161. You have not visited there? I have seen it often, but have not visited there for years.

162. Did you notice recently, some month or two ago, articles in the *Sydney Morning Herald* headed "Butchers and Butchers' Meat"? I did.

163. Did you read them? I did, carefully.

164. From your knowledge of the general subject, what is your impression as to the correctness of those articles, or of their justification in any way? It will be seen from the reply I gave just now to another question that I acknowledge not having been to the Abattoir for some time, and it might be said, why give an opinion upon what you now refer to. But from my general knowledge of the Abattoir and the meat supply, those articles were, I believe, a fair account of the whole thing. I do not think they were at all exaggerated. I think they were generally admitted to be a fair account by the butchers and others, and many things that might have been exposed, I am told, have not been. I have been told by men who dare not say anything about it in other ways, that there are worse things than any that have been exposed.

165. Worse than those stated in the *Herald's* articles? Yes, worse things than there stated; occasionally worse things happen. I will tell you some few things if you like, without having it committed to paper.

166. It must be committed to paper? It is what I have been told.

167. What, in your opinion, has been the effect of the publication of those articles in the trade generally, in the city? With regard to those articles and the trade I have no doubt they have done a great deal of good at the Abattoir; but previous to those articles appearing there was a marked change for the better in the shops and the various ways in which the butchering trade was conducted.

168. Previous to the appearance of the articles things had begun to improve? They had, consequent on the movement I made. Now I am trying to get up a company to remedy the evils existing in the butchers' trade throughout the city and suburbs.

169. That now exist? Yes, but since those articles appeared there has been a great improvement. Before those articles appeared there were articles in various newspapers in the colony, setting forth the necessity for such a company and the good it would do, and from that a great deal of improvement took place. The butchers took the hint, and prices were lowered considerably. Many persons are killing in the country, and the carts, the men, and the shops have been improved. And another matter I particularly noticed, and which I mentioned in my prospectus was, that the meat should be conveyed hung up in vans, from the Abattoir to the shops. Very soon after my prospectus appeared—a few months after—vans, as proposed by me, came into use, and others are being built, solely from my suggestion.

170. Can you state, for the information of the Board, what you consider the principal reforms required in regard to these matters generally? Yes, I have an idea that a great reform could be made in the way of meat supply to Sydney, both in regard to producers and consumers. First of all, I believe that all cattle and stock that could be slaughtered up the country should be so slaughtered. Of course, there are some little lots which come in which must be slaughtered here, but the rest should be slaughtered somewhere up the line, 100 or 200 miles from Sydney. Then the meat should be brought by train to Sydney, and, in the summer months, of course, we should require refrigerated vans. The meat, after being brought from the slaughter-houses, wherever they may be, in the train, should be conveyed to a dead-meat market in a central position in Sydney.

171. And sold as carcases? Let them sell it as they like.

172. I mean to say not distinguishing quarters or sides, but meeting requirements by selling the dead meat instead of live cattle? Yes, selling the dead meat instead of live cattle.

173. Any other improvement? I think the Government or the Corporation should build a central meat market that would accommodate either companies or single individuals, letting the market to those parties and providing facilities by which the train could bring the meat into the meat market and discharge it right and left as required, and, if necessary, that the meat should be put into refrigerated rooms. I think, too, that the Government or the Corporation, whoever possessed these markets, should have an ice-making machine, and make ice for all those people, and sell it to them at the smallest amount of profit. Ice should also go up the line to supply the trucks with the necessary means for cooling them in the summer months, and the meat, after being killed at the slaughter-houses, should be made stiff to the bone before being put into the trucks, and then, when the meat is brought down here to the meat market, the butchers could go and

T. Dawson,
Esq.
10 July, 1879.

and take it away as they want it, hourly, or once or twice a day, as their requirements would make it necessary; and if they choose to have cooling rooms at their shops, so much the better. While on the subject of the butchers' shops, I might say that the butchers' shops in Sydney are not properly built for the purpose. There is scarcely a shop in Sydney that is fit for a butcher's business, and I will tell you why I say so. You will recollect that last Monday was a very dusty day, and on that day I saw hanging out in the streets, outside butchers' shops, quarters of beef, and sheep, and all sorts of meat, for which there was no room in the shop, and in some cases I could not see the meat for the dust that was flying about it, and we know what the dust of Sydney consists of. These shops ought to be constructed with a back room to hang the meat in.

174. Does your long experience enable you to inform the Board whether, if such a market as indicated by you were established in Sydney, for the sale of dead meat, the trade generally would be content with it, and it would meet their requirements? I think the consumers would particularly prefer it, and the trade would have to go to it because the consumers preferred it. We know that cattle cannot travel 100 or 200 miles to Sydney without being deteriorated considerably and losing the best and most nutritive quality of the meat. The meat is so deteriorated that the value of some cattle becomes reduced, after the animals have travelled, say 200 miles, from £1 10s. to £2 10s. per head. We see from the agents' advertisements that there are advertised, for instance, 80 odd wasters at one sale. That means the cattle have wasted on the road. This wasting would not happen if the cattle were killed 200 miles away.

175. Would it be better for the producer of the cattle, for the owner of the cattle, for the railway, in regard to an increased freight, and for the consumer in the metropolis and along the line, that the meat should be so slaughtered and brought in bodies here, having been first set in the way you have indicated? Certainly it would. First of all, we will take the railway. We know very well that if the railway would carry dead meat, even at the price it carries live meat, the revenue from the traffic would be much increased. The dead meat is already charged higher than the live beast, and the live beast carries the hide, and horns and tallow, and such things with him. The meat traffic will some of these days be the greatest that the Government have upon the railway.

176. It will give greatly increased business to the railway? No doubt a very great increase.

177. *Mr. Stewart.*] Have you ever followed cattle on the way to Sydney from the station? Many a time.

178. Fat cattle? Yes.

179. What rate do they travel at generally? It depends on the state of the road, whether they get water and such things. In some seasons they travel 8 miles, in others they have to go 10 or 15, a day, but in good seasons they can go 8 or 10 miles a day with comfort.

180. That would be from sunrise to sundown? We are generally out early in the morning, and spell about the middle of the day. Then we camp about sundown, and start off again after breakfast. The cattle ought not to go more than 8 or 10 miles a day, but sometimes they go double that.

181. And suppose you had to bring cattle from a station 200 miles from Sydney, how many days would you be on the journey? About 20 days, or 2 or 3 and 20 days.

182. You depend a good deal on the condition of the cattle, and the state of the weather? Some cattle will travel better than others. Cattle off some stations you cannot get to market.

183. Why? Because of the nature of the country on which they are fattened. They knock up so much. Monaro cattle, for instance, or cattle reared on hard stony ground, are better.

184. And very fat cattle travel worse than lean ones? They waste more, although it does not show perceptibly. We know that the road, anywhere you like to go, for 200 miles from Sydney, is perhaps as bad as can be for travelling fat cattle in mobs to market.

185. Why? Because it is all mountains, or fenced in, rocky on the ground, and the little feed that the cattle get is worthless.

186. What evil do they suffer particularly by going over this bad country? First of all, they go a journey of perhaps 400 or 500 miles. Take Orange for instance. Suppose that the cattle have come from Bourke (some 400 miles) to Orange. Then commence their trouble and misery. They are crowded between fences, and in wet weather are up to their bellies in mud. They are dogged behind; everything that meets them rushes them right and left, and even when out of the fences they get amongst the hills which are stony and hard to their feet. They have to mount those hills, and the grass is very bad compared to what they have been accustomed to, and if they get a mouthful it does them no good. Then after they get down the hills they are probably put into a paddock near the railway, where everything frightens them, and perhaps there is no water. I am sure there is no grass, because there is no grass anywhere within 10 miles of Sydney. Then they go into the sale-yards, and are knocked about there, and up to their bellies in mud, and are drafted, and branded.

187. Then, by the time they get to the end of their journey, to the sale-yards, what is the difference between them then, and what they were at the time they started from the station? If you were the owner of the cattle you would not know them. I have known men not recognize their own cattle in consequence of their knocked-up state and reduced condition. In olden times in England, when I used to take cattle for my father about 50 miles to London, we travelled 8 miles a day, and those cattle were fed, morning and night, on the best of feed. Even under those circumstances we estimated a loss of 8 lbs. a day on each beast, and what must be the loss on these cattle here.

188. *Chairman.*] Those cattle in England were fed all the way on the road, and yet lost in condition? Yes. Travelling cattle are bound to lose in condition. If you were to sit down and estimate the loss in the weight and value of the cattle through travelling by road during the year, you would see what an enormous loss there is to the country, and nothing can prevent it. Not even carrying cattle by train will prevent it. They will lose in weight by train, but not so much, for our cattle are of such a disposition that nothing will prevent them losing weight. They are frightened, for instance, in getting into the train, and they get knocked about and starved in the paddocks.

189. *Mr. Stewart.*] And besides the loss of flesh is there any alteration in the quality of the meat? Yes, they lose the best quality of the meat; that sappy, nice, nutritious part of the beast which you would get on the station if you killed the beast there.

190. Would the meat that has lost this quality not bring the same price in the butcher's shop as the meat from country killed cattle? I dare say it would; there is no other to get.

191. Suppose a buyer had the choice of a country fed carcase, and the carcase of a beast travelled on the hoof, would the same price be given for each? The buyers would give more for the country-killed meat, and I believe advantage is being taken of that in many shops where the butchers are ticketing meat as country-killed meat when it is not killed in the country.
192. You can judge of the meat yourself? I think so.
193. In the raw state? Yes.
194. Is there any alteration in the colour of it? Sometimes some cattle come to market very well, but in regard to that which looks well now, what would it have looked if killed 200 miles away.
195. Then there is an actual loss of flesh and a deterioration in the quality of the meat in the cattle travelled to market any distance from Sydney? Very serious, and so serious that I could show you figures that would astonish you.
196. Do the cattle that are brought down by rail suffer anything? They suffer a good deal. In the first instance our cattle are naturally wild. When about to be put into the train at Orange, for instance, there is some difficulty in getting them into the trucks. You put eight into a truck, and after getting them in with a good deal of knocking about, you shut the truck and serve another eight the same. I have seen when cattle were being loaded, a beast plant his fore-feet in such a manner that the devil himself could not move him. At another time I have seen a beast turn round as soon as he got into the truck and prevent the others for a time from going in.
197. So that they are knocked about a good deal in getting them into the trucks? Yes, and knocked about a good deal in coming in the trucks to market. The scenes they go through, the trains that pass them, and the shunting at different places, cause the cattle to get very frightened, and you will see them rushing about with perhaps one or more down, and the others treading them to death.
198. What is the result when cutting up the body of the beast? Terribly bruised.
199. Under the skin? Yes, of course, and the animals before they are killed must be to a certain extent very feverish. There is nothing worse than fright for making cattle feverish; and when these cattle arrive at Homebush they are let out of the trucks into the sale-yards, and then after being sold hunted down to the Abattoir.
200. But the train-carried cattle do not suffer near so much as those which travel? Not in waste; it is time and exercise that waste the others.
201. Is the meat deteriorated in any way besides being bruised? Decidedly so.
202. You think it is not equal to what is killed on the station? It could not be.
203. Are the cattle knocked about a good deal at the Homebush sale-yards? Terribly.
204. Could not that be avoided? Not in those yards.
205. The yards are incommodious? They are bad—unfit in every way for sale-yards.
206. You understand that the Corporation are about to be empowered to erect sale-yards? I understood so.
207. Would not Glebe Island be a commodious place for selling yards? If Homebush is too near, and yet the cattle travel too far to get there, Glebe Island would be too near town, and the worst day's journey for the cattle is that from Homebush to the Abattoir, as they have to pass people and houses.
208. I want to know whether there would be sufficient accommodation at Glebe Island for cattle sale yards; there are 13 acres there altogether? Not if the sale of cattle to its present extent is going to continue.
209. But if there were sufficient room Glebe Island would be a very suitable place for sale-yards? I do not think so.
210. Pray mention why? Simply because Glebe Island is too near the city. You are away from any paddocks in the event of your wanting to turn out any of the cattle, and men cannot kill all their cattle in one day.
211. But what is the disadvantage of having the sale-yards so near the city as Glebe Island? You must understand that if you bring 1,400 or 1,500 head of cattle into sale-yards at Glebe Island and they are all sold, there must be some paddocks round about to put those cattle into in order to keep them for slaughter.
212. Would there not be sufficient room? I think not.
213. That is the only disadvantage? Not the only disadvantage.
214. If there were sufficient yards for the accommodation of the cattle, Glebe Island would be a very suitable place for holding the sales? No, certainly not, I say.
215. Well, besides the "lairs" and the room not being sufficient, what other objection is there? I think those two objections are sufficient.
216. You do not know of any other? I think they would be too close to the city.
217. You mentioned that before? And there would be no means of keeping the cattle until they were wanted for slaughter. I do not know that I can give you any other reason.
218. The cattle that are sold at Homebush, where are they slaughtered? Mostly at Glebe Island.
219. So they have to go there? But they go there in driblets; they are dropped into paddocks as they come down and are brought on to the Abattoir as they are wanted for slaughter.
220. They are sold in the yards twice a week, and after being sold in the yards some of them are turned out in the paddocks adjoining? Yes.
221. These paddocks are lairs, are they not? Yes.
222. Suppose Glebe Island were connected with the railway at some point—say at Petersham—and all the stock coming down for sale were carried right on to Glebe Island and discharged there, would that not be a great advantage—discharged, and sold, and slaughtered? I think not.
223. Even if there were all the accommodation required, you think Glebe Island would not be a proper place? I think not.
224. Instead of resting the cattle at Homebush they would be carried on to Glebe Island? Perhaps if all came by train it would be better.
225. I am speaking of those that come by train? Those that come by train are not a tithe of the total number that come; it might answer for those that come by train, so far as mere room is concerned.
226. What proportion is there between the cattle that come on the hoof and those that come by train? I have not looked into that, but I think that four or five lots of cattle come by road for one that comes by train.
227. And as to the sheep? Nearly all come by train.

T. Dawson,
Esq.
10 July, 1879.

- T. Dawson,
Esq.
10 July, 1879.
228. You spoke of a wholesale meat market as a thing of great accommodation to parties connected with the meat trade; whereabouts do you think it should be? It should be in such a position that the railway could run straight into it and discharge the meat right and left. I think somewhere about Paddy's Market—the Haymarket, or thereabouts—would be the best place for it.
229. Suppose it were at Glebe Island, would that be suitable for sellers and buyers? That would be quite out of the way. If you are going to accommodate them with cooling rooms and all that is necessary for keeping the meat, it might be different.
230. The wholesale meat market would be out of the way at Glebe Island? Yes.
231. Where are bodies sold now? Principally at Glebe Island.
232. Is there any place other than Glebe Island where meat is bought wholesale? Yes, several lots come down by train in bodies, and are sold.
233. That is a recent thing is it not? Yes.
234. I mean apart from that? The meat has always been sold at Glebe Island.
235. The wholesale meat market then is virtually at Glebe Island now? Yes.
236. You have had a good deal of experience in the handling of meat after it has been killed? Yes.
237. Does pulling the meat about before it is cooled or set injure it? No doubt it does; and by some men particularly, if you can understand me.
238. Suppose a carcass were taken quite warm from the Abattoir, and carried to a butcher's shop in Sydney, would the handling and conveyance of the meat in that state hurt it? In the summer months it would very much.
239. It would interfere with the keeping of it? Yes; that meat kept back, and thoroughly cooled to the bone, would travel and keep three times as long as the meat you are speaking of.
240. And the meat sent by the railway is almost always cooled and set before being put into the van? This time of the year there is no necessity for it; in the summer months it should be so.
241. And is it not so? There are no means of doing it. If there were, meat in the summer months might be put into cooling rooms in the country, one night, and put into the trucks the next morning as stiff as a board. Then when it came to the market here it would keep a fortnight or three weeks.
242. At present they kill meat shortly before they put it into the train? Yes; they kill it, chop it down, and put it into the train at once. No meat will keep under those circumstances.
243. Have you ever been to the Melbourne sale-yards? I have.
244. Have you any idea what proportion the offal bears to the meat? Some a third, and some a fourth. A fat bullock has less weight in proportion in offal.
245. From a third to a fourth; the poor cattle having most offal? Yes. A poor bullock weighing 500 lbs. will have as much offal as a fat bullock weighing much more. I include horns, hoofs, head, and intestines.
246. Then in bringing cattle by rail you are carrying one-fourth of each beast which is not eatable? Exactly.
247. Carrying to Sydney stuff that is not wanted? Yes.
248. With the exception of the hide? Yes; but the heads, horns, tallow, hoofs, bones, &c., would have to come eventually.
249. But in driving cattle alive to Sydney you are actually bringing to Sydney one out of every four of an article not required for human food? Yes.
250. Do you understand why the railway charges more for carrying the dead meat than for living meat? I have never understood the reason; but the Commissioner has always expressed a great desire to meet the requirements of people slaughtering in the country, and has expressed himself in favour of the carriage of dead meat. At the same time, the Government charges more for carrying the meat than for carrying the cattle.
251. Encouraging people to send meat alive? Yes, and by making a calculation you will find the charge to be 50 per cent. more on dead meat than on the live bullock.
252. Then the railway fares as now regulated actually encourage people to send cattle alive rather than dead? At present they do—unless there has been some alteration since I was at the office.
253. If the traffic in dead meat was likely to increase, the probability is there would be much less work to do at the Abattoir? I reckon that in five years we will have nineteen-twentieths of the meat killed in the country.
254. And in that case there might be at Glebe Island quite sufficient accommodation for the selling and slaughtering of the cattle, and the sale of the carcasses also? Yes, if the Government gives us the accommodation of refrigerated vans.
255. You think it is an essential part of the railway traffic to provide cold vans? Yes, cooling meat vans.
256. And much of the meat that would come to market if these vans were provided will not come unless that be done? It cannot. Companies might do it, but it will not encourage the trade.
257. Have you had any experience in salting meat in this country? A little—not very much, nothing worth mentioning.
258. I suppose you have heard that meat that is salted here does not keep very long? Mr. Leslie, at Camperdown, who is a practical man, has been trying the curing of meat for a long time in all sorts of ways, and he asserts that no meat that comes down by road to this market could be salted and made to keep.
259. That is, it is so deteriorated that it will not take the salt readily? It will not keep. But I believe if establishments were formed on the line, say 200 miles away from Sydney, that we should have a great deal of salt meat prepared there. The meat would be in first-rate condition for salting, and the climate would be suitable for the purpose.
260. Suppose you had slaughtering places established on the line, commencing where the feed for the cattle stops in the paddocks, how would you dispose of the offal and the blood? I should think that was a most simple thing. I would not have the slaughtering place in the town, and the people round about would be only too glad to take the offal and the blood, and use them for growing for this market vegetables that we are obliged to send to Melbourne for. Let the slaughter-houses be built in suitable positions, either by the Government or under Government supervision.
261. The blood and offal would be taken away, that is, if they were made portable? Yes.
262. The people do not take them away here? There are no gardens here.
263. There are a good many market gardeners? But you cannot well distribute it on land near the city, nor carry it through the streets.

T. Dawson,
Esq.
10 July, 1879.

264. Do you know whether there is an extensive slaughtering of small stock in the city? Yes.
265. There is a large slaughter of small stock in the city? Yes.
266. Could it be prevented? With proper supervision. Let every butcher's premises be inspected.
267. But could it not be prevented? If the inspector is allowed to go on the premises and prevent any live stock from being kept there.
268. If it is not possible to prevent it would it not be well to license the butchers' houses? Not those houses that are unfit for the purpose—for instance, where there is no drainage.
269. But the license would be refused if the premises were not fit? That might be done; but you would have to get an inspector who thoroughly understands the business.
270. But under those conditions the permission to slaughter small stock in Sydney need not be a nuisance? That question is difficult to answer, inasmuch as our present sewerage is bad, and our present water supply is not sufficient to wash these places out, and the places themselves are not sufficiently well built to carry off any objectionable accumulation. Then if it were carried off it would go into the harbour. So I should say prevent it altogether, and let the slaughtering be done in one place. There is no reason why the butchers should not go to the Abattoir to slaughter anything of the kind; they do in other places, including Melbourne.
271. *Mr. Bruce.*] Do you know the reason why notice has not been taken sooner of all the waste that has been going on and deterioration in the quality of the meat? Well, I think it is in a great measure owing to the apathy of the people.
272. Is there not another reason—the large quantity, the large supply, of meat we have always had? That has had a great deal to do with it. They do not mind wasting a little because the meat is so plentiful.
273. And it does not matter to the buyers? There is a good deal in that, but I think a great deal is owing to the apathy of the people.
274. You mentioned the waste in weight;—what waste would there be upon a beast travelling 300 miles to market, including the road over the Blue Mountains—what would a 900 lbs. beast weigh when it reached the Abattoir, after travelling 300 miles? It would weigh about 700 lbs., losing about 200 lbs.
275. Besides the loss to the consumer here is there not another element in this matter of waste to be considered—our export trade; do we not almost lose our export trade through the quality of the meat we are able to send away? I think that the meat is so deteriorated in quality that it is not fit to send away. There are meat companies which, if their meat were killed up the line, would have a much better chance of succeeding.
276. They never have paid? No.
277. Do you know what price our tinned meats fetch in the London market compared with the price of the Scotch tinned meats? It is about half, and we ought to receive fully as much.
278. And this arises principally from the quality of our meat being deteriorated? Yes, in travelling and being knocked about.
279. With respect to trucked cattle killed in Sydney, compared with the same sort of cattle killed in the country, is it not a fact that the former do not bleed like the country-killed cattle, and that the meat does not set like that of the cattle killed in the country? In any feverish animal—and ninety-nine out of every one hundred beasts killed at the Abattoir are feverish—the blood will not come freely out of the meat when the animal is stuck.
280. In mentioning the amount of offal in the live animal carried by train, you stated that it was about a fourth? It depends on the weight and quality of the beast. A very fat beast will not turn out anything like the proportion of offal that a poor beast will. A very poor beast will be nearly half offal.
281. With reference to the charges on the dead and the live animals, there is one thing you did not notice, and which I think ought to be noticed. After conveying the live animals, the railway authorities are obliged to take back the cattle trucks empty? Yes.
282. They cannot carry goods in them? Not unless some particular goods; but they reckon that the trucks have to go back empty.
283. That would not be the case with the meat trucks? Meat trucks would be always taking something back; they would be all clean, and there would be ice, salt, and casks, and other such things to go back.
284. Do you know whether the accommodation for trucking cattle is what it ought to be? I cannot say.
285. Do you know anything of what becomes of the cattle when they are sold at the Homebush yards? Do you mean immediately after the sale?
286. Yes? There are drovers, each of whom takes his employer's cattle away, and some drovers are employed by three or four butchers.
287. But where are the cattle taken to? Down the road to the neighbourhood of the Abattoir.
288. How long, on an average, is it from the time the cattle are sold at Homebush until they are slaughtered? Part of them may be slaughtered the same night, and the others may remain for days in some cases.
289. How many days? I have known them remain for a week or ten days.
290. Where? In small paddocks, in the neighbourhood of Sydney.
291. Any feed in the paddocks? No more than there is in this room. Sometimes there is a little water.
292. Is it not the case that as a rule butchers have some cattle always on hand? Yes, they seldom run clean out before they buy again.
293. In that case the cattle would go to the paddocks and not to the slaughter-house? Yes, usually three-fourths of them go to the paddocks.
294. And there is nothing in the paddocks? Nothing.
295. *Chairman.*] You told the Board that you attributed the present state of things to the apathy of the general public;—do you not think that the public up to this time have been wholly unaware of the state of things existing as to the quality of the meat they have been consuming? I think the majority of them have been totally unaware.
296. And now that they are being by this and other means informed of such a state of things, do you not think they will feel such an interest in the matter as to demand a reform? One would think so. The meat that is coming from the country has a great run, and for that reason a great many of the butchers are selling Abattoir-killed meat as meat from the country—because there is such a demand for it.
297. Then the consumers would not buy meat slaughtered at Glebe Island if they could get it from the country? They would not.

Mr.

Mr. Frederick Penny examined :—

- Mr. F. Penny.
10 July, 1879.
298. *Chairman.*] Are you a retail or a wholesale and retail butcher? Wholesale and retail.
299. Your establishment is in Dowling-street, Woolloomooloo? Yes.
300. Were you not a butcher in the city of London? Yes, I served my time in the city of London.
301. You do a pretty large business in Sydney? Yes.
302. Family business? Yes, and shipping business—not a large shipping business, but amongst the small craft.
303. Is the establishment in which you do your business suitable, remembering what you have seen in London in regard to butchers' shops;—is your establishment so constructed as to be suitable for the purposes of your trade? Well, not altogether; there could be a great deal of improvement made.
304. Are you not building a new establishment for yourself? I am, at the top of William-street.
305. In view of the interests of your trade, are you making any improvements? Yes, undoubtedly, in every shape and form; in fact similar to the shops in London.
306. And you intend to build a perfect butcher's shop? Yes, a perfect butcher's shop.
307. Very different from your own and other butchers' shops in Sydney? Yes, I hope it will be.
308. It is intended to be? Yes.
309. You have had a good deal of experience of the Glebe Island Abattoir? I have.
310. Do you slaughter your own cattle? At times. I used to kill all my bullocks, but not the sheep. In the trade I do now however; I want so many hind quarters of beef that it suits me to buy on the Island. Where I get one fore quarter I get ten hind quarters.
311. You say you sometimes slaughter your own animals and at other times buy the carcasses? Yes.
312. Then you have some experience of the mode of slaughtering at Glebe Island? Yes, I have.
313. What is your opinion of the manner in which it is generally conducted there, and as to the suitability of the buildings? The buildings are suitable enough. The cattle are naturally wild, and they are slaughtered differently from the method adopted at home. There, after the cattle are bought at Smithfield, they are driven home, and there is always plenty of water and hay for them. Then when they are going to be slaughtered a rope is put round the neck of the beast, and in a ringbolt, and the animal is then knocked down by the poleaxe, and pithed. Here they could not do that, but there is no doubt that there is a great deal more torture exercised at Glebe Island than there is any occasion for. I have seen the cattle as quiet there as I have at home; but as a rule they are naturally wild. There is a great deal, however, in the driving of the cattle.
314. How do you manage with your sheep—do you slaughter them at Glebe Island? No, I buy very few sheep alive; but if by chance I do buy any I have them slaughtered there. You can get a good supply there; you can buy them there, or you can buy them alive at Homebush and have them slaughtered at Glebe Island.
315. You mostly buy carcasses of mutton? Yes. There are many men who buy mutton alive, but there is a chance of your not getting the sheep again after they are taken to the Island. You cannot keep your eyes on the things there.
316. You noticed, when in London, the quality of the beef used there—it is generally very good, is it not? Yes.
317. Looking at the quality of the beef killed here from cattle driven down the country, and comparing it with the quality of London beef, what is the difference? There is not a great deal of difference. I have seen beef here as fine as any at home. Stall-feeding at home may make a difference in the flavour, but I have killed cattle here as fine as any in London. I have seen some very fine cattle here, and, in particular instances, some finer than I have seen in London.
318. I am asking you respecting the general state of things. Do you not think that a beast driven a long distance down the country, fatigued, footsore, and feverish, is less likely to become good meat? Undoubtedly. The greater part of our best cattle have been driven. Anybody may go to Homebush on a Thursday and buy a lot of cattle, and after they are bought hand them over to a man who slaughters for you. He will drive them to Garryowen, where the cattle are kept, and there is never a blade of grass nor a drop of water for them. On Saturday they are driven to the Abattoir for Monday's consumption, and there is no shelter and no water nor hay for them in the yard. In London they are fed and watered. It stands to reason that if a beast stands forty-eight hours without food or water the sap of the meat must degenerate. I have known cattle driven into the yards and on Monday morning you would hardly know them; they had fallen off so much that you would not know them as cattle you bought on the Thursday.
319. Then, as a general thing, it is a fact that cattle driven down the country, and used in the way you describe, lose the good quality of the meat? Undoubtedly, the sap of it is gone. You may buy some bullocks on a Monday, or on a Thursday, and they may be splendid cattle; but they are driven down to the Abattoir, where one or two are killed, and you will find the flesh as black as my coat. But leave these cattle for a few days, and the blood would be settled down and run away from the animals when they were slaughtered—different altogether from what is the case when the animals are driven down and killed while hot, and when the blood will not flow. In that case, when the meat is sent to the shops, and cut up the next morning, it is as black as a coal. This has given me so much experience that I would rather buy a body of beef than buy an animal which is driven in and at once killed.
320. Is it not a fact that you get your meat almost hot, and with the muscular action going on? No doubt that is the general rule in the summer-time. As soon as the bullock has his hide off he is cut up and put into the cart, and goes jig-jog to the shops.
321. Can that meat be wholesome and fit for food? It cannot be fit for human food.
322. And yet that is the way it is done? Yes.
323. That is the way in which it is conducted? Undoubtedly. That is correct, I assure you.
324. You must have noticed lately a new feature in the wholesale meat trade—bringing bodies of meat from the country? Yes.
325. Does your experience lead you to give an opinion as to whether the public prefer that meat to the Glebe Island meat? Decidedly they do. I wish I could always get it that way.
326. Is the country-killed meat really better than the other? It is; that I am sure of.
327. Is it more wholesome? More wholesome.
328. Looks better? Looks better, and —
329. And is more palatable? Yes, more palatable. It has all its nature in it.

Mr.
F. Penny.

10 July, 1879,

330. And the customers prefer it? Oh, yes.
331. And will have it if they can get it, in preference to the other meat? Oh, yes.
332. Do you think if a system of slaughtering cattle in the far interior were adopted, and the meat were set and put into refrigerated vans, then brought down to Sydney, and put into a meat market, the temperature of which would be considerably reduced, that it would be an improvement upon the present state of things? Oh dear, yes.
333. Would it suit the retail trade very much better? It would. No doubt if we were supplied with it there would be the necessary conveyances—horses and carts—to bring it to our own places, otherwise it would be extra expense for us to get men, and horses and carts.
334. Would it not be better also for the producer and for the consumer—better in the interests of all concerned? It would be, undoubtedly. I am speaking conscientiously, in regard to everything you have asked me.
335. No man, of course, will deny that there is a lot of illicit slaughtering in the city? No.
336. Lambs and calves, and sucking pigs are killed contrary to the law. I do not want you to make any admissions; my object is to ascertain from you your opinion whether under proper supervision and in properly licensed houses—butchers' establishments—the slaughtering of these animals might be permitted without any detriment or nuisance to the public and with great advantage to all concerned? I believe so; that is, if a man has got a fit and proper place to do it.
337. If a man has a proper place for the slaughter of these small animals it could be carried on without any injury to the public, without any nuisance, and with many advantages? Just so. There are all the advantages if you could only have the thing done as it ought to be done.
338. Proper premises and properly supervised? Yes; properly supervised all through. By killing lambs and calves at Glebe Island you expose tender animals to all sorts of weather, and the meat being delicate meat goes much quicker than other meat. Then the less you move it about the better, and the handling and the jolting about in the cart are such that if you should not want the meat till the next morning after it has been brought to the shop it will be as green as grass.
339. Then in respect to the quality of the meat of those calves, lambs, and sucking pigs, it would be a very great advantage to the public if properly constructed places were licensed for the purpose of killing these animals? Yes.
340. And under proper supervision it would be a very great advantage in all respects? It would indeed, both to the public and the butchers, if properly carried out.
341. Especially as to the wholesomeness and general quality of the meat? Yes.
342. *Mr. Stewart.*] You do not kill all the meat you retail? No, I do not.
343. You buy it wholesale? Yes, at Glebe Island.
344. At any other place? Since the beef has come down from the country I have bought Riverstone beef.
345. But until recently you bought all you required at Glebe Island? Yes.
346. Is there any wholesale meat market in Sydney? No.
347. Is such a place not required? Undoubtedly it is.
348. Would Glebe Island be a good place to have a wholesale meat market? Well, I could not altogether say that Glebe Island would be a first-class place? If the market could be more central in the city it would be better.
349. But Glebe Island is the only thing in the shape of a wholesale meat market that you have now? Yes.
350. Is there any real competition among the carcase butchers? No, it is a pity there is not.
351. Do they not arrange the prices among themselves? Yes.
352. And the retail butchers are quite at their mercy? Yes, and the public afterwards. There are only about four men in the trade—mutton men and beef men. If it had not been for a few men who broke the monopoly, by buying outside and supplying us, the monopoly would still have existed.
353. Are you pretty sure that they do arrange the prices among themselves without submitting the thing to competition? I could almost swear it.
354. Would not the present supply of carcasses from the country help to bring down the monopoly? Undoubtedly.
355. And if you had a well regulated wholesale meat market the retail dealers would not be at the mercy of the carcase butchers? No. Melbourne is an instance of where you can buy a loin of beef in the same way as you can in Newgate Market, at home.
356. When you happen to have more meat on Saturday night than customers what do you do with it? Put it in salt.
357. Does it take salt well? Not well in the summer-time.
358. Have you any cool chamber in which to put the meat? No.
359. Are you building one on your new premises? Yes, and a cellar—a double-walled building.
360. Do you mean to apply ice? They tell us that ice will be very cheap this season. I have not gone into the thing thoroughly, but I intend to rail off one part of the premises for nothing but a cooling place.
361. How much meat will it hold? It will be to hold meat from day to day. You would want a large place to supply a trade for four or five days.
362. What size will the ice chamber be? 26 by 23.
363. If there were a wholesale meat market, supplied with a sufficient number of cool chambers, would it not be a very great convenience to the retail dealers? Undoubtedly.
364. And then the necessity for keeping cattle in the bare paddocks would be at an end, as you could kill them off at once? Yes.
365. Do you lose much meat in summer by spoiling? No, not a great deal. A good deal of judgment is required in dealing with customers. You spoil a little.
366. Have you had any experience of butchers' shops in other parts of the world? I have in London.
367. Is it customary to have even large stock slaughtered there on butchers' premises? Yes, on butchers' premises in the heart of London.
368. Some in the cellars? Yes. In Newgate Market they did all the slaughtering in the cellars.
369. Did it create a nuisance? No.
370. Why? There was always a great supply of water, and all the offal was carted away.
371. It is not kept long enough to make a smell? No.
372. Is it not a fact that a small quantity of meat in a stinking state will spoil a large quantity? Yes, undoubtedly.

Mr.
F. Penny.
10 July, 1879.

373. Then if about the killing houses at Glebe Island there is a bad or foul smell it would be impossible to kill calves and lambs and sucking pigs there, and to keep the meat good? Yes, you could not kill them there to keep. My experience is that if you leave a fore or hind quarter hanging till next morning unless that beef is properly broken up the meat will not be worth much.
374. If there were a wholesale meat market here would it be necessary for you to kill any beast at all? No.
375. You would buy it dead? I would prefer to buy it all dead.
376. *Mr. Bruce.*] Is there any actual necessity to kill calves and lambs in the city? There is, I assure you.
377. How is it that in Melbourne they can kill eight lambs to one killed here, and carry them further than they are carried here; in Melbourne they kill at Flemington thousands to our hundreds; how do you account for that? I am sure I could not answer that question; but there is no doubt that the butchers escape the law there as they do here—I am certain of it. I know when I was butcher of the mail boats I have gone ashore and killed half-a-dozen lambs on the premises, and taken them away with me.
378. How long ago is that? Eight or nine years ago. On many occasions we have been short of time, and not knowing the number of passengers there would be, the order for the necessary quantity of meat has not been sent from Sydney; then we have been told to take half-a-dozen lambs or calves, and I have gone ashore to pick out the stock, and have killed them.
379. *Chairman.*] Then there is a good deal of illicit slaughtering in Melbourne? Oh, yes.
380. *Mr. Bruce.*] If there were a chilling house at the Abattoir, lambs and calves after having been killed could be set there before being brought to Sydney? Lamb and veal are required perhaps, only once a week, and you could not kill them as you wanted them at the Abattoir. A man may go to the Abattoir and kill a lamb on a Saturday morning, and during three months of the year the meat may not be good when you put it upon the table on Sunday. It must be killed the very last thing on Saturday night, and then the meat is sent out hot. I do not know what it would be if killed at Glebe Island.
381. There is no more necessity for killing these animals on your premises than for killing sheep. Would not killing the small stock at the Abattoir force that part of the trade into the hands of the wholesale men and take it out of the hands of the retail men; does it not pay the retail butcher better to kill the lambs and calves on his premises than to buy from the wholesale butchers; and is it not at the same time more convenient? Yes, if it were not allowed there never would be a beast supplied.
382. In other parts of the world, as in Melbourne, a far larger number of animals are killed at the Abattoirs than are killed here, and without illicit killing? Then they must get the orders in differently.
383. As to the offal from the calves and lambs, how would you get rid of it? Take it away.
384. How? Let one of our own carts take it away.
385. What would become of the blood;—it would have to go into the drain would it not? No; if a calf or lamb to be killed were stuck over a bucket the whole contents would be caught and would not amount to half a bucketful, and then it could be taken away in your own cart.
386. The blood of all the calves and lambs killed in Sydney would amount to a great deal? Yes, but does it not make splendid manure. Chinamen would give you 2s. 6d. a load for it. I send my dung away every day in the week.
387. It goes now to your own dung-heap—the blood and the offal? Oh, no, it would do so. But if you allowed slaughtering on the premises you would have to provide a place where you could put this stuff.
388. If a butcher were not very careful there would be a nuisance from this? No doubt of it.
389. And it would entail a great deal of inspection and care? Yes.
390. And if the killing could be done at the Abattoir it would be much safer? No doubt, if you had sufficient and proper places.
391. Do you buy all your own cattle? No, I buy nothing to kill. I used to buy cattle, but I now cut up more hind than fore quarters.
392. Do you know what the practice is of those who buy their cattle—is it to buy enough to last them just to the next sale day, or to have a few on hand? To have a few on hand.
393. Where do they keep them? At Garryowen. As soon as the cattle are knocked down to the purchaser at the sale-yards they are delivered to a man who charges you so much for driving them and killing them.
394. Then the cattle that would be sold on Monday would go to the paddocks until after Thursday's sale? Yes, till the following week. If the butchers saw a chance of buying a lot of cattle cheap they would buy enough to last them a fortnight.
395. Then they would be some time in the paddocks? Yes.
396. *Chairman.*] A butcher's shop for the sale of meat should be conspicuous for cleanliness throughout every part of the premises, and every implement or instrument used should be thoroughly well cleaned and constantly clean? It ought to be.
397. There should be perfect ventilation—a pure atmosphere always passing through the premises—good drainage, and every other thing necessary to keep meat wholesome? Yes.
398. Any other condition of things would of course have a contrary effect—make the meat unwholesome and unfit for human food? Yes.
399. Is it not a fact that just now, and for some months past, the wholesale price of cattle is very much less than it has been? Yes.
400. More than one-half? More than that.
401. At any rate it has been reduced to the extent of one-third or one-half? Yes.
402. Notwithstanding that, is it not also a fact that the retail price of meat has not fallen in the same proportion? Yes.
403. The retail price has been kept up? To a great extent it has.
404. Now, I want you to tell me to what circumstance you attribute this state of things—that although the producer gets so small a price for his cattle, yet the public pay so-high a price for their meat? I am paying 2½d. a lb. for my hind quarters of beef, 2d. and 2½d., and so on.
405. To whom? To the Abattoir. That is what the meat stands me in, taking the carcase. The fore-quarter meat is no use to us now. I do not know that there ever was such a quantity of salt beef as there is now through there being so much meat. If I want any rumps and loins of beef I buy them off Woolfe, and have to pay 4d. a pound for those.

406. You have to pay for your meat the prices that the wholesale carcase butchers charge you? Yes. Their charge is about 2d., taking it fair, but by the time you get what you want out of it, it stands you in about 4d. a pound.

Mr.
F. Penny.

10 July, 1879.

407. I only want to know the reason why you charge the public so much? It is because you want so much more of the best part of the meat now than you did before. I have now a lot of the finest beef—shipping meat—that I would be glad to get 8s. a hundred for; but people want better beef now. Where a man does a chance trade you can buy a piece of roast beef off him cheaply, because you have to take something else with it. M^r Carroll, for instance, will cut his beef right through, and sell you a piece for 2d. a pound.

408. *Mr. Stewart.*] What becomes of the fore-quarters? He can cut those up. People who come in with the wood-carts, and others, buy it. But anyone in the habit of providing choice meat could not sell the fore-quarter meat.

409. *Chairman.*] Have you ever seen any diseased meat offered for sale at the Abattoir? I have not. I have seen plenty that has been there, and cut down. It takes a good judge to tell a diseased bullock.

410. But you have not seen any, except after it has been cut down? No.

Mr. Henry Woolfe examined :—

411. *Chairman.*] You are a wholesale and retail butcher in Sydney? Yes.

412. On your own account, or are you one of a firm? On my own account.

413. Have you been long engaged in the trade? Three-and-twenty years.

414. And you do a large business? Yes.

415. Have you seen much of the mode of slaughtering, and of the business done at the Glebe Island Abattoir? Yes, I have been there every day since, I think, the Abattoir was opened.

416. And what is your opinion of the establishment as an Abattoir, for the purpose required? Well, in the first place, it was never intended, when it was first built, to be used for so large a business. It was never thought the country was going to grow as it has. The Abattoir is far too small. There is more accommodation now than ever there was, but some time ago the accommodation was very bad.

417. The accommodation now is not enough? Well, there is plenty of room if it was only managed as it should be managed.

418. What is your observation of its general state, as to cleanliness? Well, I think it is kept as clean as any place could be kept.

419. With regard to the sheep-slaughtering place? Well, the sheep-slaughtering is a dirty business from beginning to end. The place is cleaned when they are done at night. When they are done the place is washed down as clean as a new pin.

420. And the pig-slaughtering? Well, I have been killing 130 and 140 pigs per week ever since Glebe Island opened, and of course you cannot have anything else but a clean slaughter-house for pigs. It is a person's own fault if he ever allows his place to be dirty on Glebe Island, because there is plenty of water, and they can wash down the slaughter-houses and the yard in 10 minutes.

421. Have you plenty of hot water? Well, we have not plenty of hot water; we have to make a fire and provide our own water.

422. Would not steam be a great advantage? If they could provide enough steam. In my establishment in the city we boil and cook everything by steam.

423. In some cities in America, notably in Chicago, they kill as many as 15,000 pigs a day? Yes, they do.

424. And where there can be such an extent of business done, we could, with advantage, I suppose, follow, in some degree, the state of things that exists there? They only want a boiler at the end, and a steam pipe running along, by which means you could supply every slaughter-house on the island.

425. *Mr. Stewart.*] In any quantity? In any quantity.

426. *Chairman.*] Have you had any experience the last few months of getting carcases of meat from the country? I was the first one that got meat in Sydney from Orange.

427. What is the result of that new order of things in regard to the appreciation shown by the public, the consumers? Well, it stands to reason that the meat killed in the country must be far superior to the meat killed at Glebe Island.

428. What is the reason of that? In the first place there is the slaughter-yard near where the cattle are fattened, so that the animals do not have to come any distance. They are killed and then hung up till thoroughly cold, and then the carcases are sent to Sydney, whereas, if the cattle are trucked alive, there is first a great difficulty in getting them into the trucks, and coming down they get knocked about and bruised, and after arriving at Homebush on a Friday night or Saturday morning, they are taken out of the trucks and put into a paddock where there is nothing to eat. If the market is bad on Monday the agents will not sell them but put them back till Thursday, and the cattle are all this time starving. Then at Thursday's market they are sold. Butchers bring in to the Abattoir what they want to kill, and put the rest in paddocks the other side of the island, where there is no more grass than on the floor of this room, and there the cattle stop perhaps 4 or 5 days before they are slaughtered.

429. That is the description of meat killed at Glebe Island? Yes, and when they are brought in for slaughter, and before they are knocked down, they are driven about very much, and the meat becomes as black as that cloth. Then again, they may be put in the yards in the morning, and may not be killed till night, and standing there all day does not do them any good.

430. *Mr. Stewart.*] Does that sort of treatment affect the meat of the animal? It must do it. To see the difference between the meat killed in the country and the meat killed at Glebe Island you would not credit it. Half the butchers in Sydney will not believe it, because it costs them more to get the meat down from the country than from Glebe Island.

431. *Chairman.*] Then you say that the Glebe Island meat will not bear any comparison for wholesomeness, flavour, or any other quality, with that brought down from the country? It will not.

432. And the public are now judging the difference by buying meat from the country to the exclusion of the other? Yes, and a great many butchers ticket beef as country-killed beef, which people purchasing and eating it find out, as they do not discover any difference.

433. Then butchers ticket the Abattoir beef as Bathurst or Orange beef? Yes.

434. And they find it necessary, in competition, to call it by these names, in order to get custom for it? Yes.

Mr.
H. Woolfe.

10 July, 1879.

Mr.
H. Woolfe.
10 July, 1879.

435. Is it not an undoubted fact that the meat which is brought from Orange and the country districts is infinitely superior, in all respects, for human food, to that slaughtered at Glebe Island? It is far superior. I would not give 12s. for beef at Orange while I could get other beef at the Glebe Island for 8s. if it were not so; but I prefer giving 12s. for the Orange beef.
436. Have you ever considered the subject of a wholesale meat market to be established in the metropolis; say, for example, that a large meat market was erected near the Haymarket? That is what it will have to come to in the course of years, for all the meat to be brought to one market, and then things will be in a great deal better state than they are in now.
437. Suppose a system were introduced similar to that in connection with meat markets in other parts of the world, where the temperature is reduced to a freezing point, and the meat brought into the market by refrigerated cars from the country, do you not think a system of that kind would be vastly to the benefit of all persons concerned? I do.
438. Particularly to the producer of the animals? Yes, they would get far more for the meat, and it would be delivered in a nicer way.
439. And would not the consumers be better treated by getting more wholesome meat and less nuisance? Yes.
440. Would not the railway derive a large additional revenue from such a course? Yes. In London the train runs underground to the Newgate and Leadenhall Market and conveys the meat to the shops.
441. How long is it since you were in London? Four-and-twenty years.
442. Then you have not seen the new Smithfield Market? No, we used to have the beef brought from Aberdeen and all parts.
443. You say that half the butchers in Sydney are not yet aware of the advantages of meat brought from the country over that slaughtered at the Abattoir? A great many butchers do not study their customers and only study themselves, and if they get meat a farthing a pound cheaper at Glebe Island than anywhere else they get it rather than put themselves about in the interest of their customers.
444. Would not a meat-market cure that? Yes, the meat could be killed at Glebe Island and brought to the market for sale.
445. Then a wholesale meat-market of the kind I have indicated would be better for the interests of all concerned—the producer, the retailer, and the consumer? Yes, better for all parties.
446. You remarked just now that it must come to that in the course of time? Yes.
447. What is your opinion upon this point: Suppose a properly built establishment were to be provided in the city, or suppose you built a shop of your own, with every convenience in it, and that it was under the proper supervision of the authorities, do you think you could carry on the slaughter of small animals—lambs and calves—without any injury to the public? Of course you could.
448. And would it not be a great benefit to yourself as being in the trade, and also in respect of the wholesomeness and general quality of those delicate descriptions of meat? Yes, it stands thus: If any butchers' shops were built so that they could be licensed to kill calves and lambs, the butchers could keep the places far more clean than now; but where any place had not the conveniences for slaughtering, let them take the animals to Glebe Island. They now kill calves and lambs on the premises, and the blood runs through the cracks in the floors and settles there, and in the summer-time it is very bad. They want places built as in London. At the same time there requires to be a very heavy penalty if they are caught killing sheep. If the butchers once commenced killing sheep the town would be a nuisance.
449. Then sheep ought never to be permitted to be slaughtered in the city? A butcher wants only two or three calves and lambs, not to make a common slaughter-house of his place.
450. But, under proper supervision, and on properly constructed premises, the slaughtering of small stock might be permitted with advantage in every respect? Yes; you want a very heavy fine to put on, and an inspector visiting the place every day, and when you find a place dirty, make an example of it. It is no use fining £1 or 30s., but make the penalty severe. Half the butchers in Sydney keep such filthy dirty places that you would be ashamed to go through them.
451. *Mr. Stewart.*] Where do you buy meat wholesale? I am getting all my beef from Orange.
452. Previous to that? I used to buy my own at Homebush and kill for myself.
453. Did you ever buy dead meat? At times.
454. There are people who do buy it? Hundreds.
455. Where do they buy it? At the Abattoir,—York and Walsh, and Rennie and Williams.
456. That is the only thing in the shape of a dead-meat market? Yes.
457. Is there any competition among the dead-meat butchers? There is plenty of competition, but when there is meat very dear there is something like a knock out.
458. But any monopoly would be done away with by the establishment of a dead-meat market? Yes.
459. Suppose you were to be supplied at a much cheaper rate than now, would it not be possible to make arrangements at Glebe Island for a wholesale meat market for storing meat there for two or three days? It would.
460. I understand cattle are often kept alive starving for two or three days to wait a demand in the market, whereas, with proper accommodation for storing the meat, they might be killed at once, and the carcasses kept in a cool store, and be all the better for being so kept? Yes.
461. The meat would cut firmer, and be more tender? Yes.
462. Is new meat always tough? Yes.
463. Whatever has been the state of the animal when killed? Yes. Well, a nice young bullock off a good run is not very tough.
464. Do you have any meat spoiled on your hands? Plenty, in summer.
465. Not having sale for it? Not that, but having beef in at night, and it going bad next morning.
466. What do you do with it when you find you cannot sell it? The bone man gets it.
467. You do not sell any of it? No.
468. It is used for boiling down? Yes.
469. Would that be necessary if you had a cooling chamber? Yes.
470. Would not a cooling chamber preserve it? Only for a time.
471. Perhaps from Saturday to Monday? Yes.
472. In hot weather you can hardly do that now? No; I have seen meat come in on Saturday morning, and be bad on Sunday.

