to the model before the Committee*), with no stays for the piles, with the exception of those that are on that bridge? I have seen viaducts 120 feet high with no other stays than such as these.
1621. Do you mean to say the timber viaducts on the Oxford were not stayed or strutted with cross sections? I scarcely understand the meaning of the question.
1622. To stay the timber piles? These piles are no height, and there are braces upon them, and walings upon them; in fact they are almost equal to a solid piece of timber. I should consider any timber put on this bridge, to attempt to strengthen it, to be so much timber thrown away.
1623. Do you know whether any of these piles are driven yet? No, they are not; and I do not see any prospect of their being so.
1624. What length do you expect the piles to be? It is very possible they may be 50 or 60 feet.
1625. Do you not think, on economical grounds, it would be better, providing the contractor was willing to do it, to erect a brick bridge than to drive piles 50 or 60 feet in length? I have never heard of any contractor offering to build a brick bridge. The only thing I have heard was the contractor's offering to build a culvert eight feet high to take the public road from Campbelltown to Camden, to carry off all the water that flows there, and to allow a passage for cattle. Even if he did offer to build a brick bridge, so far as I am concerned I would not have a brick bridge built.
1626. It is not customary, is it, to bed piles on viaducts at home, but merely to drive them into the ground? It is very often the custom at home to build brick piers for a certain distance up, where the bridges are very high, then to put cills on the brick piers, and to frame on the top of that; but this is only done where the viaducts are so very high that it is absolutely necessary that something of the kind should be done to stay the timber. Where there are only low heights like this it is never done, and it would be a very considerable increase of cost.
1627. You think there will be no danger from the vibration of the superstructure of this bridge, by the passage of heavy trains over it? I do not think there would be the least danger, not even if we were to bring all the engines we have and run them over it constantly every day for the next six months.
1628. Although the piles will be fifty or sixty feet in length? I do not see the least danger in that; I think it will be rather an addition to its strength.
1629. You have alluded to some cases in which the brick piers of railway bridges have been carried away, but the woodwork is still good—what was the foundation on which those piers were built? The foundation no doubt was earth; but if you get an accumulation of trees and brushwood against those piers, and a current running 20 miles an hour, you could not keep any brickwork up.

1630. How far were the foundations sunk? Sufficiently deep to get to a good foundation. J. Whitton, Esq.
1631. Do you not think that if at that viaduct near Glenlee you were to meet with a good solid structure of earth at three feet from the surface it would be better to erect brick piers, and in fact be cheaper, than to drive piles 20 or 30 feet into the ground? No, for the simple reason that if we find a good foundation at three feet from the surface, the piles would be driven into that, and there would be no reason for driving them so far as 20 or 30 feet. 1. May, 1860.
1632. Do you not propose to drive the piles until they come to the rock? No, certainly not; it is not at all necessary.
1633. Has not Mr. Willcox remonstrated with you on the great injustice you are doing to Sir Morton Peto & Co. by your conduct towards Mr. Rhodes, with reference to the matters in dispute between you? No, he has remonstrated the other way, against the improper conduct of Mr. Rhodes.
1634. Is this the first occasion on which you have quarrelled with the agents of contractors? Well, I do not know that I was ever particularly friendly with railway contractors, but I do not remember that I ever had any quarrel with any contractor but Mr. Rhodes.
1635. Had you not frequent disputes with the contractors on the Oxford, Worcester, and Wolverhampton Railway? Not a doubt of it; and I do not think any engineer, who discharges his duty, can ever do anything else.
1636. Do you know a Mr. Durham, Mr. Rhodes' agent? I know there is such a person; I have seen him.
1637. The engineer who gave evidence in this house the other evening was asked with whom he was articed—whether he was articed to an engineer—have you any objection to reply to questions of a similar nature? Whether I was articed?
1638. Yes? No, certainly not. I was articed to Mr. Billinton of Wakefield, and served with him for seven years. He was in large practice, and a member of the Institute of Civil Engineers.
1639. Was he not also an architect and builder? Yes, of course he was, and a contractor too.
1640. *By Mr. Arnold:* Has the same mode of measuring the earthwork been adopted with Mr. Gibbons as with Mr. Rhodes? Yes, precisely.
1641. Counting shale as earth? Yes.
1642. If there had been an intention on the part of the Government to count only earth that could be removed by pick and shovel as earthwork, under this agreement for 2s. 7½d. per cubic yard, would so large a price have been paid? No, it would not; the price was arranged on the condition that it should include shale as ordinary earthwork, as well as marl, clay, and sand.
1643. In making the agreement with Mr. Rhodes for ballasting the line what was the price paid? 17s. 6d. a yard.
1644. Would that price have been paid if the Government had agreed to find him the stone? Certainly not.
1645. The reason why so high a price was paid was because he agreed to find the stone himself? Decidedly.
1646. And he is to pay all the expense of finding the stone, quarrying it, and conveying it to the spot? Yes.
1647. Then when the Government agreed to allow Mr. Rhodes the use of the stone from the cuttings, they made a concession to him that would afford him a considerable profit? No doubt, they saved him the expense of buying the stone and the haulage on to the line; and that was far more than would compensate him for making up the banks out of side cutting.
1648. *By Mr. J. Campbell:* You say timber viaducts are preferable to brick? I do.
1649. Would the expense of timber and brick viaducts be equal to the Government? No, I think brick would be three times more than the timber.
1650. Then you have saved by making the railroad of wood? Undoubtedly there is a very considerable saving by adopting timber bridges.
1651. What amount? I should think that the brick would cost nearly three times as much as the timber; and, if the foundation had to be piled, considerably more even than that, because then there would be all the expense of driving the pile foundation, as well as the cost of the brickwork itself.
1652. Mr. Rhodes stated to us that he was sent out here to do this work, and at the same time he has a share in the profits—is that usual? I believe the arrangement generally made with Sir Morton Peto and Co's agents is that they shall have a certain salary and a certain per centage on the profits, and, of course, they are naturally anxious to substitute work which will give a large profit for work which will give no profit.
1653. *By Mr. Samuel:* I find in your evidence before a Select Committee of this Assembly, upon the Sole Commissioner of Railways Incorporation Bill, in reply to some questions referring to a recommendation of yours, that only single ways shall be constructed, that you recommend the construction of double way viaducts, in these words: "Where we have to make viaducts it will be cheaper to construct them for a double line than to make them single, and to put on the extra width afterwards; because if they are only made for a single line we are obliged to extend the width of the foundations so much as to go a long way towards making a double line." Is the viaduct of which we have the model before us constructed in accordance with the suggestion you then made? I believe in that evidence I stated that it would not be necessary to construct any viaducts for a double line, except high viaducts.
1654. Do you call that a high viaduct? No.
1655. *By Mr. Hoskins:* Was Mr. Billinton an engineer for any lines of railway while you were articed to him? He was engineer for a number of projected lines, but not for the construction of any lines.

- J. Whitton, Esq. 1656. And pray how were you occupied then? I was occupied in various ways; in getting up plans for railways, in making out tenders, in constructing the Barnsley Water Works, and the Wakefield Water Works, and in many other matters.
- 1 May, 1860. 1657. He was a carpenter, was he not? No, he was an engineer and architect.
1658. Did you ever work at the carpenter's bench? Yes; and if I had not perhaps I should not have known as much about works as I do now. However, I only did that with a relation; I did not do it because I was compelled.
1659. *By Mr. Lucas*: Is that portion of the Parramatta Railway now being constructed by Mr. Gibbons going on satisfactorily? Yes.
1660. Has he had the same difficulties to contend with that Mr. Rhodes is complaining of? Precisely.
1661. Have you received the same complaints from him that you have from Mr. Rhodes? Never.
1662. With regard to the stone that Mr. Rhodes wishes to use for ballast, has any portion of the excavation taken from the cuttings where he found this stone been tipped to spoil? No.
1663. Then it required the whole of the stone that Mr. Rhodes quarried from this place to make up the embankment? Yes. But if Mr. Rhodes had not been the contractor for the ballasting, I should have made up the bank from side cutting, and saved the stone to the Government.
1664. As Mr. Rhodes is the contractor for the ballasting, what difference would it make to the Government to allow him to take this stone—would there have been any loss to the Government by Mr. Rhodes taking this stone? There would have been loss in this way:—Mr. Rhodes agreed to find this stone—
1665. No matter about the agreement? I beg that I may be allowed to give an explanation. Mr. Rhodes agreed to find the stone; he then asked the Government to quarry the stone, for that would have been the effect of it, if we had paid him 4s. 9d. a yard for it as if it had been taken to embankment; and then he wished to charge the full price of 17s. 6d. a yard for the ballasting obtained in this way; so that it would have been quarried for him and paid for twice over. If we had done this for him, we could not have refused to have done the same thing on the Northern Line.
1666. This stone had to be quarried for the cutting, at any rate? Yes.
1667. Then what difference did it make to the Government whether Mr. Rhodes put this stone in the embankment or no, if he made up the embankment with other materials? It would simply have made this difference, that it would end in giving the contractor the benefit of everything we find on the line. If we had chosen to do so, we might have taken this stone and had it stacked for ballast, so that the Government would have had the benefit of it.
1668. As he had the contract for the ballasting, you could not take the contract out of his hands? If we had done it for Mr. Rhodes we should have had to do the same thing on the Northern Line.
1669. Was there no agreement for the Northern Line? There was an agreement; Mr. Rhodes took all the contracts on the same terms.
1670. I cannot see what difference it would have made to the Government, as you say Mr. Rhodes would have repaid the amount to the Government in earthwork? I cannot certify for excavation taken to embankment when I know he is taking it for private purposes, and is charging the Government for it.
1671. He would have taken earth to the embankment in place of it, if you had allowed him this stone? That would not justify my certifying what I knew to be incorrect.
1672. *By Mr. Arnold*: Is not a different price allowed by the Government to Mr. Rhodes, under the schedule of prices, for earth from side cuttings taken to embankment, and for rock taken to embankment? Yes.
1673. And, in point of fact, was not the proposal of Mr Rhodes this, that you should certify for rock taken to embankment, when, in point of fact, it was side cutting taken to embankment? Yes; for rock taken at 4s. 9d., when in reality he was taking side cutting at 1s. 9d.
1674. *By Mr. Parkes*: I think you stated just now that Mr. Rhodes, as Sir Morton Peto's agent, had made a special condition in his contract to take shale, with other things, as earthwork? I say that is the condition of his contract.
1675. You enumerated some other substances? The terms of the specification are, that the term earthwork is to be understood to include sand, clay, marl, shale, &c., and no addition shall be made to the price to be paid under the head of earthwork, excepting what is generally known as rock.
1676. Where is that stated? In the specification.
1677. In what specification? The specification on which Mr. Rhodes accepted these contracts. It is in the specification for the Western Line, and it is also in the specification sent home to Sir Morton Peto and Co.
1678. Is that so in the specification on page 5? That is simply a schedule of prices; the specification is not there at all.
1679. Where is the specification of the works? The specification of the works was sent home to Peto and Co. with that schedule, and in that specification there is that clause.
1680. Is it in the specification sent Home to Sir Morton Peto, where this is stated, that Mr. Rhodes, as Sir Morton Peto's agent, is to excavate shale, and these other substances, as earthwork? That specification states that it is to be done.
1681. Will you turn to page 7 in the correspondence, and read the letter signed "B. H. Martindale," in which, in the second paragraph, you will find these words:—"It may, perhaps, be as well that I should here notice that the tenor of your letter would seem to imply that the agreement which the Government were willing, in 1858, to have made with
" Mr.

"Mr. Gabrielli is in force; of course that is not intended." Does not this refusal to acknowledge the agreement sent home to London include the specification sent home with it? It does not refuse to acknowledge the specification sent Home; it simply says, there was no agreement with Mr. Gabrielli; but the specification sent Home was a sample specification, in order that Sir Morton Peto & Co. might judge of the conditions under which the contract would be let.

J. Whitton,
Esq.
1 May, 1860.

1682. Is not the specification sent Home the one on which you now fall back as requiring Mr. Rhodes to excavate shale, among other things, as earthwork—is it not the specification sent Home which formed part of the agreement offered to Mr. Gabrielli, which is here denied to be binding? Yes; but there is an additional one which was made after Mr. Rhodes' arrival in the Colony. He agreed with the Government that he would construct the whole of the authorized extensions on the same terms and conditions as were arranged for the contract held by Mr Gibbons on the Western Line.

1683. Where is that? That arrangement was made in the presence of Mr. Cowper, Mr. Robertson, Captain Martindale, myself, and Mr. Rhodes.

1684. Is it in writing? I do not know whether it is in writing; but the schedule of prices is a strong corroboration of it, for they are precisely the same as Mr. Gibbons's in every respect.

1685 I wish to know whether it is in writing, because, in this unfortunate dispute, Mr. Rhodes alleges that you agreed to various things which you deny, and probably he will deny this. If it is not in writing in any way, what certain evidence have we that it did occur any more than we have that the various allegations made by Mr. Rhodes are correct? If Mr. Rhodes did not intend to work under that specification, why did he not state, on receiving from the Government the schedule of prices wherein it is stated that the work is to be carried on in strict accordance with the plans and specification, that he had no specification, and why did he receive without objection a letter from the Government, stating that the usual bond and contract must be signed, when he knew that bond and contract included that specification.

1686. Mr. Rhodes denies any knowledge of the specification included in the usual bond and contract? It is a most unusual thing for a contractor to take a contract, and after he has been at work under it for five or six months to say he did not intend to work according to the specification prepared by the Government, but that he intended to work to a specification to be afterwards agreed upon, which is in effect saying that he would only work under a specification prepared by himself.

1687. Where does Mr. Rhodes say that? There are letters to the Railway Department in which, I believe, Mr. Rhodes says that.

1688. I have not seen those letters? At all events the original specification was sent back; and Mr. Rhodes has said over and over again that the specification by which he intended to work was one to be agreed to afterwards, which means that it must be one prepared by himself.

1689. *By Mr. Hoskins:* Did he make that acknowledgment in writing? There have been so many letters from Mr. Rhodes that really I do not remember them all; but it is most distinctly upon my memory that Mr. Rhodes said he intended to work on a specification prepared by himself.

APPENDIX.

No. 1.

GREAT SOUTHERN AND GREAT WESTERN RAILWAYS.
SUMMARY OF FORTNIGHTLY RETURNS.

DATE.	MEN.*				Horses.	PLANT.			No. of feet of temporary rails not in use.	REMARKS.

Esq.

No. 2.

In Mr. Rhodes' letter, dated September 5th, he proposed to build Culverts 8 feet by 6 feet 6 inches, in place of the Bridges proposed by me, for the whole District between Campbelltown and Menangle. The following shows the area of the water during the late flood in several of the Creeks in this District:—

M. G.	Water area in feet.	Area in feet of culverts pro- posed by Mr. Rhodes.
At 20-77	249	41.
21-55	166	41.
22-11	188	41.
22-38	120	41.
22-51	153	41.
24-28	7,600	41.
22-53	9,460	41.

J. W.

E.

FRIDAY, 4 MAY, 1860.

Captain Ben Hay Martindale, R.E., called in and examined:—

Captain B. H.
Martindale,
R. E.

4 May, 1860.

1690. *By Mr. Parkes:* Will you be kind enough to state the office you at present hold? Commissioner for Internal Communication.

1691. You have, I believe, held an office with some other designation since your arrival in the Colony? I am Commissioner for Railways now.

1692. Your designation was not always Commissioner for Internal Communication? My first designation in the Colony was Chief Commissioner for Railways.

1693. When did you arrive in the Colony? In June, 1857.

1694. How was the railway at that time managed? There were three Commissioners at the time I arrived, Captain Mann, Chief Commissioner, Mr. Donaldson, and Mr. Hay.

1695. That is, there was one Commissioner besides the responsible Ministers for the time being? The responsible Ministers at the time were Commissioners also.

1696. Was the office you accepted in England the same as the one you filled when you arrived in the Colony? My appointment in England was to superintend the construction of railways and other public works.

1697. At the present time you hold some other offices besides that of Commissioner for Internal Communication? I am Commissioner for Roads, Superintendent of the Electric Telegraph, and also Under Secretary for Public Works.

1698. That is, you fill four distinct offices? I fill four distinct offices.

1699. But receive salary for but one? I receive the same salary that I did as Chief Commissioner for Railways.

1700. That salary is the salary of the Commissioner for Internal Communication? It is.

1701. There is no salary attached to the other appointments? No.

1702. No remuneration whatever? No remuneration whatever.

1703. Did the proposal emanate from yourself that you should fill these other offices? It arose from conversations with the Government in discussing how the department could best be carried on.

1704. Will you be kind enough to state to the Committee what were the reasons for the arrangement by which you hold these several other offices—with what object in regard to the public service? I believe the reasons were somewhat of the following nature:—It was thought that in a new country, such as this is comparatively, the Internal Communication formed one great subject—that is, the Railways, the Roads, and the Telegraph—and that it would be for the benefit of the public service that there should be one mind, one leading mind, considering constantly the various services required for those three branches. As regards the Under Secretary for Public Works; when the Department of Lands was separated from that of Works, the then Minister did me the honor to consult me as to what arrangements I thought would be best adapted for the efficiency of my own department, and in connection with the new Department of Public Works. The separation of the Lands from the Works relieved me of a very heavy mass of correspondence, and from my experience in carrying out the Department of Internal Communication for nearly three years, I was of opinion it would facilitate the public business, especially in reference to my own department, if the office of Under Secretary were not filled up, provided I could find time for the performance of the duties of Under Secretary, if they were fulfilled by the Commissioner for Internal Communication. I believe these were the leading reasons that induced the Government to fill the appointment as they did.

and if,

1705. Very similar reasons weigh with Louis Napoleon in his government—the governing of France? I am not aware what reasons weigh with Louis Napoleon.

1706. One mind directing the whole machinery of the Government; but, however, that is, I believe, the principle of despotic governments—the having one mind to govern the whole machinery—is it not? There is no despotism in my department—I have too many masters.

1707. I do not say there was, but there was a fancied analogy between your reasoning and that of the Government I have referred to. Do you recollect when a gentleman of the name of

- of Gabrielli was in the Colony, and opened some negotiations with the Government for a contract for a portion of the proposed railway extension? I do.
1708. Would you be kind enough to state as briefly as you can the substance of what took place between the Government and Mr. Gabrielli as to the preliminaries which led to the contract between the Government of this country and Sir S. M. Peto and Company? In April, 1858, Mr. Gabrielli was at Melbourne negotiating with the Victorian Government for the construction of Victorian railways. A communication was addressed to him as to whether he, on behalf of Sir Morton Peto and Company, would enter into negotiations with this Government for the construction of the railways of New South Wales. Mr. Gabrielli stated at that time that the small amount of work to be done in this Colony did not make it worth the while of Sir Morton Peto to enter upon the construction of the works in this Colony. That correspondence ceased with that. Mr. Gabrielli, subsequently, in June, 1858, visited Sydney. He then addressed two letters to me as Commissioner for Railways, desiring to enter into negotiations with the Government, on behalf of Sir Morton Peto and Company, for the construction of railways in this Colony. These letters were referred by me to the Government, and some negotiations went on with Mr. Gabrielli, which terminated in certain proposed articles of agreement being drawn up. Before these articles of agreement could be concluded Mr. Gabrielli found he was unable to carry out his part of the proposed agreement, and the agreement, therefore, dropped through; but the whole correspondence was sent to Sir Morton Peto and Company direct, and they were informed that, although the agreement had failed, yet the time and labor bestowed upon it could not be considered as entirely wasted, because it had elicited from the Legislative Assembly an expression of opinion that in the contracts for the construction of the proposed railways the principle of public competition might be departed from, and that if Sir Morton Peto and partners would without delay send a person to the Colony fully authorized to act on their behalf, the Government would be prepared to negotiate with him for any length now sanctioned, and not at the time contracted for.
1709. Mr. Gabrielli carried Home with him certain documents from the Government of this Colony? He did.
1710. Did any of those documents form a portion of the agreement subsequently entered into with Sir Morton Peto's agent? None.
1711. The agreement at the present subsisting for the contract of these railway works was in no way affected by anything forwarded to London at that time? The specification and contract are similar to the specification sent to London—almost identical with it; that is the only document.
1712. Are any of the papers sent to London in any way at present recognised—any single terms of them? No.
1713. I think in the printed correspondence between yourself and Sir Samuel Peto and Co.'s agent, at page 7 of the first portion of the correspondence printed—? Are you referring to Mr. Rhodes as the agent now?
1714. Yes. At page 7 there are these words—the concluding words of the second paragraph—“It may perhaps be as well that I should here notice that the tenor of your letter would seem to imply that the agreement which the Government were willing, in 1858, to have made with Mr. Gabrielli is in force, of course that is not intended.” Does this observation apply to everything that preceded the arrival of Mr. Rhodes in the Colony? With the exception that, if an agent was sent from Sir Morton Peto and Co., the Government would be prepared to negotiate with him.
1715. It applies to all the specific terms of the negotiation with him previous to his arrival? It does.
1716. Will you now inform the Committee whether, in your opinion, any contract at the present time does exist between the Government and Messrs. Peto and Co.? In my opinion a contract does exist.
1717. Will you explain of what papers, letters, and otherwise, that contract really consists? In the correspondence commencing with the letter from Mr. Rhodes of the 2nd April, 1859, at page 2 of the correspondence, and terminating at page 10 with a letter, dated 23rd June, 1859, addressed from the Commissioner for Railways to the Under Secretary for Lands and Works.
1718. That is the letter signed by yourself? Yes.
1719. A letter of four lines? Yes.
1720. Do all the letters and papers from this first letter, dated 2nd April, on page 2, to the letter dated 23rd June, form part of the contract in your opinion? The contract must be collected from those letters, but Mr. Rhodes was to sign the usual bond and contract. It is one of the terms contained in these letters that he was to sign the usual bond and contract.
1721. Where do you find that? In a letter of the 15th April, addressed by me, by direction of the Government, to the agent of Sir S. M. Peto and Co., on the fifth page.
1722. Will you be kind enough to read the words? “The usual bond and contract, with * in accordance * the above arrangements, will be prepared by the Civil Crown Solicitor.”
1723. Has this bond and contract been prepared? The bond and contract have been prepared.
1724. Will you be kind enough to explain what you mean by the term the “usual bond and contract”? I mean the bond and contract usually prepared and signed for railway works in this Colony.
1725. What is the nature of that bond and contract? It consists of a bond for the performance of the general conditions of the contract, and a specification, detailing how the work is to be performed.
1726. Are there in that instrument that you call the usual bond and contract any conditions
not

Captain B. H.
Martindale,
R. E.

Captain B. H.
Martindale,
R. B.

4 May, 1860.

not to be found in these various letters from which you say the agreement is to be gathered? I consider not.

1727. What then was the objection of Mr. Rhodes to sign them? Mr. Rhodes considers that there are —.

1728. Then what consists the matter of dispute is, that you think there are no terms introduced, and that Mr. Rhodes thinks there are? I think the principal matter of dispute is, that Mr. Rhodes as the contractor, wishes to be independent of the control of the Engineer-in-Chief, and wishes to execute the work in his own manner instead of in accordance with the instructions he receives.

1729. These are matters of argument or opinion, but are there no distinct terms that Mr. Rhodes points out; no written conditions which he points out, and which he alleges are not in any of the letters that have passed between you and him? The objections made by Mr. Rhodes are contained in a letter from Mr. Want, Mr. Rhodes' solicitor, to the Civil Crown Solicitor. The letter is a long one, and it contains a great variety of objections.

1730. Could you not state substantially, in a few words, what are the matters in dispute—if there are any written matters in dispute between you—you say that you consider the usual bond and contract contain no terms but what are expressed in these various letters? I do.

1731. Mr. Rhodes, you say, contends it does? He does.

1732. Can you state what those terms are? The letter to which I have referred states as one principal objection, that the contract is unnecessary, as the agreement is fully set out in the correspondence between Mr. Rhodes and the Government, which is amply sufficient to protect both parties. Second—that the specification is an unusual proceeding in extensive contracts, the contractors being bound in the terms of their agreement to perform the work satisfactorily before they receive payment. This letter has been laid on the Table, and is part of the proceedings. I do not know whether the Committee wish me to read it at length.

1733. My object was to get, in as connected a form as possible, the matter of dispute—however, never mind that—do you consider, setting aside this instrument which has not been signed, the agreement to be gathered from these various letters is sufficient and binding? I do, *binding*; but I consider that the usual bond should be signed in accordance with Mr. Rhodes' agreement.

1734. But if the agreement which we find in these letters is sufficient and binding, what necessity is there for that contract? Because Mr. Rhodes disputes the reading of these letters. He disputes the fact that he is bound by the specification.

1735. In that case ought he to have been permitted to have entered upon the works in such an unsatisfactory state of the case with the contract—let it consist of these letters, or whatever it may consist of—so open to dispute and to different interpretations? Mr. Rhodes stated to the Government that, as he had a large and expensive staff in the Colony, it was a matter of moment to him to commence work as early as he could; that he was prepared to take over the line from Gambelltown to Menangle, upon which we were then using what was commonly termed the unemployed labor, at once, if the Government would let him take it. Nobody imagined that a person in Mr. Rhodes' position, representing as he did such a large and influential firm as Sir Morton Peto and Company, would ever endeavor to evade signing the usual bond and contract after having agreed to sign. To meet his convenience, and to afford him every facility the Government could give, he was allowed to go to work at once.

1736. Has not Mr. Rhodes stated his willingness to sign any contract you might prepare, containing only the terms stated in the correspondence? Any terms suiting him.

1737. Has he not stated that? He has; but at the same time he stated that he would not sign the usual bond and contract—the bond and contract which every other contractor signs and makes no difficulty in signing.

1738. In your opinion, should Mr. Rhodes be guided by what other persons have done, or by what he in the preliminary arrangements agreed to do? Mr. Rhodes had agreed to sign the usual bond and contract.

1739. Where do you find that? In his letter assenting to the fact stated in my letter that the usual bond and contract should be prepared by the Civil Crown Solicitor. In his reply to that letter, the 19th April, he makes no objection whatever to signing the usual bond and contract.

1740. Your letter in which you state, "the usual bond and contract, in accordance with the "above arrangements, will be prepared by the Civil Crown Solicitor," is dated 15th April? Yes.

1741. Mr. Rhodes' reply to it is on that date? No, there is a letter of Mr. Rhodes of that date, but his reply is dated 19th April.

1742. It does not state that he will sign any bond? He makes no objection to it whatever.

1743. Did he ever verbally, in his communications with you, say he would sign any contract that had been prepared? It was distinctly understood.

1744. Did he ever assert in words that he would sign any contract? He did.

1745. I think you were present in the House during the time his examination was going on? I was.

1746. Did you not hear Mr. Rhodes state that he was prepared to sign any contract that contained the terms already agreed upon? Mr. Rhodes is prepared to sign any contract which contains his reading of the agreement.

1747. Are you aware that he has said he was prepared to sign any contract containing nothing more than the terms that are to be gathered from these letters? I am not aware that he said so at the Bar; I am aware that his solicitor has written to the Crown Solicitor to say so.

1748. That is the long letter that has been handed in from Mr. Want? Either in that or in some of the other long letters.

1749.

1749. Will you be kind enough to state what, substantially, were the conditions upon which—by the agreement as it is to be gathered from these letters—the contract was to be carried out? The contract was to be carried out under a schedule of prices. Captain B. H. Martindale, R. E.
1750. What I wish to know is this—what facility Mr. Rhodes was to have—what he was substantially to perform for the Government—what prices were to be paid to him—and so on? Mr. Rhodes was to carry out the extension from Campbelltown to Menangle, from Menangle to Picton, and also from Blacktown Road to Penrith, under a schedule of prices agreed upon between the Government and Mr. Rhodes, in strict accordance with the plans and specifications. He was to receive such facilities as the Government could give him, and especially such rails and chairs, exclusive of those ordered for the permanent way, as the Government could spare. Mr. Rhodes also, in consequence of Mr. Willcox not being in the Colony, tendered for the works up to formation level of the Great Northern Railway from Lochinvar to Singleton. In reference to the extension from Campbelltown to Menangle, Mr. Rhodes was to take over all the agreements or arrangements that the Government had already made with contractors or with the laborers employed direct by the Government upon that extension. * May, 1860.
1751. Did he carry out all these conditions? No.
1752. In what did he fail? Mr. Rhodes has written to repudiate the engagement he entered into for laying and ballasting the permanent way; and he has not, up to this time, built the wooden viaducts for which he has had a great number of plans in his possession, and which should have been commenced, at any rate, long ago.
1753. He has repudiated his engagement for ballasting the line you say, I think? Yes, through his solicitor.
1754. Will you explain what you mean by that? In the letter to me of 21st May, 1859, on page 9, the Committee will see that Mr. Rhodes tendered a schedule of prices for certain extra work, that is work not provided for in the first schedule, marked A, and attached to my letter of 15th April. That tender of Mr. Rhodes led to a correspondence and certain interviews with Government, which terminated in an agreement being entered into with Mr. Rhodes, on the 22nd June, communicated by my letter of the 23rd June, for laying and ballasting the permanent way complete, for providing sleepers, and for fencing. That agreement Mr. Rhodes has, through his solicitor, since written to decline to carry out.
1755. Did he accept it at the time? Yes.
1756. Where is the letter accepting it? There is no letter accepting it.
1757. He accepted it verbally? He accepted it verbally. My letter to him, at page 10, states, "I have the honor to inform you that I have this day written to the Government requesting that I may receive their formal approval of the final terms verbally agreed upon at your interview with the Colonial Secretary and myself yesterday." Mr. Rhodes never questioned or denied that that was the agreement for months afterwards.
1758. You say that he did not question that for months afterwards? No.
1759. At what date did he question it? I really cannot say.
1760. How many months? I cannot say.
1761. You said just now that Mr. Rhodes had declined to build wooden viaducts? I said he had not commenced building them.
1762. He delayed building them? He delayed building them, and endeavored by every means in his power to avoid building them.
1763. On what ground did this delay take place, according to his statement of the case? On his statement that the viaducts were unsafe.
1764. What actually took place in the matter? Mr. Rhodes wrote me a letter.
1765. Of what date? 22nd July; the fourth paragraph, p. 12—"Although strictly not within the province of Messrs. Peto and Co., as copartners I feel myself bound to point out that I consider the wooden viaducts proposed to be erected—the plans of which have been furnished to me—will not, when erected, be safe for the probable traffic after a very short period. Messrs. Peto, Brassey, and Betts' character as contractors will be at stake, if, after a short time, these bridges should have to be rebuilt."
1766. What took place on the receipt of this letter from Mr. Rhodes in your department—what steps did you take, as the head of your department? I wrote to Mr. Rhodes to request him to state which viaducts he considered unsafe, and Mr. Rhodes, in his reply, pointed out one particular viaduct.
1767. Which one was that? The one near Glenlee.
1768. Is that the one of which so much has been said, on this side Glenlee? That is the one of which so much has been said. In consequence of Mr. Rhodes' statement I requested Mr. Whitton to submit that plan to me particularly. I very carefully examined the plan, and came to the most unhesitating conclusion that the viaduct was perfectly safe.
1769. You had a conference with the Engineer-in-Chief upon the receipt of the letter containing these objections? I am not aware that I had, on the receipt of the letter containing the objections; but after Mr. Rhodes wrote to me to point out the particular viaduct to which he objected, I then requested the Engineer-in-Chief to come to me, and went through the plan with him. I examined it in detail.
1770. Had you at that time visited the locality where this viaduct was? I had, long before.
1771. You were acquainted with the character of the country where this viaduct was to be erected? Yes.
1772. What followed upon this re-examination of the plan? I am not aware that anything followed.
1773. Did you not make any request to Mr. Rhodes? I believe not; I had no request to make. Mr. Rhodes had already got his instructions to proceed with these works.
1774. Under any circumstances, I should think some reply would be given? A reply was practically

Captain B. H.
Martindale,
R. E.

4 May, 1860.

practically given by this fact, that a gentleman in another place subsequently asked a question whether the Government were aware that unsafe viaducts were about to be erected, and the Government stated that the viaducts were perfectly safe. That statement, of course, was made on information furnished from the department; but I cannot at this moment recollect whether I sent any reply to Mr. Rhodes, the correspondence with him has been so exceedingly voluminous.

1775. When the plans of these viaducts were prepared, including the one just alluded to, did you give any direction in the matter? I did not.

1776. Had you any conference with the Engineer-in-Chief in the preparation of these plans? Not that I remember.

1777. Are the plans prepared by the Engineer-in-Chief without consultation with you? They are, as far as engineering details go; I am not in the habit of interfering with engineering details, except in cases of appeal, as in the case referred to of Mr. Rhodes.

1778. Are plans submitted to you for approval? Some, not all.

1779. Is it the practice to submit them to your approval after they are prepared? It depends upon the officer preparing, and the degree of confidence I feel myself justified in placing in him.

1780. Are any works executed without your having any knowledge whatever of the manner in which those works are to be executed? No.

1781. Does it not follow, then, that you must be in some way communicated with? I invariably go over the proposed line of railway, and make myself generally acquainted with the line, and the character of the structures which the Engineer-in-Chief proposes to put up; but as a rule I never interfere with his particular duties; he is the head of that particular branch. As regards the details of bridges, for instance, which he wishes to put up, I never interfere with him, except in cases of appeal such as the present.

1782. It seems desirable that the Committee should clearly understand the limits of your authority, and also the limits of the authority exercised by the Engineer-in-Chief. In any case, if plans were prepared of which you disapproved, would you consider it your duty, and have you authority to prevent, the execution of the works? Certainly; and a circumstance might happen to-morrow—although I should very much regret it if it did—something which might deprive the Colony of the services of Mr. Whitton, and I might have an engineer in whom I had no confidence; I should then feel it to be my duty practically to work his department; but as long as I have an Engineer-in-Chief in whom I can place the most entire confidence, as I can in Mr. Whitton, I feel that I should be hampering him by interfering with the details of his duty.

1783. I understand you then, that you surrender a part of your authority in consequence of the high professional character of Mr. Whitton? I do not feel it to be necessary to exercise it.

1784. You leave it in abeyance? I leave it in abeyance.

1785. You consider your office as practically and completely the head of the establishment, including the situation of Engineer-in-Chief? Decidedly.

1786. And you, under certain circumstances, would feel it your duty to exercise a rigid inspection of all that officer did? Yes.

1787. But, in the present case, in consequence of the high character of the gentleman holding the office, you feel quite safe in leaving much of the work of the country entirely in his hands? I do.

1788. Coming back to what we started from just now, as to Mr. Rhodes' objections, if you were satisfied that the works would be perfectly safe, and that Mr. Rhodes' objections were of a frivolous and vexatious character—and, I take it, if they were not necessary they must have been of a vexatious character—was it not your duty to insist upon his going on with the work, and carrying out the instructions given to him? Mr. Rhodes appealed from me to the Government, and as soon as he appealed to the Government he stopped my power.

1789. And has the dispute been going on from that time to this? Yes.

1790. And the works been standing still? No, the earthwork has been going on; but these viaducts, which should have been built, have not gone on.

1791. Many letters, I believe, are not included in this correspondence? A very great number of letters.

1792. Are any of them letters of importance to the proper understanding of the case? The letters consist chiefly of complaints from Mr. Rhodes, and the replies of the department to those complaints.

1793. These letters, I believe, come down to September 21st? Yes.

1794. That is owing to the time when they were moved for? Yes; and at my suggestion the Government put a note on these papers, when furnished to the Committee, that all the correspondence should be laid upon the Table of the House.

1795. Was there any letter subsequently from Mr. Rhodes, offering to build brick culverts for these bridges, and to fill up solid embankments? There was an offer from Mr. Rhodes to build brick culverts.

1796. What date was that? It was a letter, in the first instance, to the Engineer-in-Chief.

1797. I am told the letter was some time in October? There was a letter from Mr. Rhodes offering to erect culverts in place of timber bridges, and to satisfy me, as Commissioner, that the capacity of the culverts was sufficient to take off the water.

1798. And to uphold them for any period? I have no recollection of any engagement to uphold them.

1799. I have been informed that a letter, written I think on the 3rd October, offered to construct brick culverts, and to satisfy you that they were of the requisite substantial character; to fill up with solid embankments, and to uphold the works for a given time—I think twelve months? I have no recollection of any offer to uphold them.

1800. What is your opinion of the relative durability of these brick culverts and wooden bridges? I believe the wooden bridges to be much better. Captain B. H. Martindale, R. E.
1801. Will they last longer? I think they will last quite as long; and, I think, if the culverts proposed by Mr. Rhodes were put in, the bridges would last much longer.
1802. What is your reason for coming to that conclusion? In the first place, because in some places where Mr. Rhodes proposed to put the culverts, the capacity of the culverts was not sufficient to take the water off; and in the second, because there is very great difficulty in this Colony to get good brickwork. 4 May, 1860.
1803. Could you not insist on having culverts of what capacity you thought fit? I did not think it necessary to do so. I was perfectly satisfied with the wooden viaducts; and there were many reasons why viaducts were wanted, as for the passage of cattle, and for roads, independently of their being of brick or of wood altogether. Being perfectly satisfied with what the Engineer-in-Chief had proposed, and seeing that there was great difficulty in giving Mr. Rhodes what he wanted, which was a profit not warranted by his contract, I did not think it necessary to go further into the question.
1804. Has your experience as an engineer enabled you to form a good opinion as to the relative durability of works of this kind? I have been employed nearly all my life, I may say, in carrying out public works; often in the field from morning till night; and obliged to make my own plans, surveys, and measurements.
1805. Were you ever employed on a railway in the Mother Country or in any part of Europe? I was not.
1806. Did you ever occupy a position analogous to that you occupied when this contract was made—representing the interests of the Government or of a Company in any large work—in negotiating with contractors? I did; I was the Executive Officer at Dover for four years, and had the superintendence of the Ordnance works there.
1807. In the erection of fortifications? Yes, and of buildings and waterworks.
1808. Can you recollect the largest amount of any of those contracts, to give the Committee an idea of their magnitude? I was employed, before I left England, on a special appointment, in directing the works of part of the national defences; and I have no doubt the amount of those plans would have been some millions of money. * designing.
1809. With regard to the supply of the rails and chairs to the contractor in this case—I think you have stated, that by the terms of the agreement the contractor was to have such rails and chairs as the Government could spare? He was.
1810. Supposing the Government could only spare a quantity that would be utterly inadequate to the wants of the contractor in carrying out the work, should you have been disposed to adhere to the terms of your contract? The contractor under his contract might have been compelled to find the remainder himself, as Mr. Gibbons has.
1811. How could the contractor find rails and chairs for himself in the Colony? He could get temporary rails, as Mr. Gibbons has done. Mr. Gibbons, I believe, has made wooden rails; another contractor has made some of bar iron on wood; but there has been no occasion for Mr. Rhodes to do anything of the kind. * some.
1812. We are now merely on the terms of the agreement: Would it be for the convenience of Government, for any contractor—for Mr. Gibbons, Mr. Rhodes, or anyone else—to be driven to this shift, if other rails were at hand? It depends upon how the rails were treated. If we sent to England for permanent way rails, and then when we wanted to use them for the permanent railway, they were knocked about so as to be unfit for use, I think it would be very much against the interest of Government for them to be used.
1813. If that were the case, undoubtedly it would be; but, in point of fact, are the rails injured by such use? They are, undoubtedly.
1814. Will you explain the extent of the injury sustained by them? They are warped, and have to be made straight again. If any member of the Committee will go and see how the temporary road is laid, they will find that they are laid angle to angle, and then the ballast trucks are run over them; they would see that it is impossible but they must be injured. And it is a different thing in this country from England. In England, if rails are injured they are easily replaced; here it takes a year from the time they are sent for before they can arrive.
1815. So far as the value is concerned is not the contractor responsible for the injury done to the rails? Decidedly.
1816. Then, as far as the money value is concerned, much injury cannot result to the country? Without the contractor chose to dispute his liability.
1817. It could soon be decided whether the rails were injured or not? I do not know that it could be decided, except by a Court of Law.
1818. A Court of Law would soon decide it if the contract existed, and the rails really were injured. Has the contractor ever complained of not having sufficient rails and chairs? He has; and in every case where he has complained he has had thousands of rails lying idle. * fact of.
1819. Is he not compelled to pay 10 per cent. for the use of the rails? Yes.
1820. Then does it follow that any man would agree to pay 10 per cent. for the use of rails, and allow them to lie idle in the way you state—would it not be a serious loss to him? It is very difficult to explain Mr. Rhodes' conduct, but after the best consideration I can give to it, the only conclusion I can come to is, that after a time Mr. Rhodes made up his mind to complain of the department, and to bring it under censure, and this charge respecting the rails was an easy one to make, because it was a difficult matter to meet; and that he has therefore made use of this cry of rails and chairs in order to make an unfavorable impression. * and. It was a convenient source of complaint against the department, and especially against the Engineer-in-Chief.
1821. He would not profit much by making an idle complaint? He believed he would; he believed he would force the Engineer to substitute culverts for the wooden viaducts, and he has

Captain B. H. Martindale, R. E. has made every effort to make the department fail in their duty, even to bringing the matter to the Bar of this House.

1822. You believe that the substitution of brick culverts for wood would be a profit to the contractor? I believe it is the only reason for the proposal.

4 May, 1860.

1823. Would the filling up with solid embankments and brick culverts, substantially built, be less expensive than the wooden viaducts? I have not gone into the calculation; but, from the report of the Engineer-in-Chief, I believe it would have given a much larger profit to the contractor.

1824. You speak now from the calculation of the Engineer-in-Chief? I do.

1825. I think you will admit that it is a very singular course for any contractor to take to incur an unnecessary expense to a large amount for the use of rails he does not want? I think it a very improper course; but I say this, that Mr. Rhodes has always had rails enough, if he had arranged his work properly, to have carried out his work efficiently.

1826. Do you know what length of rails we have in the Colony towards the fifty-four miles of railroad which has been authorized by Parliament? As nearly as possible fifty-three miles.

1827. Nearly the whole length? Nearly the whole length for the fifty-four miles, but the entire extensions are sixty-eight miles. The whole of the rails are either shipped or in process of shipment from England.

1828. What is the price you have been paying in England for rails? The price has varied from £7 15s. to about £9 per ton.

1829. Are there any peculiarities in the rails? No; some few of the rails have had iron of a superior description put into them, and two miles I think have been steeled, which is a process lately introduced and very highly spoken of.

1830. What is the price of those which have been steeled? I do not remember, it was a special price.

1831. When were you over the Southern and Western Extensions last? I was over the Southern, as far as Douglas Park, somewhere about a fortnight or three weeks ago. I have not been over the Western I think since last January.

1832. The Western Line is progressing towards completion, I believe? I have not seen it for some time.

1833. Have you any report as to when it is likely to be completed? The last report I had was that the progress upon it was exceedingly unsatisfactory.

1834. Will you describe what you mean by exceedingly unsatisfactory,—no doubt the report gave some details? The report shewed me that there was little or no fencing going on, that very few bridges were in progress, and that the number of men employed on that occasion was by no means so great as it might have been.

1835. Do you know the kind of bridges on the Western Line between Blacktown Road and Penrith? Pile bridges, similar to that. (*Referring to the model.*)

1836. Are there some culverts on that line? Yes, there are.

1837. Do you know whether these culverts have been affected by the recent floods? I have no report of their being affected; I have no doubt I should have heard if they had been.

1838. I have in my hand a letter received from Penrith to-day, written by a Member of this House; and he states, "The culverts on the line between Blacktown Road and Penrith are wholly insufficient for the purpose, especially at two points—Rope's Creek and Hillend,—they are so small that they are simply absurd." This is with reference to the recent floods, the writer having passed over that district within the last day or two? I have had no report, but I think it quite possible it may be true. All the experience we have hitherto had since I have been in the Colony has shewn the necessity of increased water-way.

1839. Have you seen the bridge over South Creek, which, I believe, is the most formidable watercourse on the line? There was one in course of erection, either at South or at Rope's Creek, when I passed there. I have not seen it since its completion, certainly.

1840. It is stated that the piles of that bridge do not go more than three feet into the earth, in the creek itself, before they rest upon the rock—that the piles there, some twenty or twenty-five feet high—nearly as high as this chamber, are held by entering the earth about three feet—are you aware of that circumstance? I heard it stated here; if it is so I should say the inspecting officer on the spot, who had allowed it, had grossly neglected his duty in not reporting it to the Engineer-in-Chief.

1841. This letter, alluding to Mr. Whitton's evidence, confirms the statement; it says, "It is the fact that they have only held three feet before they touch the rock"? I should say there was great neglect of duty on the part of the inspecting officer in not reporting it; and I think, also, there was great impropriety, on the part of the contractor, in doing such work. For any contractor of high standing to do such work is very improper, for, if he knows anything about it, he must know that he had no right to do it.

* work.

1842. This is what the letter says—and it is written in consequence of the writer having read Mr. Whitton's evidence—"The piles have been driven down on to the rock; but, when the specified quantities of earthwork are removed, they will not have more than three feet of earthwork to retain them in their position"—would it not be likely that a flood coming down that creek would carry the bridge away, if the piles had held only of three feet of earth? If the statement made is correct, I should say the bridge is insecure.

1843. Mr. Rhodes gave evidence to this effect, and it is stated on this authority? I am surprised that Mr. Rhodes should give evidence that he has done such work.

1844. He contends that his work is in accordance with the plans and specifications? Yes; but it is singular that a contractor of such high character, and who takes such high grounds in finding fault with the wooden viaduct, should yet carry out what he must know to be thoroughly bad work.

1845. According to your evidence, he does not get much encouragement in objecting to carry out

out the works he is ordered to carry out? Mr. Rhodes has never been ordered to drive piles three feet, I am sure.

1846. How can he drive them farther if they then come to rock? If Mr. Rhodes found he came to rock he should have stated the fact, to give the opportunity of altering the construction of the bridge, and, if he had wished to do his duty, I believe almost any contractor would have done so; but the blame, of course, is not the contractor's, but the inspecting officer's on the line.

1847. As far as the contractor is concerned, is not what you complain of his not having done precisely of a similar nature to that which you complain of his having done on the Southern Line? I think not; if Mr. Rhodes believed the viaduct to be insecure, he was perfectly justified in saying it was insecure; but when he had said so—when he had drawn attention to it, and was told to go on with the work, he was relieved of responsibility;—his duty was performed.

1848. With reference to this viaduct at South Creek—the statement that the longest piles in that creek do not have a hold of more than three feet, and also with reference to the statement that the brick culverts are insufficient for the flood-water—shall you cause a report to be made? Certainly.

1849. Perhaps you will append that report to your evidence? Certainly. (*Vide Appendix A.*)

1850. With regard to these wooden viaducts on the Southern Road—is it the case that in all of them, whether large or small, the timbers are precisely of the same size and strength? I believe the piles are all twelve inches by twelve. I think in some of these viaducts of shorter span there is only a single instead of a double beam, if my memory serves me right.

1851. I am told that between Menangle and Campbelltown there are between sixteen and seventeen wooden bridges of similar construction to that; that some of these are thirty feet high, and some only ten feet high; and that in all cases the piles are of the same strength, and the superstructure just as strongly put together, whether lofty or low, whether lengthy or short? I think it probable that the piles are of the same scantling, in order to get good old wood of large size. I believe, speaking from memory, in some of the viaducts with small spans, the superstructure consists of a single instead of a double beam, but I am not certain, I am speaking from memory.

1852. Is it not necessary in wooden structures of that kind to have the strength of the timber proportioned to the size of the superstructure, so as to sustain an even and uniform strength all through? The timber, of course, must be strong enough for the greatest span and height. There can be no objection to have it over strong for the lesser spans and heights.

1853. Are the openings between the piles the same in all these bridges, whether large or small—the distances between the piles I mean? I think so.

1854. Suppose some of the smaller bridges have the piles much closer together than the larger ones, can you give any reason for that? If it is so no doubt there is a reason. I am not aware that it is so, nor am I aware of the reason if it is so.

1855. Are you not aware that some of the smaller bridges have the piles closer together than the lofty bridges? I am not.

1856. Well, it is the case? Very possibly.

1857. There is a bridge which I saw with my own eyes the other day—it is at 21 miles 25 chains on the line, a little beyond Campbelltown, which is only twelve feet high—that (*referring to the model*) being thirty feet high, and the piles are of the same strength and thickness as in that. Can there be any reasons for that—for the bridge which only goes over a little dyke being made so strong compared with the larger bridges? Probably the piles are of the same scantling, because it is the best size to get thoroughly good timber, and the superstructure, I should imagine, would consist of one beam instead of two, as in the larger bridge.

1858. I am speaking of the piles being close together? I presume twelve feet would be sufficient water-way, and there would be no occasion then to have twenty feet.

1859. But where this bridge is constructed, near Glenlee, it is only over meadow land, where there can be no large stream of water, and the openings there are twenty feet? But they are wanted for other things—for a road, a cattle track, and also to save the necessity of taking out side cuttings.

1860. Must not a superstructure of that kind, resting on twelve-inch piles, the roadway being the same width, be much weaker by having the openings between the piles twenty feet apart, when the height is thirty feet, than a bridge of much smaller dimensions—of one-third the dimensions—even with the piles the same distance apart? Not if this viaduct (*referring to the model*) has double, and the other viaduct single beams. The double beams will bear ~~four times the weight~~ of the others.

1861. But surely the support of a superstructure of this kind should be close in proportion to its height? But the supports of this are amply strong enough.

1862. What is the use of putting more in the smaller bridge? Because, as I have said, timber twelve inches by twelve is the best size.

1863. But that is not the point, there are more piles in the shorter than in the longer bridge? Not more in number?

1864. Yes, at every twelve instead of at every twenty feet? Exactly, because the ways are smaller.

1865. But what is the use of having them if the smaller number is sufficient for the larger bridge? I cannot say what is the object. I have no doubt the Engineer-in-Chief will be able to explain satisfactorily. I dare say you would get the evidence better from him.

1866. I do not know that I make myself sufficiently intelligible—You say, and so Mr. Whitton says, the piles are amply strong enough, as I understood, to bear eight times the weight that will ever go over them? Yes, the superstructure and piles.

1867.

Captain B. H.
Martindale,
R. E.

4 May, 1860.

• more. • than.

Captain B. H. Martindale, R. E. 1867. If that be the case, what is the use of putting nearly double the number of piles in a short bridge to that you put in a long one? This bridge has double beams, the other has single.

4 May, 1860. 1868. How can that affect the matter? It affects the weight the bridge will bear.

1869. I cannot see how that affects the supports? These supports (*referring to the model*) are strong enough for anything; the only result of your question would be that the others would be too strong.

1870. That is precisely it—if these are strong enough what is the use of making others too strong? Because timber of twelve inches by twelve is the best.

1871. What is the use of using double the number that are requisite? There are not double the number; there would be double the number if there were double beams.

1872. There is double the number of piles nearly—if the supports of the large bridge are sufficiently strong why should double care be taken to strengthen the shorter? I believe the whole of the ¹⁰piles were ordered twelve by twelve, because it is considered that ironbark of that size is the best, the soundest, and the hardest.

1873. It is possible still that I may not be understood—in this bridge I am referring to, where there were piles twelve feet apart, it is not merely of one opening, but a viaduct with several openings? I quite understand.

1874. Instead of a number of openings like that (*referring to the model*)—there are four or five openings? I believe the reason is what I have stated.

1875. Do you consider that it is your duty to inquire after the other engineers who hold situations subordinate to that of the Engineer-in-Chief? No. Perhaps I may explain to the Committee the organization of the department. The Railway Department is divided into the following sub-branches:—New works and trial surveys form one; accounts, correspondence, the maintenance of the way and rolling stock on existing lines, the traffic on the Southern Line, the traffic on the Northern Line, and the store branch, each of these forms a sub-branch in the Railway Department, each is under some officer responsible to me for the working of that branch. I transact all I do with these branches with the immediate head, and hold him responsible for all the gentlemen who assist him in carrying out the duty of the branches, and, therefore, without the head of a branch is away from Sydney, I never communicate with any person under that head.

1876. You have stated already that you have entire confidence in Mr. Whitton? I have; for I believe there never was a better officer, nor a more upright man.

1877. You have confidence not only in his professional ability but in his judgment? Yes, and in his integrity.

1878. In that respect you are quite willing to leave the other officers under him to his direction and control? I am; I never could work the department at all without doing so.

1879. Are any periodical reports made to you, as the head of the department, to shew what is doing in the Engineer's department? I constantly see Mr. Whitton; and the whole work of my department is carried on by a series of minute papers. Each sub-head forms a minute paper; and if the Engineer-in-Chief wishes to communicate a matter officially to me he puts it on a minute paper; while, if I wish to ask for any information I state it upon a minute paper. Reports that come to me come to me in that shape always. Probably I see Mr. Whitton on different matters a dozen times in a day.

1880. That of course would not supply the information which reports at stated periods would? I have no reports at stated periods. It is the duty of every head of a department to keep me fully informed of every matter which it is necessary to bring under my attention.

1881. If any work is going on, is it not desirable that at the end of every six days, of every fortnight, or of every month, you should have a report, which should not be subject to accident, detailing the progress of the work and what is requisite for facilitating it? I think it might be a very useful thing to have; but the fact is, that every officer has so much to do, that it is as much as he can do to get through the daily practical work he has to do, and I never will trouble an officer for any merely formal matter that I do not think really necessary. If I want a report upon any matter I generally call for it.

1882. That can only arise from some occurrence directing your attention to a particular part of the work going on? Every branch comes under my attention in some shape during the day.

1883. Are you aware whether or not there are resident engineers on the works? There are inspectors of works.

1884. What are the inspectors? The one on the Southern Line is a man who has, I believe, been trained from his childhood in carrying out railway works, and who is thoroughly acquainted with every description of railway work; in fact, he is a very superior foreman or clerk of works. The one on the Western Line is a gentleman who has been a considerable time resident in the Colony, and is well known, Mr. Storey, at one time employed under Mr. Randle. The one on the Northern Line, Mr. Bewick, I believe, is equally well qualified. I believe Mr. Bewick is as competent to see railway works carried out as any man can be.

1885. Is it the duty of the engineer to set out the work for the contractor? Yes.

1886. Have all the culverts been set out? The whole of the line has been set out, and he has working plans, and sections sufficient to enable any contractor acquainted with the work to carry it on. Any minor information could be given him from time to time.

1887. I believe all the plans and specifications have not been handed to the contractor? Yes, I believe every plan has, with the exception of that of the Menangle viaduct.

1888. With regard to this point, is it not part of the agreement that the contractor is to have twenty-three months from the delivery of the last plans? Not in the sense of minor plans, but from the delivery of the general plans and sections of works, to enable him to proceed.

1889. Is that in writing anywhere? Yes, you will find it in the letter of the 21st April, 1859, from Mr. Rhodes to the Commissioner for Railways—"The time for the completion of the contract is settled at twenty-six months from this date; the Government undertaking to deliver over immediately the five miles Menangle Extension, to furnish us with plans and put us in possession of fifteen continuous miles of railway within two months, and the plans and lines for the remainder of the contract within three months." Captain B. H. Martindale, R. E. ⁴ May, 1860.

1890. Were all the plans furnished within three months? No.

1891. Is not then the agreement broken in that respect? The whole of the plans for the Western and Southern Lines were furnished, I believe, within a fortnight of the time stipulated; about half of the plans for the Northern Line were furnished within a month of the time stipulated, and the remainder within another month, and I recommended the Government—finding that owing to two of the surveyors breaking down the plans had not been given at the exact date—I recommended the Government to give the contractor ^{four} 11 day for. days for every day's delay in giving the plans, although I did not believe that the delay was of any consequence to him when he had twenty-six months to do his work.

1892. Did the contractor accept that? No.

1893. However convenient that might have been to the contractor, would it not have been a serious loss to the country? The delay was unavoidable. The Engineer-in-Chief himself went out into the field to endeavor to get the plans in time. The assistants were the best that could be got at the time; they were entrusted with the work; but when their work came to be examined it was found to be incorrect and useless, and it was that which caused the delay. No officer could have controlled the breaking down of these men.

1894. Mr. Rhodes, when he was at the Bar, complained that the plan of the Menangle bridge—that bridge being the most important work on the line—was not furnished to him early. He says it is the practice for the contractor to have furnished to him the plans of the most important works at first, in order to enable him to make the most advantageous arrangements for executing those works—Is that the practice, do you know? It is; but the plan of the Menangle viaduct was not furnished to Mr. Rhodes for the reasons stated in his evidence by Mr. Whitton the other night. The delay arose from Mr. Rhodes wishing to charge a very undue price for the iron.

1895. With regard to this dispute about ballasting, what is the view you take of it—you heard Mr. Whitton's evidence the other evening? What is the exact point?

1896. Mr. Rhodes, as I understand it, complains that he has contracted for stone ballasting the line at a certain figure, and he feels himself aggrieved because he is not allowed to use any stone that turns up in the cuttings, he undertaking to supply the deficiency of stuff from side cuttings to fill up the embankment? There is no objection to Mr. Rhodes using the stone, the objection is to paying Mr. Rhodes for stone as if he had excavated and put it into the embankment; and the Committee will see that under the schedule of prices it would be impossible to pay Mr. Rhodes. It would be falsifying the accounts if we were to return 10,000 cubic yards of rock taken to embankment, when in fact it has not been taken to embankment.

1897. You concur entirely in the evidence of Mr. Whitton upon that point? I concur in this, that it was impossible to pay the contractor for the stone he had taken for his own purposes, as if he had taken it out of cutting and put it into embankment.

1898. If he had made up the embankment in the same way as if he had buried the stone in the embankment, could the public have suffered? Then he would not have done the work for which he would have required a certificate. If we had paid him anything, we must have paid him for the side cutting.

1899. Did he not propose to take from side cutting the same amount of stuff as the stone he reserved for his ballasting? Exactly; but side cutting is worth 1s. 9d. a yard, and excavation of rock taken to embankment 4s. 9d.

1900. Exactly, and in that way it would have been an advantage to Mr. Rhodes, but would it have been any loss to Government if he had made the embankment of earth as well as if the stone had been buried there? The Government had a right to a fair share in the advantage.

1901. I can understand the basis upon which you put it in claiming a share of the advantage, and I am not prepared to say but what your view is correct, but what I want to elicit is this,—whether what Mr. Rhodes asked, although an advantage to himself, would in itself have entailed any loss on the Government? Clearly, because the Government need have paid him only—supposing they had paid him anything—1s. 9d. for the earth from side cutting, and the Government would have saved 3s. upon every yard.

1902. Could not Mr. Rhodes insist upon carrying this rock to embankment? No, he could not; the Engineer-in-Chief might have ordered him to take the stone and stack it wherever he liked.

1903. And then have compelled him to fill up from side cutting at a lower price? Yes.

1904. Then this is Mr. Rhodes position, that in excavation he cannot carry all the stuff he excavates into embankment at his own option? He is bound to set aside any material which he may be ordered to do by the Engineer-in-Chief, and if he find anything to the advantage of the country it is not unjust to the contractor to require that the country shall have the benefit.

1905. Then it is altogether optional on the part of the Engineer-in-Chief whether the contractor shall carry out the stuff from cutting into embankment, he can either compel him to carry it into embankment or to fill up from cutting? I forget whether the power to alter the contract is vested in the Engineer-in-Chief or in the Commissioner, but it is in one or the other—it is the same thing on principle. I am afraid I cannot find the particular clause.

1906. If you append it it will save time? I will append it then, if you will allow me. (*Vide Appendix B.*)

Captain B. H. Martindale,
R. E.

4 May, 1860.

1907. This is where I am at a loss myself clearly to understand the position of the contractor. I was under the impression, up to this point, that in carrying his cuttings through the rising ground, he could at his own will carry the whole of the stuff into the embankments; and in this matter of the stone I understood this, that when he found stone in the cutting, it being of no use buried in the embankment, he asked permission to use it for the ballasting which he had undertaken to do,—he at his own expense purchasing land if necessary, and taking the requisite amount of stuff out of side-cutting to fill up where this stone would otherwise have been buried. That is how I understood the case, and therefore I could not see, though this arrangement would be a profit to the contractor, in what respect it would be a loss to the country; and in that case I could not see why he should not be allowed any profit that would not entail loss on the country? The case is simply this—that if we pay him for this rock which is taken for ballasting, but which should have been taken into embankment, we are paying him for work that he never does. According to the schedule of prices, he is only entitled to be paid for work which he does, at the rate stated in the schedule; and if, in this case, we paid him anything at all, what he ¹²was entitled to be paid for ¹³was for the ¹⁴stuff taken from the side cutting to the embankment, for which there is a price specially named in the schedule. But the question arose, whether the gift of the stone to him was not more than equivalent to the cost he would be at for the ¹⁶stuff obtained from the side cutting to replace the stone in the embankment.

¹² would be.
¹³ would be.
¹⁴ earth.

¹⁵ earth.

1908. Has the contractor ever pointed out to you that some of the culverts on the lines were too small for the water-way—that they would not be of sufficient capacity? I do not remember it in any of the letters.

1909. Were any of the culverts altered at different times after their first design? Some have been altered; some have been increased in size.

1910. What have been the effect of the late floods upon that portion of the railway which is finished? On the existing line?

1911. Yes? Between Ashfield and Homebush two double culverts blew up, carrying, in one case, about 20 feet wide of the bank away with it; and in the other case, about 50 or 60 feet away. At Duck River the embankment under the down line was seriously injured; and the embankment under the up line was swept away, and the rails are now lying nearly on a level with the river. At Cabramatta Viaduct, beyond Fairfield, the formation and the ballast were washed away for a considerable extent; and the whole of the line from Sydney to Liverpool has received a good deal of injury from the washing away of the ballast. Between Liverpool and Campbelltown there is one bridge, at Macquarie Fields, with three piers washed away; there is a second bridge entirely washed away; and beyond that, in several places, there is a large amount of formation, and there is a large amount of ballasting washed away. The injury done to the line is very considerable.

1912. Are the repairs which have been effected of a temporary character, or are they of a character that will put the line in as trustworthy a state as before the floods took place? The repairs to the two places where the double culverts blew up are of a temporary character; but they will be immediately succeeded by works of a permanent character, which will improve that part of the line. The embankment at Duck River is permanently made good, and the formation and ballasting to Cabramatta Viaduct is made good. Beyond Liverpool no repairs have yet been commenced. When the repairs are commenced, the first work done will be of a temporary character, to enable the line to be opened again, and they will be followed by permanent works.

1913. When you say that some of the repairs will be of a character to improve the line, do you mean to say they will be improvements upon the state in which it existed previous to the floods? Yes. For instance—where the double culverts were we shall put in timber viaducts such as this (*alluding to model before the Committee*), to give more water-way.

1914. You consider them an improvement? I do.

1915. How long do you suppose these viaducts will last—timber viaducts of that construction? I see nothing to prevent these ironbark viaducts lasting for half a century with the care that is always taken of railway works; and I may take this opportunity of pointing out to the Committee that the only statement given about these viaducts at present is this, that in course of time they may become dangerous if not repaired. Now anybody at all acquainted with railway works knows this, that the repairs are incessant, that not a day passes that the whole line is not gone over to see if any little repairs are needed, and that when needed they are done at once; and, therefore, the evidence that the viaducts will become unsafe if not repaired will only amount to this, that they are perfectly safe.

1916. Was not the evidence to the effect, that they would be unsafe, not simply unless they were repaired according to the present plan of construction, but unless some new form of construction was introduced? I did not understand it so. I understood the witness to say that the vibration caused by the trains would make these viaducts unsafe if they were not kept in repair.

1917. I understood him to say that, unless struts were introduced and the bridge so strengthened, the construction would be unsafe; he did not allude to mere ordinary repairs. With regard to the dispute about the payment for rock and earthwork in the cuttings, the contractor claims to be paid for rock in some places where, I believe, the Engineer-in-Chief says that he only ought to be paid for earthwork? There is no objection to paying the contractor for rock at rock price; the objection is to paying for shale at rock price. Under the terms of the contract, the contractor can only be paid for shale as shale. But I am quite sure there need be no practical difficulty in this question of shale or rock. I am quite sure that if, when he felt himself aggrieved, Mr. Rhodes had sent in a statement shewing exactly how and where he felt himself aggrieved by the measurement of the subordinate officers, the Engineer-in-Chief would have gone on the ground and satisfied himself

- himself by actual inspection whether the measurement was fair or not. I went to Douglass Park the other day with Mr. Rhodes, his solicitor Mr. Want, the Engineer-in-Chief, and Mr. Willcox. At the first cutting we came to, the question was put to Mr. Whitton, "What should you measure there as rock?" Mr. Whitton said, "I should measure so and so;" and Mr. Willcox said at once, "I am satisfied——"
1918. Where was that? At Douglass Park.
1919. In the cutting near Spaniard's Hill? No, on this side Douglass Park. The next thing we came to was a matter that was quite open for discussion——
1920. Where was that? In one of the cuttings—I do not know how exactly to describe it—and Mr. Rhodes immediately said, in the most offensive manner I ever heard a man speak to a man in Mr. Whitton's position, "I tell you what, I will be paid for that as rock." Upon this I said, "Mr. Rhodes, if you are going to speak in that way I shall go home, I will not be a party to anything of the kind." What I wish to leave with the Committee is this—The attempt has been made throughout to make this appear as a sort of personal dispute between Mr. Whitton and Mr. Rhodes. It is no such thing. There is no difficulty in working with the other agent of Sir Morton Peto and Co., and if Mr. Rhodes acted as the agent of Sir Morton Peto and Co. should do, there would be no difficulty in this case; and I say it after great consideration and very anxious thought as to what my duty was in the matter.
1921. Where do we find that the terms of the agreement include shale among the substances for which Mr. Rhodes is to be paid as for earthwork? In the specification.
1922. Are these the specifications sent home to London? They are almost identical.
1923. Are they the identical specifications sent home to London? I believe one clause is varied—a clause of detail in reference to the slopes. I am speaking from memory, but I believe they are otherwise identical.
1924. Are these specifications included in these various letters which you say, taken together, constitute the agreement? You will find it referred to both in the schedule of prices first submitted by Mr. Rhodes, and then in the schedule of prices agreed to between the Government and Mr. Rhodes, both of which contain a provision that the works are to be carried out in strict accordance with the plans and specifications.
1925. What page? Page 3 and page 5. "I hereby propose to execute the whole of the _____ required in the construction of that portion of the Great _____ Railway, _____ comprised in contract No. _____, commencing at or near to _____, and being a length _____ of _____, or thereabouts, in strict accordance with the plans and specifications."
1926. I do not see anything about shale? That is contained in the specification which he is strictly to follow, under that schedule of prices.
1927. The specifications are not here? The specifications are not here.
1928. What I want to know is, whether these specifications were really those sent Home to London, or whether they were comprised in the documents laid before Mr. Rhodes at the time the original contract was entered into? The specification was shewn to Mr. Rhodes by the Engineer-in-Chief before he took the contract, and is as nearly as possible identical with that sent Home.
1929. These letters cover that identical specification? They do.
1930. With regard to Mr. Willcox, who is conducting the works on the Northern Extension, have you had any disputes with him? Yes.
1931. Of a similar character to those of Mr. Rhodes? No, very different.
1932. Is there a better understanding existing between the Government and Mr. Willcox, and between the Government and Mr. Rhodes? I believe very much better. I do not think I have had half a dozen letters from Mr. Willcox since he came out.
1933. It was stated in evidence by Mr. Whitton, that he was in possession of information that Mr. Rhodes was ordered Home, and to turn over the contract to Mr. Willcox—Do you know anything of that? Simply at second hand.
1934. What do you mean by second hand? My information is derived from Mr. Whitton.
1935. Do you know how the information has been derived? I believe Mr. Whitton was made acquainted with the fact by private letters from Home.
1936. From the house of Peto and Co.? I do not know.
1937. Have any letters ever been written from the Railway Department here to Sir Morton Peto and Co., suggesting the propriety of removing Mr. Rhodes? Not that I am aware of; but I think it is probable that but for the numerous changes of Ministry that have taken place such letters would have been written.
1938. Then these numerous changes of Ministry must be an inconvenience to the Railway Department? Yes, they are.
1939. They must interfere with that beautiful system of concentrating one mind on the whole works of the Colony? No doubt.
1940. Both the Railway Works and the Railway Department would go on so much better if there were no Ministerial changes? I think the railway works would go on better if there was a permanent Ministry.
1941. Might I ask, supposing that the present Commissioner for Internal Communication had the entire control of these works, and that my honorable friend near me was a permanent Minister, whether things would go on well then? I do not quite catch the question.
1942. I say, supposing the present Commissioner for Internal Communication had entire charge of the railway works, and my honorable friend who cheered just now was a permanent Minister, would things go on better? Was he the Minister for Public Works?
1943. No, I think it was the Minister for Lands? I presume the Minister is necessary as the head of the department; but I think a permanent Ministry would be a great advantage.
1944. Were the specifications you alluded to just now, the sections, and the disposal-sheet ready

- Captain B. H. Martindale, R. E.
- 4 May, 1860.
- ready when you entered into the contract with Sir Morton Peto and Co.'s agent? The specification was; the disposal-sheet was not.
1945. When was that ready? It was ready at different times. Whenever a portion of the line was proclaimed the disposal-sheet for it was ready at the time. The line was proclaimed in lengths, at some interval between each length, and in sending the plans to the contractor, they were accompanied by the disposal-sheet.
1946. Was it not an understanding when the Government wrote Home to Sir Morton Peto, that he should be allowed to enter upon these railway contracts without competition? Yes.
1947. And was not Mr. Randle invited to compete for the contracts? No; never in any shape nor by any person to my knowledge.
1948. What was the position of Mr. Randle in the matter? Mr. Randle, or rather Mr. Gibbons, sent in a tender to execute the whole of the railways in New South Wales, at a certain schedule of prices, and he subsequently sent in a second letter, modifying that tender. I thought it my duty to lay that offer before the Government; but it was not invited by me, nor by anybody in the department, nor to my knowledge by anybody connected with the Government.
1949. Did you bring this offer of Mr. Randle's or Mr. Gibbons' before Sir Morton Peto and Co.'s agent as a reason why they should submit to lower terms? I brought it before him as being the market price of the value of the works at that time.
1950. In what time do you think the line of railway to Picton will be open? I think if it goes on at the present pace, it will not be open for the next twelve months at any rate.
1951. When ought it to be open? In twenty-six months from the 21st of April, 1859. I think that will be the 21st June, 1861.
1952. Did Mr. Rhodes at any time offer to get the railway open at a much earlier date, provided that certain facilities were afforded him? I do not recollect any such offer having been made. I have heard Mr. Rhodes make statements here that he could have it open by September, if he had the rails and chairs, which I think he could not possibly do. I believe it to be quite an incorrect statement.
1953. I do not very clearly understand this matter about the disposal-sheet, but as far as I do understand your answer, could you not vary it from time to time so as to affect the interest of the contractor in an improper way? I dare say we could, but we never should.
1954. You have his interest, to a certain extent, in your power, if it is made out in the way you say? I think so.
1955. Is that right? I think it is the case in every contract that is ever taken. If a man builds a house he generally employs an architect, and the contractor is practically subject to that architect; and there is no doubt the architect can make things very uncomfortable for the contractor if he goes to work about it.
1956. You have before you a paper which was ordered by the Assembly to be printed on the 18th April, containing a letter from Mr. Rhodes and a report from yourself? I have.
1957. Have you any objection to state whether you advised the publication of this letter in its present form? I did advise it.
1958. Do you not think this is very unfair to the contractor to publish one letter, out of a large mass of correspondence, with an *ex parte* report of this kind, which in no way forms any part of the correspondence, and with these running annotations? Not in the least, and I will tell you why. It is a matter of notoriety, that in the clubs, in the streets, by advertisements in the newspapers, and by letters in the newspapers, Mr. Rhodes has spoken in very harsh terms of the Railway Department, and especially of Mr. Whitton; and the attempt, as I before said, has been made to make this appear a personal quarrel with Mr. Whitton. Mr. Rhodes wrote this letter which has been published, as a summing up of all his grievances, as I understood, of all the statements that he had to make against the department. And the Committee will remember that we as a department have hitherto had no possible means of answering the statements made against us for months past. We cannot from our official position write to the press; we have not the time, and certainly not the will, to go about from place to place communicating with individuals, or making public our grievances or our replies to grievances; and I knew from the extremely voluminous character of the correspondence that the chances were very great that no gentleman having any occupation of another kind would read it through. It appeared to me, therefore, a fair thing, and the only fair thing, that the statements in Mr. Rhodes' letter—of which I may say he thought so much that he sent a second copy to the Governor General—should be laid before this House and country, with the notes that the Engineer-in-Chief might wish to make upon it, and my own observations in reply. I thought that the fairest thing, that we might at any rate, in some shape or other, have the privilege of replying to the statements made against us; because, up to this time we had contented ourselves with going on perfectly quietly, doing our duty, leaving it to time to bring out that we have been doing our duty, and simply caring to keep the Government informed that we were doing our duty, and nothing but our duty to this country, which has entrusted us with the carrying out of these works. These were the notions that led me to advise the publication of that letter, and my report, in the shape in which they appear.
1959. Have you any objection to state how this document in its present form was concocted—for instance, there are a number of annotations, some signed "J. W.," and others signed "B. H. M." I do not pretend to know what those initials mean? The letter was sent by me in the first instance, to Mr. Whitton, for any observations he might wish to offer. All the notes signed "J. W." are Mr. Whitton's notes, and I put my own notes upon it, not intending at the time to take any further trouble about it. But I subsequently thought it wiser once for all to draw up a statement for the information of the Government as to what the real state of the case was between Mr. Rhodes and the department; and that led me to make the report which appears in this paper.

