LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

RAILWAY CONTRACTS.

(PARTICULARS RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 16 May, 1878.*

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 17th July, 1877, That there be laid upon the Table of this House,—

- “(1.) A copy of the Specifications and Conditions for each Railway Contract from Goulburn to Wagga Wagga, from Bathurst to Orange, and from Murrurundi to Tamworth.
- “(2.) A copy of the Bond entered into by each Contractor for the due completion of the aforesaid Contracts.
- “(3.) A copy of the accepted Tenders for supplying the Rails for the Contracts referred to.
- “(4.) A tabulated Statement showing the cost of the Rails for each Contract delivered at Sydney or Newcastle, with dates of landing, showing contract price, also charges (if any).
- “(5.) The cost of removal from landing place to Railway (if any) at per ton, with total tonnage and cost delivered for each Contract.
- “(6.) The cost of carriage by Railway at per ton per mile, and total tonnage delivered, and cost for each Contract for distance as per Specification, including that which is not yet delivered.
- “(7.) A Summary of the tonnage and cost of Rails for each Contract length according to original Specification; also add to each Contract length the amount of accepted Tender for construction, showing the cost of each Contract length, with cost of Rails added.
- “(8.) The amount voted by Parliament per mile and total amount for each Contract length as submitted when Vote was taken.
- “(9.) A copy of the Minute of the then Secretary for Public Works, dated 14th July, 1873, referred to in the Report of the Engineer-in-Chief for Railways, dated 23rd January, 1877.”

*(Mr. Sutherland.)*

Minute, dated 14 July, 1873, of Mr. Secretary Sutherland, with approval of Cabinet, that 70 instead of 40 lbs. rails be used, with Mr. Secretary Sutherland's minute of 25/1/78, showing that his views have been realized.....	80

## RAILWAY CONTRACTS.

Sections Nos. 1 and 2.

### D. Williams—Contract for Extension, Goulburn to Yass.

- No. 1. Specification.
- No. 2. Conditions.
- No. 3. Tender.
- No. 4. Letter from Commissioner to D. Williams respecting provision being made for a deviation of the line.
- No. 5. Letter from D. Williams in reply.
- No. 6. Bond.
- No. 7. Agreement for £5,000 security.
- No. 8. Agreement for extension of time.

#### No. 1.

THIS is the Specification, marked A, referred to in the annexed Articles of Agreement, dated the twenty-fifth day of September, A.D. 1873.

Witness.—M. S. HARTE.

DANIEL WILLIAMS.

A.

GREAT SOUTHERN RAILWAY.—EXTENSION FROM GOULBURN TO WAGGA WAGGA.

*Contract No. 1.—Goulburn to Yass.*

#### SPECIFICATION.

1. This contract commences in the town of Goulburn, at 134 miles and 20 chains from Sydney, as marked on the working section, and terminates near to Yass, at 188 miles and 41 chains, being a length of 54 miles and 21 chains.

2. The work for which tenders are invited, and to which this specification refers, comprises the providing of all materials (excepting such as are hereafter specified to be provided by the Commissioner), labour, scaffolding, tools, implements, and every other thing requisite and necessary for the full and proper completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers, required in the construction of a single line of railway, in accordance with this specification, and to the entire satisfaction of the Engineer-in-Chief for Railways.

3. The contractor to state in his schedule a price per cubic yard at which he will execute all the excavations, brickwork, and masonry, the timberwork per cubic foot; the ironwork in bolts, straps, and other similar ironwork at per lb.; the fencing per rod; ballasting and laying permanent way at per lineal yard; and sleepers at per sleeper, finding all materials and labour, the work being paid for on the net measurement as executed.

4. The plan is drawn to a scale of 4 chains to an inch, and the section to a horizontal scale of 4 chains to an inch, and a vertical scale of 40 feet to an inch.

5. The plan shows the course of the line. The centre red line represents the line of the stakes, which are driven down at intervals of one chain, and are in the centre of the line to be constructed.

6. The section represents the surface of the ground in black, and is taken along the centre line shown on the plan in red. The upper or blue line represents the upper surface of the rails when laid; the lower or red line represents the level of the bottom of the ballasting, or formation level in the centre of both cuttings and embankments, and is 1 foot 3 inches below the blue line.

7. When the railway is in cutting, a ditch 3 feet wide at the top, 1 foot at the bottom, and 1 foot 6 inches deep, shall be made on the higher side of the ground to be occupied by the railway; on the lower side it will not be necessary to have any ditch. The drains are to be made to fall into the ditches or watercourses at present existing for the drainage of the adjoining lands, or into the diverted channels, as the case may be; and whenever the fall of the drains, or that of the diverted channels, shall be so great as to endanger the stability of the sides or bottoms of such drains, the same to be protected by pitching; and whenever it may be considered desirable to carry the water from such drains down the slopes of the cuttings, a pitched drain shall be constructed on the slopes, but these matters will be considered as extra works, and arranged for as provided in clause No. 5 of the General Conditions.

8. A ditch similar to that described on the top of the cuttings to be formed at the foot of the embankments, on the higher side only.

#### *Earthworks.*

9. The excavations in the centre of the cuttings are to be made to the depth shown on the longitudinal sections by a red line, being a depth of fifteen inches below the level of the upper surface of the rails, as indicated by the blue line.

10. The bottom of the cuttings to be slightly convex, being fifteen inches below the level of the rails in the centre, and eighteen inches at the sides, having a fall from the centre to the bottom of the slopes.

11. The cuttings to be sloped at the batters stated on the longitudinal section, or to such other batters as may be ordered by the Engineer-in-Chief during the progress of the works; to be 15 feet wide at the bottom, that is to say, at the formation level. The sides, as the excavation proceeds, to be uniformly trimmed or dressed to the specified inclinations, proper battering rules being used and provided by the contractor at his own cost for this purpose.

12. Cross sections have been already taken at the expense of the Commissioner, and should the contractor not take exception to the accuracy of these sections before the work in the cuttings to which they refer has been commenced, it will be taken as an acknowledgment on his part that they are correct; and that he will be satisfied to have the quantities of work for which payment is to be made measured from the sections furnished by the Engineer, provided the works cannot be otherwise satisfactorily measured, and the quantities accurately ascertained. Should the contractor prefer to take cross sections for himself no measurements taken from them will be admitted as the correct quantities unless the accuracy of such sections has been confirmed by the Engineer or superintending officer.

13. The centre line has been very carefully staked out, and every care must be taken by the contractor not to remove any of the centre stakes without taking the precaution to fix such marks as will enable him to find the position of the stake or stakes so removed.

14. Any stakes removed which the contractor is unable to replace will be replaced by the officer in charge of the works; but it must be distinctly understood that every expense attendant upon such replacement must be paid by the contractor, the Engineer-in-Chief reserving to himself the right to deduct at once such cost from any certificate then due in favour of the contractor for work done on this contract.

15. The embankments throughout the whole contract to have slopes of  $1\frac{1}{2}$  to 1, and to be not less than 15 feet wide at formation level.

16. On the completion of the cuttings and embankments the whole of the formation shall be properly trimmed. The formation of the cuttings shall be trimmed to the level shown on the working section, and the embankments shall be trimmed to such level as the Engineer may direct.

17. The excavations shall at all times be kept free from water, and so conducted as always to afford the utmost facilities for the escape of the water, by casting, and keeping properly cleaned out ditches (which shall in no case be deeper than the formation level) on each side of the excavation, and also by pumping if necessary.

18. The contractor must deposit the material from the cuttings either to the embankments named for its reception or to such other place, not exceeding a lead of one mile, that may be directed by the Engineer during the progress of the works.

19. Any stone or gravel that may be found in the cuttings suitable for ballasting may be laid aside by the contractor, at his expense, instead of being taken to embankment; but any deficiency in the embankments caused by such appropriation of material from the cuttings shall be supplied entirely at the expense of the contractor, either from side cutting or by increasing the width of the cuttings to the extent only of the width required for a double line.

20. The price stated in the schedule for excavations from cuttings is to be the average price per yard, whatever the nature of the material excavated may be, and the contractor must therefore satisfy himself as to the nature of the excavations in the different cuttings before sending in his tender. Trial holes have been made in nearly all the cuttings, and the strata through which they pass is marked on the section. These trial holes, however, shall in no way bind the Commissioner or be assumed to be a guarantee to the contractor of their accuracy; but, as they are left open, he must satisfy himself by personal inspection, as no allowance will afterwards be made to him beyond the price stated in his schedule, whatever material may hereafter be found in the cuttings.

21. All excavations, when the lower portion only is in rock, shall be taken out as shown by a diagram on the working sections, the gullet in all cases keeping pace with the excavation of the slopes. If any cutting be composed entirely of rock the sides shall be left perpendicular throughout, unless otherwise directed.

22. The earthwork must be well panned for such distance as may be required, not exceeding three yards on either side and one yard in depth, over the top of all culverts, without any charge beyond the price stated in the schedule for earthwork.

23. The quantities stated on the longitudinal section are placed there for the contractor's guidance to enable him to determine the length of lead, but the quantities to be paid for will be the actual measurement of the works satisfactorily executed, whether in excess or diminution of the quantities marked upon the section.

24. The Commissioner will lend to the contractor for the execution of the earthworks on this contract rails for a length of two miles of single way, but any rails beyond this quantity, if required by the contractor, must be provided at his own expense. The rails which will be lent will weigh about 40 lbs. to the yard, but no fastenings, either fish-plates or dogs, will be lent by the Commissioner.

25. All rails lent to the contractor for temporary purposes must be returned by him and stacked at the Yass end of his contract, having first been straightened to the satisfaction of the Engineer. Any rails cut, broken, lost, or so damaged by the contractor as to be rendered useless must be paid for by him at the price per ton at which rails of a similar description are valued in the Colony. These rails will be delivered, free of charge, to the contractor at the Goulburn Station.

26. The whole of the land inside the fences of the railway, or road approaches (and for a distance of half a chain beyond such fences) should it be considered by the Engineer desirable, to be cleared of timber or brushwood, the fallen timber being entirely removed or destroyed. See clause No. 8 of General Conditions. The cost of clearing will not be paid for as a specific charge, but must be included in the price stated in the schedule for earthwork.

27. All embankments which have to be formed on side-lying ground must have benchings cut so as to prevent the bank from slipping, and such benchings shall be done to the satisfaction of the Engineer or superintending officer. The excavations for these benchings to be paid for at the price stated in the schedule for side cutting.

28. During the progress of the works, every protection shall be afforded to the public by the erection of proper fences alongside all excavations which join upon any public road, and where the road is crossed by the railway temporary crossings or diversions shall be made at the expense of the contractor, and lights shall be kept burning between the hours of sunset and sunrise at all intersections or diversions of all public roads, if considered necessary by the engineer or superintending officer. The contractor will however be held responsible for any accidents which may occur at any of these crossings during the progress of the works.

#### *Timberwork.*

29. The timber to be used in the superstructure to the bridges shall be ironbark, free from sap and wane, perfectly sound, straight, and well-seasoned, and to be framed as shown on the drawings.

Great

Great care must be taken in framing the work and in fitting the ironwork, which must be done with the greatest accuracy. The bearing and batter piles to be round, the diameter at the top being not less than 16 inches, and the bottom 12 inches, to be driven as hereafter directed, and may be of ironbark, box, stringybark, or other approved timber.

30. The girders, trusses, headstocks, and corbels shall be hewn timber, perfectly square, and the sleepers, transomes, walings, braces, and planking shall be of sawn timber, straight and sound. All beds and joints of the timberwork to have a thick coat of red lead and oil previous to being fixed, the cost of doing this to be included in the price stated in the schedule for timberwork.

31. Should any of the bridges have to be erected on rock foundations, timber sills bolted to the rock shall be substituted for piles, in accordance with drawings which will hereafter be furnished; the rock shall be dressed off perfectly true to receive the sills, and the cost of doing this shall be paid for at the price named in the schedule for excavation to foundations in rock.

32. The whole of the timberwork will be paid for at per cubic foot, and the round piles of the size stated will be considered as equivalent to a cubic foot for every foot in length of pile, and paid for at the price per lineal foot named in the schedule.

33. When the piles are being driven, every precaution must be taken to prevent splitting during the driving, as no split piles will be allowed to remain in the work.

34. Each pile must be driven with an iron ram weighing not less than 20 cwt., and every pile shall be driven to such a depth as may be required by the superintending officer.

35. The contractor must ascertain for himself the required length of each pile, as no scarfing to any of the piles will be permitted, and all piles pitched too short must be drawn and others substituted of the requisite length.

36. An allowance will be made to the contractor of 3 feet on each pile beyond the net measurement when cut off, for the reception of the headstocks for waste in driving.

37. The whole of the bolts, nuts, straps, spikes, plates, washers, strap-bolts, and pile-shoes to be of wrought iron of the best quality, and of the form and dimensions shown on the drawings. The whole of the iron-work, except pile-shoes, to be heated and dipped in linseed oil before being taken on to the works.

*Culverts.*

38. The whole of the masonry, except where otherwise described, is to be laid in mortar, mixed in the proportion of one of stone-lime to one of clean sharp sand, or any other proportion the Engineer may hereafter direct.

39. The price stated in the schedule for excavations is also to include keeping the foundations free from water, and filling and well ramming round the masonry or brickwork, to the level of the original surface of the ground, as the work proceeds.

40. No masonry or brickwork shall be commenced without an order from the engineer or superintending officer, and when the excavation is ready to receive the brickwork or masonry the contractor must give notice to the engineer or superintending officer to that effect, so that the foundations may be approved before the work be commenced.

41. The culverts, except those of a square form, are to be built of the form shown on drawing No. 3; the materials and workmanship to be of the best description. If of stone, the beds and joints shall be boasted throughout, and rock-faced (excepting the soffit of the arch and invert, which must be picked off to an even surface), laid in 12-inch courses, header and stretcher alternately, and grouted in flush with good mortar at every course.

42. The bed of each stretcher, from 2 to 5 feet culverts inclusive, must be equal to the thickness of their walls respectively. Two stretchers may be used in the 8-foot and 10-foot culverts, but each arch must be formed of single stones, the bond throughout being not less than twelve inches.

43. Any culvert sustaining damage from carelessness on the part of the contractor in not sufficiently backing-up the masonry or brickwork, the whole of the work in such culvert will be condemned, and must be re-built at the expense of the contractor.

44. The square culverts are to be built "dry," of the form and dimensions shown on drawing No. 3; all beds and joints to be picked true, the face may be roughly knocked off.

45. If earthenware pipes be used for drains, they shall in all cases be sunk not less than their outside diameter below the ordinary surface of the ground, and the joints made with properly tempered clay. Brick-heads to be built for these pipes, as shown on drawing No. 3.

46. If bricks be used in the culverts, they shall be good, sound, well-shaped, hard-burnt kiln bricks, free from all defects, moulded for cutwaters where required, and laid in courses of headers and stretchers alternately (English bond), in mortar or cement, as may be hereafter directed.

47. The bricks to be well bedded, and the joints flushed with mortar or cement at every course, and well grouted.

*Inlets and outlets.*

48. Excavations from inlets and outlets, also from foundations of culverts, to be run into the main line embankment where directed, such run not to exceed sixty yards.

*Permanent way and ballasting.*

49. The ballast to be of the depth shown on drawing No. 7, being nine inches above the formation level in the centre of the cuttings, to be level on the upper surface on straight portions of the line; but on curves the outside of the ballast shall be of sufficient thickness to give the proper super-elevation to the outside rail, the inner rail being kept at the height shown on the longitudinal section.

50. All ballast and sleepers required for the works under this contract must be provided by the contractor, who will have to lay the rails, &c., and deposit the ballast on the line of railway as hereafter described.

51. The Commissioner will provide all ironwork for the permanent way rails, fish-plates, bolts, nuts, spikes, and screws. These permanent way materials will be delivered to the contractor at the Goulburn Station free of cost, but all expenses attendant upon their removal from thence to the places where they are to be used must be borne by the contractor; and on the Commissioner delivering to the contractor all such materials as are to be provided by him for this work, the contractor will be bound to receive

receive them, and to give the Commissioner or his agent a receipt for all such materials so delivered; and after receiving such materials, he will be held responsible for all damage, breakage, or loss while in his possession, either during their transit from the place of delivery or in putting them into the work; and in all cases where they may be damaged, lost, or destroyed, the contractor will have to replace or repair them at his own expense.

52. The contractor must supply all engine-power, waggons, tools, implements, labour, and every other thing necessary for ballasting and laying the permanent way in the manner stated in this specification, and to the satisfaction of the Engineer-in-Chief for Railways.

53. The contractor must in all cases exercise great care in carting the materials on to the work, as he will be held responsible for and chargeable with the expenses of repairing all or any damage he may cause to the works by carelessness or otherwise in carrying out this contract; and the Commissioner is hereby empowered to deduct the amount of such damages from any money which may be due or may hereafter become due to the contractor under this contract.

54. Where the railway intersects any road, whether main road, public road, or private occupation road, a permanent level crossing shall be made in all cases where directed by the engineer, with proper ironbark guard rails, and the whole constructed in accordance with drawing No. 8.

55. All such crossings shall be maintained by and at the expense of the contractor, until the final completion of this contract.

56. Level crossing gates, 10 feet, 12 feet, and 15 feet respectively, must be provided and fixed complete in accordance with drawing No. 9 at the price stated in the schedule.

57. Each gate, including all posts, struts, or spurs, and ironwork, must be painted two coats with the patent iochrome Australian paint.

58. The approaches to all public roads to be metalled with broken stone (the best that can be obtained in the district), and must be broken to a gauge of two inches, and be laid on to the approach to the depth of 9 inches.

#### *Ballasting.*

59. The ballast shall consist of clean, sharp, gravel, free from all loam, small sand, or other material which the Engineer may consider unsuitable for ballast, broken stone of approved quality, not larger than a cube of 3 inches, or properly vitrified clay, 9 inches in thickness, in the centre of the roadway; the ballast being spread level transversely on the straight portions, but on curves the ballast on the outside of each curve shall be of such extra thickness as will give the necessary super-elevation to the outer rail.

60. The width of the ballast at the bottom to be 11 feet 9 inches, and at the top, which will be 6 inches below rail level, the width must be 9 feet 6 inches, as shown on drawing No. 7. The outer edges of the ballast both at the top and bottom must be kept parallel to the centre line throughout, and the slopes of the same to be neatly trimmed to a uniform surface.

61. The road may be laid upon the formation, and afterwards lifted to the proper level in two lifts of 3 inches each, so as to give 6 inches of ballast under the centres of the sleepers and 7 inches under the ends, as shown in drawing No. 7.

62. The contractor must use the greatest care in lifting, no lift being more than 3 inches, so as to avoid bending the rails or in any other way injuring the road; and no ballast waggon will be allowed to run over any portion of the road until 3 inches of ballast have been placed under the sleepers, and no engine shall pass over the road until it has been lifted to its full height and properly packed.

63. The ballasting when laid complete will be paid for at per lineal yard, and no allowance will be made for any loss by subsidence in embankments or otherwise.

#### *Road-laying.*

64. The sleepers must be provided by and at the expense of the contractor, in accordance with clauses Nos. 73 to 79.

65. The bed for the rail must be trimmed by machinery to the width of its bottom flange, which must be sunk its exact depth into the sleeper on the outside of the rail, the seat for the rail being inclined from the inside at an angle of 1 in 20 to give the proper cant to the rail.

66. The sleepers must be placed at such distances apart as are shown on drawing No. 7, the number being eight sleepers under rails of 21 feet in length, and seven under 18 feet rails.

67. The rails must be fixed to the sleepers with screws and spikes as shown on the drawing No. 7, the holes for which must be bored in the sleepers to prevent their splitting when inserting the fastenings.

68. The rails to be laid to a gauge of 4 feet 8½ inches throughout, the upper surface being at the level shown on the working section, excepting where otherwise directed by the Engineer. The joints of the rails to be secured by fish-plates and bolts in the usual manner. Each rail to be straight and level transversely when put down in the straight portions, and where the line is curved, the rails must be bent by a machine, to be provided for the purpose by the contractor (as no hammering will be allowed) before being placed on the sleepers, to suit the particular radius of such curve, the outer rail having an elevation above the inner rail such as the Engineer may direct.

69. The rails on the working section are shown 12 inches only above the level of the formation, but as a heavier rail will now be used than that originally contemplated, the rail level will be 15 inches above the formation level in the centre throughout. A standard clip-gauge will be provided by the Commissioner, to which standard all other gauges must be made, and which shall be approved and branded by the district engineer before being used on the works. Any portion of the road laid in with any gauge not so approved and branded will not be paid for by the Commissioner. Clip-gauges only shall be used throughout, no other gauge will be permitted on the works.

70. The rails must be laid with the joints as nearly as right angles with each other as the lengths of the rails will permit, but in no case shall the joint in one line of rails have a lead or be in advance of the joint in the opposite rail of more than 3 inches.

71. The contractor must provide all labour and tools required for the laying and completing the permanent way, which must be finished in every respect to the entire satisfaction of the Engineer-in-Chief.

72. All the sleepers must be laid as nearly as practicable at right angles to the centre line of railway; they must be well and thoroughly packed up so as to cause the upper surface of the rails, when finished

finished to be at the level shown on the working section, or at such level as may be hereafter directed; and the two lines of rails shall be laid uniformly parallel to the centre line throughout, and must be perfectly straight on all the straight portions, and on the curves they must be laid to a uniform specified radius.

*Sleepers.*

73. The sleepers to be supplied under the contract may be of ironbark, grey-gum, bloodwood, blackbutt, red-gum, or other approved hardwood, 8 feet long, either half-round or split from large trees.

74. If half-round, to be sawn, not split, the size to be not less than 9 inches by 4½ inches, sound and straight, and must be cut when the sap is down. If split, they must be taken from trees not less than 3 feet in diameter, the broadest side to be of a uniform width of 10 inches, to be 4½ inches thick and the smallest part of the sleeper to have a sectional area of not less than 40 superficial inches. The bark to be removed from all sleepers before inspection.

75. The number of sleepers required will be about 117,000, but any additional number that may be required for this contract shall be supplied by the contractor at the price for sleepers stated in the schedule.

76. The contractor to find men at his own cost for the purpose of turning over the sleepers during their inspection by a person appointed by the Engineer for this purpose, and all the sleepers approved will be branded.

77. No inspection of sleepers will be made unless a proper number of men be provided by the contractor for the purpose above-mentioned.

78. All sleepers before they can be branded or inspected must be delivered on some portion of the land inside the railway fences on this contract.

79. Any sleeper which may be found to be split after being laid in the road and branded must be replaced by the contractor at his own cost.

*Sidings.*

80. All sidings, cross-over roads, or through roads, that may be required shall be ballasted and laid in by the contractor at the price per lineal yard stated in the schedule for laying and ballasting the main line of permanent way, also all crossings and switches must be laid in by the contractor at the price per lineal yard stated in the schedule for that description of work.

81. The measurements for these "sidings," "cross-over," "through," or "loop" roads shall be taken from point to point of switches where two switches are laid in, but where one switch is used the measurement will be from the point of the switch to the heel of the crossing.

82. In no case shall the measurement of the ballasting on the sidings include any part of that which is already included in the measurement of the main line of permanent way.

83. The contractor shall maintain all works which he may have executed under this contract in good order and repair until they have been certified by the Engineer as having been satisfactorily completed.

*Fencing.*

84. The fencing to be erected under this contract is to be either a three-rail sapling fence or a two-rail fence, with split posts and rails, as shown on drawing No. 4. The timber to be of the best quality in the district through which the railway passes.

85. When the railway passes through lands not belonging to the Government, the fencing shall in all cases be erected before any other work is commenced upon such lands.

*Miscellaneous.*

86. The contractor shall pay all stamp or other duties which the Government now, or may hereafter require to be paid on any document forming part of this contract.

87. The contractor must furnish to the Engineer a monthly statement of all works done by him, or of claims he may have against the Commissioner under this contract, and no certificate will be given until such an account has been rendered.

88. The contractor to provide at his own cost an office for the district engineer. This building to consist of two rooms each 14 feet by 12 feet, having weatherboard sides and ends, the roof to be covered with shingles. To have ½-inch tongued and grooved boarded ceiling, and inch flooring boards, a brick chimney with two fire-places to be erected between the rooms; two doors and three windows to be provided and fixed. The place where this building is to be erected will be decided upon hereafter.

89. Each person tendering must enclose with his tender a Treasury deposit receipt for £500, without which his tender will not be taken into consideration. Such deposit will be returned to the unsuccessful tenderers forthwith; but should the person whose tender has been accepted fail to find the necessary security within the time named in the General Conditions, then the said sum of £500 shall be forfeited by him to the Commissioner.

No. 2.

"B."

THESE are the General Conditions, marked "B," referred to in the annexed Articles of Agreement, dated the twenty-fifth day of September, A.D. 1873.

DANIEL WILLIAMS.

Witness—M. S. HARTE.

GENERAL CONDITIONS.

*Interpretation clause.*

1. The words "superintending officer" in these Conditions shall mean any person who may from time to time be appointed by the Engineer-in-Chief of Railways to supervise the works or buildings, and the words "Engineer-in-Chief" or "Engineer" shall mean the Engineer-in-Chief for the time being of the Commissioner for Railways.

*Dismissal of workmen, removal of improper materials, &c.*

2. The Engineer shall have the power of immediately dismissing any agent or workman employed by the contractor, and of having removed off the line of railway (or any land belonging to the Commissioner),

sioner), any materials, plant, or implements, which in his opinion are insufficient for the purpose intended, or at variance with the meaning and intention of this Specification. The cost of the removal of any such plant, materials, or implements to be paid by the contractor.

*Instructions to be obeyed.*

3. Should the contractor refuse or neglect to carry out the instructions of the Engineer or the superintending officer, the Engineer shall have the power of suspending the usual monthly certificate until such instructions have been complied with.

*Drawings, specification, &c.*

4. The plans, sections, and drawings represent generally the form and dimensions of the several works. Where any discrepancy exists between the dimensions as indicated by the scale and those marked in figures, the figures are to be considered as correct, and are to be taken in all cases in preference to the measurements by the scale attached. And if there should be any discrepancy between the figures or dimensions, or the form of construction, or the material as indicated in the drawings, and the dimensions and materials given in the Specification, the directions of the Specification shall be adopted; and in all cases of defective description, or any ambiguity, the explanation given by the Engineer shall be binding upon the contractor. Also, anything contained in the drawings and not in the Specification, or anything contained in the Specification and not shown in the drawing, shall be equally binding as if it were contained in both.

*Extra work, omissions of works, &c.*

5. If at any time whilst the works are in hand it shall be deemed expedient by the Engineer to increase or diminish the dimensions of any works to be done under this contract, or to alter their situation, or to vary the materials, form, or dimensions of any of the said works, or of any part thereof, he shall have full power to do so, and to order and direct any such increase, diminution, or alteration, which shall be executed by the contractor if of the class of works provided for in the schedule of prices; and no such increase, diminution, or alteration of works shall in any way annul or set aside this contract, or extend the time for the completion thereof; but such additions or alterations shall be measured and allowed and paid for, or such deductions credited to the Commissioner for Railways, as the case may require, according to the schedule of prices; and if any portion of the works so ordered to be done shall not be of the class of works provided for in the schedule of prices, the same shall be executed by the contractor at such price as may be agreed for with the Engineer; but if the contractor and the Engineer cannot agree as to the works required to be done which are of a class not provided for in the schedule of prices, the Engineer may order and direct the same to be done by such person or persons as he may think fit.

*Net measurements.*

6. All measurements of the works shall be made according to the actual dimensions, notwithstanding any general or local custom to the contrary.

*Labour, materials, plant, &c.*

7. The contractor shall provide at his own costs and charges all materials, labour, tools, plant, tackle, machinery, scaffolding, &c., for the proper completion of the works at the prices stated in his schedule.

*Damages, &c., to be paid for by contractor.*

8. The land inside the fences of the railway may be used for the purpose of carting the materials for the works on this contract; but all damage that may be done to any land not actually the property of the Commissioner must be paid for by the contractor, whether such damage be caused by the carting of materials, or the straying of cattle in consequence of the destruction by the contractor or his workmen of the original fences, or of the fences alongside the railway, or by any other cause connected with the construction of the works; and should such damage not be at once paid for, such an amount as shall appear reasonable to the Commissioner may be paid by him in compensation for the same, and deducted from any money that may be due to the contractor for work done under this contract.

*Setting out works.*

9. The works will be set out for the contractor, but he must satisfy himself of their accuracy, as no work incorrectly set out or improperly executed will be paid for by the Commissioner.

*Contractor to be represented.*

10. The contractor at all times during the progress of the works, when he is not personally superintending them, must have a responsible agent or overseer stationed on them to receive instructions from the superintending officer or Engineer-in-Chief, and to represent the contractor for all the purposes of this contract.

*Progress of works.*

11. Should the Engineer be at any time dissatisfied with the mode of proceeding, or at the rate of progress of the works or any part thereof, the Commissioner shall have full power without vacating this contract, to take the works wholly or in part out of the hands of the contractor, and to employ, procure and make use of all labour or materials which he may deem necessary for completing the works, the cost of such labour and materials to be deducted from any money that may be then due, or may hereafter become due to the contractor; and if the money then due or thereafter becoming due to the contractor, shall not be sufficient for that purpose, the balance remaining unpaid may be recovered in an action for damages for breach of contract or as money paid for the use of the contractor.

*Cancellation of contract.*

12. The Commissioner shall have the option, and full power and authority, in lieu of proceeding under the last preceding clause of these Conditions, if the contractor fail to proceed in the execution of, and to carry on the works in the manner and at the rate of progress required by the Engineer, of cancelling

calling this contract, so far as relates to the works remaining to be done; and in such case the moneys which shall have been previously paid to the contractor on account of the works executed, shall be taken by him as full payment for all works done under the contract; and upon notice in writing under the hand of the Commissioner, that he, under the authority of this condition cancels the contract, being served upon the contractor, or left at his last known place of abode, the contract shall be cancelled, and thereupon all sums of money that may be due or unpaid to the contractor, together with all implements in his possession, and all materials provided by him, upon the ground upon which the work is being carried on, or adjacent thereto, and all sums of money named as penalties for the non-fulfilment of the contract within the time specified, shall also be forfeited and become payable to the Commissioner, and the said implements and materials shall become and be the absolute property of the Commissioner, and with the moneys so forfeited and payable as aforesaid shall be considered as ascertained damages for breach of contract.

*Time of completion.*

13. The contractor shall complete the whole of the works comprised in this contract, on or before the thirty-first day of December, one thousand eight hundred and seventy-five; and in the event of their non-completion at the specified time, should the Commissioner not have proceeded under clauses Nos. 11 and 12 of these Conditions, or either of them, the contractor shall forfeit and pay two hundred pounds sterling per week or for every part of a week that shall elapse after such specified time until their completion, and which sum or sums may be deducted from any money payable to the contractor under this or any other contract. No certificate will be given after the date specified for the completion of the contract, until the whole of the works shall have been properly completed to the satisfaction of the Engineer-in-Chief.

*Copies of drawings, &c.*

14. All copies of drawings or specifications required by the contractor for carrying on the works must be made at his expense.

*Free passes, &c.*

15. No free passes on any of the Government Railways will be granted either to the contractor or his agents, nor will any materials or articles of any description be conveyed free of charge.

*Liability of contractor.*

16. The care and maintenance of all works under this contract shall remain with the contractor until their completion, and until the Engineer-in-Chief for Railways shall, by notice in writing under his hand, inform the contractor that he has taken charge thereof; and until such notice shall have been given, the Contractor and his sureties shall be jointly and severally responsible for all accidents from whatever cause arising, and shall make good all damage thereto.

*Contractor not to assign works or moneys.*

17. The contractor shall not assign over this contract, or assign all or any of the moneys payable or to become payable under the contract, or all or any part thereof, or any other benefit whatsoever arising, or which may arise under this contract, to any other person, without the consent in writing under the seal of the Commissioner for Railways first obtained. The contractor for each and every breach of this condition shall pay to the Commissioner for Railways the sum of five hundred pounds as and for liquidated damages, and the sum or sums payable as such damages may be deducted from any sum or sums due to the contractor, under this or any other contract with the commissioner for Railways; and any permission to assign over this contract shall not discharge the contractor from liability to see that the works so assigned are executed and completed in terms of this contract, unless on the assignment thereof the Commissioner expressly declare that the contractor is discharged from further liability.

*Truck system not allowed.*

18. The workmen, tradesmen, and labourers of every class employed on the works to which these Conditions refer shall be paid their wages, in full, in money, current coin of the Colony, at least once in every month; and no ticket or other system of payment by provisions, liquors, or goods, will on any pretence be allowed; nor shall the contractor, or any person or persons employed by him or in any way connected with him, establish any shop for the supply of provisions, liquors, or goods; nor shall the contractor oblige his workmen to take provisions, liquors, or goods of any kind from any person in particular. The workmen of every class shall be paid on the works if it be possible, or in some building adjoining, and in no case shall they be paid at a public-house or other place where liquors or refreshments are sold.

*Power to the Commissioner to pay workmen's wages.*

19. Before the payment of any money to the contractor, the Commissioner may require from him a statutory declaration that the tradesmen and labourers of every kind employed on the works to which these Conditions refer have been paid their wages and claims of every kind in full, in money, the current coin of the Colony, and to the latest date at which such wages or claims are due; and the Commissioner may withhold the payment of any money that may be due or may become due to the contractor until such declaration has been made and delivered to him.

*Bankruptcy or insolvency.*

20. If the contractor shall become insolvent, have his estate placed under sequestration, or shall make an assignment of his estate for the benefit of his creditors, it shall be lawful for the Commissioner, without previous notice to the contractor, or to the Official or other Assignee or Assignees of his insolvent estate, or to the trustee or trustees under the assignment, to take the works out of the hands of the contractor, and of the assignees or trustees of his estate, and to re-contract with any other person or persons to proceed with and complete the same, upon such terms, stipulations, and conditions as shall be deemed expedient; and all the then remaining materials, implements, and plant aforesaid may be used in and applied for the purposes of the works; but on the final completion of the works, the surplus of such materials, implements, and plant shall cease to belong to the Commissioner, and shall become the property of the said assignees or trustees, without any allowance for or payment by the Commissioner, or on account of any loss or diminution, wear, tear, or injury they may have sustained in the meantime.

*Security.*

21. The contractor will be required to enter into a bond to the Commissioner for Railways, in the penal sum of five thousand pounds, for the proper performance and completion of the contract.

Should the contractor fail to make the required deposit of five thousand pounds within six days from the acceptance of the tender, or should the contractor fail to execute the contract for the due performance of the works mentioned in the said tender, or to execute the bond required hereunder for securing the due completion of the works to be done under the said contract, within fourteen days after the acceptance of his tender has been notified to him, the Commissioner will have the option of and full power and authority to declare such acceptance to be annulled.

No tenderer will be allowed to proceed with the work tendered for until he has provided the cash deposit, has executed the required contract, and has duly executed the bond before mentioned for the due performance of the said contract—it being hereby declared that for all or any work done or materials found and provided by the contractor before the due execution of the said contract and bond, he shall not have any right of action, claim, or demand against the Commissioner.

*Progress payment without prejudice, &c.*

22. No certificate given to the contractor for the purpose of any progress payment shall prevent the Engineer-in-Chief from, at any future time before the termination of the contract, rejecting all unsound materials and improper workmanship discovered subsequently to the giving of the last previous certificate; and notwithstanding the giving of any certificate that portions or the whole of the works have been satisfactorily performed, the Engineer-in-Chief may require the contractor to remove and amend at any future time previously to the final payment on account of the construction or maintenance of the works, any work that may be found not to have been performed in accordance with the contract; and the contractor must remove and amend at his own cost all such work when so required, notwithstanding any approval made or given by the superintending officer; and the Commissioner shall have power, on the report of the Engineer-in-Chief that the work approved of as aforesaid is not in accordance with the contract, to deduct from any moneys that may be due or that may become due to the contractor, the whole amount that has been paid on account of such work.

If in the opinion of the Engineer-in-Chief, further inquiry is necessary or desirable before any certificate is given, he shall have power to withhold such certificate for a period not exceeding one month from the date at which in the ordinary course the certificate would have been given.

None of the conditions of this contract shall be varied, waived, discharged, or released, either in law or in equity, unless by the express consent of the Commissioner testified in writing under his seal.

*Payments.*

23. Payments will be made once in every month, unless same shall become not payable by reason of anything contained in these Conditions, up to the date specified for the completion of the contract, on the Engineer's certificate as the work proceeds, in the proportion of ninety per cent. of the value of the work satisfactorily executed, and the remaining ten per cent. will be paid after the Engineer has certified that the whole of the works have been completed to his entire satisfaction; and it is expressly declared that the obtaining a certificate from the Engineer that the work done by the contractor has been satisfactorily executed or completed to his satisfaction, shall be a condition precedent to the contractor having any right or cause of action in respect of any work done or materials provided, and to the contractor having any right of action or claim to the payments from time to time to be made hereunder, as well as to the final payment upon the whole of the work being finished.

JOHN WHITTON.

Department of Public Works,  
Railway Branch, Engineer's Office,  
Sydney, 17 June, 1873.

## No. 3.

This is the Tender, marked "C," referred to in the annexed Articles of Agreement, dated the twenty-fifth day of September, A.D. 1873.

Witness—M. S. HARTE.

DANIEL WILLIAMS.

C.

GREAT SOUTHERN RAILWAY.—EXTENSION FROM GOULBURN TO WAGGA WAGGA.

*Contract No. 1.—Goulburn to Yass.*

## FORM OF TENDER.

15 July, 1873.

I HEREBY propose to execute the whole of the works required in the construction of that portion of the Great Southern Railway comprised in Contract No. 1, commencing at 134 miles 20 chains, and terminating at 188 miles 41 chains—being a length of 54 miles and 21 chains—in strict accordance with the plans and specification, at the following prices, viz. :—

	Average price	£	s.	d.
Excavation from cuttings taken to the embankments named in disposal } sheet ... .. } Do. do. do. of road approaches ... .. } Do. from road approaches taken to embankment, not exceeding } half a mile lead ... .. } Do. from side cutting do do. (including 3 runs, or 66 lineal } yards) ... .. } Do. do. do. each additional run of 22 } yards ... .. } Rock	per cub. yd. do. do. Earthwork Rock Earthwork Rock	0	2	4 0 9 1 3 0 0
				Excavation

		£	s.	d.
Excavation from side ditches and forming a mound alongside the ditch	{ earthwork	0	1	4
	{ rock	0	5	0

DANIEL WILLIAMS,  
"Metropolitan Hotel," Sydney.

To the Commissioner for Railways.

SHOULD the foregoing tender be accepted, I, the undersigned, hereby undertake to deposit with the Commissioner for Railways, within fourteen days from the notification of the acceptance of the said tender, the sum of £5,000 as security for the due performance of the contract.

DANIEL WILLIAMS,  
Sydney.

NOTE.—A sum of £500 has, according to the conditions of the Specification, been deposited with the Colonial Treasurer, which sum I agree to forfeit to the Commissioner, should I fail to provide the cash deposit and to complete the bond at the time specified.

DANIEL WILLIAMS,  
Sydney.

D.

The Commissioner for Railways to D. Williams, Esq.

Sir, Department of Public Works, Railway Branch, Sydney, 16 July, 1873.

Referring to your tender for the construction of the railway line from Goulburn to Yass, I have the honor to inform you that, in accepting a tender for this service it is necessary to make provision for a deviation in the line, should the Government determine to adopt, at the instance of the inhabitants of Yass, a survey which they are now having made with that object in view.

I

I have the honor therefore to request that you will have the goodness to state whether, in the event of the acceptance of your tender for this work, you will consent, if any such diversion should be made, to your contract being altered to accord therewith, and to the cost of the work in such deviation being paid for at the schedule of rates in your tender—the deviation to be considered in all respects a portion of the original contract.

I have to request the favour of an early reply.

I have, &c.,  
JOHN RAE,  
Commissioner for Railways.

#### No. 5.

This is the letter, marked "E," referred to in the annexed Articles of Agreement, dated the 25th day of September, A.D. 1873.

DANIEL WILLIAMS.

Witness—M. S. HARTE.

E.

D. Williams, Esq., to The Commissioner for Railways.

Sir,

Sydney, 17 July, 1873.

I have the honor to acknowledge the receipt of your letter of the 16th instant, accepting (conditionally) my tender for the Goulburn and Yass Railway extension; and in reply, I am willing that the prices in schedule to my tender shall apply to the present line if carried out; but in the event of the North Yass deviation being constructed, the prices in schedule shall apply *only* up to the point of deviation, leaving the prices for excavation of the proposed deviation to be further considered and agreed upon.

With respect to the deviation, - what I mean is that I will do all the work required on it at the schedule of prices except the excavation, the price for which, in consequence of the deviation probably running through a country in which there is a large proportion of granite rock, no such rock occurring on the present line, is to remain open until it is ascertained what class of rock or earthwork is comprised in the excavation, when the price for excavation is to be agreed on between the Engineer-in-Chief and myself; and if we differ and cannot agree as to price, I am willing to leave the matter to the Minister for Works for the time-being, whose decision shall be final.

I have, &c.,  
DANIEL WILLIAMS.

#### No. 6.

ARTICLES OF AGREEMENT made and entered into this twenty-fifth day of September, in the year of our Lord one thousand eight hundred and seventy-three, between Daniel Williams, of the city of Sydney, in the Colony of New South Wales, contractor, of the one part, and the Commissioner for Railways, a corporation sole, created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same,*" of the other part.

WHEREAS the Commissioner for Railways aforesaid lately advertised for tenders for the works to be done and the materials to be provided for the construction of an extension of the Great Southern Railway in the said Colony from Goulburn to Yass, being a length of fifty-four miles and twenty-one chains, in accordance with the Specification hereto annexed, marked "A," and the plans and drawings therein referred to, and under and subject to the General Conditions hereto annexed, marked "B": And whereas the said Daniel Williams, hereinafter styled or referred to as "the contractor," forwarded to the Commissioner for Railways aforesaid the tender to do the said works, and to find and provide the materials required in the construction of the said extension of the said railway, dated the fifteenth day of July last past, hereto annexed and marked "C": And whereas the Commissioner for Railways aforesaid, on the sixteenth day of July last past, forwarded to the contractor a letter, of which a true copy is hereunto annexed, marked "D," accepting the tender of the said Daniel Williams for the said works, subject to a provision therein contained for a deviation being made in the line of the said intended railway near Yass, in lieu of a portion of the said line of railway now proposed to be made, if it should be determined that such a deviation should be made, the works in such deviation if such deviation be determined upon to be considered as included in and forming a portion of the works to be done under the contract of the contractor, to perform the works and find the materials for the said extension of the Great Southern Railway: And whereas the contractor, in reply to such last-mentioned letter, forwarded to the Commissioner for Railways aforesaid the letter bearing date the seventeenth July last past, hereto annexed, marked "E," agreeing that in the event of the said proposed deviation of the said extension of the said railway being determined upon, the works to be done upon or in respect of such deviation should be done by him at and for the prices mentioned in the schedule of prices in the said tender, excepting as to the excavation to be done upon and in constructing the said deviation; that the price to be paid by the Commissioner for Railways for excavation upon the said deviation until it has been ascertained what class of rock and earthwork will be comprised within the said deviation, when the price to be paid for such excavation shall be fixed, determined, and agreed upon between the Engineer-in-Chief for Railways, and the contractor, and that in the event of their not agreeing as to such price or prices the price to be paid for such excavation shall be fixed and determined by the Minister for Works for the time being of the said Colony, whose decision as to the said price or prices is to be final and conclusive between the Commissioner for Railways and the contractor, and the Commissioner for Railways hath assented to the terms mentioned by the contractor in the said last-mentioned letter: And whereas the contractor hath deposited in the Commercial Bank, Sydney, Queensland Government debentures for the sum of five thousand pounds, as security for the due performance by him of the works in the said Specification mentioned, as by the said General Conditions provided, and hath duly executed a memorandum of agreement under seal with the Commissioner for Railways, bearing even date herewith, setting forth the terms and conditions upon which the said Queensland Government

Government debentures for the sum of five thousand pounds is held by the Commissioner for Railways for the due performance of the contract in these presents contained: Now these presents witness that the contractor, for himself, his heirs, executors, and administrators, doth hereby covenant, promise, and agree with and to the Commissioner for Railways, his successors and assigns:—That he, the contractor, his executors and administrators, shall and will find and provide all materials (excepting such as in and by the Specification hereto annexed are to be provided by the Commissioner for Railways aforesaid), labour, scaffolding, tools, implements, and every other thing requisite and necessary for the full and proper completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers, required in the construction of a single line of railway: Commencing in the town of Goulburn, at one hundred and thirty-four miles and twenty chains from Sydney, as marked on the working section in the said Specification referred to, and terminating near to Yass, at one hundred and eighty-eight miles and forty-one chains, being a length of fifty-four miles and twenty-one chains, as mentioned in the said Specification, at or for the price or prices, sum or sums of money in the said tender mentioned; and in case a deviation of the said line of railway shall be determined upon, at the portion of the said line of railway approaching and extending to the said town of Yass, in lieu of a portion of the line of railway now proposed to be made, shall find and provide all materials (excepting materials in the said Specification mentioned as to be provided by the Commissioner for Railways aforesaid), labour, scaffolding, tools, implements, and every other thing required for the full and proper completion of all the earthwork (excepting excavation), brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers, required in such deviation, at the price or prices mentioned in the said tender; and do and shall find all labour, tools, and other implements for, and do and perform all the works required, in and about the excavation, upon the said deviation, at the price or prices that may be agreed upon by the contractor and the Engineer-in-Chief for Railways, as the prices to be paid for the excavation on the said deviation; or if the contractor and the Engineer-in-Chief for Railways shall not agree as to such price or prices at the price or prices that shall be fixed and determined by the Minister for Works for the time being of the said Colony, as the price or prices to be paid for such excavation—the said works required upon such deviation being done and performed in accordance in all things with the said Specification and the said General Conditions, as if such work had been included in and formed part of the works in the said Specification mentioned.

That the said Specification marked "A," the said General Conditions marked "B," the said Tender, marked "C," the said copy of a letter marked "D," and the said letter marked "E," shall be read and considered as incorporated in and forming part and parcel of this contract in the same way as if the same had been herein written and set forth at length; and all materials to be provided, and works to be done, shall be provided, done, and performed, in accordance with the said Specification, and the plans and drawings therein referred to; and that all conditions, agreements, stipulations, and directions, contained in the said Specification and General Conditions, and therein or thereby required or intended to be done by the person or persons tendering, shall be made, done, performed, and kept in all things by the contractor as if the contractor had hereby expressly covenanted to provide, do, and perform the same; and as if the said Specification, General Conditions, and the proposals and agreements contained in the said copy of a letter and the said letter had been written in and formed part of these presents; and all powers and authorities in the said Specification and General Conditions mentioned as given or intended to be given to the Commissioner for Railways and to the Engineer-in-Chief for Railways, shall vest in and be exercisable by the Commissioner for Railways and his successors, and the Engineer-in-Chief for the Commissioner for Railways for the time being, as if the said powers and authorities had been expressly created and given to the Commissioner for Railways and his successors, and the Engineer-in-Chief for the Commissioner for Railways for the time-being in or by these presents: And that if a deviation shall be made from the line of railway now proposed to be made at the portion thereof near to the town of Yass as hereinbefore provided for, such deviation shall not be held to extend or alter the time within which the railway works to be done under this agreement are to be completed, the contractor agreeing to complete the whole of the said works in the said Specification mentioned, and shown on the plans and drawings therein referred to, and all and every work required to be done in and about such deviation, if it is determined that such deviation shall be made, in all things as herein provided, on or before the thirty-first day of December, in the year of our Lord one thousand eight hundred and seventy-five.

In witness whereof, the contractor hath hereunto set his hand and seal, and the Commissioner for Railways aforesaid hath affixed his official seal, the day and year first before written.

## No. 7.

MEMORANDUM of Agreement, made this twenty-fifth day of September, in the year of our Lord one thousand eight hundred and seventy-three, between Daniel Williams, of the city of Sydney, in the Colony of New South Wales, contractor, of the one part, and the Commissioner for Railways, a corporation sole, created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled, "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same,*" of the other part.

WHEREAS by certain Articles of Agreement under seal bearing even date herewith, and made between the said Daniel Williams, of the one part, and the Commissioner for Railways aforesaid, of the other part, the said Daniel Williams covenanted and agreed with the Commissioner for Railways aforesaid to find and provide all materials (excepting such as are to be provided by the Commissioner for Railways), labour, scaffolding, tools, implements, and every other thing requisite and necessary for the full and proper completion of all the earth-work, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way and sleepers, required in the construction of a single line of railway commencing in the town of Goulburn, at one hundred and thirty-four miles and twenty chains, and terminating near Yass, at one hundred and eighty-eight miles and forty-one chains, being a length of fifty-four miles and twenty-one chains, as set out in a Specification annexed to the said Articles of Agreement and the plans and drawings therein referred to, and certain works which will be required on a deviation from the said line of railway in the said Articles of Agreement mentioned, if such deviation is determined upon: And whereas in and by the said General Conditions it is provided that the said Daniel Williams shall, as security for the due performance of the said works in the said Articles of Agreement, Specification, and General Conditions mentioned, deposit the sum of five thousand pounds with the Commissioner for Railways aforesaid, to be held by the Commissioner for Railways aforesaid as such security: And whereas in performance of the said provision in the said General Conditions, the said Daniel Williams, on the thirtieth day of July last past, deposited certain Queensland Government debentures, amounting to the sum of five thousand pounds, with the Commercial Banking Company of Sydney, at the Banking Office of the said Company, in the said city of Sydney, in the name of the Commissioner for Railways aforesaid: And whereas the said Daniel Williams and the Commissioner for Railways aforesaid have agreed to enter into these presents for the purpose of stating and affirming the terms and conditions upon which the said Queensland Government debentures, amounting to the said sum of five thousand pounds, shall be held by the Commissioner for Railways aforesaid as security for the due performance of the said works in the said Articles of Agreement, Specification, and General Conditions mentioned: Now, these presents witness that it is hereby declared and agreed between and by the said Daniel Williams, on behalf of himself, his executors and administrators, and the Commissioner for Railways aforesaid, on behalf of himself and his successors, that the said Queensland Government debentures for the said sum of five thousand pounds sterling are now and shall henceforth be held by the Commissioner for Railways aforesaid as security for the due completion of the said works in the said Articles of Agreement, Specification, and General Conditions mentioned, in accordance in all things with the said Articles of Agreement, Specification, General Conditions, and plans; and that the said debentures shall be held by the Commissioner for Railways aforesaid, and his successors, until the whole of the said works shall be completed and finished in accordance with the said Articles of Agreement, Specification, General Conditions, and plans, and until the time for which the said Daniel Williams is bound to maintain and uphold the same has fully expired: And that if the said Daniel Williams, his executors or administrators, shall make default in completing the said works in the manner stipulated in the said Articles of Agreement, Specification, and General Conditions, and the said plans or drawings, the Commissioner for Railways aforesaid and his successors may at once, and without notice to the said Daniel Williams, his executors and administrators, sell and dispose of the said Queensland Government debentures, or from time to time such and so many of them as the Commissioner for Railways shall think necessary, for such price or prices as the Commissioner for Railways may think reasonable, and use and employ the proceeds of the sale or sales of the said debentures in and about completing and finishing the said works, and in and about the payment, or retention in payment, of any penalty or penalties, sum or sums of money, which the Commissioner for Railways may be entitled to claim from the said Daniel Williams, by reason of the non-completion of the said works as aforesaid within the time fixed for that purpose; and the balance remaining (if any) after the sale of the whole of the said debentures shall be considered as forfeited to the Commissioner for Railways aforesaid, and shall be paid by the Commissioner for Railways aforesaid into the office of the Treasury of the said Colony, to the credit of, and shall become and form a portion of the Consolidated Revenue of the said Colony, as if the same had been recovered by action at law at the suit of Her Majesty upon a bond given to Her Majesty, Her Heirs and Successors, by the said Daniel Williams, to secure the due completion of the works in the said Articles of Agreement, Specification, and General Conditions mentioned, without prejudice nevertheless to the right of the Commissioner for Railways aforesaid to sue for and recover, if he shall think fit so to do, from the said Daniel Williams, his executors and administrators, all or any penalty or penalties, sum or sums of money, which under the said Articles of Agreement or the said Specification and General Conditions he or they may be entitled to recover from the said Daniel Williams, his executors and administrators, and which may be in excess of the said sum of five thousand pounds: Provided always that all interest recoverable upon the said debentures whilst they shall continue so deposited may be credited by the said Banking Company to the credit of the said Daniel Williams, and provided also that the Commissioner for Railways aforesaid shall not be liable or accountable for any loss occasioned by the said debentures being so deposited with the said Commercial Banking Company, or for any loss which may arise or be occasioned by the sale of the said debentures or any of them as aforesaid.

In witness whereof, the said Daniel Williams hath hereunto set his hand and seal, and the Commissioner for Railways hath caused his official seal to be hereunto affixed, the day and year first before written.

## No. 8.

MEMORANDUM of Agreement made this fifth day of May, in the year of our Lord one thousand eight hundred and seventy-six, between the Commissioner for Railways, a corporation sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled, "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same,*" of the one part, and Daniel Williams, of Sydney, in the said Colony, contractor, of the other part.

WHEREAS by certain Articles of Agreement bearing date the twenty-fifth day of September, in the year of our Lord one thousand eight hundred and seventy-three, and made between the above-named Daniel Williams of the one part and the Commissioner for Railways aforesaid of the other part, the said Daniel Williams covenanted and agreed with the Commissioner for Railways aforesaid and his successors to find and provide all the materials (excepting such as are in the Specification therein referred to mentioned as to be supplied by the Commissioner for Railways), labour, scaffolding, tools, implements, and every other thing requisite and necessary for, and to do and perform all the works required in and about the full and proper construction and completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers required in the construction of a single line of Railway commencing in the town of Goulburn, at one hundred and thirty-four miles and twenty chains from Sydney, as marked on the working section in the said Specification referred to, and terminating near to Yass, at one hundred and eighty-eight miles and forty-one chains, being a length of fifty-four miles and twenty-one chains, as mentioned in the said Specification, contract No. 1, Goulburn to Yass, Great Southern Railway extension, in accordance in all things with the Specification and General Conditions to the said Articles of Agreement annexed, and the plans or drawings therein referred to, and to complete and finish the whole of the said works on or before the thirty-first day of December, in the year of our Lord one thousand eight hundred and seventy-five: And whereas by a certain memorandum of agreement under seal bearing even date with the said lastly recited Articles of Agreement, and made between the said Daniel Williams of the one part and the Commissioner for Railways aforesaid of the other part, after reciting that it had been agreed that, for securing the due performance of the said contract, the said Daniel Williams should deposit with the Commissioner for Railways aforesaid the sum of five thousand pounds, to be held by the Commissioner for Railways as security for the due performance of the said works, and that in pursuance of the said Agreement the said Daniel Williams had, on the thirtieth day of July, one thousand eight hundred and seventy-three, deposited certain Queensland Government debentures, amounting to the sum of five thousand pounds, with the Commercial Banking Company of Sydney, at the Banking Office of the said Company in Sydney aforesaid, and had handed the receipt for the same to the Commissioner for Railways aforesaid: It is witnessed, and the said parties to the said Agreement did declare that the said Queensland Government debentures for the sum of five thousand pounds, so deposited in the name of the Commissioner for Railways as aforesaid, should be held by him as security for and until the completion of the said works, upon the terms and conditions as in the said now reciting memorandum of agreement mentioned: And whereas the said works are still unfinished and not completed, and the said Daniel Williams has applied to and requested the Commissioner for Railways aforesaid to extend the time for the completion of the said works until the thirty-first day of May which will be in the year one thousand eight hundred and seventy-six, which the Commissioner for Railways aforesaid hath consented to do, upon the terms and conditions hereinafter mentioned: Now these presents witness that, in consideration of the premises, the Commissioner for Railways aforesaid doth hereby extend the time for the completion of the works remaining to be done of the works in the said Articles of Agreement and Specification mentioned until the thirty-first day of May which will be in the year of our Lord one thousand eight hundred and seventy-six, upon the terms and conditions hereinafter mentioned; and that in consideration of the premises and of the said extension of time by the Commissioner for Railways aforesaid, the said Daniel Williams hereby covenants and agrees with and to the Commissioner for Railways aforesaid and his successors, that he, the said Daniel Williams, his executors and administrators, shall and will well and truly complete the whole of the works yet remaining to be done of the works in the said Articles of Agreement and Specification mentioned, in accordance in all things with the said Specification and General Conditions and the said plans or drawings, on or before the said thirty-first day of May which will be in the year one thousand eight hundred and seventy-six: And further, that at all times hereafter, the said recited Articles of Agreement and the said recited memorandum of agreement shall be read and considered as if the thirty-first day of May, one thousand eight hundred and seventy-six, had been named in and by the said Articles of Agreement, Specification, and General Conditions, and the said memorandum of agreement, as the day on or before which the whole of the said works hereinbefore mentioned were to be completed and finished by the said Daniel Williams: And that the said Articles of Agreement and the said memorandum of agreement, or the terms and conditions upon which the said debentures for the said sum of five thousand pounds is held by the Commissioner for Railways aforesaid, shall not be considered as altered, or the stipulations, provisoes, and agreements therein, or in the said Specification and General Conditions in any way waived, barred, or departed from in any respect otherwise than as to the time within which the said works are to be completed, but that the Commissioner for Railways aforesaid and his successors shall have all and every the rights, powers, and authorities, cause and causes of action, and suit claims and demands given to or vested in him or them in and by the said Articles of Agreement, Specification, and General Conditions, and by the said memorandum of agreement, in all respects as if the said thirty-first day of May, one thousand eight hundred and seventy-six, had been the day or time originally named and appointed for the completion of the whole of the said works hereinbefore mentioned: And that all and singular the penalties, forfeitures, sum or sums of money, rights, and privileges which would accrue to or vest in the Commissioner for Railways aforesaid and his successors, for or by reason or on account of the said works hereinbefore mentioned, not being completed and finished within the time named in and according to the said Articles of Agreement, Specification, and General Conditions, and the said memorandum of agreement, shall accrue to and vest in the Commissioner for Railways aforesaid and his successors, if the whole of the said works hereinbefore mentioned shall not be completed and finished in all things on or before the said thirty-first day of May, one thousand eight hundred and seventy-six: And that the said Articles of Agreement and the said memorandum of agreement shall at all time hereafter be read and considered as if the said thirty

first

first day of May, one thousand eight hundred and seventy-six, was and is the time therein named for the completion of the whole of the said works hereinafore mentioned, instead of the said thirty-first day of December, one thousand eight hundred and seventy-five therein written.

In witness whereof, the Commissioner for Railways aforesaid hath hereunto set his official seal, and the said Daniel Williams has hereto set his hand and seal, the day and year first before written.

The official seal of the Commissioner for Railways was }  
hereto affixed, in the presence of,— } JOHN RAE, (L.S.)

GREAT SOUTHERN RAILWAY.—EXTENSION FROM GOULBURN TO WAGGA WAGGA.

*Contract No. 2.—Yass to Cootamundra.*

SPECIFICATION.

1. This contract commences near the town of Yass, at 188 miles and 41 chains from Sydney, and terminates at the township of Cootamundra, at 253 miles and 8 chains, being a length of 64 miles and 47 chains.

2. The work for which tenders are invited, and to which this Specification refers, comprises the providing of all materials (excepting such as are hereafter specified to be provided by the Commissioner), labour, scaffolding, tools, implements, and every other thing requisite and necessary for the full and proper completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers, required in the construction of a single line of railway, in accordance with this Specification, and to the entire satisfaction of the Engineer-in-Chief for Railways.

3. The contractor to state in his schedule a price per cubic yard at which he will execute all the excavations, brickwork, and masonry, the timberwork per cubic foot; the ironwork in bolts, straps, and other similar ironwork at per lb.; the wrought-iron girders at per ton; the fencing per rod; ballasting and laying permanent way at per lineal yard; and sleepers at per sleeper, finding all materials and labour, the work being paid for on the net measurement as executed.

4. The plan is drawn to a scale of 4 chains to an inch, and the section to a horizontal scale of 4 chains to an inch, and a vertical scale of 40 feet to an inch.

5. The plan shows the course of the line. The centre red line represents the line of the stakes which are driven down at intervals of one chain, and are in the centre of the line to be constructed.

6. The section represents the surface of the ground in black, and is taken along the centre line shown on the plan in red. The upper or blue line represents the upper surface of the rails when laid; the lower or red line represents the level of the bottom of the ballasting, or formation level in the centre of both cuttings and embankments, and is 1 foot 3 inches below the blue line.

7. When the railway is in cutting, a ditch 3 feet wide at the top, 1 foot at the bottom, and 1 foot 6 inches deep, shall be made on the higher side of the ground to be occupied by the railway; on the lower side it will not be necessary to have any ditch. The drains are to be made to fall into the ditches or watercourses at present existing for the drainage of the adjoining lands, or into the diverted channels, as the case may be; and whenever the fall of the drains, or that of the diverted channels, shall be so great as to endanger the stability of the sides or bottoms of such drains, the same to be protected by pitching; and whenever it may be considered desirable to carry the water from such drains down the slopes of the cuttings, a pitched drain shall be constructed on the slopes, but these matters will be considered as extra works, and arranged for as provided in clause No. 5 of the General Conditions.

8. A ditch similar to that described on the top of the cuttings to be formed at the foot of the embankments, on the higher side only.

*Earthworks.*

9. The excavations in the centre of the cuttings are to be made to the depth shown on the longitudinal sections by a red line, being a depth of fifteen inches below the level of the upper surface of the rails, as indicated by the blue line.

10. The bottom of the cuttings to be slightly convex, being fifteen inches below the level of the rails in the centre, and eighteen inches at the sides, having a fall from the centre to the bottom of the slopes.

11. The cuttings to be sloped at the batters stated on the longitudinal section, or to such other batters as may be ordered by the Engineer-in-Chief during the progress of the works, to be fifteen feet wide at the bottom, that is to say, at the formation level. The sides, as the excavation proceeds, to be uniformly trimmed or dressed to the specified inclinations, proper battering rules being used and provided by the contractor, at his own cost, for this purpose.

12. Cross-sections have been already taken at the expense of the Commissioner, and should the contractor not take exception to the accuracy of these sections before the work in the cuttings to which they refer has been commenced, it will be taken as an acknowledgment on his part that they are correct; and that he will be satisfied to have the quantities of work for which payment is to be made measured from the sections furnished by the Engineer, provided the works cannot be otherwise satisfactorily measured and the quantities accurately ascertained. Should the contractor prefer to take cross-sections for himself, no measurements taken from them will be admitted as the correct quantities, unless the accuracy of such sections has been confirmed by the Engineer or superintending officer.

13. The centre line has been very carefully staked out, and every care must be taken by the contractor not to remove any of the centre stakes without taking the precaution to fix such marks as will enable him to find the position of the stake or stakes so removed.

14. Any stakes removed which the contractor is unable to replace will be replaced by the officer in charge of the works; but it must be distinctly understood that every expense attendant upon such replacement must be paid by the contractor, the Engineer-in-Chief reserving to himself the right to deduct at once such cost from any certificate then due in favour of the contractor for work done on this contract.

15. The embankments throughout the whole contract to have slopes of  $1\frac{1}{2}$  to 1, and to be not less than 15 feet wide at formation level.

16. On the completion of the cuttings and embankments, the whole of the formation shall be properly trimmed. The formation of the cuttings shall be trimmed to the level shown on the working section, and the embankments shall be trimmed to such level as the Engineer may direct.

17. The excavations shall at all times be kept free from water, and so conducted as always to afford the utmost facilities for the escape of the water by casting and keeping properly cleaned out ditches (which shall in no case be deeper than the formation level) on each side of the excavation, and also by pumping if necessary.

18. The contractor must deposit the material from the cuttings either to the embankments named for its reception, or to such other place, not exceeding a lead of one mile, that may be directed by the Engineer during the progress of the works.

19. Any stone or gravel that may be found in the cuttings suitable for ballasting may be laid aside by the contractor, at his expense, instead of being taken to embankment; but any deficiency in the embankments caused by such appropriation of material from the cuttings shall be supplied entirely at the expense of the contractor, either from side cutting or by increasing the width of the cuttings to the extent only of the width required for a double line.

20. The price stated in the schedule for excavations from cuttings is to be the average price per yard, whatever the nature of the material excavated may be, and the contractor must therefore satisfy himself as to the nature of the excavations in the different cuttings before sending in his tender. Trial holes have been made in nearly all the cuttings, and the strata through which they pass is marked on the section. These trial holes, however, shall in no way bind the Commissioner or be assumed to be a guarantee to the contractor of their accuracy; but as they are left open, he must satisfy himself by personal inspection, as no allowance will afterwards be made to him beyond the price stated in his schedule, whatever material may hereafter be found in the cuttings.

21. All excavations, when the lower portion only is in rock, shall be taken out as shown by a diagram on the working sections, the gullet in all cases keeping pace with the excavation of the slopes. If any cutting be composed entirely of rock, the sides shall be left perpendicular throughout unless otherwise directed.

22. The earthwork must be well punned for such distance as may be required, not exceeding three yards on either side and one yard in depth, over the top of all culverts, without any charge beyond the price stated in the schedule for earthwork.

23. The quantities stated on the longitudinal section are placed there for the contractor's guidance, to enable him to determine the length of lead, but the quantities to be paid for will be the actual measurement of the works satisfactorily executed, whether in excess or diminution of the quantities marked upon the section.

24. The Commissioner will lend to the contractor for the execution of the earthworks on this contract rails for a length of 2 miles of single way, but any rails beyond this quantity, if required by the contractor, must be provided at his own expense. The rails which will be lent will weigh about 40 lbs. to the yard, but no fastenings, either fish-plates or dogs, will be lent by the Commissioner.

25. All rails lent to the contractor for temporary purposes must be returned by him and stacked at the Cootamundra end of his contract, having been first straightened to the satisfaction of the Engineer. Any rails cut, broken, lost, or so damaged by the contractor as to be rendered useless, must be paid for by him at the price per ton at which rails of a similar description are valued in the Colony. These rails will be delivered, free of charge, to the contractor, at the Goulburn Station.

26. The whole of the land inside the fences of the railway or road approaches (and for a distance of half a chain beyond such fences), should it be considered by the Engineer desirable, to be cleared of timber or brushwood, the fallen timber being entirely removed or destroyed. (See clause No. 8 of General Conditions.) The cost of clearing will not be paid for as a specific charge, but must be included in the price stated in the schedule for earthwork.

27. All embankments which have to be formed on side-lying ground must have benchings cut so as to prevent the bank from slipping, and such benchings shall be done to the satisfaction of the Engineer or superintending officer. The excavations for these benchings to be paid for at the price stated in the schedule for side cutting.

28. During the progress of the works every protection shall be afforded to the public by the erection of proper fences alongside all excavations which join upon any public road, and where the road is crossed by the railway, temporary crossings or diversions shall be made at the expense of the contractor, and lights shall be kept burning between the hours of sunset and sunrise at all intersections or diversions of all public roads, if considered necessary by the Engineer or superintending officer. The contractor will however be held responsible for any accidents which may occur at any of these crossings during the progress of the works.

#### VIADUCTS AND BRIDGES.

##### *Brickwork.*

29. The brickwork is to be constructed with the best, sound, well-shaped, hard-burnt kiln bricks, free from all defects, moulded for the cutwaters, and laid in courses of headers and stretchers alternately (English bond), in mortar or cement as may be hereafter directed.

30. The bricks to be well bedded and joints flushed with mortar or cement at every course, and well jointed.

31. The whole of the walls to be built of the dimensions shown on the drawings, and no allowance will be made for any excess of dimensions above those found on the working drawings now exhibited, or which may be hereafter supplied.

32. The price stated in the schedule for brickwork shall apply not only to the bridges the plans for which are now exhibited, but to any other bridges which may be considered requisite hereafter; and the price stated for excavation to foundations shall include all expenses attendant upon getting in the foundations, and filling in and thoroughly punning round the brickwork up to the original level of the ground.

##### *Masonry.*

33. All stone used in the bridges to be of the best quality, free from all defects, to be laid in cement or mortar, in courses of 12 inches in thickness, to have boasted beds and joints throughout, and to be rough-picked on the face.

34. No stretcher will be allowed with a less bed than one and a half times the thickness of the course in which it is being used. The work to be built header and stretcher alternately, each header extending throughout the whole thickness of the wall, if such wall be not more than 4 feet in thickness; and for all walls exceeding 5 feet the headers may be in two stones, laid side by side, overlapping each other at least 14 inches.

35. The bed of each stretcher shall not be less than 18 inches, except when the full thickness of the wall shall be less than 3 feet, when two stretchers may be used with beds each equal to half the thickness of the wall.

36. The whole of the masonry to be rock-faced (except where otherwise described), with a chisel-draft  $1\frac{1}{2}$  inch wide on each side of all external angles, and the bond throughout shall not be less than 14 inches.

37. The springing stones for the arches shall be of the dimensions shown upon the drawings; the beds and vertical joints being boasted throughout with a chisel-draft 1 inch wide on the external angles. To be chamfered and throated as shown in the drawings.

38. The copings to piers, string-courses and parapets or pilasters to be of the dimensions shown on the drawings, to be rock-faced with a chisel-draft 1 inch wide on the external angles. The string courses to be chamfered and throated, and the upper side of the parapet to be tool-dressed.

##### *Culverts.*

39. The whole of the masonry, except where otherwise described, is to be laid in mortar, mixed in the proportion of one of stone lime to one of clean sharp sand, or any other proportion the Engineer may hereafter direct.

40. The price stated in the schedule for excavations is also to include keeping the foundations free from water, and filling and well ramming round the masonry or brickwork to the level of the original surface of the ground as the work proceeds.

41. No masonry or brickwork shall be commenced without an order from the Engineer or superintending officer; and when the excavation is ready to receive the brickwork or masonry the contractor must give notice to the Engineer or superintending officer to that effect, so that the foundations may be approved before the work is commenced.

42. The culverts, except those of a square form, are to be built of the form shown on drawing No. 3; the materials and workmanship to be of the best description. If of stone, the beds and joints shall be boasted throughout, and rock-faced (excepting the soffit of the arch and invert, which must be picked off to an even surface), laid in 12-inch courses, headed and stretcher alternately, and grouted in flush with good mortar at every course.

43. The bed of each stretcher, from 2 to 5 feet culverts inclusive, must be equal to the thickness of their walls respectively. Two stretchers may be used in the 8-foot and 10-foot culverts, but each arch must be formed of single stones; the band throughout being not less than twelve inches.

44. Any culvert sustaining damage from carelessness on the part of the contractor in not sufficiently backing-up the masonry or brickwork, the whole of the work in such culvert will be condemned, and must be rebuilt at the expense of the contractor.

45. The square culverts are to be built "dry," of the form and dimensions shown on drawing No. 3; all beds and joints to be picked true; the face may be roughly knocked off.

46. If earthenware pipes be used for drains, they shall in all cases be sunk not less than their outside diameter below the ordinary surface of the ground, and the joints made with properly tempered clay. Brick-heads to be built for these pipes, as shown on drawing No. 3.

47. If bricks be used, they shall be good, sound, well-shaped, hard-burnt kiln bricks, free from all defects,

defects, moulded for cutwaters where required, and laid in courses of headers and stretchers alternately (English bond), in mortar or cement as may be hereafter directed.

48. The bricks to be well bedded, and the joints flushed with mortar or cement at every course, and well grouted.

*Inlets and outlets.*

49. Excavations from inlets and outlets, also from foundations of culverts, to be run into the main line embankment where directed, such run not to exceed sixty yards.

*Mortar.*

50. The mortar to be mixed in the proportion of one part of fresh well burnt lime and one of clean sharp sand, or such other proportion as the Engineer may direct during the progress of the work,— to be mixed in a dry state and well tempered by being passed through a pug-mill with a proper quantity of water, and must always be used fresh.

*Cement.*

51. The cement to be Portland cement, of the best quality, gauged in the proportion of two of clean sharp sand to one of cement, and must be used fresh.

*Wrought iron girders.*

52. The top and bottom tables of the girders are to be constructed as shown on drawing No. 14; the length and thickness of the plates and the arrangement of joints and all other details of construction are fully shown in the drawings, and care must be taken to carry out the design in exact conformity with them. The girders are made to rest at each pier and at the abutments, on cast-iron bed-plates, fixed on the piers and placed in accordance with the arrangements exhibited in the drawings. The whole of the materials must be put together in the most substantial and workmanlike manner, and the butts of all the plates are to be *planed* perfectly true and square, so as to ensure contact throughout the entire bearing surface.

53. The cast-iron work must be of the best quality of cold-blast grey metal. The castings must be true, straight, and of the exact shape and dimensions required, sound and free from air-holes and flaws of every description.

54. The surfaces of the bed-plates must be planed perfectly true, so that there may be a perfect uniformity of bearing over the entire length of the girders.

55. The whole of the wrought-iron used in the work is to be of the quality known as Beale's P. G. Crown, or Monk Bridge Crown Plates, guaranteed, or of such other iron of at least equal quality as the Engineer may approve, and he reserves the power of testing and rejecting from time to time any portion of the wrought-iron used in the construction of the girders; and it must be distinctly understood that the whole of the work is to be executed of the quality of first-class girder work, and no edges of any plate shall be left unplanned.

56. The rivets to be made of Yorkshire iron of the toughest quality, the rods from which such rivets are made being capable of sustaining a load of 27 tons per sectional inch before fracture. All costs and expenses attending the testing to be borne by the contractor. The Engineer shall have the power of rejecting any part of the work which in his opinion does not satisfactorily bear the tests applied, or which may be otherwise unsuited for the purpose, whether arising from imperfect workmanship or defective materials. All the plates to be perfectly true, and of uniform thickness throughout each plate. All the angle or T-irons are to be rolled accurately, so as to apply exactly to the surface of the plates to be connected by them, and must have all their joints slotted true, and covered by proper plates. All covering plates must be planed perfectly square and regular at the edges.

57. The joints in all plates, angle-irons, &c., are to be made only in such positions as are shown on the drawings; and all covering plates or T-iron stiffening bars are to be truly cut at the ends, so as to ensure perfect fitting, and must in all cases be planed, curved or rounded to the exact form shown in the drawings, and be of sufficient length, breadth, or thickness, as to effectually preserve the strength of the joint.

58. The riveting throughout the whole work must be executed by hand in the neatest and most workmanlike manner. The rivets to be of the sizes shown on the drawing, with a pitch of 4 inches, but no riveting to be done until the work is drifted together and the position of the parts carefully examined and found correct.

59. All the holes must be accurately drilled, so that the riveting may bring each plate into its proper position and to the most perfect contact with the adjoining pieces. All rivets are to perfectly fit the holes, and to be finished with cup-heads or such other shape as may be approved or ordered; and when rivets are shown to be counter-sunk the sinking must be effected by drilling; and the heads finished in the neatest and most workmanlike manner, so as perfectly to conceal the rivet-heads. All the projecting bolt-heads and nuts must be hexagonal.

60. All plates, angle-irons, &c., are to be dipped in oil before they are delivered from the maker's yard; and after the bridge has been passed the whole of the iron work must receive two coats of metallic oxide paint, to be approved by the Engineer.

61. The Engineer shall have the power of making any alteration in the dimensions by either increasing or diminishing the thickness of the plates or other parts of the work, and shall be at liberty to alter or vary the design in any manner he may think fit; and the contractor shall from time to time execute the work according to such altered design without being entitled to make any claim for an extra amount in addition to the contract.

*Timberwork.*

62. The hewn timber to be used in the superstructure to the bridges shall be ironbark, free from sap and wane, perfectly sound, straight, and well seasoned, and to be framed as shown on the drawings. Great care must be taken in framing the work, and in fitting the ironwork, which must be done with the greatest accuracy. The bearing and batter piles to be round, the diameter at the top being not less than 16 inches, and the bottom 12 inches, to be driven as hereafter directed, and may be of ironbark, box, stringybark, or other approved timber. White gum shall not be used in any of the bridges on this contract.

63. The girders, trusses, headstocks, and corbels shall be hewn timber perfectly square, and the sleepers, transoms, walings, braces, and planking, shall be sawn timber, of any approved hardwood, straight and sound. All beds and joints of the timberwork to have a thick coat of red lead and oil previous to being fixed,—the cost of doing this to be included in the price stated in the schedule for timberwork.

64. Should any of the bridges have to be erected on rock foundations, timber sills bolted to the rock shall be substituted for piles, in accordance with drawings which will hereafter be furnished; the rock shall be dressed off perfectly true to receive the sills, and the cost of doing this shall be paid for at the price named in the schedule for excavation to foundations in rock.

65. The whole of the timberwork will be paid for at per cubic foot, and the round piles of the size stated will be considered as equivalent to a cubic foot for every foot in length of pile, and paid for at the price per lineal foot named in the schedule.

66. When the piles are being driven, every precaution must be taken to prevent splitting during the driving, as no split piles will be allowed to remain in the work.

67. Each pile must be driven with an iron ram weighing not less than 20 cwt., and every pile shall be driven to such depth as may be required by the superintending officer.

68. The contractor must ascertain for himself the required length of each pile, as no scarfing to any of the piles will be permitted, and all piles pitched too short must be drawn and others substituted of the requisite length.

69. An allowance will be made to the contractor of three feet on each pile beyond the net measurement when cut off, for the reception of the headstocks, for waste in driving.

70. The whole of the bolts, nuts, straps, spikes, plates, washers, strap-bolts, and pile-shoes, to be of wrought-iron of the best quality, and of the form and dimensions shown on the drawings. The whole of the ironwork, except pile-shoes, to be heated and dipped in linseed oil before being taken on to the works.

#### *Permanent way and ballasting.*

71. The ballast to be of the depth shown on drawing No. 7, being nine inches above the formation level in the centre of the cuttings, to be level on the upper surface on straight portions of the line; but on curves the outside of the ballast shall be of sufficient thickness to give the proper super-elevation to the outside rail, the inner rail being kept at the height shown on the longitudinal sections.

72. All ballast and sleepers required for the works under this contract must be provided by the contractor, who will have to lay the rails, &c., and deposit the ballast on the line of railway as hereafter described.

73. The Commissioner will provide all ironwork for the permanent way, rails, fish-plates, bolts, nuts, spikes, and screws. These permanent-way materials will be delivered to the contractor at the Goulburn Station free of cost, but all expenses attendant upon their removal from thence to the places where they are to be used must be borne by the contractor; and on the Commissioner delivering to the contractor all such materials as are to be provided by him for this work, the contractor will be bound to receive them, and to give the Commissioner or his agent a receipt for all such materials so delivered; and after receiving such materials he will be held responsible for all damage, breakage, or loss while in his possession, either during their transit from the place of delivery or in putting them into the work; and in all cases where they may be damaged, lost, or destroyed, the contractor will have to replace or repair them at his own expense.

74. The contractor must supply all engine-power, waggons, tools, implements, labour, and every other thing necessary for ballasting and laying the permanent way in the manner stated in this Specification, and to the satisfaction of the Engineer-in-Chief for Railways.

75. The contractor must in all cases exercise great care in carting the materials on to the work, as he will be held responsible for and chargeable with the expenses of repairing all or any damage he may cause to the works by carelessness or otherwise in carrying out this contract; and the Commissioner is hereby empowered to deduct the amount of such damages from any money which may be due or may hereafter become due to the contractor under this contract.

76. Where the railway intersects any road, whether main road, public road, or private occupation road, a permanent level crossing shall be made in all cases where directed by the Engineer, with proper ironbark guard rails, and the whole constructed in accordance with drawing No. 8.

77. All such crossings shall be maintained by and at the expense of the contractor, until the final completion of this contract.

78. Level crossing gates, 10 feet, 12 feet, and 15 feet respectively, must be provided and fixed complete, in accordance with drawing No. 9, at the price stated in the schedule. Each gate to be provided with a strong chain, padlock, and duplicate keys.

79. Each gate, including all posts, struts, or spurs, and ironwork, must be painted two coats with the patent iochrome Australian paint.

80. The approaches to all public roads to be metalled with broken stone (the best that can be obtained in the district), and must be broken to a gauge of two inches, and be laid on to the approach to the depth of 9 inches.

#### *Ballasting.*

81. The ballast shall consist of clean, sharp gravel, free from all loam, small sand, or other material which the Engineer may consider unsuitable for ballast, broken stone of approved quality, not larger than a cube of 3 inches, or properly vitrified clay, 9 inches in thickness, in the centre of the roadway; the ballast being spread level transversely on the straight portions, but on curves the ballast on the outside of each curve shall be of such extra thickness as will give the necessary super-elevation to the outer rail.

82. The width of the ballast at the bottom to be 11 feet 9 inches, and at the top, which will be 6 inches below rail level, the width must be 9 feet 6 inches, as shown on drawing No. 7. The outer edges of the ballast both at the top and bottom must be kept parallel to the centre line throughout, and the slopes of the same to be neatly trimmed to a uniform surface.

83. The road may be laid upon the formation, and afterwards lifted to the proper level in two lifts of 3 inches each, so as to give 6 inches of ballast under the centres of the sleepers, and 7 inches under the ends, as shown in drawing No. 7.

84. The contractor must use the greatest care in lifting, no lift being more than 3 inches, so as to avoid bending the rails or in any other way injuring the road; and no ballast waggon will be allowed to run over any portion of the road until 3 inches of ballast have been placed under the sleepers, and no engine shall pass over the road until it has been lifted to its full height and properly packed.

85. The ballasting when laid complete will be paid for at per lineal yard, and no allowance will be made for any loss by subsidence in embankments or otherwise.

#### *Road laying.*

86. The sleepers must be provided by and at the expense of the contractor, in accordance with clauses Nos. 95 to 101.

87. The bed for the rail must be trimmed by machinery to the width of its bottom flange, which must be sunk its exact depth into the sleeper on the outside of the rail, the seat for the rail being inclined from the inside at an angle of 1 in 20, to give the proper cant to the rail.

88. The sleepers must be placed at such distances apart as are shown on drawing No. 7, the number being eight sleepers under rails of 21 feet in length, and seven under 18-foot rails.

89. The rails must be fixed to the sleepers with screws and spikes as shown on the drawing No. 7, the holes for which must be bored in the sleepers to prevent their splitting when inserting the fastenings.

90. The rails to be laid to a gauge of 4 feet 8½ inches throughout, the upper surface being at the level shown on the working section, excepting where otherwise directed by the Engineer. The joints of the rails to be secured by fish-plates and bolts in the usual manner. Each rail to be straight and level transversely when put down in the straight portions, and where the line is curved the rails must be bent by a machine to be provided for the purpose by the contractor (as no hammering will be allowed), before being placed on the sleepers, to suit the particular radius of such curve, the outer rail having an elevation above the inner rail such as the Engineer may direct.

91. The rail level will be 15 inches above the formation level in the centre throughout. A standard clip-gauge will be provided by the Commissioner, to which standard all other gauges must be made, and which shall be approved and branded by the district engineer before being used on the works. Any portion of the road laid in with any gauge not so approved and branded will not be paid for by the Commissioner. Clip-gauges only shall be used throughout; no other gauge will be permitted on the works.

92. The rails must be laid with the joints as nearly at right angles with each other as the lengths of the rails will permit, but in no case shall the joint in one line of rails have a lead or be in advance of the joint in the opposite rail of more than 3 inches.

93. The contractor must provide all labour and tools required for the laying and completing the permanent way, which must be finished in every respect to the entire satisfaction of the Engineer-in-Chief.

94. All the sleepers must be laid as nearly as practicable at right angles to the centre line of railway; they must be well and thoroughly packed so as to cause the upper surface of the rails, when finished, to be at the level shown on the working section, or at such level as may be hereafter directed; and the two lines of rails shall be laid uniformly parallel to the centre line throughout, and must be perfectly straight on all the straight portions, and on the curves they must be laid to a uniform specified radius.

#### *Sleepers.*

95. The sleepers to be supplied under this contract may be of ironbark, grey-gum, blackbut, red-gum, or other approved hardwood, 8 feet long, either sawn or split from large trees.

96. If sawn, the size to be not less than 9 inches × 4½ inches, sound and straight, and must be cut when the sap is down. If split, they must be taken from trees not less than 3 feet in diameter, the broadest side to be of a uniform width of 10 inches, to be 4½ inches thick, and the smallest part of the sleeper to have a sectional area of not less than 40 superficial inches. The bark to be removed from all sleepers before inspection.

97. The number of sleepers required will be about 139,000, but any additional number that may be required for this contract shall be supplied by the contractor at the price for sleepers stated in the schedule.

98. The contractor to find men at his own cost for the purpose of turning over the sleepers during their inspection by a person appointed by the Engineer for this purpose, and all the sleepers approved will be branded.

99. No inspection of sleepers will be made unless a proper number of men be provided by the contractor for the purpose above mentioned.

100. All sleepers before they can be branded or inspected must be delivered on some portion of the land inside the railway fences on this contract.

101. Any sleeper which may be found to be split after being laid in the road and branded must be replaced by the contractor at his own cost.

#### *Sidings.*

102. All sidings, cross-over roads, or through roads, that may be required, shall be ballasted and laid in by the contractor at the price per lineal yard stated in the schedule for laying and ballasting the main line of permanent way; also all crossings and switches must be laid in by the contractor at the price per lineal yard stated in the schedule for that description of work.

103. The measurement for these "sidings," "cross-over," "through," or "loop" roads shall be taken from point to point of switches where two switches are laid in, but where one switch is used the measurement will be from the point of the switch to the heel of the crossing.

104. In no case shall the measurement of the ballasting on the sidings include any part of that which is already included in the measurement of the main line of permanent way.

105. The contractor shall maintain all works which he may have executed under this contract in good order and repair until they have been certified by the Engineer as having been satisfactorily completed.

#### *Fencing.*

106. The fencing to be erected under this contract is to be either a three-rail sapling fence or a two-rail fence, with split posts and rails, or a wire fence, as shown on drawings Nos. 4 and 5. The timber to be of the best quality in the district through which the railway passes.

COMPLETION

## COMPLETION OF THE LINE TO MURRUMBURRAH.

107. All the excavations, bridges, culverts, permanent-way sidings, road approaches, and every other work requisite and necessary to enable the Commissioner to open the line from Yass to Murrumburrah for the accommodation of goods and passengers must be completed on or before the 31st day of December, 1875; and the remainder of the works between Murrumburrah and Cootamundra on or before the 30th June, 1876, as specified in clause No. 13 of the General Conditions.

*Miscellaneous.*

108. The contractor shall pay all stamp and other duties which the Government now or may hereafter require to be paid on any document forming part of this contract.

109. The contractor must furnish to the Engineer a monthly statement of all works done by him, or of claims he may have against the Commissioner under this contract, and no certificate will be given until such an account has been rendered.

110. The contractor to provide at his own cost an office for the district engineer. This building to consist of two rooms, each 14 feet by 12 feet, having weatherboard sides and ends, the roof to be covered with shingles. To have  $\frac{1}{2}$ -inch tongued and grooved boarded ceiling, and inch flooring boards, a brick chimney with two fireplaces to be erected between the rooms; two doors and three windows to be provided and fixed. The place where this building is to be erected will be decided upon hereafter.

111. Each person tendering must enclose with his tender a Treasury deposit receipt for £500, without which his tender will not be taken into consideration. Such deposit will be returned to the unsuccessful tenderers forthwith; but should the person whose tender has been accepted fail to find the necessary security within the time named in the General Conditions, then the said sum of £500 shall be forfeited by him to the Commissioner.

JOHN WHITTON.

## LIST OF DRAWINGS REFERRED TO IN THIS SPECIFICATION.

- No. 1. Working Plan, in three parts.
- No. 2. Working Section, in three parts.
- No. 3. Culverts.
- No. 4. Post and rail fencing.
- No. 5. Wire fencing.
- No. 6. Embankments and Cuttings.
- No. 7. Permanent way.
- No. 8. Level Crossings.
- No. 9. Level Crossing Gates.
- No. 10. Ten-feet Timber Openings.
- No. 11. Open Drain or Waterway.
- No. 12. Bridge over Derringullen Creek.
- No. 13. Bridge over Illalong Creek.
- No. 14. Details of Wrought-iron Girders.
- No. 15. Bridges over Sharpening-stone, Murray, Binalong, and Bowning Creeks.
- No. 16. Bridges over Rocky Ponds, Murrumburrah, Demondrille, and Connaughtman's Creeks.

## No. 2.

THESE are the General Conditions, marked "B," referred to in the annexed Articles of Agreement with the Commissioner for Railways, dated the twenty-third day of June, A.D. one thousand eight hundred and seventy-four.

Witness—M. S. HARTE.

ALEX. AMOS.  
ROBERT AMOS.  
ALEXANDER KERR.

## B.

## GENERAL CONDITIONS.

*Interpretation clause.*

1. The words "superintending officer" in these Conditions shall mean any person who may from time to time be appointed by the Engineer-in-Chief for Railways to supervise the works or buildings, and the words "Engineer-in-Chief" or "Engineer" shall mean the Engineer-in-Chief for the time being of the Commissioner for Railways.

*Dismissal of workmen, removal of improper materials, &c.*

2. The Engineer shall have the power of immediately dismissing any agent or workman employed by the contractor, and of having removed off the line of railway (or any land belonging to the Commissioner) any materials, plant, or implements which in his opinion are insufficient for the purpose intended, or at variance with the meaning and intention of this Specification. The cost of the removal of any such plant, materials, or implements to be paid by the contractor.

*Instructions to be obeyed.*

3. Should the contractor refuse or neglect to carry out the instructions of the Engineer or the superintending officer, the Engineer shall have the power of suspending the usual monthly certificate until such instructions have been complied with.

*Drawings, Specification, &c.*

4. The plans, sections, and drawings represent generally the form and dimensions of the several works. Where any discrepancy exists between the dimensions as indicated by the scale and those marked in figures, the figures are to be considered as correct, and are to be taken in all cases in preference to the measurements by the scale attached. And if there should be any discrepancy between the figures or dimensions,

dimensions, or the form of construction, or the material as indicated in the drawings, and the dimensions and materials given in the Specification, the directions of the Specification shall be adopted; and in all cases of defective description, or any ambiguity, the explanation given by the Engineer shall be binding upon the contractor. Also, anything contained in the drawings and not in the Specification, or anything contained in the Specification and not shown in the drawings, shall be equally binding as if it were contained in both.

*Extra works, omissions of works, &c.*

5. If at any time whilst the works are in hand it shall be deemed expedient by the Engineer to increase or diminish the dimensions of any works to be done under this contract, or to alter their situation, or to vary the materials, form, or dimensions of any of the said works, or of any part thereof, he shall have full power to do so, and to order and direct any such increase, diminution, or alteration, which shall be executed by the contractor if of the class of works provided for in the Schedule of prices; and no such increase, diminution, or alteration of works shall in any way annul or set aside this contract, or extend the time for the completion thereof, but such additions or alterations shall be measured and allowed and paid for, or such deductions credited to the Commissioner for Railways, as the case may require, according to the Schedule of prices; and if any portion of the works so ordered to be done shall not be of the class of works provided for in the Schedule of prices, the same shall be executed by the contractor at such price as may be agreed for with the Engineer; but if the contractor and the Engineer cannot agree as to the works required to be done which are of a class not provided for in the Schedule of prices, the Engineer may order and direct the same to be done by such person or persons as he may think fit.

*Net measurements.*

6. All measurements of the works shall be made according to the actual dimensions, notwithstanding any general or local custom to the contrary.

*Labour, materials, plant, &c.*

7. The contractor shall provide at his own costs and charges all materials, labour, tools, plant, tackle, machinery, scaffolding, &c., for the proper completion of the works at the prices stated in his Schedule.

*Damages, &c., to be paid for by contractor.*

8. The land inside the fences of the railway may be used for the purpose of carting the materials for the works on this contract, but all damage that may be done to any land not actually the property of the Commissioner must be paid for by the contractor, whether such damage be caused by the carting of materials, or the straying of cattle in consequence of the destruction by the contractor or his workmen of the original fences, or of the fences alongside the railway, or by any other cause connected with the construction of the works; and should such damage not be at once paid for, such an amount as shall appear reasonable to the Commissioner may be paid by him in compensation for the same and deducted from any money that may be due to the contractor for work done under this contract.

*Setting out works.*

9. The works will be set out for the contractor, but he must satisfy himself of their accuracy, as no work incorrectly set out or improperly executed will be paid for by the Commissioner.

*Contractor to be represented.*

10. The contractor at all times during the progress of the works, when he is not personally superintending them, must have a responsible agent or overseer stationed on them to receive instructions from the superintending officer or Engineer-in-Chief, and to represent the contractor for all the purposes of this contract.

*Progress of works.*

11. Should the Engineer be at any time dissatisfied with the mode of proceeding, or at the rate of progress of the works or any part thereof, the Commissioner shall have full power, without vacating this contract, to take the works wholly or in part out of the hands of the contractor, and to employ, procure, and make use of all labour or materials which he may deem necessary for completing the works, the cost of such labour and materials to be deducted from any money that may be then due or may hereafter become due to the contractor; and if the money then due or thereafter becoming due to the contractor shall not be sufficient for that purpose, the balance remaining unpaid may be recovered in an action for damages for breach of contract or as money paid for the use of the contractor.

*Cancellation of contract.*

12. The Commissioner shall have the option, and full power and authority, in lieu of proceeding under the last preceding clause of these Conditions, if the contractor fail to proceed in the execution of and to carry on the works in the manner and at the rate of progress required by the Engineer, of cancelling this contract, so far as relates to the works remaining to be done; and in such case the moneys which shall have been previously paid to the contractor on account of the works executed, shall be taken by him as full payment for all works done under the contract; and upon notice in writing under the hand of the Commissioner that he, under the authority of this condition, cancels the contract, being served upon the contractor, or left at his last known place of abode, the contract shall be cancelled, and thereupon all sums of money that may be due or unpaid to the contractor, together with all implements in his possession, and all materials provided by him, upon the ground upon which the work is being carried on, or adjacent thereto, and all sums of money named as penalties for the non-fulfilment of the contract within the time specified, shall also be forfeited and become payable to the Commissioner, and the said implements and materials shall become and be the absolute property of the Commissioner, and with the moneys so forfeited and payable as aforesaid shall be considered as ascertained damages for breach of contract.

*Time of completion.*

13. The contractor shall complete the whole of the works comprised in this contract, between Yass and Murrumburrah, on or before the thirty-first December, one thousand eight hundred and seventy-five, and the remainder of the works from Murrumburrah to Cootamundra, as specified in clause No. 107, on or before the thirtieth day of June, one thousand eight hundred and seventy-six; and in the event of their non-completion

non-completion at the specified time, should the Commissioner not have proceeded under clauses Nos. 11 and 12 of these Conditions, or either of them, the contractor shall forfeit and pay two hundred pounds sterling per week or for every part of a week that shall elapse after such specified time until their completion, and which sum or sums may be deducted from any money payable to the contractor under this or any other contract. No certificate will be given after the date specified for the completion of the contract, until the whole of the works shall have been properly completed to the satisfaction of the Engineer-in-Chief.

*Copies of drawings, &c.*

14. All copies of drawings or specifications required by the contractor for carrying on the works must be made at his expense.

*Free passes, &c.*

15. No free passes on any of the Government Railways will be granted either to the contractor or his agents, nor will any materials or articles of any description be conveyed free of charge.

*Liability of contractor.*

16. The care and maintenance of all works under this contract shall remain with the contractor until their completion, and until the Engineer-in-Chief for Railways shall, by notice in writing under his hand, inform the contractor that he has taken charge thereof, and until such notice shall have been given, the contractor and his sureties shall be jointly and severally responsible for all accidents from whatever cause arising, and shall make good all damage thereto.

*Contractor not to assign works or moneys.*

17. The contractor shall not assign over this contract, or assign all or any of the moneys payable or to become payable under the contract, or all or any part thereof, or any other benefit whatsoever arising or which may arise under this contract, to any other person, without the consent in writing under the seal of the Commissioner for Railways first obtained. The contractor for each and every breach of this condition shall pay to the Commissioner for Railways the sum of £500, as and for liquidated damages; and the sum or sums payable as such damages may be deducted from any sum or sums due to the contractor, under this or any other contract, with the Commissioner for Railways; and any permission to assign over this contract shall not discharge the contractor from liability to see that the works so assigned are executed and completed in terms of this contract, unless on the assignment thereof the Commissioner expressly declare that the contractor is discharged from further liability.

*Truck system not allowed.*

18. The workmen, tradesmen, and labourers of every class employed on the works to which these Conditions refer shall be paid their wages, in full, in money, current coin of the Colony, at least once in every month, and no ticket or other system of payment by provisions, liquors, or goods, will on any pretence be allowed; nor shall the contractor, or any person or persons employed by him or in any way connected with him, establish any shop for the supply of provisions, liquors, or goods; nor shall the contractor oblige his workmen to take provisions, liquors, or goods of any kind from any person in particular. The workmen of every class shall be paid on the works if it be possible, or in some building adjoining, and in no case shall they be paid at a public-house, or other place where liquors or refreshments are sold.

*Power to the Commissioner to pay workmen's wages.*

19. Before the payment of any money to the contractor, the Commissioner may require from him a statutory declaration that the tradesmen and labourers of every kind employed on the works to which these Conditions refer have been paid their wages and claims of every kind in full, in money, the current coin of the Colony, and to the latest date at which such wages or claims are due; and the Commissioner may withhold the payment of any money that may be due or may become due to the contractor until such declaration has been made and delivered to him.

*Bankruptcy or insolvency.*

20. If the contractor shall become insolvent, have his estate placed under sequestration, or shall make an assignment of his estate for the benefit of his creditors, it shall be lawful for the Commissioner, without previous notice to the contractor, or to the Official or other Assignee or Assignees of his insolvent estate, or to the trustee or trustees under the assignment, to take the works out of the hands of the contractor, and of the assignees or trustees of his estate, and to re-contract with any other person or persons to proceed with and complete the same, upon such terms, stipulations, and conditions as shall be deemed expedient; and all the then remaining materials, implements, and plant aforesaid may be used in and applied for the purposes of the works; but on the final completion of the works, the surplus of such materials, implements, and plant shall cease to belong to the Commissioner, and shall become the property of the said assignees, or trustees, without any allowance for or payment by the Commissioner, or on account of any loss or diminution, wear, tear, or injury they may have sustained in the meantime.

*Security.*

21. The contractor will be required to deposit the sum of £5,000 with the Commissioner for Railways, as security for the proper performance and completion of the contract.

Should the contractor fail to make the required deposit of £5,000 within six days from the acceptance of the Tender, or should the contractor fail to execute the contract for the due performance of the works mentioned in the said Tender, or to execute the bond required hereunder, for securing the due completion of the works to be done under the said contract, within fourteen days after the acceptance of his Tender has been notified to him, the Commissioner will have the option of and full power and authority to declare such acceptance to be annulled.

No tenderer will be allowed to proceed with the work tendered for until he has provided the cash deposit, has executed the required contract, and has duly executed the bond before-mentioned for the due performance of the said contract—it being hereby declared that for all or any work done or materials found and provided by the contractor before the due execution of the said contract and bond, he shall not have any right of action, claim, or demand against the Commissioner.

*Progress payment without prejudice, &c.*

22. No certificate given to the contractor for the purpose of any progress payment shall prevent the Engineer-in-Chief from at any future time, before the termination of the contract, rejecting all unsound materials and improper workmanship discovered subsequently to the giving of the last previous certificate; and notwithstanding the giving of any certificate that portions or the whole of the works have been satisfactorily performed, the Engineer-in-Chief may require the contractor to remove and amend, at any future time previously to the final payment on account of the construction or maintenance of the works, any work that may be found not to have been performed in accordance with the contract; and the contractor must remove and amend at his own cost all such work when so required, notwithstanding any approval made or given by the superintending officer; and the Commissioner shall have power, on the report of the Engineer-in-Chief that the work approved of as aforesaid is not in accordance with the contract, to deduct from any moneys that may be due or that may become due to the contractor, the whole amount that has been paid on account of such work.

If, in the opinion of the Engineer-in-Chief, further inquiry is necessary or desirable before any certificate is given, he shall have power to withhold such certificate for a period not exceeding one month from the date at which in the ordinary course the certificate would have been given.

None of the conditions of this contract shall be varied, waived, discharged, or released, either in law or in equity, unless by the express consent of the Commissioner, testified in writing under his seal.

*Payments.*

23. Payments will be made once in every month, unless same shall become not payable by reason of anything contained in these Conditions, up to the date specified for the completion of the contract on the Engineer's certificate as the work proceeds, in the proportion of ninety per cent. of the value of the work satisfactorily executed, and the remaining ten per cent. will be paid after the Engineer has certified that the whole of the works have been completed to his entire satisfaction; and it is expressly declared that the obtaining a certificate from the Engineer that the work done by the contractor has been satisfactorily executed or completed to his satisfaction, shall be a condition precedent to the contractor having any right or cause of action in respect of any work done or materials provided, and to the contractor having any right of action or claim to the payments from time to time to be made hereunder, as well as to the final payment upon the whole of the work being finished.

JOHN WHITTON.

A. & R. AMOS & Co., 5, Exchange.

To the Commissioner for Railways.

SHOULD the foregoing Tender be accepted, we, the undersigned, hereby undertake to deposit with the Commissioner for Railways, within six days from the notification of the acceptance of the said Tender, the sum of £5,000 as security for the due performance of the contract.

A. & R. AMOS & Co., 5, Exchange, Sydney.

NOTE.—A sum of £500 has, according to the conditions of the Specification, been deposited with the Colonial Treasurer, which sum we agree to forfeit to the Commissioner, should we fail to provide the cash deposit, and to complete the bond at the time specified.

A. & R. AMOS & Co., 5, Exchange.

#### No. 4.

ARTICLES OF AGREEMENT made and entered into this twenty-third day of June, in the year of our Lord one thousand eight hundred and seventy-four, between Alexander Amos and Robert Amos, of Sydney, and Alexander Kerr, of Woolhara, in the Colony of New South Wales, contractors, carrying on business together in the said Colony under the style or firm of "A. & R. Amos & Co.," of the one part, and the Commissioner for Railways, a corporation, sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same of the other part.*"

WHEREAS the Commissioner for Railways aforesaid lately advertised for tenders for the works to be done and the materials to be provided for the construction and erection of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way and supplying sleepers required in the construction of a single line of railway, being that portion of the Great Southern Railway extension from Goulburn to Wagga Wagga, in the said Colony, intended to be contract No. 2, Yass to Cootamundra, commencing near the town of Yass, at one hundred and eighty-eight miles and forty-one chains from Sydney and terminating at the township of Cootamundra at two hundred and fifty-three miles and eight chains, being a length of sixty-four miles and forty-seven chains in accordance in all things with the Specification hereto annexed, marked A, and the plans or drawings therein referred to, and under and subject to the general conditions, hereto annexed, marked B: And whereas the said Alexander Amos, Robert Amos, and Alexander Kerr, hereinafter styled or referred to as "the contractors," forwarded to the Commissioner for Railways aforesaid the tender to do the said works and to find and provide the materials required in the construction of the said line of railway, hereto annexed, marked C: And whereas the Commissioner for Railways aforesaid duly accepted the said tender of the contractors for the said works, and whereas the contractors have deposited the sum of five thousand pounds in the City Bank in the City of Sydney in the name of the Commissioner for Railways aforesaid upon

upon fixed deposit for the term of twelve months at interest, and have handed the receipt for the same deposit, which bears date the twenty-third May, one thousand eight hundred and seventy-four, No. 11/178, to the Commissioner for Railways as security for the due performance by them of the works in the said Specification mentioned in accordance therewith in all things as thereby and by the said General Conditions is provided, and have duly executed a memorandum of agreement under seal with the Commissioner for Railways, bearing even date herewith, setting forth the terms and conditions upon which the said sum of five thousand pounds is held by the Commissioner for Railways as security for the due performance of the contract in these presents contained: Now these presents witness: That the contractors for themselves, their heirs, executors, and administrators, hereby covenant, declare, promise, and agree with, and to the Commissioner for Railways aforesaid, his successors and assigns, that they, the contractors, their executors, and administrators, shall and will find and provide all materials (excepting such as are in the said specification mentioned as to be provided by the Commissioner for Railways) labour, scaffolding, tools, implements, and every other thing requisite and necessary for, and shall and will do and perform all the works required in and about the full and proper completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers required in the construction of the said single line of railway, being that portion of the Great Southern Railway extension from Goulburn to Wagga Wagga, in the said Colony, intended to be Contract No. 2, from Yass to Cootamundra, commencing near the town of Yass at one hundred and eighty-eight miles and forty-one chains from Sydney and terminating at the township of Cootamundra at two hundred and fifty-three miles and eight chains, being a length of sixty-four miles and forty-seven chains at the price or prices mentioned in the said Tender and in accordance in all things with the said Specification and General Condition and the plans or drawings therein referred to.

That they, the Contractors, shall and will find and provide all materials to be provided, and do, perform, execute, and complete all the works to be done under this contract in accordance in all things with the said specification and the plans or drawings therein referred to, and under, subject to, and in all things in accordance with the conditions, agreements, stipulations, and directions contained in the said specification and general conditions, and therein or thereby required or mentioned, or intended to be done by the person or persons tendering or contracting.

That all powers and authorities in the said Specification and General Conditions mentioned as given or intended to be given to the Commissioner for Railways and to the Engineer-in-Chief for Railways shall vest in and be exercisable by the Commissioner for Railways aforesaid and his successors, and the Engineer-in-Chief for the Commissioner for Railways aforesaid for the time being, as if the said powers and authorities had been expressly created and given to the Commissioner for Railways and his successors, and the Engineer-in-Chief for the Commissioner for Railways for the time being, in or by these presents.

That they, the contractors, shall and will complete and finish in all things that portion of the said works in the said Specification and the plans or drawings therein referred to, mentioned, or shewn, comprised between Yass and Murrumburrah, on or before the thirty-first day of December, one thousand eight hundred and seventy-five, and the remainder of the said works, from Murrumburrah to Cootamundra, on or before the thirtieth day of June, which will be in the year of our Lord one thousand eight hundred and seventy-six, as provided in clause number one hundred and seven of the said Specification, and mentioned in condition number thirteen of the said General Conditions, and that the completion of the said works upon the days and times hereinbefore mentioned shall be considered as of the essence of this contract.

And further, that the said Specification marked "A," the said General Conditions marked "B," and the said Tender marked "C," shall be read and considered as incorporated in and forming part and parcel of these presents, in like manner as if the same had been herein written and set forth at length; the said Specification, General Conditions, Tender, and these presents, together forming the contract between the said parties hereto.

And the Commissioner for Railways, for himself and his successors, hereby covenants with the Contractors, their executors or administrators, that the Commissioner for Railways, or his successors, shall pay the contractors, their executors and administrators, for the said works hereinbefore mentioned, and materials to be supplied at and after the rate of prices in the said Tender mentioned, when and as payment for the said works and materials shall, in accordance with section twenty-three of the said General Conditions, become due and payable to the Contractors; such payments only to be made upon the production of the certificate in the said twenty-third section of the said General Conditions mentioned, the production of such a certificate being a condition precedent to the Contractors having any cause or right of action, claim, or demand upon the Commissioner for Railways, as in the said twenty-third section is mentioned, and at the time or times, and in accordance with and when payable under the provision as to payment in the said General Conditions and the said Specification, or either of them mentioned, and not otherwise.

And further, that the said Specification, General Conditions, and Tender shall be read and considered as incorporated in and forming part and parcel of these presents in like manner as if the same had been herein written and set out at length; the said Specification, General Conditions, Tender, and these presents, together forming the contract between the parties hereto.

In witness whereof the contractors have hereunto set their hands and seals, and the Commissioner for Railways aforesaid hath affixed his official seal the day and year first before written.

Signed, sealed, and delivered by the said } Alexander Amos, Robert Amos, and } Alexander Kerr, in the presence of,— }	ALEX. AMOS.	(L.S.)
	ROBERT AMOS.	(L.S.)
	ALEXANDER KERR.	(L.S.)

M. S. HARTÉ.

The official seal of the Commissioner for } Railways was hereto affixed, in the } presence of,— }	JOHN RAE,	(L.S.)
	Commissioner for Railways.	

CHAS. A. GOODCHAP, Secretary.

MEMORANDUM

## No. 5.

MEMORANDUM OF AGREEMENT made this twenty-third day of June, in the year of our Lord one thousand eight hundred and seventy-four, between Alexander Amos and Robert Amos, of Sydney, and Alexander Kerr, of Woollahra, in the Colony of New South Wales, contractors, carrying on business together in the said Colony under the style and firm of "A. and R. Amos & Co.," of the one part, and the Commissioner for Railways, a Corporation sole created by the Act Council, passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled, "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same*" of the other part.

WHEREAS, by certain Articles of Agreement under seal, bearing even date herewith, and made between the said Alexander Amos, Robert Amos, and Alexander Kerr, of the one part, and the Commissioner for Railways aforesaid of the other part, the said Alexander Amos, Robert Amos, and Alexander Kerr, covenant and agree with the Commissioner for Railways aforesaid, to find and provide all materials (excepting such as by the specification therein referred to are to be provided by the Commissioner for Railways), labor, scaffolding, tools, implements, and every other thing requisite and necessary for, and do and perform all the works required in and about the full and proper completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers required in the construction of a single line of railway, being that portion of the Great Southern Railway extension from Goulburn to Wagga Wagga, in the said Colony, intended to be contract number two, from Yass to Cootamundra, commencing near the town of Yass at one hundred and eighty-eight miles and forty-one chains from Sydney, and terminating at the township of Cootamundra, at two hundred and fifty-three miles and eight chains, being a length of sixty-four miles and forty-seven chains, as mentioned and set out in a Specification and General Conditions annexed to the said Articles of Agreement and the plans and drawings therein referred to: And whereas, in and by the said General Conditions, it is provided that the said Alexander Amos, Robert Amos, and Alexander Kerr, shall, as security for the due performance of the said works, in the said Articles of Agreement, Specification, and General Conditions mentioned, deposit the sum of five thousand pounds with the Commissioner for Railways aforesaid, to be held by the Commissioner for Railways aforesaid as such security: And whereas, in performance of the said provision in the said General Conditions, the said Alexander Amos, Robert Amos, and Alexander Kerr, on the twenty-third day of May last, deposited the sum of five thousand pounds in the City Bank, in the City of Sydney, in the name of the Commissioner for Railways aforesaid, upon fixed deposit for the term of twelve months, at interest, and have handed the receipt of the said deposit, which is marked No. 11/178, to the Commissioner for Railways aforesaid, the Commissioner for Railways having agreed that the said sum of five thousand pounds, so to be left in his hands as aforesaid as security for the due performance of the said contract shall be held by the City Bank, at interest, as aforesaid, and that the said Alexander Amos, Robert Amos, and Alexander Kerr shall receive the interest thereon: And whereas the said Alexander Amos, Robert Amos, and Alexander Kerr, and the Commissioner for Railways aforesaid, have agreed to enter into these presents for the purpose of stating and defining the terms and conditions upon which the said sum of five thousand pounds shall be held by the Commissioner for Railways aforesaid, as security for the due performance of the said works in the said Articles of Agreement, Specification, and General Conditions mentioned: Now these presents witness that it is hereby declared and agreed between and by the said Alexander Amos, Robert Amos, and Alexander Kerr, on behalf of themselves, and their respective heirs, executors, and administrators, and the Commissioner for Railways aforesaid, on behalf of himself and his successors, that the said sum of five thousand pounds of lawful British money is now and shall henceforth be held by the Commissioner for Railways aforesaid as security for the due completion of the said works in the said Articles of Agreement, Specification, and General Conditions mentioned in accordance in all things with the said Articles of Agreement, Specification, and General Conditions, and that the said sum shall be held by the Commissioner for Railways and his successors until the whole of the said works shall be completed and finished in accordance with the said Articles of Agreement, Specification, and General Conditions, and until the time for which the said Alexander Amos, Robert Amos, and Alexander Kerr, are bound to maintain and uphold the same has fully expired: And that if the said Alexander Amos, Robert Amos, and Alexander Kerr, their, or either of their executors, or administrators, shall make default in proceeding with, or in completing the said works in the manner stipulated in the said Articles of Agreement, Specification, and General Conditions, and the said plans or drawings, the Commissioner for Railways aforesaid and his successors may at once use and employ the said sum of five thousand pounds, or so much thereof as shall be requisite in and about the proceeding with, completing, and finishing the said works, and in and about the payment of or retention in payment of any penalty or penalties, sum, or sums of money which the Commissioner for Railways may be entitled to claim from the said Alexander Amos, Robert Amos, and Alexander Kerr by reason of the non-completion of the said works as aforesaid, and within the time fixed for that purpose; and the balance remaining (if any) shall be considered as forfeited to the Commissioner for Railways aforesaid, and shall be paid by the Commissioner for Railways aforesaid into the office of the Treasury in the said Colony to the credit of and shall become and form a portion of the Consolidated Revenue of the said Colony as if the same had been recovered by action at law at the suit of Her Majesty, upon a bond given to Her Majesty, her heirs and successors, by the said Alexander Amos, Robert Amos, and Alexander Kerr, to secure the due performance and completion of the works in the said Articles of Agreement, Specification, and General Conditions mentioned, without prejudice nevertheless to the right of the Commissioner for Railways aforesaid to sue for and recover, if he shall think fit so to do, from the said Alexander Amos, Robert Amos, and Alexander Kerr, their or either of their executors and administrators, all or any penalty or penalties, sum or sums of money, which under the said articles of agreement or the said Specification and General Conditions he or they may be entitled to recover from the said Alexander Amos, Robert Amos, and Alexander Kerr, their executors and administrators, and which may be in excess of the said sum of five thousand pounds: And further, that at the expiration of the said term of twelve months for which the said sum of five thousand pounds has been deposited in the City Bank as aforesaid upon fixed deposit, it shall be lawful for the Commissioner for Railways aforesaid, but he is nevertheless not required or under any obligation so to do, to re-deposit the same for a further period of twelve months at interest, or for such further period, or for such lesser term, from time to time, as the Commissioner for Railways or his successors shall think fit, until the said works are completed, or in his discretion to retain the same in his hands uninvested, in which case the Commissioner for Railways shall

shall not be chargeable with or liable to pay interest on the said sum: And it is further agreed that the said Alexander Amos, Robert Amos, and Alexander Kerr, their executors or administrators, shall be entitled to receive from time to time as the same shall become receivable from the Commissioner for Railways aforesaid and his successors, all interest which shall be paid upon the said deposit, and that the Commissioner for Railways aforesaid and his successors shall not be liable or answerable for any loss of the said sum of five thousand pounds or any part thereof through the same being from time to time deposited in or held by the said Bank as aforesaid.

In witness whereof the said Alexander Amos, Robert Amos, and Alexander Kerr, have hereunto set their hands and seals, and the Commissioner for Railways hath caused his official seal to be hereunto affixed the day and year first before written.

Signed, sealed, and delivered by the said Alexander Amos, in the presence of,—	M. S. HARTE.	ALEX. AMOS.	(L.S.)
Signed, sealed, and delivered by the said Robert Amos, in the presence of,—	M. S. HARTE.	ROBERT AMOS.	(L.S.)
Signed, sealed, and delivered by the said Alexander Kerr, in the presence of,—	M. S. HARTE.	ALEXANDER KERR.	(L.S.)
The official seal of the Commissioner for Railways was hereto affixed in the presence of,—		JOHN RAE,	(L.S.)
		Commissioner for Railways.	
	CH. A. GOODCHAP, Secretary.		

### No. 6.

MEMORANDUM OF AGREEMENT made this eighteenth day of April, in the year of our Lord one thousand eight hundred and seventy-six, between the Commissioner for Railways, a corporation sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same,*" of the one part, and Alexander Amos and Robert Amos, of Sydney, in the said Colony, contractors, of the other part:

WHEREAS by certain Articles of Agreement bearing date the twenty-third day of June, in the year of our Lord one thousand eight hundred and seventy-four, and made between the abovenamed Alexander Amos, Robert Amos, and one Alexander Kerr, of the one part, and the Commissioner for Railways aforesaid, of the other part, the said Alexander Amos, Robert Amos, and Alexander Kerr covenanted and agreed with the Commissioner for Railways aforesaid, and his successors, to find and provide all materials, excepting such as in the specification to the said Articles of Agreement annexed are mentioned as to be provided by the Commissioner for Railways, labour, scaffolding, tools, implements, and every other thing requisite and necessary for, and to do and perform all the works required in and about the full and proper completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers required in the construction of a single line of railway, being that portion of the Great Southern Railway extension (Goulburn to Wagga Wagga) in the said Colony, comprised in the contract called contract No. 2 of the said extension from Yass to Cootamundra, commencing near the town of Yass, at one hundred and eighty-eight miles and forty chains from Sydney, and terminating at the township of Cootamundra at two hundred and fifty-three miles and eight chains, being a length of sixty-four miles and forty-seven chains, in accordance in all things with the Specification and General Conditions to the said Articles of Agreement annexed, and the plans or drawings therein referred to: And to complete and finish the whole of the said works in the said specification and the plans or drawings therein referred to, mentioned, or shown, comprised between Yass and Murrumburrah, on or before the thirty-first day of December, in the year of our Lord one thousand eight hundred and seventy-five, and the remainder of the said works from Murrumburrah to Cootamundra on or before the thirtieth day of June, one thousand eight hundred and seventy-six, as mentioned in clause No. 107 of the said specification and in condition No. 13 of the said General Conditions: And whereas by a certain memorandum of agreement, under seal, bearing even date with the said lastly-recited Articles of Agreement, and made between the said Alexander Amos, Robert Amos, and Alexander Kerr, of the one part, and the Commissioner for Railways aforesaid, of the other part: After reciting that in and by the said General Conditions it is provided that the said Alexander Amos, Robert Amos, and Alexander Kerr shall, as security for the due performance of the works in the said Articles of Agreement, Specification, and General Conditions mentioned, deposit with the Commissioner for Railways aforesaid the sum of five thousand pounds, to be held by the Commissioner for Railways as such security: And reciting that in performance of the said provision in the said General Conditions the said Alexander Amos, Robert Amos, and Alexander Kerr, on the twenty-third day of May then last deposited the sum of five thousand pounds in the City Bank in the city of Sydney, in the name of the Commissioner for Railways, upon fixed deposit at interest, and had handed the receipt for same to the Commissioner for Railways aforesaid, to be held by him as security for the due performance of the said contract: And reciting further, that the said Alexander Amos, Robert Amos, and Alexander Kerr, and the Commissioner for Railways, had agreed to enter into the said memorandum of agreement for defining the terms and conditions upon which the said sum of five thousand pounds should be held by the Commissioner for Railways as such security: It is witnessed that the said parties in the said memorandum of agreement do thereby declare the terms and conditions upon which the said sum of five thousand pounds shall be held by the Commissioner for Railways aforesaid, his successors, as in and by the said memorandum of agreement is particularly stated and declared: And whereas by a certain indenture, bearing date the first day of January, in the year of our Lord one thousand eight hundred and seventy-five, and made between the said Alexander Amos and Robert Amos of the one part, and the said Alexander Kerr of the other part: After reciting (*inter alia*) the hereinbefore recited contract for the construction of the said railway works, and an agreement between the said Alexander Amos, Robert Amos, and Alexander Kerr, for copartnership in the carrying out of the said works: It is witnessed, that for the valuation consideration therein mentioned the said Alexander Kerr did grant, bargain, sell, assign, transfer, and set over unto the said Alexander Amos and Robert Amos, their executors, administrators,

trators, and assigns, to be had and held by them as their absolute property, all the right, title, and interest of him, the said Alexander Kerr, in the said hereinbefore recited contract, and in all works done and contracted to be done thereunder; and in all plant, machinery, rolling stock, and other property of any kind belonging to or appertaining to the said contract or works, or to the said partnership thereinbefore referred to; and in all retention and other moneys due, owing, or belonging to the said partnership: And whereas the said works are still unfinished and not completed, and the said Alexander Amos and Robert Amos have applied to and requested the Commissioner for Railways aforesaid to extend the time for the completion of the said works for the periods following, that is to say, the works from the point of commencement of the said works at Yass to Bowning, inclusive of the works to be carried out at the station-yard at Bowning aforesaid until the thirty-first day of March, which will be in the year of our Lord one thousand eight hundred and seventy-six, the time for the completion of the said works from Bowning aforesaid to Murrumburrah aforesaid, inclusive of the works to be carried out at the station-yard at Murrumburrah aforesaid, until the thirtieth November, which will be in the year of our Lord one thousand eight hundred and seventy-six; and for the completion of the said works from Murrumburrah aforesaid to the point at which the said extension is to terminate at Cootamundra aforesaid, inclusive of the works to be carried out at the station-yard at Cootamundra aforesaid, until the thirtieth April, which will be in the year of our Lord one thousand eight hundred and seventy-seven, which the Commissioner for Railways aforesaid hath consented to do upon the terms and conditions hereinafter mentioned: Now these presents witness, that in consideration of the premises, the Commissioner for Railways aforesaid doth hereby extend the time for the completion of the said works in the said Articles of Agreement and Specification and General Conditions mentioned in the following manner, that is to say:—The time in the completion of the works from the point of commencement at Yass aforesaid to Bowning aforesaid, including the works to be carried out in connection with the station-yard at Bowning aforesaid, until the thirty-first March, in the year of our Lord one thousand eight hundred and seventy-six, the time for the completion of the said works in the said Articles of Agreement, Specification, and General Conditions mentioned and comprised from Bowning aforesaid to Murrumburrah aforesaid, including the works to be carried out in connection with the station-yard at Murrumburrah aforesaid, until the thirtieth November, one thousand eight hundred and seventy-six; and the time for the completion of the said works in the said Articles of Agreement, Specification, and General Conditions mentioned and comprised from Murrumburrah aforesaid to the point at which the said works in the said Articles of Agreement and Specification are to terminate at Cootamundra aforesaid, including the works to be carried out in connection with the station-yard at Cootamundra aforesaid, until the thirtieth April one thousand eight hundred and seventy-seven, upon condition that the same shall be done and performed in all things according to the stipulations, provisoes, agreements, and conditions in the said Articles of Agreement, Specification, and General Conditions named; and that the said deposit of five thousand pounds shall remain as security for the due performance of the said works, and the provisoes, covenants, conditions, matters, and things in the said memorandum of agreement contained shall apply to the completion of the said works within the said extended times as same originally for the completion of the works within the times mentioned in the said Articles of Agreement: And these presents further witness that in consideration of the premises and of the extension of time hereby given, they the said Alexander Amos and Robert Amos do hereby covenant and agree with and to the Commissioner for Railways aforesaid and his successors that they, the said Alexander Amos and Robert Amos shall and will well and truly complete the whole of the works mentioned in and by the said articles of agreement and the said Specification and General Conditions, and comprised from the point of commencement in the said Articles of Agreement mentioned at Yass aforesaid to Bowning aforesaid, including the works to be carried out in connection with the station-yard at Bowning aforesaid, in accordance in all things with the said Specification and General Conditions, and the said plans or drawings on or before the said thirty-first day of March, one thousand eight hundred and seventy-six, and the whole of the works mentioned in and by the said Articles of Agreement, and the said Specification and General Conditions from and comprised between Bowning aforesaid to Murrumburrah aforesaid, including the works to be carried out in connection with the station-yard at Murrumburrah aforesaid, in accordance in all things with the said Specification and General Conditions and the said plans or drawings on or before the thirtieth day of November, in the year of our Lord one thousand eight hundred and seventy-six, and also the whole of the works mentioned in and by the said articles of agreement and the said Specification and General Conditions from and comprised between Murrumburrah aforesaid and Cootamundra aforesaid, to the point at which the extension of the said railway in the said articles of agreement mentioned is under the said Articles of Agreement to finish, including the works to be carried out in connection with the station-yard at Cootamundra aforesaid, in accordance in all things with the said Specification and General Conditions and the said plans or drawings, on or before the thirtieth day of April, one thousand eight hundred and seventy-seven; and that the said Articles of Agreement and the said memorandum of agreement shall not be considered as altered, or the stipulations, provisoes, and agreements therein, or in the said Specification and General Conditions in any way waived, varied, or departed from in any respect otherwise than as to the time within which the said works are to be completed, but that the Commissioner for Railways aforesaid and his successors, and the Engineer-in-Chief for the Commissioner for Railways, and all and every person or persons to whom, with reference to the said contract, any rights or powers are given, shall have all and every the rights, powers, and authorities, cause and causes of action, and suit, claims, and demands given to or vested in him or them, in and by the said Articles of Agreement, Specification, and General Conditions. And by the said memorandum of agreement in all respects against the said Alexander Amos and Robert Amos, and in respect of the said sum of five thousand pounds so deposited as aforesaid, and otherwise as if the said Articles of Agreement, Specification, and General Conditions had originally provided that the works in the said Specification and the plans or drawings therein referred to, mentioned and comprised from the point of commencement at Yass aforesaid to Bowning aforesaid, including the said works in connection with the station-yard at Bowning aforesaid, were to be completed on or before the thirtieth day of March, one thousand eight hundred and seventy-six, and as if the works from Bowning aforesaid to Murrumburrah aforesaid, including the works to be carried out in connection with the station-yard at Murrumburrah aforesaid, were to be completed on or before the thirtieth day of November, one thousand eight hundred and seventy-six; and the works from Murrumburrah aforesaid to Cootamundra aforesaid, at the point at which the said works on the said Articles of Agreement, Specification,

tion, and General Conditions terminates, including the works to be carried out in connection with the station-yard at Cootamundra aforesaid, were to be completed on or before the thirtieth day of April, which will be in the year of our Lord one thousand eight hundred and seventy-seven; and that all and singular the penalties, forfeitures, sum or sums of money, rights and privileges which would accrue to or vest in the Commissioner for Railways aforesaid and his successors for or by reason, or on account of the said works not being completed and finished within the time named in and according to the said Articles of Agreement, Specification, and General Conditions, and the said memorandum of agreement shall accrue to and invest in the Commissioner for Railways aforesaid and his successors if the works from Yass aforesaid to Bowning aforesaid, including the said works in connection with the station-yard at Bowning aforesaid, shall not be completed and finished in accordance with the said specification, and the plans and drawings therein referred to in all things on or before the said thirty-first day of March, one thousand eight hundred and seventy-six; and if the works from Bowning aforesaid to Murrumburrah aforesaid, including the works to be carried out in connection with the station-yard at Murrumburrah aforesaid shall not be completed and finished in accordance with the said specification, and the plans and drawings therein referred to in all things, on or before the said thirtieth day of November, one thousand eight and seventy-six; and also if the said works between Murrumburrah aforesaid and Cootamundra aforesaid, including the works to be carried out in connection with the station-yard at Cootamundra aforesaid, at the point at which the said works in the said Articles of Agreement specified are to terminate, shall not be completed and finished in accordance with the said Specification and the plans and drawings therein referred to in all things, on or before the said thirtieth day of April, one thousand eight and seventy-seven: And further, that the said Articles of Agreement and the said memorandum of agreement shall at all times hereafter and for all purposes whatsoever be read and considered as if the said thirty-first day of March, one thousand eight hundred and seventy-six; the thirtieth day of November, one thousand eight hundred and seventy-six; and the thirtieth April, one thousand eight and seventy-seven, were and are the times therein named for the completion of the several portions of the said contracts which under this agreement are to be completed and finished on or before the said several days, it being hereby expressly declared that if default shall be made in completion of any part of the said works upon the day at or upon which such portion of the said works should under this Agreement be completed, the extension of time hereby given shall, as to the works mentioned in the said Articles of Agreement and Specification then remaining to be completed, wholly cease; and the Commissioner for Railways and his successors shall thereupon have all and every the same powers and authorities, rights, remedies, claims, and demands against the said Alexander Amos and Robert Amos, and the said Alexander Amos and Robert Amos shall be and become liable to the like penalties and forfeitures to which they by and under the said Articles of Agreement, Specification, and General Conditions, in case of default being made by them in the construction and completion of the said works on the days and times in the said Articles of Agreement, Specification, and General Conditions mentioned.

In witness whereof the Commissioner for Railways aforesaid hath hereunto set his official seal, and the said Alexander Amos and Robert Amos have hereto set their hands and seals the day and year first before written.

The official seal of the Commissioner for Railways was hereto affixed in the presence of,— CHAS. A. GOODCHAP, Secretary.	}	JOHN RAE, (L.S.) Commissioner for Railways.
Signed, sealed, and delivered by the said Alexander Amos in the presence of,— JNO. BENYON JACKSON.	}	ALEX. AMOS. (L.S.)
Signed, sealed, and delivered by the said Robert Amos in the presence of,— M. S. HARTE.	}	ROBERT AMOS. (L.S.)

## A. & R. Amos & Co.—Contract for Extension, Cootamundra to Wagga Wagga.

- No. 1. Specification.
- No. 2. Conditions.
- No. 3. Tender.
- No. 4. Bond.
- No. 5. Agreement for £5,000 security.
- No. 6. Agreement for extension of time.

### No. 1.

This is the Specification, marked "A," referred to in our annexed Articles of Agreement with the Commissioner for Railways, dated the sixteenth day of October, A.D. 1874.

Witness—M. S. HARTE.

ALEX. AMOS.  
ROBERT AMOS.

A.

GREAT SOUTHERN RAILWAY.—EXTENSION FROM GOULBURN TO WAGGA WAGGA.

*Contract No. 3—Cootamundra to Wagga Wagga.*

#### SPECIFICATION.

1. This contract commences at Cootamundra at 253 miles 8 chains, and terminates at near the town of Wagga Wagga, at 304 miles and 50 chains from Sydney, being a length of 51 miles and 42 chains.
2. The work for which tenders are invited, and to which this Specification refers, comprises the providing of all materials (excepting such as are hereafter specified to be provided by the Commissioner), labour,

labour, scaffolding, tools, implements, and every other thing requisite and necessary for the full and proper completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers, required in the construction of a single line of railway, in accordance with this Specification, and to the entire satisfaction of the Engineer-in-Chief for Railways.

3. The contractor to state in his schedule a price per cubic yard at which he will execute all the excavations, brickwork, and masonry, the timberwork per cubic foot; the ironwork in bolts, straps, and other similar ironwork at per lb., the wrought iron girders at per ton; the fencing per rod; ballasting and laying permanent way at per lineal yard; and sleepers at per sleeper, finding all materials and labour,—the work being paid for on the net measurement as executed.

4. The plan is drawn to a scale of 4 chains to an inch, and the section to a horizontal scale of 4 chains to an inch, and a vertical scale of 40 feet to an inch.

5. The plan shows the course of the line. The centre red line represents the line of the stakes, which are driven down at intervals of one chain, and are in the centre of the line to be constructed.

6. The section represents the surface of the ground in black, and is taken along the centre line shown on the plan in red. The upper, or blue line, represents the upper surface of the rails when laid; the lower or red line represents the level of the bottom of the ballasting, or formation level in the centre of both cuttings and embankments, and is 1 foot 3 inches below the blue line.

7. When the railway is in cutting, a ditch 3 feet wide at the top, 1 foot at the bottom, and 1 foot 6 inches deep, shall be made on the higher side of the ground to be occupied by the railway; on the lower side it will not be necessary to have any ditch. The drains are to be made to fall into the ditches or watercourses at present existing for the drainage of the adjoining lands, or into the diverted channels, as the case may be, and whenever the fall of the drains, or that of the diverted channels, shall be so great as to endanger the stability of the sides or bottoms of such drains, the same to be protected by pitching; and whenever it may be considered desirable to carry the water from such drains down the slopes of the cuttings, a pitched drain shall be constructed on the slopes, but these matters will be considered as extra works, and arranged for as provided in clause No. 5 of the General Conditions.

8. A ditch similar to that described on the top of the cuttings to be formed at the foot of the embankments, on the higher side only.

#### *Earthworks.*

9. The excavations in the centre of the cuttings are to be made to the depth shown on the longitudinal sections by a red line, being a depth of fifteen inches below the level of the upper surface of the rails, as indicated by the blue line.

10. The bottom of the cuttings to be slightly convex, being fifteen inches below the level of the rails in the centre, and eighteen inches at the sides, having a fall from the centre to the bottom of the slopes.

11. The cuttings to be sloped at the batters stated on the longitudinal section, or to such other batters as may be ordered by the Engineer-in-Chief during the progress of the works, to be 15 feet wide at the bottom, that is to say, at the formation level. The sides, as the excavation proceeds, to be uniformly trimmed or dressed to the specified inclinations, proper battering rules being used and provided by the contractor at his own cost for this purpose.

12. Cross sections have been already taken at the expense of the Commissioner, and should the contractor not take exception to the accuracy of these sections before the work in the cuttings to which they refer has been commenced, it will be taken as an acknowledgment on his part that they are correct; and that he will be satisfied to have the quantities of work for which payment is to be made measured, from the sections furnished by the Engineer, provided the works cannot be otherwise satisfactorily measured, and the quantities accurately ascertained. Should the contractor prefer to take cross sections for himself no measurements taken from them will be admitted as the correct quantities, unless the accuracy of such sections has been confirmed by the Engineer or Superintending Officer.

13. The centre line has been very carefully staked out, and every care must be taken by the contractor not to remove any of the centre stakes without taking the precaution to fix such marks as will enable him to find the position of the stake or stakes so removed.

14. Any stakes removed which the contractor is unable to replace will be replaced by the officer in charge of the works; but it must be distinctly understood that every expense attendant upon such replacement must be paid by the contractor, the Engineer-in-Chief reserving to himself the right to deduct at once such cost from any certificate then due in favour of the contractor for work done on this contract.

15. The embankments throughout the whole contract to have slopes of  $1\frac{1}{2}$  to 1, and to be not less than 15 feet wide at formation level.

16. On the completion of the cuttings and embankments the whole of the formation shall be properly trimmed. The formation of the cuttings shall be trimmed to the level shown on the working section, and the embankments shall be trimmed to such level as the Engineer may direct.

17. The excavations shall at all times be kept free from water, and so conducted as always to afford the utmost facilities for the escape of the water by casting, and keeping properly cleaned out ditches (which shall in no case be deeper than the formation level) on each side of the excavation, and also by pumping if necessary.

18. The contractor must deposit the material from the cuttings either to the embankments named for its reception or to such other place, not exceeding a lead of one mile, that may be directed by the Engineer during the progress of the works.

19. Any stone or gravel that may be found in the cuttings suitable for ballasting may be laid aside by the contractor, at his expense, instead of being taken to embankment; but any deficiency in the embankments caused by such appropriation of material from the cuttings shall be supplied entirely at the expense of the contractor either from side cutting or by increasing the width of the cuttings to the extent only of the width required for a double line.

20. The price stated in the Schedule for excavations from cuttings is to be the average price per yard whatever the nature of the material excavated may be, and the contractor must therefore satisfy himself as to the nature of the excavations in the different cuttings before sending in his tender. Trial holes have been made in nearly all the cuttings, and the strata through which they pass is marked on the section. These trial holes however shall in no way bind the Commissioner or be assumed to be a guarantee to the contractor of their accuracy; but, as they are left open, he must satisfy himself by personal inspection,

inspection, as no allowance will afterwards be made to him beyond the price stated in his Schedule, what ever material may hereafter be found in the cuttings.

21. All excavations, when the lower portion only is in rock, shall be taken out as shown by a diagram on the working sections, the gullet in all cases keeping pace with the excavation of the slopes. If any cutting be composed entirely of rock the sides shall be left perpendicular throughout unless otherwise directed.

22. The earthwork must be well punned for such distance as may be required, not exceeding three-yards on either side and one yard in depth, over the top of all culverts, without any charge beyond the price stated in the schedule for earthwork.

23. The quantities stated on the longitudinal section are placed there for the contractor's guidance to enable him to determine the length of lead, but the quantities to be paid for will be the actual measurement of the works satisfactorily executed, whether in excess or diminution of the quantities marked upon the section.

24. The Commissioner will lend to the contractor for the execution of the earthworks on this contract rails for a length of two miles of single way, but any rails beyond this quantity, if required by the contractor, must be provided at his own expense; but no fastenings, either fish-plates or dogs, will be lent by the Commissioner.

25. All rails lent to the contractor for temporary purposes must be returned by him and stacked at the Wagga Wagga end of his contract, having first been straightened to the satisfaction of the Engineer. Any rails cut, broken, lost, or so damaged, by the contractor as to be rendered useless, must be paid for by him at the price per ton at which rails of a similar description are valued in the Colony. These rails will be delivered, free of charge, to the contractor at the Goulburn Station.

26. The whole of the land inside the fences of the railway or road approaches (and for a distance of half a chain beyond such fences) should it be considered by the Engineer desirable, to be cleared of timber or brushwood, the fallen timber being entirely removed or destroyed. See clause No. 8 of General Conditions. The cost of clearing will not be paid for as a specific charge, but must be included in the price stated in the schedule for earthwork.

27. All embankments which have to be formed on side-lying ground must have benchings cut so as to prevent the bank from slipping, and such benchings shall be done to the satisfaction of the Engineer, or Superintending Officer. The excavations for these benchings to be paid for at the price stated in the schedule for side cutting.

28. During the progress of the works every protection shall be afforded to the public by the erection of proper fences alongside all excavations which join upon any public road, and where the road is crossed by the railway, temporary crossings or diversions shall be made at the expense of the contractor, and lights shall be kept burning between the hours of sunset and sunrise at all intersections or diversions of all public roads, if considered necessary by the Engineer or superintending officer. The contractor will, however, be held responsible for any accidents which may occur at any of these crossings during the progress of the works.

#### VIADUCTS AND BRIDGES.

##### *Brickwork.*

29. The brickwork is to be constructed with the best, sound, well-shaped, hard-burnt kiln bricks, free from all defects, moulded for the cutwaters, and laid in courses of headers and stretchers alternately (English bond) in mortar or cement as may be hereafter directed.

30. The bricks to be well bedded and joints flushed with mortar or cement at every course, and well jointed.

31. The whole of the walls to be built of the dimensions shown on the drawings, and no allowance will be made for any excess of dimensions above those found on the working drawings now exhibited, or which may be hereafter supplied.

32. The price stated in the schedule for brickwork shall apply not only to the bridges, the plans for which are now exhibited, but to any other bridges which may be considered requisite hereafter, and the price stated for excavation to foundations shall include all expenses attendant upon getting in the foundations, and filling in and thoroughly punning round the brickwork up to the original level of the ground.

##### *Masonry.*

33. All stone used in the bridges to be of the best quality, free from all defects, to be laid in cement or mortar, in courses of 12 inches in thickness; to have boaster beds and joints throughout, and to be rough picked on the face.

34. No stretcher will be allowed with a less bed than one and a half times the thickness of the course in which it is being used. The work to be built header and stretcher alternately, each header extending throughout the whole thickness of the wall, if such wall be not more than 4 feet in thickness; and for all walls exceeding 5 feet the headers may be in two stones, laid side by side, overlapping each other at least 14 inches.

35. The bed of each stretcher shall not be less than 18 inches, except when the full thickness of the wall shall be less than 3 feet, when two stretchers may be used with beds each equal to half the thickness of the wall.

36. The whole of the masonry to be rock-faced (except where otherwise described) with a chisel-draft  $1\frac{1}{2}$  inch wide on each side of all external angles, and the bond throughout shall not be less than 14 inches.

37. The springing stones for the arches shall be of the dimensions shown upon the drawings, the beds and vertical joints being boasted throughout with a chisel-draft 1 inch wide on the external angles. To be chamfered and throated as shown in the drawings.

38. The copings to piers, spring-courses, and parapets or pilasters to be of the dimensions shown on the drawings, to be rock-faced with a chisel-draft 1 inch wide on the external angles. The string-courses to be chamfered and throated, and the upper side of the parapet to be tool-dressed.

##### *Culverts.*

39. The whole of the masonry, except where otherwise described, is to be laid in mortar, mixed in the proportion of one of stone lime to one of clean sharp sand, or any other proportion the Engineer may hereafter direct.

40.

40. The price stated in the schedule for excavations is also to include keeping the foundations free from water, and filling and well ramming round the masonry or brickwork to the level of the original surface of the ground, as the work proceeds.

41. No masonry or brickwork shall be commenced without an order from the Engineer or superintending officer, and when the excavation is ready to receive the brickwork or masonry the contractor must give notice to the Engineer or superintending officer to that effect, so that the foundations may be approved before the work be commenced.

42. The culverts, except those of a square form, are to be built of the form shown on drawing No. 3; the materials and workmanship to be of the best description. If of stone, the beds and joints shall be boasted throughout and rock-faced (excepting the soffit of the arch and invert, which must be picked off to an even surface), laid in 12-inch courses, header and stretcher alternately, and grouted in flush with good mortar at every course.

43. The bed of each stretcher, from 2 to 5 feet culverts inclusive, must be equal to the thickness of their walls respectively. Two stretchers may be used in the 8-foot and 10-foot culverts, but each arch must be formed of single stones, the band throughout being not less than twelve inches.

44. Any culvert sustaining damage from carelessness on the part of the contractor in not sufficiently backing-up the masonry or brickwork, the whole of the work in such culvert will be condemned, and must be rebuilt at the expense of the contractor.

45. The square culverts are to be built "dry," of the form and dimensions shown on drawing No. 3; all beds and joints to be picked true; the face may be roughly knocked off.

46. If earthenware pipes be used for drains, they shall in all cases be sunk not less than their outside diameter below the ordinary surface of the ground, and the joints made with properly tempered clay. Brick-heads to be built for these pipes, as shown on drawing No. 3.

47. If bricks be used they shall be good, sound, well-shaped, hard-burnt kiln bricks, free from all defects, moulded for cutwaters where required, and laid in courses of headers and stretchers alternately (English bond), in mortar or cement as may be hereafter directed.

48. The bricks to be well bedded, and the joints flushed with mortar or cement at every course, and well grouted.

#### *Inlets and outlets.*

49. Excavations from inlets and outlets, also from foundations of culverts, to be run into the main line embankment where directed, such run not to exceed sixty yards.

#### *Mortar.*

50. The mortar to be mixed in the proportion of one part of fresh well-burnt lime and one of clean sharp sand, or such other proportion as the Engineer may direct during the progress of the work,—to be mixed in a dry state and well tempered by being passed through a pug-mill with a proper quantity of water, and must always be used fresh.

#### *Cement.*

51. The cement to be Portland cement of the best quality, gauged in the proportion of two of clean sharp sand to one of cement, and must be used fresh.

#### *Timberwork.*

62. The hewn timber to be used in the superstructure to the bridges shall be ironbark, free from sap and wane, perfectly sound, straight, and well seasoned, and to be framed as shown on the drawings. Great care must be taken in framing the work, and in fitting the ironwork, which must be done with the greatest accuracy. The bearing and batter piles to be round, the diameter at the top being not less than sixteen inches, and the bottom 12 inches, to be driven as hereafter directed, and may be of ironbark, box, stringybark, or other approved timber. White gum shall not be used in any of the bridges on this contract.

63. The girders, trusses, headstocks, and corbels shall be hewn timber perfectly square, and the sleepers, transoms, walings, braces, and planking, shall be sawn timber of any approved hardwood, straight and sound. All beds and joints of the timberwork to have a thick coat of red lead and oil previous to being fixed, the cost of doing this to be included in the price stated in the schedule for timberwork.

64. Should any of the bridges have to be erected on rock foundations, timber sills bolted to the rock shall be substituted for piles, in accordance with drawings which will hereafter be furnished; the rock shall be dressed off perfectly true to receive the sills, and the cost of doing this shall be paid for at the price named in the schedule for excavation to foundations in rock.

65. The whole of the timberwork will be paid for at per cubic foot, and the round piles of the size stated will be considered as equivalent to a cubic foot for every foot in length of pile, and paid for at the price per lineal foot named in the schedule.

66. When the piles are being driven every precaution must be taken to prevent splitting during the driving, as no split piles will be allowed to remain in the work.

67. Each pile must be driven with an iron ram weighing not less than 20 cwt., and every pile shall be driven to such depth as may be required by the superintending officer.

68. The contractor must ascertain for himself the required length of each pile, as no scarfing to any of the piles will be permitted, and all piles pitched too short must be drawn and others substituted of the requisite length.

69. An allowance will be made to the contractor of three feet on each pile beyond the net measurement when cut off, for the reception of the headstocks, for waste in driving.

70. The whole of the bolts, nuts, straps, spikes, plates, washers, strap-bolts, and pile-shoes, to be of wrought-iron of the best quality, and of the form and dimensions shown on the drawings. The whole of the ironwork, except pile-shoes, to be heated and dipped in linseed oil before being taken on to the works.

#### *Permanent way and ballasting.*

71. The ballast to be of the depth shown on drawing No. 7, being nine inches above the formation level in the centre of the cuttings, to be level on the upper surface on straight portions of the line; but on curves the outside of the ballast shall be of sufficient thickness to give the proper super-elevation to the outside rail, the inner rail being kept at the height shown on the longitudinal section.

72. All ballast and sleepers required for the works under this contract must be provided by the contractor, who will have to lay the rails, &c., and deposit the ballast on the line of railway as hereafter described.

73. The Commissioner will provide all ironwork for the permanent way rails, fish-plates, bolts nuts, spikes, and screws. These permanent way materials will be delivered to the contractor at the Yass Station free of cost, but all expenses attendant upon their removal from thence to the places where they are to be used must be borne by the contractor; and on the Commissioner delivering to the contractor all such materials as are to be provided by him for this work, the contractor will be bound to receive them, and to give the Commissioner or his agent a receipt for all such materials so delivered; and after receiving such materials, he will be held responsible for all damage, breakage, or loss while in his possession, either during their transit from the place of delivery or in putting them into the work; and in all cases where they may be damaged, lost, or destroyed, the contractor will have to replace or repair them at his own expense.

74. The contractor must supply all engine-power, waggons, tools, implements, labour, and every other thing necessary for ballasting and laying the permanent way in the manner stated in this Specification, and to the satisfaction of the Engineer-in-Chief for Railways.

75. The contractor must in all cases exercise great care in carting the materials on to the work, as he will be held responsible for and chargeable with the expenses of repairing all or any damage he may cause to the works by carelessness or otherwise in carrying out this contract; and the Commissioner is hereby empowered to deduct the amount of such damages from any money which may be due or may hereafter become due to the contractor under this contract.

76. Where the railway intersects any road, whether main road, public road, or private occupation road, a permanent level crossing shall be made in all cases where directed by the Engineer, with proper ironwork guard rails, and the whole constructed in accordance with drawing No. 8.

77. All such crossings shall be maintained by and at the expense of the contractor until the final completion of this contract.

78. Level crossing gates, 10 feet, 12 feet, and 15 feet respectively, must be provided and fixed complete in accordance with drawing No. 9 at the price stated in the schedule. Each gate to be provided with a strong chain, padlock and duplicate keys.

79. Each gate, including all posts, struts, or spurs, and ironwork, must be painted two coats with the patent iochrome Australian paint.

80. The approaches to all public roads to be metalled with broken stone (the best that can be obtained in the district), and must be broken to a gauge of 2 inches, and be laid on to the approach to the depth of 9 inches.

#### *Ballasting.*

81. The ballast shall consist of clean sharp gravel, free from all loam, small sand, or other material which the Engineer may consider unsuitable for ballast, broken stone of approved quality, not larger than a cube of 3 inches, or properly vitrified clay, 9 inches in thickness, in the centre of the roadway; the ballast being spread level transversely on the straight portions, but on curves the ballast on the outside of each curve shall be of such extra thickness as will give the necessary super-elevation to the outer rail.

82. The width of the ballast at the bottom to be 11 feet 9 inches, and at the top, which will be 6 inches below rail level, the width must be 9 feet 6 inches, as shown on drawing No. 7. The outer edges of the ballast both at the top and bottom must be kept parallel to the centre line throughout, and the slopes of the same to be neatly trimmed to a uniform surface.

83. The road may be laid upon the formation, and afterwards lifted to the proper level in two lifts of 3 inches each, so as to give 6 inches of ballast under the centres of the sleepers and 7 inches under the ends, as shown in drawing No. 7.

84. The contractor must use the greatest care in lifting, no lift being more than 3 inches, so as to avoid bending the rails or in any other way injuring the road; and no ballast waggon will be allowed to run over any portion of the road until 3 inches of ballast have been placed under the sleepers, and no engine shall pass over the road until it has been lifted to its full height and properly packed.

85. The ballasting when laid complete will be paid for at per lineal yard, and no allowance will be made for any loss by subsidence in embankments or otherwise.

#### *Road laying.*

86. The sleepers must be provided by and at the expense of the contractor, in accordance with clauses Nos. 95 to 101.

87. The bed for the rail must be trimmed by machinery to the width of its bottom flange, which must be sunk its exact depth into the sleeper on the outside of the rail, the seat for the rail being inclined from the inside at an angle of 1 in 20 to give the proper cant to the rail.

88. The sleepers must be placed at such distances apart as are shown on drawing No. 7, the number being eight sleepers under rails of 21 feet in length, and seven under 18-foot rails.

89. The rails must be fixed to the sleepers with screws and spikes as shown on the drawing No. 7, the holes for which must be bored in the sleepers to prevent their splitting when inserting the fastenings.

90. The rails to be laid to a gauge of 4 feet 8½ inches throughout, the upper surface being at the level shown on the working section excepting where otherwise directed by the Engineer. The joints of the rails to be secured by fish-plates and bolts in the usual manner. Each rail to be straight and level transversely when put down in the straight portions; and where the line is curved, the rails must be bent by a machine, to be provided for the purpose by the contractor (as no hammering will be allowed), before being placed on the sleepers, to suit the particular radius of such curve, the outer rail having an elevation above the inner rail such as the Engineer may direct.