Mr.
H. Woolfe.
10 July, 1879.

473. One joint bad would spoil all the others? No, but the way meat is delivered in Sydney is a very bad way. When killing sheep at Glebe Island they stick five-and-twenty at a time on the ground. The sheep put down first is dressed first, and by the time they come to the last animal, it has been lying upon the ground some time. The sheep want to be dressed very quickly. Then a cart is loaded perhaps with five-and-twenty, or thirty, or forty, mutton carcasses—say thirty. They have to go to different shops, and the sheep that is put at the bottom of the cart, with all the other mutton on top of it, lying there in the summer, perhaps two hours from the time of starting from the Abattoir until it reaches the butcher's shop where it has to go to; that must make the meat go bad.

474. But if these mutton carcasses were hung up in a cool chamber till thoroughly cold the carriage of them would not be so detrimental? No.

475. It is because the meat is not cold and set that it is apt to spoil? Yes, apt to spoil.

476. Do you kill any mutton at Glebe Island? No, I do not kill any mutton.

477. Did you ever see any meat that was supposed to be diseased offered for sale? No, I have seen meat bruised very much.

478. That is bruised during the journey on the surface, under the skin? Yes. I think there should be great alterations made at Glebe Island, in order to stop people from talking.

479. Could the cattle be sold at Glebe Island? No, there is no accommodation.

480. Could not accommodation be made there? If cattle were sold there, they would have to drive them back to the paddocks.

481. Why? You would want to sell every day.

482. And if there were accommodation for keeping the meat after it was killed, would it not be better to kill the animals at once? I do not think so, but I have not considered that.

483. You think if cattle were brought to the Glebe Island, and not sold, they would have to be taken away again? Yes; it would be like bringing anything to market, and when the buyers knew they had got you they would give you anything they liked for it.

484. The buyers might combine to keep the animals unsold? Yes.

485. Are there not some good large paddocks about Glebe Island? None with any more grass than there is in this room—nothing but rocks.

486. Is there any grass anywhere for them? No, nothing in summer.

487. Nothing at Homebush? No; you know what the grass is at Homebush.

488. Then the advantage of taking them to the paddocks is to give them a rest, a lie down? That is all.

489. *Chairman.*] You were saying something about inspectors? The inspectors might look after the island a great deal different from what they do. They should go along the slaughter-houses of a morning, and if they saw a dirty slaughter-house they should see that it was washed down, and they should look into the carts. I have seen meat being taken off the island in carts which were in a dreadfully dirty state.

490. Do you not think the mode of delivery in the carts, with one or two exceptions, very unsatisfactory? Those carts of Rennie and Williams are a great improvement.

491. And the others? They are right enough if they were kept clean, and if the men were clean.

492. There are neither clean carts, clean cloths, nor clean men? No.

493. Is it not generally the case in the summer time, that is during the hot weather, that meat is taken from the Abattoir almost hot, in fact almost alive, for delivery at the retail shops? I have seen a bullock killed, and 5 minutes after quartered off, and hung up, and put into the carts.

494. Can that meat be fit for human food? That does not interfere with the eating of the meat. It is before the bullock is killed where the evil is.

495. Do you not think meat should be set before it is fit for consumption? It should be, but it is set in the shop. If the carcass comes in hot you hang it up until it is set.

496. *Mr. Stewart.*] How will you manage in summer with that country killed meat—will it come from Orange without being spoiled? They think they can get it without being spoiled.

497. They will have to provide cool cars? That is what they are going to try to get.

498. Unless the railway provides some cool cars the meat cannot come in summer from Orange? No.

499. *Chairman.*] Refrigerated cars are an absolute necessity for bringing the meat from Orange in summer? Yes.

500. *Mr. Bruce.*] Is it not a fact that their not being sure of this trade continuing in the summer time is keeping a good many retail butchers from buying carcasses from the country—that they are afraid the wholesale butchers would not supply them if they did not buy from them now? I do not know that. There are a few men in the hands of the carcass butchers that cannot shift.

501. But yourself and others do buy? Yes, but those dependent on the carcass butchers cannot buy.

502. If there were a large chilling-store attached to the Glebe Island Abattoir, would it not be a great benefit to the retail trade? I think it would be a great benefit both to the wholesale and retail trade, because, in the summer-time a man would have four or five bullocks over, and would have, as it were, to give those away. A butcher who goes over at half-past 4 to get something cheap sees a man perhaps with three or four bodies of beef, and immediately wants to get it at his own price, and if that is not taken the meat spoils.

503. Would not meat set to the bone keep a day longer than other meat? It would keep one and a-half days or two days longer.

504. And your country-killed meat will keep longer than the meat killed at the Abattoir? Two or three days longer.

505. Is it an absolute necessity that you should kill small stock on your premises—could they not be killed at the Abattoir? You are not allowed to put a breath of wind in a calf or a lamb, and it is a great inconvenience for a man to take a calf or lamb to Glebe Island to kill it.

506. But putting the inconvenience out of view, if the calf or lamb were killed at the Abattoir, and put into a proper conveyance to be taken to the shop in town, would it not be possible to carry on the trade that way? Yes, but on the other hand there are very few men who can dress calves and lambs at Glebe Island. It is a particular part of the business, and your shopman generally does it. And if you have the convenience to do it a butcher should be allowed to kill the small stock at his own shop. Lamb, after being brought over in a cart from the Abattoir, does not look fit to eat.

507. *Chairman.*] That is to say, a lamb killed at the Abattoir by the ordinary butcher, and a lamb killed by a skilled butcher on the butcher's premises, would be such that one would be saleable and the other not? Yes.

TUESDAY, 15 JULY, 1879.

Present:—

THE HON. GEORGE THORNTON, Esq., M.L.C., CHAIRMAN.

JOHN STEWART, Esq., | ALEXANDER BRUCE, Esq.

George Maiden, Esq., examined:—

G. Maiden,
Esq.
15 July, 1879.

508. *Chairman.*] You are one of the firm of Maiden, Hill, and Clark, of Sydney, engaged in extensive stock and station transactions? Yes.

509. I suppose you are aware that the object of this Board, appointed by the Government, is to inquire into the subjects of cattle slaughtering, the meat supply of the metropolis, and the condition and management of the Abattoir? Yes.

510. You must have had considerable experience in matters of this sort? I have had very great experience, not only in selling stock but in the management of sheep, horses, and cattle, long before I entered the auctioneering business.

511. Have you had any experience in travelling stock? Very great, for many years, overland. Do you mean on the railway line?

512. Travelling stock generally—droving I mean more particularly? Very great experience.

513. I suppose your experience relates to travelling stock between the colonies as well as in this colony? In Victoria and New South Wales principally, in fact nearly all over. I was a very large store-cattle buyer at one time. I bought some thousands on the Clarence, and in all parts of the country.

514. Can you tell the Board how the droving roads are provided with reserves for the use of travelling stock? I have not had much to do with droving of late years, but I have been able to see that not sufficient attention is paid to that matter of reserves, that the stations are being fenced up to the roads, and that there is not sufficient accommodation for travelling stock. Some ten or twelve years ago I wrote a letter on the subject, either to the *Herald* or to *Bell's Life*, and signed it "A Bogan Squatter."

515. Do you know the present state of the reserves for such purposes? From what the drovers tell me they are insufficient. There is not nearly enough accommodation provided for that sort of thing.

516. Is it not essential that every provision should be made for the protection and for the travelling of stock, especially for fat stock coming to market? It is.

517. Do you know anything of the travelling of stock by rail? Yes.

518. Do you know about when it commenced? I was trucking sheep ten or eleven years ago from Mount Victoria; I think it is about that time.

519. How long has the cattle-trucking by rail been in operation as far as you know? Not very much until the last two or three years. Very little was done until then; hardly anything in fact.

520. How do you account for that? Bad accommodation; want of knowledge.

521. Bad accommodation where? On the railway lines; want of accommodation, and proper yards for putting the stock from the road on to the rail.

522. How do you account for the travelling of stock by rail not having been taken advantage of sooner? Only the slow way of doing everything in Sydney, the same way as I account for the sale-yards not being erected. Everything is left to chance until the necessity of the thing requiring to be done is so great that it forces itself into operation.

523. The Western railway from here to Wallerawang, and the Southern railway from here to Goulburn, have been opened for a number of years? Yes.

524. And the advantage of bringing cattle by rail might have been taken many years ago? Yes. People were deterred from sending cattle by rail very much through the losses that occurred. The cattle got bruised and knocked about so much that the owners would not truck them, and preferred coming by the road, although, but for the loss they would have preferred trucking the cattle.

525. When you say the arrangements are so insufficient, and the trucking accommodation of stock so faulty, do you refer to the sites for trucking, or the form and construction of the trucks? Everything in connection with it. The yards were not constructed to facilitate the thing, and the trucks were very risky and old-fashioned, in my estimation, and they were loaded from the middle, and had an old-fashioned door that a man had to go into the middle of the yard and lift up, which made it so unsafe for him that I wonder some men have not been killed. Then it must knock the cattle about, because some cattle would run out before the door could possibly be closed.

526. Do you speak of by-gone times? No, of the present time.

527. The arrangements are still very defective in respect of trucks and accommodation generally? Yes, still defective as to the mode of trucking.

528. Where should the trucking-yard be situated as regards the ordinary station traffic? Do you mean in regard to the metropolis, or all along the line?

529. All along the line? Do you mean near the railway station, or from it?

530. I mean to receive cattle in the interior—where would the trucking-yards be most convenient for all persons interested? There are different points; taking the south, I suppose you allude to Goulburn?

531. Yes? That is a matter I can hardly say.

532. *Mr. Bruce.*] I think you hardly catch the question: Should the site of the trucking-yards be near or away from the general station? Away from it.

533. *Chairman.*] I think you say these trucking places should always be away from the main station? Yes.

534. I conclude you mean that the cattle should be harassed as little as possible, and should be put into the trucks as quietly as possible? Yes, and away from the traffic as much as possible.

535. As a rule, where are these trucking-yards at present? As a rule, they are as close to the station as they can be got.

536. And you think that most unwise? I do.

537. Because, I take it, that the cattle are irritated and excited by the noise, shunting, and unavoidable confusion always about a main station? Quite so. When the wool season is on, for instance, there are always a number of teams about the stations, and people loading up and taking their goods away.

538. Then you say, emphatically, that the trucking-yards should be away from the main stations in every case? I certainly say that if the place where a station is situated is much inhabited the trucking-yards should be at least half a mile away along the line.

539. Do you know of any improvement being made, or intended to be made, with regard to the position of trucking-yards along the line, either west or south? There has been a good deal of improvement made.

540. I mean as regards the position of trucking-yards? I am not aware of that, but I know a great deal of improvement has been made during the last year or two. The yards at Wagga are very good.

541. What are those at Junee? I did not examine them.

542. As to the yards themselves, their form and construction, have they been planned and erected in the best way possible do you think? Not as a rule; only the recently built ones.

543. The recently built ones are a great improvement on the old ones? That I saw at Wagga is.

544. That at Wagga is a great improvement on the others? Yes.

545. Do you not think that might still be improved upon? I do not see that it could very much; the facilities are very good there.

546. And sufficient for the present? I should think so.

547. You speak of some of these places being badly constructed and insufficient;—can you refer us to any yards on the Western or Southern Line that are defective in those respects? Wallerawang.

548. That is defective? Yes.

549. Any other? I have not seen the Orange one; it has been put up since I was at Orange.

550. The cattle require to be taken into the trucks as quietly as possible and kept in the trucks as quiet as possible, so as to prevent them from being knocked about? The object is to get the greatest dispatch you can without knocking the animals about, which is impossible under the present system of cattle trucking. It not only injures the cattle but is positively risky.

551. Do you speak of the cars that convey the cattle? Yes.

552. You say they are very faulty? Yes, to my idea.

553. Can you point out to the Board in what way they are faulty? In regard to what I alluded to before—the door.

554. They are old-fashioned and unsuitable because of the door—the flap door? Yes, my idea is that the door should be on slides. The door should be at the side of the car near the end, and should be a sliding door, because then the cattle would go in, and remain in, and the door could be slid quickly.

555. Were the arrangements of the yards in respect to fastenings and the gates suitable in the places you have referred to? At Wagga?

556. At any places where you speak of the defective system of trucking-yards existing? The only place where I have seen any pretence of accommodation was at Wagga.

557. The only place that comes up to your idea of sufficient accommodation for trucking cattle is Wagga; all the others are faulty? So far as I have seen.

558. What about the speed that the trains go at;—do you think it sufficient, or that it might be increased advantageously to all concerned? I think that all trains that carry stock should be special trains, and should take the stock straight away. Now when they are brought down they are delayed on the way, and shunted backwards and forwards, throwing the cattle off their feet, and this is the cause of a great deal of the loss, particularly among the sheep.

559. You think cattle and sheep trains should be special trains, and should be taken away as quickly as possible—all shunting and delay avoided? Quite so.

560. It is the shunting and delay that cause so much destruction to the animals? Just so.

561. Do you think we have sufficient trucking stations on our lines for present requirements? I think so, provided they were properly constructed.

562. If properly constructed you think they are sufficient? Yes.

563. Do you remember when the line was opened to Orange? Yes.

564. Do you know how long it was after the line was opened that the trucking-yards were erected there? I know it was some considerable time after.

565. Can you indicate it by a year or two, or the number of months? I could not say.

566. But there was a very great delay? A very great delay, I should think unnecessary delay.

567. Do you know whether sufficient attention has been given to having quiet and easy access to the trucking-yards on the line? I do not think there has been; in fact the whole affair in connection with the trucking of cattle has not been properly considered—that is my opinion.

568. What is your opinion as to the conveyance of stock from the interior to the metropolis by rail;—do you not think it a very greatly improved plan on the old style of droving? Certainly.

569. Very much so, not only as regards the saving of time but also the preservation of the quality and quantity of meat? Quite so.

570. It is a great improvement in the interests of the producer and the consumer, and is it not also a very great improvement in the interests of the Government as a matter of revenue from the railway? Yes.

571. Do you not think that the traffic, that is to say, the cattle traffic on the railway, is of sufficient importance to claim the marked attention of the Government? I do; I believe that if the thing were properly considered there should be yards built, accommodation provided at both ends, and then most of the squatters would avail themselves of it. Those who did not would suffer in regard to the price they would get for their article when it came here, and that, of itself, would cause the graziers to use the railway.

572. But cannot we get a much better quality of meat by such means? Considerably better.

573. A different sort of flavour and quality altogether? You would get it fresh from the pastures, instead of being wasted, as in many instances it is now.

574. Do you not think that the conveyance of stock, alive or dead, from the interior to the metropolis, would become the most important branch of the railway business? I do. As an instance of that I may mention that very little stock now goes by road from Deniliquin to Melbourne, where they have every facility for trucking, carrying, and unloading.

575. On the Victorian side, from Deniliquin to Melbourne, they have every facility for taking stock by railway, and nearly all the business there is done by railway? Yes, all the business the other side of Deniliquin; there is hardly an exceptional case where the stock is driven along the road.

576. Are there a sufficient number of trucks for our present requirements on the railway;—do you happen to know whether there has been any experience of a want of trucking accommodation? When there is a rush by the various agents requiring trucks at the one time there is not sufficient.

577. But as a general thing? As a rule they have met fairly the demands of the trade.

G. Maiden,
Esq.
15 July, 1879.

- G. Maiden, Esq.
15 July, 1879.
578. The railway authorities always willingly and gladly avail themselves of any suggestion for improvement that may be made to them, do they not? Oh, yes.
579. They are always willing to oblige the public; they see the necessity for improvements, do they not, but the matter is beyond their control? Yes.
580. People practically acquainted with the railways in this matter are quite aware of the necessities for these improvements, but they have no power to carry them out? They have no power to carry them out.
581. Has there been any improvement in the trucks during the last year or two? The sheep trucks have been increased a good deal, and are very good, but require landing stages on a level with the upper deck. The cattle trucks I do not see any improvement in at all.
582. What is your opinion as to the present arrangements for landing stock at Homebush? Miserably defective.
583. Can you make any suggestion in regard to that;—what would you suggest? In the first place there is not sufficient accommodation, nothing like sufficient. There is no land there sufficient to receive the stock that come, and not sufficient yards.
584. Not room enough, and not land enough? No; they have given all the land they can, but that is not enough.
585. And they have not sufficient land to give? No, it is not there.
586. And is this trade, the conveyance of cattle and other stock by railway, likely to increase? I think so.
587. To increase considerably? I think so, with the improved facilities.
588. Then these improved facilities are absolutely necessary, because there is no doubt that the public are becoming fully alive to the quality of the meat coming by train, and the butchers, in view of that, will only buy the best article? That is to say there is a better demand for a bullock that is prime and fleshy and fat, than for one that is knocked about on the road.
589. Then you say the public have lately been educated and enlightened as to the qualities of meat, and readily appreciate the difference between that brought by rail and that driven by road? Yes.
590. Then, as a matter of fact, cattle driven by the road are not so valuable or so good as those brought by rail? They do not come in so fat, and, consequently, they bring less money.
591. They are knocked about a good deal—tired and footsore? Some drovers bring them in, generally, very well.
592. As a general thing? As a rule, the butchers prefer the trucked cattle, provided they are not knocked about and bruised in the transit, and if there were a better system of trucking that evil would be remedied, and all the difficulties would be met.
593. I will ask you again this question: I think you said that cattle and stock of other descriptions should be conveyed by special trains, that they should not be delayed, that all shunting should be avoided, and that they should be brought at as great a speed as it is reasonably possible to obtain? Quite so. Talking about Homebush, I saw a very risky and dangerous thing occur there last Thursday. In unloading a truck of cattle seven broke away on the railway line, and ran towards Burwood, until some men working at a bridge—repairing it—on the line, blocked them, and turned them back. Then they ran back half a mile beyond the Homebush Station, still on the railway line, and if a special train had been coming along there must have been some serious accident. Fortunately no train came along until the men managed to get the cattle off the line. I have seen something of the same kind before. Nearly fifteen or sixteen animals—two truck loads—might have got on the line. The men working at the bridge, by blocking the cattle stopped them from going right up the line to the Redmyre Station.
594. Then the arrangements for discharging cattle at Homebush are not only defective but highly dangerous? Highly dangerous. I wonder some one has not been killed at Homebush.
595. A whole train might have been brought to grief by this, an accident that could not be foreseen? Yes, I saw it myself, and it might occur next sale-day.
596. It might occur any day? Any day. The yards should be away from Homebush altogether. The railway trucking should be further away from Homebush. When a station is likely to have a moderately-sized passenger traffic the yards should be fully half a mile away.
597. *Mr. Stewart.*] Where there is a passenger station? Yes; whereas now it is so close that it cannot get any closer. The yards are as close up as you can get them, and unsuitable and unsafe in every way.
598. *Chairman.*] All the arrangements in that respect are defective, and the yards should be at least half a mile from the Homebush Station where they are now? Yes.
599. You know the cattle sale-yards at Homebush well? Yes.
600. Do you not think they are very defective for the purpose? I think they are; anyone can see that. They are disgraceful.
601. Are not the cattle seriously affected in all respects by having to stand in such a wretched place? I don't know that it seriously affects them very much, because they are not long there, but it does them no good. At the same time they are up to their knees in mud, which is very much to the prejudice and disadvantage of the owner.
602. *Mr. Stewart.*] Can you tell the cost of driving, say 60 bullocks, from Orange to Sydney, by road? I never knew so small a lot to come by road. They never send less than 120 or 130.
603. Say 100 or 120? The general rule is that they send not less than 180 or 200, and the cost is—but I do not know the cost from Orange. The contracts are made on the station, that the cattle shall be driven to Orange, Bathurst, or Sydney.
604. So you cannot tell the exact cost? You cannot get at it.
605. Do you know the loss on stock travelling from Orange and Bathurst to Sydney by road? It varies and depends on circumstances. Sometimes the animals die from Cumberland, or from pleuro.
606. There is always some loss? Not always; I have known drovers deliver to me without any loss.
607. What does the loss chiefly arise from? Sometimes animals are diseased with pleuro, or Cumberland, or some accident might occur.
608. Or they might get lame? Those are sold on the road, to the road-side public-houses, for instance.
609. You do not know the cost of bringing a similar mob of cattle by rail from Orange? I think it is 12s. per head.
610. What difference is there in the value of the stock when they come to Homebush, between the cattle driven by road and the cattle carried by train—are they equally valuable? They are more valuable by train.
611. You cannot tell to what extent? It depends on the drover; but of all cattle the preference is given to those that come by train. It does not matter how good a drover may bring them by road, they are preferred by train.

G. Maiden, Esq.
15 July, 1870.

- 612. *Chairman.*] They are of more value by train? Yes.
- 613. *Mr. Stewart.*] Then if it is cheaper to send by road rather than by rail, the loss incurred by the additional cost of carrying the stock may be made up by the additional price obtained for the stock? In many cases a great deal more.
- 614. Is that the case with the sheep too? Yes.
- 615. Sheep that travel on the hoof are not worth so much as those carried by rail? No, they waste on the road a great deal even if the drover is ever so good, and in wet weather they lose a good deal. Then the road in dry seasons may be bad for grass; everything is in favour of the train, notwithstanding even the most advantageous way that you can bring them by road.
- 616. And when you send a lot of stock by road you never can tell what day they will arrive at Homebush? Well, you can, but they are very often a sale-day later than it is said they will arrive.
- 617. You cannot be certain of their arriving at Homebush on the day it is expected they will arrive when they leave the station? No.
- 618. Because of the weather and other circumstances? Yes.
- 619. But when they are started by rail you know the hour they will arrive? Yes, particularly if they get express trains for the purpose.
- 620. In most cases a telegram would inform you from Orange as to what cattle were on the rail? Yes.
- 621. But the same information as to stock started on the hoof could not be depended on? No.
- 622. Is that not a matter of some consequence? Yes, but it may not be necessary to meet that market for which we expect them to arrive; you may get a better.
- 623. If you knew that a lot of cattle so shipped were to arrive on Thursday, for instance, and were sure that they would arrive, you might get a better price for them? Yes, if it was not a glutted market.
- 624. They have no slaughtering place at Homebush, I think? No.
- 625. Most of the cattle coming from the interior are sold there? Yes.
- 626. Would it be of any advantage to have a slaughtering place near the sale-yards? Yes, I think it would.
- 627. They all have to go to the slaughtering yards ultimately? Yes.
- 628. And the shorter distance they would have to go the better? The less knocking about they got the better.
- 629. Have you been often at Glebe Island? I have.
- 630. How would it be to have selling yards there? It would do very well, but I think there is not room enough.
- 631. What room do you require? In view of the big business here, which I see is increasing, I should say not less than 30 or 40 acres—receiving and delivering yards.
- 632. Do you know what ground the yards at Homebush occupy? I should say about 2 or 3 acres, but they are not to be mentioned as the style of yards which I am alluding to, and which I hope to see here.
- 633. Do you think it would be a suitable place to have selling yards at Glebe Island, if there was room enough there? Yes, as near the Abattoir as you can get them, as far as that is concerned.
- 634. Have you paid any attention to the quantity of dead meat arriving from the interior? Yes.
- 635. Is that likely to increase in quantity? I think it is.
- 636. If that increases in quantity you would not want much room for selling yards and slaughtering places? They will always require slaughtering places and selling yards.
- 637. For some purposes they would require them to some extent always, but if a large quantity of beef and mutton are sent from the interior there will be less need of slaughtering houses in Sydney? I do not think the mutton will ever be sent in carcasses from the country.
- 638. Why? Because it does not waste so much on the road as cattle.
- 639. It deteriorates to some extent? Yes, but not so much as cattle, and it is a handier article to dispose of.
- 640. Could they carry dead meat from Orange, and Bathurst, and Goulburn in summer? If they had refrigerators they could, but not under the present system. I believe the jolting about which the meat would get in hot weather, without the refrigerators, would cause it to stink; but with refrigerators there is no reason why it should not be killed at Orange, and brought to Sydney.
- 641. Have you seen the sale-yards at Melbourne? Yes, I have sold in them.
- 642. They are most suitable? Yes.
- 643. Not susceptible of any improvement? Hardly.
- 644. They have slaughtering yards alongside of them? About half-a-mile off, or it might be three-quarters.
- 645. *Mr. Bruce.*] You said the railway authorities were very ready to take any suggestion which was offered to them. I think you were appointed by a late Minister of Works —? I did not say the railway authorities but the railway employes, the men who were practically engaged, and saw the defects.
- 646. Then the question is, have these defects been pointed out to the railway authorities or those in charge of the railway for years? Yes.
- 647. Improvements have not been made, though pointed out? They have not, although pointed out and required.
- 648. I think you were appointed once by the Minister for Works to report upon the matter? Yes.
- 649. You then made recommendations with respect to the Wallerawang yards? I did.
- 650. Have they been carried out? No, I see no alteration up to the present time—not the alterations I suggested.
- 651. You said, with respect to the Wagga yards, that they were very good;—do you include the site? No, only the yards.
- 652. With respect to the site, do you think that objectionable? I do; I think it ought to be further away.
- 653. Do you know anything of the access to those yards at Wagga, for the stock? Do you mean coming over the reserve?
- 654. Coming from the main road to the yards, how do you think the stock ought to come? I do not know.
- 655. Do you not think it objectionable that they should come by that narrow road where the coaches go? Highly so.
- 656. And that the stock should have to travel round the houses, past the goods station, to the yards? I think that is objectionable. None of these important trucking places should be erected within half-a-mile of a station, and that is close up to the station.
- 657. How many sites for yards on the Southern and Western Lines do you consider fit? Not one.
- 658. You forget Goulburn? I did not inspect the one at Goulburn.

- G. Maiden, Esq.
15 July, 1879.
659. You did not tell the Chairman what was the extent of waste there would be in stock travelling, say 300 miles to market, or what would be the saving in the waste between stock travelling by the train and those coming by the road? Oh, I should say about a little over 100lbs.
660. *Chairman.*] 100 lbs. weight in each beast? Yes.
661. *Mr. Bruce.*] And that would be the best part of the meat? Yes, the flavour and the fat.
662. Do you know anything as to the Melbourne abattoirs—whether the arrangements there are very good? I am not aware.
663. With respect to the cattle after they leave the sale-yards here what becomes of them? They are driven very recklessly to the different paddocks that the butchers have. I consider that a great deal more care should be taken in the manner in which they drive the cattle to those paddocks. The cattle are put into those paddocks until they are required to be killed.
664. As a rule how long, on an average, is it from the time the cattle leave the sale-yards till they are killed? That is a difficult thing to arrive at; it depends upon the consumption of the butcher who buys. Some butchers buy to keep them from one sale-day to another; some buy sufficient to keep them for two or three days, particularly if cattle are cheap.
665. But, as a rule, the cattle are sent to the paddocks, and kept sometime? Yes.
666. Do you know anything of the paddocks in respect of feed;—is there any feed in them? None whatever. As long as they got plenty of water, and were killed forthwith, it would not matter much; but I do not know whether the water is good—I do not think it is.
667. You think that the dead meat trade is likely to increase? After a while.
668. When the proper appliances are obtained? Yes.
669. What principally prevents it from increasing now? Old establishments, such as glue places, factories, tanneries, and such things, encourage the trade being done at Homebush, because they want the raw materials. The dead-meat trade has to fight against this, besides the want of refrigerators.
670. Is not the fear on the part of the retail butchers of not getting a constant supply from the dead-meat market one of the principal reasons why the dead meat is not better patronized now? Not altogether.
671. If they were certain they could get a constant supply would they not be more ready to buy the dead meat now? Not so long as they can get the meat cheaper in this market—at Homebush—than they can get it from Orange. They will go to the cheapest market.
672. *Chairman.*] Where is meat usually sold wholesale in Sydney? At the Glebe Island.
673. At the Abattoir? Yes.
674. At no other place that you are aware of? Well, Richards is selling thirty or forty carcasses a day at Darling Harbour, and McMinn and Co. are selling a few carcasses—ten or twelve a day.
675. Have you ever considered the subject of a meat-market for the metropolis? I have.
676. Do you not think the establishment of a large meat-market, so constructed in regard to all necessary accommodation, particularly as to the meat being kept in a state of great coolness, and as to the accommodation provided for buyers, not only something that would be of very great advantage to the people of the metropolis, and to all concerned, but an absolute necessity? I think it would be a very great advantage.
677. Do you not think such a meat-market a necessity for an increasing metropolis like Sydney? I think so.
678. Do you not think the public, the consumers, would be more likely to get a better class of meat, and more likely to get what they wanted in such an establishment, than is the case at present? I do; in fact, the greater the facilities you give the public the more it must redound to their advantage, and it certainly is to their advantage to have a meat-market.
679. Then your experience enables you to say emphatically that cattle driven by road are in all respects, whether as regards their value to their owner, or the quality of the meat to the consumer, very much inferior to those brought by rail? As a rule. There are exceptional—very exceptional cases.
680. But as a rule it is so? As a rule it is so.
681. And the subject is so important to the Government as a means of revenue that it deserves their best consideration? Yes.
682. With a view to making every improvement possible to be made in that respect? Yes, they have done so in Victoria, and it is a great success there, and a great source of revenue—more so before they had the stock-tax. Since the tax has been put on there a lot of stock have been driven here, and hence the necessity for us to get these things put in such a way as to expedite our business the same as they have done there.
683. We should have the benefits of free trade as against the evils of protection in Victoria? We should.
684. The advantages would be very great in respect even of cattle? They would.
685. *Mr. Stewart.*] Have you ever seen cattle so wild that they could not be got on board the trucks without being knocked about? I do not care how wild the cattle are if you have proper appliances. But cases have occurred where the cattle have been wild, and knocked about for want of proper appliances.
686. Then with proper appliances the wildest of cattle can be put on board the trucks? Yes. I should like to state that I paid a visit to Glebe Island, and am rather surprised that something more has not been done by Swan's process there. From what he told me, and showed me, I do not see why Glebe Island should not be as sweet as it would be necessary to be if you had to kill in George-street.
687. *Chairman.*] You are well acquainted with Glebe Island? I am, and I went over there and inspected it last week.
688. And you think well of Swan's plan for utilizing the blood? I think that if what he describes is a success the only thing that surprises me is that it has not been carried out before.
689. Then if Swan's statements are correct, it is a matter of surprise to you that his recommendations are not carried out? Yes, they have built a place for the steam-engine there, which is quite unfit, and have given Swan no room at all.
690. But suppose you were made aware that the manufacture of the article cost £2 12s. 6d. a ton, and that it was sold for 2s. 6d. a ton, what would be your opinion then? I am alluding to the desiccating.
691. You are alluding to the avoiding of a nuisance? Yes, not to the disposal of the blood, but to the avoidance of the offal nuisance.
692. Then your remarks only tend to the removal of the nuisance arising from the blood and offal? Yes, I do not allude to what Swan is now doing, because I consider it a waste of the man's time. If all this blood and offal can be disposed of as he says they could, I do not see why the plan should not have a trial.

G. Maiden,
Esq.

15 July, 1879.

693. I suppose you mean the plan that Swan has proposed to the Government, not the one he is carrying on now? Yes.
694. His new proposal? Yes.
695. You think that if Swan's new proposal is carried into effect it will be of great advantage? Yes, and I cannot understand why it has not been put into operation before. I quite understand why the offal is left where it is; you have to go down a large precipice, and then to draw it up.
696. Then you think if Swan's proposals were carried into effect it would be a very great advantage? I do.
697. And you express your surprise at its being delayed so long? I do.
698. I may tell you that the Government have given instructions for the machinery and the utensils necessary for Swan's proposal to be made, and they are in course of being made at Cockatoo Island? I think it should have been done long ago. If Swan can do it on a small scale he could do it on a large scale.
699. But still you confine your remarks to the avoidance of nuisances only, and do not refer to cost or sale? I cannot see why it should not be made reproductive. Swan told me it could be sold for £4 a ton. Even at a loss, if it can be done it should, for the health of the inhabitants, be done. As it is, there must be a loss in taking the blood and offal out to sea. If the trial is a success it should be carried out.
700. The machinery is in course of construction? And there is another matter, the sheep slaughter-houses are most defective, most unsuitable.
701. Then you think the arrangements at Glebe Island for the slaughter of sheep most defective? Most defective.
702. Are they not very filthy? Very filthy, and they have old-fashioned slush lamps, which were used on stations when they could get nothing else forty years ago.
703. Every regard should be shown for cleanliness, for an adequate supply of water, for lighting, and for drainage? Yes, and these mutton slaughter-houses should be knocked two into one, to give the men more room.
704. They should be at least twice their present size? Yes. Then there is another matter: Drays cannot get up to get the sheepskins and offal. I saw a mass of sheepskins thrown on the offal, and all the offal lying there. I was told that it would not be disposed of for an hour, and carts were waiting outside for the offal, not being able to get in to obtain it. It seemed to me such a waste of time to have Government men standing there waiting while the other men were taking the skins away.
705. Then you say the arrangements for sheep slaughtering are most defective? Yes, and incomplete.
706. The drainage is defective; more space is required; there is not room enough for the drays to pass up, and do the work required of them; and altogether the arrangements are too small? Yes. Then the piggeries were in the most filthy state when I went there. They should be removed from there—removed from another portion of the island, or immediately opposite. They were in a fearful state when I went there.
707. You say they are filthy and defective? Yes. Their system of heating the water, and the old-fashioned vats and coppers are such as people are compelled to use on a station when they can get nothing else.
708. Everything is old-fashioned and out of date? Yes. I saw the dining-room where twelve men can go, and accommodation is required for one hundred. The baths cannot be used, and the closets are in a disgraceful state. There ought to be shower-baths.
709. You say the whole arrangements of the island are defective, and want vast improvement? Yes.
710. They want shower-baths for the men? Yes. Then, by the defective and filthy system there, men naturally get into the careless dirty state they are in, whereas, if the proper conveniences were erected for them, there is no reason why they should not be as clean as if they were going out of my office.
711. There is no accommodation for the men to get their meals? Only for twelve men, whereas there are about 100 or 150 on the Island. And this dining-room has very often been used as a store-room, and the men are not allowed to use that part. The butchers came to me, and told me this. The baths are never used, as the bath-room is kept as a store-room.
712. *Mr. Stewart.*] They have got a lot of wash-hand basins there, big enough to wash their fingers in? Yes, but the men are not allowed in there, because the place is used as a store-room. Then they have a telegraph office also in this room. The whole thing is jumbled up altogether. It is a dining-room, a washing-room, a store-room, and a telegraph office. Then the closets, the sheep-yards, and the piggeries, all want thoroughly attending to.
713. *Chairman.*] All are capable of vast improvement? All are as rough as they can be.
714. Are they not a disgrace to a state of civilization? They certainly are. Then there is another matter—the butchers' carts. I see a little attempt has been made to have an improved kind of cart for carrying the meat. Williams and Rennie have got it; but if the whole of the carcase butchers get this kind of cart they will not be able to work them, because there is not sufficient space between the slaughter-houses to allow the carts to stand. As it is now there is barely room enough to allow an ordinary cart to pass, and get into position, and if these long improved carts are used generally they will not be able to get through.
715. Then you say that although there is an effort made to get rid of the present insufficient mode of conveying meat in carts the new mode will be unworkable because there is not room? Yes. There is not space between the cattle and sheep killing yards.
716. *Mr. Stewart.*] It is a mere lane there, not a road? Yes. I took particular notice of this.
717. *Chairman.*] In all these, and many other respects, you consider the Glebe Island arrangements very defective, and capable of very great improvement? Yes, but I consider the position of the Abattoir a very excellent one.
718. What is your opinion as to the position of Glebe Island for its purpose? With a proper system of drainage, and utilization of the offal, there could not be a better.
719. With the defects remedied it might be made a model establishment? Yes, I am quite certain of that. And if the place had been large enough there is no reason why a railway should not be run into it, and the sale-yards be there. Then all the calves and lambs landed in Sydney by sea could be landed there instead of going into the city. But I am afraid the place is hardly large enough for that.
720. Did you pay any attention to the form and construction of the yards, and facilities for drafting, on the Island? I did; there are no facilities for drafting.
721. Those are all defective? Yes; the cattle are all running backwards and forwards; there is no convenience if you want a certain beast for killing. Then the accommodation at the back of the slaughter-

pens

- G. Maiden, Esq.
15 July, 1879.
- pens is most insufficient. There is not room for the offal and the hides. There is no accommodation whatever; the places are too small and cramped.
722. Then those yards require improvement, the slaughtering places require to be increased, the drainage should be perfect, and the floors should be either flagged or of asphalt? Yes; I should think asphalt would do for the floors very nicely. I wish particularly to point out as a very serious thing that the practice of carrying the meat in the present carts wants remedying, and if you are going to get the other carts there is not sufficient room for them.
723. Do you say the present mode of carrying the meat is dirty and filthy—dirty carts and dirty men? Oh yes, it should be stopped.

MONDAY, 21 JULY, 1879.

Present:—

THE HON. GEORGE THORNTON, Esq., M.L.C., CHAIRMAN.

JOHN STEWART, Esq.,

ALEXANDER BRUCE, Esq.

Mr. Joseph Burrell, re-examined:—

- Mr. J. Burrell.
21 July, 1879.
724. *Chairman.*] You gave evidence some time ago before this Board? Yes.
725. And since then have you been subjected to any annoyance arising out of that evidence you then gave? Yes, both myself and my wife.
726. I may as well tell you beforehand that you need not fear any intimidation; the Board and the Government will protect you so long as you do what is honest and right? Yes.
727. You will be protected whilst you do everything honest and fair. As you can suppose, we can want nothing else than to have this inquiry conducted in the interests of the Abattoir, and in the public interest. You say both yourself and your wife have been subjected to some annoyance since you gave evidence before the Board; will you state to the Board what the annoyance has been? Mr. Oatley called me down and read the evidence to me in his office, and he had someone there to witness it.
728. Well, and what did he say? He cross-questioned me about the passing of those cattle which, it was said, Mr. Jager condemned, and Mr. Oatley passed, and I told him that I did not hear him say so, but that I heard it was common rumour right through the slaughter-houses, and that one of the lessees of one particular slaughter-house—I think there are two brothers who have the slaughter-house between them—said so.
729. Well? I happened to go through the slaughter-house, and I said, "Those cattle are not gone yet?" "No," said Steve Tancred, "Mr. Oatley has passed them," and I judged from where they were that they had been passed, for they were right in front of the door.
730. You mean the diseased or very much bruised cattle? Yes.
731. The lessee told you that Mr. Oatley had passed them? Yes, Stephen Tancred told me so.
732. And they were in the place from which the meat was to be taken away? Yes.
733. What sort of annoyance have you or your wife been subjected to? Mr. Oatley was not satisfied with me and the evidence, but he thought it necessary to go down and read it to my wife, telling her that I would have to put up with anything that the Treasurer—
734. Mr. Oatley said what? That I should have to put up with anything in reference to being discharged, if that should come about, I suppose. He did not exactly say that, but that was what was meant.
735. He said that anything that was done by the Treasurer, in consequence of the evidence you gave, you would have to put up with? Yes. I happened to break the small bone of my leg some time ago through there not being sufficient room in which to capsize my cart, and Mr. Oatley, when referring to the evidence I gave recently, upbraided me to my wife with the time that he paid me my wages while I was lying ill with the broken leg.
736. At one time you broke the small bone of your leg, and Mr. Oatley upbraided your wife for your ingratitude, as he had been so kind to you during the time your leg was broken? Yes.
737. In what way was he kind to you? In paying me my wages while I was lying sick.
738. Were you called in and examined by Mr. Oatley the other day? Yes.
739. He asked you several questions? Yes, he badly wanted to know who told me the cattle were passed, but I would not tell him that.
740. Who was present when you were examined by Mr. Oatley? I really do not know, but he is a man that does business for Mr. Turner.
741. Was he in the room with you? Yes.
742. What was he there for? Well, I suppose he was there to witness what I said.
743. Now, have you any cause to withdraw any of the evidence you gave before the Board on a former occasion? No, I have nothing to say with regard to it, except what I mention now.
744. Then all you stated on that occasion was correct, and you now confirm it? Yes, and things have occurred since that.
745. What? Cows calving.
746. Matters have occurred since? Yes.
747. What are those? There was a cow that came into the yards on Thursday morning, and about the time I noticed her she was calving. It was then about ten minutes to 12 o'clock, and all the bullocks were running about and horning the cow.
748. She was put in with the bullocks, although she was calving? Yes.
749. And what was done with the cow? She stopped there until she calved, between 3 and 4 o'clock.
750. Still in the bullock-pen? Yes.
751. And she was kept in the pen with the wild bullocks? Yes; she was not with the wild bullocks at the time she calved, but she had been with them previously. She was put into a top yard, but although she was there she was drafted along with the others.
752. *Mr. Stewart.*] Was she standing or lying? Standing.
753. All the time? I could not say.

754. *Chairman.*] How long was she in that state before and after calving? I could not say.
755. About how long? I could not say, but after her calving I noticed that she was all of a shiver and tremble.
756. Very ill? Yes, all of a shake; and I made mention to one or two persons that if she got a wet night on Thursday night she could not live through it.
757. What became of her? She went out on Saturday morning, but was very weak.
758. And you saw nothing more of her? Nothing more of her.
759. What became of the calf? I do not know what became of the calf, excepting from hearsay.
760. We do not want hearsay. Can you tell us of your own knowledge what became of the calf? I cannot, but I do not know whether Mr. Carroll can.
761. Did you see a cow here on Saturday—a sick cow. Did any cow on Saturday attract your notice? Yes, I think she is in the yard now.
762. What colour is she? I think red and white.
763. What state is she in? She was very low on Saturday afternoon.
764. Very sick you mean? Yes.
765. Is she suffering from distemper, or from fever, or from what? I could not say; she has been groaning, and very sick.
766. Is she there now? Yes.
767. For slaughter? She must be there for slaughter. She is in the calf yard, and I suppose will be slaughtered.
768. Don't you be in the least uneasy about the Treasurer or anyone else taking any measures against you. You are not in the least danger so long as you do what is upright and fair. You will not be disturbed.
769. *Mr. Bruce.*] Did you call Mr. Oatley's attention to this cow;—have you any instructions to call attention to such things? I have no instructions to call the attention of anybody.
770. Do you know whether his attention, or the attention of Mr. Jager, was drawn to the cow? No; I forgot to tell you that Mr. Swan was also told about the passing of the cattle.*

Mr.
J. Burrell.
21 July, 1879.

Constable Carroll re-examined :—

771. *Chairman.*] You were examined some time ago before this Board? Yes.
772. Has anything arisen since to give you any annoyance in consequence of the evidence which you gave? No, nothing that I am aware of.
773. Do you see any reason to change or withdraw any part of the evidence you have given? No.
774. You confirm all you then stated? Yes.
775. What I sent for you for was to ask whether you saw, during the last day or two, a cow calve here? On Thursday evening last I saw a cow drop a calf in one of the cattle-yards. She was then in the upper part of the yard, and there were no other cattle with her. After she dropped the calf I went away, but about noon next day I was round there again, and I then saw the cow in the outer yard, and the yard full of bullocks. The calf was lying down near the fence, and looked nothing but a shivering mass. It was a very small calf, and was lying in the wet and dirt, with the cow standing near. I was surprised to see the cow and the calf there, as I thought they would have been taken out.
776. How long had they been there? I have been told since that the cow came in on Wednesday morning. I saw it on Thursday evening about 4 o'clock. The calf was there for twenty-four hours in the wet yard. On Friday evening, about 4 o'clock, the calf was taken away, and slaughtered in one of the slaughter-houses.
777. What became of the meat? I believe it went to Sydney.
778. For veal? Yes.
779. What became of the cow? The cow was there all Friday, and on Friday night, about 11 o'clock, I saw her lying in the wet yard moaning so badly that it was distressing to hear her.
780. *Mr. Stewart.*] Lying down? Yes, lying down.
781. Did the other cattle trample on her? I did not see them trample on her. At that time there were not many cattle there, as the killing was over, but in the day-time there was a lot of cattle with her.
782. She was lying down on the ground at night? Yes; on Saturday morning, about 7 o'clock, I saw her taken out to the paddocks, in a very weak state, with some bullocks. That was the last I saw of her. I heard Mr. Jager remark, when she went out, that she would not come back alive again, and I heard since from the men that owned her, that she died on the way out, on the road.
783. *Chairman.*] When the cow was in that state did you name the circumstances of the animal to anybody? No; both Mr. Jager and Mr. Oatley saw her in the act of calving; in fact they saw it before I did; they saw her dropping the calf.

Constable
Carroll.
21 July, 1879

Mr. Francis Fagan examined :—

784. *Chairman.*] Are you one of the slaughtermen? Yes.
785. Have you been long on the island? I have been there since 1863.
786. I may as well tell you that you need not be afraid of any evidence that you give here; you can speak out; speak the truth, that is all we want, and no harm will come to you? Well, Schultz has got discharged.
787. We will ask you about that. Have you seen anything, during your career as a slaughterman at the Abattoir, with regard to diseased bullocks being cut up? Dressed?
788. Yes? Yes, I have.
789. Tell us what you have seen? I have seen bullocks with the Cumberland disease, commonly called "blackleg" dressed there, with melts about 3 feet long.
790. With diseased melts over 3 feet long? Yes.

Mr. F. Fagan.
21 July, 1879.

* NOTE (on revision) :—I wish to add that there is a practice, which has been going on for a long time past, of cutting what are called sweetbreads from dead calves taken from cows after they have been killed, and these sweetbreads are sold to the butchers for threepence the pair. I do not know what is done with the calves. There have been a great number of cows killed while in calf. On Sunday last a sow pigged in one of the pens, and the young, as fast as they were born, were eaten by the other pigs.

Mr.
F. Fagan.
21 July, 1879.

791. How often have you seen that? Well, none of it lately, but about two years ago it was very bad.
792. Were there several cases then? Oh dozens. I have seen Mr. Jager tell them not to kill a cow when she came in, and they have killed her, and he has watched them in order to see the carcass dressed, and it has been found to have "blackleg."
793. So he ordered them not to kill the animal, and they persisted in killing it? Yes, and he condemned it.
794. You are only engaged in the cattle slaughtering, not with the slaughtering of the sheep? No, only with the cattle.
795. Do you know what becomes of the carcasses that are condemned? No; I could not rightly tell you; sometimes they are sent away to the boiling down, but I have seen them sent away to the shops. I remember seeing one about ten years ago.
796. You know a man named Charles Schultz? Yes.
797. He was employed at the Abattoir was he not? Yes.
798. Do you know that he gave evidence before this Board? Yes, I saw it in the paper.
799. What has become of Schultz? I heard he was gone to see Mr. Thornton this morning.
800. But what has become of him—has he been dismissed? He was dismissed on Saturday.
801. Do you know what he was dismissed for? I was told that his master told him that the customers would not deal with him while Schultz was there.
802. That the master's customers would not deal with him while he employed Schultz? Yes.
803. Has any other man who gave evidence been dismissed? No, not that I know of.
804. Did you see anything of a beast brought in here last week dead in a cart—brought here about Thursday;—did you cut it up? No. I saw three dead beasts brought in, I think two last week, and one the week before.
805. Three dead beasts were brought in, two last week and one the week before? Yes, one was brought in Lomax's dead-meat cart.
806. Do you know whether that beast died, or was killed? I do not know.
807. You saw it? Yes.
808. Did you see it cut up? No, I only saw it come in.
809. Who would cut up that beast? I do not know, I am sure.
810. But it was skinned and dressed at the Abattoir? It was.
811. The three beasts you speak of were skinned and dressed? Yes.
812. *Mr. Stewart.*] You say you have seen cattle with what is called "blackleg," slaughtered at the Abattoir? Yes, I had my arm poisoned with it.
813. Is "blackleg" the same as Cumberland disease? That is what they call Cumberland disease.
814. The spleen was upwards of a yard long? Yes.
815. Was that beast dressed as if it were to be sold? It was.
816. Could you not tell by looking at it whether it was good or bad meat? Not when it was dressed.
817. It looked so well when it was dressed that you could not tell it from good meat? Yes; some of it looked veiny, not properly bled.
818. Did you see the beast before it was killed? Yes.
819. Had it been long in the yard? No, it was killed the morning it came in. We can pretty well tell any bullock that is very bad, by its eye, which protrudes out of its head, and there is a yellow colour or scum about the lower part of the eye. They generally keep those cattle for the nights. They keep them in the paddocks, and fetch them in on Sunday, and kill them on Sunday nights.
820. *Chairman.*] They generally keep them for slaughter until there is nobody at the Abattoir to see what is going on? Yes.
821. *Mr. Stewart.*] Did you notice this beast while it was alive? Yes.
822. What made you notice it? Well, we generally take notice of the cattle in the yard, and those that have anything wrong with them generally single out themselves.
823. The sick ones do? Yes.
824. But had it any other signs of sickness about it? No.
825. Was it staggering? No.
826. Hanging its head? Yes.
827. Redness about the eye? Dark about the eye, between a red and a yellow.
828. Was it from that beast that you got your arm poisoned? No, from another one.
829. What caused you to think that your arm was poisoned? When I went to stick the beast his flesh was as cold as ice. I had a sore on my arm, and as I put up my hand to stick him I said to my mate—Lockett—that I thought the bullock was crooked. He told me to be careful, and wash my hands and arms, but when I went home I felt a sensation about the arm like pins and needles, and then it commenced to swell very much.
830. What was the colour of it? A redness where the veins go. It swelled up very much, and when I put caustic on, it burst, and a lot of foul matter came out of it.
831. Was the caustic put on before it swelled? Yes, the swelling was about half way up the arm when I put on the caustic, and then it went round the caustic as if it could not pass it, and afterwards burst.
832. How did you know that the beast had Cumberland disease? I saw his melt.
833. Was it very large? Yes.
834. And easily torn? Yes, touch it and it would fall to pieces.
835. Was that beast dressed for meat? It was dressed.
836. Did it look well enough to pass? No, it looked very bad.
837. What was the appearance of it? Blood running out all over it.
838. A dark purple sort of blood? Yes.
839. Was the meat firm? The meat was firm enough because the animal was cold when we dressed it. But if anybody did not know differently they would have thought the bullock had died.
840. The flesh was not flabby? No, hard.
841. Was the beast in good condition? Yes, very good condition.
842. You have no notion how long it had been ill before you saw it? No, I could not tell.
843. Have you ever heard of anybody else getting a poisoned wound in slaughtering? Yes, there was a man who died near the island from it.