1960. With regard to the style of these annotations, do you think it is quite the thing for a paper to be laid before Parliament, affecting an important contract of this kind. I will call your attention to a specimen at page 3—you will find at the foot of the page the following note numbered 18, "This untrue.—J. W." "19. This statement is wholly untrue.—" "J. W." "20. This statement is most untrue.—J. W."? Well, I think it might have been better to have used more official language, but it is very hard for a gentleman placed in Mr. Whitton's position, when he is accused of untruth, when he is accused of erecting unsafe works, and when the statements are distinctly very incorrect—it is very hard for him to use any language but that which expresses what he means, which is that the statement is untrue. Captain B. H. Martindale,
R. E.
4 May, 1860.
1961. With regard to this stonework, has Mr. Rhodes been paid for any of the stone which has been taken out of the cuttings and stacked? I am not aware that he has. I saw some stuff that Mr. Rhodes had taken out, under the impression that it was stone, sometime back, but it was all disintegrated, it was all frittering to pieces.
1962. Where was that? On one of the cuttings on the Southern Line.
1963. Do you recollect which it was? No.
1964. Then he has not in fact been paid for any stone taken from cuttings? He has been paid for all that he has put into embankment.
1965. But he has not been paid for any that has been stacked beside the line? He has had no orders to stack it; if he did it, he did it for his own pleasure and at his own risk.
1966. Do you know when the line to Penrith is likely to be opened? I do not. Mr. Rhodes is not bound to have the works on the Penrith Line completed until the same date as the Southern Line.
1967. I think you say you have not visited that line for a considerable time? I do not recollect having been over the line since last January or February.
1968. How often have you visited the Northern Line? I have been over the Northern Line I think, latterly, some two or three times.
1969. How often altogether since it was commenced—the new line of extension I mean? I think not more than two or three times. It is very seldom that I can get away from my office duties to go over the lines; I do so whenever I can; and during the last recess I visited and inspected all the lines.
1970. Your duties, I should gather from what you have stated, are mostly in your office in Sydney? Mostly.
1971. And they are in the nature of direction to other officers? Mostly; in fact, entirely. But I do in fact take every opportunity I can of visiting either railways, roads, or telegraphs, because without doing so I should find great difficulty in directing such a department as that with which this Colony has entrusted me.
1972. Have you any objections to state what knowledge you had of electric telegraphs before you arrived in this Colony? I believe I had a very good knowledge of them.
1973. Practically acquired? No.
1974. Not acquired from having had the superintendence of them? I never had the superintendence of electric telegraphs before I came here, but I believe I thoroughly understood the principles.
1975. *By Mr. Windeyer*: I understood you that the engineering work with which you were connected in England, before your arrival here was mostly of a military character? Yes; it comprised fortifications, and buildings, and waterworks; and my last duties were in designing works.
1976. Then all your knowledge respecting railways is either theoretical or acquired from books? There is nothing whatever in the application of engineering to railways to make it at all difficult to be comprehended by a gentleman who has been from his youth engaged in engineering works.
1977. But it is as I have stated, that your knowledge respecting railways is theoretic, or at most acquired from books? Decidedly.
1978. You have never been employed on any railway works in England? Never.
1979. It is not common, is it, to find military engineers engaged in managing railway works? It is very common; very much in the position which I now have. All the officers of the Board of Trade are military engineers, and it is their duty to inspect every new line of railway, to pronounce whether the works are safely and substantially executed, and whether they are or are not in a proper state to be opened for public traffic; and they must be fit judges, or they would have no right to pronounce an opinion. In India, the consulting engineers to the Government are all military engineers, and they have very absolute control indeed over the work of the civil engineers.
1980. But in all these cases in England the companies interested have the guarantee of eminent civil engineers whom they employ to look after their own interest? There is precisely the same guarantee —.
1981. I wish you to answer my question. Is it not the fact, as I have stated, that in England all the Railway Companies have their interests secured by the supervision of competent and eminent engineers of their own? Certainly.
1982. Have there not been instances where military engineers, on supervising these works, have pronounced them unsafe, and their decision has been afterwards over-ruled by other civil engineers? Not that I am aware of.
1983. You have heard such cases stated? I have not.
1984. Did you not hear one stated the other night in the evidence given? I did not.
1985. You will not undertake to say such is not the fact? There is no occasion for my undertaking to say so. I cannot state what is not the fact.
1986. On the whole, which are the most economical structures, viaducts of equal length constructed, as that (*the model*) is, of wood, or of earthen embankment? Embankment.
- 1987.

- Captain B. H. Martindale, R. E.
 4 May, 1860.
1987. Embankment is the cheapest? It depends upon where you have to get the earth from, the length of lead, the description of earth, and a thousand other things. It may or may not be the cheapest.
1988. If you were constructing any given number of yards of each, at certain prices, on the whole which would be the cheapest? Earthwork as a rule.
1989. The contractor generally is paid so much per cubic yard for earthwork? Yes.
1990. In a contract of this kind, would it make any difference in the expense of the work to the country, if the earth had to be brought a slightly longer distance? It would not make any difference, because the contractor is bound to take the earth any length of lead.
1991. Then it would not make any difference to an embankment at that particular place (Glenlee), whether the earth was brought from a hill immediately in the neighborhood, or from a place a quarter of a mile down the line? No, it would make no difference in the price of the earthwork.
1992. As a general rule which is the most stable, an earthwork or a timber structure? Earthwork.
1993. Then I presume that, as earthwork is more stable, and on the whole more economical, as a general rule, you would, unless special circumstances should require you to erect timber structures, adopt embankments of earthwork? Certainly.
1994. What would be the difference in expense between a given length of timber structure such as that, and the same length of embankment? I cannot tell you.
1995. *By Mr. Hoskins*: Have you not made a calculation? No.
1996. *By Mr. Windeyer*: Do you know the length of that bridge, the model of which is before us? No, I do not. I have already told the Committee that, as a rule, I do not go into these features. It would be utterly impossible for me to do so, besides that I should be doing the duty of the Engineer-in-Chief.
1997. Could you not give the Committee a rough estimate of the comparative cost of one hundred yards of earthen embankment, and one hundred yards of a bridge of that character? I dare say I could.
1998. What would be the relative cost, one to the other? I do not know.
1999. Could you not give an approximation? No, I should be very sorry to give an approximation.
2000. What is there in the peculiar character of the spot where that timber bridge is proposed to be erected (Glenlee), to have induced the Engineer-in-Chief to prefer it to an embankment of the same length? In the first place, there was space wanted for a road, for a cattle track, and for a water-way; and, in the next place, it suited the engineer, in the disposal of the earthwork, to have it there.
2001. What is the character of the country where that bridge is proposed to be erected? It is meadow land.
2002. There is no large creek there? No.
2003. There is no water-way at all, in point of fact? Yes, there is.
2004. There is no defined water-course? No.
2005. There is merely a little back-water, which naturally collects in any place where there is a slope? Certainly there is a run of water.
2006. What depth of run of water? Very slight.
2007. Is there ever such a run of water—have you the calculation there? I wanted to see what the area was. The area of water was somewhere between 100 and 200 feet at the last flood—very small.
2008. What sized culvert would take that off? I dare say a five-foot culvert would take it off—no, a five-foot culvert would not; a ten-foot culvert would.
2009. Would not only two spans be required for the roadway? One.
2010. There are ten spans in that? Yes.
2011. I suppose one would be sufficient for the cattle track, and one for the road—what necessity is there, then, for erecting a structure like that, in preference to one of earthwork, which, you say, is more durable and less expensive? It went in with the disposal of the earthwork; and although one bay is sufficient for the road and one for the cattle, there is no reason why more should not be given.
2012. Has the proprietor of that land made any special request that he should have that space left open? No special request; but in going through private lands we always ascertain what the wants of the proprietors are, and endeavor as far as possible to meet their wishes. Glenlee is a great dairy farm, and it is a great object to have free access for their cattle.
2013. Do you think you are justified in putting the country to the additional expense of a timber structure of that length when one opening would do for that facility? I do not know what the difference of expense would be, and I do not know how many openings may be wanted for the cattle.
2014. Would not one do just as well as half a dozen? I dare say it would.
2015. Then there is no special reason why there should be a timber structure there? Yes, there is; it is wanted for roadway, for a waterway, and for a cattle track.
2016. Is there any special necessity for a timber structure of ten bays? No, except that it came in with the disposal of the earthwork.
2017. What do you mean by that? I mean to say that there would not have been earthwork to have made an embankment at this place without taking it from side cutting.
2018. Can you state what would be the cost, and why it should not be taken from side cutting? We did not want to take the land. Mr. Rhodes has taken the land without any authority.
2019. I suppose he is liable for that? He is.

2020. What would be the cost of the same work with brick piers? With a pile foundation it would be very much larger. Captain B. H. Martindale, R. E.
2021. Would there be any necessity for such a foundation? Yes; Mr. Rhodes himself told me that he would have to drive these piles 32 feet into the ground, and I am quite sure that a place where that would be requisite would not afford a natural foundation for brick piers. 4 May, 1860.
2022. Did Mr. Rhodes complain that he had no data for knowing what length of piles would be required? Yes, he did; and he was told it was his duty to find the lengths of them. I have since had information from one of the late Mayors of Sydney, that in his Mayoralty precisely the same application, to be furnished with the length of the piles, was made by a contractor and refused.
2023. About this ballasting, what are the grounds on which you decline to allow Mr. Rhodes the request which he made? The ground was simply this, that Mr. Rhodes wanted to be paid for rock which he took for his own use for ballast, and was paid for in the ballasting, as if he had taken it for the use of the public, and put it in embankment; and that was impossible.
2024. You made use of an expression just now that if you had acceded to his request you would be paying him for work that he never did? Yes, we should.
2025. What work that he never did would you have been paying him for? Work which he wanted to be paid for, and which he did not want to do. He was taking out rock which he wanted to be paid for as if it had been taken to embankment, when he was actually taking it for ballast, and wanted to be paid for it as ballast. We could not pay him twice over for the same thing.
2026. How would you pay him twice over for the same thing? If we paid him for rock as if put into embankment, and then for the same rock when used for ballasting, he would be paid twice over.
2027. Suppose that this rock had been earthwork, you would have had to pay him for a certain amount of earth deposited in the embankment? Not if it was not deposited there.
2028. You would have had to pay for a certain amount of earthwork deposited in the embankment to make up the embankment? If deposited there. That is the whole point of the question.
2029. Of course, if the embankment never was made, you would never have had to pay him for it, that is what your answer comes to? Clearly.
2030. What difference would it make to the public where Mr. Rhodes got the ballast from? It would make a great difference if they paid him for rock which he never ^{took}.
2031. What difference would it make? It would make a very great difference in this case. ^{is put into embankment.}
2032. I want you to explain what difference it would make? Mr. Rhodes' proposal was this, that he should be allowed to take the stone for his use, that he should be paid for it as if he had taken it to embankment, and that he should be paid for it again in the ballasting; and that he would make up the embankment from side cutting at his own expense.
2033. If you paid him for that stone as ballast, you would not have to pay him for other ballast? No; but we should have paid —.
2034. Does not that follow? No.
2035. If you paid him for the stone as ballast, which came out of the embankment (? cutting), of course, if he used that stone, you would not have to pay him for other stone—is not that clear? Well, allow it.
2036. It has been admitted by Mr. Whitton—and of course you concur in it, as Mr. Whitton appears to be supreme in these matters—that there would be no special advantage in having this stone put into the embankment? No.
2037. It is all the same to the public, whether the embankment is made of stone or earth? Certainly.
2038. Then if Mr. Rhodes chooses to go and buy land elsewhere to get earth for this embankment, why should he not be allowed to put aside the stone, if it is more convenient to him to use it as ballast? Simply because in that case we would be paying him 4s. 9d. per cubic yard for what was worth at the most only 1s. 9d; and for which, under the schedule of prices by which he is bound to work, he would be only entitled to 1s. 9d., which is the price for earth taken from side-cutting. We should, in fact, be presenting to the public false sets of accounts.
2039. How would you be presenting false sets of accounts? Because we should be paying the contractor for work which he never did.
2040. You are bound to pay him for the stuff he gets out of the cuttings? If he takes it to embankment. We are bound to pay him, under the schedule, for all work which he does and for no more.
2041. Do I understand the agreement to be this—that you are to pay him for certain earth work taken out of cuttings? If he puts it into embankment.
2042. Is there any special necessity for his absolutely putting it into embankment—there is no advantage to the public in his putting that very stuff that he takes out of cutting into embankment? He is bound to do it. He is bound to carry out the works according to his contract.
2043. I want to know why, if he finds a quarry in the cutting he is opening, he should be under the necessity of finding one elsewhere—why he should not be allowed to use the stone out of that cutting as ballast? He may do it; but he cannot expect us to pay him, and we have no right to pay him, 4s. 9d. a yard for work he does not do. And if we had done it, and it had come to the knowledge of this House that we had done it, there would not have been a Member of this House that would not have cried shame on us—there would not have been a Member of this House that would not have accused us of the grossest corruption and the grossest collusion with the contractor—not a Member.

- Captain B. H. Martindale, R. E.
 4 May, 1860.
2044. Why should it not be done if the public were not defrauded? The contractor cannot, and will not, as long as I am Commissioner of Railways, be paid for work that he does not do.
2045. Then you simply stand on the letter of the law? I stand on this—that I will not pay the contractor for work that he does not do.
2046. You stand upon the letter of the law when it is no advantage to the public, while it is a great advantage and offering great encouragement to the contractor, to meet with such a piece of good fortune? I do not do anything of the kind; I simply refuse to pay the contractor for work he does not do; and that I am bound to do by my duty.
2047. What are the exact terms of the contract with respect to the removal of earthwork into embankment? The contractor is to be paid 2s. 7½d. per cubic yard for earthwork taken from cutting to embankment.
2048. When this offer was made by Mr. Rhodes what was the proposition you made to him? I laid the matter before the Government, and the Government decided that Mr. Rhodes' proposal could not be entertained.
2049. Did you not make some proposal to him as to acceding to his proposition if he consented to stack up the stone in a particular way? Not that I am aware of.
2050. Has not Mr. Whitton told us that if Mr. Rhodes consented to stack up the stone, so that it might be measured, he might do it? I did not hear Mr. Whitton say so.
2051. Is it not in that correspondence? Yes, it is. There is this in the correspondence—this is entirely a different matter. This letter is simply a letter from Mr. Whitton, stating that he has no objection to his making use of the "stone or any other materials, for the purpose of ballasting, which you may find in any of the cuttings, provided that such stone or other material be approved by me before being so used, and any deficiency in the banks, caused by such use of stone or other material, being in all cases made up entirely at your own expense, from side cutting. It must be understood, also, that stone or other material, found in the cuttings, is to be used only in the construction of works appertaining to your existing contracts with the Government, and as the stone or other material which may be used for ballasting, &c., must be deducted from the quantities in the cuttings, I have to request that it may be stacked at your own expense, in some convenient form for measuring, so that there may be no unnecessary difficulty in ascertaining the exact quantity to be deducted." (Page 54.) That was in order that Mr. Whitton might not pay him twice over, once as rock from the cutting and again as ballast.
2052. What did you mean by saying it was quite a different matter? Simply this, that this letter is merely that Mr. Whitton desired to have the stone stacked in order that he might not pay for it as taken into embankment.
2053. What you said just now was incorrect, that the Government refused to accede to Mr. Rhodes' request? This is a refusal.
2054. Is not that letter a conditional allowance of it? No; this is simply to tell him to stack the stone so that Mr. Whitton may not pay for it as taken to embankment.
2055. That is allowing him to put aside the stone if he likes to use it on those conditions? Yes; but it amounts to a refusal to accede to the proposition which Mr. Rhodes made.
2056. Did you not hesitate to admit that there was any such letter? This letter is simply a letter refusing Mr. Rhodes the very thing he asked for, and not granting it in any shape whatever. It is granting him the use of the stone provided he makes everything up at his own expense.
2057. It is a consent to him if he likes to do it in that way? Exactly; but that is not his proposition.
2058. Did you not say just now that you did not recollect any such offer being made? Yes, and if you had had as many letters from Mr. Rhodes as I have had, you would not recollect them all very well.
2059. You have not published some of those letters? No. Perhaps you will allow me to explain that I advised the Government, when this correspondence was laid before the House, and when this note was¹⁷ made upon it, that the whole of the correspondence should be laid before the House.
2060. And your advice was not accepted? It was accepted, but there was not time to get the enormous correspondence ready for the House.
2061. Were there not two or three other letters relating to this matter which might have been published at the same time that that letter was published? I dare say they might have been.
2062. Do you know the locality we have heard spoken of as Harris' Creek? Yes.
2063. When there is a certain amount of water to be carried off, is it usual to arrive at the size of the culvert or water-way by estimating the area of the watershed? Yes.
2064. It is a common way? Yes.
2065. It is the usual method pursued by engineers? It is a common way.
2066. Can you inform me what the area of the watershed at this place is? No, I cannot.
2067. When you go over the works do you make it your business to see whether the different structures proposed to be erected are sufficient for the purpose required? I examine them to satisfy myself more as to the general progress that is being made than as to the stability of any particular structures.
2068. Were you aware that Mr. Whitton had not estimated the watersheds at any of those places where bridges and culverts are required? I have heard him say so.
2069. When did you first become aware of it? I believe when I heard him say so before this Committee, or a short time before that.
2070. Are you aware that a five-feet culvert was at first proposed to be constructed at Harris' Creek? I heard Mr. Whitton state so here.
2071. You were not aware of the fact before? No.

¹⁷in consequence of that advice

2072. You were not aware before that the size of this culvert had been doubled? I was made aware of it here. Captain B. H. Martindale,
R. E.
2073. Not before you came before the Committee? I believe Mr. Whitton mentioned to me that in some places where he had proposed to build five-foot culverts he had increased the size. May, 1860.
2074. Can you state whether the culvert proposed to be erected there will be sufficient to carry off the water—from your own knowledge? I cannot. I have not gone into the question in the least.
2075. Then I suppose that, since these doubts have been raised as to the propriety of making a larger structure at that place, you have not in any way satisfied your mind whether a larger bridge or culvert is necessary? I have only heard one doubt raised.
2076. Have you satisfied your own mind or not? No, my mind has not been troubled about it at all; I had nothing to satisfy.
2077. Can you state in any way whether the culvert proposed to be erected will be sufficient or not? No. I have not the slightest doubt but that it will be.
2078. Were you aware that the bridge which was proposed to be erected at Menangle would, if erected, have been swept away by the last flood? I have no doubt that if it had been in course of erection, it would have been.
2079. Were you aware, before Mr. Whitton stated it before this Committee, that the plans were of such a character that the bridge would have been swept away undoubtedly, to use his expression. Were you aware before that a structure of such a character was to be built there? I was. The Menangle viaduct is one of the matters I discussed with Mr. Whitton. It is a large work, and I have had frequent conferences with him upon it.
2080. But you were not aware at the time the first set of these plans were completed, that such a result would inevitably follow if the bridge were erected? I do not care what the structure was, it would have been swept away in such a flood.
2081. Just answer the question? I must be allowed to answer the question in my own way.
2082. If you answer the question first, you can give any explanations you like afterwards. I want to know whether you were aware, when the plans for the first bridge were completed, as a matter of fact, that the inevitable consequence of erecting such a structure would be, that it would have been swept away by the flood? My answer is just what I gave before, that whatever the structure—
2083. Will you answer the question. The answer is simple, Yes or No? I decline to give any answer except the one I am ¹⁸doing. ¹⁹ giving.
- Mr. Windeyer appealed to the Chairman.*
- Witness ordered to withdraw.*
- After some discussion, Witness re-introduced.*
- The Chairman of Committees:* Captain Martindale, the Committee desire that you will have the goodness to reply to the questions put to you directly, and if you wish to make any explanations, after you have given a direct answer, you will have an opportunity of doing so.
2084. *By Mr. Windeyer:* I want to know whether you are aware that the plans of the bridge which was first proposed to be erected at Menangle were of such a character that if the bridge had been erected according to those plans, and completed, and if a flood had come down the river of the extent to which the flood in February came the bridge would inevitably have been swept away? I think it would.
2085. I want to know did you see the plans—were you aware what the plans were? Yes.
2086. Then you had formed no calculation as to what strength of bridge was required to resist the floods at that place? The Engineer had.
2087. You had not satisfied your mind in any way? Yes; but the flood in February was five feet higher than the flood on which these calculations were based, and that additional height of water would have swept away the bridge.
2088. Then the calculations were all wrong? No; the flood of February rose five feet higher than the highest ever known.
2089. Then the calculations were wrong to that extent? To that extent.
2090. The bridge has since been raised seven feet? Yes.
2091. Has not the last flood risen higher than seven feet? I believe not. I have no report on the height of the flood as compared with that of February; but I have seen private letters which stated that it was not much higher.
2092. Would you undertake to say that the bridge which was proposed to be erected according to the second plan would be sufficiently strong to resist a flood? It would be strong enough—whether it would be high enough I do not know. I do not know how high the last flood was, and whether it would resist future floods I do not know.
2093. *By Mr. Kemp:* No one could tell? I believe not.
2094. *By Mr. Windeyer:* The second bridge you think would be high enough to resist the last flood? The present plan would be.
2095. This is the third plan, is it not? The third plan. The second was a mere substitution of timber for brick and iron.
2096. The second would not have been sufficient? No.
2097. But you think this third plan would be sufficient? Yes, as to strength I am sure it would be; as to height, I do not know how high future floods would go.
2098. *By Captain Russell:* You do not know how high the last flood went? No, only from hearsay; I have no official report.
2099. *By Mr. Arnold:* I understand, in regard to these bridges, that the calculations on which the plans were based were founded upon the experience of past floods? They were.
2100. You had no means then of ascertaining or knowing what future floods would be? We had not.

- Captain B. H. Martindale, R. E.
4 May, 1860.
2101. Nor have you now? Nor have we now.
2102. The experience upon which these engineering calculations are based must necessarily be the experience of what has already happened? Certainly.
2103. You have no means of foretelling what will happen? Impossible.
2104. Then, in point of fact, whatever precautions you take may be rendered useless by some unforeseen accident or flood, which it is impossible for human foresight to anticipate? They may be.
2105. Do you know a Mr. Fowler, who was examined at the Bar of this House? I have a slight acquaintance with Mr. Fowler.
2106. Do you know what Mr. Fowler's position is in the engineering world? I know that he is not a member of the Institution of Civil Engineers.
2107. Are you a member of the Institution of Civil Engineers? I am an associate.
2108. You are a Royal Engineer? I am.
2109. Is admission to the corps of Royal Engineers procured by competition among a number of students in engineering? By competitive examination.
2110. The commission is not procured in the corps of Engineers as it is in any other corps in the service? It is not, except the Artillery, who obtain their commissions by competitive examination also.
2111. The students who pass the best examination pass into the Engineer corps, and those who pass an inferior examination into the Artillery corps? Usually, yes.
2112. Are railway works in any countries of Europe entrusted to the construction and inspection of military engineers? They are in England to their inspection. No railway can be opened in England without the approval of the officers of the Board of Trade, who are all officers of my own corps.
2113. Do you know whether that is the case in other countries as well as in England? I think the supervision in France to some extent was at one time in the hands of military engineers.
2114. Is it the case in Russia, do you know? I do not know how Russian railways are managed.
2115. It is in British India? It is. The consulting engineers of the Government, who have very great power over the engineers carrying out the works, are invariably military engineers.
2116. Is Mr. Whitton a member of the Institution of Civil Engineers? He is.
2117. Does Mr. Fowler in any respect that you are aware of occupy a superior position in the engineering world to Mr. Whitton? I should say not, decidedly. I should say he did not occupy the same position at all.
2118. Has Mr. Fowler any right to be considered an engineer at all beyond the right which accrues from his assertion that he has made engineering his study? Not that I am aware of; but I know nothing of Mr. Fowler personally, except from one or two interviews I had with him.
2119. Will you state on what occasion you had those interviews, and to what purpose? Mr. Fowler was introduced to me some months ago by Mr. Whitton, who stated that he desired to be employed in the railway department, and Mr. Fowler, I think, brought me a letter of introduction from one of the Ministers. I understood Mr. Fowler to wish to be employed as resident engineer on the works for which Mr. Rhodes was contractor. I saw very grave objections to my recommending Mr. Fowler's application for the favorable consideration of the Government, and I informed Mr. Fowler that I did see grave objections, and that I was unable to recommend it. I had one subsequent interview with Mr. Fowler at his request. He wrote me a note to ask that I would give him an interview on urgent business, and I sent him a verbal reply that I would. Mr. Fowler stated that he thought it very desirable that the disputes or alleged causes of complaint on Mr. Rhodes' part should terminate, and he wished to know what course I thought ought to be pursued. My answer was, that the course for Mr. Rhodes to pursue was to sign his bond and contract, and to go on with his work according to instructions. Mr. Fowler then asked me if I would let him see the bond and contract and specifications, and I referred him to Mr. Want, the solicitor of Mr. Rhodes. Mr. Fowler subsequently wrote me a note to say that he did not wish Mr. Want to know what was going on, and would I give him the papers direct. My answer to that was, that I could be a party to no course that required any concealment. These were the only two interviews, as far as I am aware, that I have had with Mr. Fowler.
2120. You have no doubt, I understand from your statement, that Mr. Fowler offered his services to the Government as an engineer? Not the slightest.
2121. Was Mr. Whitton on friendly terms with Mr. Fowler at the time his services were offered to the Government? Not very, I think.
2122. Were they on such terms that Mr. Fowler calculated on Mr. Whitton's influence? No, I should say not. I cannot tell what he calculated on. I do not think he had any right to.
2123. Did Mr. Whitton recommend Mr. Fowler's appointment? He did not.
2124. Mr. Fowler, I think you say, was brought to you by Mr. Rhodes? He was introduced by Mr. Whitton.
2125. Did Mr. Rhodes exercise any influence that he might have in endeavoring to procure Mr. Fowler's appointment? Not with me; but I believe Mr. Rhodes mentioned his name to the Government.
2126. You have reason to believe that Mr. Rhodes did endeavor to procure the appointment of Mr. Fowler? I have.
2127. Why were Mr. Fowler's services refused by the Government? I could not recommend Mr. Fowler's appointment, because in the first place, he was a relative of Mr. Whitton, and

I thought it very objectionable to employ one relative under the other; in the next place, from inquiries I made, I considered it would not be for the benefit of the public service that Mr. Fowler should be employed in it.

Captain B. H.
Martindale,
R. E.

2128. I think I understood, from answers which you gave, that you were not the Engineer-in-Chief of Railways—that your services in the department are not exclusively confined to the superintendence of Railways? They are not.

4 May, 1860.

2129. And still less are they confined to the responsibility which attaches to the Engineer-in-Chief for Railways? That is so.

2130. Will you explain to the Committee what your position in the Department of Works is? My position in the Department of Works is Under Secretary of Public Works and Commissioner for Internal Communication. In the former of these two capacities I lay before the Minister all papers which have to be brought under his attention; and, as Commissioner for Internal Communication, I direct the different heads of the branches—the Railway Department, the Main Roads, and the Telegraph. Each of the heads of the sub-branches is responsible to me for carrying on efficiently the work of his particular branch, and he has the right and the liberty to see me at any time upon any work connected with his particular branch; and, as a practical matter, I do see them all almost daily—sometimes many times a day—on the different points on which they require decisions, or upon which they wish to relieve themselves of any responsibility which they think does not duly come upon them. And I may add that it is, of course, impossible for me to go into details of engineering matters. In all leading matters the Engineer-in-Chief consults me; but in the mere details—the sizes of culverts, or the peculiar construction of a bridge—he never consults me, nor do I ever think of interfering with him, except in case of appeal, such as the case of this Glenlee viaduct. And I am sure that the Ministers under whom I have served will bear witness that it would be perfectly impossible for me to attend to the duties I have to perform, and to attend to the details also of the different sub-branches.

2131. Has there been any intention on the part of the Government, at any time, to suppress any portion of the correspondence which has been alluded to as not having been published? Never. The instructions to the clerks have been to get it ready as rapidly as possible for the House.

2132. Is it the case that an extra clerk has been engaged for the purpose? Yes.

2133. The only reason why it has not been published is that it could not be made out in time? Because it is so voluminous.

2134. Are all the main matters in dispute between the Government and the contractors' agent summed up in his last letter, which was laid on the table of the House? Yes.

2135. Then the correspondence will only give more in detail the matters which are there summed up? That is all.

2136. In the case of rails, the use of which is given to contractors, is it not the case that it is very difficult to detect precisely what amount of injury is done to a rail, and to determine whether the injury is of such an extent as to justify the Government in calling on the contractor to make it good? Yes. A litigious contractor might dispute almost every case that the Government adduced of rails being damaged.

2137. If a rail was slightly bent, could it be possible to straighten it again so that in appearance no injury had been sustained by it? It would; but it would never be as good a rail.

2138. Have the Government now in their possession rails that have been so injured by the contractors? Yes.

2139. Which can be seen? Which can be seen.

2140. Is it the duty of the contractor, wherever he finds that the specification determines a work to be done in a certain way, which upon being done is found to be a disadvantageous way—is it his duty to report that circumstance to the Government? I think so; I think that any honest contractor would do so.

2141. In point of fact has not Mr. Rhodes remonstrated with the Government against works which he alleged to be unsafe? Yes, in the case of wooden viaducts.

2142. Has any discouragement been given to Mr. Rhodes to make any representation where he believes plans are of an unsafe character? I think not. Mr. Rhodes has not been encouraged to go on repeating complaints.

2143. In respect to the comparative strength of different bridges, I think it was stated that in some of the small bridges the span was smaller than in the case of large bridges—are you aware whether the plan of the small and large bridges is in all respects the same? It is not the same. In the large bridges there is a double beam; in the smaller bridges only a single beam.

2144. A certain amount of strength being required, in some it is given from below, in others from above? Both above and below.

2145. The necessary strength is given in different degrees in different bridges, some above and some below? Yes.

2146. Is it not the case also that the use of twelve-inch piles is resorted to, because, although smaller piles would be sufficiently strong, the lasting of the timber would be less, and the price would be very slightly diminished? It is so. Twelve-inch timber is taken, because it is about the best size we can get hardwood piles for these bridges.

2147. That is to say, a six-inch pile, even if strong enough, would not last anything like the same time as a twelve-inch pile? It is on that account that twelve-inch piles have been chosen—that they are more likely to last than smaller timber, and they are less expensive than older timber of a greater size.

2148. It is on that account that twelve-inch piles have been resorted to? Entirely so.

2149. In the matter of the difference as to the mode of paying for the rock which is used for ballasting,

Captain B. H.
Martindale,
R. E.

4 May, 1860.

ballasting, would you consider that, if a certificate were given by the engineer in compliance with the demand of Mr. Rhodes, it contained a fraudulent representation? I should; I should say it was getting me to pay for work that had never been done, under the certificate of the engineer.

2150. Would it not in fact amount to this, that it would represent that rock had been thrown into embankment at 4s. 9d., when in point of fact only earthwork had been thrown in, for which you are bound to pay 2s. 7½d.? 1s. 9d. from side cutting.

2151. That would be a misrepresentation, wholly independent of the advantage allowed to the contractor of taking from the cuttings the stone which he would otherwise be compelled to find as he could, by his agreement? It would.

2152. Was permission ever refused to Mr. Rhodes to make use of this rock that he found in the cuttings for the purpose of ballasting? No; he was directed by the Engineer to stack it, in order that he might measure it, and see what quantity was not taken into embankment, so that it might not be paid for, according to the schedule of prices, as if it had been taken to embankment.

2153. Then, the only difference is as to the mode of payment for a work to be done on a plan which is not contained in the schedule of prices at all? Yes.

2154. *By Mr. Hoskins*: I understood you to say that Mr. Fowler had applied for a situation under Government? He did.

2155. You are aware that in the House he stated that he did not? He did apply to me.

2156. Did he make a written application to you? No.

2157. Only a verbal application? Only a verbal application.

2158. You are aware that he said in this House that he did not make an application? I believe he did. He was introduced to me by Mr. Whitton as an applicant for employment, and Mr. Whitton can confirm what I say, that he did apply to me for employment.

2159. I understood you to say that you did not make any representations to Messrs. Peto and Company as to the incompetency of Mr. Rhodes? I am not in a position to make representations to Messrs. Peto. I make representations to the Government, and it remains with them to decide whether they will carry them out.

2160. Are you aware that representations have been made? I have not heard.

2161. Were you ever employed in the construction of any bridges? Yes, in England and abroad.

2162. For the Government? Yes, I have always been in Government employment.

2163. For what purposes were they required? They were draw-bridges.

2164. You have never been engaged in the construction of timber viaducts? I have not; but the principles are very simple.

2165. You say the contractors injure the rails—they never use locomotives in propelling dirt wagons? No, but they use very rough wagons, which are worse.

2166. Still the traffic is not equal to that which takes place when locomotives pass over the rails? But the rails are properly jointed and properly laid for the ordinary traffic; that is not the case when they are temporarily laid down.

2167. You think the rails are more damaged than they would be if they were permanently fixed and were employed as an ordinary permanent way? I do not know that they are more damaged, but they are damaged in some degree; and here, where we are so distant from the source of supply, it is our object to lay down the rails in the best possible ¹⁹way.

2168. How long do you consider rails will last in an ordinary permanent way before requiring replacing? They ought to last twenty or thirty years.

2169. Do you not think ten per cent. ample payment, then, for the short time they will be employed by the contractor? I think the remuneration sufficient, but Mr. Rhodes has never been short of rails. Every time Mr. Rhodes has applied to me for rails, I have found that he has had thousands of feet unemployed.

2170. You are aware that he has stated at the Bar of the House that he has been short? I am not aware of that; but I know that Mr. Whitton produced a return to the House shewing the quantity lying idle every month.

2171. I understood you to say that there would be danger from the vibration caused by the train in crossing the bridge at South Creek? I should say so, if the piles pass through only three feet of silt and then come on to the rock, most decidedly.

2172. Has no officer of your department represented to Mr. Whitton or to yourself that the piles have been driven only three feet? I believe no representation was made to Mr. Whitton until after Mr. Rhodes had stated in the House that the piles had gone down but three feet. If the case be as stated by Mr. Rhodes, I look upon it as very great neglect of duty on the part of the inspector.

2173. Do you not think it would have been the duty of the servant of Government there to have represented it to his superior? I say, if it be as stated, the inspector has been guilty of great neglect of duty.

2174. Is it not customary, previous to the erection of a bridge, to drive piles to test the depth to which they may be driven? The contractor should have driven a pile to ascertain that.

2175. Would you not consider an officer of Government in charge of such a work, who allowed such work to pass unreported, to be guilty of culpable negligence, and undeserving to be retained in the public service? If the fact be as stated by Mr. Rhodes.

2176. Are you not aware that the statement has also been made from another quarter? I should like to hear the statement of the person accused before I decided upon the matter.

2177. It was represented that the piles were driven not more than three feet in solid ground? I heard the statement.

2178. I suppose you will make inquiry into this matter? Most decidedly. I have no doubt Mr. Whitton is already making inquiry, and will report to me the result.

2179.

2179. Do you think a viaduct of that description, two beams is a sufficient stay, 298 feet in length, on an incline, and with a curve at one end? I have not the slightest doubt of it.
2180. Will not all the weight be upon the base? The weight will be transmitted through the piles to the ground. They are braced, and have double walings. I believe that to be a perfectly safe viaduct.
2181. Have you ever seen any in the Mother Country so long and so high as that? No; I believe that is the adoption of a new principle, but it is a perfectly safe bridge.
2182. Mr. Whitton stated in his evidence that there were plenty in the Mother Country that were not strutted. You think the interests of the public will not suffer by such a construction? I have not the shadow of a doubt about it; the Committee can test it at any time.
2183. You are aware of course that a bridge may stand the ordinary test of a train passing over it, which may not be able to bear the constant wear and tear to which it is liable by the traffic for any length of time? I am sure you are aware of the care constantly taking in repairing railway works day by day. I believe you may run any train at any rate over that bridge for the next six months without damage.
2184. Six months! But a bridge of that kind ought to last more than six months? Yes, but we do not run any very heavy trains in this country, nor at a very high speed. The trains are never very heavy, and they do not run at a greater speed than twenty miles an hour.
2185. You say you do not interfere with the details of the Engineer's office? Yes; there is an Engineer-in-Chief, and I do not interfere in any way except in case of appeal.
2186. Presuming that the agent of the contractor represented to the Engineer-in-Chief that he considered the works laid out were insecure, do you not think it would be his duty to report that to you? The moment the contractor appeals against the Engineer-in-Chief I interfere, but until he appeals I do not interfere with the details of the engineering work.
2187. I understood you to say that a brick culvert and embankment there, together with two arches for a cattle track and roadway, would be stronger, safer, and cheaper than a viaduct? I did not say that—I believe that sufficiently strong and secure.
2188. Do you think it cheaper? I cannot speak to the relative price.
2189. Do you think it as secure? I think it more secure than a culvert; but the culvert Mr. Rhodes proposed to substitute would not answer the purpose required.
2190. Of course the Engineer-in-Chief submits to you the probable expense of any part of the railway? Yes, all the expenditure. No officer has a right to spend a penny without he has some general or some particular sanction. That is a matter I retain studiously in my own hands.
2191. Did he give you the probable cost of the embankment and culvert? Yes.
2192. Mr. Rhodes has represented that an embankment with a culvert there would be cheaper and safer? I cannot say that I have been into the price. The question upon which he appealed to me was the safety of the viaduct, and I went closely into that, and satisfied myself that the viaduct was absolutely safe.
2193. You have not made calculations as to the bridges carrying off such floods as have recently occurred? I never made those calculations; I could not in my position.
2194. Did the Engineer-in-Chief? I believe if he did he must have been grossly wrong from what we have lately seen.
2195. Then it is possible that if we were to have a heavier flood than we have recently had that the whole of the bridges might be carried away? It is possible. I do not believe any man can calculate; but this has been my experience since I have been here, that so far from having too much water-way we have not enough.
2196. Do you not think it will be better in future to have a calculation of such floods? Certainly; that is the data we have always taken. At Menangle the highest flood that was known was taken, and the bridge was put above that.
2197. I presume you have known a number of practical engineers who have not been Members of the Institute of Civil Engineers—men distinguished in their profession? There are some; but the leading men are Members of the Institute, and it stamps a man as being well informed as to his profession.
2198. Have you ever seen an officer of the Royal Engineers in charge of large public works in England? I have; Colonel James was in charge of the whole of the dockyards in England. He was a Royal Engineer. The national defences of England are not small works.
2199. Were not private engineers consulted there? I believe in that case, at the time I am speaking of, the whole of the dock works were carried out by officers of the engineers.
2200. Did I understand you to say that the railways in India were carried out by Royal Engineers? By military engineers; they are the engineers of the East India Company.
2201. Is not the consulting engineer for the Great Indian Peninsular Railway a private engineer? Yes, no doubt; but checked and controlled by the Government in India in a very strict manner.
2202. With regard to this rock—you say that the interests of the public would suffer by allowing Mr. Rhodes to have this ballast, will you state what was the advantage to the public of depositing in the embankment this rock over clay? When that contract was made, the simple arrangement was that such and such cutting should be taken to such and such an embankment, without reference to its being rock, clay, or other matter, and the disposal-sheet is so made out that the whole cutting formed the whole of the embankment. The knowledge was not possessed whether it was rock or not.
2203. If Mr. Rhodes wished to use this rocky part, and deposited the same quantity of earth or clay in the embankment, would it be any disadvantage? Yes, clearly. There was no objection to his using it, the objection was to his using it and then calling upon us to pay for it in the ballasting.

Captain B. H.
Martindale,
R. E.
4 May, 1860.

so as rock taken
to embankment.

- Captain B. H. Maitindale, R. E.
4 May, 1860.
2204. *By Mr. Robertson:* It has been stated that the course pursued by Government of allowing their work to be commenced before the contract was signed was unusual and irregular, is it not the fact that the contract, No. 3, made in 1857, was so commenced before the contract was signed? That was before I came to the Colony, but I happen to know that it was so commenced.
2205. It has also been stated that the commencement of this work, in the case of Peto and Company, before the contract was signed, took place in our absence and without our concurrence—was that the case? Yes. The works were actually commenced in my absence, but the arrangement for handing it over to Mr. Rhodes was made in my presence and with my concurrence.
2206. The Government undertook to give Mr. Rhodes the line between Campbelltown and Menangle immediately? In carrying that out, of course he entered at once upon the work; I had no objection, and made no objection to it.
2207. It has been stated also that I improperly authorized the payment of money to Mr. Rhodes before the bond and contract was signed—was that the case—who authorized the payment? I believe the first payment was authorized by the Colonial Secretary.
2208. During my absence in the country? I am not certain.
2209. Who authorized the second? You did.
2210. Was this at the time that the differences in dispute between the Railway authorities and the contractor were before the Government for the Government's award—that they were unsettled in fact? I am not certain; I believe the differences were in existence, but I am not certain whether they had been brought before the Government.
2211. Was there, as a matter of fact, any payment made to Mr. Rhodes under the authority of the Cowper Government after Mr. Rhodes refused to sign the bond and contract? I think not.
2212. Who authorized the payment of money to Mr. Rhodes after his refusal to sign? I think, speaking from memory, Mr. Secretary Eagar.
2213. It has been alleged that no contract exists, is that the case? Both the Government and the contractor recognise the agreement contained in the letters as a valid contract.
2214. What say the lawyers? The lawyers say so too.
2215. Is it true that Mr. Secretary Eagar gave the first instructions for the preparation of the usual bond and contract, or is it not the fact that the bond and contract were prepared and ready before Mr. Eagar came into office? The first instructions for the preparation of the bond and contract were by the late Cowper Ministry.
2216. Is it not correct that the first instructions for the preparation of the bond and contract were given by the Cowper Ministry? Yes.
2217. In fact the bond and contract were tendered to Mr. Rhodes for signature before Mr. Eagar came into office? Yes.
2218. Do you remember a conference when Mr. Cowper, yourself, Mr. Whitton, Mr. Rhodes, and myself, were present at the Colonial Secretary's office, on the day that Mr. Gabrielli left the Colony? I do very well.
2219. Do you recollect that when Mr. Rhodes made some allusion to the papers that were sent to England that I proposed Mr. Gabrielli should be called in, as he was within the precincts of the building, to state why those papers were sent to England? I recollect very distinctly your suggesting to Mr. Rhodes to call in Mr. Gabrielli and Mr. Rhodes declining.
2220. You are perfectly clear that I offered when a doubt was expressed as to sending Home by Mr. Gabrielli the agreement and schedule of prices which had been submitted to them, that I proposed to Mr. Rhodes to call in Mr. Gabrielli, that we might have his evidence? I have a distinct recollection that you proposed to Mr. Rhodes to call in Mr. Gabrielli, and that Mr. Rhodes refused.
2221. You are aware that Mr. Gabrielli was at that time in Mr. Cowper's office? Yes, in the next room.
2222. *By Mr. Parkes:* How is Mr. Rhodes paid on Sir Morton Peto's account? On the certificate of the Engineer-in-Chief, by me, by a cheque.
2223. Is it the fact that he has not been paid upon the last certificate? He has not been paid for the month of April. I have not received his certificate yet.
2224. When ought he to have been paid? On the 26th of April.
2225. He has not been paid yet? He has not.
2226. What amount is due to him? I cannot tell till I see the certificate.
2227. How much is generally paid to him per month? It varies from £5,000 to about £10,000. He has sent in a claim for £15,000.
2228. Is the last bill for £15,000? The last claim for £15,000 has not the certificate of the Engineer-in-Chief. The certificate has not come to me. In fact, I know from different circumstances that the work has not been measured. The officer who usually measures his work was injured by the fall of his horse, and he was laid up for a few days. He has also been detained here a few days in case he should be wanted by the Committee.

APPENDIX A.

GREAT WESTERN RAILWAY.—SOUTH CREEK BRIDGE AND CULVERTS.

Captain B. H. Martindale, R. E.

Commissioner to Engineer-in-Chief.

4 May, 1860.

Minute 60-306.

Railway Branch,
7 May, 1860.
Bridge at South Creek

Statements having been made before the Legislative Assembly that the bridge is insufficient to carry off the flood waters, the Engineer-in-Chief is requested to furnish a report on these matters.

Mr. Whitton.
7/5/60.
R. Moody.

B. H. M.
7/5/60.

Engineer-in-Chief to Commissioner.

The following is the statement above referred to, relative to the Bridge over the South Creek, made by Mr. Rhodes on the 24th April, 1860, at the Bar of the Assembly, when giving evidence on the "construction and character of the Railway works now in progress":—

- 564. By Mr. Parkes: Will you describe the bridge at South Creek? This viaduct at South Creek is 176 feet long on the level; between the piles or props (12 in. X 12 in.) there are four openings over the creek. In driving these piles we have only driven them about 3 feet from the bottom of the creek, so that there is no stay whatever 3 feet under the surface; it is merely mud that it is driven into; therefore I consider there ought to have been a coffer-dam made.
- 565. What is the height of the piles? 23 feet 6 inches.
- 566. By Mr. Asher: Are they only driven 3 feet into the ground? They come to the rock 3 feet in the ground.
- 567. Does that refer to the whole of the piles? Three sets of piles.
- 568. By Mr. Garrett: How many sets of piles are there altogether? Nine.
- 569. By Mr. Windeyer: Are the piles shod with iron? Yes.
- 570. By Mr. Parkes: Those piles which only go into the earth 3 feet are the centre piles in the creek? Yes.
- 571. They are in the bottom of the creek? Yes; they are driven through the mud or slush 3 feet, and the shoes go into the rock a few inches.
- 572. By Mr. Asher: Were your instructions from the Railway Department to drive these piles in the way you have mentioned? Yes.
- 573. By Mr. J. Campbell: Are they driven down to the bed rock? Yes.
- 574. By Mr. Samuel: Do I understand you to mean that these piles have only three feet of mud to hold them? That is all.

By reference to the above evidence, it will be seen that Mr. Rhodes informed the Committee that three rows of piles were driven only three feet through "mud or slush" before reaching the rock, and that he had instructions from the Railway Department to drive these piles in the manner described by him.

Before replying to the above statement, it may be desirable that I should give a general description of the bridge referred to.

The bridge over South Creek is proposed to be built entirely of timber, having eight openings, each of 20 feet clear span. There are on the drawing furnished to Mr. Rhodes nine rows of piles, five piles in each row, three piles being driven perpendicular, and the two outside piles having a batter of 1 in 8. The whole of these piles are 12 in. by 12 in., and firmly bound together by two sets of double walings, and two sets of double braces. Each row of piles has a headstock 12 in. by 12 in., morticed to receive the tenon on the pile heads, which is also secured to the piles by 1 1/4 inch wrought iron spikes. On this headstock the corbels, 6 feet in length, 12 in. by 12 in., are notched and cogged, and carry the longitudinal beams forming the superstructure.

The superstructure consists of two longitudinal beams of ironbark timber, 12 in. by 12 in., extending the full length of the bridge, and placed 9 feet apart; on these beams close transverse planking 8 inches thick is laid and spiked to the longitudinal beams. Upon this planking are laid two other ironbark beams, each 12 in. by 12 in., and securely bolted with 1 1/4 in. wrought iron bolts, through the planking to the lower beams. Longitudinal timbers are then bolted to the planking, 14 in. by 7 in., on which the chairs are spiked that carry the rails.

On the 9th instapt, I carefully inspected the work done at this bridge, and found that thirty-six piles had been driven—a sketch of which I give below. The piles I have numbered, for the purpose of reference when stating the depth each pile is driven below the surface of the ground.

	Row 1.	Row 2.	Row 3.	Row 4.	Row 5.	Row 6.	Row 7.	Row 8.	Row 9
				22	29	36

	12	Upright "	* 12 6
	13	" "	* 11 0
	14	" "	* 10 0
	15	Battering "	* 9 6

* These piles will be 3 feet less in the ground when the diversion of the creek is made.

EVIDENCE TAKEN AT THE BAR OF THE ASSEMBLY IN REFERENCE TO

Captain B. H. Martindale, R. E.
4 May, 1860.

	No. of pile.	Description of pile.	Depth in ground. ft. m.
4th Row	16	Dwarf	10 9
	17	{ Raking pile, not driven into the ground, but framed into the dwarf pile	..
	18	Upright pile	12 4
	19	" "	12 4
	20	" "	13 0
	21	Raking pile, similar to No. 17	..
5th Row	22	Dwarf pile	13 3
	23	" "	4 4
	24	Raking pile, similar to Nos. 17 & 21	..
	25	Upright pile	8 2
	26	" "	7 9
	27	" "	7 6
	28	{ Raking pile, similar to Nos. 17, 21, and 24	..
6th Row	29	Dwarf pile	10 9
	30	" "	4 8
	31	{ Raking pile, similar to Nos. 17, 21, 24, and 28	..
	32	Upright pile	5 0
	33	" "	4 10
	34	" "	12 9
	35	{ Raking pile, similar to Nos. 17, 21, 24, 28, and 31	..
	36	Dwarf pile	11 8

In rows 7, 8, and 9, the battering piles only are driven, the least depth in the ground being 9 feet 6 inches, and the greatest 17 feet.

It therefore appears that the average depth to which the piles have been driven into the ground in row

No.	1 is	feet.	inches.
2	13	11
3	13	3
4	11	1
5	12	4
6	7	8
6	7	9

There are, however, four piles driven of the several depths of 4 feet 4 inches (No. 23); 4 feet 8 inches (No. 30); 5 feet (No. 32); and 4 feet 10 inches (No. 33); but these piles are not driven through "mud or slush," but through solid ground. As a proof, the dwarf pile, No. 23 (not carrying the weight of the roadway, but simply acting as a strut for the raking pile, No. 24), was driven 4 feet 4 inches into the ground with a monkey or ram weighing 24 cwt., it never went more than 2 inches to a blow, and diminished to 1 inch with a 12-foot fall; afterwards, went 3 1/4 inches with five blows, 1 1/2 inches with three blows, and 1 1/2 in. with four blows, and 13 feet fall.

However, when the nearness of the rock to the surface was discovered, the dwarf piles should have been omitted, and battering piles driven instead. I consider the inspecting officer to blame for not having drawn my attention to this matter, and I am surprised that such work should have been done by the contractor. At the same time, I must observe that, during the recent floods, the water was within 3 feet of the under side of the main beams of the superstructure; and although the walings and braces had not at that time been fixed upon the piles, no damage whatever was done to the bridge; thus shewing, that without either walings or braces, the bridge is strong enough to resist the pressure of the heaviest flood ever known in the Colony.

I must further observe that no directions were given by any officer of this department to drive the piles in the manner described by Mr. Rhodes. On the contrary, upon my questioning the inspector, as to several defects in the driving of the piles, I was informed that the matters pointed out by me had been named by him to Mr. Rhodes' agents, but that no attempt had been made to improve the work.

It will be seen, therefore, that the statements made by Mr. Rhodes as to the manner in which the piles are driven, and the instructions he received from this department, are incorrect.

I may also state that this work is being carried on in a most improper and unsatisfactory manner, and that it will be my duty to refuse to give to the contractor any certificate for this bridge until the whole shall have been completed in a proper and workmanlike manner.

With reference to the statements made relative to the insufficiency of the culverts on the Western Line, I have only to remark that, on the 10th instant, I carefully inspected the whole of the culverts on this line, and am quite satisfied that, during the recent floods, the culverts have, in all cases, been sufficiently large to carry off the flood waters without in the least degree obstructing the drainage of the country.

JOHN WHITTON.
14/5/60.

Submitted for the information of the Honorable the Secretary for Public Works.

Secn— B. H. M.
W. M. A. 15/5/60.

APPENDIX B.

EXTRACT FROM SPECIFICATION.

(Referred to in reply, No. 1,906.)

13. No addition, deduction, or alteration shall in any way vitiate or set aside the Contract; but any addition, deduction, or alteration shall be measured and allowed for according to the schedule of prices annexed to the Bond, or at a price to be agreed upon at the time.

F.

FRIDAY, 11 MAY, 1860.

Samuel Willcox, Esq., called in and examined :—

2229. *By the Chairman*: You are acting as Agent for Sir Morton Peto and Company? Yes. S. Willcox, Esq.
2230. You are constructing the line of railway extension in the Northern District, I believe? Yes.
2231. Will you be good enough to describe that extension? The extension from Lochinvar to Singleton. 11 May, 1860.
2232. How many miles? Twenty-three, nearly.
2233. When did you arrive in the Colony? In June last.
2234. It was some time after Mr. Rhodes' arrival, I believe? Two months.
2235. Were you engaged to come out to the Colony at the time Mr. Rhodes left London? Yes, at the same time.
2236. Had you any intercourse with Mr. Rhodes prior to his embarkation? Yes.
2237. Have you frequently been in Sydney since you have undertaken that Northern Line of railway extension? Yes.
2238. In conference with Mr. Rhodes? Yes.
2239. And also to get instructions from Government? For both purposes.
2240. Have you ever had any conference with Mr. Rhodes on the subject of Sir Morton Peto and Company's contract generally? In this Colony do you mean?
2241. Exactly? Oh, yes.
2242. At different times? Many times.
2243. When were you in Sydney last? A month since.
2244. On that occasion did you visit any portion of the line which is in the hands of Messrs. Peto and Company? Yes, I went over a portion of the Southern Line.
2245. Can you remember on what date it was? On the 14th, I think, of March.
2246. How far did you go on the Southern Line? I think it was to a place called Douglass Park,—about fourteen miles along the line.
2247. Was Mr. Rhodes with you? Yes.
2248. Any one else? The Chief Commissioner, the Chief Engineer, and one or two of their assistants.
2249. On that occasion, was the object of your visit, in company with the railway authorities, to inspect the matter in dispute between Mr. Rhodes and the railway authorities? Yes, I went with that object.
2250. Will you be kind enough to state, generally, what was the result of your examination of the line—what took place? I do not quite understand the question.
2251. This is it,—you went upon the line, as I understand, with the other gentleman acting as Agent for Messrs. Peto and Company, with the Chief Commissioner, and the Engineer-in-Chief, to examine the line with reference to those parts of it out of which disputes have arisen between Mr. Rhodes and the Engineer? Yes.
2252. What I would desire you to state to the Committee is this,—what particular parts of the works you inspected upon that occasion—what took place—what Mr. Rhodes said, and what the Engineer said? I think the principal thing was the question with regard to rock cutting. Mr. Rhodes stated that a great portion of the rock in cuttings had not been allowed him, but had been paid him as though it had been earthwork, and I was asked my opinion about it.
2253. At what particular places did you look at the line—at the alleged rock? There was one cutting, I think, near to Menangle—near to the river—and the second ———
2254. This side Douglass Park? Yes, this side Douglass Park. There is a large hill near Douglass Park which I saw,—indeed I saw several cuttings.
2255. Did you go into the cuttings? Yes.
2256. Did the Commissioner and Engineer-in-Chief go into them? They went into two or three of them.
2257. Will you be kind enough to state what took place? Mr. Rhodes pointed out some rock that had not been allowed him. We went into the cutting; both the Commissioner and Engineer went down, and they decided that a certain portion should be allowed as rock.
2258. Will you describe the face of the cutting as nearly as you can? The cutting might be perhaps 28 feet in depth, and about 10 or 12 feet at the bottom it was agreed to take as rock.
2259. What was the appearance of the bottom up to 8 or 10 feet in height, which they agreed to take as rock? Rock.
2260. Could you describe it in any way so that we could understand it better? I can give no better description.
2261. Was it sandstone? No.
2262. Was it granite? No; it was a volcanic rock, igneous.
2263. Was it in one block, or in broken pieces? In broken pieces; there were some beds of 3 feet, and some portion of it was shaley.
2264. What color was it? It had been colored by ironstone—rather red.
2265. However, you say the Commissioner and Engineer-in-Chief agreed to reckon some 8 or 10 feet as rock—that is, the solid part, I suppose? Yes.
2266. Was there anything else inspected by you on that occasion, on that line? We looked at the bridges and culverts through the line.
2267. You mean the wooden bridges? Yes, the wooden bridges in course of construction.

- S. Willcox, Esq.
11 May, 1860.
2268. You are aware of the kind of wooden structures which are to be erected on that line; you have seen the plans? I have seen the plans of one or two of them.
2269. Will you be kind enough to look at the model behind you? (*The witness looked at the model.*) It is on a similar plan to that, I think.
2270. Do you remember the dimensions of that bridge? The height I do not remember, but the openings were 20 feet.
2271. Some of those wooden bridges were from 20 to 30 feet in height? Yes, I should think so.
2272. Have you ever heard that Mr. Rhodes is of opinion that these bridges are not safe for a heavy traffic? Yes.
2273. Have you ever had a conversation with Mr. Rhodes upon the subject? Yes.
2274. Have you expressed your opinion upon the subject? I have expressed my opinion that for a great height I thought, perhaps, longitudinal bracings might be advisable.
2275. In addition to what? In addition¹
2276. Will you describe on the model the kind of bracings you think are advisable? (*The witness described by reference to the model.*) One way of doing it would be to put struts to the crown piece, but perhaps that would be objected to on account of the floods, and therefore I would put a longitudinal tie.
2277. It has been stated by some gentlemen who have been examined at the Bar of this House, that the bridges in the course of two or three years, constructed as proposed, would by the force of traffic become shaky and insecure, and unless they were strengthened by the introduction of new pieces in some way, which I do not pretend to understand, they would give way and lead to an accident—do you think that that might possibly be the case? No, I do not think that; not in the course of two or three years.
2278. Have you any bridges of this description on your line? Not so high.
2279. How high are the bridges on your line? I have some up to, I think, 22 feet.
2280. What length? I have some about a hundred and sixty or seventy feet.
2281. That particular bridge, of which we have the model there, is near a place called Glenlee—you may remember it from passing over the line—it is described as having an incline of 1 in 70, with a slight curve—would that make any difference in its security? Yes; it would require, I think, stronger bracing on that account.
2282. On the occasion when you, Mr. Rhodes, and the railway officers passed over the railway line, did you notice anything particularly offensive or objectionable in Mr. Rhodes' conduct? In passing over the railway line?
2283. We have had evidence given by Captain Martindale to the effect that Mr. Rhodes' conduct, when they were examining one of these cuttings, was, in some way, so offensive, that it was difficult to continue the investigation? It was not marked by its politeness, certainly.
2284. What was it? He insisted on being paid; he said he would be paid, or something of that kind, for this material which the Engineer called shale; but he did it ²in rather a short temper.
2285. Did he say anything more than that he would be paid? I cannot recollect exactly what he did say.
2286. Were there other matters in dispute between Mr. Rhodes and the railway authorities communicated to you? I think there were, about the ballasting and permanent way.
2287. Was there anything about the rails? Yes; the ballasting, the permanent way, and the rails were the principal.
2288. When you passed over the line on this occasion did you notice any rails lying idle? No.
2289. Did you notice that Mr. Rhodes had a large quantity of rails more than he needed? No; he had not.
2290. As far as you went he had not? We looked particularly to that, and he had not a large stock of rails at that time.
2291. Do you think he had sufficient? No; he was short of rails in nearly every cutting we went into.
2292. He had not sufficient for the purposes of the contract? Not sufficient to carry on the cuttings he had gone into.
2293. It has been said he ought to have made wooden rails, or rails out of bar iron—is that a course often adopted in railway contracts? I never saw it adopted except in the Colony. I have seen it here.
2294. Would it be possible to carry on a work satisfactorily, or expeditiously, if contractors had to resort to wooden, or to bar iron, rails? Certainly not.
2295. Have you had experience of the conduct of works of this kind in other parts of the world? Yes
2296. For how many years? For nineteen years.
2297. In what countries? On the Hereford and Gloucester ³Railway, the Bedford Level, the Great Northern, the Dutch, Rhenish, and the ⁴ , in France.
2298. What is the practice, speaking from your own personal knowledge on great works, as to the engineer accommodating the contractor with such rails and chairs as are necessary for the conduct of his work? It is always done; I have never seen it otherwise.
2299. That is as far as your personal knowledge goes—it is always done without limit, except the limitation of the work? There is no limit at all. I have always, on every work I have been upon, had free use of all the rails and chairs I required.
2300. Without any scruple? Without any scruple.
2301. Were you ever required to pay for their use? On one occasion we paid a fixed sum, I believe, for the rails of the Great Northern.
2302. Do you remember what that sum was? I do not remember.

¹ to present design.

² with rather show of

³ Canal.
⁴ Western Railway.

2302. Are you, as agents for Messrs. Peto and Company, paying for the use of rails? Yes. S. Willcox, Esq.
2303. What are you paying? Ten per cent.
2304. Both on your line and on that of Mr. Rhodes? On the Northern, the Southern, and the Western. 11 May, 1860.
2305. Have you ever had any cause to complain of the treatment you have experienced from the Railway Department in any way? We have ^{had} several—two or three matters in dispute now on the Northern Line. I think they are now reduced to one; that is, the rock cutting, owing to our having an order to take them out ^{with} of vertical sides.
2306. Is your line carried through a similar character of country to that between Campbelltown and Picton? No, we have much more rock on the Northern than they have on the ^{Campbelltown} Camden Railway.
2307. Rock of the same description? No, much harder rock on the Northern.
2308. I have been told that it is the fact that you did not require the same quantity of rails as Mr. Rhodes would on account of having side cuttings? It is impossible for me to say what Mr. Rhodes requires. I can tell what I require for the Northern Railway.
2309. I thought you might by comparison? No. I have only been over the Southern Line one day, and I have hardly seen the sections for it.
2310. Have you met with as many facilities, and as much disposition on the part of the railway authorities here to meet you in carrying on the work as you have in other parts of the world? I think the Government has treated us badly in several respects. In taking work from us that fairly belonged to the contract—I mean work not included in the schedule—given in the first place.
2311. Would you describe what you mean, if you please? I tendered for the fencing of the Northern Line, and for the sleepers. My tender for the fencing I think was 10s. per rod—that is my written tender; I afterwards verbally altered it to 9s. 6d. I got an offer from Government to execute it at 7s. 6d. per rod. I refused that. I then got, I think, a second letter telling me that they had received offers to do it for 8s., and that if I felt disposed to tender under that it was still open to me. Of course, I could not tender against a lot of working bushmen, and I gave it up. Since then I believe they are paying as high as 8s. and 8s. 3d. for this fencing. That I do not think exactly fair treatment.
2312. Have you had any other matter of dispute? The rock cuttings.
2313. Have your disputes about rock cuttings been similar to those of Mr. Rhodes? No, I am ordered to take out the cuttings on the Northern Line with vertical sides, and it is clearly stated on the trial sections, and Mr. Rhodes I believe was also informed before he took the contract, that the side cuttings would be taken out at a slope of one to one. I now claim an additional payment on that account, for it is much more expensive to take out the cuttings in the way now proposed than as originally designed.
2314. Are your claims entertained? No, they are refused.
2315. Have you abandoned them? No.
2316. What do you intend doing? That is not quite decided upon.
2317. With regard to rails and chairs have you met with any difficulty in obtaining sufficient for the works on your line? No. I was short two or three months back, but I now have sufficient to go on with.
2318. There is some dispute with Mr. Rhodes about leads; he contends that his leads are unnecessarily long—some of them more than a mile—what is the general practice in works of this kind with regard to leads? I have been informed by Mr. Rhodes, that he was told when he took the contract that the lead should not exceed half a mile.
2319. Is there any practice generally observed in this respect? In giving the price for work you generally suppose that it is to be taken one lead, or half a mile.
2320. Did you look at the ballasting when you were on the Southern Line with Mr. Rhodes? No, there was no ballasting done.
2321. Did you look into the matter of dispute? Not on that occasion, but I have since.
2322. Will you state to the Committee what is the matter of dispute between Mr. Rhodes and the authorities in this respect—I want you to do that, if you please, because it is a matter which does not appear to be clearly understood by the Committee, and as you are a party in a manner not immediately concerned, and have derived your view of it from parties directly concerned; if you would state it, as it appears to you, it is likely we should understand it better? I think it is this: Mr. Rhodes has undertaken the ballasting of the permanent-way of the Southern and Western Lines, and he found a quantity of material in his cutting suitable for ballast; he wishes to put that in depôt, and use it as permanent-way ballasting, instead of taking it into embankment, as shewn by the disposal-sheet. He proposes to put from side cutting, at his own expense, the quantity of ballast he might save, into the embankment, in lieu of the stone. That is objected to.
2323. Is that the whole of the matter in dispute? I think that is the whole of it with respect to the ballasting.
2324. Has not Mr. Rhodes carried out some stone to the side of the railway, which is a matter of dispute independently of the mere question of ballasting? Yes, he has, but it is not much; I believe he has taken out stone which they have refused to pay him for.
2325. In any way? In any way. That, of course, would belong to the ballasting. He must be paid for it eventually.
2326. With regard to your own line,—do we understand that you feel upon the whole satisfied with the facilities afforded you in carrying the work out? With the exception of the two or three points I have mentioned. I think when these points are cleared up, we shall go on quite smoothly there.
2327. There is another matter of dispute between Mr. Rhodes and the railway authorities, as to whether the engineer ought to give the contractor the length of the piles, or the depth to which they should be driven? Yes, decidedly.

- S. Willcox,
Esq.
11 May, 1860.
2328. It is denied by the engineer, as I understood him, that it is any part of the engineer's duty to give the contractor the length of the piles; but he states that it is rather the duty of the contractor to drive the piles till he finds the depth to which they will go: will you state, as far as your experience goes, what is the general practice? The general practice is to give the length; it is never refused.
2329. Do we understand that the engineer gives the length to which the piles are to be driven into the earth, and that he takes the responsibility? No. He would give you the length the pile was to be driven into the ground; but if, in the execution of the work, it was found necessary, instead of taking, for instance, 30 feet piles, the length given by the engineer, to use 35 feet piles, the additional cost of obtaining those piles would be charged to the Government.
2330. How is this generally ascertained? By boring.
2331. Do the Committee understand that it is the practice for the engineer to go and examine the earth, and to bore, in order to see what depth it is necessary to drive the piles? Not the engineer; his assistants.
2332. I mean the engineer's department? Decidedly.
2333. And from this examination of the locality to give the length of the piles to the contractor, and the contractor has to drive them that length, unless it turns out from some cause that it is necessary to drive them a greater length, and that he then charges the difference of the cost of the piles to the contractor? If it is necessary to drive a longer length, of course the contractor must do it, or the bridge would be unsafe.
2334. And he charges accordingly? Yes; he would charge the value of the piles he had left on hand. He would have to charge for the fresh supply. Suppose he had, in accordance with the engineer's first instructions, laid in a stock of 30 feet piles, and found that 35 feet piles were required, he would charge the Government both with the 30 and 35 feet piles, and the Government would use the 30 feet piles in any other place.
2335. That is, supposing a hundred piles were necessary for a bridge, according to the instructions given by the engineer, and when they came to be driven, ten were found to be too short, the contractor would get ten fresh ones to supply their place, and charge the ten short ones to the Government? Yes, and they would become the property of the Government. That is matter of arrangement between the Government and the contractor; the contractor might take them to another bridge.
2336. That is the practice as far as your knowledge has gone? Yes; and in pile-driving I have had great experience at Home.
2337. Are you in a position to state what the views of Peto and Company are —? Permit me one half moment. In going over the Southern Line the other day, owing to the difficulty—and I admit it is difficult and expensive—to bore to ascertain the depth these piles should go, I proposed that we should drive the piles the depth required, and if it were found they were too long, or that there was a waste on the piles of short pieces, which could not be brought in, that the short pieces should be taken back by the Government. That would clear up the difficulty, would save the expense of boring, and we would take the responsibility of the length of the piles.
2338. I was going to ask you whether you were in a position to state the views entertained by Messrs. Peto and Company as to the schedule of prices sent to London—did they consider that you were coming here to undertake works upon that schedule of prices? Yes; if we found that schedule of prices was advantageous when we got here.
2339. This is what I want to understand—whether your principals regarded this as a mere indication, an approximative indication, or whether they regarded it as a fixed schedule of prices? Whether they regarded it as a fixed contract?
2340. Yes? My instructions were to come here and see if the prices offered by the Government were advantageous, and if so to take them; if they were not to try to make the best bargain I could; and if I failed, to go back again. But the simple understanding was that the prices sent to England would be the minimum—the schedule that had been offered, provisionally, to Gabrielli—that was their clear understanding.
2341. They understood these prices to be the minimum? The minimum.
2342. And your discretion was as to whether you should accept them or not? Yes.
2343. If it were not prudent to accept them, and you could not make other terms, you were to go back? To go back.
2344. The prices you did accept were in reduction of those in the schedule? Yes, Mr. Rhodes did accept a reduction.
2345. Your prices are the same, I believe? Yes; but I did not take the Northern Line myself, Mr. Rhodes took that before I came.
2346. Do you consider that there is anything approaching to a departure from a correct understanding in this reduction of prices? Decidedly.
2347. What would you call it? I should be almost afraid to say what I should call it.
2348. You need not be afraid? I should call it very dishonorable; a breach of faith, decidedly.
2349. You call the circumstance of your being subject to a kind of competition when you came here to lower prices that were sent home to London, dishonorable and a breach of faith, you say? Yes.
2350. If your principals had known that you would have been subjected to this kind of thing, do you think they would have sent you out? Decidedly not. It is not likely they would have sent out agents and plant to a large amount, unless they clearly understood what prices were to be the minimum.
2351. You say Mr. Rhodes adopted these reduced prices before your arrival? Yes.
2352. What, under these circumstances, induced him? It is hard to say what did induce him;

- him ; but I think it must have been on account of the plant that he knew was on its way here ; hoping that larger works would turn out, rather than have the plant here at a loss, he might have thought it better to take these works, perhaps, even at a just paying price.
2353. What does your contract consist of—your instrument of contract? ^{Sr Willcox, Esq.} The letter of the 11th May, 1860.
- 15th April, I think, of last year.
2354. The same letter which constitutes the contract between Mr. Rhodes and the Government? Yes, it is the same contract.
2355. Has any specific bond and contract been submitted to you for signature? Yes.
2356. Have you signed it? No.
2357. Will you state why you declined to sign it? Because it is not in accordance with the terms of the 15th April.
2358. In that you and Mr. Rhodes agree, that the bond and contract includes something more than the letter which you consider constitute your contract? Yes.
2359. You have not a copy of the bond and contract submitted to you? I have not here.
2360. Could you state, in detail, the conditions contained in the bond and contract which formed the ground of your refusal to sign it? I think I can. There are several things in it which are not in accordance with the agreement of the 15th April. In the first place, the time for the completion of the contract.
2361. What was the time by the letters? Twenty-six months.
2362. From what date? I think it is from the delivery of the plans.
2363. From the delivery of the last plan? Well, that I can hardly say. I think that, perhaps, legally it might be, but ^{spiritually} I do not think that is the meaning of it. I ^{in spirit} think we must ^{take} the plans and sections, all the plans necessary to go to work, but in the ^{have} case of a work like the Menangle viaduct I think we should have the plans in time, as it is an important work.
2364. What was the time fixed by the bond and contract—what was the difference? ^{They} ^{we} were offered day for day for the time they were behind in the delivery of plans.
2365. For every day the delivery of plans was deferred you were to have an additional day for the completion of the railway works? Yes;—which we objected to, for we had missed a very fine season, and it was impossible to say what the weather might be, or what might be the rates of wages that would rule in the Colony.
2366. You said something about vertical cuttings on your line? Yes.
2367. Was Mr. Rhodes, do you know, aware that there were to be vertical cuttings when he undertook the work? No, the trial sections sent home state distinctly that all cuttings shall be taken out with slopes of one to one. When Mr. Rhodes came to the Colony, as he has informed me, the engineer went over the line with him, and clearly stated that all the cuttings would be taken out at a slope, and the cuttings taken by the Government themselves on all the line have the same slopes.
2368. Would you be kind enough to explain, so that persons unacquainted with the work may understand, the difference of difficulty to the contractors? I think it must be pretty clear to everyone that if you have a cutting of thirty feet deep, and are ordered to take that out with vertical sides, it must be more expensive than to take it out with slopes.
2369. That is apparent, but I wish to know in what degree it will be more expensive or laborious—can you give some idea of the difference? I have not gone into that. I am unable to tell you the difference in cost, but I have offered the Government this—that I am quite willing to take our schedule price for rock with slopes one to one as a basis, and that the difference shall be left to arbitration if we are not able to agree ourselves. I have made that proposition in writing to the Government or to the Chief Commissioner.
2370. How was it entertained? He refused it; I got a letter back stating that I must take out the cuttings according to my contract; and I contend I have no contract for cuttings with vertical sides.
2371. You are told to take out the cuttings in accordance with a contract that does not exist in that particular? Yes.
2372. I presume the cuttings where the sides are vertical must be through solid rock? Yes.
2373. Else they would not stand? Else they would not stand.
2374. The Government themselves are carrying on some portions of the Northern Line are they not? Yes.
2375. What portions of the line are they carrying on? The piece between Maitland and Lochinvar.
2376. Are there any rock cuttings in the portion of the line the Government are carrying on? Yes.
2377. Are the sides vertical? No; they slope.
2378. Then where the Government are carrying on cuttings themselves, they do not insist upon vertical sides? No.
2379. *By Mr. Kemp*: What slope is it? One to one.
2380. *By Mr. Parkes*: Are they through the same kind of rock? Just the same kind of rock.
2381. Were you present when Mr. Want, the solicitor for Mr. Rhodes, and your solicitor too, I presume, prepared a letter to the Government, containing your views with reference to the contract? I was.
2382. Dated the 22nd September? Yes.
2383. You were present when this letter was prepared? I was.
2384. Did you see this letter before it was sent to the Crown Solicitor? Yes.
2385. Did you concur in it? Yes.
2386. Did you consult with Mr. Rhodes in the preparation of it? Yes.
2387. Then this letter expressed your views equally with Mr. Rhodes? Exactly.
- 2388.