91. The rail level will be 15 inches above the formation level in the centre throughout. A standard clip-gauge will be provided by the Commissioner, to which standard all other gauges must be made, and which shall be approved and branded by the district engineer before being used on the works. Any portion of the road laid in with any gauge not so approved and branded will not be paid for by the Commissioner. Clip-gauges only shall be used throughout, no other gauge will be permitted on the works.

92. The rails must be laid with the joints as nearly at right angles with each other as the lengths of the rails will permit, but in no case shall the joint in one line of rails have a lead or be in advance of the joint in the opposite rail of more than 3 inches.

93. The contractor must provide all labour and tools required for the laying and completing the permanent way, which must be finished in every respect to the entire satisfaction of the Engineer-in-Chief.

94. All the sleepers must be laid as nearly as practicable at right angles to the centre line of railway; they must be well and thoroughly packed so as to cause the upper surface of the rails, when finished, to be at the level shown on the working section, or at such level as may be hereafter directed, and the two lines of rails shall be laid uniformly parallel to the centre line throughout, and must be perfectly straight on all the straight portions, and on the curves they must be laid to a uniform specified radius.

#### *Sleepers.*

95. The sleepers to be supplied under the contract may be of ironbark, grey-gum, blackbutt, red-gum, or other approved hardwood, 8 feet long, either sawn or split from large trees.

96. If sawn, the size to be not less than 9 inches  $\times$  4½ inches, sound and straight, and must be cut when the sap is down. If split, they must be taken from trees not less than 3 feet in diameter, the broadest side to be of a uniform width of 10 inches, to be 4½ inches thick, and the smallest part of the sleeper to have a sectional area of not less than 40 superficial inches. The bark to be removed from all sleepers before inspection.

97. The number of sleepers required will be about 110,000, but any additional number that may be required for this contract shall be supplied by the contractor at the price for sleepers stated in the schedule.

98. The contractor to find men at his own cost for the purpose of turning over the sleepers during their inspection by a person appointed by the Engineer for this purpose, and all the sleepers approved will be branded.

99. No inspection of sleepers will be made unless a proper number of men be provided by the contractor for the purpose above-mentioned.

100. All sleepers before they can be branded or inspected must be delivered on some portion of the land inside the railway fences on this contract.

101. Any sleeper which may be found to be split after being laid in the road and branded must be replaced by the contractor at his own cost.

#### *Sidings.*

102. All sidings, cross-over roads, or through roads, that may be required shall be ballasted and laid in by the contractor at the price per lineal yard stated in the schedule for laying and ballasting the main line of permanent way, also all crossings and switches must be laid in by the contractor at the price per lineal yard stated in the schedule for that description of work.

103. The measurements for these "sidings," "cross-over," "through," or "loop" roads shall be taken from point to point of switches where two switches are laid in, but where one switch is used the measurement will be from the point of the switch to the heel of the crossing.

104. In no case shall the measurement of the ballasting on the sidings include any part of that which is already included in the measurement of the main line of permanent way.

105. The contractor shall maintain all works which he may have executed under this contract in good order and repair until they have been certified by the engineer as having been satisfactorily completed.

#### *Fencing.*

106. The fencing to be erected under this contract is to be either a three-rail sapling fence or a two-rail fence, with split posts and rails, or a wire fence, as shown on drawings Nos. 4 and 5. The timber to be of the best quality in the district through which the railway passes.

#### *Miscellaneous.*

107. The contractor shall pay all stamp or other duties which the Government now or may hereafter require to be paid on any document forming part of this contract.

108. The contractor must furnish to the Engineer a monthly statement of all works done by him, or of claims he may have against the Commissioner under this contract, and no certificate will be given until such an account has been rendered.

109. The contractor to provide at his own cost an office for the district engineer. This building to consist of two rooms, each 14 feet  $\times$  12 feet, having weatherboard sides and ends, the roof to be covered with shingles; to have ½-inch tongued and grooved boarded ceiling, and inch flooring boards; a brick chimney with two fire-places to be erected between the rooms; two doors and three windows to be provided and fixed. The place where this building is to be erected will be decided upon hereafter.

110. Each person tendering must enclose with his tender a Treasury deposit receipt for £500, without which his tender will not be taken into consideration. Such deposit will be returned to the unsuccessful tenderers forthwith; but should the person whose tender has been accepted fail to find the necessary security within the time named in the General Conditions, then the said sum of £500 shall be forfeited by him to the Commissioner.

JOHN WHITTON.

### No. 2.

THESE are the General Conditions, marked "B," referred to in the annexed Articles of Agreement with the Commissioner for Railways, dated the sixteenth day of October, A.D. 1874.

Witness—M. S. HARTE.

B.

GENERAL CONDITIONS.

#### *Interpretation clause.*

1. The words "superintending officer" in these Conditions shall mean any person who may from time to time be appointed by the Engineer-in-Chief for Railways to supervise the works or buildings; and the words "Engineer-in-Chief" or "Engineer" shall mean the Engineer-in-Chief for the time being of the Commissioner for Railways.

*Dismissal*

*Dismissal of workmen, removal of improper materials, &c.*

2. The Engineer shall have the power of immediately dismissing any agent or workman employed by the contractor, and of having removed off the line of railway (or any land belonging to the Commissioner), any materials, plant, or implements, which in his opinion are insufficient for the purpose intended or at variance with the meaning and intention of this Specification. The cost of the removal of any such plant, materials, or implements to be paid by the contractor.

*Instructions to be obeyed.*

3. Should the contractor refuse or neglect to carry out the instructions of the Engineer or the superintending officer, the Engineer shall have the power of suspending the usual monthly certificate until such instructions have been complied with.

*Drawings, Specification, &c.*

4. The plans, sections, and drawings represent generally the form and dimensions of the several works. Where any discrepancy exists between the dimensions as indicated by the scale and those marked in figures, the figures are to be considered as correct, and are to be taken in all cases in preference to the measurements by the scale attached. And if there should be any discrepancy between the figures or dimensions, or the form of construction, or the material as indicated in the drawings, and the dimensions and materials given in the Specification, the directions of the Specification shall be adopted, and in all cases of defective description, or any ambiguity, the explanation given by the Engineer shall be binding upon the contractor. Also, anything contained in the drawings and not in the Specification, or anything contained in the Specification and not shown in the drawings, shall be equally binding as if it were contained in both.

*Extra works, omissions of works, &c.*

5. If at any time whilst the works are in hand it shall be deemed expedient by the Engineer to increase or diminish the dimensions of any works to be done under this contract, or to alter their situation, or to vary the materials, form, or dimensions of any of the said works, or of any part thereof, he shall have full power to do so, and to order and direct any such increase, diminution, or alteration, which shall be executed by the contractor if of the class of works provided for in the schedule of prices; and no such increase, diminution, or alteration of works shall in any way annul or set aside this contract, or extend the time for the completion thereof, but such additions or alterations shall be measured and allowed and paid for, or such deductions credited to the Commissioner for Railways, as the case may require, according to the schedule of prices; and if any portion of the works so ordered to be done shall not be of the class of works provided for in the schedule of prices, the same shall be executed by the contractor at such price as may be agreed for with the Engineer; but if the contractor and the Engineer cannot agree as to the works required to be done which are of a class not provided for in the schedule of prices, the Engineer may order and direct the same to be done by such person or persons as he may think fit.

*Net measurements.*

6. All measurements of the works shall be made according to the actual dimensions, notwithstanding any general or local custom to the contrary.

*Labour, materials, plant, &c.*

7. The contractor shall provide at his own costs and charges all materials, labour, tools, plant tackle, machinery, scaffolding, &c., for the proper completion of the works at the prices stated in his Schedule.

*Damages, &c., to be paid for by contractor.*

8. The land inside the fences of the railway may be used for the purpose of carting the materials for the works on this contract, but all damage that may be done to any land not actually the property of the Commissioner must be paid for by the contractor, whether such damage be caused by the carting of materials, or the straying of cattle in consequence of the destruction by the contractor or his workmen of the original fences, or of the fences alongside the railway, or by any other cause connected with the construction of the works; and should such damage not be at once paid for, such an amount as shall appear reasonable to the Commissioner may be paid by him in compensation for the same and deducted from any money that may be due to the contractor for work done under this contract.

*Setting out works.*

9. The works will be set out for the contractor, but he must satisfy himself of their accuracy, as no work incorrectly set out or improperly executed will be paid for by the Commissioner.

*Contractor to be represented.*

10. The contractor at all times during the progress of the works, when he is not personally superintending them, must have a responsible agent or overseer stationed on them to receive instructions from the superintending officer or Engineer-in-Chief, and to represent the contractor for all the purposes of this contract.

*Progress of works.*

11. Should the Engineer be at any time dissatisfied with the mode of proceeding, or at the rate of progress of the works or any part thereof, the Commissioner shall have full power without vacating this contract, to take the works wholly or in part out of the hands of the contractor, and to employ, procure, and make use of all labour or materials which he may deem necessary for completing the works, the cost of such labour and materials to be deducted from any money that may be then due or may hereafter become due to the contractor; and if the money then due or thereafter becoming due to the contractor shall not be sufficient for that purpose, the balance remaining unpaid may be recovered in an action for damages for breach of contract or as money paid for the use of the contractor.

*Cancellation of contract.*

12. The Commissioner shall have the option, and full power and authority, in lieu of proceeding under the last preceding clause of these Conditions, if the contractor fail to proceed in the execution of, and to carry on the works in the manner and at the rate of progress required by the Engineer, of cancelling

cancelling this contract, so far as relates to the works remaining to be done ; and in such case the moneys which shall have been previously paid to the contractor on account of the works executed shall be taken by him as full payment for all works done under the contract ; and upon notice in writing under the hand of the Commissioner that he, under the authority of this condition, cancels the contract, being served upon the contractor, or left at his last known place of abode, the contract shall be cancelled, and thereupon all sums of money that may be due or unpaid to the contractor, together with all implements in his possession, and all materials provided by him, upon the ground upon which the work is being carried on, or adjacent thereto, and all sums of money named as penalties for the non-fulfilment of the contract within the time specified, shall also be forfeited and become payable to the Commissioner, and the said implements and materials shall become and be the absolute property of the Commissioner, and with the moneys so forfeited and payable as aforesaid shall be considered as ascertained damages for breach of contract.

*Time of completion.*

13. The contractor shall complete the whole of the works comprised in this contract, on or before the thirty-first day of December, one thousand eight hundred and seventy-six ; and in the event of their non-completion at the specified time, should the Commissioner not have proceeded under clauses Nos. 11 and 12 of these Conditions, or either of them, the contractor shall forfeit and pay two hundred pounds sterling per week or for every part of a week that shall elapse after such specified time until their completion, and which sum or sums may be deducted from any money payable to the contractor under this or any other contract. No certificate will be given after the date specified for the completion of the contract, until the whole of the works shall have been properly completed to the satisfaction of the Engineer-in-Chief.

*Copies of drawings, &c.*

14. All copies of drawings or specifications required by the contractor for carrying on the works must be made at his expense.

*Free passes, &c.*

15. No free passes on any of the Government Railways will be granted either to the contractor or his agents, nor will any materials or articles of any description be conveyed free of charge.

*Liability of contractor.*

16. The care and maintenance of all works under this contract shall remain with the contractor until their completion ; and until the Engineer-in-Chief for Railways shall, by notice in writing, under his hand, inform the contractor that he has taken charge thereof ; and until such notice shall have been given, the contractor and his sureties shall be jointly and severally responsible for all accidents from whatever cause arising, and shall make good all damage thereto.

*Contractor not to assign works or moneys.*

17. The contractor shall not assign over this contract, or assign all or any of the moneys payable or to become payable under the contract, or all or any part thereof, or any other benefit whatsoever arising or which may arise under this contract, to any other person, without the consent in writing under the seal of the Commissioner for Railways first obtained. The contractor for each and every breach of this condition shall pay to the Commissioner for Railways the sum of £500 as and for liquidated damages, and the sum or sums payable as such damages may be deducted from any sum or sums due to the contractor, under this or any other contract with the Commissioner for Railways ; and any permission to assign over this contract shall not discharge the contractor from liability to see that the works so assigned are executed and completed in terms of this contract, unless on the assignment thereof the Commissioner expressly declare that the contractor is discharged from further liability.

*Truck system not allowed.*

18. The workmen, tradesmen, and labourers of every class employed on the works to which these conditions refer shall be paid their wages, in full, in money, current coin of the Colony, at least once in every month ; and no ticket or other system of payment by provisions, liquors, or goods, will, on any pretence be allowed ; nor shall the contractor, or any person or persons employed by him, or in any way connected with him, establish any shop for the supply of provisions, liquors, or goods ; nor shall the contractor oblige his workmen to take provisions, liquors, or goods of any kind from any person in particular. The workmen of every class shall be paid on the works if it be possible, or in some building adjoining, and in no case shall they be paid at a public-house or other place where liquors or refreshments are sold.

*Power to the Commissioner to pay workmen's wages.*

19. Before the payment of any money to the contractor, the Commissioner may require from him a statutory declaration that the tradesmen and labourers of every kind employed on the works to which these conditions refer have been paid their wages and claims of every kind in full, in money, the current coin of the Colony, and to the latest date at which such wages or claims are due—and the Commissioner may withhold the payment of any money that may be due or may become due to the contractor until such declaration has been made and delivered to him.

*Bankruptcy or insolvency.*

20. If the contractor shall become insolvent, have his estate placed under sequestration, or shall make an assignment of his estate for the benefit of his creditors, it shall be lawful for the Commissioner without previous notice to the contractor, or to the Official or other Assignee or Assignees of his insolvent estate, or to the trustee or trustees under the assignment, to take the works out of the hands of the contractor, and of the assignees or trustees of his estate, and to re-contract with any other person or persons to proceed with and complete the same, upon such terms, stipulations, and conditions as shall be deemed expedient ; and all the then remaining materials, implements, and plant aforesaid may be used in and applied for the purposes of the works, but on the final completion of the works, the surplus of such materials, implements, and plant, shall cease to belong to the Commissioner, and shall become the property of the said assignees or trustees, without any allowance for or payment by the Commissioner, or on account of any loss or diminution, wear, tear, or injury they may have sustained in the meantime.

*Security.*

*Security.*

21. The contractor will be required to deposit the sum of five thousand pounds with the Commissioner for Railways for the proper performance and completion of the contract.

Should the contractor fail to make the required deposit of £5,000 within six days from the acceptance of the tender, or should the contractor fail to execute the contract for the due performance of the works mentioned in the said tender, or to execute and to procure the due execution by the persons so approved of as sureties of the bond required hereunder for securing the due completion of the works to be done under the said contract, within fourteen days after the acceptance of his tender has been notified to him, the Commissioner will have the option of and full power and authority to declare such acceptance to be annulled.

No tenderer will be allowed to proceed with the work tendered for until he has provided the cash deposit, has executed the required contract, and has with such sureties duly executed the bond before-mentioned for the due performance of the said contract—it being hereby declared that for all or any work done or materials found and provided by the contractor before the due execution of the said contract and bond, he shall not have any right of action, claim, or demand against the Commissioner.

*Progress payment without prejudice, &c.*

22. No certificate given to the contractor for the purpose of any progress payment shall prevent the Engineer-in-Chief from at any future time before the termination of the contract, rejecting all unsound materials and improper workmanship discovered subsequently to the giving of the last previous certificate; and notwithstanding the giving of any certificate that portions or the whole of the works have been satisfactorily performed, the Engineer-in-Chief may require the contractor to remove and amend at any future time previously to the final payment on account of the construction or maintenance of the works, any work that may be found not to have been performed in accordance with the contract; and the contractor must remove and amend at his own cost all such work when so required, notwithstanding any approval made or given by the superintending officer; and the Commissioner shall have power on the report of the Engineer-in-Chief that the work approved of as aforesaid is not in accordance with the contract, to deduct from any moneys that may be due or that may become due to the contractor, the whole amount that has been paid on account of such work.

If in the opinion of the Engineer-in-Chief further inquiry is necessary or desirable before any certificate is given, he shall have power to withhold such certificate for a period not exceeding one month from the date at which in the ordinary course the certificate would have been given.

None of the conditions of this contract shall be varied, waived, discharged, or released, either in law or in equity, unless by the express consent of the Commissioner testified in writing under his seal.

*Payments.*

23. Payments will be made once in every month, unless same shall become not payable by reason of anything contained in these Conditions, up to the date specified for the completion of the contract, on the Engineer's certificate as the work proceeds, in the proportion of ninety per cent. of the value of the work satisfactorily executed, and the remaining ten per cent. will be paid after the Engineer has certified that the whole of the works have been completed to his entire satisfaction; and it is expressly declared that the obtaining a certificate from the Engineer that the work done by the contractor has been satisfactorily executed or completed to his satisfaction shall be a condition precedent to the contractor having any right or cause of action in respect of any work done or materials provided, and to the contractor having any right of action or claim to the payments from time to time to be made hereunder, as well as to the final payment upon the whole of the work being finished.

Department of Public Works,  
Railway Branch, Engineer's Office,  
Sydney, 24th August, 1874.

JOHN WHITTON.

No. 3.

THIS is the Tender, marked "C," referred to in the annexed Articles of Agreement with the Commissioner for Railways, dated the sixteenth day of October, A.D. 1874.

Witness—M. S. HARTE.

ALEX. AMOS.  
ROBERT AMOS.

C.

GREAT SOUTHERN RAILWAY EXTENSION FROM GOULBURN TO WAGGA WAGGA.

Contract No. 3.—Cootamundra to Wagga Wagga.

FORM OF TENDER.

22 September, 1874.

WE hereby propose to execute the whole of the works required in the construction of that portion of the Great Southern Railway comprised in Contract No. 3, commencing at 253 miles 8 chains, and terminating at 304 miles 50 chains—being a length of 51 miles and 42 chains—in strict accordance with the plans and specification, at the following prices, viz. :—

	Average price	£	s.	d.
Excavation from cuttings taken to the embankments named in disposal sheet	per cub. yd.	0	2	9
Do. do. do. of road approaches	do. do. do.	0	2	9
Do. from road approaches, taken to embankment, not exceeding half a mile lead	do. do. do.	0	2	9
Do. from side cutting, do. do. (including 3 runs, or 66 lineal yards)	Earthwork	0	1	6
Do. do. do. do. each additional run of 22 yards	Rock	0	3	0
	Earthwork	0	0	3
	Rock	0	0	3

A. & R. AMOS, 5, Exchange, Sydney.

To the Commissioner for Railways.

SHOULD the foregoing Tender be accepted, we, the undersigned, hereby undertake to deposit with the Commissioner for Railways, within six days from the notification of the acceptance of the said Tender, the sum of £5,000 as security for the due performance of the contract.

A. & R. AMOS, 5, Exchange, Sydney.

NOTE.—A sum of £500 has, according to the conditions of the Specification, been deposited with the Colonial Treasurer, which sum we agree to forfeit to the Commissioner, should we fail to provide the cash deposit and to complete the Bond at the time specified.

A. & R. AMOS, 5, Exchange, Sydney.

#### No. 4.

ARTICLES OF AGREEMENT made and entered into, this sixteenth day of October, in the year of our Lord one thousand eight hundred and seventy-four, between Alexander Amos and Robert Amos, of Sydney, in the Colony of New South Wales, contractors (carrying on business together in the said Colony under the style or firm of "A. and R. Amos"), of the one part, and the Commissioner for Railways, a corporation sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled, "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same*," of the other part. WHEREAS the Commissioner for Railways aforesaid lately advertised for tenders for the works to be done and the materials to be provided for the construction, erection, and completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent-way, and supplying sleepers required in the construction of a single line of railway, being that portion of the Great Southern Railway Extension from Goulburn to Wagga Wagga, in the said Colony, intended to be Contract No. 3—Cootamundra to Wagga Wagga—commencing at Cootamundra at two hundred and fifty-three miles eight chains, and terminating near the town of Wagga Wagga, at three hundred and four miles and fifty chains from Sydney, being a length of fifty-one miles and forty-two chains, in accordance in all things with the Specification hereto annexed marked "A," and the plans and drawings therein referred to and under and subject to the General Conditions hereto annexed marked "B": And whereas the said Alexander Amos and Robert Amos (hereinafter styled or referred to as "the contractors"), forwarded to the Commissioner for Railways aforesaid the tender to do the said works, and to find and provide the materials required in the construction of the said line of railway, which is hereto annexed and marked "C": And whereas the Commissioner for Railways aforesaid duly accepted the said tender of the contractors for the said works: And whereas the contractors have

have deposited the sum of five thousand pounds in the City Bank, in the City of Sydney, in the name of the Commissioner for Railways aforesaid, upon fixed deposit for the term of twenty-four months at interest, and have handed the receipt for the said deposit, which bears date the first October one thousand eight hundred and seventy-four, and is numbered 11/341 to the Commissioner for Railways as security for the due performance by them of the works in the said Specification mentioned, in accordance therewith in all things as thereby and by the said General Conditions is provided, and have duly executed a memorandum of agreement under seal with the Commissioner for Railways bearing even date herewith, setting forth the terms and conditions upon which the said sum of five thousand pounds is held by the Commissioner for Railways as security for the due performance of the contract in these presents contained: Now, these presents witness that the contractors, for themselves, their heirs, executors, and administrators, hereby covenant, declare, promise, and agree with and to the Commissioner for Railways aforesaid, his successors and assigns, that they the contractors, their executors and administrators, shall and will find and provide all materials (excepting such as are in the said Specification mentioned as to be provided by the Commissioner for Railways), labour, scaffolding, tools, implements, and every other thing requisite and necessary for, and shall and will do and perform all the works required in and about the full and proper construction and completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers, required in the construction and completion of the said single line of railway, being that portion of the Great Southern Railway extension from Goulburn to Wagga Wagga, in the said Colony, intended to be Contract No. 3, from Cootamundra to Wagga Wagga, commencing at Cootamundra at two hundred and fifty-three miles eight chains, and terminating near the town of Wagga Wagga, at three hundred and four miles and fifty chains from Sydney, being a length of fifty-one miles and forty-two chains, subject to and in accordance in all things with the said Specification and General Conditions hereto annexed, marked respectively "A" and "B," and the plans or drawings therein referred to, and the conditions, stipulations, and agreements therein contained, and at the price or prices mentioned in the said tender, the Contractors finding all materials and performing and completing all the works in the said Specification and General Conditions mentioned and therein or thereby required or intended to be done by the person or persons tendering or contracting: That all powers and authorities in the said Specification and General Conditions mentioned, as given or intended to be given to the Commissioner for Railways and to the Engineer-in-Chief for Railways, or to either of them, shall vest in and be exercisable by the Commissioner for Railways aforesaid, and his successors, and the Engineer-in-Chief for the Commissioner for Railways for the time being respectively, as if the said powers and authorities had been expressly created and given to the Commissioner for Railways and his successors, and to the Engineer-in-Chief for the Commissioner for Railways for the time being, or to either of them, in or by these presents: That they, the contractors, shall and will complete and finish the whole of the said works in the said specification and the said plans or drawings therein referred to, mentioned or shown, on or before the thirty-first day of December which will be in the year of our Lord one thousand eight hundred and seventy-six, as provided and mentioned in condition number thirteen of the said General Conditions; and that the completion of the said works upon the day and time hereinbefore mentioned shall be considered as of the essence of this contract: And further, that the said Specification, marked "A," the said General Conditions, marked "B," and the said Tender, marked "C," shall be read and considered as incorporated in and forming part and parcel of these presents, in like manner as if the same had been herein written and set forth at length—the said Specification, General Conditions, tender, and these presents together forming the contract between the said parties hereto: And the Commissioner for Railways aforesaid, for himself and his successors, hereby covenants with the contractors, their executors or administrators, that the Commissioner for Railways aforesaid or his successors, shall pay the contractors, their executors or administrators, for the said works hereinbefore mentioned, and materials to be supplied at and after the rates of prices in the said tender mentioned, when and as payment for the said works and materials, shall, in accordance with section twenty-three of the said General Conditions, become due and payable to the contractors, such payments only to be made upon the production of the certificate in the said twenty-third section of the said General Conditions mentioned the production of such a certificate being a condition precedent to the contractors having any right or cause of action, claim, or demand upon the Commissioner for Railways, as in the said twenty-third section is mentioned; and at the time or times, and in accordance with, and when payable under the provisions, as to payment in the said General Conditions and the said Specification, or either of them mentioned and not otherwise: And further, that the said Specification, General Conditions, and Tender shall be read and considered as incorporated in and forming part and parcel of these presents in like manner as if the same had been herein written and set out at length, the said Specification, General Conditions, Tender, and these presents together, forming the contract between the said parties hereto.

In witness whereof the contractors have hereunto set their hands and seals, and the Commissioner for Railways hath affixed his official seal, the day and year first before written.

## No. 5.

MEMORANUM OF AGREEMENT made this sixteenth day of October, in the year of our Lord one thousand eight hundred and seventy-four, between Alexander Amos and Robert Amos, of Sydney, in the Colony of New South Wales, contractors (carrying on business together in the said Colony under the style or firm of "A. and R. Amos"), of the one part, and the Commissioner for Railways, a corporation sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same,*" of the other part.

WHEREAS by certain Articles of Agreement under seal bearing even date herewith, and made between the said Alexander Amos and Robert Amos, of the one part, and the Commissioner for Railways aforesaid, of the other part, the said Alexander Amos and Robert Amos covenant and agree with the Commissioner for Railways to find and provide all materials (excepting such as by the Specification therein referred to are to be provided by the Commissioner for Railways), labour, scaffolding, tools, implements, and every other thing requisite and necessary for, and do and perform all the works required in and about the full and proper completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers required in and about the construction and completion of a single line of railway, being that portion of the Great Southern Railway Extension from Goulburn to Wagga Wagga in the said Colony intended to be Contract No. 3, from Cootamundra to Wagga Wagga, commencing at Cootamundra, at two hundred and fifty-three miles eight chains, and terminating near the town of Wagga Wagga, at three hundred and four miles and fifty chains from Sydney, being a length of fifty-one miles and forty-two chains, as mentioned and set out in a Specification and General Conditions annexed to the said Articles of Agreement and the plans or drawings therein referred to: And whereas in and by paragraph twenty-one of the said General Conditions it is provided, or is mentioned, or intended to be provided, as the said Alexander Amos and Robert Amos hereby admit and declare, that the said Alexander Amos and Robert Amos shall, as security for the due performance of the said works in the said Articles of Agreement, Specification, and General Conditions mentioned, deposit the sum of five thousand pounds with the Commissioner for Railways aforesaid, and to be held by the Commissioner for Railways aforesaid as such security: And whereas in performance of the said provision in the said General Conditions, the said Alexander Amos and Robert Amos did, on the first day of October, one thousand eight hundred and seventy-four, deposit the sum of five thousand pounds in the City Bank, in the city of Sydney aforesaid, in the name of the Commissioner for Railways aforesaid, upon fixed deposit for the term of twenty-four months at interest, and have handed the receipt for the said deposit (which is marked No. 11/341) to the Commissioner for Railways aforesaid: The Commissioner for Railways having agreed that the said sum of five thousand pounds so to be left in his hands as aforesaid as security for the due performance of the said contract shall be held by the City Bank as a deposit in the name and by the Commissioner for Railways aforesaid on behalf of himself and his successors, at interest as aforesaid; and that the said Alexander Amos and Robert Amos shall receive the interest thereon when and as the same becomes due and payable. And whereas the said Alexander Amos and the said Robert Amos and the Commissioner for Railways aforesaid have agreed to enter into these presents for the purpose of stating and defining the terms and conditions upon which the said sum of five thousand pounds shall be held by the Commissioner for Railways aforesaid under the said Articles of Agreement as security for the due performance of the said works in the said Articles of Agreement, specification, and General Conditions mentioned: Now these presents witness, and it is hereby declared and agreed between and by the said Alexander Amos and Robert Amos, on behalf of themselves and their respective heirs, executors, and administrators, and the Commissioner for Railways aforesaid on behalf of himself and his successors, that the said sum of five thousand pounds of lawful British money is now and shall henceforth be held by the Commissioner for Railways aforesaid, as security for the due completion of the said works in the said Articles of Agreement, Specification, and General Conditions mentioned in accordance in all things with the said Articles of Agreement, Specification, and General Conditions; and that the said sum shall be held by the Commissioner for Railways and his successors until the whole of the said works shall be completed and finished in accordance with the said Articles of Agreement, Specification, and General Conditions, and until the time for which the said Alexander Amos and Robert Amos are bound to maintain and uphold the same has fully expired, and that if the said Alexander Amos and the said Robert Amos, their or either of their executors or administrators, shall make default in proceeding with or in completing the said works in the manner stipulated in the said Articles of Agreement and Specification and General Conditions and in accordance therewith, and with the said plans or drawings aforesaid: The Commissioner for Railways aforesaid and his successors shall and may at once and without any further consent on the part of and notwithstanding the express dissent of the said Alexander Amos and Robert Amos, or either of them, use and employ the said sum of five thousand pounds, or so much thereof as shall be requisite, in and about the proceeding with completing and finishing the said works, and in and about the payment of or retention, in payment of any penalty or penalties, sum or sums of money, which the Commissioner for Railways aforesaid may be entitled to claim from the said Alexander Amos and Robert Amos, by reason of the non-completion of the said works as aforesaid, and within the time fixed for that purpose, and the balance remaining (if any) shall be considered as forfeited to the Commissioner for Railways aforesaid, and shall be paid by the Commissioner for Railways aforesaid into the office of the Treasury of the said Colony, to the credit of and shall become and form a portion of the Consolidated Revenue of the said Colony, as if the same had been recovered by action at law at the suit of Her Majesty, upon a bond given to Her Majesty, Her Heirs and Successors, by the said Alexander Amos and Robert Amos, to secure the due performance and completion of the works in the said Articles of Agreement, Specification, and General conditions mentioned, without prejudice nevertheless to the right of the Commissioner for Railways aforesaid to sue for and recover, if he shall think fit so to do, from the said Alexander Amos and Robert Amos, their or either of their executors or administrators, all or any penalty or penalties, sum or sums of money, which under the said Articles of Agreement or the said Specification and General Conditions, he or his successors may be entitled to recover from the said Alexander Amos and Robert Amos, their executors and administrators, and which may be in excess of the said sum of five thousand pounds. And further, that at the expiration of the said term of twenty-four months, for which the said sum of five thousand pounds has been deposited in the City Bank as aforesaid, upon fixed deposit, it shall be lawful for the Commissioner for Railways aforesaid, but it is hereby expressly declared that he is not in any way  
required,

required, or under any obligation so to do, to re-deposit the same for a further period of twelve months at interest, or for such further period, or for such lesser period or term, from time to time, as the Commissioner for Railways or his successors shall think fit, until the said works are completed; or the Commissioner for Railways aforesaid may in his discretion retain the said sum of five thousand pounds in his hands uninvested, in which case the Commissioner for Railways shall not if the said works shall be completed in the terms of the said Agreement, and the said Alexander Amos and Robert Amos become entitled to receive back the said sum of five thousand pounds, be charged or chargeable with, or liable to pay, interest on the said sum for the time the same shall have been held by him: And it is further agreed that the said Alexander Amos and Robert Amos, their executors or administrators, shall be entitled to receive from time to time as the same shall become receivable, from the Commissioner for Railways aforesaid and his successors, all interest which shall be payable upon the said deposit: And it is hereby further expressly declared between the said parties hereto that the Commissioner for Railways aforesaid and his successors shall not be liable or answerable for any loss of the said sum of five thousand pounds or any part thereof through the same being from time to time deposited in or held by the said Bank as aforesaid. In witness whereof the said Alexander Amos and Robert Amos have hereunto set their hands and seals, and the Commissioner for Railways aforesaid hath caused his official seal to be hereunto affixed, the day and year first before written.

Signed, sealed, and delivered by the said Alexander Amos and Robert Amos, in the presence of—	} ALEX. AMOS. (L.S.)
	M. S. HARTE.
The official seal of the Commissioner for Rail- ways was hereto affixed in the presence of—	} JOHN RAE, (L.S.) Commissioner for Railways.

### No. 6.

MEMORANDUM OF AGREEMENT made this eighteenth day of April, in the year of our Lord one thousand eight hundred and seventy-six, between the Commissioner for Railways, a corporation sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled, "An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same," of the one part, and Alexander Amos and Robert Amos, of Sydney, in the said Colony, contractors, carrying on business together in the said Colony, under the style or firm of "A. & R. Amos." Whereas by certain Articles of Agreement, bearing date the sixteenth day of October, in the year of our Lord one thousand eight hundred and seventy-four, and made between the above-named Alexander Amos and Robert Amos of the one part, and the Commissioner for Railways aforesaid of the other part, the said Alexander Amos and Robert Amos covenanted and agreed with the Commissioner for Railways aforesaid and his successors, to find and provide all the materials (excepting such as are in the Specification therein referred to mentioned as to be supplied by the Commissioner for Railways), labour, scaffolding, tools, implements, and every other thing requisite and necessary for and to do and perform all the works required in and about the full and proper construction and completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supply sleepers required in the construction of a single line of railway on the Great Western Railway extension Goulburn to Wagga Wagga, in the said Colony, comprised in the said contract, which is termed Contract No. 3, of the said extension from Cootamundra to Wagga Wagga, commencing at Cootamundra at two hundred and fifty-three miles eight chains, and terminating near the town of Wagga Wagga at three hundred and four miles and fifty chains from Sydney, being a length of fifty-one miles and forty-two chains, in accordance in all things with the Specification and General Conditions to the said Articles of Agreement annexed, and the plans or drawings therein referred to, and to complete and finish the whole of the said works, on or before the thirty-first day of December, in the year one thousand eight hundred and seventy-six: And whereas by a certain memorandum of agreement under seal bearing even date with the said lastly recited Articles of Agreement, and made between the said Alexander Amos and Robert Amos of the one part, and the Commissioner for Railways aforesaid of the other part, after reciting that it had been agreed that for securing the due performance of the said contract, the said Alexander Amos and Robert Amos should deposit with the Commissioner for Railways aforesaid the sum of five thousand pounds, to be held by the Commissioner for Railways as security for the due performance of the said works, and that, in pursuance of the said agreement, the said Alexander Amos and Robert Amos had, on the first day of October, one thousand eight hundred and seventy-four, deposited the sum of five thousand pounds in the City Bank, in the city of Sydney, in the name of the Commissioner for Railways, upon fixed deposit, and had handed the receipt for same to the Commissioner for Railways aforesaid: It is witnessed, and the said parties to the said agreement did declare, that the said sum of five thousand pounds so deposited in the name of the Commissioner for Railways upon fixed deposit as aforesaid should be held by him as security for and until the completion of the said works, upon the terms and conditions as in the now reciting memorandum of agreement mentioned: And whereas the said works are still unfinished and not completed, and the said Alexander Amos and Robert Amos have applied to and requested the Commissioner for Railways aforesaid to extend the time for completion of the said works, and of certain works to be carried out in connection with the station yard at Wagga Wagga aforesaid, which have to be done under the said contract, under the provisions in clause five of the said General Conditions, until the thirty-first day of December which will be in the year one thousand eight hundred and seventy-seven, which the Commissioner for Railways aforesaid hath consented to do, upon the terms and conditions hereinafter mentioned: Now these presents witness that, in consideration of the premises, the Commissioner for Railways aforesaid doth hereby extend the time for the completion of the works remaining to be done of the works in the said Articles of Agreement and Specification mentioned, and of the works in connection with the station yard at Wagga Wagga, until the thirty-first day of December which will be in the year of our Lord one thousand eight hundred and seventy-seven, upon the terms and conditions hereinafter mentioned:

And

And that in consideration of the premises and of the said extension of time by the Commissioner for Railways aforesaid, the said Alexander Amos and Robert Amos hereby jointly and severally covenant and agree with and to the Commissioner for Railways aforesaid and his successors, that they, the said Alexander Amos and Robert Amos, their executors or administrators, shall and will well and truly complete the whole of the works yet remaining to be done of the works in the said Articles of Agreement and Specification mentioned, and also the works required to be done at the station-yard at Wagga Wagga, in accordance in all things with the said Specification and General Conditions, and the said plans or drawings, on or before the said thirty-first day of December, which will be in the year of our Lord one thousand eight hundred and seventy-seven: And further, that at all times hereafter, the said recited Articles of Agreement and the said recited memorandum of agreement shall be read and considered as if the said thirty-first day of December, one thousand eight hundred and seventy-seven, had been named in and by the said articles of agreement, Specification, and General Conditions, and the said memorandum of agreement, as the day on or before which the whole of the said works hereinbefore mentioned were to be completed and finished by the said Alexander Amos and Robert Amos: And that the said Articles of Agreement and the said memorandum of agreement, or the terms and conditions upon which the said sum of five thousand pounds is held by the Commissioner for Railways aforesaid, shall not be considered as altered, or the stipulations, provisos, and agreements thereon, or in the said Specification and General Conditions, in any way waived, barred, or departed from, in any respect otherwise than as to the time within which the said works are to be completed; but that the Commissioner for Railways aforesaid and his successors shall have all and every the rights, powers, and authorities, cause and causes of action, and suit, claims, and demands given to or vested in him or them, in and by the said Articles of Agreement, Specification, and General Conditions, and by the said memorandum of agreement, in all respects as if the said thirty-first day of December, one thousand eight hundred and seventy-seven, had been the day or time originally named and appointed for the completion of the whole of the works hereinbefore mentioned: And that all and singular the penalties, forfeitures, sum or sums of money, rights and privileges which would accrue to or vest in the Commissioner for Railways aforesaid and his successors, for or by reason or on account of the said works hereinbefore mentioned not being completed and finished within the time named in and according to the said Articles of Agreement, Specification, and General Conditions; and the said memorandum of agreement shall accrue to and vest in the Commissioner for Railways aforesaid and his successors, if the whole of the said works hereinbefore mentioned shall not be completed and finished, in all things, on or before the said thirty-first day of December, one thousand eight hundred and seventy-seven: And that the said Articles of Agreement and the said memorandum of agreement shall at all times hereafter be read and considered as if the said thirty-first day of December, one thousand eight hundred and seventy-seven, was and is the time therein named for the completion of the whole of the said works hereinbefore mentioned, instead of the said thirty-first day of December, one thousand eight hundred and seventy-six, therein written.

In witness whereof, the Commissioner for Railways aforesaid hath hereunto set his official seal; and the said Alexander Amos and Robert Amos have hereto set their hands and seals, the day and year first before written,

5. Agreement for £5,000 security.
6. Agreement for extension of time.

### No. 1.

THIS is the Specification, marked "A," referred to in our Agreement with the Commissioner for Railways, annexed hereto, and dated the 24th day of August, A.D. 1874.

Witness—M. S. HARTE

WM. MASON.  
A. ELKINGTON.

A.

GREAT WESTERN RAILWAY—EXTENSION FROM BATHURST TO ORANGE.

Contract No. 1.

SPECIFICATION.

1. This contract commences at 144 miles 45 chains and 50 links, in the city of Bathurst, and terminates at 192 miles and 41 chains, in the town of Orange, being a length of 47 miles and 64 chains and 50 links.

2. The work for which tenders are invited, and to which this Specification refers, comprises the providing of all materials (excepting such as are hereafter specified to be provided by the Commissioner), labour, scaffolding, tools, implements, and every other thing requisite and necessary for the full and proper completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent-way, and supplying sleepers, required in the construction of a single line of railway, in accordance with this Specification, and to the entire satisfaction of the Engineer-in-Chief for Railways.

3. The contractor to state in his schedule a price per cubic yard at which he will execute all the excavations, brickwork, and masonry, the timberwork per cubic foot; the ironwork in bolts, straps, and other similar ironwork at per lb.; the wrought-iron girders at per ton; the fencing per rod; ballasting and laying permanent-way at per lineal yard; and sleepers at per sleeper, finding all materials and labour, the work being paid for on the net measurement as executed.

4. The plan is drawn to a scale of 4 chains to an inch, and the section to a horizontal scale of 4 chains to an inch, and a vertical scale of 40 feet to an inch.

5. The plan shows the course of the line. The centre red line represents the line of the stakes, which are driven down at intervals of one chain, and are in the centre of the line to be constructed.

6. The section represents the surface of the ground in black, and is taken along the centre line shown on the plan in red. The upper or blue line represents the upper surface of the rails when laid; the lower or red line represents the level of the bottom of the ballasting or formation level in the centre of both cuttings and embankments, and is 1 foot 3 inches below the blue line.

7. When the railway is in cutting, a ditch 3 feet wide at the top, 1 foot at the bottom, and 1 foot 6 inches deep, shall be made on the higher side of the ground to be occupied by the railway; on the lower side it will not be necessary to have any ditch. The drains are to be made to fall into the ditches or watercourses at present existing for the drainage of the adjoining lands, or into the diverted channels, as the case may be, and whenever the fall of the drains or that of the diverted channels shall be so great as to endanger the stability of the sides or bottoms of such drains, the same to be protected by pitching, and whenever it may be considered desirable to carry the water from such drains down the slopes of the cuttings, a pitched drain shall be constructed on the slopes, but these matters will be considered as extra works, and arranged for as provided in clause No. 5 of the General Conditions.

8. A ditch similar to that described on the top of the cuttings to be formed at the foot of the embankments, on the higher side only.

#### *Earthworks.*

9. The excavations in the centre of the cuttings are to be made to the depth shown on the longitudinal sections by a red line, being a depth of 15 inches below the level of the upper surface of the rails as indicated by the blue line.

10. The bottom of the cuttings to be slightly convex, being fifteen inches below the level of the rails in the centre, and eighteen inches at the sides, having a fall from the centre to the bottom of the slopes.

11. The cuttings to be sloped at the batters stated on the longitudinal section, or to such other batters as may be ordered by the Engineer-in-Chief during the progress of the works, to be fifteen feet wide at the bottom, that is to say, at the formation level. The sides, as the excavation proceeds, to be uniformly trimmed or dressed to the specified inclinations, proper battering rules being used and provided by the contractor at his own cost for this purpose.

12. Cross-sections have been already taken at the expense of the Commissioner, and should the contractor not take exception to the accuracy of these sections before the work in the cuttings to which they refer has been commenced, it will be taken as an acknowledgment on his part that they are correct, and that he will be satisfied to have the quantities of work for which payment is to be made measured from the sections furnished by the Engineer, provided the works cannot be otherwise satisfactorily measured and the quantities accurately ascertained. Should the contractor prefer to take cross-sections for himself, no measurements taken from them will be admitted as the correct quantities, unless the accuracy of such sections has been confirmed by the Engineer or superintending officer.

13. The centre line has been very carefully staked out, and every care must be taken by the contractor not to remove any of the centre stakes without taking the precaution to fix such marks as will enable him to find the position of the stake or stakes so removed.

14. Any stakes removed which the contractor is unable to replace will be replaced by the officer in charge of the works; but it must be distinctly understood that every expense attendant upon such replacement must be paid by the contractor, the Engineer-in-Chief reserving to himself the right to deduct at once such cost from any certificate then due in favour of the contractor for work done on this contract.

15. The embankments throughout the whole contract to have slopes of  $1\frac{1}{2}$  to 1, and to be not less than 15 feet wide at formation level.

16. On the completion of the cuttings and embankments, the whole of the formation shall be properly trimmed. The formation of the cuttings shall be trimmed to the level shown on the working section, and the embankments shall be trimmed to such level as the Engineer may direct.

17. The excavations shall at all times be kept free from water, and so conducted as always to afford the utmost facilities for the escape of the water, by casting and keeping properly cleaned out ditches (which shall in no case be deeper than the formation level) on each side of the excavation, and also by pumping if necessary.

18. The contractor must deposit the material from the cuttings either to the embankments named for its reception or to such other place, not exceeding a lead of one mile, that may be directed by the Engineer during the progress of the works.

19. Any stone or gravel that may be found in the cuttings suitable for ballasting may be laid aside by the contractor, at his expense, instead of being taken to embankment; but any deficiency in the embankments caused by such appropriation of material from the cuttings shall be supplied entirely at the expense of the contractor, either from side cutting or by increasing the width of the cuttings to the extent only of the width required for a double line.

20. The price stated in the schedule for excavations from cuttings is to be the average price per yard, whatever the nature of the material excavated may be, and the contractor must therefore satisfy himself as to the nature of the excavations in the different cuttings before sending in his tender. Trial holes have been made in nearly all the cuttings, and the strata through which they pass is marked on the section.

section. These trial holes, however, shall in no way bind the Commissioner or be assumed to be a guarantee to the contractor of their accuracy; but as they are left open, he must satisfy himself by personal inspection, as no allowance will afterwards be made to him beyond the price stated in his schedule, whatever material may hereafter be found in the cuttings.

21. All excavations, when the lower portion only is in rock, shall be taken out as shown by a diagram on the working sections, the gullet in all cases keeping pace with the excavation of the slopes. If any cutting be composed entirely of rock, the sides shall be left perpendicular throughout unless otherwise directed.

22. The earthwork must be well punned for such distance as may be required, not exceeding three yards on either side and one yard in depth, over the top of all culverts, without any charge beyond the price stated in the schedule for earthwork.

23. The quantities stated on the longitudinal section are placed there for the contractor's guidance, to enable him to determine the length of lead, but the quantities to be paid for will be the actual measurement of the works satisfactorily executed, whether in excess or diminution of the quantities marked upon the section.

24. The Commissioner will lend to the Contractor for the execution of the earthworks on this contract rails for a length of 2 miles of single way, but any rails beyond this quantity, if required by the contractor must be provided at his own expense; but no fastenings, either fish-plates or dogs, will be lent by the Commissioner.

25. All rails lent to the contractor for temporary purposes must be returned by him and stacked at the Orange end of his contract, having been first straightened to the satisfaction of the Engineer. Any rails cut, broken, lost, or so damaged by the contractor as to be rendered useless, must be paid for by him at the price per ton at which rails of a similar description are valued in the Colony. These rails will be delivered, free of charge, to the contractor at the Raglan Station.

26. The whole of the land inside the fences of the railway or road approaches (and for a distance of half a chain beyond such fences), should it be considered by the Engineer desirable, to be cleared of timber or brushwood, the fallen timber being entirely removed or destroyed. (See clause No. 8 of General Conditions.) The cost of clearing will not be paid for as a specific charge, but must be included in the price stated in the schedule for earthwork.

27. All embankments which have to be formed on side-lying ground must have benchings cut so as to prevent the bank from slipping, and such benchings shall be done to the satisfaction of the Engineer or superintending officer. The excavations for these benchings to be paid for at the price stated in the schedule for side cutting.

28. During the progress of the works every protection shall be afforded to the public by the erection of proper fences alongside all excavations which join upon any public road, and where the road is crossed by the railway, temporary crossings or diversions shall be made at the expense of the contractor, and lights shall be kept burning between the hours of sunset and sunrise at all intersections or diversions of all public roads, if considered necessary by the Engineer or superintending officer. The contractor will, however, be held responsible for any accidents which may occur at any of these crossings during the progress of the works.

#### VIADUCTS AND BRIDGES.

##### *Brickwork.*

29. The brickwork is to be constructed with the best, sound, well-shaped, hard-burnt kiln bricks, free from all defects, moulded for the cutwaters, and laid in courses of headers and stretchers alternately (English bond), in mortar or cement as may be hereafter directed.

30. The bricks to be well bedded and joints flushed with mortar or cement at every course, and well jointed.

31. The whole of the walls to be built of the dimensions shown on the drawings, and no allowance will be made for any excess of dimensions above those found on the working drawings now exhibited, or which may be hereafter supplied.

32. The price stated in the schedule for brickwork shall apply not only to the bridges the plans for which are now exhibited, but to any other bridges which may be considered requisite hereafter, and the price stated for excavation to foundations shall include all expenses attendant upon getting in the foundations, and filling in and thoroughly punning round the brickwork up to the original level of the ground.

##### *Masonry.*

33. All stone used in the bridges to be of the best quality, free from all defects, to be laid in cement or mortar in courses of 12 inches in thickness, to have boasted beds and joints throughout, and to be rough-picked on the face.

34. No stretcher will be allowed with a less bed than one and a half times the thickness of the course in which it is being used. The work to be built header and stretcher alternately, each header extending throughout the whole thickness of the wall, if such wall be not more than 4 feet in thickness; and for all walls exceeding 5 feet the headers may be in two stones, laid side by side, overlapping each other at least 14 inches.

35. The bed of each stretcher shall not be less than 18 inches, except when the full thickness of the wall shall be less than 3 feet, when two stretchers may be used with beds each equal to half the thickness of the wall.

36. The whole of the masonry to be rock-faced (except where otherwise described), with a chisel-draft  $1\frac{1}{2}$  inch wide on each side of all external angles, and the bond throughout shall not be less than 14 inches.

37. The springing stones for the arches shall be of the dimensions shown upon the drawings; the beds and vertical joints being boasted throughout with a chisel-draft 1 inch wide on the external angles. To be chamfered and throated as shown in the drawings.

38. The copings to piers, string-courses, and parapets or pilasters to be of the dimensions shown on the drawings, to be rock-faced with a chisel-draft 1 inch wide on the external angles. The string-courses to be chamfered and throated, and the upper side of the parapet to be tool-dressed.

##### *Culverts.*

*Culverts.*

39. The whole of the masonry, except where otherwise described, is to be laid in mortar, mixed in the proportion of one of stone lime to one of clean sharp sand, or any other proportion the Engineer may hereafter direct.

40. The price stated in the schedule for excavations is also to include keeping the foundations free from water, and filling and well ramming round the masonry or brickwork to the level of the original surface of the ground as the work proceeds.

41. No masonry or brickwork shall be commenced without an order from the Engineer or superintending officer, and when the excavation is ready to receive the brickwork or masonry the contractor must give notice to the Engineer or superintending officer to that effect, so that the foundations may be approved before the work is commenced.

42. The culverts, except those of a square form, are to be built of the form shown on drawing No. 3; the materials and workmanship to be of the best description. If of stone, the beds and joints shall be boasted throughout, and rock-faced (excepting the soffit of the arch and invert, which must be picked off to an even surface), laid in 12-inch courses, header and stretcher alternately, and grouted in flush with good mortar at every course.

43. The bed of each stretcher, from 2 to 5 feet culverts inclusive, must be equal to the thickness of their walls respectively. Two stretchers may be used in the 8-feet and 10-feet culverts, but each arch must be formed of single stones, the band throughout being not less than twelve inches.

44. Any culvert sustaining damage from carelessness on the part of the contractor in not sufficiently backing-up the masonry or brickwork, the whole of the work in such culvert will be condemned, and must be rebuilt at the expense of the contractor.

45. The square culverts are to be built "dry," of the form and dimensions shown on drawing No. 3; all beds and joints to be picked true; the face may be roughly knocked off.

46. If earthenware pipes be used for drains, they shall in all cases be sunk not less than their outside diameter below the ordinary surface of the ground, and the joints made with properly tempered clay. Brick-heads to be built for these pipes, as shown in drawing No. 3.

47. If bricks be used, they shall be good, sound, well-shaped, hard-burnt kiln bricks, free from all defects, moulded for cutwaters where required, and laid in courses of headers and stretchers alternately (English bond), in mortar or cement as may be hereafter directed.

48. The bricks to be well bedded, and the joints flushed with mortar or cement at every course, and well grouted.

*Inlets and outlets.*

49. Excavations from inlets and outlets, also from foundations of culverts, to be run into the main line embankment where directed, such run not to exceed sixty yards.

*Mortar.*

50. The mortar to be mixed in the proportion of one part of fresh well-burnt lime, and one of clean sharp sand, or such other proportion as the Engineer may direct during the progress of the work,—to be mixed in a dry state and well tempered by being passed through a pug-mill with a proper quantity of water, and must always be used fresh.

*Cement.*

51. The cement to be Portland cement, of the best quality, gauged in the proportion of two of clean sharp sand to one of cement, and must be used fresh.

*Timberwork.*

62. The hewn timber to be used in the superstructure to the bridges shall be ironbark, free from sap and wane, perfectly sound, straight, and well-seasoned, and to be framed as shown on the drawings. Great care must be taken in framing the work, and in fitting the ironwork, which must be done with the greatest accuracy. The bearing and batter piles to be round, the diameter at the top being not less than 16 inches, and the bottom 12 inches, to be driven as hereafter directed, and may be of ironbark, box, stringybark, or other approved timber. White gum shall not be used in any of the bridges on this contract.

63. The girders, trusses, headstocks, and corbels, shall be hewn timber perfectly square, and the sleepers, transoms, walings, braces, and planking, shall be sawn timber, of any approved hardwood, straight and sound. All beds and joints of the timberwork to have a thick coat of red lead and oil previous to being fixed; the cost of doing this to be included in the price stated in the schedule for timberwork.

64. Should any of the bridges have to be erected on rock foundations, timber sills bolted to the rock shall be substituted for piles, in accordance with drawings which will hereafter be furnished; the rock shall be dressed off perfectly true to receive the sills, and the cost of doing this shall be paid for at the price named in the schedule for excavation to foundations in rock.

65. The whole of the timberwork will be paid for at per cubic foot, and the round piles of the size stated will be considered as equivalent to a cubic foot for every foot in length of pile, and paid for at the price per lineal foot named in the schedule.

66. When the piles are being driven every precaution must be taken to prevent splitting during the driving, as no split piles will be allowed to remain in the work.

67. Each pile must be driven with an iron ram weighing not less than 20 cwt., and every pile shall be driven to such depth as may be required by the superintending officer.

68. The contractor must ascertain for himself the required length of each pile, as no scarfing to any of the piles will be permitted, and all piles pitched too short must be drawn and others substituted of the requisite length.

69. An allowance will be made to the contractor of three feet on each pile beyond the net measurement when cut off, for the reception of the headstocks, for waste in driving.

70. The whole of the bolts, nuts, straps, spikes, plates, washers, strap-bolts, and pile-shoes to be of wrought-iron of the best quality, and of the form and dimensions shown on the drawings. The whole of the ironwork, except pile-shoes, to be heated and dipped in linseed oil before being taken on to the works.

*Permanent*

*Permanent way and ballasting.*

71. The ballast to be of the depth shown on drawing No. 7, being nine inches above the formation level in the centre of the cuttings, to be level on the upper surface on straight portions of the line, but on curves the outside of the ballast shall be of sufficient thickness to give the proper super-elevation to the outside rail, the inner rail being kept at the height shown on the longitudinal sections.

72. All ballast and sleepers required for the works under this contract must be provided by the contractor, who will have to lay the rails, &c., and deposit the ballast on the line of railway as hereafter described.

73. The Commissioner will provide all ironwork for the permanent way, rails, fish-plates, bolts, nuts, spikes, and screws. These permanent-way materials will be delivered to the contractor at the Bathurst Station free of cost, but all expenses attendant upon their removal from thence to the places where they are to be used must be borne by the contractor; and on the Commissioner delivering to the contractor all such materials as are to be provided by him for this work, the contractor will be bound to receive them, and to give the Commissioner or his agent a receipt for all such material so delivered; and after receiving such materials he will be held responsible for all damage, breakage, or loss while in his possession, either during their transit from the place of delivery or in putting them into the work; and in all cases where they may be damaged, lost, or destroyed, the contractor will have to replace or repair them at his own expense.

74. The contractor must supply all engine-power, waggons, tools, implements, labour, and every other thing necessary for ballasting and laying the permanent way in the manner stated in this Specification, and to the satisfaction of the Engineer-in-Chief for Railways.

75. The contractor must in all cases exercise great care in carting the materials on to the work, as he will be held responsible for and chargeable with the expenses of repairing all or any damage he may cause to the works by carelessness or otherwise in carrying out this contract; and the Commissioner is hereby empowered to deduct the amount of such damages from any money which may be due or may hereafter become due to the contractor under this contract.

76. Where the railway intersects any road, whether main road, public road, or private occupation road, a permanent level crossing shall be made in all cases where directed by the Engineer, with proper ironbark guard rails, and the whole constructed in accordance with drawing No. 8.

77. All such crossings shall be maintained by and at the expense of the contractor, until the final completion of this contract.

78. Level crossing gates, 10 feet, 12 feet, and 15 feet respectively, must be provided and fixed complete in accordance with drawing No. 9, at the price stated in the schedule. Each gate to be provided with a strong chain, padlock, and duplicate keys.

79. Each gate, including all posts, struts, or spurs, and ironwork, must be painted two coats with the patent iochrome Australian paint.

80. The approaches to all public roads to be metalled with broken stone (the best that can be obtained in the district), and must be broken to a gauge of 2 inches, and be laid on to the approach to the depth of 9 inches.

*Ballasting.*

81. The ballast shall consist of clean, sharp gravel, free from all loam, small sand, or other material which the Engineer may consider unsuitable for ballast, broken stone of approved quality, not larger than a cube of 3 inches, or properly vitrified clay 9 inches in thickness, in the centre of the roadway, the ballast being spread level transversely on the straight portions, but on curves the ballast on the outside of each curve shall be of such extra thickness as will give the necessary super-elevation to the outer rail.

82. The width of the ballast at the bottom to be 11 feet 9 inches, and at the top, which will be 6 inches below rail level, the width must be 9 feet 6 inches, as shown on drawing No. 7. The outer edges of the ballast both at the top and bottom must be kept parallel to the centre line throughout, and the slopes of the same to be neatly trimmed to an uniform surface.

83. The road may be laid upon the formation, and afterwards lifted to the proper level in two lifts of 3 inches each, so as to give 6 inches of ballast under the centres of the sleepers, and 7 inches under the ends, as shown in drawing No. 7.

84. The contractor must use the greatest care in lifting, no lift being more than 3 inches, so as to avoid bending the rails or in any other way injuring the road; and no ballast waggon will be allowed to run over any portion of the road until 3 inches of ballast have been placed under the sleepers, and no engine shall pass over the road until it has been lifted to its full height and properly packed.

85. The ballasting when laid complete will be paid for at per lineal yard, and no allowance will be made for any loss by subsidence in embankments or otherwise.

*Road-laying.*

86. The sleepers must be provided by and at the expense of the contractor, in accordance with clauses Nos. 95 to 101.

87. The bed for the rail must be trimmed by machinery to the width of its bottom flange, which must be sunk its exact depth into the sleeper on the outside of the rail, the seat for the rail being inclined from the inside at an angle of 1 in 20 to give the proper cant to the rail.

88. The sleepers must be placed at such distances apart as are shown on drawing No. 7, the number being seven sleepers under rails of 21 feet in length, and six under 18-foot rails. On all curves from 12 to 18 chains radius inclusive one extra sleeper to be used in each length of rail.

89. The rails must be fixed to the sleepers with screws and spikes as shown on the drawing No. 7, the holes for which must be bored in the sleepers to prevent their splitting when inserting the fastenings.

90. The rails to be laid to a gauge of 4 feet 8½ inches throughout, the upper surface being at the level shown on the working section, excepting where otherwise directed by the Engineer. The joints of the rails to be secured by fish-plates and bolts in the usual manner. Each rail to be straight and level transversely when put down in the straight portions, and where the line is curved the rails must be bent by a machine, to be provided for the purpose by the contractor (as no hammering will be allowed), before being placed on the sleepers, to suit the particular radius of such curve, the outer rail having an elevation above the inner rail such as the Engineer may direct.

91. The rail level will be 15 inches above the formation level in the centre throughout. A standard clip-gauge will be provided by the Commissioner, to which standard all other gauges must be made, and which shall be approved and branded by the district engineer before being used on the works. Any portion of the road laid in with any gauge not so approved and branded will not be paid for by the Commissioner. Clip-gauges only shall be used throughout; no other gauge will be permitted on the works.

92. The rails must be laid with the joints as nearly at right angles with each other as the lengths of the rails will permit, but in no case shall the joint in one line of rails have a lead or be in advance of the joint in the opposite rail of more than 3 inches.

93. The contractor must provide all labour and tools required for the laying and completing the permanent way, which must be finished in every respect to the entire satisfaction of the Engineer-in-Chief.

94. All the sleepers must be laid as nearly as practicable at right angles to the centre line of railway; they must be well and thoroughly packed so as to cause the upper surface of the rails, when finished, to be at the level shown on the working section, or at such level as may be hereafter directed, and the two lines of rails shall be laid uniformly parallel to the centre line throughout, and must be perfectly straight on all the straight portions, and on the curves they must be laid to a uniform specified radius.

#### *Sleepers.*

95. The sleepers to be supplied under this contract may be of ironbark, grey gum, blackbut, red gum, or other approved hardwood, 8 feet long, either sawn or split from large trees.

96. If sawn, the size to be not less than 9 inches  $\times$  4½ inches, sound and straight, and must be cut when the sap is down. If split, they must be taken from trees not less than 3 feet in diameter, the broadest side to be of a uniform width of 10 inches, to be 4½ inches thick, and the smallest part of the sleeper to a sectional area of not less than 40 superficial inches. The bark to be removed from all sleepers before inspection.

97. The number of sleepers required will be about 88,000, but any additional number that may be required for this contract shall be supplied by the contractor at the price for sleepers stated in the schedule.

98. The contractor to find men at his own cost for the purpose of turning over the sleepers during their inspection by a person appointed by the Engineer for this purpose, and all the sleepers approved will be branded.

99. No inspection of sleepers will be made unless a proper number of men be provided by the contractor for the purpose above-mentioned.

100. All sleepers before they can be branded or inspected must be delivered on some portion of the land inside the railway fences on this contract.

101. Any sleeper which may be found to be split after being laid in the road and branded must be replaced by the contractor at his own cost.

#### *Sidings.*

102. All sidings, cross-over roads, or through roads, that may be required shall be ballasted and laid in by the contractor at the price per lineal yard stated in the schedule for laying and ballasting the main line of permanent way; also all crossings and switches must be laid in by the contractor at the price per lineal yard stated in the schedule for that description of work.

103. The measurement for these "sidings," "cross-over," "through," or "loop" roads shall be taken from point to point of switches where two switches are laid in, but where one switch is used the measurement will be from the point of the switch to the heel of the crossing.

104. In no case shall the measurement of the ballasting on the sidings include any part of that which is already included in the measurement of the main line of permanent-way.

105. The contractor shall maintain all works which he may have executed under this contract in good order and repair until they have been certified by the Engineer as having been satisfactorily completed.

#### *Fencing.*

106. The fencing to be erected under this contract is to be either a three-rail sapling fence, or a two-rail fence with split posts and rails, or a wire fence, as shown on drawings Nos. 4 and 5. The timber to be of the best quality in the district through which the railway passes.

#### *Miscellaneous.*

107. The contractor shall pay all stamp and other duties which the Government now or may hereafter require to be paid on any document forming part of this contract.

108. The contractor must furnish to the engineer a monthly statement of all works done by him, or of claims he may have against the Commissioner under this contract, and no certificate will be given until such an account has been rendered.

109. The contractor to provide at his own cost an office for the district engineer. This building to consist of two rooms, each 14 feet by 12 feet, having weatherboard sides and ends, the roof to be covered with shingles. To have ½-inch tongued and grooved boarded ceiling, and inch flooring-boards; a brick chimney with two fireplaces to be erected between the rooms; two doors and three windows to be provided and fixed. The place where this building is to be erected will be decided upon hereafter.

110. Each person tendering must enclose with his tender a Treasury deposit receipt for £500, without which his tender will not be taken into consideration. Such deposit will be returned to the unsuccessful tenderers forthwith; but should the person whose tender has been accepted fail to find the necessary security within the time named in the General Conditions, then the said sum of £500 shall be forfeited by him to the Commissioner.

JOHN WHITTON.

## No. 2.

THESE are the General Conditions marked "B" referred to in our agreement with the Commissioner for Railways, annexed hereto and dated the twenty-fourth day of August, A.D. 1874.

Witness—M. S. HARTE.

WM. MASON.  
A. ELKINGTON.

## GENERAL CONDITIONS.

*Interpretation clause.*

1. The words "superintending officer" in these conditions shall mean any person who may from time to time be appointed by the Engineer-in-Chief of Railways to supervise the works or buildings, and the words "Engineer-in-Chief" or "Engineer" shall mean the Engineer-in-Chief for the time being of the Commissioner for Railways.

*Dismissal of workmen, removal of improper materials, &c.*

2. The Engineer shall have the power of immediately dismissing any agent or workman employed by the contractor, and of having removed off the line of railway (or any land belonging to the Commissioner), any materials, plant, or implements, which in his opinion are insufficient for the purpose intended, or at variance with the meaning and intention of this specification. The cost of the removal of any such plant, materials, or implements to be paid by the contractor.

*Instructions to be obeyed.*

3. Should the contractor refuse or neglect to carry out the instructions of the Engineer or the Superintending Officer, the Engineer shall have the power of suspending the usual monthly certificate until such instructions have been complied with.

*Drawings, specification, &c.*

4. The plans, sections, and drawings represent generally the form and dimensions of the several works. Where any discrepancy exists between the dimensions as indicated by the scale, and those marked in figures, the figures are to be considered as correct, and are to be taken in all cases in preference to the measurements by the scale attached. And if there should be any discrepancy between the figures or dimensions, or the form of construction, or the material as indicated in the drawings, and the dimensions and materials given in the specification, the directions of the specification shall be adopted, and in all cases of defective description, or any ambiguity, the explanation given by the Engineer shall be binding upon the contractor. Also, anything contained in the drawings and not in the specification, or anything contained in the specification and not shown in the drawings, shall be equally binding as if it were contained in both.

*Extra works, omissions of works, &c.*

5. If at any time whilst the works are in hand it shall be deemed expedient by the Engineer to increase or diminish the dimensions of any works to be done under this contract, or to alter their situation, or to vary the materials, form, or dimensions of any of the said works, or of any part thereof, he shall have full power to do so, and to order and direct any such increase, diminution, or alteration, which shall be executed by the contractor if of the class of works provided for in the Schedule of prices; and no such increase, diminution, or alteration of works, shall in any way annul or set aside this contract, or extend the time for the completion thereof, but such additions or alterations shall be measured and allowed and paid for, or such deductions credited to the Commissioner for Railways, as the case may require, according to the Schedule of prices; and if any portion of the works so ordered to be done shall not be of the class of works provided for in the Schedule of prices, the same shall be executed by the contractor at such price as may be agreed for with the Engineer; but if the contractor and the Engineer cannot agree as to the works required to be done which are of a class not provided for in the Schedule of prices, the Engineer may order and direct the same to be done by such person or persons as he may think fit.

*Net measurements.*

6. All measurements of the works shall be made according to the actual dimensions, notwithstanding any general or local custom to the contrary.

*Labour, materials, plant, &c.*

7. The contractor shall provide at his own costs and charges all materials, labour, tools, plant, tackle, machinery, scaffolding, &c., for the proper completion of the works at the prices stated in his Schedule.

*Damages, &c., to be paid for by contractor.*

8. The land inside the fences of the railway may be used for the purpose of carting the materials for the works on this contract, but all damage that may be done to any land not actually the property of the Commissioner must be paid for by the contractor, whether such damage be caused by the carting of materials, or the straying of cattle in consequence of the destruction by the contractor or his workmen of the original fences, or of the fences alongside the railway, or by any other cause connected with the construction of the works; and should such damage not be at once paid for, such an amount as shall appear reasonable to the Commissioner, may be paid by him in compensation for the same and deducted from any money that may be due to the contractor for work done under this contract.

*Setting out works.*

9. The works will be set out for the contractor, but he must satisfy himself of their accuracy, as no work incorrectly set out or improperly executed will be paid for by the Commissioner.

*Contractor to be represented.*

10. The contractor at all times during the progress of the works, when he is not personally superintending them, must have a responsible agent or overseer stationed on them to receive instructions from the superintending officer or Engineer-in-Chief, and to represent the contractor for all the purposes of this contract.

*Progress*

*Progress of works.*

11. Should the Engineer be at any time dissatisfied with the mode of proceeding, or at the rate of progress of the works, or any part thereof, the Commissioner shall have full power, without vacating this contract, to take the works wholly or in part out of the hands of the contractor, and to employ, procure, and make use of all labour or materials which he may deem necessary for completing the works, the cost of such labour and materials to be deducted from any money that may be then due, or may hereafter become due, to the contractor; and if the money then due or thereafter becoming due to the contractor, shall not be sufficient for that purpose, the balance remaining unpaid may be recovered in an action for damages for breach of contract, or as money paid for the use of the contractor.

*Cancellation of contract.*

12. The Commissioner shall have the option, and full power and authority, in lieu of proceeding under the last preceding clause of these conditions, if the contractor fail to proceed in the execution of, and to carry on the works in the manner, and at the rate of progress required by the Engineer, of cancelling this contract, so far as relates to the works remaining to be done; and in such case the moneys which shall have been previously paid to the contractor on account of the works executed, shall be taken by him as full payment for all works done under the contract, and upon notice in writing under the hand of the Commissioner, that he, under the authority of this condition, cancels the contract, being served upon the contractor, or left at his last known place of abode, the contract shall be cancelled, and thereupon all sums of money that may be due or unpaid to the contractor, together with all implements in his possession, and all materials provided by him, upon the ground upon which the work is being carried on, or adjacent thereto, and all sums of money named as penalties for the non-fulfilment of the contract within the time specified, shall also be forfeited and become payable to the Commissioner, and the said implements and materials shall become and be the absolute property of the Commissioner, and with the moneys so forfeited and payable as aforesaid shall be considered as ascertained damages for breach of contract.

*Time of completion.*

13. The contractor shall complete the whole of the works comprised in this contract, on or before the first day of August, one thousand eight hundred and seventy-six, and in the event of their non-completion at the specified time, should the Commissioner not have proceeded under clauses Nos. 11 and 12 of these conditions, or either of them, the contractor shall forfeit and pay two hundred pounds sterling per week, or for every part of a week, that shall elapse after such specified time until their completion, and which sum or sums may be deducted from any money payable to the contractor under this or any other contract. No certificate will be given after the date specified for the completion of the contract until the whole of the works shall have been properly completed to the satisfaction of the Engineer-in-Chief.

*Copies of drawings, &c.*

14. All copies of drawings or specifications required by the contractor for carrying on the works must be made at his expense.

*Free passes, &c.*

15. No free passes on any of the Government Railways will be granted either to the contractor or his agents, nor will any materials or articles of any description be conveyed free of charge.

*Liability of contractor.*

16. The care and maintenance of all works under this contract shall remain with the contractor until their completion, and until the Engineer-in-Chief for Railways, shall by notice in writing, under his hand, inform the contractor that he has taken charge thereof, and until such notice shall have been given the contractor and his sureties shall be jointly and severally responsible for all accidents, from whatever cause arising, and shall make good all damage thereto.

*Contractor not to assign works or moneys.*

17. The contractor shall not assign over this contract, or assign all or any of the moneys payable or to become payable under the contract, or all or any part thereof, or any other benefit whatsoever arising, or which may arise, under this contract, to any other person without the consent in writing under the seal of the Commissioner for Railways first obtained—the contractor for each and every breach of this condition shall pay to the Commissioner for Railways the sum of £500 as and for liquidated damages, and the sum or sums payable as such damages may be deducted from any sum or sums due to the contractor, under this or any other contract, with the Commissioner for Railways—and any permission to assign over this contract shall not discharge the contractor from liability to see that the works so assigned are executed and completed in terms of this contract, unless on the assignment thereof the Commissioner expressly declare that the contractor is discharged from further liability.

*Truck system not allowed.*

18. The workmen, tradesmen, and laborers of every class employed on the works to which these conditions refer shall be paid their wages, in full, in money, current coin of the Colony, at least once in every month, and no ticket or other system of payment by provisions, liquors, or goods, will on any pretence be allowed; nor shall the contractor, or any person, or persons employed by him, or in any way connected with him, establish any shop for the supply of provisions, liquors, or goods; nor shall the contractor oblige his workmen to take provisions, liquors, or goods of any kind from any person in particular. The workmen of every class shall be paid on the works if it be possible, or in some building adjoining, and in no case shall they be paid at a public-house, or other place where liquors or refreshments are sold.

*Power to the Commissioner to pay workmen's wages.*

19. Before the payment of any money to the contractor, the Commissioner may require from him a statutory declaration that the tradesmen and laborers of every kind employed on the works to which these conditions refer, have been paid their wages and claims of every kind in full, in money, the current coin of the Colony, and to the latest date at which such wages or claims are due—and the Commissioner may withhold the payment of any money that may be due or may become due to the contractor until such declaration has been made and delivered to him.

*Bankruptcy*

*Bankruptcy or insolvency.*

20. If the contractor shall become insolvent, have his estate placed under sequestration, or shall make an assignment of his estate for the benefit of his creditors, it shall be lawful for the Commissioner without previous notice to the contractor, or to the Official or other Assignee or Assignees of his insolvent estate, or to the trustee or trustees under the assignment, to take the works out of the hands of the contractor, and of the assignees, or trustees of his estate, and to re-contract with any other person or persons to proceed with and complete the same, upon such terms, stipulations, and conditions as shall be deemed expedient, and all the then remaining materials, implements, and plant aforesaid may be used in and applied for the purposes of the works, but on the final completion of the works the surplus of such materials, implements, and plant shall cease to belong to the Commissioner, and shall become the property of the said assignees or trustees without any allowance for, or payment by, the Commissioner, or on account of any loss or diminution, wear, tear, or injury they may have sustained in the meantime.

*Security.*

21. The contractor will be required to enter into a bond to the Commissioner for Railways, in the penal sum of five thousand pounds for the proper performance and completion of the contract.

Should the contractor fail to provide the required deposit of £5,000 within six days from the acceptance of the Tender, or should the contractor fail to execute the contract for the due performance of the works mentioned in the said Tender, or to execute the bond required hereunder for securing the due completion of the works to be done under the said contract, within fourteen days after the acceptance of his Tender has been notified to him, the Commissioner will have the option of and full power and authority to declare such acceptance to be annulled.

No Tenderer will be allowed to proceed with the work tendered for, until he has provided the cash deposit, has executed the required contract, and has duly executed the bond before mentioned for the due performance of the said contract—it being hereby declared that for all or any work done or materials found and provided by the contractor before the due execution of the said contract and bond, he shall not have any right of action, claim, or demand against the Commissioner.

*Progress payment without prejudice, &c.*

22. No certificate given to the contractor for the purpose of any progress payment shall prevent the Engineer-in-Chief from at any future time before the termination of the contract rejecting all unsound materials and improper workmanship discovered subsequently to the giving of the last previous certificate; and notwithstanding the giving of any certificate that portions or the whole of the works have been satisfactorily performed, the Engineer-in-Chief may require the contractor to remove and amend at any future time previously to the final payment on account of the construction or maintenance of the works, any work that may be found not to have been performed in accordance with the contract; and the contractor must remove and amend at his own cost all such work when so required notwithstanding any approval made or given by the superintending officer; and the Commissioner shall have power on the report of the Engineer-in-Chief that the work approved of as aforesaid is not in accordance with the contract, to deduct from any moneys that may be due or that may become due to the contractor, the whole amount that has been paid on account of such work.

If in the opinion of the Engineer-in-Chief further inquiry is necessary or desirable before any certificate is given, he shall have power to withhold such certificate for a period not exceeding one month from the date at which in the ordinary course the certificate would have been given.

None of the conditions of this contract shall be varied, waived, discharged, or released, either in law or in equity, unless by the express consent of the Commissioner, testified in writing, under his seal.

*Payments.*

23. Payments will be made once in every month, unless same shall become not payable by reason of anything contained in these Conditions, up to the date specified for the completion of the contract on the Engineer's certificate as the work proceeds, in the proportion of ninety per cent. of the value of the work satisfactorily executed, and the remaining ten per cent. will be paid after the Engineer has certified that the whole of the works have been completed to his entire satisfaction, and it is expressly declared that the obtaining a certificate from the Engineer that the work done by the contractor has been satisfactorily executed or completed to his satisfaction, shall be a condition precedent to the contractor having any right or cause of action in respect to any work done, or materials provided, and to the contractor having any right of action or claim to the payments from time to time to be made hereunder, as well as to the final payment upon the whole of the work being finished.

Do. 16 do.	do.	1	5	0
Do. 18 do.	do.	1	15	0
Do. 24 do.	do.	3	15	0

The prices in the preceding Schedule include all labour material (except ironwork for the permanent way), scaffolding, and workmanship of every kind necessary for the full and perfect completion of the works, to the satisfaction of the Engineer-in-Chief.

WILLIAM MASON & Co., 362, George-street, Sydney.

To the Commissioner for Railways, Sydney.

SHOULD the foregoing Tender be accepted, we the undersigned hereby undertake to deposit with the Commissioner for Railways, within six days from the notification of the acceptance of the said Tender, the sum of £5,000 as security for the due performance of the contract.

WILLIAM MASON & Co., 362, George-street, Sydney.

Note.—A sum of £500 has, according to the conditions of the Specification, been deposited with the Colonial Treasurer, which sum we agree to forfeit to the Commissioner, should we fail to provide the cash deposit, and to complete the bond at the time specified.

WILLIAM MASON & Co., 362, George-street, Sydney.

#### No. 4.

ARTICLES OF AGREEMENT made and entered into this twenty-fourth day of August, in the year of our Lord one thousand eight hundred and seventy-four, between William Mason, the younger, of Bathurst, and Albert Elkington, of Sydney, in the Colony of New South Wales, contractors, carrying on business together in the said Colony, under the style or firm of "William Mason & Co.," of the one part; and the Commissioner for Railways, a Corporation sole created by the Act of Council, passed in the twenty-second year of the Reign of Her Majesty Queen Victoria, number nineteen, intituled "An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales, and for the regulation of the same" of the other part.

WHEREAS

WHEREAS the Commissioner for Railways aforesaid lately advertised for tenders for the works to be done, and the materials to be provided for the construction and erection of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers required in the construction of a single line of railway, being that portion of the Great Western Railway extension—Bathurst to Orange—in the said Colony, intended to be contract No. 1, commencing at one hundred and forty-four miles forty-five chains and fifty links in the City of Bathurst, and terminating at one hundred and ninety-two miles and forty-one chains in the Town of Orange, being a length of forty-seven miles and sixty-four chains and fifty links, in accordance in all things with the specification hereto annexed marked "A"; and the plans or drawings therein referred to, and under and subject to the General Conditions hereto annexed marked "B": And whereas the said William Mason and Albert Elkington (hereinafter styled or referred to as "The Contractors," forwarded to the Commissioner for Railways aforesaid the tender to do the said works and to find and provide the materials required in the construction of the said line of railway hereto annexed marked "C": And whereas the Commissioner for Railways aforesaid duly accepted the said tender of "the contractors" for the said works: And whereas "the contractors" have deposited the sum of five thousand pounds in the City Bank in the City of Sydney, in the name of the Commissioner for Railways aforesaid, upon fixed deposit, for the term of twenty-four months at interest; and have handed the receipt for the said deposit, which bears date the third day of August, one thousand eight hundred and seventy-four, and is numbered 11/263, to the Commissioner for Railways, as security for the due performance by them of the works in the said Specification mentioned in accordance therewith in all things as thereby, and by the said General Conditions is provided, and have duly executed a memorandum of agreement, under seal with the Commissioner for Railways, bearing even date herewith, setting forth the terms and conditions upon which the said sum of five thousand pounds is held by the Commissioner for Railways as security for the due performance of the contract in these presents contained: Now these presents witness that "the contractors" for themselves, their heirs, executors, and administrators, hereby covenant, declare, promise, and agree with, and to the Commissioner for Railways aforesaid, his successors, and assigns: That they, "The contractors," their executors, and administrators, shall and will find and provide all materials (excepting such as are in the said specification mentioned as to be provided by the Commissioner for Railways), labour, scaffolding, tools, implements, and every other thing requisite and necessary for; and shall and will do and perform all the works required in and about the full and proper completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers, required in the construction of the said single line of railway, being that portion of the Great Western Railway extension from Bathurst to Orange, in the said Colony, intended to be contract number one, commencing at one hundred and forty-four miles forty-five chains and fifty links, in the city of Bathurst, and terminating at one hundred and ninety-two miles and forty-one chains in the town of Orange, being a length of forty-seven miles sixty-four chains and fifty links, subject to and in accordance in all things with the said Specification, and General Conditions hereto annexed, marked respectively "A" and "B", and the plans or drawings therein referred to, and the conditions, stipulations, and agreements therein contained, and at the price or prices mentioned in the said tender—"the contractors" finding all materials, and performing and completing all the works in the said Specification and General Conditions mentioned, and therein or thereby required or mentioned, or intended to be done by the person or persons tendering or contracting: That all powers and authorities in the said Specification and General Conditions mentioned, as given or intended to be given to the Commissioner for Railways and to the Engineer-in-Chief for Railways, or to either of them, shall vest in and be exercisable by the Commissioner for Railways aforesaid, and his successors, and the Engineer-in-Chief for the Commissioner for Railways for the time being respectively, as if the said powers and authorities had been expressly created and given to the Commissioner for Railways and his successors, and to the Engineer-in-Chief for the Commissioner for Railways for the time being, or to either of them, in or by these presents: That they, "the contractors," shall and will complete and finish the whole of the said works in the said specification and the said plans or drawings therein referred to, mentioned or shown, on or before the first day of August, which will be in the year of our Lord one thousand eight hundred and seventy-six, as provided and mentioned in condition number thirteen of the said General Conditions; and that the completion of the said works upon the day and time hereinbefore mentioned shall be considered as of the essence of this contract:

And further, that the said Specification marked "A," the said General Conditions marked "B," and the said tender marked "C," shall be read and considered as incorporated in and forming part and parcel of these presents, in like manner as if the same had been herein written and set forth at length—the said Specification, General Conditions, Tender, and these presents together, forming the contract between the said parties hereto; and the Commissioner for Railways, for himself and his successors, hereby covenants with the "contractors," their executors or administrators, that the Commissioner for Railways or his successors shall pay the "contractors," their executors and administrators, for the said works hereinbefore mentioned, and materials to be supplied at and after the rate of prices in the said Tender mentioned, when and as payment for the said works and materials shall, in accordance with section twenty-three of the said General Conditions, become due and payable to the "contractors," such payments only to be made upon the production of the certificate in the said twenty-third section of the said General Conditions mentioned—the production of such a certificate being a condition precedent to the "contractors" having any cause or right of action, claim, or demand upon the Commissioner for Railways, as in the said twenty-third section is mentioned, and at the time or times and in accordance with and when payable under the provision as to payment in the said General Conditions and the said Specification, or either of them mentioned, and not otherwise: And further: That the said Specification, General Conditions, and Tender shall be read and considered as incorporated in and forming part and parcel of these presents in like manner as if the same had been herein written and set out at length, the said Specification, General Conditions, Tender, and these presents, together forming the Contract between the parties hereto.

In witness whereof the contractors have hereunto set their hands and seals and the Commissioner for Railways hath affixed his official seal, the day and year first before written.

## No. 5.

MEMORANDUM OF AGREEMENT made this twenty-fourth day of August, in the year of our Lord one thousand eight-hundred and seventy-four, between William Mason, the younger, of Bathurst, and Albert Elkington, of Sydney, in the Colony of New South Wales, contractors, carrying on business together in the said Colony under the style and firm of "William Mason, junior, and Co.," of the one part, and the Commissioner for Railways, a corporation sole created by the Act of Council passed in the twenty-second year of the reign of her Majesty Queen Victoria, number nineteen, intituled "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same*," of the other part

WHEREAS, by certain Articles of Agreement under seal, bearing even date herewith, and made between the said William Mason, the younger, and Albert Elkington of the one part, and the Commissioner for Railways aforesaid of the other part, the said William Mason, the younger, and Albert Elkington, covenant and agree with the Commissioner for Railways aforesaid to find and provide all materials (excepting such as by the specification therein referred to are to be provided by the Commissioner for Railways), labour, scaffolding, tools, implements, and every other thing requisite and necessary for, and do and perform all the works required in and about the full and proper completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers required in the construction of a single line of railway, being that portion of the Great Western Railway extension from Bathurst to Orange, in the said Colony, intended to be contract number one, commencing at one hundred and forty-four miles forty-five chains and fifty links in the city of Bathurst, and terminating at one hundred and ninety-two miles and forty-one chains in the town of Orange, being a length of forty-seven miles sixty-four chains and fifty links, as mentioned and set out in a Specification and General Conditions annexed to the said Articles of Agreement, and the plans and drawings therein referred to: And whereas, in and by paragraph twenty-one of the said General Conditions it is provided, or is mentioned, or is intended to be provided, as the said William Mason, the younger, and Albert Elkington hereby admit and declare, that the said William Mason, the younger, and the said Albert Elkington shall, as security for the due performance of the said works in the said Articles of Agreement, Specification, and General Conditions mentioned, deposit the sum of five thousand pounds with the Commissioner for Railways aforesaid, and to be held by the Commissioner for Railways aforesaid as such security: And whereas, in performance of the said provision in the said General Conditions the said William Mason, the younger, and the said Albert Elkington, have on the third day of August, one thousand eight hundred and seventy-four, deposited the sum of five thousand pounds in the City Bank, in the City of Sydney, in the name of the Commissioner for Railways aforesaid upon fixed deposit for the term of twenty-four months, at interest, and have handed the receipt for the said deposit, which is marked 11/263, to the Commissioner for Railways aforesaid: The Commissioner for Railways having agreed that the said sum of five thousand pounds so to be left in his hand as aforesaid as security for the due performance of the said contract, shall be held by the City Bank as a deposit in the name and by the Commissioner for Railways aforesaid, on behalf of himself and his successors, at interest as aforesaid, and that the said William Mason, the younger, and Albert Elkington, shall receive the interest thereof upon and as the same becomes due and payable: And whereas the said William Mason, the younger, and the said Albert Elkington and the Commissioner for Railways aforesaid, have agreed to enter into these presents for the purposes of stating and defining the terms and conditions upon which the said sum of five thousand pounds shall be held by the Commissioner for Railways aforesaid, under the said Articles of Agreement as security for the due performance of the said works in the said Articles of Agreement, Specification, and General Conditions mentioned. Now these presents witness, and it is hereby declared and agreed between and by the said William Mason, the younger, and the said Albert Elkington, on behalf of themselves and their respective heirs, executors, and administrators, and the Commissioner for Railways aforesaid, on behalf of himself and his successors: That the said sum of five thousand pounds of lawful British money is now and henceforth shall be held by the Commissioner for Railways aforesaid, as security for the due completion of the said works in the said Articles of Agreement, Specification, and General Conditions mentioned, in accordance in all things with the said Articles of Agreement, Specification, and General Conditions, and that the said sum shall be held by the Commissioner for Railways and his successors until the whole of the said works shall be completed and finished in accordance with the said Articles of Agreement, Specification, and General Conditions, and until the time for which the said William Mason, the younger, and the said Albert Elkington are bound to maintain and uphold the same has fully expired: And that if the said William Mason, the younger, and the said Albert Elkington, their, or either of their executors or administrators, shall make default in proceeding with or in completing the said works in the manner stipulated in the said Articles of Agreement, and Specification,

and

and General Conditions, and in accordance therewith and with the said plans or drawings aforesaid, the Commissioner for Railways aforesaid, and his successors, shall and may at once and without any further consent on the part of and notwithstanding the expressed dissent of the said William Mason, the younger, and Albert Elkington, or either of them, use and employ the said sum of five thousand pounds, or so much thereof as shall be requisite in and about the proceeding with, completing, and finishing the said works, and in and about the payment of or retention, in payment of any penalty or penalties, sum or sums of money, which the Commissioner for Railways may be entitled to claim from the said William Mason, the younger, and Albert Elkington, by reason of the non-completion of the said works as aforesaid, and within the time fixed for that purpose, and the balance remaining (if any) shall be considered as forfeited to the Commissioner for Railways aforesaid, and shall be paid by the Commissioner for Railways aforesaid into the office of the Treasury in the said Colony, to the credit of and shall become and form a portion of the Consolidated Revenue of the said Colony as if the same had been recovered by action at law at the suit of Her Majesty, upon a bond given to Her Majesty, her heirs and successors, by the said William Mason, the younger, and Albert Elkington, to secure the due performance or completion of the works in the said Articles of Agreement, Specification, and General Conditions mentioned, without prejudice nevertheless to the right of the Commissioner for Railways aforesaid to sue for and recover, if he shall think fit so to do, from the said William Mason, the younger, and the said Albert Elkington, their or either of their executors and administrators, all or any penalty or penalties, sum or sums of money, which, under the said Articles of Agreement, or the said Specification and General Conditions, he or they may be entitled to recover from the said William Mason, the younger, and Albert Elkington, their executors and administrators, and which may be in excess of the said sum of five thousand pounds: And further, that at the expiration of the said term of twenty-four months, for which the said sum of five thousand pounds has been deposited in the City Bank as aforesaid, upon fixed deposit, it shall be lawful for the Commissioner for Railways aforesaid,—but it is hereby expressly declared that he is not in any way required, or under any obligation so to do, to re-deposit the same for a further period of twelve months at interest, or for such further period or for such lesser period or term, from time to time, as the Commissioner for Railways or his successors shall think fit, until the said works are completed; or the Commissioner for Railways aforesaid may, in his discretion, retain the said sum of five thousand pounds in his hands uninvested—in which case the Commissioner for Railways shall not, if the said works shall be completed in the terms of the said agreement, and the said William Mason, the younger, and Albert Elkington become entitled to receive back the said sum of five thousand pounds, be charged or chargeable with, or liable to pay interest on, the said sum for the time the same shall have been held by him: And it is further agreed, that the said William Mason, the younger, and Albert Elkington, their executors or administrators, shall be entitled to receive from time to time as the same shall become receivable, from the Commissioner for Railways aforesaid and his successors, all interest which shall be payable upon the said deposit: And it is hereby further expressly declared, between the said parties hereto, that the Commissioner for Railways aforesaid, and his successors, shall not be liable or answerable for any loss of the said sum of five thousand pounds, or any part thereof, through the same being from time to time deposited in or held by the said Bank as aforesaid.

In witness whereof the said William Mason, the younger, and the said Albert Elkington have hereunto set their hands and seals, and the Commissioner for Railways hath caused his official seal to be hereunto affixed the day and year first before written.

Signed, sealed, and delivered by the said William } Mason, the younger, in the presence of,— }	M. S. HARTE.	WM. MASON. (L.S.)
Signed, sealed, and delivered by the said Albert } Elkington, in the presence of,— }	M. S. HARTE.	A. ELKINGTON. (L.S.)

CHAS. A. GOODCHAP, Secretary.

### No. 6.

MEMORANDUM OF AGREEMENT made this thirtieth day of September, in the year of our Lord one thousand eight hundred and seventy-six, between the Commissioner for Railways a Corporation sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same,*" of the one part, and William Mason, the younger, of Bathurst, in the said Colony, and Albert Elkington, of Sydney, in the said Colony, contractors, of the other part.

WHEREAS by certain Articles of Agreement, bearing date the twenty-fourth day of August, in the year of our Lord one thousand eight hundred and seventy-four, and made between the abovenamed William Mason and Albert Elkington of the one part, and the Commissioner for Railways aforesaid of the other part, the said William Mason and Albert Elkington covenanted and agreed with the Commissioner for Railways aforesaid and his successors to find and provide all the materials (excepting such as are in the specification therein referred to mentioned as to be supplied by the Commissioner for Railways), labour, scaffolding, tools, implements, and every other thing requisite and necessary for, and to do and perform all the works required in and about the full and proper completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers, required in the construction of a single line of railway, being that portion of the Great Western Railway, which is the extension of the said line of railway from Bathurst to Orange, in the said Colony, intended to be contract number one, commencing at one hundred and forty-four miles and fifty links in the City of Bathurst, and terminating at one hundred and ninety-two miles and forty one chains, in the town of Orange, being a length of forty seven miles and sixty-four chains and fifty links, in accordance in all things with the Specification

Specification and General Conditions to the said Articles of Agreement annexed, and the plans or drawings therein referred to, and to complete and finish the whole of the said works on or before the first day of August, in the year one thousand eight hundred and seventy-six : And whereas by a certain memorandum of agreement, under seal, bearing even date with the said lastly-recited articles of agreement, and made between the said William Mason, the younger, and Albert Elkington of the one part, and the Commissioner for Railways aforesaid of the other part : After reciting (*inter alia*) that the said William Mason and Albert Elkington had on the third day of October, one thousand eight hundred and seventy-four, deposited the sum of five thousand pounds in the City Bank, in the City of Sydney, in the name of the Commissioner for Railways aforesaid, upon fixed deposit, for the term of twenty-four months, at interest, and had handed the receipt for same, which was marked 11/263, to the Commissioner for Railways aforesaid : It is witnessed, and the said parties to the said Agreement did declare and agree that the said sum of five thousand pounds, so deposited in the name of the Commissioner for Railways upon fixed deposit as aforesaid, should be held by him as security for and until the completion of the said works upon the terms and conditions in the said now reciting Memorandum of Agreement mentioned : And whereas the said William Mason and Albert Elkington made default in the completion of the said works on or before the first day of August last past, and the said works are still unfinished and not completed ; and the said William Mason and Albert Elkington have applied to and requested the Commissioner for Railways aforesaid to extend the time for the completion of the said works until the thirty-first day of January, which will be in the year one thousand eight hundred and seventy-seven : And whereas the Commissioner for Railways aforesaid hath not proceeded under clauses number eleven and twelve of the General Conditions which form part of the said contract, and the said William Mason and Albert Elkington have under clause thirteen of the said General Conditions become liable to forfeit and pay two hundred pounds sterling for every week and for every part of a week that shall elapse after the said first day of August last past until the completion of the said works, which sum it is by the said clause declared may be deducted from any money payable to the said William Mason and Albert Elkington under the hereinbefore recited or any other contract : And whereas the Commissioner for Railways aforesaid hath consented to agree to the extension of the time for the completion of the said works until the said thirty-first day of January, which will be in the year of our Lord one thousand eight hundred and seventy-seven, upon condition that the said William Mason and Albert Elkington shall forfeit and pay to the Commissioner for Railways aforesaid the sum of two hundred pounds sterling per week for every week and part of a week that shall elapse from the said first day of August last until the said thirty-first day of January, in the year of our Lord, one thousand eight hundred and seventy-seven, as and for the liquidated and ascertained damages which the Commissioner for Railways aforesaid hath sustained and will sustain by the non-completion of the said works on or before the said first day of August last, and as the consideration for the extension of the time for the completion of the said works hereby given ; and that the sum of money, now payable on account of the said sum of two hundred pounds a week, so to be forfeited and paid by the said William Mason and Albert Elkington, shall and may be deducted from any money that may now be in the hands of the Commissioner for Railways aforesaid, and which would, but for the default in the completion of the said works, have been payable to the said William Mason and Albert Elkington under the said Articles of Agreement, or out of any money which may become payable to them by reason of the extension of time hereby given to them, or out of the said sum of five thousand pounds so deposited as aforesaid, and that all sums of money which shall from time to time hereafter become payable to the Commissioner for Railways aforesaid at any time hereafter on account of the said sum of two hundred pounds a-week so to be forfeited and paid by the said William Mason and Albert Elkington on account of the said non-completion of the said works shall and may be deducted from time to time from any moneys which from time to time shall hereafter become payable to the said William Mason and Albert Elkington on account of any works hereafter done under the said contract, and this Agreement for the extension of the time for the completion of the works therein mentioned, or out of the said sum of five thousand pounds, or any other account whatsoever. And the said William Mason and Albert Elkington have accepted the said extension of time for the completion of the said works, upon the said terms and conditions, and also of the terms and conditions hereinafter mentioned :

Now these presents witness that in consideration of the payment by the said William Mason and Albert Elkington to the Commissioner for Railways aforesaid, or of the Commissioner for Railways aforesaid, deducting from any moneys which are now or at any time hereafter may become payable to the said William Mason and Albert Elkington under the said Articles of Agreement, or of the extension of the time for the completion of the said works, of the sum of two hundred pounds per week for every week and part of a week from the said first day of August last past until the thirty-first day of January, in the year of our Lord one thousand eight hundred and seventy-seven, as and for liquidated and ascertained damages, which the Commissioner for Railways aforesaid hath sustained and will sustain by reason or on account of the non-completion of the said works in the said Articles of Agreement, Specification, and General Conditions, as hereinbefore mentioned, and as the consideration of the extension of the time for the completion of the said works hereby granted to the said William Mason and Albert Elkington, the Commissioner for Railways aforesaid doth hereby extend the time for the completion of the works remaining to be done of the works in the said Articles of Agreement and Specification mentioned until the thirty-first day of January, which will be in the year of our Lord one thousand eight hundred and seventy-seven, upon the terms and conditions hereinafter mentioned : And that in consideration of the premises and of the said extension of time by the Commissioner for Railways aforesaid the said William Mason and Albert Elkington hereby jointly and severally covenant and agree with and to the Commissioner for Railways aforesaid and his successors, that they, the said William Mason and Albert Elkington, their executors and administrators, shall and will well and truly complete the whole of the works yet remaining to be done of the said works in the said Articles of Agreement and Specification mentioned in accordance in all things with the said Specification and General Conditions and the said plans or drawings, on or before the said thirty-first day of January, which will be in the year of our Lord one thousand eight hundred and seventy-seven : And that the said Articles of Agreement and the said Memorandum of Agreement, or the terms and conditions upon which the said sum of five thousand pounds is held by the Commissioner for Railways aforesaid shall not be considered as altered, or the stipulations, provisoes, and agreements therein, or in the said Specification and General Conditions in any way waived, barred, or departed from

in any respect otherwise than as to the time within which the said works are to be completed; and as to the power herein given to the Commissioner for Railways aforesaid to deduct therefrom the money hereby made payable thereout, but that the Commissioner for Railways aforesaid and his successors shall have all and every the rights, powers, and authorities, cause and causes of action and suit, claims and demands given to or vested in him or them, in and by the said Articles of Agreement, Specification, and General Conditions, and by the said memorandum of agreement, in all respects as to the said sum of five thousand pounds, and against the said William Mason and Albert Elkington and otherwise, if the said works are not completed on or before the said thirty-first day of January, one thousand eight hundred and seventy-seven, as if that day had been the day or time originally named and appointed for the completion of the whole of the said works hereinbefore mentioned; and that all and singular the penalties, forfeitures, sum or sums of money, rights and privileges which would accrue to or vest in the Commissioner for Railways aforesaid and his successors, for or by reason or on account of the said works hereinbefore mentioned not being completed and finished within the time named in and according to the said Articles of Agreement, Specification, and General Conditions, and the said memorandum of agreement, shall accrue to and vest in the Commissioner for Railways aforesaid and his successors, by reason and on account of the said works hereinbefore mentioned not being completed and finished in all things on or before the said thirty-first day of January, one thousand eight hundred and seventy-seven, in the like manner that the same are in the said Articles of Agreement and the said Specification and General Conditions, and the said memorandum of agreement, are declared to be given to or vested in the Commissioner for Railways aforesaid and his successors, as to the completion of the said works on or before the first day of August last past: And further, that the said William Mason and Albert Elkington shall and will well and truly pay to the Commissioner for Railways aforesaid, or that it shall be lawful for the Commissioner for Railways aforesaid and his successors shall and may, out of any money now in his hand which would have been payable to the said William Mason and Albert Elkington if the said works had been completed on or before the said first day of August last, or out of any other money which may now or at any time hereafter be or become payable by the Commissioner for Railways aforesaid to the said William Mason and Albert Elkington on any account whatsoever, and out of the said sum of five thousand pounds, all and every sum or sums of money which now are or at any time hereafter shall become payable to the Commissioner for Railways aforesaid for or on account of the sum of two hundred pounds per week for every week and part of a week between the said first day of August last past and the said thirty-first day of January, in the year of our Lord one thousand eight hundred and seventy-seven, as and for liquidated and ascertained damages payable to the Commissioner for Railways aforesaid, by reason or on account of the said works not having been completed on or before the first day of August last past; and as the consideration for the extension of time being granted to them, the said William Mason and Albert Elkington: And it is hereby expressly declared and agreed between and by the said parties hereto, that the said payment of the said sum of two hundred pounds per week for every week and part of a week for the time that will elapse between the said first day of August last past and the said thirty-first day of January next, shall in no way diminish, alter, or affect the rights, remedies, powers, and authorities given to or vested in the Commissioner for Railways aforesaid under the said Articles of Agreement, Specification, and General Conditions, and of the said memorandum of agreement, and of this agreement for the extension of the time for the completion of the said works, to use all and every or any of the rights, powers, and authorities given by the said Agreement, Specification, and General Conditions, and this agreement for the extension of the time for the completion of the said works, in case the said works shall not be completed and finished in all things in accordance with the said Articles of Agreement, Specification, plans, and General Conditions, and of this agreement, on or before the said thirty-first day of January next, as is hereinbefore provided or is intended to be so provided.

In witness whereof the Commissioner for Railways aforesaid hath hereunto set his official seal, and the said William Mason and Albert Elkington have hereto set their hands and seals, the day and year first before written.

The official seal of the Commissioner for Railways was hereto affixed in the presence of,—  
(a line being previously inserted between the second and third lines from the bottom of the third side of writing, and between the seventh and eighth lines of the same side).

JOHN RAE, (L.S.)  
Commissioner for Railways.

CH. A. GOODCHAP, Secretary.

Signed, sealed, and delivered by the said William Mason the younger, in the presence of,—  
(a line being previously inserted between the second and third lines from the bottom of the third side of writing and between the seventh and eighth lines of the same side).

WM. MASON, (L.S.)

C. E. P. MAYBURY, C.P.S.

Signed, sealed, and delivered by the said Albert Elkington in the presence of,—  
(a line being previously inserted between the second and third lines from the bottom of the third side of writing and between the seventh and eighth lines of the same page).

## Wm. Wakeford—Contract for Extension, Murrurundi to Tamworth.

- No. 1. Specification.
- No. 2. Conditions.
- No. 3. Tender.
- No. 4. Bond.
- No. 5. Agreement for £5,000 security.
- No. 6. Agreement for extension of time.

### No. 1.

THIS is the Specification, marked "A," referred to in the annexed Articles of Agreement with the Commissioner for Railways, dated the seventeenth day of March, A.D. 1874.

Witness—M. S. HARTE.

W. WAKEFORD.

A.

GREAT NORTHERN RAILWAY—EXTENSION FROM MURRURUNDI TO TAMWORTH.

Contract No. 1.

SPECIFICATION.

1. This contract commences at 119 miles, 44 chains, and 35 links from Newcastle, and terminates at 181 miles, 70 chains and 18½ links, near the town of Tamworth, being a length of 62 miles, 25 chains, and 83½ links.

2. The work for which tenders are invited, and to which this Specification refers, comprises the providing of all materials (excepting such as are hereafter specified to be provided by the Commissioner), labour, scaffolding, tools, implements, and every other thing requisite and necessary for the full and proper completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers, required in the construction of a single line of railway, in accordance with this Specification, and to the entire satisfaction of the Engineer-in-Chief for Railways.

3. The contractor to state in his schedule a price per cubic yard at which he will execute all the excavations, brickwork, and masonry, the timberwork per cubic foot; the ironwork in bolts, straps, and other similar ironwork at per lb.; the fencing per rod; ballasting and laying permanent way at per lineal yard; and sleepers at per sleeper, finding all materials and labour, the work being paid for on the net measurement as executed.

4. The plan is drawn to a scale of 4 chains to an inch, and the section to a horizontal scale of 4 chains to an inch, and a vertical scale of 40 feet to an inch.

5. The plan shows the course of the line. The centre red line represents the line of the stakes, which are driven down at intervals of one chain, and are in the centre of the line to be constructed.

6. The section represents the surface of the ground in black, and is taken along the centre line shown on the plan in red. The upper or blue line represents the upper surface of the rails when laid; the lower or red line represents the level of the bottom of the ballasting or formation level in the centre of both cuttings and embankments, and is 1 foot 3 inches below the blue line.

7. When the railway is in cutting, a ditch 3 feet wide at the top, 1 foot at the bottom, and 1 foot 6 inches deep, shall be made on the higher side of the ground to be occupied by the railway; on the lower side it will not be necessary to have any ditch. The drains are to be made to fall into the ditches or watercourses at present existing for the drainage of the adjoining lands, or into the diverted channels as the case may be; and whenever the fall of the drains or that of the diverted channels shall be so great as to endanger the stability of the sides or bottoms of such drains, the same to be protected by pitching; and whenever it may be considered desirable to carry the water from such drains down the slopes of the cuttings, a pitched drain shall be constructed on the slopes, but these matters will be considered as extra works, and arranged for as provided in clause No. 5 of the General Conditions.

8. A ditch similar to that described on the top of the cuttings to be formed at the foot of the embankments, on the higher side only.

#### *Earthworks.*

9. The excavations in the centre of the cuttings are to be made to the depth shown on the longitudinal sections by a red line, being a depth of fifteen inches below the level of the upper surface of the rails, as indicated by the blue line.

10. The bottom of the cuttings to be slightly convex, being 15 inches below the level of the rails in the centre, and eighteen inches at the sides, having a fall from the centre to the bottom of the slopes.

11. The cuttings to be sloped at the batters stated on the longitudinal section, or to such other batters as may be ordered by the Engineer-in-Chief during the progress of the works, to be 15 feet wide at the bottom, that is to say, at the formation level. The sides, as the excavation proceeds, to be uniformly trimmed or dressed to the specified inclinations, proper battering rules being used and provided by the contractor at his own cost for this purpose.

12. Cross sections have been already taken at the expense of the Commissioner; and should the contractor not take exception to the accuracy of these sections before the work in the cuttings to which they refer has been commenced, it will be taken as an acknowledgment on his part that they are correct, and that he will be satisfied to have the quantities of work for which payment is to be made measured from the sections furnished by the Engineer, provided the works cannot be otherwise satisfactorily measured and the quantities accurately ascertained. Should the contractor prefer to take cross sections for himself, no measurements taken from them will be admitted as the correct quantities unless the accuracy of such sections has been confirmed by the Engineer or superintending officer.

13. The centre line has been very carefully staked out, and every care must be taken by the contractor not to remove any of the centre stakes without taking the precaution to fix such marks as will enable him to find the position of the stake or stakes so removed.

14. Any stakes removed which the contractor is unable to replace will be replaced by the officer in charge of the works; but it must be distinctly understood that every expense attendant upon such replacement must be paid by the contractor, the Engineer-in-Chief reserving to himself the right to deduct at once such cost from any certificate then due in favour of the contractor for work done on this contract.

15. The embankments throughout the whole contract to have slopes of  $1\frac{1}{2}$  to 1, and to be not less than 15 feet wide at formation level.

16. On the completion of the cuttings and embankments, the whole of the formation shall be properly trimmed. The formation of the cuttings shall be trimmed to the level shown on the working section, and the embankments shall be trimmed to such level as the Engineer may direct.

17. The excavations shall at all times be kept free from water, and so conducted as always to afford the utmost facilities for the escape of the water, by casting and keeping properly cleaned out ditches (which shall in no case be deeper than the formation level) on each side of the excavation, and also by pumping if necessary.

18. The contractor must deposit the material from the cuttings either to the embankments named for its reception or to such other place, not exceeding a lead of one mile, that may be directed by the Engineer during the progress of the works.

19. Any stone or gravel that may be found in the cuttings suitable for ballasting may be laid aside by the contractor, at his expense, instead of being taken to embankment; but any deficiency in the embankments caused by such appropriation of material from the cuttings shall be supplied entirely at the expense of the contractor either from side cutting or by increasing the width of the cuttings to the extent only of the width required for a double line.

20. The price stated in the schedule for excavations from cuttings is to be the average price per yard whatever the nature of the material excavated may be, and the contractor must therefore satisfy himself as to the nature of the excavations in the different cuttings before sending in his tender. Trial holes have been made in nearly all the cuttings, and the strata through which they pass is marked on the section. These trial holes however shall in no way bind the Commissioner or be assumed to be a guarantee to the contractor of their accuracy; but, as they are left open, he must satisfy himself by personal inspection, as no allowance will afterwards be made to him beyond the price stated in his schedule, whatever material may hereafter be found in the cuttings.

21. All excavations, when the lower portion only is in rock, shall be taken out as shown by a diagram on the working sections, the gullet in all cases keeping pace with the excavation of the slopes. If any cutting be composed entirely of rock, the sides shall be left perpendicular throughout unless otherwise directed.

22. The earthwork must be well pauned for such distance as may be required, not exceeding three yards on either side and one yard in depth, over the top of all culverts, without any charge beyond the price stated in the schedule for earthwork.

23. The quantities stated on the longitudinal section are placed there for the contractor's guidance to enable him to determine the length of lead, but the quantities to be paid for will be the actual measurement of the works satisfactorily executed, whether in excess or diminution of the quantities marked upon the section.

24. The Commissioner will lend to the contractor for the execution of the earthworks on this contract rails for a length of 2 miles of single way, but any rails beyond this quantity, if required by the contractor, must be provided at his own expense. The rails which will be lent will weigh about 40 lbs. to the yard, but no fastenings, either fish-plates or dogs, will be lent by the Commissioner.

25. All rails lent to the contractor for temporary purposes must be returned by him and stacked at the Tamworth end of his contract, having first been straightened to the satisfaction of the Engineer. Any rails cut, broken, lost, or so damaged by the contractor as to be rendered useless, must be paid for by him at the price per ton at which rails of a similar description are valued in the Colony. These rails will be delivered free of charge to the contractor at Murrurundi Station.

26. The whole of the land inside the fences of the railway, or road approaches (and for a distance of half a chain beyond such fences), should it be considered by the Engineer desirable, to be cleared of timber or brushwood, the fallen timber being entirely removed or destroyed. (See clause No. 8 of General Conditions.) The cost of clearing will not be paid for as a specific charge, but must be included in the price stated in the schedule for earthwork.

27. All embankments which have to be formed on side-lying ground must have benchings cut so as to prevent the bank from slipping, and such benchings shall be done to the satisfaction of the Engineer or superintending officer. The excavations for these benchings to be paid for at the price stated in the schedule for side cutting.

28. During the progress of the works, every protection shall be afforded to the public by the erection of proper fences alongside all excavations which join upon any public road, and where the road is crossed by the railway, temporary crossings or diversions shall be made at the expense of the contractor, and lights shall be kept burning between the hours of sunset and sunrise at all intersections or diversions of all public roads, if considered necessary by the Engineer or superintending officer. The contractor will however be held responsible for any accidents which may occur at any of these crossings during the progress of the works.

#### *Timberwork.*

29. The hewn timber to be used in the superstructure to the bridges shall be ironbark, free from sap and wane, perfectly sound, straight, and well seasoned, and to be framed as shown on the drawings. Great care must be taken in framing the work, and in fitting the ironwork, which must be done with the greatest accuracy. The bearing and batter piles to be round, the diameter at the top being not less than 16 inches, and the bottom 12 inches, to be driven as hereafter directed, and may be of ironbark, box, stringybark, or other approved timber. White gum shall not be used in any of the bridges in this contract.

30. The girders, trusses, headstocks, and corbels shall be hewn timber perfectly square, and the sleepers, transoms, walings, braces, and planking, shall be of sawn timber (any approved hardwood) straight and sound. All beds and joints of the timberwork to have a thick coat of red lead and oil previous to being fixed; the cost of doing this to be included in the price stated in the schedule for timberwork.

31. Should any of the bridges have to be erected on rock foundations, timber sills bolted to the rock shall be substituted for piles, in accordance with drawings which will hereafter be furnished; the rock shall be dressed off perfectly true to receive the sills, and the cost of doing this shall be paid for at the price named in the schedule for excavation to foundations in rock.

32. The whole of the timberwork will be paid for at per cubic foot, and the round piles of the size stated will be considered as equivalent to a cubic foot for every foot in length of pile, and paid for at the price per lineal foot named in the schedule.

33. When the piles are being driven every precaution must be taken to prevent splitting during the driving, as no split piles will be allowed to remain in the work.

34. Each pile must be driven with an iron ram weighing not less than 20 cwt., and every pile shall be driven to such depth as may be required by the superintending officer.

35. The contractor must ascertain for himself the required length of each pile, as no scarfing to any of the piles will be permitted, and all piles pitched too short must be drawn and others substituted of the requisite length.

36. An allowance will be made to the contractor of 3 feet on each pile beyond the net measurement when cut off, for the reception of the headstocks, for waste in driving.

37. The whole of the bolts, nuts, straps, spikes, plates, washers, strap-bolts, and pile-shoes, to be of wrought-iron of the best quality, and of the form and dimensions shown on the drawings. The whole of the ironwork, except pile-shoes, to be heated and dipped in linseed oil before being taken on to the works.

#### *Culverts.*

38. The whole of the masonry, except where otherwise described, is to be laid in mortar, mixed in the proportion of one of stone lime to one of clean sharp sand, or any other proportion the Engineer may hereafter direct.

39. The price stated in the schedule for excavations is also to include keeping the foundations free from water, and filling and well ramming round the masonry or brickwork to the level of the original surface of the ground, as the work proceeds.

40. No masonry or brickwork shall be commenced without an order from the Engineer or superintending officer, and when the excavation is ready to receive the brickwork or masonry the contractor must give notice to the Engineer or superintending officer to that effect, so that the foundations may be approved before the work be commenced.

41. The culverts, except those of a square form, are to be built of the form shown on drawing No. 3; the materials and workmanship to be of the best description. If of stone, the beds and joints shall be boasted throughout, and rock-faced (excepting the soffit of the arch and invert, which must be picked off to an even surface), laid in 12-inch courses, header and stretcher alternately, and grouted in flush with good mortar at every course.

42. The bed of each stretcher, from 2 to 5 feet culverts inclusive, must be equal to the thickness of their walls respectively. Two stretchers may be used in the 8-foot and 10-foot culverts, but each arch must be formed of single stones, the bond throughout being not less than twelve inches.

43. Any culvert sustaining damage from carelessness on the part of the contractor in not sufficiently backing-up the masonry or brickwork, the whole of the work in such culvert will be condemned, and must be rebuilt at the expense of the contractor.

44. The square culverts are to be built "dry," of the form and dimensions shown on drawing No. 3; all beds and joints to be picked true, the face may be roughly knocked off.

45. If earthenware pipes be used for drains, they shall in all cases be sunk not less than their outside diameter below the ordinary surface of the ground, and the joints made with properly tempered clay. Brick-heads to be built for these pipes, as shown on drawing No. 3.

46. If bricks be used in the culverts, they shall be good, sound, well-shaped, hard-burnt kiln bricks, free from all defects, moulded for cutwaters where required, and laid in courses of headers and stretchers alternately (English bond), in mortar or cement as may be hereafter directed.

47. The bricks to be well bedded, and the joints flushed with mortar or cement at every course, and well grouted.

#### *Inlets and outlets.*

48. Excavations from inlets and outlets, also from foundations of culverts, to be run into the main line embankment where directed, such run not to exceed sixty yards.

#### *Permanent way and ballasting.*

49. The ballast to be of the depth shown on drawing No. 7, being nine inches above the formation level in the centre of the cuttings; to be level on the upper surface on straight portions of the line, but on curves the outside of the ballast shall be of sufficient thickness to give the proper super-elevation to the outside rail, the inner rail being kept at the height shown on the longitudinal section.

50. All ballast and sleepers required for the works under this contract must be provided by the contractor, who will have to lay the rails, &c., and deposit the ballast on the line of railway as hereafter described.

51. The Commissioner will provide all ironwork for the permanent way rails, fish-plates, bolts, nuts, spikes, and screws. These permanent way materials will be delivered to the contractor at the Murrurundi Station free of cost, but all expenses attendant upon their removal from thence to the places where they are to be used must be borne by the contractor; and on the Commissioner delivering to the contractor all such materials as are to be provided by him for this work, the contractor will be bound to receive them and to give the Commissioner or his agent a receipt for all such materials so delivered; and after receiving such materials, he will be held responsible for all damage, breakage, or loss while in his possession, either during their transit from the place of delivery or in putting them into the work, and in all cases where they may be damaged, lost, or destroyed, the contractor will have to replace or repair them at his own expense.

52. The contractor must supply all engine-power, waggons, tools, implements, labour, and every other thing necessary for ballasting and laying the permanent way in the manner stated in this Specification, and to the satisfaction of the Engineer-in-Chief for Railways.

53. The contractor must in all cases exercise great care in carting the materials on to the work, as he will be held responsible for and chargeable with the expenses of repairing all or any damage he may cause to the works by carelessness or otherwise in carrying out this contract; and the Commissioner is hereby empowered to deduct the amount of such damages from any money which may be due or may hereafter become due to the contractor under this contract.

54. Where the railway intersects any road, whether main road, public road, or private occupation road, a permanent level crossing shall be made in all cases where directed by the Engineer, with proper ironbark guard rails, and the whole constructed in accordance with drawing No. 8.

55. All such crossings shall be maintained by and at the expense of the contractor, until the final completion of this contract.

56. Level crossing gates, 10 feet, 12 feet, and 15 feet respectively, must be provided and fixed complete in accordance with drawing No. 9 at the price stated in the schedule. Each gate to be provided with a strong chain, padlock, and duplicate keys.

57. Each gate, including all posts, struts, or spurs, and ironwork, must be painted two coats with the patent iochrome Australian paint.

58. The approaches to all public roads to be metalled with broken stone (the best that can be obtained in the district), and must be broken to a gauge of two inches, and be laid on to the approach to the depth of 9 inches.

#### *Ballasting.*

59. The ballast shall consist of clean sharp gravel, free from all loam, small sand, or other material which the Engineer may consider unsuitable for ballast, broken stone of approved quality, not larger than a cube of 3 inches, or properly vitrified clay, 9 inches in thickness, in the centre of the roadway; the ballast being spread level transversely on the straight portions, but on curves the ballast on the outside of each curve shall be of such extra thickness as will give the necessary super-elevation to the outer rail.

60. The width of the ballast at the bottom to be 11 feet 9 inches, and at the top, which will be 6 inches below rail level, the width must be 9 feet 6 inches, as shown on drawing No. 7. The outer edges of the ballast both at the top and bottom must be kept parallel to the centre line throughout, and the slopes of the same to be neatly trimmed to a uniform surface.

61. The road may be laid upon the formation, and afterwards lifted to the proper level in two lifts of 3 inches each, so as to give 6 inches of ballast under the centres of the sleepers and 7 inches under the ends, as shown in drawing No. 7.

62. The contractor must use the greatest care in lifting, no lift being more 3 inches, so as to avoid bending the rails or in any other way injuring the road; and no ballast waggon will be allowed to run over any portion of the road until 3 inches of ballast have been placed under the sleepers, and no engine shall pass over the road until it has been lifted to its full height and properly packed.

63. The ballasting when laid complete will be paid for at per lineal yard, and no allowance will be made for any loss by subsidence in embankments or otherwise.

#### *Road laying.*

64. The sleepers must be provided by and at the expense of the contractor, in accordance with clauses Nos. 73 to 79.

65. The bed for the rail must be trimmed by machinery to the width of its bottom flange, which must be sunk its exact depth into the sleeper on the outside of the rail, the seat for the rail being inclined from the inside at an angle of 1 in 20, to give the proper cant to the rail.

66. The sleepers must be placed at such distances apart as are shown on drawing No. 7, the number being eight sleepers under rails of 21 feet in length, and seven under 18-foot rails.

67. The rails must be fixed to the sleepers with screws and spikes as shown on the drawing No. 7, the holes for which must be bored in the sleepers to prevent their splitting when inserting the fastenings.

68. The rails to be laid to a gauge of 4-feet 8½ inches throughout, the upper surface being at the level shown on the working section, excepting where otherwise directed by the Engineer. The joints of the rails to be secured by fish-plates and bolts in the usual manner. Each rail to be straight and level transversely when put down in the straight portions, and where the line is curved the rails must be bent by a machine, to be provided for the purpose by the contractor (as no hammering will be allowed) before being placed on the sleepers, to suit the particular radius of such curve, the outer rail having an elevation above the inner rail such as the Engineer may direct.

69. The rail level will be 15 inches above the formation level in the centre throughout. A standard clip-gauge will be provided by the Commissioner, to which standard all other gauges must be made, and which shall be approved and branded by the district engineer before being used on the works. Any portion of the road laid in with any gauge not so approved and branded will not be paid for by the Commissioner. Clip-gauges only shall be used throughout, no other gauge will be permitted on the works.

70. The rails must be laid with the joints as nearly at right angles with each other as the lengths of the rails will permit, but in no case shall the joint in one line of rails have a lead or be in advance of the joint in the opposite rail of more than 3 inches.

71. The contractor must provide all labour and tools required for the laying and completing the permanent way, which must be finished in every respect to the entire satisfaction of the Engineer-in-Chief.

72. All the sleepers must be laid as nearly as practicable at right angles to the centre line of railway; they must be well and thoroughly packed up so as to cause the upper surface of the rails, when finished, to be at the level shown on the working section, or at such level as may be hereafter directed, and the two lines of rails shall be laid uniformly parallel to the centre line throughout, and must be perfectly straight on all the straight portions, and on the curves they must be laid to a uniform specified radius.

#### *Sleepers.*

73. The sleepers to be supplied under this contract may be of ironbark, grey-gum, blackbutt, red-gum, or other approved hardwood, 8 feet long, either sawn or split from large trees.

74. If sawn, the size to be not less than 9 inches × 4½ inches, sound and straight, and must be cut when the sap is down. If split, they must be taken from trees not less than 3 feet in diameter, the broadest side to be of a uniform width of 10 inches, to be 4½ inches thick, and the smallest part of the sleeper to have a sectional area of not less than 40 superficial inches. The bark to be removed from all sleepers before inspection.

75. The number of sleepers required will be about 115,000, but any additional number that may be required for this contract shall be supplied by the contractor at the price for sleepers stated in the schedule.

76. The contractor to find men at his own cost for the purpose of turning over the sleepers during their inspection by a person appointed by the Engineer for this purpose, and all the sleepers approved will be branded.

77. No inspection of sleepers will be made unless a proper number of men be provided by the contractor for the purpose above mentioned.

78. All sleepers before they can be branded or inspected must be delivered on some portion of the land inside the railway fences on this contract.

79. Any sleeper which may be found to be split after being laid in the road and branded must be replaced by the contractor at his own cost.

#### *Sidings.*

80. All sidings, cross-over roads, or through roads, that may be required shall be ballasted and laid in by the contractor at the price per lineal yard stated in the schedule for laying and ballasting the main line of permanent way, also all crossings and switches must be laid in by the contractor at the price per lineal yard stated in the schedule for that description of work.

81. The measurements for these "sidings," "cross-over," "through," or "loop" roads shall be taken from point to point of switches where two switches are laid in, but where one switch is used the measurement will be from the point of the switch to the heel of the crossing.

82. In no case shall the measurement of the ballasting on the sidings include any part of that which is already included in the measurement of the main line of permanent way.

83. The contractor shall maintain all works which he may have executed under this contract in good order and repair until they have been certified by the Engineer as having been satisfactorily completed.

#### *Fencing.*

84. The fencing to be erected under this contract is to be either a three-rail sapling fence or a two-rail fence, with split posts and rails or a wire fence as shown on drawings Nos. 4 and 5. The timber to be of the best quality in the district through which the railway passes.

#### *Tunnel.*

85. A tunnel will have to be constructed through the Liverpool Range at Murrurundi for a single line of railway of a length of 528 yards, and to be of the form shown on drawing No. 12. The clear height above the rails to be 17 feet, and of a width of 15 feet in its widest part.

86. The excavation for the tunnel is assumed to be hard rock throughout, specimens of which are exhibited, which must be carried to the embankment named in the disposal sheet.

87. Should the excavation throughout the entire length of the tunnel be strong compact rock no lining will be requisite, but should the Engineer during the progress of the excavation consider lining to the whole or any portion of the tunnel advisable, it must be done in the manner shown on drawing No. 12.

88. The excavation for the tunnel will be measured, the net dimensions of the outside of the brickwork lining when lining is required, and to the net dimensions shown on the drawing for the inside of the tunnel, if not lined.

89. The whole of the brickwork, if required to be laid in English bond, to be set in Portland cement of the best quality, mixed in the proportion of one of cement to two of clean sharp sand.

90. Where lining is not required the excavation shall be taken out to the exact form of the tunnel, as shown on drawing No. 12; the sides and soffit being roughly picked off true. Great care must be taken in blasting the rock so that no portion of the sides or soffit of the tunnel be removed beyond the exact dimensions shown on the drawings.

91. Sanctuaries must be formed about 50 yards apart on both sides of the tunnel, 6 feet high, 4 feet wide, and 2 feet deep. Tunnel fronts will probably not be required, but if it should be desirable to have them, they shall be built in brickwork laid in Portland cement, mixed as previously stated, and of the form shown on drawing No. 12.

92. A centre drain of the form and dimensions shown on the drawing is to be built in dry rubble stone through the entire length of the tunnel and properly turned into the side ditches at each end, should the excavation of the tunnel necessitate an invert, but should the bottom of the tunnel be hard rock, a drain shall be cut out of the solid rock and covered with stone 4 inches thick.

93. The excavation for the lining to be taken out as nearly as practicable to the exact shape of the tunnel, so as to leave the spaces to be filled in as small as possible, and in no case shall the excavation be taken out in advance of the brickwork more than that which may be necessary for putting in the succeeding length, unless otherwise directed by the Engineer.

94. During the progress of the excavation, every precaution must be taken to prevent any slipping of the strata, by using proper timbers for that purpose.

95. As the lining proceeds, the spaces between the excavation and brickwork shall be well rammed in with earth or broken stone and finished to the satisfaction of the Engineer; the cost of doing this to be included in the price stated in the schedule for brickwork to the tunnel. Should it be necessary to line with brickwork the sides and top only, the side walls to be finished as shown on drawing No. 12.

96. All timbering, scaffolding, centering, and every other thing necessary for the proper completion of the work shall be found by the contractor at his own cost and included in the price stated in the schedule.

#### *Miscellaneous.*

97. The contractor shall pay all stamp or other duties which the Government now or may hereafter require to be paid on any document forming part of this contract.

98. The contractor must furnish to the Engineer a monthly statement of all works done by him, or of claims he may have against the Commissioner under this contract, and no certificate will be given until such an account has been rendered.

99. The contractor to provide at his own cost an office for the district engineer. This building to consist of two rooms, each 14 feet by 12 feet, having weatherboard sides and ends, the roof to be covered with shingles; to have  $\frac{1}{2}$ -inch tongued and grooved boarded ceiling, and inch flooring boards; a brick chimney with two fire-places to be erected between the rooms; two doors and three windows to be provided and fixed. The place where this building is to be erected will be decided upon hereafter.

100. Each person tendering must enclose with his tender a Treasury deposit receipt for £500, without which his tender will not be taken into consideration. Such deposit will be returned to the unsuccessful tenderers forthwith; but should the person whose tender has been accepted fail to find the necessary security, within the time named in the General Conditions, then the said sum of £500 shall be forfeited by him to the Commissioner.

## No. 2.

THESE are the General Conditions, marked "B," referred to in the annexed Articles of Agreement with the Commissioner for Railways, dated the 17th day of March, A. D. 1874.

W. WAKEFORD.

Witness—M. S. HARTE.

B.

### GENERAL CONDITIONS.

#### *Interpretation clause.*

1. The words "superintending officer" in these Conditions shall mean any person who may from time to time be appointed by the Engineer-in-Chief of Railways to supervise the works or buildings, and the words "Engineer-in-Chief" or "Engineer" shall mean the Engineer-in-Chief for the time being of the Commissioner for Railways.

#### *Dismissal of workmen, removal of improper materials, &c.*

2. The Engineer shall have the power of immediately dismissing any agent or workman employed by the contractor, and of having removed off the line of railway (or any land belonging to the Commissioner), any materials, plant, or implements which in his opinion are insufficient for the purpose intended or at variance with the meaning and intention of this Specification. The cost of the removal of any such plant, materials, or implements to be paid by the contractor.

#### *Instructions to be obeyed.*

3. Should the contractor refuse or neglect to carry out the instructions of the Engineer or the superintending officer, the Engineer shall have the power of suspending the usual monthly certificate until such instructions have been complied with.

#### *Drawings, Specification, &c.*

4. The plans, sections, and drawings represent generally the form and dimensions of the several works. Where any discrepancy exists between the dimensions as indicated by the scale and those marked in figures, the figures are to be considered as correct, and are to be taken in all cases in preference to the measurements by the scale attached. And if there should be any discrepancy between the figures or dimensions or the form of construction, or the material as indicated in the drawings, and the dimensions and materials given in the Specification, the directions of the Specification shall be adopted, and in all cases of defective description, or any ambiguity, the explanation given by the Engineer shall be binding upon the contractor; also, anything contained in the drawings and not in the specification, or anything contained in the Specification and not shown in the drawings shall be equally binding as if it were contained in both.

#### *Extra works, omissions of works, &c.*

5. If at any time whilst the works are in hand it shall be deemed expedient by the Engineer to increase or diminish the dimensions of any works to be done under this contract, or to alter their situation, or to vary the materials, form, or dimensions of any of the said works, or of any part thereof, he shall have full power to do so, and to order and direct any such increase, diminution, or alteration, which shall be executed by the contractor if of the class of works provided for in the schedule of prices; and no such increase, diminution, or alteration of works shall in any way annul or set aside this contract or extend the time for the completion thereof, but such additions or alterations shall be measured and allowed and paid for, or such deductions credited to the Commissioner for Railways, as the case may require, according to the schedule of prices; and if any portion of the works so ordered to be done shall not be of the class of works provided for in the schedule of prices, the same shall be executed by the contractor at such price as may be agreed for with the Engineer; but if the Contractor and the Engineer cannot agree as to the works required to be done which are of a class not provided for in the schedule of prices, the Engineer may order and direct the same to be done by such person or persons as he may think fit.

#### *Net measurements.*

6. All measurements of the works shall be made according to the actual dimensions, notwithstanding any general or local custom to the contrary.

#### *Labour, materials, plant, &c.*

7. The contractor shall provide at his own costs and charges all materials, labour, tools, plant, tackle, machinery, scaffolding, &c., for the proper completion of the works at the prices stated in his schedule.

#### *Damages, &c., to be paid for by contractor.*

8. The land inside the fences of the railway may be used for the purpose of carting the materials for the works on this contract, but all damage that may be done to any land not actually the property of the Commissioner must be paid for by the contractor, whether such damage be caused by the carting of materials, or the straying of cattle in consequence of the destruction by the contractor or his workmen of the original fences, or of the fences alongside the railway, or by any other cause connected with the construction of the works; and should such damage not be at once paid for, such an amount as shall appear reasonable to the Commissioner may be paid by him in compensation for the same and deducted from any money that may be due to the contractor for work done under this contract.

*Setting*

*Setting out works.*

9. The works will be set out for the contractor, but he must satisfy himself of their accuracy, as no work incorrectly set out or improperly executed will be paid for by the Commissioner.

*Contractor to be represented.*

10. The contractor at all times during the progress of the works, when he is not personally superintending them, must have a responsible agent or overseer stationed on them to receive instructions from the superintending officer or Engineer-in-Chief, and to represent the contractor for all the purposes of this contract.

*Progress of works.*

11. Should the Engineer be at any time dissatisfied with the mode of proceeding, or at the rate of progress of the works or any part thereof, the Commissioner shall have full power without vacating this contract, to take the works wholly or in part out of the hands of the contractor, and to employ, procure, and make use of all labour or materials which he may deem necessary for completing the works, the cost of such labour and materials to be deducted from any money that may be then due, or may hereafter become due to the contractor; and if the money then due or thereafter becoming due to the contractor, shall not be sufficient for that purpose, the balance remaining unpaid may be recovered in an action for damages for breach of contract, or as money paid for the use of the contractor.

*Cancellation of contract.*

12. The Commissioner shall have the option, and full power and authority, in lieu of proceeding under the last preceding clause of these Conditions, if the contractor fail to proceed in the execution of and to carry on the works in the manner and at the rate of progress required by the Engineer, of cancelling this contract, so far as relates to the works remaining to be done; and in such case the moneys which shall have been previously paid to the contractor on account of the works executed shall be taken by him as full payment for all works done under the contract, and upon notice in writing under the hand of the Commissioner that he, under the authority of this condition cancels the contract, being served upon the contractor or left at his last known place of abode, the contract shall be cancelled, and thereupon all sums of money that may be due or unpaid to the contractor, together with all implements in his possession, and all materials provided by him, upon the ground upon which the work is being carried on, or adjacent thereto, and all sums of money named as penalties for the non-fulfilment of the contract within the time specified, shall also be forfeited and become payable to the Commissioner, and the said implements and materials shall become and be the absolute property of the Commissioner, and with the moneys so forfeited and payable as aforesaid shall be considered as ascertained damages for breach of contract.

*Time of completion.*

13. The contractor shall complete the whole of the works comprised in this contract, on or before the thirty-first day of March, one thousand eight hundred and seventy-six and in the event of their non-completion at the specified time, should the Commissioner not have proceeded under clauses Nos. 11 and 12 of these Conditions, or either of them, the contractor shall forfeit and pay two hundred pounds sterling per week or for every part of a week that shall elapse after such specified time until their completion, and which sum or sums may be deducted from any money payable to the contractor under this or any other contract. No certificate will be given after the date specified for the completion of the contract until the whole of the works shall have been properly completed to the satisfaction of the Engineer-in-Chief.

*Copies of drawings, &c.*

14. All copies of drawings or specifications required by the contractor for carrying on the works must be made at his expense.

*Free passes, &c.*

15. No free passes on any of the Government Railways will be granted either to the contractor or his agents, nor will any materials or articles of any description be conveyed free of charge.

*Liability of contractor.*

16. The care and maintenance of all works under this contract shall remain with the contractor until their completion, and until the Engineer-in-Chief for Railways shall, by notice in writing, under his hand, inform the contractor that he has taken charge thereof, and until such notice shall have been given, the contractor and his sureties shall be jointly and severally responsible for all accidents from whatever cause arising, and shall make good all damage thereto.

*Contractor not to assign works or moneys.*

17. The contractor shall not assign over this contract, or assign all or any of the moneys payable or to become payable under the contract, or all or any part thereof, or any other benefit whatsoever arising, or which may arise under this contract, to any other person, without the consent in writing under the seal of the Commissioner for Railways first obtained. The contractor for each and every breach of this condition shall pay to the Commissioner for Railways the sum of £500 as and for liquidated damages, and the sum or sums payable as such damages may be deducted from any sum or sums due to the contractor, under this or any other contract with the Commissioner for Railways; and any permission to assign over this contract, shall not discharge the contractor from liability to see that the works so assigned are executed and completed in terms of this contract, unless on the assignment thereof the Commissioner expressly declare that the contractor is discharged from further liability.

*Truck system not allowed.*

18. The workmen, tradesmen, and labourers of every class employed on the works to which these Conditions refer, shall be paid their wages, in full, in money, current coin of the Colony, at least once in every month, and no ticket or other system of payment by provisions, liquors, or goods, will on any pretence be allowed; nor shall the contractor, or any person or persons employed by him, or in any way connected with him, establish any shop for the supply of provisions, liquors, or goods; nor shall the contractor oblige his workmen to take provisions, liquors, or goods of any kind from any person in particular. The workmen of every class shall be paid on the works if it be possible, or in some building adjoining, and in no case shall they be paid at a public-house, or other place where liquors or refreshments are sold. ✓

Power

*Power to the Commissioner to pay workmen's wages.*

19. Before the payment of any money to the contractor, the Commissioner may require from him a statutory declaration that the tradesmen and labourers of every kind employed on the works to which these Conditions refer have been paid their wages and claims of every kind in full, in money, the current coin of the Colony, and to the latest date to which such wages or claims are due; and the Commissioner may withhold the payment of any money that may be due or may become due to the contractor until such declaration has been made and delivered to him.

*Bankruptcy or insolvency.*

20. If the contractor shall become insolvent, have his estate placed under sequestration, or shall make an assignment of his estate for the benefit of his creditors, it shall be lawful for the Commissioner without previous notice to the contractor, or to the official or other assignee or assignees of his insolvent estate, or to the trustee or trustees under the assignment, to take the works out of the hands of the contractor, and of the assignees or trustees of his estate, and to re-contract with any other person or persons to proceed with and complete the same, upon such terms, stipulations, and conditions as shall be deemed expedient, and all the then remaining materials, implements, and plant aforesaid may be used in and applied for the purposes of the works; but on the final completion of the works, the surplus of such materials, implements, and plant shall cease to belong to the Commissioner, and shall become the property of the said assignees or trustees, without any allowance for or payment by the Commissioner, or on account of any loss or diminution, wear, tear, or injury they may have sustained in the meantime.

*Security.*

21. The contractor will be required to enter into a bond to the Commissioner for Railways, in the penal sum of £5,000, for the proper performance and completion of the contract.

Should the contractor fail to provide the required deposit of £5,000 within six days from the acceptance of the tender, or should the contractor fail to execute the contract for the due performance of the works mentioned in the said tender, or to execute the bond required hereunder for securing the due completion of the works to be done under the said contract, within fourteen days after the acceptance of his tender has been notified to him, the Commissioner will have the option of and full power and authority to declare such acceptance to be annulled.

No tenderer will be allowed to proceed with the work tendered for until he has provided the cash deposit, has executed the required contract, and has duly executed the bond before mentioned for the due performance of the said contract; it being hereby declared that for all or any work done or materials found and provided by the contractor before the due execution of the said contract and bond, he shall not have any right of action, claim, or demand against the Commissioner.

*Progress payment without prejudice, &c.*

22. No certificate given to the contractor for the purpose of any progress payment shall prevent the Engineer-in-Chief from at any future time before the termination of the contract rejecting all unsound materials and improper workmanship discovered subsequently to the giving of the last previous certificate; and notwithstanding the giving of any certificate that portions or the whole of the works have been satisfactorily performed, the Engineer-in-Chief may require the contractor to remove and amend at any future time previously to the final payment on account of the construction or maintenance of the works, any work that may be found not to have been performed in accordance with the contract; and the contractor must remove and amend at his own cost all such work when so required, notwithstanding any approval made or given by the superintending officer; and the Commissioner shall have power, on the report of the Engineer-in-Chief that the work approved of as aforesaid is not in accordance with the contract, to deduct from any moneys that may be due or that may become due to the contractor the whole amount that has been paid on account of such work.

If in the opinion of the Engineer-in-Chief further inquiry is necessary or desirable before any certificate is given, he shall have power to withhold such certificate for a period not exceeding one month from the date at which in the ordinary course the certificate would have been given.

None of the conditions of this contract shall be varied, waived, discharged, or released, either in law or equity, unless by the express consent of the Commissioner testified in writing under his seal.

*Payments.*

23. Payments will be made once in every month, unless same shall become not payable by reason of anything contained in these Conditions, up to the date specified for the completion of the contract on the Engineer's certificate as the work proceeds, in the proportion of 90 per cent. of the value of the work satisfactorily executed, and the remaining 10 per cent. will be paid after the Engineer has certified that the whole of the works have been completed to his entire satisfaction; and it is expressly declared that the obtaining a certificate from the Engineer that the work done by the contractor has been satisfactorily executed or completed to his satisfaction shall be a condition precedent to the contractor having any right or cause of action in respect of any work done or materials provided, and to the contractor having any right of action or claim to the payments from time to time to be made hereunder, as well as the final payment upon the whole of the work being finished.

Department of Public Works,

Railway Branch, Engineer's Office,  
Sydney, 22 January, 1874.

JOHN WHITTON.

## No. 3.

THIS is the Tender, marked "C," referred to in the annexed Articles of Agreement with the Commissioner for Railways, dated the seventeenth day of March, A.D. 1874.

Witness—M. S. HARTE.

W. WAKEFORD.

C.

GREAT NORTHERN RAILWAY—EXTENSION FROM MURRURUNDI TO TAMWORTH.

Contract No. 1.

FORM OF TENDER.

3 March, 1874.

I HEREBY propose to execute the whole of the works required in the construction of that portion of the Great Northern Railway comprised in Contract No. 1, commencing at 119 miles 44 chains and 35 links, and terminating at 181 miles 70 chains and 18½ links, being a length of 62 miles and 25 chains and 83½ links, in strict accordance with the Plans and Specification, at the following prices, viz. :—

		Average price	£	s.	d.
Excavation from cuttings taken to the embankments named in disposal	} sheet	per cub. yd.	0	2	6
Do. do. do. do. of road approaches	... ..	do. do. do.	0	3	0
Do. from road approaches, taken to embankment, not exceeding half a mile lead	... ..	do. do. do.	0	3	0
Do. from side cutting, do. do. (including 3 runs or 66 lineal yards)	... ..	earthwork	0	1	6
		rock	0	3	6
Do. do. do. do., each additional run of 22 yards	... ..	earthwork	0	0	6
		rock	0	0	9
Do. from side ditches, and forming a mound alongside the ditch	... ..	earthwork	0	1	4
		rock	0	5	0
Do. from inlet and outlet drains to bridges or culverts, do.	... ..	earthwork	0	2	6
		rock	0	5	0
Do. from diversions of watercourses taken to embankment	... ..	earthwork	0	2	6
		rock	0	5	0
Do. from foundations to bridges, viaducts, and culverts	... ..	earthwork	0	3	0
		rock	0	5	0
Masonry to culverts (in mortar, 1 of lime to 1 of sand)	... ..	per cub. yd.	3	10	0
Do. do. (in Portland cement, 1 cement to 2 sand)	... ..	do.	4	0	0
Brickwork to culverts (in mortar, 1 of lime to 1 of sand)	... ..	do.	2	10	0
Do. do. (in Portland cement, 1 cement to 2 sand)	... ..	do.	3	0	0
"Dry" square culverts, 18 inches	... ..	per lin. yd.	4	10	0
Do. do. 2 feet.	... ..	do.	5	10	0
Timber, ironbark, framed and fixed in superstructure of bridges	... ..	per cub. ft.	0	5	6
Do. In planking, walings, and braces (any approved timber)	... ..	do. do. do.	0	5	6
Do. In piles fixed	... ..	per lin. ft.	0	5	6
Ironwork, fixed in bolts, nuts, straps, plates, spikes, washers, and pile-shoes	... ..	per lb.	0	0	8
Painting bridges (3 coats iochrome in oil)	... ..	per sup. yd.	0	1	4
Tarring timberwork, 2 coats (kerosene tar)	... ..	do.	0	0	4
Fencing (3-rail sapling)	... ..	per rod.	0	6	4
Do. (2-rail split)	... ..	do.	0	6	4
Do. wire	... ..	do.	0	6	4
Ballasting permanent way	... ..	per lin. yd.	0	4	0
Laying do.	... ..	do.	0	2	6
Do. crossings and switches, including cross-over roads	... ..	do.	0	15	0
Sleepers (split)	... ..	each	0	4	6
Do. (sawn)	... ..	do.	0	4	6
Level crossings for 10-ft. gates (including timber box drains complete)	... ..	do.	4	0	0
Do. 12 do. do. do. do. do.	... ..	do.	8	0	0
Do. 15 do. do. do. do. do.	... ..	do.	8	0	0
Metalling approaches to level crossings	... ..	per cub. yd.	0	5	0
10-foot level crossing gates, fixed complete, and painted 2 coats iochrome in oil	... ..	each	7	0	0
12-foot do. do. do. do. do. do.	... ..	do.	8	0	0
15-foot do. do. do. do. do. do.	... ..	do.	8	0	0
Earthenware drain pipes, 6-inch	... ..	per lin. yd.	0	8	0
Do. 9- do.	... ..	do.	0	13	0
Do. 12- do.	... ..	do.	0	15	0
Do. 16- do.	... ..	do.	1	8	0
Do. 18- do.	... ..	do.	1	10	0
Do. 24- do.	... ..	do.	3	15	0

Tunnel.

Excavation from tunnel taken to embankment :—

Earth or shale	... ..	At per cub. yd.	0	13	0
Sandstone	... ..	do.	0	15	0
Hard rock, similar to specimens exhibited	... ..	do.	0	17	6
Brickwork in lining of tunnel (in cement)	... ..	do.	3	3	0
Do. to fronts of do. do.	... ..	do.	2	10	0
Sanctuaries in do.	... ..	each	1	0	0
Dry rubble drain through do.	... ..	per lin. yd.	0	5	0
Drain cut out of solid rock through do. with 4-in. stone covers	... ..	do.	0	5	0

The prices in the preceding schedule include all labour, material (except permanent way materials), scaffolding, and workmanship of every kind necessary for the full and perfect completion of the works, to the satisfaction of the Engineer-in-Chief.

W. WAKEFORD, Kiama.

To the Commissioner for Railways.

SHOULD

SHOULD the foregoing Tender be accepted, I, the undersigned, hereby undertake to deposit with the Commissioner for Railways, within fourteen days from the notification of the acceptance of the said Tender, the sum of £5,000 as security for the due performance of the contract.

W. WAKEFORD, Kiama.

NOTE.—A sum of £500 has according to the conditions of the Specification been deposited with the Colonial Treasurer, which sum I agree to forfeit to the Commissioner, should I fail to provide the cash deposit and to complete the Bond at the time specified.

W. WAKEFORD, Kiama.

#### No. 4.

ARTICLES OF AGREEMENT made and entered into this seventeenth day of March, in the year of our Lord one thousand eight hundred and seventy-four, between William Wakeford, of Kiama, in the Colony of New South Wales, contractor, of the one part, and the Commissioner for Railways, a corporation sole, created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled, "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same,*" of the other part.

WHEREAS the Commissioner for Railways aforesaid lately advertised for tenders for the works to be done, and the materials to be provided for the construction and erection of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers required in the construction of a single line of railway, being that portion of the Great Northern Railway Extension from Murrurundi to Tamworth, in the said Colony, comprised in Contract No. 1, commencing at one hundred and nineteen miles forty-four chains and thirty-five links from Newcastle, and terminating at one hundred and eighty-one miles seventy chains and eighteen and one half links near the town of Tamworth, being a length of sixty-two miles twenty-five chains and eighty-three and a half links, in accordance in all things with the Specification hereto annexed marked "A," and the plans or drawings therein referred to, and under and subject to the General Conditions hereto annexed marked "B": And whereas the said William Wakeford (hereinafter styled and referred to as "the contractor") forwarded to the Commissioner for Railways aforesaid the tender to do the said works and to find and provide the materials required in the construction of the said line of railway hereto annexed marked "C": And whereas the Commissioner for Railways aforesaid duly accepted the said tender of the contractor for the said works; and whereas the contractor hath deposited the sum of five thousand pounds in the Union Bank of Australia, in the city of Sydney, in the name of the Commissioner for Railways aforesaid, upon fixed deposit for the term of twelve months, at interest, and has handed the receipt, which bears date the twelfth day of March instant, for the said deposit, to the Commissioner for Railways, as security for the due performance by him of the works in the said Specification mentioned, in accordance therewith in all things, and as thereby and by the said General Conditions is provided, and hath duly executed a memorandum of agreement under seal with the Commissioner for Railways bearing even date herewith, setting forth the terms and conditions upon which the said sum of five thousand pounds is held by the Commissioner for Railways as security for the due performance of the contract in these presents contained: Now these presents witness that the contractor, for himself, his heirs, executors and administrators, doth hereby covenant and declare with and to the Commissioner for Railways aforesaid, his successors and assigns, and the Commissioner for Railways aforesaid, doth hereby covenant and declare with and to the contractor, his executors and administrators, that the said Specification marked "A," the said General Conditions marked "B," and the said Tender marked "C," shall be read and considered as incorporated in and forming part and parcel of these presents in like manner as if the same had been herein written and set forth at length—the said Specification, General Conditions, Tender, and these presents, forming together the contract between the said parties hereto, as to the performance and completion of the said works and providing materials required for the same, excepting only that in lieu of the provision in clause twenty-one of the General Conditions, that "the contractor will be required to enter into a bond to the Commissioner for Railways, in the penal sum of five thousand pounds," it has been arranged between the contractor and the Commissioner for Railways, that the contractor shall, as security, deposit the sum of five thousand pounds for the due performance and completion of the said works, which as hereinbefore recited, the contractor has done. And the contractor, for himself, his heirs, executors, and administrators, doth hereby covenant, declare, promise, and agree with, and to the Commissioner for Railways aforesaid, his successors and assigns, that he, the contractor, his executors and administrators, shall and will find and provide all materials (excepting such as are in the said Specification mentioned as to be provided by the Commissioner for Railways), labour, scaffolding, tools, implements, and every other thing requisite and necessary for, and do and perform all the works required in and about the full and proper completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers, required in the construction of the said single line of railway, being that portion of the Great Northern Railway Extension from Murrurundi to Tamworth, in the said Colony, comprised in Contract No. 1, commencing at one hundred and nineteen miles forty-four chains and thirty-five links from Newcastle, and terminating at one hundred and eighty-one miles seventy chains and eighteen and one-half links near the town of Tamworth, being a length of sixty-two miles twenty-five chains and eighty-three and one-half links, at the price or prices mentioned in the said tender, and in accordance in all things with the said Specification and General Conditions and the plans or drawings therein referred to; that the contractor shall and will find and provide all materials to be provided; and do perform, execute, and complete all the works to be done under this contract, in accordance in all things with the said Specification and the plans or drawings therein referred to; and under, subject to, and in all things in accordance with the conditions, agreements, stipulations, and directions contained in the said Specification and General Conditions, and therein or thereby required or mentioned, or intended to be done by the person or persons tendering or contracting, shall be made, done, observed, performed, and kept in all things by the contractor: And that all powers and authorities in the said Specification and General Conditions mentioned as given or intended to be given to the Commissioner for Railways and to the Engineer-in-Chief for Railways shall vest in and be exercisable by the Commissioner for Railways and his successors and the Engineer-in-Chief for

for the Commissioner for Railways for the time being as if the said powers and authorities had been expressly created and given to the Commissioner for Railways and his successors and the Engineer-in-Chief for the Commissioner for Railways for the time being in or by these presents: And the contractor, for himself, his heirs, executors and administrators, hereby further covenants with the Commissioner for Railways aforesaid and his successors, that the whole of the said works in the said Specification and the plans or drawing therein referred to, mentioned, or shown, shall be completed and finished in all things on or before the the thirty-first day of March which will be in the year of our Lord one thousand eight hundred and seventy-six, as in the said General Conditions is provided: And the Commissioner for Railways, for himself and his successors, hereby covenants with the contractor, his executors and administrators, that the Commissioner for Railways aforesaid or his successors shall pay the contractor, his executors and administrators, for the said works hereinbefore mentioned and materials to be supplied at and after the rate of prices in the said tender mentioned, when, and as payment for the said works and materials shall, in accordance with section twenty-three of the said General Conditions, become due and payable to the contractor, such payment only to be made upon the production of the certificate in the said twenty-third section of the said General Conditions mentioned (the production of such a certificate being a condition precedent to the contractor having any cause or right of action, claim or demand upon the Commissioner for Railways as in the said twenty-third section is mentioned), and at the time or times, and in accordance with and when payable under the provision as to payment in the said General Conditions and the said Specification or either of them mentioned, and not otherwise.