Mr.
F. Fagan.
21 July, 1879.

844. Poisoned in slaughtering? No, he used to take the offal away.
845. How do you know he died from the poisoned wound? Well, he had the symptoms of it, and Dr. Kingsbury cut his arm open.
846. But he might have got a poisoned wound from putrid meat? No, he had a sore on his shoulder, and he used his shoulder to shove the bullock into the cart, and got it poisoned in that way.
847. The wound was in the shoulder? Yes, and the poison worked inside, into his lungs.
848. Suppose you had to handle the meat of a beast that had Cumberland disease, and received a wound, what would you do? Get some rum and brandy, and wash my hands in it.
849. Is that all? That is all they generally do.
850. Would it not be worth your while to get some professional opinion as to what you ought to do in a case of that sort? When I was in Queensland at the Long Bank Meat-Preserving Company, there was one bullock that we could not get in, and they went to fetch him in in a cart. I had a sore on my knee, and my trousers getting cut as we were getting the bullock into the cart, I was poisoned, and my leg swelled up very much. Two days after I was taken in to the doctor, and he told me he would not be answerable for my life if I went out of his house. I told him I could not stay there, and he gave me a bottle of medicine, and another little bottle with some stuff that was very thick and black, and with it a brush, and I used to have to paint the leg every three hours. In two days all the swelling was gone out of it. I have got his prescription at home now.
851. When you get any part of your hands or arms poisoned, or when you suspect that they are poisoned, the proper thing to do is to dip them into hot water, bathe them and clean them well, as soon as possible the same day, but the sooner the better; get them thoroughly cleaned in the hot water, and encourage bleeding, and then, after drying them, apply a little lunar caustic, nitrate of silver, to the sore place, putting it into the wound, and dressing it well with it. In ninety-nine cases out of a hundred you will have no further trouble. But to do good it should be done within an hour or two after the poison is introduced. If the poison is allowed to remain for twenty-four hours, or perhaps less, without anything being done, the caustic is not sufficient. The caustic is only good for destroying the poison when it is fresh, and it should be applied as soon as possible. It could easily be carried in a small bottle, and applied to the wound the same day. Tell your mates that.
852. *Chairman.*] You perfectly understand what to do? Yes.
853. *Mr. Stewart.*] I have bathed my own hands, after they have been poisoned, scores of times, but no bad consequences ever followed the adoption of the method I have described to you. I examined all the Cumberland diseased cattle when they first appeared here, and dissected their bodies, and was repeatedly wounded, but never had the slightest annoyance from the wounds, so the remedy has been thoroughly well tried.
854. *Mr. Bruce.*] Are the yards for putting the cattle into the killing houses handy? Yes, they are handy enough; I have never seen any trouble with them.
855. Do you kill by contract for others? I kill weekly.
856. For whom? Davis and Turner.
857. But the yards where they require to pick out particular beasts to kill, are they handy? Yes, I find them so.
858. Would it not be better to have the yards contracted, so as to be able to draft out a particular beast that you want? We never have much drafting out; it is those men that kill for the little butchers that have. We generally kill them as they run in.
859. But in killing them you have frequently to put the same cattle in twice or three times before you get at the right ones? Yes, or as many as ten times in a day.
860. Is not that bad for the cattle, and does it not cause a loss of time? Yes, a great loss of time.
861. Suppose you could draft two ways, letting what is wanted to be killed go one way and the others not wanted another way? That would be handy.
862. Is it absolutely necessary to use the boat-hook? Yes.
863. Could you not draft the cattle with middling-sized sticks, if there were man-holes in the corners of the fence for you to get away from the animals? Yes, you could draft them that way, but you would knock them about more with the sticks. You would job a bullock with the stick under the tail, and the stick would go right up.
864. But why job them under the tail? The owner will not let you touch them anywhere else, because if you job them anywhere else there is a bruise left on the meat, and the customers find fault with that.
865. You think it would not be possible, with conveniences for the safety of the men, to yard without a heavy boat-hook? It would be possible, but it would be awkward, and would cause you to lose more time.
866. *Chairman.*] You said something as to diseased cattle being put back until Sunday night? Yes.
867. Do you mean that they are kept back so as to avoid inspection? Yes. If there are any that the drover has any doubt about he keeps them back.
868. Then you state that these diseased animals are killed on Sunday nights? Mostly, any that they have any doubts about.
869. What inspection is there on Sunday nights then? None at all. We go at half-past 1 or 2 o'clock, and we see nobody there but the man who opens the gate, and we do not see anybody till Mr. Jager comes at 6 o'clock.
870. Meantime the bullocks have been killed and dressed? Yes, and taken out, and cut up in the shops, by that time.
871. Before the assistant-inspector comes? Yes.
872. I think that you have already stated that you have been several times engaged in skinning diseased animals? Yes.
873. You have to do as you are ordered? Yes, either have to do it or leave.
874. Either have to do it or leave your employment? Yes. There is a man named William O'Brien, who has lost one of his fingers by this disease.
875. *Mr. Stewart.*] Is the finger cut off? No, he has lost the use of it.

Mr.

Mr. William Lockett examined :—

- Mr. W. Lockett.
21 July, 1879.
876. *Chairman.*] You are a slaughterman in the beef slaughter-houses? Yes.
877. How long have you been at the Abattoir? Just over eight years.
878. Have you, in the performance of your duty, ever been called upon to skin and dress diseased bullocks? Not on the island, not diseased cattle. Do you mean cattle suffering from Cumberland disease?
879. From any disease? I have seen cattle slightly affected with pleuro, in the early stages of it.
880. And they have been skinned and dressed at the Abattoir? Yes.
881. Have you assisted in skinning and dressing those? Yes.
882. What becomes of the cattle you say are slightly affected with pleuro? They go into the market. That meat is not injurious.
883. When only slightly affected with pleuro you consider the disease does not affect the meat? I consider the meat is perfectly healthy.
884. You say the meat is sent into the market slightly diseased, but you do not consider it as unfit for food? No. I consider a bullock in the last stages of pleuro unfit for food, but I have seen Mr. Oatley cut them down.
885. Have you ever suffered from the effects of skinning them? No, never. There is no fear of a man suffering from a bullock that has pleuro, as it is a lung disease.
886. Have you ever seen any cattle at the Abattoir with Cumberland? Yes, but not of late.
887. Any on the island? Oh yes, but not of late years.
888. They have been slaughtered and dressed? Yes, for the pots. I think as far back as 1852 the cattle were very bad with the Cumberland disease, but I have seen no case of Cumberland of late years.
889. I understand you can tell us something about the trucking of cattle;—what can you tell us? I think that the bullocks should be divided in the trucks by something to prevent the animals from falling. Each bullock should be divided by a piece of timber, and should stand in a sort of stall which would prevent the animal from falling.
890. Do you know a man named Charles Schultz? Yes, he is my brother-in-law.
891. Do you know that he gave evidence before this Board? Yes, I think he was the first butcher examined.
892. What has become of him? He is doing nothing. He gave evidence, and consequently was discharged.
893. Who discharged him? Some of the retail butchers told the person he was working for that they would not patronize him while Schultz was in his employ.
894. Some retail butchers told his employer that while Schultz was employed they would not buy from him? Yes.
895. And he either had to lose his connection or discharge Schultz? Yes.
896. Then Schultz has lost his situation in consequence of giving evidence before this Board? That is it, sir.
897. *Mr. Stewart.*] Was he employed by several butchers? No, he was employed by Mr. Macnamara.
898. How do you know that Macnamara discharged him in consequence of what you say? He told him he could not keep him in his service in consequence of that.
899. Did you hear him tell Schultz? No, but Schultz told me when he came home.
900. Did they accuse him of telling an untruth? They could not do that sir. That man was discharged for telling the truth. They are stubborn facts, is the truth, at times.
901. Then Macnamara did not want this truth to be known? Macnamara did not want to lose his connection.
902. With reference to those cattle slaughtered having pleuro-pneumonia, does the meat not look inferior, or does it appear as prime meat? When only slightly affected it makes no difference in the appearance of the meat.
903. If sufficiently bled, and if it bleeds well? Yes, different from the Cumberland disease. That bleeds badly; the blood comes from that meat almost the same as coal-tar, so black.
904. So you could not dress a body with Cumberland disease so as to make it wholesome meat? No, impossible.
905. Not even in the early stages of the disease—in the commencement of it? I have never noticed them in that stage.
906. Did you ever have to skin a beast after having been thoroughly bled, or bled as well as it could be; suppose a beast with Cumberland were killed, and you bled him as well as possible, have you ever taken the skin off him? Not on the island; I have killed them up the road for the pots.
907. Then you know the appearance of the flesh after bleeding? Oh yes, as black as your boot.
908. And it would not pass for sound meat? No.

Mr. Henry Brisbane Swan re-examined :—

- Mr. H. B. Swan.
21 July, 1879.
909. *Chairman.*] You were examined before the Board some time ago? Yes.
910. Do you see any cause to vary the evidence you then gave, or do you confirm it? I confirm my evidence, and I could go a deal further.
911. Has anything arisen with anybody on the island in consequence of the evidence you gave, or the part you took? I have not heard anything on my part, but I have heard that the other men have been threatened.
912. Tell us of your own knowledge what you have heard of threatenings? I have been told by a gentleman on the island, confidentially, that a man who gave evidence had been dismissed the first chance that was got.
913. Who was the man that was dismissed? Schultz was one, and the Government men were to be the others.
914. Who were the Government men? Burrell was one. In fact the Government men stated that what
915. knew they ought to have kept to themselves, that they ought not to have given evidence. they Because it was understood they would be discharged the first chance? Yes.
916. Who made that statement to you? It was a gentleman whose name I would not like to mention.
917. You must mention his name? But if I mentioned his name he might back out in giving the evidence, and I only want to say what I can prove.
918. I only want the information of your own knowledge; you did not hear anybody make those threatenings? Not the officials themselves, but I got it from the men themselves that they had been cross-questioned on the evidence which they had given before the Board.

Mr. H. B.
Swan.

21 July, 1879.

919. Then these men told you after being cross-questioned by whom? By Mr. Oatley.
920. Where were they examined by him? In his office.
921. What did those men say? They said they would stand to the truth, that it was quite correct what they had said.
922. What did Mr. Oatley say to them? One man is going to leave the Abattoir, principally through this. He has got another situation, and his principal reason for going away is, that unless he took this situation he might be dismissed before getting another. The men might give far better evidence themselves on this point.
923. Are you still going on with the desiccation of the blood? Coagulating better than one half of it. There are only about 28 tons in the whole Abattoir.
924. You are still continuing on the same principle as before? Yes. I saw in the *Echo* it was represented that the cost of coagulating this blood was £2 17s. a ton; that is altogether incorrect. It does not cost 19s. 6d. a ton. It was stated also that we have it on the rocks there drying, but it is not so; we send it away to the gardeners, and there is such a demand for it that they cannot get enough of it.
925. You deny the statement in the *Echo*, and you say it costs only 19s. 6d.? Yes, it never costs more than £1, but they reckon in the cost they mention the whole cost of the place, and it is represented also that the blood and offal go outside the heads at 1s. a ton. That I deny, for it costs quite £1,000 for the working of the punt.
926. What date was that *Echo*? About ten days back.
927. Is the nuisance arising from the drying of the blood exceptional? It is through the wet weather.
928. And unavoidable? It is unavoidable. I have no sheds. I applied to the Treasurer four or five months back, stating that I had no sheds to work in, and Mr. Oatley had written to the Treasurer stating that I had. I always report through Mr. Oatley, and he delayed my letter; and during the time it was with him, run up a bit of a Hobart Town paling shed, and then reported that I had sheds.
929. Do you know what progress is being made with the machinery? Yes, it is going on now. Part of it is on the ground now. The engineer reckons that he will have it all done in about three weeks.
930. You expect that you will have the blood-drying machinery ready for work in about three weeks? It is only part of the machinery, to make the experiment. They have been very doubtful as to the success of the experiment, and this part of the machinery is to prove it.
931. The machinery will not then be complete? No, only sufficient to show what I can do.
932. *Mr. Stewart.*] The machinery that is being got ready now is only as an experiment? Yes, but it is part of the whole plant.
933. How much blood will this machinery deal with? With all, but not to dry it all. Another boiler will have to be added, and a couple of drying pans; then we think that with this all the offal can be dealt with for years to come.
934. Then suppose this experiment turns out as you expect, you will require additional machinery? Yes. There will have to be another boiler to supply steam. The boiler is already on the island, and only wants shifting.
935. I think you said you could guarantee the Government a certain price per ton for this dried blood;—how much was it? £4.
936. How do you mean to guarantee it? A gentleman has promised me that if I can get it he will take it for growing sugar-cane in the North.
937. Who was it made that offer? Mr. Boyd made the offer to me verbally.
938. But suppose the Government cannot sell this prepared manure, what is to be done with it? I do not think there is any doubt about selling it.
939. But suppose the Government cannot sell it? Then they will have to ship it to the Mauritius, to pay expenses.
940. Suppose it does not pay expenses? I should think it would. Mr. Elliott has taken away a lot of the offal, and mixed it with chemicals.
941. But if the Government cannot sell it, it will have to be shipped? Yes.
942. And, in the meantime, one shipment will be accumulating after another? Yes.
943. At what rate will it accumulate? At about 9 tons per week, or 36 tons per month.
944. Then if the Government cannot sell it, they will have to ship it at the rate of 9 tons per week? Yes.
945. And if they cannot ship it they will have to provide stores for it? Yes, we have no place to store it in now.
946. *Chairman.*] To justify your statement about the cost being 19s. 6d. a ton, the Board require you to send in a detailed statement showing how this cost of 19s. 6d. a ton is made up? Very well.
947. *Mr. Bruce.*] You say it costs more than 1s. a ton to convey the blood and the offal in the punt outside the Heads? It costs over £1,000 a year.
948. How much a ton? About 1s. 4d. a ton.
949. Will the plant now being prepared deal with both offal and blood? With all the offal and refuse at the Abattoir, but it will not dry it all, so that we shall still have to allow a lot of it to go away as now at 2s. 6d. a ton, until the other boiler is added to the plant.
950. You are speaking of the blood now, but your plant is so far ready that in three weeks you will be able to deal with the blood and offal? Yes.
951. And then we will be in a position to say whether you can deal with the whole of it? Yes.
952. *Chairman.*] Do you know anything about dead pigs recently at the Abattoir;—can you state anything to the Board in reference to dead pigs? I have seen dead pigs at the Abattoir; it is my duty to remove them.
953. What have you seen in reference to them? I have seen dead pigs there—pigs that have died in the yards a natural death—and dressed. There was one about four or five weeks back that was hanging on the hook, and that men were busy scraping down. The Inspector and I came in at the time, and he had some doubts about the pig, and wanted to know about the colour of it. He was told that it was scalded on the steam-boat, and that that was why it was black when lying on the ground. I made some remarks about it, and was jacketed the next day by other butchers for not knowing the difference between a pig that had died and one that was killed. I was told the next day that the pig had died and was passed.
954. You have seen pigs that have died a natural death scalded, and dressed, and then sent away for consumption? If I go into statements of that kind I shall render myself liable to dismissal.
955. Have you seen it? Yes I have seen it. I have seen a pig that had died, and when dressed and cut open the stench was so abominable that it had to go amongst the offal, and I had to remove it. It was dragged in to be dressed in order to go and be rendered down for tallow. 956.

- Mr. H. B. Swan.
21 July, 1879.
956. *Mr. Bruce.*] How will the offal and blood be conveyed to your desiccator? By a horse and cart. I should like to state something about the cleanliness of the establishment. It has been represented that the Abattoir has been cleaned up by Mr. Gilchrist and others, whereas I am here at all hours to do this, and am responsible for the cleanliness of the establishment. I have to stop here on Saturday night, and they knock off at 1 o'clock, and claim the credit of cleaning the establishment. There should be one man appointed to look after all the men. After I get this blood matter into working order I intend to resign, if things are not changed, because I do not like the place at all. Gilchrist looks after three men, and I after seven or eight. They should be under one man responsible for the cleaning of the place, and the Inspector should look after the inspection of the stock.
957. Have you an opportunity of getting at the weight of the different organs or parts of an animal? Yes.
958. Will you send in a statement, showing this, to the secretary? Yes.

Mr. Frederick Oatley re-examined :—

- Mr. F. Oatley.
21 July, 1879.
959. *Chairman.*] I noticed a letter from you in one of the newspapers, contradicting the statement made in an anonymous communication, published a few days previously, in reference to the carting of a dead beast to the Abattoir? Yes.
960. You had noticed the statement in the letter signed "Eye-witness?" I saw it.
961. And you contradicted it in your letter to the *Herald*? I did.
962. With regard to that beast, it was brought to the Abattoir dead in a cart? Yes.
963. Had it died, or had it been killed? Slaughtered.
964. Where? At Homebush.
965. And was brought to the Abattoir to be skinned and dressed? Yes.
966. Was the meat of the beast perfectly wholesome? It was very much bruised. It appeared to be a beast that had come by the train, and, I am informed, was driven over to the sale-yards, and sold for what it would bring.
967. It was slaughtered at Homebush, and brought to the Abattoir, and skinned and dressed? Yes.
968. What became of the meat? It was condemned, and I saw it cut up, and thrown down by the offal on the floor.
969. What do you mean by cut up? All in pieces; independent of the disfigurement it had received at our hands.
970. When animals that are unfit for human food, from any cause whatever, are scarified at the Abattoir, cut up, and taken away, you have no positive knowledge of what becomes of the meat? No; it is so disfigured that it could not be sold to any butcher for food, and persons could be criminally prosecuted for attempting to dispose of such meat.
971. Have you ever taken steps to ascertain what becomes of the meat? No.
972. What prevents it from being chopped up for sausage-meat? There is nothing to prevent it, if they choose so to do.
973. What I wanted to ask you most particularly to-day was as to a cow which it has been stated calved on the island in one of the pens? I saw it calve.
974. You saw the cow calve? Yes.
975. How long was the cow allowed to remain in the place where she calved? Well, I think the prescribed time, 48 hours.
976. She must have remained with her calf 48 hours? No, they were only together about 16 hours.
977. Do you not think it would have been more correct under the circumstances to have the cow removed? Yes. I went to the owner, and requested him to remove her and the calf as soon as possible.
978. Had you no power to compel him? I have no power to do that. The power we have is not to allow an animal to remain after 48 hours.
979. You have no power until after 48 hours have expired? No.
980. The cow and the calf were allowed to remain that time? The cow remained about 48 hours, and the calf 16.
981. Were there other cattle with them? Yes, but not until the following day.
982. Wild cattle intended for slaughter? The cattle usually brought down, intended for slaughter. I may also say that I called the owner's attention to that fact.
983. But you had no power to remedy that? None.
984. Do you happen to know whether the cow or calf was injured in any way by these cattle? I should think they were sure to be knocked about.
985. Do you happen to know what became of the calf? No. I think I told you that my instructions were to send the cow and calf away as soon as possible.
986. No, you did not say so? I should have said so.
987. You now say you had instructions to send the cow and calf away as soon as possible? No, I gave instructions.
988. That has a totally different meaning; you gave instructions to the owner, personally, to have the cow and calf removed? Yes, and further instructed my assistant to see that my orders were carried out.
989. But the owner failed to do so? I saw him again on the following morning, and asked why he did not send them away. He said there were no cattle taken out that morning, and it would be dangerous to send the cow alone and wild on the road; and she had therefore to remain until Saturday morning. That being within the prescribed time I could not insist upon the cow going before.
990. What became of the cow? I have not heard, except from what I saw in the papers.*
991. However she was taken away from the Abattoir? Yes, on Saturday morning.
992. Do you know anything of a cow now on the island, or that has been on the island within the last day or so, in a state of poverty or sickness? I know of a poor cow brought in on Saturday by Mr. William O'Connor.

993.

*NOTE (on revision) :—Since this evidence I have learnt that the cow was driven to Delaney's boiling-down establishment, on the Bullock Road, and there slaughtered and boiled down.

993. What is she suffering from? I did not notice any sickness about her. She is poor, and in low condition.

994. Not fit for beef? I should not like to eat the meat. It is some old dairy cow brought from Sydney, and is very poor—seems to have been starved.

995. Have you no power to interfere with the slaughter of animals in that state of poverty? No. I may tell you I spoke to the Health Officer, Dr. Dansey, on that subject, whether a poor beast having its lungs and other parts healthy is unfit for food in consequence of its poverty, and he said decidedly not.

996. My object in asking you the question was to ascertain whether you had any power or not to prevent the slaughter of animals in that condition? I have not.

997. *Mr. Bruce.*] In your account of the animals killed at the Abattoir you make no distinction between lambs and sheep? They are all put down as one, because we charge the same for lambs as for sheep. We never kept a proper account of the lambs as distinct from sheep.

998. *Chairman.*] You do not distinguish them? No. In the return I gave you lambs were included with the number of sheep. They are all charged at the rate of 1½d. per head, and are entered as sheep.

999. *Mr. Bruce.*] Can you tell us the different Acts under which you perform your duties as Inspector? There is the Abattoir Act; then there is another Act for the prevention of the sale of diseased meat—14 Vic. No. 36. But really the power we have at the Abattoir is taken from the Abattoir Act and the regulations.

1000. The Abattoir Act and the Cattle Slaughtering Act? Yes; the power is given under the Abattoir Act to make certain regulations for the management of the establishment.

1001. Only those two Acts? Those two—or I might say we are confined solely to the regulations made under the Act.

1002. Can you give the Board any information as to the boiling-down places at the head of the bay, near Glebe Island? Yes.

1003. Have you smelt any nuisance coming from them? Yes, very strong, and at times the policeman on the Island has had to shut his windows to exclude the smell coming from the works on the creek beyond the Island.

1004. Is there not a candle-making establishment also up there? Yes, all those works have a bad smell.

1005. *Chairman.*] That is a matter for the police to attend to. That is all, Mr. Oatley? Did you want to speak to me of anything in reference to my statement concerning the two men?

1006. No, not now; we may ask you something upon that subject at another time? What I was going to observe is —

1007. I think you had better not; it is no part of our proceedings to-day, and it may be necessary to call you again, and ask you in reference to this, and perhaps other matters arising out of it? I am anxious that it should not go to the world that I passed that which Mr. Jager condemned. I want that sifted to the bottom.

1008. The Board will give you an opportunity of speaking upon that, but not now? I am anxious about that, and hope you will not lose sight of it, as I do not want that stigma to rest upon me. With regard to the calf alluded to I have been told by the policeman it was slaughtered late on Friday afternoon, but I have never been so informed by my officers. If it has been slaughtered it is without my knowledge, and I would have condemned it had it been reported to me, but the knowledge of it has been kept from me.

1009. *Mr. Bruce.*] Do you give instructions to the men moving about to let you know anything that has occurred? Yes.

1010. Have they all had special instructions to report to you about cows calving, and so on, in every case? Yes, special instructions; I think I have been kept in the dark in a manner which at some future time I shall have to complain of. A thing occurs here, and the *Herald* obtains the information before I do.

Mr. Joseph Jager re-examined:—

1011. *Chairman.*] You may have noticed a letter in the *Herald*, signed "Eye-witness," in reference to a dead bullock brought to the Abattoir? I did.

1012. Do you know anything about that bullock? I do. It came in about the time specified in Mr. Oatley's letter. I was late at the Abattoir that morning, and it must have been nearly 9 o'clock. I was finishing breakfast when a message came from Creasy, saying his father had a beast in a cart, and would I like to see it. The beast was then in the slings; of course it was bruised.

1013. The beast was very much bruised? Oh, yes; but a magnificent animal.

1014. But very much bruised? Oh, beyond all —

1015. And what became of the carcass? It went to the boiling-down. I sent Mr. Oatley to it at once, and he scarified it.

1016. But you do not know what became of it? Oh, it went to the pots. There need be no reason to doubt that. The quantity of fat from the animal was, I understand, 350 lbs. I did not scarify him.

1017. *Mr. Stewart.*] Do you know why they slaughtered the animal outside? He was lame, and unable to walk.

1018. *Chairman.*] Was he killed outside? Yes, to get him into the cart.

1019. Did you notice anything of a poverty-stricken cow on the Island during the last day or so? Yes, she went out on Saturday morning.

1020. She was driven away? Yes, to the paddocks.

1021. Then she has not been slaughtered here? No.

1022. Suppose it was intended to slaughter such a miserable object, have you any power to interfere? No, not that I am aware of.

1023. I am alluding to a poor yellow-coloured cow that has been at the Abattoir within the last day or two, belonging to William O'Connor? Oh, she is in the yard now, and going to be slaughtered for the boiling-down. I though you were alluding to a cow that went out on Saturday morning.

1024. There is a miserable cow in one of the Abattoir-yards now? Yes, an old miserable cow.

1025. Very poor? Wretchedly poor.

1026. She is intended for slaughter? To be killed, and sent out to the boiling-down.

1027. What is the use of sending a wretched animal like that to the boiling-down? The person for whom she is intended is a manure manufacturer, and she is intended for use in that direction.

1028. That is, as far as you know? Yes. She is not slaughtered yet; but that is their intention.

1029.

Mr.
F. Oatley.
21 July, 1879.

Mr.
J. Jager.
21 July, 1879.

Mr.
J. Jager.
21 July, 1879.

1029. But for all you know the meat may go into consumption for sausages? Oh, it may, for anything we know, unless we have some means of dealing with it.

1030. You have no means of preventing it from being used in that way, or authority over it after it leaves the Island? No authority.

1031. You want to make some statement, do you not, in reference to your former evidence? Yes; it is in connection with my statement with reference to cattle that were condemned by me going into the city for consumption. The same afternoon of the day on which this transaction took place, I ventured to say to Mr. Oatley, "That was a great mistake allowing those cattle to pass, and, in consequence of what has occurred, I shall never again put a knife upon a beast however it may deserve condemnation, but I will take the necessary steps to detain it for your inspection, and leave the whole of the responsibility with you." He said, "Perhaps it would be best;" and I left it at that. On the following day the engineer alluded to the affair of the previous day.

1032. Who is the engineer? Gilchrist. He said to me, "What I find fault with Mr. Oatley for is that he don't support his officer." "Provided," I said, "that his officer was in the right." There is a person on the Island now that I spoke of—Levy. When he, and another person who was a lessee at that time, came to pay me their fees, knowing the commotion there was about threatening to sue me, he said, "Mr. Jager, you did perfectly right in what you have done, and if they bring you up for the value of that beast, you call upon me—I will let them know what it was;" and the other individual, without consultation on my part, voluntarily introduced the subject, and said, "They talk of suing you! You call on me." I never spoke of the subject to any person connected with the establishment, whether employes or anyone else, until the latter end of last week. I heard there were rumours that it was going to be proved that those cattle went to the pots, and I said to Levy, "Did you hear of that rumour about attempting to prove that those animals went to the boiling-down?" "I could take my dying oath," he said, "that I believe I saw some of it in Pigott's shop. I saw the scarification of it."* Pigott was the owner of the meat. There is some little confusion, I think, in my printed evidence about the number of quarters that went in. There were a body, and the two hind quarters of the animal, which I believe died from injuries before being meddled with and was dead when they put it into the cart; the third body which I left for Mr. Oatley's discretion was gone, and I had but two to show to him. When I walked in I said, "Why, it is gone!"

1033. Well? I have nothing further to say about that.

1034. Have you about anything else? You were alluding to some cow with a calf.

1035. Did you see that cow with the calf in the pen? I did.

1036. The cow calved in the pen? She did. Taking a walk round, as I do, to look at the cattle, I saw this cow in the act of calving. I sent at once for Mr. Oatley, and we both went to the pen, and the cow calved while I was there.

1037. Was she alone, or with other cattle? Alone when she calved, I think. Mr. Oatley went into the slaughter-house, and asked the men what they purposed doing with that cow. I think the owner, Mr. Harpur, was there. "If you kill her," Mr. Oatley said, "I shall condemn her." So they said they were about to send her out.

1038. How long was she there with her calf? She remained there till she went out on Saturday morning.

1039. When did you first see her? On Thursday evening.

1040. And she was taken away on Saturday morning? Yes.

1041. Do you know what became of the cow? She passed out of the gate to go to the paddocks.

1042. In what state? In a poor, wretched state.

1043. Was she sick? She was in that state that I said, "She will never come in again alive." I have had some experience in cattle. I have been overland with cattle, and I could judge the condition of this animal.

1044. She was in that state of sickness that you remarked she would never come in again alive? Yes; in that state from starvation and calving—in fact, perished.

1045. Were other cattle allowed to be with the cow and calf in the pen? I saw no more after what I have stated.

1046. The cow did not come back? No.

1047. Do you know what became of the calf? That I cannot tell you.

1048. Mr. Bruce.] Did you ever see the cattle in the yards get hay? Yes; all cattle that are left there on the Saturday—it being found not convenient to take them out, and the owners not being allowed to take them out after 8 or 9 o'clock—have food left with them. I see all the cattle in the yard, and notify everyone of them.

1049. Do the cattle eat the food? They do—lucerne hay; and I have seen chaff and corn put in.

1050. If they get any food at all the cattle will eat it? If the food is good. They seem to prefer lucerne to the oaten hay.

1051. Supposing there were a place made on the island for shipping cattle from, so that they could be taken to the Californian or other steamers, where ought it to be? Down near the old punt wharf, which is admirably situated for such a thing.

THURSDAY, 24 JULY, 1879.

Present:—

THE HON. GEORGE THORNTON, Esq., M.L.C., CHAIRMAN.

JOHN STEWART, Esq., | ALEXANDER BRUCE, Esq.

Alexander B. Farquhar, Esq., examined:—

A. B.
Farquhar,
Esq.
24 July, 1879.

1052. Chairman.] You are the managing partner of the firm of Mort & Company? Manager of the Fresh Food and Ice Company.

1053. I suppose you are aware of the nature of this Board, and the purpose for which it is created? I am not aware of what it is created for. I have seen the reports in the paper.

1054.

* NOTE (on revision):—Mr. Levy added, "Only you know a man would not like to swear positively."

A. B.
Parquhar,
Esq.

21 July, 1879.

1054. This is an inquiry into the management of Glebe Island, and all matters in connection with the slaughtering of animals for food, the production of wholesome food for the consumption of the people of the colony, and all matters in connection therewith. With that view we have sought your valuable help in one essential part of our inquiry, namely the icing or cooling part of the business; and I think you are in a position to give us some information upon that head, are you not? Yes, I think I shall be able to do so if I know the direction in which it is required.

1055. In the first place the Board contemplate recommending to the Government the formation of a wholesale meat-market in Sydney, in a suitable locality, for the purpose of receiving meat, keeping it in a cold state, and selling it to the trade and consumers in Sydney. Another recommendation of the Board will be that the Government should provide the refrigerated cars necessary to bring carcasses of meat from inland to this meat-market, and it is upon the subject of refrigerated cars that we wish to ask your opinion and advice, as well as upon the subject of obtaining the necessary cold atmosphere for a meat-market, and upon matters generally in connection with the subjects I have named? May I ask where you propose killing?

1056. From our view of the matter there will be no fixed place for killing. The carcasses of meat will be brought from inland, from various places, south and west, all along the line, wherever people choose to kill them,—as far as the railways go; for instance, from Wagga Wagga, and beyond that, if possible, and from Orange, Bathurst—all the western and southern districts as far as the railways penetrate. The railway authorities would meet this by bringing the carcasses from the various places along the line? My idea in asking you where you proposed slaughtering was in this view: Wherever you have your meat market in Sydney, or your cold room for storing the meat, it is necessary that you should have cold at your slaughtering place; it is more necessary there than at the terminal point. If you want to bring meat from the interior, that is from Orange, Dubbo, Yass, and those long distances, you must cool your meat where it is slaughtered, and not bring it to Sydney and cool it.

1057. You mean that the meat must first be set by cold? Yes, sufficient cold to set the meat thoroughly—that is, to stiffen it—before you attempt to travel it. That is the first consideration. The secondary consideration of a *dépot* is of no importance compared with that.

1058. Then the first great thing to achieve would be to slaughter the meat in a place where it could be set by a cold atmosphere? Yes.

1059. And that is absolutely necessary? Absolutely necessary.

1060. In ensuring success to such a scheme that first course is absolutely necessary? No doubt. You have now ocular demonstration of the fact in this cold weather. When meat is killed at Orange, or anywhere else, where the normal temperature is sufficient to stiffen and harden it before it is travelled, you may send it to Sydney and keep it a week. I have Orange killed beef that I have kept hanging in the normal state of the weather ten days after it arrived in Sydney.

1061. And is it not a fact that meat improves in flavour and quality by being kept in that cold state? No.

1062. I mean to say meat for consumption? Meat for consumption cannot improve in quality so long as it is kept from decomposition. Why meat is better kept a few days is because it has slightly decomposed, or has progressed towards decomposition to a certain extent.

1063. Decomposition has set in? Progress towards decomposition has set in. That is why you hang up your joint of mutton or venison for a certain number of days until it becomes tender. That is nothing more than decomposition.

1064. *Mr. Stewart.*] It is the first stage towards decomposition? Yes, it is the progress of decomposition. If you kill a bullock and freeze it instantly, and keep it frozen for ten days if you like, the meat will not have changed. It will have the same consistency, the same toughness of fibre, less a small proportion of the fluids that have been evaporated by refrigeration.

1065. *Chairman.*] You say it would be absolutely necessary first to set the meat by cold appliances;—could not that setting be obtained by putting the meat into refrigerated cars at the place where it was slaughtered? Not unless the cars were very large and there was a very large consumption of ice.

1066. Assuming that the cars are made for the purpose—for instance, there are such cars in use in America, where it is most successfully carried on—we have evidence of that; assuming that we had such cars, do you not think the necessary coolness could be obtained in them? To a certain degree it could, but at a much greater expense.

1067. But would it not overcome the great difficulty you speak of as to the necessity of setting the meat before it is brought to market? No, I do not think it would set the meat sufficiently in our summer weather, and it would be a more expensive arrangement setting the meat in the cars than setting it in a refrigerated room where it was slaughtered.

1068. It is your advice we want, and we shall be glad to have the benefit of it? You would have to carry not only the weight of the meat in the car but also the weight of the ice. That weight of ice must be proportioned to the number of degrees that you have to reduce the temperature of the beef or meat to the temperature at which it will set, which we will say is 40° or 45°. From 40° to 50° is the temperature which will stiffen meat. Then you will have to reduce the meat from 80° or 90° to 50° we will say. That must be done by the action of ice in your refrigerated car. It is a question of how many degrees you have to reduce so many pounds of meat to, to know how many pounds of ice are necessary.

1069. It is a mere matter of calculation—a simple rule of three? Exactly. You have to manufacture your ice we will say in Sydney, to send it away in the cars, losing its cold and its weight on the journey. You may say that it is cooling the car all the time. So it is, but you have extra weight to haul, and you must put enough ice in to bring back the meat on the return journey. We will say, for instance, that a car holds 20 or 10 bodies of meat at a temperature of 85° or 90°, or the normal temperature of the atmosphere. You would require to provide a sufficient quantity of ice to send to the slaughtering place to keep the meat cool on its journey to Sydney; whereas, if you had the cold appliances at the slaughtering place, the cooling could be done there without making ice, and the meat, once stiffened, could be carried in the cars without any ice at all.

1070. Without using ice? You would not require ice in the cars, and they would be lighter to haul and less difficult to handle.

1071. Then do I understand you to say that if the meat were set where it was slaughtered it could be carried in the cars without ice appliances? Yes, any distance you would have to carry it, say from Young or Dubbo.

1072. *Mr. Stewart.*] In ordinary meat vans? No.

1073. Vans constructed for the purpose? Yes.

1074.

A. B.
Farguhar,
Esq.
21 July, 1879.

1074. With double sides? Yes.
1075. *Chairman.*] During all seasons of the year? In the winter months.
1076. Could the plan you have suggested be carried out during the summer months? Yes.
1077. Would you tell the Board what would be the probable cost of an ice-making establishment in these contemplated slaughter-houses in the country? That will depend on the quantity you slaughter. What do you propose to kill—100, 200, or 300 head?
1078. Take the basis of 100 head? 100 head of bullocks per day averaging (say) 600 lbs. each;—that would be equal to 60,000 lbs. of beef. You have to reduce 60,000 lbs. of meat in the summer-time from, we will say, 80° to 50°—that is, 30°. 30 degrees are equivalent to so many pounds of ice. It would require about 10 tons of ice—that is to say, you would require refrigerating power equivalent to about 10 tons of ice per diem to reduce the temperature of 100 bullocks.
1079. *Mr. Stewart.*] 10 tons of ice made at Orange say;—what would it cost? If you make the ice it is more expensive than utilizing the cold to cool a room. It takes more units of cold to make the ice than it would to produce the cold necessary for obtaining the required temperature. We only go to 50° in cooling the room, but to make ice you must go to 32°; and then put in 140 units of cold. That is called abstracting latent heat or putting in latent cold.
1080. *Chairman.*] You produce that state of cold without making ice? Yes.
1081. *Mr. Stewart.*] Perhaps you will be good enough to explain how it is done? You construct a room to hang the bodies in, and you circulate cold brine by the same medium as you would use to convert water into ice, through pipes. That cold brine, instead of being circulated in a trough or in a vessel, as when making a block of ice, is circulated through the room in pipes and cools the air which imparts the cold to the bodies of beef. If you make ice you have to use more cold; then take the ice and pack it in your room, and after it is packed and all this labour is expended the ice melts, and is lost. We lower the temperature of the room on the same plan as you raise it in cold weather, by introducing cold pipes instead of hot pipes.
1082. *Chairman.*] What would be the probable cost per ton of manufacturing ice in the country, supposing that you had every appliance and an abundance of water? An abundance of water is absolutely necessary. I should say the cost would be about £2 a ton.
1083. Not exceeding £2? It ought not to be that.
1084. And what would the probable cost of the refrigerating process be—it would be less than that of ice, of course? Yes, but you must bear in mind that you have first to obtain a machine for making ice. Having got that the manufacture of your ice will cost you about £2 a ton, whereas you have the machine to produce the cold, and you need not manufacture ice at all. An ice-machine that would make 10 tons of ice per diem would cost about £4,000.
1085. An ice-producing machine to manufacture 10 tons of ice per diem would cost about £4,000? That is the machine itself. Then there are the room and all the necessary fittings. I am speaking only of the price of the machine itself as you would get it from England or Europe.
1086. Could not a machine be made here as cheaply as it could be imported? We could make a machine here quite as cheap as one you could import, because we could make a similar machine that would produce a larger quantity of ice than the one imported. A machine to make 10 tons of ice a day would cost £4,000 in England.
1087. What would be the cost of a machine for producing a cold temperature in a room? It would depend on the size of the room. A room that would hold 100 bodies of beef—say 60 feet square—to fit it up with pipes and ventilating appliances, I suppose it would cost you another £1,000. Then there is the erection of the machine when you get it here.
1088. But that is for ice-making? Oh, it is the same machine.
1089. The same machine that is used to produce ice is necessary to produce a cold atmosphere? The same machine will make ice or produce a cold temperature.
1090. But the same machine is necessary for producing a cold temperature as for making ice? Yes.
1091. And you say that a room 60 feet x 60 feet, capable of holding 100 carcasses, would cost another £1,000 to fit it up for the purpose required? Yes. You would not require such a large room as that. Our room is 60 feet x 60 feet, and we can hang 200 head in it.
1092. Have you ever been to Glebe Island? Yes.
1093. Would it be possible to erect some such machine there; I mean a machine for reducing the temperature of the atmosphere to the required coolness to set the meat? Quite possible.
1094. I fancy quite easy to be done? Just as easily erected there as anywhere else.
1095. And at a similar cost? Probably cheaper than in the interior. Labour is more available here—skilled labour—for you must have skilled labour; and you would have to pay less for it than in the interior. If you had to take skilled labour into the country it would cost you more.
1096. Then it would probably cost less at Glebe Island than at an establishment up the country? I think so. I am not sufficiently up in building statistics to know what the cost of a building would be; but I should say that it would cost less to erect a building in Sydney than in the interior.
1097. As you are managing partner of the Fresh Food and Ice Company you must have had a great deal of practical experience as to the cooling of meat, and the results of cooling it? Yes.
1098. Will you favour us with your opinion as to the results that would arise from having meat refrigerated in the way I have suggested at Glebe Island during the summer-time: How long would that meat maintain its sweetness after being refrigerated by the process you have indicated in the summer-time? Meat chilled in the summer-time to a temperature of 40°, and then brought into Sydney, and delivered at the butchers' shops, moderate care being taken with it, ought to keep two days.
1099. In the summer-time? In the summer-time. It would not do to shut it up in a close room, where it would get no air, or where it would be in a bad atmosphere, such as over a drain or a cess-pit; but with the ordinary care which would be observed by a good house-keeper in keeping a joint of meat in a cool shady place, it ought to keep two days.
1100. In a proper butcher's shop it could be kept for at least two days in a sweet state? Yes.
1101. As a matter of fact does meat deteriorate in quality or flavour by the application of cold? No.
1102. Does it preserve its quality and flavour intact notwithstanding the application of cold? Yes.
1103. I take it also that, in a building such as I have indicated to you, to be erected in a suitable place in Sydney

A. B.
Farguher,
Esq.
21. July, 1879.

Sydney for a meat market, the same probable expense would fit up a machine and produce the necessary cold atmosphere there as in the other places you have mentioned? Yes. If you establish a meat market in Sydney, whatever appliances you had at the *depôts*, either at the Abattoir or country *depôts*, it would be necessary to have refrigerating power at your central *depôt*, here in town for instance.

1104. That was the next question I intended to ask you. You have anticipated me, and I will take your remark. What I intended to ask was whether, notwithstanding that you say it is absolutely necessary to set the meat where it is slaughtered, it would be necessary to maintain the same cold atmosphere at the meat market in order to retain the sweetness of the meat? Or dispose of the meat instantly.

1105. Do you think the main *depôt*, which I have called a meat market, should be kept in that state of low temperature? Yes, to ensure a constant supply of meat being always there. Circumstances might happen to intercept your daily quantity from coming down, such as the weather, accidents by rail, fire, storms, or whatever it might be, and it would never do to establish a business that might leave the whole community without its meat for a day. Therefore it would be necessary to have a certain quantity of meat always in your *depôt*, so that it would be worked off as required, and supplied as required from the other end. That is the object of having cooling power at your central *depôt*.

1106. Will you tell us please, how long meat set in the way you have described and then brought to our meat market, to a temperature equally as low as that at which it was set;—how long that meat untouched and hung in the market would probably keep? That is meat chilled at the slaughter-house?

1107. Yes, kept at the same temperature in the cars, and brought into the meat-market, and left in the same temperature for sale;—how long would that probably keep sweet? That depends on the temperature you keep it at. If kept at a temperature of from 40° to 50° it would keep eight days.

1108. Perfectly sweet? Yes.

1109. And might it not keep some days beyond that? Not unless you go to a lower temperature.

1110. Then a lower temperature would increase its keeping power? Yes.

1111. Do you not think that would work a complete revolution in the system of killing, disposing, and consuming meat in this community? Quite a revolution.

1112. Do you not think it would be one of the greatest blessings we could confer upon the inhabitants of the Colony to give them sweet and wholesome meat at all times? I consider it absolutely necessary that it should be done.

1113. And do you not think it would be of the greatest consequence to the producers that they should have a better and more certain sale, and probably better prices for the animals they produce? I am sure they would get better prices. It would be an inducement for men to breed the best cattle in order to obtain the best prices, because, whatever the quality, the best meat will always fetch the best prices. We have instances of it in the old country, in England; the man who breeds the best beast gets the best price, and it pays him.

1114. And would it not be an incentive to people in the country to feed and fatten and produce the best quality of meat? No doubt; I believe it would, and the only means of inducing them to do so would be that power of being able to get it to market and sell it at the price it is worth. At present a man breeds cattle and sends them to market, and they have to take their chance of the market price whatever it may be. If the market price is low he gets a low price; if it is high he gets a good price.

1115. Then would it not be a great blessing to the community if they could get a much more wholesome quality of meat than they have been in the habit of getting? Yes, the greatest blessing that could be conferred upon them, and it would be cheaper for the consumer to pay 1d. a pound more for that meat which he would then consume, than to buy his meat under present circumstances. There would be less waste; he would save it in the waste.

1116. *Mr. Stewart.*] Do you know the fish-market in Sydney? Yes; I have not been very often in it; I cannot say that I know it intimately.

1117. Would it cost much to make arrangements for keeping fish cool there for two or three days occasionally,—not all the year round, but occasionally? No, it would not cost much.

1118. An ice-making machine is out of the question, but a quantity of ice could be purchased? Yes.

1119. The market is often glutted with fish, and a large quantity of it is wasted or given away, and perhaps during the next two or three days none comes in, whereas, if a quantity of the fish from the glut had been served for two or three days the market would have been constantly supplied? Yes.

1120. Well, we want to know if arrangements could be made at a moderate cost for preserving that fish? By means of ice you could do it. In the first place you would have to put it into a cold room. It would never do to put fish and ice together. If you put a fish in ice it will keep while it is in the ice, but after you take it out you will scarcely be able to take it across the street and cook it—it will go bad. A fisherman could not in the summer-time take fish that had been kept in ice for two or three days, into his basket or cart and carry it about the town to sell it.

1121. Then how should it be kept? In a room where it will be sufficiently frozen, as we do now at the meat works. We freeze fish there now, but it never comes in contact with the ice at all. It is frozen in a cold temperature, cold air. I have sent fish from here to Melbourne, to Armidale, and to all the towns in the interior, and it has arrived there frozen.

1122. And how do you cool the air? The same as in the room for the meat.

1123. You would require a machine then? Yes, or ice, but ice would never give you a sufficient temperature. Ice would only give you 32°, and you must go below 32°.

1124. Then to go below 32° there is no means available except an ice machine? No, and it is the cheapest in the end.

1125. Suppose you did not go below 40°? I do not think fish would keep at that. Fish has a very delicate texture, very different from meat.

1126. But you could reduce the temperature of the atmosphere in a cold room to 40°? Yes, by ice.

1127. Without any extravagant expense? It would be, in the summer-time, a very heavy expense.

1128. Is the ice placed below or above? Above.

1129. Not touching the fish? No. When ice melts the fish absorbs the moisture. That means rapid decomposition with increased temperature.

1130. It would not be a costly experiment to put up a room to see what ice would be required—I suppose a wooden building, with double walls, would be sufficient? Yes, but the more perfect you make your insulation or non-conducting power the less cold you will waste. If you have double stone walls they will keep the cold better than wooden walls.

1131.

A. B.
Farquhar,
Esq.
21 July, 1879.

1131. But wooden walls, with some non-conducting substance—say sawlust—between the two, would be sufficient to make an experiment? Yes.
1132. As a temporary provision? Yes.
1133. Suppose people in Sydney were to make a much larger use of ice than they do, could not a manufacturer afford to sell it at a much reduced price? Yes.
1134. If the demand were larger the price would be lower? Yes.
1135. And supposing that an ice-machine were to be put up at Glebe Island for the purpose of cooling a store-room for the meat, ice could be made at the same time, and perhaps distributed among the retail butchers in Sydney and others? No, it does not follow. Your machine might only be capable of producing the cold necessary to keep the room at the proper temperature.
1136. It would require additional power to produce ice? Yes.
1137. And different arrangements, to some extent? Yes.
1138. What is the chief peculiarity of a car made for the purpose of keeping meat cool after it has been made cool? These cars here—there is no peculiarity about them at all; they are common cars, built up with Venetians.
1139. Are you referring to those built by Mr. Mort? No, to the common cars on the railway.
1140. I am speaking of the cars built for keeping the meat cool? The only ones are those built by Mr. Mort.
1141. Where are they? They may be seen at the ice-works.
1142. Could we see them? Certainly, any time you like.
1143. Their chief peculiarity is the double wall? Yes.
1144. They do not carry ice? Yes they do.
1145. On the roof? Yes.
1146. How does the cold get to the bodies of the cattle? It falls upon them—the cold atmosphere.
1147. But there must be some communication between the ice-chamber and the chamber holding the meat? The ice-chamber forms the lid of the car. It is a double lid 18 inches deep. The car has no opening at the sides or ends; it is loaded from the top, and then the lid goes on, containing from 10 to 15 cwt. of ice. The cold produced by the melting of the ice falls upon the bodies. Cold always descends.
1148. The external atmosphere is entirely excluded? Yes.
1149. Then you think it would cost a great deal of money to provide the means of cooling bodies at a wholesale meat market, or fish market, or at the retail shops in Sydney,—that it would cost more than the meat would be worth? At the separate shops decidedly; it should be cooled at one establishment.
1150. Yes, but it could not remain at that establishment until it was wanted; the retail shops must keep meat sometimes; very often from Saturday to Monday, and I, for one, was thinking that it would be quite possible for butchers to make arrangements at a moderate cost, to enable them to keep meat, particularly in summer, and until it is perfectly set, if it is not so when they get it, as very often it is not, and at all events to keep it for a day or two until it is wanted? That would be a costly thing; it would simply fall on the consumer.
1151. Of course it would, but the consumer would not grudge paying a little higher price for an article of better quality? But it would not be little; it would be very expensive if every butcher had to chill his meat.
1152. You have not perhaps considered that question,—how a small chamber, capable of containing 200 or 300 lbs. of meat, might be constructed in retail butchers' shops without much cost? It would not cost much to construct it; the expense is in maintaining the cold.
1153. It is only on certain days that it would be required, not all the year round? I believe there are one or two butchers now that have cool chambers; I have not seen them but I have been told.
1154. Cooled with ice? Not with ice.
1155. Would a few pounds of ice in a chamber not be a great improvement? Not a few pounds, perhaps a hundredweight or two would.
1156. Perhaps you will be kind enough to give the question a little consideration. It is thought to be a point of some importance, if butchers are to be licensed and their premises inspected before a license is granted, whether it might be advisable to withhold a license from any who have not an ice-chamber, but that would not do if it involved an enormous expense beyond the value of the meat. At present meat is often delivered before it is set—warm, flabby, and not fit to eat? Always in summer.
1157. But if a butcher could keep it from spoiling by a little cold, he would hardly ever deliver it in that condition; people would not take it from him. He might then keep it for 24 or 48 hours until it was ready for cooking? My opinion is that it would be very desirable for the Government or the authorities, whoever they may be, to exercise such a power over the trade.
1158. That is not the question; we wish to know whether it is practicable? Quite practicable; it is only a question of cost.
1159. At a moderate outlay? A moderate outlay.
1160. You have perhaps not considered that question; you have not thought of providing ice-machines at a moderate cost on a small scale? I have never gone into the calculation of what it would cost.
1161. Mr. Nicolle knows a great deal about these things does he not? Oh yes.
1162. In those machines that the late Mr. Mort was constructing it was always intended to use ice, I believe, in carrying the meat down from the country? In the cars?
1163. Yes, the cars? Yes.
1164. So that even after the meat had been thoroughly set and cooled at say 40° at Lithgow, ice would have been used in carrying it to Sydney? No.
1165. Not in summer? No; it would not have been necessary? We found from experience—from practice—that the temperature of the cars never varied more than two or three degrees between Bowenfels and Sydney.
1166. The external air was excluded by double walls, and by nothing else? Nothing else.
1167. And a cold atmosphere enclosed? Yes.
1168. And that was sufficient to keep the meat, even in summer? Yes; we always travelled our meat at night.
1169. Were not the carcasses submitted to some process of ventilation before being submitted to a cold temperature at Lithgow? They never had more than the normal temperature of the atmosphere.