- S. Willcox,
Esq.
- 11 May, 1860.
2388. You endorse this letter as much as Mr. Rhodes? Yes.
2389. All that letter says you agree to except as a letter going from you? Yes.
2390. Are you content with the position in which these misunderstandings is left about these cuttings—do you intend making any claim for these vertical cuttings? Yes.
2391. Have you made any claim for extra pay? I have not.
2392. You intend to do so? Yes.
2393. Then that is likely to be a matter of dispute between you? That is a disputed point; in fact, I think that is almost the only disputed point I have on the Northern Line.
2394. Have you undertaken to ballast the Northern Line? No.
2395. With regard to that matter of ballasting, is it an usual practice for the contractor to obtain ballast from cuttings when he can find it? I have never known it otherwise.
2396. You have never known the engineer to object to his taking hard stuff from the cutting for ballasting purposes, if he supplied the matter at his own expense? Never; if he supplied the matter at his own expense.
2397. You are aware that there is a dispute between Mr. Rhodes and the railway authorities as to the preference for brick culverts to wooden bridges in some places? Yes.
2398. Have you any decided opinion on that matter? I think, generally, it is well to adopt brick culverts where you can; at any rate, I prefer brickwork to timber.
2399. You have heard of the recent floods in the Southern districts? Yes.
2400. Have you paid much attention to the reports of the floods? No.
2401. Do you think good brickwork would be unable to stand against the floods of this Colony? I am quite certain it would not. I am quite certain brickwork would be far better than anything else in case of flood.
2402. Do you think a viaduct, a wooden superstructure upon brick piers for instance, would be as likely to stand the force of a flood as one upon wooden piles? I think "æet."
2403. You think wooden piles would be best? No; I think good brickwork would be best.
2404. It has been stated at the Bar, that no bricks, however good the cement, and however well baked the bricks, could be built into piers that would stand the force of the recent floods, while piles would stand—that is what I want your opinion upon—that the piers would be carried away? Unless I investigated the matter I could hardly give an opinion; but I have built bridges upon the Rhine, and in cases of flood I have seen a head of ¹²eight feet of water on the upper side running for two or three days, and they have stood it without the bridges being moved; but I am not able to say whether the bridges in this Colony would have stood or not.
2405. Is it the case that by running the stuff out of cuttings to spoil, as you call it, you could shorten the length of the lead on the road, in many cases, without any detriment to the work? In some cases that can be done.
2406. Have you ever represented that it might be done so as to facilitate the work? No; I have no cuttings where I consider it necessary to adopt that plan.
2407. Had you any conversation with Mr. Rhodes on that subject? I had.
2408. Did he make any representation of this kind? Yes; but I did not quite agree with Mr. Rhodes upon that subject; he can do it.
2409. Will you state on what you disagree, so that we may be able to understand it? I disagree with throwing out of cuttings to spoil as not being a profitable way of carrying out the work.
2410. Not profitable to the contractor? Not profitable to the contractor; of course it would forward the work materially, but it is not the plan I should adopt except in cases of very long leads, then it would be advisable.
2411. Are you a civil engineer? Yes.
2412. Under what engineer did you acquire a knowledge of your profession? Mr. Ballard.
2413. Coming to the Menangle bridge, I should infer from what you voluntarily said that you agree with Mr. Rhodes' opinion, that he should have the plans of that bridge among the first plans furnished to him? I think the plan ought to have been delivered before this.
2414. Mr. Rhodes says it is the usual practice for the contractor to be supplied with the plans of the most important and difficult works to enable him to command all the facilities he can in preparing for the construction? It is so.
2415. If you agree with that as a rule, you must agree that he ought to have had this plan? Yes.
2416. When shall you be able to get your contract finished? I hope in fifteen months.
2417. Is that within the date? No, it will be a little over the date, I think; I shall do it as quickly as I can.
2418. Can you form any opinion as to when Mr. Rhodes is likely to finish his contract? No.
2419. Have you any objection to state what relation subsists between you and Mr. Rhodes, whether you have independent authority as agents from Messrs. Peto and Company, or whether you or Mr. Rhodes has any superior authority? No, I have independent authority.
2420. You are out here independent of each other? Quite independent.
2421. Have you received letters from your principals by every mail? Yes.
2422. Have you received letters by the last mail? Yes.
2423. Are they satisfied with what you are doing? With what I am doing?
2424. With what you are doing—the character of the contract entered into by you? They regret exceedingly the disagreements that have taken place, of course.
2425. Have you any information as to whether Mr. Rhodes is to be recalled from the Colony? I decline to answer that question.
2426. By Mr. Arnold: If you had not received any communications from Messrs. Peto, Brassey, and Company, as to the removal of Mr. Rhodes, would you object? I have no right to divulge the contents of any private communication I receive from the firm; it would not forward the inquiry.
- 2427.

2427. I presume you would have no objection to say you had not received any such communication if you had not? No; I do not say so.
2428. What is your position? I represent Messrs. Peto and Co., for the Northern Line; and am sole agent for the other Colonies.
2429. Sole agent here for the contractors for the Northern Line? Yes.
2430. Have you any interest in the profits to be derived from the Northern Line? That I decline to answer.
2431. You decline to state that fact—what your position is with regard to the contractors? With regard to the contractors—I represent the contractors here—you mean my private position with the contractors?
2432. What I mean to ask is this—what I did ask in fact—whether you are interested in the works? That I say I decline to answer.
2433. Do you occupy a similar position under the contractors with regard to the Northern Line, that Mr. Rhodes does with regard to the Southern and Western Lines? I am the agent for the contractors for the Northern Line, and occupy a position similar to that of Mr. Rhodes.
2434. And hold similar powers? Exactly.
2435. Are you in any way subordinate to Mr. Rhodes? Not in the slightest.
2436. Is Mr. Rhodes at the present moment the agent for the contractors for the Northern Line? No.
2437. Did you negotiate and contract for the Northern Line? No; Mr. Rhodes undertook the Northern Line before my arrival.
2438. Was Mr. Rhodes ever placed by the contractors in the position of their agent, for the construction of the Northern Line—that is to say beyond the negotiation—was he ever their agent for the construction of the Northern Line? Never.
2439. If Mr. Rhodes has said he was, what should you think of his statement? I should certainly think he had made a mistake.
2440. Can you account for the manner in which he made the mistake? He has a power of attorney, I think, for New South Wales; my power of attorney limits me to the Northern Line in New South Wales.
2441. Then, if I understand you rightly, Mr. Rhodes has never, so far as the construction of the Northern Line has been concerned, been the agent of Messrs Peto and Company? Never.
2442. Has Mr. Fowler had anything to do with the contract for the Northern Line, or been employed in any way under you? No.
2443. Has Mr. Fowler ever been employed by you? Professionally?
2444. Professionally? No.
2445. Has he ever been employed by you in any way? No.
2446. I think you stated, that at the present moment there is only one matter of difference between yourself and the Government, with regard to this contract—the Northern Line contract? Only one matter of importance.
2447. Only one matter that there is any difficulty in settling? Only one matter that there is any difficulty in settling.
2448. Have the same modes of construction in these respects been exacted from you that have been exacted from Mr. Rhodes, and the same mode of measurement applied? That I am unable to answer.
2449. Are you aware of any difference having been made? I am not aware of any.
2450. Have you consented to the mode in which distinction shall be made between earth and rock? Up to this time we have agreed upon that point.
2451. Have you any opportunity of knowing whether Mr. Rhodes has claimed to be paid as rock for material which you have consented to recognise as earth? No. Let me understand your question exactly.
2452. What I want to know is whether Mr. Rhodes has insisted upon being paid by Government for material taken out of cutting as rock which you have consented to be paid for as earth? No, I am not aware that he has.
2453. Are you aware that he has not? I believe he has not.
2454. Have you an opportunity of knowing? I can only say that the material I saw in the cuttings near to Menangle, that I understand he is paid for as earthwork, I should certainly consider rock.
2455. Did you see all the material in dispute between the Government and Mr. Rhodes in that respect? I think I saw all that it was necessary to see, at least the Chief Commissioner and Engineer thought so, for they said the other cuttings were similar; and we went as far as Douglass Park, which I think is within five miles of Picton.
2456. Have you been paid for shale as earth? No. Have I been paid for shale as earth did you say?
2457. Yes? I do not know what you call shale. I have been paid for something the engineer has called shale as earth.
2458. I think you said you went on the line to examine into the differences which have arisen between Mr. Rhodes and the Government, and I think you have examined the line with Mr. Rhodes and the railway authorities? Yes, on the 14th of last month.
2459. Did you see the place where Government had proposed a viaduct, but where Mr. Rhodes has suggested there should be an embankment and culvert? Yes.
2460. In substitution for the viaduct? Yes.
2461. If the work were in your hands, and you had the choice of making either an embankment or a viaduct in that place, which would you prefer as an engineer? A culvert or a viaduct?
2462. An embankment with a culvert or a viaduct? I do not know how to answer that; but, generally, I prefer culverts and embankments to viaducts,—as a general rule.

S. Willcox,
Esq.
11 May, 1860.

- S. Willcox, Esq.
 11 May, 1860.
2463. If you had the work to do would you prefer to do it in that way? That would depend upon whether I wanted the material from the cutting.
2464. As it is? I do not know the circumstances, and, therefore, I cannot give an opinion.
2465. Did you arrive at the conclusion that at this place an embankment and culvert should be substituted for a viaduct. I do not speak of Glenlee, but generally. We did not examine the viaduct at Glenlee with that object at all.
2466. I think you stated the conduct of Government was dishonorable and a breach of faith in refusing to conclude a contract with you upon the terms sent in the first schedule to Messrs. Peto and Company? Yes.
2467. Did you come out for the purpose of accepting that schedule? I came out for the purpose of seeing whether it was worth accepting.
2468. If you had found you could not accept it advantageously to your firm would you have accepted it? No.
2469. You would not have considered Messrs. Peto and Company bound under that agreement? Clearly not.
2470. But you thought the Government bound? Yes.
2471. So that, in point of fact, supposing this schedule to have contained the fair prices at the time it was sent home, if the price of labor had risen very much its departure and your arrival you would not have accepted it? Certainly not.
2472. But if the prices of labor had fallen you would have considered Government still bound to give you the full amount named in the schedule? Yes.
2473. Is that the usual way? The thing has been done in a very unusual manner altogether. It is not usual.
2474. Did you ever know an instance of any company or Government binding themselves for a length of time to a contractor to certain prices, when the contractor himself was in no way bound to accept them—is that the usual plan at Home or in Europe? I have never known works carried out under similar circumstances, so that I really cannot say.
2475. Have you seen the Southern Line since the late flood? No.
2476. Have you read the correspondence between Mr. Rhodes and the Government upon which the contract is founded? Yes.
2477. Do you gather from that contract that an unlimited supply of rails and chairs was to be given to Mr. Rhodes? I think you can gather from that, that he was to have all the rails and chairs he required, and that the Government had to spare in the Colony.
2478. That he required, if the Government had them to spare? Yes.
- Mr. Parkes said, That is not what he said.*
2479. Perhaps you will answer the question again—I say, do you gather from the correspondence that Mr. Rhodes was entitled to all the rails and chairs that he might demand from the Government for the purpose of carrying on the works as arranged by himself? I think Mr. Rhodes was led to believe he would get all the rails he required for carrying on the works.
2480. Are you aware that the contractor had received all the rails that were then in the Colony? No, I am not.
2481. Are you aware that it is not the case that he has been supplied with all the rails that were in the Colony at the time the contract was made? I am not.
2482. Do you gather from the correspondence that Mr. Rhodes should be supplied by the Government with the rails they had imported for permanent way? That is hardly to be gathered from the correspondence; still, I think it was clearly to be understood.
2483. That he was to get them? That he would get them; it is usual.
2484. Will you explain to me whether you understood that this contract was to be conducted by Government in accordance with established usages at Home, and not in accordance with the restrictions and specifications contained in this letter? We had no specification. I understood that the works would be carried out according to the agreement of the 15th of April, and that the Government would offer every facility in their power to forward the contractors.
2485. Have you observed in reading this correspondence that Mr. Rhodes has repeatedly endeavored to make it one of the conditions, that he should be supplied with rails and chairs? It is stated in the letter of the 15th April that he shall be supplied with rails and chairs.
2486. Yes—but did you not observe in reading the correspondence that in every instance where that condition was insisted upon and the demand was made the Government refused it? Yes; still I think they promised that every facility should be given, notwithstanding that they state the rails for the permanent way shall not be used.
2487. I think you stated with regard to the fencing in the Northern District, that you considered you had reason to complain that your tender had not been accepted? Yes.
2488. What was the lowest tender you made? 9s. 6d. per rod.
2489. Have the Government since paid so much as 9s. 6d. a rod for fencing? No; I think they have since let a large portion to a Chinaman at 8s. 3d. or 8s. 6d.
2490. I do not care who it is done by—do you know that all the fencing that has been done since has been done at a lower rate than you tendered? Yes.
2491. Were Government bound in any way to give you the fencing? It was certainly understood that we were not to undertake our work by competition, and much less to be put in competition with a lot of bush laborers, as we were with regard to the fencing; for it is very clear I could not execute the work at the price a rough bushman could.
2492. Will you tell me what advantage it would be to the Government to give this contract to Messrs Peto and Company at Home if we could only get the work done by them at a higher price than we should have to pay bush laborers? The responsibility is something.
2493. I suppose the work is never paid for until it is executed? Perhaps not.

2494. So that there would not be any great responsibility after all? There would be a degree of responsibility—for instance, this fencing is not up yet, and I believe the Government will not be able to finish it at 8s. 6d. or 9s.; and I have offered to do it for 9s. 6d.

2495. Do you believe that before this fencing is finished it will cost the Government as much as or more than it would if they had accepted your tender? I think it will.

2496. You say you did not expect to be subjected to competition for any of these works not specified in the schedule? No.

2497. Did you expect to have the works given you at any price you chose to demand? No. I expected to have them at a reasonable price.

2498. Who was to fix what was a reasonable price? Between the Chief Commissioner, or the Chief Engineer, and ourselves. But I think it is very easy to be seen that we have not asked an unreasonable price for any of these works.

2499. I think I understood you to say that the fencing has been done at 8s. a rod, and that you demanded 9s. 6d. a rod? Yes.

2500. Do you not consider that an unreasonable price? No. I believe it has been done by small gangs at 8s. a rod; but there are a great many things you must take into account, there are inspectors to look after these small gangs, which might be done away with if we had the contract.

2501. I presume Government would have to inspect your works as well as those of small contractors? Not so much I hope.

2502. Then you not only expect higher prices, but also to escape the inspection to which small contractors would be liable? I think we should have the character of being able to perform a little fencing without much inspection.

2503. You think we should trust to Messrs. Peto and Company to perform the work without inspection? To put up fencing at any rate.

2504. I suppose Messrs. Peto and Company do not know much about fencing? They ought to know something about it; they have done a good deal.

2505. Have any of the laborers you have brought out here been entrusted with fencing? No.

2506. To whom have you entrusted this work? I have done none.

2507. Has not all the fencing done here by them been entrusted to bushmen, these rough characters of whom you speak so slightly? I do not speak in that way of them.

2508. With regard to the length of the piles, do I understand you to say that it is the invariable practice at Home to give the length of the piles to the contractor? It is.

2509. Have you had works to do at Home where there has been piling? I should think I have done more piling perhaps than any one in the Colony.

2510. Will you state a few works upon which you were engaged in which the length of the piles was given? Yes; on the Bedford Level, under ²³, I was the sub-engineer; ²³ Walker & Burges.

2511. In these places was it the custom to drive the piles to the rock, or till they were—I forget the term—till they got so far they would not drive further? Yes, decidedly; they would be useless else.

2512. Was the ground at these places of such a character that the piles were pretty uniform in length? That varied very much.

2513. The piles were not uniform in length? No.

2514. Then, how would the Government Engineer for these works ascertain what would be the length of each pile? By boring.

2515. Do the Government or the Company's engineer in such cases bore for every pile and give you the length? No; he would take the average.

2516. But if some were much longer than the average, and some were much shorter, both would be rejected I should suppose? No; there would be a waste.

2517. They would either both be rejected, or in the case of the long ones, the excess in length would be expended uselessly? Yes.

2518. Have you had any piling to do here? Yes.

2519. Has the length been supplied to you? No.

2520. Is that one of the matters of dispute between you and the Government still? Yes.

2521. I thought I understood you to say there was only one matter? Only one important matter—that I have offered to arrange by driving the piles the length necessary, and any timber that I am compelled to cut off the top of the pile that will prove perfectly useless to myself, the Government shall take to—by doing that they save the expense of the boring, which will be very considerable, and would come to ten times the value of the waste on the pile.

2522. Were you ever led to believe that the length of these piles would be given you by the Government engineer? There is nothing stated; but it is customary, and therefore it was expected.

2523. Then, in case the piles prove too short, they will be again drawn? They will take care to name a sufficient length I should hope; it is not a difficult matter to get at—the length of the piles necessary, but it is an expensive one.

2524. Then, as I understand as there was no condition as to the length of the piles to be given to the contractors, you think it would depend upon usage—whatever the usage was in that respect you would conclude should be followed? If there is no agreement, of course you take custom.

2525. I think you have stated you have no bridges of the height of the one of which this is a model? No.

2526. Have you reason to believe that a bridge constructed on that plan would be unsafe? No.

- S. Willcox, Esq. 2527. Have you tested the bridges you have erected on the Northern Line? No.
2528. Have any of the bridges on the Northern Line been tested? Yes.
- 11 May, 1860. 2529. Have you seen them tested? No; but I have heard they were perfectly satisfactory.
2530. Have you any reason to believe that an incline of one in seventy and a curve of ninety chains would render a bridge of that construction unsafe? No; still I should in a bridge of such great height think it desirable to put longitudinal braces.
2531. Do you know the height? I do not. I should say from 25 to 30 feet.
2532. Have you seen timber bridges of greater height than that? Yes.
2533. I presume you have no experience of ironbark? None.
2534. *By Mr. Scott:* I think you stated you only wanted men? Yes.
2535. Will you state what these men earn per day taking a month at a time? A good man would earn from ¹⁴ten shillings to ¹⁵twelve shillings a day.
- ¹¹ eight. ¹⁵ ten. 2536. Would you object to take some of the unemployed of Sydney if they tendered their services? I should be very happy to take three or four hundred if they tendered their services.
2537. *By Mr. Russell:* Allow me to ask you is it usual in England to pay for the transit of rails on the line? No.
2538. Is it the practice here? Yes.
2539. They make you pay for all the rails that go along the line to make the railway? Yes, we pay the carriage on the Government lines for Government rails.
2540. Is it not the case at Home? No.
2541. You never saw it? No.
2542. *By Mr. Arnold:* I think you say that at Home it is the practice to allow the contractors the use of the line carriage free? No, the carriage of rails, and all the other carriage of materials is always done at cost price; that is, at the working expenses of the line.
2543. Are you now speaking of the permanent rails for the permanent way? Yes, I am speaking of the carriage of the rails to be laid down on the line.
2544. Are you aware from this correspondence that it is not the intention of Government to allow rails for the permanent way to be used by the contractor on temporary works? Yes.
2545. In fact, the mode of construction is different here from the mode of construction at Home? It does appear so.
2546. With regard to the quantity of rails—what is the length of your contract? Nearly twenty-three miles.
2547. How many miles of rails have you? 464 tons.
2548. How many miles would that be—about? Nearly four miles of road.
2549. Are you aware what quantity of rails Mr. Rhodes has? No.
2550. Are your rails sufficient for your work? Up to the present time, but I shall require 800 tons altogether. I have only received four miles of road, but I have had rails granted to me for five miles and a quarter; they are ¹⁶on the works.
- ¹⁶ now being taken. 2551. That is sufficient for you up to the present time? Yes. I am taking them on to the works daily.
2552. *By Mr. Wisdom:* You stated, I think, that the Government had refused to allow the contractor to use rock obtained from cutting as ballast? Yes.
2553. Will that be any disadvantage to Government, or advantage? None, whatever.
2554. Then, if Government refused to permit him to do so, it must have been out of ill will to Mr. Rhodes? I think so; it cannot make the slightest difference to ¹⁷Government.
- ¹⁷ the. 2555. If the Government allowed him to use this rock taken from cutting as ballast—do you think it possible Mr. Rhodes would have claimed to have had it allowed as rock in the cutting? Yes.
2556. That may have been the reason why the Government refused? That is the reason they give for it.
2557. In the schedule of prices sent Home to Messrs. Peto and Company was any mention made about fencing? No.
2558. In taking the contract had you the fencing in contemplation? Yes.
2559. Although nothing was mentioned about it in the schedule of prices? Yes.
2560. You stated that Mr. Rhodes came out before you? Yes.
2561. He took the contracts for both the Northern and Southern Lines before you came out at all? Yes.
2562. How then could you afterwards get the contract for the Northern Line? It was the understanding before I left Home, that I should take the management of the Northern Line; I had a power of attorney for that purpose.
2563. Is not Mr. Rhodes responsible to the Government for carrying out the Northern Line? No.
2564. Did he not enter into the contract for the Northern Line? Yes.
2565. Is he not then responsible? No; for it was clearly understood that I was to take the Northern Line, and when I came to the Colony, I was taken by Mr. Rhodes to the office of the Minister for Works, to the Chief Commissioner and Chief Engineer, and it was clearly stated there I was to take the management of the Northern Line. Besides, I had a power of attorney of later date than Mr. Rhodes, which clearly entitled me to it.
2566. You do not consider yourself in any way under the authority of Mr. Rhodes? No.
2567. *By Mr. Lucas:* You said this structure would not become shakey in two or three years—do you think it would become shakey in eight or ten years? I have had no experience of such structures in this Colony; in England it would become very shakey in eight or ten years.
2568. You were saying that you would advise longitudinal braces—how far down the pile would you put them? You could not take them far down the pile, on account of the floods, they would be likely to act as an impediment to the passage of anything.

2569. How would you secure them to the piles? By bolts.
2570. Do you think that would strengthen the structure so much as the struts—By-the-bye, have you seen the plan that Mr. Rhodes proposed of the struts? I know what his proposal is. (*The Honorable Member and Witness here referred to the model.*)
2571. I presume to strengthen the structure at all you would have to bolt a longitudinal brace some two or three feet down the pile? I do not think a longitudinal brace necessary when the bridge is not a great height.
2572. I am speaking of that bridge of 30 feet height? Then to make it perfectly safe, I should put in a longitudinal tie, or ¹⁸props.
2573. Struts? Struts.
2574. Do you not think struts would be stronger? Struts would be stronger.
2575. Would not the struts reduce the bearing—by putting on struts and a crown piece, would it not reduce it to seven feet six? I think it is strong enough to carry any load, vertically.
2576. Would not the vibration loosen it? It is to guard against that I recommend longitudinal ties.
2577. I am speaking of struts; if you put strut pieces from the piles, I presume you would not have a crown piece above three or four feet long? In some places, eight or ten feet.
2578. That is, the piers being twenty feet long, would you have the crown piece as long as that? Yes.
2579. Do you know that the late floods have swept away the brick piers on the Campbelltown line? I have heard so.
2580. Are you aware that the piles have remained? Yes, I have heard so.
2581. Having that knowledge, does it not shake your opinion as to brickwork? Not the slightest.
2582. Have you seen this embankment? No; but I know properly constructed brick bridges will withstand almost any flood.
2583. Are you aware that where the brick culverts have been washed away, the mortar is so good that a large number of bricks lie cemented together in a mass, some fifty or sixty together? That has been mentioned.
2584. Knowing that, do you think bricks better than piles? I do.
2585. *By Mr. Wilson:* Have you made any calculation of the comparative value of Australian bricks and timber, or do you arrive at this conclusion from the knowledge of the bricks of other countries, and of American timber? I can have no idea of the value of Australian timber.
2586. From what you have seen of Australian bricks, and of the bricks, for instance, used in the bridge to which you have referred on the Rhine, are the bricks of this country as good as those? No.
2587. *By Mr. Byrnes:* In speaking of the struts that you would propose to attach to that bridge, or longitudinal ties, will you have the goodness to explain to the Committee in what way longitudinal ties would strengthen a bridge of that character? I think the weakest part of the bridge is the connection between this corbel (*referring to the model*) and the ¹⁹capping piece.
2588. In what way would a longitudinal tie strengthen that? (*The Witness explained by reference to the model.*)
2589. What effect would that have upon the bridge as to its durability? It would strengthen it.
2590. Will you explain how it would strengthen it—first and foremost, are the piles at all likely to bend or sway? I think they would, if the bridge were a great height.
2591. Where would it be likely to bend? I think at the top.
2592. Would it not be the case in the event of the piles bending in that way, that there must be some weakness at each end at the abutment? None.
2593. Would any pressure that could be brought to bear upon a viaduct of that kind, in your opinion, in any way cause these piles to bend; standing, as they do now, without a longitudinal tie? It is a question. I do not say that the viaduct is not strong enough, but I say that in a bridge of a great height I should put in a longitudinal tie.
2594. Merely to guard against any contingency? Yes.
2595. But you do not apprehend that from any pressure likely to be brought against it it is likely to give way? I should have no fear of its giving way, but it is a precaution I should adopt.
2596. I saw a sketch exhibited by Mr. Rhodes, in which it was shewn that diagonal ties and longitudinal pieces, under the present longitudinal cap, would strengthen the bridge very much—do you believe it would? It would, decidedly.
2597. In what way? It would strengthen the ²⁰longitudinal ties.
2598. Do you think there is any probability of the platform of that bridge sinking? Not sinking.
2599. That there would be anything like deflection between the piles? No.
2600. Then what advantage would it be? The only fear is that in time the spike that fastens the corbels might become loose, and cause the bridge to rock.
2601. You say they "might become loose,"—do you think from the mode in which it is proposed to construct the bridge that is possible? Quite possible, and to guard against that I should put in a tie.
2602. From what cause do you think they might become loose? From vibration.
2603. How is it to vibrate unless the platform gives way? It is not necessary that the platform should give way to vibrate. The platform might remain at the same level.
2604. If the pile could vibrate without the platform giving way, there could be no connection

S. Willcox,
Esq.
11 May, 1860.

¹⁹ struts.

²⁰ piles.

²⁰ bridge longitudinality.

- S. Willcox, Esq.
11 May, 1860.
- between the head of the pile and the platform? The connection would not be good between the head of the pile and the platform.
2605. Would it not be possible to construct it in such a way as that the connection between the two should be perfect? Yes.
2606. Then in that case, supposing there were a perfect connection between the two, it would not, I apprehend, from your view of the subject, be possible for the pile to vibrate? No.
2607. In that viaduct I think there is a curve of something like one to ninety? Yes.
2608. Is the viaduct much weakened by that curve? No.
2609. Is it weakened at all by the curve? Slightly.
2610. What effect would the engine have on running over a viaduct of that kind, seeing that you throw the weight to the inner part of the curve rather than to the outer—what effect would it have? The weight of course would naturally go to the outer side of the curve.
2611. The outer rail would be raised some little? Yes.
2612. What effect would that have in reference to the viaduct itself? None.
2613. It is not likely to injure the construction? Not the slightest, the raising of the rail.
2614. You have stated, I think, that in all cases of this kind in England the engineer is in the habit of giving the length of the piles in all constructions of this character where they are estimated between the contractor and the Company by the foot? In some cases, generally the contract is ²¹ contract.
- ²¹ an *à forfait*.
²² Not] 2615. Is it not generally the case that they are not contracted for by the foot? ²² Generally. In my experience I have only worked on one line with a schedule, before this.
2616. Then in all cases where they are not contracted for by the foot, the contractor himself ascertains the length the pile is to be before he makes out his contract? Exactly.
2617. And *vice versa*, where it is done by the foot, the engineer employed by the Company gives the length of the piles? Yes; perhaps my last answer might be explained: in a contract ²³ you have all your plans ready before you commence your work, and the length of your piles, if you have piled bridges, is shown on the plan. If longer piles are required than those shown on the plans on which the contract is taken, they are always allowed for by the Company. I know that on one line I executed under Mr. Locke, in Holland, we had a great number of bridges, and the piles were specified some eight or ten metres in length. These were provided, and when we came to drive them we wanted them fourteen or fifteen metres long.
- ²³ *à forfait* 2618. What were the piles generally composed of in England, and in foreign places? Of beech, elm, and oak. For foundations we use beech.
2619. What do you mean by "foundations?" Pile foundations; pile platforms for timber bridges—I beg pardon, I mean for bricks.
2620. In speaking of piles, without reference to platforms for brick bridges, has it come within your knowledge at any time in England, or in other places where you have been connected with railways, that there has been any platform construction upon which piles have been driven, or where framework for viaducts of this character have been erected? No.
2621. These platforms have been made generally with a view of building brick piers? Yes.
2622. Do you construct a platform of wood for timber structures? If we find rock near the surface, then, of course, we put a timber cill.
2623. Only in such such cases? Only in such cases.
2624. In speaking of the facilities Government ought to have afforded you and Mr. Rhodes, you state that it is invariably the practice of companies in England to allow contractors the use of rails, ultimately intended for the permanent way, during the progress of their work? Yes.
2625. Have you ever known an instance in England, or in Ireland, in which the rails intended for the permanent way have been specifically reserved from the use of the contractor? No, not in my experience.
2626. Are you under the impression such is not the case? Yes.
2627. Then you would be surprised, I suppose, if you saw a specification in which the rails intended for the permanent way were reserved from the temporary use of the contractor? Yes.
2628. I do not happen to have a copy of the specification with me to-night, but I have one at home in which they are specifically reserved? Perhaps it is a very old one.
2629. No, it is one of very recent date indeed, in which, in the second clause of the specification, all rails intended for the permanent way are specifically reserved from the use of the contractor for his temporary works—you have stated to-night that you have made a claim upon the Government for some vertical cuttings? Yes.
2630. Did you draw the attention of the Government to the difference that it would make in your profits between vertical cuttings and the slopes you have spoken of, prior to your commencing the work? Directly I got the section.
2631. Before you commenced the vertical cutting? I will give you the exact date if you will allow me. I received the last section on the 23rd September, and I wrote, claiming extra payment for vertical sides, on the 26th September.
2632. Then you had commenced the vertical cuttings at this time? No; it was only three days after I had received the section.
- ²⁴ have. 2633. That had reference to this particular cutting? I ²⁴ had many cuttings with vertical sides—it is not one cutting.
2634. Allow me to have an answer to that question again—I scarcely understand you—you state that you received —? I received my sections —.
2635. Yes, on the 23rd September —? And I wrote on the 26th September, making my claim for the rock cuttings.

2636. And, in answer to your claim of the 26th, the Government stated that they were not disposed to acquiesce in your requirement? I got an answer to that letter on the 29th December, stating that they did not admit it. G. Wilcox,
Esq.
2637. Had you proceeded far with your work prior to their giving you an answer? Yes, and I will tell you why. ²⁵We came down in October, hoping to settle this matter, and Mr. Secretary Robertson agreed to leave this question to arbitration, and I went on with my works on the understanding that it would be arranged in that way. 11 May, 1860.
*1
2638. And the time rolled on to December before you received an answer from the Chief Commissioner's office? Yes.
2639. Of course, I am prepared to admit that there is some difference between the value of a vertical cutting, and one as you are expected to make it? I think that is pretty clear.
2640. Have you made any calculation as to what the difference is? I have made one; but I have not it with me.
2641. That is through rock you say—of what description? Bluestone.
2642. Is it the ordinary blue metal on which the action of fire is observed? Yes.
2643. Whinstone, in fact? It is a trap—hardly whinstone.
2644. You state that on the Southern Line Mr. Rhodes has taken out a quantity of stones from the cutting which he has placed by the sides, I suppose in order ultimately to use it for ballasting, and you also state that the reason which you suppose has led the Government to refuse to sanction the appropriation of it in that way—would not the Government, in the first instance, have to pay for the cutting out of which this rock was taken? Yes.
2645. Supposing that Mr. Rhodes were allowed to use the stone for his own purposes in the shape of ballasting, what quantity of earthwork would, in your opinion, replace that quantity of stone in the embankment? Supposing a load of stone that ought to have been thrown into embankment were removed otherwise, how many yards of earthwork ought to be substituted for ten yards of stone cutting? That is not the practical way of looking at it. If you will allow me, I will state the way I think it ought to be done. If he has a certain quantity of cutting to get out, and a certain quantity to fill into a bank according to this agreement, if he had to take out 60,000 yards for ballast, and there is only 50,000 required for the bank, I should consider that he had fulfilled his contract if he put in only 50,000; that is, if he made the bank.
2646. You saw this stone that was taken out of the cutting; is it such stone as would stand the action of the air if it were used for the ballasting? No, it did not strike me as being good ballast.
2647. In fact, I suppose you are quite under the impression that it would not stand the action of the air? I do not think the engineer would allow it to be used for ballast; indeed I am pretty certain he would not.
2648. Do you think it would decompose? I think it would.
2649. Then, in fact, the Government would not be doing justice to the country to allow it to be used as ballast? No, but ²⁶that is a trifling matter; I do not suppose the whole question ²⁶is one of £40.
2650. I have heard that question asked many times in the House, of every witness, and I never heard till now that it was not likely to suit as ballast? I think, if I understand you, you allude to a hard stone.
2651. I do not know, I never was on the line, but I gather from what you state to-night that there is a certain quantity of stone taken out of cutting intended by Mr. Rhodes to be used for ballasting, and a complaint has been made by him of the Government engineer for not allowing him to use it for ballasting? If you will allow me, that is not the complaint; the complaint is this,—Mr. Rhodes has taken out this material, and because he has not put it into the bank according to the disposal-sheet, although he has got it out of the cutting, the Government refuse to pay him for it as excavation from cutting; but it is a trifling matter.
2652. Then the refusal is not in consequence of Mr. Rhodes' intention to use it for ballasting? No.
2653. *By Mr. Parkes*: There are two disputes are there not,—the first the refusal to allow Mr. Rhodes to use it as ballasting, and the second as to his not being paid for it for taking it out of cutting? If the honorable gentleman alludes to the heap that I saw, I do not think Mr. Rhodes would wish to use it as ballasting.
2654. *By Mr. Byrnes*: Admitting that you are correct, would the Government be right to allow that same material to be used for ballasting upon the line? If the material were good they would.
2655. Do you believe it is good—this material which you saw taken out as rock? It was only a small lot of it I saw. They had not saved it with care. A portion of it—perhaps three-fourths—would make good ballast, but the workmen had allowed clay and soil to be mixed with it. That certainly injured the sample.
2656. Is it not the fact that all that kind of stone decomposes when exposed to the action of the atmosphere? Yes.
2657. You know of no reason why this should not decompose in the same way? No.
2658. Have you had an opportunity of examining any viaducts along the Western Line? No.
2659. What would be about the greatest weight that could be brought upon a viaduct of that kind (*referring to the model*) at a time, under ordinary circumstances, with the working of the train? I should say from three quarters of a ton to a ton per foot run with an ordinary train.
2660. What weight do you think there would be in an extraordinary train, where there were two engines working, and both brought to operate upon a viaduct of that kind at the same time. You have seen the engines in use in this Colony? Yes.

S. Willcox,
Esq.

11 May, 1860.

2661. Taking into consideration that two of these were being worked together upon the line with a heavy train? Not more than a ton or twenty-five cwt. per foot run. I am not able to state exactly, as I do not know the weight of the engines.

2662. If you saw two engines in that way, with a train such as I speak of, working upon a viaduct of that kind, there was nothing like vibration in it, and the deflection was very little indeed between the piles, you would not apprehend there was any particular danger to the public? None.

2663. Do you consider that in the plan adopted in the construction of that there is sufficient science observed to give strength to it? Yes; I think with the exception of the connection between the corbels and the cap, the construction is very good.

2664. Are you aware in what way the corbel is connected with the cap? Yes, by an inch and a quarter bolt.

2665. A diagonal bolt? No, vertical.

2666. Are you aware in what way the corbel is attached to the head of the pile? The corbel is attached to the head of the pile ^{to} the cap.

2667. Are you aware in what way it is attached to the cross piece here (*referring to the model*) the cap? In the way I tell you, by one bolt passing from this girder down to the pile.

2668. Is it a jagged bolt? No.

2669. What kind of bolt is it? An inch and a quarter bolt; an ordinary straight bolt; a spike.

2670. Is there a nut let into the upright? No, it is a spike.

2671. *By Mr. Parkes*: A large nail? It would be a very large nail.

2672. Is it like a nail? It is a nail on a very large scale.

2673. *By Mr. Byrnes*: Then I suppose it has a nut on the top? No, it is simply driven in; it is impossible to put it in any other way; you could not put a bolt into a nut there.

2674. You have stated that you never saw temporary rails composed of wood, and a piece of bar iron on the top, used throughout Great Britain? Never.

2675. You told Mr. Parkes, I think, that you had heard or seen that it was the case here? I have seen it used here.

2676. Is the wear and tear very great upon rails used for temporary purposes? No.

2677. It is not? No.

2678. You think that ten per cent. for the use of them affords ample remuneration? I think five per cent. for the use of them would afford ample remuneration.

2679. What proportion would the construction of temporary rails of wood, covered by iron bars, bear to this ten per cent.? Really I do not know, I never made a rail of that sort. I do not know how they are made.

2680. *By Mr. Parkes*: Did you even see any? I fancy I saw them on the Western Line.

2681. In England? Never.

2682. *By Mr. Byrnes*: I suppose that in England, in very many instances, large contractors have a very large quantity of second-hand rails, which they are in the habit of using for temporary purposes? Large contractors do get a large stock.

2683. For instance, Sir Morton Peto and Company? Yes, we have a large quantity of rails.

2684. Rails unfit for permanent way, which I suppose are generally used for temporary purposes? I dare say they have.

2685. Upon lines you have been superintending for the contractor, or when you have acted as engineer, has that not been the case to a large extent? No, I never had a temporary rail in my life, and I have never seen one on any railway ^{in my life} ~~temporary rails~~.

** an which I
have been en-
gaged.

** used any.

2686. What I mean is, rails not fit for the permanent way, and used as temporary rails? I never ^{saw any} used.

2687. I thought you said just now you had seen them used by Peto and Company? I say I daresay Messrs. Peto and Company have a large stock of rails, but I did not say they have used them.

2688. You have stated to-night, and I think very properly too, that there would be a very great difference between the expense of a brick and of a wooden viaduct? Yes, more than double.

2689. In constructing a brick viaduct in some of the watercourses of this country, would there not, unless you could find rock very near the surface, be great risk of the brick piers being displaced and washed away during heavy floods? No. I have constructed brick bridges in Holland 25 and 30 feet down to the foundation.

2690. Supposing you do not go down that depth? You would not go down that depth to a foundation here.

2691. In what way is the foundation prepared? You first drive piles, on the top of the piles you make a platform, and then you lay the brickwork.

2692. Where you do not take that precaution, but simply construct a platform upon the bottom, either of clay or sand, or something of that kind, if the water were to come down in great force, is it not likely the bridge would give way? I should think it was exceedingly likely.

2693. Are you aware that in nearly all the creeks and watercourses of this country the stream is very rapid in times of flood? I believe it is.

2694. Are you aware that the beds of the creeks, and of various watercourses, very often shift? I do not understand your question.

2695. Are you not aware that the creeks often change their course —? That the channel changes? Oh, yes.

2696. In such cases would it not be almost certain that a brick structure would give way? No; I do not admit that at all.

2697.

2697. If not built upon piles? If not built upon piles no doubt.
2698. *By Mr. Robertson*: With regard to the bridge to which you have been referring is not the corbel coggled and tenoned into the head stock? On to the head stock.
269. You have said that the spikes are plain—are they not jagged? I think not, but I am not certain on that point; it is possible I may have made a mistake.
2700. You are not sure they are not jagged? No.
2701. Are they not four feet long? Yes, four feet six.
2702. And an inch and a quarter in diameter? Yes.
2703. Do you call that a nail? No, I do not.
2704. *By Mr. Parkes*: What difference would the reduction in the prices upon the schedule of prices sent home to London make in the value of your contract? On the Northern Line it will make nearly £10,000.
2705. Is it usual, as far as your personal experience goes in similar works, to charge the contractor for travelling on the railway already in construction, and for removing his material? It is not usual to charge him for travelling upon the railway, but it is usual to charge the cost of the locomotive for the conveyance of the material, that is, the working expenses of the line.
2706. That is, some special arrangement is made with the contractor employed in the extension of a railway, for travelling on that part which is open for traffic, at a price just covering the cost? Yes.
2707. Is that generally the case? Yes; I have never known it otherwise.
2708. Is it the case with you and Mr. Rhodes? No; we are charged the full rates.
2709. To what extent are you permitted yourself to travel on the road? I have a pass, and Mr. Rhodes has one; but that is not a very important matter.
2710. Do you pay for persons in your employ? Yes.
- Mr. Robertson*: Of course.
2711. The honorable member says "of course,"—is it a matter of course—do you pay in similar cases of contract in England? No.
2712. What is the general practice in carrying out works of this kind in England? To issue passes to all the engineers and inspectors engaged upon the works.
2713. *By Mr. Robertson*: Will you kindly answer me whether , or any other country, or anywhere else, it is not usual the contractor shall have the amount of accommodation on the line agreed to, whatever that may be? I have never known an instance of an agreement being made on any line, but I have always seen that we have been charged just the working expenses.
2714. But where an agreement has been made as to the amount of accommodation to be given to a contractor there is no injustice in insisting upon that agreement? But in this case I say the agreement has not been made.
2715. What I want to know is where an agreement has been made? If you make a special agreement that he is to pay carriage, of course there is no injustice.
2716. You say that, having reference to the schedule, the amount you will lose by the change of prices will be £10,000—will you kindly say what you mean by that? I will. In the first place, I believe we shall have about 508,000 yards of excavation from cutting —.
2717. If you will permit me —? I am going to give the details.
2718. If you will permit me, I would ask what schedule you refer to? I allude to the schedule you offered to Mr. Gabrielli.
2719. Which schedule? The schedule that went to England.
2720. You are aware that several went to England—which do you refer to? I refer to your engineer's schedule.
2721. Which schedule? Only one went to England.
2722. There were several went to England? Not several of your engineer's.
2723. Yes? Then it is the schedule mentioned in the Gabrielli contract—the provisional contract.
2724. Then will you kindly say what the schedule mentioned in the contemplated contract with Mr. Gabrielli has to do with the contract with Mr. Rhodes? It ought to have a great deal to do with it.
2725. What has a proposition made a year before, or something like that, for a contract with Mr. Gabrielli, and which Mr. Gabrielli refused to sign, to do with a contract made with Mr. Rhodes subsequently, which Mr. Rhodes did sign? I gave an answer to that question I think to Mr. Parkes.
2726. What answer do you give me? I do not understand your question.
2727. I will make you understand. Will you kindly tell me what the contract which the Government of this country would have been willing to have given to Mr. Gabrielli, but which Mr. Gabrielli declined to enter into, has to do with the contract made many months after with Mr. Rhodes, and which was signed by him—what these things have to do with each other—what connection they have? I think you so arranged matters that they had not much connection.
2728. They had no connection in fact? I think you arranged it in that way.
2729. I think you will admit that you have given some attention to this matter? I have.
2730. I think you will admit that the Government offered certain terms to Mr. Gabrielli, and that Mr. Gabrielli was not in a position to accept those terms—I suppose that you will admit that he did not accept them before he went to England? Yes.
2731. I think you will admit that the Government, in this state of circumstances, and still being desirous of negotiating with Messrs. Peto and Company, sent home in the same ship in which Mr. Gabrielli went, if not in his custody, a letter stating that they would have been willing at the time to have entered into this agreement, the terms on which they dealt with

S. Willcox,
Esq.
11 May, 1860.

S. Wilcox,
Esq.

11 May, 1860

Mr. Gibbons, and another schedule of prices, being three; that these were sent home as clearly indicating that the Government were not bound by any of them, but as shewing merely the kind of agreement the Government were willing to make under the then state of circumstances in each case—I think you will admit that? No, I do not at all.

2732. Then you will admit this, that when Mr. Rhodes arrived in this Colony, having a power of attorney from Sir Morton Peto and Company, he agreed to these terms? I am led to believe that, to induce Mr. Rhodes to undertake these lines, he was promised extraordinary facilities; that, in fact, he should be engineer and contractor, and execute the works—

2733. It is not what you have been led to believe—that is not my question—I ask what was the fact, did Mr. Rhodes agree to certain terms of an entirely different character to those which had been offered to Mr. Gabrielli? Unfortunately he did.

2734. Are you aware, is it within your knowledge, that the Government, on the day that Mr. Gabrielli left this Colony, when Mr. Gabrielli was in the Colonial Secretary's Office, proposed that he should be called in in order to say fairly and honestly what was the intention of sending home the schedules? I was not present, but I can tell you what Mr. Gabrielli told me in London, that we had only to come over here and accept or refuse these terms. Besides, Messrs. Peto would not have sent out agents and plant at the expense of £15,000 or £20,000 on speculation.

2735. I do not think you have answered my question—are you not aware that at the time this matter was under discussion with Mr. Rhodes, Mr. Gabrielli was in the ante-room? I am not aware.

2736. Have you not heard it from Mr. Rhodes? No.

2737. Are you aware that under the Railway Act no special agreement can be made for carriage? I am not aware.

2738. Have you not read the Act of Parliament on these matters? No.

2739. *By Mr. Parkes*: Have you read many Acts of Parliament? I have not read one yet.

2740. *By Mr. Robertson*: Do you say there is no such Act of Parliament that would prevent your being carried at lower rates than other people? No.

If you do not know whether there is or not, I can inform you that there is.

2741. *By Mr. Parkes*: Did you ever know any agreement of this kind to be made for charging a contractor for the passage of all his workpeople on the railway? No; I never knew an agreement of this kind.

2742. *By Mr. Dickson*: Do they travel free? The inspectors and engineers, not the workpeople.

2743. *By Mr. Parkes*: The engineer and staff, I do not mean the workmen? The engineer and staff generally go free.

2744. Where you have been engaged in other cases, have you to treat with Government or with companies? With companies.

2745. In all cases? In every case.

2746. In foreign countries as well as in England? Yes.

2747. Railways generally all over the world are carried on by companies? Yes.

2748. Did you ever know the business to be conducted in the same manner as it has been conducted by Government in this country? I do not wish to answer that question.

2749. I do not see any reason why you should not answer it; it is not a matter of private interest between you and your principals? Well, I never have seen it conducted a similar way.

2750. Could you describe, definitely and clearly, what is your contract with the Government—is it in any tangible form in which it could be conveyed to persons unacquainted with the circumstances? I think so; I perfectly understand it.

2751. Did you ever hold before a contract that consisted of the same kind of vague instruments? I think the letter is sufficient to form any contract.

2752. *By Mr. Robertson*: My question has reference to a question of the Honorable Member; you have stated that you have not known in the Mother or in any other Country, railway employees to be charged for their travelling on a line on which they were employed? Yes.

2753. Will you kindly state whether you mean the travelling on the line formed by the contractor, or do you mean that if a line of railway was formed of a hundred miles in length, and another contractor came in to construct fifty miles of new line, he would be allowed to travel over the hundred miles of railway already made for nothing? No, I do not mean to say that, but he would get a pass for the length of line on which he was engaged.

2754. Have you or Mr. Rhodes constructed any lines? I have, a good many.

2755. Have you completed any lines in this country? No.

2756. Then have you any real complaint on this head? I have no complaint, and I make no complaint.

Because, from the manner of your answer before, we might be led to suppose that, according to the practice in the Mother and other Countries, if you had the construction of an extension line, that gave you a right to travel upon the whole line. You mean that you have only a right to travel on your own extension, and I think that will be admitted by all.

2757. *By Mr. Dickson*: I understood you to say that the difference between the rates mentioned in the schedule sent Home and the rates of the present contract would be to Messrs. Peto and Company, something like £10,000? Nearly £10,000.

2758. Do you believe that the rate at which the works of the Northern Extension are carried will be attended with loss to Messrs. Peto? I believe it will.

2759. Are you aware that other contractors have offered to take these extensions on the same scale as Messrs. Peto and Company are now receiving for them? Do you allude to the tender that was sent in before we came? Mr. Randle's?

2760. Do you know that contractors are willing to take the contract off Mr. Rhodes' hands? I am speaking of the Northern Line; I know nothing of Mr. Rhodes.

2761.

2761. You think at the present rate the construction of the Northern Line will not pay Messrs. Peto and Company—will they actually lose? I believe there will be no profit.
2762. Will there be a loss? Perhaps not; but the profit will be merely nominal.
2763. There will be a profit? No; I will not say so.
2764. This £10,000 would have supplemented whatever profit there might have been? Yes.
2765. You know the Northern Line at the part where it crosses the main road at Maitland? Yes.
2766. Are you aware of the height of the embankment at that line? No.
2767. Are you aware that it is several feet below the highest flood level? I have understood it was below the level.
2768. Do you think that a proper way of constructing a railway? It is a difficult matter to decide a point of that kind in cases of extraordinary floods.
2769. Is it your opinion that, should a flood occur, that would be carried away? Before answering that question, I should want to know the material of the embankment; if it is sand, I should say it would be carried away if a flood were to rise five or six feet over it.
2770. I understood you to say that there had been several points of dispute between you and the Government, but that now only one exists? We have had three or four; I think we never had more.
2771. Have you reason to believe that by arbitration or by arrangement the Government will meet you on this one point? I hope so.
2772. They have not refused to consider the matter? Yes, they have; I have understood they have refused to submit to arbitration in any case.
2773. You consider that the Government acted unjustly towards you in not accepting your tender for the fencing? I think so.
2774. That is one of the disgraceful acts you have spoken of? I do not call it a disgraceful act exactly.
2775. I understood you to say the Government had acted disgracefully towards you—(*an Honorable Member*: dishonorably)—dishonorably towards you? Yes, dishonorably.
2776. Would you consider it reasonable for the Government to accept a tender some 25 per cent. above what others tendered for the same work? It is not 25 per cent. above; it is not more than 10 per cent.
2777. If it has been taken at 8s. and your tender was 10s., I imagine it is 25 per cent? They have not let the whole of it for 8s.
2778. Call it 10 per cent.—do you think the Government would be justified in doing that, seeing that they were responsible to their superiors? I think so.
2779. *By Mr. Windeyer*: You know a bridge over Stoney Creek, on the Northern Line? Yes.
2780. You know the old bridge over the roadway which was washed away by the flood, and of which some portions remain? Yes, I think so.
2781. Do you know whether the white ant was very much in that bridge? I have understood they were.
2782. Do you know whether they have got into the new railway bridge at all? I do not know. I know they took precautions to prevent it.
2783. This old bridge where the white ants were in such quantities was immediately under the new railway bridge? Some 40 or 50 yards away.
2784. The railway bridge goes over the road of which this old bridge forms part? Over the same road, but still the railway bridge is some 40 or 50 yards further up.
2785. At the place the other day I was informed they were destroying this bridge because they found that the white ant was in the railway bridge? I understood that the white ant was in the old bridge, and that the railway authorities had taken precautions to protect the new bridge.
2786. Do you mean by way of tarring? Yes.
2787. Would that preserve these bridges from the white ant? I believe that is generally admitted in the Colony.
2788. *By Mr. Robertson*: Is it not the fact that there has never been a railway bridge attacked by the white ant, either from the running of the trains over it, or from some other cause? ———
2789. *By Mr. Windeyer*: Do you consider it to be the duty of an engineer having charge of the construction of such works as these, to find out at first whether the places where he proposes to erect certain works are suitable for the kind of works designed? Of course it forms a part of his duty, decidedly.
2790. It ought not to be left to the contractor to find out whether the place is adapted to the work designed—it ought to be found out by the superintending engineer? Yes, it ought to be seen and ascertained by the engineer.
2791. Before the plans are given over to the contractor to carry out? Yes; but in all contracts you will find alterations; it is impossible to design a contract entirely without alteration.
2792. Do you think it is a proper way to conduct such concerns as these, that the engineer having the designing of these works should design the works without knowing whether the place is suitable for them? I should think the engineer would not design a thing of that sort without knowing the place where it was to be erected.
2793. You think it would be his duty to find out first whether the place where he proposed to erect the work was suitable for such an erection? Yes.
2794. Do you think it shows a careful or efficient discharge of the duties of such an office, when a pile bridge is directed to be made in a place where there are only three feet of earth before the piles come to the rock? Yes, there is no objection to that if you use a pile bridge.

S. Willcox,
Esq.
11 May, 1860.

S. Willcox, Esq.
11 May, 1860.

2795. Do I understand you to say there is no objection to driving a pile where there are only three feet of holding ground? I should not drive piles where there were only three feet of holding ground; I should excavate it down to the rock and put in a cill; and that is the plan adopted here; I received instructions a fortnight or three weeks back for a work of the kind.

2796. Are you aware of a bridge on the Western Extension where there are only three feet of holding ground, and where no cill has been put down? I have understood that there are something like five or six feet, or seven feet of earth at the bridge you allude to.

2797. Do you think such a construction is safe where there are only five feet of holding ground, without a cill, with a waterway likely to make a scour? It depends upon the material; if it is a very hard material, I should think five feet quite little enough.

2798. Supposing it is only three feet, do you think that safe? No, five feet would be the minimum.

2799. Do you think it would shew a competent and proper discharge of the duties of an engineering officer, when he proposed to erect such a bridge without putting a cill upon the rock? No engineer would be able to tell; he could not go and bore for every pile. He would make a design for the bridge, it would be ascertained in driving, and he would alter the plan accordingly.

2800. Do I understand you to say that the work would be thrown on one side, and recommenced on a different plan? The work is not thrown on one side, because, perhaps, in such a case as you mention, he would only have to put cills under two tiers of piles. I have a similar case in a bridge I am building at Jump-up; we have driven some of the piles fifteen feet, but just in the bed of the river we found there were only 2 ft. 6 in. or 3 ft. down to the rock, and I got an order from the engineer to put in cills, and have erected the bridge in that way. The only alteration is, that there are two cills under two tiers of piles. These trifling alterations will always occur in contracts. It is impossible to avoid them.

2801. Where no preliminary inquiries of the kind are made at all, it is only a matter of chance whether the alteration is a large or a small one? It would be a very expensive thing to go and bore for every pile.

2802. Ought it not to be known in some degree whether the proposed erection is suitable for the place? It can only be known by boring, and, as I have said, it is too expensive to bore for every pile.

2803. Are not some general measures usually taken to find out whether bridges are suitable for the places where they are proposed to be erected? Yes, it is usual to do that.

2804. And it would not show a competent knowledge, or an efficient discharge of an engineer's duties, if he did not take such steps? The case brought forward would be no proof that that care has not been taken.

2805. I understood you to say it would not shew care or a competent knowledge of the duties of such an office for an engineer to erect a bridge without finding out whether the design was suitable to the place where it was proposed to be erected? He would find that out.

2806. Your assuming that he would find it out shews that if he did not he would neglect his duty? No.

2807. Does it not shew that if he does not he neglects the general duties of his office—what is generally done by such persons? No; because he might design a bridge, and eight tiers of piles out of nine might be driven on deep ground and the ninth come on rock. It would be a great chance if he hit on the position of the ninth tier in his experiments.

2808. Supposing that a whole bridge turned out so rickety that it vibrated visibly, would you think, with regard to such a bridge, that suitable precaution had been taken to find out whether the place was suitable for the proposed erection? Before answering the question I must know the design of the bridge. Unless I know that I should not know whether it was the fault of the foundations or the fault of the superstructure.

2809. I am sorry to see that you have such persons to deal with that you do not like to give evidence against them? No, I have no fear on that score.

2810. *By Mr. Byrnes*: Will you state what you meant, in answer to Mr. Parkes' question, when you stated that the railway was conducted in this Colony differently to what it was in England? I think that was not the question.

Mr. Parkes: My question was this—Whether, in his contracts with railway companies in England, the business of the contracts was ever conducted in the manner in which it is conducted here.

2811. *By Mr. Byrnes*: Will you state to the Committee what you mean? I do not quite understand what you wish me to state. In what way they have been managed differently?

2812. Yes, in what way they have been managed differently here to what they are in England? In the agreement.

2813. *By Mr. Parkes*: Have you ever met with so much difficulty in carrying out a contract? Never.

2814. *By Mr. Byrnes*: Does it come within your knowledge, at any period of your connection with railways, that, after contracts are made with either Companies or Governments, the contractors decline to proceed with the works unless the suggestions they have made themselves are adopted by the Company or by the Government? That is not the general way of managing in a case of the sort. I should myself protest against a work if I considered it wrong in plan, and having done that, I should consider that I had done my duty both to my employers and to the Company.

2815. Have you any recollection of an instance where there has been a dispute between the contractor and the proprietors of the railway, and where he has not proceeded with the work simply because the proprietors would not adopt his suggestions, in which he has had the pleasure of having his case brought before Parliament? I am very happy to say I do not remember a case; but we have never been similarly situated.

- 2816. *By Mr. Parkes*: You never remember a case where there was any cause? No.
- 2817. *By Mr. Byrnes*: You never remember an instance in England, in all your experience of railways, in which the same course was adopted as has been adopted in this case—the contractor, after making his bargain for his work, dictating to his employers the way in which the work shall be done, and then because his suggestions were not followed, having the pleasure of figuring before Parliament? I think I must decline answering that question.
- 2818. Have you had an opportunity of knowing, since you came to the Colony, anything of the durability of our ironbark timber? No.
- 2819. And what is your opinion of the value of ironbark timber for such a structure as that (*the model*), or for viaducts generally? Well, if it will last as long as is stated by the Engineer-in-Chief, I should say, that for timber bridges, it is about the best material you can use—supposing it to last 40 or 50 years; but I have had no experience of it at all.
- 2820. In England, where viaducts are constructed of wood, it is usual to pay considerable attention to them in keeping them painted and protected from the weather? Yes.
- 2821. And in this Colony it is equally necessary? Quite so.
- 2822. Have you any knowledge what part of a timber structure of that build is likely to go first? I should suppose the piles.
- 2823. What part of the piles? Near to the ground.
- 2824. Just about the surface? Yes.
- 2825. Is there any mode in which you think that part could be preserved from decay, or the action of the weather? Charring is the plan we adopt.
- 2826. That is known to be a preservative against rot from damp? Yes.
- 2827. And, in this case, you consider that, if care is taken, these timber viaducts will last 40 or 50 years? No; I said that the engineer states it. I do not state that they would last 40 or 50 years. I have had no experience of this timber.
- 2828. In the event of the timber being prevented from rotting in the way you suggest, how long do you think it will last? I can form no idea.
- 2829. Did you ever hear of a piece of ironbark timber being used in the construction of a common viaduct in this colony, and being taken out sound after 40 or 50 years? I was shewn, some time back, by the engineer, a piece of wood which he stated had been used as a covering for a culvert some 40 years.
- 2830. What engineer was that? Mr. Whitton.
- 2831. Did he tell you where it was taken from? I think he did.
- 2832. Was it the neighborhood of Parramatta? Yes.
- 2833. I saw it taken out myself, and I know it was in use about 40 years? Indeed.
- 2834. What timber are the bridges constructed of in the Northern District? Ironbark.
- 2835. Do you know if the timber is grown on low land or high land? I think it is generally grown on high land.
- 2836. And the fencing, I suppose, is constructed of the same material? Yes.
- 2837. I was going to ask you a question about the contract—about its paying—my friend, Mr. Dickson, asked the question, and you said you thought it would not pay, nor do you know any person in the Colony that would take it off your hands? No.
- 2838. If you wish to part with it I can introduce you to an individual who will take it off your hands? I shall be very happy to see him to-morrow, if you will introduce him.
- 2839. From such experience as you have had of the timber here, do you think the timber here is better than the timber used for the same purposes in England? It is.
- 2840. How many years are viaducts expected to last in England? From ten to twelve years.
- 2841. They are generally of Baltic timber? Yes.

S. Willcox,
Esq.
11 May, 1860.

G.

FRIDAY, 18 MAY, 1860.

Charles Fowler, Esq., again called in and further examined:—

- 2842. *By Mr. Parkes*: Since you were examined at the Bar some few weeks ago, you have been present, I believe, and heard the evidence of other gentlemen who have been examined? Some of them; two other gentlemen I have heard since then.
- 2843. Some evidence has been given affecting your statements in some particulars respecting which you now wish to offer some explanation? Yes, there are two or three matters. A question was asked by the Minister for Public Works of myself, and another was asked by Mr. Willcox, and the answers appear, I may say, almost diametrically opposed. I mentioned to Mr. Willcox afterwards what answers he had given, and called certain facts to his mind, and he admitted at once that he had given an inadvertent answer, and regretted that he had given it. I also mentioned the matter to Mr. Rhodes, and he appeared to agree with me that the answer I had given was the correct one.
- 2844. In relation to what? To the answer to question 2443 in Mr. Willcox's evidence. It is not material to the subject, but I should very much regret if I so far forgot myself—
- 2845. You wish to explain more fully the statement that has been made by other witnesses as to your being employed by Sir Morton Peto's agent? Yes.
- 2846. Will you be good enough to explain what you mean? I have not been consulted

C. Fowler,
Esq.
18 May, 1860.

C. Fowler, much by Mr. Willcox; but I called certain matters to his mind, and he admitted that he was scarcely justified in giving the answer he had done.

2847. You have been professionally consulted sometimes by Mr. Willcox? Just so. I appealed to Mr. Rhodes, and he seemed to think the answer was a proper one.

13 May, 1860.

2848. It has been stated at the bar by the Engineer-in-Chief, I think, that you did apply to the Government for employment? By Captain Martindale, the Commissioner, not by the Engineer-in-Chief.

2849. That statement appears directly at variance with your own evidence? Just so. My opinion is, and so is Mr. Rhodes', to whom I have since named the matter to call to his mind what took place—his opinion is that the statement made by the Commissioner is entirely falsely colored, so much so that his opinion is that it is an entirely false statement.

2850. Will you explain exactly what took place in the matter in which you complain of being misrepresented? What took place as far as I recollect was this:—Mr. Rhodes came to me as I stated before in my evidence. I did not then state the conversation that took place, but I recollect it perfectly well. He stated certain reasons why he wished me to assist the department; one was that they had no one to make the plans, and that if I did not assist them they would not have them ready in three months. He said he did not believe they understood their business, and that there was not an engineer in the lot. I believe those were his very words. I said, "Have you so soon formed that opinion of them?" I said, "I have no objection to assist them, even if I did not receive one single farthing compensation, provided it could be done pleasantly, but you are aware that Captain Martindale, who is at the head of the department, is a Royal Engineer." I recollect the conversation well; and I said, "I would as soon be dictated to," I believe I said, "by a dancing master as by a Royal Engineer, and, therefore, it would be objectionable to me to do it; still I do not mind giving you my assistance so far as that goes." That was the sum and substance of what took place. Afterwards Mr. Rhodes persuaded me to offer to assist them, but I never agreed to assist them for more than a few months. I made that statement to Captain Martindale, that I did not consider I should be at liberty after a few months. Mr. Rhodes proposed it to oblige the department; he was on good terms at that time,—they had neither snubbed nor insulted him, nor charged his rock as earthwork, nor abused him in any way; and I believe Mr. Rhodes did it more out of consideration for the department than for any other reason.

2851. Have you read the evidence of Captain Martindale, from question 2118 to 2127? I have.

2852. That refers to you? That refers to me. Perhaps it is desirable to the House that I should state what took place. There is a remark with regard to Mr. Want, the solicitor,—a gentleman well known here; and also a farther remark of Captain Martindale, "I could be a party to no course that required concealment." In conversation with Mr. Rhodes I offered to undertake to settle the matters of dispute between him and the railway authorities; I shewed him that there were very few questions between them, and that where people were desirous to act honestly and understood their business they could easily come to an arrangement. Mr. Rhodes said, "I will not stand in the way, go and settle it." I understood that Captain Martindale was the proper person to settle the matter with; and after writing a note to Captain Martindale, requesting an interview, I received a reply, and saw Captain Martindale. At the first interview with him we had some conversation, in which I stated that the matter in dispute between the department and Mr. Rhodes might easily be settled, and that the conduct of all parties concerned was unseemly and discreditable, as well as a loss to the Colony; and I felt sure that by each party giving way a little the matter could be easily arranged. I took the conversation down at the time. We had not got far in the conversation before Mr. Secretary Eagar sent for Captain Martindale. I asked to see the bond and contract tendered to Mr. Rhodes for signature; Captain Martindale's reply was, that Mr. Want had the bond and contract. I offered to settle this matter—not as a partizan of Mr. Rhodes, but more, as I thought, to make peace on both sides. I thought it not desirable in an attempt to settle the matter peaceably to have the intervention of lawyers—that they were only the *dernier resort*. The scrap of paper I sent to Captain Martindale, when he was in the next room, was about the size of a gentleman's card; it was written off hand; just such a scrap as a gentleman would send in to say he was waiting; it was not a letter, and would not be looked upon as a letter. I may state that it was mentioned by myself once, and at my request by Captain Martindale once, before we commenced the conversation, that no part of the conversation should be made use of hereafter, provided we did not come to an arrangement; and Captain Martindale, at the end of the conversation, stated at my request to the chief clerk, who was present, that the conversation or anything that had taken place should not be made use of hereafter, inasmuch as we had come to no arrangement; I also stated that to his head clerk. I find, on the first day's interview with Captain Martindale, that in reply to—perhaps I had better read it—in reply to this scrap of paper I had written—"Will you oblige me with the draft form of contract, as I do not wish Mr. Want to know what we are endeavoring to conclude"—I received this long official document (*producing a letter*) in answer to this dirty scrap of paper on which I had merely written a wish to see the form of contract. This long official document addressed to me, "On Her Majesty's Service," talks about concealment, and a whole lot of other matters—

2853. Do you wish to hand that in? I do not know whether it is worth doing so.

2854. Do you wish? No, I do not. I came to the conclusion that no man of business would write a long official document in answer to a scrap of paper like that, in which he would talk of concealment, there being actually nothing to conceal, and that it was useless to attempt to arrange matters with Captain Martindale. When I went to him the second day,

day, I told him that was my opinion ; I found him so unbusiness like, that he had such a total want of knowledge of real business that it was useless —

C. Fowler,
Esq.

Mr. Samuel thought the letter should be handed in, as it had been referred to by the witness.

18 May, 1859.

(The witness handed in the letter. Vide Appendix.)

So that after four distinct promises—mentioned by myself once at the beginning of the conversation, and once at the end, and once by Captain Martindale at the commencement, and at the end by him to the chief clerk—next day Captain Martindale shews Mr. Want the small scrap of paper, and says, "There is some underhand work going on." This Captain Martindale does after these four promises. He may be an officer, the House will form their own opinion as to whether he is a gentleman or not.

Mr. Black called the attention of the Chairman to the last observation of the witness.

The witness withdrew.

After some discussion the witness was again introduced.

The Chairman: In giving your evidence you will the goodness to refrain from using any expression that may be of an offensive character.

The Witness: I regret if I have made any remark offensive to the House. I did not make any statement, I merely left the House to draw its own conclusion; but even if that be offensive to the House, I beg to apologise.

2855. *By Mr. Parkes:* Is there any other point in your former evidence upon which you wish to offer any explanation? Not of a personal nature. There are one or two matters I omitted to state, as I was called upon unawares, these might have followed upon the questions you asked if I had been prepared.

2856. There is nothing else you desire to state? Not that I am aware.

2857. *By Mr. J. Campbell:* You are a professional engineer? Yes.

2858. Worked on railways at Home? Yes, my evidence stated that.

2859. Did you come out here to work on your own account, or in the employ of Peto and Company? I came out here on my own private account; I did not come out here connected either with Messrs Peto or with the Government. What I came out for, or had in view, is my own private business, upon which I decline to give any information.

2860. Do you know the different weight of timber? Weight?

2861. Yes, what timber will carry? Do you mean what weight a certain piece of timber will bear?

2862. Do you know the difference between what a piece of oak and what a piece of pine will carry? I cannot remember exactly the difference; I cannot keep the particulars in my mind.

2863. Which do you consider the strongest? Oak or pine?

2864. Yes? In the form of a beam, oak will carry the greatest weight, considerably.

2865. As to its durability? Oak is more durable than pine.

2866. Of course you were not acquainted with the woods of this country until you came here? Not till I came here. I knew them by name some of them, and from having read of them; of course I did not know them from observation.

2867. Having seen them now, what is your opinion of them? Take the ironbark.

2868. Or the blue gum? Ironbark is fully fifteen per cent. stronger than teak. In fact I saw some experiments made at Russell's Foundry a week or two back. I have not had the results sent to me since; but, as far as I recollect, ironbark was fifteen per cent. stronger than teak, and teak is considerably stronger than oak.

2869. In making bridges in this country, would you prefer wood piles driven into the earth to brick? Good brickwork is far superior to any timber—the best timber in the world, and the work of the best carpenter.