In witness whereof the contractor hath hereunto set his hand and seal, and the Commissioner for Railways aforesaid hath affixed his official seal, the day and year first before written.

No. 5.

MEMORANDUM OF AGREEMENT made this seventeenth day of March, in the year of our Lord one thousand eight hundred and seventy-four, between William Wakeford, of Kiama, in the Colony of New South Wales, contractor, of the one part, and the Commissioner for Railways, a corporation sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled, "An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same," of the other part.

WHEREAS by certain Articles of Agreement under seal, bearing even date herewith, and made between the said William Wakeford of the one part, and the Commissioner for Railways aforesaid of the other part, the said William Wakeford covenants and agrees with the Commissioner for Railways aforesaid to find and provide all materials (excepting such as by the Specification therein referred to are to be provided by the Commissioner for Railways), labour, scaffolding, tools, implements, and every other thing requisite and necessary for, and do and perform all the works required in and about the full and proper completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers required in the construction of a single line of railway, being that portion of the Great Northern Railway Extension from Murrurundi to Tamworth comprised in Contract No. 1, commencing at one hundred and nineteen miles forty-four chains and thirty-five links from Newcastle, and terminating at one hundred and eighty-one miles seventy chains and eighteen links and one half link near the town of Tamworth, being a length of sixty-two miles twenty-five chains and eighty-three links and one half link, as mentioned and set out in a Specification and General Conditions annexed to the said Articles of Agreement and the plans and drawings therein referred to: And whereas, in and by the said General Conditions, it is provided that the said William Wakeford shall, as security for the due performance of the said works in the said Articles of Agreement, Specification, and General Conditions mentioned, deposit the sum of five thousand pounds with the Commissioner for Railways aforesaid, to be held by the Commissioner for Railways aforesaid as such security: And whereas, in performance of the said provision in the said General Conditions, the said William Wakeford, on the twelfth day of March instant, deposited the sum of five thousand pounds in the Union Bank of Australia, in the city of Sydney, in the name of the Commissioner for Railways aforesaid, upon fixed deposit for the term of twelve months at interest, and has handed the receipt for the said deposit to the Commissioner for Railways aforesaid, the Commissioner for Railways having agreed that the said sum of five thousand pounds so to be left in his hands as aforesaid as security for the due performance of the said contract shall be at interest as aforesaid, and that the

said

said William Wakeford shall receive the interest thereon: And whereas the said William Wakeford and the Commissioner for Railways aforesaid have agreed to enter into these presents, for the purpose of stating and defining the terms and conditions upon which the said sum of five thousand pounds shall be held by the Commissioner for Railways aforesaid as security for the due performance of the said works in the said Articles of Agreement, Specification, and General Conditions mentioned: Now these presents witness that it is hereby declared and agreed between and by the said William Wakeford, on behalf of himself, his executors and administrators, and the Commissioner for Railways aforesaid, on behalf of himself and his successors, that the said sum of five thousand pounds of lawful British money is now and shall henceforth be held by the Commissioner for Railways aforesaid as security for the due completion of the said works in the said Articles of Agreement, Specification, and General Conditions mentioned, in accordance in all things with the said Articles of Agreement, Specification, and General Conditions; and that the said sum shall be held by the Commissioner for Railways and his successors until the whole of the said works shall be completed and finished in accordance with the said Articles of Agreement, Specification, and General Conditions, and until the time for which the said William Wakeford is bound to maintain and uphold the same has fully expired: And that if the said William Wakeford, his executors or administrators, shall make default in proceeding with or in completing the said works in the manner stipulated in the said Articles of Agreement, Specification, and General Conditions, and the said plans or drawings, the Commissioner for Railways aforesaid and his successors may at once use and employ the said sum of five thousand pounds, or so much thereof as shall be requisite, in and about the proceeding with completing and finishing the said works, and in and about the payment of or retention of any penalty or penalties, sum or sums of money, which the Commissioner for Railways may be entitled to claim from the said William Wakeford, by reason of the non-completion of the said works as aforesaid, and within the time fixed for that purpose, and the balance remaining (if any) shall be considered as forfeited to the Commissioner for Railways aforesaid, and shall be paid by the Commissioner for Railways aforesaid into the office of the Treasury in the said Colony to the credit of and shall become and form a portion of the Consolidated Revenue of the said Colony, as if the same had been recovered by action at law at the suit of Her Majesty upon a bond given to Her Majesty, Her Heirs and Successors, by the said William Wakeford, to secure the due performance and completion of the works in the said Articles of Agreement, Specification, and General Conditions mentioned, without prejudice nevertheless to the right of the Commissioner for Railways aforesaid to sue for and recover, if he shall think fit so to do, from the said William Wakeford, his executors and administrators, all or any penalty or penalties, sum or sums of money which under the said Articles of Agreement, or the said Specification and General Conditions, he or they may be entitled to recover from the said William Wakeford, his executors and administrators, and which may be in excess of the said sum of five thousand pounds: And further, that at the expiration of the said term of twelve months for which the said sum of five thousand pounds has been deposited in the Union Bank of Australia aforesaid, upon fixed deposit, it shall be lawful for the Commissioner for Railways aforesaid, but he is nevertheless not required or under any obligation so to do, to re-deposit the same for a further period of six months, at interest, or for such further period, or for such lesser term, from time to time, as the Commissioner for Railways or his successors shall think fit, until the said works are completed, or in his discretion to retain the same in his hands uninvested, in which case the Commissioner for Railways shall not be chargeable with or liable to pay interest on the said sum: And it is further agreed that the said William Wakeford, his executors or administrators, shall be entitled to receive from time to time as the same shall become receivable, from the Commissioner for Railways aforesaid and his successors, all interest which shall be paid upon the said deposit, and that the Commissioner for Railways aforesaid and his successors shall not be liable or answerable for any loss of the said sum of five thousand pounds or any part thereof, through the same being from time to time deposited in or held by the said Bank as aforesaid. In witness whereof the said William Wakeford hath hereunto set his hand and seal, and the Commissioner for Railways hath caused his official seal to be hereunto affixed, the day and year first before written.

### No. 6.

MEMORANDUM of Agreement made this twenty-third day of May, in the year of our Lord one thousand eight hundred and seventy-six, between the Commissioner for Railways, a corporation sole created by the Act of Council passed in the twenty-second year of the reign of Her Majesty Queen Victoria, number nineteen, intituled, "*An Act to make more effectual provision for the construction by the Government of Railways in the Colony of New South Wales and for the regulation of the same*," of the one part, and William Wakeford, of Murrurundi, in the said Colony, contractor, of the other part.

WHEREAS by certain Articles of Agreement, bearing date the seventh day of March, in the year of our Lord one thousand eight hundred and seventy-four, and made between the above-named William Wakeford of the one part, and the Commissioner for Railways aforesaid, of the other part, the said William Wakeford covenanted and agreed with the Commissioner for Railways aforesaid and his successors, to find and provide all the materials (excepting such as are in the Specification therein referred to mentioned as to be supplied by the Commissioner for Railways), labour, scaffolding, tools, implements, and every other thing requisite and necessary for and to do and perform all the works required in and about the full and proper construction and completion of all the earthwork, brickwork, masonry, timberwork, ironwork, fencing, ballasting, laying of permanent way, and supplying sleepers, required in the construction of a single line of railway, being that portion of the Great Northern Railway extension from Murrurundi to Tamworth, in the said Colony, comprised in Contract number one, commencing at one hundred

hundred and nineteen miles, forty-four chains, and thirty-five links, from Newcastle, and terminating at one hundred and eighty-one miles, seventy chains and eighteen and a half links, near the town of Tamworth, being a length of sixty-two miles, twenty-five chains, and eighty-three and a half links, in accordance in all things with the Specification and General Conditions to the said Articles of Agreement annexed, and the plans or drawings therein referred to, and to complete and finish the whole of the said works on or before the thirty-first day of March, in the year one thousand eight hundred and seventy-six: And whereas, by a certain memorandum of agreement under seal bearing even date with the said lastly recited Articles of Agreement, and made between the said William Wakeford, of the one part, and the Commissioner for Railways aforesaid, of the other part, after reciting that it had been agreed that for securing the due performance of the said contract, the said William Wakeford should deposit with the Commissioner for Railways aforesaid the sum of five thousand pounds, to be held by the Commissioner for Railways as security for the due performance of the said works, and that in pursuance of the said agreement, the said William Wakeford had, on the twelfth day of March, one thousand eight hundred and seventy-four, deposited the sum of five thousand pounds in the Union Bank of Australia, in the city of Sydney, in the name of the Commissioner for Railways, upon fixed deposit, and had handed the receipt for the same to the Commissioner for Railways aforesaid,—it is witnessed, and the said parties to the said agreement did declare, that the said sum of five thousand pounds deposited in the name of the Commissioner for Railways upon fixed deposit as aforesaid should be held by him as security for and until completion of the said works, upon the terms and the conditions as in the said now reciting memorandum of agreement mentioned: And whereas the said works are still unfinished and not completed, and the said William Wakeford hath applied to and requested the Commissioner for Railways aforesaid to extend the time for the completion of the said works until the thirtieth day of September which will be in the year one thousand eight hundred and seventy-seven, which the Commissioner for Railways aforesaid hath consented to do, upon condition that the whole of the works on the said line from the commencing point at Murrurundi to and at the station-yard at Quirindi, on the said extension, be completed and finished in all things according to the said plans, specification, and drawings in every respect, and that possession thereof is delivered by the contractor to the Commissioner for Railways on or before the thirty-first day of August next, and upon the other terms and conditions hereinafter mentioned: Now these presents witness that, in consideration of the premises, the Commissioner for Railways aforesaid doth hereby extend the time for the completion of the works remaining to be done, of the works in the said Articles of Agreement and Specification mentioned, as hereinafter mentioned, that is to say, for the extension of the said works from the point of commencement at Murrurundi to and at the station-yard at Quirindi, until the thirty-first day of August next, and for the remaining portion of the said works until the thirtieth day of September which will be in the year of our Lord one thousand eight hundred and seventy-seven, upon the terms and conditions hereinafter mentioned; and that, in consideration of the premises and of the said extension of time by the Commissioner for Railways aforesaid, the said William Wakeford hereby jointly and severally covenants and agrees with and to the Commissioner for Railways aforesaid and his successors, that he, the said William Wakeford, his executors and administrators, shall and will well and truly complete the whole of the works yet remaining to be done of the said works required for the completion of the said works from the point of commencement at Murrurundi aforesaid to and at the station-yard at Quirindi aforesaid, on or before the thirty-first day of August next, and for the completion of the whole of the residue of the said works in the said Articles of Agreement and Specification mentioned, in accordance in all things with the said Specification and General Conditions and the said plans or drawings, on or before the said thirtieth day of September which will be in the year of our Lord one thousand eight hundred and seventy-seven: And further, that at all times hereafter the said recited Articles of Agreement and the said recited Memorandum of Agreement shall be read and considered as if the said thirty-first day of August had been named in and appointed by the said Articles of Agreement, Specifications and General Conditions as the day on or before which the said works from Murrurundi to and at the station at Quirindi were to be completed and finished, and as if the said thirtieth day of September, one thousand eight hundred and seventy-seven, had been named in and by the said Articles of Agreement, Specification, and General Conditions and the said Memorandum of Agreement, as the day on or before which the whole of the residue of the said works hereinbefore mentioned were to be completed and finished by the said William Wakeford; and that the said Articles of Agreement and the said Memorandum of Agreement, or the terms and conditions upon which the said sum of five thousand pounds is held by the Commissioner for Railways aforesaid, shall not be considered as altered, or the stipulations, provisions, and agreements therein, or in the said Specification and General Conditions, in any way waived, barred, or departed from in any respect otherwise than as to the time within which the said works are to be completed, but that the Commissioner for Railways aforesaid and his successors shall have all and every the rights, powers, and authorities, cause and causes of action, and suit, claims, and demands given to or vested in him or them in and by the said Articles of Agreement, Specification, and General Conditions, and by the said Memorandum of Agreement, in all respects as if the said thirtieth day of September, one thousand eight hundred and seventy-seven, had been the day or time originally named and appointed for the completion of the whole of the said works hereinbefore mentioned; and that all and singular the penalties, forfeitures, sum or sums of money, rights and privileges which would accrue to or vest in the Commissioner for Railways aforesaid and his successors, for or by reason or on account of the said works hereinbefore mentioned not being completed and finished within the time named in and according to the said Articles of Agreement, Specification, and General Conditions, and the said Memorandum of Agreement, shall accrue to and vest in the Commissioner for Railways aforesaid and his successors, if the work to be done to complete the line from the point of commencement at Murrurundi to and at the station-yard at Quirindi shall not be completed and finished in all things on or before the thirty-first day of August next, and the whole of the residue of the said works shall not be completed in all things on or before the said thirtieth day of September, one thousand eight hundred and seventy-seven: Provided, and it is hereby declared that if the said works shall not be completed and finished in all things according to the said Specification and General Conditions, from the point of commencement at Murrurundi as aforesaid to and at the station-yard at Quirindi aforesaid, and delivered over by the contractor to the Commissioner for Railways aforesaid, the extension of time hereby granted for the completion of the residue of the said work in the said Agreement, Specification, and General Conditions shall cease and become void; and the Commissioner for Railways and his successors shall have such and the rights, remedies,

remedies, claims, demand, and powers against the said contractor, his heirs, executors, and administrators, and his and their moneys, plant, and any material provided by him for carrying on and completing the said works in the said Articles of Agreement, Specification, and General Conditions mentioned, as the Commissioner for Railways and his successors, under the said Articles of Agreement, Specification, and General Conditions, or either of them, is declared to have, possess, or be entitled to, in case of default being made in the completion of the said works on or before the thirty-first day of March, in the year of our Lord one thousand eight hundred and seventy-six; and shall also have the like remedies, claims, demands, and powers against the said contractor, his heirs, executors, and administrators, and his and their moneys, plant, and any materials provided by him or them for carrying on and completing the said works, if the whole of the said works from Quirindi to Tamworth are not completed and finished on or before the thirtieth day of September, one thousand eight hundred and seventy-seven, so that on or before that day the whole of the work mentioned in the said Articles of Agreement, Specification, and General Conditions, shall be completed and finished in accordance in all things with the said Articles of Agreement, Specification, and General Conditions.

In witness whereof the Commissioner for Railways aforesaid hath hereunto set his official seal, and the said William Wakeford has hereto set his hand and seal, the day and year first before written.

The official seal of the Commissioner for Railways was hereto affixed, in the presence of,—

JOHN RAE, (L.S.)  
Commissioner for Railways.

CHAS. A. GOODCHAP, Secretary.

Signed, sealed, and delivered by the said William Wakeford, in the presence of,—

W. WAKEFORD. (L.S.)

G. G. BRODIE, C.P.S., Murrurundi.

To all to whom these presents shall come, I, the within-named William Wakeford, send greeting: Whereas I have applied to and requested the Commissioner for Railways, in the within Agreement mentioned, to pay to me the sum of five thousand pounds out of the moneys which have been retained by the Commissioner for Railways aforesaid, as and for the ten per cent. upon the value of the work satisfactorily executed, which, under the twenty-third section of the General Conditions, forming a portion of the Contract under Articles of Agreement bearing date the seventeenth day of March, one thousand eight hundred and seventy-four, the Commissioner for Railways aforesaid is entitled to retain until the whole of the works in the said Agreement mentioned have been completed to the satisfaction of the Engineer-in-Chief for Railways, and a certificate to that effect has been granted by him: And the Commissioner for Railways aforesaid has consented to pay to me the said sum of five thousand pounds out of the said moneys, upon the understanding that such payment is not in any way prejudicially to affect his rights, remedies, claims, cause or causes of action against me under the said Articles of Agreement, or under a certain Memorandum of Agreement bearing even date with the said Articles of Agreement, and therein referred to: Now know ye that I, the said William Wakeford, do hereby declare that I have this day received from the Commissioner for Railways aforesaid, on a voluntary payment made by him at my request out of the moneys so retained in his hands as aforesaid, and that the payment of the said sum of money to me as aforesaid shall not be held, deemed, or taken to alter, affect, or vary the Contract in the said Articles of Agreement mentioned, or to alter, diminish, or prejudicially affect the powers, rights, remedies, cause or causes of action given to, vested in the Commissioner for Railways aforesaid, under the said Articles of Agreement, or under the said Memorandum of Agreement, or either of them, in any manner whatsoever.

In witness whereof, I, the said William Wakeford, have hereunto set my hand and seal, this twentieth day of April, in the year of our Lord one thousand eight hundred and seventy-seven.

Signed, sealed, and delivered by the said William Wakeford, in the presence of,—

W. WAKEFORD. (L.S.)

JOHN WILLIAMS.

### Section No. 3.—Accepted Tenders for supply of Rails.

NEW SOUTH WALES RAILWAYS.—GREAT SOUTHERN RAILWAY EXTENSION, GOULBURN TO WAGGA WAGGA.

#### TENDER FOR RAILS.

To the Agent General for the New South Wales Government, 3 Westminster Chambers, Victoria-street, London, S.W.

## Amount voted by Parliament, &amp;c.

Towards construction of Line—Goulburn to Wagga Wagga, 174 miles, at £6,500	... £1,131,000
Do. Bathurst to Orange, 46½ miles, at £6,000	... 279,000
Do. Murrurundi to Tamworth, 60½ miles, at £6,000	... 361,500

## Section No. 9.

## Minute of Secretary for Public Works.

## MINUTE FOR CABINET.

When Parliament passed the Estimates for the Extension of Railways I consulted with and requested the Engineer-in-Chief to prepare a plan and specification for constructing the line from Goulburn to Yass, in accordance with the recommendation made in that gentleman's report of 4th November, 1872, on which the Estimates were founded. I received, on the 11th instant, Mr. Whitton's report of the 5th May, in which he states, "The recommendation in my report, dated 4th November, 1872, was that no rail should be used of a less weight than 70 lbs. per yard. This rail would be *single-headed*, and fixed to the sleepers without chairs—thus effecting a considerable saving in first cost as compared with a 75-lb double-headed rail with chairs such as are now used on the existing lines."

It will be seen by the plan which Mr. Whitton now submits that the rail is to be embedded in the sleepers, and to have a large bearing thereon, and securely fixed thereto with screws. This compares favourably with the small bearing in the chairs, and the constant breakage of chairs and keys—the loosening of keys by their contraction and expansion with the change of weather requiring constant and careful attention and costly labour to keep them safe. The noise of the present rail in the chairs when the train is in motion will be obviated by the proposed one, which, when properly fixed in and screwed to the sleepers, may remain so while the rail lasts. This class of rail is very largely used on the Continent and in America, and many of the English Companies are taking up the 75-lb double headed-rail, and replacing it with a similar pattern single-headed rail. This to me is very strong evidence in favour of this class of rail; their traffic is as 100 to 1 to ours where these rails are proposed to be used, and their speed by express trains is double that of ours. Our neighbours in Victoria also are going to complete their line to Albury (and this is where our Southern line is proposed to connect with the lines of that Colony) with the same pattern rail; by this we have the opinion both of the engineering and ministerial ability of our neighbours.

Take our own past experience, from the returns up to the 31st December, 1872, of rails broken, turned, and renewed since the opening of our lines from the Parramatta Junction.\* These returns are compiled from the reports of the Assistant Engineer, who has the constant supervision of the lines referred to. Taking the first length in that return—it has been run over for sixteen years and three months, and shows two rails broken, one only renewed, and 214 turned end for end or over. The next length has been run over for fourteen years and seven and a-half months, with two broken, five renewed, and sixty-two rails turned end for end or over. The next length has been run over for ten years and four months, with six broken rails, one renewed, and three turned end for end or over.

Take next the Western Line, from Parramatta Junction to Blacktown, including both Junctions and the Parramatta Station, the Windsor and Richmond traffic is also run over this portion of line. In twelve years and six months there are only one broken rail, seventeen renewed, and forty-two turned either end for end or over.

After carefully considering these returns with the Engineer-in-Chief, it was considered that a fair lifetime for the proposed single-headed rails—comparing the traffic on the lines referred to in return with what may be expected on the proposed extensions—would be fifteen years. Some of these rails may not last fifteen years, but others may last twenty years; this will depend entirely upon the quality of the iron used and the amount of traffic on the line, which will equally apply to double or single headed rails. I have therefore taken the saving as shown by Mr. Whitton on first cost between a double and single headed rail as prepared for use on the Southern line by that gentleman, with value of relaying; I have allowed £3 per ton for re-rolling, which in England is only £2. The saving per mile by Mr. Whitton's report is £669, with £25 for keys, not included, making £694. As the plan and specification refer only to the extension to Yass, I wish to bring before my colleagues the whole of the extensions for which Parliament has voted the money, with the view of having their opinion as to the weight of rails to be used, in order that they may be at once sent for. I will therefore include in these calculations the whole of the extensions, for reasons which I will explain hereafter.

I have to commence with a saving of £694 per mile, which upon 283 miles,	
with compound interest for fifteen years, at 5 per cent., make a total	
saving of ... ..	£408,309
Deduct for labour of re-laying new rails ... ..	99,616
Do. for cost of re-rolling old rails ... ..	93,390
	<u>193,006</u>
Saving ... ..	<u>£215,303</u>

The value of the old rails is not included in the above, as they will still remain the property of the Government. We have then a new and sound road, with a saving of £215,303. Apply of this, £15,303 to the purchase of new rails for the purpose of renewing as the old ones wear out, and having a stock to commence re-rolling with to supply the gradual wants of the line, we would have a clear saving of £200,000, which would supply the permanent way of same weight and cost for 102½ miles of further extension. The £193,000 proposed to be spent in this way for renewals would be almost entirely expended in labour, and through the producer and the Treasury would become a reproductive investment, and if not sooner through this, the encouragement given to re-rolling, we would have our rails made in the

\* See Mr. Whitton's report of 5th May, 1873.

Colony, have direct competition, which is the great cheapener of first cost, and would have direct control and supervision as to quality, which I think is of far more importance than first cost.

Mr. Whitton's estimate for the Southern line extensions with this class of rail was £7,000 per mile. I am now reminded by that gentleman that there is only £6,500 voted—£500 per mile, or £87,000 short of the sum required to complete to Wagga Wagga. This matter was explained by me to the Cabinet when the reduction was made; it was then "cheap railways or no railways at all."

The estimates of the Engineer-in-Chief for the Western and Northern extensions were prepared, as stated, for a second-class line, to satisfy the parliamentary demand for "cheap railways or no railways at all." These Estimates have been passed as prepared at £6,000 per mile—providing for a 40-lb. rail and partially ballasted. If this be adopted, we shall have a first-class line on the South to sustain a speed of thirty or forty miles per hour, and on the West and North a line upon which a speed of fifteen miles an hour is the greatest that could be obtained with safety. Thus we would have double time in the transit of goods and passengers, and nearly double cost in working—this I could never approve of. To obviate it, and give the same class line to all our extensions, we would, in the opinion of the Engineer-in-Chief, require £7,000 per mile, or £107,000 more than that voted by Parliament for the West and North.

In the face of an apparent deficiency in amount voted of £194,000, I have no hesitation in asking my colleagues to approve of the application to all our extensions of the plans and specification submitted for the extension to Yass. I feel so strongly on this subject that I would sooner leave Parliament to-morrow than be the means of inflicting such a lasting injury on this Country as the placing of 40-lb. rail on the main trunk of our Western and Northern extensions would involve.

A word or two on the apparent deficiency, which I have no doubt in the ordinary state of things would become real. My anxiety on this subject has led me to make careful inquiries in Tasmania, where railways will soon be completed. In Victoria and Queensland there is a lull or no signs of large extensions. I judge by this that there will be a large number of men of railway experience in the market, both contractors and subs.; money seems plentiful, and the large fortunes made by previous contractors will draw our moneyed men in to support the second class or men of experience with little money. If my opinion is correct in this, our present extensions will be carried out cheaper than ever they have been in the Colony before, and in proportion the difference which we have to answer for will melt away, and we shall have a 70 instead of a 40-lb. rail for the whole of the extensions, without exceeding the vote of Parliament.

Another point of great anxiety to me is the unsettled state of the iron market in England. If all our rails are to be alike, I would divide them into four or five sections, giving careful instructions to the Agent General to place one section on the market at first, and then take advantage of the fluctuation in the market to get our full supply at the cheapest rate. If all these fail to extinguish the difference, I would advise that we leave off the top ballast or boxing up, &c.; this can be done without affecting the stability of the line, and the work may be afterward carried out at any time from capital or revenue, say to the amount of 5s. per yard, or £124,520. There is also a charge for railway carriage, &c., from the ship to the extension, which might stand over for future adjustment, amounting to about £2 per ton, or £62,260, making in these two items £186,780 against the difference of £194,000.

I have thus explained as briefly as I could how the matter stands and my opinions on the whole subject so that I cannot be misunderstood, and now leave it for the careful consideration and, I hope, the approval of my colleagues.

JOHN SUTHERLAND,  
14 July, 1873.

The Cabinet having agreed to this class of rail, they may now be ordered—J.S., 28/7/73.

\* These views have been realized, as the following figures will show:—

BATHURST TO ORANGE.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## RAILWAY ROLLING STOCK.

(OBTAINED AND ORDERED SINCE 1 JANUARY, 1875, TO 31 MARCH, 1878.)

*Ordered by the Legislative Assembly to be printed, 16 May, 1878.*

RETURN of Rolling Stock obtained and ordered since 1 January, 1875, to 31 March, 1878:

Laid upon the Table of the Legislative Assembly by the Secretary for Public Works, in satisfaction of the promise made to the Honorable Member for West Sydney (Mr. Angus Cameron).

RETURN showing ROLLING STOCK obtained and ordered since 1st January, 1875, to 31st March, 1878 (exclusive of Rolling Stock supplied under P. N. Russell & Cos.' contract for 5 years).

Description of Vehicle.	Rolling Stock delivered.	Rolling Stock ordered, but not yet delivered.
Sleeping car	1	.....
First class carriages	6	1
Second do.	4	.....
Saloon carriages	3	.....
Composite do.	.....	4
Carriages of Midland type (with brake van if required)	.....	8
Goods brake vans	16	10
Sheep vans	18	86
D trucks	1,124	6
E do.	152	.....
C do.	5	.....
Ballast waggons	41	.....
Total	1,370	115

Rolling stock delivered ... 1,370

Do. to be delivered ... 115

Total vehicles ... 1,485

Attached as Appendices, marked A to Z, are *précis* of each action taken when obtaining the several supplies.

Attached as Appendix, marked No. 1, is a Return showing monthly deliveries of the various vehicles.

Public Tenders were invited since 1st January, 1875.

Tender with acceptance.	Security.	Time specified for completion in conditions and by Tenderers.	Date when last Vehicle was delivered.	Length of time over or under Contract time.		Extracts from Conditions.	For Part of Contract see Appendix	
				Over.	Under.			
10 Feb., 1875	Bond £750	30 Sept., 1875 50 trucks. Before 31st July, 1875. 50 trucks. Before 30th Sept., 1875. Extended to 30th June, 1876.	Aug., 1876	10 months over specified time.  1 month over extended time.		The work is to be carried out under the direction and to the satisfaction of the Engineer-in-Chief, &c. Payment will be made in full for every wagon on being delivered complete to the satisfaction of the Engineer-in-Chief. As these wagons are much wanted preference will be given to the tenderer of the shortest time, all other matters being equal. The material to be provided by the Commissioner will be delivered to Contractor at any station—but he will be required to pay cost of conveyance, &c.	A	
15 Jan., 1876	Bond £370	1 Oct., 1876 Extended to 1st Feb., 1877. Extended again from 19 April to 19 May.	July, 1877	9 months over specified time. 5 months over extended time.				
15 Jan., 1876	Bond £750 ... Not signed until September, 1876.	1 Sept., 1876 Extended to 1st March, 1877.	July, 1877	10 months				B

## APPENDICES.

(76/1,576.)

## A.

*Tender of Messrs. Kellaway and Penny for 100 D Trucks.*

THE tender of Messrs. Kellaway and Penny being the lowest was accepted.

On the 28th February, 1876, Mr. Kellaway asked for an extension of time to complete the trucks, on the ground that in the midst of his contract his partner (Mr. Penny) had died, which had caused the delay.

The Engineer-in-Chief wrote: "I see no objection to granting the extension of time asked for"; and the Commissioner approved thereof.

(77/7,599.)

## B.

*Tenders for 500 D Trucks.*

THE Traffic Managers continuing to urge the necessity for more trucks being provided, the Commissioner, on the 21st September, 1875, ordered that specifications should be at once prepared and tenders invited and that as they were urgently required it was suggested by the Secretary that tenders should be invited to supply either the whole or in lots of 50 trucks. This paper was sent to Engineer-in-Chief, but nothing appears to have been done until the 7th of December following, when the Commissioner asked what was the cause of delay; the Secretary replied, "The papers for preparation of specification for 500 trucks were sent to Engineer-in-Chief on the 6th of October last; the advertisement inviting tenders for these has come in to-day.—8/12/75."

Tenders were then invited, but were only received for 350 trucks, viz.:—50 from Mr. T. Denny, at £72 10s. each; 100 from Messrs. Davy and Co., at £74 19s. 6d.; and 200 from Messrs. Hudson, Brothers, at £70 each. These tenders were accepted. Messrs. Hudson Brothers' contract was completed in contract time.

Mr. Denny, on the 13th October, 1876, applied for an extension of time of four months, on the ground of the delay in the delivery to him of wheels, axles, &c., to be supplied by the Government. The Engineer for Existing Lines recommended that this extension be granted, which was done. On the 29th January, 1877, Mr. Denny wrote that in consequence of the delay in the Government finding the materials his business arrangements were materially affected, and asked that in lieu of compensation being granted to him he should receive an order for an additional number of trucks. In reply he was informed that it was only from the expiry of his extension time that he could have any claim, but that when he had completed his contract he could renew his claim. On the 19th April, 1877, he again obtained a month's extension of time.

As

As regards Messrs. Davy and Co., they asked for an extension of time for six months on account of two vessels laden with their timber having been lost at sea; their request was granted, but the bond for this extension of time does not appear to have been executed.

(77/7,916.)

**C.***100 D Trucks from Messrs. Hudson Brothers.*

TENDERS were invited on the 20th of June, 1877, and the tender of Hudson Brothers, was accepted on the following report:—

"The tender of Messrs. Hudson, Brothers, is the lowest, and is recommended for acceptance. As it was stated in the specification that time of supply would be considered in determining the most eligible tender, these tenders must be considered on this basis. Mr. Wearne's time is the shortest, but his price exceeds that of Hudson, Brothers, by £187 10s. Mr. Hudson will, in the time named by Wearne, deliver 81 trucks only, and the department will lose the net earnings of 19 trucks. According to the returns of 1876, the net earnings of each truck are about 30s. per week; the 19 trucks would earn net in the extra six weeks required, £171.

"On the basis therefore of time and money, the tender of Hudson Brothers, is the most eligible."

(76/5,969.)

**D.***Tenders for 50 E Trucks from Messrs. Davy & Co. and T. Denny.*

In September, 1875, the Traffic Manager (South and West) and the Engineer-in-Chief having reported that there was not a sufficient number of trucks to carry on the timber traffic, tenders were invited for 50 E trucks; and Messrs. Davy & Co. and Mr. Denny were the lowest and equal tenderers at £59 10s. per truck; fresh tenders were invited from them. Davy & Co. would not reduce their price; but Denny reduced his to £57 15s. per truck; it was however decided that as the trucks were so urgently required to give half (25) to each party at the original sum they tendered at, viz., £59 10s. each truck.

Messrs. Davy & Co. asked for and obtained an extension of time of twelve weeks, as they had experienced such difficulties in obtaining a supply of suitable timber.

Mr. Denny does not appear to have had any extension granted him, although he completed his contract no earlier than Davy & Co.

Both parties supplied twenty-six trucks.

(77/4,209.)

**E.***Tender for 100 E Trucks from Mr. A. Wright.*

On the 4th April, 1876, tenders were invited for 100 E trucks, and Mr. A. Wright's being the lowest one was accepted.

The time for completion was 31st March, 1877, but on 24th April Mr. Wright asked for an extension of time for two months, stating that the delay was caused through the Government failing to deliver the wheels, axles, &c., in terms of the conditions of Contract.

Mr. Secretary Hoskins, in granting this extension, wrote: "The Commissioner for Railways has informed me that recently the Government have granted the extension of time asked for by the Contractors who undertook to supply the Department with trucks, in consequence of the Railway Department not having the wheels and axles ready for such trucks; therefore an exception cannot, in common fairness, be made in this case. At the same time I wish to add, that, if the wheels and axles for these trucks had been available for the Contractors, I should not have allowed any extension of time with this contract."

Mr. Wright asked for and obtained a further extension of time to the 31st August, 1877, as there was still a delay on the part of the Government in supplying the wheels, axles, &c. No extension bond was demanded from Mr. Wright, but he was informed that no time must be lost in delivering the remaining trucks.

(77/204.)

**F.***Tender for 6 Goods Brake Vans from Mr. Thos. Braid.*

On the 16th December, 1875, the Engineer-in-Chief recommended that tenders be invited for six brake vans at once as they were urgently required.

Mr. Braid's tender was the lowest and accepted. On the 7th November, 1876, he asked for and obtained an extension of time until the 1st February, 1877, owing to the great difficulty he had in procuring timber.

(78/371.)

**G.***Tenders for 6 Brake Vans—Mr. A. Wright.*

TENDERS were opened for these on 20th March, 1877. Mr. Wright's being the lowest was accepted.

The Traffic Manager having stated how urgently he required these vans, and as Mr. Wright had not signed his bond or delivered the vans in accordance with the conditions of his contract, he was informed on the 30th June, 1877, that the order given to him was withdrawn.

Mr. Wright then wrote that he would deposit £200 in the Treasury, to be forfeited if he did not deliver two vans on the 3rd August, two on 3rd of September, and the remaining two on 3rd of October, 1877; this proposition was agreed to and Mr. Wright deposited the £200 and signed the necessary bond.

On the 3rd of October (the day the last van ought to have been delivered) Mr. Wright, having then delivered five vans, asked to be allowed 19 days extra time to deliver the last one; his request was granted.

On

On the completion of the contract Mr. Wright wrote and asked for the deposit of £200 to be returned to him. On this letter the Commissioner wrote: "Strictly speaking, Mr. Wright has forfeited the £200, but as five of the brake vans were delivered within the time, probably a fine of £25 might meet the justice of the case." J.R., 30/11/77."

This was approved of by Mr. Secretary Combes on the 1st December 1877, and the deposit returned to Mr. Wright, less the £25 fine.

(77/6,593.)

**Ga.**

*3 Saloon Carriages from Mr. T. Braid.*

TENDERS for 12 carriages were invited on the 15th March, 1877. (These three saloon carriages formed part of the twelve.)

Mr. Braid's tender being the lowest was accepted.

On the 27th September, 1877, Mr. Braid applied for an extension of time, alleging that the delay in fulfilling his contract arose through the scarcity of suitable labour. The Engineer for Existing Lines wrote: "I cannot recommend any extension of time to be granted; I would strongly recommend the Commissioner to compel Contractors to adhere strictly to the terms of the contract"; and the Engineer further wrote, 2/10/77: "The progress made by Mr. Braid is very unsatisfactory and I recommend that some action be taken to enforce a compliance with the terms of the specification."

On an application for extension of time, received from Mr. Ritchie, the Commissioner wrote: "The Minister declines to give extension of time to any Contractor for rolling stock.—J.R., 9/1/78."

This would apply to Mr. Braid's contract. The three carriages were delivered 2½ months over the contract time.

(77/6,593.)

**Gb.**

*2 second class Carriages from Messrs. Hudson Brothers.*

TENDERS were invited on 15th March, 1877. Mr. Kellaway's tender was so absurdly low that it was not considered, and it appeared he had made an error.

Messrs. Hudson Bros. were the lowest tenderers, and their tender was accepted on 26th May, 1877; the time specified for completion was 26th September, 1877, but they have completed this contract in one month less time than the contract gave them.

(77/8,159.)

**H.**

*Tenders for 6 Brake Vans from Mr. F. Kellaway.*

ON the 29th June, 1877, the Traffic Manager (North) reported that the brake power on his line was quite inadequate for working the extensions. Tenders were invited for the construction of six brake vans. The Secretary then suggested that 10 per cent. on the total amount of the contract should be deposited in the Treasury as security for the proper fulfilment of the contract. Mr. Secretary Hoskins however preferred that a trial be made of Contractors only depositing 5 per cent. The tender of Mr. Kellaway was the lowest, and was accepted; he duly deposited the required amount and signed the bond. The last of the six vans ought to have been delivered on the 13th February, 1878, but up to this date (31st March, 1878) none have been delivered. Mr. Scott, on 1st October last, reported "that Mr. Kellaway is making very little progress with the construction of his brake vans. It has been necessary to condemn a quantity of his timber, both on account of its being of unsuitable quality and not of sufficient dimensions."

(78/2,724.)

**J.**

*Tenders for 6 Brake Vans from Mr. A. Wright.*

TENDERS were invited for these six brake vans on the 3rd December, 1877. Mr. Wright's tender being the lowest, was accepted on the 9th January, 1878. The work is in progress.

(78/104.)

**K.**

*Tenders accepted for 70 Sheep Vans for South and West Lines, and 30 for Northern Line.—Mr. John Robertson for 70, and Messrs. Moyes and Donald for the 30.*

TENDERS were invited for these sheep vans on the 21st August, 1877. Messrs. Moyes and Donald's being the lowest tender for the Northern vans, it was accepted.

Mr. T. Denny's was the lowest tender for the 70 vans for the South and West lines, and it was accepted at £75 10s. for each van. Mr. Denny then wrote, expressing regret that he had made a clerical error of £10 too little in his tender for each van, as it should have been £85 10s. each. This would still have been the lowest tender by £10 5s. 6d. each, but the Engineer for Existing Lines wrote: "It would form an inconvenient precedent to allow Mr. Denny to amend his tender, and taking all the circumstances of the case into consideration, I would advise that fresh tenders be invited without delay."

Mr. Secretary Combes ordered fresh tenders to be invited. This was done on the 17th of October, 1877, and as Mr. Robertson's was the lowest at £84, it was accepted on the 10th November, 1877.

The following Minute by the Secretary appears in the papers:—"I was absent in Melbourne when these tenders came in, or I should have pointed out that Hudson Bros. were by far the lowest tenderers—time and money combined."

The vans are now being constructed.

Ka.

(77/6,089.)

**Ka.***3 first-class Carriages from Mr. R. A. Ritchie.*

TENDERS were invited on the 15th March, 1877, for twelve carriages, and these three first-class ones formed part.

Mr. Ritchie's tender was accepted (Mr. Kellaway having made an absurd blunder in his tender) on 29th May, 1877.

On the 6th September following Mr. Ritchie wrote for an extension of time from the 29th November, 1877, to 1st January, 1878, asserting that he could not procure suitable workmen, &c.

He again wrote on 11th December, urging his application for the extension of time, and stated that besides the scarcity of skilled mechanics he had suffered much through having a portion of his workshops blown down during a storm.

On the 9th January, 1878, the Commissioner wrote: "The Minister declines to give extension of time to any Contractor for rolling stock."

Two of these carriages have been delivered.

(77/6,593.)

**Kb.***4 Composite Carriages from Mr. T. Braid.*

TENDERS for twelve carriages were invited on the 15th March last, 1877. These four composite carriages formed part of the twelve.

Mr. Kellaway made an error in his tender which was so apparent that it was not considered. Mr. Braid's was therefore the lowest and was accepted.

On the 27th September, 1877, Mr. Braid asked for an extension of time; the same action was taken as will be found with the *précis* on his contract for three saloon carriages. (*See Appendix Ga.*)

Up to this date (31 March, 1877) none of these carriages have been delivered although the whole ought to have been delivered on the 26th November last.

On the 7th November, 1877, the Engineer for Existing Lines wrote that Mr. Braid having already failed with the first contract his present contract ought to be cancelled. Mr. Secretary Combes instructed Mr. Braid to be informed that unless he completed his contract by the specified time the full penalty would be enforced. This was done, but the Engineer pointed out that the specification gave no power to inflict fines—only to cancel the contract.

The Commissioner wrote on 25th January, 1878, that the specification ought to have contained a clause providing for fining the Contractor, in the event of its being found undesirable to take the work out of the Contractor's hands, and inquired whether if the contract was cancelled what prospect there was of any other firm being able to supply the carriages in less time than Braid, regard being had to the progress he had made with them. The Engineer for Existing Lines stated that the work done and materials in hand for their construction amounted to £770, and that one carriage might be delivered in March, one in May, one in July, and the last in September, 1878, but that he saw no other chance of any other firm completing them sooner than Mr. Braid.

Mr. Secretary Sutherland on 7th February, 1878, wrote: "Seen. Hurry on the work as much as possible. This is all that can now be done under the circumstances."

(77/4,656.)

**L.***50 D Trucks from Messrs. P. N. Russell & Co.*

On the 4th June, 1875, an order for 50 D trucks was given to Messrs. P. N. Russell & Co., at £79 10s. each, for the bodies; and the wheels, and axles (which Messrs. Russell had in stock) were taken at the same price as that paid by the Government for similar wheels and axles, with 10 per cent. added for commission, &c., and profit on importation.

A tender had already been accepted from Kellaway and Penny for all the trucks for which the Government had ordered wheels and axles, and the urgency with which these trucks were required would not admit of the delay of obtaining the wheels and axles from England.

The price, £79 10s., was the same as that given to Messrs. Russell & Co. for the last trucks supplied by them.

(76/3,785.)

**M.***3 D Trucks obtained from Mr. T. Denny.*

On 13th June, 1875, Messrs. F. B. Suttor and Thos. Brown, M.P.'s, forwarded a letter from Mr. Denny, stating that he was prepared to construct trucks at same price as Messrs. P. N. Russell & Co. had been receiving.

On this the Engineer-in-Chief wrote that this application confirmed his advice to the Commissioner not to give a five years contract for rolling stock.

On the 31st July, 1875, an order was given to Mr. T. Denny to supply 3 D trucks.

(77/6,671.)

**N.***150 D Trucks from Mr. R. A. Ritchie.*

On the 8th December, 1875, tenders were invited for 500 D trucks.

Tenders for 350 trucks only were received, leaving 150 untendered for.

Mr. Ritchie subsequently offered to supply the 150 for which no tenders had been received at £72 each truck, but he was informed that no higher sum would be given than that at which the lowest tenderer had contracted for, viz., £70 a truck. Mr. Ritchie consented to this price and his offer was accepted.

## 14

## O.

(77/6,619.) *60 D Trucks from Messrs. Leahy & Brodie.*

ON the 4th February, 1876, Messrs. Leahy and Brodie offered to supply 60 D trucks at £72 each, in accordance with the same plan and specification as the 500 D Trucks for which tenders were called for on the 8th December, 1875. (*See Return "D trucks completed."*) This price they reduced to £70 per truck, which was as low as Hudson Bros'. This offer was accepted on 1st March, 1876, the trucks to be completed in 12 months. On the 21st of March they asked for an extension of time, alleging that the delay in delivery arose through the Government not supplying wheels, axles, &c. An extension of time was granted to them, but no specified time is shown on the papers in the case, and the extension bond was dispensed with, but they were told that the trucks must be delivered without delay.

(76/6,669.)

## P.

*50 D Trucks from Mr. J. Robertson.*

MR. Robertson offered to build 50 trucks for £70 each, the same price as the other Contractors were receiving.

(76/6,280.)

*100 D trucks from Messrs. Kellaway & Wearne.*

MESSRS. Kellaway & Wearne offered the same as Mr. Robertson. (*See above.*)

(77/7,599.)

*50 D Trucks from Mr. T. Denny.*

MR. Denny offered the same as Messrs. Kellaway & Wearne. (*See above.*)

He received an extension of time for 4 months, viz., 1st May, 1877, but up to this date (31st March, 1878) he has only delivered 44 trucks, leaving six to be yet delivered. The great delay is in consequence of the rejection of inferior material and workmanship. Mr. Turton, the Inspector, wrote on 29th September, 1877: "I have instructed him not to proceed with them until he has seasoned timber for their construction."

(78/3,071.)

## Q.

*Rolling Stock purchased from the New Zealand Government.*

ON the 31st of August, 1874, the New Zealand Government offered to sell to this Government the rolling stock of the Southern Railway in New Zealand, the necessity for sale having arisen in consequence of its becoming necessary to assimilate the gauge of the New Zealand lines.

The Engineer-in-Chief advised the Commissioner not to purchase any second-hand rolling stock.

They were, however, informed by letter from the Colonial Secretary of 10th November, 1874, that this Government was prepared to purchase the stock at a valuation after its arrival in Sydney. The New Zealand Government agreed to this. The material was shipped from New Zealand in April, 1876, but one of the vessels was lost at sea. The material that arrived here was valued, and when put together made up 17 D trucks, 5 C trucks, and 29 ballast wagons, besides some other material not connected with the rolling stock.

(78/1,336.)

## R.

*100 D Trucks from Messrs. Hudson Bros.*

THE Traffic Manager (North), on the 12th November, 1877, applied for 100 additional D trucks, urging that there was not a sufficient number to conduct the traffic, and that as the whole of the sleepers for the extensions to Tamworth and Gunnedah would have to be conveyed, a large number of trucks would be occupied in that traffic alone.

The Engineer for Existing Lines recommended that 100 trucks be at once sent from Sydney station, and 100 more to replace them, be ordered from Hudson Bros. without delay, as they were urgently wanted. The price to be the same as for the last 100 trucks supplied by Hudson Bros., viz., £63 each.

Messrs. Hudson expressed their willingness to supply them at this price, and the order was accordingly given to them, without inviting tenders, as it was known that this firm was the most likely one to supply the trucks quickly.

(77/2,801.)

## S.

*2 Break Vans purchased from Messrs. Hudson Bros.*

ON the 26th of February, 1877, Messrs. Hudson Bros. wrote, that being anxious to ascertain the value of various kinds of rolling stock likely to be required by the Railway Department (to enable them to tender for any that might be required), they had constructed two heavy brake vans, and offered to sell them at 10 per cent. advance on actual cost, which was £340, making £374 for each van.

The Engineer for Existing Lines having inspected them and reported the price as reasonable, they were accordingly purchased as they were urgently required.

(78/659.)

## T.

*Purchase of 4 Sheep Vans from Messrs. Hudson Bros.*

MESSRS. Hudson Bros. had these four sheep vans completed at their works and ready for delivery; they asked the Government to purchase them for £90 each van. As the Engineer for Existing Lines reported the price reasonable, they were at once purchased and delivered on the 15th of February, 1878.

## U.

(75/6,563.)

## U.

12 *Ballast Wagons for G.N.R., from Messrs. J. & A. Rodgers (Newcastle).*

Mr. Bewick having reported that 12 additional Ballast wagons were most urgently required on the Great Northern Line, he was instructed to obtain offers from any one he thought would be likely to build them. He only asked two parties—Messrs. J. & A. Rodgers and Messrs. Moyes & Donald; the former firm asked £70 each wagon, and the latter £80.

The work was therefore given to Messrs. J. & A. Rodgers.

(77/4,656.)

## V.

*Order given to Messrs. P. N. Russell & Co. to build one First class and one Second class pattern Carriage.*

IN April, 1875, the Traffic Manager wrote urging the necessity of being at once supplied with additional carriages, and the Engineer-in-Chief in May recommended certain improvements, and advised that Messrs. P. N. Russell & Co. should be instructed to build pattern carriages. The Commissioner then gave an order to Russell & Co. to construct a first and second class carriage as pattern ones in accordance with a plan to be supplied to them.

The carriages were completed, and Messrs. Russell sent in their account—£1,348 0s. 9d. for first, and £929 12s. 6d. for second, class carriage. The Engineer-in-Chief expressed his surprise at the high prices asked. Messrs. Russell & Co. were asked to reconsider their charges, and they pointed out that these carriages were specially made as pattern ones, and that these prices were not a fair criterion of what they would be if they had a large number of carriages to build, and they further offered to show their cost price accounts.

The Engineer-in-Chief then stated that he believed Messrs. Russell's statement, but that if these prices were as reasonable as possible he advised the Commissioner to purchase rolling stock elsewhere.

Mr. Secretary Lackey approved of Messrs. Russell & Co. being paid the amount they asked, on 13th April, 1876.

(77/4,656.)

## W.

1 *First class Carriage, purchased from Hudson Bros.*

ON 21st May, 1877, Messrs. Hudson Bros. wrote to say that they had then ready for delivery and would be glad to sell a first class carriage, which they had constructed to enable them to get at the value of Railway rolling stock; their price was £800, exclusive of wheels, axles, &c. Mr. Mason valued the carriage at £690, which sum they agreed to take, with £5 extra for making the springs stronger.

(78/2,198.)

## X.

1 *First class Carriage purchased from Messrs. Hudson Bros.*

ON the 29th October, 1877, Messrs. Hudson Bros. offered to sell a first class carriage for £800, exclusive of wheels, &c. Mr. Mason valued it at £605 9s. 8d., and this amount was offered to Hudson Bros., but they would not accept it, as they stated that it would entail a heavy loss upon them; they urged that already the carriage had been lent by them to the Railway Department on several occasions during the Christmas holidays to enable the traffic, which was so large at that time, being carried on, and that they had been put to the expense of having the carriage re-varnished, &c.; they stated their willingness to accept the actual cost price of it, viz., £750.

The Commissioner, on the 12th March, 1878, wrote that this carriage would be of the greatest service during the approaching Easter holidays, and that its loss would be severely felt, and it would be true economy to purchase it at £750.

Mr. Secretary Sutherland having approved of the Commissioner's suggestions, the vehicle was purchased and delivered.

(77/8,564.)

## Y.

1 *each 1st and 2nd Class Carriage, and one Sleeping Car, obtained from Jackson, Sharp & Co., America.*

ON the 5th June, 1876, Mr. Secretary Lackey requested Messrs. Towns & Co. to order pattern carriages on the Pullmann principle. One 1st and one 2nd class carriage and one sleeping car were accordingly ordered through Messrs. R. W. Cameron & Co., of New York.

Messrs. Jackson & Sharp, of Wilmington, Delaware, obtained the contract to supply them. They were shipped from America by the "Annie H. Smith" on the 16th April, 1877, and reached Sydney in July of the same year, and were put together at the Redfern workshops without delay.

(77/3,564.)

## Z.

*Indent sent to England for eight Composite Carriages of the Midland type, and one Brake Van.*

ON the 6th June, 1877, the Engineer-in-Chief, in compliance with Mr. Secretary Hoskins' instructions, prepared a specification and indent for eight composite carriages of the Midland Railway (of England) Company's type, each to be carried on two six-wheeled bogies, and to be obtained from the Ashbury Railway Carriage and Iron Company.

A brake van was also to be procured if the system of lighting carriages with gas manufactured in the brake van was perfected.

The indent was despatched on the 9th June, 1877, and on the 17th September, 1877, a letter (dated the 3rd August, 1877) was received from the Agent General in London, acknowledging the receipt of the indent, &c.

The carriages have not yet arrived in the Colony.

## APPENDIX.

## No. 1.

RETURN of Rolling Stock supplied from 1st January, 1875, to 31st March, 1878 (exclusive of that supplied under Messrs. P. N. Russell & Co.'s contract for five years), showing the date of delivery.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

## RAILWAYS.

(EXTENSION FROM REDFERN TO CIRCULAR QUAY—LETTERS AND PAPERS.)

*Ordered by the Legislative Assembly to be printed, 16th May, 1878.*

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 15th March, 1878, That there be laid upon the Table of this House,—

“Copies of all Letters and Papers suggesting, as well as Plans depicting, schemes for the extension of the Railway from Redfern to the Circular Quay, received by the various Ministers for Public Works since 1st January, 1870.”

[*The Plans are placed on the Table as Exhibits only.*]

(*Mr. J. Davies.*)

NO.	SCHEDULE.	PAGE.
1.	Letter from Mr. J. F. Wakely, submitting Plan and suggestions for Line into the City. 6 August, 1873 .....	2
2.	Petition from Messrs. P. N. Russell and Co. and others, for formation of a new street, connecting George-street at junction of Druiitt-street, with head of Darling Harbour. August, 1873 .....	2
3.	Petition from Inhabitants of Parramatta for the railway to be extended to a central part of Sydney. 22 September, 1873.....	3
4.	Letter from Mr. J. F. Wakely, forwarding an enlarged plan of his scheme. 23 September, 1873 .....	3
5.	Letter from Commissioner for Railways to Mr. Wakely, in reply. 30 September, 1873 .....	3
6.	Letter from Mr. J. F. Wakely—that he is anxious to know if his scheme is approved of. 18 December, 1873 .....	3
7.	Letter from Mr. J. F. Wakely—further in reference to his scheme. 22 January, 1874 .....	3
8.	Letter from Mr. J. F. Wakely—further in reference to his scheme, and enclosing estimated cost. 6 April, 1874 ...	4
9.	Letter from Mr. J. F. Wakely, asking for a survey to be made at his own cost, with minute of Engineer-in-Chief thereon. 25 January, 1875 .....	4
10.	Letter from Commissioner for Railways to Mr. J. F. Wakely, that if survey is required it will be made by the Railway officers. 6 March, 1875 .....	4
11.	Petition from Inhabitants of Sydney, presented to the Legislative Assembly. 25 June, 1875 .....	5
12.	Letter from Mr. J. F. Wakely to the Colonial Secretary, submitting his propositions. 5 April, 1876 .....	5
13.	Letter from Commissioner for Railways to Mr. J. F. Wakely, acknowledging receipt of his letter of 5th April. 24 October, 1876 .....	6
14.	Letter from Mr. J. F. Wakely, forwarding plan of his proposed route. 12 July, 1876 ..	6
15.	Letter from Mr. Thomas Woore—has a scheme for a line to Circular Quay, but must be guaranteed that it will not be plagiarised. 27 July, 1876 .....	6
16.	Letter from Mr. J. F. Wakely, directing attention to his letters. 19 September, 1876 .....	7
17.	Description and plan of a proposed route from some person unknown. February, 1877 .....	7
18.	Letter from Mr. D. Cohen, submitting plan of a proposed Line. 12 February, 1877 .....	7
19.	Letter from Mr. H. D. Smith to Colonial Secretary, submitting photograph of a proposed line. 3 April, 1877 .....	8
20.	Letter from Colonial Secretary, acknowledging the receipt of Mr. Smith's letter. 6 April, 1877 .....	8
21.	Letter from Mr. D. Cohen, directing attention to his former letter. 30 April, 1877 .....	8
22.	Letter from Secretary of Railways, acknowledging receipt of Mr. Cohen's letter. 2 May, 1877.....	9
23.	Minute of the Engineer-in-Chief, on the extension of the railway into the City. 11 June, 1877 .....	9

## RAILWAYS.

## No. 1.

Mr. J. F. Wakely to The Secretary for Public Works.

Sir,

Enmore Road, Newtown, 6 August, 1873.

I beg to lay before you my plan and suggestions respecting the extension of the railway into the City:—

Starting from Redfern Station on to Pyrmont line, then curving north-easterly on to the iron quay east side of Darling Harbour, traversing the said iron quay to Baltic Wharf, curving on to Corporation Wharf, to Corporation block of ground at Market Wharf, which position would make a goods and passenger station.

Then commencing a tunnel at north-west corner of said block of ground, passing under Sassex-street, Kent-street, King-street, York-street, to south-west corner of Wynyard Square, which square I propose as a city passenger terminus, with two spiral staircases for entrance.

Tunnel continuing on to Dawes' Point, passing under Church Hill, Cumberland-street, Argyle Cutting, between Cumberland and Princes streets, curving at the end of Cumberland-street, under George-street, and out on to the south-west corner of said point.

The above point would make a central goods and passenger station, commanding the whole of Sydney Cove to Fort Phillip, where a receiving goods station could be erected, from whence a tramway could traverse the whole of the northern wharf to Miller's Point, where another goods receiving station could be made.

A branch line could be formed from Essex-street to south-west corner of Globe-street, passing down Globe-street, across George-street to Commissary Stores, Queen's Wharf.

The said tunnel from Market Wharf to Dawes' Point would not interfere with any private property or sewers, nor roadways, except at Market Wharf.

The tunnel being through freestone would not require lining, but rough picked; the rubble from same at each end would fill up at the back of the iron quay around Darling Harbour, and extend ground and wharfs around Dawes' Point.

At a future time a high-level bridge could be erected from the end of George-street, Dawes' Point, to Milson's Point, St. Leonards, from which a railway line could be made to junction with our Great Northern Line, and be connected to the tunnel by a zigzag from end of George-street, shunting north on east side of bridge sufficient distance; then shunting south-easterly around the said point to tunnel.

Sir, with these remarks, I beg to leave my plan with you.

I am, &amp;c.,

J. F. WAKELY.

Enmore Road, Newtown, 16 August, 1873.

Sir,

In reference to my omission of the scale of measurement this morning to the plan, my statement from memory was wrong, of 800 feet to inch.

I beg to enclose the scale I have worked my calculations upon. You will please to annex the same to plan, and you will oblige,

Yours, &amp;c.,

J. F. WAKELY.

To the Hon. John Sutherland, Esq., Minister for Works.

## No. 2.

Petition from Messrs. P. N. Russell and Co. and others.

To the Honorable the Minister for Public Works,—

The Petition of the undersigned,—

Respectfully Showeth:—

That application has been made to the City Corporation for the formation of a new street, connecting George-street at the junction of Druitt-street with the head of Darling Harbour, the site of the contemplated railway works, as shown in the accompanying plan.

That while the proposed street will be a great improvement to the city it will also form a convenient approach to the Darling Harbour Goods Station.

That it is desirable that the Government should co-operate with the City Corporation in carrying out the proposed street, for the reason above stated.

That the new street being carried out as planned, it will furnish the means of bringing the railway into the centre of the city by a tunnel underneath, and forming a passenger station on the site of the present Police Station. The railway could then be continued by a tunnel in a N.E. direction to the Circular Quay at Phillip-street, thus connecting our two principal wharves.

That to carry out our railway system profitably it is highly necessary that the passenger station should be more centralized, and by this plan the railway is not only brought through the heart of the city, but it can be executed at the most moderate cost, without prejudicing private interests, or interfering with our harbour, streets, parks, or public reserves.

Your Petitioners therefore humbly pray that you will be pleased to lay this Petition before the Cabinet, and request that the same may be taken, as tending to promote the public interest, into their most serious consideration.

August, 1873.

P. N. RUSSELL &amp; CO.

THOS. S. MORT.

And ninety-one (91) others.

Put with other papers on subject of city terminus.—C.A.G.

No. 3.

For plan, see  
Exhibit, marked  
A.  
Plan enlarged.

Annexed to  
Exhibit A.

See Exhibit  
marked B.

## No. 3.

## Petition from Mayor of Parramatta, on behalf of Inhabitants.

To the Honorable the Minister for Public Works.

The Petition of the Inhabitants of Parramatta and its neighbourhood, in Public Meeting assembled,—  
Showeth:—

That in the opinion of your Petitioners an extension of the railway to a central part of Sydney would contribute greatly to the advantage, not only of the inhabitants of Sydney and its suburbs, but also of that large portion of the general public whose business and other relations bring them into frequent intercourse with the metropolis.

That in the opinion of your Petitioners such extension would cause a large and ever-growing increase of traffic, and thereby secure to the Government an adequate return for the outlay of money which it would cost.

Your Petitioners therefore humbly pray that you will be pleased to take such steps as you may see fit for causing the railway to be extended as early as practicable to a central part of Sydney.

And your Petitioners will ever pray.

HUGH TAYLOR,  
Mayor.

(For and on behalf of the inhabitants of Parramatta and District, in Public Meeting assembled.)  
Parramatta, 22 September, 1873.

## No. 4.

## Mr. J. F. Wakely to The Secretary for Public Works.

Sir,

Enmore Road, Newtown, 23 September, 1873.

I beg to forward you an enlarged plan on my original one and suggestions left with you on the 15th ultimo. See Exhibit marked A.

You will oblige by receiving the same, as it shows more fully the direct route of railway line into the city, and the possibility of connecting to a high-level bridge to Milson's Point, St. Leonards, for conveyance of coal from our Great Northern district, and with other improvements for the delivery of mails to the new Post Office, also entrances from George and Sussex streets to city passenger terminus, Wynyard-square.

I also trust you will lay before the proper authorities at your convenience, my plan and suggestions for their approval, as the same may be a great benefit to the Colony.

I am, &c.,  
J. F. WAKELY.

Acknowledge receipt and inform that suggestions and plans will be considered with plan marked A.—J.S., 28/9/73.

## No. 5.

## The Commissioner for Railways to Mr. J. F. Wakely.

Sir,

Department of Public Works, Railway Branch, Sydney, 30 September, 1873.

I am directed to acknowledge with thanks the receipt of your letter of 23rd instant, respecting the extension of the railway into the City of Sydney, and to inform you that the plans and suggestions forwarded by your communication will be duly taken into consideration.

I have, &c.,  
JOHN RAE.

## No. 6.

## Mr. J. F. Wakely to The Commissioner for Railways.

Sir,

Newtown, 18 December, 1873.

I received your letter dated 30th September, in receipt of plans on extension of railway into City of Sydney.

I am anxious to know if the same are approved of, or if any steps are being taken in respect to surveying of same.

I have, &c.,  
J. F. WAKELY.

Mr. Whitton, B.C., 23/12/73.—J.R.

The Railway Department has not yet received Mr. Wakely's plans. Has Mr. Whitton seen them?—C.A.G. Mr. Whitton knows nothing about them.—W.H.Q., 29/12/73. Mr. Goodchap.

## No. 7.

## Mr. J. F. Wakely to The Secretary for Public Works.

Sir,

Newtown, 22 January, 1874.

I beg to state, if it is the intention of the Government to extend the railway line into the city according to plan,—

That upon further calculation I find there can be a saving of nearly one-half by using stone from the tunnel instead of iron cylinders for the iron wharf around the east side of Darling Harbour.

The line of wharfage could be erected by driving wooden piles along the front, say (25) twenty-five feet apart, backed by a stone wall of not less than (3) three feet in thickness of solid masonry.

The

The stone could be procured from the tunnel with advantage to the Government, and the Contractors for excavation; the smaller ballast would fill up the back and reclaim a deal of ground in front of the present frontages, and no doubt would be sufficient compensation to the owners of same.

I trust you will excuse me, and think these remarks worthy of your consideration.

I have, &c.,

J. F. WAKELY.

To be put with other papers.—J.S., 5/2/74.

No. 8.

Mr. J. F. Wakely to The Secretary for Public Works.

Sir,

Newtown, 6 April, 1874.

I have the honor to state, that having given a deal of study to the contemplated extension of railway into the City of Sydney, I beg to forward you a few further remarks, seeing that the matter of extension is likely to come before Parliament. I find by going into the probable cost on my different suggestions a great saving would be made by forming the line from the Market Wharf to the iron quay round Darling Harbour; that if the permanent way were made by shunting the ballast from the tunnel into the harbour, commencing at the Market Wharf, thereby letting it find its own bottom (which would make the best permanent way), then by driving piles at the foot of the batter in deep water, attaching inlaid girders of joists and planking, I find would be the cheapest and best mode of forming the wharf and reclaiming the ground. The railway line could be formed 100 feet back from wharfage front, thereby allowing sufficient space for goods and shipping and roadway.

I may add that originally I conceived a line could be made from the Pymont Line, running at the back of Sims' Mills, across Liverpool and Sussex Streets, commencing a tunnel under Kent and Bathurst streets, to Druitt and York streets, to Wynyard-square; but I found it would not be so advantageous, not commanding the shipping or passenger station at the Market Wharf, interfering with level crossings in main streets, and the compensation for private property would be immensely more expensive.

I have, &c.,

J. F. WAKELY.

Estimated cost of railway from the Pymont Junction to Wynyard-square, with spiral staircases and cross tunnels for entrances, &c. :—

	£	s.	d.
Compensation for property from Pymont Junction to the iron wharf at head of Darling Harbour ... ..	3,657	0	0
Forming and ballasting road with sleepers, from Pymont Junction to Baltic Wharf—1,300 yards forwards ... ..	11,103	0	0
Labour reclaiming land around Darling Harbour... ..	2,125	0	0
Excavating tunnel, from Sussex-street to Wynyard-square ... ..	9,719	3	4
Excavating underground station at Wynyard-square, with cross-tunnels, staircases, &c., for entrance and delivery of mails ... ..	4,749	16	8
Iron rails, chairs, &c.—1,875 yds. forward ... ..	5,625	0	0
Labour, laying same, &c. ... ..	1,875	0	0
Ballasting and sleepers for tunnel—573 yds. forward ... ..	1,146	0	0
Total... ..	£40,000	0	0

See debate in House.—J.R., B.C., 8/4/74. Mr. Whitton. Seen.—J.W., 15/4/74. Commr.

No. 9.

Mr. J. F. Wakely to The Secretary for Public Works.

Sir,

Sydney, 25 January, 1875.

In respect to plans and suggestions of extension of railway into the City of Sydney, you will oblige by giving your sanction for a survey at my own cost, and due publication of same.

I have, &c.,

J. F. WAKELY.

Mr. Whitton, B.C. I cannot understand why Mr. Wakely should give himself the trouble to ask the Minister to allow him to make a survey for the extension of the railway into Sydney at his own expense, unless he entertained the impression that when it was made he would be entitled to make a charge for it. I don't believe in disinterested services of this kind, and I think if such a survey be wanted, which I believe it is, that the officers of this Department will be found fully equal to the duties required.—J.W., 18/2/75. Commissioner. Decline to interfere in this case. If survey be wanted it can be made by our own officers. What has been done by us up to the present time?—J.R., 3/3/75.

No. 10.

The Commissioner for Railways to Mr. J. F. Wakely.

Sir,

Department of Public Works, Railway Branch, 6 March, 1875.

In reply to your letter of the 26th January last, asking permission to make a survey for the proposed extension of the railway into Sydney, I have the honor to inform you that I must decline to interfere in this matter; I may add, however, that should a survey be required, it can be made by our own officers.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

## No. 11.

## Petition from Inhabitants of Sydney.

Railway Extension through the heart of the City, down to the Circular Quay.

To the Honorable the Members of the Legislative Assembly of the Colony of New South Wales, in Parliament assembled.

The Petition of the undersigned inhabitants of Sydney,—  
Humbly Showeth:—

That your Petitioners having observed that a measure for an extension of railway into the city has been introduced during the present Session, respectfully submit for your consideration the extension not only into the city, but right through down to the Circular Quay, and believing that anything short of that will only tend to hamper the already over-crowded condition of the city, we sincerely hope it may please your Honorable House, while giving attention to other valuable suggestions, before pledging itself to any course, to cause engineering ability to investigate and report on this route.

Starting from the present Railway station at Redfern, to cross Devonshire-street, the old Burial-ground, skirting Belmore Park, crossing the Markets, till reaching a point between Pitt and George streets, on a viaduct, thence by an incline cutting or tunnel under Liverpool, Bathurst, and Park streets, right by the Post Office (to go through the same when finished), crossing Hunter and Bridge streets, passing between the old Commissariat Store and Guard House by a short incline eased by breaks and buffers, sweeping round the Circular Quay to Milson's Ferry, or by turn-tables, taking goods from one or half-a-dozen ships as the case may require.

It would supersede the necessity of a large central station, as each street could accommodate its own business.

Every traveller could get out where it best suited his convenience, in the heart of the city, or right through to the Circular Quay. Besides its enormous importance to the mercantile and shipping interests it would create an immense business, and distribute it fairly among the citizens.

Being 15 or 20 feet above the ground, compensation could not be heavy, as the proprietor would be an immense gainer by having the line so close to his business, using the arch, and getting a good wall to his premises, and being entirely out of the way of ordinary traffic, with a substantial bridge and station at each street, and splendid iron span crossing the court-yard of the Post Office, mounted on polished pillars, it would supplement its usefulness by giving a look of noble grandeur to our city, and improve the property over which it passed.

By bringing it down to the Circular Quay you would be giving a vast accommodation to a large and increasing population on the northern shores of our harbour, and exercising a wise and generous forethought for the daily, nay hourly, accommodation of millions yet unborn.

Your Petitioners therefore pray that your Honorable House will take the foregoing Petition into your favorable consideration.

And your Petitioners will ever pray, &c.

[Here follow 127 signatures.]

## No. 12.

## Mr. J. F. Wakely to The Colonial Secretary.

Hon. Sir,

13, King-street, Sydney, 5/4/76.

Through many requests I am induced to place my plan for "City Railway Extension" prominently before the public; and seeing how materially it affects the interests of the residents of West Sydney, I am anxious to secure your opinion upon the route proposed with a view to petitioning Parliament to have the route surveyed, and for which petition I have had certainly not less than 200 voluntary promises of signature.

Will you therefore oblige by giving it your attention, and a reply by letter at your earliest convenience.

I shall be happy to give you any further information, and to wait upon you with the plan *in extenso* at any time or place that you may appoint.

I have, &c.,

J. F. WAKELY.

The Under Secretary for Public Works.—H.H., B.C., 30/9/76. What reply should be given to Mr. Wakely?—C.A.G., B.C., 11/10/76. Mr. Whitton. No reply.—Merely acknowledge receipt of his letter.—J.W., 20/10/76. Commissioner. Write accordingly.—C.A.G., 23/10/76.

[Enclosure to No. 12.]

## City Railway Extension.

Mr. J. F. Wakely, of Newtown, offers the following suggestions for the extension of the railway into the city of Sydney. They are accompanied by a plan showing the proposed route. Mr. Wakely says:—

"The suggestions and plan for the extension of the railway into Sydney were received and approved of by the late Minister for Works (the Hon. J. Sutherland); since when I have surveyed, and now proffer, an easy and practicable railway route to the eastern suburbs.

"Throughout I have been guided by the material question of 'cost,' and an examination of my plans will show that on the whole of the proposed line 'private property' is only touched three times, and that to a very small extent.

"For the benefit of our city no time should be lost in forming a goods and passenger station at Market Wharf, and I am prepared to show, after much careful inquiry, the cost of the whole or any part of the undertaking.

"The debris from the eastern tunnel could, by convenience of carriage, be made invaluable for the reclaim of Darling Harbour and Blackwattle Swamp.

"My proposed line branches from Redfern station on to the Pyrmont line, then curving north on to the east end of the iron wharf at the head of Darling Harbour, then traversing a proposed line to the front of Russell's Wharf, thence curving to the Baltic Wharf on to the Corporation's block of ground at Market and Sussex streets, which position would be well available for goods and passengers.

"Thence, commencing a tunnel at the N.E. corner of said block, under Sussex, Kent, King, and York streets, to S.W. corner of Wynyard-square, where I propose a city passenger-station, with two spiral staircases; also tunnel from George-street, and one from Sussex-street, as side entrances to underground station; and also a tunnel from the Post Office for delivery of mails.

"The

"The said railway line continuing on by tunnel to Dawes' Point, passing under Church-hill, Cumberland-street, Argyle-cutting, between Cumberland and Prince streets, thence curving at the end of Cumberland-street, under George-street, out on the S.W. corner of Dawes' Point, as a goods and passenger station, commanding the whole of Sydney Cove from Fort Phillip, where another goods station could be erected, from whence a tramway could traverse the whole of the northern wharfs to Miller's Point, at which point another goods station should be erected, and also a tramway could be connected at the back of the present wharfs to starting point, *i.e.*, Market and Sussex streets goods, &c., station.

"The tunnel being throughout composed of freestone would not require brick lining, but roughly picked would make the line of road and help to reclaim the east side of Darling Harbour to starting point at east end of iron wharf and its junction at Pyrmont line; and further would reclaim and give material to erect stone wall round Dawes' Point. The land reclaimed around Darling Harbour would more than repay any compensation for said frontage, and give a deep water wharf frontage to said properties.

"There could also be a branch line to curve from Essex-street and Cumberland-street to S.W. corner of Globe-street, across George-street to the Commissary Stores, &c., Queen's Wharf.

"At a future time, in connection with the above, a high-level tabular iron bridge could be erected from the north end of George-street to Milson's Point, and from thence a railway line could be connected with the Great Northern at New-castle.

"The line at George-street could connect by zig-zag to the low-level line on Dawes' Point, thus connecting the Great Southern and Northern lines. The line from Redfern station and its connections crosses one roadway only at Market Wharf, leading on to Pyrmont Bridge, and does not interfere with any sewers; but on the reclaimed ground, at foot of each street, west, large, self-emptying, at low-water, silt reservoirs could be erected in front of said wharf, emptying into barges placed for that purpose.

"The proposed line to Dawes Point could be completed, including an ornamental station of iron and glass at Wynyard-square, and the whole ready for lighting with gas, for less than £100,000. The above line to Dawes' Point would be a commanding position for the ultimate connection of the northern line—the two points, Dawes' and Milson's, being the highest and narrowest for such purpose.

"Eastern Suburban Lines by tunnel of about one mile in length, without encroaching on any private property, from Redfern station to the valley of Lacrozia, Darlinghurst, commencing at Redfern station, across Prince Alfred Park, passing under Castlereagh-street, between Cleveland House and Belvoir-street, to Riley and Devonshire streets, thence between Riley and Crown streets to Fitzroy-street, continuing between Crown and Bourke streets to Botany-street and Oxford-street, thence under Darlinghurst Road, passing between Sacred Heart Church and the School of Industry, emerging on to vacant land, for passenger station, on the north of the Paddington Ice-works, and there commanding by a surface line all the bays to the South Head.

"The tunnel could be formed on an easy gradient, or dead-level, according to position in Lacrozia Valley, and without any engineering difficulty; and also a branch line of about 300 yards from said tunnel, commencing at Waterloo-street, under Lansdowne-street, to its east end, there emerging on vacant ground of little value, to Moore Park, commanding Randwick, Waverley, &c., by surface line.

"The above forms a rough description of the routes I propose; but I am fully prepared and most willing to answer any queries as to cost, &c., &c., in order that it may receive a careful investigation.

"JOSEPH F. WAKELY."

"Newtown, June 21, 1875."

#### No. 13.

#### The Commissioner for Railways to Mr. J. F. Wakely.

Sir,

Department of Public Works, Railway Branch, 24 October, 1876.

I have the honor to acknowledge the receipt of your letter of the 5th of April last, on the subject of railway extension into Sydney, addressed to the Honorable the Colonial Secretary, and forwarded by him to this office.

I have, &c.,

JOHN RAE,  
Commissioner for Railways.

#### No. 14.

#### Mr. J. F. Wakely to The Secretary for Public Works.

Hon. Sir,

13, King-street, Sydney, 12 July, 1876.

Herewith I have the honor to forward for your consideration this letter, and the accompanying plan and map, respecting "City Railway Extension."

On inspection you will find that my proposed route could easily diverge to Campbell's Wharf, whilst it could be tapped from many points to afford ample facility to and from Darling Harbour and Towns' Wharf for goods traffic, and from George-street for passenger traffic.

I would also direct your attention to the small encroachment that would be made on Wynyard-square, and to point out that such encroachment would be a further ornamentation.

It is by numerous and influential requests that I am induced to advocate my route; and having been at a heavy expenditure with it, I beg to state that I am willing to contract for the whole, including the erection of a stone circular wharf at Dawes' Point, for the sum of £150,000, the contract to be completed in not less than two years.

Dawes' Point is the only point from which a high-level bridge could be made to connect with the Northern Line.

At any time or place I shall be only too happy to wait upon you and to fully explain the route.

I have, &c.,

J. F. WAKELY.

P.S.—The route marked upon map from Liverpool-street to Wynyard-square (*via* George-street Markets), with its two approaches to under-ground station, I will guarantee for the same amount as the Darling Harbour route, £150,000, if the same should be preferred. Tunnel commencing at the west side of Sussex-street, near Bathurst-street, as denoted on map, at No. 255.—J.W.

Received this letter, but *no* plan or map.—J.L., 17/7/76. Plan now herewith—on Minister's table.—J.R.

#### No. 15.

#### Mr. T. Woore to The Secretary for Public Works.

Sir,

Pomeroy, Woore, 27 July, 1876.

I can no more refrain from considering the great engineering questions that agitate this Colony when I see others stumbling at them than I can resist breathing; consequently I have possessed myself of a scheme for connecting the present railway terminus at Redfern with the Circular Quay, for goods

goods and passengers, with other advantages, that in the interest of the community should be considered without delay.

I therefore offer it to the Government; but, before divulging, I must have some guarantee it will not be plagiarised by your officers, but fairly judged and acknowledged, if found to be what I consider it—an efficient terminus to the trading arteries of the country, worthy of the great city Sydney is destined to become.

I have, &c.,

THOMAS WOORE.

Mr. Whitton, B.C., 5/8/76.—J.R. Seen.—J.W., 9/8/76. Commissioner.

No. 16.

Mr. J. F. Wakely to The Secretary for Public Works.

Hon. Sir,

King and Sussex streets, Sydney, 19 September, 1876.

I have the honor to direct your attention to the letters, &c., forwarded by me to you, dated respectively the 14th and 25th of July, 1876, and which to the present date remain unacknowledged.

The plans having been prepared by me at great trouble and expense, I shall be thankful to hear from you that they have not been mislaid.

I have, &c.,

J. F. WAKELY.

No letters of these dates appear to have reached the Railway Office.

No. 17.

Description and Plan of a proposed route, received from some person unknown.

City Railway from Circular Quay and Woolloomooloo Bay to Redfern Station.

[For plan see Exhibit marked D.]

THE advantages of this proposed line are,—its directness; its non-interference with Hyde Park, the Domain, public buildings, streets, sewers, or water-pipes.

The very small expense attached to its construction for the purchase of private properties, as will be observed by the accompanying plan. The line from the Quay and Woolloomooloo Bay is taken under the Domain and Hyde Park, by a tunnel, to a point near Goulburn-street, midway between Elizabeth-street and Macquarie-street south; it then runs through property of little value, such as Market-lane, Exeter-place, and other property of minor account, until it reaches Gipps-street, where the property is of more value, though small in area; it then crosses the south-eastern angle of Belmore Park, passes between the Police Barracks and old Cemetery; continuing its course at the rear of the House of the Good Shepherd, Christ Church Parsonage, and the Benevolent Asylum, until it reaches Devonshire-street, at the south-western extremity or angle of the old Cemetery; then direct to the station.

The line from the Quay to the southern side of Liverpool-street will be entirely underground; and no objection can be made to it on account of noise, or otherwise, owing to the depth. There is a large corner block of land at Liverpool-street admirably adapted for a station site.

An excellent and very central passenger station with an underground platform, constructed upon the same principle as the Metropolitan Underground Railway Stations in London, can be made immediately at the top of King-street, on the large block of unoccupied land adjoining the Immigration Depot, from where a branch line can easily be made to Woolloomooloo Bay.

Near the Haymarket it will be seen the line branches off in two directions towards Redfern—one for goods, the other for passengers. The expense of two lines over a single one will be very trifling, and will relieve the passenger station at Redfern from being inconvenienced by goods trains, up or down.

All shipments can be run upon the goods line, which will prevent any interference with the ordinary passenger traffic.

After the line leaves the tunnel near Goulburn-street, a brick viaduct might be constructed through the low ground beyond, which would offer no obstruction to the traffic upon the streets crossed, and the arches underneath could be turned to some account by letting them for shops, or for the storage of goods, as the case may be.

The section shown is only an approximation, as no levels have been taken, and is merely intended to convey an idea of the length of the tunnel and work required upon the line.

The line runs from the Circular Quay, and connects with the present terminus at Redfern. The branch for goods (the section not shown) does not present any more difficulties than the one shown for passengers; and the property on the branch line for goods passes principally through unoccupied land, and would only necessitate the destruction of small tenements.

It would be impossible to make an estimate of the cost without knowing the distance and the correct section of the ground passed over, but an approximation might easily be made of the tunnel for a single or double line supposing it passed through solid rock, and required no brick or stone work.

No. 18.

Mr. D. Cohen to The Secretary for Public Works.

Sir,

424, George-street, Sydney, 12 February, 1877.

Noticing that you intend shortly to submit a proposal to Parliament for the continuance of the railway into Sydney, I take the liberty of sending you a plan which has occurred to me as being one very suitable to our requirements and worthy of your consideration.

See exhibit marked E.

The route I propose, you will see by the enclosed plan, starting from the Darling Harbour line, crossing the wharf into Dixon-street, and following the red line into Druitt-street, where it proceeds under ground to the site of the Police Office and Markets, making that a central passenger station right in the centre of the city. For the goods traffic you will perceive I branch off the line along Sussex-street to Margaret-street, then underground to Kent-street, also underground almost to Argyle-street, down Argyle-street to the Circular Quay, near the Ordnance Department, where a large goods shed could be erected right in the heart of the shipping.

The

The distance to be travelled by this route will be short, and very little if any compensation will have to be granted. Another advantage to be gained by running the goods line along Kent-street is that it could take in all the wharfs round Miller's Point and Darling Harbour. Branch stations could be erected on the vacant land under the Flagstaff reserve and would be most convenient.

I send this plan in the hope of seeing the railway into the city in as short a time as possible, and will deem it ample reward if my suggestion is carried out. I seek no renown, and would be greatly obliged if this was treated purely as a private communication.

I have, &c.,

DAVID COHEN.

Mr. Whitton,—Who has the plan?—C.A.G., B.C., 24/2/77.  
Commissioner.

No. 19.

Mr. H. D. Smith to The Colonial Secretary.

Sir,

Ruskin Villa, William-street, Paddington, 3 April, 1877.

I trust you will excuse my intrusion on your patience at a time when every minute must be of importance to you, but as delay would perhaps be fatal to my project, I am compelled to force myself on your notice; at the same time what I am about to ask is so trifling compared with the good that might result, that I feel bold enough to think you will endeavour to grant my request. So to be brief, without even dilating on its merits, I will at once to the point:

Railway extension through the city can scarce fail to be among the matters entertained by the new Ministry, and having been at some little trouble in getting up a rough plan and petition, I don't wish to see it and the signatures thrown away without achieving the object sought, or some practical reason given for its discontinuance, else where the use of the right of petition at all, while its terrible want the Press has too often nobly pointed out.

For years past having felt and maintained that the direct route through the city (thereby utilising the Post Office and clearing away much of the debris of the older portion of the early tenements), though costing most at first, would give the greatest accommodation, thereby securing the surest and quickest return to New South Wales—not that it is perfect or without its drawbacks—so in 1875 I drew up a petition, called on Mr. J. Davies, and asked him if he would present it, and apologized for the roughness of my materials. He told me he did not mind its roughness so that I had really gone over the ground, and was honestly convinced it would be for the future welfare of New South Wales, and that if I got a dozen citizens to sign it he would consider it his duty to present it. It was placed in the window of a shop in Pitt-street, and very soon there were 127 signatures attached to it. Wishing as was then thought to save the Session, and thinking 127 was a pretty good dozen, again waited upon Mr. Davies, who proved as good as his word, present it he did, ordered to be printed it was, then came the collapse of Parliament, and nothing done. So again through another Session, precluding the subject being again ventilated, but now that it can scarce fail of being dealt with one way or another, all I ask is, while yourself and colleagues are giving other schemes your consideration, to assist me in giving these humble endeavours some chance of fairness.

The petition merely asks—"That Government would cause engineering ability to investigate and report on the practicability of this scheme." That done, I will give no further trouble, but leave it in the hands of those who will have to decide this most important question, satisfied to let it stand or fall on its own merits.

Should you favor me with any advice, or cause the prayer of this petition to receive the attention required, I shall be very grateful for having no self-interest whatever to gratify, but simply pursuing what has always fixed itself upon me as a duty for the advancement of New South Wales in particular, and accommodation of her citizens in general.

I have, &c.,

H. D. SMITH.

P.S.—The plan being unwieldy, I had a few copies photographed. You will oblige by accepting the enclosed.

Acknowledge, and say that the subject will receive consideration. Put with any other papers on subject.—H.P., 4/4/77.

Secretary.

SUBJECT:—Extension of the railway into the City.

## No. 23.

## Minute of The Engineer-in-Chief to The Commissioner.

## Extension of the railway from Redfern to the Circular Wharf.

Sir, Department of Public Works, Railway Branch,  
Engineer's Office, Sydney, 11 June, 1877.

In all the discussions which have taken place on this subject the Circular Wharf is always named as the point to which the extension should be made, with a view, as stated by nearly all the speakers at public meetings, of taking goods of all kinds, and wool particularly, to this wharf to be loaded for their destination; and also for the purpose of loading general merchandise for the interior of the Colony, and putting a stoppage to the haulage of rails, locomotive engines, &c., through the streets of the city.

With the greatest possible deference to the gentlemen who make these statements, I may be permitted to say that, in advocating the extension of the railway to the Circular Quay, they entirely overlook the fact that full, complete, and satisfactory communication has already been established between the railway and the deep water of Port Jackson by the construction of the iron wharf at the head of Darling Harbour, which can now be used for the unloading of rails and other articles imported by the Government; locomotive engines can either be delivered by ships upon this wharf, or punted and delivered upon a separate wharf.

The articles imported by the Government appear to me those only which would be loaded direct upon the railway if it were extended to the Circular Quay, as nearly all other merchandise is sent from the ship to the stores in the city, where bulk is broken and the various articles distributed throughout the Colony. If, however, any packages were required to be sent direct into the interior such articles could be unloaded, either from the ship, or by punting, upon the wharf at Darling Harbour, where ample provision has already been, or can be, made for this purpose.

There is therefore no reason whatever for putting the Country to the expense of a line of railway for goods traffic to the Circular Quay, which would be comparatively useless for the purpose for which it had been constructed, and cause very serious inconvenience to the city by having to cross several important streets on the level.

This is assuming that such a line could be made, giving every facility for the general goods traffic of the Colony; but I believe it would be impossible to construct such a terminal goods station as would to any appreciable extent relieve the Redfern Terminus from the over-crowding to which it is now subjected.

The proper position for the goods station for Sydney is the present Redfern yard, which should be entirely used for goods traffic; all other buildings with the exception of the permanent way workshops being entirely removed.

The whole of this yard with the sidings, which are now in or which may be hereafter laid at the head of Darling Harbour, and the wharfage accommodation now, or which can be provided there, would be sufficient for the goods traffic of this Colony for the next fifty years, or probably for a much longer period.

It must not be forgotten that the larger portion of imported goods are unloaded at private wharfs, and would therefore not use the railway at the Circular Wharf if made.

If a terminal goods station be demanded at the Circular Quay it should be clearly understood that it must be an independent line from the passenger line, and that the goods trains cannot be permitted to run through the passenger terminal station.

The area of land required for such a goods station at the Circular Wharf may be imagined on inspecting the Redfern Station-yard, with all the locomotive workshops removed.

If the proposed goods traffic accommodation at the Circular Quay be only intended as supplementary to the Redfern yard, then it is utterly unnecessary, and would entail a useless expenditure by the employment of extra porters, clerks, &c.

In my opinion the Circular Quay is the most inconvenient position that could be selected for a terminal station, for either goods or passengers; for the latter it would be useless for the general public, and for the former, a very expensive mistake.

*Terminal Passenger Station.*

The proposal to erect a terminal passenger station at the Circular Quay appears to me to have been made without any consideration whatever, as I can hardly imagine a more inconvenient place for such a purpose. What proportion of the travellers by railway would require to be set down at the Circular Quay? I venture to say not one in 10,000 of the ordinary daily travellers would wish to go as far as the Circular Wharf, and therefor I think that the advocates of the extension into the city have not fully considered the question of railway extension which they have been so energetically advocating for some time.

That a terminal passenger station into the City is, I admit, most desirable, but it should be so placed as to give the greatest possible accommodation to those who most frequently use it, without losing sight of the convenience of the general public.

It appears to me, so far as I have been able to give the matter attention, that the most central position for a passenger terminus would be between King-street and Hunter-street, making the eastern boundary of the station the alignment of Castlereagh-street, and extending the whole distance between Hunter-street and King-street.

The general direction of this line would be, after leaving the present station at Redfern across Devonshire-street, through Belmore Park on a viaduct crossing Elizabeth-street by a bridge over the road, under Liverpool-street a little to the east of its junction with Elizabeth-street, where a passenger station could be provided; then under Hyde Park, William-street, Elizabeth-street, Castlereagh-street, Market-street, and King-street, by a tunnel entering the south end of the passenger station north of King-street.

The proposed station to have six lines of rails through its entire length, with three platforms. The centre platform, to be used exclusively for the suburban traffic, to be 30 feet in width, with two outside platforms, each 25 feet wide, for the main line traffic.

The station to be roofed in for a length of 650 feet, with booking-offices, waiting-rooms, &c., which can be approached by cabs from Hunter-street.

A covered cab road, about 40 feet wide, will be provided, of the same length as the station, and running parallel with it on the arrival side, with an entrance from Pitt-street.

A foot bridge will be constructed over the whole of the lines of rails and platforms, and extend over the cab road, with steps into Foxlow-place, with stairs connecting each platform, so that passengers can, through Foxlow-place, reach Pitt-street without crossing the cab road on the level. A staircase will also be provided from the south end of the centre, or suburban platform, by which passengers can reach King-street, where a second booking-office will be provided for passengers entering the station from that end.

No estimate has been prepared for the cost of this extension, but probably it would not be less than £500,000, including the purchase of land and compensation.

JOHN WHITTON.

## Extract from Engineer-in-Chief's Report on Progress of Trial Surveys.

24 June, 1874.

\* \* \* \* \*

ABOUT 30 miles of this extension have been surveyed, but the plans have not been completed.

## No. 3.

## Extract from Engineer-in-Chief's Report on Progress of Trial Surveys.

28 September, 1874.

\* \* \* \* \*

NOTHING has been done on this length since my report of the 24th June last. One surveyor has been recently engaged to continue the survey of the line at Walgett.

## No. 4.

## Memorandum from Mr. W. B. Wade to The Engineer-in-Chief for Railways.

Bathurst, 20 March, 1875.

## Great Western Railway—Extension beyond Orange.

I HAVE been over the country as far as Dubbo during the week. I found Mr. Cowdery had run a traverse into Wellington, but had not levelled the last few miles. The section from Ironbarks was not so good as I had anticipated. This is owing to the general fall of the country being so rapid that it is impossible to get away from the range on to the level flats below, but on the whole the section is very fair, and the unlevelled portion will certainly be good. There is a very good station site in Wellington, also a favourable place for crossing the Macquarie with a bridge about 600 feet long, and very little flooded bank. The distance from Orange to Wellington is 55 miles by the line, being nearly 6 miles shorter than the main road, and more than 10 miles shorter than any possible line by way of Molong.

I went with Mr. Cowdery over the country from Wellington to Dubbo; the road keeps near to the river, and is about 35 miles. On our return we came very nearly in a straight line between the two places over a country from 200 to 300 feet above the river, and with the exception of one rough piece about 2 miles long, an excellent piece of country for a railway, good gradients and very light earthworks, with no stream beyond the capacity of a culvert. The distance by that route will probably be about 30 miles.

On my way back to Orange I carefully examined the Molong Road. There is only one moderate range between Wellington and Molong, and three inevitable bridges.

Molong is 1,700 feet above the sea level. In the first 6 miles towards Orange the country only rises 200 feet; then there is a steep ascent of 230 feet; then broken country, slightly descending for some distance; then a rough rise to a level of 2,300 feet at Broken-shaft Creek; and from there to Orange, in a distance of only 3 miles, there is a rise of 500 feet, which I think renders any line approximating the road impracticable. The probable route towards Molong is keeping a range about 2 miles west of the road, but when once on that, the obvious question occurs: "Why go into Molong at all?"—but rather keep the same range in the most direct line to the Bogan, probably going through Currajong.

There will probably be three routes to the Darling to choose from:—

1st. From Orange to Wellington and Dubbo, and by the mail route to Bourke. Of this route you will soon have a section to Dubbo, and the remaining portion of 280 miles is known to be level, but is exposed to extensive floods.

2nd. From Orange, through or near Currajong, to the Bogan, the first 15 or 20 miles are, I am informed, very rough, but I propose to examine it soon.

3rd. In connection with the proposed line from the G.W.R. through Young to G.S.Ry., to leave this line where it crosses the Lachlan, then follow the Lachlan to Forbes, and cross over to the Bogan. It is generally allowed that the west bank of the Bogan is the best route for the long-level portion of any line to the Darling.

W. B. WADE.

No. 5.

## No. 5.

## Memorandum from Mr. W. B. Wade to The Engineer-in-Chief for Railways.

Great Western Railway—Trial Survey, Orange to Wellington, Molong Route.

Bathurst, 27 November, 1875.

PREVIOUSLY to my report to you in September, 1873, and on several subsequent occasions, I have examined the country on the Orange, Molong, and Wellington line of road. The country adjoining the present road appears to me impracticable for a railway of moderate cost, and if a survey is made a route must be sought more to the westward, and consequently longer than the present road.

After leaving Orange the road rapidly descends 500 feet into Broken-shaft Creek in a distance of less than 3 miles, and follows a difficult and broken country to within 6 miles of Molong. A section of the portion between Orange and Broken-shaft Creek was levelled by Mr. Donkin, and is now in the Sydney office; the obvious way of avoiding this steep descent is to keep considerably to the westward and go round the head of Broken-shaft Creek, and probably of Molong Creek also. I have not sufficient information to say if there is practicable country in this direction, but under any circumstances there would be an increase of length of  $1\frac{1}{2}$  to 2 miles more than the present road. If a route should be found on the west bank of Molong Creek it would then be a deviation from a direct line to go into the township of Molong, as immediately after passing Molong the road crosses the Bell River four times through a difficult country, and the way to avoid these crossings is to keep still more to the westward, and try the route sometimes used when the Bell River is flooded, and which is, I am informed, 2 miles longer than the road over the river; about 8 miles from the Black Rock a heavy spur of the Catombal Mountains is crossed by the road. The deviation above alluded to for avoiding the river crossing would cross this spur nearer to the range and increase its already formidable proportions. After passing Black Rock the road passes over flooded river banks before reaching Wellington; to avoid this source of expense the line would have to bear to the east, and enter Wellington on the line surveyed *via* Ironbarks.

The present road between Orange, Molong, and Wellington is shown by a section in the Roads Department to be  $63\frac{1}{2}$  miles; the deviation between Orange and Molong will add (say)  $1\frac{1}{2}$  mile, that round the rivers 2 miles, and to avoid floods  $\frac{1}{2}$  mile, or 4 miles in all, making the distance from Orange to Wellington by way of Molong 67 miles; it would cross two considerable streams, the Bell River and Molong Creek, and as it would be a long way from the watershed on either side, all the streams crossed would require large culverts. The above estimate is based on the assumption that a practicable route can be found in the country to the west of the present road. The route by Ironbarks is a little less than 56 miles in length, or 11 miles shorter, crosses no streams of any importance, and being close to the watershed throughout its whole length, would in most cases require only earthenware pipes and small culverts; on this route there is no difficulty of the magnitude of the Catombal spur on the Molong route.

W. B. WADE.

Deputation, consisting of Mr. J. S. Smith, M.L.A., Sir George Innes, Mr. Smith of Gamboola, Mr. Lee, and several others, called on me to-day to urge that no line of railway between Orange and Wellington be decided upon until a complete survey of the country *via* Molong be made. I informed deputation that a thorough survey was now being made, and that no route would be finally determined upon until the surveyor's report is received. I also stated that the surveyors would be instructed to intimate to the residents there, and that Dr. Ross of Molong would be communicated with on their behalf, when the survey was being made.—J.L., 18/1/76.

The present road from Wellington to Orange by way of Molong is  $63\frac{1}{2}$  miles; the detour now being laid out by the Road Department, to avoid the "three rivers," is 2 miles additional, making  $65\frac{1}{2}$ , and any line with gradients of 1:40 would be at least 2 miles longer than the present road between Orange and Molong, making at the least 67 miles; the line now being surveyed by way of Ironbarks will be 55 or 56 miles from Orange to Wellington.

The Molong line involves at least one crossing of the Bell River, and one or three crossings of Molong Creek, both streams liable to considerable floods; the Molong line is generally from 5 to 15 miles distant from the watershed, so that all the streams crossed would require considerable outlay in culverts or bridges.

The Ironbarks line is within 1 mile of the watershed for nearly its own length; the streams to be crossed are all small.

The Molong line must enter Wellington either by the present road, which is under flood level for several miles, or it must be directed into the Ironbarks line, causing further extension of distance. The last paragraph of the letter by "Beta," deserves consideration, *viz.*, the whole question of the extension to Dubbo should soon be considered; for if it is decided to make this line means of reaching Forbes, the Lachlan, Currajong, &c., the Molong line, or even a still more circuitous line may be advisable, but unless branches are constructed to those places it is pretty evident from the map that they will join the Railway at Orange. On the other hand, if it is decided to reach Forbes, the Lachlan, &c., by a more south-westerly route, the Wellington and Dubbo line will stand on its own merits as a direct line to the Macquarie and Castlereagh country, and should, I think, be laid out on the shortest route, which is by way of Ironbarks.

I should mention that from my present rather limited examination of the country I see no way of getting down the heavy descent from Orange to Molong; probably a line can be got, but I am quite confident it will be a very expensive one.—W.B.W., 2/11/75.

The Commissioner for Railways, 74/5,787. Engineer-in-Chief, 74/3,241.

## No. 6.

## Memorandum from the Engineer-in-Chief to Mr. W. B. Wade.

Government Railways, Engineer-in-Chief's Branch,  
16 December, 1875.

As it will be impossible to convince the advocates of the Molong line of the superiority of the line *via* Ironbarks, without some more information than we are at present in possession of, and as a Committee will most probably be appointed to investigate this matter, it will certainly be more satisfactory to the department

ment to be able to show by sections and estimates that the opinions we have expressed are correct. Will you therefore, as early as practicable, give instructions for a rough trial survey, as far (at any rate) as Molong. Cowdery will be absent on leave until the end of the month, and I fear I shall not be able to send you any assistance from here.

JOHN WHITTON.

I have obtained from Cowdery Donkin's level-book, and will plot the section from Orange to Broken-shaft Creek, and forward it. I shall probably see you here this week and receive your instructions as to what part of survey should be pushed. I saw a letter in an Orange paper from an advocate of Molong route, who evidently knows the country well; he admits the difficulties of Molong line to Wellington, and proposes to leave out Wellington. To carry out his views fully we should have to try the country I mentioned in one of my reports as a possible route to the Darling, viz., to take the shortest line from Orange to the head of the Bogan; this would of course omit both Wellington and Dubbo. It would be well to have definite instructions from the Government or the Legislature, whether an extension is to be made through Wellington and Dubbo, or simply the nearest route to Bourke. If the former, we shall have no difficulty, I think, in proving the superiority of the route *via* Ironbarks; if the latter, although Molong might be left to the right, it is possible a line might be got that would satisfy the arguments used by the advocates of Molong route in giving communication to the good country extending from Molong towards Parkes.—W.B.W., 19/12/75.

#### No. 7.

Mr. W. B. Wade to The Engineer-in-Chief for Railways.

Great Western Railway—Trial Survey, Orange to Wellington.

Bathurst, 21 February, 1876.

I ENCLOSE a section made by Mr. Cowdery from the table-land near Orange to Bell River, at Kangarooobie. This route was pointed out as the line Mr. Lord used to travel. If compared with the section from "Star Inn" to Broken-shaft Creek the cuttings will be found very similar, the greater fall in the Kangarooobie section being due to the lower level at which the Bell River is reached. It would no doubt be possible to run a sideling line down the terrace, but it would be very indirect and the works would be enormous.

I think these two sections show that any route to the north of Molong road is quite impracticable. I also enclose a note from Dr. Ross. Cowdery and I went with the Mr. Murray alluded to and examined the line he proposed: it is nearly parallel to the line we had selected, but, going more to the south and west, would be from 2 to 3 miles longer; it ascends and descends an additional 90 feet, and the works would be no lighter. Cowdery is now on the second length of the line we selected, and which I am confident is the best towards Molong.

W. B. WADE.

[Enclosure.]

The Honorary Secretary, Railway League, to Mr. Cowdery.

Dear Sir,

Molong, 8 February, 1876.

I have just seen Mr. Adam Murray, of the Meadows, near Orange, and he is quite prepared to point out a most excellent and cheap line of railway from Orange to Molong, totally different from the one you are now surveying. He desired me to write, informing you that if you call on him at the Meadows he will be happy to walk over the ground and point it out to you, or if you let Mr. Murray know he will meet you any day in Orange that would be most convenient for you to look at the line. Mr. Murray resides only a few miles from where you are now camping. The line that Mr. Murray knows leaves Orange behind Dalton's store and out by the race-course, and from what I can learn the most preferable route to adopt. Murray will take you as far as Boree Nore, and at this point Mr. Beadle will then pilot you on the rest of a suitable line into Molong. The most difficult part of the line is to get out of Orange, and Mr. Murray is evidently in a position to obviate this part of the difficulty.

You will therefore I hope endeavour to make arrangements with Mr. Murray when to meet; and when his part of the line is finished, Mr. Beadle (on writing to me) will bring you the rest of the way to Molong.

Yours, &c.,

DR. ROSS,

Hon. Secretary, Railway League.

#### No. 8.

Mr. G. Cowdery to The Engineer-in-Chief for Railways.

Trial Survey—Orange to Molong.

Sir,

Camp, Molong Creek, 9 March, 1876.

I have the honor to report that since my last I have traversed and levelled a portion of the route through Kangarooobie and forwarded plan and section of same to Mr. Wade. I have also completed the survey I was previously on to 20 $\frac{1}{4}$  miles 12 chains. I cross the Molong Creek at 199 miles 15 chains, with an embankment about 30 chains long and 55 feet in the deepest place. This is the heaviest work on the line. There will be three 40-foot cuttings 12 or 14 chains long, and the remainder more or less rough. On the whole line surveyed from Orange there will be about 5 $\frac{1}{2}$  miles of 1 in 40 gradient, the longest continuous length being 1 $\frac{1}{4}$  mile.

The line is not quite so bad as I expected, and the total distance to Molong I think will be about the same as the road.

Yesterday I rode over the remainder of the ground to Molong with one of the guides sent by the Railway League. To-morrow I shift camp to Coal Alley Gully and spring. It is not a convenient place, and water brackish; neither has the one been I am now at, as we have had to walk at least 2 miles to the nearest part of the line, but the water is getting very scarce everywhere.

I hope to complete the survey to Molong by about the end of this month, if I am not detained for water.

I have, &c.,

GEORGE COWDERY.

Do you wish Mr. Cowdery to continue the survey from Molong towards Wellington?—W.B.W., 11/3/76. To Engineer-in-Chief.

I do not understand this report. Is this survey an entirely new one from Orange, or is it a continuation of the line with the 1 in 10 gradient? I presume it is a new line, as Mr. Cowdery says there is

no

no incline from Orange more than 1 in 40. I have not received the plan alluded to by Mr. Cowdery. The survey should be continued to Wellington, so as to make a comparison with the other line by Ironbarks.—J. WHITTON.

Immediately after receiving your instructions to survey a line from Orange to Molong, Mr. Cowdery and I examined the country and fixed on a route, starting from the north end of the town of Orange, crossing Molong Road near to Ploughman's Creek, crossing Broken-shaft Creek close to the Forbes Road, going close to Heifer Station Inn on the Forbes Road, and then down Molong and Boree-Noir Creeks to Molong. This is the line Mr. Cowdery is now engaged on. A short time after this survey was commenced I received your instructions to survey the Kangarooobie route recommended by Mr. Lord. This was traversed and levelled, and plan and section forwarded to you. The section being quite impracticable, Mr. Cowdery returned to the first line as described above. I will endeavour to get the section from Mr. Cowdery to show to you when you are up here in April. The main question to decide is whether the survey from Molong should go through Wellington or go direct to Dubbo.—W. B. WADE.

---

No. 9.

Mr. G. Cowdery to The Engineer-in-Chief for Railways.  
Trial Survey—Orange to Molong and Wellington.

Sir,

Molong, 29 April, 1876.

I have the honor to inform you that I have now completed a little over 8 miles of the survey beyond Molong, in a direction to miss the three crossings of the Bell River. The ground is good so far, there being no cutting over 10 feet deep, and only four or five of them. For the next 6 or 7 miles I think it will be equally good, except perhaps a short piece between two hills just beyond where I have surveyed to; but I have very little hopes of making the whole distance to Wellington shorter than the road, if so short.

I shift camp on Monday to Smith's paddock, on a bend of the Bell River, about 12 miles from Molong.

I have, &c.,

GEORGE COWDERY.

No. 10.

The Engineer-in-Chief to Mr. Wade.

24 February, 1877.

THE plans of the extension, Orange to Wellington and Dubbo, by Ironbarks and Molong, are required at once for laying upon the Table of the Assembly and cannot wait until the lines are staked. I therefore wish you to send some one to take the references throughout for both lines and have them forwarded here as early as practicable. There must be no delay in this work, and probably two persons had better be employed—one from Orange to Dubbo by Ironbarks, and the other on the Molong portion.

JOHN WHITTON.

Fifteen reference sheets forwarded under separate cover.

Mr. Hardy has started to complete reference on the Ironbarks line, Mr. Cowdery on the Molong line. To expedite the latter line, Mr. Francis is taking the first five miles from Orange, which are too closely fenced to follow on horseback.—W.B.W., 5/3/77.

The Engineer-in-Chief has promised that the plans and books of reference shall be ready to lay before Parliament by the 20th instant. The books of reference must be forwarded to this office before that date.—W.H.Q., 13/3/77. Mr. Wade.

Reference only just received and forwarded by to-day's mail to Mr. Palmer.—W.B.W., 18/3/77. Mr. Palmer.—W.H.Q., 20/3/77. Reference of Molong line received on the 19th, and of the Ironbarks line, to Dubbo, received on the 20th instant.—H.P., 20/3/77.

---

No. 11.

The Engineer-in-Chief to Mr. Wade.

9 March, 1877.

A TELEGRAM appeared in the *Herald* of the 7th instant, of which the following is a copy:—

"Molong, Tuesday.

"Mr. Surveyor Cowdery reports that the land between Orange and Molong, along the proposed line of railway, is all taken up by farmers. The difference of population is five to one over the Ironbarks route."

IN this day's *Herald* the following paragraph appears:—

"Mr. Cowdery, Government Surveyor, has been in town during the week, his duty being to mark on a plan the point of contact of free selections with the proposed railway line on the road from Orange to Molong.

"This gentleman finds that the land is almost all taken up by farmers on the route mentioned, and gave as his deliberate opinion to a gentleman here, that the agricultural population of the police district of Molong, as actually shown by his plan, must be as five to one greater than at any other point between Orange and Bourke.

"Surely there could not be a greater argument than this in favour of carrying the projected line by way of Molong, which, according to this statement, must prove a settled district second to none in New South Wales."

You will be good enough to call upon Mr. Cowdery for an explanation of the circumstances under which the above information was made public.

W. H. QUODLING,

For the E.-in-C.

To Mr. Cowdery.—W.B.W., 10/3/77.

The only explanation I can give to the statements referred to in this memo., as also in the enclosed paragraph which I have cut out of the Molong paper, is that they are a tissue of lies from beginning to end, as no such information was given by me.—G.C., 12/3/77. To Mr. Wade.

To Engineer-in-Chief.—W.B.W., 13/3/77.

No. 12.

## No. 12.

Assistant Engineer to Mr. Wade.

27 March, 1877.

I ENCLOSE herewith a tracing showing the commencement of the line from Orange to Wellington, *via* Molong. Reference is required for the portions marked ×, instead of Nos. 1 and 2, as shown. Please let me have this as soon as possible to complete the book of reference.

J. W. DREWETT.

## No. 13.

Engineer-in-Chief to Commissioner.

7 April, 1877.

Extension of the Great Western Railway from Orange to Dubbo.

In attention to the Minister's memo. of the 27th ult., I forward comparative estimates, taken from the trial sections, of the cost of the Railway Extension from Orange to Wellington by way of Ironbarks and Molong.

The distance from Orange to Wellington, by way of Ironbarks, is 55½ miles, and by way of Molong 64 miles, being 8½ miles longer than by the Ironbarks route.

	£.	s.	d.
The total estimated cost of the line, if taken by Molong, is ... ..	417,298	15	3
Ditto if taken by way of Ironbarks ... ..	371,150	16	6

Difference in cost in favour of the route by Ironbarks ... ..	£46,147	18	9
---	---------	----	---

The line by way of Ironbarks is partly staked out, and by the end of this month I hope to have the working plan and section complete to Wellington. This work has been in hand about eight months, and tenders may be invited in May next.

By way of Molong no portion of the line has been staked, and if this route were adopted a delay of fully eight months must take place before tenders could be called for.

The line by way of Molong would take probably three months longer to construct than the line by Ironbarks, and, taking into consideration the delay of eight months in the preparation of the working plans and sections, the extension through Molong would take nearly twelve months longer to complete than that by way of Ironbarks.

The steepest gradient on both lines is 1 in 40; but the total length of steep gradients from 1 in 40 to 1 in 60 is in favour of the Molong route.

The nearest point at which the inhabitants of Molong could reach the railway by Ironbarks, measured in a straight line, is 13 miles, and the distance from Molong to Orange, over a good macadamized road, is 22 miles.

There are six bridges on the Ironbarks line, and seventeen on the Molong line.

Although the working plans and sections of this extension will only be completed as far as Wellington by the end of May, I purpose to call for tenders for the whole length from Orange to Dubbo.

As the contract will be let on a schedule of prices, sufficient information can be obtained from the trial section to enable any person to tender for the whole of the works. JOHN WHITTON.

P.S.—A detailed estimate showing the cost of the several works by each route is appended.

Comparative Estimates of the extension from Orange to Wellington, *via* Ironbarks, and *via* Molong, taken from the Trial Sections.

	Orange to Wellington.					
	<i>Via</i> Ironbarks.			<i>Via</i> Molong.

## No. 14.

The Secretary of Public Works to The Engineer-in-Chief.

Government Railways—Minute Paper. (Very urgent.)

Extension of the Great Western Railway from Orange to Dubbo.

WITH reference to the memo. of the Engineer-in-Chief for Railways on this subject, dated April 7th, 1877, number 77-2,022, I wish to be informed from what locality the timber required for the bridges on this length of Railway will be obtained, and whether the six bridges specified in such report as being required for the Ironbarks route, or the seventeen bridges required for the Molong route, will be constructed of timber.

2. When did the Engineer-in-Chief for Railways first receive instructions to have a tract of country surveyed for the Railway from Orange to Wellington, and from what Government were such instructions received, and were any directions given at the time as to the particular route to be taken?

3. Can the Engineer-in-Chief give me an approximate estimate of the area of land which the Government will have to purchase in constructing the Railway from Orange to Wellington by Molong, together with similar information respecting the proposed route by the Ironbarks?

4. Was the cost of the land required to be purchased by the Government included in the estimate in the memo. of April 7th, 1877.

Mr. Whitton, B.C., 14/4/77.—J.R.

J.H., 13/4/77.

### No. 15.

#### Telegram from Chief Clerk to Mr. W. B. Wade.

14 April, 1877.

FROM what locality could timber be procured for building bridges, Ironbarks route? State distance. Similar information required for Molong route. Reply.

W. H. QUODLING.

I believe stringy-bark piles and red-gum or box timber of only moderate quality can be obtained on both the Ironbarks and Molong lines within 9 or 10 miles from the Railway. At Wellington the road bridge is of ironbark of first-class quality. I believe it came from the Castlereagh River. Probably the Commissioner for Roads can give some information as to where it came from, and what it cost.

W.B.W., 15/4/77.

At a place called the Barks, about 20 miles from Wellington.—W.H.Q., 17/4/77.

### No. 16.

#### The Engineer-in-Chief to The Secretary for Public Works.

In reply to questions of the Minister (M.P. 77/2,169), relative to Extension from Orange to Dubbo, the following answers were returned:—

1. Stringy-bark, red-gum, and box timber of moderate quality, suitable for piles and bracing, can be obtained on both the Ironbarks and Molong routes within 9 or 10 miles of the proposed lines. Good ironbark timber for girders can be obtained about 20 miles from Wellington. The Estimates were prepared on the assumption that the bridges on both routes would be built of timber.

2. The first positive instructions that I can find to continue the survey from Orange to Wellington, by way of Ironbarks, were given on the 4th November, 1873 (as shown by the accompanying map), by Mr. Secretary Sutherland when Minister for Works in Mr. Parkes's Administration.

3. The length of line passing through Crown lands by the Ironbarks route from Orange to Wellington is 42½ miles, and the quantity of land required is 510 acres. The length of Crown land passed through by the Molong route is 28 miles, and the quantity of land required 334 acres. Therefore the quantity of land to be purchased will be as under:—

*Via* Ironbarks, 156 acres. *Via* Molong, 434 acres.

4. My estimate did not include the purchase of land.

Commissioner.

J.W., 16 April, 1877.

### No. 17.

#### Engineer-in-Chief to Commissioner.

23 April, 1877.

##### Orange to Wellington and Dubbo.

THE line by Ironbarks (to Wellington, 55½ miles) is 8½ miles shorter than the route *via* Molong (64 miles).

The cost of the Ironbarks line will be £46,000 less than that by Molong.

The steepest gradient on either line, that is by Ironbarks or Molong, is 1 in 40; and although the total length of this incline is in favour of the Molong line, yet the same engine would take the same weight of load over either line.

The line by way of Ironbarks to Wellington is nearly all staked out, and the contract section taken. If this route be adopted tenders may be invited immediately.

If the route by Molong to Wellington be adopted tenders cannot be invited in less than eight months; and as this length would take at least three months longer to construct, a delay of twelve months would take place in opening up railway communication with Wellington.

The nearest point at which the inhabitants of Molong could reach the railway by Ironbarks, measured in a straight line, is 13 miles, and the distance from Molong to Orange over a good macadamized road is 22 miles.

There are six bridges, estimated cost, £5,775, on Ironbarks line; and seventeen, estimated cost, £15,592, on the Molong line.

The river Macquarie at Wellington will be crossed by a wrought iron bridge, having three spans of lattice girders of 150 feet each in the clear, and one span on each side of the river of wrought-iron plate girders of 66 feet each, making a total length of wrought-iron girders, including the width of piers, of 658 feet. The lattice girders will be carried on cast-iron columns 9 feet in diameter, filled up with concrete.

The remainder of the line to Dubbo is through a very easy country, and although inclines of 1 in 40 are used, they are very short and will not interfere with rapid running. There is no curve on this portion of the line of a less radius than 40 chains.

The total length from Orange to Dubbo is about 86 miles, or 278 miles from Sydney.

The proposed line from Orange to Parkes will pass within about 8 miles of Molong, and a station might be erected in a convenient position for this town.

JOHN WHITTON.

P.S.—Diagram, plan, and section showing the routes *via* Ironbarks and *via* Molong respectively are forwarded herewith.

No. 18.

## No. 18.

Engineer-in-Chief to Commissioner.

Department of Public Works, Railway Branch,  
Sydney, 24 July, 1877.

Plans, &amp;c., to be laid before Parliament, Molong route.

IN compliance with the Order of the House of Assembly, I forward herewith copies of all correspondence with reference to the proposed Railway from Orange to Wellington, *via* Molong, since the 24th February last.

The undermentioned plans, &c., are also forwarded to be laid on the Table of the Assembly—*as Exhibits only—viz. :—*

1. Plan of line, Orange to Wellington, *via* Molong, in two parts.
2. Sections of                      *do.*                                      *do.*
3. Book of reference.
4. Comparative sections of routes *via* Ironbarks and *via* Molong.
5. Diagram plan showing both routes.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## RAILWAY STATION, LITHGOW.

(PAPERS, &amp;c.)

*Ordered by the Legislative Assembly to be printed, 24 April, 1878.**[Laid upon Table in accordance with promise made in answer to Question 7, Votes No. 52, 3 April, 1878.]*

RETURN of Copies of Papers in reference to the Railway Station at Lithgow Valley, laid upon the Table of the Honorable the Legislative Assembly of New South Wales, in accordance with the answer given to the Honorable Member for Hartley, on 3rd April, 1878, and in continuation of a Return on this matter, already printed by order of the Legislative Assembly of 17th May, 1877.

## SCHEDULE.

NO.	PAGE.
1. Letter from Messrs. Combes and Hurley, that nothing has been done towards making the approach. 15 May, 1877	2
2. Letter from Commissioner for Railways, in reply. 29 May, 1877	2
3. Letter from Mr. P. Higgins, requesting a fulfilment of promise to erect a station at Lithgow. 24 November, 1877	2
4. Minute of Secretary (Railways), requesting the Acting Traffic Manager to furnish a return of traffic. 28 November, 1877	2
Return of traffic for six months. 30 November, 1877	3
5. Minute of Secretary (Railways) as to amount of traffic and if there is land enough for a station. 4 December, 1877	4
6. Minute of Secretary for Public Works, approving of erection of station buildings at Lithgow. 4 December, 1877	4
7. Letter from Mr. D. Williams, inquiring if a siding will be put in for the Eskbank Iron Company. 9 January, 1878	4
8. Return of traffic at Lithgow and Eskbank	4
9. Minute of Secretary for Public Works, directing the Commissioner, Engineer for Existing Lines, and Traffic Manager to visit locality and report as to most suitable site for station buildings. 28 January, 1878	5
10. Minute of Commissioner for Railways, that he has visited Lithgow, and will report on best site for station, &c., when surveys are completed. 3 April, 1878	5

## RAILWAY STATION, LITHGOW.

---

No. 1.

E. Combes and J. Hurley, Esqs., M.P., to The Secretary for Public Works.

Sir,

Sydney, 15 May, 1877.

We beg to state for your information that we have this evening received a letter from Lithgow saying the platform would be completed in two days, but that nothing had been done towards making the approach which passes through Gray's paddock; and requesting that the Minister for Works should be communicated with at once on the subject, so that there be no longer delay than is absolutely necessary.

We have, &c.,

EDWARD COMBES.  
JOHN HURLEY.

---

Mr. Mason, for report.—J.R., 18/5/77. Instructions have been given for this approach to be made.—W.M., 19/5/77. Commissioner. Inform.—C.A.G., 25/5/77.

---

No. 2.

The Commissioner to E. Combes and J. Hurley, Esqs., M.P.

Gentlemen,

Department of Public Works, Railway Branch, Sydney, 29 May, 1877.

I have the honor to acknowledge the receipt of your letter of the 15th instant relative to the platform at Lithgow, which you state you have been informed will be completed in a few days, but that nothing had been done towards making the approach which passes through Gray's paddock; and to inform you that instructions have been given for this approach to be made as soon as possible.

I have, &c.,

JOHN RAE,  
Commissioner for Railways.

---

No. 3.

Mr. P. Higgins to The Commissioner.

Sir,

"Royal Hotel," Sydney, 24 November, 1877.

I beg to refer you to the correspondence which passed between us in February and March last respecting the erection of a Station at Lithgow.

In my letter of February 27th I requested that a platform might be erected at Lithgow, and a record kept for six months of the business transacted there and at Eskbank—the result to decide which situation was most convenient to the public as the site for a Station; and if the experiment did not unmistakably prove in favour of Lithgow, I undertook to pay the cost of erecting and removing the said platform.

You will remember that you replied on the 21st March, stating that the Minister for Works considered my proposal was a fair settlement of the question and accepted my offer.

As eight months have now elapsed, and the record kept so far leaves no doubt of the great superiority of Lithgow over Eskbank (both for passengers and goods traffic), I beg now to request that you will see to the fulfilment of the promise given by the Minister, as the increasing traffic and business requirements of the town urgently demand accommodation which a mere platform fails to supply.

I have, &c.,

P. HIGGINS.

---

No. 4.

The Secretary for Railways to The Acting Traffic Manager.

THE Acting Traffic Manager will furnish without delay a return, showing the inwards and outwards traffic at Lithgow for the past six months,—

Goods,  
Mineral traffic,  
Passenger traffic,

to enable the Minister to judge of the necessity for a station at this place.

C.A.G., B.C., 28/11/77.

Very urgent.

---

Return enclosed.—T. CARLISLE (*per* H. RICHARDSON), 30/11/77. The Secretary.

---

\* In May and June all passengers were charged as if coming from Brown's Siding, we having no tickets for Lithgow at this time.  
 \* Exclusive of coal used for Government Locomotives—say 10,000 tons.—C.A.G. In six months:—Passengers, No., 483. Goods, tons, 334. Minerals, tons, 14,008.

J. L. MORTON,  
 Pro Station-master, 30/11/77.

## No. 5.

## Minute of The Secretary for Railways.

THE traffic at this place is much larger than at many places where Station house and goods shed accommodation are provided. Will Mr. Mason please report whether the site for the platform affords a good site for Station buildings, &c., and, if so, whether there is sufficient land within the railway fences for the purpose, should the Minister decide to erect?  
C.A.G., B.C., 4/12/77.

## No. 6.

## Minute of The Secretary for Public Works.

IF there be not sufficient land, additional land should at once be obtained, as from these statistics it is clear that station buildings should be erected at Lithgow.

I approve of their erection, the expense to be charged to Schedule G.  
Mr. Mason.

E.C., 4/12/77.

I will have a survey made to ascertain what additional land is required.—W.M., 7/12/77.  
Commissioner.

And when the survey is made I should be glad to see it before any further steps are taken.—J.S., 7/1/78. Mr. Mason, B.C., 8/1/78.—C.A.G.

I have shown the plan of the site of proposed Station to the Minister, as requested. After I have laid down the Station arrangement upon it I will submit it again to the Minister for his approval before any works are commenced.—W.M., 9/1/78. Mr. Goodchap.

## No. 7.

## Mr. D. Williams to The Commissioner.

Sir,

Macleay-street, Sydney, 9 January, 1878.

At the request of the Eskbank Iron Co. I am directed to inquire if you will put a siding at Brown's Siding, 94 miles 45 chains 95 links, on the opposite side of the line to Mr. Brown's, for the Company's use, they agreeing to enter into the usual bond or guarantee.

Some months ago verbal application was made, but owing to a discussion about the position of the proposed Lithgow Station, nothing was done.

Should this spot be chosen for the proposed Station for Lithgow, the Company wish to have points put in, so as to run a line into the Company's property, crossing the old road known as "Bell's Line," at or about the spot named, 94 miles 45 chains 95 links.

I am, &amp;c.,

DANIEL WILLIAMS.

T. CARLISLE,  
Traffic Manager.  
per J. B. GOOLD.

## No. 9.

## Minute of The Secretary for Public Works.

Siding accommodation at Lithgow Valley.

I wish the Commissioner to take an early opportunity of visiting Lithgow, taking with him, if he thinks it desirable, the Engineer for Existing Lines (who should be consulted in all cases on the best means of providing the accommodation so urgently required to meet the demands of Traffic Branch), and with the Traffic Manager make a thorough inquiry into the present and probable traffic, and where it is likely to centre, with a view to the selection of the most suitable site for Station buildings, and save the extraordinary loss on working the rolling stock for want of proper siding accommodation at this place.

Upon this matter will depend the points of sidings for private companies at Lithgow, so long applied for and so urgently required by these companies, and cannot longer be delayed.

JOHN SUTHERLAND,  
28/1/78.

I shall be glad if Mr. Mason will name a day which will be convenient to him.—C.A.G., 1/2/78.

On Tuesday morning, the 5th instant.—W.M., 2/2/78. Commissioner.

I must ask Mr. Mason to postpone this for a few days, as I shall be unable to leave Sydney till about the end of the week.—C.A.G., 4/2/78.

Seen.—W.M., 4/2/78. Commissioner.

## No. 10.

## Minute of The Commissioner.

*Subject* :—Lithgow.

I VISITED Lithgow in company with the Engineer for Existing Lines, and made the inquiry suggested by the Minister in his Minute 28/1/78. There can be no doubt that the large and increasing traffic at this place—estimated to amount to 150,000 tons annually—necessitates early provision being made to meet it in the shape of siding accommodation and Station arrangements. When the surveys now being made under the direction of the Engineer for Existing Lines are completed, sufficient information will be afforded to enable a report to be made as to the best situation for the proposed new Station, goods-shed, weigh-bridge, and sidings.

C.A.G., 3/4/78.

Seen—expedite the report as much as possible.—J.S., 4/4/78.

1877-S.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## GOODS TRAINS BETWEEN BATHURST AND BLAYNEY.

(EVIDENCE, MINUTES, AND PAPERS, RESPECTING IRREGULAR RUNNING OF.)

*Ordered by the Legislative Assembly to be printed, 16 May, 1878.*

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 12th March, 1878, That there be laid upon the Table of this House,—

“Copies of all Evidence, Minutes, and Papers on the subject of the irregular running of Goods Trains between Bathurst and Blayney on the 24th May last.”

*(Mr. Murphy, on behalf of Mr. Thompson.)*

## GOODS TRAINS BETWEEN BATHURST AND BLAYNEY.

## No. 1.

## Locomotive Foreman's Report, and Minute from Minister.

Memorandum to Mr. Wm. Scott.

Sir,

Government Railways, Bathurst Station, 24 May, 1877.

Engine 27 with a special goods train had just started at 11.45 a.m. to-day, and had got as far as the gates at Vale Road crossing when Driver Edward Burrows saw engine 63 approaching from Blayney; the driver of 63, John Davidson, also saw the steam from 27, and thinking she was shunting at the Bullock Road he slackened speed. Driver Burrows backed up the yard out of his road. The Traffic Manager and Inspector Goold were both here at the time.

Yours obediently,  
J. TURTON.

W. Scott, 25/5/77. Mr. Mason.

The Traffic Manager to report at once respecting this matter, and suspend, pending further inquiry, the official who was responsible for the starting of the special goods train.—J.H., 25/5/77.

Mr. Vernon, 25/5/77.—J.R. See report attached.—D.V., 27/5/77.

## No. 2.

## Traffic Manager's Report to Commissioner.

REFERRING to the facts reported, they occurred while I was at Bathurst, and were immediately and fully investigated.

It is correct that just as a special train which was *due* to leave Bathurst for Blayney at 11.45 had started, a train was perceived coming into Bathurst yard from the direction of Blayney.

This latter train was, however, wholly unauthorized, and the guard of it (Jeffries) is the person principally responsible for its running, and the one under suspension.

It had been arranged the previous evening by Inspector Goold with Mr. Higgs, the Station-master, and Mr. Turton, the Locomotive Inspector, that No. 14 down-goods should run in two portions—the mail engine (63) in charge of Guard Jeffries with the first at 7.10 a.m., and the goods engine with the second in charge of Guard Morrison at 7.30 a.m. Both trains were to cross the up-passenger at Back Creek and then proceed to Orange, returning as usual. It was further arranged between these officers that the passenger engine should make a trip to Blayney, leaving Bathurst at 11.45 a.m., and of this Blayney was duly informed by Mr. Goold in writing. The surprise of myself as well as of Inspector Goold was painfully extreme to witness the arrival of the No. 63 at Bathurst at just the time the special was due out, and so was Mr. Turton's. Upon examining the guard Jeffries, he stated that "he had returned from Blayney because he understood he *was* to do so." When questioned as to the reasons or ground for such an understanding on his part, he explained "that prior to starting, Mr. Higgs mentioned to him that he had better proceed to Blayney, and that there the second engine would take on half his load, and he inferred that of course he was to return even if nothing definite was said about returning, of which he would not be certain, and that he had *targeted* the up-passenger accordingly for the protection of his own train."

Mr. Higgs "could not recall having said anything of the kind to Jeffries, and does not think he did so, although he was of the impression before the train left that the mail engine was to go no further than Blayney, and that Jeffries was to return, but still he had given him no *instructions* to do so."

Jeffries upon being further questioned as to what he would have done but for the remarks which he alleged took place between himself and Mr. Higgs, stated clearly that "he would have gone straight to Orange."

I think it is only reasonable to suppose that, without doubting Mr. Higgs's statement for a moment, as Mr. Higgs was evidently under the impression that Jeffries *was to return*, he may have dropped incidentally some remarks which led to the same impression being made on Guard Jeffries' mind, otherwise it is difficult to account for Jeffries' action.

Whence Mr. Higgs derived so different an understanding to that of either Mr. Goold or Mr. Turton may perhaps be traced to that part of the arrangements made the previous evening which related to the trip of the *passenger* engine to Blayney only.

I may here give copies of the memoranda given in writing and acknowledged by the Guards Morrison and Jeffries, and Station-master, Blayney:—

"Memo. to Guard Jeffries.

"You will leave Bathurst to-morrow morning at 7.10 a.m. sharp, and cross No. 6 up at Back Creek—your train is first portion of No. 14 down.

"J. B. GOOLD,  
"Traffic Inspector, 23/5/77."

"Memo. to Guard Morrison.

"You will leave Bathurst at 7.30 a.m. sharp to-morrow morning for Orange, and cross No. 6 up as usual at Back Creek.

"J. B. GOOLD,  
"Traffic Inspector, 23/5/77."

"Memo. to Station-master, Blayney.

"A special will leave Bathurst for Blayney to-morrow at 11.45 a.m., and meet No. 10 up at Blayney at 2 p.m. She will return from Blayney attached to No. 10 up.

"J. B. GOOLD,  
"Traffic Inspector, 23/5/77."

Guard

Guard Jeffries evidently left Bathurst under the idea that he was to return, as he took the precaution to target the *up passenger* which he met at Back Creek and before he reached Blayney. Upon arrival at the latter station he so informed the Station-master there, and upon mention being made of the special which was to leave Bathurst at 11.45 a.m., Jeffries informed the Station-master that he had to return with it, and arranged that No. 10 up goods was to wait until he got back to Blayney. Jeffries states that he was not aware of the special having to leave Bathurst at 11.45 a.m. until the Blayney Station-master told him; but upon hearing it he immediately gathered that he would have to run it, and became the more confirmed that he had to return as soon as possible to bring it—hence, no doubt why he told the Station-master that he had to return as soon as he could, and was allowed to depart from Blayney.

The whole was a result of a most unfortunate, and to a certain extent, inexcusable misunderstanding, and it was a most fortunate thing that the two trains did not meet on the road.

For the guard it may be said—1st, he thought he was doing his duty and for the best; and 2nd, he targeted the preceding train, which would have prevented the mistake had not Mr. Higgs been also under a wrong impression. When he saw the target he understood to what it referred, and before the special started asked Mr. Goold if arrangements “had been made for special to cross,” or some such words, in my hearing—but Inspector Goold having no idea of the train which was coming, understood Mr. Higgs to refer to the crossing or meeting which had been arranged for between the special and the No. 10 up goods, which was the only train the special could meet according to authorized arrangements, and of course Mr. Goold replied in the affirmative.

These are the facts of the case, and I forward them for the information of the Commissioner. This event is an illustration of the *difficulty* and *anxiety* attending the working of traffic over lines of railway without efficient means of telegraphic communication, and it is also a forcible proof of the propriety of my views and action with regard to the introduction of the “staff and ticket” system (especially where the telegraph wire is wanting,) under which no such thing as a collision from trains *meeting* one another could take place. Since the Commissioner sanctioned my doing so, we have got the system into working between Bowning and Murrumburrah, and everything in readiness for putting it into operation beyond Bathurst. In fact it was part of the business which took me to the Western District to arrange for it.

The staffs, boxes, and ticket-books, accompanied or, strictly speaking, followed me, and before this week is over they will be in use.

I desire however to take advantage of this fortunate escape from accident, to urge upon the Commissioner the great importance of doing all we can for providing and improving the means of telegraphic communication. No extension of line ought to be handed over for traffic without them if possible, and I hope for the future the telegraph wire will at least keep pace with the rail—but it is the business of the *Railway Department* to see that such is the case. I am greatly indebted to Mr. Cracknell, the Superintendent of Telegraphs, for the way in which he has pushed on the Southern Railway wire. Murrumburrah was brought into circuit last week, and I shall be very thankful when the same can be said of stations beyond Bathurst.

Meantime, I beg respectfully to refer the Commissioner to my minute of 30/1/77 on this subject, and more especially to my report of 23/1/77. I do hope some action will be taken upon the latter, as our *one western wire* is quite inadequate for the work we have to do upon it.

I have made no recommendation as to the punishment which should follow upon the circumstances which occurred at Bathurst, pending an interview with the Commissioner on the matter.

D. VERNON, 27/5/77.

### No. 3.

#### Minute of Commissioner.

THE muddle in this case, which might have led to disastrous consequences, commenced with the indefinite instructions issued by Mr. Goold. Mr. Higgs and Guard Jeffries are also censurable for giving or receiving verbal instructions which neither of them professed fully to understand. The guard is much to blame for working a train without clear instructions. The Station-master at Blayney was, perhaps, most to blame for allowing the train to start without being satisfied that the line was clear; such misconduct cannot be overlooked. Guard Jeffries will be dirated for six months with a reduction of 6d. a day, and the Station-master at Blayney fined a week's pay.—J.R., 1/6/77.

Traffic Manager, B.C., 2/6/77.—C.A.G. Secretary.—D. Vernon, Traffic Manager, *per*  
T. Elliott, 22/6/77. Accountant, B.C., 27/6/77.—C.A.G. Noted.—F.J.W., 4/7/77. Secretary.

### No. 4.

#### Station-master, Bathurst, to Commissioner.

Sir,

Bathurst, 26 June, 1877.

Having received from Mr. Inspector Goold a minute dated 9th June, 1877, 3029, as follows:—

“The following is an extract from the Commissioner's minute of the 1st instant, relative to a special train leaving Bathurst Station on the 24th ultimo, just as another train was approaching the station from an opposite direction, though fortunately without having collided:—

‘Mr. Higgs and Guard Jeffries are censurable for giving or receiving verbal instructions which neither of them professed fully to understand.’

“By order,

“J. B. GOOLD,

“Traffic Inspector.”

I beg leave to submit that I did not give *any* instructions to Guard Jeffries in reference to these special goods trains, nor am I in any way to blame in the matter. I therefore most respectfully ask you to do me the justice to hold a full investigation into the circumstance, and give me an opportunity of clearing myself.

I may add, I have not had the privilege of seeing the papers relating to this matter.  
Hoping you will have the kindness to grant my request,—

I am, &c.,  
ED. HIGGS.

Will the Traffic Manager have the kindness to forward this.

Will Commissioner please let me have papers, as I do not remember his authorizing this extract to be conveyed to Mr. Higgs.—D.V., 28/6/77. Commissioner. Herewith.—B.C. 14/7/77, C.A.G.

Mr. Higgs has seen these papers.—D.V., 23/7/77.

## Reports of accident by Engineer for Existing Lines Branch.

Telegram from Inspector Hollis, Bowenfels, Zig-zag, to Mr. Mason.

STATION brake-van and five trucks got off the line at bottom points, Lithgow Zig-zag. Cause of accident, points not being properly held over. Brake-van got on two roads. Line is open for traffic.  
11:15 a.m. 5th November, 1877.

Telegram from Driver Childs, Zig-zag, to Mr. Tipping, Penrith.

BRAKE-VAN and five trucks off road at bottom points. Line blocked.  
3:45 a.m.

5/11/77.

## Memo.

For the information of the Locomotive Superintendent. I have just heard, 7:30, that No. 18 up goods has arrived at Mount Victoria, but no particulars to hand. Will send as soon as received.

Mr. Scott.

J. TIPPING.

5/11/77.

Telegram from J. Tipping, to Mr. Scott, Locomotive Superintendent.

BRAKE-VAN and five trucks off the road at Lithgow, bottom points, No. 18 up goods line blocked. I have just heard that up mail left there. Will let you have further particulars as soon as I can.  
5:35 a.m.

5/11/77.

Telegram from J. Tipping, Penrith, to Mr. William Scott, Locomotive Superintendent.

EXAMINER Perry reports that brake van No. 40, which is off the road and on its side at Lithgow, bottom points, will have to be taken to pieces, the body is much broken, and iron-work of under carriages is badly damaged.

10:30 a.m.

5/11/77.

Engineer for Existing Lines.—J.C., for W. SCOTT, 5/11/77. Commissioner to see.—W.M., 5/11/77.

Memo. to W. Mason, Esq.

Sir,

Bowenfels, 5 November, 1877.

I beg to report for your information:—On Monday morning, the 5th instant, when No. 18 up goods train arrived at the bottom points, Lithgow, the engine took water at the top crane, and when proceeding up the middle road the brake-van got on two roads at the points. The brake-van and (5) five trucks got off the road; the brake-van ran about 70 yards and then turned over. There was one A truck loaded with wool also turned over.

Amount of damage done to the road:—One switch rail bent, one right hand heel chair broken, one double-headed rail broken, and seven common chairs broken.

The points were in good order when this happened. The wheel and the timber that the wheel is fixed on belonging to the distant signal wire is broken. Please to send a man to fix it.

Yours obediently,

JOHN HOLLIS.

Memorandum to the Locomotive Superintendent.

Mr. Scott,—

Sir,

Engineer's Branch, Penrith, 5 November, 1877.

Driver Edward Childs, engine No. 95, with No. 18 up goods, on the night of the 4th, reports that at 11:50 o'clock, after taking water at Lithgow, he sounded his whistle, and, as usual, the assistant guard was on the step of the engine; Childs asked if all was right, the reply was "all right," and after setting back some distance he felt a jerk, he then felt sure that something was wrong and stopped, and before coming to a stand felt another severe jerk; after stopping he went to see what was wrong, and found the guard's van and five trucks off the road. The guard's van No. 40, and A truck No. 17, turned over on their sides, the van completely turned round; the line was blocked both roads; he sent for assistance and commenced to clear the line; the trucks were got on, and line clear for up mail at 5:50 a.m. this morning. Childs cannot account for the van leaving the rails, unless the points were not properly closed.

The

The following trucks were off the road:—A No. 17, headstock damaged, one buffer broken, both draw bars bent and chain broken, brake rack broken and lever damaged, one end board split; A 47, one buffer head damaged; D 816, D 734, and B 7, were off the road, but very little damage done to them, and are gone to Sydney. Brake-van No. 40 Perry reports as very badly damaged under frame and top, and says it will have to be taken to pieces.

If I possibly can I will go to Lithgow by No. 1 down goods to-morrow morning, and report as to the state the van is in.

Yours obediently,

J. TIPPING.

Mr. Mason.—W.S., 6/11/77. Forwarded for Commissioner's information.—W.M., 6/11/77.  
Seen. Too many of these accidents lately.—J.R., 7/11/77. Traffic Manager, B.C., 7/11/77.—L. P. IREDALE, *pro* Secretary.

Existing Lines Branch, 14 November, 1877.

THE following is the estimated cost of repairing the damage done to rolling stock at the accident at Lithgow, on 4th instant:—

Goods brake van No. 40.....	£150	0	0
		30	0

Total.....	£180	0	0
------------	------	---	---

W. SCOTT.

Damage caused by points being half open.—W.M., 16/11/77.

No. 2.

Reports of accident by Traffic Branch.

Mr. Hornidge,

Sir,

Lithgow Zig-zag, 5 November, 1877.

I beg to report on arrival of No. 18 up goods, they took water at the top crane to enable them to take a good run at incline of middle road—by so doing the brake-van and five trucks got off the road. The brake-van is lying here a total wreck, and about 30 bales of wool on the ground.

The assistant guard informed me that he examined the points before giving engine water, which were all right, and they were not broken in the accident. From the place where I can first track them off the road to where they stopped is between 70 and 80 yards.

They had a very light load on twelve sheeted trucks.

I remain, &c.,

W. CHANDLER.

Telegram from Inspector Hornidge, Orange, to Traffic Manager, Sydney.

Owing to telegraph communication being interrupted, have only just heard of accident at Zig-zag. Will investigate the matter to-morrow morning. I am arranging for a special to take on the trains delayed.  
2:55 5/11/77.

Traffic Manager,

Wallerawang, 6 November, 1877.

When at Orange yesterday I received a telegram from the Station-master at Bowenfels informing me of the accident to No. 18 up goods, at Lithgow Zig-zag, yesterday morning. Owing to telegraphic communication being interrupted, the information did not reach me in sufficient time to enable me to visit the scene of accident before this morning.

It appears from the statement herewith of the guards, that on arrival of the train at Lithgow bottom points it went on to the top or furthest crane for the purpose of watering the engine, and having done so put back to ascend the middle road, when the brake-van left the rails at the facing points, and after running, seemingly partly on and partly off the rails for about sixty yards, went off altogether. The train being still in motion, it was forced completely round and capsized into the space between the lower and middle roads—the concussion overturning a truck laden with wool, and throwing four others off the line.

This accident undoubtedly arose from a disregard of Rule 90. *There was no one at the points.*

Both guards assert that the points were examined and found to have fallen back properly after the train passed them the first time, but that is not sufficient—they should be held by the assistant guard; and Guard Morrison, at all events, who was for some time assistant guard of the through goods trains, must have known that this was necessary.

Watering the engine at the top crane is unusual, and could only have been done with a view of getting a run at the incline on the middle road; it would be impossible for the assistant guard to get on the engine at the points under such circumstances, and from the distance the brake travelled after getting off I am inclined to believe that they were going over their facing points at considerable speed. I cannot say whether the driver knew that there was no one at the points, but from the fact of the assistant guard being on the engine with him I should imagine such was the case.

The damage done is not so serious as might have been expected. The windows and light wood-work of the brake van are broken and splintered, but the framing and heavy timbers appear to have escaped damage. The wool is uninjured, and has been re-loaded to day. Guard Morrison's escape from serious if not fatal injury was little short of miraculous. He was in the van when it capsized.

I consider both guards and driver to blame—Morrison being in charge of the train, especially so. I have no doubt however that Morrison's narrow escape will make him more careful for the future, and having already insufficient guards to meet the requirements of the traffic, I would recommend that whatever punishment is necessary to meet the case may be inflicted in the shape of a fine.

M. A. HORNIDGE,

Acting Traffic Inspector.

[Enclosures

## [Enclosures to No. 2.]

*William Morrison*, guard of No. 18 up goods, states as follows:—On the morning of Monday, November 5th, we arrived at Lithgow bottom points to time. The driver pulled to the top crane for water; assistant guard Simpson got down as we crossed the points to see that they were properly closed; he reported to me that they were closed; after taking water, Simpson, who was on the engine, ordered the driver to start up the middle road; I was in the brake-van re-lighting my lamp which had been extinguished by the wind; the van shortly after starting left the road, as far as I could judge, about ten feet from the points; there was no one at the points; I was not aware of this when we started; I had previously ordered Simpson to steady the points whenever the train passed over them.

W. MORRISON.

*John Simpson*, assistant guard of No. 18 up goods, states as follows:—On Monday morning as soon as we arrived at the bottom points, I got out of the van and went to the points to see that they had fallen back properly—I found them closed; I am quite sure of this as I put my hand on the lever so as to have no doubt about it; after that, I went to the top water crane to give the engine water; as soon as that was done the driver asked me if it was all right; I said yes, all right; I knew no one was at the points; I had not received orders from Morrison to go to them; I believe Morrison knew I was at the engine; on starting the driver went very fast; had I been at the points it would not have been safe for me to have got on the engine as it passed the points.

JOHN SIMPSON.

## No. 3.

## Traffic Manager to Inspector Hornidge.

THE fact of the examination of the points in the first place by the assistant guard, and his reporting to head guard that they were properly closed, together with the facts of the driver running up to the far crane for water, and then coming back at a speed which he must have known would prohibit any one being picked up at the points, would lead me to believe that both guards and driver were all aware and agreed together to dispense with the steadying of points. If so, then head guard is certainly chiefly to blame, although Simpson and the driver are also to blame for acquiescing in any such arrangement.

The speed at which the train was driven over these points had no doubt very much to do with the accident.

I should like, however, a little further information upon the point in which Morrison and Simpson appear to contradict each other. The former states that he had previously instructed his assistant to steady the points when trains were passing over them. Simpson does not admit this, but he was perfectly aware that they should have been steadied from his experience more especially as a shunter. What has Morrison been in the habit of doing?

D. VERNON,  
8/11/77.

## No. 4.

## Further Report from Inspector Hornidge.

I HAVE questioned Morrison and Simpson face to face respecting the apparent discrepancy in their statements.

Morrison repeats his statement that he gave Simpson orders to examine, hold, or steady, as required, the points at the Zig-zags whenever they had occasion to pass over them. Simpson acknowledges to having received this order on their first journey, but explains that he understood me to refer to the second (the date of the accident), on which the order was not repeated. Morrison replies that having given a plain direction once he saw no reason for repeating it.

The guards positively deny any pre-arrangement with the engine-driver. Morrison states that as soon as the driver started, which both state he did at a great pace, he was aware that they were going too fast to take the curve with safety; and, his hand lamp being out, he was unhooking a side lamp for the purpose of giving a red light when the accident occurred.

Morrison had only joined this train two days before—having latterly been employed between Bathurst and Orange. He informs me that during the time he was assistant on the through goods he does not remember any driver starting to go up the middle road at such a speed, nor without his being at the points.

One matter I would call attention to: The driver started on the verbal order of the assistant guard, instead of waiting for the usual signal from the guard in charge of the train.

Traffic Manager.

M. A. HORNIDGE,  
13/11/77.

## No. 5.

## Report of Investigation held by Acting Traffic Manager and Engineer for Existing Lines.

Government Railways.—Minute Paper.

Subject:—Accident to Goods Train at Lithgow Zig-zag, 4th November, 1877.

To Commissioner for Railways,—

Along with Mr. Mason, Engineer for Existing Lines, I proceeded to Penrith this morning to investigate this matter, and on examining head guard Morrison and assistant guard Simpson, we arrived at the conclusion that the accident was caused solely through the want of a man to steady the points when the train backed up the middle road.

This was Simpson's duty, and beyond stating that he examined the points before the train began to back, he cannot give any explanation of his carelessness. I have therefore suspended Simpson, and on reference to the offence book I find that he has been once cautioned, twice reprimanded, and once fined for carelessness in attending to points, since July, 1876. I now recommend that assistant guard John Simpson be dismissed.

THOMAS CARLISLE,  
Actg. Traffic Manager,  
30/11/77.

I have inquired into this accident in company with Mr. Carlisle, and I think Simpson, the second or assistant guard, is alone to blame, and ought, I think, be dismissed.—W.M., 3/12/77. Commissioner. Approved.—4/12/77, J.R. Acting Traffic Manager, B.C., 5/12/77.—C.A.G. Seen.—T. CARLISLE, per H. RICHARDSON, 6/12/77. The Secretary.

[Enclosures to No. 5.]

Inquiry into cause of Accident, Lithgow Zig-zag, 30/11/77. Held at Penrith.

*William Morrison states*:—I am a railway guard, and was so on the 4th November last, of No. 18 up goods train.

*Examined by Mr. Carlisle*: We arrived at bottom points, Lithgow, at about 11.40 p.m., on the night of the 4th November; I told assistant guard Simpson to get out and steady the points; he told me afterwards that he had been to the points and saw they were properly closed; the engine took water at the top crane, and while taking water the wind blew my hand-lamp out; it was a very windy night; I did not give the driver any signal to come back; the train was pushed back to the points and I then felt the brake jerk; I looked out to see where I was and saw that the train had passed over the points; I tried to take the side lamp out to give the stop signal, not having been able to light my hand-lamp; they were about three minutes taking water.

*Examined by Mr. Mason*: It is usual after taking water for the assistant guard to tell the driver "All Right"; I did not look out to see where Simpson was until I felt the jerk.

*Examined by Mr. Carlisle*: When I was assistant guard I invariably steadied the points referred to.

*Examined by Mr. Mason*: No one was at the points at the time of the accident; the train consisted of twelve trucks (loaded) and brake-van; the distance from where the brake-van stood is about fifty yards from the points; the driver was going too fast for me to get out of the brake; he did not come back quicker than usual; I never saw any one get on the engine at the points; when water has been taken at the top crane during the night I think the train has run over these points without any person being at the points; I did not know until I looked out of the brake-van but what Simpson was at the points; I do not think they clean these points on Sunday. W. MORRISON.

*John Simpson states*: I am an assistant guard, and was so on the night of the 4th November last, of No. 18 goods train; on arriving at the bottom points, Lithgow, I got out of the brake-van and put my hand on the lever and found they were properly closed; the points set to the middle road and anything coming from the water crane, if the points were properly closed, would run on the middle road; I have been assistant guard about two months; I think Morrison said something about the points as I got out of the brake-van—I believe he told me to see that the points were properly closed.

*Examined by Mr. Mason*: Morrison knew I had gone to the top crane to give the engine water; the engine was about five minutes taking water; this is the only time the engine has taken water at the top crane since I have been assistant guard; the driver asked me if it was "all right," and I said "all right"; so far as I know I expected the points were all right; it did not strike me that I should go and steady the points as directed by Morrison; I took it for granted that the train could run over the points safely without any one holding the points.

*Examined by Mr. Carlisle*: When water has been taken at the first or lower crane the points have always been steadied for the train to pass over; I am aware that Rule 90 states that facing points are to be steadied; I think the train was running to time; we had not a heavy train, only twelve trucks and brake-van.

*Examined by Mr. Mason*: Morrison did tell me to get out and steady the points; I have had a great deal of experience on the New South Wales Railways—say thirteen or fourteen years as porter and shunter, and understood well what steadying points meant. JOHN SIMPSON.