A. B.
Farquhar,
Esq.

21 July, 1879.

1170. There was no air made to pass over the bodies? Yes, there was a large fan driven to circulate the air through the room in which the bodies were hanging to cool.
1171. Just the external atmosphere? Nothing more.
1172. What was the object of that? It assisted in cooling the meat, and also removed the animal smell which meat gives off in cooling, and which if confined in a small room will fix itself into the meat.
1173. And it required the cool external atmosphere to enable you to do that to any purpose? Yes.
1174. It would not have done in the hot weather? No.
1175. *Mr. Bruce.*] Continuing the subject of the question which Mr. Stewart was asking, was it summer-time or winter-time when you were getting the meat from Bowenfels? April and May; I think we commenced in March, and then April and May.
1176. *Chairman.*] March is the hottest month of the year.
1177. *Mr. Bruce.*] And you say there were only two or three degrees difference of temperature between Bowenfels and Sydney? We always had the temperature registered at Bowenfels before the cars were closed, and a thermometer was always hung up on the car; and when the cars arrived in Sydney, I generally found that there was one or two degrees difference. Sometimes, on a hot night, it might be three degrees.
1178. If the meat were thoroughly set at the Abattoir, and it could be kept for two days in the butchers' shops, there would be no great necessity for the butchers to have a cooling place? No.
1179. The chilling of the meat at the Abattoir or up the country would obviate the necessity for a cooling place on the butchers' premises? Yes.
1180. Can you give the Board an idea of the daily expense of working a chilling plant for 200 bodies, in such a room as you spoke of;—I understand you to say that it would cost about £4,000 for the plant, and £1,000 for the room and fittings, so that the cost would be between £5,000 and £6,000? Yes, about £4,000 for the machine, and the fittings and appliances for the cold room £1,000—£5,000.
1181. And the room itself? I do not know what that would cost, I am not conversant with building estimates. It is only a matter of interest on the money.
1182. And the daily expense of working that room to its capacity? Working a machine that will produce 10 tons of ice per diem—the whole cost of it, for wages, coals, water, &c., would be about £5 10s. per diem.
1183. Would that be for making ice or for reducing the temperature to 40°? You can apply it to either purpose; it is the same machine.
1184. But it would not require the same expense to cool to 40° as to 32°? It depends on the quantity of meat you want to cool. I base my calculation on 100 bodies from 90° to 50°.
1185. That would cost about £5 10s. per diem? About £5 10s. per diem. I made out a memorandum of what it would cost. The cost per lb. of freezing or cooling would be $\cdot 033$ of a penny, or $\frac{1}{300}$ of a penny per lb.
1186. That is the chilling? Yes; or putting it in other figures, which will make it a little more intelligible, it would be $3\frac{1}{2}$ d. per 100 lbs.
1187. *Chairman.*] It will cost us $3\frac{1}{2}$ d. per 100 lbs. of meat. Yes.
1188. That is one of the most valuable pieces of evidence you have given us? It is equal to 1s. $8\frac{1}{2}$ d. per animal, taking it at 600 lbs. I thought you would very likely want to know the cost, and I have worked it out. My data are 100 head killed per diem; that is, at (say) 600 lbs. each, 60,000 lbs. A machine to reduce the temperature of that from 90° to 50° would cost £4,000, exclusive of the chilling-room and appliances.
1189. *Mr. Bruce.*] You said that the meat would keep two days well in the height of summer? I should think so.
1190. Fully? Yes.
1191. And suppose the meat were reduced to a temperature of from 40° to 37°, how long would it keep? It would keep about a fortnight.
1192. Then, if there were a dead-meat market, with cooling appliances, in view of meat being required to be kept eight or ten days, a portion of the cooling place could be set apart for being reduced to that temperature? Yes, it could be arranged so.
1193. And according as the trade required it the meat could be cooled and kept? Yes.
1194. It is a fact that the American meat sold in England has to be kept on an average about eighteen days—fifteen to eighteen days? It must be ten days in transit.
1195. *Chairman.*] But the English climate suits it.
1196. *Mr. Bruce.*] In London the heat is about as bad as it is here, in August. It is not only the supply of meat for the city that depends upon this question, but the prosperity of the stock-owners of the colony depends on it also, in so far as the export trade depends on the quality of the meat. I suppose you are aware that the reason why our exported meat brings such low prices is the inferior condition of our meat—the tinned meat? —
1197. *Chairman.*] It is salted meat.
1198. *Mr. Bruce.*] No, tinned meat. You must know that the reason of our tinned meat bringing such low prices is its inferior condition? I am not disposed to take that view; I do not think that our meat is of inferior quality.
1199. It ought not to be, but it is on account of the hardship it sustains? If you have to keep a bullock at the Abattoir a week I can understand it.
1200. *Chairman.*] Yes, and drive it down the country and starve it. Where does your company slaughter its meat? At Bowenfels.
1201. Do you utilize the blood and offal in any way? We have not done so as yet.
1202. It is allowed to be wasted? Yes.
1203. I thought if you had utilized it we might have got some information from you on that point? We had not the appliances. We used to make the offal into graves, but the blood we could not.
1204. The only further remark I would make is to trespass upon your kindness by asking you to allow us to visit your establishment and see the refrigerated cars—and we would be glad to have your presence—so that we might by personal inspection form our own ideas about them? Any day that you give me notice of I will have the cars ready for you.

THURSDAY,

THURSDAY, 7 AUGUST, 1879.

Present:—

THE HON. GEORGE THORNTON, ESQ., M.L.C., CHAIRMAN.

JOHN STEWART, Esq.

ALEXANDER BRUCE, Esq.,

Mr. Reuben Woodham examined:—

Mr. R.
Woodham.
7. Aug., 1879

1205. *Chairman.*] You are an old resident of Sydney? Yes, for five and thirty years and upwards.
1206. And engaged in the butchering trade? Yes, nothing else.
1207. As a slaughterer, or butcher, or what? I have been slaughtering, and I have had a shop in Sydney, but am now killing pigs, and have done so for years on my own account.
1208. Are you well acquainted with the Glebe Island Abattoir? Yes, ever since it was opened.
1209. You expressed a desire to be examined before this Board? Yes.
1210. With the view of giving certain evidence in your power to afford in respect to the Abattoir? Yes.
1211. Of course I am not aware of the nature of the evidence which you desire to give, and I am therefore not prepared to propose questions to you; if you will make your statement we shall be glad to take it down? You mean in regard to the working of Glebe Island?
1212. In any way according to your judgment and experience. I would premise by saying that you must of course be fully aware that the object of this Board is only to inquire and report. We have no feeling or prejudice at all in the matter; we are only carrying out the duty entrusted to us without prejudice? Well, I have been killing on Glebe Island ever since it was opened, and I do not think a better place could be found as a situation for the Abattoir. I was in London, and was brought up there as a butcher, and my father was a butcher there. I came to this colony in 1843, and when the slaughter-houses were opened on Glebe Island I took a slaughter-house there. I was killing beef on my own account, but since then have been killing pigs, and I have worked for a great many gentlemen here—for Mr. Wentworth, for Mr. Drake, salting for Mr. Hinchy at the boiling down, and for a great many others; for Mr. Richard Hill for instance. I have a considerable experience in the butchering, and am a butcher. I was in Melbourne not long ago and did not see there any place so fit and so good as the slaughter-houses on Glebe Island.
1213. You have seen no place so fit notwithstanding that you have been recently in Melbourne; you have not seen anything so useful as a place for slaughtering as the Glebe Island Abattoir? No.
1214. You mean as to its locality? Yes, and the building of it and everything else.
1215. The general arrangement? The general arrangement. I might not perhaps have seen all the slaughter-houses in Melbourne. I am speaking of Flemington. They are only dog-kennels over there to ours.
1216. Do you not think a greater amount of accommodation for killing and dressing sheep is required at Glebe Island? Yes, there are more slaughter-houses required.
1217. More room for the comfort and cleanliness of the men and for the cleanliness of the place? Yes, no doubt about it.
1218. And for the wholesomeness of the meat too? Yes; the slaughter-houses were never big enough when first laid out. I pointed that out at the first going off that they were too small for the purpose required.
1219. What about the drainage? The drainage is much better now than it used to be; at one time it was very bad.
1220. At one time I suppose, in fact there was no drainage at all? No.
1221. But of late years things are very much different? Very much different.
1222. Do you not think it would be a great improvement to have those places either paved or asphalted? I think asphalted would be much better.
1223. Do you not think it necessary? I do indeed. It would take no trouble then to wash the places out and to keep them thoroughly clean; now it gets through the stones, and you cannot get the place as clean as it ought to be.
1224. What is your opinion with regard to the accommodation for slaughtering the pigs? Well I think the places are almost big enough for what we kill there. I suppose Mr. O'Connor kills 300 or 320 a week, Mr. Woolfe about 120, and myself 100, that is taking the average; and then there are two more pig butchers who kill fifty or sixty, or perhaps a larger number.
1225. And you say that the slaughtering accommodation is at present sufficient for your requirements? Well, if the pens were done as you say with asphalt, it would be much better.
1226. If the pens were asphalted, the accommodation would be sufficient for present purposes? Oh yes, plenty, and likewise we want gas.
1227. Gas is necessary? Yes.
1228. All over the building? Yes; we burn those nasty lamps there. They make you sick in fact, and sometimes we have to work all night.
1229. Have you sufficient boiling or hot and cold water for your slaughtering? No, the copper is sufficient, but sometimes we have had no water. That has not, however, been for long, and has been caused by the wind getting into the pipes. Of late we have had no occasion to complain about the water.
1230. Is the water used at all times perfectly clean? Oh yes, we drink it.
1231. I mean the water used in the scalding? Well it is never changed all day, but after the pig is scalded it goes into a clean tub of water, and there is another tub to wash him in after that. The water in the second tub in which he is put, that is the cold water, is changed three or four times a day.
1232. The scalding water is used all day? Yes.
1233. And it is unavoidably dirty? It is rather dirty, but if you waited to empty that copper you would have to wait an hour or an hour and a half, and in that way lose time in the killing of a number of pigs.
1234. Suppose you had steam-power and a boiler of the necessary size to supply hot water, would not that be an additional accommodation? Yes, sometimes we have been without water there through the engine breaking down, but that has not been since the water was laid on.
1235. Do you know that in one city in America they kill 15,000 pigs a day in the winter-time? I do not believe they could do so.
1236. It is nevertheless a fact, and they never kill less than 3,000 a day in hot weather? They must have very slow people at Glebe Island then. I have three sons on Glebe Island who could kill 150 a day, and myself

myself included, I do not think that we could do more than 150 or 200 properly. There are people who do more, but not what I call properly.

1237. Do you not believe the statement that 15,000 pigs are killed and dressed in a day at Chicago? No, I should want to go and see it. Mr. R.
Woodham.
7 Aug., 1879.

1238. But suppose it is true? I do not disbelieve you, but I would not believe anything of the sort because —

1239. You think it impossible? I saw in the paper about O'Connor's men doing twenty an hour; they cannot do any such thing, if the pigs are to be what I call dressed. You can go and look in my place at Glebe Island, and find pigs as white as that paper.

1240. Did you read the evidence about the killing of pigs at Chicago? Yes, I read it, and saw it in the *Echo*, where it was stated that they went down an incline; or what I made out was, that they put the pig into a tub, and then put it out again for a man to scrape. My men at Glebe Island would do three while they do that.

1241. I would recommend you to read the evidence given before this Board in reference to Chicago slaughtering, and you will find that they surpass us very much. It is worth your while to read it? I should like to read it; but I know very well that they must have a great many more hands, or something else than we have.

1242. The animal goes up a live pig, and comes out pickled pork? Yes. I do not think one man could hit and stick all those in a day, nor that two men could do it.

1243. Do you know anything of the meat-slaughtering establishments on Glebe Island? Yes; they would be much better if they were larger.

1244. You think it would be a great improvement if they were increased in size? A great improvement.

1245. Can you suggest to the Board any other improvements. It is one great object of the Board to make necessary improvements in the place? In regard to selling meat not fit for food —

1246. We will come to that by-and-bye? I cannot suggest anything. I must leave the matter of the blood and that like to those with better knowledge than I have myself. If the offal were taken away in a better manner than now, Glebe Island would be free from smell or anything else. A hose put on to the slaughter-houses to slush them down is very requisite.

1247. You think an abundant supply of clean water for cleansing purposes is absolutely necessary? Yes.

1248. With hose appliances? Yes, with hose.

1249. What is your opinion of the accommodation for the men working there, in regard to keeping themselves clean? Well, I think there are some men who, if they had a parlour to go into, would not wash themselves.

1250. Suppose the regulations compelled them to do it? You would want a little more room than there is at the back, and more accommodation.

1251. Can you suggest to the Board any other improvement that would be to the interest of the public or those concerned on the island. If you can offer any suggestions we should be glad to hear them? I do not know of anything but making the pens larger. The other day they covered in the pens. To-day there is not a dry spot that the pigs can lie in, the covering of the pens has been managed so badly. I do not know who was the architect, but in the large place they have put up over the pig and sheep pens there is not a dry place to day.

1252. Through somebody's fault the buildings are so faulty that to-day there is not a dry spot for the pigs or sheep? Yes.

1253. During this rain? Yes.

1254. In consequence of the faulty nature of the buildings? Yes.

1255. Would you suggest that the pig-houses be removed to some other place or part of the Island? No.

1256. Would not the pig-killing be carried on in a more methodical way in some other part of the Island? I do not think we can have a better place than where we are. There wants to be some accommodation for hanging the carcasses upon the beams, for I suppose that some day the pieces that go across now will break down.

1257. Can you tell the Board the number of pigs killed weekly on the Island for consumption in Sydney? I should think that O'Connor kills 350, I kill 110, the young man next door kills sometimes 70, and then there is another man—Brierley's man—who kills on an average between 50 and 60.

1258. That is about the weekly average consumption of pigs throughout the year for Sydney and the suburbs? Yes; but there are a great many that come down from Picton and other places dead—that is in winter-time.

1259. In winter-time a number of carcasses come from the country? Yes.

1260. Are the pigs on the island killed for consumption as fresh pork or for salting, or for what purpose? Generally for fresh pork. The generality of them are for fresh pork.

1261. Is there no establishment, within your knowledge, for the purpose of curing or salting pork? Pigs went away to Kiama this week to be made into bacon. I do not know any such place in Sydney, but there is a man at Canterbury who kills about twenty a week.

1262. Is it a customary thing to send the pigs to Kiama to be made into bacon? No. I have known them do it at odd times, but not of late.

1263. Do you mean that the pork has gone there, or that the pigs have gone? The live pigs have gone to be made into bacon down there.

1264. What is your opinion of Glebe Island as a site for cattle sale-yards, supposing the whole business of cattle selling and slaughtering were concentrated on Glebe Island. Do you think it would be an improvement? I do not think the cattle sale-yards ought to be there.

1265. You think they ought not to be there? Yes; it would be too near, although in Melbourne they have them close to the Abattoirs; but there the place is much larger, and there is a large flat country.

1266. Suppose the cattle were brought from the interior by the railway, and delivered on the island by the railway, what would you think then? It would be much better. They would not be driven, and there would be no wasting. My opinion is that the bullock begins to waste directly it leaves the station.

1267. Have you ever considered the subject of a public meat-house, a refrigerated house, or place for the purpose of storing carcasses in—that is, a place reduced in its temperature in order to keep meat cold throughout the year;—have you ever considered that subject? No, I have never considered it, but I think if anything like that was done it would make meat very much dearer in the cost and that like.

- Mr. R. Woodham.
7 Aug., 1879.
1268. It would add to the cost of meat, and to the retail price? Yes.
1269. Which the public would have to pay? Yes, it would be more expensive.
1270. But would you not get a more wholesome and fresher meat? Yes, no doubt about that.
1271. Would it not be better for all concerned—for the producer, the wholesale and the retail butchers, and for the consumers—if the meat could be kept fresh as long as possible, even if it cost a little more? It would be much better; there is no doubt about that.
1272. Do you not think the public would willingly pay a small advance in price to have wholesome and fresh meat sold to them? No doubt a great number would; no doubt of it.
1273. Is it not the practice in the summer-time that meat is taken away from the Abattoir quite warm—almost hot? Oh, yes.
1274. It is the usual practice? Oh, yes.
1275. Do you think that is absolutely necessary? No, I do not; but unless you did as you just now proposed they could not at present act in any other way. They kill at 2 o'clock in the morning, and they are not allowed to kill on Sunday. Mr. Playfair, and others who want meat for shipping, must have their meat down at 5 o'clock, to serve the ships; and they could not adopt any better plan than that followed now.
1276. Then they are compelled to kill their meat at 2 o'clock in the morning, because it is necessary that the meat should be delivered at the shops by 5 o'clock in the morning? Yes, or before 6 in the morning.
1277. The meat being then quite hot? Yes, and no doubt it eats very hard too.
1278. Do you not think meat is unwholesome in that state? I do not think it is injurious to health.
1279. It is not as nice or palatable? No, not as it would be if frozen or cold.
1280. What would your London customers say if you gave them a piece of hot beef? I do not know. I have many times had to light a fire and thaw the meat there before we could cut it. I lived at one place in London where we served Mr. Robert Towns, and we used to serve his ship, the "Royal Saxon."
1281. Do you not think that all meat should be set by cold before it is moved from the slaughter-house? Yes, if there was a possibility of doing it.
1282. Do you think it would be a great improvement to set meat before using it? Yes. For instance, if there is a southerly wind on Friday we can kill pigs, and they set first-rate on that day, and they will keep longer than pigs killed on the following day when there is no southerly wind.
1283. Is there any discrimination used on the Island by the pig butchers in selecting proper animals for slaughter;—do you kill all that come to your hands, or do you reject any? We reject any that are not fat.
1284. All others are killed? Yes, all others are generally killed.
1285. What do you do with the lean pigs? I generally send them to the sale, and they are sold to different people, perhaps to go to people in the country, or to Cook's River. "Stores" we call them.
1286. How do you feed your pigs on the Island? I could make an affidavit before any gentleman that I feed my pigs on corn—that is myself; I am only speaking on my own account. I have got sixty this week, and may have five or ten left after killing what I want, and I take corn over and feed them. Other people have perhaps 200 left; of course I do not know what they feed them on.
1287. I do not want to ask you that? But I saw Carroll's evidence in the paper, about the rotten calves' feet, and that; he ought to have mentioned that this was not in all places. He saw them in one place; he did not see them in every place.
1288. You have never fed your pigs so? Never, I could take an oath. I only have a few left; perhaps twenty or thirty are the most that ever I had left.
1289. Mr. Stewart.] You have been often present when the pigs have been killed and dressed? Oh yes; I have killed them myself.
1290. And you are accustomed to handle the flesh of pigs a good deal? Yes.
1291. Could you distinguish between the flesh of pigs fed on corn and pigs fed on offal? Oh yes, certainly.
1292. What is the difference? One is soft; the other is hard. The offal-fed pig is quite soft; but in the winter-time the flesh is harder than it is in summer.
1293. Flabby? Yes, never set.
1294. Is the colour the same? Very white.
1295. Is there any difference in the smell? Well, no; I do not think you could detect any.
1296. Only two points of difference—flabby to the feel, and pale in colour? Yes, very white.
1297. Is there any difference when cooked? No. Some gentlemen prefer the offal-fed pork. I could mention one you all know well. I do not expect that if any gentleman had a loin of pork nicely roasted and stuffed he could tell what the pig had been fed upon.
1298. Is there any chance of pigs suffering from any disease, or of sickly pigs, being killed for food? I have not seen many diseased pigs killed. If I said I had not seen a few I should tell a lie.
1299. You have seen one or two? Yes.
1300. Do you know what the disease was? No.
1301. What made you think they were sickly? When you opened them, and took the insides out, you found the livers not all right.
1302. Any difference in the flesh? Not so much; very little difference.
1303. You judged by the state of the liver that the pig was sickly? Yes.
1304. Is there any inspection of the meat before it goes out of the market? Mr. Oatley is generally about, and in and out of the slaughter-houses.
1305. But if there were nothing to be seen the inspection would be useless? Just so.
1306. Did you ever see measles in pigs? Never knew one in the country.
1307. You have seen measly flesh in pigs? At home.
1308. What difference is there between the flesh of those pigs and the flesh of other pigs? One is full of little spots.
1309. On the skin? A pig will look motley on the skin if you have him a week in the pen, and feed him ever so much. It is the starvation which causes it—coming from his own home, where, perhaps, he has been fed on milk, and then when he comes here you feed him on corn, or it may be offal. He will fall away, and come out in blotches.
1310. Chairman.] From the change of diet? Change of diet.
1311. Mr. Stewart asked you what symptoms the measly pig showed—whether they are in the flesh or on the skin? The pigs are drowsy looking. It is many years ago since I saw one. I came here in '43.
1312. Mr. Stewart.] The question I want answered is how you distinguish between the flesh of a measly pig and the flesh of a sound pig? One has a kind of blotches through the meat. 1313.

Mr. R.
Woodham.*

7 Aug., 1879.

1313. Dark bloody spots? Yes.
1314. Any difference in the feel? No; only in the colour.
1315. It is not on the skin? No, underneath.
1316. No difference in the smell of it? No.
1317. Do you know if such meat has ever been sold? In England, yes.
1318. It has been sold? Plenty, no doubt.
1319. You do not know what those blotches in the flesh of the meat are caused by? No, I do not. Underneath the skin, where they have had a hit on board ship with a rope, you will frequently find a bruise.
1320. You have never seen typhus fever in pigs? No.
1321. Neither at home nor here? No. I have seen them with a little of the pleurisy, but very seldom; you may kill two or three hundred and not find it.
1322. You never heard of people becoming diseased by eating pork? No, I have not.
1323. I understood you to say there is no better site in the Colony for slaughtering than Glebe Island? Yes.
1324. Was I right in thinking you applied that to the site of the slaughter-houses only? Yes, as to position.
1325. You did not intend to say that all the arrangements were good for slaughtering? No.
1326. But Glebe Island is a fine position for slaughter-houses? Yes, you could not find a better position for slaughtering.
1327. But for all that there need to be a great many improvements and alterations? Yes.
1328. You seem to think it would not be a good plan to have the selling-yards for cattle on the island? No doubt it might do if, as Mr. Thornton remarked, the cattle were brought in trucks.
1329. But suppose the cattle did not come in trucks—what would be the objection? They would have to take the bullocks back to Homebush to feed.
1330. Why? Some of them leave bullocks in the Homebush paddocks to feed.
1331. A man kills as many as he wants, and keeps the rest starving? There is good grass at Homebush.
1332. But if he wanted to kill all, the best place for the selling-yards would be near the slaughter-houses? Yes. If a man bought ten bullocks, and slaughtered them at once, he would have them to his hand.
1333. And it would suit him to have the selling-yards near the slaughter-houses? Yes.
1334. Then your objection to Glebe Island as a place for selling-yards is the necessity to take some of the cattle back to the paddocks? Yes.
1335. If the cattle could be fed on the island there would be no objection to the selling-yards being there? No, I think not.
1336. Would Glebe Island be a good situation for a wholesale meat market? Yes, it would be very central.
1337. It is a kind of wholesale meat market now? Yes.
1338. All who buy meat wholesale mostly go to Glebe Island? Not so many of late, on account of Mr. Richards selling country-killed meat.
1339. But until the carcasses came from the country there was no other wholesale meat-market? No, none.
1340. Do you think that Glebe Island is managed as well as it might have been under proper arrangements? No, but it is a deal different from what it used to be.
1341. If it were your property you would have some alterations made? Oh, yes, with the slaughter-houses.
1342. And the management? I do not think anyone could manage it much better than it has been managed by Mr. Oatley, although he is no friend of mine. He is a man who has been many years at it; he ought to know all about the inspection of bullocks, and that like.
1343. Perhaps you might keep Mr. Oatley on to manage the place, and in that case you do not see any necessity for making any alterations? Not in regard to the inspection of the cattle.
1344. *Chairman.*] Mr. Stewart means if it were your own property? I am referring to the Chief Inspector. I do not know much about Mr. Jager.
1345. *Mr. Stewart.*] But you would make some alterations in the yards and sheds and slaughter-houses, to make them more commodious? Yes, and more room to hang the carcasses up; there is not room enough to keep them apart.
1346. Have you had any sucking-pigs killed at the island? A few.
1347. Every week? I would not say every week; some weeks.
1348. Some people think it would be more convenient to slaughter them in Sydney? If they had suitable premises.
1349. Could that be done without creating a nuisance? I think so—the slaughtering of such stock as lambs and sucking pigs.
1350. *Chairman.*] And calves? And calves.
1351. *Mr. Stewart.*] Is it done now? Oh, yes.
1352. And no one finds out the nuisance? No.
1353. But, if the butchers were required to obtain a license for the premises which should be properly appointed, this slaughtering might be done openly and done better? Yes.
1354. If the retail butchers were allowed to slaughter on their own premises there would be less chance of their creating a nuisance than there is now? Yes.
1355. You are sure of that? Yes; but if licenses are granted the butchers ought to have fit premises. They kill in the heart of London.
1356. And in London they would have fit premises? Yes.
1357. Is the license there an annual one? I do not know.
1358. If a man were frequently convicted of breaking the regulations the license would be taken from him? No doubt.
1359. The slaughtering-houses now in London are all licensed? I could not tell you.
1360. How long is it since you left London? Six and thirty years.
1361. They were not licensed in your time? No.
1362. Suppose a man buys a hundred head of cattle and wants only twenty slaughtered to-day, if he had some cold chamber to store the meat in would it not be to his advantage to kill all the cattle and store the meat? If he had a place to keep it.
1363. Say an ice-house? Yes.
1364. It would be much better than keeping the cattle starving in poor paddocks; the meat would be better and the loss would be less? Yes.

Mr. R.
Woodham.
7 Aug., 1879.

1365. Then it is simply because he cannot keep the meat that he keeps the cattle alive starving? Yes, it is a good deal towards it. I was going to say that in my own opinion there requires to be an inspector at Homebush; and I have no doubt in my own mind that if there were a proper inspector at Homebush there would not be the cattle come that they complain about.

1366. *Chairman.*] You think there should be an inspector at the sale-yards, and that if there were such an inspector, objectionable cattle about which so much has been said lately would not be allowed to be killed? Yes. Any gentleman who had the inspectorship would, if he was a good general, know whether a bullock was fit to be killed or not.

1367. And would prevent the cattle being taken to Glebe Island for the purpose of being killed? Yes. About that boar pig, concerning which there has been so much talk, no man in Sydney could make a sausage out of the pig described to you. That man, Shultz, is a mutton butcher; I have known him for five and thirty years. He used to sell muffins once, and how he came to be a butcher was—he used to put his tray down in the slaughter-house, and leg the sheep for Mr. Donahue. I do not know of a pork butcher's in Sydney where they would make sausages from such a pig as Shultz described; it would be no use to them.

1368. In your opinion sausages, you say, could not be made of a boar pig of the description given in the evidence before the Board? Yes; and as for smelling the pig a hundred yards away, it is all nonsense. If it could be done a law should be passed that the men should castrate those pigs when they were a certain age, and we should have none of this—they would not send them to market. Last week I bought seven pigs, and had four boar pigs among them. That shows that people in the country will not take the trouble to castrate them. If a man has twenty pigs he asks you so much for them, and if there were ten boars among them you must take the lot—take them or leave them.

1369. And you must kill the boars with the others? Yes.

1370. *Mr. Stewart.*] Is the flesh of the boar pigs as good as that of the others? Generally it is.

1371. Some are rank? Sometimes there are, but very seldom. It is like everything else. I do not know whether you are aware that if you were to give a pound an ounce for hay and give it to the bullocks in the slaughter-yards they would not eat it, unless they were cattle that had been stall-fed.

1372. *Chairman.*] Wild cattle will not feed in the yards? No.

1373. They will not eat hay in the yard? No, not even the best ever grown.

1374. *Mr. Stewart.*] You have tried it? Yes, I have seen it tried.

1375. More than once? More than once.

1376. *Chairman.*] Your opinion is that cattle cannot be fed artificially in the pens? Not in the pens.

1377. They refuse to eat? Yes; they drink, but will not eat.

1378. Do you know whether they will eat the natural grass if put into a paddock? Oh, yes; I have seen them eat a little bit. But sometimes there is not much in the paddocks to eat. During the drought there was nothing for them to eat. I heard that Mr. Dempster speaks about the cattle being starved on the Island. Such is not the case; if you got a bale of lucerne hay they would not touch it unless they have been stall fed.

1379. The evidence was, that the starvation goes on by keeping the cattle so long; it is not the wilful withholding of feed from them, but keeping them so long without food? They starve themselves.

1380. The charge is not so much that they are starved by their owners but that they waste from starvation through being kept so long without food? Yes. And as for the blood Mr. Dempster spoke about, no man would think of making sausages out of that blood. You can take that blood and pelt it at a wall, when it is cured by the chemical put into it; you can cut it like a knife.

1381. You say that the blood which has been deodorized by the chemical process is never used for sausages? God bless your soul! no; it is impossible. Talking about taking the beef away in the carts, there is no doubt that sometimes the men do sit on the front; they have no other place to sit. They ought to have a seat made for them to sit upon without sitting on the beef—although I have carted some thousands of cattle myself in the same way when the weather was a deal hotter in summer than now.

1382. Do you not think it is a very insufficient and filthy way of conveying meat, to take it away in these open dirty carts with dirty drivers? Yes. They might be made to reform a great deal in that regard, and in many other little things that you do not know anything of on the island, if Mr. Oatley had power to do so. That bullock they talk about, I saw that brought in and dressed, and Mr. Oatley and Mr. Jager cut it down. I would have eaten a piece of that bullock myself. The bullock I mean is that described by "Eye Witness." He was a bullock that had got down in the train, and had been trampled upon. There was a part of the animal bruised, but in the inside he was beautiful. He was sold for a pound. He was a grand bullock. He was boiled down I know. The man got 250 lbs. of fat off him.

1383. Is there anything else you wish to mention? No, sir, I do not think there is. There is only one thing: If you had an inspector at Homebush you want a man who is well acquainted with the duties he would have to attend to.

1384. A man of practical experience, judgment, and character? Yes.

1385. A man of practical experience, good judgment, and character, who would detect faulty or diseased beasts and prevent them from going to the slaughter? Yes, prevent them from being slaughtered for food.

1386. And thereby save the public from the chance of having to eat diseased meat without knowing it? Yes.

1387. Anything else? There was something else, but I cannot think of it just now.

1388. If there should be anything which you find you have forgotten and you write it down on paper and forward it to me, I will have it added to your evidence.

TUESDAY, 12 AUGUST, 1879.

Present:—

THE HON. GEORGE THORNTON, ESQ., M.L.C., CHAIRMAN.
JOHN STEWART, Esq., | ALEXANDER BRUCE, Esq.

Mr. Timothy O'Connor examined:—

Mr. T.
O'Connor.
12 Aug., 1879.

1389. *Chairman.*] You are a butcher in Sydney, Mr. O'Connor? Yes.

1390. Wholesale or retail? I am a retail butcher, but sometimes I sell a little wholesale.

1391. Where are your premises? At the corner of the Double Bay and Edgecliffe Roads, Woollahra.

1392.

Mr. T.
O'Connor.
12 Aug., 1879.

1392. You have expressed a desire through your brother to be examined before this Board? Yes.
1393. With the view of giving some evidence on the subject claiming the attention of the Board? Yes.
1394. Will you kindly tell us what you wish to state? Well, I have been a great deal on the Island, but I have never seen any diseased cattle killed, and I have watched closely.
1395. Have you been much about Glebe Island? Two or three times a week.
1396. You generally go two or three times a week? Yes.
1397. Do you slaughter there? Sometimes; whenever I have slaughtered I have slaughtered there.
1398. You purchase your meat there, and sometimes slaughter? Yes.
1399. And therefore you visit it two or three times a week? Two or three times at least.
1400. For what number of years have you visited there? Since the Abattoir was built; I was about one of the first that visited it after it was built.
1401. You have been a constant visitor there since the Abattoir was built? Every week I dare say since it was built.
1402. And you state that during the whole of that time you have never seen any diseased meat? Not in one single instance.
1403. Neither beef, nor mutton, nor pork? I have seen sheep with what they call flukes in the liver, but I have never seen diseased cattle, and I have taken particular notice of their lungs and of their melts.
1404. You have never seen any diseased cattle, and you have taken particular notice of their lungs and melts? I have seen particularly poor cattle, but never any diseased.
1405. It is quite possible, I suppose, that there might be diseased cattle there and you not know it? Very likely. I have seen cattle that I was sure were diseased sold at the Homebush sale-yards. I saw Mr. Inglis selling a lot of cattle one day at Homebush, and a bullock among them was pointed out as being likely to be diseased, and it died within half-an-hour afterwards.
1406. You have seen Mr. Inglis sell cattle, one of which was pointed out as being diseased, and it actually died within half an hour? Yes. In another instance I saw a very poor cow killed. Everything about her was sound, but she was very poor. When she was bled the blood, instead of flowing out, flowed back into the ribs, and when Mr. Jager came he said that this blood was the liver. He did not know the difference between the clot of blood and the liver.
1407. The blood coagulated within the carcase? Yes.
1408. And you say the assistant inspector said that that coagulated blood was the liver? Yes; he did not know the difference until Mr. Oatley pointed it out to him.
1409. Were you present on that occasion? I was.
1410. How long ago is it? Some years ago.
1411. It occurred many years ago? Yes, it is some years ago; but I have always wondered that I never saw any inspectors of live stock at the sales, and they are held so close to Sydney.
1412. You think the inspectors should examine the stock before they are taken to the Island? Yes, and condemn anything unfit. I saw a cow cut down yesterday. It seemed a nice little body of beef, but I was informed that she had a calf by her side, and it is a question whether the meat of a cow that has recently calved is wholesome.
1413. You doubt the propriety of killing beef under those circumstances? Yes; I would like to have advice whether the flesh would be wholesome. It looked wholesome.
1414. But you doubt it? Yes; I would not like to eat the meat myself.
1415. I think you said that you have seen sheep killed there that were diseased with fluke? The mutton looked right enough, but there were hard lumps on the liver—what they call flukes.
1416. And does a carcase of mutton being fluked affect the quality of the mutton? Not in appearance.
1417. But in fact? It does not look any the worse, and I never heard any complaints. The quality does not seem to be inferior.
1418. The consumer would not know that the animal had fluke? No.
1419. Because it looks the same as a sound sheep? Just the same. I have never seen any difference, and I have watched closely. You see no sign whatever.
1420. And the meat of a fluked sheep is sold in the shops the same as if it were a good sheep? Yes, it is.
1421. In your opinion does Glebe Island possess all the accommodation required for the trade? No, not one-third. I believe it is well situated, but I think the Government ought to provide more room.
1422. You think the situation is very good? I do not think it could be better, especially in summer-time. Mr. Davis was slaughtering not 15 miles away on the Duck River, and I have known meat killed there not to be good on the following morning in close weather. The vibration of the train keeps the meat in motion, and it will not set. The slaughter-houses should be at some place convenient to the city in the summer-time.
1423. You think, as to the locality, that Glebe Island is eminently well situated? Yes, all they want is more room.
1424. And more accommodation? More accommodation.
1425. The buildings extended? The yards should be made larger, and more room given for the cattle, and then the cattle could be got into the slaughter-houses in a different way from the present. The men could go into the yards and drive them in; but at present it would be dangerous to go in amongst them. I saw a bullock to-day on the ground and they could not get him in. The smell of the blood infuriates the animals.
1426. You think they want more room in the cattle-yards and additional buildings? Yes, they do; and I think it is necessary to provide racks with green lucerne to feed the sheep and cattle, and that lucerne should be provided in the paddocks also.
1427. You think there should be hay-racks to feed the cattle and sheep? Racks, with lucerne; I don't believe they would eat dry hay.
1428. And that the paddocks should also be provided with green lucerne for feeding the cattle? Yes, I think that is quite necessary.
1429. Do you think wild cattle would feed if they had green lucerne given to them? Well, they are not very wild with the men going so much amongst them. I have seen men go amongst them and put their hands on them. After being so long on the road they become very quiet compared to what they are when they leave the station.
1430. You say you think there should be an inspector to examine the cattle at the yards at Homebush before they are taken to the Abattoir? I think that is quite a necessity.

Mr. T.
O'Connor.
12 Aug., 1879.

1431. And that many a diseased beast would then be prevented from going to the Abattoir? It would not be possible for one to pass. Nothing is easier than to tell a diseased beast, because there is generally mucus coming from its nostrils, and its eyes are dull and heavy. There is nothing easier, I think; but if they were not sure of any particular beast they could put a mark on him, and send word to the inspector, who would take care to see that particular beast slaughtered.

1432. But my remarks go towards the propriety of having an inspector solely for the purpose of examining the cattle at the sale-yards? One man could inspect all the cattle there in an hour, and there are only two sale days in the week.

1433. There would be no necessity then for an additional officer? No; Mr. Bruce and Mr. Yeo have nothing to do hardly. All that they have to do is when a bull or heifer comes out from England, to go and inspect it. There are inspectors of cattle for the district of Sydney, and I think it is part of their duty to go to the sale-yards to inspect the cattle, or else I do not know what their office is.

1434. Do you not think the island is in a very bad state for want of drainage, and cleanliness generally? It is only the drainage. It is utterly impossible for any place to be kept clean where there is such an amount of slaughtering. A little while ago I was at a place up the country, and there was more filth about it than you would see at Glebe Island in two months. It is impossible to keep the place clean where they slaughter. The men have to wash the slaughter-house down for their own safety after every fall, because if a clot of blood got under their feet it would be dangerous. I have always seen the place washed down after a fall.

1435. But in America they have a plan of killing bullocks by which they avoid the slightest stain of blood or filth, or offal;—nothing of the sort could possibly occur in the slaughter-houses in America—that is to say, we have evidence to that effect? You would think that an utter impossibility.

1436. It is done in this way, so far as our evidence goes: The beast is pithed, and then slung up by the hind legs, and the head is let into an iron receiver; then its throat is cut, and this receiver catches every drop of the blood, and prevents it from spilling; care is also taken to collect the entrails, so as to prevent any mess. You will never see a spot of blood or filth anywhere; that is the evidence before us? Well, I have seen the beasts hung up, yet there is always a little blood.

1437. But it is all caught in the iron receiver? You would think that though that might receive the greater portion of it, it would be impossible to collect every drop, because the little veins in the body would be sure to retain a little blood.

1438. Is there any suggestion you can make to the Board for the improvement of Glebe Island? I think if they were to fill up at the back, where the cattle are kept, and make larger yards there, and not keep so many cattle at the slaughtering place, the men would be able to get into the yards and drive the cattle out without using the boat-hook. Some cattle rush back when they smell the blood, and I think if a race were made which would compel them to go forward, it would be better.

1439. You think the present plan might be greatly improved? Yes; if they had a race, the cattle being once got into it would be compelled to go on to the slaughter-house. The men could then get close to them, and force them along. At present the yards are sometimes as full of cattle as they can hold, and if a man got in among them it would be as much as he could do to find room for himself.

1440. Have you any other suggestion to make? No; only I would like to mention, with regard to Shultz's evidence, that it would be an utter impossibility to smell a pig at the distance he states. I have never seen anything of the kind. There are as fine pigs at Glebe Island as you will see in any part of the world. They mostly come from Wollongong, where they are fed on corn and milk, and I have never seen a finer lot of pork in my life. And as for making sausages out of boar pig's meat, any man of experience will tell you that you cannot do that. You want the very finest meat for sausages, and you have to take every sinew out of the meat before the knives will cut it. I have seen hundreds of pigs, and killed many myself, and I have never seen anything such as Shultz describes. I was slaughtering pigs for two years, and I never saw anything of the kind. Shultz has had very little experience on the island. He was working mostly for Mr. Davidson, selling dead meat.

1441. And you say that during your experience on the island—and you have had considerable in the slaughter of pigs—you have never known an instance of killing boar pigs to make sausages, and that they could not be made into sausages? No, anyone who sells pork sausages cheap makes them out of mutton. What I mean to say is that what are sold as cheap pork sausages are made of mutton. I know plenty who never put a particle of pork into what they sell as pork sausages; and as for making pork sausages out of boar pigs, it is an utter impossibility—you could not chop the meat. I have never seen anything like what some people have given as a description of the Island, and I am over there pretty well every day. There is as fat beef and mutton there as in any part of the world.

1442. *Mr. Stewart.*] Were you here in 1850 and 1851? No, sir.

1443. How long have you been here? Since 1855.

1444. Have you ever seen a beast ill with Cumberland disease? Disease of the lungs?

1445. No; you do not know what Cumberland disease is? I have never seen Cumberland disease. What they call Cumberland disease is a diseased melt.

1446. That is not it—it is a diseased spleen; you never saw that complaint? No.

1447. Have you seen cattle bad with pleuro-pneumonia? Yes.

1448. Alive? I have seen them alive and dead.

1449. Have you ever seen one dressed that had a slight attack of it? I have seen a lot dressed that were bad with it, but not in this country—at home. I have seen a light four times its ordinary size.

1450. But not in this country? No.

1451. Then you have not seen that disease in this country? No.

1452. Nor Cumberland disease? No.

1453. Have you seen catarrh in sheep? I do not remember.

1454. You have no experience of diseased stock at all? I have never seen any diseased stock.

1455. Then how do you know that they are sound? I have seen their liver, light, heart, and melt. Any disease that a cattle has is in one of those organs. I do not know what name you might give the disease, but if you asked me if any of those organs were affected, I could tell you.

1456. *Chairman.*] And if a beast is diseased in any of those organs the meat must be affected? Decidedly. I knew a man that skinned a diseased animal on Mr. Eales' estate, and he died within two days after, at Newcastle.

John Stewart, Esq., a member of the Board, examined in his place :—

1457. *Chairman.*] In the practice of your profession as a veterinary surgeon you have had opportunities of learning what circumstances affect the flesh of animals used as food? Yes. I have made a great many dissections and *post mortem* examinations of animals that have died or been killed.

J. Stewart,
Esq.

12 Aug., 1872.

1458. You have heard how hurriedly cattle are driven from the sale-yards at Homebush to the Abattoir at Glebe Island; what effect will that have on the meat? If the animal is slaughtered at once it will not bleed freely, and the flesh will be dark in colour, not a bright scarlet. But even after the animal has been quiet for some hours after overdriving the flesh is apt to be dim, and of a dull red colour, and it soon spoils.

1459. Is meat in that state unwholesome? I do not know that it is. Dogs, pigs, and other animals thrive and get fat upon it, even when they get it uncooked. Medical men, however, generally hold that deteriorated meat, whatever be the cause of the deterioration, is unwholesome, particularly in some states of the system or of the atmosphere. Richard Owen, the celebrated naturalist, and Hunterian Professor at the Royal College of Surgeons, was a witness before a Select Committee of the House of Commons in 1849, and he said, "Every arrangement which produces over-driving, irritation, terror, and torment to the beast before the final blow is struck, deteriorates the qualities of the flesh as human food, and especially its property of resisting decomposition." He also said that this deteriorated meat is less wholesome and less nourishing, and that in some constitutions it will produce irritation of the mucus membrane of the stomach and intestines, and its continuous use might lay the foundation of complaints attributed vaguely to indigestion. Sometimes it directly occasions diarrhœa, and in the event of cholera-poison being in the atmosphere, such a condition of the flesh-meat would form an additional element in the chances of the inhabitants of a metropolis so supplied being attacked by that disease. Such was the opinion of Mr. Owen, and if he was correct as to the effects of deteriorated meat in a climate like that of England, I think the mischief must be greater in a climate so hot as ours.

1460. Is the want of food, or of water for some days before slaughtering, injurious to the meat? The want of water is more injurious than the want of food. The secretions and evacuations become scanty from the want of water. Noxious matters, which ought to escape by the kidneys, the lungs, the bowels, and the skin, are retained in the blood. The blood becomes impure and thick, and does not flow completely out of the flesh when the animal's throat is cut. Part of it is retained and gives the flesh a dull dark-red colour, and little drops ooze out of the flesh as the body cools.

1461. Is this meat unwholesome? It is not nice looking, it does not keep well, and it does not take salting well; but I am not sure that it is unwholesome.

1462. Is the meat of a pregnant cow unwholesome? I know of nothing which induces me to believe that it is unwholesome.

1463. Is the meat of a newly-born calf unwholesome? I don't think it is. I have heard that in some parts of Ireland and of France calves are killed on the day they are born, and used as veal without any ill results.

1464. Are cattle liable to ulcers or tumours? They are liable to swelling of the glands about the throat, but not very frequently, and when they have them there is very seldom any matter in them, and they in no way affect the flesh of the animal.

1465. Are cattle or sheep liable to any diseases which make their flesh poisonous or dangerous? I know of none in this Colony, except that called Cumberland disease; but it is said that the flesh of sheep or of cattle having pleuro-pneumonia in Africa is dangerous and sometimes poisonous. In this Colony, and in Europe, it is universally held that the meat of cattle suffering from the pleuro is quite harmless. In the Australian Colonies the only flesh known to be poisonous is that taken from an animal having the Cumberland disease, and we are not sure that that is poisonous when cooked.

1466. Is it true that cooking by boiling or roasting destroys any poisonous virus which meat may contain? It is generally—almost universally—acknowledged in Europe that cooking by roasting or boiling destroys all poisonous properties in meat; but Dr. Livingstone, in his travels in Africa, found a disease there which produced disease in human beings, notwithstanding the boiling or roasting. He says:—"When the flesh of animals that have died of this disease (peri-pneumonia) is eaten it causes a malignant carbuncle, which, when it appears over any important organ, proves rapidly fatal. It is more especially dangerous over the pit of the stomach. The effects of the poison have been experienced by missionaries, who had eaten properly cooked food, the flesh of sheep really but not visibly affected by the disease. The virus in the flesh of the animal is destroyed neither by boiling nor roasting. This fact, of which we have had innumerable examples, shows the superiority of experiments on a large scale to those of acute and able physiologists and chemists in the laboratory, for a well-known physician of Paris, after careful investigation, considered that the virus in such cases was completely neutralized by boiling."

1467. Is it probable or likely that the flesh of a beast suffering under Cumberland disease may be used as human food? In my opinion it is not at all likely. The disease very quickly kills the animal. And if he is slaughtered while visibly ill the blood is so thick and stagnant that it runs out of him slowly and imperfectly. The meat looks more like the flesh of an animal that had not been bled at all. I don't think any person would buy such meat, and I don't think any butcher would offer to sell it. But it is possible that in the very earliest stage of the disease neither the blood nor the flesh may be so visibly deteriorated, in which case there is a possibility of the meat being used as food. The Cumberland disease appeared here in the summer of 1850-51, and since that time I have heard of several persons suffering from a complaint which, I believe, was previously unknown in this Colony. The disease is called carbuncle or anthrax, and seems to resemble the disease described by Livingstone as arising from the use of diseased meat. I do not say that the carbuncle of this Colony is caused by using the flesh of an animal that had been affected by Cumberland disease. In its uncooked state the flesh is poisonous to dogs and pigs and cats; a small quantity of the blood introduced into the system of a living being produces dangerous and sometimes fatal results. It is possible that the same meat may be partly yet not wholly deprived of its virus by cooking. There may be enough left to produce carbuncle. I have, however, had no opportunity of putting this conjecture to the test of experiment. If I could get some flesh from a beast suffering under the Cumberland disease I would feed a dog or two with it after cooking it.