2870. You prefer brick to wooden piers? Yes, if the work were well done and duly proportioned.

2871. You think piles would not last so long as brick? Certainly not—not so long as good bricks, and good workmanship.

2872. Have you observed the height to which floods rise in this country with heavy rains? I have, carefully.

2873. Do you not think these brick pediments would not be so likely to stand the rush of water as wooden bridges? I should say not. If they are properly designed, properly strengthened, and properly shaped, they will stand just as well as any other structure.

2874. Do you not think large logs of timber coming down with the stream would act as battering rams, and seriously damage any broken parts? No doubt they would, either on brick or timber.

2875. Would it affect brickwork more than timber? If you knock out a piece of brick it may be easily replaced—you can either put in another or plate it, or put protecting guards against it, and still not interfere with the permanence or durability of the brick structure. Unless you take your railway works above flood level, and provide proper and sufficient openings for the passage of floods, and have your works properly designed and constructed of good materials, they will be swept away, as they have been.

2876. In driving piles into the ground, of course, they are attached to the beams,—the superstructure will not stand unless attached to the timber? You mean the longitudinal beams?

2877. Yes, of course; these piles will not go, or cannot move, without the superstructure going with them? The chances are, that if you move the piles the superstructure will give way.

2878. The brickwork may be knocked away, and the superstructure still stand? Such may be the case; I believe there was an instance the other day.

C. Fowler,
Esq.
18 May, 1860.

2879. Have you not seen that work between Liverpool and Campbelltown? I have not, but I believe that was the case; but I do not see that it would be much advantage to a Government, or for a Railway Company, to put up a bridge of such a character as that anything coming in contact with it shall destroy the roadway or superstructure. It is possible that a bridge may be put up inadvertently, or without due consideration, but I do not think it desirable that such should be the case.

2880. You are employed by Mr. Rhodes as an engineer? I am.

2881. And you have given your opinion to him that brick piers are preferable to wooden ones? I am not aware whether I gave an opinion exactly in that form; no doubt, I gave opinions amounting to that.

2882. As regards the size of the culverts,—did you give any opinion to Mr. Rhodes about the size of the culverts? I think the size of the culverts, as to their capacity for discharging water, was Mr. Rhodes' own idea. I believe he drew my attention to it, but I never took means to ascertain whether the size of the culverts was proper or not; but I have done so in the case of the wooden bridges.

2883. When you came to this country, did you ever, through Mr. Whitton, ask to be employed by the Government? No, not in that way.

2884. You never made any application in that way? No, not in that character.

2885. Are you any relation to Mr. Whitton? No; I am a sort of connection,—not a relation.

2886. Do you consider yourself employed by Messrs. Peto, Brassey, and Company, to superintend this work? I am employed by Mr. Rhodes directly, and if you like to look at a private letter from Mr. Brassey to myself, I have not the slightest objection to your doing so. That will fully explain the matter. (*The witness produced a letter.*)

2887. Mr. Rhodes, in employing you, employs you as engineer on the part of Messrs. Peto, Brassey, and Company? Exactly.

2888. You have seen the contracts, I suppose? Yes, I have read all the documents through, from first to last.

2889. You think the contractors have to complain against Government,—what have they to complain of? They have to complain of Government measuring rock, and charging it as earthwork, and at earthwork price, in the certificate. From Menangle to Picton no earthwork has been returned in their certificates, although some thousands of yards have been done; in fact, eight tons of powder have been blown away in that work, for which Government have received some thousand pounds.

2890. Has Mr. Rhodes made use of the stones taken from cutting in any part of the railway? It has all gone into embankment.

2891. Then the stones that have been got out have been of no use? They have not been sold or appropriated by Mr. Rhodes, but have been thrown into the bank.

2892. Government have refused to pay for that part of the work? They have refused to pay for it at 4s. 9d.; they have paid for it at 2s. 7½d.

2893. What would be the difference in the amount, if Government refuse to pay Messrs. Peto and Brassey's claim? Probably there may be 250,000 yards of this. I do not know what it may turn out, but supposing that to be correct that would amount to the small sum of about £25,000 on the question of rock alone; and I consider that what they claim at the bottom of these cuttings is decidedly and unmistakeably rock.

2894. Have Peto and Brassey refused to go to arbitration with reference to this matter? As to going to arbitration they have offered to do anything and everything to settle this matter fairly and honestly. They are willing to do so now, and have offered to go to arbitration; but Government wish to have Government employes as arbitrators, or they will have none.

2895. Are you carrying on the work now and employing as many people as you can? Mr. Rhodes is employing as many people as he can conveniently.

2896. Have you heard him complain that he could get no money from Government to carry on the work with? He complains, of course, that his certificates are deficient, and they must be so if they are charging rock at earthwork price.

2897. In making railroads, which would be the cheapest to the Government, to build brick bridges, or to use wooden viaducts? If you take wooden and brick structures of equal magnitudes, of course, timber will be cheaper at the first cost, but it has generally been found that brick is the cheapest in the end.

2898. That is to be known when we are dead and gone? I do not know that.

2899. Timber will last a hundred years and not many of us will be left by that time? Oak timber in England has lasted many hundred years, but not in railway works.

2900. Then Government in using wood are doing the work on a cheaper scale than they would be if they were to use brick? I do not admit that; you must take a broad view of the question; if built of wood there will be renewals of part of the line which will involve the stoppage of the traffic. Brickwork is looked upon as permanent, but timber can only be regarded as temporary; and I consider brick the cheapest in the end, if good brick, good work, and good mortar are employed.

2901. Would the contractor have a greater interest in the larger or in the smaller expenditure? The contract for brickwork would be a worse contract for the contractor than a contract for wood.

2902. You think the contractor would not make so much by brick as he would by wood? Certainly not.

2903. *By Mr. Arnold:* You state, I think, that Mr. Willcox since giving his evidence here has expressed a wish to modify that evidence in some way? That is so.

2904. In what respect? I believe I have explained it as well as I can. The questions asked

asked by yourself of him and of me were not quite the same, but nearly, and the answers given were diametrically opposite. I say the explanation is this, that after he had given this evidence I called certain matters to Mr. Willcox's mind which he had forgotten; and, I say I had not been employed much by Mr. Willcox, but that what I had stated was correct. I daresay he thought he was right when he was giving that answer; but he admitted to me when I called these matters to his mind, that his answer was inadvertent, and stated that he regretted he had given it.

C. Fowler,
Esq.
18 May, 1860.

2905. That is with regard to questions 2442 to 2444—"Has Mr. Fowler ever been employed professionally by you? No." Yes.

2906. Did Mr. Willcox make this statement to you privately? Yes; I saw him privately about it.

2907. Have you any evidence that Mr. Willcox desires to retract it? No evidence but my own.

2908. You did not think it worth while to write to Mr. Willcox on the subject? Certainly not; because it is so trifling a matter, and it does not affect the question before the Committee.

2909. Did you desire to be examined before this House in order to contradict this statement? Not that in particular.

2910. Was that one of the matters respecting which you desired to be re-examined? No; I thought the other explanation about Captain Martindale's conduct of more importance.

2911. I did not precisely catch what you said, but I understood you to say that some part of Captain Martindale's evidence was absolutely false? I said it was given with such an entire discoloration of what took place as appears to be false.

2912. What is the particular evidence to which you allude—the statement to which you apply the term "false"—question No. 2119 of Captain Martindale's evidence? The statement I gave is the correct one; the statement made by Captain Martindale has an entirely false coloring.

2913. What is the particular statement to which you allude—which you characterise as false? If you read No. 2119 you will see it.

2914. "Mr. Fowler was introduced to me some months ago by Mr. Whitton,"—is that true? I very much doubt whether that is correct.

2915. Is that true or not? It might be, or it might not be.

2916. "Who stated that he desired to be employed in the railway department?" He might state so, I did not.

2917. "Mr. Fowler, I think, brought me a letter of introduction from one of the Ministers,"—is that true? Yes, it was done by Mr. Rhodes; but not at any solicitation of mine.

2918. "I understood Mr. Fowler to wish to be employed as resident engineer on the works for which Mr. Rhodes was contractor,"—is that false? I cannot state exactly that it is false; but I say it gives a false coloring to the matter. If he so understood the thing I cannot say diametrically that it is false; but I say it gives a false coloring.

2919. "I saw very grave objections to my recommending Mr. Fowler's application for the favorable consideration of the Government, and I informed Mr. Fowler that I did see grave objections, and that I was unable to recommend it,"—is that false? I say it gives a false coloring to the matter, for I told Capt. Martindale that I was only at liberty for a few months.

2920. "I had one subsequent interview with Mr. Fowler at his request,"—is that false? That is true.

2921. "He wrote me a note to ask that I would give him an interview on urgent business, and I sent him a verbal reply that I would?" That is about the other matter. I will explain that.

2922. Is there anything in the subsequent part of the answer to which you have alluded, which you characterise as false? Instead of my calling upon him to be employed on the railway, as you read it, I say the thing was done at Mr. Rhodes' request and wish. I say that a false coloring is given to the matter.

2923. I understood you to say that it was an absolutely false statement? I say it is a false coloring, so as almost to amount to a false statement.

2924. Will you characterise any part of Captain Martindale's statement as false, excepting his assertion that you applied for employment in the public service? I do not recollect.

2925. That is the part to which you allude? I say that gives a false coloring to the matter.

2926. Do you deny that you did? Did what?

2927. Do you deny that you applied for employment? At Mr. Rhodes' request and wish, and, as I understood, to oblige him and the department.

2928. You did not wish for employment? I did not want it, certainly.

2929. Did you apply? I do not know whether it could be considered an application or not. How could it be said to be an application, or a wish for employment, when I said I did not care about the salary?

2930. I am asking you a simple question, and I wish for a simple answer—did you apply for employment in the public service? I cannot say I did, in the ordinary sense in which it is understood—certainly not. I wish to be understood to state the thing correctly, and I am sure I would not make a statement even at random to this House, knowingly, still less with untruth. I would not so far forget myself.

2931. Did you apply to Mr. Whitton for employment in the public service? Certainly not.

2932. Not in any capacity whatever? Certainly not.

2933. I need not ask you then whether you applied for employment as resident engineer on this line? No.

2934. You distinctly deny that you ever applied for employment as resident engineer? I think some conversation of that kind took place, but in a very loose, indefinite manner

2935.

- C. Fowler,
Esq.
18 May, 1860.
2935. Did you apply for that employment? I cannot say.
2936. Can you say you did not? I should say the latter was the correct answer, rather than the former.
2937. Do you decline to answer the question? I say it was done in an indefinite, and indistinct manner.
2938. Do I understand you that you did apply, but in an indistinct manner? I cannot say that. I say I did not make a distinct application, or express a distinct wish to be employed.
2939. I presume, whether it was distinct or indistinct, if you did express a wish, such a wish would be understood as an application? I did it more with a view to oblige Mr. Rhodes than anything else, and that was only for a few months, without pay, or any stipulation as to pay.
2940. Then you applied for employment as resident engineer with the intention of obliging Mr. Rhodes? No; I believe it had nothing to do with the resident engineer, for the great object was to get the plans made for Mr. Rhodes, who had a large staff here doing nothing.
2941. I ask you the question on your own statement, that your only object in applying for employment was, to oblige Mr. Rhodes? You said, as resident engineer.
2942. I ask you whether you did apply for employment to oblige —? I will not allow even the Minister for Public Works to take one of my answers to a question, and then to state another question in order to make the answer given apply to it —
2943. Unless you decline to answer the question? What is the question?
2944. Did you apply for employment as resident engineer to Mr. Rhodes' line? I believe not—it is not likely that any engineer would apply for the office of resident engineer for three months.
2945. Are you sure you did not? The whole thing was in such an indistinct manner that I cannot say. I believe that I have given as correct an answer as I could.
2946. If you did apply for employment as resident engineer, was it for the purpose of obliging Mr. Rhodes? No; the purpose of obliging Mr. Rhodes was to get the plans out as soon as possible, so that he could get to work. He wished to oblige the department and to get on with the work.
2947. You were on friendly terms with Mr. Rhodes? He was on friendly terms with the department—How could I be resident engineer when I said I could not engage for more than three months, and this was a thing of many months: two years and a half at least.
2948. *By Mr. Parkes*: When you stated that you offered your services to oblige Mr. Rhodes, did you confine the application of the word "oblige" entirely to the preparation of the plans? Certainly, and to the things that were necessary in order to set Mr. Rhodes to work with his staff, and nothing else. As to being resident engineer, Captain Martindale knows that I was only at liberty for a few months, until I got an answer from home. How could a man be resident engineer for a few months only when the contract was for twenty-six months?
2949. Your offer of your services to prepare plans was made at the instance of Mr. Rhodes? Certainly.
2950. Cannot you recollect whether you ever did or did not make any formal application for permanent employment under Government? I believe not; certainly not.
2951. Surely you remember whether you did or did not? Certainly, I never sent any written application, this was the only transaction.
2952. How long had you been in the Colony when you offered your services in the preparation of plans? I should think ten or twelve months.
2953. When you first arrived did you make any application? No, I came on entirely different business, nothing at all to do with anything of the kind.
2954. Do you state to the Committee that, with the exception of agreeing to offer your services at the instance of Mr. Rhodes, in the preparation of plans—which it was alleged there was a difficulty in preparing, and a delay of the work in consequence—with that exception you made no application? I should say the proper term would be to allow my services to be made use of, and not to offer my services—that would be a correct statement of the matter.
2955. I wish to know whether, apart from the preparation of these plans, you ever made any application? Certainly not.
2956. *By Mr. Arnold*: Is the duty of the resident engineer confined to the preparation of plans? No.
2957. Is it part of his duty to pass or to condemn work done by the contractor? Certainly not. He draws the attention of the Engineer-in-Chief to the work, but the Engineer-in-Chief is the man to decide.
2958. Does the resident engineer in the first instance decide? He cannot decide—he has to refer the matter to his superior.
2959. Does he recommend? He makes his remarks, of course.
2960. If the resident engineer fails to draw the attention of the Engineer-in-Chief to any defective work, would that defective work be discovered by the Engineer-in-Chief? I should think so.
2961. In all cases? An Engineer-in-Chief who understood his work would soon see if there were any defective work.
2962. Would it not be possible to pass it over without seeing it, if it were covered up? I think it would only be so in an extraordinary or exceptional case. I think I could see, from going along a line, whether the work were well done or not.
2963. For instance, in the case of culverts—if a culvert had been constructed badly, and had afterwards been covered over by embankments, would it be likely to attract the attention of the Engineer-in-Chief, unless his attention were called to it by the resident engineer? Yes, I should say he should go up the culvert.

2964. Up a five-feet culvert? Yes.
2965. With a candle in his hand? Certainly. It is a very common thing for an Engineer-in-Chief to do to go up culverts and tunnels also.
2966. May I ask what is the use, then, of a resident engineer at all? To set out all the work required. If there is any question at issue, he is the person to whom the contractor ought to refer; and if the contractor has any complaint against the resident engineer, or the resident engineer has any complaint against the contractor, the matter should then be referred to the Engineer-in-Chief.
2967. Is it not the practice that payments are made on the certificate of the resident engineer? Certainly not; the Engineer-in-Chief settles all matters.
2968. Does the Engineer-in-Chief make the measurements himself? Certainly not.
2969. Does he not take the measurements of the resident engineer? He does his work by a system of checks. He knows all the persons under him, and sees that each does his work accurately.
2970. On whose measurements does the Engineer-in-Chief make payments? On the measurements of the person employed to measure.
2971. Is it not under the immediate supervision of the resident engineer? The measuring, or the work?
2972. The measuring—is he not responsible to the Engineer-in-Chief for the quality and measurement of the work? No doubt, if he is employed he is accountable.
2973. Would it not be in the power of the resident engineer to oblige the contractor? It might be in the power of the resident engineer to oblige the contractor; but he would be as great a scoundrel to oblige the contractor to the injury of the Government—it would be equally as dishonest for him to conspire with the contractor to rob the Government as it would be for the Government to charge rock at the rate of earthwork.
2974. *By Mr. Windeyer:* You say that the difference in the price of this rock, which is allowed only as earthwork, will amount to about £25,000? I cannot say definitely what will be the sum, there is a large amount turning out.
2975. There is a large quantity of this material on the line? Doubtless there is a large quantity, very large.
2976. You state that it is not improbable it will amount to 250,000 yards? It is not improbable.
2977. You are acquainted with the correspondence and the nature of the contract between Messrs. Peto and Co. and the Government? Yes, I have read all the documents—I have read them once all through.
2978. Can you point out to the Committee in what way this misunderstanding has arisen as to rock and earth work? Certainly. I have heard the evidence given, or have read it; and, in the evidence of one witness, it is stated that shale shall be measured as earthwork. Now, there is not one word in the contract about shale. The statement made was that this material in dispute was shale.
2979. I understand you to say that as the contract was adopted by the contractors here there was nothing in it about shale being charged as earthwork? Certainly not in any document that constitutes the contract.
2980. Am I to understand that a certain proposed contract was sent Home to Messrs. Peto with a certain schedule of prices? That was so.
2981. And that in that contract it appeared that shale was to be measured as earthwork? There was a sample specification sent home—it might be or might not be in it. I believe it was sent to Mr. Rhodes after the contract was signed.
2982. I want to find out how this occurred —? I think in a sort of sample specification that was sent home to England to Messrs. Peto and Company the works were described as earthwork.
2983. After Mr. Rhodes came here the contract as to prices was annulled? It was annulled altogether.
2984. And a fresh contract was entered into? Yes.
2985. I want to know whether in the fresh contract entered into this arrangement as to shale being charged as earthwork appeared? Certainly not; the word "shale" was never mentioned.
2986. Then, when the Chief Commissioner and Engineer-in-Chief state that Mr. Rhodes has agreed to this in some written contract they allude to some contract which did exist, but which has since been entirely abolished? Which was intended to exist, but which has never been acted upon—which never really was made a contract.
2987. Then I understand, according to the view you and Mr. Rhodes take of it, that the Government had abandoned the old contract sent to England in certain respects, and insisted upon Mr. Rhodes adhering to it as to shale? Yes, although they annul the specification and offer which was sent to England by Mr. Gabrielli, they say that shale is to be measured as earthwork.
2988. Then, in fact, Mr. Rhodes never undertook by any engagement or written document, or in any other way, to do this shale as earthwork? Certainly not; it is not mentioned in the contract which now exists; it is not mentioned in any specification prepared for these works at the time the contract was taken. Schedule A mentions that the work is to be done in strict accordance with the plans and specifications. What they may have added afterwards Mr. Rhodes cannot acknowledge.
2989. You say this will make a difference of £25,000? Yes; between rock and earthwork. I think the evidence given is that this is shale, and that shale is to be charged as earthwork; I say it is rock, decidedly rock, and returned as earthwork, and that it may probably make a difference of £25,000 to the contractors.

C. Fowler,
Esq.
18 May, 1860.

- C. Fowler,
Esq.
18 May, 1860.
2990. How is Mr. Rhodes paying for the excavation of this material? He is paying considerably more than he is receiving for it.
2991. Is he paying for it as earthwork? He is paying a long price for it.
2992. At all event he is paying more than he would for earthwork? Yes, much more; besides he has other expenses, he has used about eight tons of powder in three months.
2993. *By Mr. Arnold*: Have you any means of knowing the agreement with the Government, except what the correspondence—the printed correspondence—supplies? Do you mean the printed contract or ———?
2994. Have you any means of knowing, except what is contained in the printed correspondence? No, nor did I wish to know from any other source, when it is said that verbal arrangements are not to be acknowledged.
2995. I merely ask the question—have you any means except the correspondence? And other documents shewn to me by Mr. Rhodes. I have seen other documents besides what are here.
2996. I say you gather your information from the printed correspondence? Certainly not; the correspondence had not been printed at the time I gained my information.
2997. That is to say, you gathered your information from the documents which are printed here? Certain abstracts from those documents are printed here.
2998. Had you any means of forming an opinion which other engineers having these documents before them would not have—had you any peculiar means of obtaining information—were you present at any conversation? Conversations are not to be alluded to, they are ignored.
2999. I ask you the question whether you were ever present at any conversation? Certainly not; but conversations do not form a contract.
3000. Is the schedule under which this contract is being carried on altered in any respect from the schedule sent home to England to Messrs. Peto and Company, except as to the modification of the prices? They are both filled in of course on a printed form.
3001. Are they both precisely the same, the one adopted and acted upon, and the one sent home to Peto and Company, except as to the prices? I would rather not give a positive answer off hand. I think they are nearly the same.
3002. You have not observed any difference? I really do not recollect any particular difference. The prices are different; they are reduced.
3003. I will put the question in another way—have you observed any difference between the two? Except the prices?
3004. Yes? I believe, as far as I recollect, they are both a printed form struck off from the same type.
3005. Notwithstanding they are printed forms they might not both be the same? There is some writing in red ink in the one sent home; you may say they are not alike in that respect.
3006. There is great deal of fencing my questions,—cannot you say whether you observed any substantial difference between the two schedules? In what respect do you mean,—as to the work.
3007. In any respect whatever, except as to the prices? I really cannot recollect any particular difference,—but it is so long since.
3008. I do not care about an answer; it is easy to compare them? I should be happy to give an answer if I could.
3009. *By Mr. Lucas*: I understood you to say that you preferred brick piers to a wooden bridge? Yes.
3010. Have you had an opportunity of travelling along the Campbelltown Line since the floods? From Liverpool to Campbelltown I have not.
3011. Have you heard that the brick piers have been completely washed away by the flood, and that the piles remain,—the superstructure merely resting upon the piles? It would not include both brick piers and piles, or it must be a very extraordinary structure.
3012. Have you heard that the brickwork piers were washed away? I have.
3013. And that the piles remain? I do not know what piles they could be to be connected with a brick bridge.
3014. Seeing that that is the case, does it not alter your opinion as to the desirability of having brick piers? Not in the least, if the bridge were properly constructed.
3015. Are you aware that large masses of brickwork of fifty, sixty, or seventy bricks, were cemented together, and lying about, which had been washed off the foundation,—the foundation still remaining, shewing that the workmanship was good,—would that alter your opinion? None whatever. If there had been proper and sufficient waterway, and the bridge properly constructed, it would have stood.
3016. What do you think of that structure? (*Referring to the model.*) I think it is defective in not being strutted. I think a better bridge might be made with the same amount of timber.
3017. It was stated in evidence, the other night, by Mr. Willecox, that the only fault he found with the bridge was that it had not a longitudinal brace? I think he meant a diagonal strut.
3018. I asked him particularly—“do you think a longitudinal brace near the top of the “structure would be beneficial”? Before I could answer the question, I must know what he meant by a longitudinal brace. I think there must have been some misunderstanding. I think he meant merely a strut.
3019. I am now asking you the question,—do you think a longitudinal brace put to that structure, some foot or two from the top, would improve it, merely fastened to the pile by bolts? Not as I understand it from your statement; but I should not like to give that as a reply to the statement made by the witness. Unless I saw a drawing of what he intended

I could not speak to it; he might have meant something entirely different; but as you explain it, I should say decidedly not.

3020. You think a longitudinal brace would be of no benefit? If put near the top.

3021. If it were put halfway down, and were merely bolted to the pile, do you think that would be any benefit? Very little indeed; it would be still square jointed.

3022. What is your opinion of struts? Struts would be a great improvement, doubtless.

3023. Would the struts obstruct the water as much as the longitudinal braces mentioned by Mr. Willcox? Not in that bridge, inasmuch as I think a five-foot culvert would take off all the water at the largest floods, and with all these openings there could be no obstruction.

3024. From your knowledge of structures of this kind, constructed as that bridge is, within what time would it become ricketty? It would depend upon the traffic. Upon the London and Birmingham —

3025. We are talking of the traffic likely to take place on the present structure, and not of the London and Birmingham? That I cannot say; because the present traffic ought to be four times as much as it is at present, if it were managed properly. Therefore I cannot judge of the probable traffic unless you can tell me how the railway is to be managed.

3026. I think this is rather evading the question? I do not wish to evade it.

3027. Taking what you imagine to be the traffic, or what it will be under proper management, how long do you suppose this structure will stand before it will become ricketty? I think it will become ricketty in two or three years, because these jagged spikes are driven into the piles lengthway, and I am sure most Honorable Gentlemen in this House are sufficiently acquainted with colonial timber to know how easily it splits. A number of piles in the work now executed are split.

3028. How would you attach these longitudinal pieces to the corbels? I should put struts in them, with shoes and knees.

3029. How would you secure the struts? With cast-iron shoes, bolted through, and cast-iron sockets where they meet at the top.

3030. I am speaking of fastening the longitudinal beams to the corbels, and to the piles—how would you secure them? There was a far better plan submitted by Mr. Rhodes to the House a few evenings since. (*The witness described the same by reference to the model.*)

C. Fowler,
Esq.
18 May, 1860.

APPENDIX.

Railway Branch,
Department of Internal Communication,
Sydney, 1 March, 1860.

Sir,

In reply to your note of this day's date, just received, in which you say, "Will you oblige me with the draft form of Contract, as I do not wish Mr. Want to know what we are endeavoring to conclude," I have the honor to remind you that, at the interview which I gave you this morning, in compliance with your written request, I informed you, upon your expressing a desire to see the bond and contract to be signed by Sir S. M. Peto & Co.'s agents, that it was in the possession of Mr. Want, to whom I begged to refer you. To that reply I must adhere. I cannot consent to take part in any matter involving concealment.

I must further take exception to your expression, "What we are endeavoring to conclude." In reply to your statement at your interview with me this morning, that you were anxious that the disputes between the Engineer-in-Chief and Mr. Rhodes should be terminated, and that you were desirous to know if I had any course to suggest, I informed you that, in my opinion, the course for Mr. Rhodes to pursue was to sign the usual bond and contract in accordance with his agreement, and to proceed in accordance with its stipulations with the works to be performed under it, carrying them out in compliance with the directions of the Engineer-in-Chief.

I have, &c.,
B. H. MARTINDALE.

C. Fowler, Esq.,
Peto, Brassey, & Betts, Elizabeth-street.

Alexander Rhodes, Esq., called in and further examined:—

3031. *By Mr. Parkes:* Since you were examined at the Bar of this House, have you been present and heard the evidence given by the Commissioner for Internal Communication and the Engineer-in-Chief? Yes.

A. Rhodes,
Esq.
18 May, 1860.

3032. There were some statements made in the evidence of those witnesses at variance with the allegations in your own evidence? Yes.

3033. Will you be kind enough to state, as succinctly and clearly as you can, the different grievances of which you complain? If the Committee will allow me to read it, then it will save time.

The witness proceeded to read a written statement. Mr. Arnold objected. Witness ordered to withdraw. After discussion the Committee decided, on motion of Mr. Faucett, that the witness be allowed to read the statement in question, and hand it in as an Appendix to his evidence. Witness re-introduced, and the remainder of the statement read.

3034. You wish to hand that in to be appended to your evidence. Yes. (*The witness handed in the same. Vide Appendix.*)

3035. Is there anything further that you desire to state to the Committee? No.

3036. *By Mr. John Campbell:* Since you were here last, have you had any correspondence from England on the subject of your disputes with the Government? Yes.

3037. Would you object to read the last letter? That is private.

APPENDIX.

A. Rhodes,
Esq.

18 May, 1860.

1st. I should be provided with 10 miles more rails and chairs.
2nd. To pay me rock price for such excavation as is generally known as rock, and if the Railway Department still dispute the matter, to be settled there and then by arbitration as may be agreed.
3rd. That as I am finding the length of piles, that I be paid monthly for so finding them, or settle the amount for payment.

4th. That the department at once drop the dispute as to the "length of lead," and adopt that agreed with me, viz.—*not to exceed half a mile*, or pay me for extra, as is invariably the case.

5th. That if I am to do the ballasting at 17s. 6d. per lineal yard (which price is, I think, about half the amount the Government are paying to other contractors), I am, as agreed, to have the use of rock, &c., out of cuttings that will serve for ballast, and be paid for my excavation thereof just the same as though it was buried in the embankment. Should any deficiency arise in consequence I will make it good by buying land and taking it into the bank from side cutting at my expense.

6th. As I have been building and will build the bridges according to the plans given to me by Engineer-in-Chief (against which I have already most fully protested), the Government take the responsibility of any after consequences, and so relieve Peto, Brassey, and Betts from any responsibility as to their future security.

7th. That the plan for the Menangle Bridge be furnished at once,—that it be as agreed between me and the Railway Department, an iron girder bridge with brick piers, for the reasons—that, firstly, this style of bridge is the best suited to the locality; secondly, that any other structure made with a view to economy will be no economy, as I am fully entitled to be paid as though it was iron top with brick piers, having agreed to the schedule of prices on this assumption, which I can fully prove and maintain.

Of course I am perfectly willing to construct any bridge the engineer may design, but I must insist upon being indemnified for any loss I may sustain in consequence of the Government having so far failed in keeping this portion of the contract.

If the Government are prepared to offer me any facilities which can be justly considered a set-off for such loss, and which will expedite the works, I will treat with them liberally.

It has been stated before this Committee that I have delayed the works. It must be obvious that for me to do so would be prejudicial to my own interests, as the longer I am in finishing them the less profit I should realise. There would be loss in interest on capital, salaries, rents, and all incidental expenses.

My desire is to finish these extensions as speedily as possible, and so that they may hereafter reflect credit on the contractors; and though I will not sign the bond and contract presented to me for signature by the Government, I am quite willing at any time to sign a bond and contract in accordance with the letters of agreement, and which shall properly provide for the matters I have referred to. Further, that all disputes, when necessary, be referred to the arbitration of any person or persons as may be mutually agreed.

The Committee, I hope, will see the necessity for this last clause, as, after what has transpired, it will be impossible for me to rely solely upon the engineer's impartiality in certifying for the works.

In submitting the foregoing to this Committee, I beg to state that I do so without prejudice to my case, should the Government and I not come to terms thereon.

John Whitton, Esq., Engineer-in-Chief, called in and further examined:—

J. Whitton,
Esq.

18 May, 1860.

3033. *By Mr. Arnold*: Are you aware of any application having been made by Mr Fowler to the Commissioner for Railways, or to any other officer of the Government, for employment on the railway works? Yes, Mr. Fowler applied.

3039. Mr. Fowler applied for employment on the railway works? Yes, he did; to be appointed district engineer between Campbelltown and Picton, on Mr. Rhodes' contract.

3040. You say he applied to be appointed district engineer—is that the same thing as resident engineer? It is resident engineer for the district.

3041. Will you state what are the duties of a district engineer? A district engineer has to superintend the whole of the works in his district, and return measurements fortnightly or monthly to the Engineer-in-Chief for certificates.

3042. Is it on that return the Engineer-in-Chief gives the authority for payments to the contractor? It is. I may state that previous to Mr. Fowler's application for the appointment, Mr. Rhodes called on me to ask if I had any objection to Mr. Fowler's being appointed—about half an hour before Mr. Fowler made his application—and I told Mr. Rhodes that I had the strongest possible objection to any such appointment.

3043. Did Mr. Fowler apply to you to forward his views? Mr. Fowler applied to me to introduce him to Captain Martindale, and said he had brought a letter from one of the Ministers. I told Mr. Fowler at that time that I had neither sufficient confidence in his judgment or ability to recommend any such appointment.

3044. *By Mr. Parkes*: You state that Mr. Fowler applied to be appointed resident engineer on the southern line of railway extension? Yes.

3045. When was that? Perhaps two months after Mr. Rhodes came to the Colony.

3046. That would be about what month? It might be June or July.

3047. In what form did he make the application? The application was made by asking me to introduce him to Captain Martindale; Captain Martindale was engaged at the time; and on my requesting to know what particular business he had with him, he told me he wished to be appointed district engineer between Campbelltown and Picton, on Mr. Rhodes' contract, and he had brought a letter from one of the Ministers for that purpose.

3048. Is that all that took place? It is nearly all, except a few remarks I made to Mr. Fowler at the time about the indecency of the application.

3049. That would hardly be an application, would it? I think it would. If a person came to me and told me he wished to be appointed district engineer, and asked me to introduce him to Captain Martindale for that purpose, I should call it an application.

3050. If he did not make application to you in any form, but merely told you he wished to make application to some one else? He told me of his intention to apply for the appointment, and he must have had a strong impression that unless I recommended him he would not get the appointment.

3051.

3051. You say Mr. Rhodes called upon you previously to state his wish that Mr. Fowler should be appointed? Yes, Mr. Rhodes called about half an hour before Mr. Fowler called.
3052. And you stated to Mr Rhodes that you saw very strong objections to Mr. Fowler's appointment? Yes, I told him I would not recommend it.
3053. Does it not seem evident that if Mr. Fowler sent Mr. Rhodes to feel his way, he would not think of any application after he had this clear intimation of your opinion? I do not say Mr. Fowler sent Mr. Rhodes to feel his way; I simply say, that Mr. Rhodes called on me to ask if I had any objection to Mr. Fowler's appointment half an hour before Mr. Fowler himself called; though I have not the least doubt he did.
3054. After what you said to Mr. Rhodes he would make a very unfavorable report, would he not? I daresay he would.
3055. Is it not rather singular, then, that he should have advised Mr. Fowler to proceed with his application? So many singular things have been done by Mr. Rhodes, that I do not think it at all singular. Mr. Fowler might think it probable that the letter he had from the Minister would over-rule my objections.
3056. Did you know Mr. Rhodes in England? No.
3057. Did you know Mr. Fowler in England? Yes, I did.
3058. Was it not very singular, then, that Mr. Fowler should think Mr. Rhodes would exercise any peculiar influence over you? I believe Mr. Rhodes introduced Mr. Fowler to the Minister, for the purpose of getting a letter from the Minister recommending him for the appointment; and I believe Mr. Rhodes thought that by his influence he could obtain the appointment for Mr. Fowler without my consent.
3059. Is it not a most unusual thing for a contractor on any public work to intercede to get an engineer appointed to superintend his execution of that work—would it not excite suspicion anywhere? It is a most unusual thing, but it is not at all unlikely that Mr. Rhodes would attempt it.
3060. Would he not see at once that it would excite suspicion as to his motives? From what I have seen of Mr. Rhodes, I do not think he would see it in that way.
3061. You say Mr. Fowler had a letter from one of the Ministers? Yes.
3062. What Minister? Mr. Robertson.
3063. Have you got that letter? No. I believe that the letter was nothing more than to the effect that Mr. Fowler had made application for the appointment, and if he was suitable for the purpose, the Minister had no objection.
3064. Can you append a copy of that letter to your evidence? I have not got the letter.
3065. If it is in the department, I presume the Commissioner would make no objection to your doing so? I do not think the Commissioner would.
3066. Will you see then if you can supply a copy? I believe that letter was sought for the other day, but could not be found. It was simply a letter of introduction.
3067. Mr Fowler never made any application by letter? Not by letter.
3068. Did he in direct language ask you to give him employment? No, because he knew I would not give it him if he did.
3069. He never did apply to you either verbally or by letter? No. I have quite sufficient knowledge of his utter want of experience in carrying out works of any kind, to think for a moment of recommending him.
3070. *By Mr. Arnold:* Have you any power of appointment? No.
3071. Then it would be useless to apply to you? He would merely apply to me to recommend him.
3072. Did Mr. Fowler ask your recommendation? No.
3073. He merely asked you to introduce him to Captain Martindale? Yes.
3074. Did you introduce him? I did.
3075. *By Mr. Parkes:* You introduced Mr. Fowler to Captain Martindale on the occasion you allude to? Yes.
3076. Were you present during their interview? No; after I had introduced Mr. Fowler I left the room.
3077. When you introduced him did you recommend Mr. Fowler? No, I did not; I did the reverse. I stated that I could not recommend him.
3078. Do you recollect what you said? I told Captain Martindale I would not recommend Mr. Fowler. In the first place, ~~he was a relative~~ of mine, and that in itself would be quite sufficient to prevent any recommendation from me; in addition to which I knew that Mr. Fowler had had no practical experience of works of any description, and I therefore declined to recommend him.
3079. Were you present and did you hear Mr. Fowler make any direct application to Captain Martindale? No, but there cannot be a shadow of a doubt that he did.
3080. You never heard him make any application to Captain Martindale or any one else for employment? No, except his telling me he wished for employment.
3081. You never heard him in direct terms make application for an appointment? If a man comes to me and says he wishes to be appointed as district engineer, I call that an application.
3082. I ask whether Mr. Fowler made any direct application to you, or whether you were present and heard him make any application to Captain Martindale? No, I did not.
3083. *By Mr. Arnold:* Did you know from Mr. Fowler that it was his intention to make application in the proper quarter for the appointment you mention? Yes.
3084. *By Mr. Windeyer:* Can you tell us what he said? He said he had brought a letter from the Minister for Captain Martindale, and requested me to introduce him.
3085. Was that all? I asked what his particular business was with Captain Martindale, and he said he wished to be appointed as resident engineer on the line between Campbelltown and Picton on Mr. Rhodes' contract.

J. Whitton,
Esq.
18 May, 1860.

- J. Whitton,
Esq.
18 May, 1860.
3086. Anything else? He did not say much more; I did.
 3087. He did not go into further details? No.
 3088. What did you say to him? I told him I would not recommend him for the appointment, but I said I would introduce him to Captain Martindale.
 3089. He never asked you to recommend him, according to your own statement? Yes, he did, or else what was the meaning of his application.
 3090. He never told you what he wanted to see Captain Martindale for till you asked him what was his business with him? He applied to me to be introduced, and told me his business.
 3091. Not till you asked him? He knew he could not get it without my recommendation.
 3092. Did he tell you his business until you asked him? No, he did not.
 3093. *By Mr Robertson*: Do you happen to know that I was Minister of Works at this time, and that this gentleman waited upon me and applied for the appointment? I only know from Mr. Rhodes' statement to me, and the letter that was brought.
 3094. I think you were present at the Colonial Secretary's Office the day that Mr. Gabrielli left the Colony? I was.
 3095. Do you remember my proposing, during some discussion with Mr. Rhodes as to the contract, that Mr. Gabrielli should be called in, in order that he might state what was the intention of sending home these papers? Yes, I do.
 3096. Do you remember what Mr. Rhodes said in reply? Mr. Rhodes said he did not want him.
 3097. You remember that I desired to call in Mr. Gabrielli for the purpose of his explaining the object of sending the papers to England, and that Mr. Rhodes declined to have him in? Yes, I do.

1860.

Legislative Assembly.
NEW SOUTH WALES.

*FURTHER EVIDENCE TAKEN AT THE BAR OF THE ASSEMBLY,
IN COMMITTEE OF THE WHOLE HOUSE,

ON THE

INQUIRY INTO THE CONSTRUCTION AND CHARACTER
OF THE RAILWAY WORKS NOW IN PROGRESS.

* Ordered by the Legislative Assembly to be Printed, 14 June, 1860.

H.

THURSDAY, 14 JUNE, 1860.

Charles Henry Storey, Esq., called in and examined:—

3098. *By Mr. Parkes:* You have been for some years connected with the inspection of railway works, I believe? I have. C. H. Storey,
Esq.

3099. Were you employed in this capacity before you arrived in this Colony? I was.

3100. Will you be kind enough to state to the Committee in what employment you have been—where you have obtained your experience in connection with railway supervision? I was brought up in the office of a London builder of good repute, who was also Surveyor to Her Majesty's Excise. 14 June, 1860.

3101. Who was that? Mr. Herbert. I then entered the Royal Engineers department of the London district, where I served for ten years under Major General Sir Frederic Smith, who gave me a very high testimonial, as well as did Mr. Byham, the Secretary to the Ordnance.

3102. When did you leave this last employment? In the year 1840, I think it was, as near as I can recollect.

3103. Did you then come out to the Colony, or did you fill any other situation in England? No. If you will allow me, I will state the various offices I filled:—I was then specially engaged by Mr. Thomas Jackson—one of the largest London builders and railway contractors—to go to France, to look into the contracts then being offered for the execution of the Great Northern, France. That was a special appointment; and I was afterwards permanently employed by that gentleman for ten years, in assisting him in carrying out his large public buildings and railways. From him I have a very high testimonial. During this period I came very much in contact with Sir Samuel Morton Peto; and from him I also received a high testimonial, in the shape of a letter addressed to Sir Charles Hotham, then Governor of Victoria.

3104. Have you that letter? I have copies of all the testimonials I have alluded to, and handed them to the Under Secretary for Public Works and Commissioner for Internal Communication.

3105. Have you copies of them here? I have.

3106. Will you hand them in? Yes. (*The witness handed in the same. Vide Appendix A.*)

3107. When did you arrive in this Colony? I arrived in this Colony, or rather I should say in Victoria, in October, 1854.

3108. Were you employed in Victoria in connection with railways? I was appointed an arbitrator in a railway question then pending between the Engineer to the Melbourne and Hobson's Bay Railway and the Company, to which I gave my attention in conjunction with the other arbitrator.

3109. Was that the only employment you had in Victoria? No; I practised as an architect and surveyor.

3110. When did you come to New South Wales? In October, 1855.

* NOTE.—Former evidence ordered to be printed 29th May.

- C. H. Storey, Esq.
14 June, 1860.
3111. Were you employed on railways here? Yes, by Mr. Randle, immediately on my arrival.
3112. How long did you continue in Mr. Randle's employment? About eighteen months.
3113. What was the nature of your duties with him? They were of a general nature—more in the office than out of doors—correspondence, estimates, and accounts.
3114. When did you enter the service of the Government? Last November.
3115. Had you any employment in the interval? Yes, I practised as an architect and surveyor in the interval.
3116. Between the time of your employment by Mr. Randle and the time of your entering the public service? Yes.
3117. What office did you undertake in the service of the Colony? Under the Railway Department.
3118. In what capacity? As Inspector of Works.
3119. In any particular district? On the Great Western Line, No. 2 Contract.
3120. Have you been in that situation up to the present time? Until within a few days.
3121. Will you explain to the Committee what was the nature of the duties you had to perform in that situation? The instructions I received from the Engineer-in-Chief were that I was to superintend the construction of the line, in accordance with the drawings, plans, and specifications which would be furnished to me; in fact, that I was to consider myself as resident engineer, with the exception that the drawings would not be prepared by me.
3122. The line of railway extension upon which you were appointed is that from Parramatta to Penrith? The portion I had to superintend was from Blacktown Road to Penrith, the No. 2 portion.
3123. Is that the portion contracted for by Sir Morton Peto and Company? Yes, it is.
3124. Your superintendence did not include that portion contracted for by Mr. Gibbons or Mr. Randle? Not at all.
3125. You have been upon that work from the time of your appointment? Yes.
3126. Will you state to the Committee the character of the line, that is, what kind of country it goes through, what cuttings there are upon it, and also the number of bridges, viaducts, and culverts on the line? The nature of the work on that line is, I consider, very light, there is only one heavy cutting in the whole length, and that has been made more so in consequence of the alteration of the South Creek station. There are three viaducts and four timber bridges on this length.
3127. Where are the viaducts situated? The viaducts are situated at Eastern Creek, Rope's Creek, and South Creek.
3128. Are they all constructed? No.
3129. Are they all in any stage of construction? The Rope's Creek viaduct is completed; the small bridge adjacent to it by this time must be very nearly so, and the South Creek viaduct is fast progressing towards completion according to the original design.
3130. Will you be good enough to describe to the Committee the character of the viaduct at South Creek—have you a plan of it? I have a drawing of it. (*The witness produced the same.*)
3131. You do not know anything of the Southern Line? Nothing whatever.
3132. Have you never been upon it? I have never been upon it.
3133. The diagonal braces marked upon that plan in pencil are not part of the original plan, are they? No.
3134. Will you describe the plan so as members of the Committee may understand it? This drawing shews eight openings of twenty feet each.
3135. What is the height? The height will vary from fifteen feet—rail level always understood—to about forty feet; that is, from the ground line.
3136. Forty feet from the creek itself—the bed of the creek? The lowest part—merely the surface of the ground, the piles being above the ground.
3137. The piles are forty feet above the ground? Yes.
3138. From the centre of the creek? Thirty-eight feet I find is the deepest.
3139. Were you in the Assembly Chamber during the time that a model of the bridge on the Southern Line was upon that bench? I was.
3140. Is this viaduct at the South Creek on the Western Line in accordance with the model which was exhibited in the Assembly? As far as I could see from the gallery behind me, it seemed perfectly the same.
3141. Are there no braces between the piles? Not between the piles; across the piles there are diagonal braces.
3142. But not longitudinally? Not longitudinally.
3143. What is the width of the roadway on the top? Eleven feet out and out; the extreme width.
3144. Has that viaduct been constructed by the contractor strictly in accordance with the plans? Yes.
3145. It was your duty to see it was so constructed? Those are my strict instructions—to see the works carried out in accordance with the plans and specification.
3146. Did the contractor, or any of his servants, make any objection to the design of that bridge, or make any remark to you as to the defective character of the design? I think they have remarked that some of the piles would go a very short distance into the ground.
3147. Which piles were those? The centre ones in the creek.
3148. What distance were those piles driven? They vary. I can give you the driving of any piles you wish to know.
3149. The longest piles—the piles that are driven into the creek? In the fourth row, on the creek side, which this drawing shews, they begin 10 feet 9, 12 feet 4, 12 feet 4.

3150. Driven into the ground? Into the ground down to the rock, 13 feet, 13 feet 3. C. H. Storey, Esq.
3151. There are no piles driven only three or four feet? I will give you the next two rows. In the fifth row the piles are driven 4 feet 4, 8 feet 2, 7 feet 9, 7 feet 6, and 10 feet 9. In the sixth row they are driven 4 feet 8, 5 feet, 4 feet 10, 12 feet 9, 11 feet 8. These are 14 June, 1860. the three centre rows in the creek.
3152. It is reported that this bridge, in some manner which I do not clearly understand, but which you no doubt can explain to the House, goes along the side of the creek—can you explain its precise situation? This line (*referring to a plan*) is the contour line—that is, the line of water at its low level.
3153. Be so good as to explain so as it can be taken down? The contour line, marked in pencil here, shews the line of water in the creek. On the side of the creek it is shelving ground, consequently it crosses the diversion that has been made, as well as runs along the side of the creek. (*The witness described the position on the plan.*)
3154. I do not clearly understand the position of this bridge—is it that the bridge goes over a bend of the creek, and that the water flows and reflows under the bridge? It goes over, if I may so term it, a bay of the creek; it is widened out, forming a regular bay. The current is principally here (*pointing to the position on the plan.*)
3155. Alongside the bridge? Alongside the bridge.
3156. Does not the bridge go right over the creek, or does it bring the line out on the same side of the creek, merely crossing a bend of it? It does, because the diversion has been made with the intention of stopping up the original course of the creek.
3157. Might not the line then have avoided the creek altogether? Decidedly.
3158. Then the creek in reality flows alongside of the bridge? Alongside and across by the diversion which has now been made.
3159. Alongside the bridge and then back under it? It flows across at first; at present it flows alongside of it, because the present creek is not stopped up; when it is stopped up, that current, of course, will be done away with.¹
3160. What is the objection which has been alleged to the bridge going alongside the creek in the manner you describe? My objection—I do not know that anyone else has made an objection—is that I think it very badly placed for the stability of a structure of that description.
3161. In what respect? It should have been kept more to the south or to the north so as to have avoided this shelving bank, by which means it would have been upon higher ground, and more holding ground for the piles when driven.
3162. Can you explain more clearly the reasons that constitute the objection you see to it—what will be the effect of the peculiarity of its situation? It has not that stability which otherwise it would have had if it had been placed on higher ground.
3163. Cannot you explain what causes come into play to lessen its stability? The rolling loads and the vibration.
3164. Those causes would operate upon all bridges? The higher the bridge the greater effect they would have upon it.
3165. This is the real situation, as I understand it,—there is a sharp bend of the creek, and to avoid that the course of the creek has been diverted so as to cut off that elbow, and the bridge crosses directly over the new creek that is made, but goes alongside the old bend—is that it? That is it.
3166. And the objection you see to the bridge going alongside the old bed of the creek is that the foundation will be bad, I apprehend? It will weaken the foundation.
3167. Has there been any alteration in this viaduct since it was first designed? Yes. I pointed out to the assistant engineer that if the design were executed as shewn on the drawing the return slope of the embankment would run into the diversion that had been made and stop that up, as well as a great portion of the creek itself. I therefore had instructions to elongate this side by two twenty-foot openings.
3168. Has there not been some alteration with respect to the dwarf piles? Not the slightest that I know of.
3169. Have you had many opportunities of observing the character of wooden viaducts in Europe? Several.
3170. Did you ever see any constructed in the same manner as this? Never.
3171. Do you think this plan of construction without defect? I think it is full of defects. In the first place the commonest principles of carpentry have not been observed with regard to the mortices, tenons, and scarfs. The tenons were originally shewn on some of the drawings as nine by an inch and a half on the top of the pile to go into the head-stock. The scarf is defective, inasmuch as it leaves nothing for the timber to do and everything for the iron, of which an excess is obliged to be used.
3172. In any other respects do you consider this plan of construction objectionable? Yes. So far as the dwarf piles are concerned I consider this bad in design, for this very simple reason —
3173. In the first place, will you explain to the Committee what the dwarf piles are? They are short piles that do not support the superstructure driven on the outside of those that do support the superstructure, for the purpose of receiving the raking piles scarfed on to them, as shewn by the drawing. They are bolted through.
3174. Do you consider that a viaduct of this elevation ought to be supported by longitudinal braces—do you, in other words, consider the piles sufficiently safe, taking into consideration their great length, without any intervening supports? I consider the viaduct very weak in that respect, inasmuch as there is nothing to withstand the rolling or vibratory motion which a train naturally brings to bear upon a structure of that description.
3175. What is the gradient of this particular viaduct? This viaduct is level; but the same thing

¹ The present creek is not now to be stopped up, because the viaduct is to be continued across it, and to be extended more than four times its original length, consequently the flow of the creek will always be alongside, as well as across by the diversion.

C. H. Storey, Esq., thing that would be very essential in a viaduct with a steep gradient is also essential in this, on account of its loftiness.

14 June, 1860. 3176. You can, as a practical man, acquainted with railway works, describe to the Committee the effect which the traffic will have upon a construction of this character—that is, a wooden viaduct so lofty as this is, and so inadequately braced together as some persons allege this is? My opinion is that the vibration, combined with the oscillation and the want of sufficient stiffness, would shake it so much that in due time it would be crippled, and, consequently, if it once became crippled it would be dangerous.

3177. Then, in your opinion, is there any reason to apprehend that the trains on entering this viaduct, bearing in mind its loftiness and the alleged defects in its construction, would have a tendency to give a leaning position to the whole structure? There is nothing to withstand the first shock of a train coming upon it—nothing to counteract the impelling power of a train coming down, as it will in this instance, off a gradient of one in eighty on to this structure.

3178. What I meant was this—whether there is any danger of the piles giving way by the force of the traffic—whether there is any danger of the superstructure leaning, as a house built of cards for instance leans, in one direction by force of the contact coming against it? If the force of contact is not arrested in the first instance of course it will have that effect, and as it goes on the effect will be increased. The shock of the train coming against the first row of piles, if there were nothing to withstand it, as the train went each successive row would yield more and more.

3179. You said you never saw viaducts in Europe constructed upon that same plan,—will you describe the difference as to strength? In general the way of making viaducts of this structure is to throw the weight of the permanent way or of the engine upon some direct bearing surface, such as a beam or truss; in this instance the weight is thrown upon planking lying transversely upon two girders, by which an immense vibration is caused to the whole structure.

3180. Then, at all events, you must be of opinion that these bridges are not remarkably safe? Certainly not in their present condition.

3181. Did you ever state this opinion to your superior officer in the department? No, I did not, for the best of all reasons.

3182. For what reason? When I first entered upon my duties on that line I ventured to make a suggestion to the Engineer-in-Chief, and I had a most severe reprimand on the occasion, and I felt from that moment that my mouth was gagged, and that I was a very inefficient servant to the public, because I felt it was my duty when I saw an error to point it out, and that for the future I could not do so.

3183. What was it you ventured to represent to the Engineer-in-Chief on that occasion? It was soon after I joined. I happened to read the Commissioner for Internal Communication's third annual report—

3184. The report laid before Parliament? The report laid before Parliament. I can refer to that report if you will allow me.

3185. You are now referring to the third annual report of Captain Martindale? The third annual report to the Honorable the Secretary for Works, by Captain B. H. Martindale, Commissioner for Internal Communication, presented to both Houses of Parliament by command. In the fourth page he states—"In addition to the great accommodation which a station within the Town of Parramatta will afford the public, the line will, where it crosses the Blacktown Road, at once bring a station within thirteen miles of Windsor and Richmond."

3186. On reading that paragraph you offered some suggestion to the Engineer-in-Chief? I did.

3187. What was it? It was to this effect—this is a copy of a memorandum I addressed to the Engineer-in-Chief:—"Great Western Railway, No. 6, Engineer's Department, 8th December, 1859.—Memorandum to John Whitton, Esq.—With the view to carry out that portion of Capt. Martindale's report of the 1st October last, as to the early opening of this line as far as the Blacktown Road, by which the public would be accommodated and the capital at once become productive, I venture to suggest that the station-yard and buildings at that locality be proceeded with as soon as possible, and as they are to be at the commencement of this contract, I have taken upon myself *this day* to speak to Mr Rhodes upon the subject, in the presence of Mr. Durham, when the former gentleman expressed his perfect readiness to further the object in view."

3188. Was it upon that occasion you received the reprimand which you say sealed your mouth afterwards? In reply to that I received this memorandum:—"Engineer's Department, December 9th, 1859.—I am much surprised at the contents of your memorandum of the 8th instant, and I have to inform you that you have greatly exceeded your duty in speaking to Mr. Rhodes on the subject of the station at the Blacktown Road. Your position (which I clearly explained to you on your appointment) is that of Inspector of Works, and you have only to see that the works are carried out in accordance with the plans and sections furnished to you. I have to request that you return to Sydney as early as practicable after the receipt of this communication. JOHN WHITTON"

3189. Did you go to Sydney? I did, and had an interview with Mr. Whitton. We had a long conversation, and I think I can give it you, I may say word for word.

3190. Have you taken notes of it? So strongly impressed upon my memory was it, and so often have I repeated it to various gentlemen—amongst the rest to Mr. Fagar, the Minister for Works, who appointed me—that I have not the least hesitation in saying that I could repeat it correctly. It is only within the last month I have committed it to paper. (*The witness read a memorandum. Vide Appendix B.*)

3191. In consequence of this memorandum, addressed to you, and of the conversation, the notes of which you have just read, you considered yourself not at liberty to make any representation to the department? I considered that a wet blanket was thrown over me and my exertions for the future. C. H. Storey,
Esq.
14 June, 1860.

3192. What you mean is —? My zeal for the public service, if I may so term it, was annihilated.

3193. The course you then took was merely to follow your instructions? Decidedly. I kept to the letter of my instructions afterwards as closely as practical work can be carried out.

3194. Did you apply to the Secretary for Works to be examined before the Committee of this House? Yes.

3195. What was the reason of your applying to Mr. Arnold? Because, as an officer of Government, knowing what official etiquette was, I thought that was the only proper course to take.

3196. Upon what points did you wish to be examined, and what reasons influenced you in seeking to be examined? The reason that induced me to seek to be examined was the report made by Mr. Whitton respecting a bridge, the principal details of which I furnished him with, imputing blame to me for not reporting certain circumstances to him, namely—the nearness of the rock to the surface. I felt myself aggrieved, as it was an imputation upon me. He had tied my hands and consequently I was not disposed to put up with the imputation. It was to clear up my character, in a professional point of view, that I appealed to Mr. Arnold.

3197. As I understand, your explanation of your reason for wishing to be examined is this: that Mr. Whitton had complained of your not reporting some circumstance to him—the nearness of rock to the surface. Was it not part of your duty to make a report of such circumstance to him? I did not consider it to be my duty after the strict instructions I had received—for I had these instructions repeated ^{in two or three different memoranda—in two} ~~I should say—in one of them twice.~~ * in three memoranda and in one of them twice.

3198. Did you report the circumstance to any officer of the department? With regard to the piles?

3199. Did you report the circumstance, whatever it was? Certainly not; if I had reported it to anyone it would have been to Mr. Whitton, or to the assistant engineer when he came over the line.

3200. When you applied to Mr. Arnold what did he say? He said “He did not see how he could interfere; he did not see what the object was.” I said “The object was very simple—it was to clear my character.” He said, “Oh, but we have evidence enough on this subject, and of course I shall take the evidence of the Engineer-in-Chief in preference to yours, if you differ upon engineering details.” I said, “Of course you would, but the Committee, perhaps, might come to a different conclusion.” Then he said, “Oh, but I think you should apply to Mr. Parkes.” I said, “I beg to differ with you, I think I should have shown myself very much wanting in knowledge of official etiquette if I had not applied to you.” “Oh, but,” he said, “you seem to have forgotten official etiquette, as you should have applied to Mr. Whitton.” “What!” I said, “to the man who is stabbing me behind my back. No, Sir, I appeal from Mr. Whitton to you; I ask you to do the same justice to me you have done to him. You are very chary of the character of your superior officers; give me the same opportunity of clearing mine that they have had of clearing theirs, that is all I ask.”

3201. What followed? Mr. Arnold still hesitated, and said he did not see how he could interfere; of course if Mr. Whitton suggested to him that any officer of the department should be dismissed, he should act on it.

3202. You then applied to me? Yes.

3203. By letter? By letter.

3204. Are you still an officer of the department? I am not.

3205. Have your services been dispensed with since you applied to Mr. Arnold to be examined? They have; in fact, since I appeared at this Bar, I received the notification.

3206. When did you receive this letter? I received it on the morning of the 9th June. It is dated the 5th, but I can explain, perhaps, why I did not receive it so soon as I should have done. The post mark on the envelope bears date Sydney, 6 June. In due course it would have arrived at South Creek at night, and been deliverable in the morning; so that had I been there, and not in attendance in Sydney, waiting for examination, I should have received it on the 7th. On the same morning it was sent back to me, but from some neglect on the part of the Post Office authorities, it did not reach my private residence until Saturday morning the 9th, instead of the 8th.

3207. Will you read that letter? (*The witness read the same. Vide Appendix C.*)

3208. Did you take any step in consequence of that letter? I did.

3209. What was that? I wrote the following letter to the Secretary for Works. (*The witness read the same. Vide Appendix D.*)

3210. Did you get any answer to that letter? Yes; I received it this morning. (*The witness read the same. Vide Appendix E.*)

3211. What are the instances alluded to where it is alleged you have failed to point out defects in the public works? The instance alleged, and which is made the handle of for this treatment—though that is really not the tender point—is, that I did not point out to either the Engineer-in-Chief or his assistant, that the piles at South Creek were driven some few inches out of line, in connection with a former memorandum which I received.

3212. Did you ever receive a reprimand or letter of disapproval of any kind, except the memorandum you have read? Yes; I have it here.

3213. You are now about to refer to the only one you have received? It is the only one. (*The witness read the same. Vide Appendix F.*) 3214.

- C. H. Storey, Esq. 3214. Did you make any reply to that memorandum? I did.
3215. Have you got that? Yes. (*The witness read the same. Vide Appendix G.*)
- 14 June, 1860. 3216. You had then reported this to Mr. Durham? Yes.
3217. You had reported the defective driving of piles to Mr. Durham, he being the officer placed over you? No; Mr. Durham represents Mr. Rhodes, the agent on the line.
3218. With reference to these acts of insubordination, being absent without leave, and disregard to the prescribed routine—have you been absent without leave? No; never. This is the first time I have heard of it. The first time I was absent was when I came up on the 1st June to see the Secretary for Works.
3219. When you made application to be examined? Yes. When I came from the Secretary's room I went and reported myself to the department. Mr. Whitton being absent, I saw Mr. Mason, and said I had been to see the Minister. He asked me when I should return; I said, on Monday morning, most likely. On Tuesday morning, I met Mr. Mason in the street, and said, "I was coming to report to you that I could not go back, because I am going to be examined, and it is necessary that I should refer to my papers"; he said, "Oh! I saw you were going to be examined."
3220. During the time you have been Inspector on the Western Line, how often has the Engineer-in-Chief visited the works? In February, 1860, and May 9th and 10th, when he came down specially to inspect the South Creek viaduct, and the effect of the floods upon the culverts—twice.
3221. That is twice in a period of six months? Yes.
3222. How often has the Commissioner for Internal Communication been upon the works during that time? I could not say; I have heard of his being there once.
3223. Did you ever see him there? I never saw him there, but I heard of his being there.
3224. From your experience, derived from your connection with railway works in Europe, can you state any opinion as to whether it is the practice to supply contractors with the rails and chairs they require to carry on works? Yes, I can.
3225. What is the general practice? That is a question upon which Mr. Rhodes applied to me as late as last September —.
3226. Will you state your opinion without reference to what passed between yourself and Mr. Rhodes? My opinion is, that it is the general custom to allow contractors the use of rails and chairs without charging anything for them.
3227. Your experience extends over what period? Ten years that I was with Mr. Jackson.
3228. With respect to that part of the line you were appointed to superintend, has the work been carried out in a proper manner generally? Yes; I have no complaint to make in that respect. It has been carried out slowly, and when I have pointed out that to the contractor's agents they have said they could not carry it out more quickly as they had not the rails.
3229. When do you suppose the extension of the Western Line will be finished? Judging from what has been done, I should say it would be another twelve months.
3230. How far has the South Creek viaduct progressed towards completion? The last time I saw it they were putting on the girders at the further end.
3231. Are you aware whether the assistant engineer has measured any portion of the work there in order to certify for the payment of the contractor? The assistant engineer has not measured it, but asked me for the measurement from my register, which I gave him on three occasions.
3232. There is nothing you wish to state with reference to your position? No; I am not complaining of my dismissal.
3233. There is nothing further you wish to state in connection with the misunderstanding existing? Nothing.
3234. *By Mr. Arnold:* I did not quite catch your answer to the question as to how often you have seen the Engineer-in-Chief upon this part of the line during the time you have inspected it? I think I stated twice, that is to say two visits; I may have seen him two days on each visit.
3235. Could Mr. Whitton have visited the line without your seeing him? I do not think it very probable; if I had not seen him I should have heard of it, but I never heard of it.
3236. Who is the contractor for this line? Messrs. Peto, Brassey, and Betts.
3237. Who is the acting agent here? Mr. Rhodes represents the firm, I believe.
3238. How often during the period of your inspection was Mr. Rhodes on the line? ³Nine times.
3239. To your knowledge? ⁴Eight times.
3240. Did you see Mr. Rhodes on your part of the line eight times? I spoke to him on four occasions, on some occasions I did not see him.
3241. How often did you see Mr. Rhodes? I have seen him, I think, some five or six times.
3242. You saw him five or six times? Yes.
3243. Have you the dates? November 3rd, December 8th, February 8th, and February 18th. I do not think I have seen him more than that; I might have seen him once besides, but there were other days when he was on the line.
3244. Then you mean that you have seen him four times? Yes.
3245. And Mr. Whitton twice? That is two visits; I do not call his coming on the line when he has been down on two successive days two visits, because Mr. Rhodes has done the same. He has come down one day, and gone back the next—I do not call that two visits.
3246. *By Mr. Walker:* What portion of the railway works was it you had charge of? From the Blacktown Road on the east side up to Penrith.
3247. Only on one side of the road? No; commencing on the east side of the Blacktown Road up to Penrith.
3248. Did your charge commence at Blacktown? At Blacktown Road; my section commenced on the east side, that is the side nearest to Parramatta. 3249.

3249. Had you anything to do with the construction of the station at Blacktown? Not the C. H. Storey, Esq. slightest; I do not even know whether it is going on or not.
3250. Did I not understand you to say that you made some suggestion as to the proper locality for a station? Not as to the proper locality. I said as the site had been pointed out to me, I suggested that the works should be proceeded with at once. 14 June, 1860.
3251. Did it occur to you that the work had not been proceeded with quickly enough? No; for I had only just entered upon my duties; but as the No. 1 Contract was to be completed by October, I thought no time was to be lost if the public were to be accommodated with an early opening to the Blacktown Road.
3252. Are you aware whether this station-house has been built? No; I always attended to my own contract and did not interfere with the business of others.
3253. Do you know the point where the station-house is proposed to be erected? I think I know it; I think it is where an angle of ground has been fenced off.
3254. Can you state what distance that is from Parramatta? According to the specification 8 miles 25 chains 64 links. I presume that is from the junction of the Southern Line.
3255. How near will this proposed station-house be to what is called the Blacktown or Richmond Road? I am not sufficiently acquainted with that locality to say. I never could find time to scour the country and investigate the roads.
3256. *By Mr. Lucas*: Are these piles you speak of in the fifth row,—you say there is one driven 4 feet 4 inches—does that still remain? It does.
3257. Do you think it was impossible to drive them further than 4 feet 4 inches, in consequence of the rock, and that it would have been much better to put down a cill and mortice the piles into the cill? That is what Mr. Whitton said he would have had done if I had reported the circumstance to him.
3258. That would have made a better job of it? It would have been better still if the dwarf piles had been omitted.
3259. You would have a battering pile from the cill, which should be let into the ground, bolted to the rock, and reaching up to the superstructure? Yes.
3260. What alteration do you propose in that to strengthen it longitudinally? In the first place I would strengthen the connection of the superstructure with the head stock.
3261. I am speaking now of the part between the piles—the bays? I thought you said the strengthening of the piles.
3262. Strengthening the piles longitudinally? I should recommend longitudinal cross braces, as I shew in pencil on my drawings, with an additional one against the first row to make it stiffer to withstand the shock of the train coming on.
3263. That is, you would put it from the cill up to the superstructure? Yes.
3264. Do you think these braces would be as good as struts to come down 3 or 4 feet down the pile, with crown pieces? Much better; it would then have become a continuous truss by these cross bracings, and there would have been plenty of strength to carry the superincumbent loads. Between the points of two corbels you get a flatter angle.
3265. The corbels are about 6 feet long? Yes.
3266. That makes the bearing about 14 feet? Yes; that would be stiffer by putting these diagonal braces.
3267. With regard to the support of the superstructure,—you have mentioned that the head of the tenon was 9 by 9 by $1\frac{1}{2}$ inches, I think? That has been altered to 8 by 4 by 3.
3268. The whole of the superstructure is secured by means of a spike, not of a bolt; do you approve of that plan? No.
3269. Do you not think it would be better to let in a nut and screw it together? No, I think this would be a better plan (*referring to a drawing*), to have iron knees, they would bind it together firmly. Do you mean as a bed screw?
- Mr. Samuel* drew the attention of the Chairman to the fact that the examination was being conducted in a tone of voice inaudible to the Committee.
- The Chairman* said he thought it desirable that the questions should be put in a tone of voice so as to be audible to Honorable Members.
3270. Speaking with reference to the height of this structure, do you not think it would have been a much better plan if a nut had been put upon the pile the same as a bedstead pile? I think it would have been much better to have omitted the spike altogether, and to have substituted knees.
3271. Would it not have been much more expensive? Yes; but it is not safe as it is at present.
3272. You think if there were a nut let into the pile it would be stronger than at present? Certainly, stronger than the present spike.
3273. You are aware that wood shrinks very much in this country, and by this means the structure could be screwed up at any time and tightened? Very likely.
3274. If your suggestion with respect to knees were adopted, the whole stress would be upon the knees? You could tighten the knees.
3275. The piles would shrink in thickness? Not seasoned timber such as that of which this bridge has been constructed.
3276. You say the tenon on the top of the pile has been altered from 9 by 9 by $1\frac{1}{2}$ inches, to 8 by 3 by 4? Yes.
3277. You think that is sufficiently strong? Certainly.
3278. You said the bridge would become shaky if furnished according to the present plans—how long do you think it would be before it would become shaky? I should say within six months.
3279. From its construction, do you not think if it once became shaky, it would be very difficult to secure it? If it became crippled, it would not be possible to make so good a job of it as you can now.

- C. H. Storey, Esq.
14 June, 1860.
3280. You particularly refer to these short piles, and you advise a battering pile, as shewn by the pencil mark? I think the present batter of the pile insufficient; but I would do away entirely with the dwarf piles. The base is not wide enough for the height of the viaduct, and the narrowness of its top.
3281. But by putting these battering piles—that would effectually cure your objection? It would help to do so, but even then there would be nothing to counterbalance the oscillation.
3282. How are these diagonal braces secured? They are notched and bolted.
3283. They are put in properly? Quite properly.
3284. Are you aware of the manner in which Mr. Rhodes does his work—whether he sub-lets it? I believe he sub-lets; I have only heard that promiscuously.
3285. Do any of the farmers in the neighborhood take the sub-contracts from him? I am sure I do not know; very likely they may do the horsing.
3286. He generally lets a cutting to one, a bridge to another, and so on? I believe that is his mode; I never interfered with his details.
3287. But you know he sub-lets the whole of his work? Yes.
3288. It takes as many officers to supervise the works under Mr. Rhodes now, in consequence of the sub-letting, as if Mr. Rhodes had nothing at all to do with the contract? It makes no difference.
3289. The Government would not require more officers to inspect the works, if they themselves let them in small portions? Yes, if Government let out the works in small portions, the supervision would be much greater.
3290. Why? Because they would deal with a number of contractors instead of with one.
3291. But Government have now to supervise the work done by small contractors? You will find in practice that a number of small contractors will require a larger number of officers to supervise their work than one large contractor.
3292. Taking the height of these piles, forty feet, do you think the depth to which the longest is driven, 13 feet 3, is sufficient? I think that is plenty, if the superstructure is properly braced.
3293. Do you think 4 feet 4 sufficiently deep in the ground? No, not for a number, but for an isolated pile I think it is of little importance.
3294. That is an outside pile? Yes.
3295. Do you think that is sufficient? I think so, for the floods have never affected it.
3296. Still you think if it had been let into a cill instead of having been allowed to rest on the rock, it would have been better? Decidedly.

APPENDIX A.

From R. Byham, Esq., Secretary of the Ordnance.

Pall Mall,
23 April, 1839.

My Dear Sir,

I have had so much reason to be pleased with everything you have done, when I have been in any way concerned, that I should do you injustice to withhold my strongest testimony in your favor whenever an opportunity may offer, and I beg to assure you I shall feel great pleasure in so doing.

I am, &c.,
R. BYHAM.

C. H. Storey, Esq.

From (now) Major General Sir F. Smith, Royal Engineers.

Chatham, 29 July, 1842.

Sir,

I have great satisfaction in complying with your request that I would give you a testimonial of your services when under my command in the London District.

I do not remember the precise length of time you were with me, but I believe it was not less than eight or nine years. During that period you had the charge of very responsible duties in conducting the erection of costly and important public buildings, and you acquitted yourself to my entire satisfaction, affording me the pleasure of repeatedly recommending you for various steps of promotion, and to the favorable consideration of the Inspector General of Fortifications.

I found you invariably zealous, correct, and attentive, as well as most intelligent, and it was my gratifying duty always to have to praise; I therefore trust you may be speedily placed in such employment as will be congenial to your feelings, and afford you an opportunity of displaying your talent.

I have, &c.,
FREDERIC SMITH,
Lieutenant Colonel Royal Engineers.

C. H. Storey, Esq.

From Mr. Thomas Jackson, Railway Contractor, &c., &c.

Commercial Road, Pimlico,
1 August, 1854.

I have much pleasure in giving this testimonial in favor of Mr. C. H. Storey, who has been in my employ for the last ten years as principal agent in the carrying out extensive railway and other contracts on public works, and during that time he has always given me the greatest possible satisfaction in every respect, and I strongly recommend him for this description of employment, for building in general, or for surveying, for each of which he has a practical knowledge.

THOMAS JACKSON,
Contractor of Public Works and Buildings.

From

From Samuel Morton Peto, Esq., M.P., Railway Contractor.

9, Great George-street, Westminster, London,
18 September, 1854.

C. H. Storey,
Esq.

14 June, 1860.

Sir,

I take the liberty to introduce the bearer of this letter, Mr. C. Storey, as a gentleman whose professional knowledge and business habits and connexions in this country, were highly estimated, and who would, I believe, do credit to anything entrusted to him, and I shall be glad to hear that you have been able to offer Mr. Storey some opportunity of confirming the high opinion I entertain of his abilities.

I have, &c.,
S. M. PETO.

To Sir Charles Hotham, Bart.

APPENDIX B.

Upon the 14th December I waited upon Mr. Whitton, when, as near as I can recollect after this lapse of time, the following conversation took place:—

S.—I have waited upon you in consequence of your memorandum of the 9th, the tenor of which I regret to have received.