*Examined by Mr. Mason*: *Edward Childs states*:—I am an engine-driver, and was so on the night of 4th November, of No. 18 up goods train; on arriving at bottom points, Lithgow, I ran to top crane to take water; my reason for going to top crane was for convenience, as the arm of the crane will stand without steadying; the train was a light one, there only being twelve trucks and brake-van on; I ran over the points at about seven miles an hour; the brakes were eased off at starting; I put on steam about the platform, but only a little at a time; when I put on steam the brake-van was through the points; when I started I did not see Morrison; I saw assistant guard Simpson; he got on the step of the engine; I received the signal to start from Simpson; it has always been the practice to receive the signal from the assistant guard; the signal he gave me was that of telling me that it was "all right"; I did not know but what some one was at the points; it is not my duty to go and examine the points to see if they were all right; it has not been the general practice for these points to be steadied while the train has been passing over. EDWARD CHILDS.

*John Wiggins states*:—I am a fireman, and have heard the evidence of driver Edward Childs, and corroborate the whole of his statement.

*Examined by Mr. Carlisle*: I have been a fireman on the Western line about fourteen months; I do not consider it a part of my duty to go and see if the points were all right; nothing passed between me and the guard with reference to the points; the assistant guard came up almost immediately to turn the water on to the engine; he had time to walk from the points to the crane; if we had taken water at the bottom crane the train would not have been clear of the points; we have never been in the habit of taking a run at the middle road. JOHN WIGGANS.

## No. 2.

### Accident at Redfern Station on 5th November, 1877.

#### No. 1.

#### Report from Traffic Manager.

Government Railways.—Minute Paper.

To the Commissioner for Railways,—

I regret to have to report a somewhat serious accident occurred in the Sydney yard this morning, resulting in one passenger being rather severely injured and a few slightly shaken.

The particulars are as follows:—

As the No. 27 up suburban passenger train, due at 8.44 a.m., was coming into the station, Shunter Albert Sharpe, instead of merely steadying the No. 1 dock facing points while the train was passing over them, committed the most insane act of holding them over and open for the dock siding into which a shunting engine and train of empty carriages had just before been backed. The consequence was the incoming train came into rather violent contact with the engine attached to the empty carriages standing in the dock.

Any

Any further particulars as to how the accident occurred will be found in the statements annexed, which speak for themselves.

Sharpe's story of having been instructed to "let the first engine into the dock" is manifestly absurd. Not only is it beyond all likelihood that such an order would have been given to him, but there is the positive evidence of White as to the exact words made use of; and in addition to this it will be seen that foreman shunter Free, who was personally superintending the work and closely watching all that was going on, states that he saw Sharpe at the points steadying them before he lowered the station signal for the train to come in.

I cannot blame any one in the matter but Sharpe, to whose unaccountable act the accident is alone due. The man must evidently have become confused and lost his head, or he could not possibly have committed such a palpable blunder as to turn a train into a siding which was already fully occupied.

There are proper mechanical means for preventing such mistakes as this, which Railway servants will sometimes make, and I sometime ago suggested that our points and signals should be interlocked. No such yard as this at Redfern, where such an amount of traffic is done, and under such peculiar difficulties, should be unprovided with Saxby and Farmer's interlocking apparatus.

D. VERNON, 5/11/77.

State names and address of persons injured. A medical man should be asked to examine them without delay.—J.R., 6/11/77. Traffic Manager.

A medical man was sent for to examine Mr. Brown, who was the only one who appeared to be injured at the time. I have requested Dr. Waugh, of Parramatta, to examine a Mrs. Burt, who pleads injury. In another case of Mr. Chapman's, of George-street, shopman, I will have him examined.—D. VERNON, 7/11/77. Seen.—17/11/77, J.R.

[Enclosures to No. 1.]

*Charles Free* states:—I am foreman shunter in the Sydney yard; I remember giving White orders this morning to draw out the carriages of the 8:34 a.m. up train, and put them in No. 1 dock, and hold one second-class on the engine to fetch out of the dock with him after the 8:44 a.m. up train had passed in; I saw him carry out my orders, and the train placed in the dock at a standstill, when I went to the signal and lowered it for the passenger train to come in; I stood at the signal, and saw Sharpe steadying the points, which were fairly closed; the next thing I saw was the wheels of the tender (which was in front) entering the dock; I threw up my hands, and shouted to the driver to stop, which was all I could do; Sharp has been with me since Thursday or Friday, and I kept him with myself until Saturday night, having shown him all round the points and how to handle them.

C. FREE, 5/11/77.

*Thomas White* states:—I am a shunter; this morning, by foreman shunter Free's directions, I signalled the shunting engine, which had been attached to the empty carriages of the No. 26 up suburban train, to draw out of the station, and told the driver to go into No. 1 dock; after telling the driver where to go, I went to the points and unlocked them, and held them over while the train was being backed in; after letting the train in, I went back to cut off a second-class carriage which Free had told me to run across with after arrival of the No. 27 up passenger; while I was uncoupling the carriage I heard George Mansfield call out to some person, I don't know who it was, to go and steady the No. 1 dock points; I am positive that I distinctly heard those words; when I got out from under the carriages I saw a man at the points, and therefore did not go myself, which I otherwise would have done, in accordance with the usual practice.

THOMAS WHITE, 5/11/77.

*George Mansfield* states:—I hold the position of shunter in the Sydney yard; this morning at about 8:40 o'clock, I was waiting at the south end of the arrival platform for the No. 27 up passenger train (due in at 8:44 a.m.) to cut off the engine, it being my duty to do this; before the train was in sight, and about three minutes prior to its arrival, I told Sharp, who was standing with me near the shunter's box, that he had better steady the No. 1 dock points; my reason for sending Sharpe to these points was that I knew they were not locked, as there was a train standing in the dock; it is always the practice for a man to stand at the points and steady them for incoming trains when they are not locked; excepting when there is an engine in this siding the points are always kept locked; I saw Sharp go towards the points and stand by them, and I then remained in the six foot watching the train coming in.

GEORGE MANSFIELD, 5/11/77.

*Albert Sharp* states:—Since Thursday last I have been engaged in the shunting gang, by the Station-master's directions; I came on duty this morning about 6:15 o'clock, and was engaged in shunting operations up to the time Mansfield spoke to me, when I understood him to tell me to go to the No. 1 dock points to let the first engine in; this was about three minutes before the No. 27 up suburban train was due; after receiving these directions I went to the points, and while there I saw a train drawn out of the station on the up road, which I expected to be backed through the points at which I was standing; I did not observe there was an engine and carriages standing in No. 1 dock until the accident had occurred; on the approach of the No. 27 up passenger train I mistook it for the empty carriages which had just been drawn out, and turned it into the No. 1 dock, notwithstanding that the engine was in front, and I was not conscious of my error until too late; then I saw I had made a mistake; since I commenced shunting I may have handled points about forty or fifty times; perhaps a dozen times out of that number I have steadied them for passenger trains to pass over, although not that particular pair; the remainder I have worked them for letting engines and carriages through.

ALBERT SHARP, 5/11/77.

No. 2.

Reports from Locomotive and Permanent Way Branches.

Government Railways, Engine Branch, Sydney, 5 November, 1877.  
Memorandum to Mr. Scott.

Extract from Driver John Jolley's Report-sheet to-day, Engine No. 39.

"Coming into Sydney this morning at 8:44 a.m. with 7:10 a.m. up passenger train (thirteen vehicles and brake-van on) we passed the ticket platform at the usual speed, and just after doing so my fireman said, "We are on the wrong road." I at once reversed the engine, and we did all we could to stop, but the pointsman had turned the train into the dock, and the engine and train came into collision with shunting engine No. 13, which was standing in there with a train of carriages, doing considerable damage to that engine and carriages, and throwing the tender of my engine off the line, breaking the buffer-springs between engine and tender, and bending one buffer spindle. Neither myself nor my fireman saw the pointsman turn the points, as our attention was called to some passengers who were coming up the line close by the points at the time. None of our men are to blame.

JOHN COBB, 5/11/77."

Mr. Mason, 5/11/77.—W.S.

Government

Government Railways, Engine Branch, Sydney, 5 November, 1877.

Memorandum to Mr. Scott.

Extract from Driver George Campling's Report-sheet to-day, shunting engine No. 13.

"I was standing with my engine in No. 1 dock (up line) with eight carriages and two cattle-trucks attached, when No. 27 up passenger train (due at 8:44 a.m.) was turned into the dock by the pointsman instead of into the station, coming into collision with my engine, throwing the trailing wheels off the line, breaking one buffer, and damaging the buffer plank, and doing much damage to several of the carriages. The vehicles that I had on were haul up to the end of the dock, so that I could do nothing to lessen the force of the collision.

JOHN COBB."

Government Railways, Engine Branch, Sydney, 5 November, 1877.

Memorandum to Mr. Scott.

Carriage-examiner Thomas Evans reports the following damage done to carriages and brake-van by the collision this morning in Sydney Yard:—

Brake-van No. 23.—Four end standing pillars, four glass frames and glass, one side each of the two doors and two glass frames broken; two buffer rods and brake-screws bent, and the body much shaken.

Composite No. 14.—South end, one corner, one side pillar and three panels broken; five end pillars broken, and one buffer-rod bent. North end, five end pillars broken and three panels broken; two buffer-rods bent, and heads broken; three leg-irons and one stopboard broken; two axle-keeps broken and one bearing spring crippled; body of carriage much shaken.

Smoking Carriage No. 1.—South end completely destroyed; one door damaged, one glass frame and glass broken; one head stock and two buffer heads broken.

Second-class No. 64.—One buffer rod bent, and pillars of one end broken.

JOHN COBB.

Mr. Mason, 5/11/77.—W.S.

Memorandum to Engineer for Existing Lines.

Sir, Sydney Station, 5 November, 1877.  
I beg to forward you particulars of damage done to the permanent way through the collision in Sydney Yard this morning:—

One rail broken; one heel-chair to points, broken; one switch-tongue and two stock rails badly bent.

Your obedient Servant,  
RICHARD WARING.

Forwarded for Commissioner's information.—W. MASON, 6/11/77. Seen. Place with other papers.—J.R., 8/11/77.

### No. 3.

#### Report of further inquiry made by Acting Traffic Manager.

Government Railway—Minute Paper.

Accident to Passenger Train at Sydney, 5th November, 1877.

To Commissioner,—

I have looked carefully into this case, and again questioned all the men regarding the circumstances which led to the accident, which I find was caused by pointsman Sharp, who seems to have been very much confused on the occasion. This, however, is not to be wondered at, considering that Sharp had only been in training some two or three days when he caused the accident.

I recommend that Sharp be dismissed the Service, but as he is in no way responsible for the delay in thoroughly investigating and arriving at a decision in the case, he be paid his wages up to date.

Foreman-shunter Free states that he was under the impression that Sharp was fully conversant with the working of points, but the length of service of the latter did not warrant this belief, and as a caution to Free I recommend a fine of 40s.

I enclose a statement from Mr. Evans, Station-master, Sydney, with reference to the accident.

THOS. CARLISLE,  
Acting Traffic Manager.  
29/11/77.

Where is the statement from Mr. Evans? Please also state who appointed Sharp to be a shunter.—C.A.G., 1/12/77. The statement referred to is with Mr. Mason; it explains all about Sharp's appointment as shunter, &c.—THOS. CARLISLE, 1/12/77. To Engineer for Existing Lines. Statement herewith.—W.M., 4/12/77. See No. 4. Commissioner. Approved.—J.R., 5/12/77. Acting Traffic Manager. To be returned early.—C.A.G., B.C., 8/12/77. Noted. Sharp commenced duty as a porter, Sydney, on 2nd September, 1877.—T. CARLISLE, per H. RICHARDSON, 10/12/77. Secretary. Accountant.—C.A.G., B.C., 11/12/77. Noted.—F.W., B.C., 13/12/77. Secretary.

[Enclosures to No. 3.]

Inquiry into cause of Accident, Sydney Station, 28/11/77.

Albert Sharp states:—I was an assistant pointsman on 5th November last.

Examined by Mr. Carlisle:—I was engaged holding and steadying points that morning, as also coupling trucks; I have had no experience at shunting.

Examined by Mr. Mason:—I was engaged shunting two days and two hours; I did not notice that the points fell to the main line; Mansfield instructed me to go to the points, to allow one engine to enter; I did not let the engine into the dock; I did not understand Mansfield that I was to hold the points for the passenger train; I was not aware that a passenger train was due; it did not strike me to look at the dock to see if there were any carriages in it; when I held the points over, I was doubtful which line the train would run on.

ALBERT SHARP.

Charles

*Charles Free* states:—I am foreman carriage-shunter in Sydney Station yard; I know Albert Sharp; he was placed under my charge about five or six days before the accident which took place on 5th November; he was with me for three days, and I showed him through the yard, and explained to him how to open and close a pair of points as well as steady them; I consider Mansfield justified in ordering Sharp to hold a pair of points; Sharp was sent to me by Mr. Evans; I would be astonished if Sharp said he had no experience holding points; he was quick at learning how to hold the points and names of the different roads; I cannot account for the train being turned into the siding; when I saw him, he was steadying the points for the main line; no one gave Sharp instructions in my hearing; I showed Sharp how to hold points.

*Examined by Mr. Mason*:—I was at the signal-post and saw Sharp holding lever of points.

C. FREE.

*George Evans* states:—I am Railway Station-master at Redfern Station.

*Examined by Mr. Mason*:—I remember the 5th November last, when an accident occurred in Sydney Station-yard, caused by Albert Sharp opening the points leading into the dock; Sharp was placed under Charles Free to be taught shunting; he was the most likely and suitable man I had at my disposal; he was acting under Charles Free; I have heard Free's evidence, and am of opinion that Free thought Sharp was competent to attend to the points; I myself would not have sent Sharp direct to attend to the points; I have had a great difficulty in keeping a staff of good shunters, as they are constantly being removed; I think it very dangerous removing efficient shunters; I have often protested to Mr. Vernon against the men being removed, and have pointed out to him the danger attending it; he replied that I could not expect to keep all the good men in Sydney; efficient shunters were removed without my consent only a few days prior to the accident of 5th November.

GEORGE T. EVANS,

Station-master.

29/11/77.

*George Mansfield* states:—I am a shunter employed in the Redfern Station-yard.

*Examined by Mr. Mason*:—I remember the morning of November last, when an accident occurred in Sydney Station-yard; I know Albert Sharp, and saw him at the points; I sent him to the points that morning; I did not tell him a train was due, I told him to steady the points; I consider him competent to steady the points; I cannot account for him turning the train into the dock; it is usual to keep these points locked; Sharp knew the different points in the yard; I told him the train in the dock was to remain there until the passenger train arrived.

GEORGE MANSFIELD.

5 November, 1877.

*John Jolly* states he is an engine-driver, and was in charge of No. 27 up train from Campbelltown, engine No. 39; on the morning of the 5th instant, on approaching Redfern Station, the speed of my train was not more than 4 miles an hour, passing the old ticket platform, when my train reached the points leading into the carriage dock on the up side; my fireman called out to me to stop, as we were on the wrong road; I instantly reversed the engine, and put on steam, the fireman at the same instant putting the brakes as hard on as he could, they having been screwed pretty hard down previously; I saw engine No. 13 standing in the dock in front of a brake van, seven carriages, and two cattle trucks; I was running my engine tender first; I saw a collision was inevitable, and did my utmost to prevent it; when the tender of my engine came into collision with engine No. 13 the tender wheels were thrown off the road; I felt no rebound or shock at the moment of collision in my train; my train was composed of eleven carriages, including the brake van, two horse-boxes, and one carriage truck; it is usual for some person to be at these points when passenger trains are running over them, but I did not see any one there on this occasion, as I did not particularly observe whether any one was at the points or not as there were several people passing by them at the time; I have observed various persons hold these points at different times; it appears to be the duty of no one in particular; the points fall to the main line, and had they been left alone I should have run into the station all right; the speed of my train at the time of collision was as near as I can judge about 2 miles an hour; the distance from the points leading from the main line into the carriage dock to where engine No. 13 stood is 52 yards; I could have pulled up my train to a stand in about 30 yards more.

Witness—W. SCOTT.

JOHN JOLLY.

*Thomas Wilson*, fireman on engine No. 39, states: I have heard the evidence of John Jolly read, and I can state of my own knowledge it is correct.

I have no further statement to make.

Witness—W. SCOTT.

THOMAS WILSON.

*George Campling*, engine-driver, states: I was standing with my engine No. 13 in No. 1 up carriage dock, with eight carriages, including brake-van, with two cattle trucks attached, when No. 27 up passenger train, due at Redfern Station at 8:44 a.m., was turned into the dock road where I was standing, coming into collision with my engine, throwing the trailing wheels off the line, breaking one buffer, and smashing the buffer plank, and smashing several of the carriages and brake-van, doing a great deal of damage to my train; when engine No. 39 struck my engine it was running at a speed of about 2 miles an hour; my train filled the dock; and when I saw a collision was inevitable I jumped off my engine, as I could do nothing to avert the collision.

Witness—W. SCOTT.

GEORGE CAMPLING.

*James Bell* states he is fireman, and was standing on engine No. 13 this morning when the collision with No. 27 up train occurred.

I have heard the evidence of Driver George Campling read; that evidence is quite correct, and I have nothing further to add to it.

Witness—W. SCOTT.

JAMES BELL.

#### No. 4.

#### Station-master Evans to Acting Traffic Manager.

Government Railways.—Minute Paper.

Sir,

Having been called upon to make a statement regarding the accident to the passenger train at this station on the morning of the 5th instant, I beg to state that I attribute the cause of the accident mainly to the fact that so many of my shunters were new men.

I have repeatedly protested against the practice which has prevailed for the last eighteen months or two years of removing trained men from this station (often without my having been consulted), to other stations on the line, where learners could have been trained with much more advantage than at Sydney, but I regret to say that my protests were over-ruled, and I was under the necessity of submitting to great disadvantages in this respect.

Since the beginning of the present year I have been called upon to part with eighteen experienced men from my staff of shunters, who, with one or two exceptions, have been removed to other stations; and of the five whose statements have been taken in this case, one White was six weeks, Mansfield fourteen days, Keefe five days, and Sharp three to four days at the work when the accident occurred. Free, the foreman, who was at the signal, had been two or three years in the Service.

With

With such a staff, for the most part of inexperienced men, I am compelled to state that it was only by the greatest vigilance that we have been able to keep things going so smoothly as they have done; and while I exceedingly regret the accident in question, I must submit that, under a carefully trained staff of men there is every probability to believe that it would not have happened.

In view, however, of Sharp's conduct in the affair, I cannot altogether hold his foreman, Charles Free, exempt from blame, as he should not, in my opinion, have allowed a probationer to undertake such an important duty as that of steadying unlocked facing points on the main line, but he no doubt considered that he (Sharp) had already, *i.e.*, with three or four days' experience, sufficient knowledge and ability to perform correctly what was required.

GEORGE T. EVANS, S.-M.,  
29/11/77.

---

No. 5.

Engineer for Existing Lines to Commissioner.

I WOULD draw the Commissioner's attention to the evidence of Sharp. It is a fearful thing to contemplate that the lives of the public travelling in the Railway should be placed in constant jeopardy by men so ignorant of their duties. Free, the foreman shunter, is also to blame for placing Sharp in such a responsible place, and I think he ought to be severely punished.

Commissioner.

W. MASON,  
3/12/77.

---

No. 6.

Minutes of Secretary.

I THINK some further inquiry should be made about the shunting staff under Mr. Evans. If White, Mansfield, and Keefe have been put to shunting work without previous experience beyond—as Mr. Evans' statement implies—six weeks, (14) fourteen days, and five days only each respectively, and that these men form the class of men Mr. Evans has to do the work of shunting with, then Mr. Mason's concern for the public safety is justified; but from my knowledge of Mr. Vernon's anxiety to get competent shunters I cannot credit the statement, and I believe an inquiry into the facts would modify if not remove altogether the impression which Mr. Evans' statement creates.

C. A. G.,  
5/12/77.

---

No. 7.

Minute of Mr. D. Vernon.

Government Railways.—Minute Paper.

In looking through these papers, there appears to me a necessity for a few remarks from myself in order to correct the erroneous impressions which some of the documents are calculated to convey. It would be quite a mistake to suppose that Sydney has at any time been left without an efficient staff of shunters. As the chief training station, Sydney has been required to instruct men in the duties of shunting; and as the supernumeraries or probationers have become qualified to act as shunters, they have either been drafted into the Sydney Permanent Staff or removed to the out stations as required. In disposing of these trained men the greatest care and judgment have been exercised, the best men having been selected for the most important stations; and the smartest hands—indeed I may say, the *picked* men of the whole staff—have invariably been selected for the Sydney yard; for example, and in accordance with what I have stated, I can unhesitatingly affirm that on the 5th of November last the coaching staff of shunters at Sydney was not only ample for the work to be performed, but was composed of, without exception, the smartest and most efficient hands—a better gang could not have been put together than was working on that date. The man whose action was the immediate cause of the accident did not belong to the shunting staff proper, but had been most improperly placed among them without either the knowledge or sanction of the Traffic Inspector or the Traffic Manager. The staff proper on duty at the time of the accident consisted of foremen Free, and shunters Mansfield, Keefe, and White.

Foreman Free's efficiency cannot be called into question.

Shunter Mansfield had served ten (10) years on the London and North-western Line, five (5) of which were occupied in performing the duties connected with signalling—two (2) years he was shunting at Wilton Junction (4 miles from London), and three (3) years he served as goods guard.

Shunter Keefe's railway experience extends over a period of twenty (20) years (having been educated in railway duties from a boy of ten (10) years old. Included in this period are two (2) years shunting at Ardwick Junction (near Manchester), five (5) years service as goods guard, and four (4) years service as brakesman and conductor in America.

Shunter White was a young hand, but on account of his smartness and aptitude was fully competent for the work he was doing.

With respect, therefore, to these four men, Free, Mansfield, Keefe, and White, all young, active, intelligent, *efficient* men, I affirm most positively that a finer, more intelligent, better trained, more efficient gang of men could not be picked and put together for the work they had to perform.

Men were of course never removed from one station to another without the knowledge of the officer in charge for the time being.

To obtain suitable men for shunters is one of the great difficulties a Traffic Manager has to contend with, and in my opinion there is no part of the line where men can be so quickly and thoroughly trained in the duties of a shunter as at a busy metropolitan terminus.

D. VERNON,

## No. 3.

Accident at Liverpool, Collingwood Branch Line, 9th  
November, 1877.

## No. 1.

## Reports of Occurrence from Locomotive and Permanent Way Branches.

Sydney, 9 November, 1877.

ENGINE-DRIVER Neil McKinley states: Left Picton at 10.5 p.m. last night with No. 1 up goods train, American engine No. 105; on arrival at Liverpool, at 1.10 this morning, I asked the assistant guard if he knew how many trucks there were to go down the Collingwood Branch; he said—"he thought six;" he then gave the signal to go down; I was under the impression there were but six on, but it being dark I could not see them; after we had started to go down he came on the engine, when I asked him again; he then said—"I do not know how many is on;" I proceeded very cautiously, and tried all means to keep the train under control, but after getting half way down it overpowered the engine, and we could not stop until coming into collision with a truck at the bottom, which was driven through the back of the tender tank, and also breaking the foot-plate castings of both engine and tender, &c., damaging several trucks, and delaying the train one hour; after we had stopped I examined the train, and found that there were fifteen (15) loaded trucks on, fourteen of the breaks were dropped down, but only one of them was pinned down; had the whole of them been the same I could have stopped them easily enough; there were six trucks on the train that was taken down the branch that were coming to Sydney; this was done to save making a shunt; had these been left in the yard I could have held the rest, and this mishap would not have occurred.

NEIL MCKINLEY.

W. Scott, 9/11/77. Mr. Mason.

Sydney, 9 November, 1877.

JOHN Bough, American Engine-driver, but now acting as fireman, states: I corroborate McKinley's statement in every particular; but I wish to state, that before going down the branch the watchman said to me—"There is two trucks to go down;" I heard the assistant guard say that "he thought there were six;" shortly after this I could feel that there was too many on; I consider McKinley did everything in his power to try and stop the train, and in all my experience I never saw an engine handled better.

JOHN BOUGH.

W. Scott, 9/11/77. Mr. Mason.

## Memorandum to Engineer for Existing Lines.

Sir,

Sydney Station, 9 November, 1877.

I beg to inform you that this morning No. 105 engine, driver McKinley, while taking fifteen loaded trucks down Collingwood Branch at Liverpool, the driver could not keep the train in check. The trucks ran against the buffer stops, knocking one truck, next the engine, off the road, knocking in the end of the tender, and damaging D truck 1469, D 161, and C vans 43 and 90. No damage done to permanent way or buffer stop.

Your obedient servant,

RICHARD WARING.

This accident has entirely disabled the American engine, and will cost a good deal in repairs. It is quite time something was done to put a stop to such proceedings as caused this accident.—W.M., 12/11/77. Commissioner. Traffic Manager, for report.—J.R., 14/11/77.

## Memorandum to Engineer for Existing Lines.

Existing Lines Branch, 14 November, 1877.

The following is the estimated cost of repairing the damage done at the accident at Liverpool on 5th instant:—

	£	s.	d.
American Low Tender, No. 105	65	0	0
Goods Waggons	20	0	0
Total cost...	£85	0	0

W. SCOTT.

Damage caused by assistant guard not pinning brakes down.—W.M., 16/11/77.

## No. 2.

## Reports, &amp;c., of Occurrence from Traffic Branch.

To Inspector Richardson,—

Sir,

Sydney, 9 November, 1877.

I beg to report for your information that, while going down the Branch at Liverpool this morning, with fifteen loaded trucks and brakes down, and engine No. 105 could not hold them, which caused one truck to damage tender of engine and broke door of C 88 buffer castings broken of C 90, D 161, 43, and D 1469, springs broken, and one box.

T. CARSON.

Were

Were the brakes pinned down; if not, why not? Were the rails at all wet or slippery on the morning of the 9th?

Have you ever taken more than fifteen trucks down this branch without in any way the trucks getting the best of the engine?  
H. RICHARDSON,  
Guard Carson. 10/11/77.

In reference to the above, there were more than three-parts of the brakes pinned down, and the others there were no pins to. There was a little dew on the rails on the morning of the 9th, and I have taken twenty-four trucks of a wet morning without any trouble whatever.  
T. CARSON,  
12/11/77.

Beyond the breaking of buffer casting of three trucks and the springs of the truck next to the engine, there was no further damage to trucks or to the buffer stops. The tender of the American engine was however very much damaged, the back of it being cut open by the buffers of the truck next to it. The damage done to the tender was done in my opinion by the rebound of the trucks, and not by the force the engine and trucks struck the buffer stops, as no damage was done to them, and had the brakes been released as the train first struck the stops, little or no damage would have happened to the engine, as she would have gone back by the rebound of the trucks instead of being struck as a stationary object. Guard Carson, who is a most truthful man, states he had a large number of the brakes pinned down, but I understand the drivers have stated that only one brake was pinned down, and that they examined the train. Carson says he did not see either of them examine a truck, and it certainly seems strange that if these men were so very careful in examining these brakes and finding only one down they did not point it out to Carson, who was standing alongside train. If this had been done, as it should have been, then all doubt would have been removed. This was, I understand, the first time this engine had been down the branch, and I attribute as one of the causes of the accident, to the excessive speed the driver was proceeding down the branch; from what the driver told me he did not know what load he had on at the time, and he has been going down as fast as if he had only half a dozen on, and then when nearly down he has been overpowered and unable to pull up. Before condemning Carson and making him solely responsible for this accident, I should like to see fourteen trucks down this branch with the same engine. It certainly seems very strange that this powerful engine if only going down very slowly could not hold fourteen trucks when she was reversed and other engines have taken down twenty-four on wet mornings and twenty have been taken down with only the old brake van that used to stand at Liverpool. If Traffic Manager feels convinced that Carson had only one brake pinned down, then Carson is unfit to hold such a position as head guard.  
H. RICHARDSON,  
Traffic Manager. 13/11/77.

For information of Commissioner.

From these reports it appears the driver started his train without making himself *first acquainted* with the load he had attached to his engine, and to this cause the accident may be attributable.

J. B. GOOLD,

For Traffic Manager, 20/11/77.

Commissioner.

Mr. Mason, 23/11/77.—J.R.

I recommend the Commissioner to direct Traffic Manager to thoroughly investigate this matter. I will be present if necessary.—W.M., 26/11/77.

Approved. Instruct accordingly.—J.R., 28/11/77.

Mr. Carlisle will please hold an inquiry; and as the engine-driver and fireman will require to be examined, let Mr. Mason know when you propose to hold inquiry, in order that he may arrange to be present.—B.C., 28/11/77., C.A.G.

### No. 3.

#### Acting Traffic Manager to Commissioner.

Accident to goods train at Collingwood Branch, November 9th. 1877.

To Commissioner,—

Guard Carson, who alone is responsible for this accident, was examined by me yesterday, and he admitted having taken six trucks down the branch unnecessarily and for the purpose of saving time when he returned to Liverpool Station from the branch. He stated that all the brakes which had pins were pinned down, and that the others were dropped; but this is at variance with the statements of the engine-men, who state that only one brake was pinned and that the others were merely dropped down, with the exception of one which was not dropped at all.

Carson has not had much experience, and with proper training will, I think, make a good railway man; and as we are not very plentifully supplied with experienced men, I recommend that he be reduced to the position of second guard, and his pay reduced to 7s. per day. He is at present paid 8s. per day, and would have been entitled to 9s. had this accident not have occurred.

THOS. CARLISLE,

Acting Traffic Manager, 29/11/77.

Guard Carson is alone to blame for this accident, and ought I think to be dismissed.—W.M., 3/12/77. Commissioner. Is this his first offence?—J.R., 4/12/77. Mr. Carlisle.—C.A.G., B.C., 5/12/77. Yes; see history attached.—THOS. CARLISLE, 6/12/77.

#### History of Thomas Carson.

April, 1872.....	Appointed.
October, 1873 .....	Porter, Petersham Station, at 6s. per day.
June, 1874.....	Removed to Sydney, coaching, at 6s. per day.
1st December, 1874.	Wages increased to 7s. per day.
14th April, 1875 ...	Removed to Parramatta Junction, at 7s. per day.
1st September, 1877.	Appointed assistant guard, at 8s. per day.

Name does not appear in Offence Book.

G. H. MINGAYE,

6th December, 1877.

[Enclosure

## [Enclosure to No. 3.]

*Thomas Carson* states:—I am a guard, and was in charge of a goods train (No. 1) on the morning of the 9th November.

*Examined by Mr. Carlisle*: I had four or five trucks on my train when I arrived at Liverpool; there were nine trucks in Liverpool yard for Collingwood Branch; I had fifteen trucks on the engine going down the branch, two of which were for Parramatta Junction, and four for Sydney; I have previously taken twenty-four trucks down without any trouble; I have always pinned down the brakes, and did so in this instance; all the trucks that had pins the brakes were pinned down. I have no doubt the brakes were pinned down; I think a sudden jerk would knock out the pins; in taking the six trucks down that were not for Sydney I did not think at the time I was doing wrong; I did not hear the driver ask how many trucks were for Collingwood Branch; I did not know the power of the engine, but I knew the engine had not been down the branch before.

*Examined by Mr. Mason*: I pinned all the brakes down that had pins; I don't remember telling you on the morning of the accident that one brake only was pinned down.

*Examined by Mr. Carlisle*: It was for the purpose of saving time that I took the six trucks down the branch; Mr. Richardson saw the brakes were pinned down; this was about three-quarters of an hour after the accident.

*Examined by Mr. Mason*: I have been guard about three months on the Southern Line—Sydney to Picton; I have been assistant guard and guard for about six months; the train was a little late; I did not tell the driver how many trucks there were to go down the branch; I think the assistant guard was on the engine.

*Examined by Mr. Carlisle*: I have not been in the habit of telling the driver how many trucks there were to go down the branch; on leaving Sydney and Picton I tell the driver how many trucks are on the train.

T. CARSON.

The statements previously made by Driver M'Kinley and Fireman John Bough were read over to them, and said to be correct.

## No. 4.

## Minute of Commissioner.

Accident at Liverpool, Collingwood Branch Line, 9th November, 1877.

HAS the decision of the Secretary for Public Work in regard to guard Carson been carried out? \* "I think that Carson's case will be met by my approving of the recommendation of the Acting Traffic Manager, viz., that he be disgraced, and fined a shilling a day for six months.—JOHN SUTHERLAND, January 10th, 1878."

\* See No. 5 Section of Returns.

Mr. Carlisle to say, B.C., 19/3/78.—C.A.G. Not yet. The paper approving of my recommendation does not appear to have been returned from your office.—THOS. CARLISLE, 21/3/78. Commissioner. Paper herewith. Mr. Carlisle, B.C., 22/3/78.—C.A.G. Noted.—THOS. CARLISLE, 30/3/78. Commissioner.

## No. 4.

Near Collision between Trains at Jerrawa, on 4th  
December, 1877.

## No. 1.

## Minute of Secretary.

Government Railways. Minute Paper.

*Subject*:—Near collision between down mail train and up goods train, on the 4th December, at Jerrawa.

To Commissioner,—

No report has been made at Head Office of this. I understand that a collision was most imminent, and the mail train had to put back to make room for goods train.—C.A.G., 11/12/77.

Mr. Carlisle, for report.—J.R., 11/12/77.

Papers in this case duly forwarded to the Commissioner, on 21/12/77.—THOS. CARLISLE, 29/12/77. Commissioner.

## No. 2.

## Report from Acting Traffic Manager.

THE reports in this case are incomplete, and in some particulars contradictory; a personal investigation will therefore be necessary before arriving at any decision. No. 11 down mail being timed to pass No. 14 up goods at Jerrawa, and the guards of both trains having received "line-clear messages," to Jerrawa, that siding should have been approached with great caution\* by the driver of the mail train, knowing, as he did, that this was the ordinary crossing-place for the above trains.

The Station-master, Yass, should not have allowed the goods train to start unless satisfied that there was ample time to reach the siding at least fifteen minutes before the passenger train was due, but in this instance he appears to have been misled by the assurances of the guard and engine-driver that there was ample time to reach Jerrawa, the regular crossing-place.

Mr.

\* Not only approached with great caution, but the mail train should have stopped till the position of goods train was ascertained. The Working Orders having been abolished, it is impossible to say what is being done, or what is correct to be done.—C.A.G.

Mr. Crawford states in his report of 17/12/77, that both engine-driver and guard of mail train were informed before leaving Gunning that the goods train had left Yass, consequently they could have had no intention of passing Jerrawa\* until the up goods arrived. It appears to me that sufficient caution was not taken by the guard and driver of No. 11 down mail in approaching Jerrawa, and that the driver and guard of No. 14 up goods† *miscalculated the time for running to Jerrawa.*

THOS. CARLISLE,  
21/12/77.

Commissioner.

[Enclosures to No. 2.]

To Inspector Crawford,—  
Sir,

Goulburn, 5 December, 1877.

I have to report No. 14 up goods train not being clear of main line at Jerrawa last night when mail train arrived.

No. 11 down mail train arrived at this station at 1:45 a.m. On approaching the siding the white lights from the goods were seen as usual; and concluding this train was in the siding, we were proceeding on our journey. But as we came nearer the siding our driver (Bryson) discovered the goods to be standing on the main line; fortunately we were passing the siding *very steady*, and were able to pull up before coming close.

The delay was only five minutes, and no passenger was aware of the obstruction.

Although no danger signal was shown in time to be of any service to my driver, a red light was turned on just as we came to a standstill. Why this was not done sooner guard Wilbow will explain.

I am, &c.,  
J. JAMES.

To the Traffic Manager,—

I have to report for your information, that on Tuesday, the 4th instant, No. 14 up goods, engine No. 97, driver Armitage and guard Wilbow, left Bowning at 11:49 p.m. for Yass to cross No. 6 down goods. After I got line clear I started with the English mail special at 11:55 also for Yass. Keeping a sharp look-out we sighted the No. 14 several times between Bowning and Yass, and crept into Yass close behind them. We stopped ten minutes at Yass, I making arrangements to cross No. 11 down mail at Gunning, which was done.

No. 14 up goods remained twenty-five minutes after I left cleaning his fire and taking water—this appears to me a most excessive time—and left at 12:45 a.m., having then to run twelve miles, time allowed by time-table is 55 minutes, so that he could not get there before 1:40 a.m. at latest; he did not get there before 1:43 a.m., the exact time the mail is due.

By Rule 146 he ought to have been clear of the main line not later than 1:28 a.m., and by the time-table 1:10 a.m.

As this guard has shown a total disregard of Rule 146, and not preparing a correct time and occurrence sheet, I have suspended him from duty pending your instructions.

A. CRAWFORD,  
6/12/77.

Guards are not allowed to start their trains when they like; they must first obtain the permission of the Station-master or person in charge of station at the time. What has the Yass staff to say about letting this goods train leave so late?  
Mr. Crawford, for further inquiry.

T. CARLISLE,  
per H. RICHARDSON,  
7/12/77.

Guards are not allowed to start their trains when they like, nor did they in this instance. After the business of the station was done, the Station-master was about turning them into the loop to remain until the down mail passed, when both the guard and driver misled him, and said they had plenty of time. The guard and driver know a great deal better than any Station-master what time is required to run any distance.

Traffic Manager.

A. CRAWFORD,  
13/11/77.

This very serious matter requires further investigation yet. Wilbow in his report states that he had a line-clear report to proceed to Jerrawa; he was therefore bound to proceed unless this report was cancelled; and Gunning having given a line-clear for the goods to come on to Jerrawa, he should have instructed the mail to proceed to that place only, instead of which it appears the mail had no instructions, and would have proceeded on to Yass had not the driver seen the lights of the goods train. The Station-master, Yass, should have told Gunning that goods had left for Jerrawa thirty minutes late.

Obtain the explanation of Gunning, and also further explanation of Station-master, Yass.

T. CARLISLE,  
per H. RICHARDSON,  
14/12/77.

Inspector Crawford. Very urgent. Attach copies of all telegrams that passed between Gunning and Yass.—H.R.

The No. 14 up goods late arriving at Jerrawa on the 14th instant.

No. 14 up goods left Yass for Jerrawa with line-clear report to cross No. 14 down mail at Jerrawa.

See Messages marked A.

THIS train left at 12:45 a.m., thirty minutes late. This train was due at Jerrawa at 1:10 a.m., but did not reach it until 1:43 a.m., thirty-three minutes late. This is the exact time the mail was due. No. 11 down mail left Gunning at usual time, and arrived at Jerrawa at 1:45 a.m., two minutes late. This mail train left with line clear report to Jerrawa, only to cross No. 14 up goods, and after crossing line was clear to Yass. See Messages marked B.

Both the engine-driver and guard were informed that the goods had left Yass, and had not the slightest intention of proceeding even if the goods had not arrived.

On coming in sight of Jerrawa the driver saw the three white lights ahead, and not seeing any danger signal exhibited understood that the train was standing in the siding as usual; on coming nearer the driver saw that the train was standing on the main line, pulled up, and it was when he was in the act of pulling up that a red light was shown.

The guard of No. 14 up goods was to blame for starting late. His occurrence sheet is not correct, and he is to blame for not exhibiting a danger signal sooner, to protect his train from the advancing mail train.

ALEX. CRAWFORD,  
17/12/77.

With reference to the above, respecting No. 14 up goods leaving late on the night of the 4th, I beg to say, that after the departure of the up special with English mails, I told guard of up goods to get water as soon as possible, so that he could get away to time; it was about 12:35 before the driver was ready to start. I was then about ordering them into loop to await the arrival of down mail, but upon consulting the guard and engine-driver they told me they could do the journey to Jerrawa in ample time, they generally having thirty-five minutes to spare at that place. I therefore let them go (they having a train of *live stock*) at 12:40. Down mail had only line clear to Jerrawa until arrival of No. 14 up goods at that place.

D. M. LACKEY,  
12/12/77.

Inspector Crawford, Goulburn.

Copies

\* They should not have had any intention of proceeding beyond Jerrawa; but see what driver himself says—he would have gone on, in the conviction that it was the duty of the goods train to be out of his way. This method of working must sooner or later lead to disastrous results.—C.A.G.

† This is the special danger which the Working Orders were framed to meet—they did meet the difficulty, but they have been abolished. I strongly urge that they be revived.—C.A.G.

Copies of Train Messages on the 4th instant.

Station-master, Yass, to Station-master, Gunning.

A.—Is line clear to yours for No. 14 up goods? Time, 12:30.

Station-master, Gunning, to Station-master, Yass.

A.—Yes, line is clear to Jerrawa for No. 14 up goods to follow up special, and on arrival of No. 11 down mail at Jerrawa, and up special at Gunning line will be clear to this for No. 14 up goods. Time, 12:30.

Station-master, Gunning, to Station-master, Yass.

B.—On arrival of up special at this, and No. 14 up goods at Jerrawa, will line be clear to yours for No. 11 down mail? Time, 12:30.

Station-master, Yass, to Station-master, Gunning.

B.—Yes, on arrival of No. 14 up goods at Jerrawa, and up special at yours, line will be clear to this for No. 11 down mail. Time, 12:30.

Telegram from Station-master, Yass, to Inspector Crawford, Goulburn.

Up special left Yass at 12:20 a.m.; No. 14 up goods left at 12:40. Time received, 3:45; time sent, 3:40; date, 6/12/77.

Telegram from Station-master, Bowning, to Station-master, Goulburn.

No. 14 up goods left Bowning 11:49 p.m. on the 4th instant. Time received, 3:30; date, 6/12/77.

Extract from Guard Sheet.

No. 14 Goods Train, Cootamundra to Goulburn, 4 December, 1877.

Fifteen minutes late into Goulburn; thirty minutes late leaving Yass; ten minutes by English mail, and twenty minutes by driver Armitage cleaning his fire and taking water. Got line clear for Jerrawa, arrived at the points at 1:40, and when we turned the corner I saw the mail coming. She was then over the points, and would have run into us if I had not been there to give them a red light. They stopped and put back and we drew into the siding, and were clear of main line at 1:43. The mail was not delayed.

The No. 11 down mail was running past the siding three minutes before her time.

Memorandum to Locomotive Foreman.

Mr. Scott,— Sir,

Government Railways, Engineer, Existing Lines Branch, Goulburn, 7 December, 1877.

The 6:45 p.m., No. 14 up goods train, Cootamundra to Goulburn, on 4/12/77; engine No. 97; driver Thomas Armitage; seventeen loaded waggons and brake. This train was detained thirty minutes at Yass, for special English mail to pass. Armitage states that Station-master at Yass informed him that he would cross the No. 11 down mail at Jerrawa, and line was clear. When this train was approaching Jerrawa, the driver saw the mail coming from Gunning and passing the platform. Armitage whistled and held out the red light. The mail stopped and put back for this train to pass.

JAMES PROCTOR.

W. Scott.—7/12/77. Mr. Mason. Mr. Scott to see me about this.—W.M., 7/12/77.

Memorandum to Locomotive Foreman.

Mr. Scott,— Sir,

Government Railways, Engineer Existing Lines Branch, Goulburn, 7 December, 1877.

The No. 11 down mail train, Sydney to Cootamundra, on 4/12/77; engine No. 83. Driver Alexander Bryson reports to me that when he approached Jerrawa siding, the place for passing the No. 14 up goods train, he saw the white lights on engine and thought it was in the siding. The goods train was on main line and approaching the siding same time as mail train. A red light was held out from goods engine. Bryson put on the brakes and stopped the train in time to prevent an accident.

JAMES PROCTOR.

Mr. Carlisle to see.—W.M., 10/12/77.

Telegram from J. Cobb, Redfern, to Mr. Proctor, Goulburn.

SEND written report from each driver concerned in probable collision, each man to state if any instructions were given to cross at Jerrawa or any other place. Time received, 6:28, a.m.; date, 8th December, 1877.

Sir,—Received reports and sent.—J.H., pro J. PROCTOR. Statement of both drivers attached.—W. SCOTT, 10/12/77. This ought to be thoroughly investigated.—W.M., 12/12/77. To Mr. Carlisle.

Mr. Proctor, Sir,

Goulburn, 8 December, 1877.

I beg to inform you that I have received no instructions as to Jerrawa being a crossing-place, other than what is contained in the time-table of November 1st, 1877, unless what I have got from the guard in charge of mail train, that the trains are worked now according to Rule 146 in Rule Book.

A. BRYSON.

Mr.

Mr. Scott, Locomotive Superintendent, Sydney.

Sir,

In answer to telegram dated December the 8th, concerning the obstruction at Jerrawa, the Station-master at Yass came to me and told me that Gunning had given him line clear for me to make Jerrawa. I was thirty minutes late then, and I asked the Station-master what about the mail, and he told me that Gunning had given him line clear for No. 14 up goods to pass No. 11 down mail at Jerrawa, and he told me that the mail would not pass Jerrawa until I arrived. I left Yass, and kept my own time, arriving at Jerrawa thirty minutes late—that was three minutes before the mail was due at Jerrawa. I could see the mail coming up the bank, and I stopped well outside of Jerrawa, thinking it was not safe to go into the siding until the mail came to a stand at the platform. My guard came down in front of the train and went to the siding point to turn me into the siding as soon as the mail came to a stand; but she ran by the Jerrawa platform and over the points that go into the siding, and had to set back to let me in.

Sir, I would much like you to call both sides together and investigate this case.

Goulburn Station, 9 December, 1877.

I remain, &c.,  
T. ARMITAGE,  
Driver.

Mr. Proctor,—

Sir,

I beg to state that I arrived at Gunning on the 4th December with No. 11 down mail. On leaving Gunning I received no instructions from the guard or Station-master that No. 14 up goods had left Yass thirty minutes late. When I approached the siding at Jerrawa I gave one long whistle. I saw distinctly the white lights of the goods which led me to believe they were in the siding as usual. I proceeded on cautiously, and on getting nearer I discovered the goods to be on the main line with no danger signal shown until I had stopped.

Goulburn, 11 December, 1877.

A. BRYSON.

Mr. Scott, Locomotive Superintendent, Sydney,—

In reference to No. 14 up goods train from Cootamundra to Goulburn, on 4th December, 1877, I was detained thirty minutes at Yass for English mail to pass. Station-master at Yass informed me that line was clear to Jerrawa till my train arrived. When I approached Jerrawa I saw the mail coming on to the platform at Gunning side, and I stopped well outside of Jerrawa thinking it was not safe to go into the siding, until the mail came to a stand at the platform. My guard came down in front of the train, and went to the siding points to turn me into the siding as soon as the mail came to a stand, but she ran by the Jerrawa platform and over the points that go into the siding, and had to set back to let me in.

I remain, &c.,  
T. ARMITAGE,  
Driver.

### No. 3.

#### Minute of Secretary of Railways.

I wish to draw the Commissioner's special attention to this case. It presents without doubt the most serious appearance of mismanagement that has yet occurred, not arising apparently from any disregard of instructions, but because there are no properly defined instructions—they are too general. The driver says he depends upon rule 146; fixed crossing-places or line clear messages have no importance in his eyes. Rule 146 says that goods trains are to keep clear of passenger trains, and he as the driver of the mail train comes on at any hazard. I again urge upon the Commissioner to revive the Working Orders, which effectually provide for all cases of the kind, and are in correspondence with single line working everywhere.—C.A.G., 28/12/77.

### No. 4.

#### Minute of Commissioner.

LET a full inquiry be made into this case by Mr. Mason and the Acting Traffic Manager.—J.R., 29/12/77.

### No. 5.

#### Report of Inquiry.

IN company with Mr. Carlisle I have made a full inquiry into this subject, and find it a very frivolous affair. From the evidence attached, it will be seen that there was no reason to apprehend a collision of the two trains occurring, as the whole arrangement was clearly made and thoroughly understood by all parties concerned. Bryson, the driver of the down mail train, knew that the goods train was on the road from Yass, and had to cross the mail train at Jerrawa siding as usual. On Bryson's arrival at Jerrawa he saw the white head-lights of the goods train and thought it was standing on the siding as usual, but not being sure whether it was on the siding or on the main line he slackened speed so as to stop at a safe distance from it in case it should be on the main line, and pulled up his train 150 yards at least from the goods train. I consider this matter unworthy of further comment.—W.M., 8/1/78.

Commissioner.

[Enclosures to No. 5.]

Alexander Bryson states:—I was the driver of No. 11 down mail, on the 4th December, 1877; I left Gunning at 1:20 a.m. on the morning of the 5th December—the time stated in time-table; I knew that Jerrawa was the crossing-place for my train and No. 14 up goods, and before leaving Gunning on the date in question I was told that the up goods train had left Yass; my train consisted of five passenger vehicles, that being half the load of my engine; on approaching Jerrawa at 1:45 I fully expected to pass the up goods, and on proceeding up the incline (1 in 40) I saw the white head lights of the goods train about  $\frac{1}{2}$  of a mile or a mile in front of me; it has always been usual to run past Jerrawa at speed when the white head lights were visible, and it is very difficult to tell from a distance whether the lights are on the main line or in the siding; the moment I saw that the goods train was on the main line (at which time I had reduced speed to six or seven miles per hour), I put on the brakes and brought my train to a stand in a distance which I do not think would exceed twenty yards; had I not thought that the goods train was in the siding I would have stopped at the platform, and if I had not seen the lights of the goods train at all I certainly would not have passed Jerrawa; there could not possibly have been a collision, as I had my train under thorough control.

A. BRYSON,  
3/1/78.

Richard

*Richard Stuart*, fireman, states: I was fireman of No. 11 down mail on the 4th December; have heard the evidence of driver Bryson, and am prepared to corroborate all he has stated.

RICHARD STUART.

3/1/78.

*James James* states: I was guard of No. 11 down southern mail on the night of the 4th December; referring to my time book, I find that I left Gunning at 1:20 a.m. on the 5th December; before leaving Gunning, I was told that No. 14 up goods had left Yass, and I was aware that Jerrawa was the regular crossing-place for these trains; unless to set down or pick up passengers by signal, it has been the custom not to stop at Jerrawa, and hitherto the goods train has always been in the siding there before our arrival and all white lights exhibited; we always run past Jerrawa, when we know that we have to cross a train there, at a very much reduced speed, and so that we can be brought to a dead stand in a distance from twenty to twenty-five yards; on the date in question I saw the white lights a long way ahead, and could not tell whether they were in the siding or on the main line—but when the driver saw that the goods train was on the main line he pulled up in a very short distance, and about one hundred yards from the goods train; had we not seen the white lights of the goods train at Jerrawa, we would not have passed the platform there without learning the whereabouts of the goods train, but would have given the red light to the driver, although I do not think even that would have been necessary, as the drivers thoroughly understand in such cases not to pass the crossing-places.

*By Mr. Mason*: I am aware that the Working Orders have been withdrawn, and do not think they would have been of any good in such a case as this, in fact I have always found them to be a source of confusion rather than anything else; I have always been and am still of the opinion that rule 146 of book of Rules and Regulations is the safest rule to work upon.

J. JAMES, Guard,

3/1/78.

*George Wilbow* states: I was guard of No. 14 up goods on the 4th (fourth) December, 1877; I left Yass at 12:45 a.m., on the 5th December, thirty minutes after time; before leaving Yass, the Station-master, after a consultation with the engine-driver, came and told me that the driver had said he would try and "make" Jerrawa in time to allow the down mail to pass, and on the strength of that promise he allowed us to go; my train consisted of eighteen vehicles, including the guard's van, and on approaching Jerrawa at 1:40 a.m. the driver brought the train to a stand-still, as he had seen the mail train approaching, and said he would not move until the mail had been brought to a dead stand; as soon as my train was brought to a stop, I ran forward with a red light and stopped the mail train; the mail train was about 200 yards distant when I turned on the red light, and came to a stop about 100 yards from our train; prior to this date I have always been in the siding before the mail arrived, and I can say that the mail never passes Jerrawa at a speed exceeding twelve to fifteen miles an hour, and on this date was running much slower in my opinion, in fact I think the mail could have been brought to a stop in a few yards, considering the rate at which they appeared to be running; I should state that before leaving Yass I asked the Station-master a second time if the line was clear to Jerrawa, and he answered "Yes."

G. WILBOW, 3/1/78.

*James Fletcher* states: I am Night Telegraph Operator at Gunning; I remember receiving a line clear message from the Station-master at Yass at 12:35 a.m., on the 5th December, 1877, to the effect that line was clear to Jerrawa for No. 14 up goods to cross No. 11 down mail at the latter place; before the train left Gunning I told the guard that the up goods train had left Yass; had the crossing of these trains been altered from Jerrawa to Yass, it would have been my duty to have given the guard a written permit to run on to the latter station.

JAMES FLETCHER, 3/1/78.

*Thomas Armitage* states: I was driver of the No. 14 up southern goods on the 4th December last; I left Yass at 12:45 a.m. on 5th December, and arrived at Gunning at 1:40; before leaving Yass the Station-master came to the engine-step and told me that he had given "line clear" for the down-mail to come to Jerrawa, but not to pass there, and that I was to proceed to Jerrawa and cross the mail there; the guard, George Wilbow, then came and told me that as the Station-master had told us to proceed to Jerrawa we had better lose no time; I told him that as my train was heavy I could not make up time, and we immediately afterwards started; upon arriving near Jerrawa I saw the mail train, and as it was approaching I deemed it advisable to stop about 140 or 150 yards distant from the siding points, until the mail was brought to a dead-stop; my guard ran forward to the points and exhibited a red light, while I held a red light over the side of my engine so that the driver of the mail had plenty of time to stop before coming near the points into which I was to enter; the mail was approaching slowly, but as soon as the driver saw the guard's red light he brought his train to a stop.

T. ARMITAGE, 4/1/78.

*Mr. Lackey*, Station-master, Yass, states: I remember the night of the 4th December, 1877; No. 14 up southern goods, which should have left Yass at 12:15 a.m. on the 5th, did not leave till 12:40 a.m.; I consulted both driver and guard as to whether they would be able to make Jerrawa in time to allow No. 11 down mail to pass; they both answered "Yes," and I immediately thereafter arranged with Gunning by telegraph that the No. 14 up goods was to leave and cross No. 11 down mail at Jerrawa, and then allowed the goods train to leave; I had not the slightest reason to anticipate any misunderstanding as to the crossing of the trains at Jerrawa, as all appeared thoroughly to understand what was to be done.

W. M. LACKEY.

### Minute of Secretary of Railways.

If the Commissioner is satisfied with this, I have of course no desire to keep the matter open. The evidence, even in its amended shape, does not to my mind support Mr. Mason's conclusions; but this is of course my individual opinion only. I ask the Commissioner to look into the case closely, and I think he will decide that under the present mode of working, the goods train should not have been approaching Jerrawa at the very time the mail train was due to pass that station; and I am further of opinion (reading Driver Bryson's first statement of 8th December, and the evidence of the guard of the goods train together) that there was imminent danger of a serious collision. I may say that at the time I wrote my minute of 28/12/77 I was not aware that the Working Orders had been abolished by the Commissioner, on Mr. Whitton's advice. Of course had I been aware of this I should have hesitated in advising that they should be revived, however valuable I might consider them.

### Accidents.

MINUTE of Mr. Secretary Combes.

WILL the Commissioner ascertain what has been done with reference to the accident which occurred at Lithgow, also the accidents at the Redfern Station and at Liverpool?

E.C., 24/11/77.

Acting Traffic Manager, for report.—J.R., 24/11/77.

Reports of the Sydney and Liverpool accidents attached. The Lithgow report will follow.—THOS. CARLISLE, Actg. T.M., 29/11/77.

Now herewith.—J.R.

MINUTE of the Commissioner.

ENQUIRIES have been held in each of these cases, and the evidence is herewith. From this it appears that the accident at the Sydney Station was caused by the gross ignorance of assistant-pointsman Sharp, but foreman carriage-shunter Free was almost equally to blame for entrusting such a responsible duty to an incompetent man. Assistant-guard Simpson was alone responsible for the accident at Lithgow Valley, and Guard Carson for the accident at Collingwood Branch. To put a stop to such cases of gross negligence, resulting in considerable damage to property and danger to human life, I feel called upon to recommend that Sharp, Simpson, and Carson be dismissed, and that Free be disrated.

J.R., 13/12/77.

MINUTE of Mr. Secretary Combes.

IN my opinion my successor should carry this recommendation out.

E.C., 14/12/77.

MINUTE of Mr. Secretary Sutherland.

*Subject* :—Accidents at Lithgow, 4th November, 1877; Redfern Station, 5th November, 1877, and at Liverpool, 9th November, 1877.

I FIND that in a minute, dated the 13th December, 1877, the Commissioner recommends that of the men in fault in these cases, Simpson for Lithgow accident, Sharp for Redfern accident, and Carson for Liverpool accident, be dismissed, and that foreman shunter Free, for Redfern accident, be disrated. My predecessor, in a minute, dated 14th December, 1877, says—"In my opinion my successor should carry the recommendation out."

It appears to me, however, that in writing these minutes, both the Commissioner and the Minister must have forgotten the action already taken, for I see on reference to the papers that Simpson was dismissed by the Commissioner on the 4th December last, and Sharp on the 5th December; foreman Free was at the same time fined 40s. for his part in the accident at Redfern.

I do not see how I can dismiss men already dismissed, nor re-open Free's case for the purpose of increasing the punishment inflicted upon him.

The only case undealt with is that of Carson's for Liverpool accident. The Acting Traffic Manager recommends, on the 29th November, 1877, that he be disrated and wages reduced 1s. a day. The Commissioner it would appear approved this at first, but erased the word "approved," and asked the question "Is this his first offence?" Carson's history in the department is then given, by which it appears that he has been six years in the Service as porter at Petersham, Sydney, and Parramatta Junction, and finally as assistant guard, and that his name for the whole period does not appear in the Offence Book. It appeared to me singular that whereas the Commissioner was about adopting on the 4th December the recommendation of the Acting Traffic Manager in this case, he should, on the 13th December, having in the interval been furnished with reasons (if previous good conduct is to influence decisions in such cases) for the exercise of lenity, recommend the extreme punishment of dismissal. This apparent inconsistency and the excellent character borne by Carson induced me to look closely into the case, and I rise from a careful perusal of the papers with the conviction that though Carson is to blame he is not alone to blame, but that the engine-driver, either for want of preliminary care in first ascertaining his load, or afterwards by over-estimating the power of his engine to control the load, contributed in a large degree to the accident.

Carson it appears to me is to blame for attaching to the train unnecessarily six trucks, which were not required at Collingwood, and which he should have attached to the up-train on the return of the engine to Liverpool; beyond this there is no satisfactory evidence of his culpability. He states that he dropped the brakes of the trucks, and where there were pins he used them; three parts of the brakes were pinned down. The enginemen state that the brakes were dropped with the exception of one, but that only one brake was pinned. Both statements may be true; the guard may have pinned the brakes down, and when the enginemen examined them *after* the accident the pins may have been absent. It must be remembered that the collision was a very severe one, and a sudden jerk (in this case it smashed the tender) would knock the pins out. At all events the only evidence opposed to the guard's statement is that of the enginemen, who, if they could not have shown the guard to be in fault, must have accepted the whole responsibility of the accident.

Now it appears that the engine employed was the new American engine, which was out on trial; it had never been down the Collingwood Branch before, and this branch is difficult to work, being on a gradient of some severity. Surely, under these circumstances, the driver should have been most careful in ascertaining what his load was before starting, but by his own evidence it appears that he was altogether ignorant on the point. The guard says he was not asked the number of trucks; the driver says he asked him, and he replied "he thought six." After we had started I again asked him, and he said "I do not know how many is on." It was clearly the duty of the engine-driver to have ascertained his load in a more definite way than this.

The

The train started with fifteen loaded trucks, the driver says "very cautiously," but when half-way down the engine was overpowered. I think there is reason for believing that the train was not taken cautiously down. We have it on record that this engine is a very powerful one, able, it is asserted, to do as much as or more work than any English-built engine on our lines. Now, there is evidence that (on a wet morning even) one of the ordinary engines has taken down this branch twenty-four loaded trucks with safety, and twenty loaded trucks have been taken down it without an engine at all, but with the aid only of a large brake-van.

Under all these circumstances I am forced to the conclusion that in the investigation of this case a failure in arriving at the true facts has been exhibited, and I think Mr. Mason should take an early opportunity of ascertaining what the load really is that this engine, when being driven cautiously, can take down the Collingwood Branch.

Even with the view of Carson's culpability taken by the Commissioner, I do not think that the Department would be wise in its own interest to take the extreme step of dismissing him. The man has been six years in our employment, and has never before committed a mistake. Mr. Carlisle says he will make a good railway man. It is not sound policy, nor conducive to safety, to dismiss men for a first offence if a less penalty can serve, because men with railway experience are not so easily procured, and by dismissal the Department loses the practical knowledge which it may have taken the man years to attain.

I think that Carson's case will be met by my approving of the recommendation of the Acting Traffic Manager, viz., that he be disgraced, and fined a shilling a day, say for six months.

JOHN SUTHERLAND,

## No. 6.

# Report of the Engineer for Existing Lines on the Accident at Emu Plains on 31st January, 1878.

The Engineer for Existing Lines to The Commissioner.

Department of Public Works, Railway Branch,  
Existing Lines, Engineer's Office,  
Sydney, 1 February, 1878.

Minute Paper.

*Subject* :—Collision of goods trains at Emu, on the Great Western Railway.

ABOUT 1 o'clock on the morning of the 31st ultimo, I received a telegram which I at once forwarded to the Commissioner, stating a serious accident had occurred at Emu Plains by the collision of two goods trains.

I at once went to the Sydney station and found that Mr. Scott, the Locomotive Superintendent, and Mr. Waring, Inspector of Permanent Way, with the assistance of Mr. Lock of the Traffic Department, were making preparations to dispatch a special train with men and all the necessary appliances for clearing the line.

We left Sydney about 2 a.m., picking up men on the way to Penrith; we arrived at the scene of the accident shortly before daylight, and found the remains of the trucks, which were piled in a heap on the line one mass of flames, having caught fire a few minutes after the collision. I had a very strong gang of men, and at once applied the fire engine which we brought from Sydney, and very soon reduced the fire so as to be able to commence clearing the line; the fire was put out and the line nearly cleared of the *débris* on the arrival of the up mail train at the spot, but as the rails of the permanent way were much crippled and several of the sleepers burnt, it was impossible to pass the train over that part, consequently the passengers and luggage were transhipped with very little loss of time to another train, which we had brought from Sydney for the purpose.

The whole of the men worked vigorously and continuously until 8.50 a.m., when the line was ready again for traffic.

After seeing the line put in good working order I returned to Penrith to attend the inquest, which was to be held on the bodies of those killed by the collision of the trains.

On the meeting of the jurymen about 11 a.m., I suggested to the Coroner that they should visit the scene of the accident, which they did. On their return to Penrith the inquest was immediately commenced, at which a full and searching inquiry was made into the cause which led to the accident.

From the evidence given at the inquest, it was proved that arrangements were made between the Station-master in charge at night at Penrith, and the Telegraph Operator, who was in charge at night of the Blue Mountain Station, or a special up goods train to cross the No. 16 ordinary goods train at Wascoe's Siding. On this arrangement and understanding the Station-master in charge at Penrith despatched the No. 16 ordinary goods train from Penrith at its proper time, viz., 11 o'clock p.m., with instructions to the guard of that train to cross the above-named special goods at Wascoe's Siding. The guard of the special goods train, George Perdue, was also informed by the operator in charge at the Blue Mountain, as he passed there, that it was arranged for the special to cross No. 16 down goods at Wascoe's, but contrary to this arrangement Perdue started from Wascoe's Siding at 27 minutes to 11 o'clock with the intention of reaching Emu siding before the No. 16 goods got there; on arriving within 25 yards of the bottom of the long incline of 1 in 30 from the Zig-zag it came into collision with the leading engine of No. 16 goods train, throwing both engines with their tenders off the line, and down the embankment,

embankment, which is at this spot 6 feet 6 inches high, turning them all bottom upwards; together with nine trucks of the special and five of the ordinary goods with their contents piled up on the top of the engines and tenders, and on the line, in indescribable confusion. A few minutes after the train caught fire and was soon in flames, as I have already described.

John Egan, driver of the special train, engine No. 52, was fatally injured, having died about 20 minutes after the accident. John Larkin, his fireman, was severely scalded and otherwise injured. Michael Stevenson, driver of the leading engine of No. 16 goods train, was much injured, but is likely to recover; but John Wiggins, his fireman, was killed on the spot. Brady, assistant guard of the special train, who was at the time of the accident riding on the engine, was also killed on the spot; his body, or rather what remained of it, was not recovered until the burning wreck had been removed; he was found under the engine completely charred. Both driver and fireman of the assistant engine which was pushing behind No. 16 goods train as well as the engine escaped uninjured, not having been coupled to the train.

The two engines which came into collision are a total wreck; the whole of the bodies of the fourteen trucks were burnt, nothing being left but the iron-work; some of the wheels and axles were broken and others considerably injured. A number of men are now at work collecting all the materials, and until this is done and the whole of them carefully examined, it would be impossible to form any reliable estimate of the value of the property destroyed by the accident.

The evidence given at the inquest led conclusively to the fact that the accident was caused by the negligence of Guard Perdue, and the jury returned a verdict to that effect, adding as a rider that they were of opinion that the Government ought to make more decided arrangements for the arrival and departure of special trains at sidings.

MINUTE

OF THE

SECRETARY FOR PUBLIC WORKS

ON THE

CAUSES OF RAILWAY ACCIDENT

AT EMU PLAINS ON 30 JANUARY, 1878,

AND

SYSTEM OF WORKING THE TRAFFIC;

TOGETHER WITH

MINUTES OF EVIDENCE.

---

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,  
19 *February*, 1878.

---

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1878.

Minute of the Secretary for Public Works on evidence given at the Inquiry held by him with reference to the Railway Accident at Emu Plains on the night of the 30th January, 1878, and system of working the Trains.

THE evidence given at the inquiry shows very clearly that the Working Orders made for the guidance of the Staff in carrying out the Rules and Regulations were absolutely essential to provide for the public safety, and that in abolishing them the door was thrown open to uncertainty, contradiction, and danger. It is to my mind marvellous that, with the evidence of the value of these Working Orders before him, the Commissioner (Mr. Rae) should have ventured to cancel them. His only reason appears to have been that one officer (Mr. Higgs), who was charged with disobeying them, stated in his defence that they clashed with the Rules and Regulations: No inquiry appears to have been made whether this was so or not; but recklessly, and without thought of the consequences apparently, the Working Orders were abolished, and the Staff left entirely to form their own judgment in regard to the interpretation to be placed upon the Rules—the very action of abolishing the “Working Orders” implying that the practice they sanctioned was wrong, and something different to that practice was to be adopted: *Something different was adopted*; the system which the Working Orders provided—that “written line clear reports” were to be placed in the hands of the guards showing to what points they were entitled to run—was abandoned; “line clear reports” were no longer obtained, and the duty of making safe arrangements for crossing trains was left to the discretion of the guards, without, in the case of goods train meeting goods train, any time being fixed whereby one train was to be in before the other was due out. On the night of the accident the goods train did not stop at Blue Mountain, as she should have done, to learn to what point the line was clear,—a report which it was the Station-master’s duty to have previously obtained from Penrith, and which he neglected. The evidence shows that the train did not stop, but went slowly by, and the officer in charge of station stepped on to the break van while the train was running, and asked the guard “where he was going to”; the station officer avers that he replied “Wascoe’s,” but the guard says he told him “Emu Plains.” The train proceeds to Wascoe’s, and the guard thinks he has time to make Emu Plains and comes on; and by the evidence it appears that it is considered that, since the abolition of the Working Orders, guards are expected to exercise their discretion in this respect under Rule 146, and run for any crossing-place, provided they consider they have time. Rule 146 says they are not to be on the road within 15 minutes of an advertised train being due; but no margin of time is fixed for a goods train to clear another goods train; and it is admitted by the Traffic Manager (Mr. Carlisle) and the Inspector (Mr. Crawford) that, while it would be wrong to run so close as to clear each other by one minute only, there is no rule prohibiting it, as there is when a goods train has to meet a passenger train; and they also admit that, even as between a passenger train and a goods train, if the guard’s watch were wrong and he was not aware of it, a collision would in all probability be the result.

Against all this uncertainty and danger the “Working Orders” provided. The Commissioner (Mr. Rae), when conducting the inquiry into the irregularity at Bathurst in November last, took the evidence of Inspector Hornidge (see page 5 of the papers *re* the suspension of the Traffic Manager, laid on Table of House on 5th February, 1878), that he had experienced difficulty while he was Station-master at Wallerawang; that on three occasions goods trains had arrived from one direction *after* passenger trains were due out in the same direction; the passenger trains were no doubt late, and so collisions were avoided; but had they been running to time they would, under the then existing state of things, have started out without reference to the position of the goods trains, which, under Rule 146, ought to have shunted fifteen minutes before the passenger trains were due. The guards’ watches were wrong perhaps, or they “chanced it.”

These irregularities were brought under Mr. Vernon’s notice, and induced him to issue “Working Orders” providing for a safer practice. It is marvellous to me that, with this evidence before him, Mr. Rae should have, without further and full inquiry (taking the evidence of the Staff generally), have cancelled these Orders, and authorized, in effect, the previous unsafe practice being reverted to, the danger thereof having been, in the meantime, largely increased by the number of additional trains running to meet the growing traffic. Again, when the Traffic Manager (Mr. Vernon) sent in his explanation of his conduct, on the 5th December last, in which he graphically points out the danger of running introduced since the abolition of the Orders (see pages 10 and 11 of the papers referred to, laid on Table 5 February, 1878),—what does the Commissioner (Mr. Rae) say? He says—“It is not my intention to follow Mr. Vernon through the whole of his remarks, the burden of which is an endeavour to show that the withdrawal of the “Working Orders” will endanger the public safety, and that these Working Orders which were sanctioned by the Commissioner, are not at variance with the established Regulations approved by the Governor and Executive Council.”

I cannot refrain from saying that it would have been well if Mr. Rae *had* followed Mr. Vernon through his remarks on this vitally important subject. Had he done so, and taken the evidence of the Traffic Staff, as it was taken at the inquiry held by me, he would, I think, have seen the incorrectness of his action, and would have lost no time in obtaining the authority of the Governor and Executive Council to revive these Orders. Had this course been adopted, the evidence of the witnesses examined by me abundantly shows that the accident, which we must all deplore, resulting in the loss of valuable lives, and in the total wreck of property to the value of some £12,000, would not have occurred. But it would appear that Mr. Rae was not to be successfully warned, for I find that, in a minute which the then Secretary, Mr. Goodchap, addressed to him on the 28th December (with reference to an irregularity in train running at Jerrawa), and which, viewed in the light of subsequent events, may be said to be almost prophetic, implored him in vain to revive the Working Orders. Mr. Goodchap stated that the existing method of working must sooner or later lead to disastrous results, and he adds, "I again urge upon the Commissioner to revive the Working Orders, which effectually provide for all cases of the kind, and are in correspondence with single line working on telegraph system everywhere."

Mr. Rae's refuge is again to the Engineers, who have no responsibility in regard to the safe working of the traffic; he calls upon Mr. Mason to hold an inquiry. Mr. Goodchap, who writes the minute and gives the warning, is not asked in any way to join in investigating the matter, and then Mr. Mason's commentary upon the evidence he obtains follows:—"He finds the matter a very frivolous affair, and considers it unworthy of further comment." Mr. Rae, on the 17th January, notwithstanding Mr. Goodchap's further advice to him to make additional inquiry, says he is satisfied, and the system is continued despite all warnings, till the terrible crash occurs on the night of the 30th January.

Had this paper been laid before me as the Ministerial Head of the Department, as it should have been, I would have taken some speedy action in the matter to make provision for a safer system; but I knew nothing of these representations—far less important matters were submitted to me daily, but this question, which affected public life and safety, was withheld—presumably because Mr. Rae did not attach importance to it. No one can regret more than I do myself the necessity there is for writing in this way. Mr. Rae has been in the Public Service of the Country for nearly a quarter of a century; he has held and still holds a high and responsible position in that employment, and has earned the respect and esteem of those who value long and faithful services. His many excellent qualities as an administrative officer in the executive control of a large and important department have not been unacknowledged by myself, nor, I feel convinced, by other gentlemen who have held the position of Secretary for Public Works; and it is therefore with much reluctance and pain that I find myself constrained to use words of condemnation in connection with any action taken by him; but the occasion is of too serious a nature to admit of hesitation or reserve, and I must as a matter of simple duty which cannot be evaded, make known the facts which an inquiry into the subject has revealed.

The following is a summary of the evidence taken:—The first witness is the Mr. Higgs, who created the difficulty in November last, at Bathurst, and who my predecessor immediately promoted to be Inspector of the Western Line. Mr. Combes, in his remarks in the House the other evening, represented this officer as such an intelligent and valuable one as to be entitled to rank next to Mr. Whitton.

One of the chief duties of the Inspector is to make report—Schedules of questions being provided him for the purpose—on the working of the various stations (Appended is the Schedule); but Mr. Higgs admits that he has made no report on any station since his appointment, over two months having elapsed. (Questions 5 to 14.)

In reply to the inquiry whether as Inspector of the line he had ever inquired what the practice was in running these special trains, he says, "No; I never had any occasion to do so till now" (38.)

Then, after confounding the duties of Station-master with duties of guards in regard to obtaining line clear report (47 to 49), he admits, that since the abolition of the Working Orders the running of these specials as to the time they shall make and the places they shall run for is left to the discretion of the guards (54 and 55).

He says that he is not aware of any rule which makes it compulsory on a Station-master to give guard a line-clear message before he leaves his station (71 and 72); and that, under the Working Orders the guard could not leave the station without it (85). And then to the plain question,—Do you think that a clear-line report, in the possession of the guard of the train on the night of the accident would have prevented any misunderstanding? This clear-headed officer, who ranks in intelligence next to

Mr.

Mr. Whitton, answers in the negative three times—the question being repeated—and on the 4th repetition says, “I should think it would; I misunderstood your question when I answered, ‘I think not.’” (87 to 90). In reply to Mr. Carlisle’s inquiry, “Did I understand Mr. Higgs to say that he would start a special without having telegraphic communication,” he answered, “No.” (100). And then to next question by Mr. Vernon to the same purport, he answers, “Yes.” (101.)

I cannot refrain from observing that if this is the description of intelligence and experience upon which Mr. Combes relied and allowed his judgment to be guided, I am not surprised that he arrived at a wrong conclusion.

The next witness is Mr. Thompson, the Station-master at Mount Victoria; he says, since the abolition of the “Working Orders” he has allowed the specials to leave his station without obtaining line clear; he never did so before. (146 to 149). And Mr. Grace, the officer-in-charge at Katoomba, the next Telegraph Station to Mount Victoria, says that both Mount Victoria and Blue Mountain—the Telegraph Station on either side of him—refused to give him line clear for special goods since the abolition of the Working Orders (184-6-7); that, directly they were abolished, the books in which they used to enter their line clear reports were abandoned, and were not revived till the day after the accident, when the practice established by the Working Orders was resumed.” (192 to 195).

To shew the disorganization which ensued when the system of working by line clear and the Working Orders were interfered with, see what Mr. Grace says: he admits the Telegraph Inspector gave him an order on the 25th November (two days after the cancellation of the system) to keep up his telegraph books—but he adds “I was helpless when the contrary practice was observed by stations on both sides of me.” (198 and 199.)

John King, officer in charge at Blue Mountain, says that on the night of the accident he did not obtain line clear from the Telegraph Station in advance. (228, 230, 259). His reason for not keeping up his telegraph book was “he was doubtful whether he was supposed to do so.” (250 & 251). Nothing but uncertainty seems to have prevailed directly the Orders were abolished.

Mr. Waring, the officer in charge at Penrith, says that since the abolition of the Working Orders the trains have been running clear of each other, more or less, by the discretion of the guards. There were no crossing-places fixed by previous telegraphic communication, and they have gone on under the general arrangement that the guard will keep clear of other trains. (281, 282, 287.)

William Pine, engine-driver, gives the following evidence—in reply to the question:—“Are you aware whether guard has line clear report to any particular place?” he says “No, the line clear report has been done away with for some time (324), and these trains are run at the discretion of the guards.” (325.) There is no time stipulated within which one goods train should be clear of another goods train—and he would not be breaking any rule if he ran in one minute only before another goods train was due out. (329.) This witness gives evidence as to hours of labour (334 to 340), so also does Mr. Tipping. (301 to 312.)

Station-master Bell says:—“I have run more special trains than any man on the line,” and he would prefer to run them under the Working Orders than under the present system, because if he got line clear from Station-master ahead it would take the responsibility off him as guard. (531, 532.)

Guard Elly, in reply to question—“Do you know the practice of working these special goods trains?” says, “All that I know is that all special trains should keep clear of advertised trains. (387.) He always worked up to the Working Orders when they existed. (394 to 396). Since their abolition have not obtained line clear report—would run for any crossing if he thought he had time to clear the train.” (397 to 400.)

Guard Baker says his practice has been to keep clear of all trains—has no further instructions than his time-table. (431 to 434.) Always had a line clear report in his possession showing where he was to run to under the Working Orders. (439.) Felt perfectly safe under that system—but could not under present system unless he had plenty of time. (444 & 445.) If two specials were on the road without either knowing the other was there, there would be a misunderstanding—there could not be a misunderstanding under the Working Orders. (446 to 449.)

Guard Cox says he was employed on the Railways at home for seventeen years—has been seven months in our service; when first commenced duty as guard acted under Working Orders—they were cancelled in November. (474.) Has been running since at his discretion (480.) In reply to question  
“Which

"Which system would you prefer to work under?" He says, "I would always run under line clear report—it is safe for every one then; verbal orders are not safe to work under." (484.)

Foreman Crawford says, the Working Orders provided that the guard should have in his possession a line clear report. (494 & 495.) It is now left to the discretion of the guards to make their own time—to run to crossing-places at their own discretion provided they have plenty of time. (496 to 498.)

In reply to question which is the safer system, he says, "Line clear report system." (501.)

Station-master Hornidge (formerly Inspector) says, that when the system was under Working Orders they were strictly observed (544 & 545); there was no approach to accident thereunder; he still observes the system at his station, though it is abolished; he does it for his own safety (549 and 550.) In reply to Minister, Mr. Hornidge states, "I consider that under the Working Orders we had a system as safe as any subject to telegraph can be—as safe as any system that is not automatic. (557.)

Station-master Richardson (formerly Inspector) describes Working Order practice, and present practice, which latter is a system which leaves it to the discretion of the guards to run in such a way that they will reach crossings so as to avoid trains which are on the road without previously obtaining line clear report. (586 to 588.) In reply to question, Which do you consider the safer system? He says, "The line clear report under Working Orders is certainly" (589); and he adds, "I would not trust any guard to run a yard without the permission of the Station-master; I would not trust either guards or drivers to arrange for or to alter the appointed crossing-places of trains. (590.)

T. F. Elliott has been on the Railways two years and three months; has had ten years experience of Railways, principally in India; the lines there are mostly single, and are worked on the telegraph system, under Orders almost precisely similar to those recently abolished here; they were found in India to work very satisfactorily—never knew an accident under them; have a knowledge of the accident which occurred at Emu Plains on the 30th January; have read all the particulars, and am confident that had these Orders been in existence at the time, the accident could not have occurred. (595 to 610.) In reply to inquiry whether he had anything to say, Mr. Elliott says, "I would state as a duty I owe to society that the system under which the officers of the Railway Department have been working the traffic on the single lines during the last two months is extremely dangerous, and one which would not be allowed to remain in force on any properly conducted line elsewhere; it is unsound in principle, and exceedingly unsafe. I allude to the system under which the working of special trains is left to the discretion of the guards, the time system under which it has been endeavoured to work the lines since the abolition of the Working Orders, and the practice of giving *verbal* instead of *written* orders to the guards. (611 and 612.)

Then follows *Mr. Vernon's* statement of the measure he had taken to secure safe working. (619, 622.)

And Mr. Goodchap's statement of the course taken to secure safe working since his appointment to Commissionership. (623.)

Mr. Carlisle, Traffic Manager, examined on system generally of passenger trains leaving crossing-places not knowing where goods trains are—admits that delay and possibly danger must be the result, and also, that if the guards' watches were not keeping time a collision would be the result of this system; does not think the system is as safe as it ought to be; under the system provided in the Working Orders there was safety. (720, 721, 727, 728, 729.) (This is singular evidence, seeing that Mr. Carlisle was one of the officers consulted about the abolition of the Working Orders.)

Mr. Rae was asked, after Mr. Carlisle had given his evidence, whether he had any questions to put; the same question was asked of him after each witness had given his evidence. Mr. Sutherland asked him if he wished to have Mr. Whitton and Mr. Mason examined; and he replied that he did not wish to express any desire in the matter, and he had no witnesses he wished to have called.

Inspector Crawford examined (this was another officer consulted about the abolition of the Working Orders). He confesses to the inadequacy of existing Rules in defining what is to be done in running trains. (755 to 758.) Admits the Working Orders provided for what was required. (759 and 760.) Does not consider it a safe thing that a train should be allowed to leave a crossing-place without knowledge of the train it was appointed to cross there. (790.) The Working Orders were safer, (790 to 792.) If the guard of the up goods train on night of accident had had in his possession a line clear report, he would not have gone beyond Wascoe's. (799.) Gives evidence also respecting running of trains at Jerrawa—shows that, by the Rules, the passenger train might have come on (771 to 773); and had the goods train been a few minutes later, there might have been a collision. (787 to 789, 801 & 802.) There is no time defined by which a goods train shall run clear of another goods train. (827 to 832.) It is not wise or prudent to relieve Station-masters of all responsibility in the matter of safe working of trains, and throw it upon the shoulders of the guard. (843.) Mr.

Mr. Goodchap's statement *re* the danger attending the running of certain trains irregularly at Jerrawa on 4th December, and Mr. Mason's attempt to treat matter lightly, ignoring Secretary's earnest advice to Commissioner to revive Working Orders, and so ensure safety in the running of the trains (846 & 847.)

This is a brief summary of some of the chief points of the evidence, but a perusal of the whole of the evidence is recommended.

The present Commissioner's statement, which will be found with the papers, that he has remedied the defective system of working disclosed in this evidence, will be received with satisfaction. On the 25th January, three days after his appointment, he placed before me the revised Rules and Regulations for working Single Lines on the Telegraph system (in which the abolished Working Orders are embodied) and on the Staff and Ticket system, and the double lines on the Block system; they were at once submitted to the Governor and Executive Council and approved; and while they were in the hands of the printer the accident occurred.

I am confident that the Rules and Regulations now approved provide effectively for the proper and safe conduct of the traffic. Something has been said about the superiority of the Block system over the Train Staff and Ticket system, but advocates of the former forget that its application generally is to double, and not to single line working. It *can be* applied, and since the instruments have been ordered from England it *will be* applied, to the single lines of this Colony, but will be effective only as against *following* trains *overtaking* each other. It is not equally to be relied upon to prevent collisions between *meeting* trains, and for this purpose the Staff and Ticket system will still be retained. The officers of the Board of Trade may be accepted as the highest authorities in the Railway world on the best systems of working Railways; it is their duty to inquire into all causes of Railway accidents in the United Kingdom, and the means to be adopted to prevent them. On page 19 of the papers in Mr. Vernon's case, laid on the Table of the House on the 5th February, 1878, will be found their opinions—the result of their long experience and ripened judgment—on this very point.

Colonel Yolland says:—"I would certainly suggest a combination of the Train Staff and Block Telegraph system."

Colonel Rich says:—"I would strongly urge the desirability of working single lines under the Train Staff Regulations which have for a very long time been recommended by the Board of Trade. The train staff should be used to prevent trains *meeting*, and it should be supplemented with the block telegraph, to prevent one train *overtaking* a train in advance."

Captain (now Sir Henry) Tyler says:—"It has long been observed that the Block Telegraph system, so valuable on double lines of railway, to prevent following engines or trains from overtaking and coming into collision with one another, is not equally to be relied upon in single line working to prevent collisions between *meeting* trains; and the experience obtained from time to time in this respect has led to the introduction and employment of the train staff." And he further says:—"It does away with the danger of altering the crossing-places and working by telegraph only, *and we required it to be adopted.*"

It is impossible to get better evidence than this. The late Secretary for Public Works has given notice of his intention to move for a Parliamentary Select Committee to inquire into the working of the Railway Department. I have no desire to oppose it on any ground personal to myself; but I know from experience that these inquiries while they effect little good, do serious injury to the Department—the attention of the officers and men will be taken from their duties, and heartburnings and jealousies will be promoted by the contradictory statements and recriminations that are sure to be made. The public—who use the Railways—will become unnecessarily agitated by the revelation of irregularities and mistakes of the past, which an effective administration, undisturbed by such inquiries, will render improbable in the future; and systems of working the traffic will be advocated with varying opinions, culminating in no other result than the adoption of the existing system which is insisted upon as the best by the great authorities whose opinions I have quoted. There has been no wish that any officer should be debarred from making any statement which he might desire to offer in connection with the inquiry held by me—either upon the causes of the accident specially dealt with, or upon any matter affecting in any way the working or administration of the Department. Mr. Rae was asked to examine every witness who gave his evidence, and to call any person he wished to have examined, and the names of Mr. Whitton and Mr. Mason were specially suggested by me; but Mr. Rae's constant rejoinder was in the negative, and he stated that he did not see the necessity for further evidence.

I now submit the evidence taken at the inquiry—with my observation thereon. If it be deemed that further inquiry is necessary, I shall not on personal grounds oppose it, and I shall be glad to furnish copies of any papers that may be required to elucidate any matter which may be considered to be unexplained.

JOHN SUTHERLAND,

18/2/78.

Mr. J. Waring .....	Clerk-in-charge .....	20

## ANALYSIS OF EVIDENCE.

**SPECIAL TRAIN** run by his direction (16). Stations advised by wire that it would run (17); usual Mr. Higgs. arrangement (27). *Guard* instructed to run clear of all trains (28); his duty to obtain *line clear reports* from station to station (45-8); if *line clear report* unobtainable, guard would be justified in going without it and working by time-table (57-61, 191); not required by *Rules* to have line clear report in his possession (71-2); best able to know and arrange for running of train, left therefore to his discretion (54-5). Under *Working Orders*, must have had line clear report in his possession (64-5, 84); would have been his duty to obtain from Station-master in writing (82-3); could not leave a station without it (66-7, 85); line clear report in writing would have prevented misunderstanding or dispute as to crossing-place (87-92). *Station-masters*.—Duty of Station-masters at Mount Victoria, Katoomba, and Blue Mountain to obtain line clear report (30-4, 42-3, 49); required to do so by *Rules*, not by his directions, trusted to carry out *Rules* (36-7, 44); not required by *Rules* to give line clear report to guard (50-2, 74-9); under *Working Orders* were required to obtain line clear report before any train left, and to hand same in writing to guard (73, 80, 83); *Special Trains* now run without line clear report (70). Statement.—Conduct of guard in disobeying instructions not to be understood—means of telegraph communication available at Wascoe's—guard not justified in leaving there without using them (93-4).

**SPECIAL TRAIN**.—instructions to run received from Mr. Higgs (106-9); left Mount Victoria at 7.47 p.m. (110); Mr. Thomson. line clear report not obtained or asked for (111-114); would not have been justified in detaining train for it (113); Commissioner's *Rules* 152 did not require it under the circumstances and according to his reading (116, 117). *Working Orders*.—Since cancellation *line clear report* not obtained in every case (120); have allowed special goods trains to leave without asking station in advance for line clear (149); and without giving line clear report to guard (147-8); prior to cancellation of *Working Orders* no special goods ever was (146) or would have been started under any circumstances without line clear report being obtained (126), and given to guard in writing after entry in book (127-8). Since cancellation of *Working Orders*, *Mineral Train* working between Mount Victoria and Coal Sidings—time of which uncertain (143-5, 158), not worked by line clear report (140-1, 159), nor a previous train targeted (160). Prior to cancellation of *Working Orders*, mineral train never worked without guard having line clear report in his possession (142).

**SPECIAL TRAIN**.—Memorandum of instructions received from Mr. Higgs (167), arrived at Katoomba Mr. W. H. Grace. 8.25 p.m., left 8.35 p.m. (168), did not obtain line clear report for from Blue Mountain, but arranged by wire with Blue Mountain for special goods crossing down mail at Weatherboard (171-2, 4); no record of this made in books (177); did not hand guard of goods train, line clear report (183). *Working Orders*, prior to abolition of, would have obtained, recorded in books, and handed to guard, line clear report (180-2, 210); guard in fact would not start without it (211, 217). Since abolition of line-clear report not obtained, because stated by adjacent stations not to be necessary (191); and refused by them as a rule (184, 199); therefore telegraph books not entered up since 23rd November (192, 8, 9); practice as regards telegraphing and recording in books resumed by others and himself since occurrence of accident (192-5).

**SPECIAL GOODS TRAIN**.—Recollects running on 30th January (224); not on duty when train was at Mr. J. King. Katoomba (226); up goods did not stop at, but passed slowly by Blue Mountain (229), at 10.5 p.m. (233); line clear not obtained or asked for from Penrith (228, 230, 259); guard of up goods informed him while passing, that he would cross down goods at, and go no further that night than Wascoe's; certain guard said Wascoe's (231); telegraphed to Penrith, after up goods left, that down goods would be crossed at Wascoe's (232); down goods leaves Penrith at 11 p.m. and would reach Wascoe's about 11.35 p.m. (241-2); distance from Blue Mountain to Wascoe's about 17 miles; if special had taken ordinary time, 70 minutes allowed for this run, it would reach Wascoe's about 11.15 p.m., 20 minutes before down goods would be there (239, 243-5); distance from Blue Mountain to Emu about 22 miles; if up special had taken ordinary time, 90 minutes allowed for this run, it would have reached Emu about 11.35 p.m. Down goods if to time would pass there about 11.6 p.m. (246-9); telegraph books not kept up after cancellation of *Working Orders*, because doubtful of being supposed to do so; having no other orders to enter line clears in the book; but to work trains according to Service Time-table and Rule Book (250-1); was in habit of giving line clear (and never refused it when asked) and getting line clear as required by Rule 152, but not of entering it in book (252-8); entry of 10.5 p.m. departure time of up special made by Station-master from time of his (King's) watch (233-6), which does not always keep good time (261); heard guard had said his time of passing Blue Mountain was 9.42 p.m., which if right, and assuming up special to take ordinary allowed time for running, would have brought him to Emu about 11.12 p.m.; down goods time for passing there being about 11.6 p.m. (265-8).

Was in charge of down goods on night of accident (383); special trains should keep clear of advertised Guard Elly. trains, running at discretion of guards, who should name and not go beyond crossing station (387-396); working orders remembered and were observed by him (392-396); would only run for a crossing-place after naming it, and when time would permit (399-400); would require a line clear report under *Working Orders* (401); his knowledge of time-tables, and of advertised and non-advertised trains (402-420).

Knows of late accident, was acting as assistant guard to down goods (428-9); special trains—knows about Guard Baker. the running of; practice has been to keep clear of all trains, as per former instructions of Mr. Higgs (430-433); no further instructions received, only time-table (434); remembers *Working Orders*; always had, and never left station without line clear report under same in case of special goods (435-439); felt perfectly safe then; not so safe without, unless he had plenty time (444-5); possible misunderstanding in case of two specials (446-447); no misunderstanding or possibility of collision if line clear reports were possessed as only provided for by *Working Orders* (448-450); knows of no rule specifying time for goods trains to work clear of each other (455-458); will make no statement unless desired (459).

- Guard Cox. WORKING Orders were in operation when he commenced duties as guard (471); No. 9 was observed, in case of specials, until cancelled (472-3); since cancellation of Orders has run by foot-notes on time-table and verbal line clear reports (475-6), and at his discretion (480, 482); under Working Orders had to have written line clear report; safe for every one under them; verbal orders unsafe (483-4).
- Mr. J. Waring. KNOWS particulars of accident (271). Notice received from Station-master of special running (272); was not asked for *line clear* by Blue Mountain for up special (277); asked for and obtained *line clear* from Blue Mountain for down goods train (275). *Working Orders* were observed while in operation (280). Since abolition, believes custom has been to run clear of ordinary trains (281, 282, 287); will make no statement as to working of trains unless desired (288).
- Mr. J. Tipping. SPECIAL TRAINS, as to running of, can only speak from observation (291); have not observed Station-masters or guards departing from Rules (294). hours drivers and firemen of up special were on duty (295-308); hours of duty of men generally (309-315).
- Wm. Pine, driver. SPECIAL GOODS TRAINS, he has been running (319); does not know if train is telegraphed out by *line clear* report (320); takes his instructions from guard, who consults him (321-322). *line clear* report done away with (324); thinks it strange to run at discretion of guard (325); *No rule* specifying time for making stations in advance (326-329). *Hours of work* (334-343).
- Wm. Jordan, Fireman. SPECIAL GOODS TRAINS, does not know practice of running them (355-359-363).
- E. Cane and E. Childs. SPECIAL TRAINS run under guards directions (368, 369).
- E. Laing and Jas. Bryant. DRIVER under direction of guard, and fireman under driver (372). *Special Trains* formerly worked by *line clear* report recently done away with (373). Guards in habit of consulting and agreeing with drivers, and never knew driver leaving without, as to making stations in advance (374, 375, 377).
- Foreman Crawford. HAS worked under Working Orders (493); practice since their abolition has been same as before, goods trains to keep clear of *passenger*, and special to keep clear of *all* trains (496); believes it is at discretion of guards (498)—not so under Working Orders, which required written line clear report, and provided safer system (499-501).
- Mr. J. Bell. SPECIAL TRAIN was run by instructions of Mr. Higgs (515); practice of late has been to target previous train and advise stations by telegraph (516); under Working Orders, practice was for all specials to run by *line clear* report only (517); since abolition does not know that special trains have been run at discretion of guards (523). After being put in charge of guard, the guard has to arrange crossing-places (530); has run more specials than any other man on line; would feel safer under the Working Orders, because a *line clear* report from a Station-master ahead would take responsibility off him (531-2).
- Mr. M. A. Hornidge. SPECIAL TRAINS, worked while he was Inspector, by *line clear* report only, as provided in Working Orders, No. 9 of which was strictly observed (542-545), continues to work under system laid down in Working Orders, for his own safety (548-550); does not consider the Working Orders clashed with Rules, and prefers most decidedly to work with them (553-555); considers that under them the system was as safe as any could be, subject to telegraph; gives the preference to the Staff and Ticket system (557-559).
- Mr. G. J. Roberts. WORKS, on his section, under Staff and Ticket system, which works splendidly; would not wish for a better (566, 569).
- Mr. H. Richardson. HAS had experience in special train working (581). During his time as Inspector, specials were run by *line clear* system only; illustrations of instructions given by him to guards (582-585). Never knew guards of untimed trains travel without *line clear* report when system laid down in Working Orders was in force (585); present practice leaves it to discretion of guard; would not trust guards to run, or guards and drivers to arrange crossing-places, without permission of Station-master (587, 590). *Line clear* report system is certainly the safer (589).
- Mr. T. F. Elliott. HAS had ten or eleven years' experience of Railway administration, in various capacities, chiefly in India, where lines are mostly single, and nearly all worked by telegraph (597-600). Acquainted with Working Orders, which provide a similar system to that found to work most satisfactorily in India (601-604); had these Working Orders been in operation, is confident accident at Emu Plains could not have happened (610). Considers that system upon which it has been attempted to work of late, extremely dangerous, unsound, and unsafe, and which would not be allowed on any properly conducted line of railway (611, 612).
- Mr. D. Vernon. GENERAL remarks, &c., (619-622). Explanation of telegraph facilities between Penrith and Blue Mountain (739-745).
- Mr. C. A. Goodchap. GENERAL observations (623, 846, 847).
- Mr. J. E. Muir. STATION-MASTER, Blue Mountain; was not on duty but in office on night of accident (628-630); heard up special train pass by, and entered time as received from officer on duty (631-636); gets the time from Sydney daily when circuit allows (637-641); has made it a practice to give and get *line clear* for specials when circuit could be had; never refused *line clear* (648-658); telegraph books have not been kept up (660); no record made of *line clears* (663) since receipt of order cancelling the Working Orders (664-669); when these were in operation, always gave guard *line clear* report in writing, telling him where to work to; have not done so since their cancellation (672); left now to guard's discretion (673-4); had guard of up special had written *line clear* report, does not think he would have gone beyond Wascoe's (676).
- Mr. T. Carlisle. NOT aware of any rule specifying time by which goods trains are to work clear of each other (684-8); if a special worked clear by one minute of an ordinary goods no rule broken (689-99); crossing-place of mail and goods trains; former would be authorized in proceeding if latter had not arrived (708-11); nothing gained, but a loss incurred, by such a practice (712-727); practice not as safe as it ought to be (728-9); would be different under Working Orders (730-1); crossing-places between goods and passenger trains not fixed (732-3).
- Mr. John Rae. HAS no wish for the examination of any other witnesses (734-737).

TRAINS meeting and safe crossing of—principal thing to be provided for in rules and instructions for single line working (751-754); not provided for in Rule book (755-758); was provided for in Working Orders (759-760); no provision in working table for observance of crossing-place in case of passenger and goods train—for which Rule 146 is to be the guide (761-763, 813); by this, goods trains should keep back if unable to make crossing-place in time; and passenger train may leave crossing-place if goods should not be there (766-769); no rule or instruction requiring a passenger train to wait at a crossing station in absence of goods train to be crossed there (770-772), only what was in Working Orders (773-4); results of practice of allowing passenger train to leave a crossing-place before arrival of goods train from opposite direction—delay and danger (775-789, 800-809); does not consider such a system safe; Working Orders safer, and left no room for doubt (790-795); remembers Working Order No. 9; it is very clear (797-8); line clear report in possession of guard on night of accident would have detained him at Wascoe's (799); safer to work on supposition that road is obstructed than that it is clear (810-811); observance of Rules 152 and 146 might prevent trains travelling (812-822); no rule providing for time by which special goods train must work clear of goods trains; in absence of telegraph communication, if a margin of one minute was observed no rule would be broken (823-832); Rule 146 relieves a passenger train from waiting at a crossing-place if goods train not there; under some circumstances passenger train *should* wait—no rule to this effect (833-842); not wise to relieve Station-masters of responsibility in the matter of crossing trains and place it on guards (843).

Mr. Inspec  
Crawford.

## RAILWAY ACCIDENT, EMU PLAINS.

## MINUTES OF EVIDENCE.

MONDAY, 4 FEBRUARY, 1878.

PRESENT :—

THE HONORABLE JOHN SUTHERLAND, M.P., Secretary for Public Works.  
 CHARLES A. GOODCHAP, Esq., Commissioner for Railways.  
 JOHN RAE, Esq., Under Secretary for Public Works.  
 DONALD VERNON, Esq., Secretary for Railways.  
 THOMAS CARLISLE, Esq., Traffic Manager of the Southern, Western, and Richmond Lines.

Inspector Higgs was called in and examined :—

1. *Mr. Sutherland.*] Your name? Edward Higgs.
2. What is your present position and your length of service in the department? I am Traffic Inspector on the Western line, and I have been in the service twenty-two years next month.
3. When were you appointed to your present position? On the 24th of November last.
4. What are your duties? I am Traffic Inspector.
5. What are the duties of a Traffic Inspector? To arrange for the running of trains conveying trucks to and from the different sidings and stations.
6. *Mr. Goodchap.*] Is there not an Inspector's Report which shows you what you ought to do more particularly? There are returns to be made reporting on the various stations, but I have not made any of them yet.
7. *Mr. Sutherland.*] Have you a copy of the forms given to you for that purpose? I have them.
8. Can I get a copy of them now? (*Form produced by Secretary for Railways.*)
9. *Mr. Goodchap.*] Have you made no report at all? Upon the stations?
10. Yes? No.
11. How many months is it since you were appointed? I was appointed in November last.
12. Over two months ago? Yes.
13. And these returns are to be made monthly? I was not aware of it.
14. But you have made no report upon any station? No. It would be almost impossible to do them all monthly.
15. *Mr. Sutherland.*] You know of the accident which happened at Emu Plains on Wednesday, the 30th of January? Yes.
16. By whose direction was the special goods train from Mount Victoria run? By mine.
17. What arrangements were made for the running of this train? I sent a telegram to all stations stating that it would leave Mount Victoria about 7:30 p.m.
18. *Mr. Goodchap.*] Have you got a copy of that telegram? It is only a pencil copy that I have, but Mr. Thompson has a copy of it. [*Witness's copy produced. Vide Appendix A.*]
19. What stations did it go to? Wascoe's, Springwood.
20. It is not so marked here. Do you produce this as a copy of the telegram you sent? It is a copy of the one that Mr. Thompson received. I had not time to get the one I sent from Penrith. This is as Mr. Thompson received it, and would be the message as it was delivered at Mount Victoria only.
21. Why is Katoomba marked on it? By way of Katoomba.
22. Where were you when you sent it? At Penrith.
23. *Mr. Sutherland.*] Would the telegram you sent not be in any of the books? No, I do not think they enter them.
24. How do you leave any record of your telegrams? The form itself is left in the office.
25. In which office—the sending office? Yes.
26. Should we not have that form then? That is the one I referred to when I said that I had not time to get it as I came by this morning; but in all probability the telegraph clerk will have it with him.
27. Was that the usual arrangement you made on that night for this train? Yes.
28. What should have been the course of proceeding of the guard of this train in working it through from Mount Victoria to Penrith—explain that in detail, if you please? His instructions were to leave Mount Victoria with the special, and to run clear of all trains.

Inspector  
Higgs.  
4 Feb., 1878.

- Inspector Higgs.  
4 Feb., 1878.
29. Will you explain how he was to run clear of all trains? According to the time-table, which would guide him. The service time-table would tell him what time the various trains were due at the various stations and sidings. He would know what time it would take him to run from one place to the other, and if he could not make a particular place in time, he should stand back where he was.
30. *Mr. Goodchap.*] Was it not the duty of the Station-master at Mount Victoria, before starting that train, to obtain from Katoomba, the next telegraph station in advance, a line clear report? Undoubtedly it was.
31. Are you aware whether he did so? I am not.
32. When the train arrived at Katoomba, was it the duty of the Station-master there to telegraph to Blue Mountains to arrange for the passing of the train from Katoomba to Blue Mountain, and to arrange where it was to cross the down mail? It was the duty of the Station-master at Katoomba to ascertain from Blue Mountain if the line was clear, and then for Blue Mountain to ascertain if the line was clear to Wascoe's siding.
33. There was a down mail due between Blue Mountain and Katoomba? Yes.
34. Katoomba should have obtained from Blue Mountain a report that the line was clear, and that the special could come on and cross the down mail at the Weatherboard, and then come on? Yes.
35. Was that done? I could not tell you. The Station-master is here.
36. Was it your direction, as Inspector of the line, that it should be done? It is in the Rules—the Rule Book will tell them that.
37. Do you, as Inspector of the line, see that this is done? I do not question the Station-masters after every train has left? I trust to them to carry out the Rules.
38. Have you never inquired what the practice of running these trains is? No, I have never had any occasion to do so until now.
39. *Mr. Sutherland.*] Is the practice you have stated with respect to this special goods train the practice which is observed by guards in all similar trains? Yes.
40. What notice was issued to stations in advance previous to starting the train? That should be obtained by line clear.
41. *Mr. Goodchap.*] Was it obtained? I could not say.
42. *Mr. Sutherland.*] Will you explain what should be the course taken by Station-masters in regard to the running of this train—you say you left it to them to carry out the Rules? Yes.
43. Just state what the practice should be? To obtain a line clear report from one station to the other.
44. And you trusted entirely to the Station-masters to see that that was carried out? Undoubtedly.
45. *Mr. Vernon.*] I should like Mr. Higgs to state exactly what he considered the duties of the guard to be in working that train through from Mount Victoria to Penrith. He has described the Station-master's duties; will he now state what the guard should have done from station to station? He should have obtained line clear reports from one station to the other.
46. *Mr. Goodchap.*] The guard should? Undoubtedly.
47. *Mr. Sutherland.*] Does not the Station-master obtain it; they cannot both obtain it? He conveys it to the guard.
48. What you mean is, that the guard should obtain it from the Station-master? Yes.
49. The Station-master's duty is to obtain line clear report from the Station-master ahead, and to hand it to the guard? Yes.
50. *Mr. Goodchap.*] Do the Rules provide that it should be handed to the guard? I do not think it is provided that it shall be handed to him. Rule 152 speaks of that.
51. Is this the Rule:—"On those portions of the Railways where a single line only is provided, care must be taken before any train leaves any station that there is no train due in an opposite direction; and, where there is telegraphic communication, the Station-master, before allowing any train to leave his station, must ascertain by telegraph from the next station in advance that the line is clear"? Yes.
52. There is nothing in it about the guard obtaining the report? No, but that is the only way in which the guard can work.
53. *Mr. Vernon.*] Would Mr. Higgs be kind enough to explain what he meant by saying that the guard received instructions to work this train clear of all trains, and that he was to be guided by the working time-table? The guard starts from Mount Victoria at half-past 7 o'clock, and there is a mail train due at Katoomba at half-past 8. The question arises—is there sufficient time for him to run that distance and get to Katoomba a quarter of an hour before the mail train is due at that place. They say the guard is justified in going on, provided he gets the Station-master's sanction. I should like to have that point cleared up.
54. *Mr. Goodchap.*] Is the starting of the train left to the discretion of the Station-master? The guard has a better knowledge of the weight of his train, the speed he can make, and the general running. He knows better the time it takes him to do it. The Station-master could not say nearly so well as the guard.
55. Therefore it is left to the discretion of the guard? Yes.
56. *Mr. Vernon.*] Does Mr. Higgs hold the guard responsible for making the station in advance fifteen minutes before the train in the opposite direction is due; and does he hold him responsible for obtaining a line clear message before he leaves? The guard is responsible for keeping clear of all trains.
57. Does Mr. Higgs hold the guard responsible for seeing that he can work to the station in advance fifteen minutes before the train from the opposite direction is due there, and does he also hold him responsible for obtaining a line clear message before he starts? If so be that "line clear" cannot be obtained, the guard is justified in going without. In stormy weather, or when telegraphic communication is interrupted, unless there is advice of another special coming, the guard has the right of road provided he keeps clear of other trains.
58. *Mr. Goodchap.*] Would not a train coming in an opposite direction to this train—telegraphic communication being interrupted—also have the right of road, as you say, seeing that he could not be made aware of the other special coming? If there is another special coming, and he is not made aware of it, the Station-master dare not start it away, knowing that there is another special coming.
59. How is he to know it when telegraphic communication is interrupted? From the notice I gave him.
60. But that is the telegraphic notice? Yes.
61. *Mr. Vernon.*] Do I understand Mr. Higgs to say that when a line clear message is obtainable the guard must not leave without it; but that when it is not obtainable he may leave without it, provided he thinks

Inspector  
Higgs.

4 Feb., 1878.

- thinks he can make the next station in advance fifteen minutes before the opposite train is due according to the working time-table? Yes.
62. *Mr. Goodchap.*] Will you read the abolished Working Order No. 9? Yes.
63. What does that provide? That "all trains which—as per working time-tables—'will run only when required' as well as all untimed pickup, mineral, ballast, and special trains, or engines, are only to be worked by line clear report system and (excepting in such case as provided for in Working Order No. 10) no such train is to leave any telegraph station unless the guard has in his possession a line clear report obtained from the next telegraph station in advance."
64. The guard must have that line clear report in his possession? Yes; but that working order has been cancelled.
65. But under that working order the guard would have in his possession a written report stating how far he was to go? Yes.
66. And he does not, under those regulations, leave that station until he had such report, the order being that "no such train is to leave any telegraph station unless the guard has in his possession a line clear report obtained from the next station in advance." These are the words, are they not? Yes.
67. Then he could not leave without having that line clear report in his possession? No, not according to that.
68. That you say has been abolished? Yes.
69. When was it abolished? I think some time in November last.
70. And now such a train will run without a telegraphic line clear report? They do run without it.
71. *Mr. Sutherland.*] Is there any rule now which requires that the guard shall have in his possession a line clear report showing where he is to go to? No.
72. Not in the books? I think not.
73. You are acquainted with the provisions of the working orders which have been abolished? Yes.
74. *Mr. Vernon.*] Is there any rule at present in existence making it compulsory on a Station-master to give a guard a line clear message before he leaves the station? I think not.
75. *Mr. Goodchap.*] You know the rules well? Yes.
76. You said just now, you think not; do you mean you know not? I do not believe there is.
77. You believe; do you know there is not? I am not certain, but that is the best of my belief.
78. You have never seen one? I do not think I have; if I have, I have forgotten it.
79. *Mr. Vernon.*] I understand Mr. Higgs to say that he does not believe there is any such rule in existence? Yes.
80. *Mr. Sutherland.*] Does not the order require that previous to the train leaving the station the officer in charge shall procure a line clear report from the next telegraph station in advance for the purpose of being handed to the guard? That is the working order.
81. The working order which you have stated has been abolished? Yes.
82. Will you explain what would have been the duty, under that order, of the guard of the special goods train on the night of the 30th of January? It would be to obtain a line clear report from the Station-master.
83. *Mr. Goodchap.*] That is to say, before he started, the Station-master must hand to him a line clear report in writing? Yes.
84. He must have that in his possession? Yes.
85. *Mr. Sutherland.*] Did the working orders require that the guard must have a line clear report before leaving any station? Yes.
86. Did you hear the evidence given at the Coroner's inquest held at Penrith, in reference to this case? I did not.
87. Do you think that a line clear report in the possession of the guard would have prevented any misunderstanding as to the place of crossing? Would it have caused any misunderstanding?
88. Do you think that a line clear report in the possession of the guard would have prevented any misunderstanding as to the place of crossing—that is, the place where the guard of the special goods should have crossed the train from Penrith? I don't see how it could.
89. I will put the question again. Do you think that a line clear report in the possession of the guard would have prevented any misunderstanding as to the place of crossing? I think not.
90. My question was, do you think that a line clear report in the possession of the guard would have prevented any misunderstanding as to the place of crossing? I should think it would. I misunderstood your question when I answered I think not.
91. *Mr. Vernon.*] Mr. Higgs admits that had the guard received a written line clear report, there could be no dispute between the guard and the Station-master at Blue Mountains as to where he was to cross? There could not have been any dispute.
92. *Mr. Goodchap.*] The document would have spoken for itself? Yes.
93. *Mr. Sutherland.*] Have you any statement to make or explanation to offer in connection with the accident? No. It is a most remarkable thing—it is a thing I cannot understand. If he carried out his instructions to cross the train at Wascoe's, what should have possessed him to have gone beyond that I do not know. The same would apply if he had a line clear report if he had not obeyed the orders.
94. *Mr. Goodchap.*] If he considered that he had plenty of time, supposing it was an hour or two hours to run to Emu Plains, would he be justified under the Rules in going on at his discretion? Not if he could telegraph. He had telegraphic communication to Wascoe's, and if he wanted to go any further he could have obtained permission to do so.
95. *Mr. Vernon.*] Was there any officer in charge at Wascoe's when the guard reached there? There is always one there who can be obtained.
96. Was there any officer on duty? No; but he could be had in a few minutes. It is only the opposite side of the line where he resides.
97. *Mr. Sutherland.*] Do I understand you that there is no man in charge at night there? There is not.
98. But he could be found any time he was wanted by the guard or any one belonging to the train? Yes.
99. And could have used the instrument between Penrith and Wascoe's? Yes.
100. *Mr. Carlisle.*] Did I understand Mr. Higgs to say that he would start a special train without having telegraphic communication? No.
101. *Mr. Vernon.*] I think I understood Mr. Higgs to say that, in the event of a storm or any interruption to telegraphic communication, and a line clear report not being obtainable, that a guard would be justified

- Inspector Higgs. in taking away a special train, provided he could arrive at the next station in advance before any ordinary train was due there? Yes.
- 4 Feb., 1878. 102. *Mr. Sutherland.*] Have you, Mr. Rae, any questions to ask this witness? Not any.

Station-master Thomson was called in and examined:—

- Station-master Thomson. 103. *Mr. Sutherland.*] What is your name? John Robertson Thomson.
- 4 Feb., 1878. 104. What is your present position, and your length of service in the Railway Department? Nine years next August.
105. What is your present position? Railway Station-master at Mount Victoria.
106. You know the particulars of the accident at Emu Plains on Wednesday the 30th January last? I received instructions from Inspector Higgs.
107. I asked you if you knew the particulars of the accident? Yes.
108. What instructions did you receive respecting the running of this special goods train? I received notice from Inspector Higgs at 3.30 p.m.
109. What instructions did you receive? These are my instructions.  
[*Witness handed in a paper. Vide Appendix B.*]
110. When did this train leave your station? The up special train left at 7.47 p.m.
111. Did you obtain a line clear report from the next station in advance? No. No line clear report was obtained.
112. Will you explain the practice in starting these special trains, and how you justify it by the rules? No. 16 up goods train having left at 7.30 p.m., which train was duly targetted, the special of course followed to Katoomba. There was no train out in an opposite direction. The line was perfectly clear for the train to follow.
113. *Mr. Vernon.*] How does Mr. Thomson justify his action in allowing that train to leave without first obtaining a line clear report? I can safely say this, according to my reading of the rules, the Commissioner's rules, I would not be justified in detaining that special train if I did not receive a clear line report.
114. *Mr. Goodchap.*] Did you try to obtain a clear line report? I did not.
115. Will you read the 152nd rule? Yes; this is not a case of a train being due in an opposite direction.
116. Will you read it? "On those portions of the railways where a single line only is provided, care must be taken before any train leaves any station that there is no train due in an opposite direction; and where there is telegraphic communication the station-master, before allowing any train to leave his station, must ascertain by telegraph from the next station in advance that the line is clear." There was no train due.
117. "Where there is telegraphic communication the station-master before allowing any train to leave his station must ascertain by telegraph from the next station in advance that the line is clear";—that is the rule? I read that rule as if the train was due in an opposite direction. I cannot see that it refers to a case where there was no train due.
118. Suppose that goods which you describe as having started from Mount Victoria and targetted had broken down before it reached Katoomba, would the line have been clear? They would have gone out with their signals.
119. But would you have known that the line was clear without a telegram to tell you? I cannot see how I can answer that question, because the train itself would not have arrived at Katoomba. He could not have given me a line clear there; it would only be to follow.
120. You are to obtain under the rules a line clear report from the next station in advance;—could you have obtained it if the train you describe as having started had broken down before it reached Katoomba—That is to say, if you telegraphed to Katoomba to ask if the line were clear, would not Katoomba reply: The other train has not arrived? Since the working orders were cancelled I have not obtained a line clear report for a special following an up-goods train to Katoomba. I have not done so in every case, but I could not detain it until I ascertained whether the line was clear or not.
121. *Mr. Vernon.*] Does Mr. Thomson mean that he would not detain a special train? As long as the train was duly targetted, and provided that the station-master in advance had been advised of this special running, and knowing the time it would leave my station.
122. *Mr. Sutherland.*] You are acquainted with the working orders recently abolished? Yes.
123. Read No. 9, if you please? "All trains which as per working time-tables will run only when required, as well as all untimed pick-up, mineral, ballast, and special trains, or engines are only to be worked by line clear report system, and (excepting in such a case as provided for in working order No. 10) no such train is to leave any telegraph station unless the guard has in his possession a line clear report, obtained from the next station in advance."
124. What was your practice when that working order was in force? I started them in accordance with the Commissioner's rule.
125. *Mr. Goodchap.*] As supplemented by the working orders? —
126. What was your practice in starting these special trains under these working orders, that is under the order which you have just now read? The practice would be to detain these trains under any circumstances, until I got a line clear report from the station in advance.
127. And you would hand to the guard of the train a copy of the line clear report, which would show him how far he was to go? Yes, after having been written in the inwards book.
128. *Mr. Sutherland.*] Had these orders not been abolished would you have pursued the same in respect of this special train which was run on the 30th of January? I would.
129. Will you look at your telegraph message book on the 23rd of November, and explain the meaning of that memorandum under the telegram? The words are "Rules, 146 and 152, general order 63." That refers to guards going out protecting their trains in case of break-down, an accident on the main line, and train following.
130. *Mr. Goodchap.*] You are quite sure that general order 63 was not an order abolishing the working orders? Yes, I believe it is. Yes, that is what it is.
131. That is the meaning of the memorandum here—that there is no occasion to keep up this book, as the working orders have been abolished? I cannot say that. These have been written by James and myself, seemingly.

132. *Mr. Vernon.*] What is the meaning of the memorandum as written? It must have reference to the working orders having been abolished, I think; and this is the number of the general order referring to that; I think it must be that.
133. *Mr. Goodchap.*] Can you give any reason why it was placed there? I cannot give any other reason.
134. Any other reason; you have not given any reason? I cannot give any reason except that—that these rules would be acted up to; the rules in the Commissioner's book and this rule—
135. Will you name the rules? That rules 146 and 152 would be acted up to as regards working the trains from that day. No. 63, given here, refers to a general order, which was issued to abolish the working orders. It is merely a note about the rules. I do not think it has any other reference.
136. Do I understand you that after the working orders were abolished the necessity for telegraphic communication before starting a train ceased? No.
137. You did not observe it after that? I did if a train was due in an opposite direction; I never started a train out with a train due in an opposite direction; I never have done it and I never will.
138. *Mr. Vernon.*] Will you examine your outwards telegraph book, and explain the difference in the manner of keeping that book which is apparent after the entry of that memorandum—between the 23rd of November and the 30th of January. If you notice, prior to the 23rd of November the entries are full and numerous for each day, and that after that date there is a remarkable difference; that in fact there are days upon which there are no entries at all. Will you be kind enough to explain the difference in the manner in keeping that book prior to the 23rd of November last and subsequently? Because all trains running as per time-table do not require to be detained for a line clear message.
139. *Mr. Goodchap.*] Under the rules? Under the rules; unless I receive a special order to do so; then, of course, I will detain them under special arrangements.
140. *Mr. Vernon.*] I notice that from the 24th November to the 29th of January there is an entire absence of the entry of any line clear messages? Yes.
141. During that period, was not the mineral train working every day between your station and the coal sidings? Yes.
142. While the working orders were in existence did you ever allow that train to work without a line clear message being in possession of the guard? No.
143. Is there any certainty as to the time that train will make, more especially in the case of any second or third trip she may have to make? They have been running very regularly lately, with great certainty, very great certainty, running to time; I think the time book will show that.
144. Does her running not depend upon the amount of work she may have to do, and the amount of traffic which may be taking place between your station and Wallerawang; traffic in live stock and other things? It is very seldom that they run with live stock.
145. Is not the running of the mineral train affected by and dependent upon the amount of traffic and the number of trains which may be run between your station and Wallerawang; in other words can the mineral train always command the road? No; it cannot always command the road.
146. Prior to the working orders being abolished did you ever start a special goods train from your station without handing to the guard a written line clear report? Never to my knowledge.
147. Since the working orders have been abolished have you pursued a different course in the starting of any special goods train by allowing them to leave your station without giving the guard in writing a line clear report? A special?
148. Yes, a special, since the working orders were abolished. Have you allowed any special goods train to leave your station without handing to the guard a line clear report? I have.
149. Have you since the working orders were abolished started any special goods train from your station without asking the Station-master in advance for a line clear report? I have.
150. *Mr. Sutherland.*] Have you any explanation to make in reference to the working of the lines? I wish to explain that when special trains are run as in the case referred to by Mr. Vernon, a train has preceded that duly targetted to the next station; and when I failed to get that station in advance, knowing positively that the Station-master in advance knew such special was following the train preceding,—I would start the train, and on no other terms. That shows the safety of the way I work.
151. Is that all you wish to say? Yes.
152. *Mr. Vernon.*] Have you in working mineral trains between your station and the coal sidings since the 23rd of November, have you in every case targetted the preceding train? In working a mineral train?
153. In working a mineral train between your station and the coal sidings since the 23rd of November, have you in every case targetted the preceding train? If the mineral train was a time train I would not. She is not a special. I have not the time-table here. I am labouring under a disadvantage plainly.
154. *Mr. Goodchap.*] If you want a working time-table you can have one at once. (*A working time-table coming into operation on the 1st of November was handed to witness.*)
155. *Mr. Vernon.*] Was that table in operation on the 24th and 25th of November? Yes.
156. And for the few following days? Yes.
157. Consequently it was in operation between the 24th and the 25th of November? Yes.
158. Will you be kind enough to look at the foot of that time-table and read me that note? The third paragraph of the general directions at the foot of that table reads thus:—"The times shown for trains, other than regular and ordinary, are approximate only; and it is to be distinctly understood that these are to be worked by a line clear message only."
159. In working the mineral train between those days, between the 24th and the 29th of November, did you work it by line clear message only in every instance? Well, I cannot say that I did, because the general order was in force on the 23rd.
160. Did you in every case during that same period target the preceding train? No.
161. *Mr. Sutherland.*] Have you any questions to ask this witness, Mr. Rae? No.
162. You Mr. Carlisle? No.

William Herbert Grace called in and examined:—

163. *Mr. Sutherland.*] What is your name? William Herbert Grace.
164. What is your position and length of service in the department? Officer in charge at Katoomba.
165. How long have you been in the service? Between four and five years.
166. You know the particulars of the accident at the Emu Plains on the 30th January last? Yes, through reading of it in the papers, and by report.
- 167.

W. H. Grace.  
4 Feb., 1878.

- W. H. Grace. 167. What instructions did you receive respecting the running of the special goods train on that night? I received a memorandum from Mr. Higgs, the Traffic Inspector from Penrith, stating that a special goods train would leave Mount Victoria following the No. 14 up goods train.
- 4 Feb., 1878. 168. When did that train leave your station? Arrived at Katoomba at 8.25 p.m., and left for Blue Mountains at 8.35 p.m.
169. Did you give Mount Victoria a line clear report to your station? No, sir, I did not.
170. *Mr. Goodchap.*] Were you asked for it? No, sir.
171. *Mr. Sutherland.*] Did you obtain from Blue Mountains a line clear report for the train to that station before leaving yours? No, sir, I did not. It was not a line clear report. I arranged about crossing at the Weatherboard with the mail.
172. *Mr. Goodchap.*] With whom? Blue Mountains.
173. In what way? In the usual way in which we do it. I merely stated to him that we crossed the 13 down train at the Weatherboard. I informed the guard of the fact.
174. You arranged that by telegram? Yes, sir.
175. *Mr. Sutherland.*] I have asked you what arrangements you made with this train to cross the down mail at Weatherboard. You said by telegram, I think? Yes, I arranged by telegram.
176. Will you state what communication there was between your station and Blue Mountain relative to the passing of this train? I called Blue Mountain and explained to him that this special goods train would cross the No. 13 down train at the Weatherboard, and for him to inform the guard of the mail train of the fact.
177. Is what passed in any way recorded in your books? No, sir, it is not.
178. You keep no record of this? I have not done so lately, sir.
179. You are acquainted with the working orders recently abolished? Yes, sir.
180. Will you read No. 9 of those orders? "All trains which, as per working time-tables, will run only when required, as well as all untimed pick-up, mineral, ballast, and special trains, or engines, are only to be worked by line-clear report system, and (excepting in such a case as provided for in working order No. 10) no such train is to leave any telegraph station unless the guard has in his possession a line clear report obtained from the next telegraph station in advance."
181. In what respect did the course you took on the night of the accident differ from the course laid down in these working orders that you have now read? The only difference is that we generally entered them in a book; in this case I did not.
182. *Mr. Goodchap.*] Would you not have handed to the guard, under the working orders, a line clear report? Certainly, sir.
183. And you did not on this occasion? I did not.
184. And that is the difference? That is the difference; if I may be allowed to say, they refuse to give me a line clear.
185. *Mr. Sutherland.*] Make any explanation you think proper. Explain that answer. I wish to be as brief as possible, but I do not wish to prevent you from making any explanation you think proper.
186. *Mr. Goodchap.*] Did I understand you to say that both Blue Mountain and Mount Victoria refused to give you a line clear report for that train? Not for that train, but they have.
187. They did as a rule? They did as a rule.
188. Since what date? I do not know what date. Since Mr. Higgs's arrangement; ever since that time.
189. Since the abolition of the working orders? Yes, since that time, sir.
190. Does not rule 152 require you to get line clear report? It does.
191. And you have not done so? I have not done so, because Blue Mountain and Mount Victoria said it was unnecessary.
192. You have partially answered the question I am going to put to you now. Refer to outwards message telegraph book, and give me an explanation of the neglect to record any telegraph message from the 23rd November to the 31st January? I have already answered it; they refused to give it to me until the day following this accident.
193. Are they now giving it to you? They are.
194. And do you enter it in your book? I do.
195. Did you resume your notices after the 31st January; that is, after this accident? They all resumed them, and I fell in with the rest of them. I can only account for Blue Mountain and Mount Victoria on either side of me. Of course I tested them, and they gave me line clear then.
196. *Mr. Vernon.*] Prior to the abolition of the working orders did you ever allow a special goods train to pass your station without handing to the guard a line clear report in writing? No, sir; not before the abolition of the orders.
197. Since the abolition of the working orders have you allowed a special goods train to pass your station without handing to the guard, or without obtaining from the station in advance, a line clear report? Yes, sir; I have.
198. You have explained the reason for omitting to make any entries in your telegraph books from the date on which you received the order cancelling the working orders and the 31st January, which was the morning after the accident occurred. Do you remember receiving an order from Inspector Watson on or about the 25th November to continue keeping up your telegraph books? Yes, sir; I have a copy of it in my general orders.
199. Why did you not comply with that order of Mr. Watson? As far as I myself was concerned I would have complied, but with the stations on both sides of me what could I do?—I was helpless.
200. *Mr. Sutherland.*] Have you any statement to offer in reference to the working orders, or safety of working. I do not wish to ask you your opinion, but to give you the opportunity of giving us any opinion you have, or any statement you have to make? Being an old telegraph officer I think we should have this line clear. Every train should be signalled. The telegraph operators at present have no protection themselves, they have merely the word of the guard. They have no written authority for it whatever.
201. *Mr. Goodchap.*] But you had under the working orders? No, we had not, unless we compelled them to sign.
202. Does not working order No. 9 say that you are to get a line clear report, and hand it to the guard? Yes, but what is to protect the telegraph operator?

203. *Mr. Vernon.*] But does not No. 9 prohibit any guard leaving without this in his possession? Yes *W. H. Grace.*  
sir.
204. Then would not the fact of the guard having left the station be sufficient proof, unless he had broken the rule, that he had obtained from the officer a written line clear report? Yes sir. *4 Feb., 1878.*
205. Does not every line clear report which you obtain from the station in advance appear on your tape? No sir; not on my tape.
206. Should it not appear on your tape as a rule? Well, I have never known it to be compulsory.
207. Have you a tape? Yes sir, I have.
208. What is it for? For running messages on.
209. And as a rule should not all messages be run on it? Yes, they should as a rule, sir.
210. *Mr. Goodchap.*] Did you enter the messages in the book when the working orders were in force? Yes.
211. And a copy was given to the guard? Yes, in fact they would not start without.
212. The guard has one copy of what you have in the book? Yes.
213. And if it were on the tape there would be an additional record? Certainly. Being an operator I would like to know how the operators are protected in this case: If we get the guard's word that he is going to stop at the Weatherboard, and he goes further on.
214. What protection do you want? I want it in writing from the guard.
215. *Mr. Vernon.*] In what matter do you want to be protected? If he says he is going to the Weatherboard, and goes on to the Blue Mountains, there is only his word.
216. You want to have it in writing, and if he does not produce it in writing he is responsible? Yes.
217. Prior to the abolition of the working orders did you ever know a guard attempt to pass your station with a special goods train, without obtaining from you a line clear report? No, sir.

John King called in and examined:—

218. *Mr. Sutherland.*] What is your present position and length of service? My present position is night officer at Blue Mountain, which position I have occupied since the 27th November last. *J. King.*
219. Was that your first entrance into the Service? No, sir, I was telegraph operator previous to that. *4 Feb., 1878.*
220. I have asked you what is your length of service—not how long you were at Blue Mountain, but how long you have been in the service of the Railway Department? About six months.
221. *Mr. Goodchap.*] Previous to that time were you in the Telegraph Department? Previous to that I was in the public Telegraph Department.
222. For how long before you came to the Railway Department? I was about fifteen months as probationer.
223. *Mr. Sutherland.*] What railway stations have you been at before you went to the Blue Mountain? At Wallerawang, Redfern, and Rydal.
224. Do you recollect the up special goods train running on the night of the 30th January? Yes.
225. Did you give Katoomba a line-clear report for this train to your station? No, sir.
226. What communication passed between you on the subject. State it briefly, and whether recorded or not? I was not on duty when the train arrived at Katoomba.
227. *Mr. Goodchap.*] Mr. Muir was on duty, I presume? Yes, sir.
228. *Mr. Sutherland.*] Before the arrival of the up-train at your station did you ask Penrith if the line was clear? No, sir.
229. Did the up goods train stop at your station? She did not stop; she went very slowly by.
230. Before it left your station did you get line-clear from Penrith? No, sir.
231. Will you state whether you had any conversation with the guard, Perdue, and what was said between you on that night? I had a conversation with guard Perdue, during which he informed me that he was to cross the No. 16 down goods train at Wascoe's. I repeated the word "Wascoe's," and he made a remark to the effect that he would not go any further that night. I then got on the step of the break-van, and as the train approached towards the station I spoke to him about a circular that was issued that evening with reference to persons not travelling in the break-vans without free passes. Then, leaving the break-van, he again said "Wascoe's." He might have said "Wascoe's, Jack," but I am certain he said "Wascoe's."
232. Did you telegraph anything to Penrith about the train after he had passed your station—state exactly what you did? After the train left my station I telegraphed to Penrith that the up special goods train left at 5 minutes past 10, and that she would cross the No. 16 down goods train at Wascoe's.
233. What time did the train pass your station, and how did you ascertain the time—was the time entered in any book of your office? The special train passed my station about 5 minutes past 10 o'clock according to my watch.
234. *By Mr. Vernon.*] Was the time entered? The time was entered after the train left, in the proper book—the departure book.
235. By you? By the Station-master.
236. On your information? Yes, sir.
237. *By Mr. Sutherland.*] Was the Station-master there at the time? The Station-master was on the premises, but not on duty when the special passed.
238. What distance is it from Blue Mountains to Wascoe's, where you state it was arranged that the trains should cross? I do not know the exact distance.
239. *By Mr. Goodchap.*] Will you look at the time-table and see what is the distance—it is all stated there? 17 miles according to the time-table.
240. Do you know what is the time for No. 16 down goods train to leave Penrith? I believe the hour is 11 o'clock.
241. You need not believe, you can refer to the table and see? 11 o'clock is the hour—that is the down train's time.
242. *By Mr. Sutherland.*] In about what time would it be due at Wascoe's Siding? In 35 minutes.
243. Look at up-train No. 6, and see what time is allowed for running from Blue Mountains to Wascoe's? One hour and ten minutes—seventy minutes. *244.*

- J. King.  
4 Feb., 1878.
244. If the special goods had travelled at that rate, what time would she have been due at Wascoe's? 15 minutes past 11.
245. Would that leave 20 minutes for the up goods to be at Wascoe's before the arrival of the down goods? It would leave 20 minutes between the arrival of the up special and the down goods.
246. What distance is it to Emu Plains from Blue Mountain? 22 miles.
247. Looking at up train No. 2, what is about the time allowed for running from Blue Mountain to Emu Plains? It takes an hour and thirty minutes.
248. If the up special goods had been running at that rate, at what time should she have reached Emu Plains Siding? 35 minutes past 11.
249. What time would the down goods, running to time, pass Emu? About 5 or 6 minutes past 11.
250. Will you look at the telegraph book. After looking at that book, can you explain why the entries in that book were not kept up after the 24th November in the same manner that they were before that date? My reasons for not keeping them up were because I was doubtful as to whether I was supposed to do so.
251. What made you doubtful? Because I had no orders since the general order which said that the working orders were cancelled. I had no other orders, nor that I was to enter line clears in the book; only that trains were to be worked according to the service time-table, and the Rule book.
252. *Mr. Goodchap.*] Does not the Rule book require you to get line clear? Read Rule 152.—(*Reading*) "On those portions of the Railway where a single line only is provided, care must be taken, before any train leaves any station, that there is no train due in an opposite direction; and where there is telegraphic communication, the Station-master, before allowing any train to leave his station, must ascertain by telegraph from the next station in advance that the line is clear."
253. That requires it to be done? Yes, sir.
254. But it was not done? I was in the habit of getting line clear, but not entering it in the books.
255. Were you in the habit of giving line clear? Yes, sir, when asked for.
256. Did you ever refuse to give it to Katoomba? No, sir.
257. Was it the practice to give and take line clear? Yes, sir.
258. After the abolition of the working orders? With me I never refused to give a line clear; and when practical I took a line clear.
259. Did you ask for a line clear from Penrith before this special goods train left your station? No, sir.
260. *Mr. Vernon.*] Was the entry of the departure time from your station of this up special goods, which you state was made by the Station-master, taken from his watch or from yours? I understood it was taken from what I told him.
261. Have you any reason to doubt the correctness of your watch? My watch may be incorrect; it does not always keep good time.
262. Did you compare it at all with the Station-master's watch? No, sir.
263. You do not know whether there was any difference between it and the Station-master's watch? No, sir.
264. *Mr. Goodchap.*] Is not the correct time given from Sydney daily? I am on at night. I believe it is given daily. I get no time at night.
265. Are you aware whether the time stated by you is disputed by the guard? I heard the guard said his time was 18 minutes to 10.
266. Presuming the guard's time to be correct, at what hour should he have arrived at Emu Plains, supposing he had run at the time laid down for the running of goods trains in the time-table? An hour and 30 minutes to Emu Plains.
267. At what hour would that bring him to Emu Plains? At 11h. 12m.
268. The down goods would have been passing that place at 5 or 6 minutes past 11 you say? Yes, sir.

Joseph Waring called in and examined:—

- J. Waring.  
4 Feb., 1878.
269. *Mr. Sutherland.*] What is your name? Joseph Waring.
270. What is your present position, and length of time in the service? Clerk in charge of Penrith Railway Station at night; about fourteen years in the service.
271. You know the particulars of the accident at Emu Plains on Wednesday, 30th January? Yes, I do.
272. Did you receive notice from the Station-master or Inspector respecting running the special goods train from Mount Victoria? I did, from the Station-master at Penrith, that the up special train was to leave Mount Victoria about 7.30 p.m.
273. Did any telegram pass between Blue Mountain and Penrith in reference to the running of this up goods train? Yes, sir.
274. State the particulars of these telegrams, and the order in which they were received and despatched? At 9.30 I instructed operator Robbins to ask Blue Mountain where the up special goods was, and received a reply that she would cross the No. 13 down mail at the Weatherboard.
275. *Mr. Goodchap.*] That was previous to her arrival at Blue Mountain? Yes, sir. At 10.10, operator Robbins informed me that the Station-master at Blue Mountain had telegraphed the up special goods train at 10.5 to make Wascoe's. At 10.30, I asked for line clear, as follows:—"From Station-master, Penrith, to Station-master, Blue Mountain: Is line clear to Blue Mountain for No. 16 down goods to cross up special goods at the Wascoe's Siding?" I received a message from the Station-master at Blue Mountain to Station-master at Penrith: "Yes, line is clear to Wascoe's for No. 16 down goods to cross up special goods there, thence on to this."
276. Just look at these. These are the telegrams to which you refer? (*Looking at document.*) Yes, sir. [*Document marked Appendix C.*]
277. *Mr. Sutherland.*] Did Blue Mountain ask you for line clear to enable him to despatch the up goods from his station? No, not for the special goods.
278. Do you remember the working orders recently abolished. Read No. 9, if you please (*showing it to witness*). Will you say what this rule requires? It requires a line clear message.
279. Read the latter portion of it? "All trains which, as per working time-tables, 'will run only when required,' as well as all untimed pick-up, mineral, ballast, and special trains, or engines, are only to be worked by line clear report system, and (excepting in such a case as provided for in Working Order No. 10) no such train is to leave any telegraph station, unless the guard has in his possession a line clear report obtained from the next telegraph station in advance." 280.

280. *Mr. Sutherland.*] Was this system observed while the working orders were in operation? Yes, I believe they were. J. Waring.  
4 Feb., 1878.
281. What has been the custom since the abolition of the working orders of working the special trains? As far as I know, they have been running clear of all ordinary and advertised trains.
282. *Mr. Goodchap.*] At the discretion of the guard? Well, not entirely at the discretion of the guard.
283. By what arrangement? I do not know. I have not despatched any from Penrith, and this is the only one that has run since the new time-table came in force.
284. The new time-table of the 24th January? Yes.
285. *Mr. Vernon.*] How many have run since the abolition of the working orders? I cannot say; a great many. Not from Penrith, but into Penrith, since I have been on night duty.
286. *Mr. Goodchap.*] The line clear report has not been obtained for these trains? Not in all cases; in some cases they have, in others not.
287. And they have gone on under the general arrangement that the guard will keep clear of other trains? I believe so, without line clear was asked.
288. *Mr. Sutherland.*] Do you wish to make any statement with reference to the working of these trains? Not unless it is desired that I should do so. I would rather not.

John Tipping called in and examined:—

289. *Mr. Sutherland.*] What is your name? John Tipping. J. Tipping.  
4 Feb., 1878.
290. What is your position and length of service in the Railway Department? Inspector of Locomotive Department and rolling stock. Between fourteen and fifteen years in the Service.
291. We have sent for you to ask if you can give us any information in reference to the running of special trains, that is, trains not running according to the time-tables. What are the regulations in respect to their running—special goods trains or special passenger trains, not running according to the time table? I have nothing to do with that particular branch, only from observation and the Commissioner's rules. When the drivers refer to me for information, I point out the rules for their guidance. That is all the observation I have taken.
292. And the driver is not in control of the train at all? Not so far as the working of the train is concerned.
293. Unless you wish to make any statement in reference to this, as it is no portion of your duty, we do not press you for any evidence on it? I can give no information in reference to it, other than the rules and regulations for the drivers. I do not give them instructions in these matters, only the rules.
294. *Mr. Goodchap.*] You would not be able, from your own knowledge, to say whether the Station-master and guard observed the rules laid down for their guidance? No, only so far as I have seen, I have never seen them diverge from the rules.
295. There is a point you can give evidence on, and which I should like to have your evidence on, that is, as to the hours these men work under your control. Take this particular train—the up goods train. What is the name of the driver? John Egan.
296. What hours did he work that day? That day he worked altogether twelve hours. He was two hours on shed duty prior to going out, and ten hours with the train.
297. How many miles did he run? 86 miles.
298. Which would occupy that length of time? Had he been running to the time-table, it would have occupied him 8½ hours; that is, in running all the time from leaving Penrith to his return. He was nine hours with the train, and he was half an hour behind the time of arrival. I am treating this as the ordinary running time.
299. I want to know what was done on that particular day? He was ten hours with his engine, and two hours shed duty at Penrith—from 9 to about 11. He came on duty at 9 o'clock that morning, and then went home to prepare to go out with the special train—at least I suppose he went home, I told him he might go.
300. What time did the special leave? It did not leave as a special from Penrith. It started at 2 o'clock. He came on duty about an hour before that—at 1 o'clock. He ran to Mount Victoria. Katoomba is the distance that engine is laid down for on the time-table. After leaving that it is a special.
301. *Mr. Sutherland.*] I want to know what time these men were on duty with this special train on that day? That is the time: two hours on shed duty, and ten hours with the engine and special train. That is, reckoning up to 11 o'clock at night.
302. *Mr. Goodchap.*] He ran to Mount Victoria? Yes.
303. Was he required to do anything at Mount Victoria? Only the ordinary shunting, I believe. He was at work, I suppose, while he was there. He could not go away before the fixed time.
304. He was on duty, then, and could not go to sleep? No, Sir; sometimes the time there is short.
305. When he arrived at Penrith he would have done merely ten hours and two hours' shed duty? Yes.
306. The fireman the same? No, the fireman would be longer. He is a spare fireman in the shed, and one other fireman being sick, he was told off as soon as the engine was ordered, to go along with Egan.
307. How long was he at work before? He came to work at 5.15 a.m. He then worked on, I consider, five hours, till 10.30, that is four hours and three-quarters. He came on again at 1 o'clock, the same as the driver, and did the same work. That would have made fifteen hours for that man on that day.
308. Was that usual or unusual? An unusual thing. The day before he had been on shed duty, and the day before that—ten working hours on each occasion the two previous days; and had it not been for the man falling sick, he would not have had to go out on that occasion.
309. Is it a usual or very unusual thing for either the locomotive men or the firemen to be on duty for fifteen hours? Not usually; it is an emergency case for either to be so.
310. What are the average hours that the engine-drivers and the firemen are on duty? The longest hours will be twelve hours.
311. What are the shortest hours? The shortest would be eight and a half hours; that is, when they are running trains to time on time-table.
312. Now, can you tell us about the average? The average would be ten hours, but some days more than others. It cannot be avoided when circumstances arise.

- J. Tipping. 313. *Mr. Sutherland.*] Owing to the length of mileage run? Owing to the length of mileage and other matters. My staff of men is very limited. Since the last time-table was put into force we have not had sufficient men to make into drivers. All the eligible men, from service and ability, in the Western district have been promoted; and I was short of men to give these men on the long run a fair share of shed duties or easy days. The consequence is that these men have more work imposed upon them than would be if I had my staff made up.
- 4 Feb., 1878. 314. *Mr. Goodchap.*] But it never exceeds, except upon great emergencies, 12 hours a day? 12 hours a day. In the afternoon the through goods leaves Penrith at 3 o'clock. The driver goes on duty at 2. He arrives at Bathurst at 12 at night, and an hour for putting his engine away brings him to 11 hours. That is the one through goods. The other leaves Penrith at 11, and arrives at 8. That brings it to 11 hours again.
315. Well, the practice, although it may be interfered with occasionally, is that when a man has run 12 hours on one day, you give him shed duty the next day to ease him down? Not the next day; as soon as it comes to his turn. Perhaps one day a week on shed duty. I would like as soon as I can get the staff up again, to give the drivers a shed day once in a week where it is consistent with the work of the department.

William Pine called in and examined:—

- W. Pine. 316. *Mr. Sutherland.*] What is your name? William Pine.
- 4 Feb., 1878. 317. What is your position and length of time in the Service? Been on going on for seven years. I am a driver.
318. *Mr. Goodchap.*] Passenger or goods? Goods, sir.
319. *Mr. Sutherland.*] Do you know anything about the running of special goods trains? Yes, I have been running them. I was running on the week of the accident.
320. *Mr. Goodchap.*] Do you know whether the train is telegraphed out by line clear report? No, I know nothing about it.
321. You take your instructions from the guard? Yes, sir.
322. Has the guard of a special ever come to you as a driver and asked your opinion whether you could run from a certain place to another certain place? Yes, sir, on different occasions.
323. The guard has done this? Yes, sir.
324. Are you aware whether the guard on such an occasion had previously a line clear report to any particular place? No, sir, the line clear report has been done away with for some time.
325. Are these trains then run at the discretion of the guard? I think so, sir.
326. Supposing a goods train was leaving Penrith, and another goods train was leaving Wascoe's—I mean the one at Wascoe's being a special goods—is there any rule in the rule book which provides that the special goods shall be in at Penrith in mentioned time before the departure of the goods from Penrith? Well, there is a rule in the rule book stating that goods and ballast trains are bound to keep clear of advertised trains 15 minutes.
327. Advertised trains; but these are passenger trains. You mean passenger trains, do you not? Yes, sir.
328. But I am talking now about the goods trains? No, sir, it does not refer to goods trains.
329. Therefore, if you got into Penrith one minute before the other one was due out, you would not be breaking any rule, as far as you know, in the rule book? No, I do not think so, sir. No rule in the rule book I think; it has never occurred to me. I have never run so close.
330. What is the closest time you have run? I think ten minutes is the closest to any train running. (*Produces book.*) That book I carry with me—the arrival and departure of the different places. I do not think I have ever done anything under ten minutes.
331. You take your instructions from the guard? Yes, sir.
332. And you would run if the guard directed you to do so? Not if I thought there was not sufficient time—I would object to that.
333. The guard would consult with you about the time? They always have done so, sir, so far.
334. *Mr. Sutherland.*] What are your hours upon the railway? Different hours; all depends upon the trains we are running.
335. *Mr. Goodchap.*] What are the longest hours? I have been for twelve, and fourteen, and sixteen hours, but it has been in bad weather, in the case of a train delayed.
336. But running the time—what is the time you are expected to work—the average time? On the average, about twelve hours, I think.
337. Are you speaking now with confidence as to accuracy? No; I mean from the time we come on duty to the time we are off again.
338. If Mr. Tipping has stated that ten hours is the average time; are you prepared to say that that statement is not correct? It is this way; on some days we go out on the Crusher trip, and we will be only nine hours, and if we go on in the shed (assistant No. 8 as it is called), at 9 o'clock on Monday morning, perhaps no special train is required till 12 o'clock, and we have to run that, and that will make it a long day.
339. *Mr. Goodchap.*] How many hours do you call it from Penrith to the Crusher's—what is the time of that? The actual running time is three hours and twenty minutes on the down journey; leave Penrith at 1:40, and arrive at Katoomba at 5:25; leave again at 5:45, and pass No. 9, the down goods, at the Weatherboard. If she is there at the time she is due, away at 6:10, and we are able to pass the mail at Wascoe's, and we are into Penrith about 8:35.
340. What does that make a total of? Seven hours and three-quarters. That is the actual running time.
341. *Mr. Sutherland.*] Then if the train is stopped you have longer hours? Yes, if any accident occurs, or if there is any stoppage caused by bad weather.
342. *Mr. Goodchap.*] On no occasion have the hours you have worked incapacitated you from the performance of your work? No, sir, not so far.
343. You have had full possession of all your faculties while you were running? Well, there are times on night duty when a man will feel a little sleepy, but I have never been laid up by it.

William Jordan called in and examined :—

344. *Mr. Sutherland.*] What is your name? William Jordan.
345. What is your position and time in the Railway Department? I am classed as a fireman, but I am in charge of the running shed of a night at Penrith.
346. Are you time-keeper? Yes, for all the men that go on after I go on duty; I do not put in their time, but any time that they lose I give it in to Mr. Tipping, or the office.
347. What time do you go on at night? Between 6 and 7.
348. What time do you go in the morning? 6 o'clock; I may go half-an-hour before 6.
349. What are your duties during the time that you are there? To regulate the engines, and to see that the work is done in the shop by the cleaners, and any little jobs that there are to do to the engines I do.
350. You keep the time of the men who go on? They sign the appearance book.
351. Do you keep the appearance book? Yes; they sign the book.
352. *Mr. Goodchap.*] You take notice of the condition of the men, and see that they are fit to go out? I witness them sign the book, and I sign it with my signature.
353. You gave evidence at the inquest at Penrith? Yes.
354. Did you state there that you saw that the men who went with the No. 16 down goods train were properly capable of managing their train? Yes, sir, I have never taken a glass of liquor myself. I have been on the Railway now between eight and nine years.
355. Are you aware of the regulations, or the practice of running the special goods trains? Yes, sir.
356. You are aware of the practice? Yes, sir.
357. Will you explain what that practice is? Sometimes the special goods goes in before the goods train.
358. I mean the practice of working it; for instance, does the Station-master get line clear reports from his station to the next station? I cannot say; I have nothing at all to do with the traffic.
359. Then I put the question, do you know what the practice is? No, sir, I do not.
360. Have you ever been fireman on one of these special goods trains? I have; I have been fireman on all the trains pretty well.
361. On what days were you fireman on a special goods train? I never keep account; I cannot tell.
362. Was it since December last? It was not these last fourteen or fifteen months. I went on one occasion with No. 15 to the Crusher's, on account of one fireman being sick.
363. Do you know on that occasion what practice was observed in running that train, as regards its being telegraphed out by the line clear report system? No, sir.

W. Jordan.  
4 Feb., 1878.

Edward Cane and Edward Childs called in and examined :—

364. *Mr. Sutherland.*] What is your name? Edward Cane.
365. What is your position and length of service? Driver, eight years.
366. What is your name and length of service (to Childs)? Edward Childs, since 1869. In the locomotive department since 1872.
367. Can you give us any evidence in reference to the running of special trains? I have never had anything to do with the telegraphing.
368. You run under the directions of the guard? Yes.
369. You are not aware whether the guard has got line clear report, or whether it is obtained by the Station-master—you get your orders from the guard? Yes, we do.

E. Cane and  
E. Childs.  
4 Feb., 1878.

Edward Laing and James Bryant called in and examined :—

370. *Mr. Sutherland.*] What is your name and length of service (to Laing)? Edward Laing. Five years in the service.
371. What is your name and length of service (to Bryant)? James Bryant, fireman. A little over three years in the Railway Department.
372. Can you give us any information with reference to the running of special trains. Are you entirely under the direction of the guards? The driver is entirely under the directions of the guard, and we are under the driver.
373. Have you any information to give as to the running of these trains (to Laing)? Some time ago it was worked by line clear, but recently that has been done away with.
374. *Mr. Vernon.*] Do you know whether the guards are in the habit of consulting the drivers with regard to making stations in advance? Yes, I have heard them repeatedly ask the drivers if they had time to reach a certain station. He would consult his watch, and if he said there was time they would run for that station.
375. You never knew a driver start without being in agreement with the guard as to where they could make? No, never, not without the guard said he had a line clear report to cross the train at a certain place, and then he would go on. For instance, last Saturday morning, I was on No. 20, and we were to cross No. 16 at Katoomba; then the guard told us to go on to Weatherboard. We are a little bit excited amongst ourselves just now, and I sung out, "What is the matter"? He said, "I have a line clear to the Weatherboard."
376. What do you know about the accident? I was firing on the assistant engine, the back engine of the down goods.
377. Did I understand you to say that you never knew of a driver leaving with his train without being in agreement with the guard as to where they could make, except when the guard assured him that he had line clear? I never did so, and then the driver would see that he had time before any other train passed.