1468. Have you ever been at Smithfield Cattle Market? Yes, but it is many years ago; it is now abolished.

1469. Do you know what the area of Smithfield Market was at the time it was suppressed? It contained, in 1850, 6 acres 15 roods.

1470.

J. Stewart, Esq.
12 Aug., 1879.

1470. What quantity of stock did it contain? In 1847 there used to be from 4,000 to 5,000 cattle, and 12,000 to 30,000 sheep in the market at one time. About an acre of ground was allowed for 1,000 head of cattle. But the market was suppressed because they could not make it large enough to accommodate the stock offered for sale.

1471. At that time the slaughter-houses were near to the market, were they not? In 1849 there were 148 slaughter-houses in London; sixty-one were in cellars or vaults, eighty-seven on ground floors, twenty-five were in Aldgate-street, twenty in Newgate Market, five in Leadenhall Market. All were registered and subject to inspection. The blood was all sold, partly for food and partly for use in sugar-refining. The price it sold for was 3d. per ox, the buyer collecting and carrying it away.

1472. Do you know anything about Islington Market? Not personally; I only know that it is about 2½ miles from Smithfield, which is now a dead meat market. Islington Market has 15 acres within the walls, and 12 or 14 acres outside, which are used as lairs. It can accommodate 7,000 cattle and 40,000 sheep.

1473. At one time? Yes.

1474. Do you know of any publications which supply information respecting abattoirs or cattle-markets? There is a brief notice of abattoirs in the last edition of the *Encyclopædia Britannica*, which I have had extracted, and which I produce. There is also some useful information in Sir Francis Head's "Faggot of Sticks" of various abattoirs. There is also much information about cattle markets and abattoirs to be found in evidence taken before Select Committees of the House of Commons; also about the transit of stock by railway. There were reports laid before Parliament in the years 1828, 1834, 1835, 1847, 1849, 1850, and 1856, and there is much information to be obtained from those reports which would be very valuable to any persons charged with the erection or management of abattoirs or sale-yards, valuable also to legislators should further legislation on these subjects be deemed advisable.

TUESDAY, 2 SEPTEMBER, 1879.

Present:—

THE HON. GEORGE THORNTON, Esq., M.L.C., CHAIRMAN.

JOHN STEWART, Esq., | ALEXANDER BRUCE, Esq.

John Rennie, Esq., examined:—

J. Rennie, Esq.
2 Sept., 1879.

1475. *Chairman.*] You have been a resident of Sydney for a number of years? Sixteen years.

1476. Engaged in the carcase butcher's business? I was a retail butcher previously.

1477. You have been a retail butcher? Yes, but for the last ten years a wholesale butcher.

1478. Doing a good deal of business? Yes, pretty good business.

1479. Have you had occasion to visit Glebe Island much? Every day nearly.

1480. You are aware that the object of this Board is to make inquiry as to the general suitability and management of Glebe Island Abattoir, with a view to any improvements possible to be made; and the Government through this Board is anxious to elicit any and every information tending towards that object. We therefore should be glad if you could give us some information from your practical experience which will assist our efforts? I will be happy to do so. Anything you ask me I will answer to the best of my ability.

1481. What is your opinion as to the size, construction, and general arrangements of the Abattoir as at present situated, for the purposes of slaughtering for the city? As far as slaughtering cattle is concerned I think there could not be anything better, if the sheds at the back were covered in better than they are and the lane were wider. The lane in the front where we load the meat is too narrow.

1482. You think that the back part should be covered in? Yes.

1483. And the lane made wider so as to admit of free ingress and egress? Yes. I have some difficulty now in getting my vans into the lane. I am in the first slaughter-house, and we have got to back the vans in; there is not room to turn round. The lane is far too narrow, even if the old carts are used.

1484. I believe it was your firm that introduced the new system of meat van and meat conveyance? Yes.

1485. For the conveyance of meat from the Island? Yes. We are the only ones who have adopted them as yet, except that Richards has also got one.

1486. You were the first to adopt it? Yes.

1487. And these vans convey the meat in a cleaner, covered, and altogether better manner? Oh, yes. They give much more satisfaction to the trade, and to everyone concerned. The meat looks better; it is not exposed to the weather.

1488. It must be better for the consumers? Oh, yes; it must be. Anything that tends to cleanliness must be better for consumers.

1489. And you find it a great improvement upon the old system of open carts? Oh, a great improvement. I consider it a very great improvement.

1490. What is your opinion as to the conveyance of meat by the old open cart system; do you not think it should be abolished? Well, I would not like to give any opinion upon that; they might think I am interested. I considered the improvement I introduced necessary, and therefore I adopted it.

1491. As to the suitability of the Island itself for the purposes of slaughtering—what is your opinion of that? I think you could not get a more suitable site anywhere.

1492. For what reasons do you think so? Because it is out of the town; it is away from everything; the Island is by itself—isolated. You could not get a more suitable place, unless you went out to Bondi Beach.

1493. And it is easy of approach? Yes. Parties from the suburbs go there for their meat. One-fourth of the meat slaughtered at Glebe Island goes to the suburbs, and the butchers come and take it away.

1494. Then as to the conveniences of the buildings for slaughtering cattle, sheep, and pigs,—can you suggest any improvement in regard to those? I could not suggest any improvement as far as cattle are concerned, because I think that for killing cattle they are perfect; but for sheep and pigs I think there is not room enough.

1495. And calves? And calves. And there should be more sheds; they are not large enough; the meat has to be hung so close in them.

1496.

J. Rennie,
Esq.
2 Sept., 1879.

1496. Do you slaughter many cattle during the summer-time? About 140 a week on an average.
1497. Are you not often compelled during the hot months to slaughter at very early morning, and deliver before daylight—or what are your necessities in that respect? On Monday mornings we have to commence at 2 o'clock to kill, and to deliver to a few shops before the shops are open.
1498. What time would that be? The meat is delivered generally before 6 o'clock, and it would leave the Island before 5 o'clock. We have got to do a deal more than others. I have supplied Kidman for about four years, and have to supply meat very early to a greater extent than others have.
1499. Then the meat killed at 2 o'clock in the morning in the summer months has to be removed before 5 o'clock in the morning? Yes; we deliver at the railway, at the boat, and at the gaol every Monday morning, before 6 o'clock.
1500. Consequently it must leave the island before 5? Yes; and it was partly for that reason I got the new vans, so that the meat would cool going along.
1501. But is not the meat at that time in a state of muscular action—warm? It is warm, but you cannot help yourself.
1502. It cannot be helped—it is warm, but it cannot be helped? Yes; but I do not think it is injurious, for many a time I have eaten hot meat.
1503. Has it ever occurred to you that it would be much better for all concerned—for yourself in particular, the retailers, and the public, if this meat could be set before it was taken away? It would.
1504. Then it has occurred to you? Oh, yes.
1505. Well then, what would your opinion be of a cooling process on the Island—some refrigerated chamber or store, into which the meat could be put, and where it could receive the action of a cold atmosphere and thereby become set before delivery? I think the meat would require too much handling for that. To kill in the slaughter-house, then cart the meat away to the cooling-room would cause too much handling, and the less meat is handled the better—it keeps the longer.
1506. Then you think meat to go through the process of cooling and setting would be injured by over-handling? If it could be done in the slaughter-house, where the animals are killed, I believe it would be an improvement; but to be cut down, handled, and mauled about from shed to shed, I do not think would do.
1507. It does not follow that the meat would of necessity be mauled—as you term it—or handled; it might be conveyed on a trolley or traveller from the slaughtering place to the refrigerated room? It could be done that way. It would cost some money to do it.
1508. Do you not think this setting and cooling would be a great improvement? I do.
1509. Would it not make the meat keep longer? It would make it look better, and it would keep longer if cooled properly to the bone.
1510. And would it not be more wholesome? I cannot see that it would be more wholesome than the other, because I do not think that the meat is unwholesome though cut up hot. And it is not often cut up hot.
1511. Have you ever considered the subject of a wholesale meat market in the City of Sydney? I have, and I do not think it would suit at all in the summer-time.
1512. You do not think it would suit in the summer-time? No.
1513. You think the hot weather would be too powerful to enable the market to be a success? Yes, for six months in the year.
1514. For six months in the year you think it would not succeed? No; not unless the meat was in a cool room.
1515. As I can conceive no public meat market for the storing of meat to be perfect without its atmosphere being reduced to a low temperature, suppose the meat market were so fitted with cold rooms, what would be your opinion then? I think it would be success. If you had a fine room, fit for the reception of the quantity of meat consumed in the city every day, and had it down to a temperature of about 40 degrees, I believe the meat would keep much better and longer.
1516. And then the meat market would be a great success? Yes, but not without those appliances.
1517. Without refrigerating appliances it would not be a success? No.
1518. What is your opinion as to the new trade lately developed in the sale of carcasses of meat brought from the country to the metropolis by railway? Well, I can hardly say much about that beyond this: those that are doing it will find it out to their disadvantage. I do not think they will be able to carry it on in the summer-time.
1519. Suppose the meat is put into refrigerated carriages, and kept at a low temperature during transit, and then put into a cold meat market, what would your opinion then be? That might do. I do not think the meat killed in the country would be a bit better than the meat killed in Sydney under the same process. This country killed meat is only a cry.
1520. Do you not think meat killed at the place where the beast is fed, and without having been driven or fevered, cool, and in its normal state, must be better than that of an animal driven two hundred or three hundred miles, starved, and over-heated by driving, and harassed by dogs;—do you not think the meat of the one would be much superior to that of the other? Yes, but you are over-drawing it somewhat.
1521. I do not think so. We have very powerful evidence as to the driving of cattle? Allowing the meat to be killed at Bathurst, how long would the cattle fatten at Bathurst for the supply of Sydney—not two days. So, if abattoirs were established at Bathurst the cattle would have to be driven there; and the same at Orange, or anywhere else. They would need to have slaughter-houses at every station to kill the cattle in the vicinity, because there is no place between here and Wagga Wagga, or on the Western line, where the cattle locally fed around any of the stations would supply Sydney for two days. So the cattle would have to be driven to these stations to be killed.
1522. What is the probable daily consumption of beef for Sydney? About 250 a day.
1523. Of beef alone? Yes, Sydney and the suburbs.
1524. 250 carcasses? Yes, that is as near as I can go by; it might be a little more.
1525. Have you any knowledge as to the quantity of meat that has come from the country by railway per day? I could not say for certain, but I think not more than about 45 a day.
1526. Forty-five carcasses a day? Yes, taking one day with another.
1527. Is there not a very general impression among the people of Sydney and the suburbs that the meat brought from the country is superior to that slaughtered near the town? I believe there is such an impression,

- J. Rennie,
Esq.
2 Sept., 1879.
- impression, but it is only a cry. It is something new that always takes in Sydney; better cattle are being killed on Glebe Island this week than anything that has come from the country.
1528. Finer cattle? Yes, fresher and everything; and these cattle came by road.
1529. But do not you think great improvements could be made and ought to be made in the mode of slaughtering and dressing the cattle at the present time? I cannot see any improvement; it is the usual thing. I have been working in a good many countries, in a good many different places in the world, and do not see any difference here from there.
1530. Where were you engaged before coming here? I came from Glasgow here, but have been working in America and in England.
1531. Did you work at this trade in Glasgow? Yes.
1532. And in what part of England? Darlington; and I was working in Canada.
1533. How long is it since you were in Glasgow? Seventeen years.
1534. And is the system in Glasgow similar to that at Glebe Island? Not similar. In Glasgow the cattle are quieter, and we roped them, drew them into a ring, and knocked them down and pole-axed them. Here the cattle are so wild we cannot do that.
1535. But the blood was taken from them, and the offal removed in the same way as here? Not exactly, for the blood in Glasgow is all saved for dye purposes. Here it goes to waste.
1536. Was the system pursued in Canada similar to that pursued in Glasgow? Yes, the cattle were roped and pole-axed.
1537. Have you never heard of the system carried on in the large slaughtering establishments of the United States? No; I never was working in the United States. I have read of it in Chicago.
1538. Are you aware that in a great slaughtering place in the United States, where they kill infinitely more than are killed in England, not so much as a spot of blood or a stain from the offal of the beast is ever seen? It cannot be done, I think; I do not think a butcher can stick a bullock without his hands being stained.
1539. You do not think it could be done? I do not think you could stick a bullock without making your hands bloody.
1540. I mean splashes about the walls and floor? It splashes about the floor, but not about the walls, here. If there were a market here for the blood it would be saved. We have no market, and consequently the blood runs to waste.
1541. Have you ever worked at slaughtering in Edinburgh, or seen the slaughtering there? Yes, it is precisely similar to that in Glasgow.
1542. How do they save the blood in those slaughter-houses? They catch it in flat pans; they just hold up the skin of the neck when they cut it, and the blood is caught in the pan.
1543. It is sold for dye purposes, not for manure? For dye purposes, not for manure.
1544. Have you been in Edinburgh since the new slaughter-houses have been in operation? No.
1545. Then you do not know what is carried on in those new slaughter-houses? No.
1546. Are you aware that there are new ones there? Yes, and in Glasgow.
1547. You do not know whether any new or improved system is practised there? No, I do not know how you could improve it—killing a bullock; you knock it down and kill it.
1548. I do not know what your opinion would be if you read an account of the mode adopted in the United States. We have very valuable evidence upon this. The bullock is first pithed, and then it is hoisted by the hind legs, which renders the animal incapable of doing any harm to the workmen, his head is put into an iron vessel, and his throat having been cut he is allowed to bleed in that way. The hide and the offal are taken from the carcase, run out on trollies, the offal being conveyed to hermetically sealed carts. There is no spot of blood at all on the beast, which is kept cleansed from beginning to end of the operation? Well, then there would be some spots of blood; when the bullock is skinned, and chopped down, there are always veins running for a little while.
1549. Well, going back to the subject of Glebe Island, can you offer any suggestions as to the improvements necessary for the convenience of the trade and for the benefit of the public at large—that is to say, improvements in the buildings and the surroundings? The only thing I would suggest as far as the cattle killing is concerned is to have a shed over all the cattle. The shed there now is no good, it is too high; it would be just as well to be without it.
1550. The weather penetrates it? Yes, either wind or rain; and the back place ought to be kept a little more clean than it is. If there were more labourers and fewer officers on the island it would be better.
1551. The back place is kept very dirty? Yes.
1552. Your suggestion is that the cattle should be covered over, so as to be screened from the rain and the sun? Yes, and that the yards and lanes be properly paved, and a hydrant laid on with a hose, and the place be washed every day.
1553. There should be a constant supply of water to keep the yards and lanes cool and clean? Yes.
1554. What is your opinion of Glebe Island—it is a very large place; we were surprised to find it contained 33 acres of land—as a site for the cattle sale-yards? I do not think it would do at all.
1555. Why not? In the first place there is not room enough, and in the next place, if the cattle were not sold how are you to get them out of the yards again. Look at the population about Glebe Island.
1556. We would assume that the Island would be so arranged with stock-yards and paddocks that the cattle could not get out; could they not be fed in the stock-yards? I do not think it; I do not think Glebe Island would do at all for stock-yards; there is no better place than Homebush—anywhere between Homebush and Parramatta Junction.
1557. But do not cattle get very much harassed between Homebush and Glebe Island, and suffer very much from want of water and food? They do not want water and food. I have a paddock at Five Dock, in the Ashfield Municipality, containing 2 or 3 hundred acres, and the cattle get plenty of water and rough stuff to feed upon; I take them from there—a day's killing at the time—to a paddock near the Island. My cattle are not harassed.
1558. If all people did as you do there would not be so much complaint? We take our cattle to the one paddock on the sale-day, and then to the other as we want them. There is a law in force just now that tends to greatly harass the cattle, and it is that which makes it necessary to drive the cattle after dark along the Parramatta Road. It is a perfectly iniquitous thing altogether.

1559. The law which compels people to drive cattle at night-time along the Parramatta Road is iniquitous and hurtful to all concerned? Yes, and should be remedied without delay.

1560. What would be the remedy? To allow the cattle to be taken along the Parramatta Road as formerly. There was less danger, no one was hurt, and there have been several occasions lately of people being hurt by cattle in the dark.

J. Rennie,
Esq.

2 Sept., 1879.

1561. You say there is much less danger in driving cattle along the road by day-light than by night? Yes.

1562. And the results have proved it to be so? They have; and that is the reason why the cattle get so harassed. The men who have charge of them try to be as quick as possible; they know they cannot get inside the Municipality of Ashfield until after 6 o'clock, and mob after mob are waiting for 6 o'clock, and then they are rushed. None of this happened years ago when the yards were at Fullagar's.

1563. Do you not think these evils would be remedied if there were cattle sale-yards at Glebe Island, and the cattle were brought all the way to Glebe Island by rail? Of course it would remedy that evil; but there is no necessity to go to that expense when the thing can be done by merely rescinding that by-law in the Municipality. The Municipality of Leichhardt had me up four years ago. They beat me at the Police Office twice, and I appealed to the Supreme Court and beat them there on the point that they could not make a by-law to stop trade; and I believe if the butchers would stand out now they could get the Municipality of Ashfield on the very same footing, although I was fined last week 30s. for the same thing—for coming into the Municipality of Ashfield 10 minutes before the time. The man mistook the boundary; he thought the Iron Cove Bridge was the boundary, and instead of that it was a shop half a mile along. If they would do away with that by-law and allow us to drive the cattle along the road at any time, there would be no danger to the public, and no racing of the cattle.

1564. The cattle would be quietly driven, and the public safety would be less endangered? Yes; there was a man nearly killed about three weeks ago on the Parramatta Road. Fancy coming round a turn of the road, with two lamps, and coming on a mob of cattle—what chance have you got. Then the cattle turn and rush about, and we lose some. All of us have lost cattle.

1565. *Mr. Bruce.*] Speaking of those paddocks—you say you have a 200-acre paddock? It is Mrs. Ramsay's bush; I think it is about 200 acres.

1566. How many cattle have you in it, on an average—would you have a week's supply? Never less than a hundred at a time. There is never much grass for food, but there are pickings off the trees, and there is plenty of water. There is enough to keep them from famishing; their paunches are always full when they are killed; and when we have more cattle we rent Roberts' paddock at Homebush, and put the cattle there.

1567. In point of fact what food is there really in the paddocks? Well, there is just scrub, and a bit of grass just now in it. In our other paddock on the Balmain Road we have horses quite fat that have been in that paddock all the winter. They are in good condition now, and there are milch cows there also.

1568. Is that the general description of paddocks in which cattle are kept waiting to be slaughtered? No; in some paddocks there is not much.

1569. You said there was not room on Glebe Island for sale-yards;—do you know the extent of ground the present sale-yards cover? Well the present sale-yards are not near large enough.

1570. Have you any idea of their extent? I could not say; they do not cover more than an acre.

1571. If it were told you that they covered about 3 acres, and that there were 33 acres on Glebe Island, you would not say then that there was no room on Glebe Island for them? Though there are 33 acres on Glebe Island, still there is not room for them, and Glebe Island would not be a convenient place at all. If ever they are established there they will find that out.

1572. How would that be? Because there is not room, and the place is thickly populated, and there are no paddocks along the Balmain Road to put cattle in after they are bought.

1573. They get nothing in the present paddocks? Oh yes, they get a little. If you come over and see our cattle you will find their paunches full.

1574. I have been through the paddocks and seen the trees stripped of the bark, and no grass, and in some paddocks no water? If you go through my paddocks you will find plenty of water and plenty of scrub; and Turner and Davidson, and York and Walsh have good paddocks for their cattle.

1775. Davidson's cattle get no more than there is in this room; Davidson's paddock is at Petersham? Yes, but he has got another paddock at Homebush.

1576. You know the paddocks at Petersham;—is there anything in them? Nothing but the water, and in Davidson's paddock I daresay ten hungry bullocks could eat all there is there.

1577. Do you know how many acres to the bullock go on a station? Two to the bullock; but there is plenty of land in New South Wales where 80 acres would not feed a bullock, and there is plenty of land where 1 acre would feed four bullocks, as, for instance, on Liverpool Plains in a good season.

1578. I am speaking of the general average all the year round? If there were yards established between Homebush and the junction the auctioneers would find paddocks, and so would the wholesale butchers. There would be a lot of the paddocks cleared and laid down as grass paddocks. Allowing that the sale-yards were to be established at Wallerawang, would not a week's supply of cattle for Sydney eat all the grass within 50 or 60 miles of Wallerawang.

1579. It would be something like Sydney. But suppose the sale-yards were at Glebe Island, and the cattle got 4d. or 5d. worth of hay a day, would they not be twenty times better than in the paddocks, where they are now? I daresay they would be better if fed on hay; sometimes in the cold weather we take a little hay to the Balmain Road paddock.

1580. *Mr. Stewart.*] Do the cattle eat it? Yes; and if I have any cattle left over on the Saturday, and do not want to take them out, I take over lucerne hay to the slaughter-houses, and the cattle eat it.

1581. *Mr. Bruce.*] Can you say, on an average, how long an animal is kept alive after it leaves Homebush until it is killed? Well, three days.

1582. Before it is taken to the Abattoir? Yes; some are taken the next day; some are kept more than three days.

1583. Going to another subject;—are the yards at the cattle slaughter-houses thoroughly convenient in their arrangements? Well, as far as I am concerned, if what I have before mentioned was done, the yards are convenient enough for killing.

1584. Are they quite convenient for those men who kill for others—convenient for drafting out the particular animals they want? No, I do not think they are. Where there are a great many animals killed in one slaughter-house there is too little room.

1585.

J. Rennie,
Esq.
2 Sept., 1879.

1585. And better arrangements might be made in the yards? Yes; where there are perhaps 30 bullocks belonging to ten different butchers, there is great bother in drafting them out, and the cattle do get knocked about.
1586. Would it not be a great convenience to draft two ways? Yes; the present yards are not suitable for that, but as far as we are concerned, and the other lessees, nothing could be better. The capping of the fence, however, is often in bad repair and quite rotten, and not safe for the men.
1587. Can you describe to the Board the details as to how you would alter the shape of the killing-houses? I never did kill any sheep; Mr. Walsh or Mr. Elliott will give you that information.
1588. Would it tend to the convenience and cleanliness of the slaughtering if there were a separate gut-house;—the guts and the hides could be run in a trolley to be dealt with afterwards, and the offal could be taken away also as it dropped from the hand of the man that was running the guts into a receptacle? That would be an improvement.
1589. It would tend much to cleanliness? Much to cleanliness; but where the cattle hang after they are slaughtered there could be no better arrangement over there.
1590. Except in regard to a chilling-house? Except a chilling-house. We have a beautiful asphalted floor, and mine and all are constantly washed down. No bad smells arise from it. It must be better kept than any country slaughter-house, because there the drippings from the bullock going into the cart cause bad smells which must affect the meat. There is nothing more sensitive than meat; it absorbs bad smells. There are no bad smells on Glebe Island.
1591. Mr. Stewart.] I suppose that depends on the time you leave the offal? It is taken away every day. It is better looked after now than it was a while ago. There are no bad smells on the Island.
1592. Would it not be better to take it away at once? Well, the Government have one or two carts taking away the offal from one and the other.
1593. That is not the question. It is whether it would not be better to take the offal away at once from the beast? I do not think that matters—an hour or two's difference. The blood is let away directly the bullock is struck, into a drain. The drainage is very defective; it is all nearly level. There is a place where they could have a splendid fall. The place is well suited for drainage, and yet advantage has not been taken of it.
1594. Chairman.] Since the public agitation in the newspapers, and by the Government appointing this Board, have you observed any alteration or improvement in the management of affairs at Glebe Island? Well, the places are kept cleaner at the back. I cannot see any other improvement. The place was never badly managed. Mr. Oatley had plenty of men under him, but too few labourers and too many officers—too many men in command.
1595. You remarked just now that the place was slightly improved of late? Yes.
1596. You do give that answer? Yes, it is cleaner at the back, but the whole of the slaughter-houses ought to be white-washed—lime-washed at least every three months, for there is nothing so healthy as lime.
1597. Whom do you think unnecessary there as officers; that is, not the parties but the situations they fill;—what situations do you think superfluous? Well, there are Mr. Oatley and Mr. Jager, they have got little to do; and there is Gilchrist, I do not know what he does. There is another man for opening and shutting the gates, and I do not know what he does. Then there are carpenters and others; I do not know what they do. They are all officers and no laborers.
1598. There is a great want of other laborers? Yes, a few more laborers to keep the place thoroughly clean, and the lanes and other places should be paved and a hydrant placed there; and if the drains were led out to the back instead of to the front it would be much better, because the front drain which takes away the blood gets choked, and the floor has to be broken up, putting us to a deal of trouble, and the country to a lot of expense. If the drains were led out at the back so as to be easily got at when choked it would be much better.
1599. And there should be an abundant supply of water with hydrant appliances for the yards and lanes? Yes.

Mr. Frederick Oatley, Inspector of Glebe Island Abattoir, further examined:—

Mr.
F. Oatley.
2 Sept., 1879.

1600. Chairman.] You requested the Board when sitting at Glebe Island to hear some further evidence from you? Yes.
1601. And the Board promised to give you an opportunity on a future day for that purpose; hence your presence here to-day? Yes, I was anxious to make some explanation in connection with the evidence already given.
1602. The Board have no desire to put any further questions to you, but you are at liberty to make any explanation. Of course it must be of a limited nature, and in reference to some subject upon which you yourself have been misunderstood, or which you wish to explain in fuller language, or in any manner that may appear to you to be necessary in justice to yourself? My desire was to reply to some of the evidence I read in the Progress Report.
1603. I do not think we would be right in allowing you to do that. If you have been misrepresented or misunderstood in any evidence of your own, we can hear any explanation; but I put it to you—if you give evidence in opposition to some evidence which has been given against you, what is to prevent those parties from being brought up again to contradict you and so on, *ad infinitum*; there would be no end of it? I wanted to clear myself respecting the two carcasses which I have been charged with passing after they had been condemned.
1604. Very well, make your statement in regard to that? I was anxious to call in witnesses, as I wrote to you, who would be able to prove that I did condemn the carcasses—that they saw me condemn them.
1605. Those carcasses of meat to which reference has been made were condemned by you? They were condemned by me as stated in my former evidence, and I am now prepared to bring four witnesses whose names I mentioned in a previous letter, to prove that they saw me condemn them.
1606. You say that the two carcasses which have been referred to by other witnesses as having been passed by you were really condemned by you? Yes, and sent away and destroyed. I have suggested witnesses who can prove that, who saw me condemn them, and also one witness who boiled the two carcasses down.
1607. They were not used as human food? No, nor did they go to any shop in Sydney.
1608. But they were boiled down for the tallow? For the tallow; yes. I was anxious to clear myself on that point, and that was why I suggested witnesses to prove that what I said before was true. 1609.

Mr.
F. Oatley.

2 Sept., 1879.

1609. We are not doubting that. We are only giving you an opportunity of explaining anything you have not sufficiently explained. Now you have stated, with regard to those two carcasses, that you really did condemn them; that they were taken away and boiled down for the tallow, and were not used for human food? Yes.

1610. Well, that ends that part of the business. Have you any desire to explain any other portion of your evidence? There is some other evidence which I would like to allude to. I see Mr. Seymour states that when he was over on the 9th of March last year the punt was there and he found the place in a filthy state. I desire to say that the punt was not there till seven months after his visit.

1611. Mr. Seymour said that the punt was there on the 9th of March, and that the place was in a filthy state, and your statement is that the punt was not there till seven months after that period? Yes, not until October, which was seven months after.

1612. Therefore, you say Mr. Seymour's evidence must be wrong? Yes, the punt was not brought to the Abattoir till seven months afterwards.

1613. You see if we allow you to contradict that evidence, what is to prevent Mr. Seymour from coming here again to contradict you, and you coming again to contradict him. If you desire to supplement any evidence you have given, or to correct any misinterpretation of your evidence we will allow you to do it; but our duty is a plain and simple one, and at the same time a very important one; we must not allow you to travel outside your own evidence? Just so; but there are points I am desirous of clearing up.

1614. Well, you have explained that; is there any other point in your evidence you desire to amend or explain? I wish also to allude to Swan's letter, which appears in the appendix. During the period referred to therein the matter was not under my charge, but in that of Mr. Moore, who had also charge of the removal of the offal and blood. It was not under my control at all from December, 1876, until July, 1878.

1615. Never mind that; you are not responsible if the thing is not in your charge. Is there anything else you desire to refer to? I wish to say also, that, although the management was not in my hands, yet I instructed my men to lend every assistance they possibly could to Swan in carrying out his scheme.

1616. Is there anything else? There are several other things. I refer to some reports in the *Herald* where I am charged with passing those two bodies of beef.

1617. You have already explained that, and do you not see how improper it would be to allow you to give rebutting evidence. We would then establish the principle that other people might come in and give rebutting evidence against you? Quite right, sir; I fancied there would be that objection.

1618. We have every desire to do justice to all concerned, but you do not expect us to do that which would be foolish, and make us look foolish? Still I hope the Board will grant my request, and examine the witnesses who will prove that I condemned the carcasses.

1619. *Mr. Stewart.*] You are not being tried here? But it would show you that my evidence is true.

1620. It is for the parties who will sit in judgment on you to find out whether it is true or not.

1621. *Chairman.*] Your evidence and explanation may be considered in exculpation without additional evidence being given, and we cannot burden the proceedings unnecessarily. We are deputed to do a certain thing and we cannot go beyond it? Just so, but I would like these gentlemen to be examined. They might give you other valuable information in respect to the Abattoir. One of them was the lessee of the Abattoir at Melbourne.

1622. What could he tell us? How the abattoir is conducted in Melbourne, and he might suggest many improvements.

1623. But would it not be for you, with your practical experience of the Abattoir, to offer to the Government or to the Board any suggestions as to improvements which might occur to you? I have offered a great many.

1624. I would ask you again—I think I did ask you before—what is the average time of your reaching the Abattoir to commence your duties? At 9 o'clock, with the exception of when my duties call me away to the Treasury and other departments.

1625. What time does your assistant commence? 6 o'clock.

1626. When does he leave off? At 4, and sometimes after, when business requires it.

1627. There is no one else to inspect but you two? No, but there is Gilchrist, who renders much assistance.

1628. But he is not an inspector? No, although he is instructed to assist me in carrying out the regulations, and I find him a very faithful good man. He apprises me of all that is going on.

1629. Then there is no inspection before 6 in the morning of cattle slaughtered? Not before 6.

1630. And none after your assistant and yourself leave in the afternoon? None after that, but Gilchrist goes round and reports anything that he thinks ought to be reported. He remains until the Abattoir closes.

1631. Is there anything else you wish to state? If it would not be out of place I wish to allude to Mr. Dempster's evidence. He said he suspected that some of the dried blood we had at the Abattoir was being converted into black puddings and sausages, and I have brought you a sample of the dried blood to satisfy you as to the impossibility of such a thing taking place. [*The witness produced a large piece of coagulated blood of extreme hardness.*] I felt rather astonished at Mr. Dempster saying that he suspected such a thing. If you moistened that in water you would not be able to sit in the room for the smell of it.

1632. *Mr. Bruce.*] In what state of progress is the machinery for desiccating in? The machinery for the experiment which Swan is going to try is nearly completed. It will be completed to-morrow, and we will get up steam and try it at once.

1633. What quantity can be desiccated by it? Probably not one-third of what will be required.

1634. But sufficient to see whether it will do? Yes, sufficient to see whether it will be a success, which I sincerely hope it may. You saw where the manure was deposited down a shoot—I think that is a bad place for it. I would suggest that the manure pit be placed on the hill at the back of the Abattoir, the drawing out from there would be very little, whereas it is terrific from the place where the manure now is. I thought I would mention that to the Board.

1635. *Chairman.*] If you will supplement your evidence by sending in a letter suggesting any improvements that occur to you the Board will be glad to have it.

TUESDAY,

TUESDAY, 9 SEPTEMBER, 1879.

Present :—

THE HON. GEORGE THORNTON, Esq., M.L.C., CHAIRMAN.

JOHN STEWART, Esq.,

ALEXANDER BRUCE, Esq.

Alexander Bruce, Esq., Chief Inspector of Stock, and a Member of the Board, examined :—

A. Bruce,
Esq.
9 Sept., 1879.

1636. *Chairman.* } I understand you have given considerable attention to the carriage of live-stock by railway? I have, and frequently reported on it during the last ten years.

1637. Do you consider it an important branch of the railway traffic? Yes, the carriage of stock, alive or dead, is one of the most important branches of the railway traffic, and that which is to be the chief means of carrying our railways into the far interior, being, as it is, a large and growing source of daily revenue.

1638. Has this branch of the railway traffic been cultivated as it ought to have been? No, it has been the most neglected and the worst managed of any, and it is quite within bounds to say, that through this neglect the department lost, during the eight years from 1868 to 1876, revenue to the extent of over £20,000 a year, which would, under proper management, have been secured, and that the owners of fat stock during that time have sustained a loss of twice that amount through having to send their stock to market by the road instead of by rail; while during all that time the stock were subjected on the road to a very great deal of cruelty which would have been avoided had they been sent by rail.

1639. How are these statements proved? Their proof lies in the simple fact that it was eight or ten years after the railway had reached Goulburn, Bathurst, and Murrurundi before the trucking of stock from even these distances became at all general. I submit a statement of the stock traffic from 1858 to 1877 (*See Appendix*), which shows that the increase in 1876 and 1877 is most marked, and I believe that for 1878 it will be very much more so. I should imagine the revenue for this traffic for that year is over £40,000.

1640. What should have been done to secure this traffic? There were three things which had to be done before this traffic could be secured to the railway and which were not done during all that time. (1.) It was the duty of the railway authorities to make such arrangements at the proper stations as that the trucking of the stock could be easily and safely effected without knocking them about. (2.) To see that the stock were carried speedily and safely to their destination. And (3.) To charge at first at least moderate rates for the carriage of the stock, and make it plain to owners that it was very much to their advantage to send their stock by rail instead of by the road.

1641. Can you show in what respects the accommodation for loading, carrying, and discharging the stock was defective? Yes, it was so in the following very important respects, namely :—

1. There were too few trucking stations.
2. The sites of the trucking-yards were, as a rule, and still are, exceedingly ill-chosen. They were too near the passenger station, and too much in the midst of the ordinary traffic. It was difficult to get the stock to the trucking-yards, and when there they were frightened and maddened by the sights and noises which they were continually seeing and hearing. The trucking-yards should be at least 400 yards from the station.
3. The form of the yards was most unsuitable and inconvenient for loading and discharging the stock in the following among other respects :—
 - (1.) The number of small yards erected was insufficient and those which were erected were badly planned.
 - (2.) The gates were far too heavy, badly placed, and the fastenings unhandy and liable to damage the stock.
 - (3.) The forcing yards and crushers were too wide and allowed the stock to turn round. This retarded the loading and roused and irritated the stock. And
 - (4.) At even the larger and more important stations there was no convenience for loading more than half a truck of sheep at a time; and the upper tier had to be loaded by means of a moveable stage or plank.
4. The cattle trucks were badly constructed for loading, being provided (as they still are) with heavy unmanageable flaps instead of sliding doors,—which allow the cattle to turn round and come out again, thereby greatly retarding the loading, endangering the men engaged in trucking, irritating the cattle, and leading to their being kicked about and bruised.
5. The trucks were so badly shaped, and so roughly finished as to damage the stock on the passage—especially as the cattle-trucks were frequently shunted on the way.
6. The arrangements for unloading the stock—more especially at Homebush, where the greater part of them are discharged,—were (and to a large extent still are) quite as bad as those for trucking, and the result was that the stock were often hurt and sometimes killed outright in discharging, through the defects in the form and construction of the sidings and yards; while these again were placed close up to the station, and right in the teeth of the general traffic, to the great risk of the passengers and injury to the stock themselves.

1642. Will you state in what respects the second requirement “that the stock be carried safely and quickly to their destinations” was not carried out and the necessity for its being so? It may be said that the necessity for this was almost wholly ignored. As there were very few special (all stock trains) the stock trucks were attached to the goods trains, and the stock were treated as so much goods, totally devoid of feeling; for the trains stopped, as goods trains do, at every other station; and this of course led to the cattle trucks being frequently shunted and the stock hurt and bruised, and often thrown down by the sudden stopping and starting of the trains; while, as a rule, the trains were very long on the way. Stock ought to be carried right through with as little stopping and shunting as possible, at an average speed of 20 to 25 miles an hour.

1643. You said that the third requirement was to make it evident to owners of stock that it was very largely to their advantage to send their stock by rail. Will you state how this could have been done? A low scale of charges for five or six months, if there had been proper accommodation provided, would have done this; and if anything else had been necessary a fair division could have been made of a few little lots of cattle, their brands and descriptions taken, and some sent by rail and the rest by the road. Then these cattle could have been followed from the railway station at which the division was made to the sale-yards, and

and thence to the Abattoir, and their weights ascertained and published. The same course could have been taken with some small lots of sheep, but in their case the test could have been much more exactly made, as the sheep could have been weighed alive at the station at which they were parted, and afterwards at the Abattoir; and the question could in their case have been put to a still further test by comparing the carcasses when the sheep were slaughtered. I am not aware that a single experiment of this sort was ever made, although this test was suggested to the railway authorities; and as the great saving effected by trucking was not generally known to owners they were for a long time very sceptical with regard to the advantages of the rail over the road.

A. Bruce,
Esq.
9 Sept., 1879.

1644. Then when and how did owners begin to use the railway for the conveyance of their stock? They only did so, as it were, through compulsion, during the severe droughts of 1876-7 and '8, when there was no feed on the roads for their stock, and when they had to be sent by rail to reach the market in a state at all fit for slaughter. The stock were thus forced upon the railway authorities when they were quite unprepared for it, and they were compelled to provide better trucking accommodation and more trucks.

1645. What is the present state of the accommodation for the railway stock traffic? The accommodation is still very defective at many of the stations, and at none more so than at Wallerawang and Homebush; while the greatest mistake of all continues to be made in selecting the sites for the trucking-yards. They are still being erected quite close to the passenger stations, and in the midst of the general traffic; and as a rule provision has not been made for the stock reaching or being in the trucking-yards, without being roused and alarmed by the general traffic at the station, and on the line.

1646. Has the attention of the railway authorities ever been called to the circumstances which you have here stated? As early as 1869 the attention of the railway authorities was called in my annual report to the great importance of this traffic, and to the waste going on in the condition of the stock travelling on foot to market. It was so also, in 1870, in my report for that year and in a special report made by me in 1871. Then it was again so more recently in reports made by Mr. George Maiden, of Messrs. Maiden, Hill, and Clark, and Mr. George Lewis, of the Survey Department, and myself, under the direction of the present Minister for Lands and his predecessor; and suggestions were offered by us for the improvement of this traffic; but our reports and suggestions were not acted upon.

1647. How do you propose to bring about the necessary improvement in the accommodation for and conduct of the railway stock traffic? I have good hopes that when attention has been thus pointedly and forcibly drawn to the enormous losses which have been sustained by the Railway Department and the public through the very defective accommodation for this traffic previous to 1877, the very serious mistakes which are still being made in the selection of the sites of the trucking and discharging yards, in their form and construction, and in the form of the trucks, will henceforth cease—that the stock trains will be run as expeditiously and directly as possible—and that this branch of the railway traffic will receive that attention and consideration which its very great importance demands.

1648. Have you any special suggestions to offer to effect these highly desirable objects? Some of the Traffic Inspectors and other officers under the Commissioner for Railways have now had sufficient experience in the conduct of the live stock traffic to advise him with respect to the points to which I have alluded; and these matters (as they belong to the traffic) ought certainly to be referred to them, not to the Engineers who can have no practical knowledge of stock or their management, or even of the stock traffic on railways. If therefore it be necessary that the trucking-yards and other appliances for this traffic should form a portion of the original contracts for lines, I would suggest that the selection of the site for the yards, their size, and shape, should be left to the Commissioner for Railways, as also the form and construction of the trucks; or, as I have more than once suggested, a properly qualified Inspector, possessing a thorough knowledge of the management of stock, should be appointed to supervise and cultivate this traffic, under of course the direction of the Commissioner for Railways.

TUESDAY, 9 SEPTEMBER, 1879.

Present:—

THE HON. GEORGE THORNTON, Esq., M.L.C., CHAIRMAN.

JOHN STEWART, Esq.,

ALEXANDER BRUCE, Esq.

John Walsh, Esq., examined:—

1649. *Chairman.*] You are an old resident of Sydney, I think? I am.

1650. And engaged in the butchering business, wholesale and retail? I have been in the retail business for a good many years, but in the wholesale business only for the last fifteen years or more.

1651. You are one of the firm of York and Walsh? Yes.

1652. You buy and slaughter largely, I think—do you not? More than anyone else in the colony I believe.

1653. In cattle as well as sheep? Both.

1654. Have you had much experience of the Abattoir at Glebe Island? I have. No one connected with the trade has a right to have more. I have acted as a salesman and done our own business as salesman and collector for several years.

1655. Then you have been generally at the Abattoir? Constantly there;—not like my partner, who knows little about it, but I have been there constantly for several years.

1656. And still continue to go there? No; for the last year I have not been so much there. I have been there every day, except when out of town on business, buying stock.

1657. You are aware of the nature of this Board, and the duties that have been deputed to it, namely, to inquire into matters affecting the Glebe Island Abattoir, are you not? I have read a good deal about it.

1658. Have you anything in the shape of information to give to the Board, and thereby to the Government and the public, which will be useful in view of the matters we have in hand? The Abattoir, as it is at present—on the beef side particularly—I do not think you can make it better. I have had considerable experience; I was reared in America, and had considerable experience there in the business, and I have been in every city in Australia nearly; and, being a butcher, the first thing I would do, naturally, would be to see the Abattoirs and the butchers' shops. I do not think that there is, in Australia, a place better kept or better adapted for the business than the Abattoir at Glebe Island; that is, on the beef side; what I say does not apply to the mutton side.

1659.

J. Walsh,
Esq.
9 Sept., 1879.

J. Walsh,
Esq.
9 Sept., 1879.

1659. Then you think the buildings, for the purposes of the beef trade, are sufficient and very good? Superior to anything you can find; but those for the mutton are too small.

1660. We will come to the mutton places afterwards; at present we will keep to the beef side. You say you have been in America? Yes, I have.

1661. For how long? 12 years; I was reared there from the time I was about 8 years of age until I was 21.

1662. In any way connected with slaughtering and the butchering business? Partly.

1663. Did you see much of the mode of slaughtering in the abattoirs in America? I saw a good deal of it. It was down in Connecticut, where I lived. It is a cold climate there, and a great deal of the slaughtering is done in the winter, in the fall of the year.

1664. You have not seen the mode practised in Philadelphia? No, but I have seen Cincinnati, in the days when the principal pig-slaughtering was done there, before Chicago was much of a place. It is mostly done at Chicago now, I believe, but Cincinnati was the place then.

1665. Do you think the mode of killing and bleeding and dressing the cattle as carried out at Glebe Island a perfect one? I do not think it could be surpassed. We have had butchers from Melbourne and many other places, but we can find no men superior to our workmen that we have at Glebe Island.

1666. But I speak of the system, not of the workmen? Oh, superior.

1667. The pithing, the bleeding and skinning, the taking out the insides and offal, and so on;—you think that system perfect? I do, with this exception, that sometimes they put too many cattle down in one fall. That is the men's fault; they sometimes put four or five bullocks down together at a fall. We will say they put five down; well the beast that goes up last out of those five will not keep within a day as long as those that went up first.

1668. For what reason? It is not dressed so quickly. The inside is not taken out so quickly. The quicker the meat is dressed after being slaughtered the longer it will keep. The same remark applies to mutton.

1669. We will keep to the beef at present, if you will forgive me for asking you to do so. Is not the present system, that of cutting the throats of the animals, allowing the blood to run over the floor, the animals lying in the blood, and the blood being carried away by drainage only? The blood runs away as soon as you stick the animals.

1670. Are they not allowed to lie in their own blood? The place is invariably swept down.

1671. Does not the body of the animal, while it is being skinned, lie in its own blood? There must be a certain amount of blood; the floors are not washed down.

1672. Could not that be improved upon? It might be, but I do not see how it can affect the beast.

1673. Not the beast? Nor affect the beef either.

1674. But as regards the cleanliness of the establishment? It would look better no doubt if the place was washed down.

1675. Now, in America, we have evidence that the beasts are killed in this way, and there they kill a great many more than we do, perhaps five or ten times as many. They pith the animal and then immediately hoist it by the hind legs, and allow the head to drop into a large iron receiver. Then the throat is cut and the blood is received into this vessel, thereby preventing any stain or appearance of blood in any part of the building, or on the men who are working there. Do you not think that would be an improvement upon our plan? No beast will keep so long as one that is hoisted on the tackle after the fall, but with regard to catching the blood in a vessel, the vessel will have to be a very large one indeed, because the animals wriggle and twist about, and throw blood all over the floor.

1676. I may tell you that we have authentic evidence that this is done most successfully in America, where they kill, as I said before, at least from five to ten times as many cattle as we do, and yet the slaughtering and dressing is carried on without a stain of blood appearing anywhere? I never saw it.

1677. The blood is conveyed away by the means I have stated into carts or into boats, and there is neither foul smell, nor foul appearance, nor stain nor mess of any sort? I have never seen it in my experience, and as far as the blood is concerned, there is no smell from it until it has lain for a certain time.

1678. Well, if you will read the evidence you will find such to be the case, and I recommend it to you as a practical man, because it must be a matter of interest if not of importance to you? I quite agree with hoisting a beast on the tackle; I know that if I was a retail butcher buying carcasses for myself, I would give more for one that had been hoisted. For instance, in every slaughter-house they put down three, and sometimes five, when they are in a hurry; well if I had a shop of my own, I would give a farthing a pound more for a bullock that went up first on the chain than for the one last put up, provided that the bullocks were of equal quality.

1679. Then experience shows you that decomposition sets in more rapidly in a beast in which the inside is kept longest? Yes; and a beast that is hung up bleeds better. If you will take the trouble to go over to see the Abattoir, and get any man to show you, you will notice in the beast that is put up on the chain at once that when the hide is taken off there are none of the little veins bleeding as in the beast that is left on the ground for a quarter of an hour or so before it is taken up.

1680. Then hoisting the animal is much preferable to allowing it to lie on the floor? Decidedly.

1681. Do you slaughter much cattle during the year? Close on 200 bullocks a week.

1682. What is your practice in the summer months—I mean what time do you commence to slaughter in the hot months? 5 o'clock every morning, except on Monday morning, when we commence at 2.

1683. You commence at 2? Every Monday morning.

1684. And what time do you leave off? 7 in the summer, 6 in the winter.

1685. What time do you get the beef away from the Abattoir? We are carting it away all day, as a rule. For instance, in the hot weather the beef we commence to slaughter at 2 o'clock goes out to the shops for the Monday morning's supply to the customers.

1686. Early in the morning? Yes.

1687. Before 6? Before 6. The gates are generally opened at 4 o'clock, and then they begin to cart away. There is generally a quantity of beef and a number of sheep up by that time, and the carters commence to cart it away immediately. It is in the shops by daylight, sometimes before.

1688. The retail shops? Yes.

1689. But is not the meat at that time, so soon after being killed, almost alive, so to speak. Is it not warm? It is warm sometimes, of course; but when you kill it at 2 o'clock it cools much more quickly than in the heat of the day.

J. Walsh,
Esq.
9 Sept., 1879.

1690. But, as a matter of fact, is it not the case that the meat at that season of the year is full of muscular action and warm by the time it is delivered to the retail shops? In the hot weather it never gets cold; it is warm all the day. It will not get cold up to the time decomposition sets in, in fact; but a beast killed in the cool of the morning will keep longer than a beast allowed to stand in the sun and killed that same afternoon.

1691. Do you not think it would be a great advantage to all concerned, namely, to yourself as a carcase butcher, to the retailer, and to the consumer, if the meat were allowed to set before being delivered for consumption, say by having a chilling-house on the island, and putting the meat into it for the purpose of cooling or setting it; do you not think it would be a great advantage to all concerned if the meat could be so chilled and set before delivery? If you had such a thing as that you would be able to slaughter on Saturday for Monday's consumption, but at present we cannot.

1692. But I ask your serious attention to the subject? Well, I will answer by saying that I would certainly prefer meat that is hung a little time. I do not myself like meat immediately after it is killed, and it is not profitable to any retail butcher to sell it, because, when you cut a joint of hot meat down, the flesh creeps away from the bone and contracts, and does not look so well. I don't care how good a bullock is, a butcher shall cut you a piece out of it when it is fresh killed, and still it looks bad.

1693. Then will your experience enable you to tell the Board that a chilling-house now is an absolute necessity? No, I do not think it is. I have been in the business since Glebe Island was established, and before that, and I do not think it is an absolute necessity.

1694. Not during the summer months? Not during the summer months. I have kept an establishment for many years, and we know that, in the hottest weather, a man who understands his business will get his beef in in the morning, and it will keep till the next day. I have never seen weather when it would not.

1695. But still, do you not think a chilling-house would improve that state of things? I do not say it would not improve it, but I do not think it is an absolute necessity.

1696. Well, do you not think that meat slaughtered and chilled in the way I have indicated would be far preferable to that killed and offered for sale in the way you speak of? Decidedly preferable.

1697. Then, practically, is it not an absolute necessity that there should be a chilling-house? Well, it would be a great improvement.

1698. I do not want to force an opinion upon you —? I give you my opinion candidly, as I told you I would.

1699. Have you ever considered the subject of a dead meat market for the city? No, I have not; and to be candid with you, I do not wish to see one as long as I can help it, because I do not think it would be for the good of the butchers.

1700. The carcase butchers? Any butchers, retail or otherwise. I know that in the summer-time butchers often have a rough time and hard work to make a living; and in the winter-time, when they can make something out of it, half the people would go to the dead meat market and buy their meat.