W.—Yes; you have taken the liberty of dictating to me, and —

S.—Before you express an opinion perhaps you will allow me to explain, when I think you will not consider me so culpable as you at present seem to do. It was from a perusal of Captain Martin-dale's report —

W.—What are his reports to me? I am not bound to carry them out.

S.—It struck me that the public and the country would be benefited by an early opening of the Blacktown Road, and knowing the feeling existing between yourself and Mr. Rhodes, I sounded him to see if he would interpose any difficulty.

W.—I should not have allowed him to do so if I required the line; besides, what have you to do with the productiveness of capital? You had no business to name the station to Mr. Rhodes, as he has nothing to do with it.

S.—I know that, and never mentioned the station to him—referring only to the station-yard, as he had the contract for the permanent way.

W.—It was a great liberty on your part in attempting to point out to me how I was to carry on the details of my department.

S.—All I can say is, that my motive in dictating that memorandum was as pure as could be, and if you view it in an offensive light I can only offer you the fullest apology, as I never intended it as such; and at most it can only be viewed by you as error of judgment; and to shew you that I am sincere in what I state I am willing to cancel the document should you think fit —

W.—Oh, no! And how could you tell that the station was to be there?

S.—Judging from the position and nature of the cutting. (MEMO:—I had forgotten that in our interview of November last he had told me so.)

W.—Besides, how could you tell what motive I might have for not opening the line? I suppose Mr. Rhodes suggested it?

S.—Mr. Rhodes never named the subject; and it was, perhaps, owing to his coming down just as I had been turning it over in my mind, that I spoke to him.

APPENDIX C.

Department of Public Works,
Sydney, 5 June, 1860.

Sir,

In reference to your recent conduct, and the opinion expressed by the Engineer-in-Chief, that he has lost all confidence in you as an Inspector of Works, I am directed by the Secretary for Public Works to inform you that your services will be dispensed with from this date.

I have, &c.,
(For the Under Secretary.)
GERALD HALLIGAN.

Mr. C. H. Storey,
South Creek.

APPENDIX D.

55, Glebe Road,
9 June, 1860.

Sir,

I have the honor to acknowledge your communication of the 5th instant, received only this day, stating that, "in reference to your recent conduct, and the opinion expressed by the Engineer-in-Chief, your services will be dispensed with from this date."

I have to request that you will do me the favor of a reply, at your very earliest convenience, stating to what "recent conduct" you therein allude.

I have, &c.,
C. H. STOREY.

To the Secretary for Works.

APPENDIX E.

Department of Public Works,
Sydney, 12 June, 1860.

Sir,

In reference to your letter of the 9th instant, received this day, in which you request the favor of a reply, stating what "recent conduct" is alluded to in my letter to you of the 5th instant, I am directed by the Secretary for Public Works to inform you,—that the representation of the Engineer-in-Chief, that he had no further confidence in you, in consequence of your having, on more than one occasion, and after remonstrance and reprimand, failed to point out defects in the railway works in progress under your inspection, would alone have induced the Government to provide at once for more competent inspection.

2. Mr. Secretary Arnold desires me to state, however, that subsequent irregularities and acts of insubordination, such as absence from duty without leave, and disregard of the prescribed routine, together with the general spirit evinced during your interview with him, determined him that your connection with this department, in any capacity, could not be continued, even temporarily, without obvious disadvantage to the public service.

I have, &c.,
B. H. MARTINDALE.

Mr. C. H. Storey,
55, Glebe Point Road, Glebe.

C. H. Storey,
Esq.

15 Feb., 1860.

14 June, 1860.

No. 546.

APPENDIX F.
GREAT WESTERN RAILWAY.

Engineer's Department, 14 Feb., 1860.

MEMORANDUM to Mr. Storey.

I pointed out to you when last I inspected the works on the Western Line the improper and careless manner in which the piles had been driven for the bridge over Rope's Creek. You are aware, from the instructions you have already received, that it is your duty to see that the works are properly executed, *in accordance with the drawings furnished from this office*; but in this instance you not only permit the driving of these piles to be carried on in a most unsatisfactory manner without reporting the circumstance to me, but you do not even point out to me when on the ground that this work has been most improperly executed; and had I not observed it when riding through the line I should have heard nothing from you on the matter. I must express to you my extreme dissatisfaction at your conduct in reference to this work, the more particularly as you stated to me, after I had called your attention to the matter, that you had told Mr. Durham and Rankin that the work was being improperly executed—yet you neglected to give to me information so important.

I trust that it will not be again necessary to write to you on such a subject.

JOHN WHITTON.

APPENDIX G.

No. 2 Contract.

GREAT WESTERN RAILWAY.

No. 17.

Engineer's Department, 15 Feb., 1860.

MEMORANDUM to John Whitton, Esq.

I was not aware, until in receipt, this evening, of your Memorandum of yesterday's date, that you expected me to make reports to you upon every irregularity in the execution of the works; I therefore now beg to send you, on the other side, copy of my Memo. of the 10th inst. to Mr. Durham.

C. H. STOREY,

Inspector.

(Vide Memo. No. 16., 10 February, 1860.)

Captain Ben Hay Martindale, R.E., Under Secretary for Public Works and Commissioner for Internal Communication, called in and further examined:—

Captain B. H.
Martindale,
R. E.3297. *By Mr. Arnold*: Have you before you the evidence given by Mr. Fowler on the 18th May last? I have.

3298. Will you look at question 2843, and the subsequent questions, 2846, 2904, and 3299? I have looked at them.

14 June, 1860.

3300. Having reference to some evidence given by Mr. Willcox? Yes.

3301. Has any correspondence taken place with Mr. Willcox since that evidence was given? A correspondence has taken place.

3302. Have you that correspondence with you? I have.

3303. Will you state the purport of it? By direction of the Secretary for Public Works a letter was written to Mr. Willcox, calling his attention to the replies given by Mr. Fowler on the 18th May, in reference to Mr. Willcox's evidence. Mr. Willcox was asked to state whether he had any desire to alter his answers to the questions alluded to by Mr. Fowler—Mr. Fowler having stated before the Committee, on the 18th May, that Mr. Willcox's replies were the reverse of what he intended. Mr. Willcox, in reply, informed the Secretary for Public Works that the answers given by him to the questions were exactly what he intended, and that he did not wish to make any alteration; and he added, that, when his examination was concluded, Mr. Fowler remonstrated with him respecting that portion of his evidence relating to himself, upon which occasion Mr. Willcox told him that although he had often been present during his conversations with Mr. Rhodes upon railway matters, and had conversed with him, still Mr. Fowler had never acted for him, nor ever been consulted with regard to the Northern Line; and Mr. Willcox therefore objected to make any alteration in the evidence he had given before the Committee of the Legislative Assembly. (*The witness handed in the letters referred to. Vide Appendices 1 and 2.*)

3304. Will you turn to questions 2852 and 2854? Yes.

3305. Is what Mr. Fowler states, in regard to the confidential character of the communication referred to, true? It is untrue.

3306. Has reference been made to the chief clerk since that evidence was given? I called upon the chief clerk for a report of what took place, and in his report to me the chief clerk stated as follows, in reference to the replies referred to. (*The witness read the report in question.*)

3307. Do you desire to hand in this document? If you please. (*The witness handed in the same. Vide Appendix 3.*) I should wish also to hand in the letters which I received from Mr. Fowler, and which I desire to read. (*The witness read a letter dated 69, Elizabeth-street, March 1, 1860. Vide Appendix 4.*) To this a verbal reply was given, fixing noon of the same day to see Mr. Fowler. I saw Mr. Fowler, and subsequently, while I was with the Secretary for Public Works, I received a second note. (*The witness read the same. Vide Appendix 5.*) I consulted Mr. Secretary Esagar as to the reply that I should give to that note, which I put into his hands. I drew up a reply, and submitted the draft to Mr. Esagar before it was sent. (*Witness read the same. Vide Appendix 6.*)

3308. That is the letter which has been already printed as an appendix to Mr. Fowler's evidence? Yes, I presume that is a correct copy.

3309. Will you look at the concluding paragraph of the answer to question 2854 in Mr. Fowler's evidence—these are the words to which I wish to call your attention: "So that
" after

" after four distinct promises—mentioned by myself once at the beginning of the conversation and once at the end, and once by Captain Martindale at the commencement and at the end by him to the chief clerk—next day Captain Martindale shews Mr. Want the small scrap of paper, and says, 'There is some underhand work going on.' This Captain Martindale does after these four promises."—Is that a correct statement of what really took place—was there any promise of confidence on your part? Not the slightest. It never entered into my imagination to give Mr. Fowler a confidential interview. The term was, "without prejudice."

Captain B. H. Martindale, R. E.

14 June, 1860.

3310. *By Mr. Parkes*: Have you been over the Southern Line, between Liverpool and Campbelltown, since the occurrence of the late floods? I have.

3311. Can you state to the Committee the state in which the viaducts are which were constructed with a wooden superstructure on brick piers? At the time I saw them, which was the day before the traffic was re-opened, they were perfectly secure. I have not seen them since.

3312. Can you state what state they were left in by the floods? The former viaducts?

3313. Yes? I believe I can, generally. At Glenfield bridge, which is the first bridge from Liverpool, the right pier of the last bay has settled, and is shaken; and the left pier has settled on the right side some two or three inches.

3314. How many bridges were damaged seriously by the floods altogether, between Liverpool and Campbelltown? Five were more or less damaged, and two seriously.

3315. Will you read over the names of these five bridges? Glenfield bridge, Macquarie Fields bridge No. 2, Macquarie Fields No. 3, the bridge at Stoney Creek, and one at Davis' Flats.

3316. Which are the bridges that are injured seriously? The Macquarie Fields bridges.

3317. What is the injury to the Stoney Creek bridge? The earth is washed away at the abutments, and two of the piers have holes knocked into them near the surface.

3318. How long are the holes? Of no great extent.

3319. Did you personally inspect that bridge? I did.

3320. That is the bridge (*handing a photograph to witness*)? It may be. The holes in question could not be seen in a photograph; they are close to the surface of the water.

3321. Could you point out where the injury is sustained? I only see two of the piers here. The injury is close to the present level of the water.

3322. The piers shewn in this photograph are those which have sustained injury? Yes. On the up-stream side two of the piers are undermined to a small extent, probably from a tree having struck against it.

3323. How many other bridges are there on the line between Liverpool and Campbelltown? I think six or seven more; but most of them were not affected by the floods.

3324. There is one at Davis' Flats—? Three altogether.

3325. The flood in that case rose considerably above the bridge. Here is a photograph shewing the debris of the flood in the trees at a considerable elevation over the roadway? Yes, I think it probable the flood—

3326. Did you notice the debris left by the flood in the trees, at a considerable height above the roadway of the viaduct? I did not.

3327. You see it represented there? I do.

3328. This bridge did not sustain any injury, did it? I see it noted in my book—the third bridge on Davis' Flats is slightly injured; one pier shaken is noted.

3329. I think you say there are seven altogether? Six or seven.

3330. Including those that are seriously injured? Yes.

3331. Some of the bridges are not affected at all? No. The long viaduct at—

3332. In the case of these two that were seriously injured, did you closely inspect them? Yes.

3333. Will you describe the nature of the injury they sustained,—were the piers carried away bodily from the foundations without being broken? In the second Macquarie Fields bridge three of the piers are torn off near the foundation.

3334. The brickwork was removed from its foundations without being broken? The main body of the pier was not destroyed.

3335. Are you aware whether the foundation was defective? There is nothing to shew that the foundation is defective. When I was there the water was still over the piers, and though I examined to see how far the foundation was down, I was not able to do so successfully.

3336. Had not the foundation been repaired in some way some time previous to the flood? Not that I am aware of; part of the piers, which were built in indifferent mortar, were taken down and rebuilt in cement at the cost of the contractor.

3337. These bridges, I believe, were all constructed after Mr. Whitton's arrival in the Colony? They were.

3338. I am not quite sure whether it is in evidence or not, but perhaps you will state whether they were constructed on his designs? I believe so.

3339. *By Mr. Lucas*: How many bridges are there between Liverpool and Campbelltown? I believe thirteen or fourteen.

3340. Are any of these superstructures erected on piles? Not entirely on piles; some of the brick bridges have been extended on piles.

3341. On some of the bridges on that line, after the brick piers were built, were not some piles driven to strengthen them? Some piles were driven to extend them.

3342. Is it not the fact that the flood swept away the brick piers and did not remove the piles? It is, where the piers have been swept away.

3343. The brick piers have been swept away and the piles remain? Yes.

3344. And the superstructure is resting on the piles? No; the superstructure is resting partly on the remaining brick piers and partly on the piles.

3345.

- Captain B. H. Martindale, R. E.
 14 June, 1860.
3345. No piles have been taken away by the flood? No; the piles are simply an extension of the bridges.
3346. Have you constructed any of the railways by small contracts? Yes, on the Northern Line, from Maitland to Lochinvar, about seven miles.
3347. Has that gone on satisfactorily? Very.
- * 2a. 3348. Can you tell me what price the earthwork on that portion of the Northern Line has cost you? I think the highest price that has been paid for earthwork has been about 1s. 8d.*
3349. Per cubic yard? I think so, speaking from memory.
3350. The same sort of work as the public are now paying Mr. Rhodes 2s. 7½d. for? Yes.
3351. Does it require more officers to supervise the work performed by these small contractors than it does when the railway is left to one large contractor? If the whole of the railways were to be carried out under a system of small contracts it would require some addition to the clerical staff, on account of the numerous small payments, and it might require some additional inspection in the field, but not to any great extent.
3352. Would a difference of two and a-half per cent. on the cost of construction, under a system of small contracts, pay for the additional supervision and clerical assistance required? I can hardly answer that question off-hand, but a small per centage would pay it.
3353. And the works that you have had done by small contracts have been done satisfactorily? Very well indeed.
3354. More satisfactorily than the works under Mr. Rhodes? Much more.
- * 2a. 3355. And work for which he is paid 2s. 7½d. per yard is done for 1s. 8d.? I believe the highest price is 1s. 8d.*
3356. Have you done any brickwork by small contracts? I am not certain.
3357. Have you done any bridges? Yes.
3358. On piles? On piles.
3359. Can you state the cost of those bridges per foot? I cannot at this moment; I can append it to my evidence.
3360. And also the price of the brickwork done under small contracts? Yes; I can append the whole of the prices as a schedule, if it is desired. (*Vide Appendix 8.*)
3361. Do you believe that it is possible to get small contractors to do any railway works we require, by letting them out in £10,000 or £15,000 jobs—bridges to one and cuttings to another? I doubt whether we should gain so much by letting out all the works in small contracts. As far as the Northern Line is concerned, it has been done by dealing direct with navvies and laboring men generally.
3362. That is what I am speaking of? I believe we could get the works done, as far as obtaining men to do them goes, and as far as the supervision is concerned; but there would be considerable difficulty, perhaps, as regards the charges of corruption that might be brought against the subordinates of the department engaged in carrying out such contracts, and extreme difficulty in refuting those charges. That is the difficulty which has always stared me in the face, as regards that system in this Colony, coupled with the strong bias in favor of the contract system by tender and public competition; the main argument for which generally is, that it avoids even an opening to impute corruption.
3363. Do you believe that there is so likely to be corruption where one hundred small contractors are concerned, as where there is only one large one? I do not believe there is corruption anywhere.
3364. Is there more likely to be corruption where there are a number of small contractors, for a few thousand pounds each, as where there are only one or two large ones? I do not think corruption is more likely to exist, but I think more charges are likely to be made.
3365. But you do not think there is more likely to be corruption? I do not.
3366. Do you think there is any difficulty in letting the work in small contracts, or in dealing with the navvies and bricklayers direct—the Government finding the necessary plans? I think the difficulty is this—that a navy cannot enter into a bond and contract and give security, as is done in the case of large contracts. As long as a navy or any laboring man is paid a fair price, he goes on generally cheerfully with his labor; but if he meets with any unexpected difficulties, he might throw up the work at once.
3367. You have had no instances of that sort? I do not think we have.
3368. Where you have dealt directly with small contractors, the work has been done satisfactorily? It has. And I may say the same of contracts on the roads, as a rule.
3369. You have a great number of small contracts on the roads and bridges? Yes, we have.
3370. They are satisfactorily performed? They are, as a rule.
3371. Do you see any more difficulty in small railway contracts than in those? No, I do not. But I can see that it would cause a large amount of work, and there would be a necessity for entrusting the department charged with carrying out the works with very considerable latitude and responsibility. In fact the department could not carry out that system without they were thoroughly and entirely trusted.
- (*Mr. Walker here called the Chairman's attention to the inaudible tone in which the Honorable Member was examining the witness.*)
3372. Do you believe that we should go on giving 2s. 7½d. per yard for earthwork when we can get it done for 1s. 8d.? It depends upon the agent. If a large contractor brings a thoroughly efficient agent who understands his work, and is willing to carry it out properly, he ought to be able to do it cheaper than the small contractor.
3373. That is not an answer to my question. I asked you, do you think it is an advantage to the Colony to pay any contractor, large or small, 2s. 7½d. a yard for earthwork when you can get it done for 1s. 8d.? I do not; but, if the Government desire that the work should be carried out as it has been on the Northern Line they must distinctly understand that they will have to entrust the department with very large powers, in order to carry out that system satisfactorily.

- satisfactorily. It is absolutely necessary, if the work is to be carried out by such a system as we have used on the Northern Line.
3374. You have said that it would require only a small per centage on the contract to provide for the extra supervision and clerical duties? Yes; but it requires large powers in this way, that the department must have the power to make direct contracts with these men, without calling for tenders. There must be for the most part arrangements made on the spot.
3375. Were any tenders called for for the work under Sir Morton Peto's contract? No; it was an arrangement that it was to be without competition.
3376. Do you think that advisable? Generally, yes.
3377. You do? I do.
3378. Even if you have to pay 2s. 7½d. for what you can get done for 1s. 8d.? No.
3379. *By Mr. Laycock*: Are you aware what description of timber is supposed to be used in the construction of the various works? Ironbark.
3380. Are you aware that other descriptions of timber, such as gum and turpentine are used occasionally? I am not.
3381. Are you aware that many of the girders supplied, instead of being sound, are plugged at the ends, thereby boxing up myriads of the white ant? I am not.
3382. Are you aware that the white ant has attacked portions of the work? I have had a report that a few white ants from the old Stoney Creek bridge had got on to the new viaduct near that bridge; but attention was directly called to it.
3383. *By Mr. Parkes*: That was on the Northern Line? On the Northern Line.
3384. *By Mr. Lucas*: Whose duty is it to inspect the timber previous to its being used? The Inspector of Works.
3385. *By Mr. Parkes*: How many bridges are there between Parramatta and Campbelltown with brick piers and timber tops? I am afraid I could not say.
3386. But about—about twenty? Between fifteen and twenty.
3387. None of the bridges so constructed between Parramatta and Liverpool gave way in the last flood, did they? No.
3388. Did the recent flood have the effect of bursting any of the culverts, shewing that they were not of sufficient capacity? Between Sydney and Parramatta two double culverts were burst.
3389. In no other part of the line? No.
3390. Sir Morton Peto's agent, Mr. Rhodes, has addressed a letter to your department, or to the Government, offering to carry on the line of railway to Goulburn, has he not? He addressed a letter to the Premier, which was sent on to the Secretary for Public Works.
3391. Has any reply been given? A reply has been given.
3392. When? Within the last few days.
3393. Have you any objection to state the nature of that reply? Not if there is no objection on the part of the Government. I do not know whether, as Under Secretary, I am permitted to make the letter public. I have no objection to state, with the sanction of the Government, what the reply is.
3394. If the reply has been sent it must have become public—Mr. Rhodes has the power of making it public? Yes; but I am not aware whether I have the power—whether I, as Under Secretary, ought to communicate that reply before it is made public by the Government—I presume there can be no objection. The reply is to the effect that the Government must decline to enter into any future engagement with Mr. Rhodes, as agent of Sir Morton Peto and Co.
3395. Is that all of it? That is the general purport of it.
(*Mr. Hay rose to a Point of Order, as to whether it was not objectionable to call upon an Under Secretary to make public a letter in this way.*)
Mr. Parkes: I do not press the matter.
Mr. Arnold: The better way would be for the Honorable Member to hand the letter to the witness and ask him to read it.
3396. *By Mr. Parkes*: I will avail myself of the suggestion of the Honorable Secretary for Public Works. Is that (*handing a letter*) the letter sent to Mr. Rhodes? It is.
3397. Will you be good enough to read it to the Committee? (*The witness read the letter. Vide Appendix 7.*)
3398. Has any communication been made to Sir Morton Peto and Co. by the mail which left to-day, in pursuance of that letter? There has.
3399. To the effect intimated in this letter? To the effect intimated in this letter.
3400. *By Mr. J. Campbell*: In consequence of what has taken place before this House has the contractor gone on better with the railroad? I think not.

Captain B. H.
Martindale,
R. E.
14 June, 1860

APPENDIX.

(1.)

Department of Public Works,
Sydney, 21 May, 1860.

Sir,

In reference to your replies to questions Nos. 2442 to 2445 inclusive, asked you by the Committee of the Legislative Assembly, and your statement of the following morning to the Engineer-in-Chief for Railways, that Mr. Fowler had applied to you to alter that evidence, and that you had refused to do so on the ground that it was correct evidence, I am directed by the Secretary for Public Works to request that you will be so good as to state, by return of post, whether you have any desire to alter the replies

Copies of ques-
tions and
answers annexed

Captain B. H. Martindale, replies in question, Mr. Fowler having stated before the Committee, on the 18th instant, that your replies were the reverse of what you had intended.

R. E.

14 June, 1860. Samuel Willcox, Esq.,
West Maitland.

I have, &c.,
GERALD HALLIGAN,
(for the Under Secretary.)

2442. *By Mr. Arnold:* Has Mr. Fowler had anything to do with the contract of the Northern Line or been employed in any way under you? No.

2443. Has Mr. Fowler ever been employed by you? Professionally?

2444. Professionally? No.

2445. Has he ever been employed by you in any way? No.

(2.)

*Great Northern Railway,
Black Creek, May 23, 1860.*

Sir,

I beg to acknowledge the receipt of your letter of the 21st instant, asking if I desire to alter my replies to questions Nos. 2442 to 2445 inclusive, which were put to me by the Committee of the Legislative Council.

In reply, I have the honor to inform you, that the answers given by me to those questions were exactly what I intended, nor do I wish to make alterations in them.

I may add, that, when my examination was concluded, Mr. Fowler remonstrated with me respecting that portion of my evidence relating to himself. Upon which occasion I told him that, although I had often been present during his conversations with Mr. Rhodes upon Railway matters, and had conversed with him myself, still he had never acted for me, nor ever been consulted with regard to the Northern Line. I therefore objected to make any alteration in the evidence I gave before the Committee of the Legislative Assembly.

Captain Martindale.

I have, &c.,
SAML. WILLCOX.

(3.)

MINUTE.

Commissioner to Chief Clerk, Railway Branch.

Referring to replies Nos. 2852 and 2854, given by Mr. Fowler before the Committee of the Legislative Assembly, the Chief Clerk, Railway Branch, will please state what he knows of the matters therein referred to,

B. H. M.
19/5/60.

Chief Clerk, Railway Branch, to Commissioner.

In reference to the replies above referred to, I have to state that on the 1st March last, Captain Martindale handed to me two notes received from Mr. Fowler, and a rough draft of a letter to that gentleman in reply to one of the said notes, alluded to as "a scrap of paper," and directed me to consult with the Crown Solicitor on the matter. In consequence of the Crown Solicitor's advice, and by Captain Martindale's direction, I saw Mr. Want about 5 o'clock p.m. the same day, and informed him of the purport of the note in question and of Captain Martindale's reply, with an intimation that he could see the papers if he thought it worth his while.

The next morning (2nd March), about 9 o'clock, Mr. Want called at the Railway Office, and requested to see the papers, which I shewed to him. After reading them, Mr. Want expressed in very strong terms his disapproval of the proceedings of Mr. Fowler.

About two or three hours after Mr. Want had seen the papers, Mr. Fowler applied to me to obtain for him a private interview with Captain Martindale. This Captain Martindale refused, and directed me to inform Mr. Fowler that if he wished an interview I must be present. Mr. Fowler then said, "he didn't care who was present;" and by Captain Martindale's direction I was in the room throughout the conversation.

I have a distinct recollection of what took place, and can positively state that Mr. Fowler did not during the conversation, or at any time, request that the conversation should be considered private, nor did Captain Martindale give four distinct promises, or any promise at all, that it was to be so considered, nor did he give me any directions to that effect; but, on the contrary, Captain Martindale informed Mr. Fowler that whatever he had to propose should be put in writing, and he would submit it to the Government in the usual way, as he could do nothing privately.

R. MOODY,
Chief Clerk.
21/5/60.

(4.)

69, Elizabeth-street,
1 March, 1860.

My dear Sir,

I wish to see you on particular and important business, will you oblige me by saying at what hour it will be convenient for me to wait upon you.

Capt. B. H. Martindale.

Yours, &c.,
CHARLES FOWLER.

(5.)

Capt. B. H. Martindale,

Will you oblige me with the draft form of contract, as I do not wish Mr. Want to know what we are endeavoring to conclude.

Yours, &c.,
C. FOWLER.

(6.)

Department of Public Works,
Sydney, 1 March, 1860.

Captain B. H.
Martindale,
R. E.

Sir,

In reply to your note of this day's date, just received, in which you say, "will you oblige me with the draft form of contract, as I do not wish Mr. Want to know what we are endeavoring to conclude," I have the honor to remind you that at the interview which I gave you this morning, in compliance with your written request, I informed you, upon your expressing a desire to see the bond and contract to be signed by Sir S. M. Peto and Co.'s agents, that it was in the possession of Mr. Want, to whom I begged to refer you. To that reply I must adhere, I cannot consent to take part in any matter involving concealment.

I must further take exception to your expression "what we are endeavoring to conclude." In reply to your statement at your interview with me this morning, that you were anxious that the disputes between the Engineer-in-Chief and Mr. Rhodes should be terminated, and that you were desirous to know if I had any course to suggest, I informed you that in my opinion the course for Mr. Rhodes to pursue was to sign the usual bond and contract, in accordance with his agreement, and to proceed in accordance with its stipulations with the works to be performed under it, carrying them out in compliance with the directions of the Engineer-in-Chief.

I have, &c.,

B. H. MARTINDALE.

Charles Fowler, Esq.

14 June, 1860.

(7.)

Department of Public Works,
Sydney, 12 June, 1860.

(730.)

Sir,

I am directed by the Secretary for Public Works to acknowledge your letter of the 23rd ultimo, submitting a proposal to construct a line of Railway from Campbelltown to Goulburn, and in reply to inform you that the general question of Extension will in due course engage the attention of the Government; but I am to add that the mode in which the contracts hitherto taken by Sir S. M. Peto and Co. have been carried out by you as one of their agents, has been and is so unsatisfactory, that the Government will, in future, refuse to enter into any engagement with you as the agent of that Firm, and intend to intimate their determination to Sir S. M. Peto and Co., without delay, and to request, in regard to the existing contract, that you may be replaced here by another agent as early as practicable.

I have, &c.,

B. H. MARTINDALE.

A. Rhodes, Esq.,

Elizabeth-street.

Legislative Assembly.

NEW SOUTH WALES.

MR. DAVID MORRIS.

(COMPLAINING OF EJECTION FROM CERTAIN LANDS.)

Ordered by the Legislative Assembly to be Printed, 9 September, 1859.

To the Honorable the Legislative Assembly of the Colony of New South Wales, assembled.

The Petition of David Morris, carpenter, of Newcastle,—

HUMBLY SHEWETH:—

That your Petitioner leased an allotment of land for 21 years from His Lordship, the Bishop of Newcastle, at Honeysuckle Point, on which he built a residence for himself and family.

That your Petitioner was summarily ejected therefrom, and his house pulled down by order of the Railway Commissioners, without compensation.

That your Petitioner is disabled by infirmity from doing ordinary work, and by dint of hard saving had managed to accumulate the above-mentioned property as a stand by for his wife and nine children, and that, by the seizure of his property as aforesaid, he is reduced to utter destitution.

Your Petitioner therefore humbly prays your Honorable Assembly will afford him redress, which he has been utterly unable to obtain in any other way.

And your Petitioner will ever pray, &c.

DAVID MORRIS.

CLAIMS OF MR. DAVID MORRIS AND OTHERS.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on 20th September, 1859, "to inquire into and report upon the claims of Mr. David Morris and others, who have been hitherto unable to obtain compensation for lands and tenements from which—on account of Railway purposes—they have been summarily ejected at Honeysuckle Point, Newcastle"—have agreed to the following Report:—

Your Committee have held ten meetings, examined ten witnesses, and carefully considered a written document forwarded by the Bishop of Newcastle, which is appended to the evidence.

It would appear that in 1854, the Hunter Railway Company, in conformity with the provisions contained in their Railway Act, took possession of the whole of the land known as the Honeysuckle Point Estate, containing about 22 acres, leased at that time to certain tenants, resident and non-resident, by the Bishop of Newcastle for a period of 21 years. (*For form of lease, Vide Appendix C.*)

In the formation of the Hunter River Railway, it was deemed necessary by that Company not only to take possession of the land at Honeysuckle Point, but also to pull down and remove certain buildings and fences erected by the tenants, more especially those of Mrs. Paynter, Messrs. Page, Morley, Yarwood, and David Morris,* by which they all suffered a very serious loss, and up to the present time have received no compensation.

The Government, having adopted the policy of taking the Railways out of the hands of private companies into their own, bought the interest of the Hunter River Railway Company in 1855, and retained possession of the Honeysuckle Point Estate, which they still hold, and cannot give up, permitting some of the tenants to occupy on sufferance that portion of it which is not required for the Railway Terminus, the workshops, &c.

It appears to your Committee, from the evidence which has been taken, that the Government cannot legally deal with the tenants, owing to the leases being invalid in law, having been only signed by the Bishop of Newcastle for and on behalf of the Trustees, when, in fact, His Lordship was not a Trustee, had no authority to lease, and had no "estate" in

* *Vide Evidence,*
Q. 417.

in the land;—and yet the tenants have no remedy against the Bishop, in consequence of their having accepted informal covenants.

*Vide Evidence,
Qs. 242, 243.

It would also appear doubtful* whether the Trustees themselves—Messrs. A. W. Scott and Croasdill—had any power to grant leases, although the former forwarded to the Hunter River Railway Company on July 29th, 1854, through Mr. H. K. James, a claim for compensation at the rate of £1,500 per acre, “free and clear of all deductions whatsoever, for compensation to present lessees, occupants, or otherwise”—thereby acknowledging the presence and existence of tenants upon the Honeysuckle Point Estate.

Whilst your Committee entirely exonerate the Bishop of Newcastle from having acted otherwise than *bonâ fide* in the granting of these leases, they cannot avoid expressing their surprise that his Lordship was permitted to issue them, even so far back as 1851, without any remonstrance on the part of the Trustees, one of whom, Mr. Croasdill, according to the evidence of Mr. Simon Kemp and Dr. Brooks, was not only cognizant of these leases being granted, but sold building materials to one of the tenants, Paynter, and superintended the erection of Paynter's house, which is brought forward by Mr. Williams* in his evidence as one reason why the Government should not pay the lessees.

*Vide Evidence,
Q. 148.

Your Committee are clearly of opinion that some cases of peculiar hardship have been made out; that these tenants might not have been disturbed had not their lands been taken for Railway purposes; but they consider it would be unsafe to particularise, and give compensation in some cases without embracing the whole.

*Vide Evidence,
Q. 251.

Your Committee coincide in the following mode of settlement proposed by Mr. Barker,*—that there should be one compulsory Arbitration, to which the Trustees and all the lessees should be parties; that the Arbitrators should be directed, in the first place, to determine the total value of the land taken, and that they should then direct that amount to be paid by the Government, in proportions to be specified in the award, appropriating to each of the tenants such compensation as the Arbitrators may in their discretion decide upon, the remainder being paid to the Trustees.

*Vide Evidence,
Q. 352.

Mr. Greenway, in the absence of Mr. Croasdill in England, has a power of attorney to act for Mr. Croasdill.*

ARTHUR HODGSON,
Chairman.

Legislative Assembly Chamber,
Sydney, 3 May, 1860.

PROCEEDINGS OF THE COMMITTEE.

TUESDAY, 27 SEPTEMBER, 1859.

MEMBERS PRESENT :—

Mr. Hay,		Mr. Loder,
Mr. Hodgson,		Mr. Russell.

A. Hodgson, Esquire, called to the Chair.

The Clerk, by direction of the Chairman, read the Resolution of the House appointing the Committee; also the Petition of Mr. David Morris.

Motion made (*Mr. Loder*) and *Question*,—That evidence be taken upon the allegations contained in Mr. Morris's Petition,—*agreed to*.

H. K. James, Esq., called in and examined.

The Chairman laid before the Committee the lease issued to Mr. David Morris by the Right Reverend the Lord Bishop of Newcastle.

[Committee adjourned till Thursday, 29th instant, at *Eleven o'clock*.]

THURSDAY, 29 SEPTEMBER, 1859.

MEMBERS PRESENT :—

A. Hodgson, Esquire, in the Chair.		
Mr. Cape,		Mr. Russell,
Mr. Robertson,		Mr. Hay,
Mr. Loder.		

C. Kemp, Esq., called in and examined.

Captain Mann, R.E., *Engineer-in-Chief, and Superintendent at the Fitzroy Dock*, called in and examined.

J. Williams, Esq., *Crown Solicitor*, called in and examined.

Mr. Robertson, at the request of the Committee, agreed to give immediate instructions to the Chief Commissioner for Railways to furnish a plan of the ground in question at Honeysuckle Point, Newcastle, shewing the course of the Railway through it.

Committee then decided on calling Mr. Nealds and Mr. Barker to give evidence, the former gentleman to be requested to look carefully into all documents which may be in the possession of the Railway Authorities, having reference to the subject of inquiry, and otherwise to refresh his memory in reference to the matter as regards the action taken by the Hunter River Railway Company during his term of office under that Company.

[Committee adjourned till Thursday, 6th proximo, at *Eleven o'clock*.]

THURSDAY, 6 OCTOBER, 1859.

MEMBERS PRESENT :—

A. Hodgson, Esquire, in the Chair.		
Mr. Loder,		Mr. Close,
Mr. Hay,		Mr. Russell,
Mr. Cape.		

C. J. Nealds, Esq., *Traffic Manager, Railway Department*, called in and examined.

The plan required by the Committee at their last meeting not having been received from the Railway Authorities, the Chairman directed the Clerk to make application for its immediate production,—

And Witness having withdrawn, pending the result of the application,—

W. Barker, Esq., *Solicitor*, called in and examined.

Witness withdrew.

Former Witness (Mr. Nealds) recalled and further examined.

The plan applied for not having been furnished, the Clerk was instructed to make inquiry as to the cause, and to urge upon the Chief Commissioner for Railways the necessity of immediate compliance with the direction of the Committee, conveyed to him through the Minister for Lands and Works.

[Committee adjourned till to-morrow, at *Twelve o'clock*.]

FRIDAY, 7 OCTOBER, 1859.

MEMBERS PRESENT :—

A. Hodgson, Esquire, in the Chair.		
Mr. Close,		Mr. Loder,
Mr. Russell.		

A. W. Scott, Esq., *M.P.*, examined.

[Committee adjourned till Thursday, 13th instant, at *Eleven o'clock*.]

THURSDAY,

THURSDAY, 13 OCTOBER, 1859.

MEMBERS PRESENT:—

A. Hodgson, Esquire, in the Chair.

Mr. Russell,		Mr. Close,
		Mr. Hay.

S. Kemp, Esq., called in and examined.

[Committee adjourned.]

THURSDAY, 27 OCTOBER, 1859.

In consequence of the adjournment of the House from the 26th instant till the 29th proximo, the meeting of the Committee, called for this day, lapsed.

THURSDAY, 8 DECEMBER, 1859.

MEMBERS PRESENT:—

Mr. Hodgson,		Mr. Russell.
--------------	--	--------------

There not being a Quorum present, the meeting of the Committee, called for this day, lapsed.

THURSDAY, 15 DECEMBER, 1859.

MEMBERS PRESENT:—

A. Hodgson, Esquire, in the Chair.

Mr. Cape,		Mr. Loder,
Mr. Close,		Mr. Russell.

W. Brooks, Esq., *M.D.*, called in and examined.

Witness withdrew.

The Chairman produced the plan of the Honeysuckle Point Estate, as furnished by the Chief Commissioner for Railways, in compliance with an instruction from the Minister for Lands, at the instance of the Committee on the 29th September last.

Committee deliberated.

[Adjourned till Wednesday, 21st instant, at Twelve o'clock.]

WEDNESDAY, 21 DECEMBER, 1859.

MEMBERS PRESENT:—

A. Hodgson, Esquire, in the Chair.

Mr. Loder,		Mr. Russell.
------------	--	--------------

The Honorable J. Mitchell, Esq., *M.L.C.*, attending by permission of the Legislative Council, examined.

Witness withdrew.

Committee deliberated relative to their further course of procedure.

It was Resolved:—

- (1.) That a letter be addressed to the Lord Bishop of Newcastle, requesting his Lordship to name a day on which it may be convenient to favor the Committee with any information, either personally or by letter.
- (2.) That a complete copy of the evidence taken before the Committee be at the same time transmitted to his Lordship.

[Adjourned.]

FRIDAY, 27 APRIL, 1860.

MEMBERS PRESENT:—

A. Hodgson, Esquire, in the Chair.

Mr. Close,		Mr. Hay,
		Mr. Russell.

The Chairman, referring to the Resolutions agreed to at the last meeting, informed the Committee that a letter accordingly had been addressed to the Lord Bishop of Newcastle on the 10th instant, accompanied, as directed, by a complete copy of the evidence taken before them; and that his Lordship had been pleased to reply thereto, under date the 15th instant.

The Lord Bishop's letter, embodying a statement of observations on the Evidence, personal explanations, and suggestions for the settlement of the claims, and transmitting certain private documents and correspondence for the satisfaction of the Committee, read and considered.

Committee deliberated.

It was Resolved:—

That it is unnecessary to enter upon the several enclosures in his Lordship's letter, and that the same be therefore returned, in compliance with the suggestion in the postscript to such letter.

It was further Resolved :—

That the letter addressed to the Bishop of Newcastle, on the 10th instant, together with his Lordship's reply, now before the Committee, be respectively appended to the Report when brought up to the House. (*Vide Separate Appendix, A and B*)

[Committee adjourned till Tuesday, 1st proximo, at Ten o'clock.]

TUESDAY, 1 MAY, 1860.

MEMBERS PRESENT :—

A. Hodgson, Esquire, in the Chair.

Mr. Close,

Mr. Russell.

Mr. Hay,

Committee having met,—

It was Resolved :—

That the original lease for lands at Honeysuckle Point, in favor of Mr. David Morris, received, 27th September, 1859, form a further Appendix to the Report of this Committee. (*Vide Separate Appendix, C.*)

The Chairman laid before the Committee a Draft Report.

Draft Report read.

Committee deliberated;—it being considered that the Committee were not in a position so to report as in any way to ensure the settlement of the claims of the various tenants, inasmuch as the recommendation of any particular course would not be binding upon the parties.

And Committee requiring a detailed statement of the several claims, intended to have been supplied by Dr. Brooks, a witness examined before the Committee (*Vide Question 482*), it appeared from a private note that such witness had found himself unable to afford the information, the papers upon the subject having been transferred from the hands of Mr. W. Barker to those of Mr. J. Williams, Crown Solicitor a witness previously examined before the Committee;—

Whereupon Motion made and *Question*,—That Mr. J. Williams, Crown Solicitor, be re-called for the purpose of being further examined, and producing the documents in question,—*agreed to.*

[Adjourned till Thursday, 3rd instant, at Ten o'clock.]

THURSDAY, 3 MAY, 1860.

MEMBERS PRESENT :—

A. Hodgson, Esquire, in the Chair.

Mr. Close,

Mr. Russell.

Mr. Hay,

Committee having met,—

J. Williams, Esq., *Crown Solicitor*, called in and further examined.

Witness withdrew.

Committee resumed the consideration of the Draft Report produced by the Chairman, and read at the last meeting, and the same having been *verbally* amended,—

Motion made (*Mr. Close*) and *Question*,—That the Report, as amended, be the Report of this Committee—*agreed to.*

Chairman requested to report to the House.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

PETITION OF MR. DAVID MORRIS.

TUESDAY, 27 SEPTEMBER, 1859.

Present:—

MR. RUSSELL,
MR. LODER,MR. HAY,
MR. HODGSON.

ARTHUR HODGSON, ESQ., IN THE CHAIR.

Henry Kerrison James, Esq., called in and examined:—

1. *By the Chairman*: I believe you are Registrar to the Bishop of Newcastle? Yes, Acting H. K. James, Registrar to the Diocese. Esq.
2. How long have you been so? Ever since the Bishop's arrival, in the year 1847.
3. Do you know the estate at Honeysuckle Point, which is involved in the question referred to this Committee? Yes. 27 Sept., 1859.
4. Was that estate purchased by the Bishop of Sydney? No; it was purchased by certain subscribers to the creation of a Grammar School, which it was intended to have established there.
5. Do you remember the date of the purchase? In September, 1840.
6. How was it purchased? It was purchased from the Crown, in the name of Dr. Mitchell, as treasurer to the fund, and the grant issued to him.
7. Was it purchased at auction, or privately? At auction.
8. Do you know who actually bought it? I believe that Dr. Mitchell attended the sale and bought it.
9. Do you know the amount paid for this land? Eight hundred and three pounds fifteen shillings.
10. Do you know the number of acres it contains? I think between twenty and thirty acres, but I speak from memory.
11. Did you ever see the grant from the Crown to Dr. Mitchell of this land? Not that I remember.
12. Did you ever see any deed in connection with this land? I saw a trust deed which was executed some time afterwards.
13. Was that trust deed ever in your possession? Yes; it is in my possession now.
14. Who are the trustees named in that deed? Mr. Walker Scott and Mr. Croasdill.
15. Is the name of any other party introduced into that deed as a trustee? Not as a trustee.
16. Can you tell the Committee by whom the trustees were appointed? Mr. Walker Scott was appointed to represent the subscribers to the proposed Grammar School, and Mr. Croasdill was nominated by the then Bishop of Sydney to represent the Society for Promoting Christian Knowledge.
17. Was the then Bishop of Sydney a trustee? No.
18. Is the present Bishop of Newcastle a trustee? No.
19. Is he *ex officio* a trustee? I think not.

- H. K. James, Esq.
27 Sept., 1859.
20. Do you call this estate at Honcysuckle Point Church and School land? It is variously styled; it may be called Church and School land, but I should not call it so. I should call it Grammar School or College land. It was bought for the express purpose of forming a site for a Church of England Grammar School.
21. Did it at any time come within your knowledge that the late Bishop of Australia borrowed money from the Society for Promoting Christian Knowledge for the purchase of this land, and if so, to what extent? I do not think the late Bishop borrowed the money expressly for this purpose. The Society, at the instance, I think, of Mr. Justice Burton, had offered the loan of £3,000 for collegiate purposes in Australia, and the Bishop devoted £500 of that £3,000 in aid of the Grammar School; so that the Society, through him, contributed that amount to the purchase of this land.
22. You tell the Committee that this land cost £800, £500 of which was borrowed from this Society—can you tell how the remaining £300 were raised? By private subscriptions of colonists of that time.
23. Was a testimonial fund to Sir William Burton mixed up in any way with this money? Not at all. The gross amount of private subscriptions was £650, and there is now a balance in hand to the amount of the difference. It was not all paid up at the time the purchase-money had to be paid to the Government.
24. Can you say who suggested the site in the first instance? The Scott family, I believe, who all took great interest in the undertaking.
25. Do you know whether this estate was lying idle till the arrival of the Bishop of Newcastle in the Colony? I believe it was.
26. Are you aware that the Bishop of Newcastle took it upon himself to issue certain leases of this land? His Lordship informed me that he had done so some years ago: I did not know of it at the time.
27. You know the signature of the Bishop of Newcastle? Yes.
28. Is the signature of the Bishop of Newcastle attached to this lease? (*Lease in favor of David Morris for lands at Honcysuckle Point.*) It is.
29. Are you aware of the number of leases which have been issued? No.
30. Have you any idea of the name of the party who drew up this lease? No.
31. Do you know the signature of the attesting witness to that deed? Yes, it is the signature of Mr. Simon Kemp, the Church Trustee at Newcastle.
32. Are you aware whether Mr. Kemp had any power to act as the Bishop's agent in the matter of these leases? I am not aware.
33. *By Mr. Hay*: Do you know the date of the trust deed? July, 1844.
34. What was the date of the arrival of the Bishop of Newcastle in the Colony? The end of 1847.
35. What is the date of the lease? January, 1851.
36. Was the land re-conveyed by Dr. Mitchell to the trustees? I believe so.
37. Are you aware whether the trustees gave any notice to the Bishop of Newcastle, or to the lessees at any time, with respect to the absence of any right on the part of the Bishop to deal with this land? No, I am not aware how the discovery of the irregularity was first made. Mr. Croasdill, one of the trustees, was on the spot during the whole time the business of leasing was going on; he was a resident at Newcastle, and must have been aware of the Bishop's proceeding. I think it impossible for Mr. Croasdill to have been ignorant of it, for he took a deep interest about this land, having on a former occasion expressed a very strong opinion as to the prospective value of it, when the Bishop of Australia desired to sell it, with a view of obtaining some other site. He must have seen the houses and improvements going on, but I believe he never said a word on the subject, or communicated any objection to the Bishop.
38. No communications passed through you with respect to it? Between me and whom?
39. The trustees, with respect to the leasing of the land by the Bishop of Newcastle? No.
40. Do you recollect when it was first brought officially under your notice? I do not think I heard anything about the land being leased until March or April, 1853.
41. Do you recollect what was the particular point then brought under your notice? The Bishop of Newcastle, in August, 1852, inquired for some information about the title to this land, and from that time till March or April 1853, the subject was casually mentioned in our general correspondence, chiefly with reference to the balance of the subscription fund; I do not recollect whether I made special search for the papers or accidentally discovered them, but I found them all together, and sent a copy of the trust deed to the Bishop; and it was then his Lordship informed me that he had granted leases, and that this deed was exceedingly embarrassing to him, expressing his surprise at the same time that it should have been forgotten. That was in April, 1853.
42. But you say you were not aware up to that time that the Bishop had been dealing with the land? No, I had not before heard of it.
43. So that you were not led to make any search for the deeds of the land? No.
44. You said the Scott family had taken a deep interest in the scheme for a Grammar School? Yes.
45. Was Mr. Walker Scott living at Ash Island during all the time the Bishop was granting these leases? I am not sure he was there; I have heard that he was absent about the time these lands were being leased.
46. Are you aware whether there was any application ever made on the part of the Bishop of Newcastle, or on the part of the lessees, to have the leases confirmed by the trustees? I heard such an application had been made when the discovery arose as to the deeds.
47. But no application was made through you? No application could be made through me, because the trustees were both on the spot; nor do I know officially that any application was made.

made. Neither the lessees nor anybody on their behalf took the trouble to inquire for the deeds, nor used the most ordinary precautions to examine their title before they accepted the leases. A simple inquiry would at once have elicited all particulars, and prevented all this trouble. H. K. James,
Esq.
27 Sept., 1859.

48. In such cases is it usual to apply to the Bishop's Registrar for information—is he the proper channel to apply to for information with regard to lands in which the Church has an interest? No; I think persons treating for Church property should make legal searches, as in all other cases. If a solicitor drew up this deed (I do not know whether a solicitor was employed or not) I should have imagined that he would have at once inquired into the Bishop's powers to act for the trustees, for the leases disclose notice that the Bishop does not act for himself. I should have thought a solicitor would have sought out the trustees and have made them parties to the leases. I would not have accepted such a lease as that.

49. I suppose you would not have granted such a lease without the authority of the trustees? No; but I have no doubt the Bishop considered himself to be *ex officio* a trustee. The Society for Promoting Christian Knowledge had a title to five-eighths of the land, and the Bishop, forgetful of the precise terms of the trust, might very naturally suppose that he represented the society.

50. On the Bishop's arrival in the Colony did you, in your official capacity, call his Lordship's attention to the deeds affecting this land? I shewed these papers to his Lordship amongst many others. Of course this was one of very many subjects brought under the Bishop's notice when he first took charge of the diocese, and it is quite possible, therefore, that the details escaped his Lordship's memory.

51. In point of fact, he did not refer to you for information on this subject before granting these leases? No.

52. *By the Chairman:* Are you aware how the balance alluded to in your evidence has been expended, if expended at all? It has not been expended; it is still in the hands of the treasurer.

53. Could you tell the Committee what is the probable amount of that balance at the present time? Something under £350.

54. *By Mr. Hay:* That is the original sum? The balance of the original subscription.

55. *By the Chairman:* Are you aware of the present approximate value of that estate at Honeysuckle Point? I forget the valuation which I was instructed to communicate to the railway authorities; some very large sum—£30,000 or £40,000.

56. Did you ever hear that the Bishop of Newcastle called a meeting at Newcastle previous to the issue of these leases? For what purpose?

57. To explain that he was about to issue these leases? I do not remember having heard of it.

THURSDAY, 29 SEPTEMBER, 1859.

Present:—

MR. HODGSON,
CAPTAIN RUSSELL,

MR. LODER,
MR. CAPE,

MR. HAY.

ARTHUR HODGSON, ESQ., IN THE CHAIR.

Charles Kemp, Esq., called in and examined:—

58. *By the Chairman:* Were you at one time chairman of the Hunter River Railway Company? Yes. C. Kemp,
Esq.

59. During what period? During the period of the company's existence. I was elected chairman as soon as it could be done, and remained chairman until the railway was sold to the Government. 29 Sept., 1859.

60. In what year did your duties as chairman cease? I think it was in 1854; but I am not quite certain.

61. Under what circumstances did your duties cease? The Government adopted the policy that railways should be in their hands instead of in the hands of private companies. I believe they were actuated by the fact that the companies had exhausted all their means; and the Government said, as will be found in the correspondence, that if they had to find the money they had better take the management; and they, therefore, bought the interest of the two companies—the Sydney Company and the Hunter River Company.

62. Do you know Honeysuckle Point, at Newcastle? Very well.

63. Did the company of which you were chairman take possession of any land on that point for a railway terminus? Yes.

64. Who did the land belong to? We took possession of it under the impression that it belonged to the Church in some way, and it had been let, we knew, either by or under the authority of the Bishop of Newcastle, to some twenty tenants.

65. Was it called Church and School land? It was.

66. Do you know the names of the gentlemen who were the trustees at that time? I have learned since.

67. Who were they? Mr. Alexander Walker Scott, now a Member of the Assembly, and Mr. William Crossdill, who was then in the service of the Australian Agricultural Company, and is now in England. The land, it appears, had been purchased partly by private subscription.

C. Kemp,
Esq.

29 Sept., 1859.

subscription and partly by a sum supplied by the then Bishop of Australia, belonging to the Society for the Promotion of Christian Knowledge, as a site for a Grammar School.

68. Are you aware whether the Bishop of Newcastle was a trustee? I am not; I believe he was not; I have seen a document in which Mr. Scott and Mr. Croasdill declared themselves trustees.

69. You have seen the trust deed in fact? I would not like to use the formal term, but I have seen a document in which that is stated and acknowledged by them.

70. Was the land at Honeysuckle Point occupied when you took possession of it? A considerable portion of it; I could not say whether it all was.

71. By whom? I cannot recollect all the names: Mr. Bingle claimed some; Mr. Stacey claimed some, and had an iron cottage upon it; a person named Yarwood, another named Hinton, and I think a Mr. Baker. But I would refer the Committee more particularly, if they want precise information, to Mr. Nealds, who was Secretary to the company, and is now in the employment of the Railway Department; and I would suggest that he should be instructed to bring the papers and the applications from the various parties, which would give the exact information the Committee require.

72. Did you take forcible possession of the land? The matter was transacted in the usual way, through the solicitor. Notices were given which expired some time before we actually required possession of the land. We directed the servants and officers of the company not to dispossess any of these people until the land was actually required; but I did hear that in one case an oven was pulled down by force; the parties having retained possession after the legal notice had expired, wanted to make out some kind of tenancy, so I was told.

73. Do you know the name of David Morris as one of these tenants? I recollect the name in connection with it, but I do not recollect any particulars as to his case. I would observe to the Committee that my attention has not been drawn to the matter for more than four years.

74. Was any claim made on the Hunter River Company by the then occupants of Honeysuckle Point? By most of them.

75. Will the papers in Mr. Nealds' possession explain the nature of such claims? I have no doubt he will be able to bring the claims themselves.

76. Could you give the Committee any reason why you could not satisfy those claims at the time? There were several reasons. I had had some information privately that the Bishop was not a trustee, when we took this land, and, of course, I mentioned it to the Board, when the question of these claims came up, but the company was desirous of dealing with these people who were actually in possession, and giving them, at any rate, the value of their improvements, leaving the question of their legal status, which we did not think we ought to enter into, to be settled afterwards, by whatever course they could pursue. Arbitrators were appointed—Mr. Blackett, on the part of the company, and Mr. Barker, of Norton, Son, and Barker, went down to represent us, but they could not get any cases on. Then the claims were so very exorbitant that we could not enter into them, and we were obliged to leave them to their legal remedy. I would state, for instance, that Mr. Bingle, who had not improved his land in any way, held one allotment for which he told me he had given £7, and he claimed £6,000 for this leasehold of a little over two acres; the lease having, as we found by the dates, about seventeen years to run. Mr. Stacey had put up an iron cottage (I think he had two allotments, but I am giving the quantities merely as an approximation) and he also claimed £6,000 and the value of his improvements. There was a person named Hinton who claimed £1,000 for a very small log hut that he had put up, and on my remonstrating with him about it, having known him when he was a boy, and saying that I was surprised he should have put in such a claim, he said he had intended to put in for £500, but had been persuaded to make it £1,000. There were many other claims of an exorbitant nature. I think, in round numbers, these tenants claimed about £30,000. In the midst of it the matter was made more complex by a written notice from Mr. Scott and Mr. Croasdill, telling us that these leases were illegal; that whatever improvements were on the land belonged to them, and that they wanted thirty and some thousand pounds for the land. So that, altogether, for these twenty-two acres of land at one corner of Newcastle, there was an attempt made, I must say, to extort something like £60,000 from the Railway Company; in fact the matter became so complicated, that we did not see any way out of it, except by some legal measure. But as I believe the Bishop acted *bonâ fide*, and as the parties who took the land from him certainly did so as men who believed that he had a good title to dispose of the land, I have always thought they had a claim, although the leases were perfectly invalid in law.

77. Do you know the value of this land at Honeysuckle Point? I formed an idea myself at the time that its value might have been from £800 to £1,000 an acre; I did not think it was worth it, but that amount might have been got for it then, for just at that time the Australian Agricultural Company got extraordinary prices for some of their land. I think they got £400 for allotments of a quarter of an acre.

78. To whom on your retirement did you hand over the papers and documents of the company? To the Railway Commissioners.

79. I shew you a lease to David Morris of a portion of this land at Honeysuckle Point—is the signature "S. Kemp," as attesting witness, that of your father? It is. He is resident at Newcastle.

80. Do you know the handwriting of the Bishop of Newcastle? Yes, this is his signature.

81. Have you ever seen a lease similar to that on any previous occasion? At that time I saw several of the leases, but I do not know that I saw this particular one.

82. *By Mr. Cape*: Are any of the claims you have referred to mentioned in the Reports before the House on Railways? I am not aware that the question has ever been before the House

House, unless something might have been done when I was in England. I believe the Railway Commissioners have given up a considerable portion of this land, but I may say that our intention when we took possession of it was to make the terminus there, and to carry out a jetty for vessels to load and unload at. We had not then the facilities for going along the front of the town which the Government had, and, thinking it almost impracticable for us to get along there with the line, we took this ground for the station.

C. Kemp,
Esq.
29 Sept., 1859.

83. Was there no protection under the Act from the extortion you referred to? We could refer to arbitration.

84. There were provisions in the Act? Yes.

85. Were they put in force? Yes, we attempted to get to arbitration; but of course the same question arose as arises here, and after we got the notice from the actual trustees that put a stop to any proceedings with the lessees.

Gother Kerr Mann, Esq., called in and examined:—

86. *By the Chairman:* What appointment do you at present hold? I am Engineer-in-Chief and Superintendent at the Fitz Roy Dock. G. K. Mann,
Esq.

87. Were you ever Chief Commissioner of Railways? I was.

88. During what period? From 1855 to 1857.

29 Sept., 1859.

89. Do you remember taking over the plant, on the part of the Government, from the Hunter River Railway Company? That was done before my time; I found the Commissioners in possession of the Company's property. Captain Ward was the first Commissioner, and when he resigned I was appointed in his place. The railway was taken over during his time.

90. Do you know Honeysuckle Point? I do.

91. Are you aware that a large quantity of land was taken possession of by the Hunter River Railway Company at Honeysuckle Point? I am.

92. Do you know who that land belonged to? It appeared, when we were endeavoring to settle the claims, that the land was vested in trustees—Mr. Scott and Mr. Croasdill; but the Commissioners found it in the possession of a number of tenants. It had been leased out in allotments, as well as I remember at the present moment, on twenty-one years leases.

93. Are you aware by whom those leases were granted? I ascertained afterwards, in endeavoring to settle the claims, that these leases had been granted by the Bishop of Newcastle.

94. Can you tell the Committee the amount of land taken at Honeysuckle Point for railway purposes? Speaking from memory, I think the quantity originally taken was about twenty-two acres.

95. Is that quantity still in the possession of the Government? I think not; I think only a portion sufficient for a station and for the continuance of the line through the land was ultimately decided upon being taken.

96. Did you ever recommend to the Government that a certain portion of that land should be given up? I did. I may perhaps explain more fully, that when I took the office of Commissioner I found that the intention was to make the terminus at Honeysuckle Point. I immediately saw that that was a measure which could not be carried out with any benefit, and recommended that the line should be carried on through the town and the terminus established beyond Watt-street; and, as in that case only a sufficient portion of the land at Honeysuckle Point to form a station and for the passage of the line would be required, I advised that the remainder should be given up. That plan has since been carried out, and the land that was not required has, I believe, been allowed to be re-occupied by the tenants found in possession.

97. Did any claim come before you for land taken at Honeysuckle Point? Yes.

98. By whom was that claim preferred? The claim came in two forms before the Commissioners. The first claim sent in by the trustees was £1,500 an acre, and at the same time there were claims sent in by the various occupants of the land. The matter was then gone into, and it was found impracticable to deal with the occupants as they could not give any title. A proposition was then made by the Commissioners to the trustees to settle with them, and for the trustees to arrange with the occupants; but I do not think it ever came to anything. The trustees subsequently sent in a claim for £2,000 an acre, or rather applied for permission to amend their claim to that amount; and I am not quite sure whether they then undertook to settle with the tenants on condition of this amended claim of £2,000 an acre being allowed or not, but I think the Commissioners refused to grant the augmentation of the claim.

99. *By Mr. May:* In your evidence before the Committee on the Railway Terminus at Newcastle, in 1856, you are represented to have said that it was "very doubtful whether the terms of the application of the trustees to augment their claim would have relieved the Commissioners from any claim the tenants might have against them, and that in fact the increased claim of the trustees appeared to be based upon the fact of the enhanced value of the land to them, consequent on the tenants not being able to establish their title"? I think that was the state of the case. As far as my recollection serves me there was no decided guarantee on the part of the trustees to relieve the Commissioners from all claim on the part of the tenants. I think that was one reason, amongst others, for not allowing them to amend their claim; but I think there was also a legal reason which I cannot put before the Committee clearly, with respect to their not having forwarded their claim within the time limited by the Act.

100. Besides the doubt as to whether the Commissioners would be relieved from the claim of the tenants? Yes. I would suggest that the professional adviser of the Commissioners at this time, Mr. Barker, could give you very clear evidence on that point.

- G. K. Mann, Esq.
27 Sept., 1859.
101. *By the Chairman*: Did it come under your notice that some of the claims preferred by these tenants were exorbitant? I always considered both the claims of the trustees and of the tenants to be exorbitant.
102. Did you consider them so exorbitant as to render it impossible to deal with them? It was one of the main difficulties that came in the way. There is no doubt the exorbitancy of the claims enhanced the difficulty of dealing with them.
103. *By Mr. Hay*: But, I suppose, if there had been nothing more than the exorbitancy of the claims, they could have been dealt with in the terms of the Act? Decidedly; the claim could have been reduced to proper form and shape.
104. So as to go to arbitration? Yes. The Commissioners never admitted the value of the land to the extent of the claim.
105. *By the Chairman*: Did it come under your notice that the cases of some of these tenants were harder than others? They might have been from the different standing in society of the tenants themselves, but in other respects I believe they were very much alike.
106. Could you tell the Committee the amount of the whole of these claims, including the claims of the trustees, and of the tenants? I had an idea, before looking at the evidence I gave in 1856, that the total amount of these claims was somewhere about £80,000; and I see by that evidence that I put it down at about £70,000, but I believe £70,000 was below the actual amount.
107. *By Mr. Hay*: If you look at your answer to question 117, you will find that at that time you calculated the whole amount of the claim of the trustees and tenants, according to the trustees first demand for compensation, to be £33,000 and 38,000, which would amount to £71,000? Just so.
108. And according to the second claim of the trustees, the amounts would be £44,000 and £38,000—together, £82,000? Yes.
109. Was the whole extent of this land in the possession of the Railway Commissioners at the time you were in office? I may say it virtually was in their possession, but there were a number of tenants still on the land who had been allowed to remain where the works did not interfere with them, and where the land was not immediately required. There were others who were summarily ejected after due notice.
110. Could you tell us which of the tenants were ejected? I do not remember.
111. Do you know if David Morris was ejected from his actual holding? I remember this much that there were four or five whose land it was absolutely necessary to take, and I think Morris was one of these. I know full notice was given to these parties—as much as twelve or thirteen months notice—to enable them to move.
112. Perhaps you could tell by looking at this plan (*Plan of the College land at Honeysuckle Point*) who were the tenants finally ejected? I remember now that Yarwood's and Taylor's properties were taken, and Morris's also; and notice was given to these men immediately upon its being decided that the line would be carried to Watt-street, and the date of that notice could be got from the railway records.
113. *By the Chairman*: What notice do you allude to? The subsequent notice to Morris and these men that their land would be preemptorily required; if that is a point I remember that was given.
114. Was that second notice necessary after the land had been previously taken possession of by the Railway Company? It was so far necessary that a number of the occupants of Honeysuckle Point had been allowed to remain and live for some considerable time on the property, until the land should be actually required; and then, I believe, there was notice given to those whose land would be required, to say that it would be taken at a certain date.
115. *By Mr. Cape*: Had they paid the Commissioners any rent? No rent whatever.
116. They were there by sufferance? By sufferance.
117. *By Mr. Hay*: I understood you to say that in point of fact the reason why the Railway Commissioners did not entertain the claims of these tenants for compensation was their inability to give a title to the land? That was it. When the Railway Commissioners found that the title held by these men was bad they wished to arrange with the trustees, on the understanding that any claims the tenants might have should be settled by the trustees and not by the Commissioners.
118. In point of fact you wished to settle with the trustees on the footing of their relieving you from all claim on the part of the tenants? Just so.
119. Did you make any proposal to that effect to the trustees? I think there was a distinct proposal.
120. Who would be likely to give us precise information on that point? The Secretary to the Railway Commissioners would be able to give further information upon that point.
121. He would have access to the documents? Yes; but I believe the gentleman who is fully in possession of all the particulars of this case is Mr. Barker, to whom, as Solicitor to the Commissioners, all papers were handed.
122. At the same time, if such a proposal was made to the trustees, would it not appear on the records of the Railway Office? I think it would. I may say that I am sure arbitrators were appointed, and that there were several arbitration meetings on these cases, at which these points were argued; and it is possible that this proposition may have been thrown out at one of these meetings.
123. *By the Chairman*: Without any correspondence? Without any correspondence; but I think there was a correspondence and that the proposition was directly made to the trustees. The Commissioners always entertained the idea that the tenants had a claim to the extent of their being in possession; had the Company not dispossessed them there was nothing to prevent their remaining in possession for their full twenty-one years, which certainly gave a certain value to their leases however bad they may have been in point of law.

John Williams, Esq., called in and examined:—

124. *By the Chairman:* What is the nature of your present appointment under the Government? Crown Solicitor. J. Williams,
Esq.
29 Sept., 1859.
125. You advise in relation to all railway matters as well as others? As Crown Solicitor, I have to attend to the legal portion of the railway business.
126. Have the claims of certain tenants of land at Honeysuckle Point come under your notice? Those claims were made before I was appointed, during the time the railway business was in the hands of Norton, Son, and Barker; but I know the claims, and the nature of them.
127. Can you inform the Committee what difficulties exist in the way of their settlement? The difficulty was simply this: that the claimants had no estate—that is the technical term—to be paid for.
128. You allude to the tenants? Yes.
129. Not to the trustees? No; the trustees are now making a claim for compensation for this land.
130. Is it the case that the Government cannot legally deal with the tenants? I so imagine I should undoubtedly so advise the Commissioners.
131. But if this land at Honeysuckle Point, which has been taken for railway purposes, had not been occupied by tenants, you consider there would have been no legal difficulty in the way of settling the claim of the trustees? I do not think there is any legal difficulty now in the way of settling the claim of the trustees. I apprehend the trustees are the only persons the Government can recognise in the matter.
132. Have you ever seen the leases under which the tenants hold? I have seen one of them.
133. Is that sufficient to satisfy you that the tenants have no legal claim upon the Government? Yes.
134. How do you arrive at that conclusion? The land was granted to Mr. Scott and another gentleman, as trustees; and the leases are granted by the Lord Bishop of Newcastle, who had no estate in the land to grant a lease out of.
135. *By Mr. Hay:* He grants, I think the lease says, for the trustees? But he had no authority that I can find to grant for the trustees. (*The lease to David Morris was here handed to the Witness.*)
136. You observe there that he purports to grant for the trustees of the College and School Lands in that district? No doubt; but I have not seen that he had any authority whatever to do it, any more than I should have had.
137. *By the Chairman:* There is no intention on your part of recommending the Government in any way to recognise the claims of these tenants? Certainly, if the matter were brought before me to advise I should not recommend that compensation should be paid to these tenants. We have to compensate for interest taken, and they have none in law.
138. *By Captain Russell:* Do you not think that if the Bishop undertakes to give leases, and people take them *bonâ fide*, they have a remedy against him? I should fear they have no remedy against the Bishop, and I will tell you why. If they had taken simply a lease I apprehend in law it would have implied a covenant for quiet possession, but if they take a lease with a covenant for quiet possession that covenant must stand for what it is worth. Now I apprehend the covenant for quiet possession in this case will not cover the present difficulty.
139. *By Mr. Hay:* It is a covenant for quiet possession in so far as the Bishop for the trustees is concerned? So it appears—"And the said Lord Bishop of Newcastle doth hereby agree with the said David Morris that he the said David Morris paying the said rents and performing the said covenants shall and may peaceably and quietly hold and enjoy the said piece of land hereinbefore described without any interruption, claim, or demand whatsoever, of or by the said Lord Bishop (for said trustees) and at the end or other sooner determination,"—and so on. I should almost apprehend that the Bishop might have a good defence to an action; but if he has a good defence that is the fault of these people who have taken an informal covenant. It is, shortly, the not unusual case of a man buying a defective title, and then not covering himself by sufficient covenants.
140. Do you think that you are compelled by law to settle with these trustees, if they are prepared to give you a good title to the land, without any deduction at all on account of these leases? I think so, without doubt, for the simple reason that the trustees give us the estate in the land.
141. *By the Chairman:* Do you not consider that these tenants have fallen into this difficulty in consequence of the land having been taken for railway purposes? Well, that I can scarcely say. Of course it is just possible that the trustees would never have interfered with them, but if we pay them we shall be compensating for a possibility, not for an estate. I cannot say it is probable even.
142. Do you not think it probable they would have enjoyed quiet possession during the term of their leases, if the land had not been taken by the railway? That is possible. I cannot tell whether the trustees would be strict in asserting their rights or not; that is a mere matter of opinion.
143. *By Mr. Hay:* If these trustees, who were living almost upon the spot, and who must have been cognizant of these leases being granted, and of possession being taken under them, had been appealed to, to confirm the rights of these lessees, would you suppose there was anything extraordinary in their doing so? I should not think there was, because it appears to me that it is probable that leasing these lands would have been quite within their trust.
144. Do you not think it an extraordinary thing for the trustees, under the circumstances, to allow these lands to be leased and taken possession of, under their very noses, without their authority? Very extraordinary; and it is possible that a Court of Equity would give relief

J. Williams, relief against them. I do not say it would, but I should not like to say it would not. That is a matter for the claimants to consider.
Esq.

145. Do you think it would be safe for the Government to act on any other principle than that they at present act upon, that is to say, to give compensation for anything that did not amount to an estate? I cannot think it.

146. Would it be unsafe for the Government to do so? I should say it would. The Railway Commissioners cannot do it under the present Act.

147. It would involve them in a large number of other claims? I should fancy so; and it would be relieving these people of the consequences of an error of their own creating.

148. *By the Chairman*: Do you think it would be equally unsafe to particularise, in this instance, any case of peculiar hardship, and give compensation in that case, leaving the others on one side? I confess I cannot answer the question, because I cannot see the hardship. It is just the ordinary case of buying a defective title and being ejected, and I do not see that it makes any difference whether the Railway Commissioners or any other persons are concerned; the only variation from the ordinary circumstances of such a case being that instead of the party having the estate ejecting him, we take the land and deal with the party having the estate, because there is no one else in a position to be dealt with. It is only one remove from an ordinary ejection. Then again, if the trustees stood by and saw the lessees improving the land, and said nothing, it is possible there might be some remedy against them; and that is one reason why we should not pay the lessees.

149. *By Mr. Hay*: Leases are usually made out by the attorney of the lessee, are they not? It should always be so. The rule in law is that every man draws his own security, that is, it is prepared by his attorney, who should take all proper precaution to ascertain that the title is good. In the case of ordinary leases we do not look into title, but if the lease is for a long time, or moneys have to be expended, we look into title the same as in a case of purchase. A lease of twenty-one years would, by anybody taking ordinary care, have put the lessor upon proof of his title.

150. Does this lease to David Morris seem to have been drawn by a competent person? I should think not. It is very plain to me that any competent person would have seen that the Bishop had no title.

THURSDAY, 6 OCTOBER, 1859.

Present:—

MR. CLOSE,
MR. LODER,
MR. HODGSON,

MR. HAY,
CAPTAIN RUSSELL,
MR. CAPE.

ARTHUR HODGSON, ESQ., IN THE CHAIR.

Charles John Nealds, Esq., called in and examined:—

C. J. Nealds, 151. *By the Chairman*: I believe you were Secretary to the Hunter River Railway Company? I was.
Esq.

152. During what period? From the formation of the Company till the line was handed over to the Government.
6 Oct., 1859.

153. Did your duties take you to Newcastle? Yes.

154. Do you know Honeysuckle Point? Yes.

155. You know an estate there which goes by the name of the Church and School Estate? I believe it goes by that name, but College Land is the proper term.

156. Did you take possession of any land there? Yes.

157. On the part of the Hunter River Railway Company? Yes.

158. Do you remember what quantity of land you took possession of? As near as I can say about twenty-one acres.

159. Did you take forcible possession of the land? No; we served notices under the Act and the parties in possession gave up the land we required, peaceably. The land was not enclosed for years afterwards. The persons who were living there were not required to remove until just before the opening of the railway for traffic.

160. Were there many persons occupying tenements upon the land? Yes.

161. Could you favor the Committee with a list of those persons who were residing there at the time you took possession of the land? Johnson, Young, Yarwood, Metcalfe, Morley J., Morley C., Croker, Hinton, Hill, Paynter, Morris D., Lecce.