E. Laing and  
J. Bryant.  
4 Feb., 1878.

Guard Elly was called in and examined :—

378. *Mr. Sutherland.*] What is your name? Richard Elly.
379. What is your present position on the Railway, and the length of time you have been in the Department? I am goods guard.
380. And how long have you been in the service of the Department? In the Service since 1859.
381. *Mr. Goodchap.*] About eighteen or nineteen years? Yes.
382. How long have you been guard? Five or six years.

Guard Elly.  
4 Feb., 1878.

- Guard Elly. 383. *Mr. Sutherland.*] Do you know anything of the particulars of the accident which occurred at Emu Plains on the 30th of last month? I was in charge of No. 16 down goods on the night of the 30th.
- 4 Feb., 1878. 384. *Mr. Goodchap.*] You were in the guard's van? Yes, in charge of No. 16 down goods train.
385. You left Penrith to time? Yes, at 11 o'clock.
386. At the time of the collision you were about the place you usually are at that time? Yes.
387. Do you know the practice of working these special goods trains? All that I know is that all special trains should keep clear of advertised trains.
388. At the discretion of the guards? Of course they must keep clear.
389. Is the running at the discretion of the guards? Yes; if he says he makes a place he must make it, and no other.
390. Who does he say that to? To the Station-master at the last station.
391. You have been on these special goods trains? I have run special goods on the mountains.
392. Do you recollect working under the Working Orders? Which one?
393. There is only one set, the others are Rules. I refer to the Working Orders in force in the early part of November? I have not run any specials for three months.
394. They were in force in October? I have run under these Working Orders, the Working Orders recently abolished.
395. Will you read No. 9 of these Orders? "All trains which—as per working time-tables—will run only when required, as well as all untimed pick-up, mineral, ballast, and special trains, or engines, are only to be worked by line-clear report system, and (excepting in such case as provided for in Working Order No. 10) no such train is to leave any telegraph station unless the guard has in his possession a line clear report, obtained from the next telegraph station in advance." That I always worked up to when I had to run these trains.
396. When you were working under these Orders, did you ever leave any telegraph station without a written line clear report stating how far you were to go? No, I never did.
397. What has been the practice since these Working Orders have been abolished? Since the Working Orders have been abolished we have run according to our number on the time-table.
398. You obtain no line clear report? No, only when we are out of our running time, then I have done so. On Friday night I worked by line clear report.
399. If you thought that you had time to run for any particular crossing, you would run for that crossing? Not without naming the crossing-place.
400. If you considered you had time to run for any particular crossing, would you run for it? I would if I thought I had sufficient time to clear the train.
401. But under these Working Orders you would not, because you would get a line clear report first? I would have a line clear report.
402. *Mr. Vernon.*] Was No. 16 down goods which you had charge of on the night of the 30th January an advertised train? Yes.
403. What do you consider an advertised train? By the number—leaving Penrith at 11 o'clock.
404. Where was it advertised? —
405. *Mr. Sutherland.*] When you say it was advertised, do you mean in the public time-table or the working time-table? I was under the impression that the trains in the working time-table were advertised.
406. Do you mean the time-table given to the officers of the department only, or those issued to the public? I was under the impression that the one that was given to us was advertised. I have been under a wrong impression, for in the evidence I gave at the Coroner's inquest I said the advertised time-table. I mean the time-table issued to me.
407. Do you call the service time-table, issued exclusively to the employes an advertisement? I did do so.
408. Does No. 16 down goods train appear in the public time-table? That I do not know. I have not examined.
409. Do you know whether No. 16 down goods train appears in the public time-table or not? I do not.
410. Do you not know that there is another time-table advertised for the use of the public? I have seen larger time-tables up at the stations, but I never took any particular notice of them.
411. Are you not aware that there is another time-table, a different time-table to this (*the Service time-table*)? Yes, I am aware of that.
412. What do you call that time-table you have seen posted at the stations? I do not know; I never troubled my head about it. On the Western line I worked by the Service time-table.
413. You know of the existence of another time-table? Yes, I do.
414. Are you able to describe the difference between them? Not unless I have the two.
415. Can you give me any idea of the object of the other time-table—is it issued for the use of the servants of the department? Not for the West.
416. Are you aware whether this Service time-table which you have always worked by was issued for your use and the servants of the Railway? That is the one I have run by.
417. Do you know for whose use the other time-table—of the existence of which you say you know—is issued? That would be for the guards at this end of the line I should say; I should say for the servants.
418. We are talking of the public time-table? I am aware now that there is a public time-table, because I have seen it posted on the boards.
419. Did you ever see anything like this on the station boards? No; I have seen it in the Station-master's office.
420. I ask you if you have ever seen this Service time-table published in the Press or posted on the boards of the stations? No.
421. *Mr. Sutherland.*] Have you any statement to make with reference to this accident? I have no statement to make, beyond the fact that I was in charge of one of the trains when the accident happened. I had orders to leave Penrith at the proper time to cross the other train at Wascoe's. I knew nothing of this train being on the road. The last words I spoke to the guard were: "Mind you don't turn the back engine into Wascoe's—there is a special there."
422. Have you any questions to ask, Mr. Rae? No.
423. You, Mr. Carlisle? No.
424. You, Perdue? No.

Guard Baker was called in and examined:—

425. *Mr. Sutherland.*] What is your name? James Baker.
426. What is your position in the Department, and what length of time have you been in the Service? Guard at present, and I came on the line in 1869.
427. *Mr. Goodchap.*] You have been about nine years in the Service? Yes.
428. *Mr. Sutherland.*] Do you know anything of the accident which took place on the Railway at Emu Plains on the 30th of January last? Yes.
429. Were you acting as guard on any of these trains? I was assistant guard to Guard Elly. We had two engines on at this time, and I ran assistant up to bring a train down from Katoomba to Penrith.
430. Then you know something of the working of these special trains? I know a little about the working of them.
431. Will you state what has been your practice when acting as the guard on special trains? To keep clear of all trains.
432. You received your orders from whom? From Inspector Higgs the time before, when he was in office.
433. When do you mean? When Mr. Higgs was Traffic Inspector some years ago.
434. Have you received any instructions since then? No further than my time-table.
435. *Mr. Goodchap.*] Do you recollect the Working Orders? Yes, I received them.
436. When they were issued? I think they have been out of date now for a short time—not very long.
437. Were you working under them before November? Yes, some time before November.
438. Will you read No. 9 of these Working Orders? Yes. "All trains which—as per working time-tables—will run only when required, as well as all untimed pick-up, mineral, ballast, and special trains or engines, are only to be worked by line clear report system, and (excepting in such a case as provided for in working order No. 10) no such train is to leave any telegraph station unless the guard has in his possession a line clear report, obtained from the next telegraph station in advance." This I have always had.
439. When these Orders were in operation, did you ever leave a telegraph station with a special goods train without having in your possession a line clear report to the next station? No.
440. Since the abolition of these Working Orders have you started your train without such line clear report? Only in cases where I have been running out of time.
441. Since the abolition of these Working Orders have you run any special goods train without first having a line clear report? No, I have not.
442. You say you now work the trains without a line clear report? Not if I am running out of time.
443. Do you ever start from a telegraph station with a special goods without getting a line clear report from the Station-master? I have not run a special train since the Working Orders have been abolished.
444. When you were working under these Orders, with a line clear report in your possession, did you feel secure as regards the safety of your running? Perfectly.
445. Would you feel so safe without having in your possession a line clear report? No, not without I had plenty of time.
446. Supposing there were a special on the line of which you knew nothing, what position would you be in then without a line clear report? The special then would have to keep out of my road.
447. But if the special were not aware that you were on the road? There would be a misunderstanding.
448. Could there be any misunderstanding if you each had a line clear report, specifying the point at which you were to cross? No.
449. Is that provided for by the Working Orders? Yes: "No such train is to leave any telegraph station unless the guard has in his possession a line clear report obtained from the next telegraph station in advance." It would be impossible for a collision to take place if we both had a clear line report.
450. It is not otherwise provided for? No.
451. *Mr. Vernon.*] Do you know the difference between the public time-table and the working time-table issued for the use of the employés? Yes.
452. Was No. 16 down goods an advertised train? No, it was a time train.
453. Not an advertised ordinary train? No.
454. Are you aware that those that are known as advertised trains are those which appear in the time-table which we issue for the use of the public? Yes, I am.
455. Do you know of the existence of any rule which specifies by how much a special goods train is to work clear of another goods train? No, I do not.
456. Then if you had charge of a special goods train, and you could arrive at a station five minutes before a goods train from the opposite direction was due there, do you know of any rule which would be violated? —
457. Supposing you were in charge of a special goods train, and you could make a station five minutes clear of the time at which an ordinary goods train was due there from an opposite direction,—do you know of any rule that you would be breaking? I would not go unless I had a line clear.
458. Do you know of any rule that you would be breaking? No.
459. *Mr. Sutherland.*] If you have any explanation to make in connection with the running, I shall be glad to receive it? No, I have no statement to make unless I am desired.
460. Have you any question to ask this witness, Mr. Rae? No.
461. You, Mr. Carlisle? No.
462. You, Perdue? No.

Guard Baker.  
4 Feb., 1878.

Guard Cox was called in and examined:—

463. *Mr. Sutherland.*] What is your name? William Cox.
464. What is your position and length of service in the Department? I am an assistant guard, at Penrith. I have been in the Railway Department about seven months; I have newly come out from England.
465. What were you in England? For the last five years I was foreman shunter in a large goods yard. I have been employed on the Railways at home for seventeen years.

Guard Cox.  
4 Feb., 1878.

- Guard Cox. 466. What are your certificates from England? They are in the Manager's office, at the Redfern Station.
- 4 Feb., 1878. 467. *Mr. Goodchap.*] How long have you been guard? Six months.
468. When you first came on, what were you? I was in the Sydney yard about five weeks.
469. How long do you say you have been guard? About six months.
470. On the Western line? Yes.
471. When you first commenced duty as assistant guard, were these Working Orders in existence? Yes.
472. Will you read No. 9 of these Orders? "All trains which—as per working time-tables—will run only when required, as well as all untimed pick-up, mineral, ballast, and special trains or engines, are only to be worked by line clear report system, and (excepting in such a case as provided for in Working Order No. 10) no such train is to leave any telegraph station unless the guard has in his possession a line clear report, obtained from the next telegraph station in advance."
473. Whenever you ran a train therein enumerated, did you run it under that system? Yes, until these Orders were cancelled.
474. When were they cancelled? About the 1st of November I will not say exactly.
475. What has been your practice in running the trains since that date? According to the foot-notes on the time-tables.
476. Have you, previous to starting, received any line clear report? Not in writing. I always get it from the station-master—a verbal report.
477. You do not know whether the Station-master has obtained the line clear report from the next station in advance? I will not say that in all cases he has, but I believe that in some cases he has.
478. What Station-master has? I am almost sure that in all cases Mr. Thompson, of Mount Victoria, has.
479. What would you say if you were made aware that Mr. Thompson has stated here that he has not in all cases received a line clear report? I have always believed that he had a line clear report; I cannot say for certain, as I have not been in the office with him myself; when I have received all right from him, he has either been at the office door or on the platform.
480. You have been running then at your discretion? Yes.
481. Have you run the train to any particular crossing if you considered you had time to do it? The special goods?
482. Yes? I always run it according to my own discretion, keeping clear of all trains.
483. But under the Working Orders you always had a written line clear report, showing you where you had to run to? Yes.
484. Which system would you prefer to work under? I would always rather run under line clear report. It is safe for every one then. Verbal orders are not safe to work under.
485. *Mr. Sutherland.*] Do you wish to ask the witness any questions, Mr. Rae? Not any.
486. You, Mr. Carlisle? No.
487. You, Perdue? No.

Foreman Crawford was called in and examined:—

- Foreman Crawford. 488. *Mr. Sutherland.*] What is your name? Robert Crawford.
- 4 Feb., 1878. 489. What is your position and length of service in the Railway Department? I am coaching foreman at the Sydney station. It is six years since I entered the Service last September.
490. Have you been a guard on any of the lines? Yes, on the Western line, and also on the Scotch lines.
491. Do you know anything about the accident which took place at Emu Plains on the 30th January last? No—only what is in the papers.
492. Can you give us any opinion as to the system of working special trains on the Western line, or on any of our lines? I have run special trains along the Western line, and also the regular trains.
493. *Mr. Goodchap.*] Have you worked under these Working Orders? With passenger trains—not with specials.
494. Will you read No. 9 of these Orders? I have done so.
495. What does that rule provide a guard of a special train shall have in his possession before leaving a telegraph station? A line clear report.
496. Do you know how they run since those orders were abolished? In the same way as they did before these were issued. Goods trains to keep clear of passenger trains, and special trains to keep clear of all trains.
497. Without a line clear report? When I was running passenger trains, I always made it a point to have a line clear report (when the crossing place of a train I had to pass has been in any way altered), before I would go.
498. Do I understand you to say that it is now left to the discretion of the guards to make their own time, to run to crossing-places at their own discretion, provided they have plenty of time? I believe it is so.
499. Under the system introduced by these Working Orders he would not be able to do that? Not at all.
500. He would have a written line clear report distinctly stating how far he was to go? Yes.
501. In your opinion which is the safer system? The line clear report system.
502. *Mr. Vernon.*] Do you know the difference between the published time-table and the Service time-table? Yes.
503. Do you know the difference between an advertised train and a train which would not be called an advertised train? All trains which are advertised in the private Service time-table are advertised trains, to my way of thinking.
504. What do you call the trains which appear on the public time-table? They are advertised to the public.
505. What do you call the trains which appear only on the Service time-table? I call them also advertised trains, advertised for the guidance of the employés. The public time-table has nothing to do with the Service time-table, which is private for the employés.
- 506.

506. Do you consider that No. 16 down goods was an advertised train? She was a time train.  
 507. Not an advertised train? She was advertised in the private time-table.  
 508. *Mr. Sutherland.*] Is that advertised at all? It is not advertised for the public guidance; it is only issued for the use of the employés.

Foreman  
Crawford.  
4 Feb., 1878.

509. Have you any questions to ask this witness, Mr. Rae? No.  
 510. You, Mr. Carlisle? No.  
 511. Have you, Perdue? No.

Station-master Bell was called in and examined:—

512. *Mr. Sutherland.*] What is your name? James Bell.  
 513. What is your position and length of service in the Railway? My position is Station-master at Penrith; my length of service since 1862—sixteen years next September.  
 514. Do you know anything of the accident which took place at Emu Plains on the 30th of January last? Yes; I was there after it had happened.  
 515. Do you know anything of the running of these trains, under what instructions they are run? The time train is run on the time-table; the special train on this occasion was run under the instructions of Inspector Higgs.  
 516. Can you tell us the practice of working these trains—these special trains? Yes; the practice I have seen followed at Penrith—I am speaking of the practice since the working orders were cancelled—would be to target the previous train and telegraph to all stations that a special was leaving at such a time.  
 517. You say since the withdrawal of the working orders. What was the practice when the working orders were in force? The practice was that all specials were to run by line clear report only.  
 518. *Mr. Goodchap.*] Will you read Working Order No. 9? Yes; I have done so.  
 519. Does that provide that the train is to run by line clear report? Yes.  
 520. And that the guard must have it in his possession before he leaves the station? Yes.  
 521. It must be in the possession of the guard? Yes.  
 522. It informs him to what point he can go? Yes, to where the line is reported clear.  
 523. Since the abolition of these orders have these trains been run at the discretion of the guards? Never to my knowledge; but I think we have had very few down trains run.  
 524. As to up trains? I do not know how they start at the other end.  
 525. Have you run a special goods train under these working orders? I myself.  
 526. Yes? No.  
 527. Have you known them to be run? Yes.  
 528. Did you ever know a guard attempt to leave a telegraph station with a special goods train without a line clear report in his possession? I never knew it.  
 529. Under the present system, by whose instructions are special goods trains arranged for? By the Traffic Inspector I expect; I do not know of my own knowledge.  
 530. After they are put in charge of the guard, who has to arrange for any crossing that may be necessary? I suppose the guard.  
 531. *Mr. Vernon.*] Have you been accustomed to run special trains? Yes; I suppose I have run more specials than any man on the line.  
 532. *Mr. Goodchap.*] Under what system would you prefer to run those trains—under the working orders or under the present practice? I should feel more safe under the working orders, because if I got a line clear report from the Station-master ahead, it would take the responsibility off me.  
 533. *Mr. Sutherland.*] Do you wish to make any statement? No.  
 534. Do you, Mr. Rae, wish to ask the witness any questions? No.  
 535. You, Mr. Carlisle? No.  
 536. You, Perdue? No.

Station-master Bell.  
4 Feb., 1878.

Station-master Hornidge was called in and examined:—

537. *Mr. Sutherland.*] What is your name? Marmaduke Arthur Hornidge.  
 538. What is your present position and length of service in the Railway Department? I am Station-master at Bathurst; and I have been ten years in the Department.  
 539. You have been Acting Inspector on the line? Yes, on the Western line.  
 540. Do you know anything of the accident which happened on the 30th of January last? Merely from the public Press.  
 541. Do you know anything of the working of special trains on that line? I had five months' experience.  
 542. *Mr. Goodchap.*] When you were Inspector of the line, under what system were these special goods trains worked? By line clear report only.  
 543. Was that provided in the Working Orders? In these Working Orders.  
 544. Will you look at these Working Orders and read No. 9? Yes; this was the rule.  
 545. And that rule was closely observed? Strictly.  
 546. During the time you were Inspector, was there any approach to an accident under those Working Orders? None, excepting the dispute between Bathurst and Kelso.  
 547. That was on the 5th of November? Yes.  
 548. Do you know the system which is now in operation in regard to the running of these trains? I have been working very much under the line clear system. As far as it could be done compatible with the method, I obtained line clear for every train I despatched; and in case the crossing-place was altered, I still gave the guard a written crossing order.  
 549. Was that required by the Rules and Regulations? Not now—I did it for my own safety.  
 550. You still observed the Working Orders after they were cancelled? Yes; I did it for my own safety.  
 551. Were you on any Railway before you came to this Country? No.

Station-master  
Hornidge.  
4 Feb., 1878.

Station-  
master  
Hornidge.

4 Feb., 1878.

552. You know the two systems of working by the Rules and Working Orders? Yes, I believe I am acquainted with all systems.
553. Do the Working Orders in any way differ from the working provided for by the Rules and Regulations? I fail to see it; I do not see where they differ.
554. Do they explain more in detail the system to be observed? I consider they do.
555. Would you prefer working with the Working Orders or without them? Most decidedly with them.
556. *Mr. Vernon.*] As Station-master, would you have allowed a special goods train ever to pass your station unless you had a line clear report from the station in advance to hand to the guard? Certainly not. Of course at the present time I should not have got a written line clear report had it been a regular train, and should not have handed it to the guard; but I should have got a line clear decidedly with any train.
557. *Mr. Sutherland.*] If you have any statement to make with regard to the working of the line, I shall be glad to hear it? I would merely say that I considered under the Working Orders we had a system as safe as any subject to telegraph can be—as safe as any system that is not automatic. I never found the slightest difficulty in working under that system, although we had to put up with some of the telegraph boys being rather inferior operators. It would have worked better with more experienced men, but still on the whole it worked very well.
558. You think it is important that we should have telegraph operators who are well trained to their duties at all stations where telegraphic communication is relied on by the Railway? Decidedly; the operator should be thoroughly reliable.
559. Is there any other point upon which you would like to remark? As I have had some experience in working the staff and ticket system, and the line clear system also, I would give the preference to the staff and ticket system for working a single line. In that system you are not so much at the mercy of the telegraph operator as you are in the line clear system.
560. Have you any questions to ask this witness, Mr. Rae? No.
561. You, Mr. Carlisle? No.
562. You, Perdue? No.

Station-master Roberts was called in and examined:—

Station-  
master  
Roberts.

4 Feb., 1878.

563. *Mr. Sutherland.*] What is your name? George John Roberts.
564. What is your present position, and the length of your service in the Railway Department? I am terminal Station-master on the Southern line, at Cootamundra; and I have been in the Service about ten years.
565. Have you been Inspector or Acting Inspector on the line at any time? For a short distance—from Cootamundra to Bowning.
566. Will you state what is your present practice of working the traffic as far as special goods trains are concerned? We work with the ticket and staff on my section.
567. *Mr. Goodchap.*] Do you find any difficulty in working under that system? Not the slightest.
568. Is there any detention of trains? Yes, there was in one or two instances when the system was first introduced.
569. Is it now working with regularity? The system is working splendidly now—I could not wish for a better.
570. Will you look at Working Order No. 9? Yes; I was working under this; but I may mention that I was exempted from these Rules for the last two years.
571. In consequence of what? The telegraph. At Binalong we had no telegraph. At Bowning I may say the same, because we had to use the public line.
572. *Mr. Sutherland.*] The line was opened for traffic before you had telegraphic communication? Yes. Not so at Gunning; we had communication by telegraph, but we had to avail ourselves of the public wire; we had no railway telegraph line.
573. *Mr. Goodchap.*] That has since been supplied? Yes.
574. Do you, Mr. Rae, wish to examine this witness? No.
575. You, Mr. Carlisle? No.
576. You, Perdue? No.

Acting Chief Clerk Richardson was called in and examined:—

Acting  
Chief Clerk  
Richardson.

4 Feb., 1878.

577. *Mr. Sutherland.*] What is your name? Harry Richardson.
578. What is your present position and length of service in the Railway Department? My present position is Acting Chief Clerk in the Traffic Manager's office. I have been twelve years in the Service.
579. In what capacities have you served during that time? For about two years I was Station-master's assistant at Newtown. I was some four or five years in the Audit Office, and I was relieving Station-master at two or three places after I left Newtown. I was audit clerk, travelling audit clerk, and chief clerk in the Manager's office for about three years. I was about ten or eleven months Traffic Inspector on the Suburban, Southern, and Western lines.
580. Do you know anything of the accident which took place at Emu Plains on the 30th of January last? I have heard of it.
581. Do you know anything of the working of the traffic through these special trains? I have had some experience in working special and goods trains.
582. Will you please state the method of working? When I was Inspector on the line, the rule for special goods trains was, to inform the stations that such trains were to be run. That information was sent to the Station-masters and conveyed to the guards. The specials would only be run under the line-clear system. If we could not get a line-clear message from the station in advance, the special train would have to wait until we could. The same practice applied to all pick-up and all untimed goods trains. I took an extract out of my books this morning, showing where, in May and June last, I gave instructions to different guards never to leave the station unless they had line-clear report in their possession.
583. Will you read the extract to which you refer? This is the copy of the entry I made on the 13th of June last:—"Nos. 8 and 9 down West, and Nos. 9 and 16 up West trains, are to be worked under line-clear report only, and all line-clear reports for these trains must be received by the guard in writing  
as

as directed by Working Order No. 9 (Working Orders for single lines). Any guard neglecting to carry out this order will be most severely punished." That order was given to Johnstone, Pendergast, King, and Bergan. 584. *Mr. Goodchap.*] That was in accordance with Working Order No. 9? Yes. There is also another order I issued when we ran the midnight pick-up.

Acting  
Chief Clerk,  
Richardson.

4 Feb., 1878.

585. Read it, please? "Guards of down West trains leaving Sydney at 12 o'clock, midnight, are directed to note that they are not to run on single lines unless furnished with a written line-clear report." I never knew the guards of an untimed train to run without a line-clear report. I have known Johnstone detained at the Junction three hours, when he might safely have got to Fairfield as far as the opposing train was concerned; but he would not move until he got the report.

586. Are you acquainted with the practice which has been in operation since the abolition of the working orders? Yes; I presume the same practice is in operation now as existed prior to the initiation of the line-clear-report system. That is, they work by time under Rule 146.

587. Is that a system which leaves it to the discretion of the guards to run in such a way that they will reach crossings, so as to avoid trains that are on the road? Yes.

588. Without previously obtaining line-clear report? Yes.

589. Which do you consider is the safer system? The line-clear report is, certainly.

590. Line-clear report in possession of the guard? In possession of the guard. I would not trust any guard to run a yard without the permission of the Station-master. I would not trust either guards or drivers to arrange for, or to alter the appointed crossing-place of any train.

591. *Mr. Sutherland.*] Have you any questions to put to this witness, Mr. Rae? No.

592. You, Mr. Carlisle? No.

593. You, Perdue? No.

T. F. Elliott, Esq., was called in and examined:—

594. *Mr. Sutherland.*] What is your name? T. F. Elliott.

595. What is your position in the service, and how long have you been in the Department? I am at present Clerk in the Railway Department; I have been in the Department about two years and three months.

T. F. Elliott,  
Esq.

4 Feb., 1878.

596. What positions have you filled in the Department? Clerk, and Chief Clerk in the Traffic Manager's Office.

597. *Mr. Goodchap.*] Have you had any experience of railway administration in other countries? I have had between ten and eleven years experience altogether, in various capacities, including that of Traffic Inspector.

598. Where were you connected with railways? In India chiefly.

599. Are the lines in India mostly double or single lines? They are mostly single.

600. Are they worked on the telegraph system or the staff and ticket system? They are mostly worked by telegraph—in fact nearly all are so worked.

601. Will you look at these working orders for single lines? Yes.

602. Are you acquainted with them? Yes.

603. Are you aware whether they relate to a system of working in any way resembling that which is adopted on the lines in India? A system very similar; in fact almost precisely the same.

604. Has that system been found to work satisfactorily in India? Very much so; I never knew an accident under it.

605. Will you read No. 9 of these working orders? Yes.

606. It refers to special goods and other untimed trains? Yes.

607. The system there laid down provides that the guard shall have in his possession a line clear report? It does. "No such train is to leave any telegraph station unless the guard has in his possession a line clear report, obtained from the next telegraph station in advance."

608. Are you aware that these working orders have been abolished? Yes; they were abolished some two months ago.

609. Have you heard anything of the accident which occurred on the 30th January, at Emu Plains? I have read all the particulars that have appeared in the public papers, the evidence at the inquest, and so forth.

610. Do you think that if these working orders had been in existence that accident would have occurred? I may say that I am confident that had these orders been in existence at the time the accident could not have occurred.

611. *Mr. Sutherland.*] Have you any statement to make with reference to the working of these special trains, or of the line generally; we do not ask you to state anything unless you like, but if you have any suggestions to offer which you think would be of value we will receive them? I would state as a duty I owe to society that the system under which the officers of the Railway Department have been working the traffic on the single lines during the last two months is extremely dangerous, and one which would not be allowed to remain in force on any properly conducted line elsewhere. It is unsound in principle and exceedingly unsafe.

612. Do you allude to the system under which the working of special trains is left to the discretion of the guards? Yes; the time system under which it has been endeavoured to work the lines since the abolition of the working orders, and the practice of given *verbal* instead of *written* orders to guards.

613. Have you any questions to ask this witness, Mr. Rae? No.

614. You, Mr. Carlisle? No.

615. You, Perdue? No.

616. *Mr. Sutherland.*] Guard Perdue, you are now at liberty to make any statement. I do not ask you to make one; but simply tell you that if it is your own wish to make a statement it can now be recorded? I do not wish to say anything.

617. In that case you are now at liberty to retire.

[Guard Perdue was relieved from further attendance.]

618. *Mr. Sutherland.*] Do you, Mr. Carlisle, wish to offer any observations? No.

619.

Donald Vernon, Esq., Secretary of Railways:—

D. Vernon,  
Esq.

4 Feb., 1878.

619. *Mr. Sutherland.*] Do you, Mr. Vernon, desire to say anything upon the present or past system of working of the railways with which you have been connected; you have had considerable experience in the practical management of the railway, and if you have any statement to make, I am willing to receive it? I should like to offer a few remarks, and to state my opinion of the defectiveness under which these lines were worked prior to the time I took charge, and which existed at the time I became Traffic Manager. I do not know that I can do better than ask you to allow me to read some parts of a report which I made to the Commissioner over twelve months ago.

620. What is the date of that report? It was written on the 23rd of January, 1877. In that report I stated "I have long been desirous of adopting a more perfect system for the working of trains on our single lines, so as to ensure greater efficiency and security from accident, and as the necessity for doing this is daily increasing, I submit the matter to the consideration of the Commissioner, to whom I would point out that no time should be lost in taking the requisite steps for the attainment of this object. That the Commissioner may more readily understand the position of affairs, I may mention that prior to my taking charge of this branch of the service, the working of trains seems to have been conducted on no particular system. The Book of Rules and Regulations furnished for the conduct of these railways contains, strange to say, no provision in the shape of a system for the working of single lines, there being only a few general rules for the guidance of the officers in performing this most important and responsible of their duties. I believe it is a thing unknown elsewhere, for a single line of railway to be opened for traffic without a system of some sort, such as the "staff and ticket," or some telegraphic system, with full and complete instructions for every contingency, and although the absence of such a provision on these railways may not have been much felt in their earlier days when there were very few trains running, it has now become quite a different matter. Soon after taking charge of the duties of Traffic Manager I gave my best attention towards remedying this serious defect, and no time was lost in putting matters on a better footing. To effect this, in the first place a full and complete *service* or *working time-table* was prepared for each section of the line and issued to the staff. These tables included all trains—goods, pick-up, and mineral as well as passenger, showed the order and times of running of each, and where they were to meet and cross. This step produced a very great improvement, both in point of safety and regularity. The next thing to which my attention was turned was the improvement of our telegraphic system and appliances. Additional wires and instruments were procured at different parts of the lines, the telegraph staff was reorganized and strengthened, the operators were properly trained to railway work; and other improvements were made. By these means, with the assistance of the working time-tables, our traffic has since been worked with safety. I regret to say, however, that for want of greater facilities for communicating between stations, such as can only be obtained by increased telegraphic accommodation, we have been unable to carry out in its entirety a telegraph system of "line clear message," the rules for which I have had ready for some time, as also the requisite telegraph registers of arrival and departure of trains. I pass over a great portion of this Report which has reference to details respecting the cost of certain appliances, the length of wires, and sundry other items. I then proceeded to say "With regard to the extensions beyond these places"—I had been referring to Bowning and Bathurst—"as a railway telegraph has not yet been established, I presume if my recommendation is approved of, when the wires are put up, the necessary provisions for working trains will be made without further application from me. We have now great difficulty in working these lengths, as the public wire is practically useless to us, and we are therefore obliged to rely upon the care of the staff and the working time-table. Some time ago I prepared and submitted for approval Rules and Regulations for working the 'Staff and Ticket' system, and I asked for permission to give it a trial, with a view of applying it to the extensions above referred to; but unfortunately my recommendation has not been complied with, although no reason has been shown why effect should not have been given to it. I regret exceedingly that any obstacle should have been thrown in the way of obtaining so laudable a result as 'safety in working,' and I have generally to express a hope that this request will not meet with the fate of the numerous recommendations made by me from time to time to render the safety of the travelling public more secure. If I am to be held responsible, my views and proposals ought either to be carried out or demonstrated to be impracticable,—especially in the case of my efforts to provide for that security to life and property which it has ever been my most anxious and earnest wish to obtain. I venture to add that the responsibility of any accident which may arise from the want of the provisions which have been lost through unaccountable and unprecedented opposition must rest upon the Department from whence such opposition has come—unless the Commissioner is prepared, by endorsing such action, to take the responsibility upon himself. I write strongly because I feel deeply in this matter, and I trust that my great desire to meet the responsibilities of my office will not be considered as showing any disrespect to the Commissioner, for nothing could be further from my intention than that." As to the insufficiency of the Rules of 1869, and the necessity for the working orders; and as to the results which might be expected from the cancellation of the working orders, I need not do more than refer you to the minute which I sent in to the late Minister for Works, in reply to a minute from him requiring me to show cause why I should not be removed from my office as Traffic Manager. That minute will convey to you what my opinion was as to the insecurity of the arrangements made for working the traffic after the cancellation of my Working Orders. This minute, I may observe, was written before the occurrence of the lamentable accident which took place on the 30th of January at Emu Plains.

621. What was the date of your minute? I think it was dated the 30th of November, 1877.

622. Will you be good enough to read it? After showing some inconsistencies and anomalies which would evidently arise from the cancellation of the Working Orders, I went on to say:—"And so I might continue and go on to show that instead of safety and efficiency having been promoted, or agreement and uniformity of rules and practice secured, or misconception having been provided against, the very opposite of all these things has been the result of the action which has been approved and taken by the Commissioner throughout this whole case. The upholding of Mr. Higgs's action, and sanctioning such an interpretation of Rule 146, and cancelling the Working Orders, has made room for nothing but anomaly, doubt, contradiction, and danger. I have, I think, now sufficiently explained the object and the necessity for the Working Orders. I have shown that they do not in any way clash with the Rules and Regulations; that on the contrary they support them; and I think I have also sufficiently demonstrated that the interpretation which the Commissioner seeks to place upon the Rules, and the practice he would develop from it,

it, must necessarily end in disaster." I think I need only add that a careful perusal of the Working Orders which were recently abolished will show anyone the necessities to meet which they were provided, which necessities have been left unprovided for since their cancellation. The time system, which has been introduced since these Working Orders were abolished, is one which I consider most dangerous. Telegraphic communication under the late arrangement was no longer indispensable, as it practically was under my Working Orders, and furthermore a most important responsibility which should properly rest with the Station-masters—and which a reference to the Working Orders will show rested upon them when those orders were in force—has been removed to the shoulders of the guards, whose only dependence must be as a rule upon their watches; and the safety of the traffic has been made dependent to a large extent upon the correctness of a guard's watch. I do not wish to offer any lengthy statement upon the case, but I feel constrained to say that I am decidedly of opinion that had my Working Orders not been cancelled, and had the traffic been continued under my system, that lamentable accident at Emu Plains could not have occurred.

D. Vernon,  
Esq.  
4 Feb., 1878.

Charles A. Goodchap, Esq., Commissioner for Railways:—

623. *Mr. Sutherland.*] Do you desire to make any observations, Mr. Goodchap? Yes, there is a statement which I should like to submit with reference to the course which has been pursued since I came into office. I desire to place it on record, in the hope that it will tend to allay any agitation in the public mind which may have been created by the occurrence of the accident on the 30th of January, or by the defective system of working which has been disclosed here to-day. I ask you to allow this minute which I addressed to you on the 1st of this month to be recorded. It reads as follows:—"The accident on the Railway, near Emu Plains, on Wednesday night last, the 30th January, has demonstrated in the most painful and serious manner the necessity for a better detailed system of working our single lines by electric telegraph. The working orders, which effectually provided this system, were abolished by the Commissioner on the 22nd November, and I regret to say that I was unsuccessful in my attempts to induce Mr. Rae to revive them—my action in this respect will be found disclosed in the papers referring to an irregularity in train running, which occurred on the 4th December last, on the Southern line, at Jerrawa. The Minister is aware of the importance I attach to this matter. The appointment of Commissioner was conferred upon me on Tuesday, the 22nd January. My first action was to revise the whole of the Rules and Regulations, supplementing them with regulations for working single lines on the Telegraphic and on the Staff and Ticket system, and the double lines on the Block system. On Friday, the 25th January, I submitted to the Minister the Rules so amended, and he at once approved of their submission to the Governor and the Executive Council, as required by the Railway Act. On Monday, the 28th they were approved by the Council. In accordance with the usual practice this approval would have to be confirmed on the next Council day, viz., the 4th February, but I left directions, before leaving Sydney for the Northern line inspection, that directly they were approved, the draft rules were to be obtained from the Clerk of the Executive Council, and placed in the hands of the Government Printer, in anticipation of the confirmation. This was done, and the amended Rules were being printed when the accident occurred. I give these particulars because, holding the views I do as to the insufficiency of the present Rules, it is desirable that I should show that no time was lost by me in endeavouring to provide a better system. Every officer and servant in the Commissioner's employment has to be furnished with a copy of the book of Rules, and when new rules are introduced it is a necessity that they should be distributed to the members of the staff simultaneously to provide for uniformity of action thereunder. I find that it will take some time to get the requisite number of the books prepared (over 2,000 are required), but I propose that, to meet the serious exigency of the case, the portion of the rules which provides for the working of the single lines by telegraph system, and in which the abolished working orders are embodied, be issued at once with an explanatory general order. If the Minister will approve of this course, the printer by working night and day can get these rules out in time to come into operation on Monday, the 4th February; the working time-table will have to be re-modelled to correspond with the new system, but I will undertake to have everything perfected by the day named." You approved of this minute on Friday last, and steps were immediately taken to carry it into effect. I have now the pleasure to inform you that the Rules, as proposed, were issued this morning, and also the working tables; I think, therefore, that there is now no reason to fear a repetition of the catastrophe which occurred on the 30th of January. I wish to hand in a copy of the General Order issued this day, and of the Regulations for single line working by telegraph system which accompanied it. [*Vide Appendix D.*] I should like to add to that statement (as I have submitted in a minute to you recommending these alterations), that this telegraph system for working single lines is one that will be made use of to a limited extent only, and that I shall depend upon the staff and ticket system for working the single lines generally, as soon as the necessary boxes, staffs, and tickets, can be procured.

C. A. Goodchap, Esq.  
4 Feb., 1878.

624. *Mr. Sutherland.*] Do you, Mr. Rae, desire to make any statement, or to offer any suggestions? No.  
625. Is there any witness you would like to call? No; I do not see the necessity for further evidence.

The inquiry stands adjourned until to-morrow, Tuesday morning, at ten o'clock.

TUESDAY,

TUESDAY, 5 FEBRUARY, 1878.

PRESENT:—

THE HONORABLE JOHN SUTHERLAND, M.P., Secretary for Public Works.  
 CHARLES A. GOODCHAP, Esq., Commissioner for Railways.  
 JOHN RAE, Esq., Under Secretary for Public Works.  
 DONALD VERNON, Esq., Secretary for Railways.  
 THOMAS CARLISLE, Esq., Traffic Manager of the Southern, Western, and Richmond Lines.

Station-master Muir was called in and examined:—

Station-  
 master Muir.  
 5 Feb., 1878.

626. *Mr. Sutherland.*] What is your name? John Edgar Muir.  
 627. What is your position, and what your length of service in the Railway Department? I have been nearly fourteen years in the Department.  
 628. What is your position now? Station-master.  
 629. Where? At Blue Mountain.  
 630. Were you on duty on the night of the 30th of January when the special goods train passed your station—the train which met with the accident? I was in the office, but not on duty.  
 631. Did you see the train as it came by? I did not; I heard it.  
 632. *Mr. Goodchap.*] What time was it when this train passed, do you know? I can only say from hearsay. He told me five minutes past 10.  
 633. Who told you? The acting operator.  
 634. Who entered the time in the book? I did.  
 635. From the information he gave you? Yes.  
 636. Not from your own knowledge? No; not being on duty, I did not look at my watch.  
 637. Is not Sydney time sent through to your station daily? It is.  
 638. Daily? When we can get circuit.  
 639. How often is circuit interrupted? Frequently we cannot get it; frequently we can get it.  
 640. Frequently you can get it? Yes; I am not certain whether we got it that day or not.  
 641. How many days are you without it? Perhaps two or three days a week.  
 642. Is there a clock at the station? No; it is my own clock.  
 643. There is no public clock? No.  
 644. In what way do you keep the time? By my watch.  
 645. Your railway watch? Yes.  
 646. Are you aware whether your railway watch agrees with that of the operator? I do not know, I am sure; I do not think so.  
 647. Do you ever compare? No. He has his own watch; it belongs to himself.  
 648. What practice do you observe in regard to the running of these special goods trains? We generally get line clear for the special or for trains running out of time.  
 649. What time did this train leave Mount Victoria? We do not get from Mount Victoria.  
 650. You do not know? No.  
 651. Has it been your practice to get from Katoomba an inquiry whether the line is clear to your station for these goods trains to come there? Yes.  
 652. Since when? We always do.  
 653. Is it your practice to telegraph to the next station in advance, which in the day-time would be Springwood, and at night at Penrith, and obtain a line clear report before the train leaves your station? When I can get circuit.  
 654. You are quite positive that when you can get circuit you have always obtained line clear report for a special goods train to proceed? Yes.  
 655. Are you equally certain that you have given to Katoomba, on the other side, a line clear report for these trains? For all specials—yes.  
 656. If the operator at Katoomba has stated here that he failed to obtain line clear report from you, is that statement correct or incorrect,—a line clear report for these trains? If I was not in the office, he might; but whenever I heard him I gave him line clear. If he says that, I must have been out of call.  
 657. Have you ever refused to give it? Never.  
 658. In the case of any train? No, I never refused in the case of any train.  
 659. When was the last occasion on which a special goods train came through when you were on duty? I do not remember.  
 660. Will you refresh your memory by reference to your line clear report book? I cannot; that book has not been kept up.  
 661. But you said you always gave line clear report? Yes, but we did not enter it in the book.  
 662. What record have you that you gave this? Only myself just.  
 663. What record have you? No record.  
 664. When did you cease making these entries of line clear reports? When the line clear report books were cancelled.  
 665. When were they cancelled? I think it was the 23rd or 24th of November.  
 666. Will you refer me to the order cancelling the line clear report books? It is the general order which I produce. (*Vide Appendix E.*)  
 667. Will you read that? I have read it.  
 668. Is there any direction to you there to cancel the line clear report books? No, I do not see that there is anything about cancelling of the book.  
 669. What does the document require to be cancelled? The working orders.  
 670. When these working orders were in operation, did you get line clear report, and give it to and from your station? Yes.  
 671. Did you hand to the guard of such special goods trains a written line clear report, telling him to what station he was to work? Yes.  
 672. Since the cancellation of these working orders have you pursued the same course? No.  
 673. Is it left to the discretion of the guards of these special trains to say where they will run to? We generally ask him if he is late. Very often they make Blue Mountain early, and can make Penrith before goods leaves.

674. Is it left to the guard's discretion to make Penrith? Yes.
675. Under the working orders it was not left to the guard's discretion? No; we gave him line clear report. Station-master Muir.
676. Do you think, if the guard had obtained from the Station-master a written line clear report to Wascoe's, that he would have gone beyond Wascoe's? I think not. 5 Feb., 1878.
677. *Mr. Sutherland.*] Have you any questions to ask this witness, Mr. Rae? No.
678. Have you, Mr. Carlisle? No.

Thomas Carlisle, Esq., was examined:—

679. *Mr. Goodchap.*] Has Mr. Crawford, the Traffic Inspector, received instructions to be here as a witness? Yes; I telegraphed to him the night before last, but I received no reply, excepting a message from Mr. Crawford to his brother that his son was dangerously ill. T. Carlisle,  
Esq.  
5 Feb., 1878.
680. Mr. Crawford is not present to-day? He is not.
681. *Mr. Vernon.*] As Mr. Crawford is not present, perhaps I may be allowed to ask some questions of Mr. Carlisle which I would have preferred to put to Mr. Crawford. Have you a book of Rules and Regulations, Mr. Carlisle? I have.
682. Will you be kind enough to look at Rule 146? Yes.
683. Does that rule state that goods trains must be clear of the road fifteen minutes before an advertised ordinary train is due? Yes.
684. Have you any rule bearing on the same point as between one goods train and another goods train? There is no rule that I am aware of, excepting a foot-note to the service time-table.
685. Will you be kind enough to point out the foot-note to the service time-table which specifies the margin of time by which one goods train must arrive before another goods train is due out? I refer you to the second paragraph at the foot of the service time-table, which states—"Where one passenger train is appointed by the Service Time-table to cross another passenger train, or where any special or goods train is appointed to cross another special or goods train, the train first arriving at the crossing point must wait until the other train arrives, unless it has been ascertained that they are running out of time, in which case special arrangements may be made by telegraph."
686. I fail to see in that anything which answers my question. I want to know if you have any rule or any provision stating the margin of time by which one goods train must work clear of another goods train. Rule 146 requires that goods trains shall not be on the road within fifteen minutes of the time a passenger train is due; and I now wish to ascertain if there is any rule which makes the same or a like provision in regard to goods trains?
687. Do you know of any rule? Excepting Rule 152, which refers to line clear report.
688. I fail to see that that applies to the case? I am not aware of any other rule that applies to that.
689. Suppose telegraph communication to be interrupted, and a special goods was required to be run (say) between Goulburn and Gunning on the Southern line, I presume the special goods would not be started from Goulburn unless it could make Gunning at least fifteen minutes or half-an-hour before any goods train was due out? Certainly not.
690. That ought to be the practice, although you have no rule on that point? Certainly.
691. Suppose a special goods left Goulburn in time to arrive at Gunning fifteen minutes before any goods train was due in an opposite direction, and suppose that it lost that time on the road and arrived at Gunning one minute before the goods was due out, would the special goods have broken through any rule? I consider he would not be justified in running so close to time.
692. Nor do I, but I want to know whether any rule would be broken? I consider that they would break Rule 146, which would apply to goods or passenger trains.
693. *Mr. Goodchap.*] Does Rule 146, requiring fifteen minutes to be observed between a goods train and passenger train, also provide that the same limit as to time shall be extended to goods trains meeting goods trains? I consider it should be applied.
694. Does the rule so apply it? It does not say so distinctly.
695. Does it say it—distinctly or indistinctly? —
696. Will you read the rule, please? The rule is:—"It is to be distinctly understood by Station-masters, guards, and persons in charge of trains, that goods, special, or ballast trains are not to be on the road within fifteen minutes of the time an advertised ordinary train is due; but goods and ballast trains must shunt at least fifteen minutes before an advertised train is due, and wait for ten minutes after an advertised train has passed."
697. *Mr. Vernon.*] Does that say that a goods, special, or ballast train is not to be on the road within fifteen minutes of the time another goods, special, or ballast train is due? It does not say so.
698. *Mr. Goodchap.*] Is that a direction to the guards, Station-masters, and others? Yes.
699. Do you believe that it is so distinctly stated there as to be thoroughly understood by these men? I should think so. If they did not understand it that way they would ask for instructions; but I should think they ought to have understood it that way.
700. *Mr. Vernon.*] Will you be kind enough to look at the foot-note you read just now—the foot-note to the Service Time-table? Yes.
701. It provides that where one passenger train is to cross another passenger train, or where one special or goods train is to cross another special or goods train, the crossing-places are to be fixed? Yes.
702. Will you explain to me the reason why no mention is made there of the case of a passenger train crossing a goods train? In the Rules?
703. In that foot-note? I think it is provided for in Rule 146.
704. Suppose telegraphic communication still to be interrupted. We will take the case of an ordinary regular goods train having to cross the mail and passenger train—say, for example, the down Southern mail is appointed to cross, by this time-table bearing your name at the bottom, the up goods train at the Jerrawa siding—you know such is the case? Yes.
705. Suppose the mail train to arrive at Jerrawa siding, and no goods train to be in sight, what is the mail to do? The mail should stop there for some time to see whether the other would arrive, and then the road would be clear after that. If the other train, the down train, did not arrive within reasonable time, they would expect the road to be clear. They would be obliged to stop to see whether the other train arrived at its appointed stopping-place. 706.

- T. Carlisle,  
Esq.  
5 Feb., 1878.
706. *Mr. Goodchap.*] Has it been the custom for the mail train to run past Jerrawa at speed, without stopping? Not that I am aware of.
707. If the driver has said so in his evidence, are you prepared to say it is not true? No; I am prepared to say he was wrong if he did. Working under the service time-table, he should have stopped at the station and ascertained that the up train had arrived.
708. *Mr. Vernon.*] You say if the mail arrived at the Jerrawa siding, where it was appointed to cross the up goods, and the up goods was not there, the mail would have to wait some time to see if the up goods would arrive. How long should the mail train wait under such circumstances? There is no provision for time, but I should say they should at least wait five minutes.
709. *Mr. Goodchap.*] Have they any instructions? No written instructions.
710. *Mr. Vernon.*] We will assume that the mail train waits ten minutes and there is no appearance of the goods train, is the mail train then at liberty to proceed? Yes, because the up train would be protected in some way.
711. *Mr. Goodchap.*] In some way? The guard would take care to protect his train. See Rules 216 and 284.
712. *Mr. Vernon.*] In the meantime, let us suppose in this case that the up goods train has left Yass to time, with plenty of time to make Jerrawa siding fifteen minutes before the mail train arrived, but owing to bad weather the rails are slippery, and the whole of that margin of time has been lost, and when, within two miles of Jerrawa siding, the goods train finds that her time has expired, and the time has arrived in fact for the mail train to be due out from Jerrawa in an opposite direction, what is the goods train to do under such circumstances? The goods train would stop and send a man ahead to protect her.
713. In the meantime the mail train has waited ten minutes at Jerrawa siding, and has come on from there? Yes.
714. The two trains must meet—the mail train must meet the protected goods train? Yes.
715. In such circumstances, I presume, the mail train would have to go back again to Jerrawa siding? Either the mail or the goods train.
716. *Mr. Goodchap.*] The goods could not go back to Jerrawa siding? The mail would have to go back to Jerrawa siding.
717. *Mr. Vernon.*] Have you gained anything by allowing the mail train to leave Jerrawa Siding? Not in time.
718. Have you not lost time? In that case you would.
719. Then would it not be better under all the circumstances for that fixed crossing place to be observed? Under those circumstances it would.
720. *Mr. Goodchap.*] We have had some evidence before us about the disagreement in watches? Yes.
721. Supposing, under the circumstances which we have been considering, the watch of the guard of the goods train was in disagreement with the watch of the guard of the mail train, and that the guard of the goods train were not aware that his watch was not keeping correct time, would there be a collision? Yes, most probably there would.
722. *Mr. Vernon.*] I understood you to say that there was a rule for the guidance of the guard in such circumstances as where a train should have lost time? I think there is, but I cannot point it out just now.
723. Suppose telegraphic communication interrupted, the mail train comes to Jerrawa siding, but the time, we will suppose, has in this case been lost by the goods on the south of Yass, so that when the up goods arrives at Yass it is perfectly evident that she has no time to make Jerrawa in time to clear the mail, as required by Rule 146—in such a case as that what is the duty of the Station-master at Yass? I do not understand your question.
724. When the up goods arrives at Yass, she is so late that it is very evident she cannot make Jerrawa to time in order to clear the down mail,—in such a case what is the duty of the Station-master at Yass? To keep the goods train back.
725. The mail train arrives as usual at the appointed crossing-place, Jerrawa siding, waits five or ten minutes as you have stated. Seeing no sign of the goods, she, according to your arrangement, proceeds past the siding, and on towards Yass. The driver and guard of the mail train, however, are in ignorance as to whether the goods train may be before them in the protected condition you have described in the first illustration, or whether it may be stopping at Yass. The mail train proceeds in that state of uncertainty,—would you think it advisable that that mail train should proceed at its usual speed towards Yass? I think that she should run with caution.
726. *Mr. Goodchap.*] Is there any direction for her to proceed with caution? None that I am aware of.
727. *Mr. Vernon.*] In this case as well as the other, time would be lost,—the mail train being in uncertainty as to whether the goods train was between her and Yass, or detained at Yass. If the persons in charge of the mail train acted wisely they would proceed cautiously, and therefore time would be lost? Yes.
728. Do you think it is a safe practice for a mail and passenger train to be allowed to leave an appointed crossing-place without any knowledge of the train which should be crossed there? —
729. Do you think it a safe system which permits a passenger train to leave an appointed crossing-place without any knowledge of the train she should have passed at that crossing-place—do you think a system which permits of such a thing a safe system? I do not think it is as safe as it ought to be.
730. *Mr. Goodchap.*] Under the Working Orders, the train would not be allowed to leave its appointed crossing-place under such circumstances without telegraphic communication first being obtained? Neither before nor since the cancellation of the Working Orders; that part of the order was never withdrawn, as far as I am aware.
731. Under the Working Orders, would the mail train, without previous telegraphic communication as to whereabouts of the goods train, be allowed to leave the crossing-place? No, not under the old system.
732. *Mr. Vernon.*] You perceive in that foot-note to the working time-table bearing your name, that while you fix the place in the case of two passenger trains and two goods trains, you do not fix it in the case of a passenger and a goods train? No, it is not fixed; line clear report would have to be obtained, and Rule 146.
733. But if line clear report could not be obtained on account of telegraphic communication being interrupted, as is frequently the case during storms,—then the crossing-place is not fixed? No.

734. *Mr. Sutherland.*] Do you, Mr. Rae, wish to ask Mr. Carlisle any questions? No.
735. Do you wish that Mr. Crawford, the Inspector of the Southern line, should be examined? I have no wish at all in the matter, not the slightest.
736. Do you desire that Mr. Whitton or Mr. Mason should be examined? No, I do not wish to express a desire at all in the matter.
737. If you have any person you wish to have examined will you say so? I have none.
738. Have you, Mr. Carlisle? No.

T. Carlisle,  
Esq.  
5 Feb., 1878.

Donald Vernon Esq., was further examined:—

739. *Mr. Goodchap.*] What are the telegraphic facilities and appliances between Blue Mountain and Penrith? Our telegraphic facilities or appliances between Blue Mountain and Penrith are perfect; Springwood and Wascoe's are merely intermediate sidings. For their use we have another wire, and they are on what we call the alphabetical circuit. That is to say, there is an alphabetical instrument at Penrith in connection with another at Wascoe's, that continues to another at Springwood, and that continues to Blue Mountain. This circuit is in use during the day, to relieve what would be otherwise the over-crowded wire, which is the Morse circuit.
740. Between Penrith and Blue Mountain? Yes.
741. What is the communication at night? The Morse circuit.
742. The Morse only? Yes, the Morse only.
743. Direct between Penrith and Blue Mountain? Yes.
744. On emergencies can the alphabetical instruments between Springwood and Blue Mountain, and Springwood, and Wascoe's, and Penrith, be availed of? Decidedly they can.
745. Could the guard of the up special goods train have obtained telegraphic communication from Wascoe's with Penrith on the night of the accident? It was quite possible for him to have done so by rousing the porter in charge. In fact, our telegraphic arrangements between Blue Mountain, and Penrith could not very well be more perfect than they are.

D. Vernon,  
Esq.  
5 Feb., 1878.

WEDNESDAY, 6 FEBRUARY, 1878.

PRESENT:—

THE HONORABLE JOHN SUTHERLAND, M.P., Secretary for Public Works.  
CHAS. A. GOODCHAP, Esq., Commissioner for Railways.  
JOHN RAE, Esq., Under Secretary for Public Works.  
DONALD VERNON, Esq., Secretary for Railways.  
THOMAS CARLISLE, Esq., Traffic Manager for the Southern, Western and Richmond Lines.

Inspector Crawford was called in and examined:—

746. *Mr. Sutherland.*] What is your name? Alexander Crawford.
747. What is your present position in the Railway Department? Traffic Inspector.
748. What is your length of service in connection with railways? I have been employed upon railways since 1852.
749. In this Colony? Since 1862 in this Colony.
750. *Mr. Goodchap.*] Have you a book of the Rules? Yes.
751. Is it not considered that the principal danger to be apprehended and provided against in working single lines of railway is a collision from trains travelling in opposite directions? Yes.
752. Is it desirable that particular attention should be paid to the method of procuring the safe crossing of such trains? It is.
753. Are you aware that the crossing-places of trains, as laid down in the service time-table, more especially those in which goods trains are concerned, have frequently to be changed from various causes? Yes, they have.
754. Is it your opinion that full and explicit instructions in this respect should be laid down for the guidance of those who have charge of such trains? Yes, it is.
755. Can you point out to me in that book of Rules any rule providing for the manner in which any alteration in the fixed crossing-place is to be made? In the Rule Book?
756. Yes—I want you to point out any Rule in that book providing for the manner in which any alteration in the fixed crossing-place is to be made?—
757. Do you remember any rule? I do not remember any fixed rule.
758. There are rules for the safety of trains, for shunting and so forth, but are there any rules which provide for the manner in which any alteration can be made in the fixed crossing-places? There is none.
759. Do you recollect the Working Orders? Yes.
760. Was there any rule which provided for it there? There was.
761. Will you refer to the foot-note on the working time-table which provides that where two goods trains or two passenger trains are appointed to cross such crossing-place is to be strictly observed unless telegraphic arrangements can be made for another crossing-place? Would you repeat that question, if you please.
762. The foot-note on the working time-table provides that where two passenger or two goods trains are appointed to cross, such crossing-place shall be observed? Yes, I see that.
763. Will you show me what provision you have for the crossing of a passenger and a goods train, and whether the crossing-place as laid down in the working time-table is to be observed or not observed. The cases provided for in this note are two passenger trains and two goods trains; will you show me any rule which provides that where a passenger train has to cross a goods train, the crossing-place is to be observed or not observed? The only rule is 146.
764. Will you read that rule? "It is to be distinctly understood by Station-masters, guards, and persons in charge of trains, that goods, special, or ballast trains, are not to be on the road within fifteen minutes of the time of an advertised ordinary train is due, but goods and ballast trains must shunt at least fifteen minutes before an advertised train is due, and wait for ten minutes after the advertised train has passed."

Inspector  
Crawford.  
6 Feb., 1878.

Inspector  
Crawford.  
6 Feb., 1878.

765. Referring to that portion of the rule which says that goods trains must wait in the siding for ten minutes after the other train has passed,—does not that appear to refer to double line working? That portion does.

766. What is the nature of the provision in rule 146, admitting its application to a single line? That if a goods train cannot make the crossing-place within fifteen minutes of the train being due, it must shunt into the crossing-place further back.

767. What is the nature of the provision for the passenger train—what has it to do? They take precedence of any other train.

768. The passenger train is to come on? Yes, by this rule.

769. The crossing-place being appointed, suppose the passenger train arrives there and the goods is not there, the passenger train has to wait five minutes and then come on? Yes, after waiting a few minutes.

770. Then the only authority in the Rules you have given me is in Rule 146, and is an authority for the non-observance of a crossing-place by a passenger train in the absence of a goods train? Yes.

771. Can you point to any rule, any direction on the working time-table, or any order of any kind, by which the passenger train is to wait until the goods train arrives? No; there is nothing on the time-table.

772. Nothing in the book of Rules? No.

773. Do you know of any order? Nothing but what was in the Working Orders.

774. Did the abolished Working Orders provide for such an emergency? They did.

775. Supposing telegraphic communication is interrupted, and Jerrawa is the appointed crossing-place? There is no telegraph there.

776. Suppose the mail train arrives at Jerrawa, and the goods train is not there, is the mail train to wait or to proceed? By the time-table it is to proceed; but we always work with the telegraph. We always have worked with the telegraph and got line clear to Jerrawa.

777. Telegraphic communication as regards Jerrawa is made between Yass and Gunning? Yes.

778. Telegraphic communication being interrupted, the mail train proceeds? Yes.

779. Suppose that from storms or any other cause the goods train had lost time, and finds when within 2 miles of Jerrawa the time has gone within which she should be in, what is the goods train to do? The guard will protect his train.

780. In that case the mail train on coming to the protected train must go back again to Jerrawa, must she not? Yes.

781. Then more time has been lost than gained by such an arrangement? The case never has occurred to my knowledge.

782. It is possible for a case like that to occur? It is possible.

783. Have you been on all the lines? On the West and the South.

784. Have you been on the Northern line? No.

785. Are you quite sure a case of that kind has never occurred? I am speaking only of my own district.

786. How long have you had the district? Two or three years I think; I could not exactly say.

787. Suppose the guard's watch were ten minutes slow—the guard of the goods train, and he is not aware that he is behind time, might there not be imminent danger of a collision? He takes the time from the Station-master at starting.

788. Suppose the guard's watch is out of time, and there is a difference of time between the guards' watches, might there not be an imminent danger of collision? There would not be so much difference in time as fifteen minutes.

789. Might there not be five minutes by one and five minutes by another—I don't want you to fence the question, I only want you to say if the facts were as I put them—whether there might not be an imminent danger of collision? There would.

790. Do you consider that a safe system which allows a passenger train to leave a fixed crossing-place without any information of the train which it was appointed to cross there? No; the Working Orders were safer?

791. You know the Working Orders recently abolished? Yes.

792. Could a Station-master or guard be in any doubt as to his duty in the matter of crossing trains under the Working Orders? I do not think so.

793. As you do not think so, will you read paragraphs 2 and 3 of that circular, and say whether you do not know so? "Referring to the rule and practice of goods trains keeping clear of passenger trains, I wish to draw the particular attention of Station-masters and guards to No. 5 and 6 of these Orders. From these it will be seen that when an ordinary good train cannot arrive to time at a station where it is appointed and shown on the working time-table to cross a passenger train, arrangements can be made (*see* No. 6), to alter the crossing-place, so that the goods may work clear of the passenger train and prevent its being delayed. When, however, no clear arrangement, as required by Rule 6, can be made for the alteration of a crossing-place of ordinary and regular trains, owing to the interruption of telegraphic communication or other cause, then whether it be two passenger trains or two goods trains, or a passenger and a goods train that are timed to cross, neither train must leave its usual and appointed crossing-place before the arrival of the other."

794. What circular is that? A circular which was issued by the late Traffic Manager on the 28th of February, 1877.

795. Do you think that under such a regulation as that safety is provided for? It is.

796. Do you know anything about the accident which occurred at Emu Plains on the 30th January? I have read about it in the papers.

797. Do you remember No. 9 of the Working Orders? Yes.

798. Is provision there made that the guard of a special goods train shall have in his possession a line clear report from the next telegraph station in advance, giving him the exact crossing-place to which he is to go? Yes, it is very clear.

799. Do you think if the guard of the up goods train had in his possession on the night of the accident such a written report, that he would have been likely to have proceeded beyond Wascoe's? No, I do not suppose he would; I have never run a special train yet without a line clear message in my possession. I have run many such trains.

800. *Mr. Vernon.*] You stated just now to the Commissioner that in the event of a goods train having lost time between Yass and Jerrawa, and finding that the time had expired at which the mail was due out from

Inspector  
Crawford.  
6 Feb., 1878.

- from Jerrawa, when she was about two miles from the siding it would be the duty of the guard to protect his train? To stop his train and protect it.
801. Suppose the guard could not gain the attention of the driver, as I have known to be the case for two miles, what might happen? There might be a collision.
802. Supposing the guard lost his lamp and could not signal? In that case the same danger might arise.
803. But supposing in the case of a goods train that the time lost was on the southern side of Yass, and by the time the goods train arrived at Yass, it was perfectly evident that she could not make Jerrawa as required, fifteen minutes before the arrival of the mail train, in such a case—telegraphic communication being interrupted—what would be the duty of the Station-master at Yass under the arrangements which existed between the cancelling of the Working Orders and their re-introduction by the Commissioner? The Station-master would have to keep the goods train at Yass, and let the mail train come on.
804. But the mail train would know nothing of that? No.
805. Then upon the arrival of the mail train at Jerrawa, no goods train being in the siding, under such arrangements the mail train would be authorized to proceed towards Yass? Yes.
806. But she would be in ignorance as to whether the goods might be expected on the road in the protected condition you have described, or whether it was being detained behind at Yass? Yes.
807. In that case the mail would be travelling on an uncertain road to some extent? Yes.
808. Do you think that under such circumstances it would be advisable for that mail train to travel at the usual speed? It would not.
809. Then in that case, as well as in the case put to you by the Commissioner, there must be great delay? Yes.
810. Do you not think that it should almost be an axiom in railway working that the road should be taken to be obstructed until some positive evidence was in hand denoting the contrary?
811. My question is: Don't you think it would be a safer rule to work upon to take it for granted that a road was obstructed, unless you had positive evidence to the contrary, rather than take it for granted that the line was clear without knowing anything about it? It would be safer.
812. Will you look at Rule 152? I have it. "On those portions of the Railways where a single line only is provided, care must be taken before any train leaves any station that there is no train due in an opposite direction; and where there is telegraphic communication, the Station-master, before allowing any train to leave his station, must ascertain by telegraph from the next station in advance that the line is clear."
813. Do you not think that upon the arrival of the mail train at the Jerrawa siding, finding that the goods train which it was appointed to cross there was absent, do you not think that the guard and driver might, on the strength of that rule, decline to move from the siding? No, they always work under Rule 146; that has been the practice.
814. Would not, as a matter of fact, the goods train be due there when the mail arrived and found her absent? Yes.
815. She would be due? Yes.
816. Does not that rule require that no train should leave any siding when there is another train due in an opposite direction? Yes.
817. Then do you not think that both guard and driver would be warranted in declining to proceed on the strength of that rule? —
818. Do you not think they would have good ground to defend their action in declining to proceed? Yes; but, as I said before, they have always worked under Rule 146.
819. *Mr. Goodchap.*] And ignored the other? This Rule (152) was only used for telegraphed trains.
820. *Mr. Vernon.*] According to Rule 146 you say a goods train would not be justified in leaving Yass unless she could make Jerrawa siding fifteen minutes before the mail was due? Yes.
821. Then supposing the mail train to arrive at the siding, and the guard and driver, on the strength of Rule 152, to decline to proceed, we should have a mail train stuck at Jerrawa and a goods train stuck at Yass? Yes.
822. That would be making rules to prevent trains travelling, would it not, assuming the guard and driver's action could be defended? Yes.
823. Suppose that, in the absence of telegraphic communication, you require to run a special goods from Goulburn to Gunning, under the arrangements to which we are referring—not being able to travel by line clear, which you say has been your practice—you would, I suppose, so arrange that the special should arrive in Gunning some fifteen or twenty minutes before any goods train could be due out? Yes, and target the previous train.
824. Suppose the previous train was a train that had arrived in Goulburn from Gunning, in that case you would have no train to target? I would target the last down train.
825. Suppose you did not know that you would require the special when the last down train left? I have had no case like that.
826. *Mr. Goodchap.*] Is it not possible that such a case might arise? Of course it is. The train would be taken to arrive there before the train was due in the opposite direction.
827. *Mr. Vernon.*] Have you any rule specifying the margin of time by which you would in such a case have to arrive in Gunning to clear all coming goods trains? Only this Rule, 146.
828. Does Rule 146 say how long one goods train must work clear of another goods train? It says they are to be clear of the road fifteen minutes before any ordinary train is due.
829. I think the rule says any advertised ordinary train is due? Yes, any advertised ordinary train. "Goods and ballast trains must shunt fifteen minutes before an advertised train is due, and wait for ten minutes after the advertised train has passed."
830. Do you call a goods train an advertised train? No.
831. Then has that rule any bearing on the point I put to you? It has no bearing in the case of two goods trains.
832. So that if that special goods train arrived in Gunning one minute before a goods train was due out from Gunning, there would be no rule broken? No.
833. You remember the case at Jerrawa to which the Commissioner referred just now. Suppose the goods train had been just out of sight instead of just in sight when the mail train arrived, what do you think might have happened? If the goods train had been where?
834. If the goods train had been five minutes later than it actually was? Nothing could have happened, because they had line clear to Jerrara.

Inspector  
Crawford.

6 Feb., 1878.

835. Then the mail would not have proceeded beyond in that case? She would not have proceeded further.
836. Upon what authority would she observe the crossing-place in that case? Only the authority of the message she got from Gunning before starting.
837. Then I understand, as far as the rules are concerned, their only authority is an authority for the non-observance of a crossing-place by a passenger train, Rule 146? Yes.
838. Now I understand you to say that there are certain circumstances under which a crossing-place should be strictly observed? Yes, when line clear message is given.
839. Have you any order or instruction intimating to the staff that under certain circumstances the crossing-place between a passenger and a goods train (which according to Rule 146, as you interpret it, is "not" to be observed)—have you any order intimating to the staff that under certain circumstances the crossing-place "must" be observed? —
840. *Mr. Goodchap.*] Have you any rule? No, there is no rule.
841. Or general order? No.
842. Or direction on the time-table? No, there is none.
843. *Mr. Vernon.*] Do you think it wise or prudent to relieve Station-masters of all responsibility in the matter of the safe crossing of trains, and throw it upon the shoulders of a guard? No, it is not wise.
844. *Mr. Sutherland.*] Have you any questions to ask, Mr. Rae? No.
845. Have you, Mr. Carlisle? No.

C. A. Good-  
chap, Esq.

6 Feb., 1878.

846. *Mr. Goodchap.*] I have a statement to make, Mr. Sutherland. As this Jerrawa case has been alluded to, I desire to state the particulars in connection with it. It was reported to the Commissioner that there had been an irregularity in train running at Jerrawa on the night of the 4th December last. Mr. Carlisle said that the mail train should have approached Jerrawa with great caution, knowing, as the driver did, that this was the ordinary crossing-place for the train. I made a comment on that to this effect:—"Not only should he have approached with great caution, but the mail train should have stopped until the position of the goods train should be ascertained. The working orders having been abolished, it is impossible to say what is being done, or what is correct to be done." In another portion of his report Mr. Carlisle says that the engine-driver and guard of the mail train were informed before leaving Gunning that the goods train was at Yass; consequently there could have been no intention of passing Jerrawa until the up goods train had arrived. My comment on that is—"they should not have had any intention of proceeding beyond Jerrawa"; but see what the driver himself says—he would have gone on in the conviction that it was the duty of the goods train to be out of his way; and I add "this method of working must sooner or later lead to disastrous results." Mr. Carlisle further says that the driver and guard of No. 14 up goods miscalculated the time for running to Jerrawa. My comment upon this is:—"This is the special danger which the working orders were framed to meet. They did meet the difficulty, but they have been abolished. I strongly urge that they be revived." And in the general minute to the Commissioner I said, "I wish to draw the Commissioner's special attention to this case. It presents without doubt the most serious appearance of mismanagement that has yet occurred; not arising apparently from any disregard of instructions, but because there are no properly-defined instructions. They are too general. The driver says he depends on Rule 146. Fixed crossing-places and line clear messages have no importance in his eyes. Rule 146 says that goods trains are to keep clear of passenger trains, and he, as the driver of the mail train, comes on at any hazard. I again urge upon the Commissioner to revive the working orders, which effectually provide for all cases of the kind, and are in correspondence with single line working on telegraph system everywhere."
847. *Mr. Sutherland.*] What is the date of the minute? *Mr. Goodchap:* The 28th of December, 1877. Upon this Mr. Rae directed a full inquiry to be made by Mr. Mason, the Engineer for Existing Lines, and the Acting Traffic Manager. Mr. Mason, in his report, says that he finds the matter a very frivolous affair. Telegraphic arrangements were clearly made and thoroughly understood by all parties concerned. I am merely giving a summary of these papers. Mr. Mason winds up by stating that he considers the matter unworthy of further comment. I wish to draw your attention to the indifferent and apparently improper manner in which a serious matter of this kind is dealt with. In submitting Mr. Mason's report to the Commissioner I say, "If the Commissioner is satisfied with this, I, of course, have no desire to keep the matter open. The evidence, even in its amended shape, does not, to my mind support Mr. Mason's conclusion; but this is of course my individual opinion only. I ask the Commissioner to look into the case closely, and I think he will decide that, under the present mode of working, the goods train should not have been approaching Jerrawa at the very time that the mail train was due to pass that station; and I am further of opinion, reading driver Bryson's first statement of the 8th December, and the evidence of the guard of the goods train, together, that there was imminent danger of a serious collision." That was on the 14th of January, 1878. On the 19th January, 1878, Mr. Rae minuted the papers "I am satisfied with the result of the inquiry." On the 22nd of the same month I was appointed Commissioner, and I immediately altered that system of working. I should add that the evidence given by Mr. Crawford here to day, abundantly proves that my fears that an accident might have occurred had the goods train been a little late, were well grounded. I do not make this statement from any desire to show any superior prescience or knowledge, or to reflect in any way unduly upon the late Commissioner. I make it because it has been stated that something ought to have been done to remedy the then existing state of things, when it was known that there was danger in the system of running introduced upon the suspension of the late Traffic Manager. I wish to show that officers of the department were not indifferent, and that I myself went to almost extreme lengths, considering my position, to induce the Commissioner to do what I considered safe.
848. *Mr. Sutherland.*] How is it that this minute you have quoted from has never come to the Minister for Works, who is the head of this department? *Mr. Goodchap:* I cannot say. I submitted it to the Commissioner.
849. *Mr. Sutherland.*] This is the first time I have seen this minute. If I had seen it before, I should have considered it my duty to have taken some other step with reference to it. Have you, Mr. Rae, any questions to ask Mr. Goodchap? No.
850. You, Mr. Carlisle? No.
851. You, Mr. Vernon? No.

## APPENDIX A.

Telegram from Mr. Inspector Higgs, Penrith, to Station-master, Mt. Victoria and Katoomba.  
No. 13 Up Goods will not run to-day, but a special will leave Mount Victoria for Penrith about 7.30 p.m.  
Please acknowledge ; time 3.30 p.m., 30/1/78. Acknowledged by wire at 3.37 p.m.

---

## APPENDIX B.

Telegram from Mr. Inspector Higgs, Penrith, to Station-master, Mount Victoria and Katoomba.  
No. 13 Up Goods will not run to-day, but a special will leave Mount Victoria for Penrith about 7.30 p.m.  
Please acknowledge ; time received 3.30 p.m., 30/1/78.

## APPENDIX D.

Railway Department, Sydney, 4th February, 1878.

## GENERAL ORDER.

THE Railway Staff is informed, that pending the issue of amended Rules and Regulations for the conduct of the Traffic (now in the hands of the printer), the accompanying Regulations for Single Line working by telegraph system, approved by His Excellency the Governor and Executive Council, and which will be printed in the new General Rules, are at once to be observed, and are to be regarded as supplementary to present Rules and to be construed as part of the same.

Those portions of the single lines where the Staff and Ticket System is in operation will not be affected by this order, but will be worked under the Train Staff and Ticket Regulations.

CHAS. A. GOODCHAP,  
Commissioner for Railways.

---

## Regulations for the Single Line Working by Telegraph System.

295. On those portions of the Railways where a *Single Line* only is provided, care must be taken before any Train leaves any Station, that there is no Train due in an opposite direction.

296. Before allowing any Train to leave his station, the Station-master should ascertain by telegraph from the next station in advance that the *Line is clear*. In the event of the Station-master being unable to obtain telegraphic communication, it is to be distinctly understood that all Trains (excepting those specified in Rule No. 298, which can only be worked by telegraph) are to be started and run strictly in their turn or order as laid down in the *Working Time-tables*.

## "Line Clear Inquiry" and "Line Clear Report" Messages.

297. The greatest attention must be paid to the wording of "Line Clear Inquiry" and "Line Clear Report" messages, so as to render it impossible for the slightest confusion or misunderstanding to take place. An ambiguous or vaguely worded telegram should on no account be acted upon ; and in the event of

of anything of the sort being received, the sender must be required to repeat the message in such a form as will leave no doubt as to its meaning. Such replies as simply "Yes" and "O.K." cannot safely be accepted as an assurance that Line is clear, and to start a Train on so doubtful an authority would be highly imprudent, and is strictly prohibited.

(a) A *Line Clear Inquiry* message must state clearly the number and description of the Train to which it refers, and also the number and description of the Train which last arrived in the opposite direction to that for which the "Line Clear Report" is sought—for example, the following is given:—

(*Line Clear Inquiry.*)

S.M., MITTAGONG. to S.M., PICTON.  
2 p.m.

"Is Line clear to yours for the No. 6 *Up Passenger*? No. 1 *Down Passenger* has arrived here."

(b) A *Line Clear Report*, authorizing a Train to come on, must distinctly show the number and description of the Train for which it is intended, and the point to which such Train may safely run. No "Line Clear Report" must be given in reply to a "Line Clear Inquiry" by any Station-master, or Officer in Charge, until he has first satisfied himself that the Train specified in the Inquiry Message as having arrived is the *last Train which left his Station in that direction*.

(c) Referring to the foregoing illustration, the Station-master, Picton, having first satisfied himself that no *Down Train* has left his Station since the departure of No. 1 *Down Passenger*, will reply as follows:—

(*Line Clear Report.*)

S.M., PICTON, to S.M., MITTAGONG.  
2.3 p.m.

"Yes, Line is clear to this for the No. 6 *Up Passenger*."

Or, if the "Line Clear Inquiry" refers to a Train which is required to follow another, as, for example, should there be an *Up Special Goods Train* at Mittagong waiting to follow the No. 6 *Up Passenger Train*, Picton should be telegraphed thus:—

(*Line Clear Inquiry.*)

S.M., MITTAGONG, to S.M., PICTON.  
2.30 p.m.

"Will Line be clear for *Up Special Goods* to follow No. 6 *Up Passenger* to yours? No. 6 *Up* left here at 2.25 p.m."

Then if the *Up Special Goods* happens to be the next in turn, and there is no reason why it should not follow, Picton's answer should be:—

(*Line Clear Report.*)

S.M., PICTON, to S.M., MITTAGONG.  
2.32 p.m.

"Yes, Line will be clear for *Up Special Goods* to follow No. 6 *Up Passenger* to this."

Upon receipt of this answer Mittagong may allow the *Up Special* to proceed, after the expiration of the necessary interval, first informing Driver and Guard that previous Train has not arrived at Picton, and instructing them to proceed cautiously. The same information and caution order must always be given to a Train following another before its arrival has been telegraphed in at the Station in advance.

(e) The foregoing are illustrations of ordinary "Line Clear Inquiry" and "Line Clear Report" messages, but when arranging for Trains to cross at other than the usual crossing places, some alteration and addition of course will be necessary. It is essential that the messages should be made as clear as possible, and Station-masters must endeavour to adhere to one uniform style.

As it may occasionally take a little longer than usual to ascertain whether Line is clear, care should be taken to prevent detention by obtaining the "Line Clear Report" in advance—that is, before the arrival of the Train for which it is required.

298. All trains which—as per Working Time-tables—"will run only when required," as well as all Untimed Pick-up, Mineral, and Ballast Trains, or Engines, are only to be worked by telegraph, and no such Train or engine is to leave any Telegraph Station unless the Guard has in his possession a *Line Clear Report* obtained from the next Telegraph Station in advance distinctly stating how far the Train is to proceed and countersigned by the officer of the Station his train is then at.

In the event of telegraphic communication being interrupted, such Trains or Engines as have been enumerated above are necessarily *prevented from running*, until the road can be secured for them by "Line Clear Report" being otherwise obtained.

299. When Trains, either Passenger or Goods, are shown on a *Working Time-table* or are otherwise appointed to meet or cross at a particular Station or Siding, the *Train first arriving* at such appointed crossing place is on no account to leave until the Train or Trains from the opposite direction have arrived, excepting in cases mentioned and provided for in the following Rule.

300. When circumstances render it necessary, or in the highest degree expedient, that Trains should cross at other than the appointed crossing-place, and one Train has to proceed beyond the usual crossing point—special precautions must be taken so as to preclude the possibility of misunderstanding or accident. On no account must any Train be allowed to depart from an appointed Crossing Station prior to the arrival of the Train or Trains which it has to cross there, unless the Guard has in his possession a *Line Clear Report* from the Telegraph Station in advance, distinctly stating how far the Train is to proceed, and countersigned by the Officer in charge of such appointed crossing place. The same rule must be observed at any and every Telegraph Station which may possibly intervene between the appointed Crossing Station

Station and the Station or Siding at which a late Train is to be crossed. No such Station must be left until the Guard has a *Line Clear Report* from the Station in advance, countersigned by the Officer of the Station his Train is then at. As therefore in such circumstances no Train can proceed beyond an appointed crossing place without the authority of the Stations in advance, the Officers in charge of these will have it entirely under their own control, and the responsibility of crossing the Trains safely will therefore devolve upon them.

301. No Station-master or Officer in charge of a Station shall telegraph Line clear for a Train to advance beyond its appointed crossing-place and come on to his Station out of order, until he has taken the necessary steps to block the Line on the other side, so as to prevent the late Train by any chance running through his Station. The Signals commanding the road in the opposite direction should therefore be kept at *danger*, and in the event of the late Train arriving first, the Guard should be *at once* informed that the crossing will take place there instead of at the appointed crossing place, and that the other Train is approaching.

302. When the appointed crossing place for Trains is a Siding at which there is no telegraph communication, the Officer in charge of the adjacent Telegraph Stations will be responsible for altering the crossing place when circumstances render it necessary, in accordance with provisions of Rule 300. When it is intended for Trains running out of order to cross at such a siding, being other than the appointed crossing place, the Officers in charge of the Telegraph Station on each side must come to a clear understanding, and they will be responsible for giving the Guards clear and distinct crossing orders in writing and obtaining their signature for same.

303. When two Trains running in opposite directions are to cross each other at a Station, the Signals must not be lowered for the admission of both at the one time. Where the crossing point is a Siding where there are no Signals the Siding must be *approached with great caution*, and no Train must reach the points leading into such Siding until it is *perfectly* safe to do so.

304. Any Train waiting at a Station or Siding for the purpose of crossing another as soon as it may arrive from the opposite direction, must on no account be started until the rear vehicle of the Train in motion has passed the rear vehicle of the waiting Train and the Guards of the respective Trains have communicated with each other.

305. When an Officer in charge of a Station, in advance of which there is any Platform or Siding unprovided with Signals, has despatched a Train or Engine which may be required to call or work at such siding or platform he shall not allow any other Train or Engine to follow—excepting the road be absolutely *clear*—without handing to the Guard of the latter a written notice of such first Train being on the road; and it shall further be his duty, as well as that of the Guard receiving the written notice aforesaid, to instruct the Driver of the following Train to approach each Siding or Platform *with extreme caution*, lest the line should be obstructed by the preceding Train.

---

## APPENDIX E.

Great Southern, Western, and Richmond Railways.

General Order, No. 63.

Single Line Working.

*Very important.*

INSPECTORS, STATION-MASTERS, and other Officers are informed that on and after the 24th instant the "Working Orders for Single Lines" (dated 1st February, 1877) are to be *cancelled*, and must be withdrawn from the Staff under their charge, and the Trains worked in accordance with the Book of Rules and Regulations and the Service Time-tables.

Those portions of the Lines where the Staff and Ticket System is in operation will not be affected by this Order, but must be worked in the usual way.

THOS. CARLISLE,  
Acting Traffic Manager.

Traffic Manager's Office,  
Sydney, 23 November, 1877.

## APPENDIX F.

## RAILWAYS.

(PAPERS IN REFERENCE TO BLOCK SYSTEM ON.)

## No. 1.

## Minute Paper from The Secretary to Mr. Higgs.

Mr. HIGGS is requested to say how many trains, including coal trains and empties, arrive and depart from Newcastle daily? Is there any regulated time for coal trains and empties to run? What system is observed in this respect?

It is desirable that the Block system should be introduced on the section of the Great Northern Railway, within a mile of Newcastle—say a Signal Station at a point about a mile outside Newcastle, and another just within Newcastle—so that no train can pass the first Signal Station till intimation is received from the other Signal Station that intervening space is clear. The accident that occurred the other day has given rise to this proposal, and appears to justify it.

Mr. Higgs might consult with Mr. Bewick on the subject.

I also consider that the coal line junctions should have the interlocking apparatus.

CHAS. A. G.

Mr. Higgs, B.C., 5/2/74.

There are about 28 or 30 trains to and from Newcastle, not including engines going to and from the work-shops and the staiths; in each case they travel on the main line when so engaged. The coal trains are not timed, and I find it impossible to fix a time for this kind of work. This traffic depends entirely on the trade; when shipping is brisk and the output of the Collieries large, more trains are required. I certainly should like to see the Block system introduced, but to do this properly would require four stations between Honeysuckle Point and Newcastle, viz.: No. 1 at Newcastle; No. 2 at the Staiths, to protect engines going to and from that point; No. 3 at the Workshops; and No. 4 at Honeysuckle Point. I have seen Mr. Bewick on the matter, and we both think it unnecessary that the Block system should be introduced at present, partly owing to the large expense that would be incurred, and that all trains between Honeysuckle Point and Newcastle run at a reduced speed. I think there can be no doubt as to the advantages to be gained by having all the Junctions fitted with the interlocking apparatus.—J. HIGGS, 7/2/74.

I am quite certain that if such a line as the Great Northern—I mean the Newcastle end—were a line in England, the Board of Trade would not allow it to be used, except on the Block system.—CHAS. A. G.

Will Mr. Whitton be good enough to furnish me with his opinion on the point?—J.R., 19/2/74.

Marked in the Engineer's Department: "Put by."

## No. 2.

## Minute Paper from The Traffic Manager to the Commissioner.

I BEG to submit as a matter for the consideration of the Commissioner that it is advisable to adopt a more safe and perfect system for working trains over our suburban line (*i.e.*) between Sydney and Parramatta, and I would suggest that what is termed the Distance Block be introduced.

The present system of regulating the distance between trains is undoubtedly the best that could be adopted with the appliances at our command, and as a Time Block it is I may say perfect (of which there can be no better proof than the remarkable immunity from accidents which characterizes our working), and, under ordinary circumstances, with due care and attention to rules, the chances of a collision are very remote. There is, however, always this danger attending such a system, that notwithstanding the utmost

care

care and watchfulness it may at any moment happen from causes beyond our control (which are too evident to need particularizing) that it would be impossible to know the actual distance between trains, and in the event of the one in front not keeping to time; or breaking down, the consequences might be very serious.

Under these circumstances, and looking at the number of trains of all descriptions which run over the suburban line (often following at intervals of only five minutes), and which, judging from the rapidly increasing traffic, there is reason to believe it will be necessary from time to time to increase, I consider it our duty to endeavour to employ such means for the working of the traffic as will, as far as humanly practicable, place accidents beyond the bounds of possibility, and as perfect safety is only to be obtained under the Distance system, I would strongly recommend that the appliances required for carrying it out be procured without delay.

Of course for such an important and desirable object the question of expense is quite of secondary consideration, and should not for a moment be allowed to stand in the way. I may, however, mention, for the information of the Commissioner, that I do not anticipate that the proposed change would cause any material increase in the working expenses, as no intermediate signalling stations would be required, the distance between stations, which, with one exception, do not exceed 2 miles, being convenient distances for blocking. The only expense therefore would be the cost of the instruments, &c.

The selection of the instruments, I think, should be left to the Superintendent of Telegraphs, as he will best be able to decide what principle is most suited for the purpose; but it might be as well to point out to him the desirability of combining simplicity with efficiency.

As to whether the outside signals should interlock with the instruments is a point with which I will defer dealing until it is known what description of instrument is recommended, but I scarcely think any such arrangement will be necessary.

D. VERNON.

8/10/75.

This is an important matter, and in strongly supporting the Traffic Manager's proposal I would recommend that the system be extended to the Northern Line, between Newcastle, and (say) the Wallsend Junction, between which places numerous coal trains are running daily, and at uncertain intervals.—CH. A. G., 14/10/75.

Mr. Whitton, for report.—J.R., B.C., 15/10/75. I see no objection whatever to the course proposed, as it is one which I suggested years ago, and have repeatedly named to the Traffic Manager.\* —J.W., 8/11/75. Commissioner, 10/11/75. Approved.—J.R., 11/11/75. Traffic Manager, B.C., 12/11/75. Please forward to Superintendent of Telegraphs as to description of instrument he would recommend.—D.V., 15/11/75. Mr. Cracknell.—J.R., B.C., 16/11/75.

\*I have no recollection of Mr. Whitton's ever introducing the subject to me. The only record in the office is a minute from Mr. Goodchap, re the introduction of the Block and interlocking system on the North, as far back as Feb., '74, which was referred by Commissioner to Mr. Whitton, but no action appears to have been taken upon it.—D.V.

### No. 3.

#### Minute Paper from The Superintendent of Electric Telegraphs to The Under Secretary for Public Works.

I HAVE carefully considered the question of instruments for working the Block system on the Railways in this Colony, and from the five or six plans adopted on the new lines in Great Britain and India, I would strongly recommend Preece's instruments in preference to Tyler's, Walker's, or Spagnoletti's, as being by far more reliable.

Preece's consist of a miniature semaphore lever, the same as the outside semaphore signal, which is less liable to be misunderstood by the signalmen, who are already educated in its manipulations and use, in addition to which there is little or nothing to get out of order. The only objection to Preece's system in its entirety is that it requires three wires to work a double line of Railway; the third or bell wire can, however, be dispensed with, as a very simple bell signal can be arranged to work from the semaphore magnet. Any temporary signaling, in the event of either wire being out of order, can be maintained by the present Morse or Alphabetical instruments connecting the several Railway Stations.

Another reason for recommending Preece's apparatus is in consequence of its being worked by permanent or continuous currents, which are not so liable to cause false or defective signals, which often occur when the wires are accidentally brought into contact through gales of wind, the plate-layers, levers, and other causes, these intermittent signals or contacts being fatal to any Block system worked by momentary currents.

I am preparing a working apparatus on Preece's plan, which I will forward for inspection when ready; and shall be glad to arrange full directions for its successful working if it is decided to adopt that system.

Record books should be provided at each signal station, so that all trains can be properly timed, and any irregularity noted. This is not only a check upon the signalmen, but gives a valuable record of the working of trains, showing on what sections time has been wasted, or attempts made to pull up for time lost.

I may add that this system has been in use for several years on many of the principal Railways in England, and has been spoken of by railway and telegraph engineers as the most reliable and perfect.

E. C. CRACKNELL,

Superintendent, Electric Telegraphs.

Traffic Manager, for report. No time should be lost in introducing the system with Preece's instruments I think, 17/12/75.—J.R. I have no doubt that Preece's instruments will answer the purpose, but let us have the thing in its entirety. Our length of double road I am sorry to say is *very short*, and the extra expense will be but small I imagine. Instruments should be ordered at once.—D.V., 28/12/75. Mr. Cracknell to order what he considers best.—J.R., 6/1/76. Twelve sets ordered, at £40 per set.—E.C.C. Approved.—J.L., 1/4/76. Traffic Manager to see.—B.C., 1/4/76, CH. A. G. Seen.—D.V., 6/4/76. End of July to ascertain what steps have been taken to carry out this system.—CHAS. A. G., 11/4/76. End of year, by which time instruments should be out.—CH. A. G.

## No. 4.

## The Traffic Manager to The Commissioner for Railways.

I HAVE long been desirous of adopting a more perfect system for the working of trains over our single lines, so as to ensure greater efficiency and security from accident; and as the necessity for doing this is daily increasing, I submit the matter to the consideration of the Commissioner, to whom I would point out that no time should be lost in taking the requisite steps for the attainment of this object.

That the Commissioner may more readily understand the position of affairs, I may mention that prior to my taking charge of this branch of the Service, the working of trains seems to have been conducted on no particular system. The Book of Rules and Regulations furnished for the conduct of these Railways contains, strange to say, no provision in the shape of a system for the working of single lines, there being only a few general rules for the guidance of the officials in performing this most important and responsible of their duties.

I believe it is a thing unknown elsewhere, for a single line of Railway to be opened for traffic without a system of some sort, such as the "Staff and Ticket," or some Telegraphic system, with full and complete instructions for every contingency; and although the absence of such a provision on these Railways may not have been much felt in their earlier days, when there were very few trains running, it has now become quite a different matter. Soon after taking charge of the duties of Traffic Manager, I gave my best attention towards remedying this serious defect, and no time was lost in putting matters on a better footing. To effect this, in the first place, a full and complete *Service or Working Time-table* was prepared for each section of the line, and issued to the staff. These tables included all trains—goods, pick-up, and mineral, as well as passenger—showed the order and time of running of each, and where they were to meet and cross. This step produced a very great improvement, both in point of safety and regularity.

The next thing to which my attention was turned was the improvement of our Telegraph system and appliances. Additional wires and instruments were procured at different parts of the lines, the Telegraph staff was re-organized and strengthened, the operators were properly trained to Railway work, and other improvements were made. By these means, with the assistance of the Working Time-tables, our traffic has since been worked with safety. I regret to say, however, that for want of greater facilities for communicating between Stations—such as can only be obtained by increased Telegraph accommodation—we have been unable to carry out in its entirety a Telegraph system of "Line Clear Message," the rules for which I have had ready for some time, as also the requisite Telegraph Registers of arrival and departure of trains (an attempt having already been made to keep these up). Notwithstanding our best efforts, it has been found impracticable, with the appliances at present at our command, to work the system in such a manner as to afford that perfect protection to every train which the great increase in the traffic renders absolutely necessary both in the interests of the department and for the safety of the public.

I commenced this report by stating that I had been desirous of adopting a *more perfect system*, but it would have been more correct had I said I was desirous of *perfecting our present system*, which, if we had the means of carrying it out in its entirety, would, I am satisfied, be found the simplest and the most suited to our requirements. When these appliances are furnished we can commence carrying it out at once, the rules, as I have stated, being ready, as well as the necessary Train Message Registers, &c., and what is of more importance, I have made the staff familiar with—and they now pretty well understand—this system.

The system of all systems is of course what is termed the "Block," or that by which an invariable interval of *space* is secured between trains, and this the Commissioner is aware I have already applied for the means of adopting for working the traffic between Sydney and Parramatta. Wherever the Block system *can* be brought into operation it should be, but upon the principal lengths of our single lines, with long and varying distances between stations, the absolute Block system would be obviously impracticable, on the score of the expense which the necessary multiplication of signal stations and sidings would involve.\*

The system adopted in Victoria for working the single lines of railway, and very commonly adopted in England for the same purpose, is the "Staff and Ticket" (see my report, and the Rules and Regulations which I drew up and submitted some time back for approval). There can be no doubt, however, that a Telegraphic system of working admits of much greater freedom in manipulating the traffic than does the "Staff and Ticket" system, and where stations are far apart and the traffic irregular, the former is, I think, to be preferred.

I now recommend, therefore, the adoption of a Telegraph system of working by "Line Clear Message," and I wish this to be considered as an application for the necessary appliances to bring it into operation.

Instead of being an "Absolute Block" system, and allowing only one train in a section or district at a time, it will amount to what is termed a "Permissive Block," *i.e.* the first train entering a section will get a "Line Clear" message, but other trains will be allowed to enter the same section with "Line clear to follow" message.

I fear it will involve rather a heavy outlay to provide the additional wire and instruments, but it will be the first cost only, and this consideration should not therefore be allowed to stand in the way, especially in view of the great advantages which will be gained.

All other railways recognise the necessity for the most perfect and improved telegraphic appliances, and if our working is expected to compare favourably with theirs we must be similarly provided. The amount should not, I consider, be charged to Revenue, but the whole of it to Construction, as without these appliances, I think, the lines have been incomplete, and more or less unsafe from the first.

On

A very valuable contribution to the safe working of the Lines.—CHAS. A. G., 24/1/77.

I trust these and other endeavours to meet the needs of this important service will not be lost sight of.—CHAS. A. G., 24/1/77.

There was no system when Mr. Vernon took charge, and I have no hesitation in stating that the Department and the Public have reason to be thankful to him for the constant exertions he has shown to meet the difficulties he has had to contend with.—CHAS. A. G., 24-1-77.

This has been approved, and the instruments for working it are now on the water.—CHAS. A. G., 24/1/77.

On those parts of the line where a Railway Telegraph has already been established, the following additional lengths of wire will be required—

Parramatta Junction to Goulburn	...	...	...	...	...	...	103 miles.
Do. to Bathurst	...	...	...	...	...	...	72 "
Blacktown to Richmond	...	...	...	...	...	...	16 "
Making a total of	...	...	...	...	...	...	191 "

The remaining eighty miles will be made up by the present alphabetical lines. The new line will have to be kept perfectly distinct from the line used for general purposes, and must be devoted exclusively to the working of trains. It will further require to be in station to station circuits, so that any station will be able to communicate at any moment with the next station on either side without being liable to any interruption from any other station. At each station two instruments will be wanted—one for each side—and the total number that we shall be likely to require will be about forty pairs.

The particular description of instrument I need not now specify. I prefer, if possible, a writing instrument—such as the Morse; but there may be sufficient reasons after all why we should select our present alphabetical instruments.

I should like to see Mr. Cracknell on this point before making any recommendation, which can be done without in any way *delaying the work*, which should be proceeded with at once.

The cost of the additional wire asked for may be roughly estimated at £15 per mile, and the instruments at (say) something like £50 a pair, which makes—

For wire	...	...	...	...	...	...	...	£2,865
For instruments	...	...	...	...	...	...	...	2,000
Or a total cost of	...	...	...	...	...	...	...	£4,865

for the single lines on the *Sydney side* of Bathurst and Goulburn.

With regard to the extensions beyond these places, as a Railway Telegraph has not yet been established, I presume, if my recommendation is approved of, when the wires are put up, the necessary provision for working trains will be made without further application from me.

We have now great difficulty in working these lengths, as the public wire is practically useless to us, and we are therefore obliged to rely upon the care of the staff and the Working Time-table.

Some time ago I prepared, and submitted for approval, Rules and Regulations for working the "Staff and Ticket system," and I asked for permission to give it a trial with a view of applying it to the extensions above referred to, but unfortunately my recommendation has not been complied with, although no reason has been shown why effect should not have been given to it. I regret exceedingly that any obstacle should have been thrown in the way of obtaining so laudable a result as "safety in working," and I have generally to express a hope that this request will not meet with the fate of the numerous recommendations made by me from time to time to render the safety of the travelling public more secure.

If I am to be held responsible, my views and proposals ought either to be carried out or demonstrated to be impracticable, especially in the case of my efforts to provide for that security to life and property which it has ever been my most anxious and earnest wish to obtain.

I venture to add that the responsibility of any accident which may arise from the want of the provisions which have been lost through unaccountable and unprecedented opposition must rest upon the Department from whence such opposition has come, unless the Commissioner is prepared, by endorsing such action, to take the responsibility upon himself.

I write strongly because I feel deeply in this matter, and I trust that my great desire to meet the responsibilities of my office will not be considered as showing any disrespect to the Commissioner, for nothing could be farther from my intention than that.

D. VERNON,  
23/1/77.

## No. 5.

### Report of the Superintendent of Electric Telegraphs on the Block system.

BEFORE taking action on the recommendations of the Traffic Managers for the Great Northern, Southern, Western, and Richmond Lines, that additional wires and stations be provided for train-signalling, I am anxious to direct the attention of the Secretary for Public Works to the desirability of adopting a perfect Block system for working the traffic on the Railways in the Colony, instead of the obsolete Staff and Ticket system proposed.

I may state that during my late visit to Europe I made myself acquainted with the Block systems in use on the Railways in England, and devoted some time to the actual working of the traffic on the London and South-western Line at Clapham Junction and Bishopstoke, where the absolute Block is in use, in addition to which I inquired into various plans in operation for regulating the traffic on the principal lines of Railway, and sought the best practical information on the whole subject.

I have therefore arrived at the conclusion that it would be far preferable to adopt a perfectly safe system, although perhaps a little more expensive, than to commence with a system which is dangerous, and must sooner or later be discarded, as it has been, on the lines in Great Britain and the principal Railways in India.

To make the system more intelligible I cannot perhaps do better than give a brief description of the working of each:

The Permissive Block, which Mr. Vernon appears to think sufficient, is simply dividing the line into sections, and by means of a talking telegraph, which may be a Morse or alphabetical instrument, messages are sent to the next station that the line is clear. For sake of explanation we will take the section from the Picton Lagoons to the Big Hill siding, on the Great Southern Line: Big Hill signals the Lagoons that the line is clear, Lagoons will start a train which may be a heavy goods, and at a time interval this train is followed

Mr. Cracknell is mistaken—see my letter to, and reply from Urban Broughton, Esq., Traffic Manager, of East Indian Railway.—D.V.

followed by a passenger and mail train, and perhaps at another time interval by a special, each regulated by the staff and ticket; that is, when it is necessary for more than one train to travel in the same direction, the last train carries the staff and the previous ones are sent on by tickets. Now, to show what may happen, and has happened on several lines at Home, the goods with its heavy load drags its way up the (steep) Big Hill bank (1 in 30) at a speed not exceeding 4 miles an hour, the passenger train follows, and runs up the bank, if light, at 10 to 15 miles, or perhaps more; if there is a curve she has nothing to guide her or prevent her running into the goods train but her tail lamps, or should anything go wrong before a man with a hand-lamp can be sent back the passenger train dashes into the goods, and in all probability may be followed with the special; this is not simply what may occur, but what has actually happened on some of the best regulated lines in the world, and Colonel Yolland in his evidence at Egham, stated "that the danger of running trains at intervals can only be obviated by the Block system of telegraph," and the "*Railway News*" referring to this evidence, states "that the electric telegraph itself is at best merely an auxiliary for keeping an interval of space between following trains, and may induce a false security on the part of the driver an lead to serious accidents in the event of an incorrect telegram being sent along the line."

Any system of signalling that requires the passage or spelling of words or the asking of questions must be based upon an infirm foundation. If any lines do adopt such a system, the sooner it is abandoned the better.

"Captain Tyler remarks that the principle of the Train Staff is undoubtedly sound in theory and conducive to safety, but experience, which after all is the true test of theory, has proved it to be impracticable. I know of no long length of single line that is worked by the staff." He further states, in his report on the accident at Abergele as far back as 1868,— "that a mere interval of *time*, whether it be 10 minutes or 20 minutes, or any other given quantity, affords no true margin of safety. An interval of space is the only true remedy for such a state of things, and it matters not what the distance between the trains may be, whether 4 miles or 2 miles, or half a mile, so long as it is strictly preserved. In this particular instance an interval of time of no less than 22 minutes proved to be of no avail."

Now the Block system proper is keeping trains apart on the same line of rails by a certain and invariable interval of space, instead of an uncertain and ever-varying interval of time, so that trains, no matter whether running fast or slow, or whether the traffic is heavy or light, as long as each section is kept blocked when a train is upon it, a collision is practically impossible.

Captain Malloch, who was directed by the Government of India to report on the Block system on English railways, arrived at the following conclusions (amongst others), that,—

"The Block system entails no loss of time, but on the contrary enables a far greater extent of traffic to be carried on than can possibly be done without it.

"The Block system is essential to the safe working of the line.

"The system of the permissive Block is most dangerous.

"A private code of signals between the men must not be allowed.

"Whatever system of block instruments is introduced, a train register book is wanted.

"Besides the block instruments proper, a talking telegraph is desired to put into communication any section on which there is likely to be shunting with the next blocking station, and the talking instruments must not be interposed in circuit with others, but each station must be worked as a terminal.

"The Block system is as necessary with light as with heavy traffic.

"Needle instruments which can be used for talking are objectionable for block instruments.

"It shall be impossible after the instrument has shown 'Line Blocked' for it again to show 'Line Clear' unless both the signalmen at each end of the line are concerned in making the signal.

"The block telegraph and signals should always be worked in unison to announce 'danger' or 'line clear' as the case may be, and therefore the method of working the telegraph should approximate as much as possible to the method of working the outdoor semaphore.

"The receiver of a signal must not be able to alter the index of incoming signals at his station."

At a meeting of the Society of Telegraph Engineers, in April, 1873, the Chairman (Mr. C. W. Siemens) said:—"The whole subject had led, he thought, to very satisfactory conclusions, arrived at from this discussion. Those conclusions seemed to point to a general conviction that the absolute Block system was the most satisfactory arrangement, whichever way it might be carried out. They had the evidence of Colonel Zolland, who had been so useful and powerful an advocate of that system from the first, and he thought nothing could be added to his remarks on that subject, only he (the Chairman) was strongly of opinion that if the Block system was adopted, it ought to be an entire block; a Block system which left anything to the men to alter was no Block system at all. It must have the invariable effect of throwing the men off their guard, and must produce danger. The Block system therefore ought to be complete in itself, and there should be no exception permitted in its exercise."

I have prepared the following statements, which will show the places to be connected on each line of Railway, the primary charge for additional wires and instruments, also the number of men required and the expense per annum for maintenance, &c.

## STATIONS, Platforms, and Sidings where Block Instruments should be placed :—

\* As there would be very little night service on this line, additional men would not be required.

The cost of additional wires for working a Railway Telegraph signalling system on the present lines will be ... .. £7,476  
 Battery cells ... .. 500  
 254 instruments ... .. 6,200

Making a total of ... .. £14,176

This amount will be required at any rate.

Accommodation will have to be provided at those stations where there are no telegraph instruments at present; where instruments are now provided, room could be made without much additional expense for the blocks. This would be necessary, whatever system be adopted, and must be considered the first cost for the Railway Train signalling, whether permissive or absolute.

The annual expense on each line, if a night and day service be required, would be as follows :—

*Southern Line to Cootamundra.*—29 men, at £100 per annum ... .. £2,900  
*Great Western Line to Orange.*—31 men, at £100 per annum ... .. 3,100  
*Great Northern Line to Tamworth.*—31 men, at £100 per annum ... .. 3,100

Making a total amount of... .. £9,100

For the Richmond Line a night service perhaps is not required.

The cost per mile for line and instruments will be £23, and the annual charge per mile for working £15.

This does not include the line from Sydney to Parramatta, which has already been provided for.

If a continuous service is not required on any portion of the extensions, and the night service can be dispensed with, a considerable saving on the annual charge could be effected.

In

In conclusion, I strongly recommend that the absolute Block system, on Precie's principle, be adopted in preference to the discarded Staff and Ticket or permissive systems.

I cannot for one moment imagine that the concluding paragraphs of Mr. Vernon's minute of the 23/1/77 can apply to my Department, as he must be aware that every facility has been afforded the Traffic Manager by providing lines and instruments at every place along each Railway, and I have in all cases given positive orders for all Railway telegrams to take precedence to public messages over our lines, and miles of public wires have been placed at the disposal of the Railway Department to assist them in working the Railways with safety to the travelling public.

E. C. CRACKNELL,  
16/7/77.

## No. 6.

### Further Report from Traffic Manager, G. S. W. & R. Lines, on the proposal of Superintendent of Telegraphs to adopt the absolute Block system.

HAVING read Mr. Cracknell's report upon the Block system, I think there is room for some further remarks from me on the subject.

My report of 23/1/77 contained an application for additional and necessary telegraphic appliances, with a view to the safer and more systematic working of the traffic. Among other things, I stated very emphatically that the Block system should be introduced wherever practicable. I further alluded to the fact that I had already advocated its application, and applied for the necessary electrical appliances for working the traffic upon our short length of double road between Sydney and Parramatta; but in regard to our *single* lines, I applied for and proposed to content myself with such means as would permit of all trains being worked by a Telegraphic system of "Line Clear Message," or by what might be termed a *permissive*, in contra-distinction to an *absolute* Block system. I mentioned at the same time that the reason why I refrained from advocating the latter upon our long lengths of single lines was on the "score of the expense which the necessary multiplication of signal stations and sidings would involve." (See \* p. 1.)

No one therefore, after reading my former report, will expect me to dispute the merits of the absolute Block system, or to offer any objection to its introduction, excepting the *expensiveness* of the system both in first outlay and regular maintenance. Mr. Cracknell's estimate of £14,176 (p. 4 of his report) is for *electrical* appliances only; and referring to the cost of other accommodation which would be required, Mr. Cracknell observes that "this would be necessary whatever system be adopted, and must be regarded as the first cost for the railway train signalling, whether *permissive* or *absolute*." This is a mistake; it should be just the other way about—the estimate for *electrical appliances* should be regarded as the first cost appertaining to *any* system of train telegraph signalling, and the cost of *other* accommodation (such as extra cabins, residences, signals, &c., &c., and men) as peculiar to the absolute Block system. The item of £14,176 may safely be *doubled*, and the result will still be under the cost of the first outlay for the introduction of the absolute Block system. The annual expense also of maintaining it as compared with a permissive system will be as two to one.

Referring to the Journal of the Soc. Tel. Eng., quoted by Mr. Cracknell, and to a paper read and remarks made by Mr. W. H. Preece, C.E. & M.S.T.E., it is, I find, very justly observed that a broad distinction should be drawn between the "principle and the means of carrying out that principle \* \* \* that the two are very much confused \* \* \* a very broad distinction should be drawn between the Block system as an abstract principle and the instruments employed to carry out that principle \* \* \* the Block system was *in toto* an abstract principle \* \* \* as long as trains are kept apart by intervals of space, they had to all intents and purposes a Block system."

The fact is that, expense being no object, either the "Line Clear Message" or the "Staff and Ticket system" could, with the greatest ease, be at once made an absolute Block system.

Nearly all however that is written with regard to the absolute Block in England applies to working on a *double track*, upon which it is only necessary to secure an interval of space between trains travelling in the same direction, or what is called a "non-following block." Upon *single* lines, it is of essential and the first importance to provide for the same thing (interval of space) between trains travelling on the same road and in *opposite* directions, or in other words to provide against trains *meeting* as well as against trains *overtaking* each other—a "non-meeting block" plus a "non-following block."

Now, in my opinion, and after practical experience and responsibility in the matter, there is no safer method of providing for an absolute "non-meeting Block" than the "Staff and Ticket system," and I can quite understand therefore why the inspecting officers of the Board of Trade prefer this system for securing this object on a single line.

Referring again to the Tel. Journal quoted by Mr. Cracknell, I find that Capt. Mallock, with a view to the adoption of the *absolute block system* upon the single lines of India, suggested the use of two wires for the non-following and non-meeting block respectively, and Preece's single wire instruments (similar ones to those we are about to use).

Upon this suggestion being laid before Colonel Yolland—whom Mr. Cracknell mentions, and rightly, as one of the most consistent and strenuous advocates of the Block system—he said, "No such system is perfect without a Train Staff." With all due deference, therefore, to Mr. Cracknell, I am quite sure that no one who understood the merits of the so-termed "obsolete," "dangerous," and "discarded" Staff and Ticket or Permissive system, would speak lightly of its value in working our, or any, single lines of railway.

The remarks of Captain Tyler, quoted in Mr. Cracknell's report on page 3, refer to the system of working with a "Staff" only and not to the "Staff and Ticket"—the former *would be* quite impracticable.

As a matter of fact, a reference to my former report, pp. 5, 6 and 7, will show Mr. Cracknell that he is in error, on p. 1 of his report, in alluding to the "obsolete Staff and Ticket system" as the one "proposed." I proposed a very different system, and gave it the preference on account of the greater freedom it affords in manipulating the traffic, as compared with the Staff and Ticket system."

Having,

Findlay in his evidence given before the Royal Commission states that the cost of working Block system on London and North Western Railway is £31 per mile. Ward states that the cost of working Block system on Midland Railway is £50 per mile.—CHAS. A. G., 15-8-77.

Colonel Yolland in his evidence states:—"At the present time nearly all the single lines are worked either 1st, on the absolute Block system; 2nd, by the Train Staff and Ticket system; 3rd, by a combination of these two systems." Colonel Yolland advocates the combination of the Staff and Ticket system with the Telegraph system for single lines. Captain Tyler in his "requirements for new lines" and modes of working single lines also recommends the combined system.—CHAS. A. G., 15-8-77.

This view is supported by all the best recognized authorities in England.—CHAS. A. G., 15/8/77.

Having, however, since the date of my last report, been authorized to introduce the latter, I am more impressed in its favour, and inclined rather to put up with the risk of occasional delay and inconvenience to which it exposes us, than forego the safety which it secures. It is carrying out, as I before intimated, the *Block* principle, so far as the *non-meeting* of trains is concerned. If we adopt the principle of the *absolute block*, Preece's instruments will be a valuable auxiliary in effecting the *non-following* portion. Experience will enable us to decide upon the prudence of depending upon them for *both* purposes.

This of course (I mean the *non-meeting* of trains) is what we should provide for above all things especially on single lines.—CHAS. A. G., 15/8/77.

On the whole I offer no objection to the proposal of the Superintendent of Telegraphs, but rather recommend that, so far as it concerns Electrical appliances, it be approved and adopted.\*

Assuming therefore that the absolute block be adopted, there are two or three other remarks which I should like to make. In the first place, and in the words of Mr. Preece at the meeting of Telegraph Engineers mentioned by Mr. Cracknell. (See page 3.)

"The carrying out of the Block system means a great deal more than the erection of wires and the fixture of instruments. It means the entire re-arrangement of the Rules and Regulations of the traffic working, a complete re-organization of the signals, the construction of fresh siding accommodation, the education of the staff, the transference of much responsibility from the drivers to the signalmen, and the supply of proper cabin accommodation. Moreover, the working of the block is not necessarily an electrical question." (p. 234, J.T.E., 73.)

In the next place, the Block system may occasionally be the cause of obstruction and loss of time, e.g., Goulburn, Breadalbane, and Gunning are block stations. Say, the run between each is at least 45" and 30" for a goods and passenger train respectively; consequently a down goods train could only leave at intervals of 45" instead of 15", and passenger trains at intervals of 30" instead of 10". This is not *increasing* capabilities—to make which under the Block system equal to those under a permissive *two* block stations would be required between Goulburn and Breadalbane, and between the latter place and Gunning, and so on. Again, take the case of a special leaving Redfern for Lithgow after the 9 a.m. The latter train cannot be *passed* on the road without involving so serious a delay as to render it practically out of the question. Say the hour at which the special is required to be at its destination renders it necessary to pass the down passenger at *Springwood*, the latter must *reach* there before the special can leave the previous block station, "*Wascoe's*" (11.45 a.m., say), and must *remain* at Springwood until the special has passed and arrive at Blue Mountains, the next block station, in advance, say 12.35 p.m. Or take Blue Mountains as the station at which the special has to pass the down passenger train. The former cannot leave Springwood until the latter has arrived at Blue Mountain (say, 12.25 a.m.), and the down passenger cannot leave Blue Mountains until the special has passed and reached Weatherboard at (say) 1.5 p.m.

Shorter Blocks would remedy this, but the expense of course would be increased.—CHAS. A. G., 15/8/77.

So that it follows that, unless Sydney is left before 9 a.m., it is of no use trying to arrange to be at Lithgow before 3 p.m.

Practically, therefore, it is a mistake to suppose that the establishment of the absolute Block system upon our single lines will increase their capabilities for traffic. It will improve the *safety* of working, but tend to reduce rather than otherwise their capabilities.

Greater expedition can be provided for by having increased siding accommodation as refuges for trains.—CHAS. A. G.

In the last place, the Block system will not ensure a perfect immunity from accident. Accidents will occur, and have occurred, under it as well as under every other system; accidents too, which when they do happen, will be intensified rather than alleviated by the Block system. Col. Yolland says that "three-fourths of the accidents on the absolute Block system were due to want of discipline, disobedience of orders, &c."

The whole tendency of the evidence taken before the Royal Commission on this subject was to the effect that though perfect immunity from accident was not secured by the absolute Block system, that system better than any other provided for the public safety, and on single lines the absolute Block combined with Staff and Ticket.—CHAS. A. G., 15-8-77.

Immunity from accident depends principally upon a due regard being paid to the efficiency, mental and physical, of the staff, judicious arrangement of trains, constant supervision, and the maintenance of *rigid discipline*.

In conclusion, I need do no more than refer to the recommendation contained above\* of this report, except to say that the last paragraph but one of my former report of 23/1/77 had *no reference whatever* to the Superintendent of Telegraphs or to his department.

I gladly take this opportunity of acknowledging the kind and valuable assistance which I have received from them at all times.

D. VERNON,  
13/8/77.

## No. 7.

### Minute Paper from The Superintendent of Electric Telegraphs to The Under Secretary for Public Works.

THE amount authorized for the Block Railway Telegraph instruments is insufficient to cover the cost of those ordered, and I therefore recommend, for the approval of the Honorable the Secretary for Public Works, that 24 Preece's Block Telegraph instruments, at £22 10s. each, be substituted for 12 sets at £40 per set. These instruments are of a superior kind, and in consequence of this the price is higher than those originally recommended by me.

E. C. CRACKNELL,  
1/3/77.

The Under Secretary for Public Works, B.C. Approved.—J.L., 14/3/77. Railways, B.C., 14/3/77.—G.H. Supt. of Telegraphs, B.C., 14/3/77.—CH. A. G., *pro*. Commr.

The Supt. of Telegraphs has returned these papers, with voucher for £549 in payment for instruments. These instruments will be of permanent use, and the cost in first instance should be charged to capital a/c., repairs and renewals to working expenses. It is submitted that the a/c. in question should be charged to vote under Schedule G., 14/3/77.—CH. A. G. Approved, 15/3/77.—J.R. Accountant, B.C., 14/3/77.—CH. A. G. Sectry., B.C., 16/3/77.—F.J.W. Storekeeper to note Mr. Cracknell certified voucher. Mr. Richardson will please put transaction through the books.—C.A.G., 16/3/77. Noted.—A.R., 28/3/77.

## No. 8.

The Traffic Manager to U. Broughton, Esq., Deputy Traffic Manager, East Indian Railway.

Dear Sir, N.S.W. Government Railways, Traffic Manager's Office, Sydney, 9 July, 1877.

I take the liberty of troubling you on a matter which is just now attracting the attention of Railway authorities in the different Colonies of this Country. I refer to the working of trains over single lines.

The question has arisen, which is the safest system to adopt—the "Absolute Block," the "Staff and Ticket," or the system known, I believe, on your line, as the "Line Clear Message System?"

The single lines of New South Wales have hitherto been worked partly by "Staff and Ticket" and partly by "Line Clear Message"—chiefly the latter; but objection has been raised to both these systems as being far from safe, and it is recommended that they be abolished in favour of the "Absolute Block," worked with Preece's instruments.

In support of this recommendation, it is urged that the "Absolute Block" has been or is being universally adopted on the single lines in India, and that the old system of "Line Clear Inquiry" and "Line Clear Report" for each train, has been discontinued. It is in consequence of this statement that I now write to you, and shall be much obliged if you will kindly let me know if such be the case, and, if so, your reasons for abolishing the old system.

The lines of this country, as you are doubtless aware, are yet young, and the traffic inconsiderable, compared with that of such lines as the East Indian Railway; and I am of opinion that the time has not yet arrived for adopting so expensive a system as that of the "Absolute Block," and consider that our present arrangements are all that we shall need for some time to come.

Although the system of all systems is the "Block," yet, unless we could have very short sections, it would so hamper us as to be almost unworkable; while, on the other hand, the "Line Clear Message System" affords the greatest freedom, and at the same time only needs care and attention to ensure a reasonable amount of safety; and the "Staff and Ticket System" also possesses many great advantages.

Labour of every description being very expensive in a new country like this, it is very necessary to work as economically as possible, and although I would not for a moment allow the consideration of expense to stand in the way of safety, yet, before adopting any such course as that recommended, I should like to ascertain what is being done on other large single lines.

I would venture to further trouble you to say what is the practice on the other single lines of India, if known to you, and I may also add that your own opinion on the matter generally, if you would kindly favour me with it, would be appreciated.

We have commenced the "Block" on our double Suburban Lines, where, from the large number of trains running, it is very necessary.

Apologizing for taking up so much of your time,

I am, &c.,

D. VERNON,  
Traffic Manager.

## No. 9.

U. Broughton, Esq., Deputy Traffic Manager, East Indian Railway, to The Traffic Manager.

Dear Sir, Deputy Traffic Manager's Office, Howrah, 24 September, 1877.

In reply to your favor of 9th July, received on the 18th, I have pleasure in giving you such information as I can.

The absolute block is about to be started on the double line at our suburban stations in consequence of increased traffic. We have an average of 30 trains each way over this length in the 24 hours, and you will perceive the distances from the accompanying Time-book.

Our system on the single line is the "Line Clear" system, which you will find laid down at pages 18 19, of our particular working orders, sent herewith. A block system on single line would be "a block" in both senses.

The Madras Railway Company work all trains through a district officer, and if one train gets out of time he has to re-arrange all his crossings up to the destination of that train, and this may have to be repeated. This was all very well when they had a small traffic, but it is failing now, when they have a famine traffic to deal with.

The Great Indian Peninsular Railway system is virtually the same as ours, as are also those of the Scinde Penjaub and Delhi Railways and Oudh and Rohilkund Railway.

We work on an interval of time. The Block system is an interval of space. On our steep gradients we also adopt space as the limit, whilst we do not consider this necessary on the level.

We are not at all likely to abolish the Line Clear Message system, and we believe that we can work a larger traffic on this system than on any other. The Staff and Ticket system is equally safe, but it is more cumbersome.

Our line has been remarkably free from collisions, and our checks on the Line Clear Messages are numerous; the station-master at A inquires of the station-master of B—this passes through Telegraph clerks; the station-master of B replies through the same source. A signs his name on the back of the message and hands it to the guard; the guard examines the message and, if it is in proper order, he hands the message to the driver, who in turn examines and keeps the message. If either driver or guard expects a train, an inquiry is made "where is such a train?"

But we have amalgamated our Traffic and Telegraph Departments, and I expect that whilst we reduce expenses we abolish one of our safety checks. It remains to be seen whether we impair safety thereby; I think we shall not.

Theoretically the "Absolute Block" is safe. Practically, as it is worked by human agency, it is not absolutely safe.

The

The same may be said of the Line Clear Message system, which I consider to be the best and cheapest system, whilst it is as safe as the absolute Block. On heavy gradients we work a "Distinct Line Clear," meaning that trains may not follow until the line is clear to the next station.

The Block system is forced on us by Government. We do not consider it necessary, even where we are about to put it in operation.

I have to apologize for the delay in replying to your letter, which has arisen from pressure of work, owing to an unusually heavy traffic.

Yours, &c.,

URBAN BROUGHTON,  
Offg. Deputy Traffic Manager.

## No. 10.

### Introduction of the Block system between Sydney and Parramatta.

Traffic Manager to Commissioner.

In order to bring the above into operation, it will be necessary to provide two semaphore signals at each station. One to be placed a short distance in advance of each platform, for up and down trains respectively. A small box about 8' x 6' will also be wanted at each station in which to place the Block instruments.

The instruments are ready, and no time should be lost in placing the Department in a position to reap the additional advantage of greater safety in working, which the Block system is calculated to afford in the case of our suburban traffic.

The position of each semaphore and box will be pointed out immediately they are ready.

I am very anxious to have the Sydney to Newtown section provided for as soon as possible for the protection of trains more especially coming into this yard.

D.V., 15/8/77.

Approved.—J.H., 17/8/77. Mr. Mason. B.C., 18/8/77.—C.A.G.

I recommend that a tender be obtained from Hudson Bros. for building the boxes.—W.M., 20/8/77. To Commissioner Approved.—J.R., 20/8/77.

Write to Hudson Brothers and ask them to tender—first seeing Mr. Mason as to particulars of what is required.—C.A.G., 21/8/77.

### The Commissioner to Hudson Bros.

Gentlemen,

Department of Public Works, Railway Branch, Sydney, 21 August, 1877.

In order to introduce the Block system on the railway between Sydney and Parramatta, it will be necessary to provide two semaphore signals at each station, and also a small box about 8 feet x 6 feet, in which to place the block instruments at each station; I have therefore the honor to request that you will have the goodness to furnish me with your tender to supply these signals and boxes, after you have waited upon the Engineer for Existing Lines as to particulars of what is required.

Your prompt attention to this matter is requested, as it is urgent.

I have, &c.,

CHAS. A. GOODCHAP,  
Pro Commissioner for Railways.

Mr. Mason. C.A.G., B.C., 21/8/77. Seen.—W.M., 22/8/77.

### The Traffic Manager to Inspector Watson.

In order to introduce the Block system on the suburban line it is necessary that a wire be specially provided for this purpose between Sydney and Parramatta, and I shall be glad if you will give the matter early attention.

This must be quite independent of a wire for talking purposes, which will also be absolutely necessary.

On the lengths between Sydney and Homebush and Parramatta Junction and Parramatta is where the system is most needed and should be introduced first.

D. VERNON, 11/8/77.

Arrangements have been made for erecting a wire for block purposes at once. It will be necessary to decide where the signal-boxes are to be placed, that we may know where to put in shackles for leading in wires; the present alphabetical line will, I presume, be all that is required for speaking purposes. Are these instruments to be placed in the signal boxes or left in the station-masters' offices?—B. WATSON, Inspector. To Traffic Manager.—20/8/77.

Mr. Richardson will point out position of boxes. I have no intention of moving the talking instruments.—D.V., 20/8/77.

I will point out positions.—H. RICHARDSON, 21/8/77. To Traffic Manager.

Questions.	Answers.
17. Is the Station-master's office kept clean and in proper order?	
18. Are the waiting-rooms, water-closets, &c., kept clean, tidy, and free from smell, and are they properly lighted at night?	
19. Are proper disinfectants used for the closets and urinals, and if so, what sort? Is there a supply on hand?	
20. Is the station generally conducted with a view to the comfort of the public, consistent with due economy?	
21. Are the platforms kept clean, and are the lines, drains, &c., free from weeds? Is all refuse carried away clear of the station?	
22. Are the yard-gates and fencing in good repair, and are all gate-fastenings in order?	
23. Is every person on the pay sheet employed for the Commissioner's business only? Are all hands fully employed?	
24. Are any temporary hands employed; if so, why? Can they be dispensed with?	
25. Has the Station-master the names and addresses of all the traffic staff attached to his station?	
26. Are the Station-master and his assistants dressed in a becoming manner? Do those who should wear uniform do so at proper times, and is it clean, sound, and according to Regulation?	
27. Where are the tarpaulins, nets, &c., kept, and are precautions taken to preserve them from injury? How many are there on hand, and can the number be reduced?	
28. Are there sufficient carriage-keys?	
29. Is the locking and unlocking of carriage-doors carried out in a proper manner?	
30. Is the name of the station properly called out on arrival of passenger trains?	
31. Is the ringing of station-bell, warning, as well as starting, carried out as required?	
32. Are the provisions of section No. 4, Rules Nos. 124 to 154, regarding the working of trains, strictly carried out, especially Rules Nos. 144, 146, and 152? Are G. O. Nos. 30 and 49, of 1875, understood and acted up to?	
33. Are all telegrams regarding the working of trains given to and received from the telegraph operator, in writing, as directed in G. O. No. 137, of 1874?	
34. Is the system of telegraphing the arrival and departure of trains back and ahead respectively strictly carried out, and the times recorded in the books provided for the purpose?	
35. Are the rules for working steep gradients (section No. 7, Rules Nos. 327 to 344) so far as they concern stations, strictly adhered to?	
36. What rolling stock is at the station, and is any of it unfit for use? Is there any unnecessary detention, especially with regard to sheep, cattle, and timber trucks? (Check date of arrival with date of leaving in a few cases in register.)	
37. Is proper care taken of coaching stock? Are horse boxes, and cattle and sheep trucks, properly cleaned when unloaded?	
38. Are passengers at refreshment stations warned when time for departure of trains draws near?	
39. What are the arrangements for supplying drinking water for passengers? Is there always sufficient, and is it fresh and good?	
40. Are the platform refreshment vendors (if any) in attendance at train times; are they clean in appearance; and are their wares good and fairly priced?	

Questions.	Answers.
41. Is the refreshment rooin (if any) properly conducted, and does the lessee act up to the terms of his agreement?	
42. Has every servant of the Commissioner a copy of the Rules and Regulations?	
43. State if in your opinion any member of the staff is deficient in capacity for the appointment he fills; and if so, why?	
44. In what state are goods sheds and goods office, and are means supplied for securely locking them up?	
45. Are the appliances for the protection of the goods sheds from fire, in working order, and are they periodically tested, and by whom?	
46. Are the platform weighing machines, weigh-bridges, weights, &c., in good order, and do they weigh correctly? How many are there, and are they sufficient for the work? State the tests applied.	
47. Are all current books up to date, and properly kept, and are old books and records taken care of? Is there sufficient accommodation for records?	
48. Is all unclaimed property duly registered and sent to the proper depôt?	
49. Are consigning notes always received with goods and properly filed? Are details of weightment entered on the back?	
50. Is due exertion used in loading and unloading trucks, and are these duties performed in a proper manner?	
51. Are inwards goods thoroughly checked immediately they are unloaded, in order to ascertain if correct, before any of the consignments are delivered?	
52. Check the loads of a few trucks in both in and out books, and report cases of apparent light loading.	
53. Are all inwards goods signed for by consignees in delivery book, and does delivery porter also sign and enter date of each delivery? (Run through the entries since last visit.)	
54. Are risk notes taken for horses, cattle, &c., when necessary, and are they duly signed and attested?	
55. Are old labels removed from trucks on arrival?	
56. Are the doors of both loaded and empty trucks properly secured before shunting or despatch?	
57. Are the floors of goods vehicles swept, and the door-sills cleaned before loading?	
58. Have steps been taken to remedy the irregularities (if any) noted in Inspector's book during previous visits?	
59. Any complaints at the station, especially from the public, and have you taken any action in regard to them?	

1877-8.

## RAILWAYS.

## No. 1.

The Station-master, Bathurst, to The Traffic Manager, Sydney.

Reports of near approach to collision.

Sir,

Bathurst, 5 November, 1877.

I beg to inform you that the No. 8 up passenger train was 10 minutes late leaving this station to day. It had started to time and just reached the end of the platform when a down goods train was observed approaching from Kelso. The passenger train stopped and put back about 10 yards, to clear the line for the goods train, and before the latter reached Bathurst another goods train was seen following it. I cannot understand why these goods trains were allowed to leave Kelso, as it is in direct opposition to rule 146 of the Book of Rules and Regulations, also to the working time-table of the 1st instant, both of which state that goods trains are to keep clear of passenger trains.

I may add, one of these trains had been waiting at Kelso fully an hour, but no line clear report could be obtained in consequence of telegraph communication being interrupted.

I am, &c.,  
ED. HIGGS.

Inspector Hornidge to The Traffic Manager.

On my return from Orange yesterday, Mr. Higgs informed me that a collision might have occurred between No. 15 down goods and No. 8 up passenger train at 10.9 a.m. yesterday morning, between Bathurst and Kelso, owing to Mr. Pass having started No. 15 down as No. 8 up was leaving Bathurst.

In reply, I informed Mr. Higgs that the blame rested with him for starting No. 8 without a line clear report although No. 15 was overdue.

The facts are as follows:—No. 15 was over two hours late but had arrived at Kelso, and telegraph communication was interrupted. According to the time-table, No. 15 was due at Bathurst before No. 8 up leaves.

Mr. Pass therefore sent No. 15 down on in accordance with No. 4 of working orders for single lines (second paragraph.)

Mr. Higgs points to rule 146 in justification of his action in starting the passenger train; also to the words on the time-table "goods trains are to keep clear of passenger trains," and to No. 16 of working orders. He informed me that he considers that he is perfectly right, and will do the same again under like circumstances.

In the present instance the driver of No. 8 up, after going a few yards, pulled up on seeing the goods train had left Kelso—but the matter had of course been noised about the city, giving rise to remarks and discussion reflecting on the Department.

M. A. HORNIDGE,  
Acting Traffic Inspector,  
6/11/77.

The Station-master, Kelso, to The Traffic Manager.

Sir,

Kelso, 7 November, 1877.

On Monday morning, November 5th, a down special train arrived at Kelso from Rydal, 9.4 a.m. in charge of Guard Forrest, who at once informed me that his train was running entirely under the responsibility of the Station-master at Rydal, in consequence of the No. 15 down goods being delayed. Telegraphic communication being interrupted, and the down special above mentioned being an untimed train running without notice, I decided to shunt her into a siding at Kelso, and await the arrival of the ordinary and regular train, namely the No. 15\* down goods, with a view of acting in accordance with Nos. 3, 4, and 5 rules in working order book for single lines, revised 1st February, 1877, which orders I felt assured I could only act upon as regarded the No. 15 down goods, and then fall back upon working orders Nos. 9 and 10 for the purpose of despatching with safety the untimed special goods to follow the No. 15 down goods. The No. 15 down goods arrived at Kelso at 10.5 a.m., and I despatched her for Bathurst after supplying the guard with a notice in compliance with working order No. 10 at 10.7 a.m., and allowed the special to follow closely to avoid as much delay as possible, and I do not see that I could have exercised better judgment under the circumstances; when the No. 15 down goods had got about midway between Bathurst and Kelso the No. 8 up passenger whistled to start from the former station but did not proceed more than 50 yards before she was pulled up.

Yours obediently,  
S. PASS.

Memorandum to Locomotive Superintendent Scott.

Government Railways, Engineer's Branch,  
Penrith, November 7, 1877.

Sir,

Driver Joseph Bardsley, engine No. 96, with No. 15 down goods on the morning of the 5th, train being late in consequence of accident at Lithgow, reports: That after arrival at Kelso the guard instructed him to put his train into the siding, and to wait there for the up passenger train to pass, and after putting the train partly into the siding he was stopped, and after waiting a few minutes while the guard and Station-master were holding some conversation he received a signal from the guard to proceed on his journey. On arrival at Bathurst he was informed that the up passenger was delayed, and that it had started from Bathurst Station and had to put back in consequence of his train being on the road.

Yours, &c.,  
J. TIPPING.

Engineer for Existing Lines.—J.C., pro W.S., 8/11/77.

Commissioner to see. This is a very serious matter, and a searching investigation ought to be made into the case.—W.M., 8/11/77. Commissioner. Traffic Manager, for report.—J.R., 10/11/77. See my report sent to Commissioner 10/11/77.—D.V., 12/11/77. Commissioner.

Extract

Extract from Driver C. Frost's sheet, engine No. 91, 10.9 a.m. passenger Bathurst to Sydney, 5/11/77.  
Sydney, 6 November, 1877.

At Bathurst I received a signal from Guard Pike in the usual manner. I had proceeded about 100 yards when I observed a goods train coming from Kelso, which was then about the gates, or 100 yards distant from me. I stopped the train, and set back to Bathurst. About 5 minutes after another goods train came in. Delayed 11 minutes.

Mr. Mason. W. Scott, 6/11/77. Forwarded for Commissioner's information.—W.M.  
Seen.—J.R., 7/11/77.

Traffic Manager, B.C., 7/11/77.—L. P. IREDALE, *pro* Secretary. Please see mo. 77/9,342 and 77/9,250 on this matter, already with Commissioner.—J. B. GOOLD, per Manager, 12/11/77.

## No. 2.

### Mr. D. Vernon to The Commissioner.

The enclosed papers\* (reports of Inspector Hornidge and Station-masters, Bathurst and Kelso) disclose \* See No. 1. the following facts, viz., that on the morning of the 5th instant the ordinary up passenger train was started from the Bathurst Station at 10.9 a.m., its usual time for leaving, but had scarcely cleared the platform when a down goods train was perceived approaching from Kelso. The passenger train had to put back about 10 yards, and waited until the arrival of the goods train above mentioned, and of a second goods, which followed it to Bathurst.

Leaving out of consideration for the present the second goods train, we have to deal with the fact of the passenger train having been started from Bathurst for Kelso at or about the same time that a goods train had been started from Kelso for Bathurst. One Station-master or the other must have been guilty of a most serious blunder, and there can be no doubt whatever that the Bathurst Station-master is clearly and solely responsible for the whole thing, but having maintained in opposition to the decision and explanation of his superior officer, Inspector Hornidge, that he would act in the same manner again under similar circumstances, I had no alternative but to suspend Mr. Edward Higgs from duty.

To revert now to the facts of the case: It appears that upon this particular morning the ordinary and regular down goods train, "No. 15 working time-table," due to arrive at Bathurst at 8 a.m., had not reached that station 10.9 a.m. (the usual hour for the up passengers' leaving), having been detained in consequence of an accident to another train. The goods was in fact more than two hours *overdue* according to the working time-table. Rule 152—General Rules and Regulations—states:—"On those portions of the railways where a *single line* only is provided, care must be taken *before any train leaves any station* that there is *no train due in an opposite direction, &c.*"

Working order No. 4 is as follows:—"Where there is telegraphic communication, before any train is allowed to leave a station the Station-master or officer in charge must first ascertain by wire whether line is clear, as required by rule No. 152 of book of Rules and Regulations. In the event of telegraphic communication being wanting or *interrupted*, the order for *starting, running, and crossing*, as laid down in working time-tables, must be strictly adhered to (as required by No. 3 of these working orders), and care must be taken before any train leaves a station that there is no train due in an opposite direction."

No. 3 working orders, referred to and quoted in the above, is as follows:—"It is to be distinctly understood that all trains excepting those specified in rule No. 9 (which can only be worked by telegraph), are to run *strictly in their turn* or order, as laid down in the working time-tables; and *no departure from that order is to be permitted* in the case of any train or engine, excepting as hereinafter provided for."

The provision referred to depends entirely upon *telegraphic communication*, requires *special precautions* to be taken to preclude the possibility of accident, and makes it imperative that a train running out of turn or order shall do so under "line clear report" system.

Now, Mr. Higgs must have known that No. 15 down goods *distinctly pointed out on working table* as an ordinary and regular train, and to be *worked accordingly*, and with a remark, (see "Working Orders"), was *over-due* at his station, and yet in the face of a train over-due, without any arrangement *for crossing*, and in defiance of rule 152 and working orders, which directed him in the absence of telegraphic communication to fall back *upon his working table*, he starts the passenger train.

Rule 146 and the general instruction that goods trains are to work clear of passenger trains: The only plea which Mr. Higgs falls back upon, are nothing to the point. Of course goods trains are to give way to passenger trains, but in the case of the *ordinary* and regular goods trains it must be by *definite arrangements*, but if from interruption to telegraph communication or other cause, no definite arrangements can be made, then a passenger train cannot command the road of a regular goods train.

Rule 152 does not say that care must be taken before any passenger train be started that there is no passenger train due in an opposite direction; but *no train* of any description must be started in the face of any description of train due.

The circular which Mr. Higgs received with revised working orders on 7th March was particular upon this very point. Both circular and working orders plainly enough put an end to any possible misunderstanding on this head which the Rules may have permitted.

Mr. Pass, Station-master, Kelso, without any doubt acted clearly up to his Rules and working orders, and his action forms a perfect contrast to that of the Bathurst Station-master. A special goods arrives at his station (Kelso); not being able to get telegraph communication with Bathurst in strict accordance with working order No. 9, he shunted the special goods until arrival of No. 15 down, which he knew rightly enough would command the road, and by means of which he would be able (in accordance with working orders 9 and 10) to clear the road for the special to Bathurst.

A person so dull of understanding and withal so obstinate as Mr. Higgs has shown himself is by no means a proper or competent person to be in charge of such a station as Bathurst. In the present instance his error is an unpardonable one, and I recommend he be removed to Murrumburrah (now vacant), without loss of salary however.

The

The staff and ticket system is in operation there, and it will not be possible for him to make a similar mistake under it.

There is one end, however, which this serious instance of blundering is calculated to serve: It is a forcible proof of the wisdom of and necessity for the introduction of the much-abused, because little understood, staff and ticket system.

D. VERNON.

### No. 3.

#### Evidence taken at Inquiry.

Commissioner's Office, 14 November, 1877.

*Edward Higgs* states:—I am Railway Station-master at Bathurst, at present under suspension; in reply to Traffic Manager, I have not carried out the working orders issued and revised 1st February, 1877, as by clause 16 nothing is to supersede Commissioner's Rules and Regulations.

*Examined by Mr. Vernon*: I admit I did not carry out working orders; I received a copy on 7th March, 1877, with explanatory circular; it is my duty to carry out your orders as far as possible; it is not impossible to carry out the working orders, but when carried out they clash with the Rules and Regulations; I have known for a long time the contradiction between the working orders and book of Rules and Regulations; I have never brought under your notice that the working orders and Rules and Regulations clashed; I consider working orders clash with rule 146 of book of Rules and Regulations, which requires goods trains to keep clear of passenger trains; the time-table also requires goods trains to keep clear of passenger trains; time-table states that line must be kept clear for any regular or ordinary train, and that no other train must be on the road 15 minutes prior to any ordinary passenger or goods train being due; No. 15 down goods was an ordinary and regular train according to working time-table, but not an advertised ordinary train; I remember receiving your explanatory circular with the working orders; I remember paragraphs 2 and 3, in which you drew special notice of goods trains keeping clear of passenger trains; I know rule 152 of book of Rules and Regulations; I see it prohibits any Station-master starting any train in the face of another being due; No. 15 down goods was due at my station at 8 a.m.; it had not arrived when I started the passenger train; rule 152 makes no exception in favour of passenger trains over goods trains.

*Examined by Mr. Rae*: No. 146 rule I thought was still in existence until Mr. Hornidge told me to the contrary; as far as possible I have been guided by the working orders since I received them.

*Examined by Mr. Mason*: I am under suspension; I was suspended for making a remark that I would do the same to-morrow that I had done to-day; I produce letter informing me of my suspension, dated 7th November, 1877; in case of doubt I would appeal to book of Rules and Regulations; I do not know whether the working orders are issued by the Commissioner; I admit I did not carry out the working orders because they clash with the Rules and Regulations, which I consider my guide; I received a circular; I do not know if it contains anything which clash with the Rules and Regulations; I consider that I have carried out the Traffic Manager's orders as far as possible; I consider working orders clash with rule 146 of book of Rules and Regulations; I received a letter with reference to book of Rules and Regulations, which refers specially to rule 146; I never thought it my duty to point out to the Traffic Manager or Inspector that working orders and book of Rules and Regulations clashed; I was aware that goods trains were late, and were at Kelso station; had I been at Kelso station I would not have started the goods train, but have given right of road to passenger train; I have been employed in the Railway Department as Guard, Traffic Inspector, and Station-master for nearly 22 years; I was not aware at the time the reason goods trains were delayed; I was under the impression that Station-master at Kelso would not start a goods train in face of a passenger train; I consider the passenger train should have precedence of goods train; I have not found any difficulty in working under the book of Rules and Regulations, during the whole of my experience; I was aware the goods train was due two hours before departure of passenger train from Bathurst; in this instance I acted in accordance with rule 146; Mr. Hornidge told me that I was wrong in starting passenger train, and said the old rules were done away with almost since Mr. Vernon took office; I remarked that was strange, seeing that the working orders for single lines alluded particularly to those rules; I am certain Mr. Hornidge told me that they were done away with; I pointed out to Mr. Hornidge the foot-note to working time-tables, stating that goods trains must keep clear of passenger trains; he replied he would not then argue the point with me; he did not give me any instructions in the matter, but said he would have kept the passenger train till all was blue; I would have no difficulty in working under the Rules and Regulations, without those issued by the Traffic Manager on single lines.

*Re-examined by Traffic Manager*: I have never observed any defects in the book of Rules and Regulations; I have never perceived that any one rule clashed with another; I consider rule 146 authorized me to start a passenger train in face of a regular goods train overdue; rule 152 does not allow me to do so; we have telegraphic communication between Bathurst and Kelso, but it was interrupted that morning; rule 152 requires me to get line clear where telegraphic communication exists; I do not know that the book of Rules contains any rule for my guidance in the absence of telegraphic communication. In reply to Traffic Manager's question whether Mr. Higgs considered rule 146 as it stood to have any application to single lines, he says: I do not think there would be any sense in keeping a goods train 10 minutes after a train had passed in the opposite direction; had it been a passenger train overdue I would not have allowed the passenger train to start; I would have detained the passenger train at Bathurst, as the overdue train had right of road.

*Re-examined by Mr. Mason*: I have never found any difficulty on single or double lines to work under the Rules and Regulations, and I don't consider the working orders issued by the Traffic Manager necessary or of any assistance; the lines, in my opinion, could be worked better without than with them.

*Re-examined by Commissioner*: The working orders do supply me with information for my guidance in absence of telegraphic communication which the book of Rules and Regulations do not supply.

*Re-examined by Mr. Mason*: I prefer one set of Rules to two; had there been only one set of Rules there could not have been any mistake; I consider the book of Rules and Regulations sufficient; the book of Rules and Regulations, if properly adhered to, give every information for working either single or double lines.

*Re-examined*

*Re-examined by Mr. Vernon:* The book of Rules do not contain anything with reference to ticket and staff system; I do not refer to your staff and ticket regulations as being unnecessary.

*Examined by Mr. Hornidge:* I am not aware that any order was issued for trains to be telegraphed in and out during the time Mr. Moody was Traffic Manager; prior to working orders being issued the trains were worked in accordance with book of Rules and Regulations and time-table.

EDWARD HIGGS.

*Charles Frost states:* I am an Engine-driver in the service of the Commissioner for Railways.

*Examined by Mr. Higgs:* You told me to be careful in running into Kelso Station, as there was two goods trains there, and they might be foul of the crossing.

*Examined by Mr. Mason:* Guard Pike gave me the usual signal to start from Bathurst Station; the train had not left Kelso when I started; when about 100 yards from the station I saw the goods train had left Kelso; I then put my train back.

*Examined by Commissioner:* The goods train was distant more than  $1\frac{1}{2}$  mile from my train.

CHARLES FROST.

*John Pike states:* I am a Guard in the service of the Commissioner for Railways, and was Guard of train which left Bathurst station on 5th November; I received notice from Station-master to start train; I observed goods train coming from Kelso, as also a second train; Mr. Higgs was in the B van, and called out "red flag"; after train was started, Mr. Higgs told me to go carefully into Kelso station; I knew No. 15 down goods train was due, and had not arrived; I left by Station-master's orders.

*Examined by Traffic Manager:* I remember Kelso was the crossing-place for down passenger and up goods trains; if guard of down passenger, and arriving at Kelso, I would not have left without line clear report had goods train not arrived; I would not under such circumstances accept Station-master's orders without line clear report; I would have relied on working rules laid down.

*Examined by Mr. Mason:* I consider I was justified leaving Bathurst without line clear report.

*Examined by Commissioner:* I saw goods train shunting at Kelso; I do not know what Mr. Higgs was going to Kelso for; I have been nearly seventeen years in the service; I consider rule 146 still in existence.

*Examined by Traffic Manager:* Had I been guard of the goods train at Kelso I would have put the goods train in siding, and left line clear for passenger train; had telegraphic communication not been interrupted, I would through Station-master have found out where passenger train was, and made arrangements to cross passenger train there; had I been guard of passenger train and arrived at Kelso and found goods train not there, I would not under any circumstances have proceeded without line clear report or taken steps to flag the road; had I been guard of goods train timed to cross at Kelso, and telegraphic communication interrupted, and running late, I should have felt warranted under working orders (No. 4) to have proceeded on my journey; if I found a contradiction between the Working Orders and book of Rules and Regulations, I should prefer to act on Rules and Regulations.

*Examined by Mr. Higgs:* If I arrived at a siding, timed to cross a goods train, and found the train not there, I would have walked on and protected passenger-train.

*Examined by Traffic Manager:* I would not have taken train on without protecting her.

J. G. PIKE.

*Marmaduke Arthur Hornidge states:* I am a Station-master and Acting Traffic Inspector on the Western district; I remember having a conversation with Mr. Higgs on the evening of 5 November, 1877; he called me into his office and informed me that there had nearly been a collision during the morning, owing to Mr. Pass and himself having started trains simultaneously from Kelso and Bathurst; after informing me of the circumstances he justified the course he had taken in the matter by referring me to rule 146 and time-table; I said, "Wait a bit; where is your line clear book"; Mr. Higgs handed it to me; I opened the book and said, "You are evidently in the wrong," and read Working Orders Nos. 3 and 4 to him; a discussion then arose, in which Mr. Higgs, Mr. Hamilton, and myself took part, in course of which Mr. Higgs again referred to rule 146, asserting that, according to his reading of the rule, he was perfectly right; I replied that the system of starting trains on spec had been done away with long ago; Mr. Higgs said, "When was it done away with?" I replied, "Soon after Mr. Vernon took charge"; Mr. Higgs then said, "I am sure I am right, and would do the same thing again under similar circumstances"; I remarked, "Well, we will have to see what the Traffic Manager says about it."

*Examined by Mr. Higgs:* You did not ask me if the system of starting trains on spec had been done away with; I did not answer you with reference to rule 146.

*Examined by Mr. Mason:* After conversation I declined to discuss the matter any further; I have been ten years in the Railway Department, and employed from junior clerk to my present position; I have been six years as Station-master, and about 5 months as Acting Traffic Inspector.

*Examined by Traffic Manager:* I have been employed about  $7\frac{1}{2}$  years on the Western Line; I do not consider that rule 152 is sufficiently explicit; further working orders were needed for the purpose of explaining what should be done in case of telegraphic communication being interrupted; it has been said that your working orders clash with the Rule book; if there be any contradiction it appears to me to exist between rules 152 and 146 of Book of Rules and Regulations; our present practice is for goods trains to keep clear of passenger trains, in conformity with rule 146.

*Examined by Mr. Mason:* I have known rules 152 and 146 clash; I have experienced a little difficulty while at Wallerawang Station, and have known goods trains arrive after a passenger train was due; I believe this occurred three times; I think Mr. Gould was Traffic Inspector at the time; it was in consequence of this being brought under the Traffic Manager's notice that led, I presume, to the issuing of Working Orders.

*Examined by Traffic Manager:* Under the circumstances I would not have started the train from Bathurst without line clear report, or sending man up the line with a red flag, and an order to Station-master Kelso to detain goods train until passenger train arrived; I think Station-master Kelso acted in accordance with the working orders.

M. A. HORNIDGE.

John

*John Hamilton* states: I am Station Clerk at Bathurst Station; I have heard Mr. Hornidge's statement, the main portions of which are correct; Mr. Higgs called Mr. Hornidge's attention to rule 146, and Mr. Hornidge stated that those rules had been done away with; Mr. Higgs asked when, as he had never heard of it; Mr. Hornidge replied, "Shortly after Mr. Vernon became Traffic Manager"; I understood Mr. Hornidge referred to the Book of Rules and Regulations *in toto*; I did not hear the word *spec* used; I do not remember Mr. Hornidge saying that the system of starting trains on *spec* had been done away with; I heard everything that took place; Mr. Hornidge asked for the working orders, and Mr. Higgs gave them to him, and Mr. Hornidge read Nos. 3 and 4 to Mr. Higgs; Mr. Higgs then referred him to rule 146 and the working time-table; Mr. Hornidge replied he would not discuss the matter any further with him.

*Examined by Traffic Manager*: Mr. Hornidge said Mr. Higgs was wrong; Mr. Higgs said he was right; I remember Mr. Hornidge saying that he would have kept the train there until all was blue; I remember the mail train being at Bathurst 45 minutes in consequence of not being able to obtain line clear report from Macquarie Plains; there was no train due in a contrary direction, and the up mail had not to cross any train between Bathurst and Macquarie Plains; I drew Mr. Higgs' attention to it next morning; I explained to Mr. Higgs why I detained train, which was because I had not received any reply to my line clear enquiry, and that I had not heard of arrival of up goods train.

*Examined by Mr. Higgs*: There was no train due in a contrary direction.

J. HAMILTON.

*Samuel Pass*, states: I am Railway Station-master at Kelso, in the service of the Commissioner for Railways; I have heard my statement read, which is correct.