1701. Then as far as your interests are concerned you would be opposed to it? I would, decidedly.

1702. Do you not think the business of the supply of meat to the metropolis is in a state of change, consequent on bringing dead meat by railway to Sydney? The only change I can see is that it makes it a great deal worse for us. In our line of business it seriously affects us. It is a fine thing for the retail butchers.

1703. But is it not a good thing for the public at large? I cannot see how it is. Are you getting your meat cheaper or any better?

1704. I will ask you that question;—will the public at large, by this new mode, be likely to get their meat cheaper? I do not think they will. If I had a shop to-morrow, and I could get beef given to me almost, I would keep the price up as long as I could.

1705. But will not the meat itself necessarily be better? No, why should it?

1706. I was going to suggest to you why it should be. Of course I cannot argue with you, but from your experience as a practical man do you not think that a beast slaughtered where it has been fed, without being fevered by over-driving—slaughtered in its best condition—and the carcase sent to Sydney, must be better meat than that which is driven a long distance and perhaps ill-treated? Yes, but where will you find that? You cannot find such a place. There is no place where they slaughter meat where they can fatten.

1707. We will not go into that; I am asking if meat of that description can be introduced into Sydney? Yes, if you had a railway to Liverpool Plains or other fattening stations it would be better, but I cannot see that it is any better to drive them to Riverstone or Orange than it is to drive them to Orange and then train them here. We have the best workmen and every supervision, and I say that the public have greater protection in that way than they have in regard to meat slaughtered in private slaughter-houses where there is no inspection.

1708. But are not the cattle which are brought by train from Homebush subjected to great cruelty even after they reach Homebush;—for instance, do they get food as a rule? That is a point I would like to speak upon.

1709. Are there any feeding places? Yes; I have seen it stated by gentlemen who are supposed to know, that there is no more grass than would fill your hat, but it is not true. We had the Newington estate for years until Mr. Weatherill bought it; we have had paddocks from Mr. Walker of Concord, and paddocks of Mr. Lackey's at Duck River, and we never bring down stock for more than one or two days' supply at the furthest. The same remarks apply to others; Rennie and Williams, Davidson and Turner, and Mr. Elliott all have paddocks where their cattle are fed, for I need not tell you that any man who knows his business would not be mad enough—we might as well throw our money into the street as bring stock here to starve. It is not true that the cattle are cruelly treated. They get more cruel treatment at Homebush than they receive at the hands of the butchers.

1710. Are not the sale-yards at Homebush unwholesome? A disgrace to the country.

1711. Cattle are up to their middle in slush and mud? I have seen cattle bogged there. I think it expresses everything when I say they are a disgrace to the country.

1712. Then from there to the Abattoir are not the cattle driven furiously and tantalized the whole way by the drovers and the dogs? I cannot tell you that they are. Plenty of people will tell you it is a fact, but they never see it. There is a law which prevents us from bringing the cattle down until after 6 o'clock at night, and there are very few gentlemen about then. No gentleman can say, from practical experience, that the cattle are ill-treated. I would not keep a stockman one hour if I knew him to do such a thing.

1713.

J. Walsh,
Esq.
9 Sept., 1879.

1713. How long does it take to drive the cattle from Homebush to the Abattoir? If we buy cattle at Homebush—we buy largely outside and they rarely go into the yards—but when we do buy cattle at Homebush, they go to the paddocks at Newington or Concord, and they are left there till they are wanted, and then they are brought down early in the morning or at night, just as we require them.

1714. You say your cattle are driven quietly and carefully to the Abattoir? Yes, and so are many others. There are some exceptions. Davidson and Turner, Rennie and Williams, and our firm are the only butchers, I think, who keep their own stockmen. There are no other people's cattle "boxed" or mixed with ours.

1715. We will go back to the Island if you please. What is your opinion as to the position of the Island for the purposes of an Abattoir? I think it is a very grand one; I do not think you could find anything better.

1716. You say it is a grand situation for the purposes of a public Abattoir? I do.

1717. Near to the city and convenient to the trade? Convenient to the trade and a good road.

1718. And sufficient for all the purposes required of it? For all the purposes required of it. People from the Liverpool Road, Parramatta Road, and Balmain, have to come there.

1719. To make their purchases? To make their purchases.

1720. Are you aware of the extent of the Island? Yes.

1721. Do you know how many acres it contains? No, I don't know that.

1722. It contains 33 acres of land? It runs down to a long point at the back of the fat-house we have there.

1723. I will take you to the buildings again before I forget that part of the subject; do you think the buildings erected there are sufficient for the present and the prospective trade—I mean for the beef? Yes, I do.

1724. Do you not think the paving and drainage require amendment? Do you mean the patent floor there?

1725. It seems to be more mud than patent floor as far as we could see? Perhaps you went at an unfortunate time; in the front do you mean where the vehicles go?

1726. Yes? That is very bad, and the lane is not at all applicable; it is too narrow.

1727. It wants more room for access? Yes; you see when there is a row of carts on each side there is barely room for one cart to go up and down.

1728. One cart would monopolize all the space? Yes; and speaking of the carts, there is no doubt that those waggons in which you can hang the meat up are preferable, but when a man goes to the Abattoir he cannot turn his waggon in the lane. Rennie and Williams use them, but they have the first slaughter-house.

1729. You say there is not room for more than one at a time, and that the width of the road should be doubled? It wants to be considerably wider.

1730. What about the drainage of the place? Well the drainage is not particularly good just on the roadway.

1731. Are there not sometimes offensive smells from the drainage? Not so much lately, but there has been, recollect, only one old man as scavenger, and he was supposed to keep the place clean. Now there are a number of men, and the place is certainly kept very clean.

1732. Do you think the cattle-pens are sufficient for the purpose required? I do, and for many years to come; and as a proof of it we have occupied two of the beef slaughter-houses for years, until last year, as mutton slaughter-houses on that side, and prefer to pay the higher rent for them to kill mutton in, and then there was room enough for the beef.

1733. I mean the yards in which the cattle are put for the purpose of slaughter; they are what I call the cattle-yards? They are jammed in there very thick at times.

1734. Have you any difficulty sometimes in getting cattle up to the slaughter-houses? No; but there is sometimes great difficulty in getting in enough for the day's supply. As you can only bring them in once during the day you have to put in whatever you intend to kill; you cannot bring more.

1735. Then you think the cattle-yards could be improved? They could by being made larger.

1736. Now with regard to the mutton-houses, what is your opinion of them? Well, the mutton-houses I am quite clear are too small, considerably so.

1737. Much too small? Much too small from my experience of them. We slaughter 4,000 or 5,000 sheep a week at least, and there is no room there. The men go to slaughter in the morning; they are supposed to have a couple of hundred sheep ready before the carting out begins, and these sheep are hung so thickly that they have not a chance to cool in fact.

1738. They are hung in contact, and thereby become deteriorated? Yes; we have to what you call double-bank them, that is hang one on top of another.

1739. Well, in consequence of the mutton-houses being so small, the quality of the meat is necessarily damaged thereby? It certainly is; there is no question that it will not keep so long when it is damaged in that way; there is no manner of doubt about it.

1740. The meat will not set? It will not set.

1741. Is there not a great want of cleanliness too, in the mutton slaughter-houses? There is a great difficulty in keeping them clean.

1742. In consequence of the deficiency of room there is a great amount of uncleanness, which you say cannot be avoided? Under present circumstances; I would like you to ask me some questions upon that point.

1743. Well, tell us what you think you ought to tell us on that point? I think I should tell you that every two of those mutton slaughter-houses should be thrown into one.

1744. That is to say, you think the size of the mutton-houses should at least be doubled? I think if you want to make the lane wider you could do that by taking the front wall of the mutton slaughter-houses away, and letting the back wall be the front one. That would give additional width to the lane without any great expense. I think then that you might throw two of those houses into one.

1745. That is to say, that the accommodation for the slaughtering of sheep should at least be doubled. Should be doubled. They are very badly done those mutton slaughter-houses.

1746. To keep the meat wholesome and for purposes of cleanliness the places should be at least doubled in size? Yes. I believe the roofs are badly constructed. During easterly or southerly bad weather you might as well be out in the rain.

1747.

1747. Are they not too low? They are too low, and the rain beats in so that actually the mutton might as well be hung out in the rain. You cannot get one dry place in the slaughter-houses. They are too small, but the greatest objection still is to the lanes. Now this I know to be a fact. We are fellmongers and we take away our own skins. Well, there is a slaughter-house here, and another here (*showing the situations*), and there is one little narrow lane barely wide enough for a cart to back up. We are supposed to throw all the offal and skins of the sheep into this. They are simply thrown in a heap there, and whenever one of our big drays gets up to take a load of 300 or 400, it stops until it gets loaded, keeping possession of the lane, and consequently the men who want to get the offal away cannot get at it, and it is sometimes allowed to remain there longer than it should.

1748. Then in consequence of the narrowness of the lanes the whole work of the establishment is sometimes obstructed? Yes. If you could throw two of the slaughter-houses into one, and have one lane at one side for the offal to go, and another lane at the other side for the skins to go, it would do away with all that difficulty.

1749. And I gather from what you say that the carts and the men employed ought to have constant and uninterrupted access to the place all day long? All day long, to get at the offal.

1750. And to do that the width and extent of those places require to be increased? They do; they want a lane specially made to keep those places clean, to get at the offal. On Monday morning they commence at 2 o'clock. As a rule, in each of the slaughter-houses 200 or 300 sheep are killed before breakfast. The offal is thrown into the lane and the skins on top. Well, if the skin man comes first, the offal man has to wait until the skins are taken away, and sometimes it is the afternoon before the offal can be removed. That is a great nuisance to those houses, and if you can remedy that you will do a public good.

1751. Well it is from a practical man like you that we expect to get useful information? I believe if you ask Mr. Elliott upon this point he will bear me out. He is a man who has had a great deal of practical experience.

1752. With regard to the conveyance of meat from the Abattoir to the retail shops, have you not noticed that the plan of conveying it in open carts is very objectionable? It is; although I use them I know it is objectionable.

1753. The men themselves who drive the carts are in a state of filth? I know it is objectionable; I am quite aware of it, but if everyone had waggons they could not get in and out of that lane.

1754. Under the present arrangements there would not be room for the new meat waggons to work there? There is not. We send a waggon there every day or so for hides, and they have sometimes to wait hours before they can get the waggon in.

1755. What is your opinion about the waggons for the conveyance of meat;—do you not think it would be more proper and better for all parties if the meat was conveyed in those newly-constructed waggons? There is no room for a doubt about that.

1756. It would be an improvement, but you say it cannot be carried out in consequence of the want of accommodation on the Island? There is not room.

1757. I think there is only one other question I want to ask you. You say that the buildings, especially the mutton-houses, are in such a state of disrepair that they are no protection from the weather? I do not say disrepair; they are badly constructed. The construction is bad.

1758. They are so constructed that they do not keep out the rain or the bad weather? They do not. They are too small, ill-constructed, and the lanes at the back are not at all adapted for the business.

1759. By the way, there is one more subject I want to ask you about. Have you formed any opinion as to the advisability of having cattle sale-yards at Glebe Island. Assuming that the cattle would be brought all the way by rail and delivered on the Island from the trucks, have you considered the subject as to the advisability of having cattle sale-yards on Glebe Island? I have; I have seen something about it, and I think it would be the act of madmen. To start with, you cannot get a supply every day. You get the cattle there, and you have no water and no food, and you have to take them out again. I think it would not at all suit.

1760. But supposing that hay and an abundance of pure water were supplied, what would you think then? You may get the best hay that Australia will grow, and station-fed cattle will not tackle it until they are almost actually starved. I think the place is not at all adapted for it; it would not do at all.

1761. Then you disapprove of the idea of erecting cattle sale-yards at Glebe Island? I do, decidedly; you should have yards where you have paddocks and water.

1762. The cattle sale-yards should be where there are paddocks and water? Yes, and you should not bring cattle into thickly-populated places, where people are knocking about. Cattle require rest, and if cattle brought down from the country in warm weather are killed just after their arrival, the flesh will be of a kind of red, foxy colour—what we call foxy. But let the same cattle go into a quiet paddock, where they get rest and water and a little scrub, and the meat is of quite a different colour.

1763. And the quality of the meat is better? It must be.

1764. *Mr. Stewart.*] I would like to know where the carcase butchers sell the meat? On Glebe Island.

1765. Do the retail butchers go there to buy? As a rule they do, except on Monday morning.

1766. Then it is the only wholesale meat market we have in Sydney? We have now one at the railway-shed, where they sell by auction. On Saturday the retail butchers generally order from the carcase butchers what they want on Monday morning the first thing.

1767. Glebe Island is a convenient place for selling carcases? It is.

1768. And the butchers go from stall to stall to select their meat? Yes, if a man does not see what suits him in one place he goes to another.

1769. *Mr. Bruce.*] About the keeping of the cattle;—how many cattle on an average are there between Homebush and the Abattoir and on the Island? Well, I do not think you would find 200 head to-day between Homebush and the Abattoir, all those on the Island included.

1770. Yesterday was sale-day;—how many would there be to-day? The market was a little firm, I suppose. I do not believe you would find over 200 head between Homebush and the Abattoir, including all those there to-day.

1771. Then what becomes of the cattle sold at Homebush? They generally go into the paddocks; for instance, Rennie and Williams have a paddock where they send them to, and so have Davidson and Turner.

J. Walsh,
Esq.
9 Sept., 1879.

1772. Is not Rennie and Williams' paddock between Homebush and the Abattoir? Oh, yes; they have paddocks at Ramsay's.

1773. And Turner and Davidson's paddock? It is at Homebush, at the back of the yards.

1774. I have seen another paddock of Davidson's at Petersham, where there are about 100 head of cattle;—how much feed is there in that? They never bring them down there for more than a day or two—a couple of days' supply at the most.

1775. Would you believe it if anybody told you that they had seen cattle there for about a week in that paddock? I would not believe that it was in Davidson's paddock, it might have been in some other. There are butchers who kill for a number of small butchers, and who do not pay the same attention to the business. I do not believe you have seen cattle for a week in Davidson's paddock.

1776. I do not say I have seen it, but a party who lives close by says that he did? I could not believe it, because I am sure that Davidson would not allow it, and his partner, although a rough man, is a thoroughly practical man, and as a butcher is very clever.

1777. How many acres of grassed paddocks are there between Homebush and the Abattoir? There are a great many acres, but there is not a great deal of grass.

1778. Is there any grass? Oh, yes; you must not judge by what you see going along the road. There is grass and scrub, and you must recollect that in no instance are cattle kept there for more than a week at the furthest.

1779. They are sometimes kept a week? They may be sometimes kept a week, but not in the small paddocks down here.

1780. Do you think it right that a beast should be a week without anything to eat? I do not, but I say there are none of those outside paddocks where they get nothing to eat.

1781. Between Homebush and the Abattoir? Yes, in Ramsay's bush is there not scrub and a little grass and water, and in Mr. Walker's paddocks is there not grass?

1782. Then there are four or five small paddocks nearer to the Abattoir;—is there any food in them? Not much.

1783. And there are sometimes 40 or 50 head of cattle in them? Well, they belong, perhaps, to twenty different people, and there is only a day's supply.

1784. But is it not a rule to keep a supply in hand and not kill out? I like to kill out.

1785. Are you aware of the practice? It is a great mistake if it is done. I like to kill out every week if I can. I had several on my hands at one time, but it was against my will.

1786. We have evidence that the cattle do eat the hay? They will eat the hay sometimes. We give it ourselves sometimes. We may have 20 or 30 bullocks in on a Saturday morning, and if we cannot kill them all we leave some hay for those that are left, and on Sunday, when everything is quiet, and no one knocking about, they will eat some of it.

1787. If they did eat 10lbs. or 12lbs. of hay a day it would be better for them? It would.

1788. And that would not cost more than 4d. or 5d.? It does not cost much now.

1789. Would not the cattle-yards be better covered? Well, they are pretty well covered, though not entirely.

1790. It would be an improvement if they were? Yes, it would be an improvement. In hot weather or in wet weather the cattle try to get under the shed.

1791. Might not the paving of the yards be a little better? Well, I don't know that you could make it better. The yards are paved with free-stone; if you paved them with blue metal it would be harder. The lanes at the back are sometimes a bit of a nuisance. They are paved with this free-stone, which gets cut into holes, and the stuff which gets into these holes sometimes makes a very offensive smell.

1792. The driving or forcing yards are convenient enough, are they not? Yes.

1793. Are they so for the men who kill by contract; can they easily get out the beast they want? That is a different thing. The man who kills by contract is perhaps killing for a dozen or twenty different butchers, and the chances are that the beast which runs in first he does not want killed, while the one he wants will not go in.

1794. Supposing the yards could be made to draft two ways, would that be an improvement? It would, to all parties concerned, if there was room.

1795. You mentioned the great jam there was between the offal carts and the skin carts;—could not that be remedied by having a place to convey the guts and skins to on a trolley? Yes it could be, and if you can devise some means of getting rid of the offal and not having it mixed with the skins, you will do a great good I can assure you. That is the great nuisance of those mutton slaughter-houses.

1796. It would tend also to the cleanliness of the place? Yes, it would. Sometimes a lot of sheep come in with their paunches full of grass and water, and often the paunches burst and the mess runs through several yards.

1797. Is the ground such as to leave room for widening out the buildings as you suggest? There is room if you adopt the suggestion I made to throw two slaughter-houses into one. There would be plenty of room for the mutton-houses if you took away that pig-killing establishment.

1798. Have your men sufficient accommodation for the purposes of cleanliness—washing and all that—on the premises? Oh yes.

1799. Would it not be an advantage to get a few shower-baths for them? It would be a great advantage, no doubt.

1800. Would you kill during the night or early in the morning if the place was properly lighted with gas? I would prefer it; it would be better for all concerned if we could kill at night or early in the morning, during the hot weather particularly. But the Government gives us no chance at all. There is a man at the gate and he goes by the clock in the office; it is immaterial whether it is half an hour fast or half an hour slow. If you have a cart at the Abattoir waiting to load beef or mutton, no matter how good the customer is, that man will not wait one moment, no matter what the right time is, if the clock in the office says it is time to close.

1801. Referring to a subject the Chairman mentioned, supposing you could get meat chilled at 3½d. per 100lbs. at the Abattoir, would you patronise the chilling-house? Certainly; it would pay you to give six times that price for it sometimes in the warm weather. Decidedly, I don't think there is a butcher in the trade but what would. It is hardly a question that needs asking.

1802. *Chairman.*] Do you not think the establishment, to be perfect, should be lighted with gas? I think it should.

J. Walsh,
Esq.

1803. And do you not think that an abundant supply of fresh water, with hydrants, is necessary? I was going to suggest that, but it slipped my memory. The remark with reference to the clock also applies to this. When the time comes for shutting off the water, and sometimes a quarter of an hour before the time, it is shut off, and if you want a bucket of water you cannot get it.

9 Sept., 1879.

1804. By whom is it shut off? By some of the officials on the Island. They are very exact. As for gas it would be a great boon indeed. There is no one connected with the island but would be quite willing to pay for the cost of the gas. It would not cost us one quarter of what it costs for the fat or slush lamps.

1805. And you get light now from those fat or slush lamps? Yes, the butchers put the fat or slush into a can with a wick, and get a light from that.

1806. And there is smoke and a bad smell from it? Yes, besides a bad light it is offensive. If we had to pay for gas it would not cost us a tenth-part so much.

1807. And the slush lamps are dirty and filthy? Yes, and not alone that, but the men cannot see what they are doing.

1808. And you think there should be an unlimited supply of fresh water all over the establishment? Oh yes.

1809. With hydrants? Yes.

Thomas Elliott, Esq., examined :—

1810. *Chairman.*] Are you in business on your own account, or are you one of a firm? On my own account.

T. Elliott,
Esq.

1811. Wholesale or retail? Wholesale.

1812. A mutton butcher? Mutton only.

9 Sept., 1879.

1813. Have you been many years engaged in the trade in the colony? About twelve years on Glebe Island, I think.

1814. Have you had a large business and much experience? I have done a very large business.

1815. And are now doing a large business? Yes, a large business; about 2,500 sheep a week.

1816. What is your opinion as to the suitability of the Abattoir, especially the mutton-slaughtering part of it, for the purposes intended? Well, it is very badly laid out. It is too small, much too small for the business that has to be done there; and the buildings being so small there is not sufficient accommodation at the back to get the skins and the offal away. If the slaughter-houses could be enlarged so that there should be a lane each side of a slaughter-house, one for the skins and the other for the offal, we would then be able to keep the place clean; but the way the slaughter-houses are now they are too small for the amount of business to be done.

1817. You say the present lanes are not large enough for the cart traffic and for the purpose of getting the skins and the offal away? No, certainly not; there is only one lane to two slaughter-houses, and two carts have to go there to load skins every afternoon, and every forenoon likewise. They take them away twice a day. Only one cart can load at a time, and the offal cart is kept waiting, and there is no way to throw the skins and offal but into the lane where they lie together in one heap.

1818. How long is the offal cart kept waiting by the skin cart? When there are two carts to load in one lane it makes my cart remain two hours at least, and the offal which is placed there from 4 o'clock to 6 cannot be got away after 6, and has to remain there all night.

1819. Becoming a great evil and nuisance? Not in weather like the present.

1820. I mean in the summer season? We have longer hours in the summer—an hour later; that gives us more time. We have two hours longer to do the work.

1821. Would you recommend that the size of the slaughter-houses be increased to double the present size? Well, it would be too much.

1822. However, they require to be increased in size considerably? They would require about three thrown into two, to give us sufficient accommodation for the work.

1823. Then they want increasing in size at least one-third? Yes.

1824. And the accommodation for the road traffic at least doubled? That is the lanes to let the skins and offal away.

1825. So as to admit of access by the carts at all times without obstruction or delay? Yes, that is what it requires.

1826. What is your opinion as to the necessity for introducing gas into the buildings? That is a thing that is very much required indeed.

1827. Your present system of lighting is by means of grease pots? Not now. This year we have got a sort of tins made in which we burn kerosene oil.

1828. But even those do not afford sufficient light? They give a much better light than the fat cans, but not sufficient.

1829. And not so clean as gas? Nothing near.

1830. An abundance of light is necessary I take it for those slaughter-houses, in order that you might carry on your business during the hours of darkness? Yes.

1831. Before the light of day sets in? Yes.

1832. Have you sufficient water appliances for the slaughter-houses? We have while we are doing the slaughtering quite sufficient, but for cleanliness there ought to be a good hose to wash down each slaughter-house.

1833. You think there should be an abundant supply of water with hydrant and hose? Yes, with a good hose.

1834. And the supply of water should be unlimited? Yes, and not cut off at times five or six minutes before the hour of closing. There are times when if we are killing close up to the hour we have given us the water is cut off about five minutes before the time, and we cannot wash down at all of an evening.

1835. Sometimes the water is cut off a few minutes before you finish your work, making it very inconvenient and unpleasant? Yes.

T. Elliott,
Esq.
9 Sept. 1879.

1836. By whom is that done? By one of the officers; I do not know whose duty it is.

1837. What about the buildings generally—are they not very defective or insufficient for the purposes required—I mean in regard to the roof and generally? The buildings are much better adapted for the business since we had that big wall taken out about two years ago. They were very badly adapted for the work as mutton slaughter-houses until that was done. Now they are much better, but being so small if we are killing any way strong at all we are compelled to hang the sheep on top of one another, if the carts are not there punctually to the time.

1838. Is that not detrimental to the quality of the meat? They are not allowed to hang long, but it might be if the cart is not there at the time.

1839. Is it not detrimental? I should not think it was to their advantage. It is not often that it occurs, but it does occasionally.

1840. That could be remedied if you had additional room? Yes, larger room.

1841. Your business is confined to the mutton slaughtering? Yes.

1842. And you know nothing of the beef slaughtering? No, I do not interfere with that.

1843. Have you noticed within the last few months that matters as regards the Island generally have improved or otherwise; what is your opinion with regard to that? I think there is a larger staff of men on; I think they are a little better than what they used to be; they seem to try all they can to take the offal away but the carts cannot get up to take it away while the skin carts are there.

1844. Have you ever considered the subject of a chilling-house on the Island? No.

1845. Do you not think it would be an advantage to have an establishment for the purpose of cooling the meat slaughtered—both mutton and beef—before delivery,—setting it by means of cold appliances? I do not think it would be much advantage to it, unless you had the chilling establishment of such dimensions as to hold for instance a week's supply of meat—all the meat that would be required by the city for a week.

1846. Then it would require to be of large dimensions? Very large. Because if the meat were merely put into the cooling-house, and then carted away immediately and sold in the shops, it would not be benefited much as to the eating of it when cooked.

1847. At what time do you generally begin to slaughter mutton in the summer months? From 5 in the morning to 7 at night; on Monday morning from 2 in the morning until 7 at night; Saturday the same.

1848. Then you slaughter night and day? Only on Monday morning; we do not make use of it on Saturday morning.

1849. Is not the mutton sometimes taken away in the summer-time soon after being slaughtered, before being set; in fact, while it is warm? Yes.

1850. Necessarily so? It must be so. That is why we get up at 2 o'clock, in order to deliver it fresh. We have to deliver it before 6 o'clock; and should we kill it on Saturday for Monday it would want to be carted away in the bone cart.

1851. What is your opinion of the position of Glebe Island as a site for the Abattoir? Very good.

1852. Sufficient for all the purposes required of it? Yes; the establishment could be enlarged to double the size; but, as far as Glebe Island itself is concerned, I do not think you would find in the colony a place so suitable for the Abattoir.

1853. Had you any experience in this trade before you came to the colony? I was slaughtering in Scotland.

1854. You carried on the business in Scotland? Yes; I used to send to London when I had more stock than I required for home consumption.

1855. You used to slaughter mutton for the London market? Yes.

1856. What part of Scotland were you in? I was on the Borders.

1857. With regard to the conveyance of the mutton from Glebe Island for delivery, as at present carried out by some of the butchers in open carts? They are all open carts.

1858. Do you not think that could be improved upon? Well, I don't know.

1859. Have you seen that conveyance used by Rennie and Williams? I have.

1860. Do you not think that would be an improvement for the purpose of conveying the dead mutton to the city? It would be a very slow process, much slower than at present.

1861. You could not go quickly enough? I think not. There is not so much beef as there is mutton to hang up. Generally speaking, we have the men in the carts very clean; we have got a careful man along with the cart.

1862. Some carts, it has been represented, are kept in a very filthy state, as also are the drivers, who sit upon the meat whilst driving the carts conveying the meat for delivery? They must sit on the front of the cart; but in the mutton cart the meat is stacked up; they cannot sit on the meat.

1863. And you think the new cart system would not be an improvement on the present system? It might be an improvement, but all the carts would have to be built close up the same as those of Rennie's, or a little closer, because on days like the present (when raining), the meat would get covered with mud unless there is something to keep it from the mutton.

1864. *Mr. Stewart.*] Do you ever buy sheep at Homebush yards? Yes.

1865. Frequently? Every week.

1866. Is Homebush a convenient site for selling yards? None more so. There could be no site more suitable than Homebush for the sale-yards I think, because it gives us a chance to get paddock room for our sheep.

1867. If room could be made for them at Glebe Island would that suit as well for sale-yards? If you brought a supply there and sold them every day, and we took them and killed them, it would. There is no paddock room there.

1868. What is to hinder them from being sold every day? If you could regulate the supply every day so that they could be sold, and we could kill them, then Glebe Island is suitable.

1869. There are only two sale-days a week now, and that compels you to buy in one day sufficient until the next sale-day? Yes.

1870. But if the sales were every day you need only buy for the day? Yes. We have now to find paddock room to keep the sheep in.

1871. *Mr. Bruce.*] Where are your paddocks? I rent from the railway-line at Petersham out to Canterbury. I had all that at one time, but a good many plots have been sold since I rented it off Mr. Davies, right out through the scrub. I pay a yearly rent for it, and keep the sheep at Mr. Charles Hearne's at Petersham every night, bringing what I want to slaughter for the day to the Island every morning.

1872. The sheep do not get very much feed there I suppose? Plenty of food and water. Last year, when there was a drought everywhere, there was not much feed, but in anything like a season there is plenty of feed.

T. Elliott,
Esq.

1873. How many acres have you got? Oh, there is plenty of country and plenty of scrub; I have never myself been over half of it.

9 Sept., 1879

1874. But with all the stock between that country and the Abattoir the country must be very bare? The cattle paddocks are very bare, and some of them I think ———

1875. But the sheep get something? The sheep go out as far as Canterbury every day.

1876. Returning to the subject of the Abattoir, are the sheep-yards there sufficiently convenient and roomy for your business and that of others? They are more so now, as far as I am personally concerned, than they have been. I got a yard divided last week.

1877. Then there is not a sufficient number of sheep-yards? There were only three, and four slaughter-houses are rented. I was without a yard, but I have one now.

1878. Are there only four parties killing sheep at the Abattoir? That is all.

1879. Do you mean altogether; do none of the butchers kill their own sheep? That is a very rare occurrence. They generally buy them cheaper killed than alive.

1880. Would you recommend any alteration of the buildings themselves, besides throwing three into two—alteration in the roofs or walls, or in any other part of the sheep-houses? Well, if we were going to make new slaughter-houses the lane where we have to take the carts in to load is far too narrow. We can scarcely stand two horses in a breadth, and leave a passage for another cart. Should the new waggons be brought into use on Glebe Island I do not see how you can use them with the lane we have there now. That is one thing against these waggons or waggonettes, unless it could be arranged that they should go right down the lane, and come out at the bottom.

1881. They might do that way? Yes. With regard to the slaughter-houses they would have been much better if they had had a larger door for air, and for the carts; it should be more roomy for our carts.

1882. How is the roof? The roof in the main building, in the front slaughter-house, is right enough, but the skillion roof comes down very close on our heads.

1883. Too low? Yes, the skillion roof at the back.

1884. It would be an improvement to heighten it, and if more air were admitted? Yes, it would be an improvement to shift the slaughter-houses back about 10 or 12 feet.

GLEBE ISLAND ABATTOIR INQUIRY.

APPENDIX.

A.

DESCRIPTION OF ABATTOIR, PHILADELPHIA, U.S.

Messrs. Wilson, Brothers, & Co. to The Secretary for Public Works.

Sir,

No. 410, Walnut-street, Philadelphia, Pa., 29 May, 1870.

In accordance with a telegram recently received from Edward H. Williams, Esq., to forward to you information relative to the Railway Abattoir in Philadelphia, we have the honor to send with this a general ground plan of the grounds, a photograph of the main building and yard, a plan of basement and main floor of abattoir proper, and a printed description in Report of the Board of Health of the City of Philadelphia, for the year 1875.

The ground plan shows location of railroad tracks and all buildings. The sheds for cattle, as will be noticed by the photograph, are of wood, and so arranged as to cover only part of the space. By this arrangement the cattle can get sun and air, and still have protection in stormy weather. All fences and partitions in these cattle-sheds are of boards, 1½ inches thick. The whole surface of ground under the shed is graded to give perfect drainage, and paved with cubical blocks of stone, arranged with gutters from each separate pen to a street, where the drainage is passed into the sewers, and by them led to the river. In the sheep and hog pens the roofs cover the entire surface. In the hog-pens all the posts and division fences are of iron. In each block of hog-pens the stone pavement, laid in cement, is graded to the gutter in the middle, which has a constant stream of water flowing through it, and which gutter is tapped into the sewers at short intervals.

Please note that along all railroad tracks there is a retaining wall of stone, behind which the ground is filled in so as to make a landing wharf at level of floor of cars.

In the upper right-hand corner of plan is located a well and pump, which forces water to a reservoir on a hill at some distance, and not shown on the plan, from which the supply water-mains lead to the various parts of the yard. In addition to the foregoing the establishment contains a building for hotel and offices, stabling for horses, hay barn, coal platform, scales, and all the necessary adjuncts.

The sheep-pens noted as "sale-pens" are not covered like the others, but are merely enclosures. The cow-market is a series of covered stalls, each stall for a cow and calf.

We hope the foregoing, in connection with printed statement referred to, will give a clear idea of the arrangement. This establishment is of course arranged to suit the special piece of ground on which it is located. In preparing a plan for a different locality it would be necessary to have a correct map, with levels of ground, position of railroad tracks, drainage, lines, &c., &c., and modifications would be made to suit local requirements.

Referring again to the cattle-pens, those fronting on Thirtieth-street are entirely receiving-pens, where the cattle are placed when they first leave the cars. After a train has been unloaded the cattle are distributed from these pens to other parts of the yard. You will notice that the cattle-pens are of different sizes. Regular dealers rent one or more pens, as their business demands, and as soon as possible after unloading each man's cattle are transferred to his own pens.

All through the grounds in streets and along unloading wharfs the wooden gates are made large, and are so arranged that they can be swung across the streets, closing them up, and thus turning the cattle into the proper pens. This arrangement of gates, which is very simple, allows of the rapid and convenient transfer of cattle from one part of the yard to another.

The manure from the yard, and the contents of stomachs of animals slaughtered, are deposited together on the wharf along the river, and carried away in boats. The yards are cleaned up daily and swept by a rotary sweeping machine. Water-pipes are run through the yards as required, with fire-plugs and other outlets at convenient points; and in cattle pens each pair of troughs (see plan) is supplied by one hydrant. The overflow of these troughs is direct into the underground drainage.

The photograph shows the main building of abattoir, with the cattle-pens on the left, beyond which is a large grain depot not belonging with this establishment. In the wood-cut on page 31 of Board of Health Report the hotel and sheep and hog pens to the right of main building are shown.

The abattoir building proper is shown in the photograph. It is a brick building, resting on stone foundations, windows and doors of wood; columns in building and roof framing are of wrought iron; the roof covering is of tin on wood sheeting and purlins. All cornices, pinnacles, and other ornamental work are of galvanized iron. Basement floor is asphalt pavement. Main floor is wooden joists and flooring, covered with asphalt, excepting at the point where the killing is done, when the floors are of wood, caulked. Basement story is divided by a brick wall—one portion is used for slaughtering sheep—in the other hides are salted and packed for shipment, and the machinery for rendering tallow, &c., is placed.

The main floor is used entirely for slaughtering cattle. Hogs are not killed at this abattoir, but only housed and sold, and are driven off by the purchasers to other places.

The following is the general plan for handling business, &c.:—Cattle are shipped from the west by the dealers, who land them at the stockyard, and place them in their pens. Here the cattle are sold. Those going to other points are again loaded on cars, or are driven off on foot. Those intended for local use are purchased by the butchers, who do the killing and dressing of the animals in the abattoir building, subject to the rules of the establishment, one of which is that the butcher shall remove nothing but the dressed meat. The time of killing is regulated somewhat by the weather, but is generally done in the evening and during the night. The cattle are driven into the killing-pens, each of which will hold ten animals. A platform of plank over the top of the pen gives standing place for a man, who strikes the animals on the forehead with a hammer of peculiar shape; the animal drops at the first blow; instantly a clasp attached to a rope is fastened around one hind leg, and the rope being wound up on a drum, worked by hand from above, elevates the animal until its head is clear of the ground, when its throat is immediately cut by a butcher. Sometimes the animals are speared in the back of the head instead of striking with a hammer; and if the cattle are not wild they are often elevated into position for cutting their throats without any preliminaries.

The blood is caught in large sheet iron pans and is poured into an iron tank on wheels, which when full is run to the receiving room, where it remains until the proper time comes for putting it into the tanks in the basement, which is done by a pipe.

The beeves are dressed and quartered, hung up to cool, and taken by the butchers in their own waggons to market.

The disposition of the rest of the animal is as follows: The hides are passed to the basement, where they are salted, packed in layers, and afterwards shipped away in cars. The contents of stomach are emptied into small iron waggons and dumped on the manure pile, as previously stated. The entrails are placed on a hand waggon, and taken to the receiving room. The fat, which comes in masses, is stripped off by hand and placed by itself, to be rendered into tallow separately. The process in the receiving room is fully described in the Report of the Board of Health.

The residuum which has been obtained after the drying process described is packed in bags and sold for manure.

A variation from this process is to reserve the blood and dry it separately, as there is now a demand for it for sugar refining, calico printing, and other purposes in the arts. Recently, dried bullocks' blood has been used extensively in the manufacture of door-knobs, knife-handles, and similar articles. Horns and hoofs, with trimmings of the hides, go to the glue factory.

It will thus be seen that every part of the animal is utilized.

After the day's killing is over the floor is carefully and thoroughly washed and flooded with water from a hose.

The foregoing describes more particularly the operations on the main floor.

The sheep are killed in the basement. A man enters the pen, seizes a sheep, lays it down on the edge of the killing-table, with its head hanging over the edge, below which is a trough to catch the blood. He lays one after the other on the edge of the table, close together, and strange as it may seem, they make no attempt to get up or move. A butcher, standing on the floor below, walks along and cuts the throats of the animals in succession. The trough catches the blood and conducts it to the tank. Sheep, being light, are hung up by hand.

The same disposition as heretofore described for beeves, is made of the blood and offal, which is carried off in tanks and waggons, and elevated to the floor above so that it can be dumped into the rendering tanks.

The Abattoir Company furnish all feed for animals, and make a certain charge for storage.

We hope the foregoing, in connection with the accompanying papers, will furnish the information you require. Should you wish to construct an abattoir and stock establishment, we shall be pleased to furnish general and detailed plans, with specifications, and can procure for you and ship the necessary machinery ready to set up in place, together with such parts of the buildings as you may not have the facilities for manufacturing at the place of erection.

Very respectfully yours,

WILSON, BROTHERS, & Co.,
Civil Engineers and Architects.

A 1.

THE PHILADELPHIA SLAUGHTER-HOUSES.

(From the Report of the Philadelphia Board of Health, 1875.)

UNTIL very recently the slaughtering of cattle for the markets of Philadelphia has been conducted exclusively in private slaughter-houses. These are numerous, and are situated in all parts of the city. Even the thickly populated districts are not entirely exempt from these establishments. There is no law restricting their location within certain defined boundaries. In the choice of locality private interests are alone consulted, and the manner of conducting the business is subject to private direction, provided the rules and regulations prescribed by the health authorities are not violated, and no nuisance is created. While the premises are occasionally inspected, there is no systematic inspection of cattle before and after being slaughtered. On account of the large number of these establishments, their widely separated localities, and the irregular and unsystematic methods of conducting the business, satisfactory inspection is an impossibility; hence nuisances arise, particularly in the summer season, which, after being corrected, may and do recur, from radical defects in the premises and absence or non-observance of proper regulations.

There are many private slaughter-houses in the populated parts of the city which, on account of the locality, are nuisances, and will remain nuisances in spite of all remedies used for their improvement, and no matter how well they may be conducted. The driving of cattle through the crowded streets, the stabling of the cattle, the tardy removal of refuse and putrescible matters, the defiling of the drains by blood and even solid substances,—are powerful objections against the location of any slaughter-house in a compactly built and densely populated neighbourhood. Meat prepared in such places is liable to become tainted on account of the want of free ventilation, and the absence of facilities for most scrupulous cleanliness. There can be no doubt that all private slaughter-houses located and conducted as above-described should be abolished after due notice,—a measure which the Board feel obliged to enforce in the interest of the health and welfare of the community. Until the present time such action, although necessary, might have been deemed harsh, arbitrary, and premature. But since the most liberal and complete provisions have been made in the public slaughter-house recently completed in West Philadelphia, for all who choose to avail themselves of them, no valid objection or reasonable opposition can be made against this contemplated procedure of the Health Board. Ignoring the question of public health, which is the one of paramount importance, on the ground of economy alone the change will be exceedingly advantageous.

"Whether on the ground of public health or on that of economy," says a recent writer, "there can be no question of the superiority of public abattoirs over private slaughter-houses—a superiority acknowledged and acted upon in Paris as long ago as 1810." This is a well-established fact, which has been appreciated, accepted, and corroborated by a number of the large cities of this country. Boston, New York, Chicago, and New Orleans may be mentioned among the cities which now have abattoirs in successful and satisfactory operation, and the experience of these cities might be detailed, if it were necessary, to furnish fresh proof of the manifold advantages which the improved system of slaughtering possesses. This city has not been unmindful of the benefits to be derived from the inauguration of such a reform, but not until recently has the opportunity been presented. In 1873 the Board of Health, in their annual report, pointed out the urgent necessity for the establishment of communal abattoirs, and the gradual abolishment of the numerous ill-managed private slaughter-houses. Subsequently, a movement was set on foot, having in view the consummation of this most desirable object. In 1875, after considerable opposition, arising solely from objections to the site selected, the Herculean work of preparing the grounds for the present abattoir in West Philadelphia was commenced, and pushed forward with energy to the close of the year. By the early part of 1876 the buildings were sufficiently completed to be occupied, and the work of storing and slaughtering cattle has been in successful operation ever since. By the middle of the year it is expected everything will be in perfect order, and Philadelphia will then be able to boast of having one of the most thoroughly equipped, commodious, and complete cattle-yards and abattoirs in the world. This great scheme was projected and carried into effect by the Pennsylvania Railroad Company, and furnishes another evidence of the ability, energy, and progressive spirit of that great corporation.

The location of the new stock-yards and abattoir is on the west side of the Schuylkill River, a few hundred feet north of Market-street. It is bounded on the north by Vine-street, on the south by Arch-street, on the east by the river, and on the west by Thirtieth-street. Some idea of the magnitude of the establishment may be formed from the statement that the grounds occupy an area of 21 acres. The advantages and facilities afforded by the location are unsurpassed. It is central, yet to a considerable extent isolated by the river and the extensive grounds of the Pennsylvania Railroad Company. In the rear, or along the west side of the premises, there is a railway track, from which cattle are discharged. The track is so depressed as to bring the deck or platform upon the level of the storage pens. A railway track is also run eastward from this line, for the delivery of sheep and hogs to that part of the premises set apart for these animals. This entire enclosure is laid out in streets, substantially paved with Belgian blocks, and lighted with gas.

For the storage of cattle there are 172 pens. These enclosures are plain frame structures, partly covered, in order to protect the animals from sun and storm, and are paved with granite blocks, and so graded as to secure quick and complete drainage. Each apartment is provided with feed and water troughs. The telegraph anticipates the arrival of each train of animals, thus enabling the superintendent to designate and prepare the apartments for their occupancy, with the required rations of forage and supply of water, so that they are on their arrival at once made comfortable by food and rest after their long journey. This department has a capacity for the comfortable storage of 7,000 head of cattle, and is provided with all the necessary requirements, as hydrants, fire-plugs, and hose, in order to insure safety, comfort, and cleanliness.

The enclosures for the storage of sheep occupy the northern end of the premises. They consist of two frame structures, 350 feet by 130 feet, covered with a gravel roof, and provided with a granite pavement. These buildings are divided into compartments and pens for wholesale and retail storage, and have the necessary scale enclosures. Streets and alleys divide the premises at convenient distances. Each storage pen is provided with a rack for fodder and troughs for water. The entire division affords capacity for the comfortable storage of 10,000 sheep.

The hog department is just east of the sheep enclosure. Every provision has been made to insure cleanliness and facilitate the thorough renovation of this part of the establishment, and at the same time preserve ventilation and the free circulation of air. The roof of the building is supported by wrought-iron columns, and light iron railings are used in making the subdivisions. The wide openings at the sides admit a free current of air. Another important feature, from a sanitary point of view, is the means devised for securing thorough drainage. For this object the floors are laid with Belgian blocks, grouted in cement and slightly inclined from either side toward a central depression, along which fresh water constantly flows, thus providing against the possibility of offensive accumulations. These animals are also provided with all the comforts of food, water, &c. This section of the yard is likewise laid out with streets, lanes, and passage-ways, and is divided into large and small enclosures for general and special storage, and is provided with scales and all the necessary conveniences for the accommodation of buyers and sellers.

Centrally

Centrally located, and upon one of the broader avenues, is the office and exchange building. This is a brick structure, two stories high, and 100 feet long by 40 feet in breadth. The lower floor is divided into telegraph, post, and business offices. On market days this building presents all the activity of the stock or gold exchange.

Close adjoining the exchange building is a range of offices for the use of the dealers in sheep and hogs.

There is a brick stable upon the premises, 31 feet by 115 feet, for the storage and sale of horses.

Immediately adjoining these buildings is a covered enclosure for the accommodation of 500 cows and calves. This enclosure is also well paved and drained, and provided with all the conveniences for watering and feeding the animals. Large platform scales for weighing the stock are situated at convenient localities about the premises.

The most important and interesting feature of this vast establishment is the abattoir. This highly ornamental brick building has a frontage on the river of 110 feet, and runs back 195 feet. The nature of the ground rendered it necessary to lay the base of the foundation upon heavy timbers and concrete, upon which stone masonry is built up to the level of the ground. Above this the walls are of brick. The main floor (which is four feet above the level of the ground) is supported by cast-iron columns. The roof is supported by two rows of wrought-iron columns, which divide the building into 4 central aisles, 50 feet in width, and two side aisles, each 30 feet in width. The central aisle is open to a height of 40 feet, to the eaves, and is covered by an arch roof, erected on a new principle of construction that previously has seldom been used, the rafters being cut to the curve of equilibrium for a uniform load. The side aisles have a height of 20 feet to the square, and the rafters have also base curvatures. The building is provided, along its sides, with a series of doors, 6 feet wide and 15 feet apart, to allow of the loading of the meat into waggons. Over each of these doors is a transom for the admission of air and light. The centre aisle has a large clear window which can be opened and closed, and also a ridge-roof ventilation. The great essentials of light and air are thus provided for. The basement, 11 feet in depth, extends under the whole building. The main and basement floors are covered with Filbert's patent asphaltum pavement, 4 inches thick, and sloped so as to insure perfect drainage. The upper or main floors are used exclusively for the slaughtering of cattle. On each side of the middle aisle, and immediately adjoining it, is a range of pens enclosed by an iron-pipe-railing, which are provided with gates opening upon the centre aisle, and with sliding doors opening toward the slaughtering bed or floor. The cattle are driven from the stock-yards through a door in the end of the building, which opens into the centre aisle, and from thence into the slaughtering pens. Along the outside of these pens, running the entire length of the building, is the slaughtering floor, which is laid with heavy yellow pine planks, and caulked in the same manner as a ship's deck. Opposite each slaughtering pen are the apparatus (all of the most approved patterns) for hoisting the carcasses, and a range of baulks or beams for the hanging of the dressed beef. Each slaughtering division is provided with hose, and hot and cold water for the use of the butchers. Men are in constant attendance upon the butchers, whose duty it is to catch the blood, and to immediately remove it and the refuse to that part of the building used for the utilization of these substances. This vast slaughtering floor has a capacity for killing and dressing 1,200 oxen per day. For the comfortable heating of the building in winter a range of steam-pipes has been placed against the outer walls between each of the doors.

The basement of the west end of the building is arranged for the slaughtering of sheep. A range of elevated pens has been erected, which are enclosed by an ornamented wire fence supported by cast-iron posts, and provided with a floor of stone flagging. Running along the front of these pens is a stone table with a galvanized iron gutter immediately beneath it, for the slaughtering of the sheep and the gathering of the blood. The space occupied by the butchers in this apartment is paved with cement; it is open, roomy, and light, and has a capacity for the slaughtering and hanging up of the carcasses of 3,000 sheep.

The east end of the basement, or lower story (for at the end next to the river the floor is level with the surface of the ground), is occupied by the engine and boiler room, and by the apparatus used for the rendering of the tallow and the utilization of the blood and the other animal matters. Here are placed the boilers of one hundred horse-steam capacity, and an engine of sixty horse-power.

The most interesting and novel feature of the machinery department, however, is the apparatus for rendering tallow and utilizing refuse. Placed upon pillars are two horizontal cylindrical tanks, or boilers, 5 feet in diameter and 15 feet long. These tanks have each 3 sixteen-inch openings, or manholes; two in the upper, and one in the lower side. They are elevated so that the upper openings in each of these tanks are on the level of the upper or cattle slaughtering floors. In each of these tanks there is a shaft provided with radial arms and a broad bar running along the inner walls of the vessel. The shaft passes through the end of the tank, and is provided with a stuffing box, and, at the end, with a gear wheel which is connected by a shaft, belt, and pinions, with the engine. The tanks are jacketed, or surrounded with a steam space of 3 inches in width.

As soon as the slaughtering is finished each day, the rough fat is carried in trucks and placed in one of these tanks; steam is then passed into the surrounding space, and in four hours the tallow is rendered from the tissue. Water is then introduced into the bottom of the vessel, the melted tallow elevated and passed through a dome in the top, and from thence through a pipe, and carried some 50 feet into the centre of the basement to the necessary vat, from whence, after settling and cooling sufficiently, it is run into casks or commercial packages. In the pipe used for decanting the tallow, there is a glass section that brings to the view of the person in charge the exact condition of the material passing over, thus enabling him to determine the moment of the displacement of the tallow. When all of this product is discharged, the water is drawn out from the tank through a large pipe at its base, and carried to the bottom of the river. As soon as the water is run off, the refuse of the slaughtering floor is put into the tank and subjected to the rendering process, and all the fatty matter extracted therefrom, in the same way as the first. The water is then run off, and the blood accumulated during the day is put into the vessel with the refuse resulting from the two rendering processes; the tank is closed up, steam turned in the jacket, the shaft and arms put into motion, and the process of drying commenced. The steam generated by the heated walls passes from the tank through a 4-inch pipe, and is delivered at the bottom of the river, thus thoroughly condensed and rendered harmless. The animal matter is thus dried, and, by the constant beating of the revolving arms, rendered pulverulent. As it is poured out of the apparatus it has the consistency, dryness, and appearance of ground coffee, and, strange to say, these several operations are performed with this machine without a breath of odour, and without any of the noxious emanations that have always accompanied these operations, thus rendering the tallow and turning the residuum, known as scraps, together with the blood, into a useful and profitable product, without offence. This apparatus is the invention of Dr. J. J. Craven, of Jersey City, who has given his attention, since the war, to improving the sanitary condition of slaughtering establishments, and the utilization of animal matter. This apparatus, together with the engine and boiler, was constructed and erected under the supervision of Dr. Craven, by the People's Ironworks of Philadelphia, and in design and workmanship reflects credit on the inventor and builder. The abattoir lately established at the foot of Thirty-fourth-street, New York, is provided with the Craven apparatus, and has been under the inspection of the Health Board of that city, and recommended and approved by them.