162. Were there other leaseholders who were non-residents? Yes.

163. Could you furnish their names also? Stacey, Baker, Bingle, Russell, Croft, Lodge.

164. Are you aware under what circumstances these tenants became possessed of that land? I only know from the statement of the tenants themselves and the statement of the trustees also.

165. Can you favor the Committee with that statement? I understood that the land had been leased in allotments for twenty-one years, because the time had not arrived to use the land for the purpose for which it had originally been purchased; it was thought at that time that there were three trustees.

166. Who were they? The names given to me as Secretary of the Company, were the Bishop of Newcastle, Mr. Scott, of Ash Island, and Mr. William Croasdill, of Newcastle.

167. Did you ever see any of the leases? Yes.
168. Can you remember who signed those leases? Metcalfe's lease was signed by the Bishop of Newcastle, to the best of my knowledge, without any other name. Some of the leases were signed by the Bishop and Mr. Scott, and some not signed at all; but I cannot tell you which they were exactly. C. J. Nealds,
Esq.
6 Oct., 1859.
169. Are you certain you ever saw a lease signed by Mr. Scott? To the best of my knowledge and belief I did.
170. Mr. A. W. Scott, of Ash Island? Yes; to the best of my knowledge and belief there were several; I think Mrs. Paynter's was one, but I am not certain. I should be sorry to speak positively about it, but to the best of my knowledge and belief I have seen several signed by Mr. Scott and the Bishop of Newcastle.
171. Were the lands taken by you at Honeysuckle Point absolutely necessary for railway purposes? For carrying out the first intention of the company they were absolutely necessary. It was intended by the company to make the whole of this plot of ground their building yard, and to erect workshops for the repairs of all the rolling stock, and engines.
172. Afterwards, only a certain portion of the land was necessary? When the Government took the line over they determined on retaining only sufficient land for the formation of the line and station.
173. Did you take possession of an iron house, which was the property of Dr. Stacey? I did not, but I think it must have been two years after notice was served on Dr. Stacey that the house was removed from one spot to another by Mr. Bryson, who was an engineer acting for the Government for the Northern Line at that time.
174. Under whose instructions did Mr. Bryson remove the house? I cannot say.
175. Were you on the spot at the time of its removal? No.
176. Were you there shortly after its removal? Yes, shortly after, I was.
177. Had you any conversation with Mr. Bryson relative to the removal of this house? No; I was not aware it was going to be removed till after it was done.
178. After its removal, had you any conversation with Mr. Bryson about it? I dare say I had.
179. Was Mr. Bryson a superior officer to yourself? No, but he was independent of me, in a different department; he was in the engineer's department. I was Secretary.
180. Would not the removal of such a building have come directly under your notice? No. The Engineer-in-Chief very likely gave him directions to remove it.
181. Are you aware whether the tenants of these lands ever made any claim for compensation? They did, all of them.
182. To the Hunter River Railway Company? Yes, in the first instance.
183. And to the Government in the second? Application was made to the Government, in fact the claims never having been satisfied the claimants continued to urge their right upon the Government, as they had done on the Company.
184. Can you inform the Committee what difficulties existed to prevent the company from settling these claims for compensation? In the first place the claims were considered very exorbitant, and in the next when we went into the matter we found that the tenants had no title, the leases being invalid.
185. Did the same difficulties present themselves to the Government? Yes.
186. Are you aware whether the notices given to the occupants of this land in the first instance are now in existence? I cannot say whether the occupants have kept them or not. I served the notice myself, and true copies are preserved.
187. In conformity with the Act? Yes.
188. Do you know of any peculiar cases of hardship in connection with the removal of these tenants from their land? It is impossible to particularise any peculiar case of hardship, as the tenants were found in peaceable possession and were only deprived of that possession by the powers of an Act of Council. There were only four houses taken down after all, out of the whole number.
189. Was it necessary that these should be taken down? It was.
190. On what account? The line now passes over the sites of those houses.
191. Was David Morris's house one of these? Yes.
192. What kind of a building had he there? A weatherboard house with out-houses.
193. Was he carrying on any trade there? I believe he was a carpenter and wheelwright.
194. *By Mr. Loder:* You say that some parties gave you the names of the trustees—who were those parties? The parties residing on the ground, the tenants themselves. I was obliged to acquire the information I wanted any way I could; and I was informed by one of the tenants that Mr. Kerrison James was the agent for the trustees, and Mr. James wrote me as agent for the trustees acknowledging the receipt of notice and making claim on their behalf.
195. Have you any doubt that Mr. Scott's name was attached to some of these leases? I would not speak positively, but it is my impression that I have seen leases signed by him; at any rate if Mr. Scott did not sign them, I believe he intended and promised to sign them.
196. As one of the trustees or as a witness only? As a trustee.
197. *By Mr. Close:* What proportion of these leases do you suppose were signed conjointly by the Bishop and Mr. Scott? I cannot say.
198. Were all these leases delivered to you when you took possession of the land? No, the tenants simply shewed them to me, when I went in to serve the notices.
199. You say that in no case was violence done in obtaining possession of this land? Not at the time I took possession. In fact the people lived there for years after. We only used the land at first for storing the materials we received from England—rails, chairs, waggons, and so on; and no one was removed till it was absolutely necessary. I may observe that when the Hunter River Railway Company took this land it was with the full intention to compensate the tenants. 200.

- C. J. Nealds, Esq.
6 Oct., 1859.
200. Did the tenants understand that at the time? They understood it fully.
201. And it was with that understanding they gave up possession? Yes; but at that time we understood the leases were good.
202. *By Mr. Hay*: Did the Railway Company take up the land under the provisions of the Act or by private agreement with the tenants? Under the provisions of the Act.
203. Can you say whether any of the buildings upon the land which has not been finally required for the railway have been destroyed or removed? Dr. Stacey's house was removed, and I believe that was the only house that has been touched, that it was not absolutely necessary to remove; it was removed to make room for some building which Mr. Bryson, the engineer there, wished to put up.
204. *By Captain Russell*: Was it a movable house? It was an iron house, and it was removed on rollers to another portion of the land claimed by Dr. Stacey, where it still stands, I believe.
205. *By Mr. Hay*: It was removed from one allotment of Dr. Stacey's to another? Yes.
206. Do I understand that the original site of the building has not been retained by the Government? It has not.
207. And that is the only building which has been removed from land originally taken possession of but not finally retained? The only one that has been in any way injured, except those that were absolutely necessary.
208. *By Mr. Loder*: Do I understand you that it was considered necessary at the time, by the engineer, to remove this house of Dr. Stacey's, but that for some reason the arrangements were altered, and the land where it had stood was not required? The company intended to take the whole point for their workshops and building yards; but when the Government took the matter into their hands they considered it better to take only sufficient for an engine shed and station, and to give up the remainder; and in consequence of that determination the former site of Dr. Stacey's house was given up.
209. *By the Chairman*: Had Dr. Stacey an opportunity of occupying the house subsequent to its removal by Mr. Bryson? I am not exactly aware whether Dr. Stacey let the house subsequent to its removal; I know he received rent for it for a considerable time after we had taken possession of the land, but I am not sure whether he did after its removal. Prior to its removal I am certain he received rent for it.
210. Are you aware who occupied the house after its removal? It was a person who was a sub-contractor under the Government, carrying out the piling arrangements on the Flats.
211. *By Mr. Hay*: Did he hold it from the Government? No.
212. *By the Chairman*: Are you aware who occupied that house during the time you were at Newcastle in connection with the Government? The Manager for the Coal and Copper Company—I think his name was Robson; a Mr. Butcher also lived there at one time.
213. Was it not the office of the Railway Department for many years? No, I do not know that it was ever used for a day as an office of the Railway Department. The house on the extreme point was made an office of. We built this house ourselves and fitted it up as an office, and I resided in it for a very long time. If Dr. Stacey's house was used as an office it was used unknown to me by Mr. Bryson.
214. *By Mr. Hay*: Were any of the buildings of those persons whose land was not finally required for the purposes of the railway taken possession of by the railway authorities? No.
215. None of the tenants were removed from the possession of the buildings there? No.
216. *By Mr. Loder*: At whose expense was Dr. Stacey's house removed? It was removed by the railway servants.
217. Was it removed to this particular spot at the suggestion of Dr. Stacey? I do not know whether it was removed to that spot for the convenience of Dr. Stacey; I am not aware whether he was consulted at all in the matter.
218. *By Mr. Hay*: Is Mr. Bryson in the Railway Department now? No, he left some years ago.
219. Is there anyone that you are aware of who is likely to know whether there was any arrangement between Dr. Stacey and Mr. Bryson with regard to the spot where this building was placed? I do not know of any one.
220. *By Captain Russell*: Do I understand that this house did not at any time require to be removed for the purpose of the railway? It did not require to be removed for the purpose of making the actual line of railway, but they built temporary workshops on the site.
221. *By Mr. Hay*: Are you aware whether those people who had houses on the land which was not finally required for railway purposes have been since removed or not? At the time they wanted to carry out the finishing of the line for traffic I believe Mr. Bryson had to remove some of the tenants by force; in fact a letter passed into my hands in which one of the tenants threatened to shoot him if he turned him out.
222. Was that part of the ground finally taken? No, but the cottages about which Mr. Bryson had trouble were erected after the line was proclaimed.
223. Did he make the attempt to remove the man by force? No, he applied to the Magistrates for protection and power.
224. You have said that it was your impression that some of the leases which you saw were signed by Mr. Scott as well as by the Bishop of Newcastle? Yes.
225. You do not remember any particular person whose lease was so signed? I do not; but my firm impression is, that I have seen some of them so signed. Some of the leases were not signed at all by anybody.
226. Had you any communication with Mr. Scott upon the subject? I served him, personally, with a notice at Ash Island, as one of the trustees.
227. Did he make any allusion at that time to these leases? No, none whatever. He took it

it as a matter of course, and in fact took the Bishop's notice at the same time, to save me the trouble of going to Morpeth.

228. *By Mr. Loder*: Had you any conversation at any time with Mr. Scott, or Mr. Croasdill, that led you to believe the Bishop was a trustee? Mr. Scott said that the Bishop was a trustee with him, and that he would take his notice to save me the trouble of going to Morpeth. There was a public meeting held upon the matter at Newcastle subsequently.

229. *By the Chairman*: On what subject? The subject of these leases, when the trustees, or one of them, was present.

230. *By Mr. Hay*: Subsequently to the serving of the notices? Yes, when the question of the validity of the leases was mooted by the Government.

231. Were you present at that meeting? No.

232. When the land was originally taken up was there any plan to shew the different allotments held by these claimants? Yes; there is one now in the Court House at Newcastle, deposited there by myself. I believe this is a tracing of that plan. (*The witness produced the tracing referred to.*)

233. *By Mr. Loder*: Are you aware that the trustees now repudiate these leases? Yes.

234. Have you had any conversation with either of the trustees as to the reason why they repudiate them? No; but I was present at the time that the Government endeavored to make a settlement with the tenants, and the agent for the trustees, or arbitrator for the trustees, was present, and stated the trustees' views. The solicitor of the Commissioners and myself went down to Newcastle with the express purpose of settling, if possible, these claims.

C. J. Nealds,
Esq.

6 Oct., 1859.

William Barker, Esq., called in and examined:—

235. *By the Chairman*: I believe you were, until recently, solicitor for the Commissioners of Railways? Yes; Norton, Son, and Barker were the solicitors to the Commissioners, but I chiefly attended to the railway business.

236. Did the case of the land taken possession of by the Hunter River Railway Company, and subsequently by the Government, at Honysuckle Point, come under your notice? It did; at first as solicitor for the Hunter River Railway Company, before the transfer of the railways to the Government, and afterwards as one of the solicitors for the Commissioners.

237. Could you inform the Committee under what circumstances that land was taken possession of? It having been ascertained that the land was required for railway purposes, it was taken in the ordinary way under and in conformity with the provisions contained in the Hunter River Railway Company's Act.

238. And notices were duly served? Yes; the usual notice that the land was required for railway purposes, and all persons having or claiming to have an interest in the land were requested to send in a statement of their interest, and of the compensation claimed in respect of such interest. I believe there can be no doubt as to the regularity of the proceedings.

239. Are you aware whether there were any persons residing upon the land? There were some, I believe, a few.

240. Was the land, as far as you are aware, absolutely necessary for railway purposes at the time it was taken? At the time it was first appropriated under the Act of Council, the Directors of the Company considered it would all be required; but I cannot undertake to say how much of it was absolutely necessary for the purpose of the railway. It was necessary that the railway should go through the land; but, whether the whole of it was required, I do not know. It was originally intended to make the terminus there, and it was for that reason that the whole of the land was appropriated by the Directors.

241. Did the tenants and occupants of that land ever apply for compensation? All of them, I believe. The Bishop of Newcastle, professing to act on behalf of the trustees in whom the land was vested, had granted leases to various persons for, I think, the term of twenty-one years, and all persons claiming under these leases sent in claims.

242. Are you aware whether the Bishop of Newcastle had power to lease that land? I cannot say under what circumstances his Lordship considered himself entitled to represent the trustees or to deal with the land, but I am aware that he had no power to grant the leases because the trustees themselves had no such power.

243. Why not? I had knowledge of the title, independently of my connection with the railway matters. The trustees had no power to make leases of the land because they held it upon trust for a proprietary Grammar School, which was intended to be erected and established thereon, in connection with the Church of England, and of which the Bishop of Australia, for the time being, was to be visitor; and therefore, to have leased the land, as the Bishop of Newcastle has done, would have been a direct breach of trust, for which the trustees would have been accountable to the subscribers.

244. Are you aware whether the taking of this land by the Hunter River Railway Company opened up for the first time the question of the invalidity of these leases? I have great doubt whether it was so. I am unable to speak with certainty, but it is my impression that before any steps of any kind were taken by the Hunter River Railway Company, I had advised that the Bishop had no power to lease the land. It is certain the leases were invalid and gave the parties no interest whatever in the land.

245. How do you think these tenants were induced to take these invalid leases? I cannot account

W. Barker,
Esq.

6 Oct., 1859.

W. Barker,
Esq.
6 Oct., 1859.

account for the extraordinary negligence of the lessees. The leases were, I believe, all taken for building purposes, and yet the parties not only did not think it necessary to have their leases prepared by a competent person, or to obtain advice as to the title under which they were granted, but knowing, as they did (for the fact appears on the face of the lease), that the land was vested in trustees, they did not even take the trouble of ascertaining whether the trustees were consenting parties. I think the lessees must have relied entirely upon the Bishop, believing that he would not grant the leases unless he had power to do so, and as his Lordship was, at all events, acting in good faith, they must have taken it for granted that whatever he did was right. Had they consulted any one having the slightest knowledge of real property, law, and of conveyancing, they would have escaped all the trouble and expense in which, through their own neglect, they have become involved.

246. Did the real trustees tacitly allow these leases to be executed? I am unable to speak of my own knowledge; I do not know whether either of the trustees had any knowledge of the leases at the time they were granted, but I have understood that one of the trustees did more than tacitly allow them to be given. I was informed, when in Newcastle as solicitor for the Railway Commissioners, that one of the trustees had attended a meeting convened by the lessees, and held at the Court House, and there distinctly stated that he considered that what the Bishop had done he had done, and whatever the Bishop had done he would ratify. I was informed of this by Mr. Croasdill, one of the trustees, but he also said that he himself had taken no part in the matter, and that he was aware the Bishop had been acting without authority, and he would not ratify his acts.

247. You allude then to Mr. Scott as the trustee who declared that he approved of what the Bishop had done? Yes. I was informed to the effect I have already stated by some of the lessees—by Mr. Brookes, who had been appointed arbitrator on their behalf, by Mr. Croasdill, and, I believe, by Mr. Scott himself more than once.

248. These claims for compensation came before you? They did.

249. Were any of the claims exorbitant? All of them were considered to be outrageously so, and from the information I obtained when at Newcastle, and from the conversation I had with some of the parties, I believe they were most exorbitant. The claim sent in by David Morris was for £3,500; another tenant, named James Leece, sent in a claim for £1,500—he afterwards asked permission to reduce it to £800, and he subsequently told me he would take £600. Mr. Bingle claimed £4,000, and, I believe, all the other claims were made after a similar rate. Mr. J. E. Stacey claimed £6,000 for the allotments leased to him, and 40s. per week for a house he had erected, which would make his claim altogether upwards of £8,000. I should mention to the Committee that it was suggested in the summons I had to attend here to-day, that I should refresh my memory on this matter by reference to the papers connected with it, and I would have done so if I had had the opportunity; but I had none of the documents in my possession, and I was unable to get them until within five minutes of my leaving the office to come here. However, if I mistake not, the claims originally sent in amounted to some fifty or sixty thousand pounds; but a gentleman, Dr. Brookes, who had been named as the arbitrator for the lessees, and who called on me professedly as their agent, said that he could get the matter settled for, I believe, £5,000, if I could recommend the Commissioners to pay it. That did not include the claim of the trustees.

250. Was the large amount claimed by these tenants one of the difficulties which interposed to prevent the settlement of their claim? I think not. If the only difficulty had been the amount of compensation the claims would have been referred to arbitration, and in a short time would have been determined. The claims made were, as I have already stated, very large, but the chief difficulty was the knowledge we had of the nature of the claim, and of the impossibility of the parties establishing title to the interest in the land for which compensation was claimed. In consequence of the frequent complaints of the parties, I was instructed by the Commissioners to take any steps that could be taken to get the matters settled. I communicated with the several claimants, and asked for such information as was necessary to enable me to prepare the appointments of arbitrators, and explained to as many of them as I had an opportunity of seeing, that, as they really had no interest in the land, it would be better that they should be well advised on that point before incurring the expense of the arbitration; and I told them that it mattered not to the Commissioners what the award might be, as no payment would be made until satisfactory evidence had been given of their title to the particular interest in the land for which compensation had been awarded. The Commissioners were desirous of compensating the parties if they could safely do so, and I was instructed to raise no difficulty or objection that could be avoided with a due regard to the protection of the Government from excessive or unjust claims, or from a liability to pay twice in respect of the same interest. I advised the Commissioners that if they compensated the claimants as persons having leases for 21 years, they would not be entitled to make any deduction on that account, from the compensation to which the trustees were entitled as the owners of the fee simple, as the tenants had no such interest in the land. Had the tenants sent in reasonable claims for their expenditure upon the land, and for the actual loss and inconvenience they had been put to, their claims would have been satisfied without very strictly considering their legal rights. The trustees would not have made any claim in respect of the expenditure by the tenants, and the Commissioners were willing to make fair compensation for the land and buildings, taking care that they did not pay more than the value of the whole. The parties took no steps themselves, but still complained that the land was taken and they had not been paid. To satisfy them the Commissioners requested that I would make arrangements to go to Newcastle, and refer the claims to arbitration, if the parties insisted upon it. They had a right to go to arbitration. A circular was therefore sent to them, I believe, on the 8th November, 1855, of which this is a copy. It was sent, I believe, to the petitioner, David Morris, and to all the others. I

have

have made a note of the names of a great many—perhaps not all—to whom this circular was sent:

W. Barker,
Esq.

" 4, Elizabeth-street, Sydney,
" 8 November, 1855.

6 Oct., 1855.

" SIR,

" We are instructed by the Commissioners for Railways to take the necessary steps to have the several claims for compensation for lands taken for the Hunter River Line of Railway settled by arbitration. We have therefore to request that you will be so good as to furnish us, with as little delay as possible, with the name of your arbitrator, that we may prepare the submission for execution by yourself and the Commissioners. The arbitrator must not be interested directly or indirectly in the land.

" We are, &c.,

" NORTON, SON, & BARKER."

Copies of this circular were sent to the following persons:—T. W. Lodge, Richard Johnson, E. Young, G. Yarwood, J. Metcalf, J. Morley, Edward Morley, W. Croker, Henry Hinton, E. J. Stacy, William Hill, Mrs. Paynter, J. and A. Brown, A. E. Baker, D. Morris, J. Bingle, J. Croft, J. Loece, J. Sifton, and Henry White. In consequence of that circular I received a letter signed by a number of the lessees, appointing a certain person their arbitrator; but seeing that to proceed in the arbitration would only be wasting money, without bringing the matter any nearer to a settlement, in the same month I sent another circular to the same parties, of which this is a copy, dated 21st November, 1855:—

" 4, Elizabeth-street, Sydney,
" 21 November, 1855.

" SIR,

" With reference to your claim against the Commissioners for Railways for lands taken by the Hunter River Railway Company, we beg to suggest that it would be more convenient, and probably prevent great expense, if you were to produce to us, as Solicitors to the Commissioners, evidence of your title to the interest in the land in respect of which the compensation is claimed, before the question is referred to arbitration. You will find upon reference to the 42nd section of the Act 18 Victoria, No. 40, that the claimants are bound to make out a title to the satisfaction of the Commissioners, before they are entitled to payment of any compensation; and if it should appear after the arbitration that you have not the particular interest for which compensation was awarded, the expense of the arbitration will have been unnecessarily incurred.

" We are, &c.,

" To

" NORTON, SON, & BARKER."

After that circular was sent the parties were still troublesome to the Commissioners, and in order to please them, in the month of January following I prepared the necessary submissions, had them executed by the Commissioners, and went down to Newcastle quite prepared to enter on the arbitration in every case. There were other compensation cases on the Hunter River Line, which I was to proceed with whilst there, and notice was given to all parties having claims that I should be in Newcastle ready to enter upon the arbitrations in all cases in which the claimants were prepared. I went to Newcastle, and there remained for I think ten days, for the purpose of having these claims settled. On my arrival, Mr. Scott, one of the trustees, and Dr. Brookes, who was to be the arbitrator for the majority of the lessees, called on me, but as neither of them was represented by any professional adviser, and believing the result must be unsatisfactory to them, I was unwilling it should be said that any undue advantage of them had been taken, and, therefore, I suggested the propriety of their consulting some solicitor on the matter before they entered upon the arbitrations. I pointed out to Mr. Scott certain difficulties which applied to the trustees particularly, which I was aware he could not get over without professional assistance; and I pointed out to Dr. Brookes the difficulties which stood in the way of the lessees. In consequence of my suggestion, Mr. Scott requested me to remain in Newcastle long enough to enable him to communicate with a solicitor in Sydney. He wrote to Mr. Holden, and I waited till he arrived at Newcastle. We then met for the purpose of entering on the arbitration, but as Mr. Holden really knew nothing of the matter, I felt it would be uncandid on my part to allow him to enter upon it without his being informed of all the circumstances, and I told him the whole matter from beginning to end, and pointed out the position of the trustees and parties claiming compensation as lessees, and he at once said that he could not, with due regard to the interests of the trustees, proceed with the arbitration upon the claim sent in. Not one, I believe, of the lessees communicated with me during the ten days I was there. 251. Would it have been legal for the arbitrators to have considered the claim of the tenants, irrespective of the claim of the trustees? It would not have been possible to have determined one without reference to the other, for this reason,—The Government had taken the land, and the utmost they could be liable to pay would be the value of the land and the buildings. The first duty of the arbitrators would, therefore, have been to ascertain the full value of the land; and for that an award should be made against the Commissioners, their next duty would have been to determine how that sum should be apportioned between the several persons interested in the land. I may state what I myself suggested for the benefit of the tenants. The Government having taken the land did not desire to occasion inconvenience or loss to any parties, and as I was frequently told that the trustees did not desire to exclude the tenants I proposed that there should be one arbitration, to which the trustees and all the lessees should be parties, and that the arbitrators should be directed in

W. Barker, Esq.,
 Oct., 1859. the first place to determine what was the total value of the land taken, and that they should then direct that amount to be paid by the Government in proportions to be specified in the award, appropriating to each of the tenants the compensation to which he was entitled for his interest, and directing the remainder to be paid to the trustees. The trustees, however, were properly advised that they could not do so without making themselves personally liable, as they would by becoming parties to such an arbitration recognize the existence of the leases which were invalid, and which they had no power to make.

252. On the part of the Government you were prepared to have taken that course? Yes, because the Government incurred no risk, they would have paid no more than they were bound to pay; but if I had represented the trustees I would not have permitted them to accede to it, because by doing so they would have committed a breach of trust. Representing the Government who were liable for the full value of the land, all I had to take care of was that the compensation was not fixed too high; how it was to be apportioned was a matter with which they had no concern so long as all the parties were represented.

253. Your suggestion was probably made on equitable grounds? My suggestion was made on this ground;—I was continually told that the trustees desired that justice should be done to the tenants; and as the Government had no desire to exclude them if they could safely recognize them, and this was the only course I could think of by which the tenants could, without risk to the Government, have effect given to the claims which they set up. If the Railway Commissioners had gone to arbitration with the lessees alone, and had given them compensation for the interest they claimed, and if afterwards the trustees had insisted upon going to arbitration also, and had established their sole claim to the land, the Commissioners must have paid for the same thing over again, because the tenants had no such interest as the Commissioners could have set up against the trustees.

254. *By Mr. Hay*: I suppose the trustees have an interest upon which they could claim compensation from the Government? There is no question about that; the trustees are still entitled. It is their own fault that the compensation was not ascertained, and paid five years ago. The matter was entirely in their own hands, and if the Commissioners did not think it expedient to proceed, they, the trustees, had power either to compel them or to proceed *ex parte*. If the trustees had thought fit to proceed, there was nothing to prevent their getting an award within three months after the land was taken in July, 1854, whether the Railway Company liked it or not.

255. There is nothing to prevent them from claiming compensation? Nothing whatever. But the trustees have placed themselves in this difficulty—that in sending in their claim, I think originally for £1,500 per acre, it was stated that it must be “free and clear of all deductions whatsoever for compensation to present lessees, occupants, or otherwise.” Afterwards they denied, for legal purposes, that there were any tenants; and they claimed to be paid for the whole as for a fee simple in possession. I then said, we cannot consent to that; you have given us notice that there are “present lessees and occupants” to be compensated, and persons claiming to be tenants have come in and said, pay us for our interest, and we may incur a risk if we disregard these tenants.

256. Nevertheless, they were quite entitled to have gone to arbitration, and to have received the full value of the land, less what the tenants in actual occupation would have been entitled to? Yes. The tenants not being able to set up any legal interest of any kind, could only have been treated with, if at all, as tenants from year to year; no greater interest could have been admitted. When at Newcastle—and indeed at any time after—I was quite prepared, if the parties had insisted upon it, to go on with the arbitration, having the submission already duly executed by the Commissioners; but I should certainly have contended that they were not entitled to be compensated for any greater interest than that of tenant from year to year.

257. You were prepared to go to arbitration with the tenants, on the footing that you should pay them for a year's interest in the land? Quite; but in the majority of the cases, the compensation to which they would have been entitled would not have paid the expense of the arbitration. There was no offer made to proceed on that footing, because the parties would hear of nothing but their hundreds and thousands for the interest claimed in the leases. I could not convince them that they had no claim, nor could I persuade them to consult a solicitor; and knowing how the arbitration must terminate, I was unwilling to enter upon it, fearing that it would be said that some unfair advantage had been taken. I explained to them their true position, and then there was no desire on their part to proceed. I had no intention of going to arbitration for any other purpose than to quiet them. Had they been represented by their solicitor, I would have allowed him to take what course he thought proper; but as they were not, I explained what I believed to be their true position, and nothing further was done in the matter.

258. Their interest as yearly tenants would not have included the value of the buildings? No; the buildings are assumed to be the property of the owners of the ground on which they stand; but if the tenants had chosen to be content with a fair compensation for their expenditure upon the land and the actual loss they had sustained, the Commissioners would, with the consent and concurrence of the trustees, have given them such compensation, and the trustees would have been glad to have had such an arrangement made. I am aware that this was considered by the Commissioners.

259. If I understand you rightly as to the position of the trustees, in consequence of the course they have followed in making application for compensation, they can now only claim from the Government the value of the land, deducting the value of the interest of the tenants? Yes, that is what I contended; because a claim on their part has been sent in, in writing, which gives express notice to the Government that there are tenants to be compensated; and as the Government can only be called upon to pay the entire value of the property, that compensation must come out of the value of the land.

260. You are not aware whether Mr. Scott joined in any of these leases? I believe he did not; I have seen some leases not signed by him.

261. You have not seen any signed by him? No, I am not aware that any of them were signed by Mr. Scott.

262. By whom was the application on the part of the trustees for compensation made originally? It was made directly by Mr. James, who was Secretary to the Bishop of Sydney, but who acted, I believe, in that matter, under the instructions of the Bishop of Newcastle. There is nothing in the letter to show this, and I find that Mr. James wrote under the authority of Mr. Scott himself. This is the letter, or a copy of it:—

W. Barker,
Esq.
6 Oct., 1859.

“ Sydney, 29 July, 1854.

“ Sir,

“ Referring to the Notice served upon A. W. Scott, Esq., of Ash Island, Newcastle, conformably with the provisions of ‘*An Act to establish and incorporate a Company to be called the Hunter River Railway Company,*’ to the effect that the Company require the surrender, for purposes of the said Act, of (*here follows the description*), I am authorised by Mr. Scott to inform you that the Title Deeds of the said Estate are in my possession, and that the same may be inspected by the Solicitor to the Company at any time; and that Mr. Scott, as Trustee of this Estate, values the same, and will claim compensation at the rate of £1,500 (fifteen hundred pounds) per acre, free and clear of all deductions whatsoever, for compensation to present lessees, occupants, or otherwise.

“ I have, &c.,

“ H. K. J.”

“ To the Chairman of the Board of Directors of
“ the Hunter Railway Company.”

Perhaps I should explain to you the difficulty in which Mr. Holden found himself placed when he came to Newcastle. He found that the claim sent in set up the leases which he could not advise the trustees to recognise. He requested me to allow him to send in a new claim, which I refused to do, or to advise, as I thought already made was sufficiently extensive for every purpose. If I had consented to abandon the claim sent in altogether, and to allow the trustees to make a new claim, they would have sent in a claim for twice the amount. As I would not do that, Mr. Holden said, we repudiate the act of Mr. James; he was not authorised to act for us, nor was the Bishop of Newcastle. Mr. Croasdill, who was present, said neither Mr. James nor the Bishop had authority to act for him. I said, very well, then you stand in this position:—There has been no claim sent in but that which is contained in Mr. James' letter; the trustees now deny that it was sent in by their authority, or that Mr. James was authorised to act for them, so that no claim has yet been made by the trustees; it is more than 12 months since notice was given that the land was required, and therefore, according to the 91st clause of the Hunter River Company's Act, no claim can be made. That clause provides, that if no claim is made within 12 months by the party entitled to make the claim, the same shall be deemed to have been waived and abandoned. Then Mr. Holden said, rather than lose the claim altogether he would adopt Mr. James' act.

263. *By Mr. Loder*: Did the trustees allow the Bishop to take what steps he chose with respect to the application to the Commissioners, as if he was a trustee? I know nothing of what took place between the Bishop and the trustees. It would appear from Mr. James' letter that he was acting under the authority of Mr. Scott, one of the trustees. I may state, as a matter of information to the Committee, what I believe led to the whole difficulty. I may not be correct, but it is my impression. The late Bishop of Sydney had a certain limited interest in this land, in respect of a loan of £500 made by him out of moneys in his possession belonging to the Society for Promoting Christian Knowledge, and until that money was repaid the Bishop was to have a control and an interest in the land. This advance was made before the Bishop of Newcastle was appointed. After the Bishop of Newcastle was appointed, this land being within his diocese, and he being aware that the Bishop of Sydney (Bishop Broughton) had exercised a certain control over it, he assumed, I have no doubt, that he had the same control over it, being within his diocese.

264. *By Mr. Hay*: Mr. James in entering the claim for compensation did so as if by the authority of the trustees? Yes, or one of them; I think he did not mention Mr. Croasdill's name.

265. Are you aware whether any notice was served on the trustees previous to the land being taken possession of? Yes; a notice was served upon Mr. Scott, and the claim sent in by Mr. James purports to be in reply to that notice.

266. Mr. Nealds has told us that he served the notices? Yes, he served the notices, as Secretary to the Company. All notices were served by the Company or by their agents, never by their solicitors. I had the duplicates of the notices; indeed, I think they are now in the office of the Crown Solicitor.

267. Notices having been served upon the trustees, no other claim for compensation was put in, except that sent in through Mr. James? No; and in that claim mention is expressly made that there are tenants to be compensated. After the negotiations about the arbitration had failed, the trustees said at one time, by their solicitor, that if the Commissioners would allow them to send in a new and increased claim they would have no objection that the money to be awarded should be paid into Court, in order that the tenants might be compensated through the Court, if they were able to establish any claim; but I was of opinion that they had no right to increase their claim, and advised the Commissioners not to permit it.

268. They were aware of the existence of these tenants when they put in their original claim? Yes. The letter mentions present tenants and occupants.

269. And therefore you took it that the claim for increased compensation would be in order to enable them to compensate the tenants? That was expressed to be the object, but I had

W. Barker,
Esq.
6 Oct., 1859.

no doubt that if an increased claim had been sent in, and if the trustees should obtain a much larger sum than that originally demanded, the tenants could not get any share of it, because the trustees would be advised that they could not give them any compensation without committing a breach of a trust, for which they were answerable to the subscribers, and the tenants could never establish any claim against them.

270. *By Captain Russell:* All this took place when the railway authorities contemplated taking the whole of the land? The first notice served was notice of their intention to take the whole 20 acres and upwards; the Bishop then objected to their taking the whole, but was willing that they should take as much as would be sufficient to form the line and the station; afterwards he changed his determination, as I have reason to know, because he found that under the Hunter River Railway Company's Act, in estimating the value of the land taken there might be a deduction made from what they were to pay on account of the increased value given to the remainder. Becoming aware of that clause, he thought it the most expedient course to allow the Company to take and pay for the whole. I wish it to be understood that I had no communication from the Bishop of Newcastle on the subject; I saw Mr. James frequently and I have no doubt my impressions were formed from conversations with him. Of my own knowledge I do not know how far the Bishop or Mr. Scott acted. I may mention, as the last thing I know of this matter, that it had been ascertained that the Government did not require the whole of the land, in consequence of the change in the site of the terminus, a sketch was made by the Engineer of the Commissioners, shewing what portion of the land was absolutely required; and it was suggested to Messrs. Holden and M'Carthy, as the representatives of the trustees, that if they would permit the Government to give up what they did not require, the whole matter might begin *de novo*, that was that the trustees might send in a fresh claim in respect of the portion of land absolutely required, which claim should be determined in the usual manner. The sketch was furnished to me by the Commissioners, I gave it to Mr. M'Carthy, and there the matter ended; he was to have seen Mr. Scott and communicated with me, but no reply was ever given that I am aware of.

271. *By Mr. Loder:* If it should be proved that one of the trustees signed any of the leases, I suppose that would make them valid, notwithstanding that the Bishop may not be legally a trustee? No, it would not; they would still be quite invalid. If there are two or three or more trustees, the act of any one of them goes for nothing, it will not bind the others. Trustees stand in a different position from co-partners; the act of one co-partner may bind the others, but one of several trustees can do nothing by himself. If these leases were signed by Mr. Scott, they would not be of any more value as leases; but if he had alone assumed to grant leases, the question might have arisen whether he had not rendered himself liable to the tenant by his covenant. If the persons claiming to have an interest in this land had any interest which they could legally establish, there was nothing to prevent them from having their claims satisfied within a few months after the land was taken, nor is there anything to prevent them now from having the compensation to which they are entitled assessed. The delay that has taken place is not in the slightest degree attributable to the Railway Department but entirely to their own neglect. A reference to the 91st and three following clauses of the Hunter River Railway Company's Act will shew, that if the claimant had thought fit to use reasonable diligence about his own business, the Company had not the power of occasioning delay.

Charles John Nealds, Esq., re-examined.

O. J. Nealds,
Esq.
Oct., 1859.

272. *By Mr. Hay:* Can you mention the names of those tenants who had buildings erected upon the allotments that were taken, and what buildings were destroyed? Morris had a house taken away entirely; Yarwood the same; I believe that Johnson's house was entirely destroyed and taken away; Young's also; and Croker's house was injured.

273. What sort of tenements were they? Most of them were either weatherboard or slab huts. Johnson's was a small slab hut, covered with bark; Young's the same; Yarwood's was of a better sort—a weatherboard house; and Morris's was a weatherboard house with outbuildings—carpenters' and wheelwrights' sheds.

274. Was any sort of estimate ever made of the value of these buildings? No; they sent in their claim for the whole of their interest as tenants.

275. Did you form any estimate in your own mind of the value of these tenements? Yes; we built some houses on this land for our laborers, and from their cost I think I can judge pretty well how much the tenements belonging to these persons must have been worth.

276. What do you suppose the value of David Morris's buildings might have been? I think, with fencing and all together, the value might have been about £250.

277. And Yarwood's? Yarwood's building was not worth so much as Morris's. Morris's was looked upon as one of the best upon the land that we actually took.

278. Were the buildings removed by the railway authorities in all cases, or in any case by the parties themselves? I believe the parties themselves took all the materials away; I cannot speak positively, because it was not in my department.

279. You did not understand that the railway authorities made use of the materials? I believe they did not.

280. You are quite sure you served the notices upon the trustees in the first instance? Positive.

281. Of course before any claim was sent in? Yes, in terms of the Act, before we took possession of the land.

282. Are you aware through whom or in what way claims on the part of the trustees for compensation were sent in? Through Mr. Kerrison James, who signed as agent for the trustees. C. J. Nealds,
Esq.
6 Oct., 1859.
283. *By the Chairman:* Do you recollect whether it appeared in the notice which you left with Mr. Scott for the Bishop of Newcastle, that such notice was served upon the Bishop as a trustee? I am positive it was served upon him as a trustee. Notice was served on those persons only as trustees, because we did not know them in any other capacity.
284. Did Mr. Scott express any dissent or surprise at the circumstance of your serving a notice upon the Bishop as a trustee? Not the slightest.
285. He took the notice from you and said he would serve it on the Bishop? Yes, saying he would save me the trouble of going to Morpeth.
286. This was at the time you were Secretary to the Hunter River Railway Company? Yes.
287. *By Mr. Loder:* Did you understand Mr. Scott to assent to the idea that the Bishop was a trustee? Yes. Mr. Scott also volunteered to guarantee everything that the Bishop had done, not to me, but to the tenants themselves, at the aforesaid public meeting, so they the tenants told me.

FRIDAY, 7 OCTOBER, 1859.

Present:—

MR. CLOSE,
MR. HODGSON,

MR. LODER,
CAPTAIN RUSSELL.

ARTHUR HODGSON, ESQUIRE, IN THE CHAIR.

Alexander Walker Scott, Esq., a Member of the Legislative Assembly, examined:—

288. *By the Chairman:* You are the Member for Northumberland? I am. A. W. Scott,
Esq., M.L.A.
7 Oct., 1859.
289. You know Honeysuckle Point, at Newcastle? I do.
290. Do you know the College Estate there? I do not know it by that name, we call it the land that was purchased for a proprietary school, not for a college.
291. When was that estate purchased? In 1840.
292. By whom? By Dr. Mitchell and myself, acting for others? I believe I attended the Government auction myself and purchased it.
293. What amount was paid for it? £803 15s.
294. Out of what funds was it paid for? Out of money raised by the private subscription of individuals, and with the assistance of £500 lent to us by the Society for Promoting Christian Knowledge.
295. You say "us," will you be good enough to tell the Committee to whom you allude? I mean the original subscribers to the fund for purchasing this land, who deputed Dr. Mitchell, verbally I believe, to act in this matter on their part, and the late Bishop of Australia, who advanced the money belonging to the Society for Promoting Christian Knowledge, appointed Mr. Croasdill to act on his behalf.
296. Under what circumstances were you appointed a trustee? As it is recited in the trust deed, I was appointed by Dr. Mitchell, who was acting on behalf of the subscribers.
297. Was the late Bishop of Australia ever appointed a trustee? Never.
298. Was he *ex officio* a trustee? No.
299. Are Mr. Croasdill and yourself the only trustees? Yes.
300. Are you aware that this School or College Estate was taken possession of by the Hunter River Railway Company? Yes, I had notice of the fact served upon me by Mr. Nealds.
301. Do you remember in what year that was? I do not at this moment.
302. Was the estate then in the occupation of certain tenants? Not as tenants. It was occupied by certain parties who had erected buildings and put up fencing.
303. Under what authority did they occupy it? Under some supposed leases from the Bishop of Newcastle. I was not aware of the fact until some considerable time afterwards, when the Bishop himself wrote to me, stating that he had leased the land in allotments, but that afterwards he had found the trust deed by which it appeared that he was not a trustee. It seems he had let it, fancying he was a trustee.
304. How many years was this after the land had been leased by the Bishop? I do not know. I was trying to find the letter to bring here, but I have been unable to do so.
305. Did you ever sign any of these leases? No. I understand that Mr. Nealds has stated that he thought I did, but I contradict it flatly.
306. Did you ever offer to sign any of the leases? Certainly not. I said at a kind of meeting that took place at Newcastle that I would do all that lay in my power in order that the supposed tenants should not be injured more than I could help, but that I must act in the matter according to my duty as a trustee.
307. Did you at any time recognise the Bishop of Newcastle as a trustee? Not that I am aware of—never.
308. Do you remember Mr. Nealds serving the notice upon you? Yes, perfectly—at Ash Island.
309. Did he on that occasion also place in your hands a notice directed to the Bishop of Newcastle as a trustee? Not that I remember. He gave me one for Mr. Croasdill.

- A. W. Scott, Esq., M.L.A.
7 Oct., 1859.
310. Did you, as a trustee of this estate, ever authorise Mr. Kerrison James to act as your agent? I remember that there was some communication between us about this Honeysuckle Point Estate, and I did authorise Mr. James about something. I think it was to consult barristers on the subject.
311. Do you remember what action you took in the matter after the notice had been served on you by Mr. Nealds? I believe I wrote to Mr. James to consult lawyers on the subject. I think that was it.
312. And according to the advice given by such lawyers Mr. James was to act for you? I think Mr. James said he had taken legal advice, but I do not think he acted in the matter at all, as far as my memory serves me.
313. Did you, as a trustee, send in a claim at any time to the Government for the land taken? Yes.
314. Do you remember the amount of that claim? I think it was for £1,500 per acre.
315. Do you know how many acres there are in this Honeysuckle Point Estate? I believe there are twenty-one or twenty-two.
316. Are you aware that in the claim sent in to the Government these words were used, "exclusive of the claim of the tenants"? Yes, some such words were put in, by Mr. Holden, I think.
317. Mr. Holden being your solicitor? Yes.
318. You thus acknowledged that there were tenants? He mentioned the word tenants.
319. Did you ever attend a public meeting at Newcastle on this subject? I have already alluded to that meeting. It was not a public meeting. Mr. Bingle asked me to go there, with a few of the so-called tenants; but it was not a public meeting—it was not advertised. He asked me to go on the evening before, and I went the following morning.
320. Was this after the land had been taken by the Hunter River Railway Company? Yes.
321. And that meeting was convened by those interested in the Honeysuckle Point lands? I presume so.
322. Did you ever protest against the granting of these leases by the Bishop of Newcastle? No. I was not even bound to do it, if I had known it, but I believe I was absent.
323. How long a time were you absent? For ten or twelve months.
324. Are you aware that these tenants were in possession of these lands for nearly three years prior to the Hunter River Railway Company taking possession? I will not say three years, but they were for some considerable period.
325. Did you ever hear the name of the recognised agent of the Bishop of Newcastle, in the matter of these leases? I have heard that Mr. Simon Kemp acted as a kind of agent, but I do not know whether he was recognised.
326. Did you ever hear that he held a power of attorney from the Bishop of Newcastle? Not that I am aware of.
327. Are you aware whether these tenants have at any time made any claim for compensation? Yes, they did.
328. To whom? I think it was to Mr. Merewether.
329. Acting for the Government? Acting as one of the arbitrators on the part of the Government; Mr. William Hislop, of the Bank of Australasia, at Newcastle, acting on behalf of the trustees.
330. Can you inform the Committee what were the difficulties that existed in arranging the amount of compensation? The difficulty was that Mr. Merewether said he could not listen to it, as far as I remember, unless they could prove they had a title for the leases they held.
331. Then the difficulty was caused by the invalidity of their title? What Mr. Merewether considered was, that the proof lay on them. I do not say the leases are invalid, though I firmly believe they are.
332. Have the trustees ever received anything in the way of compensation for this land? Not anything.
333. What difficulty exists to prevent it? The usual difficulty when people do not wish to pay money—procrastination.
334. Has the fact that this land has been leased to tenants been any obstacle to the payment of compensation? Not the least, I believe.
335. Was any offer made to you by Mr. Barker, the Solicitor for the Railway Commissioners, to this effect, that the Government were prepared to arbitrate on the whole matter, giving compensation to the trustees, and a proportionate amount out of that compensation to go to the tenants? I did not understand it so if he did, because it was repeatedly argued there that the tenants must prove their right before they could be entitled to any compensation. But I invariably said I would not stand in the way of any moderate compensation being given to them for the injury which I really think some of them have sustained.
336. Had such a proposition been made to you, would you as a trustee have been prepared to entertain it? As I before stated, I would not have stood in the way if I had got the full value of the fee simple of the land.
337. Have you ever made any alteration in your ideas as to the value of that land? No further than that I believe it is of increased value; I believe if it was put up to auction at this minute it would bring more than £1,500 an acre.
338. Have you ever made any increased demand upon the Government for the land taken? I think not; I think the last demand was for £1,500 an acre. Whether I made a larger demand previously I do not remember.
339. Do you consider the case of these tenants a great hardship? I think there was a hardship in the way that they were so summarily ejected; though, at the same time, it is clear that they took no proper precautions to obtain proper leases.
340. Are you aware that they were ejected from the land under the powers granted to the
Hunter

Hunter River Railway Company by their Act of Incorporation? I am perfectly; but, in enforcing those powers, which are very arbitrary, they might have exercised a little more discretion I think.

A. W. Scott,
Esq., M.L.A.

7 Oct., 1859.

341. In what way? By giving more time to the people, or allowing them to continue in occupation till the land was actually required.

342. Are you aware that it was absolutely necessary to pull down and remove for railway purposes some of the tenements which the tenants had put up? Yes.

343. Was Mr. Croasdill a constant resident at Newcastle at the time these leases were issued? Yes; I understand so. I, myself, was very rarely at Newcastle at that period, but I believe Mr. Croasdill was a constant resident.

344. Can you tell the Committee whether Mr. Croasdill, at any time, protested against the Bishop exercising the functions which he did, with regard to this land? I think not; he might have done so but I do not think he did.

345. Did Mr. Croasdill ever communicate with you on the subject of these leases? I have had frequent communication with him, but whether personally or by letter I can hardly say.

346. Did he in these communications ever refer to the conduct of the Bishop in granting these leases? He has frequently stated to me, in speaking generally, that the Bishop had no right whatever to let the land, and that he, as one of the trustees, would never sanction the conduct of the Bishop in signing these supposed leases.

347. Do you not think that if you and Mr. Croasdill, as trustees, had informed the public of Newcastle that the Bishop had no right to grant these leases they would never have been granted? I think it would have been better if the trustees had given the notice you mention, but as I before stated I was absent at the time at the Turon River—it was when gold was first discovered there—and I remained away for some considerable time, and subsequently I was very rarely at Newcastle myself.

348. Cannot you readily understand that the circumstance of the Bishop of Newcastle acting as he did in the matter would appear to the parties who took the leases to be a sufficient guarantee that he had the power he assumed? I think it very likely the more ignorant of the tenants would take the Bishop's signature to be sufficient, and would not therefore take those precautions they ought to have taken.

349. Was it not generally supposed at Newcastle that this estate was a Church and School Estate? I think it was. They had a notion that it was not purchased by private subscription but was given by the Government. There were strange misconceptions about that land.

350. Under those circumstances, therefore, it was easy for the public of Newcastle to have been mistaken as to the Bishop of Newcastle's real position in relation to this land? No doubt, but still you must bear in mind that when a party leases or purchases any property it is his duty to look into the title.

351. What is the present position of the trustees with regard to the Government, in respect to compensation? Three weeks or a month ago I directed my solicitor, Mr. Holden, to write to Mr. Williams, the Crown Solicitor, to urge on some decision with respect to this compensation, but we have not obtained a reply to that letter. The railway authorities had previously written me a letter, stating they did not now require the whole of the land, as their original project of making Honeysuckle Point the terminus had been abandoned. I am quite willing either that the Government should take the whole and give us compensation for it by arbitration, or to allow them to take what land they require upon receiving an equivalent either in the shape of money or a similar amount of land in the neighbourhood.

352. As one of the trustees, do you consider that you can deal with this question in the absence of Mr. Croasdill in England? I should have no hesitation in doing so, because Mr. Greenway, of Newcastle, has a power of attorney from Mr. Croasdill, and, probably, he would join if asked. I would have no hesitation, if I saw it was for the benefit of the trust, to act and take the responsibility on myself, as far as the fee simple of the land is concerned.

353. Can you tell the Committee how it is your intention to deal with the tenants? My intention is simply this,—not to take an active part as a trustee in dealing with them, but I will throw no obstacle in the way of their getting any moderate compensation. The first claim put in by these tenants was at an extravagant rate, and frightened the Government from any decision in the matter. Subsequently they reduced these claims more than two-thirds. For instance, Mr. Bingle had a large piece of this land leased to him by the Bishop, and, though he never spent one shilling upon it, when he was deprived of it by the Railway Company, he put in a claim for some four or five thousand pounds, not for any damage that he had sustained, but for the value of an eighteen years lease, for he had been in possession some three years. That claim was subsequently, I believe, very materially reduced.

354. Are you aware that Mr. Bingle, in consequence of his having obtained this lease, sent to England for a very expensive iron house to be erected on Honeysuckle Point? I heard of a house being sent for by him, but I did not hear that it was a very expensive one; I do not believe it was even galvanized. I think he subsequently sold that house.

355. You are aware that Dr. Stacey did put up an iron house on the ground that he leased? Yes, he did, and that house might have cost some little money, perhaps £400 or £500; but then a good part of it was put up after he had got notice from the Railway Commissioners not to proceed, his idea being that his lease was perfectly good, or that, at all events, he could sue the Bishop for any loss he might sustain.

356. *By Mr. Close:* What were the terms on which this land was vested in the trustees—had the trustees power to sell or lease the land? I believe the trustees had no power either to sell or to lease land.

357. When you became aware that the Bishop of Newcastle had let the land in question, why did you not immediately protest against it? I have mentioned before that it was no duty of mine to do so, but I should have done it had I not been away.

- A. W. Scott, Esq., M.L.A. 358. Are you aware whether Mr. Croasdill protested against it? I believe he did not.
359. Did you never tell the tenants that you would ratify what the Bishop had done? Never.
- 7 Oct., 1859. 360. Do you think the Bishop was aware that he was leasing land he had no right to lease? No, I think the Bishop firmly believed he had power to lease the land—although there is a remarkable passage in the leases to the effect that he acts on behalf of the trustees.
361. *By Mr. Loder*: Did Mr. Croasdill ever inform you why it was that he did not interfere, because he must have been aware that the Bishop had granted these leases? He ought to have been aware of it.
362. Did he ever inform you why he did not interfere? I do not remember.
363. Do you remember making another and increased claim to the Railway Commissioners, subject to the condition of your remunerating these supposed tenants? I think there was some proposal of that kind, that we were to make an increased claim and to be liable to pay compensation to the tenants, that is, that if we could come to a speedy arrangement, we would satisfy the moderate claims of the supposed tenants; but the Government declined.
364. *By Mr. Close*: At what time was the advance made by the Bishop of Australia, out of the funds of the Society for Promoting Christian Knowledge, repaid? It is not paid off yet. By the trust deed it is provided that it is to be paid off when the school is in operation, at the rate of so much per head out of the fees paid by the scholars, or something in that way. When the land was purchased there was not enough money to pay for it, and it was then that this advance was made by the Bishop of Australia; but subsequent subscriptions made up an amount which left a balance of £346 5s., which is now in the hands of the Treasurer, Dr. Mitchell. I find that I at one time directed my attorney to apply to him for it, but upon looking over the trust deed my attorney found that I had no power to ask for the payment of that money. If Dr. Mitchell were to pay this money, with interest added to it, which, however, he is not bound to do, we should be very nearly enabled to pay off the whole debt to the Society.
365. *By the Chairman*: Can you tell the Committee whether there is any interest accumulating on this balance? I am not aware. I believe we have no right to demand interest, but if Dr. Mitchell, having the use of it, allows interest, we will take it.
366. *By Mr. Loder*: I think you said that had the trust deed allowed you, you were willing to have made reasonable compensation to these parties who have taken this land under a misapprehension? I hardly stated that. I do not know that I should do it, had the trust deed allowed me; but even with the fact as it is, that the trust deed does not allow me, I certainly will not stand in their way, so long as I as trustee obtain what I call full and moderate and reasonable compensation for the fee simple of the land. I believe that is as much as can be expected from any trustee, for you must remember that the trustees are answerable to all the subscribers, and if I exceed my power any of them could demand that I should pay the amount out of my own pocket, on the ground that I should be just before I am generous.
367. *By the Chairman*: Can you suggest any course to the Committee by which the tenants might be indemnified? I cannot; because the arbitrator for the Government, Mr. Merewether, positively refused through his lawyer, Mr. Barker, to give them the compensation they claimed, until they proved their right to receive it.
368. If the Government indemnified you, could you not give over to the tenants a sufficient amount to compensate them? I would take it on myself, in that case, to give some compensation to those whom I considered justly entitled to it; but I consider that several of the claims are most unjust; I have stated so all along. I believe Mrs. Paynter has been very indifferently used in the matter—worse than David Morris.
369. Do you consider the value of the Honeysuckle Point Estate improved by the existence of the railway? Not much. I think it is improved by the coal works and mines extending in that direction. There are little villages springing up about the Australian Agricultural Company's works, and the Coal and Copper Company's works. But the piece of land the Government now wish to retain from us—giving us back the remainder—takes away from us nearly the whole road frontage; we have no means of approach, except a small opening they have left at the south-eastern end of the land.
370. Why do not the tenants re-occupy that part of the land which the Government are prepared to give up? I cannot tell. I should feel it my bounden duty to give them notice not to do so, because it would only involve us in further litigation and dispute.
371. You are aware there has been no attempt on the part of the tenants to re-occupy the land from which they were ejected? I am not aware, for I have no right to interfere, inasmuch as the Government have taken possession of the whole.
372. *By Mr. Close*: The Government have never restored to you that portion they do not wish to use? Never; they have merely made me an offer that they would be quite willing to do so, if I as a trustee agreed.

THURSDAY, 13 OCTOBER, 1859.

Present:—

Mr. CLOSE, | Mr. HAY,
Mr. RUSSELL.

ARTHUR HODGSON, ESQ., IN THE CHAIR.

Simon Kemp, Esq., called in and examined:—

373. *By the Chairman:* You live at Newcastle, and have lived there for a long time? Simon Kemp,
Esq.
Yes, since 1831.
374. You remember the land at Honeysuckle Point being taken possession of for railway purposes? Yes. 13 Oct., 1859.
375. In what year was that? About five years since; between four and five; I do not recollect at this moment.
376. By whom was it taken possession of? The Hunter River Railway Company, through their Surveyor.
377. Were there any occupants on the land at the time it was taken possession of? Yes, it had been let under from thirty-five to forty leases, to various people.
378. By whom? By the Bishop of Newcastle.
379. The land was called the College Land, was it not? Yes; it was understood to have been purchased by subscription among a number of gentlemen, for a site for a College.
380. Do you remember the Bishop of Newcastle convening a meeting at Newcastle, on the subject, previous to leasing the land? No, I do not recollect that he had any meeting about it. He met me several times at my house, and gave me a power of attorney, and appointed me agent to let it.
381. Did you act as the Bishop's Agent? Yes, I set the land off into allotments myself, and then let it at so much per year, according to the number of lots they took. They were to have leases for twenty-one years, and to build their own houses, and to pay a ground rent of £2 a year for each lot.
382. Who fixed the ground rent? It was between myself and the Bishop. Of course the land would be worth much more now; but at the time it was let land was very low about there. There were fifty-two lots, and it was considered they would bring in £110 a year altogether. There was one lot which the Bishop let to James and Alexander Brown, two or three years before I had anything to do with it, at £10 a-year, and he renewed their lease, so that all the leases should fall in together on the same day at the end of twenty-one years. A man named Page also had a lot at the other end of the land, for which he paid £12 a-year.
383. The land leased to Page and to J. and A. Brown, was leased by the Bishop of Newcastle some two or three years prior to the other lots? Yes, two years before I had anything to do with it.
384. Have you ever seen any of these leases? Yes; I have got a copy of every one of them. I had them all done in duplicate, but the Bishop refused to take them from me, and left them all in my hands.
385. Is this lease (*lease to David Morris*) the general form of lease which you issued? Yes, this is one of the leases. Here is my signature, David Morris', and the Bishop's. I saw the Bishop and David Morris sign that, and I witnessed it. On the edge of every one of the leases there is the shape and size of the lot, just as you see it there.
386. By whom was this lease drawn up? That I do not know. The Bishop sent me the draft, from which I had all the others made.
387. Did you ever hear that a convict at Newcastle was employed in drawing up these leases? He was employed in copying some of them. The original draft was sent from some lawyer's office. There were several people that copied some of these leases. There was a prisoner of the Crown, who had been a solicitor, employed to copy some of them.
388. By your directions? By my directions.
389. From the copy placed in your hands by the Bishop of Newcastle? Yes; it was sent to me by the Bishop.
390. Had you at the time you acted as agent for the Bishop any doubt in your own mind as to the authority of the Bishop to lease these lands? Not the least. I always had understood from Bishop Broughton that he had a right to let that land, and he had often talked with me about it, and said it was a pity we could not make something of it; and when the Bishop of Newcastle was appointed I thought, of course, that he had the same title as Bishop Broughton; but it seems that Bishop Broughton had given all the power into the hands of Mr. Scott and Mr. Croasdill by some deed. But then, after I began to let the land there, Mr. Croasdill, who says he is one of the trustees, sold materials to Paynter for building his house, and superintended the building. I frequently met him on the land while the building was going on; he used to walk about there, and saw everything; and he never said anything to me against it for two years.
391. You know, as a positive fact, that Mr. Croasdill, one of the trustees, sold building materials to one of the Honeysuckle Point tenants? I can swear it, and prove it beyond a doubt, by a dozen witnesses. I was there when the materials were received.
392. Do you think by that act Mr. Croasdill recognised the validity of these leases? I should have thought so. I had no idea that he had any power whereby he could stop the building when he liked, but I believe Mr. Kerrison James, in looking over some papers, found some old deed which Bishop Broughton had left behind him before he went to England and died, and which gave Mr. Croasdill and Mr. Scott this authority. I have never seen that deed.

Simon Kemp. 393. You mean the trust deed? Yes; I suppose that was it.

Esq.

13 Oct., 1859.

394. Did you, as agent for the Bishop, collect the rents from these tenants? Yes.

395. To what amount? Somewhere about £140. After the first year was out, and they began to pay rent, I sent the Bishop £82, being the balance which remained after deducting my own expenses at the rate of fifteen shillings for each allotment; he held it about five weeks, and then returned it to me through Mr. Wilton, saying he had no authority to take the money, and that I had better give it to the trustees. I offered it to Mr. Croasdill, but he only laughed at me, and said I was not going to be let off that way.

396. Would you have any objection to state where the amount collected for these rents is now deposited? The amount is in the Bank in my own name—whose name can I put it in? Nobody will take it. I am ready to give a cheque for it to any person who shews me any legal authority to receive it.

397. Has the money been to your credit in the Bank since the Bishop returned it to you? Yes. The Bishop sent me back the cheque for it, and I paid it into the Bank, as I did not know what else to do with it, and soon after that he told the tenants not to pay me any more rent.

398. Are you aware that there were certain tenements erected on this land when it was taken possession of by the Hunter River Railway Company? Yes.

399. Do you recollect the names of those parties who were living on the land at the time? Where the line of railway actually went they pulled down peoples buildings and took them away. They began with Page, and pulled down some of his out-offices, slaughter-house, and pig-sties; then they came to a man named Morley, and pulled down a small cottage of two rooms belonging to him; then to Croker—Croker had a good four-roomed cottage and stable, and a good stockyard for cattle, all of which they removed; then, I think, the land remained empty till they came to Yarwood's—Yarwood had a great deal of building consisting of slab huts, and he had them let to different people, but the railroad people pulled them down; then they came to David Morris—he had a very nice weatherboard cottage of four rooms, in one of which his wife kept a shop, and he had besides carpenters' and wheelwrights' shops and very good saw-pits; in fact he had a very good trade there. They took all his land away, pulled down his buildings, and turned him out.

400. You are aware that this land was absolutely required for the railway? Yes, the land I am now speaking of; these houses stood on the ground that is now fenced in for the railway line; but they pulled down a good many others out of the line and they now say they do not want the land.

401. In the first instance the Hunter River Railway Company took the whole estate? Yes.

402. Could you offer any suggestion to the Committee as to what would be, in your opinion, the most equitable mode of dealing with these tenants? I do not see anything than be done except to pay them for their actual loss. I should think that Morris's house was worth £200—and he had a good business fronting the main road—and he would be entitled, I think, to some sort of recompense for the removal of his business, because he could not get another place handy, and had some trouble to settle himself again. I think if he got £500 he would be justly entitled to it, but the great obstacle was, that Mr. Bingle and the other gentlemen had a meeting on the subject, and in spite of all I could say they claimed just ten times as much as they were entitled to.

403. You consider that the exorbitancy of their demands was a great impediment in the way of their claims being satisfied? Yes. Before the Government took the railway at all I was a shareholder to the extent of sixty or seventy shares, and my son was a shareholder also; and the Committee of our private Company had then voted a certain sum of money—£10,000—to pay all the people that had claims; but when they found they claimed £40,000 or £50,000 they were forced to stop for want of means; then the Government took the railroad from us, and this matter was discovered about the titles. The Railway Company had actually ordered money to be placed ready to recompense these people. No doubt these people have suffered a great deal, and a great deal of unnecessary hardship has been used towards them. There was a man there named Bryson, a surveyor, who pulled down several houses and would have pulled down more if one of the tenants had not threatened to shoot him if he did not leave off.

404. No doubt existed at Newcastle as to the Bishop's power to lease this land at Honey-suckle Point? Not for the first two years, until this matter came out about the deed. Paynter's house, which was one of the first that was built, was finished and inhabited half a year before there was the slightest doubt about the title; and Mr. Croasdill was on the ground I might say daily during the first nine months of the time; I am satisfied he was on the ground one or two days a week. He used to talk with me about it, but never gave the slightest hint that I was doing wrong. He came and looked at the plan repeatedly.

405. Supposing this land had not been taken possession of by the Railway Company, do you think these tenants would now have been securely in possession of their land? I think they would. The land was not wanted for a college, and it is not likely it would have been for some time to come; and there would have been £100 a year coming in as rent, which would have been a consideration.

406. Then the validity of these leases was called in question in consequence of the Railway Company taking possession? Yes, not till then. We never heard anything of it till the railway people took possession, and then Mr. Croasdill and Mr. Scott came forward and claimed the title to the land. The first person that knew anything of it was, I believe, Mr. Kerrison James, who wrote to the Bishop stating that he had discovered this authority to Mr. Croasdill and Mr. A. W. Scott, as trustees; and then the Bishop stopped it immediately; he did not go on one minute after he knew that.

407. Then, in fact, it was an oversight of the Bishop of Newcastle? Yes, nothing more. I have no doubt he firmly believed he had a right to deal with that land as trustee for the college. It was all made public—the thing was advertised, bills were stuck up, and Mr. Scott and Mr. Croasdill were in the neighbourhood for two years before they said anything.
408. How were the applications for leases made by the parties? They used to come to me, and I went and shewed them where the land was staked out, and then got the leases ready in duplicate, for I thought one copy would have to go into the Bishop's office. There is a clause in the leases to the effect that they are all to fence in their allotments within one year, and if they did not the leases were to be forfeited; but some of them did not fence in their land at all—Mr. Bingle, for instance, and Dr. Stacey. Dr. Stacey brought a large iron house on the ground, and the railway people took it away; it was built on sleepers, and they hooked bullocks to it, and removed it on rollers to some other allotment.
409. Did you at any time suffer any abuse for the active part you took in leasing this land? Very often. Where people suffer severe loss they are not particular whom they blame. They kept saying to me—you leased us the land, and you are bound to see us compensated; and I offered to the Bishop to give £500 out of my own pocket if he would also give £500, and take the thing into the Court of Equity, but he said he could not do anything, and he did not consider himself either legally or morally bound.
410. *By Mr. Close*: Did you take any part in persuading the Bishop to let these lands in the first place? Never. The Bishop called on me at Newcastle, with some papers that concerned me, and we got talking about the land, and I told him it had been purchased to build a college on, and that it was a great pity it was not made something of.
411. Did you, at that time, point out the propriety of letting this land? Yes.
412. Then you were the originator of the project? No, I was not the originator of it; other people had been talking of it before; Mr. Wallace and Mr. Boulton had made plans for the Bishop before that, for he had a plan with him. I certainly never objected to it, still I was not the originator, nor did I persuade him to let it particularly; I only said it was a pity to see the land lying idle.
413. Who paid for the leases? The tenants themselves.
414. Were all the leases that were written by the convict you spoke of compared with the original draft by you? Yes; and the tenants never signed the leases till they read them themselves, and many of them had them away, and took them to their solicitors, and brought them back again to say they were all right.
415. Did Mr. Croasdill object to the part the Bishop took in the matter, or to your appointment as agent? No; but when Mr. Croasdill found out he was a trustee of course then he talked to me about it, and I believe some very angry letters passed between him and the Bishop about it.
416. *By the Chairman*: Have you any information to give to the Committee on any points we have not inquired into? No; I only hope that, if the Committee have the power to grant it, they will consider that these people are entitled to some recompense. At the same time I do not at all recommend the large claims they have made. At any rate, those that have fenced in their land and built houses ought to be repaid every expense they have been at.
417. Can you give the Committee any idea of the real loss they have sustained? Well, I think, Morris should have about £500; Yarwood, £500 or £600; Page, £200; Morley, £100, and so on; so that three or four thousand pounds would answer the purpose of recompensing those who have been actual losers. Mrs. Paynter, whose husband is dead, and has left her a large family of children, has got the best house of any of them, but she was never disturbed, because her house was outside the line of the railway, and she has lived there without paying any rent.
418. You say from thirty-five to forty persons took leases of this estate? Yes.
419. Could you tell the Committee how many of that number were actual occupants? Perhaps sixteen or seventeen, or there might be twenty, occupied and improved their land. Some improved very little, because some of the land was not let till just before the Railway Company took it.

Simon Kemp,
Esq.

13 Oct., 1859.

THURSDAY, 15 DECEMBER, 1859.

Present:—

MR. CAPE,
MR. CLOSE,MR. LODER,
MR. RUSSELL.

ARTHUR HODGSON, Esq., IN THE CHAIR.

William Brooks, Esq., M.D., called in and examined:—

420. *By the Chairman*: You reside at Newcastle? I do.
421. How long have you been resident there? Upwards of five years.
422. Are you the Dr. Brooks alluded to in evidence which we had before the Committee on the 6th October, 1859? I am.
423. Did you ever take part in any proceedings arising out of the Honeysuckle Point estate? I did.
424. Under what circumstances did you take a part—as an advocate or as an arbitrator? Both.
425. On behalf of certain tenants on the Honeysuckle Point estate? Decidedly.

W. Brooks,
Esq., M.D.

15 Dec., 1859.

- W. Brooks,
Esq., M.D.
15 Dec., 1859.
426. Are you aware to whom the Honeysuckle Point estate belongs? At present it is said to be vested in trustees on behalf of certain subscribers, and also on behalf of the Society for the Promotion of Christian Knowledge at home—they have joint possession.
427. Do you know who are the trustees of the estate? Mr. Alexander Walker Scott, a member of the Assembly, and Mr. Croasdill, at present in England.
428. Can you state under what circumstances the tenants became possessed of land at Honeysuckle Point? This Society at home, having an interest in this land, I presume instructed the Bishop of Newcastle that they had an interest in this estate, and that when he should take charge of his bishopric I imagine they asked him the favor to do on their behalf what he could for their interest with respect to this property. When he arrived—or soon after he arrived—he called a meeting of the inhabitants of Newcastle, and stated that he had this land, which he was disposed under certain conditions to let out on lease for twenty-one years. I believe the meeting took place in the Church of England schoolroom.
429. Were you present? I was not present at that meeting, but I have it upon the best possible authority. In consequence of this he had this land surveyed, cut up into streets and allotments, and gave a power of attorney to Mr. Simon Kemp to act as his agent in letting it. The consequence of this was that a number of parties, the tenants now on it and others, took these allotments upon the faith that the Bishop had such an interest as he described.
430. Can you say in what year this meeting took place? Hardly, without reference I have the facts in writing, but not with me.
431. Have you seen at any time a lease similar to the one now produced (*handing a lease to witness*)? Yes, I have.
432. In all respects similar? In all respects similar. I know what this is, because I have seen them all. A portion of them are signed by the Bishop himself and a portion by his agent only.
433. Can you state the first occasion upon which any doubt was raised as to the validity of these leases? The doubt originated, I believe, only when the Railway Company began to require the property and to make inquiries.
434. What Railway Company? The Great Northern.
435. In the first instance, the Hunter River, I believe? Yes, the Hunter River.
436. Do you know any cases of peculiar hardship connected with the taking of this land by the Hunter River Railway? I do, very many of extreme hardship. The man Morris had a good establishment there, a wheelwright, and carpenter's shop. There is also the case of Mrs. Painter, a widow, whose husband built a house under peculiar circumstances, having very small means, exhausted all his means, and is supposed to have lost his life in the exertions he made to get up a house on the property he had taken. That house is not exactly taken down, but there are high fences blocking it up. And there are large premises, belonging to Mrs. Yarwood, blacksmiths' shops and two or three houses that were built there, all taken down. An oven was pulled down, the bread was taken, hot as it was, out of the oven, and destroyed,—as well as a good deal of other property, although it was afterwards discovered that for railway purposes the oven and the houses need not have been destroyed.
437. You have told us that you acted in the double capacity of advocate and arbitrator? Yes.
438. Will you tell the Committee when, and under what circumstances? The case I may say has never been brought to arbitration, so I have never acted in that capacity, although I was returned as such when I first interested myself in it.
439. Why not? Because difficulties were in the way. Mr. Barker came down for that purpose, and Mr. Holden was sent for on the part of the trustees; insuperable difficulties were found; however, Mr. Barker submitted the proposition at that time that he could submit with safety to the Commissioners for whom he was engaged, and, as he believed, advantageous to the leaseholders upon that estate.
440. The arbitration, in consequence of these difficulties, did not come on? It did not come on.
441. For how many tenants were you arbitrator? Ten or twelve, I forget which.
442. Can you state the amount of their claims? Their claims originally were for a very large amount. I forget the precise amount at this moment, but the whole amounted to some £37,000, on the part of the whole interested in the leasehold property.
443. In the first instance? Yes. Being then not arbitrator, but as an advocate, I advised their modifying their amounts, and something like £7,000 would have been accepted on the part of these leaseholders for whom I was interested.
444. Would that sum have included the whole of the claims? Yes.
445. Including Mr. Bingle's and Dr. Stacey's claim? No. I may state why,—Mr. Bingle would not consent originally, nor Dr. Stacey, to reduce their amounts, and they were shut out of the question.
446. Were there any other parties shut out besides Dr. Stacey and Mr. Bingle? I think not.
447. Then you mean to tell the Committee that that sum of £7,000 represented the claims of the whole of the tenants on the Honeysuckle Point estate, with the exception of Dr. Stacey and Mr. Bingle? I think so, of those for whom I was interested.
448. Are you aware whether any of these claimants have received compensation directly or indirectly from the Railway Company or from the Government? I believe not.
449. Do you know Mr. Croasdill? I do.
450. Are you aware whether Mr. Croasdill, as one of the joint trustees of this estate, recognised the acts of the Bishop in issuing these leases? He did, most unequivocally.
451. Will you explain what you mean? In the first place, and I have it from his own lips, with

with respect to Painter's—he took an especial interest in their case—he urged them to take the land as the Bishop had offered it to them, and to build a house; he drew a plan for the house, visited them almost daily during its erection, and sold them a portion of the material of which it was composed; and, as he had been the means of bringing them to Newcastle, he always expressed himself very satisfied with the industry which had enabled them to avail themselves of such an opportunity.