*Examined by Commissioner*: When I started goods train I expected her to arrive at Bathurst before the passenger train left; I do not ignore rule 146; circular, which accompanied Working Order, fully explained the bearing of rule 146, and justified me in starting the train; I stated to the Minister at Kelso, after the occurrence, I had made a mistake; on arrival of passenger train at Kelso from Bathurst the engine-driver (Frost) first attacked me by remarking that I had made a pretty mess of it; Guard (Pike) then said that I had made a mistake; Mr. Hamilton came to me on the platform, and said he had given me credit for more caution; I went to Kelso to record my vote, it being polling-day, and had one or two drinks in a social way with a few friends, and not being in the habit of taking drink I was more talkative than usual; I spoke to the Minister, and made the remark that I had made a mistake; I had no argument with the Minister; when I made this remark I was completely unnerved.

*Examined by Commissioner*: The passenger train is due out from Bathurst at 10.9 a.m.; the working orders clearly point out to me that the passenger train had no right to leave Bathurst until arrival of goods train; when I saw that passenger train had left Bathurst the goods was half way there, and my nerves received a considerable shock; rule 146 is undoubtedly still in existence, and I have no idea that the working orders supersede them in any way; I consider that to any one of ordinary intelligence the working orders are so clear that they could not be misconstrued; I have not made any other report than that sent to Traffic Manager.

*Examined by Mr. Mason*: I may have told Mr. George Lee, or some other persons who were about the polling-booth; the foot-note to time-table is explained by the circular to which I have previously referred; I work by the time-table in conjunction with the working orders.

*Examined by Commissioner*: I understand the working orders to be a part and parcel of the Departmental Rules and Regulations; the goods train left Kelso for Bathurst at 10.7 a.m.

*Examined by Traffic Manager*: I had not the slightest idea that the passenger train either would or had any right to leave Bathurst before the arrival of No. 15 down goods train.

*Examined by Commissioner*: If goods train had not left for two or ten hours passenger train had no right to leave; I consider working orders made special provision for this particular emergency, and that no man would think of starting a passenger train without securing the road; I consider I done quite right, and under similar circumstances would do the same thing again, *i.e.*, in starting the train as I did; there was no train due from an opposite direction, but one would be due after arrival of goods train at Bathurst.

*Examined by Mr. Mason*: The train was advertised to leave Bathurst at 10.9 a.m.; I started the goods train from Kelso at 10.7 a.m., but the passenger train was not due to leave Bathurst until arrival of goods train there.

S. PASS.

#### No. 4.

#### Minute of The Commissioner.

AFTER a thorough investigation and a careful consideration of the evidence in this case, I have been led to the conclusion that the Traffic Manager committed an error in suspending the Station-master at Bathurst. I have therefore to direct that Mr. Higgs be reinstated forthwith, and that Mr. Pass be suspended from duty pending the further consideration of the case.—J.R., 15/11/77. The Traffic Manager.

As I consider the carrying out of this decision may seriously imperil the public safety, for which I will not be responsible one moment after putting it into effect, and seeing that I, as the responsible head of the Traffic Branch, have had no opportunity of offering any remarks on the evidence, and that the Commissioner himself in his minute acknowledges the necessity of further inquiry, I respectfully ask the Commissioner to stay his decision in the interest of public safety until the inquiry is completed. Without at present going further into the merits of the case, the Commissioner will doubtless see that by reinstating the officer whom I consider guilty, and suspending the officer whom I have distinctly stated, and still consider to have acted in strict accordance with his instructions, the whole working of the Department must be paralysed.—D.V., 15/11/77. The Commissioner for Railways.

## No. 5.

## Minute of The Commissioner.

AM I to understand that the Traffic Manager declines to carry out my instructions?—J.R., 16/11/77.  
Traffic Manager, B.C., 16/11/77.

The reasons which I gave for asking the Commissioner to stay his decision are such as would render it impossible for me to carry out the Commissioner's instructions, unless, indeed, I were lost to all sense of my responsibility,—so much so, that were an accident to follow in consequence I should be liable, I consider, to a verdict of manslaughter. If, therefore, after this representation of the case, the Commissioner still insists upon his instructions being carried into effect, I can only take it as an intimation that I am relieved from duty, pending the further investigation of the matter before a properly constituted tribunal.—D. VERNON, 16/11/77. The Commissioner for Railways.

As the Traffic Manager refuses to carry out my instructions I have no alternative but to relieve him from his duties. I request therefore that he will hand over all official documents connected with his office to Mr. Carlisle of the Goods Branch, who has been asked to take charge temporarily of the Traffic Branch.—J.R., 17/11/77.

## No. 6.

## The Commissioner to Mr. T. Carlisle.

Sir, Department of Public Works, Railway Branch, Sydney, 17 November, 1877.

Mr. Vernon having been relieved from his duties as Traffic Manager, I have to request that you will take charge of the Traffic Branch until other arrangements are made.

I have, &c.,  
JOHN RAE,  
Commissioner for Railways.

## No. 7.

## Mr. D. Vernon to The Commissioner.

I HAVE handed over the Department to Mr. Carlisle in accordance with Commissioner's instructions. At the same time I would earnestly solicit the Commissioner to take immediate steps to ensure the public safety. Mr. Higgs has acted contrary to the working rules laid down by me, and, while admitting it, states that he is prepared to do the same again. As the other Station-masters and Railway Officers are acting upon these Rules, and as the non-observance or neglect by one of them must inevitably lead to accident, I deem it my duty, in relinquishing charge, to point out this danger. The Commissioner may rest assured that unless the public safety had been at stake I would have unhesitatingly carried out his instructions.

D. VERNON, 17/11/77.

## No. 8.

## Minute of The Commissioner.

MR. HIGGS declined to carry out the working orders where they were at variance with the established Rules and Regulations approved by the Governor and Executive Council, which should not be affected by any orders issued by the Traffic Manager. As it is obviously impossible for the traffic to be safely worked under two sets of rules at variance with one another, I have, after due consultation, given instructions to have the Supplementary orders cancelled, and such alterations made in the working time-table as will prevent ambiguity, ensure unanimity of action, and give protection to the travelling public.—J.R., 19/11/77.

Mr. Carlisle has received instructions. Send this to him.—B.C., 26/11/77.—C.A.G.

The single line working orders issued by Mr. Vernon have been cancelled, and trains are now being worked in accordance with the Book of Rules and Regulations and the Service time-table.—THOS. CARLISLE, Acting Traffic Manager, 27/11/77. Commissioner.

## No. 9.

## Minute of The Commissioner.

I SUBMIT the papers in this case for the consideration of the Minister. It will be seen that after a careful investigation of the circumstances which led to the suspension by the Traffic Manager of Mr. Higgs, Station-master at Bathurst, I came to the conclusion that Mr. Higgs had acted in accordance with the established Regulations, and that Mr. Pass, Station-master at Kelso, was to blame for starting a goods train from Kelso to Bathurst within two minutes of the time when the passenger train was due to leave Bathurst for Sydney. Mr. Pass in fact, at first acknowledged that he had committed a serious mistake, though he subsequently changed his opinion, explaining that when he made the first statement he was under the influence of drink. I accordingly instructed the Traffic Manager to reinstate Mr. Higgs and suspend Mr. Pass, but as the Traffic Manager refused to carry out my instructions I had no alternative but to relieve him from his duties. Mr. Carlisle has been appointed, temporarily, to take charge of the traffic on the Southern and Western Lines.

The

The evidence taken in this case reveals a state of things which calls for immediate action. In 1869 the Rules and Regulations for the guidance of the Railway officials were carefully revised and approved by the Governor and Executive Council. Under these Regulations the traffic was worked with safety by previous Traffic Managers without alteration, till Mr. Vernon issued a series of working orders, some of which are at variance with the established Regulations, and as it appears by the evidence that some of the officers adhere to the one code, and some to the other, I have, after consultation with the Engineering and Traffic Branches, taken steps to remedy such a dangerous state of things, by withdrawing the working orders, and making such alterations in the working time-table as will, I trust, avoid misconception on the part of the officers, and thus insure the public safety.

JOHN RAE,  
20/11/77.

---

No. 10.

Mr. D. Vernon to The Secretary for Public Works.

Hon. Sir,

Burwood, November 20, 1877.

You are doubtless aware of the painful circumstances in which I am placed with regard to my superior officer, the Commissioner for Railways, which leave me no option but to appeal from him to yourself, the Ministerial head of the Department to which I have the honor to belong, and which I now do with every confidence that my case will be impartially considered by you, involving as it does a question of the highest importance, affecting the safety of the travelling public who use our railways.

Without trespassing too much on your valuable time by going into the particular merits of the case—these I leave for the tribunal to investigate which I have the honor to ask may be appointed for that purpose—I may be pardoned for putting, in a few words, the aspect of it before you as between the Commissioner and myself.

It is probably known to you that after I had inquired into the circumstances connected with the recent near approach to a collision near Bathurst, I came unhesitatingly to the conclusion that the fault lay with the Station-master at Bathurst, Mr. Higgs, whom I relieved from duty, pending the Commissioner's decision in the case. An inquiry into the matter was then commenced by Mr. Rae, assisted by Mr. Mason,—the latter, as will be seen by the transcript of the evidence, having taken a principal share in it. During its progress, however, and pending the further inquiry which Mr. Rae states in his minute to me on the subject was to take place, I was directed to reinstate Mr. Higgs, whom I had no difficulty in adjudging at fault, and to suspend Mr. Pass, whom I had exonerated.

Conceiving, however, that by doing this I should inevitably endanger the public safety, Mr. Higgs having stated that he would, under similar circumstances, act in the same way again, his action in this case having been, I contend, the cause of the accident, and must, if persisted in under like circumstances (which might arise at any moment) result in collision, I asked the Commissioner to stay his decision in the interest of public safety until the termination of the inquiry. This, however, he declined to do, and I had therefore no alternative, entertaining the serious view which I did of the matter, but to submit to be relieved of the responsibility of carrying out an order which might be attended with fatal consequences, and ask that the case might be tried before a proper tribunal.

I am only too conscious of the painful position in which I have with the utmost reluctance and an urgent sense of duty placed myself with regard to my superior officer; but I would point to the fact of my being willing to risk my position, the prospects of my family, and my daily bread, as affording some guarantee that I have not lightly taken this step, which endangers them all; and I most respectfully contend that I should not be worthy of the very responsible position I hold as Traffic Manager if I allowed even such considerations to lead me to being a party to a course which I am deeply conscious must endanger public life. The only course now left to me is to humbly request that you will be pleased to appoint a tribunal outside the Railway Department to try the matter at issue between the Commissioner and myself.

It is with unfeigned regret that I have to point out that Mr. Mason, who assisted Mr. Rae, is my most bitter personal opponent, and that I have had to suffer a constant opposition from the engineering branch, as the records of the office will sufficiently testify. I have, therefore, with all due submission to ask that a Board may be appointed to investigate the merits of the case.

I have, &c.,  
D. VERNON.

---

Before acting on this document I wish to be favoured with the opinion of Mr. Whitton, the Engineer-in-Chief; and also that of Mr. Mason, Engineer of Existing Lines, with reference to the last paragraph.—E.C., 22/11/77.

Mr. Whitton, for report.—J.R., 22/11/77.

So far as I am personally concerned in the remarks of the Traffic Manager, I emphatically state that I never offered any opposition to him that was not demanded either in the interest of the Department, or for the protection of the public.—J.W., 22/11/77.

With reference to the last paragraph in Mr. Vernon's letter, I have to state, 1st, that I was present at the inquiry by the Commissioner's order; 2nd, that I am not Mr. Vernon's bitter personal opponent; and 3rd, that I have never offered any opposition to Mr. Vernon beyond that which was absolutely necessary to prevent his unwarrantable interference with my department, or to protect the general interests of the Commissioner's Department, or to provide for the public safety.—W.M., 23/11/77. To Commissioner.

## No. 11.

## Minute of The Commissioner.

It is far from my wish to do anything that would deprive Mr. Vernon of employment after so many years of faithful service, but from his statements to me on different occasions I believe that his removal to another office would be congenial to his own feelings and beneficial to the Department. I have long observed with regret, and repeatedly called attention to the antagonism that exists between the Traffic and Engineering Branches. This want of co-operation, so prejudicial in its effects, is not of recent origin. It existed when Mr. Whitton had charge of the Locomotive and Permanent Way Branches, and was the chief cause of his relinquishing these duties. It still exists with undiminished force in spite of all attempts for its removal, and after mature consideration I would recommend, as the best solution of the difficulty, that Mr. Vernon resume his duties as Traffic Auditor, with a salary of £500 per annum, and that Mr. Read be temporarily appointed to the office of Traffic Manager, as Mr. Carlisle will gladly be relieved from its duties. If the Minister approve of this suggestion I believe that it will give general satisfaction, and result in benefit to the Public Service.

JOHN RAE,  
22/11/77.

## No. 12.

## Minute of The Commissioner.

FROM the evidence given by Mr. Hornidge at the recent investigation, with reference to the suspension of Mr. Higgs, and from Mr. Richardson's memo. of 17th inst.,\* to the Traffic Manager, on the same subject, <sup>See Appendix C.</sup> it is evident that these gentlemen are unfit for the positions they occupy as Traffic Inspectors. They both acted on the impression that the orders issued by the Traffic Manager had cancelled the Regulations approved by the Executive Council, in the face of the 16th section, which states "that they are in no way to be considered as superseding any in the Book of Rules sanctioned by the Commissioner for Railways." I therefore recommend that they be informed that their services in the capacity of Inspectors are no longer required; that Mr. Richardson be allowed to return to his former occupation; and that Mr. Hornidge's duties be again confined to those of Station-master. I consider that one Inspector for each line is quite sufficient, and recommend that Mr. Crawford's duties as Inspector be extended over the whole of the Southern Line, and that Mr. E. Higgs, who formerly acted in a similar capacity, be appointed as Inspector of the whole Western Line. As the number of Inspectors will thus be reduced, and their duties and responsibilities increased, I advise that their salaries be raised to £350 each per annum.

JOHN RAE,  
22/11/77.

Approved.—E.C., 23/11/77.

## No. 13.

## Minute of Mr. Secretary Combes.

## The Case of the Traffic Manager.

HAVING anxiously considered the whole of the circumstances of this most painful case, I feel that I have but one duty to discharge. The course of conduct pursued by Mr. Vernon appears to be utterly indefensible. He will be called on further to show cause why he should not be removed from the office of Traffic Manager. I approve of the recommendations contained in the minute of the Commissioner for Railways. I shall, of course, defer dealing with Mr. Vernon's case till he has shown cause.

E.C., 23/11/77.

Mr. Vernon to see and return for further action.—J.R., 23/11/77.

Seen. I will submit my statement on an early date.—D. VERNON, 24/11/77.

## No. 14.

## The Acting Traffic Manager to The Commissioner.

I HAVE now the honor to report that your instructions with reference to the appointments of Mr. Higgs as Inspector of the Western Line from Parramatta Junction to Orange, and of Mr. Crawford as Inspector of the Southern Line from Parramatta Junction to Cootamundra, have been carried into effect. Mr. A. Hornidge, the present Acting Inspector of the Western Line, returns to his duties as Station-master at Parramatta, and Mr. Roberts to Cootamundra.

Mr. H. Richardson has resumed his appointment as Chief Clerk to the Traffic Manager, and the services of Mr. Elliott, who has recently been officiating in that capacity, may now be dispensed with.

I await your instructions regarding him.

THOS. CARLISLE,  
Acting Traffic Manager,  
24/11/77.

As Mr. Elliott's services are no longer required, I recommend that they be dispensed with, and that a month's salary be paid to him.—J.R., 26/11/77. Approved.—E.C., 26/11/77. Write a letter to him.—C.A.G., 26/11/77. Mr. Elliott informed.—26/11/77. Acting Traffic Manager, B.C.—C.A.G., 26/11/77. The Secretary.—T. CARLISLE, per H. Richardson, 27/11/77.

Mr. T. F. Elliott to The Acting Traffic Manager.

Sir, Traffic Manager's Office, Redfern Station, Sydney, 26 November, 1877.

Having been removed from my position of Chief Clerk in this Office, I shall be obliged by your letting me know the reason why, and how the Commissioner intends disposing of my services.

Yours, &c.,

THOS. F. ELLIOTT.

Forwarded to the Commissioner.—THOS. CARLISLE, 26/11/77.

The Commissioner for Railways to Mr. T. Elliott.

Sir, Department of Public Works, Sydney, 26 November, 1877.

I have the honor to inform you, that in consequence of the reorganization of the Traffic Manager's Staff, your services in the Traffic Manager's Office are no longer required.

The Secretary for Public Works has been pleased to approve of your receiving one month's pay.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

#### No. 15.

Mr. D. Vernon to The Secretary for Public Works.

Sir, 1 December, 1877.

I have respectfully to ask your indulgence of a few days further time in replying to your minute calling upon me to show cause why I should not be removed from my office.

My reply shall be sent in about the middle of the coming week, and

I have, &c.,

D. VERNON.

#### No. 16.

Mr. D. Vernon to The Secretary for Public Works.

Sir, 30 November, 1877.

I do myself the honor to acknowledge the receipt of your minute of the 23rd instant, on the Commissioner's recommendation of the 22nd, respecting my suspension, in which you call upon me to show cause why I should not be removed from my position as Traffic Manager.

Before entering upon my defence, I may perhaps be allowed to express my sense of the painful position in which I am placed with regard to my superior officer the Commissioner for Railways. It was only after the most earnest, though fruitless, endeavour on my part to induce him to continue and terminate the inquiry before he took action in the case, that I felt called upon virtually to ask for my suspension, that I might be relieved of the responsibility of carrying out an order which I conscientiously believed would endanger the public safety. If I have done wrong in this, I beg to express my most sincere regret, nothing being further from my intention than to be guilty of the slightest act of insubordination to Mr. Rae, whom as my superior officer I hold in the highest respect; and I trust that if even now, in defending my action, and in adducing evidence to show that the Commissioner's conclusions in this case were wrong, I should seemingly write with discourtesy, I shall be acquitted of any intentional disrespect, for nothing can possibly be further from my desire than that.

I need not now go further into the history of this case than to refer to the facts which occurred immediately after the inquiry. I naturally expected that the Commissioner would have consulted me on the evidence adduced and procured my views on the matter, and indeed this appears to have been at first his intention, as he arranged that I should wait upon him at his office on the morning after the inquiry, but when I called upon him by virtue of this appointment I found him engaged with Mr. Whitton and Mr. Mason, and word was brought to me "that I was not wanted." Shortly after this I received the Commissioner's decision, which I must confess took me completely by surprise, and as he stated that the inquiry was not completed, I asked him respectfully to stay his action until I could be heard on the merits of the case. I do not think that seeing the Commissioner had over and over again, orally and in writing, informed me that he held me solely responsible for the public safety, it was too much to expect to be heard on a subject affecting the management of the traffic; but my respectful remonstrances were met with the harsh inquiry, whether he was to understand that the Traffic Manager declined to carry out his instructions.

Seeing that to do so, without some provision being made for an alteration in existing arrangements (in the face of Mr. Higgs's statement that he would act in defiance of the working orders, while all the other station-masters were observing them) could lead only to a catastrophe, I asked in effect to be relieved, and the Commissioner, still without endeavouring to ascertain in what way the public safety would be affected, relieved me from duty.

In relinquishing charge I felt that the public safety was far above any personal consideration or indignity offered to me, and I again pointed out and begged the Commissioner to take immediate steps to obviate the danger which must necessarily ensue from his upholding and sanctioning a course of action on the part of a station-master, which no one pretended to deny was contrary to working orders still in force. The Commissioner thereupon saw the danger, I presume, and, after consultation with the "Engineering and Traffic Branches," gave such directions as it was considered would meet the case. Had the Commissioner pursued this course with me I should not have been driven into my present painful position, but his refusal to confer with me left me no other course to take than the one I adopted.

And now as regards these "working orders" which are said to be at variance with the Rules and Regulations, I positively deny that there is any variance whatever. The working orders are only an enforcement of the rules and supplementary to them, giving more detailed directions and additional instructions, all of which are most essential to the safe working of the traffic. I have looked in vain to see if it were anywhere stated wherein the alleged variation lies, but it is nowhere pointed out by the Commissioner.

The only information on this point which I can gather is from the evidence of Mr. Station-master Higgs, who puts forward rule 146 as the one with which the working orders clash. This rule requires that

that "goods, special, and ballast trains are not to be on the road within 15 minutes of the time an ordinary advertised train is due, but must shunt at least 15 minutes before and wait for 10 minutes after the advertised train has passed, &c." Rule 147, following, further says: "Wherever there is a siding of sufficient length to contain the train it shall not be shunted from one main line to the other, but shall be placed in the siding. Passing by the fact that the working orders, which are based on rule 152, refer to *single* lines and to trains travelling in opposite directions, and therefore cannot be said to clash with this rule 146, which applies evidently to a *double* road and to trains travelling in the *same* direction (for there would be no sense, as Mr. Higgs himself confesses in his evidence, in requiring a goods train to wait 10 minutes in the case of a passenger train which had passed in a *contrary* direction), I am quite prepared to admit that a rule based on a similar principle is as necessary on a single line as on a double one. Goods trains must always give precedence to passenger trains.

But then it must not be forgotten that no railway, especially a single line, can be safely worked, except on some system in the light of which all such rules must be interpreted.

A railway may be worked by a "telegraph system of line clear message," or by the "staff and ticket system," or by the "absolute block system," but under each and all of these the same rule will be found: "goods trains must keep clear of passenger trains."

Nevertheless if, by reason of a goods train breaking down or being delayed, a *line clear message*, or its equivalent, under the first, or the *staff* under the second, or a *clear section* under the third of these systems, *cannot be obtained*, no passenger train *can travel*.

Now the established rules clearly imply (see 152) that the system on which our single lines are to be worked, is to be a "telegraph system of line clear message," for wherever, according to 152, "there is telegraphic communication the station-master, before allowing any train to leave his station, must ascertain by telegraph from the next station that the line is clear."

It is not very clearly laid down what is to be done in the *absence* of telegraph communication, but the implication is that *the order in which trains are due to run* is to be strictly observed, and (as the first part of rule 152 reads) "on those portions of the railways where a *single line* only is provided, care must be taken before *any train* leaves *any station*, that *there is no train due* in an opposite direction." Either this is the intention, or the Book of Rules makes *no provision whatever* for the absence of, or interruption to, telegraph communication.

The established rules therefore require that *all trains* shall be worked by telegraph line clear message, and when that cannot be done, that trains shall be run only in their order; when therefore rule 146 requires *goods trains to keep clear of passenger trains*, it by no means absolves them from the ordinary rules and conditions of working. A goods train must still work by "line clear message," and if through loss of time or accident it should be unable to make its usual crossing stations then arrangements must be made by telegraph (clear and distinct however, for the change of crossing-places is a most important matter) for the goods train to cross elsewhere, so as to avoid delaying the passenger train as required by rule 146. Should, however, a goods train be delayed and telegraphic communication be interrupted at the same time, then there is no other course to be followed but for the goods train to preserve the order laid down in the service time-table, and it must proceed on its journey and make its appointed crossing stations.

A passenger train in like manner must travel by "line clear message," as prescribed by the established rules (see 152), but when telegraphic communication fails, it also must fall back upon the order laid down in the service table. It must not under such circumstances travel out of turn—certainly not without any assurance that the road is clear, and in the face of a train due in the contrary direction, as was the case at Bathurst the other day.

(I may here remark that in 1869 there was no such thing as a general service time-table showing the relative order in which all goods and passenger trains were to run and be crossed.)

So that rule 146, which directs goods trains to keep clear of passenger trains, by no means absolves them from doing so, in accordance with the system laid down for the working of trains generally; nor does rule 146 preclude the idea of emergencies obviously certain to arise, in which a goods train must unavoidably cause delay to a passenger train, which fact alone is sufficient to prove the absurdity of regarding the rule as a general authority for the despatch of passenger trains, without any regard to goods trains due in a contrary direction.

To sum up my preceding remarks bearing on rule 146, I have shown that—

1. The established rules require that trains generally shall be worked by a telegraph system of line clear message.
2. That the established rules either make no provision for the absence of telegraphic communication, or they require, in such a case, that trains shall fall back upon the order laid down in time-table, and run only *as due*.
3. That rule 146 by no means absolves any train from working in strict accordance with the foregoing provisions; that it evidently does not contemplate or provide for emergencies certain to arise, and in which a passenger train may necessarily have to be delayed for a goods train (emergencies which are provided for by special and *other* rules); and that therefore
4. No contradiction is necessarily involved between rule 146 and other established rules which require, as we have seen, that *trains generally* shall work by a telegraph system, or (telegraph communication failing) fall back upon the order laid down in working time-tables.

Now, coming to the working orders: If anyone will take the trouble to read them it will be seen that what I have shown to be required by the established rules in regard to the working of trains is *exactly the same* as the working orders prescribe, only they do it with greater clearness and precision; and, therefore, if there is no contradiction involved between rule 146 and the established rules none can be involved between the same rule and the *working orders*.

It may be urged that the strictness with which (*e.g.*, clause 3) the working orders require that trains should keep to the order laid down for them on the working tables is scarcely consistent with a rule such as 146, which states that goods trains are to keep clear of passenger trains.

In the first place I may say that it would be hard to see the necessity for having a working table, or for laying down any order at all, if such is not to be observed; but a close examination of the working tables will show that in their compilation rule 146 has been most strictly complied with. In *every instance*

*instance* of a goods train crossing a passenger train it will be seen that the former is timed to arrive fifteen minutes, or more, before the latter is due to leave. But clause 3 of working orders does not bind trains *unconditionally* to run in turn ; it makes a distinct exception and reference to a subsequent working order, which makes provision for *that order being changed* when circumstances render it necessary. As a matter of fact, it is a daily occurrence for our goods trains to work clear of passenger trains. The comparative punctuality of our main line passenger trains, considering the number of good trains which day and night have to be worked over our lines, could never otherwise be secured. Theoretically and practically, rule 146 is most strictly complied with in *working orders, working time-tables*, and in *working practice*. I again positively deny that the working orders are at variance with the Rules and Regulations.

I now desire to state that these working orders are essentially necessary for the guidance of the officers in working the traffic on our single lines, more especially upon those portions where we have not the "staff and ticket system" in operation.

In my minute of 23/1/77, relative to the desirability of adopting a safer system, and of being furnished with additional telegraphic appliances for working our single lines, I briefly alluded to the fact that the Book of Regulations furnished for the conduct of these railways contained, strange to say, no provision in the shape of a system for the working of single lines, there being only a few general rules for the guidance of the officers in performing this most important and responsible of their duties. It became absolutely necessary to reduce our practice to something like shape and system by the issue of a few clear and concise instructions for the guidance of the officers and men in cases where the Rules were not sufficiently definite, or were altogether silent.

I have no hesitation whatever in saying that the Book of Rules does not meet the wants of the case ; and, assuming our lines to be subject to the control and inspection of the Board of Trade, unless the established Rules were supplemented by special Regulations for working single lines the railways would be closed immediately. The inspecting officers of such Board would insist upon the single lines being worked upon some well-defined system ; if a telegraph system, then something analogous to the Working Orders would be required ; if the staff and ticket system (which I am confident they would advocate), then they would require the present Regulations, which I have recently succeeded in obtaining authority to introduce.

As to the *sufficiency of the present book of Rules alone*, without the working orders, and without the staff and ticket Regulations, and without the Rules for working the absolute block system (which I have ready to submit for approval in anticipation of the arrival of the instruments which have been ordered), nothing would gratify me more than for a copy of each to be sent to the Board of Trade, and the whole question submitted for the decision of its officers. I should willingly stake my position in the Civil Service on the *result*. I know that they would say that the Book of Rules is wholly insufficient, and the lines would not be under safe working unless by the adoption of the system I have introduced.

But to return to the question of the necessity for the working orders. Let them be carefully read ; and where is one that can be dispensed with ?

We have had accidents and narrow escapes from accidents for want of them, and it is impossible to understand by what process of reasoning the Commissioner has arrived at the decision to *cancel* them.

I will now endeavour to point out some of the results which must follow from their cancellation, and some of the consequences which must also result from such action as that of Mr. Higgs having been upheld and sanctioned.

A perusal of this gentleman's evidence will be sufficient, I think, to show that his whole mind is in a state of perfect confusion upon the matter of reading and interpreting railway rules, and that he is quite unfit to hold a position, the responsibilities of which in any way concern public life and safety.

He confesses to have been well aware for some time previously of the contradiction which he believed to exist between the Rules and working orders, and yet never considered it his duty to bring it under the notice of any superior officer, although he must have known the serious consequences which such a discrepancy might involve. No ; he waits until a narrow escape from accident reveals to his superior officer that he (Mr. Higgs) does not understand the rules he is attempting to administer.

In his uncertainty, real or pretended, he did not exhibit even the common sense to choose the *safe* course.

He admits that while he thought rule 146 justified him in starting the passenger train he not only acted in violation of working orders, but in violation of rule 152.

His action in starting a passenger train without a line clear message, and in the face of a regular train due in a contrary direction, was, however, as clear a breach of the *Rules* as it was of the working orders, for both require that in such a case the order laid down in working time-table should be observed, and Mr. Higgs knew perfectly well that he was starting his train *out of order*.

If rule 146 be an authority for dispatching passenger trains in the absence of telegraphic communication, and in the face of a goods train due in an opposite direction, we have the following anomaly—*e. g.*, telegraphic communication being available, a goods train is telegraphed out from Tarana on time to Macquarie Plains. On the road, from the state of the weather and the rails, the goods loses time, and when 2 miles from the latter station the time has elapsed at which a passenger train is due to leave Macquarie Plains for Tarana. The passenger train cannot, however, be started (see rule 152) without a line clear message, and this Tarana is not in a position to give until the goods train has arrived at Macquarie Plains—the passenger train must therefore wait for the goods train.

On the other hand telegraphic communication being interrupted between these two stations the goods train, say, leaves Tarana to time just the same, loses time from the same cause, finds itself in the same circumstances—only in this case the passenger train will be started from Macquarie Plains on the assumption that the goods train is clear, whereas it is in precisely the same place as before, and the two trains must meet on the road. Assuming them to do this, if not disabled, the passenger train must put back to Macquarie Plains and has gained nothing. So that when telegraphic communication is available the passenger train must *necessarily be detained for the goods train*, as per rule 152 ; but when telegraphic communication is *not* available, rule 146, according to the Commissioner's interpretation, requires the passenger train to be *started* to meet the goods train, run the risk of a dangerous collision, and in the end gain nothing, for more time has been lost than if it had remained where it was until the goods

goods arrived. Such a practice, I repeat, is not only destitute of any authority in the established rules, intelligently read, but is in direct opposition to them, and it is, moreover, a useless and most dangerous practice against which the Working Orders were specially directed.

I might mention numbers of emergencies, which are not possibilities merely, but such cases as I have known repeatedly to occur, and which now will be *full of danger* from the withdrawal of the working orders.

Furthermore, if the practice of starting a passenger train, in the absence of telegraphic communication, and in the face of a goods train due in the contrary direction is to be upheld, rule 152, which is clearly against such a thing being done, will require alteration. Rule 148 will also require amendment for it only provides for a passenger train not being delayed in the case of a special train or engine, but omits all mention of *goods* trains. And again, some additional instructions or rule ought to be supplied for the guidance of guards and drivers, who may find themselves with a goods train in the circumstance I have referred as occurring between Tarana and Macquarie Plains—and so I might continue, and go on to show that instead of safety and efficiency having been promoted, or agreement and uniformity of rules and practice secured, or misconception having been provided against, the very opposite of all these things has been the result of the action which has been approved and taken by the Commissioner, throughout this whole case. The upholding of Mr. Higgs' action, and sanctioning such an interpretation of rule 146, and cancelling the working orders has made room for nothing but anomaly, doubt, contradiction, and danger.

I have, I think, now sufficiently explained the object and the necessity for the working orders. I have shown that they do not in any way clash with the Rules and Regulations; that on the contrary they support them; and I think I have also sufficiently demonstrated that the interpretation which the Commissioner seeks to place upon the rules, and the practice he would develop from it must necessarily end in disaster; but suppose I am in error in my views and arguments (and if so I err with all the principal managers of English lines, if their evidence before the Royal Commission is to be depended upon), still I claim to have acted upon the Commissioner's authority.

I have read and re-read the Commissioner's minute of the 20th inst., in which he says:—"The evidence taken in this case reveals a state of things which calls for immediate action. In 1869 the Rules and Regulations for the guidance of the railway officials were carefully revised and approved by the Governor and Executive Council. Under these regulations the traffic was worked with safety by previous Traffic Managers without alteration, till Mr. Vernon issued a series of working orders, some of which are at variance with the established regulations, &c.," and I am at a loss to understand its bearing: The Commissioner apparently forgets that the orders were required to meet a state of things which did not exist in 1869, and that in condemning my working orders he has condemned his own action. The Commissioner wrote to me (and the papers are now in his office) to the effect that he was anxious that a more perfect system of working on a single line should be adopted, and I was called upon to forward for the Commissioner's consideration any amendments in existing rules which in my experience of the traffic I had found to be desirable.

Pending a more complete revision I forwarded to Mr. Rae the *working orders*, and the following is his minute thereon.—"*I have carefully perused these working orders for single lines, I see nothing objectionable in them, and as the Traffic Manager, who is responsible for the proper conduct of the traffic, considers them necessary I approve of their coming into force.*"—J. R., 12/5/77. See Appendix A.

And across the copy of the working orders submitted the Commissioner further wrote.—  
Approved, J.R.

Further comment from me I respectfully submit is unnecessary. I leave my case with every confidence in your hands, merely adding, that if you will grant me the independent inquiry I have asked for, I shall be better able to demonstrate than I can in a written statement the correctness of my action since first taking charge of the Traffic Branch; and furthermore, that the onus of the want of co-operation between the Engineering and Traffic Branches does not rest on my shoulders. I can solemnly aver that the opposition and entire want of co-operation which I have experienced at the hands of the Engineering Branch have almost invariably been in matters where impelled by a sense of duty I have had occasion to suggest measures for the public safety, or to apply for accommodation to meet the increasing exigencies of the passenger and goods traffic.

I have, &c.,  
D. VERNON.

## No. 17.

### Minute of The Commissioner.

HAVING perused Mr. Vernon's statement in reply to the Minister's minute of 23rd ultimo, I see nothing to alter the opinion I had formed that his removal from the office of Traffic Manager would be beneficial to the department. It is not my intention to follow him through the whole of his remarks, the burden of which is an endeavour to show that the withdrawal of the "working orders" will endanger the public safety, and that these working orders, which were sanctioned by the Commissioner, are not at variance with the established Regulations approved by the Governor and Executive Council.

With reference to endangering the public safety, when I became aware of three cases of railway See Appendix H. mismanagement occurring on the same day, and when I learned for the first time that one officer acted on the established Regulations, and another in opposition to them, on the assumption that he was carrying out the working orders, I considered it was high time to take steps to secure the public safety; I, accordingly, at the Minister's suggestion, held an enquiry at which I was assisted by Mr. Mason and Mr. Vernon, and after consultation with Mr. Whitton and Mr. Mason, whose long and varied experience in railway matters, renders them best able to form a correct judgment in the matter, I had no difficulty in arriving at the conclusion that the wrong man had been suspended; under these circumstances I instructed the Traffic Manager to reinstate Mr. Higgs, and suspend Mr. Pass, and as the Traffic Manager refused to carry out my instructions I had no alternative but to relieve him from his duties as Traffic Manager.

That the "working orders" were considered by some officers to be at variance with the established Regulations will appear from the evidence at the investigation, and from the statement of Mr. Richardson, Inspector, that he had acted under the impression that these working orders cancelled the previous practice.

Mr.

Mr. Vernon appears to lay great stress on the Commissioner's seeing nothing objectionable in the working orders. I had no difficulty in approving of these orders which were stated to be merely explanatory, and one of which expressly provides that they are in no way to be considered as superseding any in the book of Rules sanctioned by the Commissioner; but as soon as I discovered that they were capable of being misinterpreted I at once took steps to remedy such a dangerous state of things. I did not act on my own responsibility, but under the advice of the chief officers in the Engineering and Traffic branches, and with the sanction of the Minister, I ordered the working orders to be withdrawn so as to leave but one code of Rules for the guidance of our officers, and thus make the best provision for working the Traffic with safety.

I consider that Mr. Vernon's inability or unwillingness to work amicably with the officers in the engineering branch, his repeated acts of insubordination, and his persistent attempts to ignore the authority of the Commissioner, of which I have often had occasion to complain, are sufficient to satisfy me that his removal from the office of Traffic Manager is necessary for the proper conduct of the department.

As it has been industriously circulated that the action which has been taken in this case will be attended with danger, although I am satisfied that the very reverse will be the result, I recommend that the opinion of Mr. Whitton, Engineer-in-Chief for Railways, be requested on the subject, as I believe it will remove the false impressions that have been propagated, and satisfy the public that the alterations which have been made, instead of being attended with danger, were absolutely necessary to secure the safety of the travelling public.

7 December, 1877.

JOHN RAE.

---

No. 18.

Minute of The Secretary for Public Works.

I WOULD like the Engineer-in-Chief to report for my information on traffic management generally, and carefully to consider Mr. Vernon's statement in reply to my minute calling upon him to show cause why he should not be removed from the office of Traffic Manager.

E.C., 7/12/77.

---

No. 19.

The Engineer-in-Chief to The Secretary for Public Works.

Department of Public Works, Railway Branch,  
Engineer-in-Chief's Office, Sydney, 10 December, 1877.

*Subject*:—Mr. Vernon and the Management of the Traffic Branch.

In compliance with the Minister's request, I have carefully read over the papers in connection with this matter, and have no hesitation whatever in stating that Mr. Higgs, the Station-master at Bathurst, acted in accordance with the Rules and Regulations published on the authority of the Governor and the Executive Council for the working of the Railways.

Rule No. 146 states that goods trains must in all cases keep clear of passenger trains, but in direct opposition to this regulation the Station-master at Kelso, Mr. Pass, despatched a goods train from his station when he knew that if the passenger train started from Bathurst at its proper time, and in accordance with the Regulations just referred to, these trains must meet on the single line.

The Station-master at Bathurst, Mr. Higgs, and the Station-master at Kelso, Mr. Pass, both say they were acting in accordance with their instructions.

Mr. Higgs considered that he was right in acting upon the original Regulations, and Mr. Pass considered that he was right in acting upon the supplementary orders issued by the Traffic Manager.

Thus two officers to whom the lives of the public were entrusted were acting upon directly opposite instructions.

The goods train, which was permitted to start from Kelso, so as to meet the passenger train, was more than two hours late; and as goods trains must always keep out of the way of passenger trains, there can be no doubt that Mr. Pass should have detained the goods train at Kelso until the arrival of the passenger train from Bathurst. How the Traffic Manager can approve of the action of Mr. Pass in doing everything in his power to produce a collision, I am at a loss to understand; but it is quite clear, from the evidence taken at the inquiry, that the Regulations and working orders issued to the station clerks and inspectors, were very differently interpreted by them, and to such an extent that the safety of the public was greatly endangered, while such conflicting orders remained in operation.

I took upon myself the responsibility of advising the Commissioner to withdraw the working orders issued by the Traffic Manager, as the original Regulations require no explanatory instructions to ensure the safe working of the traffic.

With reference to the traffic management generally on the S. and W. lines, I regret to say that it has always been most unsatisfactory, the officers appointed having been, almost without an exception, lamentably ignorant of the duties they were called upon to discharge.

The office of Traffic Manager is one of so much importance that I advise the Minister to send to England for a properly qualified person to take charge of the Traffic Branch of the Railways in this Colony.

JOHN WHITTON.

---

No. 20.

Minute of Mr. Secretary Combes.

Department of Public Works, Sydney, 10 December, 1877.

I HAVE taken a very deep interest in this case, have anxiously read and considered the whole of the papers, and have required and obtained repeated personal explanations from various officers of the Department, from whom I conceived it to be my duty to obtain the fullest information. I have arrived at the conclusion that the preservation of anything like due subordination in the Public Service and the interests

interests of the public alike imperatively require that the important functions of Traffic Manager should no longer be left in the hands of Mr. Vernon. There is certainly no Department in the Public Service, and there is probably no office in that Department in which the absolute necessity of immediate and implicit obedience to the orders of a superior officer is so intimately identified with the safety of human life and the protection of valuable public property as is that of the Traffic Manager of our Railways. To permit direct acts of disobedience, questionings of authority, offensive reflections upon superiors, proposals to appeal to individuals or bodies outside the Department, to pass without disapproval and punishment, would be in the Department to encourage a state of insubordination which would make the practical administration of our railways by the Commissioner an absurdity, and sooner or later would necessarily lead to some fearful accident on our lines. Were I remaining in office I should have felt no difficulty in removing Mr. Vernon from his office. As it is I feel myself precluded from taking any step in a matter of such importance. I would, however, press upon the attention of my successor Mr. Whitton's report, and ask him to carefully consider the suggestions and advice of the highest officer we have, and certainly the best authority in the country on all railway matters. This, together with the reports of other old and valued officers, all go to prove that the re-instatement of Mr. Vernon would be utterly subversive of discipline, and would go far to demoralize the entire Department.

E.C., 10/12/77.

## No. 21.

### Minute of Mr. Secretary Sutherland.

The Case of Mr. Vernon, Traffic Manager.

TO-DAY is the earliest opportunity afforded me of reading these voluminous papers, which require great care and discrimination to enable me to judge the value of the evidence on which the Minutes of the Commissioner are founded, and the strong recommendation of my predecessor, who made the inquiry, but left the responsibility of action to me.

I observe that several of the papers have not been recorded in the books, and that two papers connected with it are missing from the case. I refer to the papers bearing the Commissioner's authority for the issue of the working orders, and the case of Mr. Richardson, Traffic Inspector.

Before dealing with the case I shall require all unrecorded papers to be passed properly through the books. I think there are reasons for regret that this usual course was not followed at the time the various papers were written, and I require all papers on the case put together. See Appendices  
A and C.

The Commissioner will please see that this is done at once.

JOHN SUTHERLAND,

January 1, 1878.

Unrecorded:—No. 1, Mr. Rae's minute\* of 15th November, recommending that the whole of the Rules and Regulations be reduced into one code. No. 2, Mr. Vernon's explanation of his conduct, dated Nov. 30, marked received 5th Dec., /77. No. 3, the Commissioner's Report thereon, dated 7th Dec., /77. No. 4, Mr. Whitton's Report thereon, dated 10 Dec., 1877. No. 5, my predecessor's minute, dated 10th Dec., /77. \*See Appendix  
B.

Papers referred to now herewith, and others asked for in my minute of 6/12/77.—J.R., 2/1/78.

## No. 22.

### Minute of Mr. Secretary Sutherland.

The case of Mr. Vernon, Traffic Manager, and questions of Railway Working arising therefrom.

IN attention to my minute of the 31st ultimo, all the papers in this case, now properly recorded, have been placed before me, and I have given them a very close and earnest consideration.

As I am unable to agree with the conclusions arrived at by my predecessor in this matter, and which are so strongly and decisively urged in his minute of the 10th ultimo, which he was pleased to leave for my information and guidance, I feel it incumbent upon me, in giving my decision, to go very fully into the whole case, and to afford the reasons upon which my conclusions are based.

I must confess that had I been new to office, and consequently unacquainted with the technicalities of Railway Management, I should perhaps have accepted the decision of my predecessor as the safest solution of the difficulty; but having been Minister for Works under two Administrations for five years, over two of which I was also Commissioner for Railways, and having had opportunities, which I profited by, of understanding many of the details of the management of our Railways, I felt that I was under special obligations to inquire into and deal with the case, and more especially so as the Rules and Regulations, the construction of which has led to the complication, were made by me while I was Commissioner for Railways in 1869, and bear my signature.

I may here say that there are no systems liable to change which are so impermanent as the systems of working Railways; these are continually changing—not necessarily because they are faulty when made, but because the circumstances of the traffic change, and fresh Rules and Regulations must be made to meet those changes. The Regulations therefore of 1869, which were ample to meet the state of things then existing, might be and probably have been found (by the opening up of fresh extensions, the development of traffic, necessitating the running of many more trains, and from many other causes) to require to be supplemented and amended. I was not surprised therefore to find that the Rules and Regulations made by me in 1869 had been supplemented by the issue of working orders, and by the adoption of the Train Staff and Ticket System on some portions of the line. I find that both these supplements to the Rules have been brought into operation under the authority of the Commissioner for Railways, and that the officers on the day when the irregularity in the running of trains between Bathurst and Kelso took place were working the traffic under the Rules and Regulations so supplemented.

According to the working time-table, the fixed place for crossing No. 8 up passenger and No. 15 down goods train is George's Plains, 6 miles beyond Bathurst; the line between that place and Bathurst was being worked on the Staff and Ticket system; no difficulty was experienced, when the goods train was found

found to be late, in sending the staff to George's Plains to bring on the passenger train as far as Bathurst where the system ended; to proceed beyond Bathurst the passenger train had to depend upon the working provided under the Rules and Regulations of 1869 as supplemented by the working orders.

The Rules affecting the running between Bathurst and Kelso were—rule 146, rule 152, and working orders Nos. 3, 4, 5, 6, as under.

*Line to be kept clear for Passenger Trains.*

146. It is to be distinctly understood by Station-masters, Guards, and persons in charge of trains, that goods, special, or ballast trains, are not to be on the road within fifteen minutes of the time an advertised ordinary train is due, but goods and ballast trains must shunt at least fifteen minutes before an advertised train is due, and wait for ten minutes after the advertised train has passed; and before shunting, care must be taken that signals are made in one or both directions, as the case may require.

*Signalling Trains on Single Lines.*

152. On those portions of the railways where a single line only is provided, care must be taken, before any train leave any station, that there is no train due in an opposite direction; and where there is telegraphic communication, the station-master, before allowing any train to leave his station, must ascertain by telegraph from the next station in advance that the line is clear.

*Working Orders.*

3. It is to be distinctly understood that all trains (excepting those specified in rule No. 9, which can only be worked by telegraph) are to run strictly in their turn or order, as laid down in the working time-tables; and no departure from that order is to be permitted in the case of any train or engine, excepting as hereinafter provided for.
4. Where there is telegraphic communication, before any train is allowed to leave a station the Station-master or officer-in-charge must first ascertain by wire whether line is clear, as required by rule No. 152 of Book of Rules and Regulations.
- In the event of telegraphic communication being wanted or interrupted, the order for starting, running, and crossing, as laid down in working time-tables, must be strictly adhered to (as required by No. 3 of these working orders), and "care must be taken before any train leaves a station that there is no train due in an opposite direction."
5. When trains, either passenger or goods, are appointed and shown on a working time-table to meet or cross at a particular station or siding, the train first arriving at such appointed crossing-place is on no account to leave until the train or trains from the opposite direction have arrived, excepting in cases mentioned and provided for in No. 6 of these working orders.
6. When circumstances render it necessary or in the highest degree expedient, that trains should cross at other than the appointed crossing-place, and one train has to proceed beyond the usual crossing-point—thus running contrary to the order of working laid down in working time-table—special precautions must be taken so as to preclude the possibility of misunderstanding or accident. On no account must any train be allowed to depart from an appointed crossing station prior to the arrival of the train or trains which it is timed to cross there unless the guard has in his possession a line clear report from the telegraph station in advance, distinctly stating how far the train is to proceed, and countersigned by the officer-in-charge of such regular crossing-place. The same rule must be observed at any and every telegraph station which may possibly intervene between the regular crossing station and the station or siding at which a late train is to be crossed. No such station must be left until the guard has a line clear report from the station in advance, countersigned by the officer of the station his train is then at. As therefore in such circumstances no train can proceed beyond an appointed crossing-place without the authority of the stations in advance, the officers-in-charge of these will have it entirely under their own control, and the responsibility of crossing the trains safely will therefore devolve upon them.

*Circular sent with Working Orders.*

Our principal orders for the working of single lines have recently been collected and printed, and being now all brought together in a convenient sized pamphlet can be readily referred to, and will in this form prove of great service to Traffic Inspectors, Station-masters, and others, to assist and guide them in the management and running of trains. These Rules, revised up to the 1st instant, are now being re-issued with this Circular.

Referring to the rule and practice of goods trains keeping clear of passenger trains, I wish to draw the particular attention of Station-masters and Guards to Nos. 5 and 6 of these Orders. From these it will be seen that when an ordinary goods train cannot arrive to time at a station where it is appointed and shown on the working time-table to cross a passenger train, arrangements can be made (see No. 6) to alter the crossing-place so that the goods may work clear of the passenger train and prevent its being delayed. When, however, no clear arrangement, as required by rule 6, can be made for the alteration of the crossing-place of ordinary and regular trains, owing to the interruption of telegraphic communication or other cause, then, *whether it be two passenger trains or two goods trains or a passenger and a goods trains* that are timed to cross, neither train must leave its usual and appointed crossing-place before the arrival of the other. (See No. 5.)

It has been stated that these rules and working orders clash, but I fail to see that this is the case. The argument in support of this view appears to be that rule 146 requires goods trains to keep clear of passenger trains, and that working order circular provides that under certain circumstances the goods train is to have the right of road. Now, it is very clear, as pointed out by the Traffic Manager, that rule 146 has reference more to *following* trains than to *meeting* trains, and to double than to single line working; and this is confirmed by the fact that rule 152 shows what is to be done in the case of trains due in *opposite* directions. It is true that even on single lines goods trains should be run so that preference is given to the passenger train; but this should be secured, and was secured on the occasion

in

in question, by properly defined working time-tables, showing where meeting trains are to cross each other, and the working orders properly provide for the course to be taken when the fixed crossing-places have to be altered. I see that in the compilation of the working time-table attention has been given to provisions of rule 146;—in the times there laid down goods trains are so run that they are made to give way to passenger trains, and it is only in cases of emergency when goods trains are not running to time, and when telegraphic communication is interrupted, that goods trains detain passenger trains. I have no hesitation in expressing my opinion that this is the system which best provides for the safety of the running; and while it is not contrary to the Rules and Regulations as left by me, as will be seen when rule 146 and rule 152 are read together—it is clearly and explicitly defined in working orders.

Under these circumstances what was, and what should have been the conduct of Mr. Higgs, the Station-master at Bathurst? He knew the goods train was two hours late, and that without some arrangement with Kelso, in the absence of telegraphic communication, he could not send on the passenger train from Bathurst. Rule 152 of the book of Rules expressly tells him that, with a single line and a train due in the opposite direction—as was the goods train—he could not without first ascertaining that line was clear start his train. Working Order No. 4 is even more definite; and Mr. Higgs, in starting his train, acted not only in defiance of the working order, which he admits in his evidence, but also in defiance of rule 152, which he also admits.

I have been much astonished to find that neither the Commissioner nor Mr. Whitton, in their reports in this case, refer in any way to this disregard by Mr. Higgs of rule 152, and in failing to grasp this fact they have failed in comprehending the real merits of the case.

In my opinion, neither Mr. Higgs nor Mr. Pass (though the latter acted in close accordance with his instructions in starting the goods trains) evinced that intelligence and zeal which might reasonably have been expected of them. The goods train was two hours late, and telegraphic communication between Bathurst and Kelso was interrupted. As the two stations were so close to each other these officers should by personal conference have made proper and safe arrangements for bringing on the passenger train from Bathurst. Mr. Higgs had made arrangements under the staff system for bringing on the train from George's Plains to Bathurst, and he should not have sent it a yard further without previously making arrangements for having the line clear. No such arrangement having been made, I have no hesitation in recording my decision that Mr. Pass, under the Rules and working orders was fully justified in starting the goods train, and that Mr. Higgs was as clearly wrong in starting the passenger train. Mr. Whitton, I am aware from his report on this matter, is of a contrary opinion; and I am invited by Mr. Combes, in his minute, to accept Mr. Whitton's opinion, "as the highest authority in the Colony on all matters affecting Railways." If this were a question of an engineering nature—if it were some question requiring special professional talent to discriminate and decide it—I do not know that I could do better than follow the advice offered me, but being a question of traffic management, in connection with which Mr. Whitton has had no special experience, I do not consider that in preferring my own judgment in this matter, supported as it is, as I shall be prepared presently to show, by the best authorities in England on Railway traffic *management* and the rules which should be observed in conducting it, that I am in any way depreciating or undervaluing the best advice which Mr. Whitton, in his special province of Engineer "in the laying out and construction of lines," can afford.

Mr. Whitton in his report says that the Rules and Regulations of 1869 contain all that is necessary for the working of these lines, and he consequently recommended that the working orders should be cancelled—(I find that the Commissioner has carried out this recommendation). It is to be presumed that as the Rules of 1869 do not contain any provision for working the single lines on the staff and ticket system, that these Regulations, which have been approved and are in operation on some of the lines, are to be abolished also, and that the block system, for the introduction of which on the suburban lines the necessary instruments have been imported, must be abandoned, the Rules of 1869 being destitute of any Regulations for working the same.

I have already shown that the working orders do not in any way clash with the Rules of 1869, but supplement, explain, and enforce them.

In working the traffic upon a single line of railway, the most important object to secure is the safe crossing and passing of trains; upon this matter the Rules and Regulations should be full and clear; the working orders (now abolished) make them so. It is obvious that from accident, unpunctuality, the necessity for extra trains, &c., the appointed places for trains to cross, as laid down in the working time-table, cannot always be observed, and that at times they will require to be changed, and in this necessity for the changing of crossing-places lies a source of danger which is peculiar to single line working. To show the importance attached by Railway authorities to the change of crossing stations, and to confirm what I have said as to the necessity for clear and adequate instructions, such as the working orders contain, I will make the following references:—

Quoting from the Minutes of Evidence taken before the "Royal Commission on Railway Accidents," whose exhaustive Report (presented to both Houses of Parliament in England in February last) reached this Colony a few weeks since,—

Question 2,182-3. Captain Tyler would not entrust the power to change crossing-places to Station-masters at all.

Question 21,785-6. Mr. A. Christison, General Superintendent, North-eastern System, says that he keeps the power of dealing with crossing-places entirely in his own hands, and would not allow a Station-master to change them under any circumstances.

Question 39,504-5. Mr. W. Lawford, who was appointed by the Commission to investigate and report upon the Continental system, states that in Switzerland, where with but one exception the lines are all single, they work by telegraph and time-table—and that in the case of trains crossing, whichever train comes in first must wait for the other. It appears also from the evidence that similar precautions are taken on the single lines in France, Germany, and Belgium.

Mr. J. E. Cotton, General Manager of the Belfast and Northern Counties Railway, gives very interesting evidence. It would appear that during the sitting of the Commission, when evidence was being taken as to the best method of working single lines, Mr. Cotton wrote a letter to the *Times*, advocating his system of working, which he stated had been so safe that for twenty years no accident of importance had taken place on the lines under his management.

The system is so close to that adopted on these lines under Mr. Vernon's management as to be almost identical.

On Mr. Cotton's line goods trains are made to give way to passenger trains, but under the provisions of *working time-tables and working orders* he says: We work our line partially on the staff system and partially on the system of *fixed meeting places*, combined with telegraphic arrangements. On some portions of the line they are combined with the staff system (that is staff and telegraph), and on other portions they have no staff at all; but they have *fixed meeting places*, and trains must adhere to the crossing-places appointed in the working time-table. The only departure is when a train is at least 20 minutes late, when the guard has the power of making telegraphic arrangements for bringing his train on, but without this "he must not move"; the arrangement for the actual passing places is very seldom departed from, unless there is some very serious delay. The crossing-places are seldom changed; "if there is any departure at all, the whole thing is reported to me, and I see every departure from the ordinary arrangement."

In the "General Report to the Board of Trade upon Railway Accidents during the year 1875," by the Chief Inspecting Officer, Capt. Tyler, appear the following observations, p. 24:—

"The danger peculiar to the working of single lines is that of mistakes in arranging for altering the crossing or passing places of trains when they are not running with regularity according to the published working time-tables; and it is to the avoidance as far as possible of all risks of such mistakes that attention should, in the principles and details of all systems and regulations for single line working, be directed."

In the "Report of the Court of Inquiry into the circumstances attending the collision on the Somerset and Dorset Railway," dated 7th September, 1876, the following remarks are made by the same distinguished authority, under head of

*"Single Line Working."*

"The dangers peculiar to single line working are precisely those connected with alterations in the crossing-places of trains. As long as trains are running in accordance with properly-arranged time-tables, there is no risk of their meeting one another in collision. When it becomes necessary, in consequence of unpunctuality or of extra trains being started, to alter crossing-places or to provide for fresh crossings, then the dangers commence, against which it is the object of Regulations efficiently to provide."

Now, it was to provide for this necessity of crossing-places, and to guard against the dangers connected with it, that the "working orders" were evidently framed, and are so valuable, and I am convinced that it was most unwise to cancel them.

Not only however have the working orders been cancelled, but the Regulations for working under the Train Staff and Ticket System are, I find, to be withdrawn. This system more effectually than any other, without any exception, provides against the danger of collision from trains meeting each other. I find that the introduction of this system was warmly opposed by the Engineering Department, and that its withdrawal, notwithstanding that it has been found to work admirably, has been decided upon at the instance of the officers of that department. I have before me now two papers containing observations by the Engineer for Existing Lines which clearly prove to me that he has failed to understand the system which he has so strongly opposed. There is one principle of this system upon which the whole is based—viz., that "the tangible and visible representation of the right of the train to be on the line—viz., the staff, or its substitute, the ticket—shall be in the possession of the man who controls the motive power,—the Engine driver;" and yet I find Mr. Mason urging that this authority for running the train should be placed in the possession of the Guard of the train. A moment's consideration will show the anomaly which such a change would create.

The other paper discloses that by mistake the Station-master at Blacktown despatched a train to Parramatta with the staff when he had two trains to follow—of course the first two trains should have been sent with tickets, and the last train with the Staff. The result of the error was to temporarily block the line for the two trains left at Blacktown before an engine could be despatched from Parramatta with the staff to again open the line for "up trains." If an instance were wanted to illustrate the safety of this system of working I do not think a better one could be found, and yet Mr. Mason's commentary upon the case is "This shows the Staff and Ticket System is a failure."

It is very painful to me to have to refer in this way to valued officers of the department whose services have been so beneficial in the performance of the duties for which they were appointed; but I have been *challenged*, as it were, by the Commissioner's Report in this case, and by my predecessor's minute, to defer to the opinion of the engineers on a question of traffic management, in connection with which they have had no practical experience; and as I find I am unable to do so, I must give my reasons for differing from their conclusions.

My opinion of the value of the Train Staff and Ticket System is based upon observation of its working on some portions of our single lines; and I find that while the Royal Commission and the English Board of Trade highly approve the system, and the latter have succeeded in getting it introduced on nearly all the single lines of England, the following are the opinions of drivers, guards, Station-masters, Traffic-managers, and others whose practical experience of traffic management and the rules for its governance enable them to speak with authority. In the evidence taken before the Royal Commission the following testimony will be found:—

*Drivers—James and John Kear*, Glasgow and South Western Railway; the former, twenty-three years service, fifteen of which driving; the latter twenty years service, fourteen of which driving.

25,253-5. Whole of their single roads worked with the staff; never experienced any irregularity; a very safe system if properly worked up to.

25,975. Ran with confidence under it.

*John Morley*, driver, sixteen years with passenger trains, Great Eastern Railway.

41,498. Works on those portions of the lines which are single on the staff and ticket system principally.

41,500. Thinks it is the safest system of any.

*Mr. T. Humphries*, Station-master, London and North-western Railway.

3,183. Does not consider the use of electric telegraph and electric signals sufficient without the staff, which is a guide to driver, guard, Station-master, and every one concerned.

32,024. Considers that the traffic of a single line can be worked thoroughly and without difficulty under the train staff and ticket system with the telegraph.

M.

*M. J. Mitchell*, Northern Railway.

36,330. Is sure that better time has been kept since introduction of train staff system.

Considers the system a great improvement, and there is no fear of an accident now.

*Mr. J. C. Smith*, Engineer Way and Works, Dublin, Wicklow, and Wexford Railway.

35,537. The system adopted on single, is the train staff.

33,541-2. If block system were introduced upon the double road, would keep the staff system for the single, as it more effectually prevents collision upon a single line than the block system does—suggests a plan by which the train staff system could be made to secure an interval of space between trains following as well as meeting. Where the block system has failed, has been in protecting trains running in opposite directions.

*Mr. J. Price*, Chief Engineer of Midland, Great Western Railway, Ireland.

36,913. Single lines are worked with the staff and ticket, and under no circumstances are the rules ever broken.

*Mr. Hanbury*, Inspector, Locomotive Department of the Midland Co., England.

12,389. Considers the train staff to be very necessary on a single line, and the safest system that can be adopted.

12,394. Where telegraph system may be improperly used the staff system cannot fail.

12,399-1. From his experience as regards working of locomotives there is no difficulty in working it, and it is most decidedly to be preferred.

*Mr. A. Christison*, General Superintendent of Passenger Department, North-eastern system, England.

21,776-7. All their passenger single lines are worked by staff and ticket system, which he considers the safest system of the whole.

21,789-1. No difficulty whatever experienced in working under it.

*G. E. Ilberry, Esq.*, Traffic Manager, Great Southern and Western Railway, Ireland, for 29 years.

37,442-3. The staff and ticket system is adopted on the single line, and adhered to strictly in the case of all passing-places of trains.

37,448. *Captn. Tyler* brought the system under his notice, and he thought it so superior to the former that it was at once adopted.

37,456. So satisfied with it that he would not wish to change from it.

37,464-5. Never had an accident under it, and had experienced less delay under it.

*Henry Oakley, Esq.*, General Manager, Great Northern Railway, England (for 25 years):—

33,067. All single lines are worked on the staff and ticket system—decidedly the safest plan of working. The addition of the telegraph would be an advantage.

33,076. The staff is the best security a driver can have.

33,110. The train staff system is the safest he knows; in long lengths of single line he would add the telegraph.

*George Findlay, Esq.*, Chief Traffic Manager of the London and North-western Railway—1,308 miles double, and 342 miles of single line.

31,259. Their rule was almost universal to work the single lines upon the staff system.

31,278. Considered it desirable in case of long single lines, such as they possessed in Wales, to have the telegraph as an auxiliary.

31,288. Would prefer, in working a long single line, to work a continuation of the staff and the telegraph. If the telegraph system had to be fallen back upon, would surround it with such additional precautions as to make it a matter of absolute certainty.

31,291. Did not know of any condition of things which would make it impracticable to work the train staff system on a single line.

31,297. The safest plan of working is that of train staff and telegraph combined.

31,303. Either a line clear ticket or the staff would have prevented the Thorpe accident.

31,305. The very condition of things points out that single line working, unless properly guarded, is attended with more difficulty and risk than double line working.

*Col. Folland*—Referring to single line working—

461.—The most common mode which had been adopted during the last two years had been the train staff and ticket system.

465.—Thought that this system was good for preventing collisions between trains running in opposite directions.

469-1.—Would certainly suggest a combination of the train staff and block telegraph system, which he had frequently done, and it had frequently been adopted.

*Col. Rich* (from his Report dated 24th January, 1877, on collision which occurred between Dunadry and Antrim):—"But I would strongly urge upon the Directors of the Company the desirability of working all portions of their single line under the Train Staff Regulations, which have for a very long time been recommended by the Board of Trade. The train staff should be used to prevent trains meeting on the single portion of their lines of railway, and it should be supplemented with the block telegraph, to prevent one train overtaking a train in advance \* \* \* the combined forgetfulness of these men distinctly proves, in my opinion, how unsafe and uncertain the telegraph is for working a single line of railway, unless the Regulations are all based on the principle of the necessary presence with each train of some tangible and visible representation which cannot be in two places at the same time. The train staff system is the cheapest and most convenient form in which this principle can be carried out."

*Captn. Tyler* (from Report dated 7th September, 1876, on the Radstock accident):—"It has long been observed that the block telegraph system, so valuable on double lines of railway to prevent following engines or trains from overtaking and coming into collision with one another, is not equally to be relied upon in single line working to prevent collisions between meeting trains, and the experience obtained from time to time in this respect has led to the introduction and employment of the train staff."

Again, from his evidence before the Royal Commission, at 2,340, speaking of the *train staff system*, he says:—

"It did away with the danger of altering the crossing-places and working by telegraph only, and we required it to be adopted."

Lastly,

Lastly, I will give a quotation from the Report of the Commissioners, dated February, 1877, part 4, respecting the powers of the Board of Trade:—

“The Board of Trade maintains, for instance, that no railway is complete which has not a double line of rails. A single line, therefore, is held to be essentially imperfect, and to require, in order to ensure safety in the conveyance of passengers, to be supplemented by some system of working which will obviate the danger of trains meeting. Accordingly, the Board requires as a condition, precedent to the opening of a single line, that the Company shall forward a certificate under seal, signed by the Chairman and Secretary, pledging the Company to adopt one of certain specified and approved modes of working. Par. 120. We concur, moreover, in the view taken by the Board of Trade, that a single line of railway can be worked with safety only where a special plan of working is adopted.”

And yet this system of working by train, staff, and ticket—on single lines—commended, upheld, insisted upon, as it is by all railway authorities, from the lowest to the highest, in the United Kingdom, is, I find, condemned at the instance of officers who, in my opinion, however high their qualifications may be and undoubtedly are in their own special province, have not had that practical experience of traffic management which would entitle them to decide authoritatively on the question.

And now, as regards the following paragraph in Mr. Whitton's Report:—

“With reference to the traffic management generally on the South and West Lines, I regret to say that it has always been most unsatisfactory, the officers appointed having been almost without an exception lamentably ignorant of the duties they were called upon to discharge.”

This indictment of the management it will be seen is very general in its terms; but the “unsatisfactory management” is in Mr. Whitton's opinion due to the ignorance of the officers employed. I am not prepared to admit however that the traffic officers are ignorant of their duties—nor do the records of railway transactions show that the management has been so unsatisfactory as Mr. Whitton represents. In those particulars in which it has proved to be unsatisfactory the traffic officers may not be blameable. Any complaints that have been made by the public have been due, I believe, rather to the absence of appliances for working the traffic than to any mismanagement of the traffic itself. The facilities, for instance, for conducting the live stock traffic have been very deficient; the want of trucks for the conveyance of sheep and cattle has been largely felt, and the papers on the subject of the accommodation afforded at the various stations, to and from which live stock is sent, show clearly that necessary improvements have been tardily carried out. The insufficiency of accommodation at the Newtown siding has been another great evil; I know that lines of loaded trucks, sometimes to the number of eighty or ninety, have been left standing idle on the Sydney yard waiting to be sent to Newtown to be unloaded, but the siding there has been so full that no more trucks could be taken. The traffic officers represented this matter time after time; and at length, notwithstanding the advice to the contrary of Mr. Whitton, additional land was purchased at Newtown, to afford increased accommodation; but although the land was obtained, and directions given to put in additional sidings, the work to this day has not been carried out. The delay of trucks still continues, and the solution of the difficulty appears to be to charge the traffic officers with ignorant management.

Before I left office—in fact in July, 1874—the Traffic Managers, at my request, sent in their estimate of rolling-stock that would be required in the following five years; and when received they were sent to the Engineer Department for the specifications; but it was not till two years afterwards that any serious attempt was made to get this rolling-stock. The specification for the carriages (and then only an instalment) was not furnished for nearly three years, and the traffic officers have found the greatest difficulty in meeting the demand for truck and carriage accommodation.

Many of the inconveniences which the public have complained of in the conduct of the traffic have resulted from this cause. In dealing with charges of this character, I bring to the consideration of the question my own knowledge of the circumstances.

The Commissioner for Railways does not share evidently the opinion of Mr. Whitton as to the incompetency of the traffic officers, as will be seen from the following extracts of his Reports on Railway management from 1872 to 1876.

In the Commissioner's Report 1872 to 1875, page 40, the following will be found:—Casualties—“The casualties have been few and slight, owing to the vigilance and zeal with which the officers in the various branches of the department carry out their responsible duties.”

And, at page 42, after contrasting the working of the New South Railways with those of the United Kingdom, he says:—

“These significant facts are sufficient to show the economy of our Railway management, and the care and vigilance of the officers in all branches of the Railway Department; while comparative freedom from serious accidents must give assurance to the public that transport by our Railways is not only the swiftest but the safest of all methods of locomotion.”

In his Report, 1876, he again says,—page 30—“Our comparatively light bill of mortality last year (1876) speaks favourably for the careful management of our officers.”

It has been a very unpleasant duty to make the preceding observations in connection with the charge of mismanagement of the traffic, but it appeared to me to be absolutely necessary, in fully and fairly considering and determining the merits of the case, that I should not allow the sweeping statement which Mr. Whitton has made to remain uncontradicted, believing as I do that he is mistaken in the views he has expressed, and feeling it incumbent upon myself to protect those officers who in my opinion are wrongly accused, and for the appointment of some of whom I am responsible.

I think that I have dealt with all the questions which have arisen in connection with the suspension of Mr. Vernon, and can now come to the consideration of his conduct in declining to carry out the Commissioner's directions in regard to the reinstatement of Mr. Higgs and the suspension of Mr. Pass. I can have no difficulty, of course, in deciding at once that in this Mr. Vernon committed a very grave mistake. He urges in extenuation that his conduct was not due to a spirit of insubordination, but to a sense that if he were to follow the direction given to him the safety of the public might be affected. No consciousness on the part of the Traffic Manager that the decision of the Commissioner was wrong could justify his refusal to obey his instructions. I can quite recognize and appreciate the difficulty as regards the construction of the Rules and Regulations which the decision placed the Traffic Manager in, and he should have sought by personal conference with the Commissioner to obviate and

and remove as far as possible the anomaly which the decision created. When he found however that the Commissioner adhered to his decision he had no alternative but to carry it out, and in declining to do so Mr. Vernon could not but expect that his immediate suspension from office would follow. At the same time I must express my opinion that the Traffic Manager should have been consulted and conferred with previous to any decision being given; and I think the Commissioner, in declining to see Mr. Vernon, who was the officer specially concerned in the decision, and who at all events up to that time had not, as far as I can see, exceeded his duty, or had placed himself in a position precluding him from consultation, did not contribute to a satisfactory solution of the difficulty. That it was a difficulty there cannot be a question, directly it was decided, however erroneously, that the working orders, *which were approved by the Commissioner*, and were adopted *at his instance*, clashed with the Rules and Regulations. If the Traffic Manager in compiling these working orders, and the Commissioner "in carefully perusing them and seeing nothing to object to in them," as I find he states, did not observe that they clashed with the Rules—how could a Station-master, whose duty it was to carry out the Rules and Regulations, supplemented by the Working Orders, be punished for not seeing that they clashed? This was a difficulty which required the co-operation of the officers, especially of the Traffic Manager, to meet and overcome; and I think the Commissioner should not have excluded that officer from consultation in the matter. Nothing, however, as I have before said, could justify the Traffic Manager in declining to carry out the instructions given to him by the Commissioner; and while a confirmation of the suspension and removal from his appointment might, under all the circumstances of the case, be a punishment in excess of the offence committed, I am clearly of opinion that the conduct of Mr. Vernon, in this particular instance, is deserving of the severest censure.

In dealing with this case, I have become painfully acquainted with the existence of a great feeling of antagonism between the officers of the Engineering Department and those of the Traffic Department—more especially between Mr. Mason, the Engineer for Existing Lines, and Mr. Vernon. The feud—for it amounts to that—appears to have grown up from old causes of dispute—which have been allowed to remain unexplained and unsettled; and nothing, it appears to me, has been done to bring about a better state of feeling between these two responsible officers, who it is essential in the discharge of their respective duties should act with harmony and in concert. How this state of things has grown up, and who is chiefly responsible for its existence, are questions which cannot now be decided. I must deal with the case as I find it, and apply such remedies as will offer a fair expectation that in future this disunion will cease. To this end an immediate reconstruction of the staff will be necessary, and in a separate paper I shall submit to Cabinet my views and proposals.

For the present then, and in view only of the immediate question affecting the action of the officers in connection with the case at Bathurst, I decide that Mr. Vernon, the Traffic Manager, be severely censured, and that his suspension be removed.

That the suspension of Mr. Pass, Station-master at Kelso, be removed.

As regards Mr. Higgs, his case has already been decided; and, though I cannot concur in the opinion that the conduct of this officer was correct, I will respect the decision of my predecessor in his case.

Mr. Higgs's continuance, therefore, in his position of Traffic Inspector—to which office my predecessor promoted him when he was reinstated, after his suspension by the Traffic Manager—will be dependent upon the manner in which he carries out the duties of that position.

As Mr. Secretary Combes has decided, on the representation of the Commissioner that two Traffic Inspectors for the Southern and Western Lines are sufficient, and as he has appointed Mr. Higgs to the vacant Inspectorship on the Western Line—Mr. Crawford retaining his position as Inspector for the South—I desire to give this arrangement a fair trial. I am unable therefore to do otherwise at present than concur in the decision that Mr. Richardson, who was Traffic Inspector for the lines between Sydney and Picton and Penrith, and Mr. Hornidge, who was acting as Inspector of the Western Line, resume the positions they formerly held—Mr. Richardson as First Clerk in the Traffic Manager's Office, and Mr. Hornidge as Station-master. In justice, however, to these officers, I must express my belief that no action of theirs or opinion given by them in connection with this case, displayed in any sense incapacity for the position they were then holding, and I am satisfied with the explanation given by Mr. Richardson, in his report of 7/12/77, as to the proper construction to be placed upon his statement that the working orders corrected a former irregular practice which the Rules and Regulations did not authorize or sanction, viz., the starting of passenger trains when a train in the opposite direction was due, without first ascertaining by telegraph that the line was clear to the next station. See Nos. 12 & 13.

The Rules and Regulations of 1869, signed by me, are clear upon this point. If a practice had grown up of ignoring rule 152, it was time that practice—stated in the evidence to be "the practice of starting a train on spec."—was abandoned; and the "working orders" effectually put a stop to the practice, and provided more fully than the Rules did for the observance of the principle of working established thereby. Rule 146 requires goods trains to keep clear of passenger trains; but surely no one was reasonable in supposing that the method by which they were to keep clear would remain undefined. Working time-tables for the information of the employes were of course requisite, as they are on every Railway, showing where the trains are to cross each other, and it is in the compilation of these tables that effect is given to rule 146. When the crossing-places are fixed, the trains are run in accordance with the working table; if it become necessary to deviate from the table, then fresh arrangements are made, and in making them attention is again given to rule 146, and the goods train is made to give way to the passenger train. It is only on those exceptional occasions (as was the case between Bathurst and Kelso) when, by the interruption of telegraph communication, no arrangements can be made, that the crossing-places originally fixed are to be observed, and the passenger train, as required by rule 152, must not be started till line is clear. See Appendix C.

This is the system which the Rules of 1869 provide for; it is the system adopted on single lines worked as ours are in the United Kingdom and elsewhere, as I have already shown by the authorities I have quoted; and the "working orders" issued by Mr. Vernon, with the Commissioner's consent and approval, do not in any sense contradict or clash with the Rules, but merely define more clearly the practice to be observed thereunder.

JOHN SUTHERLAND.

January 8th, 1878.

## No. 23.

## Minute of Mr. Secretary Sutherland on the Reconstruction of the Staff of the Railway Department.

My colleagues are, I believe, aware that my predecessor left undealt with the case of Mr. Vernon the Traffic Manager, whom he had suspended from office for declining to carry out certain directions given to him by the Commissioner, which reversed the action Mr. Vernon had taken in connection with an irregularity in the running of trains between Bathurst and Kelso on the 5th November last, and which resulted in two trains (running in opposite directions) being on the same section of line at the same time.

I need not here go further into the case, than to say that I have been unable to agree with the terms of a minute which, indicating the course which my predecessor would have taken, he left for my information and guidance; and that for the reasons given in a separate minute on the subject, and on the terms therein stated, I have directed that the suspension of Mr. Vernon as Traffic Manager be removed.

In dealing, however, with the case, I have become painfully aware of the existence of a great spirit of antagonism between the officers of the Engineering Branch and those of the Traffic Branch, more especially between Mr. Mason and Mr. Vernon; and I think there is good reason for believing that the effect of this hostility has been detrimental, not only to the most effective administration of the business of the department—for to that extent it would necessarily have influence—but in a larger and more serious degree to its usefulness in providing the required accommodation and appliances for the proper conduct of the traffic, and for ensuring to the public the best return possible for the capital that has been invested in the railways, not alone as regards interest upon the money expended, but by affording those reasonable conveniences and facilities which the public has a right to expect.

Mr. Vernon, I believe, possesses very high qualifications for the position of Traffic Manager, and he has been to a large extent successful in the administration of the important and oftentimes harassing and difficult duties of that office. In the face, however, of the circumstances which the inquiry I have made has revealed to me, I feel convinced that so long as Mr. Mason and Mr. Vernon remain in their present relative positions the effective administration of the business of the traffic will be impeded by their inability or unwillingness to act together.

The office of Secretary of Railways is now vacant, and the salary is the same as that appropriated for the office of Traffic Manager. I propose, therefore, to make Mr. Vernon Secretary of Railways, and so meet the difficulty of the case in this respect.

I have given much consideration to the question of providing for the management of the traffic by the appointment of some one to the office who possesses in an eminent degree the qualifications required for the proper conduct of its duties. Without undervaluing our present staff of officers, who, trained up in the department, and with the experience they have acquired of the traffic, compare favourably for competency and zeal in the discharge of their duties with railway staffs generally,—I think that under all the circumstances of the case, and to provide for the more harmonious conduct of the business, the Government should send to England to secure the services of an experienced Traffic Manager, whose duties would not be limited to the superintendence of the management of the South and West Lines, but would include the Northern Lines also, which are now being very largely extended. No time, I think, should be lost in carrying out this proposal; and, for the purpose of securing the services of a first-class man, I recommend that the salary of the office be fixed at £800 a year.

*Locomotive and Permanent Way Branches.*

The opening up for traffic of fresh extensions of our railway, and the consequent increase in the work to be done, have made it necessary, in my opinion, that these two branches, which are now under the charge of Mr. Mason as Engineer for Existing Lines, should be divided, and that a separate head should be appointed to each branch. The duties of Mr. Mason, previous to his being appointed to his present position, were confined to the superintendence of the ways and works on the Southern and Western Lines; and as he is more intimately acquainted with the requirements of this department of engineering than with those required in the conduct of the Locomotive Department, I propose that when the arrangements are perfected Mr. Mason be relieved of the latter duties.

There are now 600 miles of railway open for traffic, the capital invested in which is close upon £8,000,000; and when the authorized extensions now in progress are completed, there will be nearly 1,000 miles of railway in different parts of the Colony to be maintained in working order. The supervision of this work, and the providing of additional accommodation, which the necessities of the traffic from time to time demand, will occupy the undivided attention and abilities of one officer; and provision should be made for the appointment of another officer to take charge of the Locomotive Department.

There is, perhaps, no branch of the Railway Department which requires more careful and constant supervision than that which embraces the management of the rolling stock. On its supply and working order, its adequacy, efficiency, and control, depend, to a very large extent, the successful conduct of the traffic.

The Colony has now invested in rolling stock and machinery no less a sum than £1,009,550, and large additions are made, or should be made, annually, to meet the growing wants of the traffic.

During last Session, Parliament voted a sum of £240,000 for additional rolling stock for our railways. In addition to the sum invested in the purchase of stock, an annual expenditure varying from £150,000 to £180,000 takes place in the payment of wages to the staff employed in working the engine power and in the maintenance of the rolling stock. The absence of efficient and economical management may make a difference of from £20,000 to £30,000 a year to the expenditure; and on this point I may observe that I have failed to understand why, while the working expenses of our railways per train mile bear favourable comparison with the like expenditure on the Victorian Railways in the traffic and Permanent Way Branches, the comparison is so unfavourable in the Locomotive branch. The wages paid in Victoria to the railway workmen are higher, if anything, than those paid to our workmen; and the cost of fuel in Victoria is 100 per cent. dearer than its cost to us, and yet, per train mile run, the cost of locomotive working in Victoria is lower than it is in New South Wales. I think the solution of the problem will be found in the fact that the supervision of this branch of the department has not been so adequate as it is requisite it should be, owing probably to other pressing and perhaps more congenial duties occupying the attention of the Engineer, to the exclusion of this not less important one.

I recommend to my colleagues that the services of an engineer accustomed to the management of Railway Locomotive Departments be obtained from England, to take charge of this branch of the department here, and to design and superintend the construction of the rolling stock required. The salary I recommend to be offered is £1,000 a year.

If the proposals made in this paper be adopted, I think a fair expectation will be afforded of a vigorous and satisfactory administration of the Railway Department.

January 10, 1878.

JOHN SUTHERLAND.

The Cabinet concur with the proposals herein contained.—J.S.F., January 11, 1878.

## APPENDIX

### A.

#### Amendments to Rules.

##### MINUTE PAPER.

REFERRING to the question of the Rules for regulating the traffic, and to the Commissioner's recent Minute, that he is anxious that a more perfect system of working trains on single lines should be adopted, I beg to suggest that the Traffic Manager be requested to forward for consideration any amendments in the existing Rules which, in his experience of the traffic, he has found to be desirable.

C.A.G., 1/2/77.

Approved.—J.R., 1/2/77. Traffic Manager.—C.A.G., B.C., 2/2/77.

This matter shall receive the earliest attention I can give to it, but I am not prepared to deal with it at present from pressure of other work; meantime, I may state that the *necessities* of the case have been met by working orders which I have issued from time to time, and the principal of which I have recently collected and issued in pamphlet form.\* When I have time I may propose to embrace some of these in the General Rules and Regulations (which I will submit with a few necessary amendments, &c.), and the remainder, with additions, it may perhaps be advisable to issue in a separate book as "particular working orders for Traffic Department, &c."—D.V., 28/3/77. To Commissioner.

\*I enclose a copy herewith.—D.V.

I have carefully perused these working orders for single lines. I see nothing objectionable in them, and as the Traffic Manager—who is responsible for the proper conduct of the traffic—considers them necessary, I approve of their coming into force.—J.R., 12/5/77. Traffic Manager to see.—C.A.G., B.C., 12/5/77. Seen.—D.V., 15/5/77. Secretary.

### B.

#### Reducing Rules into one Code.

##### MINUTE of The Commissioner.

As it appears from the evidence taken yesterday at the investigation with reference to the mismanagement at Bathurst, that the established Regulations, approved by the Governor and Executive Council, and the working orders recently issued, are at variance, or are differently interpreted by different officers, no time should be lost in reducing the whole of the Rules and Regulations into one code. I recommend therefore that they be referred to the Engineer-in-Chief, the Engineer for Existing Lines, and the Acting Traffic Manager, for such alterations as may be considered necessary to prevent the possibility of misunderstanding them for the future, and thus insure the safety of the public.

J.R., 15/11/77.

Approved.—E.C., 16/11/77.

### C.

#### Case of Inspector Richardson.

##### Inspector Richardson to The Traffic Manager.

I HAVE heard that a collision nearly occurred at Bathurst a few days ago, in consequence of one Station-master starting a train (goods) in what he considered the proper order as directed by working orders issued by you in February last, and another Station-master starting a train in an opposite direction (a passenger train) under a previous practice, and what he considered he was authorized in doing under the book of General Rules. As I have been all along under the impression these working orders cancelled the previous practice, I have been working under them, and as it is certain that both of the Station-masters above referred to could not have acted correctly, I should be glad to be informed as soon as possible which of the two acted improperly, as a similar case of misunderstanding may crop up in my district at any moment, and if one Station-master acts under one system, and another under another system, a collision must inevitably follow.

H. RICHARDSON,

17/11/77.

Forwarded for perusal of the Commissioner and instructions on the matter.—THO. CARLISLE, Act. T.M., 20/11/77. The Commissioner for Railways.

It is to be regretted that an officer in the responsible position of Traffic Inspector should have been so ignorant of his duties as to act under the impression that the working orders of the Traffic Manager cancelled the book of Regulations approved by the Governor and Executive Council. He must have known that the 16th section of these orders expressly states that these working orders are in no way to be considered as suspending any in the book of Rules sanctioned by the Commissioner. But as Mr. Richardson appears still to be in doubt which system of Rules is to be followed, he may be informed that the working orders have been withdrawn, and that there is now only one code of Regulations for the guidance of the officers, viz., the Rules sanctioned by the Executive.—J.R., 20/11/77. Inspector Richardson to note.—T. CARLISLE, Acting Traffic Manager, per T. ELLIOTT, 23/11/77.

I

I have noted the Commissioner's minute of the 20th November, but in justice to myself I wish to be allowed to make the following explanation. I regret I did not make myself more clearly understood in my memo. of the 17/11/77. I did not mean to say that the working orders cancelled the Rules approved of by Executive Council, as order No. 16 states that they are to be read as part of the same. I considered the orders cancelled the previous practice; I allude to the practice of starting passenger trains on a single line, without first ascertaining whether line was clear or not, and that this practice had been found to be contrary to the Rules of the Executive Council, from the fact of the orders issued to me by my superior officer (and which I was bound to obey) forbidding it, and I was given to understand at the time the orders were issued that they had been approved of by the Commissioner for Railways. At the time I wrote to the Traffic Manager, viz., 17/11/77, there was considerable doubt amongst the officers and men of the department as to who had acted correctly in the Bathurst case, and I think I should have failed in my duty had I not have asked the question, considering that the same question might have been put to me by the officers and men then under my charge; and had I have given a decision contrary to the instructions given me by my superior officer I should have considered myself guilty of disobedience of orders. During the twelve years I have been in the Railway service I have given its Rules, &c., my most careful attention, and endeavoured to the best of my ability to carry them out in their integrity.—H. RICHARDSON, 7/12/77, Acting Traffic Manager. Secretary.—THOS. CARLISLE, 7/12/77.

## D.

## Testimonial of confidence in Mr. Vernon.

E. Webb, Esq., to The Honorable E. Combes, M.P.

Hon. Sir,

I received the enclosed this morning, and now enclose it for your information; I also enclose a memorandum from E. Webb & Co., by which you will see that I cannot consistently have anything to do with this movement.

Yours, &c.,  
E. WEBB.

[Enclosures.]

Dear Sir,

Sydney, 21 November, 1877.

As the friends and admirers of Mr. Donald Vernon, "Railway Traffic Manager," think a testimonial of their confidence in his official capacity, and respect for him personally, will be of service, if presented to the Honorable Edward Combes, M.P., "Minister for Works," during the inquiry now pending, I forward you the enclosed, urging your kindly endeavours to get signatures thereto.

See Appendix E.

I am, &c.,  
J. R. BUBB.

(Traffic Enquiry.)

To the Honorable E. Combes, Esq., M.P., Minister for Works, Sydney,—

Hon. Sir,

Western Warehouse, Bathurst, 23 November, 1877.

Our Mr. Webb has received from J. R. Bubb, Esq., the copy of a petition to you with a request to obtain signatures to the same for the purpose of being presented to you during the "inquiry now pending."

We feel with Mr. Webb that the action of the Traffic Manager's friends amounts to an attempt to coerce or influence the gentlemen now conducting the inquiry, and this we earnestly protest against, as we have had many just causes of complaint against the Traffic Department of the Western Railway, and we venture to think it is quite time a searching inquiry be instituted, and the management of the traffic, both goods and passenger, put on a more satisfactory footing.

We are not in a position to say whose fault it is that the traffic both of goods and passengers has been so thoroughly mismanaged; therefore decline to do anything that may have the effect of stifling inquiry.

We have, &c.,  
E. WEBB & CO.

## E.

## Testimonial of confidence in Mr. Vernon.

Messrs. Davis, Pope, and Rolin, to the Secretary for Public Works.

Sir,

Sydney, 27 November, 1877.

We have the honor with this, to present to you a testimonial signed by (866) eight hundred and sixty-six railway travellers, expressive of their confidence in and respect for Mr. Donald Vernon, Railway Traffic Manager, and trust it may meet with your favourable consideration.

We have, &c.,  
G. C. DAVIS, Homebush.  
JOHN POPE, Ashfield.  
THOS. B. ROLIN, Burwood.

[Enclosure.]

Sir,

Sydney, 26 November, 1877.

We, the undersigned, residents along the Railway line, and others, beg respectfully to express to you that the suspension of Mr. Donald Vernon, Traffic Manager of the Great Southern and Western Railways, is viewed by us with feelings of the deepest regret, and we take an early opportunity of giving our testimony to the fact that, by unwearied exertions, Mr. Vernon has managed the Traffic Department, with its ever-increasing responsibilities, in such a manner as to call forth our admiration.

We

We would respectfully invite your attention to the perfect safety to travellers which has resulted from his care and forethought.

Without going into the merits of the case now under your consideration, and which is obviously out of our province, we have the honor to wait upon you only to express our entire confidence in the past management of Mr. Vernon.

We therefore venture most respectfully to hope that you will, with all due consideration for the Public Service, reinstate him.

We have, &c.,

JAMES MULLINS, J.P.  
JOHN TAYLOR, Parramatta,  
And 864 others.

## F.

### Case of Station-master Pass.

The Commissioner for Railways to Mr. S. Pass.

Sir,

Department of Public Works, Railway Branch, November 27, 1877.

Referring to the inquiry which took place relative to the running of trains between Kelso and Bathurst on the 5th instant, in connection with which you have been suspended, I have the honor, by direction of the Secretary for Public Works, to call upon you to show cause why you should not be removed from the position of Railway Station-master,—First, for your non-compliance with rule 146, which provides that goods trains are to shunt clear of passenger trains; and, secondly, for being under the influence of intoxicating drinks on the day the occurrence took place, as admitted by you at the inquiry.

I have, &c.,

JOHN RAE,  
Commissioner for Railways.

Mr. S. Pass to The Commissioner for Railways.

Sir,

Parramatta Station, November 28, 1877.

I beg to acknowledge receipt of your letter, dated November 27, M.P. No. 77/7928; and I have to request that you will furnish me with any documents or evidence in which it is stated that I was under the influence of intoxicating drinks, as stated in your letter, so that I may have an opportunity of rebutting the charges; and on receipt of the papers I will reply to them as a whole.

I have, &c.,

S. PASS.

If no answer be received from Mr. Pass on or before Monday next, I shall take steps in this case.—J.R., 1/12/77. Acting Traffic Manager, B.C., 1/12/77.—C.A.G. Mr. Pass to see Commissioner's remarks.—T. CARLISLE, per H. Richardson, 3/12/77.

I note the Commissioner's remarks, and have handed the answer to the Acting Traffic Manager this day, to be forwarded to the Commissioner.—S. PASS, 3/12/77.

Mr. Pass' reply to Commissioner duly received in this office on the afternoon of the 3rd December.—T. CARLISLE, per H. Richardson, Acting Traffic Manager. The Secretary, 4/12/77.

Mr. S. Pass to The Commissioner for Railways.

Sir,

Parramatta, December 3, 1877.

I beg to state, in reply to your letter dated November 27, M.P., 77/7928, and your remarks on correspondence numbered 77/8082, dated November 28th,—

Firstly.—I beg respectfully to inform you that in starting the goods train on the morning of the 5th, I was strictly carrying out orders and instructions given to me by my superior officer, whom I am bound to obey by your Regulations, and by disobeying such orders and instructions I rendered myself liable to immediate suspension and ultimate dismissal. The Traffic Manager being my immediate superior officer approved of the course I adopted in the running of trains on the 5th as the proper one, and I think this should exonerate me from all blame of any kind. In reference to your second charge, I must respectfully submit that I made no such admission, viz., to the effect that I was under the "influence of intoxicating drink"; all that I stated at the investigation on the subject was given to you voluntarily by me, and what I really did say was, that "some time after the occurrence of the trains took place I had permission to go to the polling booth and record my vote, and while there, 'out of business hours,' I took two drinks with friends in a social way, and I felt it necessary to do so, feeling at the time unnerved, resulting from what had occurred between the trains." I beg respectfully to remind you of your question "Were you intoxicated?" I replied "undoubtedly not." You then asked me "Did you take any drink any time that morning before the occurrence?" I replied "No, I had not tasted drink any time that morning until after the occurrence, and only then during my own hours and off the premises."

I may mention that I am most particular in the matter of drink on the premises, and never allow the use of it on the station, as my staff can testify to my having repeatedly cautioned them that I would not permit it to be used on the premises.

I have, &c.,

S. PASS.

The reply of Mr. Pass is not satisfactory. He denies that he was under the influence of drink, though he admitted he had two drinks with friends in a social way, which made him more talkative than usual; and this admission was not made voluntarily as he asserts, but was elicited in answer to my inquiry—how he could reconcile two such conflicting statements as he had made? The subsequent approval of the Traffic Manager cannot be accepted as an excuse for his acting in violation of the established Regulations, and though I have no wish to act harshly with any officers of the department, I consider it necessary for the public safety to take measures for putting a stop to all acts of carelessness. In this case, taking all the circumstances into account, I advise that Mr. Pass be disrated for the period of six months.—J.R., 7/12/77.

For the information of my successor I may say I should (had I remained in office) have carried out the Commissioner's recommendation, as Mr. Pass's conduct is wholly inexplicable.—E.C., 10/12/77.

In my minute, dealing with the whole question, I have afforded the reasons for differing from my predecessor's views in regard to Mr. Pass's conduct; he acted in close accordance with instructions. I think the charge of inebriety is strained. I have directed that his suspension be at once removed.—JOHN SUTHERLAND.

Acting Traffic Manager, B.C., 15/1/78.—C.A.G.

Mr. Pass informed of Minister's decision. He resumed duty yesterday.—J. B. GOULD, Secretary, *pro* Manager, 18/1/78.

## G.

### Case of Mr. A. Richardson, Storekeeper.

Mr. A. Richardson to The Commissioner for Railways.

\* Similar to Appendix D.

THE fact of these documents\* being sent to me for explanation leads me to judge that I have acted wrongly, but I can assure the Commissioner and the Minister for Works that the sole motive by which I have been actuated has been the desire to procure for my old friend and brother officer, Mr. Vernon, as lenient a consideration of his case as possible; and as the documents disown any expression of opinion upon the merits of the case, and consist simply of a testimonial in Mr. Vernon's favour, without a single sentiment of disrespect either to the Commissioner or the Minister, I confess that it did not occur to me that I was doing wrong. Had I thought otherwise, I should have abstained from any connection with the business; while, had I wilfully intended to do what I considered to be wrong, common sense would hardly have dictated a line of conduct in which there has not been the slightest attempt at secrecy. I trust that the zeal and integrity which I have displayed in the service of the Government for many years, and the ready manner in which I have carried out all instructions, will be sufficient to satisfy the Minister for Works that my action, although, doubtless, ill-advised, has been the result of warmth of feeling, and with no desire to create insubordination, or in any way to prejudice the best interests of the department, which it has always been my first consideration to further to the utmost of my ability.

I may add, that the circular which bears my signature did not emanate from my pen, and, further, that no officer of the department has combined with me in the matter.

In conclusion, I beg to express the deepest regret if my action has been in any way offensive to the Commissioner or the Minister, and to reassure them that nothing was further from my intentions.

A. RICHARDSON, 24/11/77.

This is only another instance of the insubordination which I have had occasion to complain of as too prevalent in the department. It must be subversive of proper discipline for a subordinate officer to issue printed circulars bearing his own signature, and inviting his brother officers and the public to prejudge the case between the Commissioner and the Traffic Manager, and endeavour to influence the decision of the Minister. I never questioned the ability and zeal of the Storekeeper, and as far as I am personally concerned I accept the expression of his regret for the impropriety of his conduct. Without further comment I submit his explanation for the consideration of the Minister.—J.R., 3/12/77.

I leave this matter for my successor, who will not fail to perceive that Mr. Richardson's action with reference to the suspension of Mr. Vernon implies insubordination, and should be dealt with accordingly.—E.C.

I agree with the Minute of my predecessor, that Mr. Richardson's action *implies* insubordination, but I do not think that insubordination was the motive of his action. His conduct was very improper, but I think the expressions of his regret for that impropriety may be accepted. If, however, Mr. Richardson wishes to retain the confidence of the head of his Department, that can only be secured by strict attention to his own duties, which if not left to others to perform will be found ample to employ his time.—JOHN SUTHERLAND, 5/1/78.

Mr. Richardson, B.C., 15/1/78.—C.A.G.

Seen.—I am obliged to the Minister for the construction he has placed upon my conduct, which is the true one; and I can assure him that it will be my earnest endeavour in the future as it has been in the past, by a strict and zealous attention to the duties of the branch of which I have the honor to be in charge, to merit the confidence and approval of both the Commissioner for Railways and the Honorable Secretary for Public Works.—A.R., 21/1/78. To the Commissioner.

## H.

### Accidents.

MINUTE of Mr. Secretary Combes.

WILL the Commissioner ascertain what has been done with reference to the accident which occurred at Lithgow, also the accidents at the Redfern Station, and at Liverpool?

E.C., 24/11/77.

Acting Traffic Manager, for report.—J.R., 24/11/77.

Reports of the Sydney and Liverpool accidents attached. The Lithgow report will follow.—THOS. CARLISLE, Actg. T.M., 29/11/77.

Now herewith.—J.R.

MINUTE

## MINUTE of The Commissioner.

ENQUIRIES have been held in each of these cases and the evidence is herewith. From this it appears that the accident at the Sydney Station was caused by the gross ignorance of Assistant-pointsman Sharp, but foreman carriage-shunter Free was almost equally to blame for entrusting such a responsible duty to an incompetent man. Assistant-guard Simpson was alone responsible for the accident at Lithgow Valley, and Guard Carson for the accident at Collingwood Branch. To put a stop to such cases of gross negligence, resulting in considerable damage to property and danger to human life, I feel called upon to recommend that Sharp, Simpson, and Carson be dismissed, and that Free be disrated.

J.R., 13/12/77.

## MINUTE of Mr. Secretary Combes.

IN my opinion my successor should carry this recommendation out.

E.C., 14/12/77.

## MINUTE of Mr. Secretary Sutherland.

*Subject:* Accidents at Lithgow, 4th November, 1877. Redfern Station, 5th November, 1877, and at Liverpool, 9th November, 1877.

I FIND that in a Minute, dated the 13th December, 1877, the Commissioner recommends that of the men in fault in these cases, Simpson for Lithgow accident, Sharp for Redfern accident, and Carson for Liverpool accident, be dismissed, and that Foreman Shunter Free for Redfern accident be disrated. My predecessor in a Minute, dated 14th December, 1877, says "in my opinion my successor should carry the recommendation out."

It appears to me however, that in writing these Minutes, both the Commissioner and the Minister must have forgotten the action already taken, for I see on reference to the papers that Simpson was dismissed by the Commissioner on the 4th December last, and Sharp on the 5th December; Foreman Free was at the same time fined 40s. for his part in the accident at Redfern.

I do not see how I can dismiss men already dismissed, nor reopen Free's case for the purpose of increasing the punishment inflicted upon him.

The only case undealt with is that of Carson's for Liverpool accident. The Acting Traffic Manager recommends, on the 29th November, 1877, that he be disrated and wages reduced 1s. a day. The Commissioner it would appear approved this at first but erased the word "approved," and asked the question "Is this his first offence?" Carson's history in the Department is then given, by which it appears that he has been six years in the service as porter at Petersham, Sydney, and Parramatta Junction, and finally as Assistant Guard, and that his name for the whole period does not appear in the offence book. It appeared to me singular that whereas the Commissioner was about adopting on the 4th December the recommendation of the Acting Traffic Manager in this case, he should, on the 13th December, having in the interval been furnished with reasons (if previous good conduct is to influence decisions in such cases) for the exercise of lenity, recommend the extreme punishment of dismissal. This apparent inconsistency and the excellent character borne by Carson induced me to look closely into the case, and I rise from a careful perusal of the papers with the conviction that though Carson is to blame he is not alone to blame, but that the engine driver either for want of preliminary care in first ascertaining his load, or afterwards by over-estimating the power of his engine to control the load, contributed in a large degree to the accident.

Carson it appears to me is to blame for attaching to the train, unnecessarily, six trucks, which were not required at Collingwood, and which he should have attached to the up train on the return of the engine to Liverpool; beyond this there is no satisfactory evidence of his culpability. He states that he dropped the breaks of the trucks, and where there were pins he used them; three parts of the breaks were pinned down. The enginemen state that the breaks were dropped with the exception of one, but that only one break was pinned. Both statements may be true, the guard may have pinned the breaks down, and when the enginemen examined them *after* the accident, the pins may have been absent. It must be remembered that the collision was a very severe one, and a sudden jerk (in this case it smashed the tender) would knock the pins out. At all events the only evidence opposed to the guard's statement is that of the enginemen, who, if they could not have shown the guard to be in fault, must have accepted the whole responsibility of the accident.

Now it appears that the engine employed was the new American engine which was out on trial; it had never been down the Collingwood Branch before, and this branch is difficult to work, being on a gradient of some severity. Surely, under these circumstances, the driver should have been most careful in ascertaining what his load was before starting, but by his own evidence it appears that he was altogether ignorant on the point. The guard says he was not asked the number of trucks; the driver says he asked him, and he replied "he thought six." After we had started I again asked him, and he said "I do not know how many is on." It was clearly the duty of the engine-driver to have ascertained his load in a more definite way than this.

The train started with fifteen loaded trucks, the driver says "very cautiously," but when half-way down the engine was overpowered. I think there is reason for believing that the train was not taken cautiously down. We have it on record that this engine is a very powerful one, able, it is asserted, to do as much as or more work than any English built engine on our lines. Now there is evidence that (on a wet morning even) one of the ordinary engines has taken down this branch twenty-four loaded trucks with safety, and twenty loaded trucks have been taken down it without an engine at all, but with the aid only of a large break-van.

Under all these circumstances I am forced to the conclusion that in the investigation of this case a failure in arriving at the true facts has been exhibited, and I think Mr. Mason should take an early opportunity of ascertaining what the load really is that this engine, when being driven cautiously, can take down the Collingwood Branch.

Even

Even with the view of Carson's culpability, taken by the Commissioner, I do not think that the Department would be wise in its own interest to take the extreme step of dismissing him. The man has been six years in our employment, and has never before committed a mistake. Mr. Carlisle says he will make a good railway man. It is not sound policy, nor conducive to safety to dismiss men for a first offence if a less penalty can serve, because men with railway experience are not so easily procured, and by dismissal the Department loses the practical knowledge which it may have taken the man years to attain.

I think that Carson's case will be met by my approving of the recommendation of the Acting Traffic Manager, viz., that he be disrated, and fined a shilling a day, say for six months.

JOHN SUTHERLAND,  
Jan. 10th, 1878.

## No. 1.

## Answer to Question in Legislative Assembly.

(8.) Mr. Carlisle, Acting Traffic Manager:—Mr. Hungerford asked the Secretary for Public Works, pursuant to Notice,—Did Mr. Carlisle, Acting Traffic Manager, after the Working Orders were withdrawn, issue instructions that the Line-clear Reports were to be observed as formerly; and if so, will the Government lay the papers referring to the matter upon the Table of the House?

*Mr. Burns* answered,—It appears that Mr. Carlisle made some inquiry as to whether Rule 152 was being observed, Mr. Watson, the Telegraph Line Inspector, having informed him that some of the Station-masters were not complying with it. Inspector Higgs was instructed to see to the matter; and Station-masters at Mount Victoria, Blue Mountains, Katoomba, and Clarence Siding were also telegraphed to by Mr. Carlisle. Some correspondence was carried on from that date (1st December) till 29th January on the subject, but nothing definite appears to have been arranged. I will lay copies of the papers upon the Table.

## No. 5.

## Traffic Manager to Station-master, Mount Victoria.

MR. INSPECTOR WATSON informs me that you are not complying with the instructions under Rule 152 with reference to signalling trains. As this is a most important rule, it must be attended to at once. Let me have your report by return.

THOS. CARLISLE, 12/1/78.

No. 6.

No. 6.

Memo. from Telegraph Operator, Mount Victoria.

Mount Victoria, 13 January, 1878.

With reference to the above, I beg to state that the departure of all trains is telegraphed from this station, and, when necessary, line-clear obtained (that is, for special trains and trains running out of time) ; by my reading that is all that is required by Rule 152.

When trains are running to time I do not see that line-clear is required, nor is there any provision for it in the above rule, except when trains are *due in an opposite direction*. As regards the safe working of trains, I will see that no accident happens.

Please let me know if my reading of the above rule is correct.

Yours obediently,  
M. J. FITZGERALD.

Traffic Manager, Redfern.

Mr. Higgs to inquire and report on this matter, as I do not understand the exceptions-referred to by the Station-master, Mount Victoria.—THOS. CARLISLE, 16/1/78.  
Bathurst.

Mr. Thomson will please report on this matter as to the reading of the *latter* part of Rule 152, as mentioned in this minute.—ED. HIGGS, T. Inspector, 22/1/78.  
Mount Victoria.

Report attached.—JOHN R. THOMSON, 23/1/78.  
Inspector Higgs.

No. 7.

Station-master, Mount Victoria, to Traffic Manager.

Sir, Mount Victoria, 23 January, 1878.

With reference to minute paper attached, requesting me to explain the reading of Rule 152, I have the honor to inform you that the rule referred to clearly shows the necessity for obtaining line-clear when trains are due in an opposite direction. If the first part of the rule was taken away from the latter I maintain that no train could leave without line-clear, but the first and second part of the rule is one, and should be read as such. As an illustration of unnecessary work in writing inwards and outwards line-clear messages, I would respectfully draw your attention to the following :—Asking line-clear for No. 8 up passenger train running to time, and failing to get line-clear, to detain that train. I should like to know what train could leave Katoomba in the face of the up passenger running to time without first obtaining line-clear under special order. I think this should prove to your satisfaction that trains are worked safely under this rule, which I consider to be a most important one, and, if properly understood and acted up to, there would be no fear of any accident occurring on the single lines. All trains are telegraphed out, and line-clear obtained for any train, when necessary, under Rule 152.

There was a previous record on this matter, but which I noticed had not been made a minute of, and which I reported upon last month, giving the same reading as I have given now.

Yours obediently,  
JOHN R. THOMSON.

Mr. Thomson's explanation herewith.—ED. HIGGS, T. Inspector, 25/1/78. To Manager.

No. 8.

Traffic Manager to Station-master, Mount Victoria.

MR. THOMSON'S reading of the rule is not required. I merely wish to know whether Mr. Thomson "ascertains by telegraph from the next station in advance that the *line is clear before allowing any train to leave his station,*" that is, when the telegraph is in working order.

THOS. CARLISLE,  
29/1/78.

Yes ; as per instructions contained in Rule 152.—JOHN R. THOMSON, 31/1/78.  
Traffic Manager.

1877-8.

10. Minutes of Commissioner and Engineers, arranging for the necessary additional improvements. Minute by Superintendent, Way and Works, stating room had been finished to satisfaction of Mr. Quinn. 16 September, 1875 ...	5
11. Minutes between Commissioner, Traffic Manager, and Traffic Auditor, regarding collection of the increased rent ...	5

## REFRESHMENT-ROOM AT RAILWAY STATION, SINGLETON.

## No. 1.

## Mr. T. B. Rubie to The Commissioner.

Sir,

George-street, Singleton, 20 January, 1875.

There is a portion of the railway premises at Singleton occupied as a restaurant, for which the restaurateur pays £13 per annum.

Allow me to ask whether the Government would be offended with the person who might offer £60 per annum for the same premises.

If it be regarded in anywise as an intrusion to do so, or an impertinent interference with the *statu quo* of the present lessee, then I beg to be considered as declining to interfere.

I have, &amp;c.,

THOMAS B. RUBIE.

P.S.—I am not in the trade but simply wish to re-let.

The present lessee of the rooms at Singleton is paying 5s. a week—£13 a year as stated; his name is J. P. Quinn.

Singleton was included in the refreshment stations advertised for lease. The offers received were from J. P. Quinn, £70 a year; J. Maguire, £50 8s. a year; Helen Russell, £52 a year, with right of selling spirits—£30 a year otherwise. Nothing was done as regards Singleton Station, and Quinn has remained in possession at 5s. a week. As the question of the rent has now been raised, and £60 offered for the room as it now stands, I think Quinn should be called upon to pay the amount at which he tendered, viz., £70 a year.—C.A.G., 27/1/75.

Ask him if he is prepared to abide by his tender.—J.R., 10/2/75.

## No. 2.

## The Commissioner to Mr. J. P. Quinn.

Sir,

Department of Public Works, Railway Branch, Sydney, 12 February, 1875.

An offer having been received to lease the refreshment-room now occupied by you at the Singleton Station, I have the honor to request that you will be good enough to inform me at your earliest convenience whether you are prepared to abide by your tender of date 10th October, 1873, offering to pay the sum of £70 per annum for the use of the premises in question?

I have, &amp;c.,

JOHN RAE,

Commissioner for Railways.

## No. 3.

## Telegram from Mr. J. P. Quinn to The Commissioner.

Singleton, 16 February, 1875.

My tender will stand good if alteration is necessary; promised by late Minister no change whilst giving satisfaction; please forward copy of condition under which tender was sent in.

See Mr. Rubie's offer to give £60 a year. It was in the interest of Mr. Quinn, the present holder, that the proposal was made that he should enter upon new arrangements in accordance with his tender.—C.A.G.

Has copy of conditions been forwarded?—J.R., 3/3/75. Copy forwarded, 4/3/75.

## No. 4.

## The Commissioner to Mr. J. P. Quinn.

Sir,

Department of Public Works, Railway Branch, 4 March, 1875.

In accordance with the request contained in your telegram of the 16th ultimo, I enclose herein copy of the conditions to be observed when tendering to rent the refreshment-room at the Singleton Railway Station.

I have, &amp;c.,

JOHN RAE,

Commissioner for Railways.

## [Enclosure to No. 4.]

New South Wales Railways—Tender for Refreshment-rooms.

To the Commissioner for Railways.

I do hereby propose to rent the several refreshment-rooms mentioned underneath, in accordance with the terms and conditions hereto annexed, at the following rates, namely:—

Great North Line—The Singleton Station ..... £5 16s. 8d.

And in case this tender, or any portion of it, be accepted, I do hereby undertake to execute a counterpart lease for due performance of same, in accordance with the aforesaid terms and conditions.

Dated this 10th day of October, 1873.

JAMES P. QUINN,

Railway Refreshment-room,  
Singleton Station.  
New

## New South Wales Railways.

THE Commissioner for Railways invites tenders for renting the refreshment-rooms on the Great Southern, Western, and Northern Lines, viz. :—

South. Sydney. Mittagong.	West. Penrith. Mount Victoria.	North. Singleton.
---------------------------------	--------------------------------------	----------------------

The rooms to be occupied can be seen by intending tenderers.

Tenders will be received for each station separately, or for all together,

The term will be from the 1st November, 1873, until the 31st December, 1876.

The highest or any tender will not necessarily be accepted.

Tenderers will be required to transmit with their tender, as a deposit, a receipt from the Treasury for an amount equal to 10 per cent. on the amount of the rent for twelve calendar months. Such deposit, in the case of the tenders accepted, to be held by the Commissioner as security for the due fulfilment of the conditions hereinafter mentioned, and to be absolutely forfeited in the event of a breach of any such conditions; or if the tenderer refuses to carry out or abide by his tender when accepted.

Unsuccessful tenderers will have the amounts deposited by them returned.

A lease of the premises successfully tendered for will be executed by the Commissioner; such lease to contain the following conditions, and all necessary, proper, and usual covenants and provisions; and the lessee will have to execute a counterpart thereof.

The following are the Conditions of Lease :—

1. The rooms to be occupied will be fitted up by the Commissioner with bar and all fixtures, and shall in all other respects be furnished by the lessee in a suitable manner, to the satisfaction of the Commissioner.
2. The lessee shall pay the rent in advance to the Station-master each calendar month.
3. The lessee shall have no right of claim for compensation against the Commissioner, if the number of trains be reduced, or if any alteration of time-table be made lessening the number of trains stopping at any particular station.
4. The rooms shall be kept clean and in good repair by the lessee during possession.
5. The rooms shall be kept open and refreshments supplied to all passengers requiring the same who may arrive or depart by any of the trains during the day or night.
6. All servants, or other persons employed by the lessee, shall be subject to the Railway By-laws, and shall be approved of by the Commissioner, who may insist on the dismissal of any servant if he thinks fit.
7. The lessee shall provide the best description and quality of refreshments at fair and reasonable prices, to be approved of by the Commissioner, and shall exhibit in each refreshment-room a list of refreshments obtainable and the prices of same, and shall keep any kind of refreshment which the Commissioner for Railways may from time to time direct.
8. Hot tea and coffee to be ready at all times while the rooms are open; also sandwiches, chops, steaks, soups, and cold meat. ~~The lessee will be bound to keep a sufficient quantity of suitable spirituous and fermented liquors~~ and other refreshments, and the lessee must supply the same at reasonable prices. He must also have in readiness for the through trains, for passengers who may wish to take their refreshment in the carriage, small baskets, each holding an assorted cold lunch and dessert for one—with all conveniences for eating same. These baskets, &c., will be collected at the termini, and returned to the lessee free of charge. In all other respects the lessee will be required to use his best endeavours to meet the convenience and accommodation of the public, and to keep and conduct the rooms in a proper and orderly manner.
9. Gas or other lights must be provided by the lessee at his own cost.
10. The lessee will have to pay for the carriage of all goods and stores he may require to be conveyed over the railway for the various stations, at the rates charged to the public. No "free passes" will be granted to any agent or servant of the lessee, but the lessee himself will be allowed a free pass over the line upon which his refreshment-room is situated.
11. The lessee shall not assign or transfer his lease, or underlet the rooms or any part thereof, without the consent of the Commissioner in writing under his seal.
12. The Commissioner will have the power of determining the lease at any time on giving one calendar month's notice in writing to the lessee.
13. The lessee shall not be liable for any Municipal rate.
14. In the event of the rent being unpaid for seven days after the same shall have become due, or in the event of any of the lessee's covenants not being complied with, or if the lessee shall become or be adjudged bankrupt or insolvent, or shall assign his estate for the benefit of his creditors, the lease shall be forfeited, and the Commissioner for Railways, by his agents or officers, shall have the power, without any demand, to enter and take possession of the premises, and every person to expel therefrom in like manner as a Sheriff might do under a writ of *habere facias possessionem*. And in the case of any action being brought in respect of such entry, the Commissioner or his agent may plead leave and license, and the lease shall be conclusive evidence of such leave and license.

## No. 5.

## Mr. J. P. Quinn to The Commissioner.

Sir,

Sydney, 15 March, 1875.

Referring to your letter, furnishing me at my request with a copy of the conditions under which the refreshment-room at Singleton is to be leased, I have the honor to state that I am prepared to abide by my tender which I sent in some months ago for the lease of the room in question, with the following alteration :—The rent to be £60 a-year instead of £70, so long as I am not permitted to sell spirituous and fermented liquors. If this privilege is accorded to me I will pay the higher rate at any time during the currency of my lease.

The lease to be for five years—to take effect from the time the improvements are completed.

I enclose a cheque for £6 as security for the due observance of the conditions in terms thereof.

I have, &c.,

JAMES P. QUINN.

I recommend the acceptance of this tender. Quinn has hitherto given great satisfaction to the public.—J.R., 16/3/75.

Approved.—J.L., 6/4/75.

This is accepted on the terms stated in letter from him of 15th March, 1875.—J.R.

Write to Mr. Quinn, accepting his tender.—C.A.G., 19/4/75.

## No. 6.

The Commissioner to Mr. J. P. Quinn.

Sir,

Department of Public Works, Railway Branch, 24 April, 1875.

In reference to your letter of the 15th ultimo, I have the honor to inform you that your amended tender to lease the refreshment-room at the Singleton Railway Station for five years, at £60 per annum, is accepted.

The rent will commence from the time the additions to be made by the Commissioner are completed, and will have to be paid monthly, in advance, to the Station-master, as provided in the specification.

I have to refer you to the Crown Solicitor for the purpose of executing the required agreement, which will be in terms of the conditions of lease.

I have, &amp;c.,

JOHN RAE,

Commissioner for Railways.

## No. 7.

## Minutes of The Commissioner and Engineers.

THE rooms at Singleton to be fitted up similar to the rooms at Mittagong and Mount Victoria, *i.e.*, a kitchen to be provided and a cooking-stove put in. The rent will commence from the date these additions are completed.—J.R., B.C., 28/4/75. Mr. Whitton.

Mr. Bewick to carry out in accordance with the views of the lessee, and charge the cost to working expenses, schedule G.—J.W., *per* W.H.Q., 6 May, 1875. To be returned.

The parcel-room, which adjoins the refreshment-room, can be converted into a kitchen by making a parcels-room of the lamp-room, and erecting a small lamp-room at the south end of the building. It will, also, I think, be necessary to make an opening in the partition-wall, and put in a door between the proposed kitchen and refreshment-room. If the Engineer-in-Chief approves of this arrangement I will have it carried out at once.—G.B., 12/5/75.

Commissioner.—J.W., *per* W.H.Q., 14 May, 1875.

Approved.—J.R., 26/5/75. Mr. Whitton, B.C.

Mr. Bewick,—To be returned.—W.H.Q., 27/5/77.

The parcel-room has been fitted up as a kitchen, and handed over to the lessee. The erection of the lamp-room is in hand, and will be completed in a few days.—G.B., 2/7/75.

Commissioner.—J.W., *per* W.H.Q., 6/7/75.

## No. 8.

## Minutes between The Commissioner and Traffic Manager.

Government Railways.—Minute Paper.

*Refreshment-room at Singleton.*

MR. WHITTON reports that the alterations required have been made.

Mr. Quinn now becomes the lessee for five years, at a rental of £60 a year, payable monthly in advance to Station-master.

The rent will be payable from 1st instant.

Mr. Higgs to instruct Station-master to collect regularly.—C.A.G., B.C., 8/7/75.

The lessee objects to pay the increased rental. He states that the room is not fitted up in accordance with verbal arrangements made with the Commissioner. Mr. Bewick declines doing anything else unless he has further instructions in the matter.

I am informed that the counter requires some alterations to suit the views of the lessee.

J. HIGGS, 17/7/75.

## No. 9.

Mr. J. P. Quinn to The Commissioner.

Sir,

Sydney, 16 July, 1875.

Having received notice from Mr. Verden, the Station-master at Singleton, that my room was completed and that the increased rent would take effect from the 1st instant, I beg respectfully to state that the alterations, as set forth in the condition of lease, have not up to the present time been done as per printed form. I have no wish to interfere with instructions given to collect the rent.

I beg to state that I have paid the old rent to the 12th instant, and would pray that the new rent of £60 per annum be not enforced until the requisite alterations are completed.

A stove has been set and a door-way made to connect the kitchen with refreshment-room. No bar or fixtures have been made, although measurements were taken; there is an old parcels counter which I have used since I have been in the room, which would be now unsuitable under the new arrangements, being too high, and taking up too much room. A proper bar and fixtures are necessary to make the room complete.

It is my wish to act in every way to your satisfaction, and carry out my duties in a suitable manner. I am prepared to sign the lease when required, and would beg that everything may be completed as soon as convenient.

I have, &amp;c.,

JAMES P. QUINN.

No. 10.

## No. 10.

## Minutes of The Commissioner and Engineers.

SEE conditions of lease herewith.

The Commissioner is to fit up the rooms with bar and all fixtures; this latter includes necessary shelving, &c. Until this be done the Commissioner cannot demand rent.—C.A.G., 19/7/75.

Let the work be carried out as agreed upon.—J.R., 20/7/75. Mr. Whitton, B.C.

I know of no expenditure more unwise or unnecessary than the fitting up of these refreshment-rooms. The Singleton station is entirely spoilt in trying to provide refreshments for a very unsympathising travelling public. Sydney station has been rendered extremely inconvenient after spending hundreds of pounds—in fact throwing hundreds of pounds away. I have throughout opposed this wasteful expenditure, and I very much doubt whether I am justified in certifying amounts for these alterations without the express instructions of the Minister. The rooms so far as my observation has extended are conducted in a most unsatisfactory manner, and with the present short lines are perfectly unnecessary.

Refreshment-rooms will no doubt be required at Bathurst, Goulburn, and Murrurundi, but they should be kept by the Commissioner without the intervention of a contractor.

An agreement having been made in this case I will forward the papers to Mr. Bewick.

J.W., 23/7/75.

Mr. Bewick, to be returned.—W.H.Q., 24/7/75.

I have put this work in hand.—G.B., 2/8/75.

Commissioner.—J.W., per W.H.Q., 10/8/75.

End of month—to ascertain if work has been completed with a view to the collection of rent.—C.A.G., 13/8/75.

Mr. Quodling.—C.A.G., B.C., 14/9/75. Mr. Bewick,—To be returned.

This work has been completed to the satisfaction, I believe, of the lessee.—G.B., 16/9/75.

Commissioner.—J.W., per W.H.Q., 20/9/75.

## No. 11.

## Minutes between The Commissioner, Traffic Manager, and Traffic Auditor.

See 75-4,598 herewith. Mr. Bewick states on 16/9/75: "This work has been completed to the satisfaction, I believe, of the lessee." Mr. Higgs will now see that the increased rent is collected say from this date.—C.A.G., 20/9/75. Noted.—J. HIGGS, 21/9/75. Traffic Auditor.—B.C., C.A.G. Mr. Seale to note.—W.V.R., 24/9/75. Noted.—JOHN SEALE, 25/9/75. The Secretary.—W.V.R., 27/9/75.

1877-8.

76. Letter from Commissioner to Crown Solicitor to advise if other than New Lambton coal can be taken. 28 September, 1877	31
77. Letter from Crown Solicitor, enclosing the Attorney General's opinion. 2 October, 1877	31

SUPPLY OF COAL FOR RAILWAY PURPOSES FOR 1877.

No. 1.

The Manager, Bowenfels Coal Mining and Copper Smelting Company, to  
The Commissioner for Railways.

Bowenfels Coal Mining and Copper Smelting Company (Limited),  
Sydney, 23 November, 1876.

Sir, Tenders having been gazetted for the supply of engine coal for the year 1877, and as we intend to compete for the contract, we would respectfully request that you would take samples,—the quality of our coal being vastly improved.

We have no doubt that you would see the injustice of classing our coal according to the sample sent in 1875.

I have, &c.,  
W. H. BOGIE,  
Manager.

Refer him to specification. No coal is excluded. Samples will be received.—C.A.G., 28/11/76.  
W. H. Bogie, 30/11/76. Mr. Mason.—C.A.G., B.C., 30/11/76. Commissioner.—W.M., 2/12/76.

No. 2.

The Commissioner for Railways to The Manager, Bowenfels Coal Mining and  
Copper Smelting Company.

Sir, Department of Public Works, Railway Branch, 30 November, 1876.

In reference to your letter of the 23rd instant, asking permission to forward samples of the Bowenfels Company's coal with a view to tendering for the supply of engine coal for 1877, I have the honor to refer you to the specification, by which you will see that no coal is excluded. Samples from your Company will be received.

I have, &c.,  
JOHN RAE,  
Commissioner for Railways.

No. 3.

Nott, Ward, & Co. to The Commissioner for Railways.

Dear Sir, Sydney, 25 November, 1876.

We purpose tendering for the supply of engine coal for G.N. Railway for 1877; we have the same pits that Pearse & Nott supplied the railway from during 1875, and purpose supplying you with coal from those pits. Will it be necessary for us to send in a sample? Will call on Monday for an answer.

Yours truly,  
NOTT, WARD, & CO.

The specification for supply of coal is now on view at my office, whence all particulars can be obtained.—W.M., 25/11/76. Commn. Inform. Sample of 10 tons required.—J.R., 27/11/76.  
Informed verbally.—27/11/76.

No. 4.

The Under Secretary for Public Works to The Commissioner for Railways.

Sir, Department of Public Works, Sydney, 5 December, 1876.

The tenders, eleven in number, for the work specified in the margin, are referred to you for report, and you will have the goodness, as early as possible, to return them to me direct, for submission to the Minister.

I have, &c.,  
JOHN RAE.

[Enclosure 1 in No. 4.]

Mr. T. Wilton to The Commissioner for Railways.

Sir, 305, George-street, Sydney, 4 December, 1876.

On behalf of the Lithgow Valley Colliery Company, I beg to tender for the supply of Western coal required for engines on the Southern, Western, and Richmond Railways during the year 1877, to be delivered at the Company's siding in trucks according to the specification, at four shillings and sixpence (4s. 6d.) per ton.

I have, &c.,  
THOMAS WILTON.

MEMO.—In the event of my tender being accepted, I beg to give the names of Messrs. John Busby and Edward Gell (of Bathurst), as sureties in terms of the specification for the due performance of the Contract.

[Enclosure 2 in No. 4.]

The Manager, Vale of Clwydd Coal Mining Company, to The Commissioner for Railways.

TENDERS for supply of Engine Coal for the Great Southern, Western, and Richmond Railways, for the year 1877.

Sir, 4, Park-street, Sydney, 4 December, 1876.

In accordance with notice in the *Government Gazette*, I beg, on behalf of the Vale of Clwydd Coal Mining Company, to tender for the supply of the above coal in terms of specification, at five shillings and threepence per ton, delivered at the Company's siding.

I have, &c.,  
HENRY FAIRFAX,  
Manager.

MEMORANDUM.—

MEMORANDUM.—In the event of this tender being accepted, we the undersigned agree to be answerable for the due performance of the contract, and undertake that we will severally execute and deliver a bond to Her Majesty in a penal sum of one-tenth of the gross amount of the contract for securing such performance.

THOMAS SAYWELL.  
THOS. S. HUTCHINSON.

[Enclosure 3 in No. 4.]

Mr. W. Pitt to The Commissioner for Railways.

Eskbank Colliery, 1 December, 1876.

I, THE undersigned, do hereby tender for the supply of engine coal for the Southern, Western, and Richmond Railways for the year 1877, at the rate of (5s. 11d.) five shillings and elevenpence per ton in trucks in the Eskbank siding, and to deposit cash to the amount of the bond, or find sureties as may be required by the Commissioner for Railways.

WILLIAM PITT,  
Eskbank Colliery, Eskbank.

[Enclosure 4 in No. 4.]

Mr. T. Brown to The Commissioner for Railways.

Tender for Engine Coal.

Eskbank, 1 December, 1876.

I, THE undersigned, do hereby tender for the supply of engine coal on the Southern, Western, and Richmond Railways for the year 1877, at the rate of (5s. 6d.) five shillings and sixpence per ton, delivered in trucks at my siding at Eskbank; either to find sureties, or make a cash deposit, as may be required by the Commissioner for Railways.

THOMAS BROWN.

[Enclosure 5 in No. 4.]

The Manager, Bowenfels Coal Mining and Copper Smelting Company, to The Commissioner for Railways.

Bowenfels Coal Mining and Copper Smelting Company (Limited),

Offices, 84, King-street, Sydney, 4 December, 1876.

Sir,

On behalf of this Company I have the honor to tender for the supply of engine coal from Bowenfels, delivered at the coal sidings there, for the year 1877, at the undermentioned price, viz., four shillings and tenpence half-penny per ton; and beg to refer you to A. Thompson, Esq., J.P., 196, Pitt-street, and J. A. Lucas, Esq., Camperdown, who will become bondsmen, and execute the bond when called upon.

I have, &c.,  
W. H. BOGIE,  
Manager.

[Enclosure 6 in No. 4.]

The Proprietors, Alnwick Coal Mines, to The Commissioner for Railways.

Sir,

Sydney, 128, Elizabeth-street, 5 December, 1876.

We beg to tender for the supply of coal to the Great Northern, Southern, and Western Railways, as follows, viz. :—

Delivered in owner's trucks in Maitland .....	9s. per ton.
Delivered in owner's trucks in Newcastle .....	9s. 6d. per ton.
Delivered by "steam collier" on the Wharf in Darling Harbour .....	14s. 6d. per ton.

Messrs. William Hargraves, of the Pyrmont Foundry, and Frederick Charles Curlewis, of Hermsley, Geelong, Victoria, will become sureties with our Mr. Lucius O'Brien for the due performance of the contract. The coal to be supplied is that of the "Four-mile Creek" seam, now being worked by us at our mines.

We are, &c.,  
L. O'BRIEN & COMPANY,  
Proprietors, Alnwick Coal Mines.

[Enclosure 7 in No. 4.]

The Agents, Wollongong Colliery, to The Commissioner for Railways.

Tender for supply of engine coal for S.W. and R. Railways.

Sir,

Agency of the Wollongong Collieries, Sydney, 5 December, 1876.

In reference to your advertisement for the supply of coals (engine) for 1877,—We hereby tender to supply you with the quantities required of the best screened Wollongong coal, according to the specification of conditions which we have seen—at the rate of 14s. per ton.

We have, &c.,  
J. WARD & Co.,  
Agents, Wollongong Colliery.

In the event of the above tender being accepted, we offer as sureties for same the names of James Osborne, Esq., of Wollongong, William Speer, Esq., of Sydney.—J.W. & Co.

[Enclosure 8 in No. 4.]

The Secretary, Waratah Coal Company, to The Secretary for Public Works.

Tender for supply of engine coal to the Southern, Western, and Richmond Railways.

Sir,

Waratah Coal Company, Sydney, 5 December, 1876.

On behalf of the Waratah Coal Company I hereby beg to tender for the supply of Newcastle engine coal required during the year 1877 for the Southern, Western, and Richmond Railways at the following rate, viz. :—(17s.) seventeen shillings per ton of 2,240 lbs., delivered in the usual way, at the Government Wharf, Darling Harbour. The wharfage, if any, to be paid by the Government.

I have, &c.,  
D. N. JOUBERT,  
Secretary.

WE the undersigned hereby agree to be answerable for the due performance of the Contract, in the event of the within tender being accepted, and we undertake in that event that we will severally execute and deliver at the office of the Crown Solicitor in Sydney, within fourteen days from the usual notification of acceptance, a bond to Her Majesty in the penal sum of three hundred pounds (£300), for securing such performance,—

CH. SMITH.  
SAM. DICKINSON.  
Sydney, 5 December, 1876.

D. N. JOUBERT,  
Secretary, Waratah Coal Company.

[Enclosure

## [Enclosure 9 in No. 4.]

E. Vickery, Esq., to The Commissioner for Railways.

Tender for engine coal, G.S.W., and R. Railways.

Sir,

116, Pitt-street, Sydney, 5 December, 1876.  
 Having reference to your invitation for tenders in the *Gazette* of the 14th ultimo, for engine coal for 1877, for the Southern, Western, and Richmond Railways, I have the honor to offer to supply best screened coal from the new pit at Greta, as required, delivered on the wharf, Darling Harbour, for the sum of sixteen shillings and sixpence (16s. 6d.) per ton of 2,240 lbs. To be supplied in terms of specification. Attention is particularly called to the superior quality of the Greta coal from the new pit, and the Engineer-in-Chief of Existing Lines, as well as the foreman of Locomotives, are respectfully invited to inspect the coal in the mine; the seam is large and of uniform character. This pit is supplied with the best and most modern appliances, so that the coal must be thoroughly screened.

The coal from this pit is used for steam purposes, and while it produces no clinker is a remarkably clean coal, and burns to a white ash, of which it leaves an unusually small percentage.

According to Government analysis, as published in the Annual Report of the Department of Mines, the Greta coal is superior in quality to the noted Newcastle mines.

I have, &amp;c.,

E. VICKERY.

I beg to name as sureties:—John Elley Begg, Esq., J.P., Olive Bank, Glenmore; Gustavus J. Waterhouse, of Waverley.

## [Enclosure 10 in No. 4.]

The Secretary, Newcastle Wallsend Coal Company, to The Secretary for Public Works.

Sir,

Newcastle Wallsend Coal Company, Sydney, 5 December, 1876.

I beg to tender on behalf of this Company, in terms of specification, for the supply of engine coal for the Great Southern, Western, and Richmond Railways, for the year 1877, at the rate of (18s. 4d.) eighteen shillings and four pence net per ton.

Should any reduction take place in this Company's selling price at Newcastle during such supply, the Company will make a reduction of a like amount in the above price.

I beg to name Messrs. F. H. Dangar and M. Metcalfe, as sureties for the due performance of the contract.

I have, &amp;c.,

F. W. BINNEY.

Secretary.

## [Enclosure 11 in No. 4.]

Sydney, 5 December, 1877.

Tender for the supply of engine coal for the Great Southern, Western, and Richmond Railways for the year 1877. I beg to tender for the supply of the abovenamed lines, in terms of specification, exhibited to tenderers in the Railway Department, with coal from the New Lambton Colliery, Newcastle, at the rate of 17s. 6d. stg. per ton.

WM. SUMMERBELL.

Memo.—The New Lambton is a portion of the same seam as that lately worked by the Waratah Colliery, whose property it adjoins.

## No. 5.

The Under Secretary for Public Works to The Commissioner for Railways.

Sir,

Department of Public Works, Sydney, 5 December, 1876.

The tenders, seven in number, for the work specified in the margin, are referred to you for report, and you will have the goodness, as early as possible, to return them to me direct, for submission to the Minister.

I have, &amp;c.,

JOHN RAE.

Engine coals,  
1877, Great  
Northern Rail-  
way.

## [Enclosure 1 in No. 5.]

The Secretary, Newcastle Wallsend Coal Company, to The Secretary for Public Works.

Sir,

Newcastle Wallsend Coal Company, Sydney, 5 December, 1876.

I beg to tender on behalf of this Company, in terms of specification, for the supply of engine coal for the Great Northern Railway, for the year 1877, at the rate of (14s.) fourteen shillings nett per ton.

Should any reduction take place in this Company's selling price at Newcastle during such supply, the Company will make a reduction of a like amount in the above price.

I beg to name Messrs. F. H. Dangar and M. Metcalfe as sureties for the due performance of the contract.

I have, &amp;c.,

F. W. BINNEY,

Secretary.

## [Enclosure 2 in No. 5.]

The Secretary, Waratah Coal Company, to The Secretary for Public Works.

Tender for the supply of engine coal to the Great Northern Railway.

Sir,

Waratah Coal Company, Sydney, 5 December, 1876.

On behalf of the Waratah Coal Company, I hereby beg to tender for the supply of Newcastle engine coal, required during the year 1877 for the Great Northern Railway, at the following rate, viz.:

(13/6) Thirteen shillings and sixpence per ton of 2,240 lbs., delivered in the usual way at Newcastle, or at the junction of the Waratah Coal Company's and Great Northern Railways.

I have, &amp;c.,

D. N. JOUBERT,

Secretary.

We, the undersigned, hereby agree to be answerable for the due performance of the contract, in event of the within tender being accepted, and we undertake, in that event, that we will severally execute and deliver at the office of the Crown Solicitor in Sydney, within fourteen days from the usual notification of acceptance a bond to Her Majesty, in the penal sum of (£300) three hundred pounds sterling, for securing such performance.

CH. SMITH.

SAM. DICKINSON.

D. N. JOUBERT,

Secretary, Waratah Coal Company.

Sydney, 5th December, 1876.

[Enclosure

## [Enclosure 3 in No. 5.]

Nott, Ward, &amp; Co. to The Commissioner for Railways.

Sir, West Maitland, 4 December, 1876.  
 We beg to tender to supply the G. N. Railway with engine coal for the year 1877; we would be willing to take the contract for the 10,000 tons, or for the coal required, north of East Maitland, at nine shillings and three pence (9/3) per ton, delivered in trucks at East Maitland.  
 Should our tender be accepted, we would offer as our sureties for the due performance of our contract, Messrs. Isaac Gorrick and Mr. Samuel Baker, both of West Maitland.

Yours truly,  
 NOTT, WARD, & CO.

## [Enclosure 4 in No. 5.]

Mr. E. Vickery to The Commissioner for Railways.  
 Tender for Engine Coal for Great Northern Railway.

Sir, Pitt-street, Sydney, 5 December, 1876.  
 Pursuant to advertisement in the *Government Gazette*, calling for tenders for engine coal for 1877 for the Great Northern Railway, I have the honor to offer best screened coal from the Greta new pit in the quantities required, delivered from the Greta trucks on to the coal stage, at Honeysuckle Point, at twelve shillings (12s.) per ton of 2,240 lbs., to be supplied in terms of specification.

I beg to name as sureties—John Elly Begg, Esq., J.P., Glenmore; Gustavus J. Waterhouse, Esq., Waverley.

I have, &c.,  
 E. VICKERY.

P.S.—I also offer to supply similar coal into the Commissioners' trucks at Greta at 9s. 8d. per ton of 2,240 lbs., or I will supply it in Greta trucks at nine shillings and ten pence (9s. 10d.) per ton of 2,240 lbs., leaving the Railway Department to do the traction anywhere along the line where they may require the coal.

Particular attention is called to the superior quality of Greta coal from the new pit, which is 260 feet deeper than the pit formerly worked. The seam is large and of uniform character. The Engineer-in-Chief is respectfully invited to inspect, or have inspected, the coal seam being worked.

The pit is supplied with the best and most modern appliances, and no coal can be sent away without being properly screened.

The coal from the new pit produces no clinker, is remarkably clean, and burns to a white ash, of which it leaves an unusually small per centage.

By the published Government analysis in the annual report of the Department of Mines, it will be seen that the Greta coal is superior in quality to that from the other Newcastle mines.

E. VICKERY.

## [Enclosure 5 in No. 5.]

Mr. J. Mitchell to The Secretary for Public Works.

Sir, Dunmore, East Maitland, 5 December, 1876.  
 I hereby tender to supply the G. N. Railway, north of East Maitland, for the year 1877, with best screened coal, according to specification from my mine at Four-mile Creek, at the rate of 11s. 9d. per ton of 2,240 lbs., the said coal to be delivered into Government trucks at East Maitland Station, as required.

I propose as my sureties,—Joseph Pearse, Esq., Dunmore; James Price, Esq., East Maitland.

Yours, &c.,  
 JOHN MITCHELL

## [Enclosure 6 in No. 5.]

MEMO.—Messrs. L. O'Brien and Company Tenders: Coal from "Four-mile Creek Seam;" delivered in owners' trucks Maitland, at 9s. per ton; delivered in owners' trucks, Newcastle, at 9s. 6d. per ton.  
 See tender in Schedule for engine coals, Great Northern Railway of even date.

G.H.,  
 5/12/76.

## [Enclosure 7 in No. 5.]

Sydney, 5 December, 1876.

Tender for the supply of engine coal for the Great Northern Railway, for the year 1877.

I BEG to tender for the supply of the abovesaid line, in terms of specification exhibited to tenderers in the Railway Department, with coal from the New Lambton Colliery, Newcastle, at the rate of 13s. 1d. sterling per ton.

WM. SUMMERBELL.

Memo.—The "New Lambton" is a portion of the same seam as that lately worked by the "Waratah" colliery, whose property it adjoins.

## No. 6.

## Memorandum from The Engineer for Existing Lines to Mr. T. Brown.

Government Railways, Existing Lines, Engineer's Branch, 13 December, 1876.

REFERRING to your Tender for supplying coal for the Great Southern, Western, and Richmond Railways, I beg to inform you that it is my intention to test the quality of that which you propose to supply.

I will therefore feel obliged if you will inform me from which pit or mine you propose to supply it, and also to authorize me or anyone on my behalf to intercept in transit any coal which you may be sending to the Sydney Market for the purpose of testing its quality.

The Manager, Vale of Clwydd Coal Mine, to The Engineer for Existing Lines.

Sir,

In reply to your memo. of yesterday's date (No. 76/760) I beg to inform you that the mine I propose supplying from for engine supply, Great Southern, Western, and Richmond Railways, is the Vale of Clwydd Co's. Mine, Lithgow.

As requested, I hand you herein a memo., authorizing you or your appointee to intercept in transit any coal from the above mine, for the purpose of testing its quality.

I have, &c.,  
HENRY FAIRFAX,  
Manager.

Sydney, 14 December, 1876.

I HEREBY authorize and empower William Mason, Esq., Engineer for Existing Lines of Railways, or any person acting on his behalf, to intercept, in transit, and use for testing purposes any coal from the Vale of Clywdd Company's Mine, Lithgow.

HENRY FAIRFAX,  
Manager.

Engineer for Existing Lines to The Locomotive Foreman, Great Northern Railway.

Government Railways, Existing Lines, Engineer's Branch, 18 December, 1876.

The undermentioned have consented to have the coals, which they tender to supply tested. (See communications from them herewith):—

Mr. William Summerbell, New Lambton.  
Messrs. Nott, Ward, & Co.  
Mr. John Mitchell, Four-mile Creek.  
Messrs. Jos. Ward & Co., Wollongong.  
Mr. E. Vickery, Greta New Pit.  
Mr. J. Bogie, Bowenfels Coal Company.  
Mr. L. O'Brien, Four-mile Creek.

[Enclosure 1 in No. 8.]

Mr. W. Summerbell to The Engineer for Existing Lines.

Sir, Sydney, 18 December, 1876.  
In answer to your memorandum of 14th instant, I have to inform you that I purpose to supply the Government Railways with coals from the New Lambton Pit, Newcastle, should my tender be accepted.  
I enclose you order on Mr. J. C. Dibbs of Newcastle for any New Lambton coals you may require for the purpose of testing their quality.

Yours truly,  
WM. SUMMERBELL.

Mr. W. Summerbell to The Manager, New Lambton Coal Co.

Dear Sir, Sydney, 18 December, 1876.  
Please deliver to Wm. Mason, Esq., on his order, any coals from the New Lambton Mine that he may require for the purpose of testing their quality for supply of the Great Northern Railway contract.

Yours truly,  
WM. SUMMERBELL.

[Enclosure 2 in No. 8 is mislaid.]

[Enclosure 3 in No. 8.]

Mr. J. Mitchell to The Engineer for Existing Lines.

Sir, Dunmore, East Maitland, 16 December, 1876.  
I am in receipt of yours of the 14th, and in reply beg to say I intend to supply from Ingaree Mine, Four-mile Creek, near East Maitland, and will be glad to load under your inspection, or any one you may appoint, any number of loads of coal for testing for the railway, as it comes from the pit's mouth. I send a large quantity of unscreened coal, and the coal I intend to supply the Great Northern Railway with will be specially screened through a screen the width specified in the specification.

Kindly let me know when the party will be up, and I will meet him at East Maitland Station, and convey him to the mine for the purpose of inspecting loading and transit.

Yours, &c.,  
JOHN MITCHELL.

Mr. Boag.—W.M., 18/12/76. Seen, and returned.—TH. BOAG, 28/12/76.

The Agents, Wollongong Colliery, to The Engineer for Existing Lines.

Sir, Agency of the Wollongong Collieries, Sydney, 16 December, 1876.  
In reply to your memo. of 14th instant, we beg to inform you that we will supply the coals for contract for the Great Southern and Western Railway from the Wollongong Collieries.

We cannot give you a general order to intercept cargoes, because it would interfere with their special destinations, but as we have nearly always cargoes in port we will deliver the quantity you require as a sample within twenty-four hours notice at any time.

We are, &c.,  
JOSEPH WARD & CO.,  
Agents.

[Enclosure 5 in No. 8.]

Mr. E. Vickery to The Engineer for Existing Lines.

Sir, 116, Pitt-street, Sydney, 15 December, 1876.  
I have the honor to acknowledge your favour of 14th instant, and in reply beg to say that I offer to supply the coal as per tender out of the new pit at Greta, close to the railway line.

I can also supply it at the same prices out of the old pit, the coal from which is very good.  
I hereby authorize you or your agent to select any coal in waggons at the mine, or intercept any in transit for the purpose of testing the quality.

There is, however, very little at present coming to market, as we are without orders. You can, however, take any in waggons now at the mine, or you can send an agent, and the coal shall be hewed in his presence in the mine.

I have, &c.,  
E. VICKERY.

P.S.—I hand you an order on the Manager. It is not possible to send two qualities from either pit, the seams are so uniformly good, and only require care in screening.

Mr.

Mr. E. Vickery to Mr. C. Harper.

Sir, 116, Pitt-street, Sydney, 15 December, 1876.  
Please permit the Engineer for Existing Lines of Railways, Wm. Mason, Esq., or any person authorized by him, to take any waggon of Greta coal, either at the mine or in transit, for the purpose of testing for locomotive purposes.  
Or, should it be so desired, allow the miners to hew the coal from either pit, in the presence of the agent, the object being to satisfy the Engineer that the usual run of the coal will be same as that to be tested.

I am, &c.,  
E. VICKERY.

Mr. Boag.—W.M., per R.J.S., 22/12/76. Returned.—THOS. BOAG, 24/1/77.

The Manager, Bowenfels Coal and Copper Smelting Company, to

Sir, Bowenfels Coal and Copper Smelting Company (Limited), Sydney, 18 December, 1876.

In answer to your favour of the 13th instant, I have much pleasure in complying with your request, and hereby authorize you to intercept any of our coal in transit. Of course you will inform me of the numbers and where consigned, so that we make up that deficiency to our customer whose coal may have been intercepted.

The coal will be supplied from our Bowenfels Colliery, Lithgow Valley.

I have, &c.,  
J. T. BOGIE,  
Manager.

[Enclosure 7 in No. 8.]

L. O'Brien & Co. to the Engineer-in-Chief.

Sir, Sydney, 128, Elizabeth-street, 15 December, 1876.

We are in receipt of your letter of yesterday (No. 76/771), requesting information as to the mines from which we propose to supply your department with engine coals and to be furnished with an authority to take coals in transit from the mines for trial.

And in reply we have much pleasure in stating that the coals will be supplied from the Alhwick Mines at Hexham, from the Four-mile Creek seam of coal worked by us there.

We shall also be very happy to allow you to take any coals you may require for the purposes of trial wherever you may find them, and our manager at the mines is instructed to afford you every assistance.

We are, &c.,  
L. O'BRIEN & CO.

P.S.—We included in our tender a price for our coal delivered in Sydney, but you only refer to our tender to supply the Northern Line.

We shall be happy to supply you with samples for testing on the Southern and Western Lines if you desire it.—  
L. O'BRIEN & Co.

Mr. Boag to test this coal.—W.M., per R.J.S., 2/1/77. Seen—THOS. BOAG, 17/1/77.

Memorandum from The Engineer for Existing Lines to The Locomotive Foreman,  
Great Northern Railway.

Government Railways, Existing Lines, Engineer's Branch, 19 December, 1876.

I FORWARD herewith authorities from the Waratah Coal Co. and Mr. Summerbell to test the coals they tender to supply.

R.J.S.,  
pro W.M.

[Enclosure 1 in No. 19.]

The Secretary, Waratah Coal Company, to The Engineer for Existing Lines.

Dear Sir, Waratah Coal Company, Sydney, 15 December, 1876.

In reply to your memorandum of this date, I beg to state that the officers of the Waratah Coal Company at the Colliery and at Newcastle have been instructed by me to allow you or any one on your behalf to test the quality of the Company's coal, whether from the old or from the new pits.

I remain, &c.,  
D. N. JOUBERT,  
Secretary.

I asked for authority to intercept the coal in transit, and also from which pits it was proposed to supply it. Perhaps Mr. Joubert will reply to these questions.—W.M., 16/12/76.

Memorandum from The Engineer for Existing Lines to The Secretary, Waratah Coal Company.

Government Railways, Existing Lines, Engineer's Branch, 16 December, 1876.

In reply to your favour of yesterday, the Engineer for Existing Lines has directed me to inform you that he applied for authority to intercept your coal in transit.

Will you be good enough to forward such authority at your earliest convenience, and please state at same time from which pit, old or new, you intend to supply from.

ROBERT J. SHERIDAN,  
Pro W. MASON.

The Secretary, Waratah Coal Company, to The Engineer for Existing Lines.

Dear Sir, Waratah Coal Company, Sydney, 18 December, 1876.

In reply to your memorandum of the 16th instant, I beg to inform you that a copy of your communication of the 15th was forwarded to the officers of the Waratah Coal Company with a request that they should allow you or any one on your behalf to test the quality of the Company's coal, in accordance with the wish therein expressed by you.

This Company will be prepared, if my tender is accepted, to supply coal to the Government Railways either from its old or new pits, as may be required by the officers of your Department.

I remain, &c.,  
D. N. JOUBERT,  
Secretary.

## Memorandum from The Engineer for Existing Lines to The Locomotive Foreman, Great Northern Railway.

Government Railways, Existing Lines, Engineer's Branch, 21 December, 1876.

I wish you to commence at once to test the coal of each of the proprietors who have tendered for supplying it for next year. Carry it out in the way I verbally arranged with you when at Newcastle. The authority from each proprietor to intercept the coal in transit, &c., will be forwarded to you to-morrow.

W. MASON.

Returned.—TH. BOAG, 24/1/77.

No. 13.

## The Locomotive Foreman, Great Northern Railway, to The Engineer for Existing Lines.

Sir,

Great Northern Railway, 23 December, 1876.

I am this morning in receipt of your memo. about testing coal from the New Lambton, Greta, Waratah, and Mr. Mitchell's pits.

I am not clear as to how you require these coals to be tested. I understood from your verbal instructions that you would require a special train loaded with metals or other heavy loading, and kept running during the whole of the tests; if this is your present intention it will be necessary to give instructions to Traffic Manager to have a train specially loaded, but if you desire to have the trials with the ordinary goods trains, I think it would be judicious to allow the tests to stand over until after the holidays, because the trains are likely to vary very much in weight until after the new year.

I desire to draw your attention to the terms upon which Mr. Mitchell grants permission to get his coals. He only gives permission to get it when loaded for inspection, and not to intercept any loaded for other people.

Testing the coals from these four pits will take a considerable time, for it will be necessary to make the tests with one engine, and one set of engine-men, and each coal should run at least two up and two down trips.

I also desire to draw your attention to the fact that Waratah coal from the tunnels have been used for some years, and has proved itself a useful coal, and that Mr. Mitchell's coal, such as will be supplied for these tests, was tried at the commencement of the year and reported upon, the great drawback to its acceptance being a doubt as to whether he would supply the same quality in large quantities. I therefore suggest that experience and previous trials may be taken as the test for these coals (which will save eight days trial) of course with provisions which will ensure them being supplied as good and in clean condition.

TH. BOAG, 23/12/76.

One trip each way between Newcastle and Murrurundi will be sufficient to test the coal. Make the trains in each case the same weight as nearly as possible; this you can do by weighing the trucks. Mr. Mitchell will be communicated with about taking his coal in transit.—W.M., 27/12/76. Mr. Boag. Returned.—TH. BOAG, 24/1/77.