The abattoir at West Philadelphia was designed and constructed under the superintendence of Messrs. Wilson and Thorne, and presents a tasteful appearance. The whole arrangement of grounds and buildings has been under the supervision of the Philadelphia Stock Yard Company, who, by their constant efforts and attention, have endeavoured, and succeeded, in erecting an establishment that embraces all the improvements that modern science has developed, and for neatness, convenience, and safety is not surpassed in this or in any other country.

A 2.

Messrs. Wilson, Brothers, & Co., Philadelphia, to Dr. E. H. Williams, Sydney.

Dear Sir,

No. 410, Walnut-street, Philadelphia, Pa., 29 May, 1879.

Your telegram was handed us a few days since by Mr. John Converse, and we have collected together as full information relative to the abattoir as we could in time for the next steamer.

We understand from your message that general information as to the arrangements and working of the abattoir is what is needed, and we hope what we send will be satisfactory.

If the Government of New South Wales desire to construct an establishment like this, we should be pleased to prepare all necessary plans for same, with specifications, and full directions for constructing it, from which it could be built by parties in New South Wales.

We

We could procure and ship the machinery all ready to set in place; also any parts of the building which cannot be made at place of erection. It would be necessary for us to have a correct ground plan of site, with levels, drainage lines, nature and source of water supply, street and railroad connections, and any local information which would affect the character of the establishment, also required capacity. Our charge for such work would be 3 per cent. on the estimated cost of the work if constructed here.

We forward the information under cover to you, as suggested by Mr. Converse, and would be pleased to have you examine it before making such disposition of it as you think proper.

Respectfully yours,

WILSON, BROTHERS, & Co.

B.

*Mr. C. F. Pierce to Dr. E. H. Williams.

TIFFANY REFRIGERATOR CARS.

Chicago, 30 May, 1879.

THE purpose of our cars is to protect perishable freight of all kinds, as well as beef, while in transit, from heat or cold. It is not their purpose to receive freight until it is properly prepared.

For instance, if beef is the article to be shipped, it must be hung for twenty-four hours, until the animal heat is taken out of it, after it is slaughtered, and the temperature reduced to 40° Fah. This operation must be slow, in order that the gases from the beef may all leave it, while, if the chilling was rapidly done, it would drive the gases inside, closing up the pores of the skin.

For this purpose we have built a large number of what we call chill-rooms, where the beef can be hung, and after the first heat has left the meat, a cool temperature produced, and the beef chilled to 40°. Then the beef is placed in the car, the car iced and tightly closed, and the same temperature will be maintained, no matter how long the time on the road, in extremely warm weather—say 85° to 95° in the shade. The car will need to be examined, and if necessary, re-iced at the end of about every three days.

We have carried dressed beef from Denver to New York, distance 2,400 miles, and have made a great many trips with fresh beef from Kansas City to New York, Boston, and Philadelphia, about eight or nine days on the road, in both extreme hot and cold weather, protecting the meat from the heat of summer and from freezing in winter.

I send you a plan of the chill-room. The ice you will see is carried overhead, and a method provided of closing the access of the air in the room to the ice floor, so that the temperature can be controlled at will.

We have built in this city several such houses for the storage of butter, eggs, cheese, fruits, and meat, dividing the house into different rooms, where the articles can be held in a temperature most desirable and most suitable for preserving them the longest time, keeping eggs perfectly fresh for six or eight months, cheese and butter from nine to twelve months or longer, as desired, improving in their condition all the time.

The expense here for building such a chill-house 30 ft. square runs from £2,500 to £3,000, with capacity for 175 to 200 tons of ice. This quantity is only needed where a large business would be done, and the ice can better be put in during cold weather than to be obliged to replenish during the heated term.

As I told Mr. Barney, we are now building 100 cars for the Hat. Dispatch, which runs from Chicago to Boston, and by refrigerating rooms on steamships to Liverpool. The Central Vermont are also building cars for their local trade. The Chicago and North-western R.R. build fifty Tiffany cars to start with. The Denver and South Park, and a number of other roads I could mention, are now building our cars for their perishable freight business.

Our cars are the most economical in the consumption of ice, carrying the most even temperature of any, and the lightest and cheapest car to build, which repeated trials have demonstrated.

Yours truly,

CHAS. F. PIERCE,
Manager.

B 1.

Mr. E. J. Barney to Dr. E. H. Williams.

Dr. Williams,

St. Louis, Mo., 29 May, 1879.

We have built quite a number of these cars. In fact, the first ones made for Tiffany and Zimmerman (the two leading styles used in this country). They are running successfully on some of our prominent roads. The Tiffany Company have applied twice to us this spring, once for twenty and once for fifty. Our contracts with other Companies were such, and the prospects for more profitable work were such as to lead us to refuse to bid. Those we furnished in 1877 were very thoroughly built and much attention given to all the details. They paid us \$905 for each in Dayton.

There is so much wood-work about them that we hardly think it would justify the New South Wales Government to ship them complete; nor have we the time *this* year to build them, having refused during past sixty days more work than we could do in a year, the demand far exceeding anything in our experience. Our facilities for turning out iron-work having been doubled the past two years, will enable us to do more of this class of work than our erecting shops can take care of. This enables us to make the propositions we send herewith.

The cars in appearance are not different from those in general use. They weigh, when complete, with 33-in. cast wheels, master car-builders' axles (6 ft. 11½ in. long, journal 7 x 3¼, wheel gear 4½ in.), iron transoms, swing-beam truck, French's elliptic springs, 24,400 lbs. I enclose a cut showing cross section of the car. This gives an idea of its general construction. The principle upon which it is built we think rather better than the Zimmerman, although they have quite a demand for their cars also. The Erie and Pacific, who dispatch a fast freight train, applied to us in March for 200 of this pattern, and we refused to bid, because it would keep our carpenters at work double the length of time occupied in the iron departments.

We make our price on not less than twenty-five cars; if less should be ordered, price to be increased 10 per cent. We shall take great pleasure in giving special attention to all the parts of their work, and see that it leaves our works in the best of shape.

Yours truly,

E. J. BARNEY, Superintendent.

B 2.

Messrs. Barney and Smith Manufacturing Company, to The Commissioner for Railways, New South Wales.

Dayton, Ohio, U.S.A., 29 May, 1879.

WE will deliver in New York City, U.S.A., all the iron-work needed for twenty-five refrigerator cars of the Tiffany Patent, including hammered scrap axles, cast-iron chilled wheels, 33 in. diameter, bronze journal bearings, double elliptic steel springs, all bolts, washers, and screws, all sheet-iron work, piping, &c., needed to complete the car for use, boxed and marked, for the sum of six hundred and twenty dollars each (\$620), and \$50 each for royalty for use of the Patent.

With the above work complete working plans to be furnished in detail, and written directions for putting the work together.

BARNEY AND SMITH MANUFACTURING COMPANY,

(By E. J. BARNEY, Superintendent.)

C.

C.

REFRIGERATING APPARATUS AND COOLING ROOMS.

E. D. Nicolle, Esq., to The Chairman of the Glebe Island Abattoir Board of Inquiry.

Sir,

Whiteheath, near Wollongong, 23 July, 1879.

I beg to forward you enclosed answers to the questions referred in your letter of the 18th instant, and regret not being able to give you a full answer to the questions No. 12 and No. 16, not knowing the quantity of meat to be operated upon.

You will see by my answers that ice cannot successfully be applied in carrying out this great scheme, but dry cold air will afford simplicity with economy, and ensure success.

I remain, &c.,
E. D. NICOLLE.

C 1.

Answers.

1. The meat should be set hard by cold before being placed in the meat van; this cooling can be effected by the natural atmospheric temperature during the winter months, but in summer it will be necessary to provide artificial cold.
2. A meat-cooling room should be constructed in the form of a cube, or as near this geometrical figure as possible, in order to offer the least external surface to radiation, and to obtain the greatest amount of storage. The building should be composed of three walls, with an air space between each, of not less width than 6 inches. The ground floor should also be made on the same principle. All these structures should be made air-tight by cementing. No solar light should be admitted in the cold room, only artificial light. No doors or windows should be built in the side walls. One main entrance should be provided on the top floor of the cold room, fitted with hydraulic lifts, connected with a complete system of tranways. The cubic form of the cold room will allow the construction of several floors, which should be made of lattice work, and should not exceed the height necessary for the storage of meat, still allowing free access to it. By these arrangements the circulation of dry cold air will take place, and its diffusion will be perfect.
3. The meat should be placed in the meat-van at the temperature of 32° Fahrenheit. If this van be constructed on the same principle as the cooling-room there will be no need of refrigerators; the meat will travel safely under these conditions, namely, 32° Fahrenheit.
4. The meat-vans constructed for the Fresh Food and Ice Company may be inspected, but they are not intended to be used for the transport of meat without the assistance of ice. However, the construction of these vans will give an idea of upon what plan vans intended for the carrying of fresh meat, already cooled, should be made.
5. About 500 cwt. of ice per van will be sufficient.
6. Ice would become a very expensive item if sent from Sydney; first, on account of carriage; secondly, through the great waste which would be inevitable during a long transit. It would be cheaper to manufacture ice on the spot. But my opinion is that ice should not be used at all, only dry cold air will be sufficient, and would reduce the expenses at least 50 per cent.
7. The Fresh Food and Ice Company will give you the answer as to what price they would be willing to supply Government at per ton, and quantity.
8. As the quantity of ice required to carry on a supply of meat to this city would be so great if ice, as a means of cooling, were to be used, it would, under these conditions, be more economical to manufacture ice specially for the purpose.
9. The Fresh Food and Ice Company could tender and supply Government with ice, but they would have to enlarge their present works.
10. Ice could be sent anywhere in the interior, but the loss by waste during transit will be serious.
11. The cost of erecting a cooling-room in the interior will depend upon the number of tons of meat to be despatched per diem, and the dimensions of the building will be determined by that quantity.
12. Cannot answer this question, as it refers to quantity of material to be noted upon, which in the question is not named.
13. I do not think it would pay to buy occasionally ice to preserve fish when the supply exceeds the demand, but a fish market must inevitably be a department of perishable food, and should be placed under the same roof as meat cooling, where the expense of keeping the same would hardly be felt.
14. Butchers could easily provide themselves with ice chests at moderate price, and keep their surplus meat. Of course they would soon acquire the best way of using ice, or else they would find it expensive.
15. The consumption of ice increases with the facility of transmission, but distance increases the cost of the article in two ways by carriage and waste.
16. The cost of ice to customers would materially decrease by the increased demand, as the manufacturer would be able to depend upon a certain supply, and regulate his operations.
17. A temperature of 45° Fahrenheit would ensure the preservation of meat during fifteen days, providing the cooling air was made dry by the apparatus. The situation of the meat market should be near to the bay, where the refrigerating water could be had in abundance during the summer months, a question of vital importance, considering that it requires 40 tons of water to produce cold equivalent to 1 ton of ice. From the opinions I have formed on the matter I believe the refrigerating apparatus would have to be one of considerable power, requiring a large supply of water, and as sea-water answers well for that purpose the meat and fish market should be in proximity to the bay.

E. D. NICOLLE.

C 2.

E. D. Nicolle, Esq., to The Chairman of the Glebe Island Abattoir Board of Inquiry.

Sir,

Whiteheath, near Wollongong.

In reply to your letter of the 11th instant, referring to No. 11 question, namely:—Would it cost much to provide a cold meat store at Railway Station in the interior fit for receiving meat intended for Sydney?

Supplementary information, 11th August:—The quantity of meat to be dealt with per diem at 100 bodies, say 65,000lbs.

In the absence of working drawings and specification of quantities and material, which are necessary for arriving at a precise cost of buildings, I have computed the gross expense, which I think will give you a sufficiently near approximate of cost to enable you to consider the project, having reduced it to a practical form.

From my calculations I have arrived at the cooling power required to operate on the quantity of meat above named, taking the reduction of temperature of the meat to be from 80 degrees Fahrenheit to 32 degrees ditto, which reduction I consider will meet all demands.

This cooling apparatus should be equal in effect to the production of 10 tons of ice per diem; but to arrive at the prime cost of this machinery the system of apparatus should be first determined, as there are now a great many different systems in the field of artificial refrigeration which are more or less applicable to your project, affecting also the cost. To this point I have given full consideration, and as no actual freezing will be required, the work to be performed being comparatively light, consisting merely in producing a certain cubic quantity of dry cold air during a given time, I deemed it necessary to select as a bases for my estimate Messrs. Giffard and Berger's compressed air apparatus. I have seen this apparatus daily at work at the last Paris Exhibition during six months. I have investigated every organ, and although I am adverse to air machines for freezing I am in favour of this one to produce in a simple and direct manner dry cold air, which is all you need. I am aware that the consumption of fuel is greater in the compressed air system for producing cold than it is with our patent ammonia machine working at low pressure, but this apparent economy is insignificant when compared with the simplicity and direct manner by which dry cold air is obtained, and as this system involves only mechanical engineering knowledge I have given it the preference, considering it is to be erected in the interior.

It will be necessary to have the cooling apparatus made in duplicate so that in case of accident and occasional repairs the operations may not be interrupted; also, I would strongly recommend the use of smaller apparatus, working in pair, and made so as to be disconnected, instead of using ponderous large single apparatus, as in the former the time required to effect ordinary repairs is of short duration and less expensive. Besides the variation of temperature of the weather is met under more favourable conditions than in using a single large machine, as during hot winds it may be necessary sometimes to work three machines, whilst during southerly winds one may be sufficient.

From

From these bases I have made my estimate, and have arrived at the following sums :—Two coupled cooling apparatus as above-described, erected ready for work, £11,600; buildings constructed in accordance with plan for enlarging the meat-cooling store, to meet future requirements, including hydraulic lift, tramways, winches, shambles, £15,500—forming a total sum of £27,100 sterling.*
I remain, &c.,
E. D. NICOLLE.

C 3.

E. D. Nicolle, Esq., to The Chairman of the Glebe Island Abattoir Board of Inquiry.

Sir, Whiteheath, near Wollongong, 23 September, 1879.
In reply to your letter of the 12th instant, I beg to inform you that the estimate I have had the honor of submitting to you, referring to the establishment of refrigerating works in connection with the meat supply for Sydney, amount to the sum of twenty-seven thousand one hundred pounds sterling (£27,100.)

An estimate given under the present conditions can only be considered as an approximation of cost, but sufficiently near to assist you in your deliberations, although I believe the whole of this sum may not be required; still it is prudent to fix a sum which may not be exceeded.

With proper plans and specifications you can at a future time ascertain the absolute cost, as the expense of building and erecting a plant entirely depend on the appliances to be provided, but in order to ensure regular action and economy in the working of the business the first outlay should be taken into consideration only with ultimate accomplishment in view: for example, the cooling-rooms, if built of suitable material and properly designed, will economize 20 per cent. of the cold produced, and as cold is produced at the expense of fuel, labour, wear and tear of machinery, it is necessary, in order to secure commercial success, to admit nothing but first-class design, buildings, and machinery, and use nothing but suitable material.

The cooling-rooms in my estimate are calculated to deliver meat at the temperature of 32° Fahrenheit every 48 hours, which time I consider ought to be allowed to secure an even temperature throughout; for if the meat be only superficially cooled there would not be sufficient cold store in it to insure its safety during the travelling; therefore you will see at once that two separate refrigerating-rooms must be provided.

The quantity of meat given in your question is estimated at 100 bodies, or 65,000 lbs., can only refer to beef; but mutton is as necessary for the trade as beef is, and cooling-room capacity should be provided for. I have allowed room for 150 sheep; besides every Saturday will require double delivery, which extra quantity must be gradually accumulated during the week; this also requires storing capacity.

The next consideration is the handling of this quantity of meat, which with beef and mutton will reach over 45 tons. You will now see that such weight can only be dealt daily, but with perfect appliances, as 45 tons of cold meat will have to come out of the room whilst 45 tons of warm meat must be admitted, making the total weight 90 tons; but during this operation the cold can be profitably applied; it follows a natural consequence that the time occupied in discharging and charging the rooms should be shortened to the greatest extent possible, and unless the buildings are fitted with lifts, tramways, steam winches, and travelling shambles, made capable of extracting and storing the whole quantity in 3 hours, there would be a great risk of failure; besides the handling of such quantity of meat as 90 tons by hand labour would require a small army of labourers if it was to be done in three hours, and an adequate expense would be incurred, as these labourers could not be employed again until the next day. Again, the receiving-room at the Sydney Terminus must be faithfully built, and of a sufficient capacity to allow for extra demand, and be provided also with perfect steam gear for storing and delivering meat.

I have only allowed in my estimate one refrigerating-machine for maintaining this room at the temperature of 45° Fahrenheit, and have allowed a special compartment for storing 6 tons of fish.

From my past experience in this matter I feel convinced that my estimate is about correct, and that it would be imprudent to represent the expense under a smaller sum than the one above named. I cannot describe at length in a letter all the important details, which such undertaking necessitate such ventilating apparatus with temperature exchanger, lighting the rooms by electricity in order to avoid the introduction of deleterious gases, and reducing the source of heat to its minimum. All these details I have studied and provided for at the Fresh Food and Ice Company's establishment.

Hoping these informations will assist you in your deliberations, and enable you to consider and recommend the expenditure of a sufficient sum to provide for an establishment which will ensure success in this important undertaking,
I remain, &c.,
E. D. NICOLLE.

D.

[To Mr. H. B. Swan's Evidence.]

Cost connected with the blood and offal from beginning of January to the end of June, 1879.

	£	s.	d.

[To John Stewart, Esq.'s, Evidence.]

ABATTOIRS.

(From the *Encyclopædia Britannica*, 9th Edition.)

ABATTOIR, from *abattre*, primarily signifies a slaughter-house proper, or place where animals are killed, as distinguished from *bougeries* and *étaux publics*, places where the dead meat is offered for sale. But the term is also employed to designate a complete meat market, of which the abattoir properly is merely part.

Perhaps the first indication of the existence of abattoirs may be found in the system which prevailed under the emperors in ancient Rome. A corporation or guild of butchers undoubtedly existed there, which delegated to its officers the duty of slaughtering the beasts required to supply the city with meat. The establishments requisite for this purpose were at first scattered about the various streets, but were eventually confined to one quarter, and formed the public meat market. This market in the time of Nero was one of the most imposing structures in the city, and some idea of its magnificence has been transmitted to us by a delineation of it preserved on an ancient coin. As the policy and customs of the Romans made themselves felt in Gaul, the Roman system of abattoirs, if it may be so called, was introduced there in an imperfect form. A clique of families in Paris long exercised the special function of catering for the public wants in respect of meat; but as the city increased in magnitude and population, the necessity of keeping slaughter-houses as much as possible apart from dwelling-houses became apparent. As early as the time of Charles IX. the attention of the French authorities was directed to the subject, as is testified by a decree passed on the 25th of February, 1567. But although the importance of the question was frequently recognized, no definite or decided step seems to have been taken to effect the contemplated reform until the time of Napoleon I. The evil had then reached a terribly aggravated form. Slaughter-houses abutted on many of the principal thoroughfares, the traffic was impeded by the constant arrival of foot-sore beasts, whose piteous cries pained the ear, and rivulets of blood were to be seen in the gutters of the public streets. The constant accumulation of putrid offal tainted the atmosphere, and the Seine was polluted by being used as a common receptacle for slaughter-house refuse. This condition of things could not be allowed to continue, and on the 9th of February, 1810, a decree was passed, authorizing the construction of abattoirs in the outskirts of Paris, and appointing a Commission, to which was committed the consideration of the entire question.

The result of the appointment of this Commission was the construction of the five existing abattoirs, which were formally opened for business on the 15th September, 1818. The Montmartre Abattoir occupies 8 $\frac{1}{2}$ English acres; Ménilmontant, 10 $\frac{1}{2}$ acres; Grenelle, 7 $\frac{1}{2}$; Du Roule, 5 $\frac{1}{2}$; and Villejuif, 5 $\frac{1}{2}$. The first two contain each 64 slaughter-houses and the same number of cattle-sheds; the third, 48; and each of the others, 32. The dimensions of each of the slaughter-houses is about 29 $\frac{1}{2}$ feet by 13. The general arrangement of the abattoirs will be understood from the plan of that of Ménilmontant.

The component parts of a French abattoir are—1. *Echandoirs*, which is the name given by the Paris butcher to the particular division allotted to him for the purpose of knocking down his beasts; 2. *Bougeries et bergeries*, the places set apart for animals waiting to be slaughtered, where the animals instead of being killed at once, after a long and distressing journey, when their blood is heated and their flesh inflamed, are allowed to cool and rest till the body is restored to its normal healthy condition

condition; 3. *Fondeurs*, or boiling down establishments; and 4. *Triperies*, which are buildings set apart for the cleaning of the tripe of bullocks, and the fat, heads, and tripe of sheep and calves. Besides these a Paris abattoir contains *logements des agens, magasins, réservoirs, voiries, lieux d'aisance, voates, remises et écuries, parcs aux bœufs, &c.*, and is provided with an abundant supply of water. All the abattoirs are under the control of the municipal authorities, and frequent inspections are made by persons regularly appointed for that purpose.

The abattoirs are situated within the barriers, each at a distance of about $1\frac{1}{4}$ mile from the heart of the city, in districts where human habitations are still comparatively few. There are two principal markets from which the abattoirs at Paris are supplied—the one at Poissy, about 13 miles to the north-west, and the other at Sceaux, about $5\frac{1}{2}$ miles to the south of the city. There are also two markets for cows and calves, namely, La Chapelle and Les Bernadins.

The Paris abattoirs were until recently the most perfect specimens of their class, and even now, although in some of their details that have been surpassed by the now Islington Meat Market, for their complete and compact arrangement they remain unrivalled.

The example set by Paris in this matter has been followed in a more or less modified form by most of the principal Continental towns, and the system of abattoirs has become almost universal in France.

The condition of London in this important sanitary respect was for a long period little more endurable than that of Paris before the adoption of its reformed system. Smithfield Market, situated in a very populous neighbourhood, continued till 1852 to be an abomination to the town and a standing reproach to its authorities. No fewer than 243,537 cattle and 1,455,249 sheep were sold there in 1852, to be afterwards slaughtered in the crowded courts and thoroughfares of the metropolis. But public opinion at length forced the Legislature to interfere, and the Corporation was compelled to abandon Smithfield Market, and to provide a substitute for it elsewhere.

The site selected was in the suburb of Islington, and the designs for the work were prepared by Mr. Bunning. The first stone was laid March 24, 1854, and the market was opened by Prince Albert, June 15, 1855. The Islington Market is undoubtedly the most perfect of its kind. It occupies a space of some 20 acres on the high land near the Pentonville prison, and is open to both native and foreign cattle, excepting beasts from foreign countries under quarantine.

In connection with the Islington cattle market are a few slaughter-houses, half of which were originally public, and half rented to private individuals; but at present they are all practically private, and the majority of the cattle sold are driven away and killed at private slaughter-houses. In this respect the London system differs from that of Paris; and it may be said for the former that the meat is less liable to be spoiled by being carted to a distance, and is therefore probably delivered in better condition; but the latter secures that great desideratum, the practical extinction of isolated slaughter-houses.

The Edinburgh abattoir, erected in 1851 by the Corporation, from designs prepared by Mr. David Cousin, the city architect, is the best as regards both construction and management in the United Kingdom. It occupies an area of four acres and a quarter, surrounded by a screen wall from which, along the greater part of its length, the buildings are separated by a considerable open space. Opposite the principal gateway is a double row of buildings extending in a straight line to about 376 feet in length, with a central roadway (marked AA in the annexed plan—See separate Appendix), 25 feet wide. There are three separate blocks of building on each side of the roadway, the central one being 140 feet in length, and the others 100 feet each—cross roads 18 feet wide separating the blocks. These ranges of building, as well as two smaller blocks that are placed transversely behind the eastern central block, are divided into compartments, numbering forty-two in all, and all arranged on the same plan. Next the roadway is the slaughtering-booth (BB), 18 feet by 24, and 20 feet in height, and behind this is a shed (CC), 18 feet by 22, where the cattle are kept before being slaughtered. All the cattle are driven into these sheds by a back entrance, through the small enclosed yards (DD). The large doors of the booths are hung by balance weights, and slide up and down, so as to present no obstruction either within the booth or outside. By a series of large ventilators along the roof, and by other contrivances, the slaughtering-booths are thoroughly ventilated. Great precautions have been used to keep rats out of the buildings. To effect this the booths are laid with thick well-dressed pavement, resting on a stratum of concrete 12 inches thick, and the walls, to the height of 7 feet, are formed of solid ashlar; the roadways, too, are laid with concrete, and cause-wayed with dressed whinstone pavement; and the drainage consists entirely of glazed earthenware tubes.

The ground on which the abattoir is built was previously connected with a distillery, and contains a well 100 feet deep (E), which, with the extensive system of tunnels attached to it, provides the establishment with an abundant supply of pure water. By means of a steam engine (F), introduced in 1872, the water is pumped up into a raised tank (G), whence it is distributed to the different booths and sheds, as well as for scouring the roadways and drains. The steam from the engine is utilized in heating water for the numerous cast-iron tanks required in the operations of cleansing and dressing the tripe (H), and pig slaughtering-house (I). By an ingenious arrangement of rotary brushes, driven by the steam-engine—the invention of Mr. Rutherford, the superintendent—the tripe is dressed in a superior manner, and at greatly less cost than by the tedious and troublesome method of hand-cleaning.

By the Edinburgh Slaughter-houses Act of 1850 the management is vested in the city authorities. Booths are let at a statutory rent of £8 each per annum, and in addition to this gate-dues are payable for every beast entering the establishment. The present rates for tenants of booths are 1½d. for an ox or cow, ¾d. for a calf or pig, and ¼d. for a sheep. Common booths are provided for butchers who are not tenants, on payment of double gate-dues. The city claims the blood, gut, and manure. The tripe and feet are dressed for the trade without extra charge.

The blood was formerly collected in large casks, and disposed of for manufacturing purposes. This necessitated the storage of it for several days, causing in warm weather a very offensive effluvia. It even happened at times, when there was little demand for the commodity, that the blood had to be sent down the drains. All nuisance is now avoided, and the amount received annually for the blood has risen from between £200 and £450 to from £800 to £1,200, by a contract into which Messrs. Smith and Forrest, of Manchester, have entered with the city authorities to take over the whole blood at a fixed price per beast. They have erected extensive premises and apparatus at their own cost for extracting from the blood the albumen, for which there is great demand in calico-printing, and for converting the clot into manure.

In connection with the establishment is a boiling-house, where all meat unfit for human food is boiled down and destroyed. The number of carcasses seized by the inspector and sent to the boiling-house during the five and a-half years ending with the close of 1872, amounted to 1,449, giving a weight of upwards of 400,000 pounds.

Before the erection of these buildings private slaughter-houses were scattered all over the city, often in the most populous districts, where, through want of drainage and imperfect ventilation, they contaminated the whole neighbourhood. Since the opening of the public abattoir all private slaughtering in the city, or within a mile of it, is strictly prohibited.

Few of the provincial towns in Great Britain have as yet followed the example of London and Edinburgh. In some instances improvements on the old system have been adopted; but Great Britain is still not only far behind her foreign neighbours in respect of abattoirs, but has even been excelled by some of her own dependencies. In America abattoirs are numerous, and at Calcutta and other towns in British India the meat markets present a very creditable appearance from their cleanliness and systematic arrangement.

[To Mr. Frederick Oatley's Evidence.]

F.

The Inspector of Abattoirs to The Secretary, Glebe Island Abattoir Board of Inquiry.

Sir,

Glebe Island Abattoir, 12 September, 1879.

I beg respectfully to suggest, for the consideration of the Board, the following alterations and improvements with respect to my Department.

1st. In lieu of No. 14 clause of the present Regulations I would propose the following:—"It shall be competent for the Inspector or Assistant-Inspector of the Abattoir to condemn diseased meat or such other as may be unfit for human food, and the owner thereof or person occupying the slaughter-house in which such meat be found shall forthwith remove or cause the same to be removed from the Abattoir and destroyed by fire or boiling down for the purpose only of extracting tallow. Any person or persons as aforesaid failing to comply therewith shall for every such offence forfeit and pay any sum not exceeding fifty pounds nor less than ten pounds."

1—K

2nd. The site formerly used for depositing the cattle manure having been chosen for the purpose of erecting the plant for desiccating the blood and offal, I would suggest that a receptacle be at once built for the deposit of the same, on the western side of the cattle lane on the hill, which would afford easy access. I believe if this were carried out, persons would come for it as fast as it was collected.

3rd. I would also suggest that a gutter be laid the entire length of the sheep and pig pens, with a view to catching the deposit that runs therefrom, which, at times of wet weather or flushing, flows over the road. If this were done it would greatly facilitate the collection of the muck and in keeping the place clean.

I have, &c.,
FRED. OATLEY,
Inspector.

P.S.—I forgot to mention that it would materially assist in keeping the sheep and pig pens in a cleanly state if they were asphalted.—F. O.

[To Alexander Bruce, Esq.'s, Evidence.]

G.

EARNINGS from Carriage of Live Stock on the New South Wales Railways, from 1858 to 1877.

H.

GLEBE ISLAND ABATTOIRS

(RECEIPTS AND DISBURSEMENTS.)

Ordered by the Legislative Assembly to be printed, 24 July, 1879.

RETURN showing what sums of money have been expended annually in providing suitable accommodation for slaughtering cattle, &c., &c., the nature of the work on which expended, the total expenditure for work, the total expenditure for land, the working expenses since the Abattoirs were opened, and the total working expenses, the revenue derived each year from the Abattoirs since they were opened, and the total revenue derived from the Abattoirs since they were opened, to 31st December, 1878.

[See Parliamentary Paper.]

[Diagrams, &c.]

GLEBE ISLAND ABATTOIR INQUIRY.

SEPARATE APPENDIX H.

Information obtained through Captain Cargill, of the ss. "Australia," with regard to the Dead Meat trade of San Francisco.

THE first and principal portion of this information is a reprint to a large extent of a pamphlet published by the Western Refrigerator Car Company of San Francisco, which conducts the chief dead meat business in San Francisco; and it speaks for itself. To this has been added some additional particulars by Mr. A. T. Spotts, its president; and then there are some details given from a circular issued by the Western Shore Ice Company, with respect to the ice-making machine sold by them.

The California Fruit and Meat Shipping Company.—The meat branch of "The California Fruit and Meat Shipping Company" is now doing an active and prosperous business, at their Office and meat Refrigerator, No. 727 and 729, Fourth-st., S.F.

Object of the Company.—This company was organized for the purpose of introducing to the trade in particular, and to the public in general, a first-class article of beef, possessing all the essence and fine flavour that good mountain feed, water, and health always produce; and now people in moderate circumstances of life can enjoy, from the fine quality of beef furnished by this Company, as healthy and juicy steaks and roasts as can the wealthiest epicure.

Live stock transportation, and the hardship poor beasts undergo.—Great difficulty has always existed among wholesale butchers in getting cattle on the hoof to the San Francisco and other markets in proper condition of health. Ordinary modes of conveyance cause some to perish on the journey, leaving those that get through in such a diseased and feverish state as to be unfit for killing and for food.

Such cattle are driven a distance of 200 miles and upwards, to a shipping point; they have a scarcity of food and water throughout the entire distance, and are then placed in corrals, where they are crowded together; and are forced into a chute about 3 feet wide, and then loaded into cars provided by railroads. From sixteen to twenty animals are put into each box-car, giving an average of less than 2 feet of space in width to each animal. They are necessarily kept standing during the entire trip of 3 or 4 hundred miles by ordinary freight train; and if one or more fall, from exhaustion or other causes, they are trampled to death or terribly bruised, as it is almost impossible for them when once down to get up.

Cruelty to animals.—If cattle are taken out of the cars for rest, during a trip of three days or less, they have again to go through the hardships of "cruelty to animals," in loading and unloading, as they did in the first instance; and when they are delivered in San Francisco and other large cities for slaughter, they are, in consequence of so much crowding, feverish, full of sores, bruised, and are generally diseased.

A few days of rest, although expensive to wholesale butchers, help such animals as are lucky enough to escape the above-described bruises; but even during such rest the cattle are constantly reducing in weight, and consequently in quality.

How meat has heretofore been supplied.—At present almost all the meat consumed in large cities comes from a distance.

From the cars, on their arrival at the freight yard, they are driven by men and dogs to a slaughter-house, where they are killed, and the slaughtering is ordinarily done in the evening, and many families eat steaks for breakfast that were in a living animal at supper-time the night before. It begins to receive heat on the gridiron before it has parted with its animal heat. This haste is indulged in for various reasons. The quicker meat is sold after the animal is killed, the less will be the loss to the butcher in weight, from evaporation. The meat of animals that were bruised, or otherwise injured on cars, will present a better appearance if disposed of immediately, as the effects of the injuries received do not at once appear.

Its appearance under the microscope, and what we have had to eat.—Such meat presents a different appearance under the microscope, from the meat of animals that have been suddenly killed while in a state of repose, and just driven into a slaughter-house from their native pasture.

The meat cannot be preserved as long, and it emits a more disagreeable odour when decay begins. Hunters well know that the flesh of game that has been pursued by dogs cannot be long preserved. The like is true of the flesh of animals that have been caught in traps, where they suffer from pain and fright for many hours.

What this Company now propose to do.—The Meat Shipping Company propose to prove that they will continue to deliver to the San Francisco trade, according to the demand, the fat cattle raised in the State of Nevada, dressed to suit the market, and possessing, when delivered, the rich essence and flavour given to the meat by the nutritious grasses which that State produces.

Who the chief stockholders are, and where the cattle are slaughtered.—The stockholders, composed chiefly of stock-raisers in Nevada and California, possess their own ranches and pastures, and will have the necessary amount of cattle always on hand, ready to send in by slow and easy drives to the Company's corrals at Reno, Nevada, where they have a splendid refrigerator slaughter-house, which is admitted by all to be the finest and most complete that has ever been built on the Pacific Coast, the main building being 40 by 60 feet, and purposely designed and fitted up for killing and preparing cattle for the San Francisco and other markets. The slaughter-house and corrals are situated about three-quarters of a mile from Reno, directly on the railroad for about 1 mile, and an irrigating ditch runs in front of the slaughter-house, furnishing an abundance of pure running water for the use of the cattle.

Merits of the Company's refrigerator slaughter-house.—This refrigerator slaughter-house of the Company is so constructed as to allow a full-sized refrigerator railroad-car to run into the main building, so that meats can be loaded on from either side. The floor of the car stands on a level with the floor of the slaughter-house, making thereby everything convenient and insuring cleanliness in loading the cars with meat.

How the patent refrigerator car is managed.—The car is washed out and dried on the inside every trip before the ice receptacle is charged with about a ton of ice for the journey, and occasionally the car is fumigated before being loaded, by burning charcoal, to insure a pure atmosphere.

Slaughtering and quartering.—At the slaughter-house, cattle for slaughtering are quietly driven to the pens, and not excited, and are perfectly rested and at ease before being killed. When killed, the carcasses are allowed to cool well in the run before quartering and the muscles being contracted, the beef keeps its shape until cut up by retailers. They are handled with cleanliness, and care is taken not to score the hides.

Appearance of the refrigerated beef, and how the animal heat is extracted.—These precautions cause the beef to have a bright white colour, which adds to the value. The carcasses remain on the runs a few hours, and are then placed in a cooling room capable of holding a large number of dressed cattle, with a temperature of about 40 degrees Fahrenheit, where they remain from twenty-four to forty-eight hours before loading in the cars, which have been brought down by the previous icing to about the same temperature as the cooling-room.

How the cars are loaded.—Thirty-five neatly dressed cattle are moved from the slaughter-house, and are carefully swung from rods at the top of the "refrigerator car," and sometimes pieces of burling are passed between the quarters of beef to prevent chafing. This car with its contents is immediately forwarded to San Francisco without disturbance of any kind.

Nature of the refrigerator car.—It may be well to explain the nature of the "refrigerator car," as many people think that meat in it is frozen, which is most decidedly not the case.

By the use of ice placed at the top of the car in a patent V-shaped ice receptacle, and with the proper management of hot and cold air, agreeable to printed instructions pasted in each car, the temperature is reduced and kept at an average of from 40 to 45 degrees Fahrenheit for transporting dressed beef, and with the aid of a proper use of Chloride of Calcium as an absorbent of surplus moisture, and the naked ice for cooling purposes, a dry, cold air of about 40 to 45 degrees Fahrenheit is produced and maintained notwithstanding the thermometer on the outside of the car may mark 100 or over in summer, or may be far below zero in winter.

The patent car and house impervious to extreme heat or cold.—The car and refrigerator house have similar non-conductors, which make the preserving chamber impervious to the extreme heat or cold of the outside atmosphere, and use naked ice without salt, fan, or other chemical or mechanical means to produce natural cold, and both are built under the same patent.

Care is taken to preserve no lower temperature than is required to transport and preserve the article being handled, and especial pains is taken to keep the same temperature day after day, and guard against extraordinary fluctuations.

The meats placed in any of the cars or refrigerator-houses owned by the Meat Shipping Company, and built upon the patent of the W. R. Car Co. of San Francisco, will be warranted to keep fresh and perfectly sound, and on arrival of the cars containing the dressed meats at the Company's depôt, No. 727 and 729 Fourth-street, San Francisco, it will be switched by the Central Pacific on the private track laid by the Company in the rear of the meat refrigerator-house, and the contents, after being weighed, will be carried into the meat refrigerator building and hung up for sale to the trade.

Description of the building and patent that is applied to both cars and houses.—This building is 34 feet front by 87 feet deep, and with 14 feet between the stories. In front is the Company's office, and in the rear of the office is the refrigerator preserving chamber, built upon the patent of the Western Refrigerator Car Company of San Francisco. In this room all meat will be stored, and as it is the most interesting feature of the building, which is the first of its kind built on the Pacific coast, and every care has been observed to render it complete in all its appointments, it seems proper to describe it. The refrigerating chamber is in the main building and on the ground floor, but raised about 4 feet from the earth, and is 60 feet long by 25 feet wide, and 12 feet high. It is sheathed outside and inside the shell with $\frac{3}{4}$ tongued grooved boards, set in thick white lead, and filled in with 8 inches of sawdust on the sides and ends, and 12 inches on the top and bottom, and 1,500 sacks of sawdust, weighing 40 pounds each, were required to fill the shell.

On the inside sheathing were put three heavy coats of white paint, and next to that was fastened one thickness of felt paper, and then stripped with $\frac{1}{2}$ x 2 inches of wood, and covered with $\frac{1}{4}$ inch of straw board, leaving $\frac{1}{2}$ inch space for dead air chamber, and the whole was then lined on the top, ends, and sides with No. 28 galvanized iron, tongued, beat together, and soldered.

On the floor is asphaltum an inch thick. Inside the refrigerator-room, and properly secured to the top, are four airtight, V-shaped, patent ice-receptacles, made of No. 18 galvanized iron, and with a depth of about 2 $\frac{1}{2}$ feet, and an equal spread at the top, which are capable of holding considerable ice when packed, and which run the full length of the refrigerator preserving room. These receptacles owing to the gutter form prevent the water from the melting ice coming in contact with the sound ice in the receptacle and thus wasting same, for as it melts the water, being facilitated by the gutter form of the lower part of the receptacle, passes out through a pipe extending through the floor, and trapped at the lower end to prevent further waste of ice by the admission of air.

Advantages of this patent in countries where ice is expensive and scarce.—As great a benefit is thus obtained by this Company from 3 to 5 tons of ice on this patent principle, as is gained by certain refrigerator-houses in New York, Chicago, and St. Louis, which are not as large, and require from 50 to 80 tons of ice to charge them. Ice being expensive, however, in San Francisco, it is necessary to economize in this respect.

The drying pan or trough.—At the bottom of the V-shaped ice receptacle is placed a desiccating trough or pan of similar shape, and running the full length of the V receptacle, but only a few inches high, and leaving an intervening space of several inches.

This trough or pan has a waste pipe similar to the pipe connected with the V ice receptacle, to carry off all liquid. A layer of desiccating matter is placed in the V-shaped trough or pan, and as it deliquesces, gradually runs out in liquid form, and passes off through the pipe which is trapped at the lower end, as above mentioned. The solution used is evaporated with sufficient frequency to produce a continuous and uniform supply of desiccating material, which adds greatly to the Company being able to maintain a dry cold atmosphere in the refrigerator house and car, and a handkerchief rubbed on the galvanized iron remains perfectly dry. The troughs are also of galvanized iron.

The preserving chamber is provided with patent doors at either end of the house, one of which opens into the office and the other on the rear platform, where the meat will be received and delivered, after being weighed on the scales erected for that purpose. The doors are packed with the same non-conductor as the rest of the house, and have triple closing edges like those of an iron safe, fitted with weather strips, so that when the doors are closed and the patent screw-cap is applied to the thread of the longitudinal latch-bar, it draws the door and the jam so closely and firmly together that no particle of air can enter the preserving chamber, unless it is permitted to enter through the ventilators, which are only opened at the will of the superintendent and under his instructions and orders.

A "thermometer" with "hygrometer" attachment is hung up in the house and carefully watched, so as to enable the superintendent to maintain an even temperature and avoid an injurious degree of humidity which the "hygrometer" accurately indicates and enables him to counteract.

Ice.—Ice is first received from the cars, and placed in an which conveys it to the receiving ice-house on the second floor, which is 12 by 14 feet, and has a water-tight iron floor, and the patent V-shaped ice receptacles are fed from this house from time to time, as required, through the eighteen doors or scuttles opening into the V-shaped ice receptacles, which doors or scuttles are in the same floor as the receiving ice-house, and are fitted and made the same as the main doors to the preserving chamber, so that air is entirely excluded, and the ice, being entirely insulated, melts very slowly.

Where the meat is hung.—Inside the preserving chamber there are three rows of double shambles, with a spread of 18 inches, and fastened to the sides and ends is a half shamble, and all of them can be used at the same time for hanging beef or other dressed meat upon the galvanized iron hooks attached to the 2 x 6 beams that run almost the full length of the preserving chamber, and are grained in, bolted and fitted with 500 hooks, capable of swinging at one time 125 head of dressed beefs when quartered.

It is sold only to the trade at the ruling market rates, and delivered in the Company's four-horse wagon in any part of the city. On the second floor of the building there are five bed-rooms fitted up for the use of the officers and employés of the Company.

How long beef can be kept by the Company at 40 to 45 degrees Fahrenheit.—Several tests have been made as to the length of time the meat will remain fresh. On one occasion the meat, after being killed at Reno, was kept three days in the cooling room of the slaughter-house, and in the car in transit, and remained four weeks in the refrigerating chamber in San Francisco, where it was daily inspected by the butchers and visitors, and, after being taken out, was kept by the retail butcher who purchased the carcass two days before being cut up, making a total of over one month, and was then in perfect order, and there was not a particle of waste. Further tests show conclusively that the beef killed and handled by this process will keep on a butcher's stand longer before being retailed out than beef transported on the hoof and sold at Butchertown or at Oakland.

Some facts about transporting perishable articles by rail.—When railroads were first started in the United States, attempts were made to transport perishable articles in cars lined with sawdust, with boxes of ice in either end, or both ends, of the car, and from that time to date the successful carriage of perishable matter has been the study of inventors and business men, and much money has been expended in experimenting. It would seem, therefore, that public sentiment and enterprise has kept alive the desire to accomplish this great end.

Chief opponents of similar enterprises in Europe and America.—In the East, as well as in Europe, the chief opponents to this mode of a carrying business in the beef line are found among rings of live-stock commission merchants, and parties interested in the abattoirs in large cities, as also stock-yard owners, middle-men, and a large class who receive great benefit by the handling of the farmers' cattle, who, it would seem, have to pay for nearly every breath they draw.

Live-stock statistic of Chicago for 1876.—By examining the live-stock statistics it will be seen that in 1876 there were received at the stock-yards at Chicago about 1,100,745 cattle, 4,190,156 hogs, and 500,000 sheep; and in 1877 there were received about 1,032,855 cattle, and 4,026,000 hogs. At the rate of eighteen head of live cattle to a car, this would give about 60,000 car-loads every year, which, with a shrinkage of say \$50 a car—which is an acknowledged loss on the hoof on a run of say 400 or 500 miles—would amount to something like \$3,000,000, and if you double the distance you would more than double the loss.

To be added to this must be the feed at the several stations, the pay of the drovers, the loss by death, and other incidental expenses, all of which would swell the annual loss about double. If to this be added the loss in San Francisco and other large cattle points in the United States, as also the loss on calves, hogs, and sheep, some idea of the enormous waste to the people of the country in this branch of trade can be estimated.

Consumption of dressed meat in America.—The consumption of dressed meats by the people of this country is greater than any other, and no household feels their meat complete without meat. They are brought up to expect it. And since they will have, and make every sacrifice to get it, they should obtain it as cheap and as good as it is possible for it to be procured.

[3]

In addition to the beef, sheep, and veal received from the Company's slaughter-house at Reno, there have been received and handled on commission several car-loads of dressed beef and one car-load of 385 head of sheep, slaughtered at Winnemucca, and further consignments will probably soon follow. The Company have regular customers in Oakland, Santa Cruz, San Rafael, San Mateo, &c., and forward carcass after carcass to their customers, who report that the meat is finer and arrives in better condition than that they have been in the habit of purchasing and receiving.

Already Eastern business communities accept the inevitable, and while the old method of supplying cattle in large markets cannot be overcome in a day, or perhaps in years, nevertheless rapid strides in favor of the great change are being made, and in Chicago, where refrigerator-cars first became popular, during 1877, there was handled 1,390,500 quarters of dressed beef, 208,000 veal, and 166,500 mutton and lambs, as also a large quantity of dressed hogs. The following shows the average rates in the Chicago and San Francisco markets respectively:—

HINTS TO SHIPPERS.

Dressed Beef—Chicago and San Francisco.

1st. Cattle for slaughtering should be quietly driven to the pens and not excited; let them rest well before killing; in this way the beef will be a bright white colour, which adds from 25 to 50 cents per hundred pounds on the sale.

2nd. Handle the carcass with cleanliness; don't score the hides. Bad scored and cut hides sell at two-thirds price. In taking out the tongue leave the entire root on, and make it as large as possible.

3rd. Split carefully, and crack the back-bone on fore-quarter. Let the carcass cool well on the run before ribbing or quartering; hence the muscles will be contracted, and when quartered the beef will keep its shape until cut up.

4th. For Chicago market, in ribbing and quartering, leave the short rib on hind quarter and cut slanting; hence the beef will have the appearance of good thickness, and if kept cool, a nice shape.

For San Francisco and New York market leave all the ribs on fore quarter and balance same as Chicago.

5th. It has been supposed that the carcass has stood four hours at least on the runs, and then twenty-four in the cooling-room (of course at certain seasons and in certain latitudes no cooling-rooms are required, but extraordinary care should always be taken not to let any meat freeze) and is ready for loading; that the car has been washed and cleaned out. In handling don't muss the beef. Put fore quarters on the outside rods in car with ribs facing out, and slide hind quarters between, on the middle rods, and number each bullock and quarter with tags, packing it in as close as possible, so as to prevent swinging and chafing. It is cleaner and more economical to use common rope in hanging. In making the hole in fore-quarter to slip the rope through, use some round, sharp instrument; don't slash it with a knife; by this a good purchase is obtained and the beef retains its shape.

Directions for the management of the cars built on the Patent of the Western Refrigerator Car Company of San Francisco.

—1st. Keep the car clean by washing thoroughly and then drying the inside before icing up for a load of perishable merchandise, and by occasional fumigation by burning charcoal and sprinkling a little sugar on same. Examine the waste pipes inside the car, and if either have been injured repair any leak before loading; and in loading the car with beef be particular to see that it swings clear off each waste pipe. See that the small stop-cocks connected with the drying or drip-trough are both shut off.

2nd. Raise the end hatchways on top of the car, just before the car leaves with a load, and if there is any water in the ice receptacle caused by the drain-pipe clogging, clear the waste pipes, to be found at each end of the car in the receptacle. In icing the car, put about a ton of ice in the receptacle for the trip, but in warm weather pack the ice closely in the receptacles, crowding well up at the sides and fitting the chunks well with small pieces. In hot weather it is well to fill the receptacles at least five hours before loading the car. This is unnecessary in loading in a cold climate. Wash or brush off all sawdust or dirt from the ice before putting it in the ice receptacle.

3rd. Beef should remain on the runs about four hours, and should be in a cooling chamber for about 24 to 48 hours before loading in the car. Cooling-rooms should not be at a higher temperature than 40 to 42, nor should the car be at a colder temperature than this when being loaded with beef or when the doors are closed and tightly screwed up. No sunshine or rain should be permitted to fall on beef when loading the car. It is best to load at a time of day when the air is clear and pure, and permit as little warm air as possible to blow against the colder galvanized iron inside of the car when putting in the beef, as it condenses on the iron and causes a sweating until the car is closed up, when of course it stops, but leaves the moisture that has accumulated inside the car to be absorbed by the calcium. The less moisture there is, the better for the load.

4th. A thermometer may be placed inside the car, and pork can be best transported at a temperature of 38 to 40; beef at a temperature of 40 to 45; fruit and vegetables 45 to 50.