W. Brooks,
Esq., M.D.
15 Dec., 1859.

452. Can you tell the Committee the value of the building erected by Painter on the Honey-suckle Point allotment? They valued it variously; the lowest at something like £800.

453. What is the state of that house? It was a good house, but being a widow she left the house, and lived in a little place near it, and she obtained 30s. a week for the house; but her interest was not confined to that, as she had several allotments of land.

454. In what state is that building now? It is somewhat dilapidated, and shut out completely from any way to the road; I believe they have to clamber over fences to get to the road in any direction.

455. By whom is it occupied? It has been occupied by several parties; Mrs. Painter has married again, and the last time I saw her, I think she told me she got 15s. a week for that for which before the railway was made she got 30s.

456. Are you aware whether any of the tenants paid rent to the Bishop of Newcastle or to his agent? The whole of them did.

457. To whom? To Mr. Simon Kemp.

458. As the agent for the Bishop? As agent for the Bishop; these moneys are in the bank.

459. Previous to the Hunter River Railway Company taking possession of this land at Honeysuckle Point, no doubt was raised as to the validity of the leases? None that I am aware of; although it is a question how far prior to that the Bishop made this discovery; and perhaps I may tell you something relating to that, for I have seen the Bishop's correspondence with Mr. Croasdill in that matter; it was read to me. The Bishop professes that he had no knowledge of the existence of this deed appointing trustees, until Mr. Kerrison James discovered it in a chest in his office, and made him aware of it. The Bishop, in the course of the correspondence, was exceedingly desirous of getting Mr. Croasdill out as a trustee, and offered to release him; indeed he exercised such an amount of authority as induced me to believe that he had much more interest on behalf of the Society at home than appears upon the face of matters as they exist now. When I mentioned the fact to the other trustee (Mr. Scott), he expressed his disbelief of the existence of such facts. I took him to Mr. Croasdill, who referred him again to the Bishop's correspondence; and he was assured it was so with respect to this deed.

460. Do you know by whom these leases were drawn up? I know by report that they were drawn up by a convict on the Breakwater at that time.

461. Drawn up or copied? Well, there is some doubt about that; but certainly he wrote them out. Whether he drew the original I cannot say. Efforts have been made to ascertain that fact, but the Bishop declines to give any information. I was the cause of sending Mr. Brown, the solicitor, to him, with respect to that and other matters; and Dr. Stacey had seen him prior to that; and he refused to give either of them any information. Captain Mann asked me to see him, and I declined to do so, because he had treated others with an amount of suspicion that I did not like.

462. Did you appear as an arbitrator before Mr. Barker? Yes.

463. Why could not Mr. Barker entertain the claims? Mr. Barker submitted a plan by which they might be entertained, and I accepted it, as the arbitrator on behalf of the people for whom I was concerned. It was—that he could advise the Commissioners to pay the whole of the sum due for the fee simple and for the leasehold interest in the estate; that when the Commissioners had paid into the hands of the trustees this round sum, an arbitration might be made between the trustees and these lessees; and that arbitration would determine the relative claim they had to the fee simple. In pursuance of that I obtained a modification of all the claims—Messrs. Croasdill and Scott for the time being consenting to put that in operation. When I presented the claims to Mr. Croasdill, about three days afterwards, he saw that Mr. Bingle's amount was not diminished, and Dr. Stacey's in like manner, and he entirely repudiated having any connection with it. Previous to that I believed the matter to be in a fair way of settlement.

464. Can you tell the Committee the amount of the claims of Mr. Bingle and of Dr. Stacey? Dr. Stacey at that time claimed £6,000, and Mr. Bingle £4,000.

465. Is it the case, that at the present time many of the tenants are in occupation of their allotments without paying any rent? Yes.

466. Do you know why they do not pay rent? Because the Bishop and his agent have both declined to receive any more; it has been offered them repeatedly.

467. Can you tell over what time the refusal of the Bishop and of Mr. Kemp to receive the rent has run? I should think during the last five years no rent has been received by them. I feel certain of that period; how much longer I cannot say.

468. Would you consider it safe to rent an allotment from any of these tenants under their present leases? Certainly not.

469. Can you suggest to the Committee any mode of meeting the claims of these lessees? I see none but by an equitable adjustment, or some such plan as that proposed by Mr. Barker.

470. You consider that Mr. Barker's mode of dealing with these tenants is the fairest? Yes; Mr. Holden, taking a legal view of the matter, advised the trustees not to accede to that proposition, although, I believe, notwithstanding his advice, he was so favorable to the view taken at the time, with the modified amounts, that I should have been able to have accomplished my object but for the circumstances previously stated. It has been urged that any one of these subscribers might have taken exception, and have a right of action against the trustees; but Mr. Scott informs me that originally there were not more than
twenty-

W. Brooks,
Esq., M.D.

16 Dec., 1869.

twenty-three of these subscribers—some portion of these have died, some few are in England—and I can see no difficulty in getting the consent of those who are here.

471. The number of subscribers, according to the evidence we have had before us, is greater than you have stated? Mr. Briggs, solicitor, of Maitland, Mr. Scott told me, would furnish me with their names. He said the number originally was twenty-three; but that that number is not now in existence; besides, he stated that this Society for the Propagation of Christian Knowledge at home had an interest equal to these subscribers, in this land.

472. Are you aware how much land was taken at Honeysuckle Point in the first instance? Twenty-two acres.

473. The whole of the estate? The whole of the estate.

474. Are you aware how much land at the present time is in the occupation of the Great Northern Railway? I presume the whole may be said to be in their occupation, for in like manner the whole was taken by the Great Northern. Subsequently overtures have been made to take only a portion, since the branch line has enabled them to dispense with it.

475. Are you aware how much of the Honeysuckle Point estate the Government are prepared to give up? No; I cannot state.

476. Will you look at this plan (*producing a plan*). Can you by means of this state to the Committee what quantity of land you believe would be sufficient for the Great Northern Railway? I suppose they would not require more than a fourth of it, judging roughly.

477. Do you remember the site of David Morris' house? Yes.

478. Does the Great Northern Railway pass over the site of that house? No, I think not, it borders upon it, as it does in Morley's case.

479. Have you any suggestions to make to facilitate the objects of the Committee? My belief is, that if the Bishop of Newcastle were examined before this Committee, he would afford the necessary information as to what authority he had, for there can be no question that he did receive authority from the Society at Home to deal with this land; how that authority originated, and in what manner he had exercised it. I think also that Dr. Mitchell, as one of the chief subscribers, should also be before the Committee; and that the Committee by getting as it does now only secondary evidence does not see the whole of the case. I feel assured in my own mind that the secrecy the Bishop has exhibited in this matter is hardly Christian-like, that he does know a great deal more with regard to this case than any other person. I believe the Society have a right in the fee simple of this land, although it is not shewn upon that deed; Mr. Scott and Mr. Croasdill told me repeatedly that they had, and that that was the reason Bishop Broughton had appointed Mr. Croasdill as trustee. Mr. Croasdill has said,—“When the Bishop wrote me to sell this land, believing it to be ineligible, “I made a plan of Newcastle from Queen's Wharf to this property, and wrote a letter to “say that I believed this land which had cost only £800 would in a few years be worth “£20,000, and the Bishop sent the whole of the correspondence Home to the Society.” Yet, now it is sought to prove that the Bishop was originally only a money lender—the mere renter. At one time he would have ordered the land to be sold but for the representation made, and the trustees not only recognise the Bishop's acts at one time, but one of them, as in Painter's case, urges the building of a house upon the land, and himself supplies a portion of the materials. I believe if these parties were brought before the Committee, the Committee might from their evidence contrive a way to get all the parties to come to an equitable adjustment. I am quite satisfied of their legal position, from an investigation of the arguments I have heard in the course of the proceedings. I may say that Captain Mann, as well as Mr. Barker, admitted the hardship of the case, and so thoroughly convinced of its injustice when the matter was made plain to them that they said,—“We did look upon you “with some suspicion, and were about to take some exception to you, but we shall not now, “for we find you were quite right in pressing the interests of these poor people in the “manner you have.”

480. *By Mr. Cape:* You blame the Bishop for his reserve, and think matters have become complicated from his reserve? Yes, and I have the best possible reason for so doing. Captain Mann urged me to see him, but I said I durst not; Dr. Stacey had been to see him, and he offered to write him a cheque for £500, and pay him out if that was a difficulty; he treated them all so. Since then I sent Mr. Brown as a solicitor, simply with the view of reconciling the matter, and to see if he could bring his influence to bear so that the matter could be arranged in such a way as that the people should not lose their little all. He treated Mr. Brown in the same manner as he had done Dr. Stacey, and utterly ignored the thing.

481. I thought it appeared, from some part of the evidence, that the Bishop had shewn some little sympathy? I am not aware that he has in any way; he called meetings when he wanted to let the lands, but since then he has not even afforded any information. There is another reason why I think you should examine Dr. Mitchell—the deed was not drawn by a solicitor. Mr. Barker had this deed in his possession before this question arose, and he is quite convinced of that; he says it is a very clumsy and loosely drawn deed, and he believes Dr. Mitchell drew it.

482. *By the Chairman:* You have stated that the several tenants, exclusive of Dr. Stacey and Mr. Bingle, were prepared to compromise their claims for the sum of £7,000,—can you give the Committee a detailed statement of these several claims? I believe I shall be able to furnish the Committee with the information from papers at present in the hands of Mr. Barker. (*Vide Appendix.*)

483. What do you consider the value of the land at Honeysuckle Point? I should consider, from the price land has brought in its immediate vicinity, £2,000 per acre.

WEDNESDAY,

WEDNESDAY, 21 DECEMBER, 1859.

Present:—

MR. LODER,

MR. RUSSELL.

ARTHUR HODGSON, ESQ., IN THE CHAIR.

The Honorable James Mitchell, M.L.C., examined by permission of the Legislative Council:—

484. *By the Chairman*: Do you know the Honeysuckle Estate, Newcastle? Yes, I know what is called Honeysuckle Point

485. Do you know an estate, containing 22 acres more or less, generally called the Church and School Estate? It may be called the Church and School Estate, but it is the Proprietary Grammar School Estate. It consists of nearly 22 acres.

486. Were you ever a trustee of the estate? No. I purchased the land on behalf of the subscribers to a proprietary grammar school.

487. Can you recollect the year? It was in September, 1840.

488. Do you remember the number of the subscribers? The number of the subscribers was forty-seven, exclusive of the Bishop of Australia.

489. Can you tell the Committee under what circumstances the subscriptions were originally made? A great desire existed to have a proprietary grammar school in the district of Newcastle, and I with many others was anxious to have such an institution, similar grammar schools having been previously established in Edinburgh and other parts of Great Britain. We considered that the establishment of a proprietary grammar school would be of very great value, and accordingly put our names down for a certain number of shares. I may say that the Scott family were very anxious for it, and they had at the time a considerable influence in the district.

490. Do you remember the amount of the purchase money? The purchase money was £803 15s., which I paid the Government.

491. Had your subscriptions sufficient to cover the amount? No; but the Bishop of Australia, afterwards Bishop of Sydney, saw the advantage that would accrue to the country, and he promised to advance what might be requisite from the funds of the Christian Knowledge Society. He had £3,000 sent out to establish a college in connection with the Church of England, and, as this proprietary grammar school was to be connected with the Church of England, he advanced sufficient money for the purpose; in fact, he put his name down for £500, to be repaid by fees of £1 a year from each scholar attending the school, without interest.

492. Has that sum of money ever been paid off? It has never been paid off.

493. This sum is, therefore, owing to that society? To the Christian Knowledge Society.

494. Was Bishop Broughton trustee of this land? He was not.

495. Not *ex officio*? I should say not. He selected for his trustee Mr. William Croasdill, and Mr. A. W. Scott was selected on behalf of the proprietors.

496. Was any security given to the Christian Knowledge Society on behalf of the money advanced? It was mentioned in the trust deed.

497. Has that trust deed any existence now? I believe it is in the Bishop's Office.

498. *By Mr. Russell*: Is it not very likely it was sent to those who advanced the money? No; all the Bishop was anxious for was some acknowledgment that the money had been advanced and would be repaid in a certain way to the Christian Knowledge Society. If I am not mistaken it was in this way, viz.,—£1 per annum from each scholar at the proprietary school till the sum was liquidated.

499. *By the Chairman*: Are you aware of the present approximate value of this estate? I am at a loss to give even an approximate value; I can only say what one of the trustees told me. Mr. Croasdill said it was worth from £30,000 to £40,000; but I would not attempt to say what the value is.

500. You are aware this estate, or a considerable portion of it, was taken possession of by the Hunter River Railway Company, and afterwards by the Government, for laying down part of the Great Northern Railway? Only by report.

501. Are you aware that the Bishop of Newcastle leased several allotments on this estate to several tenants? I only know it by report; I have seen a copy of a lease said to have been granted by him, but I know nothing more of it.

502. Do you consider it would be difficult to find out the whereabouts of several subscribers towards the funds employed in purchasing this estate? I don't know how you can do it.

503. Are you aware whether any interest has been paid to the Society for Promoting Christian Knowledge, upon the sum advanced by them? I believe the Christian Knowledge Society do not take interest for their money. It was simply advanced by the Bishop, to be returned in the way I have stated.

504. Do you know that, in adjusting the claims of any tenants on the Honeysuckle Point estate, any difficulty would arise on the part of the Society in London? I cannot answer that question; but my impression is, that if they got the £500 they would be satisfied; but I cannot say whether my impression is of any value to put on record.

505. The subscriptions that were set on foot at Honeysuckle Point have nothing to do with any testimonial to Sir William Burton? Nothing whatever.

506. Do you consider that the evidence of the Bishop of Newcastle would be material in this question? I think it right he should be examined, if he has no objection thereto.

The Hon.
J. Mitchell,
M.L.C.

21 Dec., 1859.

THURSDAY,

THURSDAY, 3 MAY, 1860.

Present:—

MR. CLOSE,
MR. HAY,MR. HODGSON,
MR. RUSSELL.

ARTHUR HODGSON, ESQ., IN THE CHAIR.

John Williams, Esq., Crown Solicitor, called in and further examined:—

J. Williams,
Esq.
3 May, 1860.

507. *By the Chairman:* Allusion has been made by Dr. Brooks, one of the witnesses examined before this Committee, to the claims of the tenants at Honeysuckle Point, for compensation—can you favor the Committee with an abstract of those claims? I have an abstract prepared, shewing all the claims relating to Honeysuckle Point, as well those for fee simples as those for tenancies.

508. Would you have any objection to furnish the Committee with an abstract of the claims of the tenants? I will supply the Committee with a copy. (*Vide Appendix A.*)

509. Could you, as Crown Solicitor, recommend any compulsory arbitration in this matter? In what way?

510. By means of an Act of the Legislature? To do what?

511. To compel the trustees to come to arbitration with the Government, and to be included in that arbitration the claims of the tenants? I do not think it would be a part of my duty, as Crown Solicitor, to advise on that point.

512. *By Mr. Russell:* The question is, whether it is competent to make such an arrangement? If you ask my opinion without reference to my office, I must say that I cannot conceive that the Committee can recommend any arrangement. This appears to be a private trust. As far as I can ascertain by inquiry, the money was subscribed by a number of gentlemen anxious to form a proprietary school; and not having sufficient funds, they borrowed £500 from the Bishop, with the intention that it should be expended and repaid in the way then arranged. (*Vide Appendix B.*)

513. *By Mr. Hay:* Cannot you conceive an instance in which the right to land being in dispute, the parties in possession will be seriously damaged by the land being taken under an Act for railway purposes? Yes, without a doubt; that is to say, they being in possession without a sufficient title would have that fact disclosed.

514. Might they not be further injured by being ousted from the possession—might it not in fact be difficult for any one to oust them from the possession, notwithstanding the defect of their title? That is sometimes the case.

515. Are there not cases in which it is difficult to oust persons holding under defective title, but actually in possession? That may be from some possible defect in the proof of the title by the claimant; but if we find a man with a good possessory title, we should compensate for land taken the same as in any other case of a good title shewn.

516. In this case you do not think that would apply? Certainly not.

517. That is to say there would have been no difficulty in ousting these persons from their possessions? Not the slightest.

518. Even if the Railway Company had not taken them? Not the slightest.

519. Have you seen the deed, or are you at all aware of the character of the deed? I have been trying to get it. I called at Messrs. Norton and Barker's, and Mr. Barker said they had not it, but he believed Holden and Macarthy had it, and by Mr. Macarthy I am told that he believes it is in the hands of Mr. James. I called upon Mr. James this morning, but he was not in his office.

520. Mr. Barker in his evidence told us that in his opinion the trustees had no power to let? I think that is extremely probable, but I should have fancied from the nature of the trust that they had such power.

521. From the object of the deed being the endowment of a Grammar School it is likely? I cannot say, but my impression is now the other way. I should have thought that the object being a Grammar School, the power to let land would have been a matter of course.

522. But you cannot say anything for or against the opinion of Mr. Barker? He has seen the deed and I have not, and no doubt his recollection is correct. Had I known earlier the wish of the Committee I should have looked up the deed.

523. Have you seen Mr. Barker's evidence, in which he seems to have been of opinion that these parties might be entitled to compensation as tenants from year to year? They are so entitled—that is to say, there is a clause in 22nd Victoria, No. 19, which declares that where parties are in possession of land, and no particular tenancies can be shewn, they shall be taken to be tenants from year to year; but that does not touch the present question, it would not carry the value of the buildings, but would relate solely to the profits from the use of the land for a year.

524. That is in law what these persons are entitled to for compensation? The utmost; and that is taking an extreme view, for the Act says, "shall be deemed to be a tenant from year to year"; but, if the contrary can be shewn, the party, of course, would not be so treated. The Commissioner would, I have no doubt, willingly accommodate the matter on that basis.

525. As to the value of the buildings, I think we had it pretty generally in evidence that these persons had the option all through of removing the buildings? I do not know how that fact is.

526. Supposing it to be in evidence that they had that option, do you think their claims might to be pretty fairly met by compensation for a year's interest in the land, with the liberty of removing the buildings? I conceive that they would have no claim whatever. Compensation for a year's use would be merely nominal. It is no compensation at all in comparison with the claims made.

APPENDIX.

L—Claims as Leaseholder.

D—Claimant does not state whether Freeholder or Leaseholder, but believed to be Leaseholder.

B.

The Bishop's claim was therefore limited to the repayment of the money lent—he had no power in any way to deal with the land. If, by Act of the Legislature, the lessees are allowed to claim, as against subscribers to the school fund, a portion of any money payable to the Trustees, it will, in effect, be obliging the subscribers to pay compensation for the Bishop's unwarranted dealing with their property. The subscribers to the fund are clearly, I think, entitled to the whole of the proceeds of the land purchased by them.

SEPARATE APPENDIX.

A.

60-12.

Legislative Assembly Committee Room,
Sydney, 10 April, 1860.

My Lord,

The Select Committee of the Legislative Assembly, appointed to inquire into the claims of Mr. David Morris and others to the lease of certain lands at Honeysuckle Point, Newcastle, held under lease from your Lordship, and from which they were ejected by the Railway Authorities, being about to bring their inquiry to a close, are desirous, before doing so, of having some statement from your Lordship as to the matter under consideration, and with that view I now beg to request that you will be so good as to name any day on which it may be convenient to your Lordship to favor the Committee with any information, either personally or by a letter which I could lay before the Committee.

I beg at the same time to enclose a copy of the Evidence already taken on the subject.

I have, &c.,

The Right Reverend
The Lord Bishop of Newcastle.ARTHUR HODGSON,
Chairman.

B.

Morpeth, 18 April, 1860.

Sir,

On Friday last, the 13th instant, I received your letter of the 10th, requesting me to name a day on which it might be convenient for me to favor the Committee (appointed to inquire into the claim of David Morris) with any information, either personally or by letter, which I could lay before them; a copy also of the evidence already taken on the subject reached me by the same post.

This evidence I at once carefully read, and now devote the first day at my disposal to prepare the statement requested, feeling that my early attention to the wishes of the Committee will best shew my sense of their courtesy in not requiring my personal attendance, which, at this time, would have greatly interfered with my official duties.

My statement may be divided into:—

I.—OBSERVATIONS ON THE EVIDENCE.

II.—EXPLANATIONS OF MY OWN INTERFERENCE.

III.—SUGGESTIONS RESPECTING COMPENSATION TO THE TENANTS.

1. There are some errors in the evidence, of course unintentional, which it is desirable to correct. Question (262).—I did not instruct Mr. James, but Mr. James communicated with me, at the request, I presume, of Mr. A. W. Scott, before he sent in the application.

(263).—I never received any such notice as trustee.

(344).—Mr. Crossdill never protested.

104—F

(386.)

- (386).—Mr. Kemp's memory quite fails him when he says I sent him a draft of the leases. I left the whole matter to him, having full confidence in him, and perfectly remember that he brought the first leases to me to sign when I was in a great hurry to keep an appointment, which led me to sign them without reading them, and thus I was quite ignorant there was any allusion to trustees in the leases, as mentioned in (360).
- (409).—I have no recollection of this offer of £500, or of my declining to meet it.
- (428).—No such meeting ever took place; I, therefore, could not state at it I had the land, or describe the interest I had in it.
- (479).—I have never communicated or received any communication from the S.P.C.K., respecting the £500 of their money lent for the purchase of this land. It is the invariable rule of that society that any money of theirs, voted for educational purposes in a diocese, is at the disposal of the Bishop, who is their representative and the guardian of their rights.

II.—THE EXPLANATIONS OF MY OWN INTERFERENCE.

1. Soon after my arrival in my diocese in January, 1848, my attention was called to the College land at Honeysuckle Point. It was described as lying vacant, useless, profitless; and the blame of this neglect was attributed to me, who, as Bishop, was supposed to have the control of the property. These remarks were reported to me by the late Canon Wilton, and applications to lease were often made to me, of which I enclose the originals of two—one dated 7 August, 1848, from Mr. Winship; another dated 5 November, 1850, from Mr. Thos. Adam.

2. Feeling that the fact, or rumour, of Church property lying idle and unproductive would be very prejudicial to the interests of the Church, especially when it was necessary to ask for generous contributions from the laity for the maintenance of the Church and Clergy;—and being also of opinion that the land at Honeysuckle Point was very unsuitable for the site of a College, from its low position, and therefore must be sold or leased to provide funds for building a College elsewhere—I determined to inquire of the late Bishop of Sydney under whose control the land was.

3. On my next visit to Sydney, I asked his Lordship—"Do you consider that you have the full control of the College land at Honeysuckle Point?" The late Bishop answered, "Yes; I have always considered it under my control." I next asked, "Am I then to consider that the land is now under my control as Bishop of the diocese in which it is situated?" His Lordship's answer was, "Yes, I have always considered this College land under my care and control; and that care and control now devolves upon you." Before I left Sydney on this visit I made the same inquiry of Mr. James, the Bishop of Sydney's Secretary and Deputy Registrar, and received the same answers.

4. To shew that this opinion was not confined to the late Bishop of Sydney and Mr. James, I may add, that when I asked Mr. Croasdill, in April, 1854, to explain the fact that he had allowed me to exercise legal control over this land during a long period of time, while he was at Newcastle, and while he all the time knew that he was a trustee of this land, he replied, in a letter dated April 15th, 1854, in these terms:—

"Granted that I was a trustee, and knew it—have I ever stated the contrary—still you will plainly see from my letter to the Bishop of Sydney of the 5th April, 1842, in reply to his Lordship's letter of 17th January, 1842, that he assumed the controlling power. I enclose copies of these letters which abundantly shew that he called on me to give my opinion of the value of the land, because he contemplated a sale or exchange of it, not appealing to me as a co-trustee even.

"I naturally considered that your Lordship had succeeded to the authority of the Bishop of Sydney, and that you had a perfect right to dispose of the land, as the Bishop of Sydney evidently thought he had, and might have done."

5. During 1850, I took great trouble to ascertain how this land could be turned to the best account, and in January, 1851—before the railway was thought of, or the gold discovery had raised the value of land—succeeded in letting most of it on improving leases for 21 years, so as to bring in a land rent of about £100;—the offer of Mr. Thos. Adam, in November, 1850, being to lease the whole at a rental of £5, increasing one pound each year.

6. Every person at Newcastle seemed pleased with this arrangement, and everything went on most satisfactorily until April 26th, 1853, when I received a letter from Mr. James, enclosing a trust deed, conveying this land in trust to A. W. Scott, Esq., and Mr. Croasdill, which he had lately found at the bottom of an iron chest, and expressing his great regret that the existence of such a deed had quite escaped his memory. I immediately wrote to Mr. James to make inquiries about the matter—received his reply May 12th, and on that same day wrote to both Mr. A. W. Scott and Mr. Croasdill to inform them of the discovery of this deed.

7. Thinking it may be more satisfactory to the Committee, I enclose the whole correspondence:—
No. 1.—May 12, 1853. My letter to A. W. Scott, Esq., of which a copy was sent the same day to Mr. Croasdill.

No. 2.—December 13, 1853. A second letter to Mr. A. W. Scott.

No. 3.—May 30, 1853. Mr. Croasdill's reply.

No. 4.—December 23, 1853. Letter from me to Mr. Croasdill, shewing that Mr. A. W. Scott called on me on the 16th December.

No. 5.—January 3, 1854. Letter from Mr. Croasdill.

No. 6.—January 12, 1854. My reply.

No. 7.—February 4, 1854. Letter from Mr. Croasdill.

No. 8.—February 8, 1854. My reply.

No. 9.—February 10, 1854. Letter from Mr. Croasdill.

No. 10.—March 16, 1854.—Letter to Mr. Croasdill.

No. 11.—March 22, 1854. Mr. Croasdill's reply.

No. 12.—April 12, 1854. Some extracts from a long letter of mine to Mr. Croasdill, to which he replied at greater length, April 15th; from which letter the only paragraph which it is necessary to produce is that already quoted in section 4.

Gathering from Mr. Croasdill's letter (No. 11) that he supposed I had done him a personal injury; and hearing, some months before, that he had spoken very bitterly of my rebuke of his uncharitable sentiments (as mentioned in No. 12); and being warned that he was anxious, if possible, to place me in a position of difficulty respecting these leases, I felt that any further exertions on my part would not expedite but hinder a satisfactory arrangement; and that the only hope of Mr. Croasdill's being persuaded to act was grounded on my retiring entirely from any active co-operation in the business. This course of conduct I have since pursued, not from want of interest or sympathy with the suffering tenants, but to remove all cause of irritation from the mind of the obstructive trustee.

III.—SUGGESTIONS RESPECTING COMPENSATION TO THE TENANTS.

1. The Government will, I trust, be required to keep the whole land, as the site, before the railway was laid down, and more especially since, must be considered quite unfit for the site of a College.

2. The only parties with whom the Government can legally treat are the trustees, for the interest of the tenants is only that of yearly tenants, which does not include their buildings. (Question 258.)

3. The trustees only claim the value of the fee simple of the land; while the Government are willing to give compensation for land and buildings (Questions 250, 251),—that is, for buildings erected previous to their notice of requiring the land. There surely, therefore, cannot be any difficulty in the Government settling by arbitration the value of the buildings and fencing, and in securing by some legal document the amount of the compensation given for each building to the tenant, at whose expense

expense it has been erected. The trustees do not wish to receive the compensation for buildings, and therefore might bind themselves to pay over such compensation to the respective tenants.

4. Mr. Croasdill, in his letter of March 22nd, 1854 (No. 11), says—"In equity the lessees are only entitled to have refunded the amount they have given for, and expended on, the land; they cannot be allowed to make a gain through an innocent mistake on your part." This is perhaps true; still I should wish all tenants who have fulfilled the covenants of their leases (Questions 408, 416) to have given to them the fair value of their leases, estimated not after the land was required for the railway, nor after the land was increased in value by the discovery of gold, but according to the value when the leases were granted in January, 1851.

5. Should Mr. Croasdill continue to obstruct any satisfactory arrangement, I would suggest that his trusteeship might be brought to a close in this way. He is trustee to represent the Bishop; that is, the interest of £500 lent from the funds of the Society for Promoting Christian Knowledge. Let this £500 be at once paid off, and then I should imagine that the interest, which Mr. Croasdill represents, having ceased, his trusteeship would cease; or that a Court of Equity would empower the subscribers to elect another trustee in the place of Mr. Croasdill. There is at present in hand towards this £500, £346 5s., probably with some addition of interest, and the difference (£153 15s.) might easily be at once raised. I would most cheerfully subscribe £50 towards it.

In conclusion, as I observed in the speech moving for this Committee, as reported in the public papers, that it was argued—the petitioner should not be allowed to suffer from the mistake of the Bishop of Newcastle, and as I find the same point often dwelt on in the questions to the witnesses before the Committee, I may be allowed respectfully to object to such expressions, as incorrect and invidious. The tenants do not suffer from my mistake, for if my mistake were the cause of their suffering and loss, the law would give them a remedy against me. They really suffer from their neglect in not investigating their title—a neglect which the law visits in all its consequences upon those who are guilty of it; and if they are supposed to be free from all blame respecting this neglect, because they had full confidence in me, I may also claim to be exempt from all blame because I had similar confidence in one who had every claim to my confidence—the late venerated Bishop of Sydney.

Arthur Hodgson, Esq., M.P.,
&c., &c.

I remain, &c.,
W. NEWCASTLE.

P.S.—I should be obliged by having the enclosed documents and correspondence returned to me, having sent them for the satisfaction of the Committee, and not, unless it be deemed necessary, for publication.

C.

Lease for Lands at Honeysuckle Point, in favor of Mr. David Morris.

MEMORANDUM OF AGREEMENT made the first day of January, one thousand eight hundred and fifty-one, BETWEEN the Right Reverend the Lord Bishop of Newcastle (for and on behalf of the Trustees of the College or School Land in the District of Newcastle) of the one part, and David Morris, of Newcastle aforesaid, carpenter, of the other part, WITNESSETH that for and in consideration of the rent and covenants hereinafter contained on the part and behalf of the said David Morris, his executors, administrators, and assigns, to be paid and performed, He the said Lord Bishop of Newcastle (for such Trustees) doth hereby covenant, promise, and agree with and to the said David Morris to grant him a lease of the allotment of land hereinafter described and delineated on the margin of these presents (that is to say) ALL THAT AND THOSE that piece or parcel of land or ground numbered 2, bounded on the north by number 3 allotment, on the east by the allotment in the possession of Alexander Brown, junior, 3 chains; on the south by the Maitland Road, and on the west by Adelaide-street, in the City of Newcastle aforesaid, as the same is set out and described in the margin of these presents, TO HAVE AND TO HOLD the said allotment of land or ground for the term and space of twenty-one years, to be computed from the day of the date of these presents, He the said David Morris, his executors, administrators, and assigns, YIELDING AND PAYING therefore and thereout yearly the sum of Two pounds sterling, by four even and equal quarterly payments on every first day of April, first day of July, first day of October, and first day of January, in every year during the said term. AND the said David Morris doth hereby promise and agree that he will, in a good and substantial manner, within twelve months from the date hereof, fence in the said allotment of land, and also cause all buildings that may hereafter be erected thereon to be slated or shingled; no such building to be on any account roofed with bark. AND the said David Morris doth hereby for himself, his executors, administrators and assigns, covenant and promise with and to the said Lord Bishop of Newcastle (for such Trustees), that he shall not nor will during said term carry on or suffer to be carried on the trade or business of slaughtering, boiling down, soapmaking, candlemaking, or any other nuisance whatsoever, on the said premises or any part thereof. And in case the said rent hereby reserved shall be behind or unpaid for the space of twenty-one days after any or either of the said days herein appointed for payment thereof, the same having been lawfully demanded, it shall and may be lawful for the said Lord Bishop (or the said Trustees) to enter in and upon the said premises and the same to have again, repossess, and enjoy, as in his or their first or former estate, anything herein contained to the contrary notwithstanding. AND the said Lord Bishop of Newcastle doth hereby agree with the said David Morris that he the said David Morris paying the said rents, and performing the said covenants, shall and may peaceably and quietly hold and enjoy the said piece of land hereinbefore described without any interruption claim or demand whatsoever of or by the said Lord Bishop (for such Trustees), and at the end or other sooner determination of the said term shall and will yield up the same, with the improvements thereon erected and built, unto the said Lord Bishop of Newcastle (or such Trustees as aforesaid). IN WITNESS whereof the said parties have hereunto put their hands and seals the day and year first herein written.

NEW SOUTH WALES.

RAILWAY ACCIDENT.

(CORRESPONDENCE RESPECTING CLAIM OF MRS. WANT.)

Ordered by the Legislative Assembly to be Printed, 21 December, 1859.

CORRESPONDENCE respecting the Claim of Mrs. Want, in consequence of the death of her late Husband, by the Railway Accident of 10 July, 1858.

*Railway Department,
26 July, 1858.*

MY DEAR SIR,

I understood, till I accidentally met you on Saturday, that poor Mrs. Want had been left in such circumstances as would have rendered any offer of pecuniary assistance altogether out of place; but if I understood your statement aright, I had been misinformed previously. If so, will you oblige me by informing me in what manner assistance of a pecuniary nature could be offered to Mrs. Want, so as least to intrude upon her, as it is the wish both of the Government and of the Commissioners that none of the sufferers by the late unhappy accident should need anything at present.

I am, &c.,

W. W. BILLYARD, Esq.

B. H. MARTINDALE.

Sydney, 29 July, 1858.

MY DEAR SIR,

In reply to your note respecting Mrs. George Want, I beg to inform you that she has appointed Mr. Lennon, the Broker, Pitt-street, as her Agent, and Mr. Dawson as her Solicitor. I have, therefore, referred your communication to those gentlemen, who will shortly wait upon you on the subject.

Believe me, &c.,

B. H. MARTINDALE, Esq.,

WM. W. BILLYARD.

&c., &c., &c.

23 August, 1858.

SIR,

In reference to your letter to Mr. Billyard of last month, kindly proffering temporary pecuniary assistance to Mrs. Want, for the loss sustained by her, by the death, by the late fatal Railway accident, of her husband, the late Mr. George Want, we do ourselves the honor to inform you, that although Mrs. Want, unhappily, is by the loss of her husband wholly deprived of the means of subsistence in the future, in any event compatible

with her social position; and particularly that, by profession and income therefrom of her late husband, she will not require the immediate temporary assistance contemplated by your communication, and hence the non-claim at that time therefor;—we now, however, beg to bring to the notice of the Government and Commissioners the claim which we submit she has against them for the irreparable loss which she has sustained, and respectfully beg that compensation be made to her with as little delay as possible—her pecuniary position being, we are instructed, far from a desirable one.

Without assuming for a moment that the Government or Commissioners are not only well competent as well as willing to determine that which Mrs. Want is fairly entitled to, but we would suggest that should any question arise on the amount of compensation to be given, the matter be referred to arbitration, or the value of her late husband's life, based on his age and income, be determined by an actuary.

In the hope that this communication will be met with the like kindly feeling which your letter to Mr. Billyard so much evidences, and for which Mrs. Want requests us to return her sincere thanks,

We have, &c.,

RODD & DAWSON.

Railway Department, Sydney,

7 September, 1858.

SIR,

I have the honor to transmit herewith a letter from Messrs. Rodd and Dawson, claiming compensation on behalf of Mrs. Want, for the loss she has sustained from the death of her husband by the late Railway accident, and also a copy of my letter therein referred to, and I have to request the instructions of the Government as to the course they desire the Commissioners shall pursue in this matter.

I have, &c.,

B. H. MARTINDALE.

THE HONORABLE

THE SECRETARY FOR LANDS
AND PUBLIC WORKS.

132, Pitt-street,

Sydney, 11 September, 1858.

DEAR SIR,

We beg again to direct your attention to our letter, upon the subject of Mrs. Want's claim; and we have to inform you, that unless we receive a satisfactory reply on or before Tuesday, at 11 o'clock, we must (though with regret) take proceedings in the matter.

We are, &c.,

RODD & DAWSON.

CAPT. MARTINDALE.

(By THOS. HUGHES.)

Railway Branch,

Department of Internal Communication,

Sydney, 11 September, 1858.

GENTLEMEN,

In reference to your letter of to-day's date respecting Mrs. Geo. Want's claim, I have the honor to inform you that the Commissioners have referred your former letter to the Government for instructions, to which they have not yet had any reply. Your letter of to-day has also been referred to the Government, and on receiving their instructions the Commissioners will at once communicate with you on the subject.

I have, &c.,

MESSRS. RODD & DAWSON,
Solicitors.

B. H. MARTINDALE.

B. C.—By an oversight in the Secretary's Department, Messrs. Rodd and Dawson's first letter, date 23rd August, and my letter therein referred to, were I find not forwarded as directed; they are now enclosed.

B. H. M.,
13 Sept., 1858.

THE HONORABLE
THE SECRETARY FOR LANDS
AND PUBLIC WORKS.

*Department of Land and Public Works,
Sydney, 8 October, 1858.*

SIR,

Referring to your letter of the 7th ultimo, and previous correspondence relative to the compensation claimed by certain sufferers by the Railway accident on the 10th July last, I am directed to inform you that it is considered necessary that all persons claiming such compensation should take legal proceedings against the Commissioners for obtaining the same, not that such claims should necessarily be opposed, but in order to justify those officers in making compensation, and to determine in that way the amount to be allowed in each case.

I have &c.,

THE CHIEF COMMISSIONER OF RAILWAYS.

MICL. FITZPATRICK.

Refer to Solicitor for his opinion as to the course to be pursued.

B. H. M.

MR. BARKER'S B. C. MINUTE.

" 15 October, 1858.

" I presume the Commissioners have no discretion in the matter; the Government
" having determined that the compensation shall be assessed by a jury, and, in that case,
" they have simply to intimate to the claimants that the Commissioner cannot make com-
" pensation until the right to it and the amount has been established by the verdict of a
" jury. Had I been consulted in the first instance, I certainly could not have recommended
" the Commissioner to pursue this course, as I believe it will be greatly against the interests
" of the Railway, and will involve the Government in much greater loss than they would
" otherwise sustain. * * * * * (a)

" WM. BARKER.

" CAPT. MARTINDALE, R. E."

*Railway Branch,
Department of Internal Communication,
Sydney, 16 October, 1858.*

SIR,

I have the honor to acknowledge the receipt of your letter of the 8th instant, acquainting me that it is considered necessary that all persons claiming compensation on account of the late Railway accident should take legal proceedings against the Commissioners for obtaining the same.

The importance of the subject will, I trust, justify me in again submitting it for the consideration of the Government before acting on their instructions.

* * * * * (a)

I have consulted the Solicitor to the Commissioners on the steps to be taken to carry out the instructions of the Government, and he assures me that he entertains no doubt that, founded or unfounded, any jury would give far larger damages than are now asked, and points out that, if defeated, the Government must incur the odium in addition of such a course.

There is no question that the accident itself, and the prolonged time it has been kept before the public, have already injured the Railway interests, and this injury would be increased by the whole being again gone over in the Courts of Law.

The

(a) Referring to other cases.

The same considerations apply generally to the case of Mrs. Want, whose husband was unfortunately killed, although this case is somewhat more difficult from no fixed sum having been asked as compensation, but, as I understand the Government do not dispute the liability of the Commissioners, the proposal of Mrs. Want's solicitors, to refer the amount to arbitration, appears reasonable, and any circumstances tending to influence the decision as to the sum to be paid, can be laid before arbitrators as well as before a jury, and without the inconveniences attendant upon the latter mode of proceeding.

* * * * *

I have, &c.,

B. H. MARTINDALE.

THE HONORABLE

THE SECRETARY FOR

LANDS AND PUBLIC WORKS.

*Department of Land and Public Works,
Sydney, 28 October, 1858.*

SIR,

In acknowledging the receipt of your letter of the 16th instant, respecting the compensation to be accorded to the sufferers by the late accident on the Great Southern Railway, I am directed to inform you that as it will be desirable to ask a vote from Parliament to meet the expense in the cases of the persons named in the margin, the Secretary for Lands and Public Works considers that the better mode of fixing the amounts will be to settle them by arbitration.

Mr. Esytou,
Mr. Hackett, and
Mrs. Want.

2. With reference to my letter of the 8th instant, I am now directed to state that the requirement of actions being first commenced by the sufferers to establish their claims will be dispensed with.

I have, &c.,

MICL. FITZPATRICK.

*Railway Branch,
Department of Internal Communication,
Sydney, 30 October, 1858.*

GENTLEMEN,

In further reference to the letter from the Chief Commissioner to you of the 11th ultimo, on the subject of the compensation to Mrs. Want for loss sustained by the late accident on the Great Southern Railway, I have the honor, in the absence of the Commissioner to inform you that the Honorable the Secretary for Lands and Works considers that the best mode of fixing the amount to be paid will be by a reference to arbitration.

I have, &c.,

(for the Chief Commissioner,)

JOHN RAE,

Secretary.

MESSRS. RODD & DAWSON,
Solicitors.

Department of Internal Communication,
Sydney, 18 December, 1858.*

SIR,

With reference to your letter of the 28th October last, on the subject of compensation to the sufferers by the late Railway accident, I have the honor to submit, for the information of the Secretary for Land and Public Works, the draft submission to arbitration in the case of Mrs. Want, prepared by her solicitors, Messrs. Rodd and Dawson, and revised by the solicitors to the Railway, together with a letter from Mrs. Want's solicitors, of the 10th inst., objecting to any alteration whereby the liability of the Government is disputed, and a copy of Mr. Barker's opinion thereon.

Requesting further instructions,

I have, &c.,

THE UNDER SECRETARY

132, Pitt-street,
Sydney, 10 December, 1858.

MRS. WANT AND RAILWAY COMMISSIONER.

DEAR SIRS,

We cannot, on the part of Mrs. Want, consent to the submission herein being based on an "alleged" wrongful act, &c., whereby the liability to make, as well as the amount of compensation, would be the subject of the reference; we have hitherto proceeded on the assumption that the liability was admitted, and that the amount of compensation alone was the matter to be determined, and we think we may safely say that this is the view taken by the Government; if it be not so (and we shall be glad to learn in the course of Monday next) and it is intended to dispute such liability, we reserve to ourselves and to Mrs. Want the right of withdrawing from the proposed reference, and to adopt such other course as we may deem advisable.

We have, &c.,

MESSRS. NORTON, SON, & BARKER,
&c., &c., &c.

RODD & DAWSON.

Sydney, 10 December, 1858.

MRS. WANT AND THE RAILWAY COMMISSIONER.

DEAR SIRS,

We had no specific instructions from the Commissioner respecting the submission to arbitration, and believing it to be the intention of all parties that the whole question should be referred to arbitration, we made such alterations in your draft as appeared to us to be necessary to give the arbitrators jurisdiction, and our duty to the Commissioner required us to make.

The statement in your draft, that by reason of the circumstances therein recited Mrs. Want and her children became entitled to compensation from the Commissioner, was not, in our opinion, correct. We believe the facts recited disclosed no liability whatever on the part of the Commissioner, for we apprehend that if the death resulted from the felonious act of a stranger, or otherwise than from the wrongful act, neglect, or default of the Commissioner, there is no liability at all. If it is the desire of the Government that a liability shall be admitted, and that it shall be referred to the arbitrators only to assess the amount of compensation to be paid to the widow and children respectively, we shall of course approve of the draft in that form, and be careful not to put you to any trouble or expense that can be avoided, but we must first obtain the instructions of the Commissioner to this effect.

If you will be so good as to return the draft as altered we will forward it with your letter, and a copy of this reply, to the Commissioner for Railways, that he may submit them for the consideration of the Government.

We are, &c.,

MESSRS. RODD & DAWSON.

NORTON, SON, & BARKER.

MR. BARKER'S B. C. MINUTE.

" I sent the correspondence with the submission to the Commissioner on Saturday, the 11th instant, in order that I might be fully instructed as to the course the Government intend to pursue, and particularly with reference to the statements in Messrs. Rodd and Dawson's letter. I do not know that the matter would not be satisfactorily disposed of by arbitration, but, after consideration, I am inclined to the opinion that it would be more satisfactory to the Government to pay on the verdict of a Jury of twelve Special Jurors.

" If the Government intend to admit the liability, perhaps they should offer such an amount as they think reasonable, having regard to all the circumstances. The Commissioner having proposed arbitration, I think he should not withdraw from it, until the claimant has distinctly expressed a desire to do so.

" WM. B.

" 14/12/58.

" CAPT. MARTINDALE, R.E.,

" &c., &c., &c."

MB.

RAILWAY ACCIDENT.

MR. SEC. ROBERTSON'S B. C. MINUTE.

I do not think we should refuse to admit the liability. We are willing to go to arbitration, and only want a fair award to the Government.

B.C., 4 January. CAPT. MARTINDALE, R.E.
M. F.

JOHN R.,
1 Jany., 1859.

MR. BARKER'S B. C. MINUTE.

I have approved of draft submission admitting liability *in accordance with instructions*, and have now to request the Commissioner to name arbitrators to act on his behalf. Mr. Hickey has been appointed on behalf of Mrs. Want.

Solicitor.—
Urgent.

4/1/59.

CAPT. MARTINDALE, R.E.

WM. B.
17 Jany., 1859.

*Railway Branch,
Department of Internal Communication,
Sydney, 25 January, 1859.*

SIR,

With reference to B. C. Minute of the 4th instant, I have the honor to state that the Solicitors to this Department have returned the Draft Submission in Mrs. Want's case, admitting liability, in accordance with the instructions of the Secretary for Lands and Works, and requesting me to name an arbitrator to act for the Government.

Mr. Hickey has been appointed on behalf of Mrs. Want, and I have to request that I may be informed of the name of the gentleman who is to act as arbitrator for the Government.

I have, &c.,

THE UNDER SECRETARY FOR
LANDS AND WORKS.

B. H. MARTINDALE.

7 February, 1859.

MY DEAR CAPT. MARTINDALE,

Mr. C. Kemp is to be (and has accepted the duty of) arbitrator for the Government *in re* Mrs. Want.

Yours truly,

MICL. FITZPATRICK.

Sydney, 1 April, 1859.

MRS. WANT AND THE COMMISSIONER FOR RAILWAYS.

MY DEAR SIR,

I enclose a notice which I received yesterday afternoon of the intention of the arbitrators to proceed in this case to-morrow morning at ten o'clock, and I also send the papers connected with the matter that the Crown Law Officers may at once be instructed to attend to it on behalf of the Government.

The case is one of difficulty, and will require the greatest attention to guard against an excessive award being made in favor of the claimants.

You will, of course, see the necessity for the professional gentlemen who is to attend being fully instructed without any delay.

I am, &c.,

CAPT. MARTINDALE, R.E.

WM. BARKER.

*Railway Branch,
Department of Internal Communication,
Sydney, 1 April, 1859.*

SIR,

I have the honor to transmit, for the consideration of the Secretary for Lands and Public Works, the enclosed papers, *just received*, relative to the case of Mrs. Want and the Commissioner for Railways.

It will be seen that the case requires *the immediate attention of the Crown Law Officers*. Any information in my power I shall be happy to afford.

I have, &c.,

THE UNDER SECRETARY FOR
LANDS AND WORKS.

B. H. MARTINDALE.

Refer

Refer to Civil Crown Solicitor, with intimation that Capt. Martindale will confer with him. Inform Capt. Martindale of the necessity of his seeing the Civil Crown Solicitor.

I regret that I have not been placed in a position to enable me to give proper and reasonable notice.

JOHN R.,
2 April.

Railway Branch,
Department of Internal Communication,
Sydney, 27 April, 1859.

SIR,

I have the honor to transmit herewith, for the information of the Secretary for Lands and Works, a copy of the award in the matter of the Commissioner and Mrs. George Want, and have to request instructions in the matter.

I have, &c.,

THE UNDER SECRETARY
FOR LANDS AND WORKS.

B. H. MARTINDALE.

AWARD.

WHEREAS by a certain Indenture, bearing date the twenty-second day of February last, between the Commissioner for Railways appointed by the Governor of New South Wales, with the advice of the Executive Council of the said Colony, pursuant to an Act of the Parliament of the said Colony passed in the twenty-second year of the Reign of Her Majesty Queen Victoria, No. , and intituled "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same,*" of the one part, and Anne Blackford Want, the widow and executrix of the late George Want, of Sydney, Solicitor, deceased, of the other part,—*after reciting* that the said George Want was, on the tenth day of July, in the year of our Lord one thousand eight hundred and fifty-eight, travelling in a railway carriage of the said Commissioner for Railways, upon the Great Southern Railway of the said Colony, and that the said railway carriage, whilst running between Parramatta and Homebush, in the Colony aforesaid, was thrown off the line of the said Railway, and was upset, whereby the said George Want was killed, and that the said George Want at the time of his decease was a solicitor in practice in Sydney aforesaid, then being one of the partners in the firm of "*Messrs. R. J. & G. Want,*" of Pitt-street, in Sydney, aforesaid, Solicitors, and that the said George Want, at the time he was so killed as aforesaid, left the said Anne Blackford Want his widow and two children him surviving, who were by reason of the premises deprived respectively of a husband and father; and that it was alleged by the said Anne Blackford Want as such executrix as aforesaid, that the death of the said George Want was occasioned by the wrongful act, neglect, or default of the Commissioner for Railways; and that the said widow and children were therefore entitled to compensation from the said Commissioner for Railways; and that differences had arisen between the said Commissioner and the said Anne Blackford Want, as such executrix as aforesaid, respecting the amount to be paid as such compensation, and the proportions to be paid to the said widow and children respectively, and that the said Commissioner for Railways and the said Anne Blackford Want, as such executrix, had agreed to refer the said question of compensation to the award, order final, and determination of Charles Kemp, of Sydney aforesaid, Esquire, nominated by the said Commissioner for Railways, and Edwin Hickey, of Osterley, Hunter River, in the said Colony, Esquire, and of such third person as the said Charles Kemp and Edwin Hickey should by a memorandum under their hands, to be endorsed on the said Indenture before they should proceed on the said arbitration, nominate and appoint. It is witnessed that the said Commissioner for Railways, for himself and his successor or successors, and the said Anne Blackford Want, for herself, her heirs, executors, and administrators, and each of them, did covenant, promise, and agree to and with each other, and so far as related to the said Commissioner for Railways his successor and successors, and so far as related to the said Anne Blackford Want, her heirs, executors, and administrators, well and truly to pay, to obey, abide by, observe, perform, fulfil, and keep the award, order, arbitrament, and final determination of the said three arbitrators, or of any two of them of and concerning the premises aforesaid, or anything in anywise relating thereto, so as the said award of the said arbitrators, or of any two of them should be made in writing under their or any two of their hands, ready to be delivered to the said parties, or to the executors or administrators of the said Anne Blackford Want, in case she should not then be alive, on or before the first day of May then and now next. And whereas they, the said Charles Kemp and Edwin Hickey, before they proceeded to act in the matters by the herein-before in part recited indenture referred, (that is to say) on the second day of April last, duly, and in pursuance of the provisions in the said in part recited indenture contained, and by a memorandum under their hands endorsed on the said Indenture, nominate and appoint Alexander Gordon, Esquire, Barrister-at-Law, as the third Arbitrator in the matter of the said reference: Now, we, the said Charles Kemp, Edwin Hickey, and Alexander Gordon,

having

having taken upon ourselves the burthen of this reference, and having duly weighed and considered the allegations of the said parties, and also the proof, vouchers, and documents, which have been given in evidence before us, do hereby make and publish this our award in writing of and concerning the matters above referred to as in manner following, (that is to say)—We do award, adjudge, and determine that the said Anne Blackford Want is entitled as such executrix as aforesaid, to be paid by the said Commissioner for Railways the sum of seven thousand seven hundred and fifty pounds as and for such compensation as aforesaid; and that five thousand pounds of the said sum of seven thousand seven hundred and fifty pounds is the proportion thereof which the said Anne Blackford Want is entitled to, as such widow as aforesaid; and that one thousand four hundred and fifty pounds, other portion of the said sum of seven thousand seven hundred and fifty pounds, is the proportion thereof which the eldest of the said children of the said George Want, deceased, is entitled to; and that the sum of one thousand three hundred pounds, other portion of the said sum of seven thousand seven hundred and fifty pounds, is the proportion thereof to which the youngest child of the said George Want is entitled. And we do further award, order, adjudge, determine, and direct, that the said Commissioner of Railways do forthwith pay to the said Anne Blackford Want, as such executrix as aforesaid, the said sum of seven thousand seven hundred and fifty pounds, as and for such compensation to her and to the said children of the said George Want as aforesaid. In witness whereof we have hereunto set our hands this thirteenth day of April, in the year of our Lord one thousand eight hundred and fifty-nine.

Signed and published the thirteenth
day of April, A. D. 1859, in the
presence of
R. C. JOHNSON,
Solicitor, Sydney.

CHARLES KEMP. (L.S.)

EDWIN HICKEY. (L.S.)

ALEX. GORDON. (L.S.)

Crown Solicitor's Office,

Sydney, 30 June, 1859.

SIR,

In returning to you the accompanying papers, I have the honor to inform you that I am clearly of opinion that you, in your capacity of Commissioner for Railways, are liable to Mrs. Want for the payment of the sum awarded by the arbitrators; and that, in default of your paying such amount to her, it is competent for her *at any time* to make the arbitrators award a Rule of Court, and to *issue execution* for the amount awarded.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

THE COMMISSIONER FOR RAILWAYS.

Department of Lands and Public Works,

Sydney, 7 July, 1859.

SIR,

I am directed to inform you that at the request of Messrs. Rodd and Dawson (the Solicitors of Mrs. George Want,) the Government has approved of an advance of one thousand pounds being made to that lady, on account of the sum awarded to her as compensation for the loss of her husband by the railway accident. This expense, pending the decision of Parliament on the whole matter, is to be charged to the £10,000 voted on the Estimates for 1858, as a contingent sum for unforeseen and incidental expenses, &c., made to the Secretary to the Treasury.

I have, &c.,

NICHL. FITZPATRICK.

THE COMMISSIONER
FOR INTERNAL COMMUNICATION.

Is the Commissioner to pay this £1,000 to Mrs. Want, or her order.

B. H. M.,

Under Secretary for
Lands and Works.

18 July.

The Colonial Treasurer will pay it.

M. F.

23 July.

Return to Captain Martindale.

B. C. 25 July,—M. F.

132, Pitt-street, Sydney,

RE MRS. WANT'S AWARD, ARISING OUT OF DEATH, BY RAILWAY, OF HER
HUSBAND, MR. GEORGE WANT.

SIR,

Before issuing execution herein, we deem it but right to endeavour to learn specifically from the Government, whether after the great delay which has taken place, the amount due to the abovenamed lady is now ready to be paid, for if not we regret to have to inform you, that our instructions are to issue and immediately act upon the execution, a step which we need hardly assure you, Mrs. Want has ever been and still is most anxious to avoid, but the long vacation (extending over the whole of January next) renders such lodging of the Writ before the expiration of the present month imperatively necessary.

Your reply in the course of to-morrow will oblige,

Sir,

Your most obedient Servants,

RODD & DAWSON.

TO THE HONORABLE

THE MINISTER FOR PUBLIC WORKS.

20 December, 1859.

Department of Public Works,

Sydney, 21st December, 1859.

GENTLEMEN,

In acknowledging the receipt of your letter of the 20th instant, stating that if the amount awarded to Mrs. Want as compensation for the death of her husband by the Railway Accident be not immediately paid you will be obliged to issue execution, I am directed by the Secretary for Public Works to inform you that the amount of award is on the Additional Supplementary Estimate for 1859, and as soon as it is voted by Parliament, the balance due to Mrs. Want will be immediately paid.

2. I am to observe that it was understood by the Government that the advance of one thousand pounds already made to Mrs. Want was given under an arrangement that the final settlement was not to be demanded until Parliament had voted the money.

3. Mr. Secretary Eagar desires me to add, that the consideration of the Estimates, on which this item is placed will probably come on to-night or to-morrow night.

I have, &c.,

MESSRS. RODD & DAWSON.

B. H. MARTINDALE.

Legislative Assembly.

NEW SOUTH WALES.

RAILWAY ACCIDENT.

(PETITION OF FRANCES DE COURCY.)

Ordered by the Legislative Assembly to be Printed, 11 October, 1859.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Frances De Courcy, of Sydney,—

SHEWETH :—

That your Petitioner is one of the sufferers by the accident which occurred on the Parramatta Line of Railway, in the month of July, one thousand eight hundred and fifty-eight.

That, previously to and at the time of the said accident, your Petitioner resided in Parramatta, and was professionally engaged in teaching music, singing, and dancing, and had several pupils there, and in Sydney.

That your Petitioner also carried on an infant school under the superintendence of her daughter, and from these sources had an income of one hundred and fifty pounds per annum.

That the injuries received by your Petitioner were a dislocation of the wrist of her right hand, and severe contusion on the head and right eye, by which her eyesight has been permanently injured, and the use of her wrist impaired.

That after the accident the Government provided your Petitioner with medical assistance and other comforts, and also advanced a sum of five pounds per week for the support of her family.

That in September last the Government, thinking that your Petitioner would be able to follow the practice of her profession, paid her a sum of twenty-five pounds, and gave a free ticket for the Railway for six months; and at the same time obtained from your Petitioner a receipt in full for all claims upon the Government.

That Doctor Gwynne, who attended your Petitioner, informed her that her injuries were purely accidental, and that it was to the kindness of Captain Martindale that she was indebted for anything; and under those circumstances your Petitioner signed the receipt above referred to.

That your Petitioner, finding her health still impaired, and her former pupils gone to other teachers, again applied for further compensation, or assistance; and the Government, under the circumstances, paid her a further sum of twenty-five pounds, taking another receipt in full.

That the injuries received by your Petitioner are of a permanent nature; have materially injured her health, and will preclude her from following her occupation; and the payments by the Government were made under the impression that the injuries were of a temporary character.

That in confirmation of this statement your Petitioner begs leave to append hereto the Certificates of the Medical Gentlemen who attended her.

RAILWAY ACCIDENT.—PETITION.

That your Petitioner claims to be entitled to further compensation, and has applied therefor; but the Government, whilst admitting your Petitioner's unfortunate condition, declines making such compensation, upon the ground that your Petitioner has signed a "receipt in full," the Honorable the Secretary for Lands and Works at the same time advancing a sum of twenty pounds to meet your Petitioner's immediate wants.

That your Petitioner has a large family to support, and is now in an almost destitute condition.

Your Petitioner, therefore, humbly prays that your Honorable House will take her case into consideration, and take such steps in the matter as shall be just.

And your Petitioner will ever pray.

F. DE COURCY.

CERTIFICATES REFERRED TO.

Parramatta, June 18, 1859.

I hereby certify that Mrs. Frances De Courey was one of the sufferers by the Railway accident that took place on the 16th of July last, and that she is materially and permanently injured in the hand and eye to such a degree as to prevent her successfully following her usual occupation.

ROBT. CHAMPLEY RUTTER,
M. R. C. S., England, &c., &c.

Parramatta, June 18, 1859.

I hereby certify that the bearer of this, whose name is mentioned in the margin, was one of the sufferers from the late Railway accident on the Sydney and Parramatta Line, in the month of July, 1858 (10th day of the month). Her injuries were severe, and I regret to say the injuries she received are, and will always be, a great drawback to her in following her occupation for her support and that of her six young children, and is a case of grave commiseration and sympathy.

GORDON GWYNNE,
M.R.C.S., London, and L.A.C.M.N.S.W.B.

PETITION OF MRS. FRANCES DE COURCY.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 18th October, 1859, "to inquire into and report upon the allegations contained in the *Petition of Mrs. De Courcy*," have agreed to the following Report:—

The case set up by the Petitioner may be thus shortly stated,—

In July, 1858, and for some time prior to that date, Mrs. De Courcy resided in Parramatta, where she taught music, singing, and dancing. She had also some pupils in Sydney, and was in the habit of travelling up and down between the two places. From these sources, and a school kept by her daughter, she was in receipt of an income of about £150 per annum. On the 10th July, 1858, when the accident occurred on the Parramatta Line of Railway, Mrs. De Courcy was one of the passengers, and received severe injuries which confined her to her bed for some ten or twelve weeks; she was consequently unable to follow her profession, and is now in a state of comparative destitution.

After the accident, it appears from the evidence of Captain Martindale, the Government rendered every assistance to Mrs. De Courcy, in common with the other sufferers. During the time she was confined to her bed she received £5 per week for temporary relief. Under that arrangement she received £45. When convalescent a further payment of £25 was made to her, making £70 in all; and the Government, deeming this a final payment, took a receipt therefor in full satisfaction of all claims to compensation. This was on the 25th September. On the 19th October Mrs. De Courcy addressed the Government, stating that after she signed the receipt she felt that £25 would not be of much use to her, having so large a family, namely, five children, particularly as she was not quite recovered, and requesting further assistance. Captain Martindale subsequently saw Mrs. De Courcy, and then arranged to make a further payment of £26, being at the rate of £2 per week for three months, and a free pass upon the Railway for six months; and, in making this payment, addressed the letter dated 11th November (*Vide*, Capt. Martindale's Evidence, Appendix A, No. 3) to Mrs. De Courcy, stating the grounds upon which he made the same. In the receipt for this amount it is stated to be "compensation for injuries."

On

On the 27th June, 1859, Mrs. De Courcy addressed a letter to the Commissioner for Railways, stating that the injuries she had received had proved permanent, whereby she was prevented from getting her living as she had formerly done, and praying that the Government would give her such further compensation as they thought her case deserved. In consequence of Mrs. De Courcy having signed the receipt of the 25th September, 1858, the Government expressed an unwillingness to open up the matter without the intervention of the Assembly; but, as Parliament was not then sitting, the Honorable the then Secretary for Lands and Works authorised a further payment of £20. Some smaller sums have since been advanced, making in all £141, including the allowance of £5 per week before mentioned.

Mrs. De Courcy now alleges, that at the time she gave the receipt of the 25th September she was under the impression that the injuries she received were merely temporary, whereas they have proved of a permanent nature, have shattered her constitution, and preclude her from efficiently following her profession. These statements appear to your Committee to be completely borne out by the Evidence.

With respect to the circumstances under which the receipt of the 25th September was given, Captain Martindale, who acted on behalf of the Government, and Mrs. De Courcy in a great measure agree in their evidence. The former states, "I had no intention of compensating Mrs. De Courcy for a permanent injury, such as to prevent her from obtaining a livelihood for herself and family." Mrs. De Courcy, in answer to the following question—"When you signed that receipt (25 September) were you under the impression that the injuries you had received were not of a permanent character?"—says, "Yes, I thought I should have recovered in a short time." Again she says, "I did not think I should have been so long ill. I thought I should not have had to call upon the Government for money, but that I should have got back my old pupils, and it is much more pleasant to labor and earn money for one's self than to be dependant on others."

Vide, Evidence, page 7.

Page 7.

Page 3.

As to the injuries. The evidence of Drs. Rutter and Gwynne, who attended Mrs. De Courcy, shews that she suffered severe contusion of the face, which has left partial paralysis; that her right arm was severely injured, and, the ligaments of the wrist having been lacerated, she is disabled from instructing pupils as effectually as heretofore. A fracture in the arch of the face, and the loss of some of her teeth, also prevent her from teaching vocal music as formerly. Dr. Gwynne also gives it as his opinion that the shock which her nervous system sustained has affected her mind. This, moreover, is borne out by the evidence of Mr. Hayes, who sent his daughter to Mrs. De Courcy for instruction after the accident.

Page 11.

The liability of the Government to make compensation not having been disputed, the only question that remains for your Committee to report upon is as to the amount, and the manner in which it should be awarded.

Mrs.

Mrs. De Courcy has made no specific claim, although she verbally mentioned to Captain Martindale that she considered £1,000 would only be a fair compensation for her being deprived of the means of obtaining a livelihood, and in her evidence she expressed her willingness to receive £2 per week.

It would appear from the evidence of Mr. Thomson, the Actuary of the Mutual Provident Society, that the value of an income of £150 a year to a person of Mrs. De Courcy's age, derived from personal exertions, might be reckoned as equivalent to a permanent life annuity of £100 a year; and that the value, to a person of average health of the same age, of £100 a year would be £1,130 or £1,250.

Although Mrs. De Courcy has thus, in the opinion of your Committee, made out a case for further compensation, they cannot advise the payment of so large a sum as above-mentioned, and they consider that it would be best consulting Mrs. De Courcy's interest to pay an annuity instead of any stated sum in liquidation; and they are of opinion that a permanent annuity of £52 per annum, and a sum of £100 over and above the sums she has already received, to enable her to meet her present wants, would satisfy the justice of the case.

Your Committee, in arriving at this resolution, have considered that although Mrs. De Courcy has been seriously injured, yet she is not wholly incapacitated from earning a living, and between her own exertions and the annual sum your Committee recommend, she will be able to maintain herself and family.

JAMES HART,
Chairman.

*Legislative Assembly Chamber,
Sydney, 20 April, 1860.*

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 21 DECEMBER, 1859.

MEMBERS PRESENT:—

Mr. Hart,		Mr. Robertson,
Mr. Loder,		Mr. Morris.

James Hart, Esquire, called to the Chair.

The Clerk, by direction of the Chairman, produced and read the Petition referred to the Committee for inquiry.

Mrs. Frances De Courcy called in and examined

[Committee adjourned.]

WEDNESDAY, 8 FEBRUARY, 1860.

MEMBERS PRESENT:—

James Hart, Esquire, in the Chair.

Mr. Morris,		Mr. Close,
		Mr. Loder.

Letter from Captain Martindale, excusing his attendance this day before the Committee, on account of duties requiring his absence from town, read by the Chairman.

Dr. Gwynne and Dr. Rutter called in, and *severally* examined.

[Committee adjourned till Wednesday next, at *half-past Ten o'clock.*]

WEDNESDAY, 15 FEBRUARY, 1860.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

PETITION OF MRS. DE COURCY.

WEDNESDAY, 21 DECEMBER, 1859.

Present:—

MR. HART,
MR. LODER,MR. MORRIS,
MR. ROBERTSON.

JAMES HART, Esq., IN THE CHAIR.

Mrs. Frances De Courcy called in and examined:—

1. *By the Chairman:* Were you one of the sufferers by the Railway accident of July, 1858? Yes; I received a dislocation of the wrist.
2. Where did you reside at the time? At the corner of Hunter and O'Connell streets, Parramatta.
3. What occupation did you carry on there? Teacher of Music, Singing, and Dancing.
4. Had you many pupils? I made about £150 a-year by music and singing. The dancing class was only just commenced. I had sixteen pupils, and the promise of more; but in consequence of this accident I was obliged to give up in the middle of the quarter.
5. Were you dependent on your own exertions for your living? Yes, solely.
6. Have you any family? Five children.
7. Are they young? The youngest is not quite two years, and the eldest is going on for sixteen.
8. Had your eldest daughter an infant-school under her charge at Parramatta? Under her sole charge.
9. What injuries have you received? Dislocation of the wrist, by which the sinews of the hand are contracted; a fracture of the fore part of the skull, by which the sight of the right eye is much injured; my side has also been a little injured, and I cannot now lie upon it.
10. How long were you laid up by your accident? For three months I was unable to go out, and for three months more I was in such a state of debility that I was not able to perform my duties; and I am now still suffering from extreme nervousness.
11. Under what medical superintendence were you? That of Doctors Rutter and Gwynne.
12. Were they directed by the Government to attend on you? By the Railway Commissioners—by the Government of course.
13. In consequence of this accident was your school broken up? Yes. I could not suffer the noise, as I was deranged, almost, for a time; at least, my mind was affected on account of the fall. I could not allow any noise in the house.
14. How long after the accident did you first attempt to resume your business? About six months. I was paid by the Government for a certain time, and after that some of my friends advised me to come to Sydney, many of my pupils having gone away from Parramatta, as

Mrs. Frances
De Courcy.
21 Dec., 1859.

Mrs. Frances De Courcy. they could not wait for my recovery; and of those who remained, those who had made any advancement could see the difference in my playing, as I could not after the accident play as I had done before.

21 Dec., 1859.

15. What was the first sum of money you received from the Government? £2; and then I had £5 a-week for ten weeks.

16. Did you receive any sum of money after that? £25.

17. Did you give a receipt to the Government? I did.

18. Will you be good enough to state the circumstances under which you gave that receipt? Captain Martindale came to me and asked me if I would like to begin teaching again; I said I would, but that my hand was so dead that I could not raise my fingers so as to teach music. Dr. Gwynne was present, and said, "If Captain Martindale gave you a sum of money, would you not take it. You have no right to any." I said, if I had no right I would not like to have it at all. Dr. Gwynne then said £25 would be very good, and with what had been received, would make £70 altogether, and that Captain Martindale was doing it on his own responsibility. I thought it very kind. In the meantime a messenger came to the door for Captain Martindale from the railway, and I was so nervous that I signed the receipt.

19. When you signed that receipt, were you under the impression that the injuries you had received were not of a permanent character? Yes, I thought I should have recovered in a short time.

20. Are you now permanently prevented from following your occupation as a teacher of music? Yes, I feel it every day; I cannot play as I used to do, and my pupils see that, as it is necessary for me to play over a new piece before giving it to them. My health is getting worse almost every day.

21. You are quite shattered in constitution? Yes, and I have become exceedingly nervous.

22. Is your home broken up? Yes, but for the kindness of friends who give us house room, I should not have a home now. A friend who knew us in better circumstances has kindly given us a home.

23. It appears that you have been kindly treated by Captain Martindale? Yes, and by every gentleman I have seen about my accident.

24. You have nothing to complain of with respect to Captain Martindale, excepting that your claim has been injured by your signing this receipt? No, he treated me like a lady in every respect, with courtesy and kindness.

25. What sum do you think would satisfy your claim? I would leave that, I think, to you gentlemen, what you think yourselves.

26. Suppose a sum were given you that would produce £2 a week? If I could not get something else to do—

27. You would not be satisfied with that? I am satisfied to leave it in the hands of the gentlemen present, and am much obliged to you for taking it into your consideration after I have given so much trouble.

28. What do you earn now? I have one pupil at Parramatta, and I teach two in the house where I live, as a compliment to the lady of the house for her kindness to me. I should tell you that I received another £25 afterwards.

29. And I think Mr. Robertson advanced you £20 himself? Yes.

30. So that you have received £65, independently of the £5 a week you received? Yes; I received £5 a week from Captain Martindale, and £20 from Mr. Robertson.

31. Have you communicated with the Government on the subject of your claim? Yes, I took the liberty of calling on Mr. Robertson more than once, and also upon Captain Martindale.

32. Can you state the reasons that were given by the Government why they could not further interfere with your claim? On account of my signature.

33. On account of your having signed a receipt in discharge? Yes.

34. By Mr. Robertson: You have said that you were induced to sign the first receipt because you were under the impression that you had no claim? Yes.

35. Do you not remember upon the day after the accident my calling upon you at your house, and telling you that not only would the Government provide for your support during the time you were unwell, and pay for your medical attendance, but that they would make other provision for you? No doubt you might have said so, but it was so soon after the accident that I could not say, my memory will not enable me to say. I remember your telling me not to fret, but to get up as soon as I could, and that I should have every attendance and every comfort. You may have said the other, no doubt you did, but I did not quite recollect that, for if I had I should not have listened to the persuasions of any one to sign such a receipt.

36. My desire is to have it made clearly apparent by you that at the time of the accident the Government made you aware of your claim, independently of any promises made to you subsequently by Captain Martindale. You were aware that I represented the Government when I called upon you at the time of your illness? Yes; but I do not remember your saying I had any claim.

37. It seems that you received £50 in the first instance,—£5 a week for ten weeks? Yes.

38. You also received medical attendance? Yes.

39. That was paid by the Government, not out of the £5 a week? Yes.

40. You have stated that you received £20, and gave a receipt in full? Yes; £25.

41. £20 the first time? Yes; and £25 the next.