The drivers state that the above coal makes steam fairly, but requires a good deal of attention—makes a deal of dirt in the fire-box. The consumption is about the same as the mountain coal.—J.C., 2/1/77. Mr. Scott. The loads not being the same with the same class of engine it is not a satisfactory trial; 10 tons more of this coal is now being tested on the Western Line.—W. SCOTT, 2/1/77. To Mr. Mason. Seen.—W.M., 3/1/77.

Mr. W. Webster to The Engineer for Existing Lines.

Sir,

5 January, 1877.

I beg to report that in accordance with your instructions I have made a through trial between Penrith and Bathurst of the coal from the different collieries in the Western District, and also of the sample of coal from Wollongong.

The trials were made in the order and with the results shown in the table attached, from which it will be seen that the consumption of the Wollongong coal is less than that of any other, and if the state of the weather be considered the result would be still more favourable as it was a wet slippery night when this coal was tried; but if this coal is to be used on the Mountain Lines it will be necessary to make alterations in all the new goods engines, as we lost an hour and a half in the first 22 miles from want of steam, having to stop three times in that distance to get steam up, and only got on afterwards by sharpening the blast, and were two hours and a half late into Bathurst.

Of all the coals tried that from the Eskbank Colliery is the best for locomotive purposes generally, and for the Mountain Lines in particular as it is the best steaming coal, and with the exception of the Wollongong the consumption, is less than the others, and while, with each of the other Company's coal we were compelled to stop once on the journey, through being short of steam and the fire having to be cleaned twice on the journey, with the coal from the Eskbank Colliery there was no difficulty in getting steam, the fire only requiring cleaning once on the journey, and very little more ash in the firebox at the end of the journey than with the other which had been cleaned twice.

You will see by the attached table that two trials have been made with the coal from the Bowenfels Company's Colliery, the first having been made under unfavourable circumstances, the train that night being very light but the rails very slippery, the fireman's time being occupied so much with sand he could not give that attention to the fire which this coal required. We therefore had to stop twice for steam on this night, but on the second occasion all things were favourable—the consumption was still heavy and there was still a difficulty in getting steam.

WILLIAM WEBSTER.

DISCREPANCY in coal return rectified. Total weight should be seven thousand three hundred and twenty-five tons eighteen hundred weight (7,325 tons 18 cwt.)

Engineer for Existing Lines.—W.S., 3/1/77.

J. TIPPING,  
Penrith.

No. 16.

Locomotive Foreman, Great Northern Railway, to The Engineer for Existing Lines.

Sir, Government Railways, Existing Lines Branch, 6 January, 1877.

In answer to your memo. 77-23, I beg respectfully to inform you that I commenced to test the coals on the 3/1/77, and expect to finish about the 24/1/77.

The coals taken for test on the 3/1/77 were from the Greta Mine, sent to Newcastle for shipment. The Shipping Agent informs me they were from their old pit, and wishes another test from their new mine, which I shall not do without your authority. If another trial has to be made the tests will not be finished on the 24/1/77.

Days and dates for trials of Coal.

Greta Old Pit .....	Wednesday, 3/1/77.	Thursday, 4/1/77.
Wallsend B Pit .....	Friday, 5/1/77.	Saturday, 6/1/77.
New Lambton .....	Monday, 8/1/77.	Tuesday, 9/1/77.
Waratah New Pit .....	Wednesday, 10/1/77.	Thursday, 11/1/77.
Nott & Ward's Four-mile Creek .....	Monday, 15/1/77.	Tuesday, 16/1/77.
Mitchell's Four-mile Creek.....	Wednesday, 17/1/77.	Thursday, 18/1/77.
O'Brien's. If I can get his coal .....	} Friday, 19/1/77.	Saturday, 20/1/77.
Alnwick Colliery .....		

Finish

Finish testing now in hand before doing anything about the Greta New Mine coal. Use all despatch possible and get them completed.—W.M., 10/1/77. Mr. Boag.

Your instructions will be carried out, and the report of each Company's coal forwarded as early as practicable.—THOS. BOAG, 11/1/77.

Sir,

Government Railways, Existing Lines Branch, 6 January, 1877.

The reason that no coals will be tested on the 12th and 13th, Mr. Newton will have to go to Messrs. Nott and Ward & Mr. Mitchell's pits to see the coals brought out of the mines, carted, and delivered into our trucks at East Maitland, and sent to Newcastle for trial, which will take about two or three days.

I will do all I can to have these tests finished as early as practicable, and furnish you with the report of the quality of each Company's coal tested.

Yours, &c.,  
THOS. BOAG.

Government Railways, Existing Lines Branch, 5 January, 1877.

Memo. to Mr. Boag,—

Please to inform me when it is likely you will have the coal testing completed.—W. MASON.—THOS. BOAG, 6/1/77.

#### No. 17.

#### Mr. J. Mitchell to The Engineer for Existing Lines.

Dear Sir,

Dunmore, East Maitland, 8 January, 1877.

Referring to our conversation at your office on the 29th December last, about the supply of samples to G. N. Railway, I beg to say I am quite ready to send them in accordance with our arrangement of that day as soon as it is convenient for you to arrange about it. Hoping soon to hear from you,

Yours, &c.,  
JOHN MITCHELL.

Inform that Mr. Boag has been instructed in accordance with our verbal arrangement.—W.M., 10/1/77. Memo. 77/42.

#### No. 18.

#### The Engineer for Existing Lines to Mr. J. Mitchell.

Sir,

10 January, 1877.

I am directed by the Engineer for Existing Lines to inform you, in reply to your note of the 8th instant, that the arrangement made with you verbally will be carried out, and that Mr. Boag has already been instructed to that effect.

Yours, &c.,  
ROBERT J. SHERIDAN,  
Pro W.M.

#### No. 19.

#### The Locomotive Foreman, Great Northern Railway, to The Engineer for Existing Lines.

(No. 77—415.)

Sir,

G. N. Railway, 17 January, 1877.

I have to inform you that I sent Mr. Bourn to the Alnwick Colliery on Monday last to inform Mr. Curlewis, manager, that I wanted 7 tons of coal on Wednesday (to-day) for trial. He informed him verbally that he could not supply them, because he had to supply the A.S.N. Company and the steam dredges with coal for trial. Attached is a letter to say they cannot be supplied until Saturday; at the same time there is a doubt if I can get them on that day. If the coals are supplied on Saturday it will prolong the testing four days longer. Please reply by telegram if I am to wait for Mr. O'Brien's coal.

I think they ought to be in a position to supply me with 7 tons of coal in twenty-four hours notice. They were informed on the 16/12/76 that their coals would be tested. I don't consider it is right that this department should be put to inconvenience by the supply to the A.S.N. Company and the steam dredges.

THOS. BOAG, 17/1/77.

Telegram 77-75, informing Mr. Boag that unless the coal from this Colliery is delivered at once it will not be tested.—R.J.S., 19/1/77.

#### No. 20.

#### L. O'Brien & Co. to The Engineer for Existing Lines.

Sir,

128, Elizabeth-street, 19 January, 1876.

We are in receipt of your letter of this date (Nos. 77—415, 77—76) touching supply of coals for testing purposes at Newcastle, and in reply beg to say that we have instructed our manager to supply the coals required by Mr. Boag immediately.

Yours, &c.,  
L. O'BRIEN & CO.,  
Proprietors, Alnwick Coal Mines.

## No. 21.

The Locomotive Foreman, Great Northern Railway, to The Engineer for Existing Lines.

Sir, Government Railways, Existing Lines Branch, 22 January, 1877.  
The testing of coals for each Company will be finished on the 23/1/77, and the report of each Company's coal will be forwarded to your office as early as practicable.

THOS. BOAG.

## No. 22.

Memo. from the Locomotive Foreman, Great Northern Railway, to The Engineer for Existing Lines.

Sir, 24 January, 1877.  
I have the honor to report to you with reference to the test of coal just completed that the Greta, Wallsend, and Raspberry Gully coals, were taken by me from wagons in transit to ordinary customers. Messrs Mitchell's, Nott, and Ward, and Alnwick coals were supplied specially for the test.

THOMAS BOAG.

Memo. to The Locomotive Foreman, G. N. Railway.

24 January, 1877.

HEREWITH I send you a return showing the amount of haulage and the consumption of coal from various collieries during the trials which were completed last night.

This return shows the comparative economic value of each coal. To show the real value for our traffic, I add the following statements of the working of each coal when on the journeys.

The Greta coal was similar in every respect to the coal supplied from this mine during 1874, and which caused so many trains to be late; it is a good steaming coal as long as the bars can be kept clean, but the bars soon get choked with clinker. Knowing how much it clinkers I had the fire cleaned out at Singleton, on down journey as thoroughly as practicable. In the fire-box there was one large thin clinker, covering nearly one-fourth of the bars, and which after being broken up the large pieces got through the fire-hole, weighed 30lbs. At Scone the fire was again choked, and the train detained there and at Wingen to pick out and make steam; this made the train 50 minutes late into Murrurundi.

The Wallsend coal is a strong steam-making coal, but it also makes clinker rapidly. This clinker is not so much trouble to shift as the Greta clinker; it is dense and hard to break up; consequently more weight of large clinker remains in the fire-box. This fire was partially cleaned out at Singleton, but it began to choke before reaching Scone. The train was detained at Scone and at Wingen to clear the bars and to get up steam, and after hard firing was got into Murrurundi 30 minutes late.

The New Lambton coal had mixed with it a quantity of a band which I think could have been picked out with little trouble; this coal steams well but it made a large percentage of clinker. The fire was partially cleaned at Singleton, and the enginemen had hard work to keep the bars clean; this, however, they succeeded in doing sufficiently to get to Murrurundi without losing time.

The Raspberry Gully (Waratah Company's New Pit) coal ran strong and without giving trouble into Singleton. The fire got the ordinary pick-up at Singleton, but I soon found that it would have been advisable to have thoroughly cleaned it. After reaching Grass-tree the enginemen had real trouble to keep going, and in consequence detained the mail train 10 minutes at Scone. At Scone and at Wingen the fire was cleaned and steam made; the engine stuck however, when within 2 miles of Murrurundi, and afterwards got in 80 minutes late—70 of which were lost by dirty fires. This coal makes less clinker than the others previously tested but considerably more dirt.

The coal from Mr. Mitchell's Tunnel, at Four-mile Creek, is nearly free from clinker, but it surrounds itself with an ash which will not fall through the bars without being moved; it therefore becomes necessary after running 40 or 50 miles with it, to keep a low fire so as to be able to stir it about, and to take advantage of every stoppage to pick up from under the engine. On the down trip the fire got the ordinary picking up at Singleton. The train was detained at Scone 17 minutes to clear the bars and get up steam, stuck after running 6 miles, then made steam again, and at Wingen stuck on Warland's Range and arrived at Murrurundi fifty minutes late.

Messrs. Nott and Ward's (Four-mile Creek Coal) began to show signs of dirt soon after leaving Maitland. The fire was picked up both at Branxton and Singleton. Having only 60lbs. of steam and 1 inch of water in glass at the foot of Grass Tree Hill it was necessary to stop to stir the fire and make steam. This caused a detention of 20 minutes; another stoppage at Muscledbrook for steam caused the train to be too late to reach Scone without delaying the mail train. Arrangements having been made to pass at Aberdeen the train proceeded to that station, and the men immediately commenced to clean out the fire-box. They took from it 51 lbs. of large clinker and a large quantity of dirt. Notwithstanding this cleaning a stoppage had to be made at Wingen for steam, stuck half-way up the range, and got to Murrurundi Station 2 hours 37 minutes late, 2 hours 17 minutes of which was lost by dirty fires.

When Mr. Nott was loading this coal he told me that he supplied from the same pit during the latter portion of his contract in 1875. I was therefore much surprised at the large quantity of clinker during this trial. In his contract time we were only occasionally troubled with clinker; the dirt caused very heavy work for the engine-men and made it an unreliable coal for long distances.

Alnwick (Woodford) Coal.—This coal had a considerable quantity of band in it which I think is difficult to pick out. With a comparatively light load the engine lost time running up Lochinvar Hill. The fire was well picked at Branxton and at Singleton, and yet gave trouble to get up the inclines after leaving Singleton. The engine stuck up for steam on Grass-tree Hill, but was enabled to make Scone by detaining the mail train a few minutes. At Scone the fire was completely choked and had to be cleaned out as thoroughly as practicable without taking it all out; 28 lbs. of clinker and a large quantity of dirt were taken out of fire-box, which detained the train 45 minutes. Stopped again for steam at Wingen, and stuck on Warland's Range, arriving at Murrurundi Station 1 hour 5 minutes late.

I cannot give the quantity of ash clinker, &c., left by each coal. The clinker stated in the return is only the large clinkers taken through the fire-hole during the journey, taken out or left in ash-pan after lifting the bars at the termini. There being so much stirring and picking on the road a large quantity was lost; the more troublesome the coal the more was lost when running or when stuck.

All these coals were tested in No. 11 engine, running the ordinary goods train from Newcastle to Murrurundi and back, and by the same engine-men. In making these tests I have followed as closely as the dirt and clinker would allow me, the ordinary routine observed by engine-men running these trains, so that the results stated are such as may be expected when working this traffic under ordinary circumstances with the respective coals. No doubt I could have obtained better results in running time by clearing out thoroughly at two stations on the journey, but this would involve an allowance of time at these stations which the present time-table does not allow.

From the above statements you will perceive that none of these coals are equal to the Waratah Tunnel coal, and if they be delivered in no better condition none can be relied upon for running a heavy train over from 50 to 70 miles. Of the samples tested that from New Lambton gave the best results both for economy and for being the most manageable. Wallsend coal stands next for steaming qualities, but its clinker makes it troublesome, and therefore although Mr. Mitchell's coal is higher in consumption and very dirty I should prefer it on account of the dirt being more easily got out of the fire-box than clinker.

The dirt and clinker in Raspberry Gully coal will make it exceedingly troublesome in locomotives. The Greta coal, Messrs Nott & Ward's coal, and the Alnwick coal are unsuitable, and cannot be worked except for short or light trains.

Engineer for Existing Lines,—THOS. BOAG, 24/1/77.

G. NEWTON.

The coal from Greta ran out, and the test ceased at Branxton on up journey, 205 miles run.  
The coal from Messrs. Nott and Ward ran out, and the test ceased at Singleton on up journey, 191 miles run.  
12 cwt. of Newcastle coal was used with Mr. Mitchell's, 209 miles only, run with Mitchell's coal.

Engineer for Existing Lines:—TH. BOAG, 24/1/77.

G. NEWTON, 24/1/77.

## No. 23.

### The Locomotive Foreman, Great Northern Railway, to The Engineer for Existing Lines.

G. N. Railway, 26 January, 1877.

In answer to your inquiry as to whether the coal, tested from Mr. Mitchell's and Messrs. Nott and Ward's mines was picked for testing, I beg to submit the following account of my visits to the mines to see the coal loaded.

As you instructed me I went to East Maitland on the morning of the 12th instant, and was met by Mr. Mitchell, who drove me out to his mine, a distance of about 3 miles, two of them over a rough road. At the mine I found a small pit-head with two screens, one of them about 7 feet long, with the bars covered nearly  $\frac{2}{3}$  of its surface with sheet iron; the coal then loading being screened by the short piece at the bottom. The other screen was made of flat bars,  $\frac{3}{8}$ " wide; the interstices had been  $\frac{1}{2}$ " but had been, as Mr. Mitchell informed me, widened to  $\frac{3}{4}$ " on the day previous, and were about 6 feet long.

The miners were at work getting coal, and Mr. Mitchell invited me down his tunnel to see where it was got, and which I found to be about a quarter of a mile from the mouth. I examined the coal in several places but did not observe much difference in its character, except that the bands, of which there are three in the depth they work, differ in thickness; they are however easily picked out if ordinary care be observed. Throughout the coal there are innumerable layers of thin dirt or clay which causes the coal to come down in small lumps, and which causes it to break up small in the different shiftings it gets before getting into the locomotive fire-box.

The coal was supplied specially for the test, and was loaded whilst I remained on the pit-head. The 6 tons I got were loaded into three drays, and took over three hours to load; they were tipped down the best screen and care was taken, both by the Manager and the drayman, to pick out all the bands that had been brought up. This however was not a difficult matter as the band is distinct enough from the coal to be easily shifted.

In consequence of the better screening and the picking this coal was in much better condition than that taken away by other drays, and Mr. Mitchell explained that he sent away coal at all prices, from 5s. per ton to 14s. per ton, according to its condition.

On the following day I met Mr. Nott at East Maitland, and was driven by him to his mine, about 2 miles from the station. At this pit there were 2-foot bar screens  $\frac{3}{8}$ " wide, with interstices  $\frac{1}{2}$ " wide and 6 feet long.

The

The coal for this test was already got and nine skips at the bottom of the shaft ready for loading. The bands in this seam are much thicker and more varied than in Mr. Mitchell's seam, and notwithstanding that the coal was in readiness for loading it required much more picking out of the bands, the drayman, as on the previous day, standing in the dray and picking out everything pointed out by Mr. Nott and the banksman.

I could scarcely expect all this attention for a large supply. Mr. Nott however informed me that should he get the contract for the Railway he would sink a shaft on the seam from which the sample was got which obtained for him the contract for 1875, and which he says is a superior coal.

G. NEWTON.

To Engineer for Existing Lines.—THOS. BOAG, 27/1/77.

### No. 24.

The Locomotive Foreman, Great Northern Railway, to The Engineer for Existing Lines.

Sir,

G. N. Railway, 27 January, 1877.

In answer to your inquiry as to whether the coal tested from the Alnwick Colliery was picked for testing, I beg to submit the following account of my visit to the Alnwick mine to see the coal loaded :

I left Honeysuckle Point Station by the 7 a.m. train on the 20/1/77, and arrived at the Woodford Platform about 7.40 a.m. I proceeded at once to the colliery. On getting there I found that the coal had to be drawn from a tunnel, and at the tip there were three sets of screens. I did not measure them, but I should think that each screen is from 10 to 12 feet long, and from 4 to 5 feet wide; the openings between the bars about  $\frac{3}{4}$ " wide. After waiting some time I saw Mr. Curlew, the manager, and told him my business; he told me his screens were rather low or flat, and that he would require to alter the angle of them and fix a break across the screen to keep the coal longer on to get rid of more of the small coal.

They commenced to load the waggon about 9.30 a.m. and finished loading at 12 o'clock noon; while the waggon was loading Mr. Curlew and one of his men were stationed at the bottom of the screen, and every skip of coal that came out of the tunnel was tipped over the screen and picked, or, as Mr. Curlew said, cleaned.

I told Mr. Curlew that he was picking the coal. He said "No, that he was cleaning the coal in the ordinary way"; in reply I told him that it looked very like hand picking the coal.

I remain, &c.,

DENIS FITZPATRICK,

Out-door Foreman.

To Engineer for Existing Lines.—THOS. BOAG, 27/1/77.

### No. 25.

Report of Testing of Waratah Coal Company's Coal.

Government Railways, Engineers Branch, Sydney, 25 January, 1877.

Memorandum to Mr. Tipping.

Sir,

The Engineer for Existing Lines wishes you to test the Waratah Company's Newcastle coal, tested in the same way and with the same engine and load (about 150 tons) as the other coal lately tested by Mr. Webster on the Mountain Lines, and let him have your report on Monday morning next, certain.

Urgent.

J.C. pro W.S.

Trial made on night of 26th and report herewith.—J.T., 28 January, 1877.

TRIAL trip between Penrith and Bathurst of Waratah coal on goods engine, No. 57, driver Morgan Meredith, 26th January, 1877.

*R marks* :—The coal as taken on very fair sample; 25 minutes was lost between Wascoe's and Springwood, as follows, owing to fireman making fire too heavy—lost in consequence of being short of steam, slow travelling, 6 minutes; lost by engine slipping, 10 minutes; stopped at Springwood 9 minutes to get steam and fill the boiler; total 25 minutes; after which there was no unusual slipping, and by strict attention to the fire, steam was maintained throughout the trip; there was about 50 per cent. more ashes in the smoke-box with this coal than is usual with Eskbank coal; the fire in the fire-box was clean throughout the trip, and at the finish there was much less dirt than usual slightly clinker. I do not think this coal would answer so well for goods engines as the Eskbank coal, as this coal, being light, a heavy blast draws the fire through the tube.

Load between Penrith and Crusher's.			Load between Crusher's and Mount Victoria.			Load between Mount Victoria and Bathurst.			Mean load throughout trip.			Total weight of coal consumed.	Coal consumed per mile.

## Analysis of Tenders for Southern and Western Lines.

Name of Tenderer.	Name of Mine.	Rate per ton.	Remarks.	Estimated quantities required from each mine in proportion to results of tests.	Western Coals. Amount.	Newcastle or Southern Coals. Amount.
No.		s. d.		Tons.	£ s. d.	£ s. d.
1. Lithgow Valley Colliery Co.	Co's. mine.....	4 6	.....	17,907	4,029 1 6	.....
3. Vale of Clwydd C. M. Co....	Do. ....	5 3	.....	18,118	4,755 9 6	.....
6. William Pitt .....	Eskbank .....	5 11	} .....	17,000	4,675 0 0	.....
7. Thomas Brown .....	Do. ....	5 6				
9. Bowenfels Coal M. & C. Co.	Co's. mine.....	4 10	.....	18,375	4,440 12 6	.....
<i>For Newcastle and Wollongong.</i>						
2. L. O'Brien & Co. ....	Four-mile Creek .....	14 6	On wharf D. H.	18,363	.....	13,313 3 6
4. J. Ward & Co. ....	Wollongong Collieries	14 0	.....	16,350	.....	11,445 0 0
5. Waratah Coal Co. ....	Co's. mine.....	17 0	On wharf D. H.	17,365	.....	14,760 5 0
8. E. Vickery .....	Greta New Pit.....	16 6	Do. ....	16,280	.....	13,431 0 0
10. Newcastle Wallsend Coal Co.	Co's. mine.....	18 4	Subject to any reduction in Co's. prices.	16,314	.....	14,954 10 0
11. William Summerbell .....	New Lambton .....	17 6	.....	16,000	.....	14,000 0 0

Of the five tenders received for supplying Bowenfels coal, that of the Lithgow Valley Co. is the lowest, and I recommend its acceptance.

Of the six tenders received for supplying Newcastle or Southern coal, that of J. Ward & Co. (Wollongong coal) is the lowest, but I cannot recommend its acceptance as this coal has been found, not only by the present test but previous ones, to be unsuitable for working traffic. The 2nd lowest is that of Messrs. O'Brien & Co., and the 3rd that of Messrs. Vickery & Co., neither of which can I recommend on account of their not being suitable for working the traffic. The next lowest is that of Mr. Summerbell, which I recommend for acceptance as the tests prove it to be most suitable.

Commissioner.

W. MASON, 30/1/77.

Approved.—J.L., 6/2/77.

## No. 27.

## Analysis of Tenders for Great Northern Line.

Names of Tenderers.	Names of Mines.	Price per ton.	Remarks.	Estimated quantities required from each mine in proportion to results of tests.	Total Amount.
1. Newcastle Wallsend Coal Co....	Newcastle Wallsend Co.	s. d. 14 0	Subject to reduction according to the Co's. selling price.	Tons. 10,196	£ s. d. 7,137 4 0
2. Waratah Coal Co. ....	Waratah Coal Co. ....	13 6	.....	10,853	7,325 15 6
3. Nott, Ward, & Co. ....	.....	9 3	Delivered in trucks at East Maitland.	12,671	6,593 13 5*
4. E. Vickery .....	Greta New Pit.....	12 0	.....	11,604	6,962 8 0
5. John Mitchell .....	Four-mile Creek .....	11 9	Delivered in Government trucks at East Maitland.	11,833	7,685 4 5*
6. L. O'Brien & Co. ....	Do. ....	9 0	Delivered in owner's trucks at Maitland.	.....	.....
Do. do. ....	Do. ....	9 6	Do. at Newcastle	10,964	5,207 18 0
7. Wm. Summerbell .....	New Lambton .....	13 1	.....	10,000	6,541 13 4

\* Including cost of haulage on 8,000 tons from East Maitland to Newcastle, amounting to £733 6s. 8d.

Of the seven tenders received for supplying coal for the Great Northern Railway, I find on analysis that of Messrs. O'Brien & Co. is the lowest; but according to the Inspector's tests and reports it was found to be unreliable for working the traffic; therefore I cannot recommend its acceptance.

The next lowest is that of Mr. Wm. Summerbell, and as this has been shown by the test, and reported by the Inspector to be the best coal of all those submitted to such test, I recommend the acceptance of this tender.

Commissioner.

W. MASON, 30/1/77.

In reply, I beg to name John C. Dibbs, of Newcastle—Chas. Abercrombie, of Sydney.

I have, &c.,  
WM. SUMMERBELL.

## No. 33.

The Storekeeper to Mr. W. Summerbell.

MR. Cobb complains that although he has sent to you several times he cannot get coal; if a cargo is not supplied at once I shall purchase one on behalf of the Commissioner for Railways at your risk and cost, in accordance with clause 7 of the specification.

The stock is nearly run out and 500 tons should be delivered at once.

A. RICHARDSON,  
Railway Storekeeper,  
17 Feb., 1877.

## No. 34.

The Secretary, Waratah Coal Company, to The Secretary for Public Works.

Sir, Waratah Coal Company, Sydney, 19 February, 1877.

I have been instructed by the Directors of the Waratah Coal Company, viz., Messrs. Ch. Smith, the Honorable Alex. Stuart, the Honorable T. W. Smart, Saml. Dickinson, and Jas. Milson, junr., to apply to you for such information as you may deem fit to communicate respecting the recent decision of the Government in giving out the contract for the supply of Newcastle engine coal required in 1877 by the Great Northern and Great Southern, Western, and Richmond Railways.

I beg respectfully to state that the Waratah Coal Company has supplied the Newcastle engine coal used by the Government railways during the last five years, and that no complaint has ever been made of its quality. The enclosed copies of the Waratah Coal Company's tender for the current year, and of my correspondence with the Engineer for Existing Lines will show that in case the Railway Department should not be satisfied with the coal extracted from a new seam lately opened by the Company, I offered to supply coal

coal from the old pits whenever required to do so. Nevertheless, after a trial of our new coal only, I understand that the contract has been given to a coal carrier for the delivery of *New Lambton Collieries coal* at a price *higher* than the one at which I tendered, viz., 13s. 6d. and 17s.

If such is the case my Directors cannot help feeling aggrieved, and they wish to ascertain upon what grounds this preference has been given to another colliery.

I am desired to add that during the latter part of December and the month of January the Great Northern Railway has used 518 tons of coal from the new seam above alluded to, and that no complaint was made to the Company respecting its quality.

I have, &c.,  
D. N. JOUBERT,  
Secretary.

[Enclosures in No. 34.]

Memorandum from The Engineer for Existing Lines to The Secretary, Waratah Coal Company.

Government Railways, Existing Lines, Engineer's Branch, 14 December, 1876.

REFERRING to your tender for supplying coal for the Great Northern Railway, I beg to inform you that it is my intention to test the quality of that which you intend to supply.

I shall therefore feel obliged if you will inform me from which pit or mine you propose to supply it, and also to authorize me, or any one on my behalf, to intercept in transit any coal which you may be sending to market, for the purpose of testing its quality.

WILLIAM MASON,  
Per R.J.S.

The Secretary, Waratah Coal Company, to The Engineer for Existing Lines.

Dear Sir,

Waratah Coal Company, Sydney, 15 December, 1876.

In reply to your memorandum of this date I beg to state that the officers of the Waratah Coal Company have been instructed by me to allow you or any one on your behalf to test the quality of the Company's coal, whether from the old or new pits.

I remain, &c.,  
D. N. JOUBERT,  
Secretary.

Memorandum from The Engineer for Existing Lines to The Secretary, Waratah Coal Company.

Government Railways, Existing Lines, Railway Branch, 16 December, 1876.

In reply to your favour of yesterday, the Engineer for Existing Lines has directed me to inform you that he applied for authority to intercept your coal in transit.

Will you be good enough to forward such authority at your earliest convenience and please state at same time from which pit, old or new, you intend to supply.

ROBERT J. SHERIDAN,  
pro W.M.

The Secretary, Waratah Coal Company, to The Engineer for Existing Lines.

Dear Sir,

Waratah Coal Company, Sydney, 18 December, 1876.

In reply to your memorandum of the 16th instant, I beg to inform you that a copy of your communication of the 15th was forwarded to the officers of the Waratah Coal Company with a request that they should allow you or anyone on your behalf to test the quality of the Company's coal in accordance with the wish therein expressed by you. This Company will be prepared, if my tender is accepted, to supply coal to the Government Railways either from its old or new pits, as may be required by the officers of your department.

I remain, &c.,  
D. N. JOUBERT,  
Secretary.

## No. 35.

### Minute of The Secretary of Railways.

For Northern Railway the price for New Lambton coal was 13s. 1d.—5d. per ton cheaper than that offered by Waratah Company.

For south and west the New Lambton coal was accepted at 17s. 6d. per ton—6d. dearer than Waratah coal.

From the analysis it would appear that New Lambton coal, though 6d. a ton dearer, is £760 cheaper on the whole contract than Waratah coal in consequence of its superiority, but what seam of Waratah was tested is not stated.—C.A.G., 20/2/77. What seam was tested?—J.R., 2/3/77. Mr. Mason. The Waratah coal was intercepted in transit in the same way as all others, and I am not aware which seam it came from.—W.M., 2/3/77. Commr. Inform.—J.L., 15/3/77.

## No. 36.

The Commissioner for Railways to The Secretary, Waratah Coal Company.

Sir,

Department of Public Works, Railway Branch, Sydney, 22 March, 1877.

In reference to your letter of the 19th instant, forwarding copies of your company's tenders for the supply during 1877 of the engine coal required for the Great Southern, Western, and Great Northern Railways, together with the correspondence which has passed between the Waratah Coal Company and the Engineer for Existing Lines on the subject, and requesting to be informed why the contract was not given to your Company, as it tendered at a price below that for which the tender was accepted, I have the honor to inform you that before any tender for this service was accepted the Department subjected the coals from the several collieries tendering to a test of the quality, and that for testing the coal from your mine a quantity was intercepted in transit and tested without any knowledge having been obtained of the pit from whence it was obtained, and that the Department having in view only the selection of the best coal, submitted at the cheapest rate, accepted the tender of the New Lambton Company.

I have, &c.,  
JOHN RAE,  
Commissioner for Railways.

No. 37.

## No. 37.

The Secretary, Waratah Coal Company, to The Commissioner for Railways.

Sir,

Waratah Coal Company, Sydney, 9 April, 1877.

In reply to your letter of the 22nd ultimo, respecting the contract for the supply of Newcastle engine coal to the Government Railways in 1877, my directors have instructed me to remind you that in my correspondence with the Engineer for Existing Lines I distinctly offered, on behalf of the Waratah Coal Company, to supply coal either from the old or from the new colliery, and to express their surprise at learning that the only Waratah coal tested by that officer was a sample from the new colliery.

The Waratah Coal Company having supplied the Government Railways during several years to the complete satisfaction of the Department with respect to quality, despatch, and regularity of deliveries, has good grounds of complaint when it finds that although the coal from its old colliery has not been compared with that of other competitors, an unfair preference has been given to the New Lambton Colliery at a loss to the public of 6d. per ton.

I have, &c.,

D. N. JOUBERT,

Secretary.

I think it will be seen that both the Department and the Waratah Company have reason to regret this omission. The coal from the old seam of the Company has always been looked upon as the best coal in the Colony, and if it had been tested as requested it would have been found far the cheapest offered.—*CH. A. G.*, 14/4/77.

I don't see what can be done in the matter now. Mr. Mason on 2/3/77 reported that the Waratah coal was intercepted in transit in the same way as all others, and he was not aware which seam it came from.—*J.R.*, 27/4/77.

## No. 38.

Memorandum from The Locomotive Superintendent to The Engineer for Existing Lines.

Sir,

Government Railways, Existing Lines Branch, Sydney, 15 February, 1877.

The coal sent to Penrith yesterday is the first under the new contract. I should be glad if you would let me know, after a trial, how this coal answers.

J.C., *pro* W. SCOTT.

Drivers complain that this coal is of an inferior quality, making a large amount of clinker, and they have considerable difficulty in maintaining steam with it, and that the steam-jet seems to have little or no effect on it when the engine is standing.—*JNO. WELLS, pro J. TIPPING*, 21/2/77. Mr. Scott.

The New Lambton coal has had a fair trial. The drivers complain very much of the difficulty they have of making steam, and the quantity of clinkers, &c. See reports attached.—*J.C., pro W. SCOTT*, 26/2/77. Engineer for Existing Lines.

Write to Mr. Summerbell and inform him that better coal must be supplied.—*W.M.*, 27/2/77.

## No. 39.

The Engineer for Existing Lines to Mr. W. Summerbell.

Sir,

27 February, 1877.

I am directed by the Engineer for Existing Lines to direct your immediate attention to the inferior coals supplied for use on the Southern, Western, and Richmond Railways, and to inform you that better coals must be supplied for the future.

I have, &c.,

ROBERT J. SHERIDAN,

*pro* W. M.

## No. 40.

Memorandum from The Locomotive Superintendent to Mr. J. Proctor.

Sir,

Government Railways, Existing Lines Branch, Sydney, 19 February, 1877.

Six trucks of the New Lambton coal will be sent to Picton to-night. I wish you to give it a fair trial, and report if it is fit for use in our locomotives.

J.C., *pro* W. SCOTT.

This coal has been issued to goods and passenger trains for trial from Picton to Goulburn, and Binalong. The drivers complain of the clinker on the fire-bars after running 40 miles, and having a difficulty in making steam.—*JAMES PROCTOR*, 24/2/77. Mr. Scott,—*J.C.*, 24/2/77.

Sydney, 17 February, 1877.

The New Lambton coal supplied to me on the 17th instant clinkers very bad, and I had a difficulty in making steam with it; use also 10 per cent. more of it than I have been in the habit of using.—*JOHN FROST*, to Bathurst and back, engine 35. *J.C.*, 20/2/77.

I have to report that the New Lambton coal I had on Monday, the 19th, to Bathurst, is very bad, and not fit to run my train with; goes all to a clinker and chokes the bars up, and I cannot get steam with it. We also use a deal more of it than the other coal.—*CHARLES FROST*, engine 32. *J.C.*, 20/2/77.

Mr. Cobb,—The New Lambton coal put in my engine on Monday for one trip to Goulburn and back is not fit for use. It runs all to clinker and chokes the fire-bars, and I cannot make steam with it.—*WILLIAM SIXSMITH*, engine No. 10. *J.C.*, 22/2/77.

Mr. Cobb,

Sydney, 26 February, 1877.

Sir,—Having to report upon the quality of the New Lambton coal, I have to state that as a coal for steam purposes they are inferior to what we have been using, producing a good deal of clinker, and otherwise very dirty.

I am, &c.,

JAMES RODGER,

Engine-driver, G.W.R.

Loco. Inspector, Sydney.

Engine No. 33 to Bathurst and back.—*J.C.*, 26/2/77.

Memorandum

## Memorandum from Mr. J. Cobb to The Locomotive Superintendent.

Sir, Government Railways, Existing Lines Branch, 30 March, 1877.  
I have again to call attention to the bad quality of the Newcastle coal supplied lately. The drivers have great difficulty in running with it. Driver C. J. Frost reports losing 6 minutes on March 27th, having to stop so long at Blue Mountains, clearing dirt and clinker out of the fire. Drivers on Southern line also complain very much about it. As supplied lately it is not fit for use in our locomotives.  
J.C.

Mr. Mason.—W. SCOTT, 30/3/77. Write again to Mr. Summerbell.—W.M., 4/4/77.

## No. 41.

## The Engineer for Existing Lines to Mr. W. Summerbell.

Sir, 5 April, 1877.  
I am directed by the Engineer for Existing Lines to again call your attention to the inferior quality of the coals supplied by you for use on the Southern, Western, and Richmond Railways, and to inform you that unless coals of a better quality be supplied in future he will be compelled to direct the Commissioner's attention to the subject.  
Yours, &c.,

ROBERT J. SHERIDAN,  
*pro* W. M.

## No. 42.

## Memorandum from Mr. J. Tipping to The Locomotive Superintendent.

Sir, Government Railways, Existing Lines Branch, Penrith, 18 April, 1877.  
I beg to report that the Newcastle coal supplied to Penrith for the Western district continues dirty, and runs to clinker. Drivers complain of the quality.  
Yours, &c.,

J. TIPPING.

The drivers at Sydney also complain very much of the Newcastle coal; there is too much dirt and clinker with it for our use.—J.C., 20/4/77.

Mr. Scott.

## Memorandum from Mr. J. Proctor to The Locomotive Superintendent.

Sir, Government Railways, Existing Lines Branch, Picton, 18 April, 1877.  
Driver William Farquhar reports having lost 10 minutes from Picton to Mittagong on 12/4/77, engine No. 24, No. 3 down passenger train, with the bad coal supplied at Sydney; this was Newcastle coal.  
JAMES PROCTOR.

Mr. Mason. W. Scott, 20/4/77.

Mr. Summerbell has been informed twice of the inferior quality of the coal supplied. I now forward this to the Commissioner to take such steps as he may deem necessary to obtain coal in accordance with contract. Copies of letters to Mr. Summerbell herewith.—W.M., 23/4/77. Commissioner.

The terms of the contract should be carried out, and coal equal to sample procured at contractor's cost.—J.R., 1/5/77. Mr. Mason, B.C.

I presume Storekeeper will carry out Commissioner's instructions.—W.M., 3/5/77. Commr.

Storekeeper to ascertain from Loco. what coal is objected to. To write at once to contractor to remove it, and supply other in its place; and if proper coal is not delivered within a reasonable time, to order coal elsewhere at their risk and cost, ascertaining from Loco. first what coal they will take, *i.e.*, from what mine.—C.A.G., B.C., 3/5/77.

## No. 43.

## Memorandum from Mr. J. Proctor to The Locomotive Superintendent.

Sir, Government Railways, Existing Lines Branch, Picton, 21 April, 1877.  
The Newcastle coal received at Goulburn is very bad, the clinker is over the firebars, and it is difficult to make steam with it when engines have to run long distances.  
JAMES PROCTOR.

Engineer for Existing Lines.—J.C., *per* W. SCOTT. Commissioner to see.—W.M., 25/4/77.

If coal is not equal to sample it should be rejected and other coal obtained in its place at contractor's risk, if it be equal to sample. I don't know that we can do anything but make the best of it.—CH. A. G.

Inform contractor, and have coal supplied equal to sample.—J.R., 30/4/77. Mr. Summerbell informed.

## No. 44.

## The Commissioner for Railways to Mr. W. Summerbell.

Sir, Department of Public Works, Railway Branch, Sydney, 7 May, 1877.  
It having been reported that the engine coal supplied under your contract at the Goulburn Station is of a very inferior quality, I have the honor to inform you that unless you are prepared to supply coal equal to the sample upon which your tender was accepted, the coal will have to be obtained elsewhere at your risk.  
I have, &c.,

JOHN RAE,  
Commissioner for Railways.

## No. 45.

## The Storekeeper to The Commissioner for Railways.

Inferior coal supplied by Mr. Summerbell.

I HAVE referred to Mr. Scott in this matter, who informs me that it is impossible to select the bad coal from the good, as it is so mixed up on the stage, and that the coal is to all appearance a good coal, until the use of it proves that certain portions of the cargo are of very inferior quality.

I was desirous of testing each cargo as it came in, but on referring to the engineer I am informed that this is quite impracticable.

Mr. Summerbell has been informed that if further complaints arise, coal from other mines must be obtained, and that if they then continue, coal will be purchased on behalf of the Commissioner at his risk and cost.

A.R., 8/5/77.

Seen.—J.R., 11/5/77.

## No. 46.

## The Storekeeper to Mr. W. Summerbell.

Sir,

14 March, 1877.

I beg to remind you that since the commencement of your contract there has been nothing but a series of disappointments, either as regards the time of delivery of coal ordered or the quantity to be delivered. I may add that on several occasions our trucks have been detained for hours awaiting the arrival of promised cargoes, and when the vessel has arrived, instead of 220 tons, the quantity promised, we have had to put up with a bare 100 tons.

If this mode of supplying us be continued, it will be impossible for us ever to get our stages filled, and even worse, we shall be in danger of running out of coal altogether.

I am informed that the vessel for which trucks have now been waiting since 6 a.m. (about 9 hours) is to arrive at 4 p.m., and that she has been delayed to put out slack, by which I infer that we are again to put up with a part cargo.

I beg to give you notice that we shall require another cargo to fall on almost immediately upon this one, and in conclusion I must warn you that, if this unsatisfactory mode of supply continues, the matter will be brought under the notice of the Commissioner for Railways, for such action as he may see fit to take in the matter.

I have, &amp;c.,

A. RICHARDSON,

Railway Storekeeper.

## No. 47.

## The Crown Solicitor to The Commissioner for Railways.

Sir,

Crown Solicitor's Office, Sydney, 14 March, 1877.

In compliance with the instructions contained in your minute paper, B.C. 10/2/77, I have had prepared, and forward herewith, the bond, executed by the Lithgow Valley Colliery Company, and sureties, for the supply of engine coals for the Great Southern, Western, and Richmond Railways during the year 1877.

The tender, specification, and other papers herein are returned herewith.

I have, &amp;c.,

## Memorandum from Mr. J. Tipping to The Locomotive Superintendent.

Sir, Locomotive Branch, Penrith, 1 May, 1877.

I beg to report that the Newcastle coal supplied to Penrith still continues to be very dirty, small, and runs to clinker. Engine-drivers complain very much about its quality, and the difficulty they have in maintaining steam with the engines working on the mountain line.

W.S., 14/5/77.

Yours, &c.,  
J. TIPPING.

## Memorandum from Mr. J. Cobb to The Locomotive Superintendent.

Sir, Government Railways, Existing Lines Branch, Sydney, 30 April, 1877.

Driver Sixsmith reports that with 6 a.m. down train, Sydney to Goulburn, on April 26th, he was delayed 8 minutes between Picton and Mittagong, owing to the bad Newcastle coal.

Mr. Mason.—W.S., 14/5/77.

I beg the Commissioner will take some decisive action in this matter.—W.M., 15/5/77.

J.C.

## No. 50.

## Minutes of The Secretary of Railways.

Commissioner.—Perhaps the coal objected to was supplied previous to late action taken by Commissioner. The contractor should have a fair chance; if the coal supplied *after*, say the 10th instant, be bad, then the course which the contract admits of should be taken. The question is was the coal *now* complained of supplied before the 10th instant.—C.A.G., 16/5/77.

Mr. Tipping complains of the coal being *small*. If screened as provided for in specification we can take no exception to this. The Locomotive Department should see that this is done. If it "clinkers" more than the sample then we can reject it; but I advise the Commissioner to warn the Engineers' Branch as to the terms of their *reports*. Some legal action may grow out of this, and it is well that there should be no *lâches* on the Commissioner's part. We cannot reject the coal because it is either dirty (if not with band) or small, if it has been passed through the screen; and if the Commissioner accepts it without this test he takes it with all imperfections.—C.A.G., 16/5/77.

Mr. Mason will no doubt be careful that there be no *lâches* on our part if legal steps are to be taken.—J.R., 17/5/77.

Secn.—W.M., 18/5/77. Commissioner.

## No. 51.

## The Storekeeper to Mr. W. Summerbell.

Sir, 25 May, 1877.

I beg to give you notice, that if coal be not delivered by noon to-day I shall purchase a cargo at your risk and cost.

I have, &c.,  
A. RICHARDSON,  
Storekeeper.

## No. 52.

## The Storekeeper to Mr. W. Summerbell.

Sir, 29 May, 1877.

I beg once again to remind you that the rate at which you are supplying this Department with coal is in the highest degree unsatisfactory. You owe us at least 1,000 tons; and a vessel has been at the wharf since Friday, during which time she has only put out 100 tons, while our consumption during the same period has been just double the quantity.

I have to inform you that I shall give you no further notice in the matter; but if 500 tons of the 1,000 due are not delivered by Friday morning next, I shall order a cargo of coal at your risk and cost.

I have, &c.,  
A. RICHARDSON.

## No. 53.

## Memorandum from The Locomotive Superintendent.

Sir, Government Railways, Locomotive Branch, 1 June, 1877.

I have to report that 3 tons 11 cwt. of Newcastle coal has been thrown off the stage during the month of May, it being quite unfit to put on any of the locomotive engines.—J.C.

A memo. has been sent to the storekeeper in order that the amount may be deducted from the contractor's accounts.—J.C.

Mr. Mason.—W.S., 1/6/77. Commissioner to see.

Complaints still continue about the coal supplied. I shall be glad if the Commissioner will take such steps as he may consider advisable to obtain good coal.—W.M., 2/6/77.

The storekeeper, for report.—J.R., 2/6/77.

If you have to get coal at contractor's risk, try the coal from the Co-operative mines; order a small quantity at first, to try it. We have, I understand, never tried the coal before, and it is well spoken of, and is used on the Melbourne Railways.—C.A.G. Noted.—A.R.

On

On the assumption that Mr. Summerbell's statements that all the cargoes in which we have found and complained of bad coal have come direct from the New Lambton Colliery, and learning that the locomotive department is satisfied with coal just received in a barque, and which is represented to be from the Wallsend Colliery, I have requested Mr. Summerbell to supply the Department for the future with either Wallsend coal or coal from the *old* Waratah seam.

Mr. Summerbell informs me that he will require a written notice of the rejection of "New Lambton" coal by the Government in order that he may lay it before the Directors, as he has a contract with them; this notice I have declined to give as I cannot vouch for the fact that the bad coal is actually from the "New Lambton" mine, but if better coal is not promptly supplied Mr. Joubert, of the Waratah Company, offers to let us have coal from the *old* Waratah seam at our contract price, and I have just had a cargo of this delivered in consequence of the contractor's tardy rate of delivery.

The Secretary.

A.R., 5/6/77.

## No. 54.

## Mr. W. Summerbell to The Commissioner for Railways.

Sir,

Sydney, 11 June, 1877.

While my ship, the "Georgiana" was discharging and delayed for want of trucks the Waratah steam collier came up at 2 o'clock, Saturday morning, and trucks were given to her, delaying my ship. I asked Mr. Richardson the reason; he says because they wanted to try Co-operative coal; I said he should not do that, he should give notice; he answered, he had no business to do so; I then said, "Why do it in the middle of the night and take away the trucks?" he answered, it was no use *blowing*. I then said, "I will see further into it." Trusting you will remedy the ill-will that exists to my having the contract,

I remain, &amp;c.,

WM. SUMMERBELL.

What is the meaning of this?—J.R., 11/6/77.

The Commissioner is aware that complaints have been made with reference to the quality of the coal supplied by Mr. Summerbell, and that he directed the storekeeper to get other coal in terms of contract. Mr. Laidley asked the Commissioner to give his coal a trial if other coal was to be obtained, and the Commissioner having consented I instructed storekeeper to order a small quantity for trial, as it might be inconvenient to order a large quantity as it might be found unsuitable. The contractor has no ground of complaint, and Mr. Richardson has acted in accordance with his instructions.—C.A.G., 12/6/77.

Seen.—J.R., 13/6/77.

## No. 55.

## Memo. from Mr. J. Cobb to The Locomotive Superintendent.

Sir,

Sydney, 25 June, 1877.

On June 20th the s.-ship "Eagle" arrived at the wharf with a cargo of New Lambton coal. I was requested by the storekeeper to report on the quality. Drivers' reports attached.

J.C.

Mr. Mason.—W. SCOTT, 26/6/77. Write on each report the distances run and where.—W.M., 27/6/77.  
Mr. Scott. Mr. Mason. Herewith.—W.S., 27/6/77. Forwarded for Commissioner's information.—  
W.M., 28/6/77.

[Enclosures to No. 55.]

Driver Newport to The Locomotive Foreman.

Sir,

23 June, 1877.

I beg to report for your information the coal issued to me on the 21st and 22nd is very bad, both clinkery and dirty.

Yours, &amp;c.,

J. NEWPORT.

Parramatta and Homebush, engine 71—Suburban trains,—86 miles.—J.C., 27/6/77.

Driver Scott to The Locomotive Foreman.

Sir,

Railway Works, Sydney, 23 June, 1877.

Having in obedience to your instructions tried for two days the fresh sample of coal with my engine, I find that there is a considerable amount of clinker and more dirt; while I could keep the fire-bars clean it steamed tolerably well, but this is but for a short time, as the bars soon get clinkered over, and then it was bad. Upon the whole it is a much inferior quality of coal for locomotive purposes than the sample I tried, supplied by the Co-operative.

I am &amp;c.,

JAMES SCOTT.

Suburban trains—Parramatta, Homebush, engine 70—86 miles.—J.C., 25/6/77.

To Mr. J. Cobb,—

Sir,

Sydney, 22 June, 1877.

The New Lambton coal that I am now using is superior to the sample I previously tried from the same place, but I find this to be deficient in steaming and lasting qualities; it clinkers badly and is very dirty, and is in my opinion unsuitable for the kind of work we have to do, and is not to be compared with the sample of Co-operative coal that I previously tried, which I found to answer all purposes.

I am, &amp;c.,

D. MOORE.

Suburban trains—Parramatta and Homebush; engine 67—96 miles.—J.C., 27/6/77.

To

To Mr. J. Cobb,—  
Sir,

Sydney, 22 June, 1877.

I beg to state for your information that the coal I used on engine No. 37 last night was very dirty. I cleaned the fire once during the night, and had 4 inches of clinker in fire-box when knocking the fire out in Sydney.

ROBERT BAKER.

Penrith and Suburban trains—96 miles.—J.C., 27/6/77.

Sydney, 25 June, 1877.

THE coal I used on the 21st of June is very good steaming coal, but leaves a large quantity of dirt in it but I found no clinkers in it.

EDWARD WILLIAMS.

Pick-up Goods, Penrith and shunting, &c.; engine No. 21, 88 miles.—J.C., 27/6/77.

Sydney, 25 June, 1876.

THE coal I burned on the 22nd instant is a much better sample of Newcastle coal than I have burned for some time back. It is very good steaming coal, but rather dirty.

HOWELL BLAND.

Engine 47, 50 miles, Pick-up goods, Blacktown and shunting, &c.—J.C., 27/6/77.

THE coal supplied to me this day is dirty and clinkery—having to clean the fire so often causes delay.

JOHN FROST, 27/6/77.

Passenger Train, engine 80, to Bathurst and back; 290 miles.—J.C., 27/6/77.

Mr. Inspector Cobb,—

Sir,

In answer to your inquiry about the coal supplied to me on the 21st June, I beg to say that I found it decidedly bad, as at the end of about 50 miles the fire was full of clinkers and dirt, and I may also say that the consumption is very great compared with other coal.

I am, &c.,

W. HADDON.

Mail train to Goulburn and back; engine No. 28, 268 miles.—J.C., 27/6/77.

Sir,

Sydney, 26 June, 1877.

The coal I used on 23rd and 24th was a coal that made plenty of dirt, and clinkered round the tubes. I got steam with it with trouble.

Yours, &c.,

JAMES MAIN, Driver.

Engine No. 10, 268 miles; Passenger train to Goulburn and back.—J.C., 27/6/77.

To Mr. Cobb,—

Sir,

25 June, 1877.

The coal that I have been using for the last week is of a very inferior quality; there is a great deal of dirt and clinker in it. I consider it is not at all suitable for our purpose.

Yours, &c.,

W. FARQUHAR.

Engine No. 26, 268 miles; Passenger train, Goulburn to Sydney and back.—J.C., 27/6/77.

Memorandum to Mr. W. Scott,—

Bathurst Station, 25 June, 1877.

DRIVER Chas. Frost reports the Lambton coal he had on to-day was very bad. He had a deal of trouble to keep steam, and on arrival at Bathurst had about 8 inches of solid clinker in his firebox.

Yours, &c.,

J. TURTON.

Engine No. 81, 145 miles; Passenger train, Sydney to Bathurst.—J.C., 27/6/77.

#### No. 56.

The Storekeeper to Mr. W. Summerbell.

Sir,

26 June, 1877.

The 250 tons of coal, ex "Eagle," on 21st June, has been fully tried by nine engine-drivers and pronounced by all to be unsuitable.

It is dirty, clinkers, and the trains are moved in consequence with difficulty.

The Commissioner directs me to say that coal of similar quality will not be accepted, and I give you this notice, in order that you make arrangements to supply better coal in satisfaction of orders not yet complied with.

I have, &c.,

A. RICHARDSON,

Railway Storekeeper.

#### No. 57.

Mr. W. Summerbell to The Storekeeper.

Sir,

Sydney, 27 June, 1877.

In answer to your memo. of 26th June I beg to say that the coal in question, ex "Eagle," is of the kind and quality of which samples were taken and tested by your department prior to acceptance of my offer for supply.

I do not believe the coal has been fairly tested; and, further, I believe undue influences have and are being used by other persons, and by unsuccessful tenderers, to my detriment. I have been unfairly dealt with in the matter of delivery of coal to your trucks, preference having been given to coals ordered from rejected tenderers while my vessels have been kept waiting to discharge.

The coal delivered by me is equal to any Newcastle coal that can be supplied, and is from identically the same seam as the Waratah coal, which was supplied to you for years.

For reasons, however, which I can only surmise but not explain, coal from the Waratah Company has a preference in your department. Let the coal be tested by any unprejudiced person, and I shall be content; in the meantime I can only reassert that the coal I have supplied is in every way equal to that approved and tested by you in the first instance.

I have, &c.,

WM. SUMMERBELL.

P.S.—I have a cargo now at the wharf, and as your present order is not fulfilled I trust you will give this a fair trial, and oblige

Yours, &c., WM. SUMMERBELL.

#### No. 58.

##### Minute of The Commissioner for Railways.

THIS is a very important matter, and I wish the Engineer for Existing Lines to give his personal attention to it. The cargo now at the wharf may be accepted on the understanding that a fair sample of it will be tested, and if not equal to test coal on which tender was accepted, the balance must be rejected, and the coal obtained at contractor's risk. Will Mr. Mason be good enough to see that the test is conducted in the same way as it was when the tenders were decided?

J.R., 28/6/77.

I will be satisfied with this.—W. SUMMERBELL.

Memo. to Mr. Richardson to take coal and keep it separate till Mr. Mason's report is received.—C.A.G. Mr. Mason.—C.A.G., B.C., 28/6/77. Mr. Scott to carry out.—W.M., 28/6/77. This has been done, and a report forwarded to your office yesterday. There is no truth whatever in Captain Summerbell's statements.—W. Scott, 4/7/77. To Mr. Mason. To Commr.—W.M., 4/7/77.

Mr. Richardson.—The "Eagle" is at Darling Harbour Wharf with cargo of coal from Captain Summerbell. A sample of it is to be specially tested, and if not found equal to sample the balance is to be rejected. Accept the coal, and keep it separate. The Engineer for Existing Lines will inquire and report on the matter.—C.A.G., B.C., 28/6/77.

Noted.—A.R. The Secretary.—29/6/77.

#### No. 59.

##### Minute of The Secretary of Railways.

Having heard of these reports, I requested storekeeper to write to contractor to say that no further quantity of this inferior coal would be taken. In reply the contractor has written a long letter challenging the opinions expressed by the engine-drivers, and insinuating the existence of a desire on their part to condemn the coal for the purpose of getting Waratah coal.

The Commissioner thereupon requested Mr. Mason to give his personal attention to the matter, and to see that a fair trial in all respects similar to the test trial given to the coal when tenders were decided upon, should be afforded.

To admit of this another cargo of the coal was authorized to be taken, with this condition that a fair sample of it should be tested, and if it be not found equal to quality tendered the balance should be rejected and other coal obtained at contractor's risk.

This is now being done, the contractor having stated in writing that he will be satisfied with the decision.

CH. A. G., 29/6/77.

Approved. Re-submit with report of testing.—J.R., 30/6/77. Mr. Mason.—C.A.G., B.C., 2/7/77. See reports herewith on the testing of this coal.—W.M., 3/7/77. Commissioner.

#### No. 60.

##### Reports on Coal, Locomotive Superintendent to Mr. W. Scott.

Sir,

Bathurst Station, 29 June, 1877.

On the arrival at Bathurst of engine No. 79 with down passenger train this evening, I examined her fire-box and found about 1 foot of clinker and ashes therein. Mr. Summerbell's representative was there and saw it also.

Yours, &c.,

J. TURTON.

To Mr. J. Cobb,—

Sir,

Sydney, 30 June, 1877.

In submitting to you my report on the quality of the New Lambton coal, I have to state that they are very dirty, being mixed with band, &c., producing a great amount of clinker and small ash, and they are in my opinion unfit for locomotive purposes.

Mr. Hawkins, representative for Mr. Summerbell, travelled on the engine from Sydney to Bathurst and back.

Yours, &c.,

JAMES RODGER,

Engine-driver, No. 79 Engine.

Telegram from Mr. J. Towson to The Locomotive Inspector.

WHEN engine 79 arrived here yesterday with down passenger—there was about a foot of clinker and ashes in her fire-box. Mr. Summerbell's representative saw it.

##### The Locomotive Superintendent to The Engineer for Existing Lines.

THIS coal has been now 6 months on trial and continual reports both verbal and written from engine-drivers and officers of the Department on its bad quality; I have also several bad samples of it at my office, also clinker

clinker that has been taken off the fire-bars, which of itself is sufficient to condemn it for locomotive purposes, and the trains are worked with the greatest difficulty, and the driver's time taken up to attend to his fire which seriously interferes with his other duties, as well as being in continual anxiety of the train coming to a stand through the steam getting low, and I would suggest that steps be taken to obtain more suitable coal without further delay.

W. SCOTT, 30/6/77.

Mr. Mason. Commissioner to see.—W.M., 3/7/77.

Under this report the balance of this cargo of coal must be rejected, and no more of the same quality received.—J.R., 5/7/77.

Capt. Summerbell informed.—5/7/77.

#### No. 61.

#### The Commissioner for Railways to Mr. W. Summerbell.

Sir, Department of Public Works, Railway Branch, Sydney, 5 July, 1877.

In further reference to the communication addressed to you relative to the inferior quality of the coal supplied under your contract, and in reply to your letter of the 27th ultimo, in which you maintain that the coal supplied by you is equal in every respect to that tested and approved of before the acceptance of your tender, and requesting that a cargo *ex* "Eagle" may be subjected to a test, the result of which you state you are willing to abide by, I have the honor to inform you that a fair sample has been tested, but the reports received are of such an unfavourable nature that I have no alternative but to state that coal of the same quality will not again be received.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

#### No. 62.

#### Mr. W. Summerbell to The Commissioner for Railways.

Sir, Sydney, 6 July, 1877.

In acknowledging the receipt of your letter, dated the 5th instant, I may say that before receiving it the "Eagle" was loaded with New Lambton coal for you. I beg therefore that you will accept this cargo, and I undertake for the future to supply coal only from such Collieries as you may approve of.

Yours, &c.,

WM. SUMMERBELL.

#### No. 63.

#### Minute of The Commissioner for Railways.

How are we off for the present supply?—J.R., 6/7/77. Storekeeper.

We are very short of coal, so much so that we were compelled to use all the coal last supplied for trial, of which it was intended that the bulk should be set aside, pending decision as to quality.

The Commissioner.—A.R., 6/7/77.

Although I am unwilling to interfere with my minute of yesterday, yet as this cargo was supplied before Mr. Summerbell received intimation of it, and as we are, it appears, very much in want of coal, I think the present cargo may be taken on the guarantee here given as to future supply.—J.R., 6/7/77.

Storekeeper.—C.A.G., B.C., 6/7/77. The Secretary. Noted.—A.R., 9/7/77.

#### No. 64.

#### Minute from The Storekeeper.

I HAVE to report that I received a message yesterday, purporting to come from Captain Summerbell, that the "Saxonia" was in from Newcastle, and ready to discharge coal for the department, and that if she were allowed to discharge during the night she would load up "trucks" in the morning for Newcastle,—trucks which I have been pressing Captain Summerbell to take for some time past.

The request was complied with, and this morning I learn two things:—

First,—That the "Saxonia" cleared out for Wollongong the moment she got rid of her cargo of coal.

Second,—That the coal discharged was of the same quality as that recently rejected, and of which Captain Summerbell guaranteed that no more should be supplied.

This coal has been rejected, and will be emptied out of the trucks on to Darling Harbour Wharf at the risk and cost of the contractor, and of this Captain Summerbell has received written notice.

A. RICHARDSON,

11 July, 1877.

To The Commissioner.

#### No. 65.

#### Mr. W. Summerbell to The Storekeeper.

Dear Sir,

Sydney, 10 July, 1877.

I saw the Commissioner and arranged to see him to-morrow. He said he was very busy. I will see the Minister for Works, and, if necessary, the Colonial Treasurer, before that extreme step is taken of emptying the waggons. I can assure you that it was purely accidental, and the "Saxonia" did not go up in the dock, but about 5 P.M. after leaving the ship "Centaur," and as you only want to carry out the orders I trust permission will be granted to receive the coals.

Yours ever,

WM. SUMMERBELL.

I shall be glad to have immediate instructions in this matter for two reasons.  
 1st. Forty waggons are occupied with the coal to the loss of the Department.  
 2nd. There is very little coal to go on with. Capt. Summerbell has declined point blank to sign the attached letter which I put before him for that purpose as directed by the Commissioner.—A.R.  
 The Commissioner.—14/7/77.

[Enclosure to No. 65.]

to The Commissioner for Railways.

Sir, Sydney, 13 July, 1877.  
 If you will accept delivery of the coal now in the trucks at Darling Harbour ex "Saxonia," about 250 tons, I will be satisfied to receive payment at the rate of 15s. 9d. per ton, which is equal to a reduction of 10 per cent. on the contract value, and I guarantee to supply no more coal of similar quality under the penalty of its instant rejection by the Department, and of the immediate cancellation of my contract.

I have, &c.,

No. 66.

Mr. W. Summerbell to The Commissioner for Railways.

Sir, Sydney, 11 July, 1877.  
 I have the honor respectfully to request that you will take delivery of the 280 tons of coal put on the wharf at Darling Harbour, as it was shipped in Newcastle partly in error and partly because two of the cranes there, at the time my vessel was loading, were broken and occupied.

I have, &c.,

WM. SUMMERBELL.

Storekeeper, for report.—J.R., 12/7/77.

Please see my report of the 11th, and my memo. of the 14th inst. It will be seen that Captain Summerbell has declined to sign a letter agreeing to the moderate reduction of 10 per cent. on this cargo. The coal has now been in the trucks five days—a considerable loss to the Department, and I recommend that it be discharged therefrom without further delay.—A.R. The Commissioner.—16/7/77.

Approved—Let the terms of the contract be carried out.—J.R., 18/7/77.

The contractor should be called on to remove this rejected coal, or the Storekeeper will have it done at his expense.—J.R., 18/7/77. Storekeeper.—C.A.G., B.C., 18/7/77. Noted, and Captain Summerbell informed.—A.R.

The Storekeeper to Mr. W. Summerbell.

Sir, 19 July, 1877.  
 I am directed by the Commissioner for Railways to call upon you to remove at once the coal rejected by this Department, respecting which you addressed a letter to the Commissioner, 11th instant.

I am further to give you notice that if the coal referred to be not at once removed I must have it done at your expense.

I have, &c.,

A. RICHARDSON,

Railway Storekeeper.

The Secretary, 20/7/77.

No. 67.

Report of Test made by Engineer for Existing Lines.

MINUTE PAPER.

SUBJECT:—QUALITY OF NEW LAMBTON COAL.

Department of Public Works, Railway Branch, Existing Lines, Sydney, 30 July, 1877.  
 REFERRING to the New Lambton coal which the contractor stated had been delivered in error, I have in accordance with the Minister's instructions tested it myself on the passenger trains from Sydney to Bathurst and back, with the following result:—

Coal used on double journey	...	...	...	9,744 lbs.
Yield of "clinker"...	...	...	...	50 lbs.

being about 11½ lbs. of clinker per ton of coal.

No time was lost either in the "up" or "down" journey; but I must remark the "down" train was a very light one—about two-thirds the weight of the maximum load.

The coal is unobjectionable for "steaming" when thoroughly cleaned from "band," &c.

W. MASON.

THIS appears to be a more favourable test than the test on which the tender was accepted. It is true the tests were made on different lines and the weight of train was not the same, but when the coal was tested at the north the consumption was 52 lbs. per mile, with 1½ lb. clinker, while the last test shows 33½ lbs. per mile and 2¼ ozs. of clinker.—C.A.G., 2/8/77.

No. 68.

Minute of The Secretary for Public Works.

As the Engineer for Existing Lines has reported that the coal taken from the 240 tons in the trucks at Darling Harbour was, after being tested, found to be of sufficiently good quality for steaming purposes when properly cleaned, I see no objection to the 240 tons being accepted, on the understanding that it is delivered screened in the usual way. This test has demonstrated that New Lambton coal can be accepted for locomotive purposes when it has been properly cleaned. I am of opinion that in future instead of coal under the terms of this contract being screened in the station yard, Redfern, that to facilitate business the screens should be moved to the Darling Harbour Wharf. The Engineer for Existing Lines will in future see that an officer properly qualified for the duty shall be present to see that the coal delivered shall be of the best quality.

J.H., 3/8/77.

Memo.

Memo to Storekeeper to take delivery of coal; then forward to Engineer for Existing Lines.—C.A.G., B.C., 3/8/77. Noted.—W.M., 3/8/77.

The Minister on the 21/7/77 made inquiry into this matter. He thinks that from the way the specification is drawn, and the manner of acceptance of Mr. Summerbell's tender, which appears to confine him to New Lambton coal, there will be some difficulty in dealing with this case. He approved of Mr. Mason testing the coal to see if it be equal to the sample upon which the tender was accepted, and if it be, he thinks the 240 tons in question had better be accepted and used exclusively for short journeys, for which Mr. Mason reports it is not unsuitable.—C.A.G., 3/8/77.

Storekeeper to note.—The coal should be screened and then passed (if of good quality) by an officer of the Engineer's Department.—C.A.G., B.C., 6/8/77. Noted.—A.R., 6/8/77.

### No. 69.

#### Minute of The Commissioner for Railways.

Department of Public Works, Sydney, 18 September, 1877.

I AM given to understand that the coal recently supplied by Mr. Summerbell, the contractor, is from Wallsend, and not from New Lambton. If such be the case the contractor should be informed that this is not in accordance with contract.

J.R.

The Storekeeper to Mr. W. Summerbell.

21 September, 1877.

Sir, I am directed by the Commissioner for Railways to inform you that by the delivery of Wallsend coal in lieu of New Lambton coal you are departing from the terms of your contract.

Yours faithfully,

A. RICHARDSON,  
Railway Storekeeper.

### No. 70.

#### Mr. W. Summerbell to The Storekeeper.

Dear Sir,

Sydney, 20 September, 1877.

A schooner I understand is at the wharf with coals pretending they are for you. Please do not take them as they are there without my knowledge. The "Saxonia," now in Newcastle loading, for you.

Yours, &c.,

WM. SUMMERBELL.

I have seen the captain of the schooner and have informed him that we cannot take this cargo from him; he tells me that Mr. Dibbs sent him up. I may say that in the conduct of the contract we have, when not finding Capt. Summerbell, been in the habit of leaving messages at, and receiving messages from, Mr. Dibbs's office. Thus, when a messenger came from Mr. Dibbs's office some days ago to know if I could do with some more coal, I replied in the affirmative, not dreaming that the supply would be other than on account of contractor; we have been well supplied for some time.—A.R., 21/9/77. The Commissioner.

I do not know about this cargo; we can recognize only the contractor, Summerbell. See, however, Commissioner's minute of 18/9/77 herewith. Mr. Richardson must act in accordance therewith.—C.A.G. B.C., 21/9/77.

I will inform Capt. Summerbell. In the meantime Mr. Dibbs is anxious for a decided answer with regard to this cargo. The "Saxonia" will, I am advised, be up this evening. If she has Wallsend coal is delivery to be taken?—A.R., 21/9/77. The Commissioner.

I have nothing further to say. The contract is for New Lambton coal and not for Wallsend.—J.R., 21/9/77. Storekeeper.—C.A.G., B.C., 21/9/77.

Mr. Richardson is seeking for advice how to act. In the absence of the Commissioner's instructions the storekeeper had better refuse to take delivery of the coal offered by Mr. Dibbs, as the contractor says he will not acknowledge it. If the contractor offers Wallsend coal it must be declined, and if coal is wanted, and the contractor is unable to supply, Mr. Richardson had better take Mr. Dibbs's coal at contractor's risk.—C.A.G., 21/9/77. Noted with thanks. This is being carried out.—A.R., 24/9/77. The Secretary.

### No. 71.

#### Mr. W. Summerbell to The Commissioner for Railways.

Sir,

Sydney, 24 September, 1877.

Mr. Richardson by letter 21st September, informs me that I must send New Lambton coals to the Railway. I called with him on Mr. Dibbs, who stated that he would telegraph to Newcastle not to load my steamer there waiting, and that I should take coals from a schooner that he had chartered. I declined this, as putting other vessels than my own was simply taking my living away, as I have no profit on the coals only the freight. My steamer the "Saxonia" was then and is now waiting for his coal, and I ask you to allow me to place Wallsend coals in her to prevent loss to me by Mr. Richardson threatening to buy coals from Mr. Dibbs to my immediate injury. I may also inform you that there is 900 tons of coals in stock at the station. Trusting you will prevent this tyranny,

I remain, &c.,

WM. SUMMERBELL,  
Contractor for Railway Coals.

Mr. Richardson, for report.—J.R., 24/9/77.

## No. 72.

## Minute of The Storekeeper.

UPON the receipt of the first memo, of instructions on the 21st instant, I notified to the contractor that by the delivery of Wallsend coal he was departing from the terms of his contract, and that no more Wallsend would be accepted, and on the following morning I called upon him to know if he intended at once to supply us with some New Lambton coal, to which he replied that he would telegraph to Newcastle for the "Saxonia" to be loaded forthwith. In order to have some tangible assurance that this step would be taken, I suggested that Captain Summerbell should accompany me to the New Lambton Company's office and have the message sent from there. I also had in view the desirability of coming to some amicable arrangement with regard to the acceptance of the cargo of New Lambton coal lying in a schooner at Darling Wharf. This, Captain Summerbell consented to, and we had an interview with Mr. Dibbs, when the latter insisted that as Captain Summerbell had brought three cargoes of Wallsend coal in lieu of New Lambton coal, which had led to Mr. Dibbs loading the schooner himself, their cargoes should be accepted on the contractor's behalf. To this Captain Summerbell declined to consent, when Mr. Dibbs declared on his part that no New Lambton coal should be loaded into the "Saxonia" until this was consented to.

After waiting a considerable time, during which a warfare of words was being waged between Mr. Dibbs and the contractor, and finding that no settlement would be come to, I gave Capt. Summerbell notice that if new Lambton coal were not forthcoming on his account by 12 noon on Tuesday, 25th instant, I should purchase the same at his risk and cost. I have accordingly given instructions that if no steamer or other vessel arrives on the contractor's account prior to that time, the trucks are to be placed at the disposal of the schooner now lying at Darling Harbour with new Lambton coal, and these instructions I beg to say will still be carried into effect, unless in the interim I receive orders to the contrary from you.

The Commissioner.

A.R., 24/9/77.

P.S.—It is true that we have (for the first time this year) a good stock of coal on the stages, but if we were not to get a cargo to-morrow the coal emptying gang would be without work.—A.R.

[Enclosure to No. 72.]

The Storekeeper to Mr. W. Summerbell.

Sir,

I beg on behalf of the Commissioner for Railways to give you notice that unless New Lambton coal is delivered at the Railway by noon on Tuesday next, September 25th, I shall proceed to purchase the same at your risk and cost.

22 September, 1877.

I have, &c.,

A. RICHARDSON,  
Storekeeper.

## No. 73.

## Mr. W. Summerbell to The Commissioner for Railways.

Department of Public Works, Sydney, 26 September, 1877.

I AGREE to 320 tons of New Lambton coal being now landed, in consideration that these vessels stop discharging on arrival of "Saxonia."

Respectfully,

WM. SUMMERBELL.

Storekeeper to act accordingly.—J.R., 25/9/77. Noted.—A.R., 25/9/77.

The Secretary,—Let me have Summerbell's contract for coal from New Lambton for Minister's information.—J.R.

Contract herewith, and also the papers, the decisions upon which have somewhat varied the terms of contract.—CH. A. G., 28/9/77.

## No. 74.

## Messrs. G. R. Dibbs &amp; Co. to The Storekeeper.

Dear Sir,

Bridge-street, 29 September, 1877.

We beg to give you notice that the coal in the *after* compartment of the "Saxonia" is not from the New Lambton Colliery.

We are, &c.,

GEORGE R. DIBBS & Co.,

*per* WALTER ROBEY,

Managing Owners of the New Lambton Colliery,

Please give orders for the coal in the *after* compartment not to be taken. "Saxonia" expected to-day.—A.R., 29/9/77.

Mr. Scott,—Take whatever coal is approved by the Engineer for Existing Lines.—J.R., 1/10/77.

Mr. Scott to note and forward at once to Storekeeper.—W.M., 1/10/77. Mr. Richardson, 1/10/77.

My instructions on 77/6,423 were that "New Lambton" was the contract coal, and that "Wallsend" coal was to be refused if offered. Under these circumstances, on receiving notice that a certain compartment of the "Saxonia" contained other than "New Lambton" coal, I considered it my duty to decline to accept it.

I could have no idea that the Engineer for Existing Lines wished it to be taken; and even now, in sending this minute on to me, it is not stated whether such is his desire or not.—A.R., 1/10/77.

The Commissioner. Mr. Mason.—J.R., 3/10/77.

As Mr. Cobb is the officer who acts for me in this matter, and Mr. Richardson being aware of it, any reference to him would have decided what coal was to be taken. Coal approved by Mr. Cobb may be accepted; that which he does not approve must be rejected. This will probably be sufficient for Storekeeper's guidance.—W.M., 3/10/77. Commissioner.

## No. 75.

## Minute of The Secretary of Railways.

As the Commissioner was giving the directions the Storekeeper could not recognize Mr. Cobb. I am not at all surprised that the Storekeeper has been somewhat confused in this matter; the directions given to him from time to time have been most contradictory. Under the recent decision however of the Attorney General, that we are at liberty under the contract to take any coal which is considered equal to New Lambton coal, the Commissioner's last direction "that only New Lambton coal was to be taken" is modified. Storekeeper will now take such coal as may be passed by Locomotive Department.

C.A.G., B.C., 6/10/77.

Noted.—I must however state, and I believe Mr. Cobb himself will bear me out, that I had not the remotest idea that Mr. Cobb was acting for Mr. Mason in this matter. Such was not intimated to me in any shape or form, and is entirely opposed by Mr. Cobb's action, the latter having come or sent to me for instructions in every case of fresh cargoes arriving, &c. I now understand clearly.—A.R., 8/10/77. The Secretary.

## No. 76.

## The Commissioner for Railways to The Crown Solicitor.

Dear Sir,

Department of Public Works, Sydney, 28 September, 1877.

Mr. Combes desires me to forward to you herewith the specification and bond entered into by Wm. Summerbell, the contractor for supplying coal for the Railways for the present year, and to request that you will be good enough to advise whether the Commissioner can accept from the contractor coal from other pits than the New Lambton, provided that such coal is equal in quality to the sample, and approved by the Engineer for Existing Lines, without vitiating the contract.

Yours, &c.,  
JOHN RAE.

## No. 77.

## The Crown Solicitor to The Commissioner for Railways.

Sir,

Crown Solicitor's Office, Sydney, 2 October, 1877.

I have the honor to return the papers received by me from your Department, relating to Mr. Summerbell's contract for the supply of coals for the Railways, for the year 1877, and to state that I have laid them before Mr. Attorney General Dalley, who has been pleased to write an opinion in the matter, a copy of which is on the adjoining half-sheet.

I have, &c.,  
JOHN WILLIAMS,  
Crown Solicitor.  
Pro W. JACKSON.

Mr. Mason, for information.—J.R., 2/10/77. Seen.—W.M., 4/10/77. Commissioner.

## [Enclosure to No. 77.]

## ATTORNEY GENERAL'S OPINION.

I do not think that it is at all necessary that the Commissioner should insist upon the supply of coal under this contract exclusively from the New Lambton pits. The construction of this as of all agreements or contracts must be a reasonable one, according to the intent of the parties. New Lambton coal I presume is coal known to be of good character; and this particular coal may have been specified because of such knowledge. It can be of no importance whatever to the Commissioner for Railways from what particular pits the coal is procured so long as it is equal in quality to the coal specifically contracted to be supplied. There is no danger consequently of a vitiation of the contract by the acceptance of other coal than that from the New Lambton pits. The only thing to be borne in mind is that the quality of the coal supplied should be equal to that specified.

In such cases as this the rule of law is that the construction should be favourable so that the agreement may, if possible, be supported *nam verba debent intelligi cum effecta, ut res magis valeat quam pereat*.

Crown Law Offices, 2/10/77.

WILLIAM B. DALLEY,  
A. G.

1877-8.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

COMPLAINT AGAINST STATION-MASTER AND PORTER, BOWRAL  
RAILWAY STATION.

(PAPERS, DOCUMENTS, AND MINUTES RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 22 January, 1878.*

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 5th June, 1877, That there be laid upon the Table of this House,—

“ All Papers, Documents, and Minutes, relative to a complaint made by  
“ Messrs. Decent & Korff, Storekeepers at Kangaloon, complaining of the  
“ conduct of the Station-master (Mr. Bradley), and Railway Porter Stone,  
“ of Bowral, and of the loss of Goods.”

*(Mr. Shepherd.)*

## SCHEDULE.

NO.	PAGE.
1. Letter from Messrs. Decent & Korff, applying for monthly freight account, and in reference to the storage of their goods. 6 November, 1876 .....	2
2. Minute of Traffic Manager thereon. 30 November, 1876 .....	2
3. Letter to Messrs. Decent & Korff, forwarding copy of Traffic Manager's Report, and stating that a monthly freight account would be allowed them. 11 December, 1876 .....	2
4. Letter from Messrs. Decent & Korff, forwarding claim for goods lost. 17 November, 1876 .....	3
5. Letter to Messrs. Decent & Korff, acknowledging receipt of the above. 30 November, 1876 .....	3

28. Letter from Messrs. Decent & Korff, acknowledging receipt of post-office order. 22 May, 1877 .....	14

## COMPLAINT AGAINST STATION-MASTER AND PORTER, BOWRAL RAILWAY STATION.

## No. 1.

Messrs. Decent &amp; Korff to The Commissioner.

Dear Sir,

Post Office Stores, Kangaloon, 6 November, 1876.

Having found some considerable inconvenience with regard to the payment of freight since we have been in this district, we, living 9 miles distant from the railway, and therefore not knowing often what is lying there for us, consequently cannot draw a cheque for the same every time our carter goes in, we would feel much obliged if you would grant us the usual accommodation that we find most of our fellow storekeepers similarly situated get allowed by paying our freights once a month.

I would also beg to inform you that we have found some considerable inconvenience with regard to the storage of our goods. We endeavour to get them away as fast as we are able, but considering the large quantity of goods we have during the last three months (between 40 and 50 tons), and for which we have paid you between £60 and £70, I think we ought to get some consideration for time to remove them, and not be bored in the way we have, as it is impossible to remove them within twenty-four hours (as we have repeatedly dinged in our ears we ought to do). All we want is fair accommodation, the same as other storekeepers get on the Northern and Western lines, and would therefore esteem it a favour if you will inform us the outside time you can grant us for same in case we cannot remove them.

I have, &amp;c.,

JOSEPH H. DECENT,

(Pro DECENT &amp; KORFF).

Traffic Manager, for report, B.C., 14/11/76.—C.A.G.

## No. 2.

Minute of Traffic Manager.

To Station Master, Sutton Forest.

WHAT amount of business do we do with this firm, and what amount of security would be required to cover an average monthly freight?

With reference to the latter part of their letter,—what is it they complain of, what do they want, and what can we do for them in this direction without inconveniencing ourselves or others?

D. VERNON, T.M.,

(Per T. F. ELLIOTT),

18/11/76.

Messrs. Decent & Korff transact all their business with Bowral Station. Mr. Gore for this firm comes to this station.—GEO. FARQUHAR, 21/11/76. To Traffic Manager.

Bowral, 22/11/76.—D. VERNON, T.M., per T. F. ELLIOTT.

Mr. J. O. Bradley to The Traffic Manager.

Sir,

Bowral Station.

In reply to Messrs. Decent & Korff's letter, I must say that those gentlemen are most unreasonable in their remarks; every accommodation has been afforded them, and also grace at all times extended to them. As regards payment, at no time have they been pressed to remove their goods, unless in a truck, or have been left too long in the shed, so much so that a portion of their goods are still on hand, and have been so for the last two months.

In reference to the cash transactions, all that was required of them was to forward the next time they came or sent in, the cash for goods taken away on the previous occasion. I do not believe a thorough business man would think himself harassed by such treatment. However, it did not please or satisfy Mr. Decent, so I informed him he would have to find security if he required any further extension of time, referring him to you to fix the said amount. £50 bond would be sufficient.

Yours, &amp;c.,

JAS. OCT. BRADLEY,

24/11/76.

From annexed report from Bowral it will be seen that this firm has no reason to complain of being inconvenienced in any way. They are allowed to leave their goods in the shed a reasonable time, and often considerably beyond this, as instanced in the case of the goods that have been on hand for about two months. With regard to the paying of their freight, all they have hitherto been asked to do is that, when sending in for goods, they will remit the freight for the goods taken the previous trip, which, as they have not an authorized credit, is as much as they can fairly expect, and even this much the Station-master is not justified in doing, and were any revenue lost in consequence he would be responsible. The best way to meet the difficulty would be for Messrs. Decent & Korff to secure a monthly credit to the extent of (say) £50, which represents about an average month's transactions.—D.V., per H. RICHARDSON, 30/11/76. Commissioner.

Send copy of this to Messrs. Decent & Korff, and say that a bank deposit receipt for £50 in favour of Commissioner, the interest upon which would be allowed them, will secure them a monthly freight account to the sum named.—4/12/76, C.A.G. Messrs. Decent & Korff, 6/12/76.

## No. 3.

The Commissioner to Messrs. Decent &amp; Korff.

Department of Public Works, Railway Branch,  
Sydney, 11 December, 1876.

Gentlemen,

In reference to your letter of the 6th ultimo applying for a monthly freight account on the Great Southern Railway,—I have the honor to inform you that an account will be allowed you on your remitting to me, in observance of the usual practice, a bank deposit receipt of £50 in my favour. The money

money may be deposited for any time you may think proper, and the interest accruing thereon will be duly paid to you. With regard to the second paragraph in your letter complaining that you have been put to considerable inconvenience in consequence of having to remove your goods within twenty-four hours after arrival, and requesting that an extension of time may be allowed you, in accordance with the alleged practice on the Northern and Western lines,—I have to state that the matter has been fully inquired into, and I forward you copy of report received from the Traffic Manager in the matter.

I have, &c.,  
JOHN RAE,  
Commissioner for Railways.

#### No. 4.

Messrs. Decent & Korff to The Commissioner.

Sir,

Post Office Stores, Kangaloon, 17 November, 1876.

We wrote you some few days ago with reference to the settlement of our freight account; but not having received any reply thereto, we beg now to hand you the enclosed account, and would respectfully inform you that the goods have been lost entirely through Mr. Stone's neglect of duty. We have a dozen witnesses to prove, besides ourselves, that goods have been taken from Bowral Station scores of times without any receipt being taken for them, consequently it is impossible for him to know what becomes of them.

With regard to the second items charged,—as we before stated to you, we have paid you a large amount for freight during the last four months; and being situated as we are, twelve miles distant from the railway, we find it most inconvenient to send in a cheque every time our man comes in (which is twice a week), not knowing often what is lying there for us; further, we have always paid hitherto at the end of each month (as you will see if you trace our cheques), and there would have been nothing said about this now had we not complained to Mr. Stone about the loss of our goods, telling him his duty was to take a receipt for everything that went out of his shed.

Lastly, we informed Mr. Stone and Bradley both that the matter was before you for your consideration, and yet, in the face of that, he not only refused to give our man a load of goods yesterday, but actually detained goods on which freight had already been paid, and for which we have the receipts, and thus our man, after coming 12 miles and 12 out, had to return unloaded.

If this state of things is allowed to be tolerated by an insubordinate officer who is paid by the public money, it is quite time it was put a stop to; without, therefore, we are compensated for the same, we intend taking immediate action in the matter for the loss we have sustained.

We have, &c.,  
DECENT & KORFF.

Acknowledge receipt, and say matter will be inquired into.—28/11/76. Quote previous papers referred to, and refer to Traffic Manager. B.C., 28/11/76, C.A.G.

#### [Enclosure.]

The Commissioner to Messrs. Decent & Korff.

Department of Public Works, Railway Branch,  
Sydney, 30 November, 1876.

Gentlemen,  
In acknowledging the receipt of your letter of the 17th instant, complaining of the delaying of your goods at Bowral Station, I have the honor to inform you that the matter will be inquired into.

I have, &c.,  
JOHN RAE,  
Commissioner for Railways.

#### No. 6.

Minute of Traffic Manager.

WILL Mr. Bradley please let me have an early and full report with reference to the enclosed, and also Porter Stone's written explanation of his share in the matter.

D. VERNON, T.M.,  
(Per T. F. ELLIOTT),  
1/12/76.

Mr.

Mr. J. O. Bradley to The Traffic Manager.

Sir,

In reply to your minute in reference to Mr. Decent's complaint against Porter Stone, and the claim he makes against the department, I must say the first is groundless and the latter perfectly absurd. He complains of Porter Stone having sent him insulting memos, and returned two of them to me to look over. In doing so I am at a loss to discover anything insulting or objectionable; they simply show that Porter Stone was doing his duty in endeavouring to collect the revenue of the department. From expressions made use of by Mr. Decent I considered it prudent to detain them in the event of any further correspondence taking place, that the same might assist in investigating the matter. Mr. Decent states nothing would have been said about payments only that he informed both Porter Stone and myself that he intended making a claim. The assertion is certainly not the truth. The memos annexed will clearly prove to the contra, and that we have had to push them for the freight of goods soon after their arrival in the district; and in order to get rid of the responsibility I referred him to you to give the necessary security. As regards the loss sustained, that can only be imaginary, they at that time having very little property on the station, some of which has been left for a considerable time. No obstruction was offered; and if so urgently required, why not have removed them before? We certainly stopped them when we found the difficulty of getting the amount of freight, and no security forthcoming. I regret to say that Mr. Decent's conduct throughout has been anything but gentlemanly. On one occasion I had to request him to leave the station unless he moderated his language, he threatening to have Porter Stone dismissed, calling him a liar and a d—d skunk. A man who so far forgets himself in my opinion is quite capable of trumping up a claim. I know very little of Mr. Decent, and from what I have seen of him am not at all ambitious of extending the acquaintance beyond business matters.

Yours respectfully,

JAS. OCT. BRADLEY.

Mr. H. Stone to Mr. J. O. Bradley.

Sir,

In answer to Messrs. Decent & Korff's complaint as to the loss of goods by them, I shall in the first place state that their goods arrived at the station all right and were delivered to their man by me for the sugar which they say was lost. I have the name of their man, and for the corn meal the names Decent & Korff signed by the latter. I may also state that on two other occasions Mr. Decent complained of having lost goods which I pointed out to him, they having laid so long that he had nearly forgotten them. As to Mr. Decent having a dozen witnesses to prove any neglect on my part of the duties which I am here to perform, I defy him to produce them. As for it being inconvenient for Messrs. Decent & Korff to send in a cheque every time their man comes in, I would ask how do others manage who get up certainly four times the amount of goods that Messrs. Decent & Korff do?

Mr. Decent says that they have hitherto paid at the end of each month, and that there would not have been anything said now had they not complained of the loss of their goods. In answer to this, I may state that since they came to the district I have been continually speaking and writing to them for the money for their goods. As to Mr. Decent's lastly, Mr. Decent did inform me some two months since that they were going to make arrangements with the Manager as to a monthly credit, but after his repeated visits to Sydney, as I saw no sign of any arrangement having been made I refused to let any more goods without the money, explaining to him that my orders were strict and that I must be able to produce the goods or the money. It is not on account of what I have or have not done on the station that Mr. Decent has made this claim, but some time ago I took the business of having my life insured out of his hands and put it in the hands of Mr. Ruuree, the Company's Agent at Nattai, and he then said that he would make some one pay for the loss of his commission. I do not doubt that the present claim is the means he has taken towards that end. Mr. Decent has shown himself so utterly regardless of truth that I consider it my duty to press him for immediate payments, or authority from the Manager to let him have his goods on credit. I also think it my duty to decline taking his cheques in payment for his goods, as I do not think there is much faith to be placed in a person who would deny to your face having received any bills and send them in the next day telling his man to get you to sign them but not to let you look at them. I am now on the station about six years, and never had a claim made for lost goods until Mr. Decent makes this charge, which I do not hesitate to pronounce false from beginning to end. The claim for loss from detention of goods is absurd; they had four bags of sugar and a few bags of flour and bran in the shed at the time they were refused the goods, and the most that they could take away at a time with their horse and cart would be about six or eight hundred, on which I hardly think they could make £5 profit.

I am, &c.,

HENRY STONE.

[Enclosures.]

Mr. H. Stone to Messrs. Decent & Korff.

Gentlemen,

I have again to call your attention to the Railway Rules, which are—cash on delivery. This has been pointed out to me no later than yesterday, and it is unpleasant to be called to account for a thing of which you are so well aware.

Yours,

HENRY STONE.

Mr. H. Stone to Messrs. Decent & Korff.

Gentlemen,

I wish you would be good enough to send in the money for the things which you have had or get authority to pay monthly, for my orders are so strict that no more goods can go without either the money or an order from Sydney to let you have them.

Bowral, 14 November, 1876.

HENRY STONE.

No. 7.

Messrs. Decent & Korff to The Commissioner.

Sir,

Post Office Stores, Kangaloon, 10 December, 1876.

With reference to the matter of Henry Stone and Station-master at Bowral, which I and my friend Mr. B. Rush called to see you about on Saturday last, and which I had previously intimated to you in my letter dated the 17th November,—I herewith, according to your instructions, beg to lay before you the following statement, which I swear to be true in every particular:—

First, that I can prove by several witnesses that Mr. Stone has allowed goods on several occasions from the said shed without any receipt being taken for them whatsoever; and in complaining to him about the loss of ours mentioned in my letter to you he was very uncivil, and told me that all goods would have to be removed from the station within twenty-four hours after arrival, otherwise he would not be responsible for them. He also stated to Mr. Bradley that he had considerable trouble to get the freight from us, whereas the said receipts will show to the contrary; and on my denying the same, he called me a damnation infernal liar, and which, much to my surprise, the Station-master, Mr. Bradley, backed him up in.

If therefore this sort of thing is allowed to be tolerated in the Government Service, I think it quite time the matter was brought before the House and inquired into. Trusting, however, that you will be able to deal with the matter by removing him,—

I am, &c.,

J. H. DECENT,

(Pro DECENT & KORFF).

Traffic Manager to inquire and report. Such conduct, assuming it to have taken place, is intolerable.—J.R., 11/12/76.

No. 8.

## No. 8.

## Messrs. Decent &amp; Korff to The Commissioner.

Sir,

Post Office Stores, Kangaloon, 14 December, 1876.

We have to acknowledge the receipt of yours, dated 11th instant, together with reports from the Traffic Manager and Mr. Bradley, Station-master at Bowral, appended; but we would respectfully inform you that we consider the same very wide of the question placed before you, which we will endeavour to show you. First, by stating that we made no complaint to you about the previous accommodation we had received, either as regards the storage of our goods or the payment of our freight account, but quite the reverse, as our Mr. Decent endeavoured to show when he was down last week with his friend Mr. Rush, and called at your office.

Up to that time we have always paid our freight as convenient to ourselves, although *always* before the end of the month, as the documents I have will show; and then as regards the storage of our goods, we have always fetched them away as fast as we possibly could. Possibly there might have been one or two articles that may have been overlooked, that may have remained the time Mr. Bradley states, but they must have been so trifling that we consider Mr. Bradley has nothing to make a handle of on that score, and we would feel very much obliged if he would, through you, mention what they are, for we know not; and neither I imagine would he have mentioned it had he not a spite against us because our Mr. Decent told him that things were done in a very irregular way, and from all accounts it suits his purpose to support Stone whether he does his duty or not.

If, therefore, a public officer, who is paid by us and every one else, is allowed to show his spleen in this way, as I will hereafter show, it is quite time, if we cannot get redress from the department we seek, to bring such glaring affairs as these before the House, and which we have influence enough to do, and intend carrying out, if our claim for the loss we have sustained is not satisfied and these officers removed.

When we inform you that no later than yesterday, although our Mr. Decent had mentioned to Mr. Bradley he had seen you and that arrangements had been made, our dray would have been sent back empty had it not been for the kindness of a stranger who cashed our cheque, because Mr. Stone refused to take it; and we have three witnesses to prove it.

Now, sir, we would not say anything about this if he had refused to do so when we first came in the district, but we have paid the same individual by our cheques before something to the tune of £86 odd since we have been here, and now because he has a spite against us, I would respectfully ask you, sir, are such insults as these to be tolerated by a common railway porter, and backed up by a Station-master?

We think the thing is monstrous. We have never had our cheque refused before by any one, and if the like of him is invested with such power as this to refuse or take as he pleases, it is high time some different regulations were made in the department, and that no cheques should be received, the same as it is in the Passenger Ticket Department, and then one would know what they had to contend against, and would not be under the penalty of receiving such insults from petty Government officers.

We have now made our statement, which we are in all points prepared to substantiate. Trusting the same will receive your just consideration, and to have an early reply,—

We have, &c.,  
DECENT & KORFF.

## No. 9.

## Minute of Secretary of Railways.

THIS letter cannot be dealt with till Traffic Manager's report on papers sent to him on 11/12/76 is received.

It appears to me that Traffic Manager should himself hold an inquiry into this matter, and ask the complainant to be present.

I should like to know early what is being done, as Messrs. Decent & Korff should be written to.—  
B.C., 21/12/76, C.A.G.

## No. 10.

## The Traffic Manager to Inspector Crawford.

THE charges brought against Bowral Station by Messrs. Decent & Korff are very serious; and before sending in my report to the Commissioner, I should like Mr. Crawford to go thoroughly into the matter and let me know the facts.

He will see from the papers what is required, but the following are the chief points to be gone into:—

Are there any grounds for the charges brought against Porter Stone,—that he has allowed goods to be taken away on several occasions "without any receipt being taken for them whatsoever"; that he was very uncivil, and told Mr. Decent that all goods would have to be removed within twenty-four hours after arrival, &c., and that he called Mr. Decent a "damnation infernal liar," and was backed up in this by Mr. Bradley?

How often have they been in the habit of making remittances to the station in payment of their freight account, and how much at a time? The best way to show this would be to have prepared a detailed statement showing all goods consigned to them during the time they have been in the district (a few months only I believe), the freight due on each consignment, and the dates the different payments have been received. It would be also as well to go to a little further trouble and complete the thing by showing dates of delivering the goods.

What has become of the goods for which claim is made—Can we prove delivery of them, and if not, why not?

Of

Of what goods was delivery refused, and how long a time were consignees kept without them in consequence, and why was such a decided step taken without reference to this office—What amount of freight was due at the time, and how long had it been owing?

What time was lost by their man and team?

Why were they refused delivery of goods on which freight had been paid, and what goods were they?

Have their cheques ever been refused, and if so, why? If they have hitherto been paying by cheque and their cheques have never been dishonored, we cannot refuse to accept them now without good and sufficient reason?

Has this firm any reasonable grounds for complaint about anything, and if not, how is their action in making such reports to the Commissioner to be accounted for?

Why has Porter Stone so much to do with the public, the collection of moneys, and corresponding with merchants, &c.? It looks very much as if he performs many important duties which should be attended to by the Station-master himself, and when such is the case it is not to be wondered at that the public are dissatisfied. This should be set right at once, and on no account must Stone be allowed to write to the public in future.

There are many other points that Mr. Crawford will see the necessity of going into. I should like him to sift the matter thoroughly, and, if possible, let me have his report by Tuesday morning next.

D. VERNON, T.M.,  
(per T. F. ELLIOTT),  
16/12/76.

## No. 11.

### Inspector Crawford's Report.

Messrs. Decent and Korff's charges against Bowral.

In reference to the above charges made against Station-master Bradley and Porter Stone, I beg to make the following remarks:—

1. That Stone allowed goods to leave the shed on several occasions without first obtaining a receipt for them.

This charge is true. Stone has allowed goods to leave the shed without obtaining any receipt for them. He allowed goods belonging to this firm to leave without receiving receipts, on the following dates:—August 30th, two items, 17s. 6d. and 4s.; September 1st, one item, 2s. 5d.; September 5th, one item, 12s. 8d.; September 29th, two items, 10s. 7d. and 1s.; October 18th, one item, 12s. 8d.; October 20th, one item, 3s. 1d.; besides several items belonging to other people.

2. That Stone was very uncivil; told Mr. Decent that all goods must be removed within twenty-four hours after arrival; that he called Mr. Decent a *damnation infernal liar*, and was backed up by Mr. Bradley in this.

This allegation is denied both by Stone and Mr. Bradley. Stone told Mr. Decent that all goods would have to be removed within twenty-four hours, because he was making a convenience of the goods shed, and leaving goods a very long time on hand—there is beer on hand over four months—and on telling Mr. Decent so, only quoted the By-laws. Stone denies using the words as stated by Mr. Decent, but he called Mr. Decent a damned liar after great provocation. The cause was this:—Stone said to Mr. Decent, "I sent you out some bills." Decent flew into a violent rage, and called Stone a liar, and a damned skunk (this is a favourite expression of his). Stone retaliated, and called him as stated above. Mr. Bradley did not back Stone up, but when Mr. Decent made use of the contemptuous expression towards Stone, said that if he (Decent) did not use more becoming and gentlemanly language he had better leave the premises.

3. How often have they been in the habit of making remittances to the station in payment of their freight account, and how much at a time?

They remitted twice in July, twice in August, twice in September, twice in October, once in November, and from December the 4th until the 13th, three times, in the following sums:—£9 15s. 7d., £23 2s. 7d., £7 11s. 4d., £4 17s. 4d., £1 19s. 5d., £4 3s. 3d., 14s. 7d., £13 4s. 9d., £2 12s. 4d., £4 14s. 5d., 5s. 11d., £1 8s. 9d., and £2 17s. 8d.

4. What has become of the goods for which claim is made—can we prove delivery?

The goods said to have been lost were delivered. The bag meal signed for by Mr. Korff, 24th July, 1876, and the bag sugar, signed for by L. C. Macrae, as one of a consignment of sixteen bags, delivered on the 4th September, 1876, can be proved by delivery book.

5. Of what goods was delivery refused, and how long were consignees kept without them in consequence?

The goods refused were four bags sugar out of a consignment of thirty-three bags, three boxes soap, seven bags bran, and five or six small bags flour.

The drayman in the first instance could not take all the sugar, and on returning without the freight owing, delivery was refused. He was kept two days without them until he paid the freight.

6. Why were such decided steps taken without reference to the Traffic Manager?

The reason assigned by the Station-master for taking such decided steps was that, from the 5th July up to the 15th November, Mr. Decent was requested to obtain the usual credit account from the Traffic Manager, as he (the Station-master) could not take upon himself the responsibility of allowing him credit. This he promised to do the first time he went to Sydney, and made the same promise time after time, until at last the Station-master saw that he had no intention of doing so, and informed him that in future he must pay on delivery, as he would not take the responsibility of giving him credit any longer.

7. What amount for freight was due at the time, and how long had it been due?

The amount due for freight was £3 17s. 7d. The dates of arrival were—October 30th, 28/2; October 31, 5/11; November 1st, 20/6 and 1/10; November 7th, 3/7; November 11th, 1/4; November 14th, 16/3.

8. What time was lost by this man and team?

One half-day *i.e.* going home empty. He brought a quantity of produce to the station for Sydney.

9. Why were they refused delivery of goods on which freight had been paid, and what goods were they?

10. Has their cheque ever been refused, and if so, why?

11. If they have hitherto been in the habit of paying by cheque and their cheque been never dishonored, we cannot refuse to accept without good and sufficient reason.

12. Has this firm any reasonable grounds for complaint about anything? If not, how is their action in making these complaints to the Commissioners to be accounted for?

Why has Porter Stone so much to do with the public—the collection of money and correspondence with the public?

It was considered that any goods could be detained for freight, no matter whether paid or not, if any amount was still outstanding. The articles were three casks ale, three boxes soap, seven bags bran, and five or six small bags flour, all portions of previous consignments.

Their cheques were never refused at the Bank, but as the Station-master is alone responsible for every cheque he may take in business, he considers he has the discretionary power to accept or refuse any cheque so long as he is individually responsible.

Mr. Bradley had misgivings from the very first in accepting their cheque, but as Mr. Decent promised to get a monthly credit account, he accepted their cheque from time to time. But, on discovering that Mr. Decent made so many misstatements, and was so thoroughly unreliable as regards the truthfulness of his statements, that he at last declined to incur any responsibility on his behalf any longer, and refused to accept his cheque or give him credit.

This firm has no reasonable cause for complaint. They were treated in the first instance exactly in the same manner as other customers were who use this station, and received every reasonable indulgence. When the goods arrived consigned to them they were delivered to their carter, with a memo. of the amount of freight due on them, and a request that the next time he came to the station to bring the amount of freight. This he failed to do time after time, and hence the memoranda complained of. Every time Mr. Decent came to the station he was reminded of the fact that the freight on his goods was unpaid.

It was no more inconvenient for this firm to send a cheque to cover the amount of freight due on goods delivered to their carter on his previous visit than it was for other storekeepers doing twice the business they were.

Another cause of grievance against Stone was (of a private nature), that Stone had taken the agency of his life assurance out of Mr. Decent's hands. He then threatened that he would make some person pay for the loss of his commission.

Porter Stone being the only porter at Bowral, has, under Mr. Bradley, charge of the goods shed, and responsible to him for the collection of all freights, enters up the delivery book, keeps the waggon book, &c. His sending the enclosed memoranda to Mr. Decent was a mistake which I have cautioned him against in future.

Mr. Decent, and he alone of all the people who use this station, is dissatisfied. Stone is a most inoffensive man, civil and obliging to every person using this station. He has been six years in the Service, all the time at this station, and over thirty years in the district, bears an excellent character, I am not aware of any complaints against him from the public until now.

To show the malicious and vindictive spirit of Mr. Decent, he has been going round the neighbourhood endeavouring to get people to join him in getting a petition up for the removal of Stone, and boasting he will have him either removed or dismissed.

The Traffic Manager.

ALEX. CRAWFORD,  
19/12/76.

## No. 12.

## The Traffic Manager to the Commissioner.

The enclosed report and explanation of Inspector Crawford affords abundant proof,—

1. That this recently-established firm have had unusual indulgence shown to them, and have given unusual trouble and annoyance in persistently neglecting the reminders and remonstrances of the Station-master and his assistant.

2. Mr. Decent has been grossly and characteristically abusive to Porter Stone, and provoked the latter to make use of the expression complained of. Stone is a most quiet, inoffensive man, and must have received some foully abusive language I am perfectly satisfied.

3. That goods were not refused until it became the *last resource*. The value of the goods detained was not much in excess of the freight due, and the Railway Act empowers the Commissioner to detain any goods, &c., &c.; the Commissioner is not liable, therefore, for the so-called loss of £5 on account of delay in sale and the £1 for man's time.

4. As Stone has neglected in two or three instances to obtain proper receipt for goods, he had better be made pay the £1 8s. 6d. claimed for goods; not that I have the slightest doubt Decent & Korff had the goods; but in view of Stone's neglect we had better not go into Court on this point.

5. Respecting refusal of "cheques," Mr. Bradley and Porter Stone state that, as the responsibility of accepting a cheque rests entirely with them,\* and they had such reason to doubt the character and intention of these people, they considered themselves justified in rejecting the responsibility of their cheques.

I don't see how we can censure an officer in the face of the fact that he has been given to understand that his must be the responsibility of taking cheques.†

I do not agree with the practice,‡ as I consider the ordinary commercial risk of conducting such a business as ours should be borne by Commissioner.

No one can be more exacting than myself in the matter of civility and courtesy being rendered to the public, but in the present instance our officers require protection. D.V., 30/12/76.

\* It does not.—C.A.G. † They have no such responsibility.—C.A.G. ‡ The practice was abandoned a long time ago. I obtained a decision from the Minister that this was a commercial risk which the Commissioner should take.—C.A.G.

## No. 13.

## Minute of Secretary of Railways.

I was present when Mr. Decent and Mr. Rush called upon the Commissioner in this matter, and from the manner in which they conducted themselves—the dominant and disrespectful language they used—I formed the opinion that their accusation against the staff at Bowral would be easily met, and that it would be shown that Mr. Decent alone was in fault. I regret, however, to find from a perusal of the papers that the staff at Bowral has been greatly to blame. There are three charges which have been proved against them.

1. Grossly insulting language used by Porter Stone to Mr. Decent, unproved by the Station-master.
2. Failure to obtain receipts for goods when they left the store.
3. Their refusal to accept the firm's cheque.

The first charge is sought to be defended by the plea of "provocation received," Mr. Decent having used equally abusive language, to which Porter Stone's was a retort. This is no defence whatever. Mr. Decent's language should have been reported to the Traffic Manager, who would have taken steps provided for in the By-laws to protect the Railway employes from insult and abuse. The Station-master is greatly to blame for not reproving Stone when appealed to by Mr. Decent.

To the second charge there is no defence offered. The Traffic Manager recommends that Porter Stone be made to pay the claim arising thereout of £1 8s. 6d.

The third charge is the most serious of all. There appears to me to have been no reason whatever for refusing the firm's cheque. They had been previously taken, and always met at the Bank. The excuse offered—that Mr. Decent had often promised and had as often failed to obtain a credit account, and thereby raised the suspicion that they were unstable—is most illogical and ridiculous. The further excuse that the staff would be liable if the cheque was not paid is a misstatement. The Railway employes were specially exempted from any such liability long ago, the Commissioner assuming, as was proper, such responsibility. Added to the indiscretion shown in refusing the cheque is the fact that it was refused at a time when the conduct of the staff was, at Mr. Decent's instance, under investigation. Common decency should have restrained the staff from taking harsh proceedings at such a time, and their conduct raises the suspicion that they were actuated by malice, although it is asserted they were acting only in the belief that their duty required them so to do. I recommend that the Station-master be severely reprimanded, and that Porter Stone be removed from Bowral to some other station, with a loss of 1s. a day in his wages for three months.

C.A.G., 8/1/77.

Approved, 24/1/77.—J.R. Traffic Manager, B.C., 25/1/77.—C.A.G.

Seen. I shall be glad to see Mr. Bradley and communicate Commissioner's decision. Retain papers until then.—D.V., 30/1/77.

## No. 14.

## The Commissioner to Messrs. Decent &amp; Korff.

Department of Public Works, Railway Branch,  
Sydney, 24 January, 1877.

Gentlemen,

In reference to your letter of the 14th December last, I have the honor to inform you that a very strict inquiry has been made into the charges brought by you against the Railway staff at Bowral, and it is with much regret I find that of these charges three have been fully proved; they are:—

1. Grossly insulting language and conduct by Porter Stone to your Mr. Decent, unproved by the Station-master.

2. Failure to obtain receipts for goods when they left the store.

3. Refusal to accept the firm's cheque.

The following minute dealing with these charges will show you the conclusions arrived at, which are based upon an analysis of the evidence.

"The first charge is sought to be defended by the plea of "provocation received," Mr. Decent having used equally abusive language, to which Porter Stone's was a retort. This is no defence whatever. Mr. Decent's language should have been reported to the Traffic Manager, who would have taken the steps provided for in the By-laws to protect the Railway employes from insult and abuse. The Station-master is greatly to blame for not reproving Stone when appealed to by Mr. Decent.

"To the second charge there is no defence offered. The Traffic Manager recommends that Porter Stone be made to pay the claim arising thereout, £1 8s. 6d.

"The third charge is the most serious of all. There appears to have been no reason whatever for refusing the firm's cheque. They had been previously taken, and had always been met at the Bank. The excuse offered—that Mr. Decent had often promised and had as often failed to obtain a credit account, and thereby raised a suspicion that they were unstable—is most illogical and ridiculous. The further excuse that the staff would be liable if the cheque was not paid is a misstatement. The Railway employes were specially exempted from any such liability long ago, the Commissioner assuming, as was proper, such responsibility. Added to the indiscretion shown in refusing the cheque is the fact that it was refused at a time when the conduct of the staff was, at Mr. Decent's instance, under investigation. Common decency should have restrained the staff from taking harsh proceedings at such a time, and their conduct raises the suspicion that they were actuated by malice, although it is asserted they were acting only in the belief that their duty required them to do so."

I have carefully considered this report and evidence, and have decided that the justice of the case will be met by the Station-master being severely reprimanded and warned that unless he better supervises the men under him he will be disgraced.

That Porter Stone be removed from Bowral to some other station, with a loss of 1s. a day in his wages for three months. I may add that Stone would have been dismissed but for his previous good character and length of service, and also the fact that he was greatly provoked.

A voucher for the sum of £1 8s. 6d. for the goods short delivered to you will be certified, and the money forwarded to Bowral for payment.

I have, &c.,

JOHN RAE,  
Commissioner for Railways,  
(By CH. A. G.)

#### No. 15.

#### J. D. Woodhouse and others to The Traffic Manager.

Sir,

30 January, 1877.

We, the undersigned, residents in the districts of Bowral and Kangaloon, hearing that it is in contemplation to remove Henry Stone, Railway porter at Bowral Station, and believing that such removal would be injurious to himself and would not serve the public interest, the said Henry Stone having our entire confidence and approval, hereby strongly but respectfully urge upon you the desirability and our earnest wish that his services should be retained in his present situation.

Yours respectfully,  
JN. D. WOODHOUSE.  
R. H. ROBERTS.  
W. H. NEICK.  
And 125 others.

For Commissioner's information.—D.V., 2/2/77.

#### No. 16.

#### Messrs. Decent & Korff to The Commissioner.

Sir,

Kangaloon, 25 January, 1877.

We have the honor to acknowledge the receipt of your favour of yesterday's date, and were glad to learn therefrom that the matter referred thereto has received your attention, and the result in some measure met our approval.

We would, however, inform you that we think we are not only entitled to the amount for the loss of our goods, but justly to compensation for the sale of same, together with loss of our time for man and two horses to and from Bowral. However, to show you that we require nothing more than justice, we will say nothing further about it, but will rest satisfied to know that such insults as we have received are not tolerated by you or any head of the Government Department.

With regard to Porter Stone's conduct, however, he may make what statements he likes to defend himself, but I beg most strenuously to deny that I ever used any abusive language to him whatsoever till both him and Bradley gave the provocation to me; and when I repeat again to you what *was said*, I will leave it to you to decide whether I was not fully justified in making the assertion I did, and also whether there was any abuse in it at all. I think you will decide the abuse was all on the other side.

The matter runs thus:—The day after our dray was sent back empty from Bowral, because we had not 14s. 6d., which was then owing (at same time we had about £40' goods at the station), I went into Bowral, and expostulated with Mr. Bradley, and remarked to him that, considering he owed me £1 16s., he might have instructed Stone to let me have the goods, especially as I had the same day given our man a note to Mr. Bradley telling him the matter was before you for your consideration. He then replied to me in a very abusive manner, telling me that Stone said he repeatedly had sent me accounts for freight, but had not got the money. I then saw Stone, and told him that it was a lie, and asked him to render me a duplicate of these accounts, which, of course, he was unable to do, he knowing full well a few days after these accounts were rendered he always got his money, as our cheques would prove. Finding, then, he was in a dilemma, he became abusive, and called me a "damnation infernal liar," in which Mr. Bradley backed him up, and had the impudence to tell me he did not believe we lost the goods, and that it was only

## 11

only a try-on. I think such statements as these, sir, most insulting, and deserve much censure, and that too much power is allowed these officials altogether, and that you have dealt very leniently with them both.

However, the steps you have taken, we trust, will be a caution to them and others in future; and, in consideration thereof, we do not wish to press our charges further.

We have, &c.,  
DECENT & KORFF,  
(Per J. H. DECENT).

## No. 17.

## Minute of Secretary of Railways.

THE writer betrays in this letter the fact which Mr. Crawford's inquiry elicited, that Mr. Decent gave the staff at Bowral great provocation. Mr. Decent does not appear to understand that there is anything offensive in calling the porter "a liar!" but I trust that should this gentleman again offend in the same way, the Railway official will not retort in the way Porter Stone did, but will at once report the matter to the Traffic Manager, who, by a prosecution under the By-laws, will teach this gentleman that the Railway servants, in the execution of their duty, are not to be insulted with impunity.—C.A.G., 30/1/77.

Approved.—Inform J.R., 30/1/77.

## No. 18.

## The Commissioner to Messrs. Decent &amp; Korff.

Gentlemen,

Department of Public Works, Railway Branch, Sydney, 6 February, 1877.

With reference to your communication of the 25th ultimo, further respecting your complaint against the Railway officials at Bowral, and giving a fuller statement of the circumstances which led to the conduct of Porter Stone, I have the honor to inform you that your statement corroborates the report made by the Railway Inspector, that your Mr. Decent gave the staff at Bowral great provocation.

In calling Porter Stone a liar, Mr. Decent placed himself in a false position, and has no right to complain of any indignity offered to him in consequence. It was not out of consideration to Mr. Decent that Porter Stone was punished, but because he transgressed the rules of the department, which provide that in such cases Railway employés are not to retort, but to report the insulting language to the head of the department, in order that a prosecution under the By-laws may be instituted against the person so offending. Had Porter Stone pursued this course, Mr. Decent would have been made to learn that Railway servants, in the execution of their duty, cannot be insulted with impunity.

I have, &c.,  
JOHN RAE,  
Commissioner for Railways.

## No. 19.

## Messrs. Decent &amp; Korff to The Commissioner.

Sir,

Kangaloon, 31 January, 1877.

It having been reported to me that a petition has been sent in to you, moved by one Mason, a friend of Bradley's in this district, to endeavour to reinstate Porter Stone in his former position, on the fictitious and trumpery grounds that the bag of sugar and corn meal in question have been found, and thus to blind the people (who know nothing of the real merits of the case) that the loss of these goods is the only charge against this man and that he has been hardly dealt with,—I would respectfully inform you that these assertions made by this fellow Mason are entirely unfounded, as I will hereafter show, and in no respect anything at all to do with the charges which by your report of the 24th have been fully proved.

Mr. Bradley may, therefore, bring all the influence he can to support his conduct and Stone's, but he will find that I have equally as much and *more*, and whether, therefore, the bag of sugar, &c., has been found or not, I will bring influence enough to bear upon the matter, to know whether such insults as I have (or rather in this case I should say we) are to be received or not.

I would, however, assert that the case got up by Mason is most ridiculous and unfounded. His case is this:—He asserts that he has this particular bag of sugar, and Bradley asserts that he knows where this particular bag of corn meal is gone to. In answer to same: are the like of these individuals to dictate to us how many bags of sugar are received from such and such a merchant? It is quite sufficient for us to know we bought in this instance from the Sugar Company eighteen bags and that we paid freight on eighteen bags and only received seventeen, and the bag that Mason had was one out of the seventeen; and further, that we were invoiced for two bags of corn meal from Redgate & Son, and that we paid freight on the two, and that they were both on the weigh bill at Bowral, and that we only received one, and that Stone cannot show his receipt for delivery of either, nor for many other goods, which if he had done this dispute would not have been raised; and this is the sum and substance of the charge, which would have passed unnoticed by us had he not through spite treated us in the way he did by sending our dray back empty. Because I spoke to him about a very shabby way he acted with reference to some insurance matter, we have ever since received nothing but annoyance from this individual, who, I say fearlessly, has been backed up by Mr. Bradley.

As I have before said, although I and my friends consider you have dealt most leniently with both these officers, I am quite satisfied with your jurisdiction, feeling quite confident that you are satisfied in your mind that these parties have been actuated entirely by malice, and therefore fully deserve the decision you have arrived at, and which you will without fear or favour let remain as it is.

I have, &c.,  
JOSEPH H. DECENT,  
(Pro DECENT & KORFF).

## No. 20.

## No. 20.

## Mr. R. Graham and others to The Minister for Works.

We are, &amp;c.,

ROBERT GRAHAM, Bowral.

JOHN G. MORRIS.

JAMES ALCORN, East Kangaloon.

And 47 others.

Let me see the papers in this case before anything is done finally.—J.L., 15/2/77.

## No. 21.

## Mr. J. H. Decent to The Commissioner.

Sir,

Kangaloon, 8 March, 1877.

I have to acknowledge the receipt of your communication of the 6th ultimo, addressed to the firm, but my time being a good deal taken up in being away from home, have been prevented from replying to the same before.

However, having been informed that Porter Stone is still enjoying his former position, and the fact that we have not as yet received the amount of our claim for the loss of our goods, I deem it expedient to make some inquiries why your decision contained in yours of the 24th January has been revoked.

With all due respect, therefore, for you and the responsible position you hold, I beg once more, in spite of what the Railway Inspector may have reported, to give a most flat denial to ever having insulted any one of the Railway staff at Bowral; but when Porter Stone made use of statements which he could not corroborate, out of spite to me for reproving him for his neglect of duty, I told him it was a lie, and that he could not prove his statements. And I think, sir, I did no more than any other free subject had a lawful right to do; and why, I would ask, is not my word as good as the Inspector's? Is it possible for an Inspector to inspect the words that came out of a man's mouth some months ago?—and is it not possible, and more than probable, for these men to make their own story good when the Inspector came up? Why, I would ask, was I not called before the Inspector to give my version of the case? If this is the way the public are to be treated, it is high time redress was looked for in another quarter; and you may rely upon it this matter will not drop here, as I have friends sufficient who will bring this most glaring affair before the House, where perhaps the ends of justice will not be defeated.

If, therefore, you will kindly point out the By-law showing me that a Government official, of any grade whatsoever, has the prerogative to exercise his tyranny over any of his other fellow-citizens, I am content to abide by it, but otherwise I am not,—and neither, as I said before, do I intend this to drop here.

I have travelled all over the Colonies for many years, and am too well acquainted with the By-laws not to be fully aware that insulting and abusive language must not be tolerated to any Railway official to hinder him in the execution of his duty, but outside that I fail to see what a Railway official is any more than any one else; and it is quite a novel idea to me to be informed that a common Railway porter has the prerogative to insult one and tell lies about him, and that we have no power or right to retort.

I beg, therefore, in conclusion, respectfully to inform you that I consider your remarks contained in yours of the 6th ultimo are entirely out of place and uncalled for, when you talk about me insulting people with impunity (it being quite the reverse). At same time also I would like to know upon what ground your former decision has been revoked, so that this matter may be further inquired into.

I have, &amp;c.,

JOSEPH H. DECENT.

(Pro DECENT &amp; KORFF.)

See Minister's minute of 15/2/77 on 77/926 herewith. He wished to see papers before anything was finally done.—C.A.G., 13/3/77.

If Stone is to be retained at Bowral, Decent & Korff should be so informed, as they were told he would be removed. Stone should not be let off all punishment.—CH.A.G.

## No. 22.

## Minute by Commissioner.

Mr. Stone is to be retained at Bowral, but a fine of two days' pay, 13s., may be inflicted as a warning to him for the future.—15/3/77, J. R. Inform to-day. Decent & Korff, 21/3/77.

## No. 23.

## The Commissioner to Messrs. Decent &amp; Korff.

Gentlemen,

21 March, 1877.

In reference to your letter of the 8th instant, I have the honor to inform you that a numerously signed petition has been forwarded to this department, speaking highly of Porter Stone, and urging his retention in his present position, and that it has been decided to retain him at Bowral.

As however it is considered that some punishment should be inflicted for his misconduct, he has been fined two days' pay.

I have, &amp;c.,

JOHN RAE,

Commissioner for Railways.

No. 24.

## No. 24.

Messrs. Decent &amp; Korff to The Commissioner.

Sir,

Post-office Stores, Kangaloon, 26 March, 1877.

We have to acknowledge the receipt of yours of the 21st, and in reply would inform you that if you think the fining of a man two days' pay is sufficient compensation to us for the inconvenience and loss we have sustained through the insolence and insults we have received by this man, and backed up by Mr. Bradley, we do not; and neither do we intend to be choked off in this manner, for notwithstanding the numerously signed petition you speak of, which we have evidence to prove was partly got up by this individual himself, and signed by several who knew nothing of the merits of the case, we consider this in no way compensates us, and is a most one-sided affair. Finding, therefore, it is of no use looking to you for justice, we must seek redress at a higher tribunal, when, perhaps, both sides of the case will be heard.

We beg, therefore, to enclose a duplicate account as rendered to you in the first instance; and without the same is settled at once, we purpose putting the same into the hands of our solicitor for immediate recovery, when perhaps we shall see whether the law sanctions the detention of our goods on which freight has already been paid, because a railway porter chooses to exercise his spleen or spite for being reproved for neglect of duty.

We have, &c.,  
DECENT & KORFF.

[Enclosure.]

Post Office Stores, Kangaloon, 16 November, 1876.

The Commissioner, Government Railways, To Messrs. Decent and Korff, Dr.

To goods lost as under at Bowral Station, &amp;c., &amp;c.

August 28th.	1 bag sugar, 60 lbs., at 29s. ... ..	£0 15 6	
	Freight on do. ... ..	0 1 0	
September 5th.	1 bag corn-meal, 100 lbs. ... ..	0 12 0	
			1 8 6
November 16th.	Loss of time for one man and team to Bowral and back ... ..	1 0 0	
	Loss on sale of goods through not receiving the same, portion of which freight had already been paid thereon, which we have evidence to prove ... ..	5 0 0	
			6 0 0
			£7 8 6

Kangaloon, March 26th, 1877.

Traffic Manager for report. It was decided that the loss said to have been sustained was to be paid, but not loss on sale. How does matter stand?—B.C., 4/4/77, C.A.G.

Will the Secretary be good enough to attach the former papers on this subject?—D. VERNON, per David Kirkcaldie, 9/4/77. Papers were returned to Traffic Manager on 22/3/77.

Where is the letter from Decent & Korff's solicitors? Put with this and forward to Traffic Manager for immediate report.—B.C., 13/4/77, C.A.G.

## No. 25.

Messrs. Shorter &amp; Fitzgerald to the Commissioner.

Sir,

Temple Court, King-street, Sydney, 8 April, 1877.

We are instructed by our clients, Messrs. Decent & Korff, of Kangaloon, to apply to you for payment of the sum of £7 8s. 6d., being the amount of compensation claimed by them for goods lost through the conduct and neglect of one of the railway officials, the nature and particulars whereof we are informed have been furnished to you on two several occasions.

We have, &c.,  
SHORTER & FITZGERALD.

## No. 26.

Minute of Traffic Manager.

I THINK the decision formerly arrived at should be adhered to—Stone to be fined two days' pay, as per Commissioner's minute of the 15th March, and in addition to be made to pay the claim of £1 8s 6d. for the goods which he cannot prove delivery of.

I think, however, that Decent & Korff's claim against us should be restricted to the latter amount, and that any effort made by them to obtain more should be resisted, for the reason that Porter Stone intimated to them by memo. (enclosed)\* on 14th November, that no more goods could be delivered to them \*See No. 6. without payment, notwithstanding which they sent their man and dray on the 16th November without either cheque or cash.

I am of opinion that Decent & Korff will think twice before they take us into Court for indirect damages, and even if they do I think Stone's memo. would protect us in our refusal to give delivery.

If the Commissioner takes this view of the matter, I shall, on hearing from him, at once direct Porter Stone to pay the 28s. 6d.

Commissioner.

D.V., 10/5/77.

The Commissioner has already approved of this. Traffic Manager had better send cheque to Decent & Korff for 28s. 6d., and collect from Porter Stone.—C.A.G., B.C., 16/5/77. P.O.O. £1 8s. 6d., to Decent & Korff, 18/5/77.—G.A.

Mr. Bradley will please note and inform Stone of the foregoing decision, and send me the £1 8s. 6d. which I have to-day remitted to Messrs. Decent & Korff. Let this be seen to without delay, please.

D. VERNON,  
(per DAVID KIRKCALDIE).

Mr. Bradley, Bowral.

[Enclosures.]

Telegram from Station-master to Traffic Manager.

PORTER Stone states about that time he refused to take Decent & Korff's cheque, but cash never refused when offered. 9/5/77.

Telegram from Station-master to Traffic Manager.

PORTER Stone states on the day he refused the goods to Decent & Korff's carrier he neither offered cash nor cheque, and they were informed previously not to send for goods without the cash or he would be refused. 10/5/77.

## No. 27.

## The Traffic Manager to Messrs. Decent &amp; Korff.

Gentlemen, Traffic Manager's Office, Redfern Station, Sydney, 18 May, 1877.  
With reference to your claim for one bag of sugar and one bag of corn meal invoiced to Bowral Station for you, which you allege have not been delivered, I have now the honor to send you enclosed post office order for their value, £1 8s. 6d., of which be good enough to acknowledge receipt.

As regards your further claim for indirect damages, I have to state that, as the Commissioner cannot see wherein the department has failed in its duty in the matter, he is unable to entertain such claim.

I have, &c.,  
D. VERNON,  
Traffic Manager.  
Per T. F. ELLIOTT.

## No. 28.

## Messrs. Decent &amp; Co. to The Traffic Manager.

Sir, Post Office Stores, Kangaloon, 22 May, 1877.  
We have to acknowledge the receipt of yours of the 18th inst., with P. O. order enclosed, £1 8s. 6d., as compensation to us for the loss our goods as per account rendered to the Commissioner for Railways in November last; but as the matter is now in the hands of our solicitors (Messrs. Shorter & Fitzgerald, Temple Court, King-street, Sydney), we have handed the same over to them, with instructions to withdraw any further claim on payment of their costs by you (if they think proper), otherwise the matter must now take its course.

We would, however, inform you, if you think the payment of this sum is sufficient compensation to us for the insults, annoyance, and inconvenience we have been put to by these officers, we do not; and would further state it was not so much a question of damages for the loss of the goods that these charges were laid, as to show these men their real position, as our previous letters to the Commissioner will prove.

We may also add that, had you done your duty in the first instance by hearing both sides of the question, you would have found that our Mr. Decent is a gentleman well known by every Traffic Manager, Inspector, and Station-master, and Railway porter throughout the Colonies, by whom he has always received the utmost kindness and attention, combined with every facility to enable him to fulfil his business capacity, and therefore not likely to get up a trumpery case for damages without just grounds to work upon.

However, the matter is now before a higher tribunal than either yours or the Commissioner's, where no such one-sided investigation as that of yours will be tolerated, but the case dealt with on its merits, and these officials taught their duty, as all public officers should be.

We have, &c.,  
J. H. DECENT & CO.,  
(Late DECENT & KORFF.)

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

EXTENSION OF GREAT NORTHERN RAILWAY TO  
QUEENSLAND BORDER.

(PETITION FROM RESIDENTS OF MANILLA, BARRABA, GWYDIR, AND INVERELL.)

*Ordered by the Legislative Assembly to be printed, 29 January, 1878.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned, residents of Manilla, Barraba, Gwydir, and Inverell Districts,—

HUMBLY SHOWETH:—

1st. That in the event of the extension of the Great Northern Railway from the proposed terminus at Tamworth to the Queensland Border, it is the duty of your Petitioners to bring before the notice of your Honorable House the following facts:—

2nd. That the proposed railway line *viâ* Manilla and Barraba to Inverell has already been reported upon by your engineers as being by far the most advantageous to the general interests of the country for the extension of Main Trunk Line from Tamworth to the Queensland Border (*vide* Mr. Surveyor Wade's report, dated December 28th, 1872, ordered to be printed by the Honorable Legislative Assembly November 18th, 1875).

3rd. That the line *viâ* Manilla and Barraba to Inverell, striking as it does into the interior of the country, and at the same time direct for the Queensland Border, points it out as far superior to the route *viâ* Armidale, which follows more the direction of the coast.

4th. That this line can be constructed at a vastly cheaper rate than any other surveyed route, owing to level nature of the country passed through, and the comparatively few engineering difficulties to be encountered.

5th. That the greater part of the country through which the line would pass is unsurpassed in the Colony for agricultural, mineral, and pastoral pursuits, thousands of acres of which would be taken up and settled upon if the line was constructed, in addition to the immense quantity already alienated.

6th. That many thousands of acres along this route are already under cultivation, the average yield of which under wheat exceeds 20 bushels to the acre, proving the extreme fertility of the soil.

7th. That the construction of the railway to Queensland by the route indicated would pass by the famous Vegetable Creek and other tin mines, which raise thousands of tons of tin annually, the greater part of which is now sent to Warwick, in Queensland, whereas, if this line were constructed, it would be the means of diverting all products of the outlying districts to our own markets.

8th. That, in consequence of the great increase of population in these districts, residents are subjected to great loss and inconvenience from want of better and quicker means for carrying the various products to market, in proof of which immense quantities of wool alone in these districts do not arrive in Sydney for months after being shorn.

9th. Your Petitioners therefore humbly suggest that the Main Trunk Line be constructed *viâ* Manilla and Barraba to Inverell as the cheapest, shortest, and most practicable and beneficial route to connect with the Queensland Border.

10th. Your Petitioners therefore humbly pray that your Honorable House will take the premises into your favourable consideration, and, in the event of the extension of the Great Northern Railway as aforesaid, cause the Main Trunk Line to be constructed *viâ* Manilla and Barraba to Inverell.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 510 signatures.]

1877-8.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## EXTENSION OF GREAT NORTHERN RAILWAY TO QUEENSLAND BORDER.

(PETITION OF W. SWANSON, MAYOR OF INVERELL.)

*Ordered by the Legislative Assembly to be printed, 21 March, 1878.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned residents of Inverell and surrounding districts,—

HUMBLY SHOWETH:—

1. That your Petitioners believing the extension of the railway from Tamworth northwards towards Queensland will shortly occupy the attention of your Honorable House, desire to place before you their reasons in favour of the route *viâ* Manilla, Bundarra, Inverell, and Vegetable Creek being adopted in preference to that *viâ* Armidale.

2. That such a line if approved would render available for settlement a far greater area of good agricultural land than on any other route proposed; in proof of this, Government statistics show that in districts where one thousand (1,000) acres or over are cultivated for wheat, Tamworth and Inverell stand respectively first and second for productiveness per acre for the whole Colony. As the land of Manilla and Barraba is equally good with that at Tamworth, which is perhaps the best in New South Wales, a very large population and increased prosperity must result from the railway passing through country of such immense resources; besides this, Inverell not only produces wheat, maize, oats, barley, lucerne, rye, &c., in large quantities, but it is also the best wine-producing district in the Colony. Statistics show that the average yield of wine for the Colony is 177 gallons per acre, that of Albury 214 gallons, whilst in Inverell, where the cultivation of the vine is but in its infancy, the yield is 577 gallons per acre of wines of the highest excellence. And during last year from being eighth Inverell has become the fourth largest producer in New South Wales. Further it may be noted that of the thirty districts, each cultivating over one thousand acres, Armidale stands as low as the twenty-first, whilst, as before stated, Tamworth and Inverell are respectively first and second.

3. That the proposed route would intersect some of the richest pastoral districts in the Colony, as the line would be fed by the greater part of Liverpool Plains, the whole of the Gwydir, and the western slopes of New England,—the number of sheep thereon being found to be no less than 2,112,000, representing 4,120 tons of wool annually, as against the Armidale route with 656,000 sheep and 1,360 tons of wool.

[*Note.*—As the district of Bundarra which now sends its sheep returns to Armidale will be intersected by the proposed line *viâ* Manilla, the stock depasturing therein are very properly claimed for that route. No estimate has been made of the quantity and value of fat cattle, sheep, and other live stock, tallow, hides, and other produce which would require to be carried to market by this line, but which must far exceed that by the line to Armidale.]

4. That a special reason exists in favour of this line against that *viâ* Armidale in this fact, that the whole of the tin fields of the Colony would be intersected or be brought within immediate reach of the line, including those of Cope's Creek, Vegetable Creek, the Gulf, and Tableland mines, from which Government returns show that over 19,000 tons were raised, valued at £840,000, in the first five years after the tin discovery, but as those returns do not include the yield for the years 1872-3 for Inverell, Cope's Creek, Middle Creek, the Ponds, and Vegetable Creek, nor for the year 1874 for Inverell and Tingha, the returns from which would represent at the lowest estimate 8,300 tons, of the value of £425,000, which would give together, tin ore to the value of £1,265,000, making an annual total production of over £250,000, affording employment to 1,600 miners, and giving an average earning to each man of £156, as against 579 gold-miners in the Peel, Uralla, and Armidale districts, producing gold to the value of £33,907, making an average earning for each man of only £58 12s.

5. That your Petitioners respectfully beg to point out that by the proposed Inverell extension a much larger number of important centres of population will be benefited than by that *viâ* Armidale; thus the following towns will either be intersected by or brought within easy distance of railway communication, viz.:—Attunga, Manilla, Barraba, Cobbeda, Bingera, Warialda, Bundarra, Tingha, Inverell, Ashford, Wellingrove, Vegetable Creek, and Dundee. Whilst *viâ* the Armidale extension the following towns only would be served:—Moonbi, Bendemeer, Walcha, Uralla, Armidale, Glen Innes, and Deepwater. (The latter two places send all their produce and obtain all their supplies from Grafton.)

6. That the number of acres of land selected from week to week in any particular land district does not always guarantee permanent settlement, as for instance the thousands of acres conditionally purchased during the recent drought at the Armidale and Walcha land offices, which land is quite unsuitable for sheep, except in the driest seasons, were merely taken by owners of travelling stock who found this course more economical than renting grass or defending trespass actions. In addition to this the Armidale land district is eight times as large as that of Inverell and reaches to within 20 miles of Glen Innes, while it approaches to within 12 miles of us on the south, whilst the Warialda and Bingera districts encroach to within 7 miles of Inverell on the west.

7. That your Petitioners desire to point out that the railway engineers have shown that the line *viâ* Inverell is at least fifty (50) miles shorter than that *viâ* Uralla, Armidale, and Wellington Vale. And that they believe that the former line has easier gradients, and will cost much less to construct and maintain than any other that can approach New England from Tamworth.

8. That viewing the work as a national one the proposed line is the best to connect our railway system with that of Queensland, as it embraces the largest area of good land, contains a greater population, exports more produce, imports more merchandize, is a country highly favourable for railway construction owing to its almost level nature, and must by reason of its superior position, climate, and natural advantages become in very few years the seat of a large and thriving population.

9. That the construction of any line of railway towards Queensland, which shall not follow generally the route before-mentioned, namely, *viâ* Manilla, Barraba, Bundarra, Inverell, and Vegetable Creek, will grievously hamper the operations of your Petitioners, and strongly militate against the future welfare and prosperity of the northern portion of the Colony.

10. That having respectfully stated their wants and grievances, and submitted such information as may acquaint your Honorable House with the justice of their requests, your Petitioners humbly pray that the premises may be taken into favourable consideration, and such relief granted as your Honorable House may in its wisdom deem just and expedient.

And your Petitioners, as in duty bound, will ever pray.

Signed for and on behalf of the Public Meeting held on this 13th day of March, 1878, and for and on behalf of the residents of Inverell and surrounding districts,—

W. SWANSON,  
Mayor.

1877-8.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## RAILWAY TO CONNECT MUDGEES WITH GREAT NORTHERN RAILWAY.

(PETITION FROM RESIDENTS OF THE HUNTER RIVER AND NORTH-WESTERN DISTRICTS,—IN FAVOUR OF.)

*Ordered by the Legislative Assembly to be printed, 22 January, 1878.*

To the Legislative Assembly of New South Wales.

The Petition of the undersigned Residents of the Hunter River and North-western Districts,—

RESPECTFULLY SHOWETH:—

That a Railway to connect Mudgee with the Great Northern Line at Muswellbrook is urgently needed, and that its construction, while calculated to be of the greatest possible benefit to the North-western Districts, will also comply with the conditions to be sought for in a great national work—

For the following reasons:—

That the line would pass for nearly its whole length (about 1,000 miles) through country of great richness and fertility, far superior to any country yet opened up by the Southern or Western lines.

That the traffic to and from the North-western Districts and the Muswellbrook Railway Station, both as regards passengers and goods, is already very considerable, the amount of goods despatched from Muswellbrook Station alone during one year being about 3,600 tons, and the number of bales of wool arriving thereat about 5,900; and that the proposed line would in its operations largely increase this traffic, and therefore become a highly profitable portion of the railway system of the Colony.

That the proposed line is in the direct route from Newcastle to the North-west either to Bourke or Walgett.

That the various towns and districts along the proposed line would be largely benefited and improved by having railway communication, and that the quantity of rich land through which the line would pass for its whole length would thereby be rendered available for the settlement of a large agricultural population.

In support of the foregoing statements the following statistics have been compiled from the Statistical Register for 1875 and the Australian Hand-book for 1877, of the districts directly interested in the proposed line, viz.:—Population, 18,354; number of acres under cultivation, 17,747; number of acres enclosed but not cultivated, 444,369; number of acres unenclosed, 271,642; number of holdings, 733,760—the quantity of wheat grown being 126,850 bushels; barley, 3,686 bushels; maize, 79,200 bushels; oats, 4,780 bushels in one year.

That in addition to those mentioned the following districts, viz.:—Singleton, Maitland, Morpeth, and Newcastle, with an aggregate population of 43,624, will in the event of the prayer of the Petition being acceded to be enabled to retain and develop a commerce with the North-western districts which is already of very considerable proportions.

That a survey of the proposed line at a great cost has been completed, and from the known level nature of the country through which such survey was made, your Petitioners submit that the engineering difficulties would be comparatively trifling, and the cost of construction per mile considerably below the general average.

Your Petitioners therefore humbly pray that your Honorable House will take the foregoing facts into your favourable consideration.

And your Petitioners, as in duty bound, will ever pray.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## RAILWAY FROM GREAT NORTHERN RAILWAY TO MUDGEE.

(PETITION FROM RESIDENTS OF THE HUNTER AND NORTH-WESTERN DISTRICTS.)

*Ordered by the Legislative Assembly to be printed, 29 March, 1878.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned residents of the Hunter River and North-western Districts,—

RESPECTFULLY SHOWETH:—

That a railway to connect Mudgee with the Great Northern Line at Muswellbrook is urgently needed, and that its construction, while calculated to be of the greatest possible benefit to the North-western Districts, will also comply with the conditions to be sought for in a great national work—for the following reasons:—

That the line would pass for nearly its whole length (about 100 miles) through country of great richness and fertility, far superior to any country yet opened up by the Southern or Western Lines.

That the traffic to and from the North-western Districts and the Muswellbrook Railway Station, both as regards passengers and goods, is already very considerable, the amount of goods dispatched from Muswellbrook Station alone during one year being about three thousand six hundred tons, and the number of bales of wool arriving thereat about five thousand nine hundred; and that the proposed line would in its operation largely increase this traffic, and therefore become a highly profitable portion of the railway system of the Colony.

That the proposed line is in the direct route from Newcastle to the north-west either to Bourke or Walgett.

That the various towns and districts along the proposed line would be largely benefited and improved by having railway communication, and that the large quantity of rich land through which the line would pass for its whole length would thereby be rendered available for the settlement of a large agricultural population.

In support of the foregoing statements the following statistics have been compiled from the Statistical Register for 1875, and the Australian Hand-book for 1877, of the districts directly interested in the proposed line, namely:—Population, 18,354; number of acres under cultivation, 17,747; number of acres enclosed but not cultivated, 444,369; number of acres unenclosed, 271,642; number of holdings, 733,760—the quantity of wheat grown being 126,850 bushels, barley 3,686 bushels, maize 79,200 bushels, oats 4,780 bushels, in one year.

**LEGISLATIVE ASSEMBLY.**  
**NEW SOUTH WALES.**

—  
**RAILWAY FROM WALLERAWANG TO MUDGEES.**  
(PETITION IN FAVOUR OF—FARMERS, FREE SELECTORS, AND OTHERS, MUDGEES DISTRICT.)

—  
*Ordered by the Legislative Assembly to be printed, 20 March, 1878.*

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Memorial of the undersigned Farmers, Free Selectors, and others, engaged in agricultural pursuits within the District of Mudgee,—

**RESPECTFULLY SHOWETH:—**

That it is of vast importance to your Petitioners, and to the general interests of the District of Mudgee, that there should be railway communication between Mudgee and the metropolis, *via* Wallerawang, as early as possible.

That within a radius not exceeding twenty-eight miles from Mudgee, according to ordinary statistics, there exists a population of about twenty-five thousand.

That in ordinary good seasons your Memorialists suffer great loss directly from the want of a market for their produce, and indirectly because they could raise much larger quantities of general agricultural produce, but have no means of profitably disposing of or utilizing the same; that railway communication with Sydney would open to them the metropolitan market; and the line from Mudgee to Wallerawang, your Memorialists respectfully urge, is essentially the best, as being the shortest; it is consequently the quickest, a desideratum at once manifest, and of paramount importance to your Memorialists as producers.

That, according to statistics furnished by Mr. Lackey, when Minister for Works in 1875, the line of railway connecting Mudgee with Wallerawang would be (63) sixty-three miles. That the produce of the Mudgee District proper, according to returns for the year ending March, 1874, was:—Gold, 131,125 ozs., valued at £508,108; wheat and maize, 136,229 bushels; potatoes, 698 tons; hay, 3,057 tons; wine, 1,200 gallons; and that 100,779 horses, horned cattle, sheep, and pigs existed within the district; and your Memorialists confidently state these returns fall far short of the producing capabilities of the Mudgee District, and are totally independent of the produce of the sister district of Rylstone, the inhabitants whereof would be equally benefited with your Memorialists by the adoption of the line of railway herein asked for.

2. That the surveyed line from Wallerawang to Mudgee runs almost entirely through Crown lands; consequently but a comparatively small sum would have to be paid to freeholders for compensation; and the grand fact that magnificent seams of excellent coal and shale exist in the immediate neighbourhood of the proposed line, and quite adjacent to the town of Mudgee, warrants your Memorialists in urging upon your Honorable Assembly the desirability and necessity of opening up to your Memorialists and the people generally, by direct means of railway communication with Sydney, *via* Wallerawang, a market for their produce, whether agricultural, pastoral, or mineral.

That the recent geological survey, made by the Government Geologist, Mr. Wilkinson, reveals the fact that the vast auriferous deposit of the great Gulgong Gold Fields (distant only 18 miles from Mudgee) is comparatively untouched, and capable of affording remunerative and permanent employment to a large mining population, whose wants would add largely to the railway revenue of the extension asked for by your Memorialists, and, in addition, would lead to the extensive mineral reserves shown by geologists to exist throughout the Mudgee District being worked, requiring only cheap transit to a market to profitably develop them.

Your Memorialists would respectfully point out that by the railway extension to Mudgee, *via* Wallerawang, the metropolitan consumer would be equally benefited with the provincial producer; and that besides Mudgee and Sydney other districts would largely benefit; and they confidently urge that the development of the resources of the interior must and will add materially to the prosperity of the metropolis, and the wealth and stability of the Colony generally.

That having regard to the immense resources of the Mudgee District, and the large revenue derived therefrom, your Memorialists are equitably entitled to the railway extension prayed for, and call the attention of your Honorable House to the Petition presented on or about July 2nd, 1875, to the then Minister for Works, signed by sixteen Members of the Legislative Council, thirty-two Members of the Legislative Assembly, 1,402 residents of Mudgee, 895 residents of Gulgong, and 185 leading Sydney residents, which petition was favourably received, and the proposed extension advocated by the two Ministries immediately preceding the present.

Your Petitioners believe thoroughly that not only is railway communication by the route proposed desirable and indispensable, but in the end is most economical, and they urge strongly that nothing is so beneficial to the development of the resources of a great producing country, such as the Mudgee District, as the advantages of speed and reliability. That the uncertainty, delay, loss, difficulties, and misery suffered by travellers between Mudgee and Wallerawang would, by the railway extension proposed, be relieved; and also increased facilities would be opened up for the prosperous settlement of a large population upon the splendid arable lands of this extensive and naturally wealthy district, as well as being of the greatest possible advantage to the inhabitants of Liverpool Plains, the District of Bligh, and the North-western interior generally.

That your Memorialists, believing that the interests of Mudgee are bound up with the general prosperity of the Colony, and having regard to the immense revenue derived from the district from many important and various sources, and also to the matter hereinbefore referred to, respectfully pray that your Honorable House will take such steps in behalf of your Memorialists and the best interests of the Colony generally as will cause the early construction of the extension of the line of railway from Wallerawang to Mudgee.

And your Memorialists, as in duty bound, will ever pray, &c., &c.

*[Here follow 620 signatures.]*

1877-8.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

## RAILWAY FROM WALLERAWANG TO MUDGEES.

(PETITION IN FAVOUR OF, INHABITANTS OF HARGRAVES.)

*Ordered by the Legislative Assembly to be printed, 21 March, 1878.*

To the Honorable Sir George Wigram Allen, Knight, Speaker, and the Honorable Members of the Legislative Assembly, in Parliament assembled.

The Petition of the Inhabitants of Hargraves, in the Electoral District of Mudgee,—

HUMBLY SHOWETH:—

That it is of paramount importance to the pastoral, agricultural, mineral, and mercantile interests of this district that there should be railway communication between Mudgee and the metropolis, *vid* Wallerawang, as early as possible.

Your Memorialists would point out that they consider themselves entitled to this boon for the following reasons:—The Electoral District of Mudgee, according to the 1877-78 lists, just issued, contains 4,795 electors. This, according to ordinary statistics, would give a population of about twenty-five thousand persons with a radius of twenty-eight miles. This number of electors does not include a large number of those of the Western Gold Fields residing in the Mudgee Electorate.

Your Memorialists would point out that the pastoral, agricultural, and mineral resources of the Mudgee District are second to those of no other in the Colony. That the most important gold fields of Gulgong and Home Rule are situated in it, and it having been decided that the large area of land hitherto reserved is to be thrown open for conditional purchase, it may be confidently asserted that thousands will settle down upon it.

Rylstone, an important and rising town, surrounded by some fine agricultural lands, would also be largely benefited by the construction of the railway prayed for.

The advantage to the metropolis of being connected by railways with the principal out-lying districts in the Colony cannot be over-rated. From the great resources of the district and the large amount of traffic between Mudgee and Wallerawang, both in passengers and goods, your Memorialists would respectfully urge that it has been demonstrated by official statistics that this railway would be remunerative from its construction, and from the large amount of revenue contributed by the district your Memorialists humbly submit that they are entitled to the boon prayed for.

Your Memorialists further submit that the necessary survey of the line having been completed, and the cost fully estimated, with the sanction of your Honorable House, pray that the work be carried out without further delay.

And your Petitioners, as in duty bound, will ever pray.

15 March, 1878.

W. B. SUTTON, JUN.,  
Chairman on behalf of the Meeting.

1877-8.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

**RAILWAY FROM WALLERAWANG TO MUDGEES.**  
(PETITION IN FAVOUR OF—PUBLIC MEETING OF INHABITANTS OF MUDGEES.)

*Ordered by the Legislative Assembly to be printed, 21 March, 1878.*

To the Honorable Sir George Wigram Allen, Knight, Speaker, and the Honorable Members of the Legislative Assembly, in Parliament assembled.

The Petition of the inhabitants of Mudgee, in the Electorate of Mudgee, in public meeting assembled,—

HUMBLY SHOWETH:—

That it is of paramount importance to the pastoral, agricultural, mineral, and mercantile interests of this electorate that there should be railway communication between Mudgee and the metropolis as early as possible.

Your Memorialists would point out that they consider themselves entitled to this boon for the following reasons:—

The Electoral District of Mudgee, according to the 1877-78 lists, just issued, contains nearly five thousand electors. This, according to ordinary statistics, would give a population of about twenty-five thousand persons within a radius of twenty-eight miles. This number of electors does not include a large number of those of the Western Gold Fields, residing in the Mudgee Electorate.

Your Memorialists would point out that the pastoral, agricultural, and mineral resources of the Mudgee District are second to those of no other in the Colony; that the most important gold fields of Gulgong and Home Rule are situated in it; and it having been decided that the large area of land hitherto reserved is to be thrown open for conditional purchase it may be confidently asserted that thousands will settle down upon it.

Rylstone, an important and rising town, surrounded by some fine agricultural lands, would also be largely benefited by the construction of the railway prayed for.

The advantage to the metropolis of being connected by railways with the principal outlying districts in the Colony cannot be overrated.

From the great resources of the district and the large amount of traffic between Mudgee and Wallerawang, both in passengers and goods, your Memorialists would respectfully urge that it has been demonstrated by official statistics that this railway would be remunerative from its construction, and from the large amount of revenue contributed by the district your Memorialists humbly submit that they are entitled to the boon prayed for.

Your Memorialists further submit that the necessary survey of the line having been completed, and the cost fully estimated with the sanction of your Honorable House, and they pray that the work be carried out without further delay.

And your Memorialists, as in duty bound, will ever pray.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

## RAILWAY FROM WALLERAWANG TO MUDGEES.

(PETITION IN FAVOUR OF—JOHN W. HARDWICK, CHAIRMAN OF PUBLIC MEETING, RYLSTONE.)

*Ordered by the Legislative Assembly to be printed, 3 April, 1878.*

To the Honorable Sir George Wigram Allen, Knight, Speaker, and the Honorable Members of the Legislative Assembly, in Parliament assembled.