42. And you gave a receipt in full? Yes, I think it was for £26.

43. Will you say why you gave that receipt in full, without seeing a Member of the Government upon the subject—for instance, without seeing me who had made you a promise—if you thought

thought the sum insufficient? I did not think I should have been so long ill. I thought I should not have had to call upon the Government again for money, but that I should have got back my old pupils; and it is much more pleasant to labor and earn money for one's self than to be dependent on others. Finding I was not able to do this, I had to make another application.

Mrs. Frances
De Courcy.

21 Dec., 1859.

44. It seems you found you had made a mistake, and that you had been put to greater losses than you had anticipated, and you, therefore, applied to the Government for another sum—how much did you then apply for? I said something to enable me to get into business, as I was incapable of carrying on my profession.

45. Then the amount fixed was £25 was it not? That was afterwards. I called upon Captain Martindale and said "I find I cannot get back my pupils, my hand is getting better, but two fingers I cannot use at all." I then asked if he could render me any further assistance. "He said you have signed a receipt in full and I cannot do it—What do you want more?" I said something for a certain time to enable me to get into business. He said, "If you live in town do you think you can do better?" I said I would try, and asked him for a free ticket to go to and fro for a year, and a sum of money. He asked me what sum of money I should require, and I said £3 a week for a year, and also a free ticket. He said he could not give me £3 a week for a year, but that he would give me £2 a week for a quarter, and a free ticket for three months. I said I wished I knew who I should apply to, for I saw at the station that Captain Martindale held the office of Railway Commissioner, and I thought I should go to no one else but him. I had not applied to any friend first.

46. I think you have not answered my question;—you have alleged that your first receipt was given in ignorance of your claim upon the Government, but how was it that when you came to the knowledge of what your rights were and had consulted your friends, you then gave a second receipt in full upon receiving £25? Because I did not know that I was permanently injured, and I thought that having given one receipt I could not claim anything further, and that it was kind of Captain Martindale to give me a second sum after I had given him the first receipt.

47. You accepted the second £25 believing that you had no claim, and still believing you had not sustained permanent injury? Yes. I think no one would have a claim if they recovered, and at that time I hoped I should do so. I have no hope now; my sight is failing every day, and my whole system is shaken.

48. You may remember coming to me? I do.

49. And applying for another sum of money? Yes.

50. Do you remember my telling you that you had placed great difficulties in the way of my dealing with the matter, by in the first instance giving a receipt in full upon my authorising payment to you of £25, by afterwards giving another receipt in full on my authorising payment of another £25 in consequence of your statement that you had not understood your claim previously? Yes, I recollect that very well.

51. Then I think you told me you had no means of going on pending the meeting of Parliament? Yes, and you kindly advanced me £20.

52. I asked you how much money would carry you on for the time, did I not? Yes, and I said £20 would do—it would enable me to pay off a few of my little debts and to remove.

53. Did you receive that £20? Yes.

54. Did I then tell you that there was only one course open to you, which was to get one of the Members of the Assembly to move for a Committee to inquire into your claims? Yes, you did.

55. Because the Government could not give you any further sum of money without an expression of opinion by the Assembly, as you had signed two receipts? Yes; you have helped me in every way; indeed I believe you mentioned me kindly to Mr. Hart, the Chairman of this Honorable Committee.

56. You have stated that you need £150 a year, but the Committee have no means, beyond your own statement, of making a calculation as to the loss you have sustained, and the amount of compensation they should give you—can you state how many pupils you had, and the amount you received from them, at the time of your accident? I had six pupils in town—three of whom paid me three guineas a quarter for singing, and three who paid the same sum per quarter for music. I had seven pupils in the country who paid me two guineas a quarter each. I had also twelve dancing pupils who paid me a guinea a quarter each for instruction once a week. I was only beginning this class, and I have not received a quarter's payment from them, as the accident occurred during the currency of the quarter. I believe, had I been able to continue the class I should have earned a good deal more.

57. If I understood you rightly, I think you said £2 a week was what you would consider yourself entitled to? I do not say what I am entitled to; I say whatever I get I will use every means to obtain restoration to health. I will consult every medical man within my reach, for the sake of my family.

58. Reverting to the matter of the receipts, you do not mean that Captain Martindale attempted in any way to mislead you as to your claim? No; but he was acting for the Government, and he had no right to direct me as to what I should do. I do not believe that Dr. Gwynne knew I had any claim on the Government; for when he afterwards examined me he was sorry that he had advised me to sign; he was afraid a cataract would form in my right eye.

59. Captain Martindale, when he agreed to give you an amount which you thought sufficient, wished to have the matter deferred for some time, to enable him to get the authority of Government? I believe so; but I said I would go to Mr. Robertson, and he said Mr. Robertson was not at home, and I might have to wait three or four weeks, and that the Government might then grant what I required. I said, what was I to do for my family —

- Mrs. Frances De Courcy. 60. But Captain Martindale gave you money from the first? Yes, but I am speaking of after I got better.
- 21 Dec., 1859. 61. Assuming that the Committee were to come to the conclusion to grant you something more, in what way would you wish to receive it—in a sum of money at once, or so much a week? I would prefer to receive it in one sum.
62. Are you a widow? No; my husband is deranged, and that is another drawback to me, as I am obliged to send a little money home for his support.
63. *By the Chairman*: Is there any one who can give the Committee information about your position in life in Parramatta at the time of the accident? Both Mr. Oakes and Mr. Byrnes, who very kindly came to see me during my illness.
64. I suppose the medical men who attended you will be willing to give the Committee any information? Yes; they gave me a certificate; but Dr. Gwynne has made a mistake, and given me one child more than I have—he has given me six instead of five.
65. Have you any further statement you wish to make to the Committee? I do not recollect. I think all I have to say is stated in the petition.

WEDNESDAY, 8 FEBRUARY, 1860.

Present:—

MR. CLOSE, | MR. LODER,
MR. MORRIS.

JAMES HART, ESQ., IN THE CHAIR.

Gordon Gwynne, Esq., M.D., called in and examined:—

- G. Gwynne, Esq., M.D. 66. *By the Chairman*: Your name has been handed to the Committee by Mrs. Do Courcy as one of the medical men who attended her after the accident on the Parramatta Railway? Yes, I was.
- 8 Feb., 1860. 67. That was in July, 1858? In July, 1858.
68. Where did you first see her? I first saw her in Parramatta, at Mr. ———, a grocer, in that town.
69. Can you state the nature of the injuries she had sustained? I can. She had received a severe injury of the right arm—of the wrist joint—with rupture of the ligaments; she had also received a severe contusion and wound on the right side of the face, with fracture of the upper malar bone—the indentation is still perceptible; and an injury, also, of the second division of the fifth nerve. I attended her for some time after the accident, and with my friend and colleague, Dr. Rutter, had opportunities of seeing her until her recovery.
70. How long was she under your care? I can scarcely state, but to the best of my recollection, ten or twelve weeks. I regret to say that I consider her recovery not completed—far from it, and in all probability it is not likely to be.
71. Did the injuries she received prevent her following her profession? I should say undoubtedly so, to a certain extent.
72. I am speaking of the time of the accident? Unquestionably.
73. Was she compelled to relinquish her business altogether? Entirely so—she was perfectly disabled.
74. Did you at any time report to the Government upon her condition? Periodically—every three or four days—twice a-week.
75. Can you state now whether her injuries were of a temporary nature, or whether they are permanent? Decidedly the latter.
76. Do you think that the dislocation of her wrist has the effect of preventing her instructing pupils in music? Had it been a simple dislocation it would not, but it was worse—it was a laceration of the ligaments of the wrist.
77. The effect of your evidence would be, I apprehend, that she could not play with the facility she previously did? Precisely so.
78. Can you say whether the injury has made her very nervous? Doubtless it has.
79. Has it affected her mind in any respect? That is a question I should answer in the affirmative. I think it has. She is an utter stranger to me, although I have seen her from time to time since she has been taken from under my medical superintendence; and I do not allude to her domestic circumstances, but she has a large family I know, and having nothing to sustain them, this, doubtless, with the severe injuries which she has sustained, has preyed upon her mind.
80. Were you at first of opinion that her injuries were of a temporary character? In the first instance I was.
81. That is not your opinion now? No it is not. In the hurry of attending so many patients at the time of the accident, I could hardly give an opinion as to what the ultimate result might be, because there is always great uncertainty in such cases.
82. You gave her a certificate? Yes. I gave her a certificate jointly with the other medical attendant. (*The Chairman read the certificate from the printed papers.*) That is precisely what I stated.
83. And you are still of the same opinion? I am. I see no reason to alter it. I think it will always be a drawback to her, and that she can never follow her usual avocation with the energy she has done. I think she is in a great measure incapacitated from getting her living as she has hitherto done.

SELECT COMMITTEE ON THE PETITION OF MRS. DE COURCY.

84. In your opinion, is she a person of respectability and of good education? As I have stated, she is an utter stranger to me, but I should say she is a woman of good family, and, as far as my judgment goes, I think of good education—highly so. G. Gwynne,
Esq., M.D.
85. *By Mr. Close*: I believe Mrs. De Courcy has been an instructress of music? Yes. 8 Feb., 1860.
86. Are you aware whether it is absolutely necessary for an instructress of music to play, and to use her hands? I should say decidedly so.
87. *By Mr. Loder*: To what extent do you consider the injuries permanent? At the time of the accident we had fifteen or sixteen sufferers brought up at the same time, and gave immediate relief to the most urgent cases, but when I saw Mrs. De Courcy I could not positively ascertain the extent of the injuries she had received, and could not tell what the result would be.
88. To what extent do you now consider that the injuries received by her are permanent? She will never recover the free use of her wrist, and I think she will never get the use of the right side of her face, she has not proper feeling in it, nor can she masticate on that side, and as she is a vocalist she will be unable to exercise her peculiar power as she has previously done.

Robert Champley Rutter, Esq., M.D., called in and examined:—

89. *By the Chairman*: I believe you were the colleague of Dr. Gwynne in attending the persons injured by the accident on the Parramatta Line of Railway? Yes. B. C. Rutter,
Esq., M.D.
90. Did you in the course of your professional duty attend upon Mrs. De Courcy? Yes. 8 Feb., 1860.
91. At the request of Government? Not at the request of any one in the first instance; it was previous to any requisition being made.
92. Will you state to the Committee what injuries were received by Mrs. De Courcy? She was laboring first of all under severe contusion of the face which it appears has left partial paralysis; she was also laboring under severe bodily injury from the shock, and from rupture of the ligaments of the carpus—the tendons of the wrist.
93. Has her nervous system been affected by the accident? I think it has. I have seen her a great deal since then, and though I was not acquainted with her previously, I had seen her.
94. How long was she under your care? I may say almost from the time of the accident to the present time I have been in the habit of seeing her.
95. Do you know whether she lost any of her teeth? I think she did. There was a fracture of the zygoma or arch of the face, which has left partial paralysis from that time.
96. Do you think the injuries she sustained are of such a permanent nature that she cannot follow her usual occupation? I thought so at first, and am still of that opinion; she cannot manipulate as she previously did.
97. Supposing Mrs. De Courcy was a vocalist, would the injuries affect her very much in that respect? I think so; in fact she has complained to me that it has done so, and I am satisfied in my own mind that she cannot sing as she used to do.
98. Were you acquainted with her previous to the accident? Slightly.
99. What was her position? She was a teacher of music; she had been laboring under some severe domestic privation, and was much respected by a number of persons who were acquainted with her, and by whom she was employed professionally as teacher of music.
100. Is she, in your opinion, a person of education? Yes, I believe she is a person of respectability, and of a certain degree of education. In fact she was obtaining her livelihood, and supporting her family, as a teacher of music.
101. Do you think that she will be always more or less affected? I think permanently so. There has been a fracture of the arch of the face, and there will always be that species of paralysis which will prevent her from being able to perform in the same way that she did before.
102. Are you at all acquainted with the reasons that induced her to leave Parramatta? I believe she left in consequence of not having sufficient pupils in Parramatta. After the accident many of her old pupils obtained other teachers; she in fact was in a great measure incompetent, and I believe Captain Martindale held out some hopes to her, or something of the kind.
103. *By Mr. Close*: You have said paralysis of the face will be permanent? Yes.
104. Will the injuries of the wrist be also permanent? Yes.
105. *By the Chairman*: Have you any further information you can afford to the Committee? No other of any importance to the Committee than this, that I think the whole of these injuries are permanent, with the exception of the shock she sustained; independently of the injuries she sustained, she was confined to her bed many weeks in consequence of the shock.
106. How long did she keep her bed in consequence of her injuries? I think she was four or five weeks before she could get out of bed. Besides the injuries mentioned she had several very severe contusions.

WEDNESDAY,

WEDNESDAY, 15 FEBRUARY, 1860.

Present:—

MR. CLOSE, | MR. ROBERTSON.

JAMES HART, Esq., IN THE CHAIR.

Captain Ben Hay Martindale, R.E., called in and examined:—

Captain B. H.
Martindale,
R. E.
15 Feb., 1860.

107. *By the Chairman*: Can you give the Committee any information respecting the claim made upon the Government by Mrs. De Courcy, for compensation? Mrs. De Courcy was one of the sufferers by the accident of 10th July, 1858. Soon after the accident, I saw Mrs. De Courcy, who was suffering from dislocation of the wrist of the right hand, and other injuries, by one of which her eyesight was affected at the time. I ascertained from Mrs. De Courcy that she was then making an income of about £150 a year, and, with the sanction of the Government, who directed that the sufferers should be in want of nothing, I arranged to make her an allowance, as a temporary measure, at the rate of £5 a week. Under that arrangement she received, up to the 14th September, £45. On the 24th September, I received a joint letter from Drs. Gwynne and Rutter, stating that the individuals injured were all convalescent, and required no more medical treatment. Drs. Gwynne and Rutter were the medical gentlemen in attendance by direction of the Government. In consequence of that letter, I went with Dr. Gwynne, on the following day, and saw Mrs. De Courcy, and being informed by Dr. Gwynne that she would very shortly be able to resume her profession, and was then convalescent, I arranged to pay her £25 as a final payment on the part of Government, making £70 in all. Subsequently, I received a letter, dated 19th October, from Mrs. De Courcy, stating that she was not satisfied with the payment, and desiring to have two pounds a week for a year, and a free ticket on the railway for the same time. I saw Mrs. De Courcy subsequently two or three times, and then arranged that she should receive a further sum of £26 in all, with which she, at the time, expressed herself satisfied. I addressed a letter to her on the subject, when the money was paid, which states the circumstances. [*The witness read the letter. Vide Appendix A.*] Subsequently, I received a further letter from Mrs. De Courcy, dated 27th June, 1859, stating that the injuries she had received from the railway accident had proved permanent, and had prevented her getting her living as she formerly had done by teaching music; and praying that, under these circumstances, the Government would see fit to give her such further compensation as they thought her case deserved.

108. Did you make any report to the Government upon that further application? I sent in a report to the Government, dated 14th July, 1859.

109. That report sets out very clearly the facts of the case? That report sets out the facts of the case in detail.

110. In making the payments you did to Mrs. De Courcy, did you do so under the impression that her injuries were temporary? I did.

111. Will you be good enough to let the Committee have a copy of that report? I will send in a copy. [*Vide Appendix A.*]

112. In the case of Mrs. Want, did the Government contest their liability to make some compensation to the sufferers? No.

113. *By Mr. Robertson*: There was other correspondence after this? Yes; subsequently I received a communication from the then Secretary for Lands and Public Works directing that, pending the final settlement of Mrs. De Courcy's claim to compensation, she should receive a sum of £20, which was accordingly paid her; and Mrs. De Courcy has, since the date of her letter of the 27th June, 1859, received in all, on account of any compensation that may be awarded her, £26, by order of the late Secretary for Lands and Works, and £20 by order of the present Secretary for Public Works.

114. Will you be kind enough to tell the Committee how you arrived at the conclusion that this lady was earning £150 a year? Mrs. De Courcy gave me the details at the time, of the amount she was earning.

115. When you say you ascertained that she was making an income of £150 a year, you mean that you ascertained it from Mrs. De Courcy's statement? Entirely so.

116. There were two receipts given by Mrs. De Courcy? Yes.

117. The first no doubt was given by Mrs. De Courcy when she was under the impression that her injuries were temporary, but was that the case with respect to the second? I think so; the date of the first receipt was 25th September, 1858; on the 19th October, which is some three weeks later, Mrs. De Courcy again wrote, stating "The object of my application to you is to beg you will be so good as to allow me £2 a week, and a free railway ticket for twelve months; at the end of which time, if my hand should not be quite restored, I should have a good connection formed." I understood from that, that Mrs. De Courcy's impression was, that the injuries she had sustained were temporary.

118. When that matter came up to me the second time, which you no doubt remember, I felt it my duty to object, on the score that there had been a receipt given in full; and it was with very great reluctance that consent was given to open the case again. No doubt you will remember that it was only on the statement that this would be a final settlement of the matter, that anything further was done? That is borne out by the letter I have read. I say, "I felt justified in requesting the sanction of the Government to my doing this, notwithstanding your receipt in full of all demands, in consequence of your statement that you have as yet been unable to obtain pupils in place of those which you lost by the
" railway

“ railway accident ; that this will enable you to commence a connection in Sydney, and that its receipt, together with the free pass enclosed, will entirely satisfy any demands which you may consider yourself to have had upon the Government.”

Captain B. H.
Martindale,
R.E.

119. Did Mrs. De Courcy consent to that arrangement before the money was paid her ? Yes, it was a clear understanding at that time ; but, as I understand it, the case now raised by Mrs. De Courcy is, that the injuries she then conceived to be temporary, she has since found are permanent, that they have since prevented, and do at this time prevent, her getting her livelihood.

15 Feb., 1860.

120. How many months was it after the accident that Mrs De Courcy received the second money and gave the second receipt in full ? I have not the date with me ; somewhere about four months ; but I did not then understand the injury to be permanent. I had no intention of compensating Mrs. De Courcy for a permanent injury, such as to prevent her from obtaining a livelihood for herself and family. She was only rendered temporary assistance, such as it was presumed would enable her again to support herself and family by her profession.

121. How much has she been paid altogether ? She has been paid up to the 11th November £96 ; and since then she has been paid £45 on account of any compensation that may be awarded her. On the 25th September, when the first receipt was given, I had a positive assurance from Dr. Gwynne that Mrs. De Courcy was convalescent ; on the second occasion when the money was given I had no communication with a medical man. It was given on Mrs. De Courcy's statement, that she continued to suffer from her injury, and was unable to get together a connection so as to make a living.

122. It seems to me that £96 has been paid to Mrs. De Courcy within four months, irrespective of the medical attendance which was paid for by Government ? Yes.

123. That being the case, is it not apparent that it must have been contemplated that she would suffer from the effects of her injury for some time, as the sum received by her within the four months was at the rate of £300 a year ? The money was paid in this way : Mrs. De Courcy received at the rate of £5 a week up to the first final payment. I then gave her a sum of £25 to close the matter, and discontinued the payment of £5 a week. By her letter of the 19th October, Mrs. De Courcy wished to be allowed £2 a week for twelve months, and a free pass for twelve months also ; in lieu of that she was allowed £26, or £2 a week for three months, and a pass for six months, which was subsequently extended for some months more.

124. Where is the second receipt ? With the rest of the office vouchers—with the Auditor General.

125. *By Mr. Close :* Did you give £96 on condition that she signed receipts beforehand ? The final payment was so made.

126. Then she signed a receipt free of all demands ? Yes.

127. *By the Chairman :* Are you aware that Dr. Gwynne had informed Mrs. De Courcy that she had no claim whatever upon the Government, and that the payment by you of £25 was more an act of charity than any thing else ? I am not aware of it, and I do not believe such an impression could have existed in Mrs. De Courcy's mind, for I told her I was acting for the Government.

128. Did you tell her the Government was not liable to make her any compensation ? No.

129. Was the question of the liability of Government ever raised ? Not in this case.

130. Can you furnish the Committee with copies of all the receipts signed by Mrs. De Courcy ? Yes. [*Vide Appendix B.*]

131. She has not signed any release, any bond, beyond the receipts ? No.

132. *By Mr. Close :* Do you think Mrs. De Courcy would have voluntarily signed these receipts unless it had been expected from her that she should do so ? Mrs. De Courcy was not told that she would not be paid any money unless she signed these receipts.

133. I thought you told her that she would not get the money without she gave a receipt in full ? Clearly I made the arrangement, that for the receipt of this last sum of money, she should sign a receipt in full of all demands upon the Government.

134. *By Mr. Morris :* Mrs. Want, when Mrs. De Courcy was in communication with you, had raised no claim against the Government ? Mrs. Want had raised a claim, but the question was not settled.

135. Had the Government agreed to refer her claim to arbitration ? I must refer to my papers to ascertain that.

P.S.—On reference, I find that the decision of the Government to refer Mrs. Want's claim to arbitration was communicated to me by a letter, dated 28th October, 1858 ; and was, therefore, subsequent to the first, but prior to the second, receipt given by Mrs. De Courcy.

APPENDIX A.

*Railway Branch,
Department of Internal Communication,
Sydney, 14 July, 1859.*

Sir,

I have the honor to bring under the notice of the Honorable the Secretary for Lands and Public Works a claim from Mrs. De Courcy, one of the sufferers by the railway accident of 1858, for further compensation.

The injuries received by Mrs. De Courcy were dislocation of the wrist of her right hand, and severe contusion on the head and right eye, by which her eyesight has been permanently injured, and the use of her wrist impaired.

These

Captain B. H.
Martindale,
R. E.
15 Feb., 1860.

These injuries were the more serious to Mrs. De Courcy, owing to her means of livelihood arising from the instructions she gives in music; and they deprived her at the time of her pupils, whom she has never been able to regain.

Mrs. De Courcy has a family of five children, entirely dependent upon her for support, her husband being in a Lunatic Asylum.

After the accident occurred, Mrs. De Courcy received in common with the other sufferers all requisite medical attendance at the cost of the Government, and for the support of her family a sum of £5 per week.

At that time she informed me that she was making an income of £150 a year.

On receiving a report in September last from Dr. Gwynne, who was in attendance upon Mrs. De Courcy, that she was convalescent, and able once more to renew the practice of her profession, I arranged with Mrs. De Courcy that she should receive a free first-class pass upon the railway between Sydney and Parramatta for six months, and a sum of £25 in full of all further claim upon the Government; and this arrangement was carried out.

At this time Mrs. De Courcy had received from the public funds a sum of £45, so that the total amount paid was £70.

Subsequently, in the month of November, Mrs. De Courcy called upon me to state that she was not succeeding in earning a livelihood at Parramatta, but hoped to do so in Sydney; she required, however, a few pounds to enable her to settle there.

Having verbally communicated with the Secretary for Lands and Public Works on the subject, I paid Mrs. De Courcy a further sum of £26, which at the time fully satisfied her, and for which she gave a second receipt in full of all demands against the Government; and her free pass has been continued up to the present time, and extended to Campbelltown. I propose to continue it until her claim for further compensation is settled. I am bound, however, to say that at the time I made this arrangement I did so under the impression that the injuries received by Mrs. De Courcy were only of a temporary nature, and not such as would prevent her fully exercising her profession as a music mistress.

By the enclosed medical certificates of Drs. Gwynne and Rutter it will be seen that these injuries have proved to be of a permanent character, and they are stated by Mrs. De Courcy to be almost a complete hindrance to her obtaining pupils; and she has verbally stated that she considers £1,000 would only be fair compensation for her being deprived of the means of obtaining a livelihood by the injuries she has sustained.

The circumstances of this case, are, I think, such as to entitle Mrs. De Courcy to compensation in addition to that which she has already received. What additional sum should be paid appears to me to be a question for the decision of the Government.

I take leave to observe, that an early settlement of this matter is most desirable, Mrs. De Courcy being in such distress that I took upon myself the responsibility of advancing to her on the 23rd ultimo a sum of £5, to prevent an execution being levied on her household goods.

The Under Secretary
For Lands and Public Works,
&c., &c., &c.

I have, &c.,
B. H. MARTINDALE.

Mrs. De Courcy having accepted a sum of money in full of all demands, I regret that I cannot recommend the Government to re-open this matter in form.

JOHN R.
21 July.

The five pounds already paid may be sanctioned. For the information of Captain Martindale.

B. C.—23 July.
M. F.

Parramatta, June 18, 1859.

I hereby certify that Mrs. Frances De Courcy was one of the sufferers by the railway accident that took place on the 10th of July last, and that she is materially and permanently injured in the hand and eye, to such a degree as to prevent her successfully following her usual occupation.

ROBERT CHAMPLEY RUTTER,
M.R.C.S., England, &c., &c.

Parramatta, June 18, 1859.

I hereby certify that the bearer of this, whose name is mentioned in the margin, was one of the sufferers from the late railway accident on the Sydney and Parramatta line in the month of July, 1858 (10th day of month); her injuries were severe, and I regret to say the injuries she received does, and will always be a great drawback to her in following her occupation for her support, and six young children, and is a case of grave commiseration and sympathy.

GORDON GWYNNE,
M.R.C.S.L. & L.A.C.M.N.S.W., &c.

Hunter-

Mrs. Frances
De Courcy.

Hunter-street, Parramatta,
October 19, 1858.

Captain B. H.
Martindale,
R. F.

Sir,

Advised by friends, I take the liberty of addressing you in order to plead my unfortunate case.

15 Feb., 1860.

Half an hour after I signed the receipt on account of the railway accident, I felt twenty-five pounds would not be of much use to so large a family; namely, five children, particularly as I have not the perfect use of my hand. I came to your office for the purpose of telling you, but the porter said you were absent and would not return for some weeks, which obliged me to wait until now.

The object of my application to you is to beg you will be so good as to allow me two pounds per week and a free ticket on the railway for the space of twelve months, at the end of which time, even if my hand were not quite restored, I should have a good connection formed. Trusting that, with your usual gentlemanly feelings, you will not take advantage of my want of knowledge of business in signing the receipt, but take into your kindest consideration the loss of my connection, and also of the appeal in the paper, if it were continued, with full confidence in your conscientious decision,

Allow me, &c,

F. DE COURCY.

Railway Branch,
Department of Internal Communication,
Sydney, 11 November, 1858.

Madam,

In reference to your letter of the 19th ult., and your subsequent interview with Mr. Rac and myself upon the same subject, I have now the honor to enclose you a cheque for £26, being £2 per week for three months, and also a free pass upon the railway between Parramatta and Sydney, for yourself or daughter, for six months.

I have felt justified in requesting the sanction of the Government to my doing this, notwithstanding your receipt in full of all demands, in consequence of your statement that you have, as yet, been unable to obtain pupils in place of those which you lost by the railway accident, that this will enable you to commence a connection in Sydney, and that its receipt, together with the free pass enclosed, will entirely satisfy any demands which you may consider yourself to have had upon the Government. Requesting the favor of an acknowledgment,

I have, &c.,

B. H. MARTINDALE.

Mrs. De Courcy, Parramatta.

Department of Lands and Public Works,
Sydney, 3 September, 1859.

Sir,

I am directed by the Secretary for Lands and Public Works to request that, pending the final settlement of Mrs. De Courcy's claim to compensation for the injuries sustained by her on the occasion of the railway accident of last year, you will be so good as to make to her a further payment of twenty pounds, taking from her a receipt in the form appended hereto.

I have, &c.,

MICL. FITZPATRICK.

The Commissioner for
Internal Communication.

Received from the Commissioner of Railways the further sum of twenty pounds in connection with the Railway Accident of July, 1858, and the injuries I received therefrom.

Sydney,

MR. CLOSE, | MR. LODER,
MR. MORRIS.

AUGUSTUS MORRIS, ESQ., IN THE CHAIR.

Robert Thomson, Esq., called in and examined :—

136. *By the Chairman*: You are an actuary in the city of Sydney? I am, and Secretary R. Thomson, to the Mutual Provident Society. Esq.
137. Will you state what would be the value of an income derived from personal exertions of £150 a year to a person of the age of thirty-four? Under the circumstance of such income being apparently pretty certain, although dependent upon one's own exertions, I should say it might fairly be reckoned as equivalent to a permanent life annuity of £100 a year. 24 Feb., 1860.
138. What would be the value, to a person of average health, thirty-four years of age, of £100 a year? If I may be permitted to allude to another case, that of Mrs. Want, where I was called in as a witness by the arbitrators. They went upon the supposition of interest accumulating at six and a-half or seven per cent., and I think that is a fair rate to calculate at. I will state the value of an annuity at six per cent. and at seven per cent. At six per cent. it would be rather more than twelve and a half years' purchase, and at seven per cent. about eleven and a third.
139. What would purchase a life annuity of £50 a year in your office, or in any of the offices in town? Probably about £720.

Mr. Patrick Hayes called in and examined :—

140. *By the Chairman*: You are acquainted with Mrs. De Courcy? I am. Mr. P. Hayes.
141. Have you been for any length of time? Between two and three years.
142. Do you know anything with reference to her proficiency as a teacher of music? I am no great judge, but my daughter, who was under her instruction, says she was a very good teacher. 24 Feb., 1860.
143. She gave you satisfaction? Every satisfaction.
144. What did she teach your daughter? The piano.
145. Only the piano? Only the piano.
146. Do you know that she is now disabled from giving instruction on the piano? From my daughter's account, she was not so efficient in her teaching after the accident.
147. Have you any knowledge of music yourself? None whatever. I merely speak from what my daughter says, and she is naturally gifted with respect to music.
148. What sum per quarter did you pay for your daughter? £2 a quarter; but Mrs. De Courcy was more reasonable with me than with others, because she generally stopped at my place when coming from Sydney, before she came to live at Parramatta. She had also commenced a dancing school at Parramatta.
149. Do you know what her general reputation as a teacher was? Merely from hearsay, from Miss Williams and others, that it was very good. She was teaching the daughters of Mrs. Williams, at the hotel, at the time of the accident, and she had a very fair school at her house.
150. Since her accident she has never been able to follow her usual pursuits? She has never been able to get a school together since.
151. *By Mr. Close*: She never taught your daughter after the accident? She did, but my daughter said it was useless.
152. Did your daughter say that her deficiency arose from mental or from bodily incapacity? I never asked, but she said it was useless for me to pay any more money to her, she could not perform so well as she had done.
153. Or could not teach? She could not perform on the instrument so well.
154. *By the Chairman*: Have you understood that Mrs. De Courcy was well acquainted with the theory of music? Yes, from those who were judges. My daughter was taught at Subiaco, and is a very excellent musician herself.
155. From what you know of her, are you able to say whether she bore an excellent character? A very excellent character. She was an indefatigable woman in her business, and has a large family.

SEPARATE

SEPARATE APPENDIX.

A.

164, *Phillip-street*,
23 *February*, 1860.

Sir,

At the request of Mrs. Frances De Courcy, I beg to inform the Committee, through you, that I have been cognizant of Mrs. De Courcy's circumstances for the last two years and a half. Prior to the Railway Accident she taught music in several respectable families in Sydney and Parramatta, and at the latter place she had also a dancing class and a day school for small children. From these various sources she derived a comfortable livelihood for herself and family of five children. Of Mrs. De Courcy's respectability there can be no doubt, and I believe those who have availed themselves of her services would, from their own observation of her conduct, bear me out in this assertion. The severe injuries she received through the accident of course prevented Mrs. De Courcy from attending her pupils, and in most cases they were provided with other teachers. I may state, as bearing upon the case, that immediately after the accident a subscription list was opened in Sydney, and £20 collected for Mrs. De Courcy and her family, but at the desire of the Railway Authorities it was closed, on the understanding that provision would be made for her present wants; several subscriptions were returned, and others refused. I believe, in fact I know, Mrs. De Courcy is at the present time in very distressed circumstances, which I believe to have resulted from the injuries she received rendering her incapable of resuming the avocation of a teacher of music.

I remain, &c.,

FRANCIS C. BREWER.

James Hart, Esq., M.L.A.

I omitted to state that Mrs. De Courcy's income, at the time of the accident, could not have been less than £150 per annum.

Legislative Assembly.

NEW SOUTH WALES.

GROSE VALLEY.

(REPORT ON THE SURVEY OF.)

Ordered by the Legislative Assembly to be Printed, 20 December, 1859.

*Department of Internal Communication,
Sydney, 20 December, 1859.*

The Commissioner submits, for the information of the Secretary for Public Works, the accompanying Report received yesterday from Serjeant Quodling, Royal Engineers, in charge of the men of the Royal Engineers employed upon the Survey of the Grose Valley. It will be seen from the Report that "a considerable seam of good Coal is outcropping at a point on the River Grose, distant twenty-three miles from its confluence with the River Nepean and nineteen miles from the Darling Causeway, and that there is a large quantity of land available for cultivation, commencing about midway on the River Grose, and extending upwards for several miles."

The Report also states that the cutting and forming of the track will probably be completed by the 31st instant, and the whole of the plans and sections by the 31st proximo.

B. H. M.
20/12/59.

*Parramatta,
19 December, 1859.*

Sir,

I have the honor to report, for your information, that the cutting and forming of the track from the confluence of the Rivers Nepean and Grose to Sheppard's Toll Bar, on the Western Road, will be completed before the end of the year; also, that the surveying and levelling will be finished by about the 14th proximo, before which period I hope to be able to submit a tracing of the remaining portion of the River Grose, track, &c., as also a section of the latter. The whole of the plans and sections will probably be completed by the 31st proximo.

I have also the honor to report, that a considerable seam of good Coal is outcropping at a point on the River Grose, distant twenty-three miles from its confluence with the River Nepean, and nineteen miles from the Darling Causeway, and that there is a large quantity of land available for cultivation, commencing about midway on the River Grose, and extending upwards for several miles.

I have, &c,
HENRY QUODLING,
Serjeant, R.E.

The Commissioner for
Internal Communication.

1859.

Legislative Assembly.

NEW SOUTH WALES.

QUEEN CHARLOTTE VALE ROAD.

(PETITION OF CERTAIN INHABITANTS OF BATHURST.)

Ordered by the Legislative Assembly to be Printed, 5 October, 1859.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the Inhabitants of the Town of Bathurst, and the proprietors of land situated on and in the vicinity of the Southern Road leading to the Town of Bathurst,—

SHEWETH :—

That the trade of the Town of Bathurst is seriously inconvenienced, and much loss is entailed on settlers and others, in consequence of the bad, and frequently impassable, state of the Southern Road leading to the town, and commonly known as the “ Queen Charlotte’s Vale Road.”

That the Queen Charlotte’s Vale Road is one of the most important thoroughfares leading to the Town of Bathurst, second in traffic only to the Main Road leading to Sydney, as it connects the town with an extensive and populous Agricultural, Pastoral, and Mining District, and is the principal traffic road by which the largest portions of Farm Produce, Building Materials, and Firewood, find their way to a market ; at the same time, that the said road is the Mail road to Rockly, the Tuena, and other Postal Establishments.

That repairs have for several years been made at the expense of settlers in the vicinity of the road, assisted by the inhabitants of Bathurst ; a very limited amount of Public Moneys having been expended on the road.

Your Petitioners, therefore, humbly pray that your Honorable House will be pleased to take this matter into your consideration.

And your Petitioners, as in duty bound, will ever pray, &c.

[*Here follow 401 Signatures.*]

NEW SOUTH WALES.

INTERNAL COMMUNICATION.

THIRD REPORT

TO

The Honorable the Secretary for Lands and Public Works,

ON THE

INTERNAL COMMUNICATION OF NEW SOUTH WALES,

BY

CAPTAIN MARTINDALE, ROYAL ENGINEERS.

COMMISSIONER FOR INTERNAL COMMUNICATION,

As. Ins. C. E., MEM. Ins. M. E.

Presented to both Houses of Parliament, by Command.

SYDNEY:

THOMAS RICHARDS, GOVERNMENT PRINTER, PHILLIP-STREET.

1859.

1859.

INTERNAL COMMUNICATION OF NEW SOUTH WALES.

THIRD REPORT TO THE HONORABLE THE SECRETARY FOR LANDS AND PUBLIC WORKS,
BY CAPTAIN MARTINDALE, ROYAL ENGINEERS.

*Department of Internal Communication,
Sydney, 1 October, 1859.*

SIR,

I have the honor to lay before you the following Report on the Construction and Management of the Railways, Roads, and Electric Telegraph of this Colony, for the year 1858, and for the first half of the present year.

RAILWAYS.

Towards the close of the first session of 1858, the Government Railways Act, 22 Victoria, No. 19, was passed, and its provisions came into force on the 1st of December of that year. Under it there is substituted for the Board of three Commissioners—who by the previous Acts possessed powers independent of the Government, but which they were gradually ceasing to exercise—one Commissioner, charged with the duty of carrying into effect the provisions of the Act, subject to the Regulations of the Governor and Executive Council. The clauses in the Act of most general interest are those which provide, that previous to the construction of any future line of Railway the plans, sections, and books of reference shall be approved of by a resolution of both Houses of Parliament; which transfer from the Commissioner to the Governor and Executive Council the duty of fixing the rates to be paid by those using the lines; and which determine that the purchase money or compensation to be paid under any of the provisions of the Act shall be estimated according to the value of the lands, estate, or interest affected at the time notice was given of such lands being required, and without reference to any alteration in such value arising from the establishment of the Railway.*

In the first Session also of the year 1858, the Parliament voted a sum of £712,000, to be raised by loan for Railway Works. This amount, together with that of £107,000 voted in 1857, made provision for extending the Northern Line to Singleton, the Western to Penrith, and the Southern to Picton; for procuring rolling stock for the two latter lines; and for the construction of a tramway along Pitt-street to connect the station at Redfern with Sydney Cove.

A Select Committee also sat to enquire into the desirability of constructing a branch from the Western Line to Windsor; and after hearing evidence reported favorably. Should, however, the Railway to Bathurst be carried along the Valley of the Grose, the contemplated branch would be unnecessary. Otherwise such a line, if constructed, and worked in connection with the existing lines, would probably prove self-supporting.

AUTHORIZED EXTENSIONS.

Immediately after the necessary funds were voted, the working surveys, plans, sections, and books of reference, of the authorized extensions were put in hand. During their progress great improvements have been effected upon the trial lines shewn on the lithographed plans laid before Parliament.

Upon

* As much misapprehension has been found to exist in reference to the settlement of claims for lands taken for Railway purposes, I have inserted an explanatory statement upon the subject in the Appendix, Paper No. 1, page 22.

Upon the Southern Line between Menangle and Picton, which passes through a difficult country, the numerous curves of 15, 20, and 25 chains radius have been converted into curves with a radius of 30 chains, which is the minimum, except in the case of three curves in the immediate vicinity of the Picton Station; and the gradients have been generally altered from 1 in 70 to 1 in 100.

On the Western Line, between the Blacktown Road and Penrith, a straight line has been substituted for several curves.

On the Northern Line, while the works have been lessened, the curves and gradients have been throughout improved by a deviation in the general direction of the line; the minimum radius of any curve being now 50 chains, and the steepest gradient 1 in 80.

The whole of the lines have been proclaimed, and the owners and tenants interested having, in almost every case, with great courtesy waived their right to prevent the lands taken being entered upon at once, the works have been generally commenced immediately after proclamation, and are now everywhere in progress.

The following is the order in which the lines have been proclaimed:—

Great Western Railway—from Parramatta Station to Toongabbee Creek, a distance of 3 miles and 5 chains, on the 9th September, 1858; thence to the Blacktown Road, 5 miles 25 chains, on the 12th October following; and to Penrith, 8 miles 25 chains and 64 links, on the 5th July, 1859.

Great Southern Railway—from Campbelltown to Menangle, $5\frac{3}{4}$ miles, on the 4th November, 1858; from Menangle to Douglas Park, 6 miles 42 links, on the 26th July, 1859; and from Douglas Park to Picton, a distance of 7 miles 79 chains and 58 links, on the 9th August, 1859.

Great Northern Railway—from West Maitland to Lochinvar, 6 miles 10 chains, on the 4th November, 1858; from Lochinvar to Black Creek, 9 miles 10 chains, on the 16th August, 1859; and from Black Creek to Singleton, 14 miles 10 chains, on the 20th September, 1859.

Tenders for the construction of the first section of the Western Line were called for in the usual manner, on the 12th October, 1858; but in consequence of the pressure for employment, arising from the failure of the Rockhampton Gold Fields, these advertisements were, by direction of the Government, immediately withdrawn, and an agreement entered into with Mr. Gibbons for the construction of the works as far as the Blacktown Road. They were commenced on the 20th October, 1858, and, it may be anticipated, will be completed early next year, when this section of the line can be opened for public traffic.

In addition to the great accommodation which a station within the town of Parramatta will afford the public, this line will, where it crosses the Blacktown Road, at once bring a station within 13 miles of Windsor and Richmond.

Under a similar pressure for employment the Government directed that the Northern Line, between Maitland and Lochinvar, and the Southern Line, from Campbelltown to Menangle, should be constructed by the Commissioner direct. The works were accordingly commenced on the 15th November, 1858, and on the 17th March, 1859, respectively; and the length to Lochinvar will be completed early next year.

An agent* with full powers to act for Sir S. M. Peto, Brassey, and Betts, having arrived in this Colony on the 24th March last, the Government, in compliance with the decision communicated to Sir S. M. Peto & Co., by the Commissioner's letter of the 11th August 1858, entered into negotiations with him, which resulted in contracts being made with that firm for the construction of such portions of the authorized extensions as had not been arranged for previous to his arrival, including therein the section from Campbelltown to Menangle already referred to.

The principal terms in these contracts are, that the works are to be executed under schedules of prices, and paid for in cash or (at the option of the Government) in debentures issued at 98, bearing interest at 5 per cent., and terminable in 25 years, and that the whole of the lines are to be completed not later than the 21st June, 1861.

The

The schedule of prices up to formation level is similar to that agreed upon with Mr. Gibbons for the Western Extension.

Mr. Rhodes has charge of the Southern and Western Lines, and a second agent,* having also full powers, of the Northern Line.

The rails, chairs, &c., for the authorized extensions were ordered from England in September and October, 1858. The whole are contracted for, and are being made and shipped as rapidly as vessels can be found to bring them; considerable difficulty is however experienced in procuring ships with sufficient rapidity, and especially for conveying direct to Newcastle the rails required for the Northern Line, but arrangements have been made for so sending about 1,000 tons.

Captain Galton, R.E., Secretary to the Railway Department of the Board of Trade, has, with the sanction of the Home Government, gratuitously undertaken for this Government the making of contracts for and the inspection of the Railway materials ordered; the arrangement proposed being that the entire cost of making contracts and inspection should not exceed 1 per cent. of the value of the articles procured. It seems probable, however, that in some cases this amount will not prove altogether sufficient to cover the expenses necessarily incurred. The position occupied by Captain Galton, and his long experience in Railway matters render it a source of satisfaction that he should have undertaken so important a duty for the Colony.

THE PITT-STREET TRAMWAY.

In the vote of £712,000 already referred to was included a sum of £7,500 for the construction of a tramway along Pitt-street, to connect the Railway Station at Redfern and Sydney Cove. †

My idea in submitting this work for the favourable consideration of the Government, by my letter of the 8th March, 1858, was to avail myself of the rails and other means at hand to get rid of a great public inconvenience, in the cheapest manner, especially as I could entertain no hope that funds could be found to carry out (even were it altogether desirable) the far more expensive scheme of extending the Railway to and erecting a station in Hyde Park, and thence continuing the line to the Circular Quay; and as I felt certain that the present position of the terminus at Redfern operated prejudicially upon the success of the Railway.

FURTHER EXTENSIONS.

When the lines to Singleton, Penrith, and Picton, have been completed and opened, it may be reasonably anticipated that they will be found to extend sufficiently far into the country to induce carriers and others to avail themselves of them, in order to save time and expense, and the more so as their terminal stations will be within easy distances of the main roads. As this anticipation is realized there is every reason to think that the lines will, after a reasonable time, cover not only their working expenses, but the interest of the capital sunk in their construction.

Before, however, any further extensions are undertaken, the country should be thoroughly explored ‡ with the object of determining the general direction of the future lines of Railway, and such surveys at least completed as to make sure that any extensions undertaken will form part of the general scheme; for it may yet prove that the great lines of Railway in New South Wales will run rather north and south than east and west, communicating at intervals by diverging lines with Sydney and the Harbours on the coast; and although the Government have decided as a principle, that the interests of existing townships and of the population around them are to receive the fullest consideration, yet this, as I understand, is to be subject to the conditions that the lines adopted be the best for the country generally and fairly practicable and economical.

An

* Mr. Willcox.

† A memorial, very respectably and numerously signed, was received in 1858, praying that its construction might be at once proceeded with, but the Municipal authorities objecting, and the Crown Law Officers having advised that it would be necessary to obtain an Act before the work could be proceeded with, it is not yet commenced.

‡ A considerable increase is therefore proposed in the Staff for Railway Trial Surveys for the year 1860.

An absolute certainty regarding the general direction of the main lines will give great confidence in proceeding with such sections of them as may at any time be directed to be carried out, and will promote their rapid progress.

There is too an advantage in the construction in a new country of Railways on a great scale, which should not be lost sight of, viz.: that by inducing immigration it supplies that great want—population. For the mechanic and laborer will naturally flock to where a large expenditure upon public works causes high and steady wages; and thus, an apparently lavish outlay may result in the rapid increase of the real wealth of the country.

Where also the lines pass through a poor or thinly peopled district or country, to connect masses of people or to reach producing districts, they should obviously be made as quickly as possible.

Such would be the case with the Western Line between the Hawkesbury and the Valley of the Lett, and, on a larger scale, would be true of a line to connect Sydney and Melbourne.

Such are the circumstances under which the Railways are now being carried out in Victoria, where at a heavy cost lines about 154 miles in length are in course of construction to connect Melbourne, by Railway, with the existing Gold Fields of Ballarat and Sandhurst.*

The question of the *rate* at which further extensions should be carried out in this Colony, will be worthy of the most serious consideration when something more is known of their probable cost.

NEW LINES OPENED.

Since the 31st December, 1857, the following additional lengths of line have been opened for public traffic:—

On the 19th March, 1858, from Honeysuckle Point to the Circular Wharf at Newcastle, a distance of 76 chains, connecting the former terminus with the harbour.

On the 17th May, 1858, from Liverpool to Campbelltown, a distance of 12 miles, being an extension of the Southern Railway, and giving a length opened for traffic of 34 miles. This section was formally opened on the 10th May, but not for public traffic till a week later.

On the 27th July, from East to West Maitland, a section of 2 miles 67 chains, connecting the most populous township in the Northern District with Newcastle, and making the length of the Northern Line 20 miles.

EXISTING LINES.

The total length of line open, therefore, for public use, since the 27th July, 1858, has been 54 miles.

In my second Report I stated, among other matters, the difficulty that had been experienced in arriving at the exact cost of each line up to the 31st December, 1857, and the measures adopted to do so. I regret to say, however, that the amount of capital invested was inadvertently overstated, by a sum of £215,582—the paid-up capital of the Sydney and Hunter River Railway Companies; this amount having been twice included in the Returns furnished to me, once as purchase money paid to the companies who commenced the Southern and Northern Lines, and again as the cost of the works. Owing to this error, the various calculations contained in that Report and the Appendix are of course erroneous, whenever the capital invested is an element in them; I have therefore revised the tables so affected, and attach them, as amended, to this Report.

By reference to these tables it will be seen that the entire expenditure upon the Government Railways, to the 31st December, 1857, was £1,150,813 3s. 1d.; of which sum there was spent, as well as can now be ascertained, upon the Southern Line, £779,468 14s. 11d.; upon the Northern Line, £314,079 11s. 1d.; and for stores in stock, on voyage, and by remittances to England, £57,264 17s. 1d.

Of the sum expended upon the Southern Line, £539,592 1s. 2d. is charged against the line from Sydney to Parramatta; £124,888 19s. 6d. against the line from Parramatta

to

* Some further information relative to the Victorian Railways will be found in the Appendix, Paper No. 2, page 22.

to Liverpool; and £21,736 11s. 1d. to the Campbelltown Line; £36,532 19s. 1d. for the Darling Harbour Branch; and £56,718 4s. 1d. for rolling stock. In the above sums are included £15,142 13s. 7d. for permanent way materials, and £19,057 0s. 1d. for stores for the general working of the line returned as in stock. If these two last sums be deducted from £539,592 1s. 2d., the cost of the line from Sydney to Parramatta (13½ miles) to the end of 1857, was £37,436 per mile, for a double line throughout, including the cost of the machinery and workshops at Sydney.

The cost of the single line from Parramatta to Liverpool, 8½ miles, was £14,692 8s. per mile.

The average cost of the whole line, including the Darling Harbour Branch, was £23,992 per mile.

The dividend, or interest on £578,366 15s. 5d. (the amount expended on the Parramatta line) for the period from the 26th September, 1855, to 1st September, 1856, when the Extension to Liverpool was opened was 1·86.

For the 4 months ending 31st December, 1856, the interest was at the rate of 1·31 per annum on £683,216 12s. 10d., including the then cost of the Liverpool Extension.

During the year 1857 no further length was opened on the Southern Line, but the capital invested upon that already opened increased, after deducting stores in stock, to £723,532 10s. 2d., and the rate of interest was 1·46.

In May, 1858, the line was opened to Campbelltown; the amount invested to the 31st December, 1858, was £839,221 15s. 7d., and the rate of interest 2·2.

For the half-year ending 30th June last, and with the same length of line, the interest on £850,435 16s. 2d. is at the rate of 2·4, nearly, per cent. per annum.

It appears, therefore, that on the Southern Line, with an increasing length and an increasing amount of capital, there has been since September, 1856, an increasing rate of interest.

In the sum of £850,435 16s. 2d. is included £91,156 7s. 8d., expended upon the Campbelltown Line to the 30th June last, and a sum of £8,140 2s. 9d., for additional sleepers, and stone in place of sand ballast, for the line between Sydney and Parramatta, which its originally defective construction rendered necessary, in addition to a very heavy outlay from the vote for working expenses.

The cost of the Campbelltown Line, therefore, to the above date was about £7,596 per mile, and of the entire line opened for traffic, £24,298 per mile. These figures are exclusive of outstanding claims for land and other liabilities.

The following statements will shew the comparative working of this line for the years 1857 and 1858, and the first half-year of 1859.

In 1857 the number of passengers carried was 299,570;* tons of goods carried, 19,288; receipts from passenger traffic, including horses, carriages, dogs, and parcels, £30,974; from goods, £7,664;—and from all sources, £38,935 2s. 2d.

In 1858 the number of passengers carried was 313,411; tons of goods carried, 26,388; receipts from passenger traffic, as above, £36,502 4s. 3d.; from goods, £12,914 1s. 9d.;—and the total from all sources £50,821 15s. 3d.

In the first half-year of 1859, number of passengers carried 172,608; and tons of goods 14,775; receipts from passenger traffic as above £19,161 14s. 7d.; from goods £6,700 10s. 1d.;—and the total from all sources £26,253 4s.

In 1857 the working expenses were £28,386 12s. 5d., the net receipts £10,548 9s. 9d., and the proportion of expenditure to receipts, 72·9 per cent.

In 1858 the working expenses were £32,343 7s. 5d., the net receipts, £18,478 7s. 10d.,† and the proportion of expenditure to receipts 63·58.

In

*The number of passengers as stated does not admit of true comparison, owing to the change which took place in the beginning of 1859, in the issue of return tickets from three times a week to a daily issue. About ½ should be added to the numbers for 1857 and 1858.

† To the working expenses should be added £3,750 16s. 4d., proportion of salaries and contingencies of general establishment, which would reduce the net receipts to £14,727 11s. 6d., and increase the proportion of expenditure to receipts to 71 per cent. It has not, for the sake of comparison, been included above, having in former years been paid out of capital. This would also reduce the rate of interest named above to 1·6 per cent. from 2·2.

In the half-year of 1859 the working expenses were £16,130 13s.* the net receipts £10,082 11s., and the proportion of expenditure to receipts 61·4.

It will be seen, therefore, that with an increasing traffic the per centage proportion of expenditure to receipts upon this line is diminishing.

The entire expenditure upon the Northern Railway to the 31st December, 1857, was, as stated in page 14, £314,079 11s. 1d., of which £252,702 4s. 1d. was for the construction of the line between Honeysuckle Point and East Maitland, a distance of 16½ miles; £39,352 1s. 7d. was for rolling stock; £3,998 1s. 5d. on account of the extension to West Maitland; £17,065 10s. 6d., for permanent way materials; and £961 13s. 6d. for stores for the working of the line then in stock.

The extensions opened increased the capital invested upon them to £349,926 18s. 3d. to the end of 1858, and to £354,067 15s. 10d. to the 30th June last; the rate of interest in 1857 was 63,† in 1858 it was 1·03, and for the past half-year the working expenses have about equalled the receipts.

In my second report I pointed out that this would probably be the case, and the reasons for it.

The line was open for public traffic on the 30th March, 1857, and the number of passengers carried in that year was 29,449; the tons of goods carried 1,559;—and the receipts from all sources amounted to £4,451 9s. 5d.

In 1858 the number of passengers carried was 63,081; the tons of goods carried were 6,997; the receipts from passenger traffic £7,751 11s. 5d.; from goods traffic £2,581 4s. 1d.;—and the total from all sources amounted to £11,469 18s. 8d.

In the first half-year of 1859 the number of passengers carried was 45,069 ‡; the tons of goods were 5,001; the receipts from passenger traffic amounted to £4,410 4s. 4d.; from goods to £1,337 19s. 4d.; and the total from all sources to £5,770 9s. 1d.

It will be seen therefore that there is a constant increase in the number of passengers and tons of goods carried, and in the receipts from these sources, but a falling off in 1859 in the miscellaneous receipts; these receipts in 1858 were mainly derived from the leasing of engines and wagons to private parties, a source of revenue which does not at present exist.

In the nine months of 1857 the working expenses were £2,963 11s. 7d.;§ the net receipts £1,487 17s. 10d.; and the proportion of expenditure to receipts 66·5.

In 1858 the working expenses were £7,870 9s. 6d.; the net receipts £3,599 9s. 2d.; and the proportion of expenditure to receipts 68·6.

In the half-year of 1859 the working expenses were £5,437 6s. 10d.; the nett receipts were only £333 2s. 3d.; and the proportion of expenditure to receipts 94.||

It appears therefore that on the Northern Line the increase of traffic has not been commensurate with the cost of maintaining and working the increase of line opened, but that the working expenses have swallowed up the entire receipts.

Such results must be anticipated if the Railway cannot enter into competition for traffic, and when goods shipped at Sydney are conveyed for the same price from Sydney to Morpeth as from Sydney to Newcastle.

To compete with any chance of success with the steamers, it would be necessary to lower the Railway rates until the total charge between Newcastle and Maitland, a distance of 20 miles, did not exceed that for cartage from Morpeth to Maitland, a distance of 5 miles.

The ordinary charge for cartage is, I am informed, 5s. per ton, the Railway rate for all goods must therefore be 3d. per ton per mile, including loading and unloading, and it is obvious that the Steam Companies could easily arrange to underbid the Railway even at that rate.

The

* An addition (for the same reason as given in the above note) should be made to these working expenses of £1,492 1s. 9d. reducing the net receipts to £8,590 9s. 3d. for the half-year, increasing the proportion of expenditure to receipts to 67·1 per cent., and reducing the rate of interest named above to 2 per cent. per annum.

† Upon £292,054 5s. 8d., the cost of construction and rolling stock.

‡ To compare these numbers † must be added to the returns for 1857 and 1858.

§ During the year 1857 and the first quarter of 1858 the permanent way was maintained by the Contractor under his contract.

|| If the proportion for salaries and contingencies of general establishment be added, there will be a deficit on this line of £412 18s. 7d. for the half-year.

The Government have hitherto declined entering into competition for traffic, and have adopted a mileage rate, applicable to all distances and lines alike, but it is evident that if the Northern Railway is to have any considerable share in the carriage of goods between Maitland and Newcastle, it must enter into competition for it; and were the line leased to a company, they would immediately make the attempt.

RATES.

The consideration of this question leads to that of the existing Railway rates generally, a subject of the greatest importance, but requiring to be entered into in such detail that I have preferred placing it as a separate paper* in the Appendix, to embodying it in this Report. I may however be permitted to take this opportunity to state, in reference to the increase in passenger rates made in May, 1858, that before recommending that measure to the Government, the subject had had, as is evidenced by my second Report and its Appendix, my most anxious attention, and that it was not until after repeated consultations, extending over many months, with those fully competent to advise with me upon such a matter, that the recommendation was made. I was perfectly aware that to a section of the public the measure would be extremely distasteful, and I anticipated what it would expose me to personally; but having, after the best consideration in my power to give, arrived at the conclusion that it was my duty to recommend the Government to make the increase submitted by me to them, I should have been unworthy of their confidence, and of the position I have the honor to hold in the public service of this Colony, had I failed to do so.

The experience I have since had in the working of the existing lines induces me to submit, for the favorable consideration of the Government, the following measures, as calculated to afford increased accommodation to the public, while promoting the financial success of the Railways:—

- 1st.—To abandon the principle of a fixed mileage rate for passengers, and to have special rates for particular places, as found necessary.
- 2nd.—To diminish the price of season tickets in proportion to the increase in distance.
- 3rd.—To revise clause 100 of the Government Railways Act of 1858, so as to enable special arrangements to be made, where it may be advantageous to do so, with merchants and others, having heavy loadings—as cargoes of grain, &c.—to send at one time.

RUNNING OF TRAINS.

It having been intimated to me that it was unnecessary to run so many as 10 passenger trains daily between Sydney and Parramatta, and 8 daily between Parramatta and Campbelltown, I caused a record to be kept shewing the working of each train,† from 1st January to the 30th June last, the results are as follows:—

WEEK-DAY DOWN TRAINS.

The passenger traffic existing on the line from Sydney to Parramatta only is sufficient to cause the whole of the down trains to be run at a profit over that length of line, with the exception of the 5.45 P.M. train‡; with the mileage proportion of receipts due for traffic to stations beyond Parramatta this train also is run at a considerable profit.

Between Parramatta and Campbelltown the down trains would be run at a loss were it not for the through goods to Liverpool and Campbelltown conveyed by them.

Considering the line from Sydney to Campbelltown as one, the whole of the down trains are run at a profit.

WEEK-DAY UP TRAINS.

The proportion of receipts due to the line between Campbelltown and Parramatta from passenger traffic is not sufficient to cover the working expenses of the up trains over that length, but the deficiency is made up in the morning trains from the goods traffic §

Between

* Paper No. 3, Appendix, page 23.

† Including receipts from passengers, horses, carriages, dogs, parcels, and the conveyance of mails. The table will be found in the Appendix, Table 9.

‡ This train feels the influence of the 4.35 P.M. train.

§ Nearly all the through goods, both up and down, are taken by the 1st and 2nd trains, which are, therefore, run at a considerable profit; the afternoon trains, as a rule, do not convey goods, and are, therefore, run at a loss over this length.

Between Parramatta and Sydney the up trains, with the exception of the 2.45 P.M., are run at a profit, even exclusive of the proportion of receipts due for traffic from stations beyond Parramatta, including these the 2.45 train, is also run at a considerable profit over this length.

Regarding the line from Campbelltown to Sydney as one, the whole of the up trains are run at a profit, with the exception of the 2.45 train which runs throughout at a loss of 7.6d. per train mile.

Although this is the case, I cannot recommend at present that it should be at once discontinued, for the hour of its arrival in Sydney (4.45, P.M.) is very convenient to a large number of persons; if, however, by the time the line beyond Campbelltown is opened the receipts from this train should not have improved, it can then be taken into consideration whether it should be continued.

SUNDAY TRAINS.

The 8.30 A.M. down train is run at a profit to Parramatta, at a loss between Parramatta and Campbelltown, and at a profit throughout.

The 2.30 P.M. down train, which stops at Parramatta, is run at a profit.

The 5 P.M. down train is run at a heavy loss throughout.

The 8.15 A.M. up train is run a loss of 4s. 2.4 per train mile between Campbelltown and Parramatta; at a profit between Parramatta and Sydney; and at a heavy loss throughout.

The 3.30 P.M. up train from Parramatta only is run at a loss of 3s. 1.7 per train mile.

The 4.45 P.M. up train is run at loss between Campbelltown and Parramatta; at a profit between Parramatta and Sydney; and at a loss of 3.4d. per train mile throughout.

The following alterations in the Sunday trains are therefore submitted for consideration.

The present 8.30 A.M. down train to leave Sydney at 8.45, and not to proceed beyond Parramatta.

The 2.30 P.M. down train, which now stops at Parramatta, to go on to Campbelltown.

The 5.0 P.M. down train to be discontinued.

The present 8.15 A.M. up train from Campbelltown to be discontinued, a train leaving Parramatta instead at 9.45 A.M.

The 3.30 P.M. up train from Parramatta to be discontinued, and the 4.45 P.M. up train to remain as at present.

These arrangements would provide 2 up and 2 down trains between Sydney and Parramatta on Sundays, instead of 3, as at present, and 1 up and 1 down train between Sydney and Campbelltown, instead of 2, as at present; and, judging from the returns, would, while avoiding the running of trains at a loss, still furnish such accommodation as the public require.

GENERAL REMARKS.

The trains have run with great punctuality; and, with the exception of the sad accident of the 10th July, 1858, without casualty.

When the Southern Line was opened to Campbelltown, in May, 1858, considerable alterations were made in the Time Table, but even a few days were sufficient to prove that the new hours for the arrival and departure of the trains were not as convenient for the public as those previously advertized. These were therefore reverted to on the 1st June, 1858, as closely as the additional 12 miles of line opened would permit, and they have remained since without change.

Experience shows that an alteration of even a few minutes, especially in the morning trains, may seriously affect the public convenience, and the amount of traffic, especially on the line from Parramatta to Sydney.

The complaints of incivility or inattention on the part of the railway officials, or of loss of or injury to goods, have been very few, and have in all cases been redressed when found on inquiry to be just, and when in the power of the Commissioner to redress them.

It

It may be interesting to give some idea of the cost of management and working in this Colony and in Victoria.

The entire cost of the management and working of the Great Southern Railway over a distance of 34 miles for the half year ending 30th June last was £17,622 14s. 9d., the receipts being £26,253 4s.

The cost of the management and working of the Melbourne and Hobson's Bay Company, a distance of 6½ miles, for the half year ending 30th April last, was £16,194 18s. 9d. the receipts being £45,343 19s. 4d.

I am not aware of the actual cost of management and working of the Government Railways in Victoria, but the Estimates for 1859 provide £66,816 11s. 8d.* for the Williamstown and Sunbury lines (as far as the Digger's Rest Station) a total distance of about 30 miles. It is probable the actual cost will be much less.

I have throughout this report preferred comparing the railway rates and expenses in this Colony with those of the sister Colony of Victoria rather than with those of Europe, because the length of line opened and the relative prices of labor admit of a more just comparison.

I have to request attention to the fact that the railway receipts for the current year will fall short of the amount estimated by me last year. The estimate was £100,000, and I cannot now anticipate that the receipts will exceed £65,000; at the same time the working expenses were estimated at £65,000 and will, I trust, not exceed £45,000.

When my estimate was framed it was under the impression that the experiment of the tramway along Pitt-street would be at once carried out; that the line would before this time have been opened into Parramatta; that the improvement of the road over Kenny's Hill, recommended in my last Report, † would have been executed before the wool began to arrive from the country, and that the coal traffic into Newcastle would have been earlier developed.

All these were measures upon which, to a great degree, increased receipts depended, but, from the circumstances to which I have already alluded, the tramway has not yet been commenced, nor any substitute provided for it; it has been found impossible to open the line into Parramatta; the late period at which funds were available prevented the work at Kenny's Hill being executed at the time proposed, and though arrangements are in progress for bringing a large coal traffic upon the Railway from various sources they are not yet completed.

I have already, in considering the question of Railway rates, submitted those further measures which I believe would conduce to the greater accommodation of the public and prosperity of the Railway. They are such as, in my opinion, any company working the line would adopt, and as the results would justify them in having tried.

In my second Report I stated the principle that the Government Railways ought to be worked precisely as if in the hands of a company, and if it be thought impossible to vary the rates, as suggested, it becomes a question for serious consideration whether the lines should not be leased.

The objections to leasing the lines are, briefly, 1st.—The great difficulty of fixing a just rate at which to lease them for a term of years, while the results of the present extensions and of the coal trade of Newcastle are yet undeveloped; at the same time that an ANNUAL lease would be most objectionable. 2nd.—That the lessees of a Railway will never have the same interest in maintaining in good order the permanent way, rolling stock, and costly machinery, as the Government, who represent the owners of the Railways, have; and that however strict the Government inspection and the terms may be, considerable difficulty will be practically experienced in enforcing such maintenance; and, thirdly—That as the lessees of a Railway of course lease it with a view of obtaining a profit for themselves over and above the working expenses and interest due upon the capital, it follows that while the Government would be prepared as soon as the lines pay the interest on the capital invested in them to reduce the rates, it cannot be expected that the lessees would do so.

It

* Including one-half the cost of general Establishment.

† As necessary to facilitate the transit of goods to Campbelltown,

It would, in my opinion, at any rate be premature now to lease the lines. Should it however be decided hereafter to do so, the following would probably be among the leading terms in the agreement :—

1st.—The maximum charges and minimum number of trains to be determined by the Governor and Executive Council.

2nd.—The lessee to maintain the way and works, and to purchase the rolling stock at a valuation, the stock to be re-valued, and the amount so determined upon re-paid to the lessee on the termination of his lease.

3rd.—The Government to appoint officers with full powers to inspect the Railways, and the Government to have power to enforce such repairs and reforms as, in their opinion, should be necessary, and to resume possession of the line should the way and rolling stock not be maintained to their satisfaction.

4th.—The accounts to be audited by Government auditors.

5th.—The company to pay all working expenses and a per centage on the capital invested, increasing yearly at a rate to be agreed upon.

However, whether the Government retain the working of the Railways in their own hands or lease them, it may be presumed, that within a few years at most, the traffic upon the Lines existing and authorized will be such as to render them self supporting, and as to afford the public a vast amount of accommodation, without any assistance from the general revenue.

It will be time enough to consider whether a similar result can be anticipated as the Railways extend into the more thinly peopled districts when further extensions are proposed, and accurate information can be submitted as to their direction and cost.

RAILWAY TRIAL SURVEYS.

The labors of this branch of the department have been confined almost exclusively to the authorized extensions, to the exploration of the country between the Hawkesbury and Bathurst, and to the survey of the Grose Valley. It was found possible, as already intimated, in preparing the working plans, considerably to improve the trial lines shewn on the lithographed plans laid in 1858 before Parliament, and the attention of the principal officers has been to a great extent occupied with the necessary surveys; the result is, however, very satisfactory.

The survey of the Grose has proved a work of even greater labor than was anticipated. Immediately after the Parliament sanctioned last session the expenditure of £1,500 specially for this service, I gave instructions that as many men as could possibly work with efficiency should be employed upon it. Since that time it has been carried forward from both ends of the Valley at once, one party being supplied with food and necessaries from the Richmond end, and the other from the Hartley end. The two parties are now within about eight miles of meeting; but the progress is unavoidably slow, where almost every inch of the track has to be cut and formed out of the rock.

It has been thought advisable also to enter into more detail than usual in a trial survey, so as to avoid the necessity of having to go twice over such ground, from any want of information. It is anticipated, however, that the work will be completed by the end of the present year; and it may be interesting to notice, that a new bridle track will then have been opened from the Hawkesbury to the Valley of the Lett.

Two of the sappers were employed from May, 1858, to August, 1859, in a survey of Norfolk Island, the expense of which will be borne by the Home Government.

I have already alluded in this Report to the importance of proceeding vigorously with the trial surveys, and to the provision made for this purpose in the Estimates for 1860. Considerable difficulty has been found in procuring surveyors of sufficient experience to take charge of parties, and to take a leading part in exploring the country, so as to enable a decision to be come to as to the lines to be surveyed. Until this was done it was manifestly useless to employ other surveyors in the field. The completion, however, of the plans for
the

the authorized extensions will set those officers free who have been until now engaged upon them, and further surveys will now be proceeded with; the intention being to place parties in the Northern, Western, and Southern districts, as early as possible.

ROADS:

The Main Roads Management Act, 21 Vic., No. 8, was assented to on the 7th June, 1858, and the following defined by its schedule to be the Main Roads of the Colony:—

The Great Western Road—from Sydney, *via* Parramatta, Penrith, Hartley, and Bathurst, to Wellington, a distance of about 210 miles.

The Great Southern Road—from the Great Western Road, at the fifth milestone from Sydney, *via* Liverpool, Camden, Berrima, Goulburn, Yass, and Gundagai, to Albury, a distance of about 380 miles.

The Great Northern Road—from a point in Swan-street, in the town of Morpeth, 100 yards easterly from the junction of George-street, *via* Maitland, Singleton, Muswellbrook, Scone, Murrurundi, and Tamworth, to Armidale, a distance of about 236 miles.

Portions of these roads, extending from Penrith to Bathurst, from Camden to Gunning, and from Black Creek to Murrurundi Gap, together with the Mudgee Road, a distance of about 80 miles, were under my charge previous to the passing of the Act; and the Governor, with the advice of the Executive Council, having been pleased to appoint me, on the 25th June, 1858, a Commissioner for the purposes of the Act, the management of the remainder, also, was devolved upon me,—a task which I felt it my duty to accept, though very sensible of the additional responsibility and labor attendant upon the construction of a practically new department, and the management of 900 miles of road.

Feeling that I could be of little service until I had seen the roads for myself, I inspected the Northern in August, and the Western and Mudgee Roads in October, 1858, accompanied by the Engineer for Roads and the Road Superintendents; but it was not until the end of the following April that my other duties permitted me again to leave Sydney for a period sufficiently long to enable me to see the Southern Road.

In the meantime, however, the question of the future management of the Main Roads was repeatedly discussed, and I had the opportunity of ascertaining the views of the Government upon it, and of submitting such arrangements as were then practicable to carry them out, the most important being the division of the roads into districts, and the substitution of contract and task for day work, which, in spite of many obstacles, have since, to a great extent, been effected.

NORTHERN ROAD.

After inspecting the Northern Road, I submitted a full Report upon it, dated the 25th September, 1858, containing also such general suggestions as I then had to offer, relative to the construction and management of the Main Roads.* Of the works then recommended, the improvement of Warland's Range has been carried out, the bridge at Falbrook is in progress, and the Engineer for Roads is at present in the field making arrangements for the improvement of the road at Grass-tree Hill, Muswellbrook, and the Murrurundi Gap, for the bridge over the Page, and for the bridges over the minor creeks, for which provision was made in this year's Estimates: tenders have been called for the bridge over the Peel, at Tamworth, but I regret to say, without success; nor was any tender sent in for the bridge over the Macdonald, at Bendermeer; and counter petitions relative to its exact site having been received, further inquiries have been directed to be made before tenders are again called for.

Bridges have also been constructed under this department over the Wollombi and Cockfighter Creeks, and the Millfield Bridge repaired.

The Northern Road is now divided into two Districts, each under the immediate charge of a Road Superintendent; the first extending from Morpeth to Doughboy Hollow, about

* Parliamentary Paper, 30 September, 1858. 524—A.

about 104 miles; the second, from the Hollow to Armidale, about 132 miles. The first District consists of four divisions, three of which have overseers immediately responsible to the Superintendent, as he is to the Commissioner; the fourth division embraces the road in the immediate vicinity of the Superintendent's residence, for which therefore no overseer is allowed.

Almost all the work in progress in this district is now being carried out by contract, and arrangements are being made for the expenditure of the balance remaining in hand after taking these contracts, and of the tolls of the second six months of the current year.

2nd District.

In my Report of September, 1858, I drew attention to the inexpediency of any considerable expenditure being incurred upon the Second District of the Northern Road, until it had been surveyed and proclaimed.

The survey was commenced in April last, and as portions of the road are finally decided upon by the Government, their construction will be proceeded with.

In the meantime some pressing works of a minor character have been done, and I have now directed the Engineer for Roads to confer with the Superintendent as to what services can be judiciously carried out in this district, and to transmit specifications and estimates for them.

I may here mention that I anticipate the most beneficial results from the system of personal inspection, and of sending over the roads from time to time from the Head Office independent officers to inspect the works in progress, and to confer with the officers on the spot who may be employed either in superintending the roads or the bridges in course of construction.

WESTERN ROAD.

1st District.