The Petition of the Inhabitants of Rylstone, in the Electoral District of Hartley,—

HUMBLY SHOWETH :—

That it is of paramount importance to the pastoral, agricultural, mineral, and mercantile interests of this district that there should be railway communication between Mudgee and the metropolis, *via* Wallerawang, as early as possible.

Your Memorialists would point out that they consider themselves entitled to this boon, for the following reasons :—

The Electoral District of Mudgee, according to the 1877-78 lists, just issued, contains nearly five thousand electors. This, according to ordinary statistics, would give a population of about twenty-five thousand persons within a radius of twenty-eight miles. This number of electors does not include a large number of those of the Western Gold Fields, residing in the Mudgee Electorate.

Your Memorialists would point out that the pastoral, agricultural, and mineral resources of the Mudgee District are second to those of no other in the Colony; that the most important Gold Fields of Gulgong and Home Rule are situated in it; and it having been decided that the large area of land hitherto reserved is to be thrown open for conditional purchase, it may be confidently asserted that thousands will settle down upon it.

The advantage to the metropolis of being connected by railways with the principal outlying districts in the Colony cannot be overrated.

From the great resources of the district, and the large amount of traffic between Mudgee and Wallerawang, both in passengers and goods, your Memorialists would respectfully urge that it has been demonstrated by official statistics that this Railway would be remunerative from its construction, and from the large amount of revenue contributed by the district your Memorialists humbly submit that they are entitled to the boon prayed for.

Your Memorialists further submit that, the necessary survey of the line having been completed, and the cost fully estimated with the sanction of your Honorable House, the work ought to be carried out without further delay, and they pray your Honorable House to take their Petition into consideration.

And your Petitioners, as in duty bound, will ever pray.

JOHN W. HARDWICK,

Chairman of Public Meeting of Residents of  
Rylstone, held 15th March, 1878.

1877-8.

## LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## MRS. MARY MILLER.

(PETITION OF.)

*Ordered by the Legislative Assembly to be printed, 29 January, 1878.*

To the Honorable the Legislative Assembly of New South Wales, now in Parliament assembled.

The humble Petition of the undersigned,—

SHOWETH :—

1st. That your Petitioner's late husband, Albert James Miller, was a guard employed by the Commissioner for Railways, and had been so employed for a period of fourteen years, previous to which he had been employed as a porter and otherwise for about six years, during the whole of such time having given satisfaction in the performance of his duties to both officers and the public.

2nd. That the said Albert James Miller, your Petitioner's husband, was on duty on the 23rd December, 1876, as guard of the mail train running to Bathurst, and that at a place called Blackheath he met with a severe and painful accident which caused his death twenty days after.

3rd. That at a Coroner's Inquest holden at Bathurst, it was proven that the accident did not occur from any neglect, carelessness, or insobriety of your Petitioner's husband, but by the act of a passenger who pushed against him as he was about to enter his van.

4th. That the passenger referred to never appeared to give evidence, or wrote to the proper authorities to explain in any way how such accident occurred; neither has that person ever communicated with your Petitioner to offer either compensation or sympathy.

5th. That your Petitioner has thus been deprived of the support, sympathy, and comfort of her best and truest friend, for the loss of whom nothing can compensate.

6th. That your Petitioner has six children, one of whom only can assist in the maintenance of the family, and four are quite young, ranging from two to nine years of age. To support this young family unaided, your Petitioner finds that, in consequence of broken health and constitution, she is quite inadequate to the task.

7th. That therefore your Petitioner earnestly prays that your Honorable House will be pleased to take into consideration her case, as shown by the foregoing, and grant her such assistance as your Honorable House may think suitable.

And your Petitioner will ever pray.

19 January, 1878.

MARY MILLER.

1877-8.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

## MR. H. BRAITHWAITE, RAILWAY DEPARTMENT.

(PAPERS, MINUTES, AND CORRESPONDENCE.)

*Ordered by the Legislative Assembly to be printed, 17 May, 1878.*

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 10th May, 1878, That there be laid upon the Table of this House,—

“Copies of all Papers, Minutes, Correspondence, &c., in the case of Mr. H. Braithwaite, whose services were lately dispensed with by the Officers of the Railway Department.”

*(Mr. McElhone.)*

## SCHEDULE.

NO.	PAGE.
1. Minutes relating to Mr. Braithwaite's appointment and promotions .....	2
2. Letter from Sir A. Stephen to Secretary, Public Works, recommending Mr. Braithwaite for advancement in Service. 20 August, 1877 .....	2
„ Minute from Traffic Manager, saying that Mr. Braithwaite had no cause to complain of his services being undervalued. 31 August, 1877 .....	2
3. Letter from Commissioner to Sir A. Stephen, to same effect. 10 September, 1877 .....	2
4. Medical certificate from Mr. Braithwaite, for a fortnight or three weeks' leave. 22 January, 1878 .....	2
5. Letter from Mr. Braithwaite to Traffic Manager, applying for three weeks' extension of leave. 4 February, 1878 .....	3
6. Minute from Traffic Manager, recommending that if the extension were granted it should be without pay. 14 February, 1878 .....	3
„ Minute of Commissioner, asking reason why, &c. 17 February, 1878 .....	3
„ Minute of Traffic Manager, stating Mr. Braithwaite did not appear unfit for duty, and was applying for other employment. 22 February, 1878 .....	3
„ Minute of Commissioner, calling for Mr. Braithwaite's explanation. 5 March, 1878 .....	3
7. Letter from Traffic Manager to Mr. Braithwaite, inquiring when he would resume duty. 27 February, 1878 .....	3
8. Letter from Mr. Braithwaite to Traffic Manager, asking for eight or ten days' further leave. 4 March, 1878 .....	3
9. Letter from Traffic Manager to Mr. Braithwaite, returning a private letter containing unwarranted assertions. 6 March, 1878 .....	3
10. Minutes by Mr. Braithwaite, in explanation and contradicting Traffic Manager; also Minute from Traffic Manager, reiterating his statement of 22 February, 1878 .....	4
11. Minute from Traffic Manager to Commissioner, stating he had suspended Mr. Braithwaite, in consequence of loss of a paper he was ordered to forward to Commissioner. 19 March, 1878 .....	4
12. Minute of Secretary of Railways, stating missing paper referred to a debt alleged incurred by Mr. Braithwaite under an <i>alias</i> . 20 March, 1878 .....	4
„ Report of Superintendent J. B. Goold, regarding loss of paper and records tampered with. 19 March, 1878 .....	4
13. Minutes between Secretary of Railways and Traffic Manager, latter stating Mr. Braithwaite said he duly forwarded paper, but admitted part of debt and using an <i>alias</i> .....	4
14. Minute of Commissioner, ordering <i>précis</i> of case to be made. 21 March, 1878 .....	5
15. <i>Précis</i> of case. 22 March, 1878 .....	5
16. Minute of Commissioner, directing that Mr. Braithwaite be called upon to show cause why he should not be removed from his position. 22 March, 1878 .....	6
17. Letter to Mr. Braithwaite accordingly. 31 March, 1878 .....	6
18. Letter from Mr. Braithwaite to Commissioner, containing his defence. 4 April, 1878 .....	7
19. Letter from Traffic Manager to Mr. Braithwaite, asking for office keys. 4 April, 1878 .....	7
20. Minute of Traffic Manager, contradicting statements made in Mr. Braithwaite's defence. 10 April, 1878 .....	7
21. Minute of Secretary, Public Works, dispensing with Mr. Braithwaite's services. 12 April, 1878 .....	8
22. Letter from Commissioner to Mr. Braithwaite, intimating that his services are dispensed with. 17 April, 1878 .....	8
23. Letter from Mr. Braithwaite to Commissioner, asking for copies of papers, &c. 23 April, 1878 .....	8
24. Letter from Mr. Braithwaite to Commissioner, regarding his pay. 25 April, 1878 .....	8
„ Minute of Commissioner, ordering him to be paid up to date of dismissal. 26 April, 1878 .....	8
25. Letter from Commissioner to Mr. Braithwaite, intimating that on calling on Accountant he would be paid what was due to him. 1 May, 1878 .....	8
26. Further letter from Mr. Braithwaite to Commissioner, asking for copies of papers, &c. 2 May, 1878 .....	8

**MR. H. BRAITHWAITE, RAILWAY DEPARTMENT.**

**No. 1.**

**Minutes regarding Appointment, Promotions, &c.**

MR. HODGSON Braithwaite is employed as a clerk at the Redfern Railway Station. Will Traffic Manager please say when he was first employed, salary, &c.—B.C., 7/9/75, C.A.G.

Commenced on 27th April last at 6s. a day, but it should at least be £2 8s. per week from 1st of present month.—D.V., 13/9/75. Secretary.

Who authorized his appointment, J.R., 17/9/75.

The Minister, on the recommendation of Sir John O'Shannassy.—C.A.G. Approved.—2/10/75,

J.R.

Traffic Manager to note that Mr. Braithwaite is to be paid 48s. per week.—B.C., 4/10/75. C.A.G. Noted.—D.V., 12/10/75. Secretary.

H. Braithwaite, Clerk, Traffic Manager's Office, Redfern.—Wages increased from 8s. to 10s. per day, from 1st April, 1876. Approved.—J.R., 3/5/76.

H. Braithwaite.—Mr. H. Braithwaite to be Record Clerk in Traffic Manager's Office, Redfern, at £175 per annum, from 1st January, 1877. Approved.—J.L., 22/12/76.

**No. 2.**

**Sir Alfred Stephen to The Secretary of Public Works.**

Sir,

College-street, 20 August, 1877.

I take the liberty of strongly recommending to you for promotion in your department, and, if possible, for appointment in the head office, a Mr. Braithwaite, now a clerk in the Railway Branch at Redfern. He was recommended here originally by Sir J. O'Shannassy (who spoke personally to me about him), and circumstances have during the last two years made me acquainted with his history. He has been in much higher employment than he holds now, and is (I have reason to believe) an excellent accountant. He writes well and fluently. I venture to think that he would do ample justice to a much better post than the one he has at present.

I am, &c.,

ALFRED STEPHEN.

Traffic Manager, for report.—J.R., 28/8/77.

This gentleman's rate of progress hitherto has been such as to afford him nothing but ground for contentment and gratitude as far as the department is concerned. If the Commissioner can do anything better for him at the head office, I shall offer no objection whatever to his removal.—D.V., 31/8/77. Commissioner.

Sir Alfred Stephen may be so informed. No vacancy at head office.—J.R., 5/9/77.

**No. 3.**

**Commissioner to Sir Alfred Stephen.**

Sir,

Department of Public Works, Railway Branch,  
Sydney, 10 September, 1877.

In acknowledging the receipt of your letter of the 20th ultimo, recommending Mr. H. Braithwaite, Clerk at the Redfern Station, for promotion, or, if possible, that he may be appointed to the head office of this department, I have the honor to inform you that this gentleman's rate of progress hitherto in the Traffic Manager's Office has been such that he has no ground to complain that his services have been undervalued, and to state that there is no appointment vacant in the head office.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

**No. 4.**

**Dr. L. Halket's Certificate, &c.**

26, Wynyard Square, Sydney, 22 January, 1878.

THIS is to certify that Mr. H. Braithwaite is suffering from nervous debility and exhaustion of the heart's action, from over-work. I consider it essential to his recovery that he should be released from his duties for at least a fortnight or three weeks.

L. HALKET, F.R.C.P., London,

Surgeon.

Forwarded for approval.—T. CARLISLE, 23/1/78. Commissioner. Approved.—D.V., *pro* Commissioner, 28/1/78. Acting Traffic Manager. Seen.—T. CARLISLE, *per* H. Richardson, 30/1/78. Secretary.

3

No. 5.

Mr. Braithwaite to The Traffic Manager.

Sir,

Watson's Bay, 14 February, 1878.

In reply to your letter of yesterday's date, asking me to call at your office this morning, I beg to state that my health is so bad that I cannot leave my room to do so.

No copy appears  
to have been  
kept of this  
letter.

Such being the case, I now respectfully apply for three weeks' sick leave of absence, and shall be glad if you will forward this note, together with Dr. Halket's certificate of the 12th instant, to the Commissioner for Railways, for his approval of my leave.

I have, &amp;c.,

H. BRAITHWAITE.

Sydney, 11 February, 1878.

This is to certify that Mr. Braithwaite is still unable to resume his usual employment. I recommend that he should be granted further leave of absence, to hasten his recovery.

L. HALKET,

Surgeon.

No. 6.

Minutes between Traffic Manager and Commissioner.

If further leave is granted, I think it should be without pay in this case.—THOS. CARLISLE, 14/2/78.

Why? No reason is afforded. Mr. Braithwaite, it appears, has been absent since 22/1/78. If the Traffic Manager is not aware of any reason why leave should not be granted on pay, I shall approve of fourteen days' leave from the 11th instant. If, however, Mr. Braithwaite's illness is due to causes over which he has control, I shall require this paper to be submitted with report.—B.C., 17/2/78, C.A.G. Traffic Manager.

I have noted your instructions about Mr. Braithwaite's leave being extended to the 25th. Mr. Braithwaite is staying at Watson's Bay; I have consequently not had an opportunity of seeing him lately, but when I saw him last, about three weeks ago, he had no appearance of being unfit for work, and on my requesting him to resume duty as soon as possible, he said that he did not intend to return to the Record Office, as he had applied for and expected a better appointment in another department. Under those circumstances, and being short-handed, I thought he should either resume duty or forfeit his pay after due notice.—THOS. CARLISLE, 22/2/78. Commissioner.

Let Mr. Braithwaite see this paper and furnish explanation.—C.A.G., 5/3/78.

No. 7.

Traffic Manager to Mr. Braithwaite.

Sir,

Government Railways, Traffic Manager's Office, Redfern Station, 27 February, 1878.

I shall be obliged by your informing me *by return of post* when you are to resume your duties at this office, as your leave has now expired.

I have, &amp;c.,

THOS. CARLISLE,  
Traffic Manager.

No. 8.

Mr. Braithwaite to Traffic Manager.

Sir,

Watson's Bay, 4 March, 1878.

My leave of absence has expired, but still my health is such that I cannot at present resume duty.

I enclose Dr. Halket's certificate to this effect, and shall be glad if you will kindly recommend me for (say) eight or ten days' further leave of absence.

I have, &amp;c.,

H. BRAITHWAITE.

This is to certify that Mr. H. Hodgson Braithwaite is under my professional care, suffering from nervous or citonic dyspepsia and cephalalgia. He requires complete rest from his duties in order to ensure his recovery.

26, Wynyard Square, Sydney, 3 March, 1878.

L. HALKET, F.R.C.P., London,

Surgeon.

Forwarded for consideration of the Commissioner.—THOS. CARLISLE, 6/3/78. Commissioner.

I can do nothing in this matter till I receive Traffic Manager's report on the other papers referred to him.—C.A.G., 12/3/78.

No. 9.

Traffic Manager to Mr. Braithwaite.

Sir,

Government Railways, Traffic Manager's Office, Redfern Station, 6 March, 1878.

I consider it my duty to return your letter dated the 4th instant, marked "Private," on account of the unwarrantable assertions made therein. You are not justified in asserting as a fact what is not true, and what you are not in a position to substantiate.

THOS. CARLISLE.

No. 10.

## No. 10.

## Minutes of Mr. Braithwaite and Traffic Manager.

No such conversation as stated by the Traffic Manager in his minute of 22/2/78, took place between us when I met him in Bent-street; Mr. Carlisle did not ask me to resume duty; I did not say that I did not intend to return to the Record Office; I did not state that I had applied for a better position in another department and that I expected to get it; I have made no application officially or verbally to any one outside the Railway Department for another position; Dr. Halket and Dr. Fortescue will state, if called upon to do so, why my health is so bad.—H. BRAITHWAITE, 14/3/78. Traffic Manager.

The Traffic Manager's conversation with me was not of an official character, and should not have been imported into an official document; I was on leave of absence at the time Mr. Carlisle met me, and had just left Dr. Halket's, wending my way to the Commissioner's office respecting my further leave of absence.—H.B., 14/3/78. Traffic Manager.

Mr. Braithwaite is in error in assuming that the conversation referred to took place in Bent-street; I am positive he stated to me that he expected a better appointment in another department of the Service; he now denies it, and it will now be for the Commissioner to decide whether what I stated was true or otherwise, and I have only to refer the Commissioner to minute paper 1,659 as to whether his word is to be taken in preference to mine.—THOS. CARLISLE, 15/3/78.

Commissioner's minute paper 78/1,659 does not refer to the subject of this minute paper; I protest against the Traffic Manager's introduction of matter which does not in any way concern this case.—H.B., 15/3/78.

## No. 11.

## Traffic Manager to Commissioner.

Government Railways.—Minute Paper.

I HAVE the honor to report for Commissioner's information that I have suspended Mr. Braithwaite, Record Clerk, pending further investigation into the removal and supposed loss of your minute paper No. 78/1,659, to which were attached important papers affecting Mr. Braithwaite's reputation. As the missing papers were placed before Mr. Braithwaite, by Mr. Goold, for the purpose of being recorded and attached to your minute paper 78/1,379, enclosed, I consider that I had just grounds for suspending him, failing to account for the disposal of said papers.—THOS. CARLISLE, 19/3/78.

## No. 12.

## Minute of Secretary of Railways.

THE missing papers had reference, as Mr. Goold states in his report of 19/3/78, to a claim made by a Mr. Kavanagh for a debt incurred by a person signing himself as "Smith," but whom Mr. Kavanagh explained to me he had traced to the Traffic Manager's office, and found to be Mr. Braithwaite. The letter signed "Smith" was evidently in Mr. Braithwaite's handwriting. These papers were sent to Traffic Manager on the 7th instant, and have not since been returned. See Mr. Goold's report enclosed.—D.V., 20/3/78.

[Enclosure to No. 12.]

Mr. J. B. Goold to The Traffic Manager.

REFERRING to Commissioner's minute paper 78/1659, missing from another of Commissioner's (78/1379), to which it was attached, I beg to state I received them pinned together, in Manager's private office, on the afternoon of Friday, the 15th instant, and afterwards laid them, as they were, on the table before Mr. Braithwaite, to transmit in usual course to the Commissioner's office on the following morning, he being the *Record Clerk on that day* in the absence of Mr. Browne, who was acting as Relieving Station-master at Parramatta Junction.

Both minute papers, 1379 and 1659, had reference only to Mr. Braithwaite—the former concerning his *sick* leave, and the latter relative to a claim for debt by one Kavanagh, and represented by him to have been incurred by Mr. Braithwaite under the name of "Smith."

On the morning of Saturday last, the 16th instant, after the Commissioner's papers were dispatched, I examined the records to see if these minutes 1379 and 1659, relating to Mr. Braithwaite himself, were also forwarded, but I found in B.C. book only one of them recorded out, viz., 1379 (Traffic 994), no entry whatever being made of the other.

In the Register likewise of M.-P. 1659 (Traffic 1603), there was no entry of its being forwarded.

Finding it did not appear to have been transmitted, I questioned the boy Mingaye, who made the entry in the B.C. book, and his answer was he only got 994 (Commissioner's 1379) from Mr. Braithwaite to enter, and he knew nothing of the other one.

Yesterday evening, however, the Manager spoke to me about one minute paper being missing, viz., 1659, when I at once examined the B.C. book to point out to him *it was not recorded out*, but to my astonishment traffic minute 1603, being the Commissioner's 1659, was duly entered on next line under 994, and the figures I believe to be those of Mr. Braithwaite, though, when asked were they his, he point blank denied they were. Mr. Browne, Mr. Andrews, and the boy Mingaye, at the same time, denied all knowledge of them.

I then referred to the Register and found it referenced off to the Secretary.

Neither of these entries were in the B.C. book or Register when I examined them on the Saturday, and the impression left on my mind on finding them on yesterday was that the records were being cooked.

I may add, that both minute papers, viz., 1379 and 1659, being pinned together when left with Mr. Braithwaite, must have been detached from each other, most probably with the view of the minute 1659, in which Mr. Braithwaite's character was called in question, being quietly got rid of.

J. B. GOOLD, 19/3/78.

Forwarded for Commissioner's information.—THOS. CARLISLE, 20/3/78.

## No. 13.

## Minutes of Secretary of Railways and Traffic Manager.

BEFORE laying these papers before the Commissioner, I shall be glad to know if Mr. Braithwaite offered any explanation of the matter to Traffic Manager.—D.V.  
Traffic Manager, 20/3/78.

Mr.

Mr. Braithwaite offered no explanation further than stating that the missing paper was sent to the Commissioner with 78/1379, and that he knew nothing more about it, and that he did not detach it from the above paper.—THOS. CARLISLE, 21/3/78.

With reference to Mr. Kavanagh's claim, Mr. Braithwaite admitted the greater portion of it as justly due, and also admitted that the letter signed "Smith" was written and signed by him.—THOS. CARLISLE, 21/3/78.

#### No. 14.

#### Minute of Commissioner.

DRAW UP *précis* of case,—first showing when Mr. Braithwaite entered Service, and particulars of his employment; then the matter of his leave of absence, and conduct towards Mr. Carlisle in connection with it; and, growing out of this, the charge brought against him by Mr. Kavanagh; and the loss of the papers, &c., &c.—C.A.G., 21/3/78.

#### No. 15.

#### *Précis* of case.

#### GOVERNMENT RAILWAYS.—MINUTE PAPER.

*Subject*:—Suspension of Mr. Hodgson Braithwaite, Record Clerk, Traffic Manager's Office, South and West Lines.

MR. BRAITHWAITE entered the Service as a general clerk in the Traffic Manager's Office, South and West Lines, on the 27th April, 1875, on a salary of 6/- per day.

On the 2nd October, 1875, while in the same position, his salary was increased to 48/- per week.

In December, 1875, a clerk being required for the records in the Manager's Office, Mr. Braithwaite was promoted to the position of Record Clerk, which position he continued to hold up to the date of his suspension.

On 1st April, 1876, his salary was increased to 10/- per day, and on the 1st January, 1877, it was further raised to £175 per annum.

On 22nd January last (prior to which date he had very little leave) Mr. Braithwaite sent in a medical certificate signed by Doctor Halket, which stated that he was suffering from "nervous debility and exhaustion of the heart's action caused through overwork," and that it was essential to his recovery that he be relieved of his duties for at least a fortnight or three weeks; the required leave was sanctioned by the Commissioner, and took effect on and from 24th January.

On 14th February, in reply to a letter from the Traffic Manager desiring him to call at the office, Mr. Braithwaite informed Mr. Carlisle that he was too unwell to comply with this request, being unable to leave his room; and at the same time he applied for three weeks' extension of leave, enclosing a further certificate from Doctor Halket in support of the application. The certificate, however, specified no time.

In forwarding this second certificate to the Commissioner, Mr. Carlisle said he considered that if the extension of leave were granted it should be without pay, but omitted to state why he was of such opinion. The Commissioner's decision was, that if Mr. Carlisle knew of no reason to the contrary, an extension of fourteen days was to be allowed from the 11th February; if, however, Mr. Braithwaite's illness were due to causes over which he had control, the papers were to be again submitted to him.

In answer to this, on the 22nd February, Mr. Carlisle stated that Mr. Braithwaite was then staying at Watson's Bay, but that when he last saw him, about three weeks before, he had no appearance of being unfit for work; and on requesting him to resume duty as soon as possible, he said that he did not intend returning to the Record Office, as he had applied for and expected a better appointment in another department. For these reasons Mr. Carlisle considered he should either resume work or forfeit his pay.

The Commissioner then directed that Mr. Braithwaite be shown the papers, and called upon for an explanation. On the papers being given to Mr. Braithwaite (who appears in the meantime to have returned to duty) for this purpose, he wrote across them the following offensive minute, dated 14/3/78, addressed to the Traffic Manager:—

"No such conversation as stated by the Traffic Manager in his minute of 22/2/78 took place between us when I met him in Bent-street. Mr. Carlisle did not ask me to resume duty. I did not say that I did not intend to return to the Record Office. I did not state that I had applied for a better position in another department, and that I expected to get it. I have made no application officially or verbally to any one outside of the Railway Department for another position. Dr. Halket and Dr. Fortescue will state, if called upon to do so, why my health is so bad."

Mr. Carlisle's minute to the Commissioner with this was to the effect that Mr. Braithwaite was in error in assuming that the conversation took place in Bent-street; that he was positive Mr. Braithwaite told him he expected to get a better appointment in another department; and that as this was now denied, it would be for the Commissioner to decide who was telling the truth. He said also that he had only to refer the Commissioner to Minute Paper 78/1,659 (the subject of which will follow), as to whether his word was not more reliable than that of Mr. Braithwaite.

Across the papers there are two notes made by Mr. Braithwaite, which, perhaps, should appear in this *précis*.—

The first, dated 14/3/78, is as follows:—

"The Traffic Manager's conversation with me was not of an official character, and should not have been imported into an official document. I was on leave of absence at the time Mr. Carlisle met me, and had just left Dr. Halket's, wending my way to the Commissioner's Office respecting my further leave of absence."

And the second, dated 15/3/78,—

"Commissioner's Minute Paper 78/1,659 does not refer to the subject of this Minute Paper. I protest against the Traffic Manager's introduction of matter which does not in any way concern this case." (Written in pencil.)

The

The Minute Paper above mentioned (78/1,659) has reference to a letter addressed to the Commissioner by a Mr. Kavanagh, enclosing an account for a debt of £7 3s. incurred by a person calling himself "H. Smith," but whom Mr. Kavanagh explained he had traced to the Traffic Manager's Office, and found to be Mr. Hodgson Braithwaite. Mr. Kavanagh also enclosed a letter addressed to himself in connection with the debt, evidently in Mr. Braithwaite's handwriting, and signed "H. Smith."

On the matter being inquired into by the Traffic Manager, Mr. Braithwaite not only admitted that the greater part of the debt was justly due, but also admitted he had incurred it under an assumed name, and that the letter purporting to be from "H. Smith" was in reality written and signed by himself.

To make matters worse, Minute Paper 78/1,659 is now missing, and from inquiries that have been made it is very evident that Mr. Braithwaite was the last person who had possession of it. After the Traffic Manager had written his report, the paper was made over to Mr. Braithwaite, in his capacity of Record Clerk, by Mr. Goold, to be recorded in the usual way, and marked back to the Commissioner, and strange to say, has never been seen since.

Mr. Goold states that he received it, attached with Minute Paper 78/1,379 regarding Mr. Braithwaite's sick leave, in the Traffic Manager's private room, on the afternoon of Friday, the 15th March, and on going into the clerk's office placed it on the table before Mr. Braithwaite. On the following morning, Saturday, the 16th, after the Commissioner's papers had been despatched, he examined the B.C. Book to see if these two had been duly marked out, but could only find a record of 78/1,379. The Register also at that time had no entry of 78/1,659 having left the office.

The entry in the B.C. Book was made by the lad clerk W. Mingaye, who, on being questioned, stated that Mr. Braithwaite had only given him Minute Paper 78/1,379, and that he knew nothing of the other.

The following Monday Mr. Carlisle spoke to Mr. Goold about the paper, and on the latter gentleman proceeding to show Mr. Carlisle that it had not been entered out to the Commissioner, to his great astonishment he found that an entry on the line following Minute Paper 78/1,379, showing 78/1,659 to have been duly forwarded, had been made since he inspected the book on the previous Saturday. He also found it marked off to the Secretary in the Register.

Mr. Goold is of opinion that the figures in the B.C. Book of this second entry are Mr. Braithwaite's; but he, Mr. Braithwaite, denies having made them. The other clerks in the office state they know nothing of the entry.

The Secretary states that the paper has never been returned from the Traffic Manager's Office, and that all he received on the 16th, relating to Mr. Braithwaite, was No. 78/1,379.

From the foregoing facts it is clear that the missing paper has either been withheld or destroyed by some person in the Traffic Manager's Office; and as the evidence traces it to Mr. Braithwaite, who is the only person who can in any way be interested in its suppression, inasmuch as it refers to a matter seriously affecting his reputation, Mr. Carlisle deemed it advisable to suspend him from duty, and he now remains under suspension, pending the decision of the Commissioner.

D. VERNON, 22/3/78.

#### No. 16.

##### Minute of Commissioner.

WRITE letter to Mr. Braithwaite for my signature, giving summary of case, and calling upon him to show cause why he should not be removed from his employment,—

1st. For his behaviour to Mr. Carlisle, which I consider insubordinate and offensive (Mr. Carlisle informed me that Mr. Braithwaite met him in the street and spoke to him in a loud and offensive tone about his leave and his position in the office, and that he afterwards went to Mr. Carlisle and offered an apology for his misconduct); also for the offensiveness shown in his reply to Mr. Carlisle's statement as to the nature of the conversation he had with him, &c.

2nd. For his conduct in assuming an *alias* under which he incurred a debt to Mr. Kavanagh, who with difficulty traced him to the Traffic Manager's Office.

3rd. For withholding the paper containing this charge, and which was given to him as Record Clerk for the purpose of being forwarded to head office.

C.A.G., 22/3/78.

#### No. 17.

##### Commissioner to Mr. Braithwaite.

Sir,

Department of Public Works, Railway Branch, Sydney, 31 March, 1878.

The Traffic Manager has informed me that he has suspended you from duty as clerk in his office,—

1st. For your behaviour towards him on his meeting you in the street, when you addressed him in a loud and offensive tone about your leave and position in the office; and also for the offensiveness shown in your reply to Mr. Carlisle's statement as to the nature of the conversation he had with you.

2nd. For your conduct in assuming an *alias* under which you incurred a debt to Mr. Kavanagh, who with some difficulty traced you to the Traffic Manager's Office, and

3rd. For withholding minute paper containing this latter charge, and which was given to you as Record Clerk for the purpose of being forwarded to the Head Office.

I have to request that you will furnish me, not later than the 5th proximo, any explanation which you may have to offer why you should not be removed from your position in this department.

I have, &c.,

CHAS. A. GOODCHAP,  
Commissioner for Railways.

No. 18.

No. 18.

Mr. Braithwaite to Commissioner.

Sir,

Watson's Bay, 4 April, 1878.  
In compliance with the instructions contained in your letter of the 31st ultimo, I now forward to you my replies to the charges preferred against me by the Traffic Manager.

I have, &amp;c.,

H. BRAITHWAITE.

Traffic Manager, for full report.—B.C., 6/4/78, C.A.G. The charge against Mr. Braithwaite is not for incurring a debt, but for incurring it under an assumed name.—C.A.G.

[Enclosure to No. 18.]

REPLY TO—

*Charge No. 1.*—My conduct and conversation could not have been offensive to the Traffic Manager when I met him in the street, or he would surely not have shaken hands with me when we parted and wished me soon well again. If it was offensive, as now stated, it seems strange the Manager should have allowed me to resume my duties in his office when my leave had expired, without calling for an explanation of such conduct.

As regards my reply to Mr. Carlisle's remark respecting my not looking ill when he met me, I refer the Commissioner for Railways to the three medical certificates forwarded by me from Dr. Halket, and leave him to judge whether the Traffic Manager's opinion or that of Dr. Halket is to be accepted as to the state of my health. My reply was not intended to be offensive to the Traffic Manager; if, however, I have given offence in stating the honest truth it is much to be regretted. I was not suspended on the first charge preferred against me.

*Charge No. 2.*—I am not guilty of having assumed an *alias*. My reply on minute paper 78/1,603 clearly shows this, and gives a full explanation of the transaction with Kavanough.

The case was in the hands of my solicitor (Mr. Colyer) for a month before Kavanough or Keely made a report against me, and both had been to see me twice at the Traffic Manager's Office respecting payment of their claim, which I dispute. On each occasion I referred them to Mr. Colyer; therefore, how could I require tracing?

If Kavanough's or Keely's claim is a legal one, why does he not sue me for recovery of the amount?

Apart from this, I respectfully submit that the case ought not to be brought against me as a crime, and used for the purpose for which it is now put forward by the Traffic Manager, until it has been decided by a Court of Law that I am guilty; it is condemning me unheard; it is taking the bare word of a person outside the department in preference to my written statement of the case, handed to the Traffic Manager on the 13th March; it is paying a premium to persons outside the department to lodge complaints against officers, so as to secure their dismissal.

The course pursued by the Traffic Manager in this case is directly opposite to what his predecessor did in matters of the kind within my recollection; indeed, since Mr. Carlisle's transfer from the Goods, a case of a gentleman owing money to a creditor has been allowed to hang over, and it has not been dragged before the Commissioner for Railways like mine.

I believe it will be admitted that the Traffic Manager has no right to interfere with my private affairs; and this case is one which certainly does not affect the Railway Department.

*Charge No. 3.*—I have not withheld this minute paper (this is the charge upon which I was suspended).

As regards my removal from the department, should the Commissioner for Railways, after reading this explanation, decide that I am to be removed, and lose the reputation I brought to the department, I cannot demur to his decision.

In conclusion, I may mention that on the 13th March I tendered my resignation to the Traffic Manager, and he refused it. That document will be found in my drawer in the Traffic Manager's Office.

H. BRAITHWAITE,

4/4/78.

No. 19.

Traffic Manager to Mr. Braithwaite.

Sir,

Government Railways, Traffic Manager's Office, Redfern Station, 4 April, 1878.

You will please, immediately on receipt of this letter, forward to me the keys belonging to this office, and anything else in your possession which you may have had in use, the property of the Commissioner.

I have, &amp;c.,

THOS. CARLISLE,

Traffic Manager.

No. 20.

Traffic Manager to Commissioner.

MINUTE PAPER.

With regard to Mr. Braithwaite's conduct towards me on the occasion referred to, I can only re-assert that it was disrespectful, and that he spoke to me in an excited and loud tone of voice. He appeared as if recovering from the effects of drink. His statement that "I shook hands with him on parting," is not true, as I walked off in the most abrupt manner *without shaking hands*, and left him talking to the lamp-post at the corner of Hunter and Phillip Streets. As he does not appear to remember the circumstance, it is strong presumptive evidence that the opinion I then formed was correct.

With reference to the missing Minute Paper, 78/1,659, I am positive that it was attached to 78/1,379 when I handed it to Mr. Goold, who has explained that he placed it before Mr. Braithwaite for registration; further than this, the missing paper, with the letter signed in the assumed name of Smith, cannot be traced.

Mr. Braithwaite made no tender of his resignation to me; I neither saw nor refused the document referred to; he merely stated that he had it written out.—THOS. CARLISLE, 10/4/78.

No. 21.

## No. 21.

## Minute of Secretary for Public Works.

It is my painful duty to recommend that Mr. Braithwaite's services should be dispensed with.—C.A.G., 12/4/78.

Approved.—J.S., 12/4/78. Mr. Braithwaite informed.—15/4/78. Traffic Manager, B.C., 18/4/78, L.P.J., *per* Secretary. Noted.—THOS. CARLISLE, 19/4/78. To Commissioner.

## No. 22.

## Commissioner to Mr. Braithwaite.

Sir,

Department of Public Works, Railway Branch, Sydney, 17 April, 1878.  
I have the honor to acknowledge the receipt of your reply to my letter of the 31st ultimo, in which you were called upon to show cause why you should not be removed from your position in the Traffic Manager's Office for the reasons therein given, and to inform you that after giving your whole case the most careful consideration, it becomes my painful duty to dispense with your services in this branch of the Public Service.

I have, &c.,

CHAS. A. GOODCHAP,  
Commissioner for Railways.

## No. 23.

## Mr. Braithwaite to Commissioner.

Sir,

Watson's Bay, 23 April, 1878.  
I am in receipt of your letter, 78/1,009, of 17th instant, dispensing with my services in the Railway Department.

I have to request you will be good enough to furnish me with copies of all letters, minutes, &c., in this case.

Yours respectfully,

H. BRAITHWAITE.

## No. 24.

## Mr. Braithwaite to Commissioner.

Sir,

Watson's Bay, 25 April, 1878.  
I beg to bring under your notice that I have been only returned by the Traffic Manager for some £4, as the amount of salary due to me. There is a great mistake here, for I am entitled to one day's pay short returned for February, 31 days' pay for March, and 17 days' pay for April, at £175 per annum.

Long ago I called the Traffic Manager's attention to my being short paid on the February pay sheet, and he promised to rectify the error when the March pay sheets were sent in, but he has not done so.

The stoppage of my pay in this way has caused me considerable inconvenience, and I shall be glad if you will have the matter rectified as early as possible.

Yours respectfully,

H. BRAITHWAITE.

Mr. Braithwaite is entitled to pay up to date of letter dispensing with his services. Let this be attended to at once. The Cashier could pay from Advance Account. Amount due should be paid quickly.—C.A.G., 26/4/78. Traffic Manager to furnish sheet.—D.V., 26/4/78. Pay Vouchers herewith.—THOS. CARLISLE, 26/4/78. Commissioner. Accountant,—Cashier can pay these, I presume, if Mr. Braithwaite is told to call. Reply, please.—D.V., 29/4/78. Cashier will pay when Mr. Braithwaite calls.—F.J.W. Secretary, B.C., 29/4/78. Mr. Braithwaite informed, 1/5/76.

## No. 25.

## Commissioner to Mr. Braithwaite.

Sir,

Department of Public Works, Railway Branch, Sydney, 1 May, 1878.  
In reply to your letter of the 25th ultimo, stating that the amount returned by the Traffic Manager as salary due to you is an error, and that you are entitled to certain short payments for the months of February, March, and April,—I have the honor to inform you that on your making application to the Railway Accountant at his office in Phillip-street, the amount of salary due to you will be paid.

I have, &c.,

CHAS. A. GOODCHAP,  
Commissioner for Railways.

## Mr. Braithwaite to Commissioner.

Sir,

Watson's Bay, 2 May, 1878.  
On April 23rd I applied to you for copies of minutes, letters, &c., in my case, but have received no reply; may I ask that you will be good enough to let me have a reply to that letter without further delay.

Yours respectfully,

H. BRAITHWAITE.

Papers to be copied for House.—D.V.

1877-8.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

## COMMISSIONER AND ENGINEER FOR ROADS.

(PARTICULARS OF DUTIES OF.)

*Ordered by the Legislative Assembly to be printed, 14 March, 1878.**[Laid upon Table in accordance with promise made in answer to Question 5, Votes No. 41, 14 March, 1878.]*

1. It was the duty of the Commissioner for Roads to inspect annually the roads of the Colony when time from office duty permitted. This was done until the Commissioner made himself acquainted so thoroughly with the length and breadth of the Colony as to be able to deal absolutely from his local knowledge with nearly every question brought before him. Of late years assistant engineers have been appointed to relieve the Commissioner of a portion of this duty, to permit him to attend to the additional office duties caused by the expenditure being increased twenty-fold.

2. The Engineer for Roads has been to Orange and Molong, leaving on a Friday night, returning on a Monday morning, the only time he could spare from the office. He inspected the Main Western Road and other works in the vicinity of Orange, and the approaches to the various Railway Stations *en route*, and conferred with the various officers through whose districts he passed. He has also, in other than office hours, almost weekly inspected some of the many works in progress or proposed in and near Sydney, Cook's River, Abattoir Road, Bridges, &c., in Randwick, Lane Cove Road, Defence Roads, and roads at Manly.

3. Contract work, &c., about £374,000.  
Day labour, about ..... 39,500.

In all..... £413,500

4. £900,798, including balances from last year.

5. No, the usual mode of payment through the Treasury was tried and found totally impracticable from the complaints of contractors as to delays resulting therefrom; and the Treasury requested that the payments should be made direct by the Roads Office. Payments are made by cheque, after the amounts have been placed to the credit of the Commissioner by the Treasury, on examination of the vouchers. The cheques are drawn by the Assistant Accountant, are countersigned by the Accountant and Chief Clerk, and signed by the Commissioner,—this duty, and the necessary examination of accounts, being one of the many reasons for his inability to absent himself from Sydney.

6. Yes.

1877-8.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

## CASE OF MR. MORELL.

(PAPERS.)

*Ordered by the Legislative Assembly to be printed, 16 May, 1878.*

## SCHEDULE.

No.	PAGE.
1. Case of Mr. Morell: Questions respecting, asked by Mr. Macintosh in the Legislative Assembly. 8 February, 1878	2
2. Mr. Bennett (Commissioner for Roads) to Mr. Morell, respecting delay in preparing plans for Parramatta River and Iron Cove Creek Bridges. 10 March, 1876	2
3. Mr. Morell to Mr. Bennett, applying for six months' leave of absence. 18 November, 1876	3
4. Mr. Bennett's report on Mr. Morell's application for six months' leave of absence. 8 January, 1877	3
5. Mr. Morell's reply to Minute of Mr. Bennett on No. 3. 22 January, 1877	4
Annexures to No. 4:—	
Other applications by Mr. Morell to Mr. Bennett, for leave of absence,—	
For two days. 16 August, 1875	7
From 2 o'clock. 17 January, 1876	7
For an hour. 31 January, 1876	7
From 12 o'clock. 20 December, 1876	7
6. Mr. Morell to Mr. Bennett, in further reference to No. 3, and enclosing application for one month's leave of absence on account. 26 March, 1877	7
7. Mr. Bennett to Secretary for Public Works, covering reply to Mr. Morell's countercharges. 4 May, 1877	8
8. Memo. of Mr. Bennett in reply to Mr. Morell's countercharges. 4 May, 1877	8
9. Board of Inquiry constituted to investigate misunderstandings between Mr. Bennett and Mr. Morell. May, 1877	10
10. Proceedings of Board of Inquiry. 25 May to 1 June, 1877	11
11. Report of Board of Inquiry. 1 June, 1877	12
12. Under Secretary for Public Works to Mr. Bennett, covering Report of Board of Inquiry, and also communication for Mr. Morell with copy of same. 5 June, 1877	14
13. Mr. Bennett to Under Secretary for Public Works, applying for copy of Mr. Morell's evidence. 7 June, 1877	14
14. Minute of Mr. Bennett on Report of Board of Inquiry. 7 June, 1877	14
15. Principal Under Secretary to Under Secretary for Public Works: Mr. Morell to proceed to Melbourne to prepare plans for Defences of the Colony. 16 October, 1877	14
16. Under Secretary for Public Works to Mr. Bennett: Resignation of Mr. Morell accepted. 16 October, 1877	14

## CASE OF MR. MORELL.

## No. 1.

Extract from Votes No. 23, of 8th February, 1878.

Department of Public Works.

*Friday, 8 February, 1878.*

Mr. Morell, late Assistant Engineer for Roads:—Mr. Macintosh asked the Secretary for Public Works, pursuant to Notice,—

- (1.) Was a Board of Inquiry recently appointed to investigate the complaints of Mr. Bennett, the Engineer and Commissioner for Roads, against the late Assistant, Mr. Morell?
- (2.) If so, will the Government cause to be laid upon the Table of this House the Report of such Board of Inquiry?
- (3.) Has Mr. Morell resigned his appointment as Assistant Engineer for Roads?
- (4.) If so, what position or appointment does Mr. Morell now hold under Government?

Mr. Sutherland answered,—

- (1.) There was a Board appointed to inquire into a misunderstanding of an official nature between Mr. Bennett and Mr. Morell.
- (2.) There will be no objection.
- (3.) Yes.
- (4.) Engineer to prepare the designs of Sir W. T. D. Jervois, R.E., for the Defences of the Colony.

## No. 2.

## Memoranda between The Commissioner for Roads and Mr. Morell.

(Paper C.)

WOULD Mr. Morell be good enough to let me know when the drawings of the Parramatta River Bridges will be ready, and when I can have the estimated weight of superstructure of Iron Cove Bridge.

Will Mr. Morell also please state how long these drawings, &c., have been in hands.—W.C.B., 10/3/76. Mr. Morell.—B.C.

I expected to have had all these plans and estimates ready for the Commissioner before, but found that they took more time to complete than I anticipated. I had also lately to hold an examination with Mr. Franklin to visit Windsor and the University Cutting, which caused an additional delay. I shall have the weight of Iron Cove superstructure ready in a couple of days, and the whole of the Parramatta River drawings and tracings by the end of next week. With regard to the time these drawings have been in hand, I find from my notes that the first drawings of the Parramatta River Bridges were commenced in April, 1873, to obtain approximate estimates to lay before the Minister to have the necessary sum to carry out the work put on the Estimates of 1874. The drawings and sketches made then (130 ft. spans and central swing) are set aside. Trial borings and sections were taken at Five Dock and Hunter's Hill, Blackwall, The Brothers, Gladesville, and at the Sister's Rock, Iron Cove, from end of October to end of December, 1873. Designs from new sections were begun in January, 1874, and estimates for spans of different dimensions prepared with calculations for girders, different kinds of platforms, &c. In March, /74, were prepared general elevation of Iron Cove Bridge and details for timber arches—rejected. Then sundry sketches and details of piers, cross heads for piles at bottom of cylinders, and several drawings relating to caisson, stone pier, large iron cylinders, &c., for swing bridge,—also rejected. The details of piers, 6 ft. cylinders were begun in August 1874. The main girders, cross girders, details of arrangement over piers, were begun in 1875. The swing pier and details were decided upon in March, 1875, new girders for superstructure in April, and swing spans in May. The drawings and tracings, quantities and estimates, have been in course of preparation since.

Besides the above work for the Parramatta River Bridges, the Nimboy Bridge, Windsor Bridge, Urara Bridge, Grafton Punt, Hay Bridge, Mann River Bridge, Casino Bridge, Mudgee Iron Bridge and Piers, the Long Cove stone bridge, with quantities, estimates occasioning supervision or inspection of materials, and reports for some of these works, also the general routine and office work, were attended to, by Mr. Bullen and myself.—G.A.M., 13/3/76. The Commissioner and Engineer for Roads.

Will Mr. Morell now give me this information. The Estimates will be passed in a short time, when there will be a pressure to invite tenders. I shall have to prepare the specification without proper consideration.—W.B., 8/4/76. I want the information to take home with me this day. Mr. Morell, B.C.

Estimated weight of Iron Cove Bridge girders herewith. Much more information can be still added to the drawings of Parramatta River Bridge; in fact, drawing showing enlarged details for swing span and general development of plates would save ultimately much time. I have all detailed sketches for compiling such a drawing if the Commissioner approves of it.—G.A.M., 8/4/76.

Has Mr. Morell done with one set of the drawings or tracings?—W.B., 19/4/76. Mr. Morell, B.C.

Memoranda for Mr. Morell,—It is desirable Mr. Morell should sign all the plans and tracings of the Parramatta River Bridge; if he wishes to qualify or add any remark to his signature I wish to see it before going on the plans.—W.B., 30/5/77.

I have no wish to sign the drawings of the Parramatta River Bridges unless ordered to do so by Mr. Bennett. I think my initials would suffice, as showing that I have brought out the Commissioner's designs according to the data given to me.—G.A.M., 30/5/77.

I think the true state of the case should be shown by the signatures, which might be thus shown: Quantities, machinery, and details by G. A. Morell (in full), Assistant-Engineer for Roads. My signature in the ordinary way.—W.B., 30/5/77. The plans of the Bridges are required to go on for transmission to England this day. Will Mr. Morell give me the memo. referred to by him as to signature? Something must be done at once.—W.B., 6/6/77. Mr. Morell, B.C. It would be unusual for me to sign the drawings of the Parramatta River Bridges as prescribed by the Commissioner. I shall sign my name and official title, as I have done before, reserving to myself, however, the privilege of having recorded my version of the true state of the case.—G.A.M., 6/6/77.

Mr. Morell will please let me have the two memoranda, written on note-paper, relative to the signing plans of bridges, Parramatta and Iron Cove Creek.—W.B., 7/6/77. Mr. Morell.

Memoranda referred to herewith.—G.A.M., 7/6/77.

### No. 3.

#### Mr. Morell to The Commissioner for Roads.

Department of Public Works,  
Office of Commissioner and Engineer for Roads,  
Sydney, 18 November, 1876.

Sir,

I beg to apply for leave of absence for six months. I have been nearly fourteen years in the Service, during which time I have only had one month's leave.

I am, &c.,  
G. A. MORELL,  
Assistant Engineer.

Will Mr. Morell please state when all the drawings and tracings of the Parramatta and Iron Cove Bridges will be ready, and when a clear statement of the quantities of iron, timber, concrete, and stonework will be ready.—W.B., 18/11/76.

A complete duplicate set of both bridges (forty-two drawings and tracings) with a revised and checked clear statement of quantities, will be ready in a fortnight—say on the 2nd of December.—G.A.M., 18/11/76.

Resubmit on my return.—W.B., 18/11/76. The statement of Parramatta River bridges received on 23rd December; will Mr. Morell please state when that for Iron Cove Bridge will be ready.—W.B., 29/12/76.

The Iron Cove Bridge schedule of quantities with drawings and tracings will be completed next Wednesday.—G.A.M., 29/12/76. Is this yet complete?—W.B., 5/1/77.

I am putting the quantities together, which the Commissioner shall have this afternoon, but the drawings and tracings of Iron Cove Bridge will not be ready for a couple of days. I have made a mistake in fixing dates for the satisfactory completion of this work, for frequently discrepancies are found in the drawings which require correction, or additional work necessary to prevent extras or mislead contractors. Although I am very anxious for the leave I have applied for, the Commissioner must remember that he pressed me to send in my application before he left Sydney in November last, and that I stated then to him that I could wait for a month or more, until all the necessary information connected with the details of the Parramatta River and Iron Cove Bridges was recorded for the manufacturers and the contractors. This work has certainly taken me more time than I anticipated, but I believe that it will be more satisfactory in the end to have all particulars shown when the contract is let, than to have new details or alterations made afterwards.—G.A.M., 5/1/77. Report herewith.—W.B., 8/1/77.

### No. 4.

#### The Commissioner for Roads to The Secretary for Public Works.

I FORWARD herewith to the Honorable Secretary for Public Works, Mr. Morell's application for leave of absence.

Mr. Morell has been in this office for nine and a half years. For the first three or four years no one could have been more zealous or able, but since the gold fever of 1873, Mr. Morell has been mixed with business out of doors, first mining business and then private practice, which seems to have taken his attention off his duties. I have had very great reason to complain of the long delay in getting out the drawings and calculations relating to the Works. Mr. Morell only dealt with the larger bridges, and I append his own memoranda, by which it will be seen that his chief work, with the best assistance in the office, has been for three years the Parramatta River Bridges.

Mr. Morell states he has not wasted any official time on his private business. I can only say that of late years he arrives frequently very late in the office, and I did not observe any compensation in the hour of his departure, and I have over and over again gone up to his room on duty and found him away, or if there, occupied with people on what did not appear to me to be Government business.

I should have drawn the attention of the Honorable Secretary of Public Works to this earlier, but wished to get the designs of the Parramatta River Bridges completed before doing so; and harassed by the frequent inquiries and pressing demands of those interested in those works, I spoke to Mr. Morell about his duties generally last September, when he stated that he intended to leave the Service at the end of the year. He subsequently informed me that he intended applying for leave to give him time to consider whether he should leave the Service or not. Since my conversation with him in September, Mr. Morell has not been employed on any other duty but those bridges; and it will be seen from the papers that they have occupied him, with two or three draftsmen and cadets, for nearly three years.

No doubt the work is very well done and very creditable; but I respectfully submit that if all other works were delayed in a similar way, there would be a storm of indignation difficult to withstand. I have always endeavoured to push on every work so as to satisfy the demands of the Parliament and the public, and I have not of late years received from Mr. Morell that co-operation and assistance which I was entitled to expect.

Mr.

Par. 5. Mr. Morell states he has had only one month's leave of absence; but it is right that I should state that for five or six years Mr. Morell, during the agricultural show, was continually away, in and out of the office, with his mind engaged on other than the work of the Department. I more than once suggested to Mr. Morell that he should apply for leave on such occasions, but he declined. Mr. Morell's duties took him on certain occasions out of the office, so that I really could not at any time definitely state whether he was absent on the Government or the Society's business.

Par. 6. Had Mr. Morell worked throughout the entire time as he did for the first three or four years, I would have had no hesitation in recommending any indulgence he asked for; but owing to the delay in carrying on the duties of his part of the Office, there is an accumulation of all the works from votes of '76, which should be done by it—*i.e.*, the Bourke, Balranald, Nowra Bridges, and the initiation of the bridges for '77 should be in progress.

I regret, therefore, I cannot recommend the leave.

W.C.B.,—8/1/77.

Under Secretary, July, B.C.

Mr. Morell to see.—B.C., 18/1/77, J.R. 19/1/77.—W.C.B.

Seen. Reply herewith.—G.A.M., 22/1/77.

## No. 5.

### Mr. Morell to The Secretary for Public Works.

Reply to Mr. Bennett's statements referring to application for leave of absence by G. A. Morell, Assistant Engineer.

1. BEFORE entering into a defence of the unreasonable and unjust statements set forth against me by Mr. Bennett in his minute, it must be stated that I was hurried by him to send in my application for leave, but that he did not allude to his intention of declining to recommend it, nor assign for his reasons for doing so the statements he has made.

I deny the correctness of these statements, which are one-sided, and dictated more by an animus against me than by any sense of duty.

It is with regret that to defend myself I shall be compelled to state facts which do not reflect much credit upon the management of the department or prove flattering to Mr. Bennett; but that gentleman having thought proper to speak disparagingly of me out of doors, and, I was informed, to the Hon. Secretary for Public Works, on the occasion of my name being left for an increase on the Estimates of 1876 without his recommendation (which caused me the unpleasantness of receiving none but written communications from Mr. Bennett for three months), I claim the privilege, in dealing *seriatim* with every paragraph in his minute, of making the necessary explanations which show "the other side of the question."

2. Every one acquainted with Mr. Bennett knows well that had I neglected to do my duty during the gold fever, or for private business *for years*, as he alleges, the matter would very soon have been reported to the Minister at the time.

The cause of delay in getting out drawings, &c., of the Parramatta River Bridges will be hereafter more fully explained.

Reference to paragraph 1 of Minute. 3. In my memoranda (paper C), carefully put away by Mr. Bennett for about eight months, although *not registered*, and now brought up against me by him—the dates March and May, 1875, underlined in red—show that the selection of the designs for the bridges alluded to has taken Mr. Bennett some fifteen months, during which time the actual drawings and calculations of the bridges could not be definitively proceeded with, although many drawings illustrating different schemes had been prepared for him and afterwards set aside.

The assistance I received will be seen in reference to my answer of paragraph 3.

Reference to paragraph 2. 4. For several years I gave up all leisure time usually devoted by other officers to recreation, for the superintendence of works in progress, or in making drawings for the department after office hours. This I should probably have continued to do had not Mr. Bennett expressed to me on several occasions (and also very lately) his displeasure and disgust at the credit given to me out of doors for the success of the works with which I had been more particularly identified. I did not seek such distinction, and even on one occasion I publicly asserted that the credit of these works ought to be given to Mr. Bennett.

5. To the assertion that "over and over again Mr. Bennett had found me away or engaged with people on what did not appear to be Government business," I can only say that it may have happened a dozen times in twelve months that I was not found in my room when wanted, but on still fewer occasions have I been detained by people more than a few moments from my duties during office hours.

6. It must be also remarked that a professional man is in a very different position to some other officers, for the short office hours are insufficient for the satisfactory and successful performance of his duties if he does not devote additional time frequently to consult engineering and scientific works of reference bearing upon the works on which he is engaged. However, as I have not kept a record of the time which I have thus devoted after office hours, I do not claim this as an excuse for the alleged irregularities, but I contend that I have conscientiously devoted more time than the usual number of office hours to my official duties, and that I have not absented myself for even an hour at any time without first obtaining Mr. Bennett's permission (see papers marked D, E, F).

Papers marked D, E, F. Reference to paragraph 3.

7. It would appear from these statements that Mr. Bennett "wanted to get the Parramatta River Bridges out of me, before he complained to the Minister, because he was afraid I would resign and leave him in the lurch, and that, in consequence, he pressed me to get the work done, and gave me the best assistance possible—two or three draughtsmen and cadets for nearly three years.

In paragraph 4. "Mr. Bennett agrees that the work is very well done, &c., but says that a storm of indignation would be raised by such delays as he attributes to me, and that my co-operation and assistance are not such as he is entitled to expect."

I have already shown, by reference to my memo. and answer to paragraph 1, that in the three years mentioned some fifteen months' delay has been caused by Mr. Bennett himself, and that my time had been also well taken up with other bridges until the middle of March, 1876.

Up to the month of May, 1876, I had the valuable assistance of Mr. Bullen. As to the assistance of cadets, the less said about it the better, for, with the exception of Mr. F. Rae, who when not employed by the Commissioner or on departmental routine, was the only cadet whose work was reliable, there was a great waste of time in teaching the boys and repairing their blunders; I often mentioned that it would have been more economical and satisfactory to have paid good draftsmen to do the same work.

I am confident that no work of such magnitude as the Parramatta River and Iron Cove Bridges—involving an expenditure of £100,000—has ever been brought out *in all the details* by an engineer and only one draftsman, under such disadvantages as I have had to contend with under Mr. Bennett.

About the beginning of 1875, I asked for additional assistance to replace an officer who had begun the general elevation of Iron Cove Bridge, and to assist on the working drawings. Some arrangement with draftsmen from Messrs. Mort and Russell having fallen through, Mr. Bennett proposed to send for a field officer, Mr. Whiteside, who had brought out, under his (Mr. Bennett's) *sole direction*, the designs for Bombala Iron Foot-bridge, the Nimbooy and the Hay Bridge, and the Yass Iron Bridge.

I reminded Mr. Bennett of the considerable time I had spent, with other officers, in completing the information which had been omitted in these designs before the contracts were let, and in repairing blunders which had caused the Government some considerable expense; and respectfully ventured to advise him not to employ to work out the details of the Iron Cove Bridge a gentleman who had not shown himself sufficiently careful in works of such importance.

Mr. Whiteside was, however, entrusted to prepare, under Mr. Bennett's *sole direction*, the details of the Iron Cove Bridge.

Some months later, four drawings of this bridge, which I had never seen, were sent up to me by Mr. Bennett to take quantities, as a check upon Mr. Whiteside's estimate—for it had been stated in the House, in answer to a question of Mr. Farnell, that these plans and specification were ready.

My examination of these drawings soon convinced me that the whole time spent by Mr. Whiteside on them, and the time of others in making four corresponding tracings, had been completely wasted, and that a new set of drawings, with all the necessary calculations, would have to be made. The drafting could have been done better by some of our cadets; and, in an engineering point of view, the whole of the work is a disgrace to any office, showing in several parts ignorance of the most elementary principles of engineering.

As these are bold assertions, I must mention among other errors that the largest section of the main girders, *intended to be effective* to carry the load required, is 36.55 square inches in the bottom booms, whereas the *actual effective section* is only 23.76 square inches, showing that not only the strength of the girders would be reduced 35 per cent., but that on the eighteen girders a mass of 113 tons of iron is wasted, adding only dead weight without any strength or stiffness whatever, and causing a wasteful expenditure of not less than £4,000. A similar mistake had previously been made by the same gentleman in the Yass Bridge, where the *intended effective section* is 63.5 square inches in the bottom booms, but the *actual effective section* is only 26.4 square inches, showing that a large proportion of the metal is misapplied and consequently useless.

I need not mention any other grave mistakes in the design of the Iron Cove Bridge; suffice it to say that after drawing Mr. Bennett's attention to the matter, he requested me to set aside Mr. Whiteside's drawing and to begin a new set. I have been engaged on this work for some months, and surely this delay clearly caused by Mr. Bennett cannot be attributed to me. I had to make entirely fresh calculations for the girders, to bring in the same design to prevent unpleasant remarks, *although the style of girders adopted is not suitable in this case for the purposes of a railway*, however safe such girders may prove when constructed like in the Urara Bridge, on the continuous principle with a narrow roadway, and the addition of bracing arches.

The question of these bridges being made strong enough to carry a railway, as moved in the House by the Hon. Mr. Forster, also occupied much of my time in going over the calculations a second time. My instructions and data from Mr. Bennett, to which I have adhered, refer only to calculate sections for a *very light suburban traffic*, and any remarks from me were generally met by Mr. Bennett saying that these bridges were not likely to be used for a railway.

I am nevertheless confident that a saving would have been made by designing new girders, of different proportions to those adopted, and more suitable for railway traffic.

These bridges are by far the largest works ever entrusted by the Government to Mr. Bennett and the officers of the Roads Department, and I could hardly be censured for giving too much consideration to the details of their construction.

To return to the assistance I have had to carry out these important works, I must say that in May, 1876, Mr. Bullen, who had so satisfactorily helped me up to this time, was removed to another building, and his valuable services replaced by those of a new draftsman, a stranger to this work, and a worse draftsman than some of our cadets. This gentleman was however clever and intelligent and improved very fast, but I lost much time in giving him explanations, as he was at a loss to find references in some forty drawings and tracings of the largest size forming the two sets of plans for the office and for the contractors.

Feeling that much of my time had been wasted and was still being wasted by making drawings myself from the pencilling to the printing on the plans, which might have been done by a draftsman paid less than half my salary, I frequently asked for more assistance, explaining clearly to Mr. Bennett that I could scheme over the details of his designs and prepare in a few days the sketches to scale which generally occupy good draftsmen as many weeks to compile. But my requests were not granted.

Nearly the whole of the months of May and June, 1876, were employed by me in calculations and preliminary designs for the new bridges with hydraulic lifts, over the Murrumbidgee, at Balranald, and the Darling, at Bourke, and the new bridge over the Shoalhaven River, at Nowra. As other works and the office routine also required my attention, I again earnestly asked Mr. Bennett for additional assistance if he wished all these designs in hand to be completed before the end of the year. But no additional assistance was given to me; on the contrary, Mr. Bennett then requested me to prepare the detail drawings to which the last note of my memo. C refers. I willingly assented and began these drawings myself, which although not required for the contractors to take quantities will be necessary, and save time in the erection of the bridges.

11.

12.

13.

The

14. The Iron Cove Bridge set had to be supplemented in like manner. When I asked again for additional assistance, Mr. Bennett then told me to recommend to him some draftsman if I knew of any. Finding no efficient man willing to undertake the duties at the small remuneration offered (£200 per an.), other officers at my request made inquiries; and Mr. Franklin having succeeded in finding a gentleman apparently competent gave him some drawing to do as a specimen, which, when brought to me, I immediately took to show to Mr. Bennett to recommend the gentleman to be employed—this was last September.

Mr. Bennett would not even look at the specimen of the gentleman's drawing, but began to complain of my causing the delay of the designs in hand, &c., &c.

Such unjust remarks prompted me to talk of resigning my appointment unless my position could be better defined; for Mr. Bennett's ill-will against me had become so evident of late that I found it impossible to carry out, without proper assistance, the important works put in my charge.

Mr. Bennett would insist upon being the best judge of the assistance I required, and declared that having managed the department for twenty years he would not receive suggestions from anybody regarding the management of his officers and his department; but desired to know when I would be ready to go, as if I was his own private servant instead of a civil officer endeavouring to work cordially with him in the common interest of the Government.

Mr. Bennett puts his own intentional misrepresentation upon my application for leave of absence, which he states is "to enable me to consider whether I should leave the Service or not."

He understood my meaning very well when I stated that I might possibly resign before the end of the year, as my uncomfortable and undefined position in his office was not encouraging for my future prospects; but that if I did not resign I would apply for a leave of absence.

In applying now for such leave *it is not* my intention to resign. I require the time to attend principally to family matters.

On the 23rd of October, about five weeks after the previous conversation, Mr. Bennett sent for me to know when I intended to resign. I then informed him that after mature consideration *I did not intend* to resign, but to apply for a six months' leave, to which I was entitled by my time of service, and which I required to attend to family matters, and if necessary to visit England. Mr. Bennett rather excitedly said that "he was entitled to a long leave before me, and Mr. Moriarty was entitled to one before him," and declared that *I must* resign or he must leave the Service himself, adding that I had been conspiring for a long time past with Mr. Rae, the Under Secretary for Works, to displace him, and that as long as our friendship (which is of fifteen years standing) lasted, the work of the department could not go on, &c., &c. I requested Mr. Bennett to show some shadow of foundation for such a vile assertion, and assured him, on my honor, that such a thing had *never entered my mind*, and that no doubt Mr. Rae could speak for himself on that point.

The display of such an animus against me explains why my repeated assurances to Mr. Bennett, during the last few years, of my sincere wish to assist him cordially have been met with rebuke rather than encouragement. All I claimed from him was the mutual confidence necessary to carry on business, and which my position as second in his office entitles me to expect, but which I never received.

15. The delay since I applied for my leave requires some explanation, for it has been caused also by Mr. Bennett, who gave me instructions to get out accurate and revised statements of quantities which he required to supply to a friend of his tendering for the Parramatta River and Iron Cove bridges.

The schedules of these quantities, which contain 110 foolscap pages of close calculations, and occupied me at least four hours overtime daily for a month in addition to the office work, would not have been required but for this purpose, as a summary of approximate quantities obtained from mean sections has been generally found to be sufficient for office records.

Reference to  
part. 5 of Minute.

16. My being selected by the Council of the Agricultural Society to act as one of their stewards or judges during their exhibitions is, according to Mr. Bennett, another reason why my leave should not be granted.

With reference to my notes, I find that I have attended nineteen days since the Exhibition of 1870, and always with permission. In 1874 Mr. Bennett declined at first to let me go *for a day* up the country to the trial of implements, but reluctantly granted me the day's leave on my wishing to appeal to the Minister to explain that I required that day to prevent disappointment to the Society and to the public who had assembled at Richmond to see the trial of implements with a new dynamometer specially placed in my charge. In 1875 Mr. Bennett granted me two days in addition to the opening day, and also two days more in August to attend to the Singleton show (see paper E.) In 1876 I declined to act as a steward or a judge, to the great disappointment of my friends, and only visited the Exhibition on the opening day and on Saturdays. I have no objection to have the nineteen days so usefully employed by me in a national undertaking during the last seven years reckoned as an addition to the only month's leave I have had in fourteen years; but I must deny Mr. Bennett's statement that I declined to ask for permission to absent myself at any time from the office. Even when prevented by indisposition to attend to my duties for a day, which has not occurred more than once in a year for several years past, I have informed Mr. Bennett early of the cause of my absence.

(Paper E.)

Reference to  
part. 6.

17. With regard "to the accumulation of all works from votes of 76,—The Bourke, Balranald, and Nowra Bridges, &c."—I have shown that when I was engaged on these bridges in May and June, 1876, the assistance I requested to get this work done was refused to me, so that the whole blame of the delay must rest with Mr. Bennett *alone* and his management of his department, and cannot be a final reason for declining to recommend my leave.

I understand also that an office Assistant Engineer has already been appointed and has begun on these works this month.

In conclusion, I must still press my claims to the leave asked for, notwithstanding the report of Mr. Bennett thereon, the whole of whose statements I take leave to think I have successfully refuted.

G. A. MORELL,  
Assistant Engineer.

22/1/77.

I have been directed to return these papers, which were forwarded to Mr. Morell in compliance with the Under Secretary's minute, which does not appear to the Commissioner to have been seen by the Minister.

The Commissioner has refrained from reading Mr. Morell's answer, but if the Hon. Secretary for Public Works thinks any reply is required, Mr. Bennett is prepared to do so.—G.C.E.  
Under Secretary, B.C., 22/1/77.

Mr. Morell to The Commissioner of Roads.

HAVING been requested by the Committee of the Northern Agricultural Association to be present at the field trial of implements at the Singleton show this week, I beg to apply for leave to absent myself on the 17th and 18th instant.

G. A. MORELL, Assistant Engineer,  
16/8/75.

Approved—W.C.B., 16/8/75.

Herewith. Also  
some papers  
relating to Par-  
ramatta River  
Bridges.  
(Paper E.)

Mr. Morell to The Commissioner for Roads.

Department of Roads and Bridges, Sydney, 17/1/76.

MEMO.—I wish to absent myself from the office this day from 2 p.m.

Approved.—W.C.B., 17/1/76.

G.A.M.

(Paper D.)

Mr. Morell to The Commissioner for Roads.

I AM desirous of absenting myself for an hour this morning, with the Commissioner's permission.

Approved—W.B., 31/1/76.

G.A.M.  
31/1/76.

(Paper F.)

Mr. Morell to The Commissioner for Roads.

Department of Roads and Bridges, Sydney, 20 December, 1876.

MEMO.—I desire to absent myself from the office from 12 o'clock this day, with the Commissioner's permission.

G.A.M.

Yes—but I wish Mr. Morell could let me have the final drawings, calculations, &c., of the P. River Bridges. It is unreasonable the length of time they have been in hands.—W.B., 20/12/76.

For the last three weeks I have devoted, besides office hours, at least *four hours per day* and the whole of Saturdays, and *every holiday*, to push on the quantities and revising of drawings. In a few days more, when I submit the particulars to Commissioner, he will admit that there is a considerable amount of labour to be devoted to works of such magnitude as the Parramatta River and Iron Cove Bridges, designed entirely in this office to the smallest details.—G.A.M., 20/12/76.

I have before expressed my opinion on these matters to Mr. Morell; it is not necessary to write further until the drawings are submitted.—W.C.B., 20/12/76.

## No. 6.

Mr. Morell to The Commissioner for Roads.

I HAVE to request that you will have the goodness to forward the appended communication to the Hon. Secretary for Public Works in reference to my former application for leave of absence.

G.A.M., 26/3/77.

As I have declined to make any recommendation in the case, I now forward this paper to be dealt with by the Honble. Secretary for Public Works with the other matter. I would offer no objection under the circumstances, to the month's leave, as it is right the Honble. Secretary for Public Works should have a little time to consider the matter.—W.B., 26/3/77.

I approve of a month's leave of absence being granted to Mr. Morell, pending my decision upon that officer's application for six months' absence from his duties.—J.H., 26/3/77. Mr. Bennett, B.C., 26/3/77.—J.R. I now forward this paper for Mr. Morell's information, as I wish to have full access to all the documents and papers of a public nature in his room, and to put a gentleman to work there during his absence. I would be glad if he would remove all his private books and papers, and hand the keys of the presses, &c., to Mr. Bullen; it is most inconvenient to me not to have access to the public documents in Mr. Morell's room, and also to be obliged to have an officer, whom I wish to confer with frequently, on the other side of the street.—W.B., 28/3/77. Mr. Morell.

I shall remove my private books, &c., as directed by the Commissioner, and have my room ready for the gentleman he wishes to put there, on Wednesday morning, April 4, when I should like my leave to begin. As far as I am concerned the Commissioner has always had complete access to all the public documents in my charge, and I fail to see how I am the cause of the inconvenience mentioned in the last paragraph of his minute; as he insisted upon my occupying my present room, instead of going to the other side of the street, at the time he assigned rooms to his different officers.—G.A.M., 3/4/77.

Department of Public Works, Office of Commissioner and Engineer for Roads,  
Sydney, March 26, 1877.

Sir,

Pending a decision upon an application for six months' leave of absence, made by me in December last, I have the honor to request that you will authorize one month's leave being now granted to me, to be counted as a portion of the longer leave asked for, should it be ultimately approved.

I have, &c.,

G. A. MORELL,  
Assistant Engineer.

The Honorable Secretary for Public Works.

No. 7.

## No. 7.

## The Commissioner for Roads to The Secretary for Public Works.

Sir,

Roads Office, 4 May, 1877.

I now forward to you direct my reply to the fifteen pages of charges made against me by Mr. Morell. On the receipt of my refusal to recommend his leave, he brought the paper to me to know if I still persisted in forwarding it, threatening if I did to bring all sorts of charges against me. I then told him that what I had written was the truth, and that I adhered to it.

Even had Mr. Morell deserved the leave it was most awkward time to give it. The Department never had so much work to do, and having to carry on the duty single-handed, as I have been doing for some time, I feel that I have been unable to reply to those charges as fully or in as much detail as I would wish, as I really had not time to refer to the drawings or documents.

The only charge of the slightest weight is that of getting the quantities taken out for Captain Mann—a comparison between the quantities which I possessed—and the new quantities will prove how absolutely necessary it was that the new quantities should be taken out, and my recommendation as to the tenders will prove, I think, that I was not dishonest enough to expend the public money for private advantage; and, this being proved, I think the fact of Mr. Morell's making a malicious charge against me, amounting to dishonesty, unfits him for the Service, and it may save trouble to the Honorable Secretary for Public Works if I intimate to him that it is impossible I can again expose myself under any circumstances to the malignant treachery of a person base enough to endeavour to fabricate so vile a charge.

I regret to have to trouble the Minister with so long a communication, but it is better that such matters should be fully gone into and exposed.

I have, &amp;c.,

WILLIAM C. BENNETT.

P.S.—I would beg the Secretary for Public Works, in considering this question, to bear in mind that I have devoted myself entirely to my duties, and to nothing else. I have not interfered in any quasi-public matters out of doors, sought to make friends, or bring my name into notice. I have devoted the whole of my time and energies to the Public Service for twenty-three years in the Colony, and for nearly thirty-seven years, taking my service under the Imperial Government into account.

## No. 8.

## Commissioner for Roads' reply to accusations made against him by Mr. Morell.

The numbers correspond to numbers on Mr. Morell's paper.

I SUBJOIN my reply to the accusations made against me in Mr. Morell's paper on my Minute as to his leave of absence, received by me from the Secretary for Public Works on the 1st instant.

1. I did ask Mr. Morell to send in application for leave without delay, as after my interview with him in September the public business was suffering from the disunion in the office, and I wished as soon as possible to put an end to such a state of things.

2. With reference to my remarks to the late Secretary for Public Works on the Estimates for 1876, as to Mr. Morell's increase put on (as I considered) at the instance of the Under Secretary, I felt it my duty to point out that Mr. Morell was not giving me the co-operation I had a right to expect; that he was largely engaged in private practice, and did not give that attention to his duties which would warrant me in recommending an increase in pay, more particularly as he had an increase the preceding year, also without any recommendation from me.

3. Mr. Morell evades this question as to his being engaged in gold and tin mining and private practice, to the detriment of his official work from the date of the gold fever, which I assert he was.

4. Mr. Morell has certainly not of late years given up his own time to his duties, as he asserts. His statements are also incorrect as to my expression of displeasure and disgust at the credit which he alleges has been given to him out of doors for the works with which he was particularly identified. I did express annoyance at his being publicly dealt with as the Engineer of the Windsor Bridge, with which he had very little to do, and I stated what I have generally found to be the case here,—if there is a success credit goes to the subordinate, if failure the head of the department alone is responsible; and I have more than once since pointed out that, while I was doing the real hard work of the department, Mr. Morell was calmly making capital and experience, and the odium of the delay as in the Parramatta River Bridges fell on me.

5. Mr. Morell here partially admits the correctness of my statement, which I maintain is strictly correct; that I over and over again found him absent from his office, or his room crowded with people on private business when I wished to speak to him on duty.

6. Mr. Morell here asserts that he has devoted more time than the usual number of office hours to his duties. I would here point out that his memos. for permission to absent himself are all subsequent to September, when he stated he would leave the department. I can only say the work did not go on as fast as it used to before Mr. Morell went into private practice.

7. Mr. Morell misquotes and puts his own colouring on this. It was my obvious duty to get the work which Mr. Morell had in hands finished before he left the office. As to leaving me in the lurch as he calls it, the department built many very good bridges for many years before Mr. Morell came into it, and also since without his intervention.

8. As to the delay of fifteen months by me, I have not recorded the time taken in those preliminary investigations, but all of them were necessary, and some of them ordered by the Minister, but I believe the same result could have been obtained in a much shorter time had I even then the cordial co-operation of Mr. Morell.

Up

Up to the time of Mr. Bullen's removal, the best of the draftsmen and cadets were in Mr. Morell's rooms, and I was absolutely obliged to remove Mr. Bullen unless the whole of the operations of the department were to have been confined to the drawings for the Parramatta River Bridges, and I did not remove him without putting the best man I could get in his place; good draftsmen were not to be had at will—I employed all those at all likely who applied.

Mr. Morell on this point goes back to the year 1875, and brings forward Mr. Whiteside's name, with a view of throwing discredit on the work got out by him, under, as he states, *my sole direction*. The drawings for those works were, it is true, not prepared in that detail that Mr. Morell's are, but the works are efficient—two of them quite novel; and I think the Hay Bridge will compare most favourably with any work of the sort in the Colonies for simplicity and efficiency; and there was no material alteration whatever in its execution. I have not time to follow Mr. Morell's statements as to the alleged defects in the other bridges, or his endeavour to prove that every work not done by him has been inefficient and extravagant.

9.

The drawings of the Iron Cove Bridge were made by Mr. Whiteside under the following circumstances: he was stationed at Queanbeyan as a road superintendent, and the sections of the ironwork calculated by myself at home were enclosed to him at Queanbeyan. Mr. Whiteside made the drawings of the girder, and most of the others there, without any opportunity of conferring with me, using short plates in lieu of those usually used, 30 feet long; this was the cause of the alteration. Mr. Whiteside was some days in Sydney at the pier drawings.

As the drawings were not done in this office, and by a man unused to the work for some time, they were not so neat as Mr. Morell's; but Mr. Morell is not justified in stating they were a disgrace. As to the errors in the girders, the best reply is the calculated weight was very close to the weight calculated by Mr. Morell for the new girder. Mr. Whiteside deserved thanks for carrying out the work in addition to his ordinary duties. With respect to Mr. Morell's statements that those girders are not fit to carry a railway, it is rather late in the day to find out that now, and it is simply a piece of malice; it is certainly not a reason for giving Mr. Morell leave of absence that he has been doing useless work for nearly two years. I assert positively that the girders are quite strong enough to carry a suburban railway with any people that will be on the bridge at the same time, which is most certainly not likely to be very many.

10.

Mr. Morell states those bridges are the largest works entrusted to the Department; but larger spans have been constructed by the Department, and the question of size is simply one of repetition; the designing was confined to one 125 feet span, one 150 feet span, and the swing span.

11.

Mr. Morell complains of Mr. Bullen's being taken from him to go on with other more urgent work; this was unavoidable, as I before explained; other matters had to be attended to as well as the Parramatta River Bridges.

12.

With reference to the sketches for bridges at Balranald and Bourke, the same sketch was prepared for both; it has not been acted on; another design was prepared. I am not aware that Mr. Morell did anything whatever to the Nowra Bridge, for which a totally different design was prepared.

13.

Mr. Morell here gives *his* version of what occurred in September last, and, with his usual ingenious perversion of facts, points out that he brought me in a drawing to recommend the appointment of a draftsman, and that it was then the complete breach occurred between us; this is contrary to fact, and I cannot help thinking advisedly so.

14.

As well as I recollect, I sent for Mr. Morell on some day in last September, to ask him how his work was proceeding, and to remonstrate with him about some absence from office on his private business; he then stated that it was untrue that he had been absent from office, and accused me of using the messenger boy as a spy on him; it was then I pointed out to him that it was impossible we could continue to work together—that I had created the Department, and managed it for twenty years, and could not submit to such an imputation. Mr. Morell then distinctly stated that it had been for some time his intention to leave the Service and go into private practice, and that he would do so before the end of the year: I then told him that I considered that the best course for all, and asked him when he intended to leave.

Mr. Morell accuses me of putting my own intentional misrepresentation upon this statement that he intended to leave the Service, but I can prove by credible collateral evidence that such was his avowed intention at the time, and I am prepared to swear that he said so to me, and that he also said at the second interview referred to, that he required the leave to enable him to consider whether he should leave the Service or not.

It was *after* this interview that Mr. Morell came to me to employ this man, and made a sort of recommendation of him; it was then that I declined to accept Mr. Morell's recommendations—not before he had made himself so offensive.

Mr. Morell admits that on the 23d of October I sent for him to know *when* he intended to resign; it is not likely I would have done *this* if I had not been under the impression it was his intention to leave.

With reference to Mr. Morell's conspiring with Mr. Rae to get my place, I did not say so, but I said that I had long seen that he and Mr. Rae wished to make a new sub-department of Bridges independent of me. I still believe this to be the case; Mr. Rae's conduct when new houses were taken was very strong evidence of this wish; in every case he tried to get Mr. Morell on to the drawing rooms away from me. I resisted it as inconvenient, and Mr. Rae then informed me that I should have no other rooms, hence the reason the offices of the Road Department are so scattered through the buildings as to make it almost impossible to exercise the necessary surveillance over the offices. I have had many other reasons for entertaining this opinion, and think the conduct of Mr. Morell has for some years been advisedly shaped towards this end.

In this paragraph Mr. Morell makes the heaviest charge against me, and one, which if true, would unfit me for a continuance in the Service, and if false, the fact of having made it would unfit Mr. Morell for the Service; this is the only conclusion that can be arrived at on this, and I am prepared to stand or fall by it.

15.

It will be seen that from September last until the receipt of Mr. Morell's memoranda two days ago, that I was fully under the impression that he intended to leave the department. Under such circumstances it was my duty, and I was most anxious to get all possible detailed information as to the quantities in the Parramatta and Iron Cove Bridges, and my minute of the 18th instant asks for a clear statement of the quantities of iron, timber, concrete and stonework, such as is always given, and which up to that

time had not and could not have been given completely, as some of the drawings were incomplete. The bridge having to be made in England and, as Mr. Morell states, being the largest bridge entrusted to this department, made it all the more necessary that the quantities should be given in detail, more particularly as the officer best acquainted with them was about, as I thought, to leave the department.

Those quantities were, I think it will be admitted, indispensable for the proper control of the work, though Mr. Morell, with a malignant perversion of the truth, states that I ordered him to get them out to enable a friend of mine to tender for the work.

He is careful not to name the gentleman he refers to, Captain Mann, to whom I did lend the quantities to check his own computations by; I made no secret of it, and it is very unlikely that considering the feeling between myself and Mr. Morell, that I should have committed myself so far with his knowledge.

The quantities were, Mr. Morell states in paper attached, refused to others; this was in accordance with the decision of Mr. Sutherland, that quantities should not be given to contractors.

I deviated from the rule as a favour to Captain Mann, an old Government officer; the quantities were made out for the purposes of the office, and his being allowed to look over them did not lessen their value or put the Country to the expense of a farthing; if the same thing had to be done again, I would do it to-morrow, and do also, if advisable, what I have done in this case, my duty, by rejecting the tenders so sent in if I considered the terms disadvantageous. An inspection of the analysis of tenders will, I think, free me from any improper motive in having these quantities made out for the Service, and lending them to an old official, under and with whom I had served, to save him having to go through a laborious check of his own quantities.

16. On the occasions of the annual shows, Mr. Morell's time was so entirely taken up with them in the office as well as out of doors, that I requested him to ask for a fortnight's or month's leave each year, in order that his time might not be counted to the department, and a bad example given to the juniors by his neglect of duty. He refused to apply.

17. As to the accumulation of work, I have already stated I could not get qualified assistance, and I think had not Mr. Morell been almost overwhelmed with private practice, the work would have gone on more rapidly.

WILLIAM C. BENNETT,

Commissioner and Engineer for Roads.  
4 May, 1877.

Messrs. Halloran, Rolleston, and McLean to be appointed a Board to investigate this matter.—J.H., 17/5/77.

#### BOARD OF INQUIRY.

The Inspector General of Police to The Commissioner of Railways.

Sir, Police Department, Inspector General's Office, Sydney, 19 May, 1877.

In reply to your letter of this date (No. 77-2,337) I have the honor to inform you that I have no objection to act on the Board referred to, provided it is considered desirable by the Minister at the head of my Department.

I have, &c.,

EDMUND FOSBERY,

Inspector General of Police.

All the papers in this case have been forwarded to Mr. Halloran this day.—G.H., 21/5/77.

The Principal Under Secretary to The Under Secretary for Public Works.

Sir, Colonial Secretary's Office, 18 May, 1877.

I have the honor to acknowledge the receipt of your letter of yesterday, and in reply to state, for the information of the Secretary for Public Works, that I am willing to join the Comptroller General of Prisons and the Auditor General in the formation of a Board proposed to be constituted to inquire into a misunderstanding of an official nature between Mr. Bennett, the Commissioner, and Mr. Morell, the Assistant Engineer for Roads.

I have, &c.,

HENRY HALLORAN.

Mr. Rolleston's letter submitted, 18/5/77.

The Auditor General to The Under Secretary for Public Works.

Sir, 18 May, 1877.

In reply to your letter of yesterday's date, I do myself the honor to state that the business of this Department requires the whole of my attention, and I must beg to be excused from joining the Board of Inquiry referred to in that letter.

I have, &c.,

C. ROLLESTON.

Request Mr. Fosbery to act.—J.R., 18/5/77. E. Fosbery, 19/5/77. In a week, 77/2371.

Mr. Rolleston having declined, Mr. Fosbery may be requested to act.—J.H., 19/5/77. Mr. Fosbery having agreed to act, the papers may be forwarded to Mr. Halloran for the information of the Board.—J.H., 19/5/77. H. Halloran, Esq., 20/5/77.

The Comptroller General of Prisons to The Under Secretary for Public Works.

Sir, Department of Prisons, Comptroller General's Office, Sydney, 18 May, 1877.

In reply to your letter of the 17th instant, I have the honor to inform you that I am quite willing to join the Board, as desired by the Secretary for Public Works.

I have, &c.,

HAROLD MACLEAN.

My

My dear Rae,

Have you advised Messrs. MacLean and Fosbery in the matter of Messrs. Bennett and Morell? This is the practice in this Department, and no doubt in yours also; but your letter to me of yesterday does not say so. Pray let me know per bearer.

Faithfully yours,  
HENRY HALLORAN,  
23/5/77.

Inform Messrs. MacLean and Fosbery that the papers have been forwarded to Mr. Halloran, and request them to place themselves in communication with him.—J.R.  
All parties.—23/5/37.

## No. 10.

### Proceedings of the Board.

MINUTES of Proceedings of the Board of Inquiry held by direction of the Minister of Public Works into a misunderstanding between Mr. W. C. Bennett, Commissioner of Roads, and Mr. G. A. Morell.

May 25th, 1877.

PRESENT:—

H. Halloran, | H. Maclean,  
E. Fosbery.

The Board deliberated as to the direction the inquiry should take, and invited Mr. Bennett to a preliminary interview, which took place.

28th May, 1877.

The Board met at 11 a.m. All present.

Mr. Bennett attended.

The Board suggested that Mr. Bennett should state briefly his grounds of complaint against Mr. Morell, under separate heads, when the Board would proceed to take evidence thereon if needful. (Appendix A to Report of Board of Inquiry, No. 11.)

1st. Stated as follows: That Mr. Morell neglected his duty, attending to his private practice and other business.

2nd. That Mr. Morell evinced a disinclination to carry out Mr. Bennett's views, and did not co-operate or give that assistance the Head of his Department had a right to expect.

3rd. That Mr. Morell improperly and untruthfully charged Mr. Bennett with directing him to prepare statements of quantities of the Parramatta River and Iron Cove Bridges to supply to a friend of Mr. Bennett's, thereby misappropriating public time for private purposes.

*William C. Bennett*, Commissioner and Engineer of Roads and Bridges, examined: With regard to my first charge I refer to my report of the Minister of Works, dated the 8th of January, 1877; the statements therein made respecting Mr. Morell's inattention to his duties I still adhere to; I first definitely took Mr. Morell to task in September last, but previously (for some years) I had been dissatisfied with the progress of the work, and had expressed it to Mr. Morell; instructions are not given in writing—it would be impossible; I was aware that Mr. Morell was carrying on a private practice; I heard of his superintending the erection of the Grand Stand at Randwick, Mr. Tooth's house at Darling Point, and some filters for Messrs. Alderson, and other work; I think that this work must have interfered with the performance of public duties by Mr. Morell; the private business appeared to be increasing, and to require a great deal of his attention; before Mr. Morell had this private practice he performed his duties to my entire satisfaction; I never expressed my disapproval of Mr. Morell undertaking private practice, but I did with the result that the departmental work did not get on; lately an order was issued by the Minister that private practice was not to be allowed for remuneration; I do not know whether Mr. Morell received any payment for his private work; I never saw Mr. Morell engaged on private plans or work in office hours; I have never engaged in any private practice myself; Mr. Morell's theoretical attainments as an engineer are beyond question, but practically refines too much, and enters into unnecessary detail; when I speak of Mr. Morell not being available to me for business from the causes stated, I may say that such occasions have averaged four times in the week; generally, I am satisfied by my own observation that Mr. Morell did not devote a proper amount of time and attention to the work in hand; Mr. Morell did not obtain leave by written memoranda until after September last, when I took him to task; I do not think I required these written applications; I believe that I said I wished he would let me know when he wanted to leave the office; I am not aware that Mr. Morell worked after office hours on official business; I do not credit his statement that he worked four hours daily overtime for a month in getting out the quantities for the Parramatta River and Iron Cove Bridges; I think if such time was occupied it was excessive, and as much as possible appears to have been made of the work.

*Second Charge*.—I cannot well define or prove want of co-operation; but whereas formerly during the first few years of Mr. Morell's service he acted cordially with me, I could not but observe that latterly he has been obstructive, and caused unnecessary difficulties; I cannot say that I have been on friendly terms with Mr. Morell for some years past, but the distant terms upon which we now meet cannot but prejudice the public interests; we have not spoken, except on official business, since September last, nor at all since I read Mr. Morell's report of 22nd January last; I forwarded this report, but never read it before doing so.

*Third charge*.—It is not true that I instructed Mr. Morell to take out quantities for the bridges referred to, in order to furnish them to a friend; the work was commenced before the gentleman to whom Mr. Morell refers (Captain Mann) applied to me for the information; it is not the case that it has not been considered necessary to get out these quantities for similar works; similar quantities have been taken out by Mr. Morell himself for the Bathurst and Urara Bridges, which were not so necessary inasmuch as they were lesser works, and to be executed in the Colony; I exhibit the same statements of quantities as regards Cowra and Gundagai Bridges, of which Mr. Morell is cognizant; it was, in my opinion, indispensable that the quantities for the bridges in question should be brought out in full detail, and the more needful in view of Mr. Morell's intention of leaving the Department.

WILLIAM C. BENNETT.

29th May, 1878.

The Board met at 3 p.m.  
Mr. Morell in attendance.

*Gustavus Alphonse Morell* states: With regard to my alleged private practice, the first work in the nature of private practice I undertook was the competition plan for the Grand Stand at Randwick, which I did on the suggestion of Mr. Bennett, who advised me to do it, because I had been refused an increase of salary; I obtained the prize and also superintended the work, for which I was paid, but I never engaged myself on such business during office hours; beyond this the only remuneration I ever received for private practice was in connection with Mr. Tooth's house; any other work I did I received no payment for; I admit I have seen persons in my office on private business, but when my attention was likely to be occupied for more than a few moments I requested such persons to see me elsewhere after office time; for the first year or two of my public employment I made it a practice to remain at my office till dark, but subsequently I took calculations and other work home with me, and have done so up to the present time; I emphatically deny that any private business I had in any way interfered with my official duties; I deny that it is possible that Mr. Bennett has gone or sent for me on an average four times a week, when I have been either engaged with private persons, or absent; I usually arrived at the office between 9 and half-past; during the progress of the Urara and other bridges I had to superintend the work after office hours; I received an additional allowance, at the rate of £50 per annum, for overtime, during a portion of this period; until latterly it was not my practice to leave the office even for luncheon; I was not in the habit of leaving the office during office hours unless upon official business. With regard to the circumstance of an increase to my salary having been placed on the Estimates without Mr. Bennett's recommendation it occurred by the action of a friend of mine outside the Department and without my knowledge.

*Second Charge.*—Mr. Bennett and I have not been on such terms as could conduce to the proper working of the Department for some two years; Mr. Bennett has been disinclined to accept that cordial assistance which I have frequently tendered, or to place that confidence in me to which my position entitled me; Mr. Bennett's action in this respect appeared to me to have been prompted by a jealousy of letting me share so far as I ought in his duties; Mr. Bennett during temporary absences gave instructions to other officers incompatible with my taking charge as the second officer.

*Third Charge.*—In consequence of a difficulty that occurred in 1870 with the contractor for the Cowra Bridge, through his having been furnished with quantities similar to those now in question, an order was made that they should not in future be supplied to intending contractors; no such quantities except in this instance were taken out since 1870, save for the Casino Bridge, and these were taken after tenders were accepted; in the cases of such works as the Parramatta and Iron Cove Bridges, I am of opinion that it is desirable or necessary to have the quantities taken out in detail as was done, but they were not required at the time; Captain Mann called upon me to ask for the quantities; I told him it was not the practice to give them, and referred him to Mr. Bennett, who sent for me, and told me to give Capt. Mann the quantities, which I did; on the following day Mr. Bennett directed me to get out the new detailed quantities (those in question) after they were completed, and furnished to Mr. Bennett, I next saw them in Capt. Mann's possession; I never mentioned the matter until it became public through Parliament; it was my impression at the time that the information was ordered because of Capt. Mann's application. In making my statement about the quantities being furnished to Capt. Mann, I in no way intended to impute any corrupt or improper motive whatever, or anything beyond a friendly indiscretion, to Mr. Bennett.

G. A. MORELL.

No. 11.

### Report of Board of Inquiry.

Sir,

Sydney, 1 June, 1877.

In pursuing the inquiry intrusted to us by your directions into the official misunderstanding which has arisen between the Commissioner and Engineer of Roads and Bridges, and Mr. Morell, Assistant Engineer, we deemed it advisable (after a careful perusal of the papers) to invite the attendance of Mr. Bennett, and to suggest to him that he should put the grounds of his complaint against Mr. Morell in a concise form, under separate heads.

This he did in the following terms:—

- 1st. Stated as follows: That Mr. Morell neglected his duty, attending to his private practice and other business.
- 2nd. That Mr. Morell evinced a disinclination to carry out Mr. Bennett's views, and did not co-operate or give that assistance the Head of his Department had a right to expect.
- 3rd. That Mr. Morell improperly and untruthfully charged Mr. Bennett with directing him to prepare statements of quantities of the Parramatta River and Iron Cove Bridges, to supply to a friend of Mr. Bennett's, thereby misappropriating public time for private purposes.

Taking for the basis of our inquiry the minute of Mr. Bennett, forwarding Mr. Morell's application for leave of absence, which was in fact the immediate cause of the difficulty, we proceeded to take Mr. Bennett's further statement in support of his charges, which we reduced to writing. (*Vide notes of evidence. Appendix A.*)

Mr.

Mr. Morell was subsequently requested to attend, when he was made acquainted with the contents of Mr. Bennett's report to the Minister, dated 4th of May; also with the summary of the charges preferred by Mr. Bennett, and the evidence given by that gentleman.

Mr. Morell was then invited to make such statements as he thought fit in refutation of the charges, and a synopsis of his evidence will also be found in the Appendix to this Report.

In receiving the statements, we elicited such further information as we deemed desirable from both gentlemen, the replies to our questions being embodied in the epitome of evidence referred to.

Neither Mr. Bennett nor Mr. Morell was desirous of calling any witnesses; indeed, from the nature of the allegations and counter-statements, consisting either of expressions of opinion, or matter to which the evidence of other parties could not be well applied, we deemed it advisable to confine our consideration to the written documents before us and the notes we had taken.

We feel compelled, at the outset, to express our dissent from the course adopted by Mr. Bennett, in accompanying Mr. Morell's application for leave of absence with the minute before referred to, which contained, in effect, a series of most grave charges against Mr. Morell.

With such cause in his view then existing, and which had existed for a long time previously, Mr. Bennett's proper course would have been, at an earlier period, to have made a substantive report, after a warning to Mr. Morell, and a notification of an intention to do so. Mr. Morell, indeed, states that he would not have desired his application to have been forwarded at all, with such an unfavourable minute.

*1st Charge.*—With regard to the first charge preferred, we think that the question affecting Mr. Morell's private practice can be readily disposed of.

It seems that Mr. Bennett was aware of it; in fact, he admits having suggested to Mr. Morell that he should send in a competitive design for the Grand Stand at Randwick. Accepting Mr. Morell's assertion, that the only works of any magnitude he undertook, and exclusively those for which he received any remuneration (the Grand Stand and Mr. Tooth's residence), were supervised after office hours, and further, that such private practice for remuneration has now been forbidden, we do not consider that Mr. Morell has laid himself open to censure for what has passed. Mr. Bennett should have promptly checked such practice if he disapproved of it.

*2nd Charge.*—With reference to alleged inattention to duty, Mr. Bennett states that Mr. Morell's official duties would occasionally take him out of doors. Mr. Morell has assured us that, unless absent by permission, he never left the office but on official duties, or for a few minutes on some trifling private business. His assertion that he constantly took home official work ought to be admitted without calling for further proof.

We are, as a matter of course, not competent to form any opinion upon the professional question whether or not Mr. Morell has used due diligence and dispatch in the execution of the work entrusted to him. On that point the opinion to the contrary, expressed by the Head of his Department, must have due weight.

*3rd Charge.*—The third charge, to which Mr. Bennett evidently attaches the chief importance, is certainly a serious issue. It is evident, indeed Mr. Bennett admits it, that permitting Captain Mann to have access to the schedule of quantities of the Parramatta River and Iron Cove Bridges was an error, the gravity of which does not appear to have presented itself to Mr. Bennett's mind.

It would appear, from Mr. Morell's statement, that Captain Mann applied to him for the information in the first instance before the detailed calculations were made (Mr. Morell states before he was directed to make them), and that he referred Captain Mann to Mr. Bennett, who thereupon instructed Mr. Morell to prepare the detailed statements, which were subsequently handed to Captain Mann.

Mr. Bennett, on the other hand, states that he gave directions for the preparation of the revised quantities before Captain Mann applied for them—that it was usual to make such calculations—and that they were requisite for departmental purposes.

Mr. Morell admits that it was desirable to have such particulars, and qualifies the statement made in his report of the 21st of January, by saying that he meant to assert that the preparation of the statements was hurried forward to oblige Captain Mann, the calculations not being then required for any other purpose, but he emphatically disclaims imputing any dishonourable or improper motive to Mr. Bennett, characterizing his action as "a friendly indiscretion."

We think Mr. Bennett should accept this disclaimer, especially bearing in mind the admitted fact that an irregularity did occur, and making some allowance for the heat in which Mr. Morell wrote, when smarting under the unexpected and unfavourable report made against him by his superior officer, on an application for leave of absence.

Although, however, we think some allowance ought to be made for the irritation under which Mr. Morell naturally suffered, yet we take grave exception to the tone of his replies to Mr. Bennett's minute, as overstepping any necessity for vindicating himself, and in its terms unbecoming his position relative to Mr. Bennett.

We deprecate a subordinate officer making out his own defence by reflections upon his superior.

To ensure the proper working of the Department, it is obviously necessary that Mr. Morell should keep well within the lines of his position, in his subordinate relation to Mr. Bennett, to whom, as well as rendering cordial assistance and co-operation, he is bound to defer; and we think that it should be impressed upon him by Ministerial authority, that as the responsibility rests with the Head of the Department it is not consistent with the public interests that there should be any recurrence of such action on his part as we have felt it our duty to advert to.

We notice, however, Mr. Morell's representation that his position in the Department has never been clearly defined. This is a matter which we think should be at once remedied, as it would not be difficult to give such general written instructions as would set all doubts at rest.

Mr. Bennett bears testimony to the fact, that during the first few years Mr. Morell was attached to the Department a more efficient or willing assistant could not have been desired. We trust that by friendly interposition and mutual concession a similarly satisfactory state of affairs may be revived, especially in view of the emphatic denial on Mr. Morell's part of the imputation of any improper motive to Mr. Bennett in the paragraph of his report relative to Captain Mann, and which we understood from Mr. Bennett to be the main obstacle to any adjustment of the difference, and Mr. Morell's disposition, expressed to us, to resume his former relations towards Mr. Bennett.

The points at issue do not appear to us to be so serious as Mr. Bennett assumes.

We have endeavoured to address ourselves, as far as practicable, to the removal of any prejudice or false impression on either side, and it will be a matter of congratulation to us if our labours result in an accommodation of the differences which have existed between two officers of such high reputation.

We have, &c.,

HENRY HALLORAN.  
HAROLD MACLEAN.  
EDMUND FOSBERY.

To the Honorable the Secretary for Public Works.

I have had two copies of this Report made: shall I forward them to Mr. Bennett and Mr. Morell?—  
J.R., 5/6/77. Yes.—J.H., 5/6/77.

No. 12.

The Under Secretary for Public Works to The Commissioner for Roads.

Sir,

Department of Public Works, Sydney, 5 June, 1877.

I am directed to transmit to you herewith a copy of the Report of the Board of gentlemen constituted for the purpose of inquiring into a misunderstanding between yourself and Mr. Morell.

I also transmit a letter, enclosing a copy of the same Report, which I am to request you will cause to be forwarded to Mr. Morell, as an officer of your Department.

I have, &c.,

JOHN RAE.

The Commissioner for Roads to The Under Secretary for Public Works.

Sir,

Department of Public Works.

Office of Commissioner and Engineer for Roads, Sydney, 7 June, 1877.

Referring to your letter of the 5th June, forwarding Report of Commission of Inquiry, &c., I have to request that I be permitted to see the evidence given before that Committee by Mr. Morell, pending receipt of which I delay forwarding your letter to that officer.

I am, &c.,

WILLIAM C. BENNETT,  
Commissioner for Roads.

Forward. I asked the whole to be sent forward.—J.R.  
G.H., for U.S.

Papers herewith—Roads, B.C., 7/6/77.—

No. 14.

Minute Paper from The Commissioner for Roads.

As I cannot concur in the Report of the Commission, and have only this morning received Mr. Morell's evidence, and would wish some time to think over the matter, may I beg that the letter for Mr. Morell be forwarded to him direct, as my doing so without any comment, which I have not time to make, might be held to show that I agreed with the paper.

Mr. Morell has applied to me for the paper, and as he is about to leave Sydney it is right it should be sent to him.

W.B., 7/6/77.

Under Secretary, B.C.

Approved.—J.H., 7/6/77. Forward to Mr. Morell direct.—J.R., 7/6/77. Handed to Mr. Morell this day.—G.H., 7/6/77.

No. 15.

The Principal Under Secretary to The Under Secretary for Public Works.

Sir,

Colonial Secretary's Office, Sydney, 12 June, 1877.

With reference to your communication of the 8th instant, I am now directed by the Colonial Secretary to state, for the information of the Secretary for Public Works, that Mr. G. A. Morell has been instructed to proceed by the first opportunity to Melbourne, to prepare plans illustrative of the proposals of Sir William Jervis for the defence of this Colony, and has been desired to report himself on arrival to His Excellency, under whose sole direction he is to consider himself in respect of the preparation of the plans.

2. Application has been made to the Under Secretary for Finance and Trade that an advance of £100 be made to Mr. Morell, on the usual terms, to meet the cost of his passage and expenses in Melbourne.

I have, &c.,

HENRY HALLORAN.

Mr. Bennett.—J.R., B.C., 14/6/77. I have already been advised of Mr. Morell's having been withdrawn from this Department. I presume all future communications will go to that gentleman direct.—W.C.B., 14/6/77. Under Secretary, B.C. As far as I understand Mr. Morell's position, he is still Assistant Engineer for Roads, and has been granted leave of absence for two months on full pay.—J.R., B.C., 18/6/77. Mr. Bennett.

No. 16.

The Under Secretary for Public Works to The Commissioner for Roads.

Sir,

Department of Public Works, Sydney, 16 October, 1877.

I am directed by the Secretary for Public Works to inform you that the resignation of Mr. G. A. Morell, Assistant Engineer for Roads under your Department, has been accepted by the Government, to take effect from the 1st instant.

I have, &c.,

JOHN RAE.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

---

MINOR ROADS.  
(PETITION OF RICHARD SADLEIR, R.N.)

---

*Ordered by the Legislative Assembly to be printed, 6 March, 1878.*

---

To the Honorable the Legislative Assembly of New South Wales.

The humble Petition of Richard Sadleir, R.N.,—

HUMBLY SHOWETH :—

That the system of repairing and forming the Minor Roads is most unsatisfactory and wasteful.

That the law is imperfect, the Justices having no legal power to fulfil their functions, and are liable to actions of law, to their injury.

Therefore, your Petitioner prays that the Subordinate Roads may as far as possible be included in the Municipalities as elective and responsible bodies, while a Trust Bill may be provided for outlying Districts similar to one he introduced when in Parliament, making the Justices elective bodies with corporate power so to enable them to fulfil their functions.

Your Petitioner prays the consideration of your Honorable House to the above premises.

And will in duty bound ever pray.

RICHARD SADLEIR.  
Feby. 26th, 1878.

1877-8.

**PARRAMATTA RIVER AND IRON COVE BRIDGES.**

No. 1.

Mr. Franklin to The Commissioner for Roads.

Department of Public Works, Roads and Bridges Branch,  
Sydney, 27 December, 1877.

Sir,

I am about to tender for the erection of the Parramatta River Bridges, and in the event of my tender being accepted I beg to hand you my resignation, to be dealt with as you may think proper.

I have, &c.,

F. A. FRANKLIN.

This step will compromise me very seriously. I regret I have no option but to recommend acceptance.—W.C.B., 27/12/77. Approved.—J.S., 27/12/77. Is it intended to accept this resignation unconditionally?—J.R., 7/1/78. Yes.—J.S., 7/1/78. Mr. Franklin informed.—7/1/78.

Note.—The original letter and the minutes thereon having been mislaid, are now reproduced from information supplied by Mr. Franklin and the Department.

No. 2.

The Under Secretary to The Commissioner for Roads.

Department of Public Works, Sydney, 27 December, 1877.

Estimated cost ..... £32,000.  
Amount voted ..... £90,000  
Less cost of iron ..... 49,054

Sir,

Amount of tender ..... £40,946.  
Erection of iron Bridges, Parramatta River and Iron Cove. £47,568 1s.  
Deposit receipts received from Messrs. Royce, Musson, and Franklin. No deposit received from Mr. Low.

The tenders, four in number, for the work specified in the margin, are referred to you for report, and you will have the goodness, as early as possible, to return them to me direct, for submission to the Minister.

I have, &c.,

JOHN RAE.

No. 3.

Minute of Commissioner for Roads.

In consequence of Mr. Franklin, the next in rank to myself in this office, having tendered for the Parramatta and Iron Cove Bridges, I think it desirable that I should not be asked to report on such tenders, and have advisedly absented myself from the opening of same; and should Mr. Franklin's tender be accepted, I would be glad if some other officer was appointed to superintend the construction.

Under Secretary, B.C.

W.C.B., 27/12/77.

No. 4.

Minute of Secretary for Public Works.

Parramatta River and Iron Cove Creek Bridges.

THESE papers have been submitted to me without any report upon the tenders received, in consequence of the extraordinary action taken by Mr. Franklin, the Assistant Engineer for Roads and Bridges, who retained his appointment up to the very hour fixed for opening the tenders for these bridges. I accepted Mr. Franklin's resignation as the most lenient course I could take towards that gentleman, but now having to deal with these papers I cannot too strongly express my disapproval of Mr. Franklin's conduct in this matter, calculated as it is to create a sense of distrust amongst the *bona fide* contractors who tender for the public works, and to bring discredit on the department. As Assistant Engineer, Mr. Franklin in his high official and trusted position was acquainted with all the particulars connected with these bridges, and had opportunities of seeing the prices of the contractors who had on previous occasions tendered for them. Under such circumstances as these a tender from Mr. Franklin could not of course be entertained, and I regret that he should not himself have seen how grossly improper his conduct was in making the offer under the circumstances set forth.

The Commissioner for Roads will please furnish me with his report on the other tenders received, excluding that from Mr. Franklin from any consideration whatever.

JOHN SUTHERLAND,

2 Jan., 1878.

Mr. Franklin to be furnished with a copy of this minute.—J.S., 2/1/78. Copy to Mr. Franklin accordingly, 4/1/78. Roads, for report, B.C., 4/1/72.—G.H., for U.S.

No. 5.

The Under Secretary for Public Works to Mr. Franklin.

Sir,

Department of Public Works, Sydney, 7 January, 1878.

Referring to your letter of the 27th December last, I am directed to inform you that the resignation of the office of Assistant Engineer for Roads, held by you in this department, has been unconditionally accepted by the Secretary for Public Works, from the date of your letter above referred to.

I have, &c.,

JOHN RAE.

No. 6.

## No. 6.

## Minute of Commissioner for Roads.

The tenders, excluding Mr. Franklin's, are :—

	Parramatta River Bridge.	Iron Cove Bridge.	Total.
G. H. Royce ... ..	£32,987 2 11	£24,624 19 9	£57,612 2 8
J. Musson & Co. ... ..	26,809 12 0	20,759 7 0	47,568 19 0
J. C. Low ... ..	27,475 0 0	22,825 0 0	50,300 0 0
— Franklin ... ..	26,530 4 0	20,638 0 0	47,168 13 3
			W.C.B., 12/2/78.

The tender of J. Musson & Co. is the lowest. It does not, according to the form of tender, state any time for completion, and is in that respect informal; the tender is however to do the work in accord with specification, in which the time is clearly stated.

There is also a reference at foot to the quantities given by the department, but they were given informally, and with the distinct understanding which was indorsed on the copy, that the department would not be bound by them. When the specification was first drawn it was not intended to give quantities, so that there is no mention whatever of them therein.

The estimated cost of the work is £32,000. Mr. Musson's tender is £47,568, so that if otherwise eligible, as I have already reported, I could not recommend acceptance of a tender so much over the estimate.

It will be observed that Mr. Musson's prices for the masonry are excessive; this portion of the work could be proceeded with in the first instance, and drawn on; the price for sinking and fixing cylinders, being proportionally much less, there would, even with the amount lodged as security, be hardly sufficient left to pay for a span or a pier if dropped in the river or injured, together with the completion of work. The price for timber, without spikes, is also high at the water-side.

I would also point out that the price asked by Mr. Musson for excavating at a depth below 80 feet is also excessive, five pounds per cube yard.

In a previous paper (herewith) I referred to the department's past experience of Mr. Musson, and to my recommendation, made seven years ago, that his tender for other works be not accepted until he had proved his fitness to carry out a contract, by the satisfactory completion of the Darling Harbour work; how that was completed is matter of history; but in order that Mr. Musson may not state that he is entirely deprived of an opportunity of showing what he can do, I have recommended that his tender for the erection of the Muswellbrook Bridge be accepted; but I cannot recommend that this, the most difficult and hazardous work of the sort that has yet been undertaken in the Colony, should be entrusted to a man who, to say the least of it, has not yet proved his fitness to undertake such a work.

I therefore adhere to my recommendation that the work be carried out by the department, that is, that the timber and masonry be let separately, and that the sinking and fixing of cylinders and girders be done by day work, the riveting by task.

The Under Secretary, B.C.

W.C.B., 7/1/78.

I would be glad to have the specifications, conditions, and schedule of quantities supplied to the contractors in tendering for these works.—J.S. Mr. Bennett, B.C., 11/1/78.—G.H., for U.S.

Printed specification and conditions herewith; quantities also herewith. Copies of the summary of first pages only given to contractors.—W.C.B., 11 Jan./78.—Under Secretary, B.C.

## No. 7.

*Précis*—Parramatta and Iron Cove Bridges.

In 1862 the cost of bridges was estimated at £80,000, and a Committee of the Legislative Assembly, on the 26th of September in that year, reported against their construction, on the ground that the value of the land did not justify the outlay.

In 1870 the Assembly carried a resolution in favour of resuming the Field of Mars Common and construction of the bridges.

A vote of £50,000 was accordingly taken in 1873, and appropriated by Loan Act, 36 Vic. No. 21. £50,000.

In June, 1874, an Act was passed resuming possession of Common, authorizing its sale, and appropriation of proceeds towards cost and maintenance of the bridges, 38 Vic. No. 3.

In 1876 a further Loan Act was passed (40 Vic. No. 12) appropriating an additional vote of £40,000.

Tenders were accordingly invited in August, 1876, to be opened on 10th October. The time was subsequently extended to 7th November, and again to 30th January, 1877, and ultimately were opened on 13th February of the present year. £40,000.

Five tenders were received as under, viz. :—

Pearson and Downie—Construction and erection—Parramatta Bridge	£73,856
Ditto ditto Iron Cove ditto	56,671
G. K. Mann—Construction only—Parramatta Bridge	35,000
Ditto ditto Iron Cove ditto	27,500
T. Smithyman—Erection only, of both bridges	54,000

The Commissioner for Roads was unable to recommend acceptance of any of these tenders, but advised that tenders should again be invited both in England and the Colony simultaneously, to be opened on the 14th of August, 1877.

This was done, and the tenders shown on next page were received.

The land consists of 6,235 acres of good land for gardens and villa sites.

The tenders opened on the 14th August were as follows :—For superstructure by telegraph from England, lowest for— Field of Mars Common.

	Estimate.
Parramatta Bridge	£25,534
Iron Cove Bridge	20,708
	£46,242
	£45,176

Acceptance

Acceptance was recommended by Commissioner for Roads, and Mr. Hoskins, then Minister, who went out of office on the 17th, minuted the paper:—

"I leave this matter for my successor, but recommend this tender for acceptance."

A few days afterwards a telegram was received from England, stating that there was a misapprehension that the lowest tender for Parramatta Bridge was—

Iron Cove Bridge					Estimate.
	Appleby Bros. ... ..	£27,466	...	...	£24,916
	Darlaston Company ... ..	21,588	...	...	20,260
		£49,054	...	...	£45,176

Commissioner for Roads recommended on 20th August a telegram to be sent to Agent General:—

"Accept tenders for both bridges. Use own judgment. Both bridges from one firm desirable, even at a slight advance."

No action was taken on this, but tenders were invited on 25th September, to be opened on 2nd October, for cast-iron cylinders. The tenders were:—

Davy ... ..	£15 0 0	per ton
Musson ... ..	14 5 0	"
Fairlie Co. ... ..	11 7 6	"
Mort's ... ..	14 18 0	imp. $\Psi$ ton

Commissioner for Roads recommended that no tender be accepted, as the English tenders delivered were much lower, and the fitting of wrought and cast iron in one shop would make a much better job.

On the 13th October the Agent General's letter was received, and as the difference between the Darlaston Company's and Appleby's tender was but £320, the Minister minuted on the 21st November:—

"In the spirit of the Commissioner for Roads' recommendation, and as we have now all the papers before us, I approve of the acceptance of Messrs. Appleby's tender. Telegraph through Colonial Secretary—

"Accept Appleby's tender for both bridges. Telegraph reply"—which was done, the amount being £49,374.

The tenders for the erection—or section 2 of contract, including masonry of approaches and embankments and roads of same—opened on the 14th August, were—

	Musson & Co.	Low & Kerr.	Estimate.
Parramatta Bridge ... ..	£27,000	£27,211	£17,657
Iron Cove Bridge ... ..	21,000	22,330	14,563
	£48,000	£49,541	£32,220

The Commissioner for Roads reported, on the 20th August and 21st November, that the two lowest, those of Musson & Co. and Low & Kerr, were 50 per cent. over the estimated cost, and he recommended that the work should be carried out by the department, the masonry and timber-work to be sublet by tender; and at the same time pointed out that Musson & Co.'s tender was informal, inasmuch as the quantities were not moneyed out to agree with the bulk sum, as specified. On the 21st November, the then Minister (Mr. Combes) directed that fresh tenders should be invited immediately, which was done, and tenders appointed to be opened on the 27th December. Just prior to the meeting of the Tender Board on that date, Mr. Franklin, Assistant Engineer for Roads, informed the Commissioner that he had put in tenders for the work, at the same time handing in the resignation of his office in the event of his tenders being accepted. The Commissioner thereupon at once wrote a minute declining to sit at the Tender Board, and requesting that some officer other than himself might be asked to report upon the tenders, and that should Mr. Franklin's tender be accepted some one else might be appointed to supervise the work.

The tenders received were as follow:—

	Parramatta.	Iron Cove.	Total.
F. A. Franklin ... ..	£26,530 4 0	£20,638 9 3	£47,168 13 3
J. Musson & Co. ... ..	26,809 12 0	20,759 7 0	47,568 19 0
J. C. Low ... ..	27,475 0 0	22,825 0 0	50,300 0 0
G. H. Royce ... ..	32,987 2 11	54,624 19 9	87,611 21 10

Mr. Franklin's resignation was accepted, unconditionally, on the 27th December, by direction of the Minister, who pointed out, in a minute of the 2nd of January, 1878, the impropriety of Mr. Franklin's conduct, and directed the Commissioner for Roads to report upon the tenders, excluding from consideration those of Mr. Franklin.

On the 7th January Mr. Bennett accordingly reported that the tenders of Musson & Co. (excluding Franklin's) were the lowest, but as they stated no time for completion, in that respect were informal, and pointed out that a reference was made at foot of their tenders to the fact that the quantities were those given by the department, but by which it had been expressly stated that the Government was not bound; that the tenders were nearly 50 per cent. in excess of estimate (£32,000); that the prices given for masonry, timber, and excavation below 80 ft. were excessive, and that as former contracts undertaken by Musson, both in the Roads and Harbours and Rivers Department, had been of so unsatisfactory a nature, and as he had been recommended for and had obtained the contract for Muswellbrook Bridge with the view of showing what he could do, he adhered to his former recommendation that this work, which was the most difficult and hazardous of the kind that had yet been undertaken in the Colony, should be carried out by the department, letting separately the masonry and timber-work.

What is the date of signing the contract in England, and under whose superintendence is the work to be carried out?—JOHN SUTHERLAND, 28/1/78. I cannot state exact date, but I presume a week or so after telegram was sent to accept—the 21st November. I do not know what Engineer, but I presume Mr. Fowler, who superintends all other similar work for the Agent General.—W. C. B., 28/1/78.

## No. 8.

## Mr. Franklin to The Commissioner for Roads.

Sir,

In accordance with your instructions conveyed by Mr. Flynn on 27th instant, I on that date gave over charge of my office duties to Mr. Coleman, and the North Shore contract and other works to Mr. Bibra.

As the latter is somewhat new to office, I shall be glad with your permission to render him some further assistance in furnishing the current month's measurements, &c.; also to be permitted to make the necessary references for drawing up my Bank statement for the quarter ending 31st December, 1877.

F. A. FRANKLIN.

2/1/78.

I have not seen Mr. Franklin since the Minister's instruction to accept his resignation. I now forward this for the instruction of the Minister. Mr. Franklin has been paid off up to date of his resignation. Questions of further payments will arise.—W.C.B., Commissioner, 2 Jan. /78. Under Secretary, B.C.

## No. 9.

## The Under Secretary for Public Works to Mr. Franklin.

Sir,

Department of Public Works, Sydney, 4 January, 1878.

I am directed to transmit for your information a copy of the Minute of the Secretary for Public Works respecting your tender for the erection of Bridges over Parramatta River and Iron Cove Creek.

I have, &amp;c.,

JOHN RAE.

## No. 10.

## Mr. Franklin to The Secretary for Public Works.

Sir,

Sydney, 8 January, 1878.

I have the honor to reply to your Minute accompanying letter from the Under Secretary for Works, dated 4th instant, which reached me yesterday, referring to the Parramatta and Iron Cove Bridges.

I must premise that the tenor of your Minute is to me of a most damaging character; and if allowed to exist without a clear and thorough explanation of the circumstances under which I fell into the error, will make it impossible for me again to hold any position of trust in this or any other Colony.

When I found the step about to be taken was so unfavourably viewed, at which I then expressed my great surprise, I at once proposed to withdraw the matter before any official action had been taken with either my tenders or conditional resignation. This offer being peremptorily refused, I had no alternative but to await the issue of your decision before taking steps to defend myself.

The following is a true statement of the sole cause of the mistake I have made:—Early in November the Commissioner for Roads mentioned to me that there was some difficulty in the matter of the tenders for the construction of the Parramatta and Iron Cove Bridges, and that if Mr. Musson's tenders were accepted, he would feel himself compelled to decline the responsibility of the supervision of the works, and in that case the duty would probably devolve on me. I at once informed the Commissioner that should such an arrangement be decided upon, I should feel justified in supporting his views by declining a responsibility that he, in his superior judgment and position, would not enter into, and that rather than do so I would resign my appointment; at the same time I expressed regret at not being in a position to relieve the department of the difficulty by offering to undertake the work as a contract; this the Commissioner then considered impossible.

Later, on Novr. 14th, while in the country on sick leave, I received a private note from Mr. Eames, the Chief Clerk of the Department of Roads, which conveyed the intimation that fresh tenders were to be invited for the bridges, and the expression of belief that a tender from me would not be objected to.

Upon my return to Sydney, I ascertained such suggestion had been conveyed to me after a conversation upon the subject between the Commissioner for Roads and the Chief Clerk.

I was not surprised when the proposition was made, nor did I, under the circumstances, see any impropriety in it, as it was not unusual for me to move in and out of the department for the performance of works presenting more than ordinary difficulties.

In 1870 I temporarily relinquished my position in the department to undertake a contract under the Government, on Gabo Island, being a case of emergency, and in 1867 while engaged upon the contract of the Gundagai Bridge, in which I had an interest, I was requested by the then Minister for Works to temporarily relieve the local Road Superintendent of his duties, and was appointed to that office while I was in effect a contractor; a junior officer of the department meanwhile inspected my contract works. Again, in 1870, while engaged upon the contract for the Aberdeen Railway Bridge, I was urgently requested to take up the work of Mr. Statham, in the Tamworth District, that gentleman, from sudden ill health, being obliged to give it up; this I did until the completion of the work.

I am satisfied the Commissioner for Roads will be just enough to admit that there were grounds for the action of the Chief Clerk, and will so explain the whole matter as to prevent my being condemned in the very extreme terms of your minute for acting on a suggestion I had no doubt was conveyed from him to me.

I must point out that, in answering a question lately asked in the Legislative Assembly, as to the cost of construction of the several bridges erected under my supervision, I furnished the Commissioner with the detailed cost of each, which information I believe became public property.

My knowledge of the value of such work is based upon long practical experience, and I did not require, as must be well known, to take advantage of official access to prior tenders in framing my estimate for the work, as such estimate was furnished to the Commissioner some months since. And again, my branch of the department is quite distinct and removed from that in which such documents are held; I therefore most distinctly refute the suggestion that I used my position to obtain information from persons or papers to establish my prices for the work.

I

I finally desire to say that, in tendering for the work, I was influenced by professional interest as to the proper carrying out of so extensive a work, to take charge of which I came to Sydney, now nearly three years since, and also by the belief that I should save the department from a great difficulty and the Country from loss; the question of impropriety could not enter into my mind with my knowledge of previous practice and of the wishes of the head of my department.

I have, &c.,

F. A. FRANKLIN.

Mr. Bennett, for report.—J.S., 9/1/78., B.C.

Mr. Eames, for very full and specific report on the portion marked, more particularly on the part underlined.—W.C.B., 10 Jan., /78. Mr. Eames.

Report herewith.—G.C.E., 10/1/78.

### No. 11.

#### Memo. by Mr. Eames.

I REGRET extremely that any action of mine should have contributed to the false position into which Mr. Franklin has been placed through having submitted a tender for these bridges; and in justice to all parties, I now beg to state what actually occurred—neither adding to nor detracting from the plain facts of the case.

It will be seen from Mr. Franklin's letter that the subject of his taking up these works as a contractor had been mooted early in November, before it was decided to call for fresh tenders, and that the Commissioner then considered that course impossible; subsequently, and while Mr. Franklin was absent on leave, it was determined that fresh tenders should be invited, and, in the course of conversation with the Commissioner, I remarked that if Mr. Franklin could become the contractor for the bridges, it would save the department a great deal of trouble and annoyance. The Commissioner seemed quite pleased at my having broached the subject, said it was the very thing he had been thinking of himself, but that he did not like to say anything about it, lest it might be said that he had prompted the action—that he had always got on very well with Mr. Franklin when he was a contractor, and he had no doubt he should be able to do so again.

I naturally understood from this that there would be no objection on the part of the Commissioner to Mr. Franklin's putting in a tender for the work. Even then I should not have made any special communication on the subject to Mr. Franklin, but it happened that there were one or two private letters by that day's post for Mr. Franklin, one of which was I think marked "Urgent," or "Important," and I also had a railway pass to despatch to him, so I wrote a hurried note to him covering the enclosures, and mentioned the fact that fresh tenders were about to be invited, and that I did not think there would be any objection on the part of the Commissioner, were he (Mr. F.) to tender for the work. *The Commissioner was not aware of my having written thus, nor did he know of it until some time after the tenders were opened.* The next day, amongst other matters, the Commissioner referred to our previous conversation, and said that he had been since thinking the matter over and had come to the conclusion that it would be better left alone, as it would undoubtedly be said that he had instigated it and was a party to it. These last utterances of the Commissioner were duly imparted by me to Mr. Franklin upon his return to Sydney, and as it appeared to us that the Commissioner's only objection was a purely personal one, and only referred to a possible misconstruction of his action in the matter, and not to any impropriety on the part of Mr. Franklin, the latter determined upon tendering; and, with the view of protecting the Commissioner and precluding the possibility of its being affirmed afterwards that the Commissioner was privy to it in any way, it was studiously concealed from him. Mr. Franklin at one time thought of tendering in some other person's name, but upon talking the matter over it was decided that the more straightforward and honest course was to do everything openly and above board, and I concurred with him in thinking that if he placed his resignation in the Commissioner's hands on the day tenders were to be opened, he would have done all that was incumbent upon him, either as a gentleman or as an officer of the department.

G.C.E., 10/1/78.

### No. 12.

#### Report on Mr. Franklin's letter to the Minister for Works, dated 8th January, 1878.

MR. FRANKLIN seeks to justify the course taken by him, by the statement that a "proposition" was made to him, coming from me to tender for this work, and that "suggestion had been conveyed to him after a conversation between the Chief Clerk and myself."

Mr. Eames's letter explains his view of the conversation—indeed it was hardly a conversation, but a mere reply to a remark of Mr. Eames that Mr. Franklin thought of tendering. I replied, on the spur of the moment, that I also had thought of that solution of the difficulty but did not like to suggest it—that I had always found Mr. Franklin a satisfactory contractor. Thinking, on reflection, that what I had said might be held to convey more than I intended, I, the next morning, told Mr. Eames, as he admits, that it had better be left alone—that it would not do for Mr. Franklin to tender. This Mr. Eames states he also conveyed to Mr. Franklin verbally on his return. I thought no more of the matter until Mr. Franklin astonished me about fifteen minutes before opening of tenders, by handing in a conditional resignation, which I at once took to the Under Secretary and the Minister, first representing to Mr. Franklin the gross impropriety he had been guilty of, and recommending him to withdraw his tender if allowed. This was not permitted, and his resignation was there and then accepted.

Mr. Franklin has therefore not the slightest grounds for his allegation that he acted on a suggestion conveyed from me to him.

I would add that, on the Minister refusing to allow Mr. Franklin to withdraw his tender, I, in a hurried minute now on record, declined to be present at opening of tenders, asked that they be reported on by another officer, and that if the work was to be carried out by Mr. Franklin that I be relieved from its superintendence.

I have not thought it necessary to refer to other statements in Mr. Franklin's letter, but can do so if required. They do not seem to me to bear on the present case.

Under Secretary, B.C.

## Minute of Secretary for Public Works.

Parramatta and Iron Cove Bridges.

I HAVE received the *précis* of the case connected with these bridges, and also the specifications and conditions of contract. It was in 1873 that Parliament made the first appropriation for these works; but tenders were not invited until August, 1876, owing to the insufficiency of the first appropriation, which Parliament supplemented in that year by £40,000, making with the first vote £90,000. The lowest tender received amounted to £62,500 for construction, and £54,000 erection—in all, £116,500; the estimate being £45,128 for the first, and £32,220 for the second—in all, £78,348, or £28,154 below the tenders.

These tenders were invited in the Colony and in England simultaneously, resulting as follows:—No Colonial tender was received for construction; lowest English tender for construction, £49,054; lowest (being Colonial) for erection, £48,000.

At my request, after pointing out some 2,000 tons of pig iron in a paddock in front of Mr. Secretary Combes' window, and that these Colonial producers had not up to that time any opportunity of tendering for their branch of the work, an unsuccessful attempt was made to get the cast-iron cylinders made in the Colony, but the tenders were considered to be too high, and after reading the conditions I am surprised that they were not much higher.

In October, 1877, it was determined to accept the English tender for construction and invite tenders in the Colony again for the erection,—tenders to be opened on the 27th December.

The lowest eligible tender received was £47,569, over 50 per cent. in excess of the estimated cost, and the Commissioner for Roads recommends that the work be carried out by the department, the masonry and timber-work being let separately.

It appeared to me to be so remarkable that, after so many attempts, we should have failed in getting anything approaching an eligible tender in the Colony, that I was induced to study the terms and conditions of the contract; and I must say that on reading these over, the cause of the high prices demanded and the limited number of tenders received were at once explained. I think it would be difficult to conceive of more binding and oppressive conditions than are contained in this document, and I am no longer surprised that many of the *bonâ fide* contractors of the Colony shunned the work.

I am ready to admit that conditions of contract should be so drawn that litigious contractors should not be allowed to take advantage of law points in their contract which may be legally availed of in the Law Courts, but a distinction should be drawn between disputes of that nature, and those broad and equitable differences which may arise between two parties to any contract, and which should be settled in a spirit of equity, with the rights of both sides duly reserved.

The very first principle in the contract appears to my mind to entail an injustice, viz., that the directions given by the superintending officer shall not be held to be valid or good till the same shall have been confirmed by the Engineer; the Engineer may appoint any incompetent man to superintend, or being competent, he and the Engineer may not coincide in the orders given—is it right that the contractor should be made to suffer for this?

Then, as to discrepancies; the whole power of deciding them is left with the Engineer, he shall judge decide, award, and determine them without reference or notice to the contractor, who is to have no power in law or in equity to demur on any ground whatever.

Then in addition to the fines for non-completion within time, the Engineer may dictate to the contractor the number of mechanics and labourers he shall employ and the plant he shall use; and if he fail in a week to comply, the Engineer shall cancel the contract, or employ the men and plant himself at the contractor's expense.

There are other conditions subjecting the contractor to all manner of pains and penalties for injuries over which he has but partial control; but the clause which provides that the contractor shall do his work as directed is so arbitrary as to raise a doubt whether it is actually a contract or not which is being superintended, or a work which is being carried out by the department by what is known as task work.

The following clause, exempting the Engineer from giving any information at all in respect to his decisions or measurements, is to my mind enough to deter any contractor from tendering, unless happily he should be able to credit the Engineer with perfect infallibility:—

Engineer no party to law-suit.—The said Engineer shall not be a party to or be required to defend or answer any bill, claim, or proceeding in law or in equity at the instance of the contractor, nor shall the said Engineer be required or compellable by any proceedings whatsoever, either in law or in equity or otherwise, to answer or explain any matter touching or relating to any certificate or award made by him, nor to state why or in what manner he determined the measurements and amounts in such certificate.

The whole of the conditions are bristling with similar arbitrary terms, and as I said before they do not leave to the contractor sufficient exercise of his own judgment and skill in devising means for carrying out the work, but dictate to him the machinery and plant he shall make use of. The result being that good contractors are warned off, or they tender at prices which are far above the estimate. I am quite aware that this arises from the anxiety of the Engineer for Roads that the Government should not be placed at any disadvantage; but has he ever considered that his efforts to prevent this—if they take this shape—may result in creating the very evil he is trying to prevent; not perhaps in the direction he provides against, but by the loss to the Country of good contractors, and in largely increased prices for the public works.

I trust that in the conditions of future contracts consideration will be given to these representations. I can assure the Engineer that the true interest of the Country requires some elasticity in these conditions, recognising the equitable rights of the second parties to the agreements, and providing more liberally for the conduct of the work.

As regards the recommendation of the Engineer for Roads for the erection of these bridges, it appears to me that under all the circumstances of the case, I cannot do better than approve of it, but I do so on the distinct understanding that as the tenders have been rejected because they are in excess of the estimate, the work when carried out by the department will not exceed the estimate.

JOHN SUTHERLAND.

No. 15.

The Under Secretary for Public Works to Mr. Franklin.

Sir,

Department of Public Works, Sydney, 29 January, 1878.

In compliance with the request contained in your letter of the 17th instant, I am directed to enclose copies of the reports of the Commissioner for Roads and Chief Clerk respectively on the subject of your letter of the 8th instant, namely, the erection of the Parramatta River and Iron Cove Bridges.

I have, &c.,  
JOHN RAE.

---

No. 16.

Mr. Franklin to The Secretary for Public Works.

Sir,

Lavender Bay, 29 January, 1878.

I have to acknowledge a letter from the Under Secretary for Works of this date, replying to mine of the 17th inst., enclosing copies of Messrs. Bennett and Eames's statements in answer to my explanation in regard to tendering for the Parramatta and Iron Cove Bridges.

Mr. Eames gives a very clear review of the circumstances that led to my action in the matter, but omits to mention that, in answer to my frequent inquiries up to the latest possible date, he still considered it advisable I should tender for the works, believing Mr. Bennett saw no impropriety in my obtaining the contracts—only in *his* suggesting such a course to me.

And I must correct Mr. Eames upon one point, *i.e.*, that of submitting the tenders in another's name. This suggestion came from him, but was objected to by me.

I am of course not in a position to say what took place between the Commissioner and Mr. Eames; but I must point out the disparity in the statements as to the origin of their conversation on the subject. The Commissioner makes it appear that Mr. Eames said *I thought of tendering*. I have no hesitation in saying that I then had no such intention. The Commissioner says—"It was hardly a conversation, but a mere reply to a remark of Mr. Eames that Mr. Franklin *thought* of tendering."

Mr. Eames says:—"I remarked that if Mr. Franklin could become the *contractor* for the bridges, it would save the department a great deal of trouble and annoyance."

I trust you will see from the whole of the facts now before you that I do not (to use the Commissioner's expression) "seek to justify" my action by straining or distorting the circumstances which induced it, nor, had the act originated solely with me, should I, in the slightest manner, have shrunk from the responsibility of its consequences; and, I unhesitatingly assert that, but for the suggestion made to me, I should never have tendered for the work.

I now most respectfully submit for your consideration my defence in this and my former letter, and trust you will accept my admission of error, and see sufficient grounds for removing the minute of censure recorded against me.

I have, &c.,  
FRED. A. FRANKLIN.

Mr. Bennett, in the first instance, for report.—B.C., 1/2/78., J.R. Mr. Eames, for his remarks.  
*Urgent.*—W.C.B., 2/2/78. Report herewith.—G.C.E., for Com. Under Secretary, B.C., 4/2/78.

---

No. 17.

Memo. by Mr. Eames.

MR. FRANKLIN appears to me to be pushing the admissions which tell in his favour too far. I have already stated my own impression that the objection to Mr. Franklin's tendering was lest the Commissioner should be compromised, and not to any impropriety in the act itself. On Mr. Franklin's return from the country I told him of the Commissioner's remark that *he had better leave it alone*; and as to my replying to Mr. Franklin's repeated inquiries that I still considered it desirable he should tender, I must state that any such replies were solely on my own responsibility and opinion; and after the Commissioner expressed to me his *disapproval* I never spoke to him again on the subject, or led Mr. Franklin to believe that he was aware of the fact that he was about to tender, and therefore, any encouragement given by me in answer to Mr. Franklin's repeated inquiries was of a negative character only, and to the effect that nothing further had transpired to alter the complexion of the case so far as I was aware. Mr. Franklin also says that, up to the "latest possible moment," I still stated that I considered it advisable he should tender. I may say that I left the office on the 21st December for Bathurst, and did not return until 2nd January, the tenders having been opened in the interim, *i.e.*, on the 27th December.

If

If my private note to Mr. Franklin is still in his possession I have no objection to its production, so as to show the exact terms in which I first communicated the idea that a tender from him would not be objected to. Such note was certainly never intended by me to (nor do I believe that it does) convey any suggestion as coming from the Commissioner; and having communicated verbally to Mr. Franklin the views subsequently expressed by the Commissioner *against his tendering*, I looked upon Mr. Franklin as a perfectly free agent in the matter, and as acting entirely on his own responsibility.

The point as to who suggested the course of tendering under another name is not a material one. I know the question was raised, and it may have been suggested by myself as stated by Mr. Franklin.

There does not appear to be anything further in Mr. Franklin's letter calling for any remark from me.

G.C.E.

2/2/78.

### No. 18.

#### Memoranda on Mr. Franklin's letter of the 29th January, 1878.

I FORWARD herewith Mr. Eames's memo. on Mr. Franklin's letter of 29 January.

Mr. Franklin in this letter states,—“Had the act originated solely with me, should I in the slightest manner have shrunk from the responsibility of its consequences, and I unhesitatingly assert that but for the suggestion made to me I should never have tendered for the work.”

This still infers that the suggestion came from me in a private note from the Chief Clerk. The production of this note will be the best evidence of what was really conveyed, but Mr. Franklin's admission, in his letter of the 8th January, that he mentioned to me in November his regret that he could not execute the work as a contractor is certainly incompatible with the statement that the idea of contracting for the work originated in a suggestion from me.

Mr. Franklin has not anywhere denied what is so strongly asserted by Mr. Eames, that he conveyed to Mr. Franklin my objection to his tendering, made on the morning following the conversation referred to; he also takes exception to the disparity of the statements as to this conversation. Mr. Eames asserts that his is strictly correct; my impression is that my view is substantially what occurred, but this is a matter of no moment, as the whole was set aside by my remark on the following morning, conveyed by Mr. Eames to Mr. Franklin on the latter's return to Sydney.

My action the moment I learned that Mr. Franklin had tendered, my advice to him to withdraw his tender, and my verbal request to the Minister that Mr. Franklin be allowed to withdraw his tender before the opening, are the best contradictions to the statement that I deliberately suggested his tendering.

WILLIAM C. BENNETT.

4 February, 1878.

### No. 19.

#### Minute of Commissioner for Roads.

##### Parramatta and Iron Cove Bridges.

IN acknowledging receipt of the Minister's Minute of the 28th January, I beg to offer a few remarks in explanation of the clauses in specification which are so strongly objected to by the Minister.

As it was doubtful whether there would be a bridge at all or not, if too expensive, the work had to be designed in the most economical manner, and the dimensions of iron cut down to the lowest inch consistent with safety. The sites also offer peculiar difficulties: a navigable tideway with strong current, 40 feet of water, a deep mud bottom with no prospect of foundation at much less depth than 100 feet below high-water. To meet those difficulties the bridges were designed from the beginning to be floated into place; hence the necessity for defining, in such detail, how the work was to be proceeded with, and for very stringent clauses in the specification, which was prepared with great care and the assistance of the Crown Solicitor. Had the mode of inviting tenders adopted in England by the Agent General been in use here and selected contractors only been allowed to tender, I am free to admit such clauses would not have been necessary; but when the tender of any person, no matter how they may have conducted other works, is liable to be accepted, I respectfully submit that it is necessary to secure the Government against any legal steps which a litigious or captious contractor might be disposed to take; and it is patent that when the department goes into Court an adverse verdict or judgment is generally given; and I would add that the conditions of contract are not more severe than those in use in Victoria, indeed many of the clauses most strongly objected to by the Minister are the same as those in the specification for the Echuca Bridge, though less stringent.

The Minister's first specific objection is to the clause stating that the orders of the superintending officer shall not be held to be valid till the same shall have been confirmed by the Engineer; this provision is also in the Victorian contracts. I would point out that a weak or dishonest subordinate might be persuaded by the contractor to give orders which would either endanger the stability of the work in a way which could not be remedied, or commit the Government to a large and unnecessary expenditure, and that the entire contract is drawn on the supposition that the Engineer is to have full control, subject of course to the Minister, and with a view as far as possible to prevent the Government being brought into Court.

The clause as to discrepancies is the usual clause, perhaps amplified more than in ordinary contracts. The Engineer, it is presumed, is appointed by the Government to judge between the contractor and the Government, and the clause only provides that he shall finally determine on all points.

The clause giving power to decide on the number of mechanics and labourers to be employed is the same as in the Victorian contracts; and as fines have in most cases hitherto been a dead letter, so much so as to have been omitted for the last two years from the ordinary contracts of this branch of the department, it did not seem to me unreasonable to provide for a control over the number of people to be employed, and I cannot help thinking that it would have the effect of ensuring the completion of the work in time, which the fines would hardly have hitherto done on account of the uncertainty of their being exacted. (The conditions in question were drawn nearly twelve months ago.)

Further, this power to employ people must be necessary to secure some portions of the work from loss or injury on some sudden emergency, or in the event of the contractor neglecting to take proper precautions against same. Such loss or injury might amount, in this instance, to thousands of pounds, and involve great delay, if not imperil the completion of the work, which is not, like a railway or a public building, independent of winds or waves, but on the contrary, much exposed to the adverse influences of both.

The clause binding contractor to do work as directed was intended to ensure the safety and completion of the work in due order, and to apply the material delivered and expected in the most advantageous manner, and also in order to secure the safety of the public and provide for the safe navigation of the river.

The clause that the Engineer is not to be a party to lawsuit is same as in Victorian conditions, and intended to protect the Engineer in his private capacity from liability to defend a suit against him from anything done in his official capacity, and also to protect him from vexatious demands for frivolous and unimportant information. No right-thinking man would really refuse information *necessary* to clear up any difference.

With reference to the general objection that the conditions fetter the contractor,—as I have pointed out, it was from the beginning determined that the erection of the iron-work should be carried out in a certain way, and it was designed with this view, and hence the stringency of the specification in this respect and the specific instructions as to mode of carrying out work. Had the work got into the hands of an inefficient contractor, much blame might have been attributed to me for any loss, legal or pecuniary, arising from laxity in the conditions of contract.

With regard to the suggestion of the Minister that good contractors are warned off by such strict specifications, I think the small number of tenders may also be attributed to the great risk in carrying out this work and the number of other contracts now in the market; and indeed one of our oldest contractors stated to me that he would not tender or compete with certain other persons who were about tendering for this work.

Having now frankly given my reasons for the strict nature of the specifications, which cost me many an anxious hour, I will in future endeavour to modify such documents to meet the Minister's wishes.

The Minister's approval of my suggestion that the work should be carried out by the department will entail much extra labour and anxiety on me, but I will be better able to meet all contingencies, and we will not be hampered by having to adjust differences of cost or extras that may arise from modifications in the mode of carrying out work arising from any unforeseen difficulties.

The straightforward work, such as masonry, supply of timber, and riveting, will all be let by tasks or small contracts. The only day work will be that necessary for putting cylinders and girders in place, as I hope to do the whole of the sinking by machinery.

With reference to the understanding that the cost of the work shall not exceed the estimate, I can only state that the estimate was made after most careful inquiry and consultation with officers who had executed similar work for the department. I hope to be able to complete the work for the amount, and will do all I can to do so; but in such a work no man can guard against contingencies, and I think it better for the Government to take the chance of none occurring than the certainty of payment to contractor of the amount which he would put on to cover such risk.

And I would point out that hardly any amount of security or retention-money from a contractor would cover the loss which might be caused in the iron-work by one accident from neglect.

WILLIAM C. BENNETT,  
February 4th, 1878.

## No. 20.

### Minute of Secretary for Public Works.

#### Conditions of Contract, Parramatta River and Iron Cove Bridges.

I HAVE read Mr. Bennett's paper on my minute of the 28th of January, in which I considered it my duty to comment in deserved terms upon the extraordinary severe conditions of contract for the Parramatta River and Iron Cove Creek Bridges.

Having duly weighed the reasons afforded for the stringent, and as I think *prohibitory* terms of this contract, I am constrained to say that I can see nothing to justify my altering or modifying in any way the views I have expressed.

Mr. Bennett says that the conditions of contract were prepared with the assistance of the Crown Solicitor, but I do not suppose that that officer did more than put into legal phraseology the terms which Mr. Bennett proposed. I cannot believe, nor do I think I am asked to believe—though it might be considered to be so implied—that these conditions were adopted on the suggestion or advice of the Crown Solicitor.

I gather from Mr. Bennett's explanation that these conditions were made so exceedingly stringent to meet the probability of the work being tendered for by one or two contractors whom he considered ineligible. This, I need not say, was wrong in principle, and unfair to the *bona fide* contractors of the Colony, who, as a class, are fully able to carry out such works as the spanning of the Parramatta River with a bridge, even though such an undertaking should present to Mr. Bennett's mind "peculiar difficulties."

I think it would not be difficult to point out in this and other Countries engineering works (which have been carried out by public contractors in no way superior to some of those whom Mr. Bennett might have secured had he adopted reasonable conditions), compared with the magnitude of which the "peculiar difficulties" connected with the erection of a bridge over the Parramatta River would have been a mere trifle.

The expressed policy of the Country by resolution of Parliament is that the public works should be carried out by public contract, and this principle must not be jeopardised nor its intention weakened or reversed, as it has been of late years in several departments of the Government of this Colony, by the adoption of conditions of contract which deter, I might say debar, the contractors in the Colony from competing on equal terms for the works of the Colony.

I might have pointed out in my previous minute many more of these conditions, which no man of means and honor could become bound to carry out, except at a large advance on the proper value of the work. I have no doubt whatever that Mr. Bennett's intention in inserting such conditions as the following:—

*Castings.*

The castings required to be of the very best cold, blast, grey, cast-iron, as hard as can be worked; castings to be perfectly free from all flaws, cracks, holes, or defects of any kind; the class of iron used to be to the entire satisfaction of the Engineer, and of such strength that a 1-inch bar, 2 inches deep, placed on bearings 3 feet apart, will sustain a weight of 24 cwt. in the centre. The castings to be true, straight, and of the exact shape and dimensions specified.

was what he has stated, but the effect of this and other conditions has been to give the foreign contractors a large advantage over our own. There is no cold blast iron made in the Colony, and very little now in England, and I might not be far from the truth in saying that there will not be one pound of cold blast iron used in the Parramatta or Iron Cove Bridges, because it is from £4 to £6 per ton dearer than the ordinary hot blast iron, which has been and is now used for all such works, and will be for the works in question.

Relying on Mr. Bennett's assurance that he will in future modify the terms of contract to meet the views expressed in my minute of the 28th of January, I consider it unnecessary to say more on the subject at present.

JOHN SUTHERLAND,

No. 21.

The case of Mr. Franklin, in connection with the tendering for Parramatta River and Iron Cove Bridges.

I HAVE carefully considered the correspondence that has passed since the date of my minute, in which I expressed my opinion of the conduct of Mr. Franklin in having retained his position as an officer of the department up to the very hour of opening tenders, and then with one hand handed in his resignation, and with the other a tender for the work.

Mr. Franklin's defence is that a proposition that he should tender for this work had been conveyed to him as a suggestion of the Commissioner for Roads, and that in submitting a tender he was, he thought, meeting the wishes of Mr. Bennett, though as that gentleman appeared to be fearful that he would be compromised by such an action the fact that he was tendering was carefully concealed from him. On these grounds Mr. Franklin asks me to remove the minute of censure recorded against him.

I desire that Mr. Franklin should have any benefit which can be derived from the aspect of the case as now submitted, which I must confess has taken me by surprise, but I am unable to alter or vary in any way my minute on the gross impropriety of Mr. Franklin's proceedings, *however influenced*, nor withdraw my views as to the discredit which they were calculated to bring upon the department; the mere fact that Mr. Franklin considered it necessary to conceal his action from Mr. Bennett should have warned him that there was something in the affair very irregular and improper.

JOHN SUTHERLAND,  
11/2/78.

1877-8.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

## PARRAMATTA RIVER AND IRON COVE BRIDGES.

(INFORMATION RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 9 April, 1878.*

[Laid upon Table in accordance with promise made in answer to Question 3, Votes No. 55, 9 April, 1878.]

Department of Public Works, Sydney, 9 April, 1878.

## 9. MR. MACINTOSH to ask THE SECRETARY FOR PUBLIC WORKS,—

- (1.) How often have Tenders been called for the erection and completion of the Iron Cove and Parramatta River Bridges?
- (2.) Over what period have these Tenders been called?
- (3.) What are the names of the Contractors who tendered on each occasion; and the respective amount of each Tender?
- (4.) What percentage of the work done was payable each month?
- (5.) When, and under what conditions, was the balance due to the Contractor?
- (6.) What was the nature of the security that the Contractor had to give for the faithful completion of the work?
- (7.) Is it true that the Contractors in England for the supply of the ironwork refused to comply with the condition to provide cash security.

1. Three times.

2. From August, 1876, to December, 1877.

	<i>Name.</i>	<i>Particulars.</i>	<i>Parramatta.</i>	<i>Iron Cove.</i>
3. <i>First time</i> (In the Colony only.)	Pearson & Downie	Construction and erection	£73,856 0 0	£56,671 0 0
	G. K. Mann	Construction only	35,000 0 0	27,500 0 0
	T. Smithyman	Erection only of both bridges	£54,000 0 0	0 0
<i>Second time</i> (In London.)	Appleby Bros.	Construction	£27,467 16 3	£21,908 18 9
	Head & Wrightson	Do.	27,500 0 0	22,300 0 0
	Handyside	Do.	27,856 7 11	22,694 0 0
	Crumlin	Do.	27,874 11 10	22,771 12 8
	Darlaston Comp.	Do.		21,588 0 0
NOTE.—There were five other higher tenderers, but amounts were not given by the Agent General.				
(In the Colony.)	Musson & Co.	Erection	£27,000 0 0	£21,000 0 0
	Low & Kerr	Do.	27,211 0 0	22,330 0 0
<i>Third time</i>	F. A. Franklin	Erection	£26,530 4 0	£20,638 9 3
	J. Musson & Co.	Do.	26,809 12 0	20,759 7 0
	J. C. Low	Do.	27,475 0 0	22,825 0 0
	G. H. Royce	Do.	32,987 2 11	24,624 19 9

4. For Section 1:—85 per cent. on ironwork completed; 10 per cent. on delivery, and 5 per cent. on final completion.

For Section 2:—80 per cent. on value of work done in erection, and 70 per cent. on value of materials delivered on the ground; balance on completion of contract.

5. Upon certificate of Engineer that work was completed to his satisfaction.

6. 2½ per cent. on amount of tender, and 4 per cent. additional when tender accepted; to be lodged with Colonial Treasurer or Agent General.

7. The majority of the *selected* firms accompanied their tenders by the half per cent. deposit, but from their well known high standing proposed security or references in lieu of the 4 per cent. cash deposit.