5th. When the ice is put in on the first trip, place in the drying-pan under the large ice receptacle about 40 lbs. of chloride of calcium in pieces about as large as a man's fist. This quantity will last several trips, and can be kept up from time to time as it deliquesces.

Pioneer load sent from Nevada to the East, and the cattle resources of the Great Buffalo Ranges.—In one of those refrigerator-cars of the W. R. Car Co. of S. F., the pioneer and experimental load of dressed meat was shipped from Nevada to Chicago, where it arrived sweet and sound more than ten days from the day it was started. And should beef ever be scarce

on the Pacific Coast, from drought, or other causes, this meat company could carry on business in San Francisco by loading its cars as far east as the "Platte Valley," on the Union Pacific, where cattle can be kept all the year without hay, and where the buffalo grass affords the rich nutriment that produces fat, and renders cattle ready for market without grain. The hand of the Almighty has placed its ineffaceable mark upon all this vast region of country as His pasture-ground—adapted, so far as is known, to no other purpose.

Millions of buffalos, and why not millions of beeves?—Millions of buffalos have ranged over these bleak and desolate-looking plains for ages past, and from the short grass, which grows in abundance, have derived a rich sustenance.

They have gone, or are fast going, and the necessities of the civilization which follows calls for beef. Truly they are the Almighty's pasture-grounds, and if there are not a thousand cattle upon a hill, there will surely be "cattle upon a thousand hills." If the buffalos have lived in this country year after year during the flight of centuries, without hay, why cannot cattle do likewise?

Extent of the grazing country of the Plains.—The stock-grazing region referred to comprises all the country west of the 100th meridian of longitude, beyond the base of the Rocky Mountains, and the elevated plateaus, or great parks, lying between the extreme eastern and western ranges of the same mountains; while the extent north and south reaches from the Gulf of Mexico to the northern boundary-line of the United States. The famous buffalo grass in this region covers the plain northward, southward, and westward. It gives the country a dried look, and the very appearance of sterility and desolation, yet it is the richest grass ever known in the world. This buffalo grass is rarely over 2 or 3 inches in height, and its seed is produced on flowers, almost covered by leaves, close to the ground.

It grows in little tufts, broad and dense, and is exceedingly rich and sweet, having no less than 36-10 per cent. of saccharine matter. When making its first growth in the spring it is green, then dries on the stem, and remains the rest of the year like cured hay in the open ground, retaining all its sweetness. Without an exception, stock of all descriptions will forsake all other kinds of grass until all the buffalo grass within reach has been consumed. It can be safely asserted that the supply of cattle in the old buffalo ranges of Wyoming, Colorado, Nebraska, Kansas, Oregon, Idaho, and Nevada is inexhaustible.

Success of the refrigerator-car and dressed meat transportation to Europe.—As to the success of carrying dressed meats in these refrigerator cars and chambers there is now no question.

Fully 10,000 quarters of beef, weighing about 180lbs. each, now leave New York and Philadelphia weekly in refrigerator chambers built on similar principles. This meat arrives in Great Britain sweet and sound, at least two weeks or more after being killed. The Coad Storage Wharf (limited) of London, which has an area of 220,000 superficial feet, divided into twelve compartments, and fitted up at an expense of £8,000, with Mr. D. Tolleran as manager, with a capital of £100,000, and the Fresh and Preserved Meat Company (limited) of London, Mr. James Bruce, manager, with £150,000 sterling capital, invite consignments of fresh beef, pork, mutton, game, poultry, eggs, butter and cheese, fruit, shell-fish, &c., which will be sold in their various departments.

American refrigerated beef in Old England, and what is thought of it.—As to how American refrigerated beef is received in London, a correspondent of a Western paper writes:

"Since arriving, I have endeavoured to gather information upon the subject from various sources, both of vendors and consumers. Of the former class, numbers are selling it as prime English and Scotch beef. Many that I have spoken to upon the subject have told me that they have purchased the American meat, believing at the same time that they were purchasing home-raised and fed meats. Others, again, have told me that they knew they were buying American meat, and speak in the very highest terms of it, and say that should the quality remain as good as at present they will purchase none other. To all whom I have spoken upon the subject—and I have spoken to very many—I have not heard one of them speak otherwise of it than in the most favourable terms. I think it speaks for itself when every day we hear that the demand is increasing and must increase immensely. Most of the large provincial towns are preparing large refrigerator-houses for the reception of American meats."

What the "Daily London Telegraph" says, and the opinion of English Scientists.—From the "London Telegraph" we learn that recently Professor Sheldon, of the Royal Agricultural Society, made a report to the Association, and says that the import of meat to England from New York and Philadelphia began in October, 1875, with a total receipt for that month of 36,000 pounds, and went on increasing until in April, 1877, when the import reached the large quantity of 8,578,216 pounds from New York and Philadelphia during that month alone, and his conclusions were favourable, not only to the maintenance but the definite expansion of the trade, which he says has passed the stage of experiment.

Statistics are given to show that, in 1876, New York, Philadelphia, and Portland exported 19,990,895 pounds of fresh meat to Europe. The past year Boston was added to the list, and the results of that and the increase at the other ports are that the total exports for 1877 have exceeded 100,000,000 lbs., at a cost of over \$11,000,000.

Why not?—Why ought not all the Nevada cattle, and the fat beeves from the old buffalo ranges of Nevada, Oregon, and Idaho, which are driven to the Central Pacific Railroad for shipment to San Francisco and other cities, be slaughtered at Reno, and sent in sweet and clean "refrigerator-cars" to this market as well as the East? Would not the meat be sweeter, tenderer, and more wholesome than if the animal had been bruised, prodded, and punctured, and heated in a stock car for two or three days, or a week, on their way to market. Why not save the acknowledged shrinkage of from 40 to 80 pounds upon every head of cattle caused by a trip on the hoof, and the freight of hides and tallow and refuse, by having the cattle killed at Reno, where the atmosphere is always purified by the mountain air?

The question of price to regulate itself.—The question of price will regulate itself, but consumers must be convinced that refrigerated meat, in a sanitary point of view, and the cruelty to animals while in transit, or in any light you may look at it, is by far the best for consumption, and should be preferred, when obtainable, over the other. Daily telegrams from the East, and from Europe, published in the newspapers, show that dressed meat is transported in fine order, to England, in Ocean steamers, and that the same thing is being done by rail to Chicago, New York, and Boston; and now that San Francisco has fallen into line, and proved that what was supposed to be an experiment is an assured success, other cities on the Pacific Coast will now only await the verdict of the producer and consumer.

In the near future we predict that all large cities will be for ever rid of cattle rings and slaughter-house nuisances, which have always been an incubus to all prosperous communities.

A chilling-house to contain 500 bodies of beef should, Mr. Spotts says, be 60 feet long, 30 feet wide, and 14 feet high. *The refrigerator-car* used in California is, he says, 30 feet long, 6 feet wide, and 6 feet high, and costs from \$1,000 to \$2,000. This car, unloaded, weighs from 24,000 to 30,000 lbs., and holds from 10 to 12 tons of meat or 35 bodies of beef.

The principal dead meat trade in California is that from Reno in the upland or mountainous country to San Francisco, and the distance is about 300 miles.

On that length of journey, and with the temperature at 90° in the shade, 1,500 to 2,000 lbs. of ice will be sufficient for the journey, and will leave enough to cool the store where the meat is to be kept. The average temperature at Reno is about 55°. Natural ice is used; and that can be collected and stored most economically in the neighbourhood. Here the circumstances would be reversed. Ice can be made more cheaply at the seaboard than in the country. Besides it is believed that cold sufficient for working a chilling-house will be obtained much more cheaply and easily by the Bell and Coleman process than by ice—at any rate, at all the stores and depôts where the meat is killed and kept for sale; and that ice will not be used except when required for cooling the railway meat-vans, which it is hoped will be very seldom even from the most outlying railway stations; for it is believed that if the meat be set and cooled to a temperature of 45°, placed in properly constructed non-conducting meat vans, and carried to Sydney during the afternoon and night, it will reach its destination sound and in good order without any ice at all.

Mr. Spotts then says that *if there is any secret in the business it is simply in thoroughly chilling the beef and getting all animal heat out of it before loading it in the cars.* If this is done he guarantees their car will carry it for two or three weeks. The farthest they have shipped regularly is from Salt Lake to San Francisco, about 1,000 miles. One car went from Winnemucca to Chicago, about 2,000 miles, and delivered the beef in good order, but net results did not do.

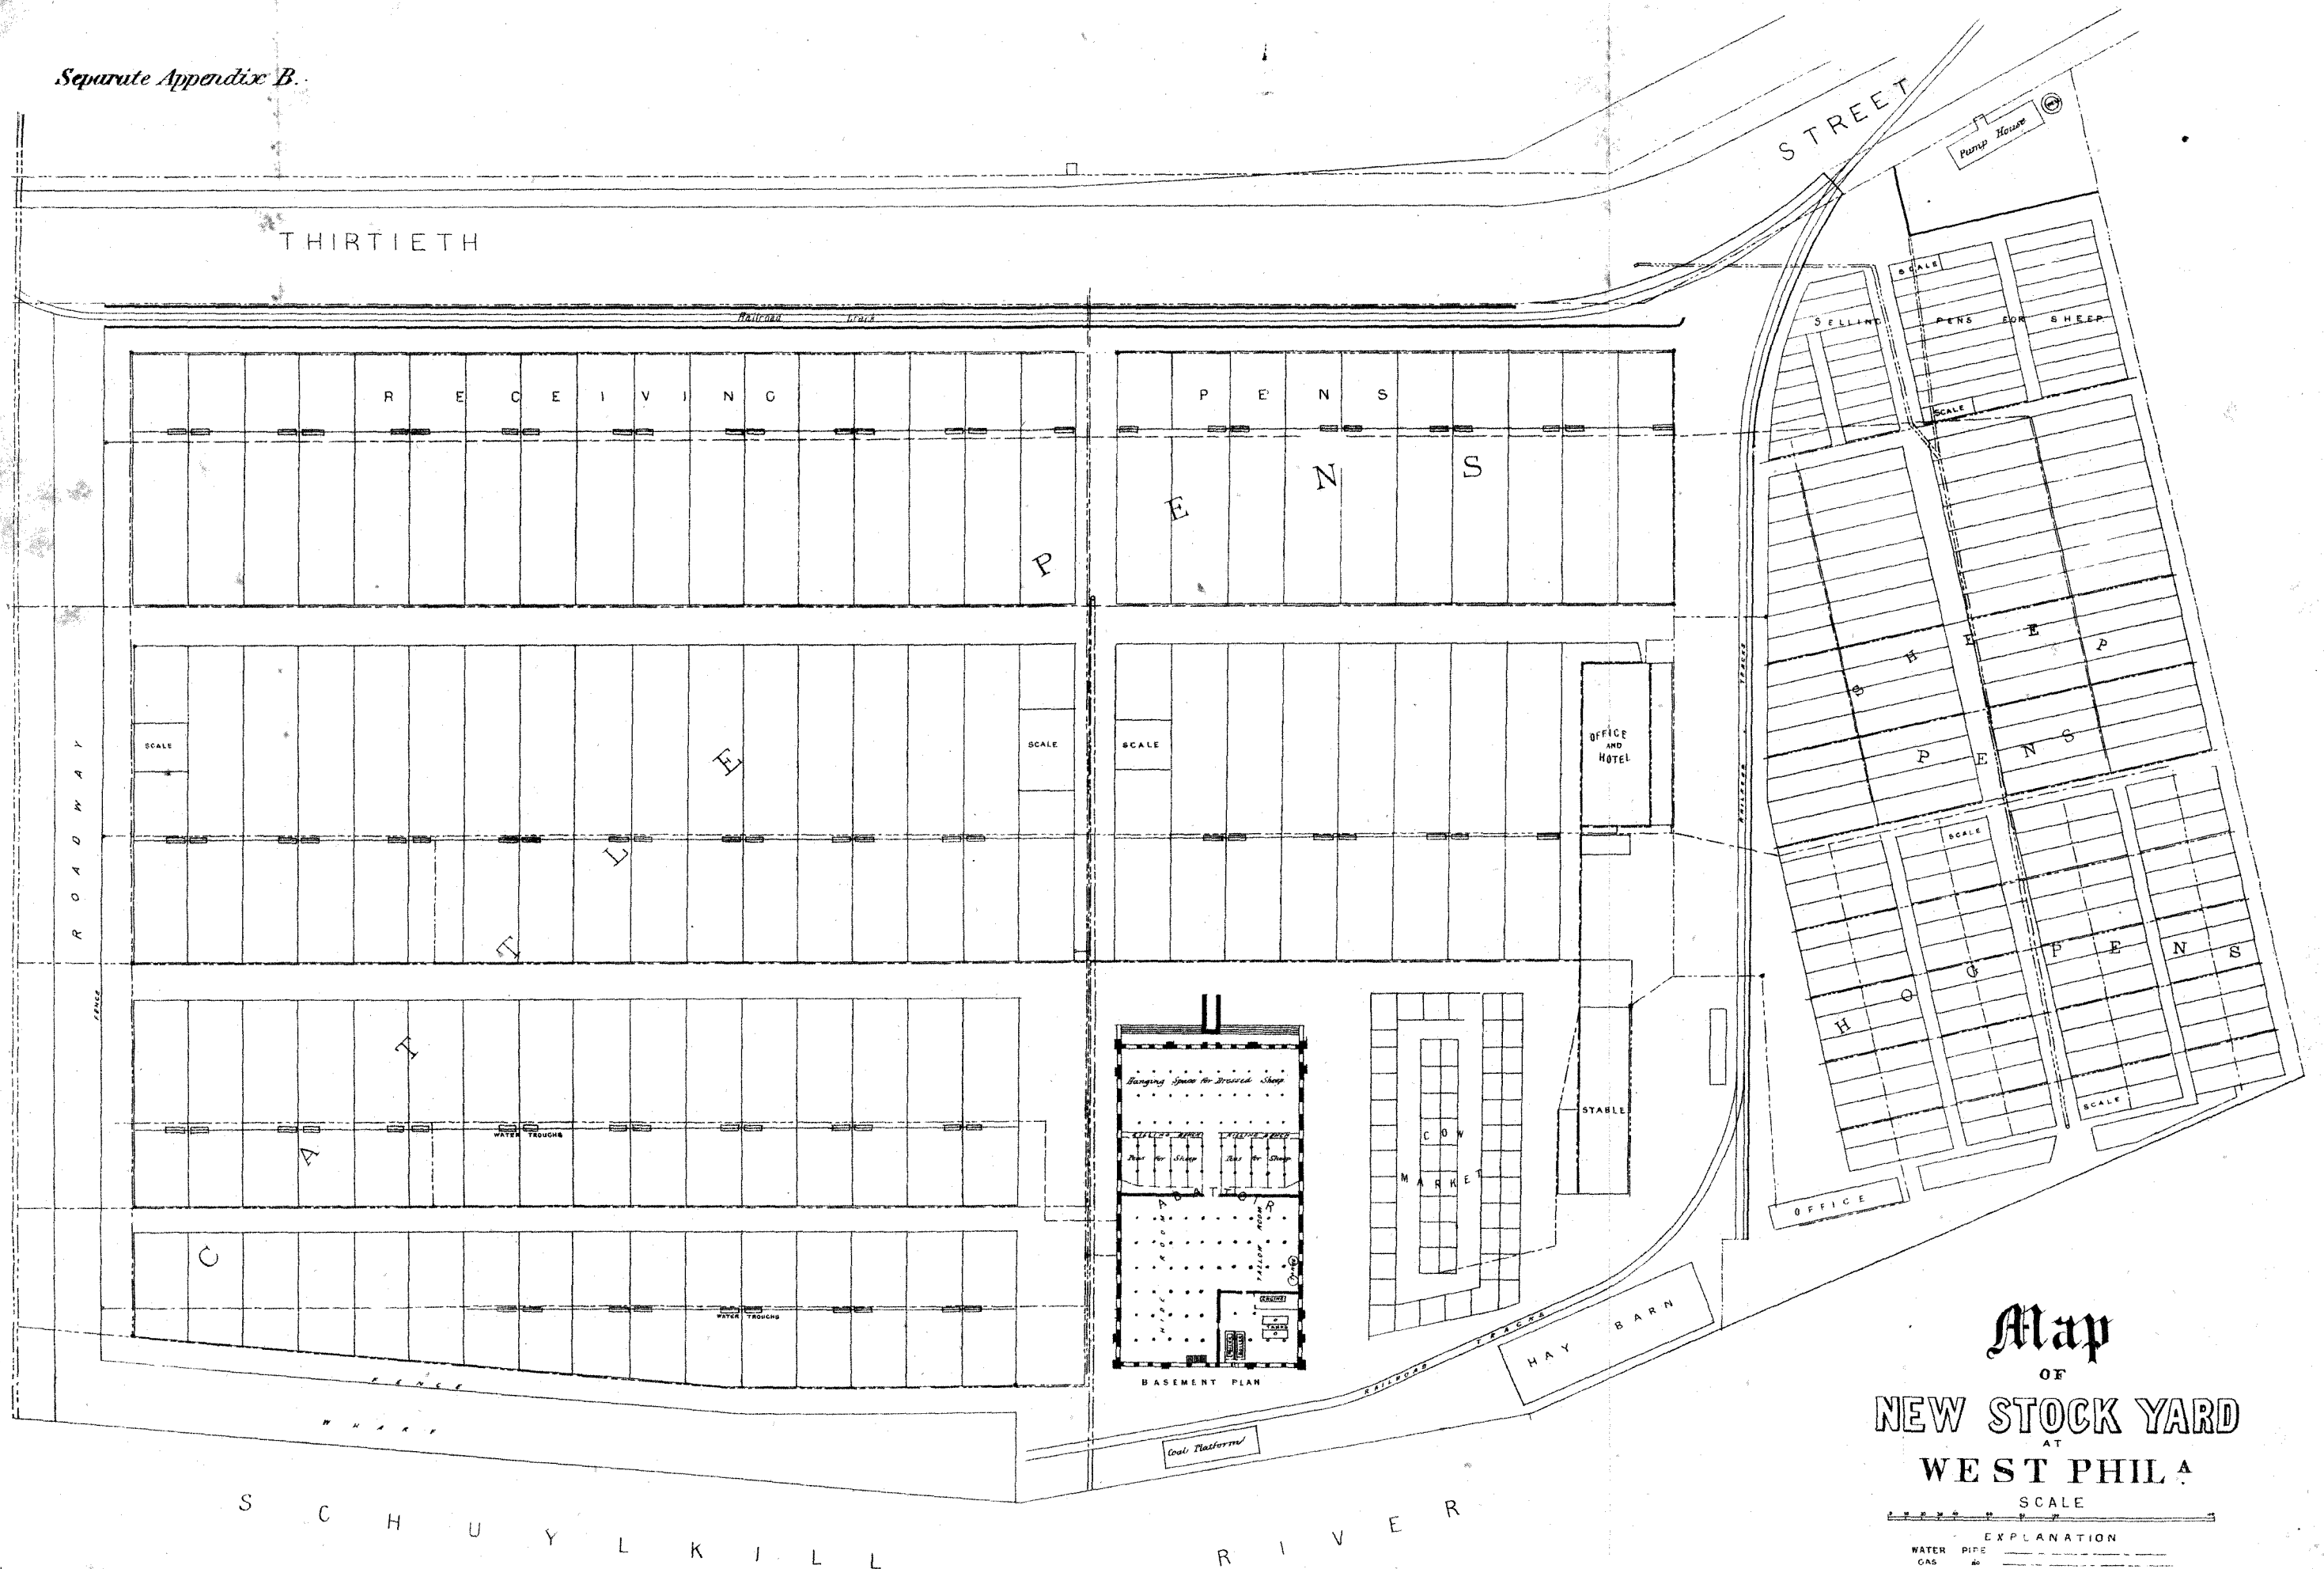

With regard to ice-making machines, Mr. H. Stephenson, the president of the Western Shore Ice Company, San Francisco, says that an ice-making machine manufactured by H. J. West, of London, and sold by his company, capable of making 1 ton of ice at a time, will do so at a cost not exceeding *one quarter of a cent. per lb.*, or £1 3s. 4d. per ton, while a larger machine by the same makers, fit to turn out 20 tons, will make ice at a cost of *one-twentieth of a cent. per lb.*, that is about 5s. per ton.

The cost of the large machine is not given; that of the 1-ton capacity is quoted at \$4,000, in San Francisco, and a 2-ton machine, at \$6,500.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GLEBE ISLAND ABATTOIRS.

(AMENDED ORDERS AND REGULATIONS.)

*Ordered by the Legislative Assembly to be printed, 9 December, 1879.*The Treasury, New South Wales,
25th November, 1879.

PUBLIC ABATTOIRS, GLEBE ISLAND.

His Excellency the Governor having been pleased, with the advice of the Executive Council, further to amend the "Orders and Regulations" concerning the Public Abattoirs at Glebe Island, as published in Treasury notice of 17th December, 1877, it is hereby notified that in lieu thereof the following shall be enforced, from and after the first day of January, 1880.

JAMES WATSON.

ORDERS AND REGULATIONS.

1. The Abattoir shall be opened daily (Sundays excepted) for the despatch of business, from the 1st October to the 31st March, from the hours of 5 o'clock a.m. to 7 o'clock p.m. (except on Mondays and Saturdays, on which days the Abattoir will be opened from 2 o'clock a.m. to 7 o'clock p.m.), and from the 1st April to the 30th September, from 6 o'clock a.m. to 6 o'clock p.m. (Fridays excepted, on which day the Abattoir will be open from 6 o'clock a.m. to 7 o'clock p.m.); and no slaughtering of cattle will be permitted during any other hour or day than the days and hours above mentioned, nor shall any person be allowed to come within or remain in the inclosures of the Abattoirs at such times as they are not open for business. Pigs, however, may be slaughtered and dressed at the Abattoir during the whole of Friday nights, between the 1st November and the 1st March in any year. During Sunday it will be permitted to drive in and yard cattle.

2. The slaughter-houses shall, with the exception of six beef and six mutton slaughter-houses, be retained in the hands of the Government, for the use of persons slaughtering therein.

3. Six beef and six mutton slaughter-houses shall be submitted to public competition, by lease, at an upset price of £200 per annum for the beef, and £125 per annum for the mutton, slaughter-houses.

4. An inspection fee of threepence per head shall be charged upon every head of cattle slaughtered in the leased houses.

5. Parties desirous of using the slaughter-houses reserved by the Government shall be permitted to do so on payment of the following fees:—

	s.	d.
For every ox, cow, bull, heifer, or steer (including an inspection fee of 3d.)	1	0
For every calf (including an inspection fee)	0	6
For every sheep or lamb	0	1½
For every head of swine	0	6

6. All fees shall be paid to the Inspector or Assistant Inspector of Abattoirs on demand, who shall pay the same into the Colonial Treasury, under such directions as he or they shall from time to time receive from the Secretary for Finance and Trade.

7. Printed receipts shall be given to all parties paying fees.

8. No person shall slaughter or yard any animal at the reserved Abattoirs, without the sanction of the Inspector or Assistant Inspector.

9. The hours during which cattle may be driven in and yarded for slaughter shall be from 5 a.m. to 8 a.m. between the 1st October and 31st March, and from 6 a.m. to 8 a.m. between the 1st April and 30th September, in each year; and cattle shall in all cases be inspected before slaughter. Milch cows and stall-fed cattle may be driven in between the hours of 2 and 4 p.m.

10. In all cases where cattle are brought to the Abattoirs in curts to be killed or dressed, notice shall be given to the Inspector or Assistant Inspector before such cattle are killed or dressed, and the hours for killing and dressing the same shall be from 9 a.m. to 4 p.m.

11. Any cattle brought to the Abattoir for slaughter which appear to the Inspector or Assistant Inspector to be diseased, shall not be slaughtered without either of their sanction, and at such times only as either of them may direct. In all such cases the owner of the same or the occupier of the slaughter-house shall be held liable for any such offence.

12. No person or persons shall slaughter, or cause to be slaughtered, any cattle in any of the pens connected with the Abattoir without the sanction of the Inspector or Assistant Inspector. In all such cases the owner thereof or persons occupying the slaughter-house, shall be held liable for any such offence.

13. Should any animal die while in the cattle-pens connected with the Abattoir, the owner of the same, or person occupying the cattle-pen at such time, shall immediately remove the whole carcass from the island, and destroy the same forthwith.

14. All animals on which fees are chargeable shall be reported to the Inspector or Assistant Inspector of Abattoirs, at his office without delay, and the fees paid forthwith.

15. Sheep and cattle will not be permitted to remain in the Abattoir-pens for more than forty-eight hours from the time of being brought in.

16.

16. No lessee or occupier of any slaughter-house connected with the Abattoir shall expose for sale diseased meat or any other which the Inspector or Assistant Inspector may have condemned; and any such lessee or occupier shall, when ordered to do so by the Inspectors aforesaid, immediately remove such meat from the Abattoir and cause the same to be destroyed by fire or boiled down for the purpose only of extracting tallow. Any such lessee or occupier failing to comply with any of these conditions shall forfeit and pay a sum not exceeding five pounds. The Inspector or Assistant Inspector is hereby empowered, in the event of non-compliance with the removal of the said meat, to destroy the same at the cost of such lessee or occupier.

17. The lessee or occupier of any slaughter-house shall thoroughly cleanse the same, to the satisfaction of the Inspector or Assistant Inspector, immediately after slaughtering has been carried on, and with respect to the offal and blood, may select and shall immediately remove each day, at such time during the day as may be appointed by the Inspector or Assistant Inspector for the purpose, such portions, not being the whole of such offal and blood, as the said lessee or occupier may require for disposal for human food, and failing such removal, at the time so appointed, the whole of such offal and blood may be removed by the Government.

18. The premises attached to, and the roadways in front and rear of each slaughter-house shall be kept clean by the lessee or person occupying or using the same, to the satisfaction of the Inspector or Assistant Inspector of Abattoirs.

19. The lessees of Abattoirs in which sheep or pigs may be slaughtered shall furnish to the Inspector or Assistant Inspector, at their respective offices, a monthly return of all such animals as shall have been slaughtered at such Abattoirs, on or before the 4th day of each month.

20. No hide, carcass, or spleen of any horned cattle (not having been previously inspected), shall be removed from any slaughter-house until after the same has been inspected by the Inspector or Assistant Inspector of Abattoirs.

21. No meat shall be blown at the Abattoir, and should any be found blown, the owner of the same, or the person blowing the meat, will be held liable.

22. The lessee or occupier of any slaughter-house shall cause the vessels and water used in dressing carcasses therein, to be kept clean to the satisfaction of the Inspector or Assistant Inspector.

23. The lessee or occupier of any slaughter-house shall upon the slaughter of any animal or animals therein, immediately cause the blood of the same to be collected in a pan, provided by the Government for that purpose, free from any water, whether used in the washing of the floor or otherwise, and the blood so collected will thereupon be removed by the Government; the said lessee or occupier may however collect whatever blood he or they may require for disposal for human food, provided the same be collected immediately after slaughter, and kept in vessels provided by said lessee or occupier, and removed by him or them from the Abattoirs under the conditions of clause 17.

24. Should the lessee or occupier of any Abattoir slaughter between the hours of 6 p.m. and 6 a.m., he shall cause the blood of the animal or animals slaughtered to be received into the pan placed there for that purpose, and put aside the same when filled. A sufficient number of pans will be provided by the Inspector of Abattoirs.

25. Cattle as they are brought in for slaughter shall be kept separate from those already in the yards, until the brands of those so brought in shall have been inspected.

26. All hides, skins, heads, feet, and offal shall be removed from the Abattoirs only by way of the road at the rear of the buildings.

27. The hours fixed for driving animals into the pens of the reserved mutton slaughter-houses shall be from 6 a.m. to 6 p.m. between the 1st October and 31st March in each year; and between the 1st April and 30th September the hours shall be from 7 a.m. to 4 p.m. in each year.

28. It is strictly prohibited to place candles or lights of any description upon or against the walls, or upon or against any portion of the woodwork of the Abattoirs, or stables, or any other building or buildings in connection therewith; and the lessee or person occupying the Abattoir or stable where such prohibited candle or light is found will be held responsible for the same.

29. In cases where water is found running to waste in any Abattoir, the lessee or occupant will be held responsible for such waste.

30. Gaming is prohibited at the Abattoirs, also the tossing up of coin, throwing of dice, or playing of cards, under any pretext whatever.

31. Any person wilfully or negligently causing injury to any Government property of any description whatever at the Abattoirs will be held responsible for the same.

32. The use of obscene or offensive language is prohibited at the Abattoirs.

33. Persons are prohibited from throwing missiles or any kind of filth or muck within the enclosure of the Abattoirs.

34. The lessee or occupier of any slaughter-house is prohibited from using, or causing to be used, any instrument for driving in cattle to the Abattoirs other than such as may be approved of by the Inspector or Assistant Inspector.

35. The Inspector or Assistant Inspector, or any other officer connected with the Glebe Island Abattoir, may at any time enter to view any of the slaughter-houses connected with the Abattoir, whether leased or otherwise; and no person or persons shall obstruct, molest, or assail with abusive or offensive language either the Inspector, Assistant Inspector, or any other officer connected with the Abattoir while in the execution of his official duties.

36. It shall be competent for the Inspector of the Abattoir at any time, should any person or persons occupying any of the slaughter-houses reserved by the Government be found breaking or continuing to break any one or more of the regulations made concerning the Public Abattoirs at Glebe Island, to refuse to allow such person or persons to use any of the slaughter-houses reserved by the Government.

37. The owner or driver of any vehicle used for the transmission of meat from the Abattoir shall keep the same and the awnings used therewith in clean and proper condition, to the satisfaction of the Inspector or Assistant Inspector of the Abattoir; and further, the driver of any such vehicle during the transmission of such meat shall keep himself and clothing in clean and proper condition, to the satisfaction of the Inspector or Assistant Inspector.

38. The lessee or occupier of any beef slaughter-house shall cause the contents of the paunches and intestines to be deposited on the manure heap at the rear of the Abattoir; and the lessee or occupier of any sheep or pig slaughter-house shall cause the contents of the paunches and intestines to be deposited in the shoot erected for that purpose.

39. The lessee of any beef slaughter-house or houses shall not slaughter, or cause to be slaughtered therein, any sheep, lambs, or pigs.

40. Persons are prohibited from bringing and depositing offal or other offensive matter on Glebe Island.

41. Any person or persons offending against any of the orders and regulations contained in paragraphs 1, 8, 9, 10, 11, 12, 13, 14, 15, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 37, 38, 39, and 40 shall for each and every offence forfeit and pay a sum not exceeding five pounds nor less than twenty shillings.

1879-80.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GLEBE ISLAND ABATTOIR.
(DISPOSAL OF BLOOD AND OFFAL.)

Ordered by the Legislative Assembly to be printed, 29 January, 1880.

REPORT of a BOARD appointed by the Colonial Treasurer to examine and report upon Mr. H. B. Swan's process of deodorizing and desiccating the blood and offal at Glebe Island.

No. 1.

The Inspector, Glebe Island Abattoirs, to The Under Secretary for Finance and Trade.

Sir, Glebe Island Abattoirs, 15 October, 1879.

I have the honor to report that, on last Saturday week, the 4th instant, the plant for the desiccation of the blood and offal was handed over to Mr. Swan, ready for operating.

I have called upon that gentleman for a report as to its working, which, when received, will be forwarded for your information.

I have, &c.,
FREDK. OATLEY,
Inspector.

Seen.—J.W.,-17/10/79.

No. 2.

The Inspector, Glebe Island Abattoirs, to The Under Secretary for Finance and Trade.

Sir, Glebe Island Abattoirs, 22 October, 1879.

In pursuance with my letter of the 15th instant, I have the honor to enclose herewith Mr. Swan's report upon the working of the plant for the desiccation of the blood, &c. As Mr. Shepperd, of the Harbours and Rivers Department, was the gentleman who superintended the erection of the plant, and also witnessed some experiments made by Mr. Swan, I would suggest that the document be forwarded to him for his report.

I have, &c.,
FREDK. OATLEY,
Inspector.

[Enclosure.]

Mr. H. B. Swan to The Inspector, Glebe Island Abattoirs.

Sir, Glebe Island Abattoirs, 21 October, 1879.

I do myself the honor of reporting to you, for your instruction, the working and cost of dealing with the blood and offal with the experimenting plant for the last fortnight, and the cost per ton when dried.

I have dealt with eighty-two loads of offal, or all that was on the Island, with the exception of twelve loads, and also 8,000 gallons of blood and water. All has passed off satisfactorily, so far as my humble judgment goes. The products from this quantity are about 3½ tons when dried.

Now, I would strongly recommend to you the necessity of having the whole plant completed by having the other spare boiler placed alongside the one now in use, or one new one in the place of the two; and also having two large drying-pans capable of holding 1,500 gallons each, and fitted with all necessary appliances; and one large receiver capable of receiving 12 tons of offal; and a machine (or offal-cutter) for dealing with the offal and emptying the sheep's paunches; and one large shed, about 70 feet x 30 feet, with a good cement or asphalt floor, to envelope all, one part of which to be used for storage.

Also, the necessity of introducing the trollies, which I have suggested to you on previous occasions. (These trollies I have seen in use in the large granaries in America). And also of having a 12-inch drain pipe laid the full length of the slaughter-houses, connected with the sink in each by a six (6) inch pipe, or an open drain; all to be connected with the plant.

If this scheme be carried out I am thoroughly confident there would be no difficulty in keeping the houses clear of blood and offal, and it would be a great saving on the present system, which costs about £12 per week for removing and emptying the sheep's paunches, and about £4 4s. for keeping the drains clean.

The trollies could be worked by two men with ease, at the cost of £4 4s. per week. And if the drains were dealt with, it would do away with two men's labour and the blood would run down itself, and there would be no necessity of using the large quantity of clean water that is now used to force the blood down them.

The quantity of blood and water to be dealt with averages 35,000 gallons weekly, and the quantity of blood extracted from this averages from 8,000 to 8,500 gallons, and when thoroughly dried $7\frac{1}{2}$ tons, at the cost of £1 12s. per ton.

The quantity of offal averages 85 loads weekly, including the paunches carted to the shoot; this, when dealt with by the machinery, is reduced to about $3\frac{1}{2}$ tons, which will cost 43s. per ton when dried.

The men that would be needed to turn out this quantity weekly, and the coals &c. that would be required if the plant is completed, are as follows:—

	£	s.	d.
Fireman	2	10	0
Two labourers for working plant	4	4	0
Two „ „ trollies	4	4	0
Chemicals	1	0	0
Oil, &c....	1	12	0
6 tons coal	6	0	0
Sundries	0	10	0
	£20	0	0

If I am right—and I think I am—in the calculations I have made, it will I hope be a saving in revenue, to say nothing of the nuisance hitherto existing which will be got rid of and utilized into a valuable manure, which has been seen and tested by several gardeners and others, who have offered from 30s. to 60s. per ton for it. I think it would be very beneficial to the country people and strangers visiting the Exhibition if you would have a couple of bags of blood and offal exhibited along with the analysis that I have, showing the value of it as a manure, before you fixed a price on it, as I am certain it would command from £4 to £5 per ton when its value is known.

I have, &c.

H. B. SWAN.

P.S.—Until the plant is completed I am compelled to ask for another man on the heavy killing days at the end of the week, as it is impossible for me to keep it clear to your satisfaction with the present staff, and it cannot lie many hours without becoming offensive.—H.B.S.

No. 3.

Treasury Minute.

The Treasury, New South Wales, Sydney, 23 October, 1879.

Subject :—Glebe Island Abattoirs.

THE subject of the removal of the blood and offal from the Abattoirs is one to which I have given some attention and consideration, and it is one which is surrounded with considerable difficulty.

The health of the residents on the Island, as well as those of Sydney and suburbs, is of paramount importance, and I am anxious that everything shall be done which can be devised, with a view to prevent anything arising detrimental to the health of the residents referred to from the removal of the blood and offal from the Abattoirs, or through desiccating the same.

The proposal made by Mr. Swan, and which had the sanction of my predecessor, with a view to utilize the blood and offal at the Abattoirs, as a valuable manure, by desiccating the same, has had every encouragement; and the temporary plant which Mr. Swan asked for this purpose has been erected and brought into operation, and from his report, which reached the Treasury yesterday, it appears to be satisfactory, and he now asks that the permanent machinery for desiccating the blood and offal, together with the necessary buildings and plant, involving a considerable outlay, should be erected without delay.

Before authorizing this, which will involve not only the present but a large prospective expenditure, I am anxious to have some evidence to corroborate Mr. Swan's statements as to the success of his proposals; and in order to attain this, I think a Board should be appointed to report on the practicability of Mr. Swan's scheme, such Board to consist of—Mr. Charles Watt, Analytical Chemist to the Government; Mr. Elliott, of Messrs. Elliott Bros., chemists &c.; and Mr. Shepperd, of the Harbours and Rivers Department, who, I understand, designed and constructed the present machinery; the gentlemen to report to me—

First—Is the scheme proposed by Mr. Swan for desiccating the blood and offal at the Abattoirs such as should be adopted by the Government, with a view to secure the health of the residents, not only of the Island, but generally?

Second—Can the desiccating process as proposed be successfully carried out by the erection of the machinery proposed?—and

Thirdly—Is the proposal of Mr. Swan, assuming it to be practicable, more economical than that of conveying the blood and offal to sea, as now adopted? and I shall be glad if the gentlemen will favour me with their views generally.

J.W.

No. 4.

The Under Secretary for Finance and Trade to Charles Watt, Esq.

Sir, The Treasury, New South Wales, Sydney, 28 October, 1879.

I am directed by the Colonial Treasurer to ask whether it will be convenient for you to attend at the Glebe Island Abattoir, in conjunction with Mr. F. W. Elliott, of Messrs. Elliott Bros., and Mr. Shepperd, of the Harbours and Rivers Department, to examine certain manure, obtained by Mr. H. B. Swan from the blood and offal, under his desiccating process, and to report upon the practicability of the scheme proposed by Mr. Swan.

I am to ask that you will address yourself to such examination with a view to report to Mr. Watson—

1st. Whether the scheme proposed by Mr. Swan for desiccating the blood and offal at the Abattoirs is such as should be adopted by the Government, with a view to secure the health, not only of the residents on the Island, but of the inhabitants of the City and Suburbs generally.

2nd.

2nd. Whether the desiccating process, as proposed, can be successfully carried out by the erection of the machinery asked for by Mr. Swan; and

3rd. Whether Mr. Swan's proposal, assuming it to be practicable, is more economical than the plan now in force of conveying the blood and offal to sea.

I am to say, in conclusion, that the Treasurer will be glad to be favoured with your views on any other points which may suggest themselves to you in the course of the inquiry.

You will perhaps be good enough to place yourself in communication with Mr. Elliott, with a view to arranging a time for the examination—and upon receipt of an intimation from you on this point, a letter will be addressed to Mr. Shepperd, requesting him to attend.

I have, &c.,
G. EAGAR.

No. 5.

Report of the Board.

Sir,

Having reference to your letter of instructions dated October 28th, we do ourselves the honor of stating that we have inquired into the several matters to which it relates, respecting which we have now to report as follows:—

1st. That by the process now employed at the Abattoir the blood is boiled, with the addition of a little common salt, the water which separates is allowed to flow into the harbour, and the solid portion, after passing between rollers, is dried.

2nd. That the offal, after being freed from fecal matter, is steamed with the addition of small quantities of lime and caustic soda, and then dried.

3rd. That such operations may be carried on by the employment of apparatus properly constructed, without injury to the health or even being a nuisance to persons living in the vicinity.

4th. That we are decidedly of opinion that the whole of the blood and offal cannot be effectively treated, day by day, by the plant proposed by Mr. Swan; that it will not be found economical; and that if erected, as designed by him, various alterations and additions would have to be made from time to time, as he gained experience; in fact, that it would still be an experimental plant.

5th. That Mr. Swan places more reliance upon the removal of a portion of the water from the boiled blood by passing the coagulated matter between rollers than the experimental trials which we saw seemed to us in any way to justify,—in fact, they were a perfect failure.

6th. That if a boiling plan be adopted, which we are of opinion would be successful, it would be necessary for the Government to have the machinery designed throughout by some one who can calculate with something approaching to accuracy the work which will have to be done daily, and who is competent to arrange the most efficient and economical way of doing it.

7th. That Mr. Swan does not work out the process for which he obtained letters of registration; but, on the other hand, uses a method which in all its essential and useful parts may be regarded as common property.

8th. That the waste products of the Abattoir would when dried form a manure of value; and that if the operation be economically carried out, and the products be properly dealt with commercially, it should more than pay expenses, and would consequently be a more satisfactory way of disposing of the refuse than taking such matter out to sea.

The Treasurer having expressed a wish that we should state our views upon any other points, we think it our duty to mention that the waste products of slaughter-houses are being successfully treated at the present time in other countries. Among the various methods we may call attention to the Milburn dryer, the Chicago apparatus, and the San Francisco apparatus; and we beg to recommend that the plans and testimonials having reference to these and other methods now in practical use be obtained, and referred to persons competent to form a sound opinion as to the most efficient and most economical method for this purpose before the expenditure of any more money be sanctioned.

In the meantime the blood and offal may be carried out to sea in punts properly washed and looked after.

At the same time we would urge that the investigation with reference to the methods mentioned above be carried on without delay, as the plan of taking the matter to sea must always to some extent involve a nuisance.

F. W. ELLIOTT.
CHAS. WATT.
CHAS. SHEPPERD.

[Enclosures.]

Mr. Swan's evidence.

4 November, 1879.

The process now in operation at the Abattoirs for desiccating blood is the process for which I hold a patent.

I will supply returns of the quantity of blood manure produced since I have been at the Abattoirs, and also the prices obtained for same.

I have not sold any of the blood manure produced by the present plant.

All the manure sold up to the present time has been in the moist state, excepting a little that has been dried on the rocks.

The moist blood manure will keep about six days.

I have been able to sell all the manure (moist) produced, excepting in wet weather, when the roads are in a bad state.

I contemplate drying the whole of the blood by the present process, and also the offal.

Is the apparatus which we now see a model of that which you intend to proceed with in the larger plant? Yes, with the exception that the blood-pan will have to be elevated sufficiently to allow the blood-pipe to enter at the bottom of the pan, and the coagulated matter to descend to the rollers, and from thence to the drying-pan, also the shape of the drying-pan.

The

The drying-pan that I propose to supply will be cylindrical in shape, semi-jacketed, and having an agitator inside.

I have no plans or sketches of the machinery, but will supply them to-morrow.

I suppose I will have to deal with 40,000 gallons of liquid per week.

There are about 250 to 200 men at the Abattoirs using the water-closets.

Mr. Swan's evidence.

7 November, 1879.

In treating the offal:—To every tankful (about $4\frac{1}{2}$ tons) I put in about 14 lbs. of common salt and 5 lbs. of caustic soda, and the time taken to finish this quantity complete will be six hours.

Every ton of offal will produce about $1\frac{1}{2}$ cwt. of dry manure.

In reference to the analysis No. 4 by Mr. Norrie, in report of the Abattoirs Commission, 43 per cent. of phosphates are mentioned as being present in this sample. This is produced by the trotters and the heads of the calves which are boiled with the offal every Monday.

I think the use of an acid is mentioned in my patent, but I do not use any acid, as it would injure the machinery.

The use of the rollers is to break up the coagulum, and to squeeze out all the water in the blood.

I find the present rollers do not squeeze out any of the water; they have been in use now about three weeks.

In treating the blood my reasons for boiling is to bring it to the surface. The salt is to clear the water before going to the harbour, and the caustic soda is to cause the blood to become thicker. The proportions used are 14 lbs. of common salt and $\frac{1}{2}$ lb. of caustic soda to the tankful of liquid, about 500 gallons.

There are about 20 loads of offal in the largest day's work (Saturday) at the Island, and from about 80 to 85 loads per week. This equals about 40 tons per week.

I propose that previous to putting the offal into the pan to pass it through an offal machine.

I reckon I could finish a tank of blood—that is, all coagulated blood—complete, including passing through the proposed drying machine, in about three hours.

The present rollers do not act, either for the blood or the offal, but may act if they were fluted.

I intend to jacket the drying-pan all round. I have never seen a jacketed cylinder drying blood.

In reference to the supply of returns asked for by you on the 4th instant of the quantity of blood manure produced, &c., I now hand in the annexed statement.

In reference to the offers made for the manure (as per statement) from 50s. to 80s. per ton, these offers were based partly on the analysis submitted to the Abattoirs Commission, and partly to the parties knowing the value of the manures.

Memo.

The fluid from the boiled blood which is to run into the harbour will not deposit anything upon the foreshores which can become a nuisance. This fluid contains only about 1 ounce of soluble organic matter in 3 gallons. The solid matter from the boiled blood, after being separated from the before-mentioned fluid, will lose fully three-fourths of its weight by drying, *i.e.*, for every ton of manure obtained more than 3 tons of water will have to be evaporated. The Government may fairly rely upon obtaining not less than £4 per ton for the manure, taking the blood and offal together.

In selecting the plan to be adopted, careful consideration should be given to those plans which involve catching the blood as it comes from the animal and drying it at once—confining the boiling to the blood and water resulting from washing down the houses—and, in dealing with the offal, to those plans of drying it which do not involve the removal of the faecal matter.

CHAS. WATT.

Memo.

The probable quantity of blood and water to be treated per week will not be less than 5,400 gallons, and will contain about 1,600 gallons of blood (pure), having 80 per cent. of water. The quantity of coal required to coagulate and dry this quantity of blood &c. by heat will be about 9 tons, and would give about $8\frac{1}{2}$ tons of dry manure per week; the average quantity of offal per week is 40 tons, and if freed from faecal matter would yield about $3\frac{1}{2}$ tons of dry manure, and the quantity of coal would be $1\frac{1}{2}$ ton; the quantity of coal for engine purposes would be (say) 2 tons—total, $12\frac{1}{2}$ tons; say 15 tons per week.

CHAS. SHEPPERD.

To the Chairman of the Glebe Island Commission.

Sir,

Glebe Island Abattoirs, 7 November, 1879.

I do myself the honor, for your information, of forwarding to you a rough plan of the necessary improvements required to complete the plant.

Having been experimenting for the last three weeks with the present temporary plant, I am in a fair position of stating to you the quantity of blood and offal that can be dealt with weekly, and the cost.

The present machinery is capable of desiccating 5,000 gallons of blood and water daily and 3 tons of offal, which, if some improvements were made, would be capable of doing a much larger quantity.

The additional machinery that would be required with the present to deal with 38,000 gallons of blood and water and 40 tons of offal per week, or all that is taken to sea, will be as follows:—

The other spare boiler that is on the Island be placed alongside the one now in use, or else one large one in the place of the two.

Two double jacketing-pans, 14 ft. x 6 ft., fitted with agitators, &c.

One jacket offal receiver, 9 ft. x 8 ft.

One offal cutting machine, 3 ft. x 12 in., fitted with necessary feeding appliances.

The present desiccating pan to have the spout improved on, and fitted with a valve to make it discharge more freely, and all the pans to be elevated 6 feet higher than they are at present, and fitted with shoots to discharge into the drying-pans.

Also

Also the present rollers to be fluted and fitted with flanges on the ends, instead of being smooth. And one large shed, to envelope all, 70 feet long by 28 ft. wide and 14 ft. high, with a good cement floor, part of which to be used as a store.

The present weekly expenses for men keeping drains clear and collecting offal, &c. :—

	£	s.	d.
Two men, for keeping drains clear	4	4	0
Five ,, collecting offal and emptying paunches	11	10	0
Hired horse and cart	2	2	0
Two labourers working experimenting plant... ..	4	14	0
Coals	3	0	0
Punt going to sea four times a week, £2 a trip	8	0	0
Sundries	1	0	0
Total	£34	10	0

If trollies were introduced, and a pipe laid on the beef side, it would do away with a great deal of the present inconvenience, expense, and labour, and the offal could be brought direct by the trollies to the plant and shot into the receivers while fresh; but by the present system we have to wait hours for our turn to get up the lanes. The necessity of having these pipes is that the ones now in use are much too small to run the blood in.

If this be carried out the expense will be considerably lessened.

The labour required for working the complete plant and turning out 11 tons weekly will be as follows :—

	£	s.	d.
Fireman	2	10	0
Two labourers for working plant	4	4	0
Two do. trollies... ..	4	4	0
Chemicals	1	0	0
Oil, &c.	1	0	0
6 tons coal	6	0	0
Contingencies	1	2	0
Total	£20	0	0

If the alterations be carried out, the average quantity of blood and water to be dealt with weekly averages 35,000 gallons.

The quantity of blood extracted from the water averages about 8,500 gallons, and when thoroughly dry about $7\frac{1}{2}$ tons, at the cost of 32s. per ton.

The quantity of offal averages about 40 tons per week, and when thoroughly dried about $3\frac{1}{2}$ tons, at the cost of 43s. per ton.

I am certain all the blood and offal would command £4 per ton.

There has been from 50s. to 80s. per ton offered for the present samples, which, taking 11 tons at £4 per ton, amounts to £44 per week.

Deducting from this the week's expenditure (£20) leaves a revenue to the Government of £24 per week, or £1,248 per year.

I have, &c.,

H. B. SWAN.

To the Chairman of the Glebe Island Commission.

Sir,

Glebe Island, 13 November, 1879.

I do myself the honor, for your information, of furnishing you with the average number of cattle, sheep, pigs, and calves slaughtered weekly at the Abattoirs, and the blood of which has to be dealt with.

	Blood.	Water.
Cattle, 1,100, averages 48 pounds of blood each, caught pure from the bullock, without any washing water mixed with it, or when treated with the plant averages	18 $\frac{3}{4}$ %	and 81 $\frac{1}{4}$ %.
Sheep, 8,500, averages 3 $\frac{1}{2}$ pounds, or	25 "	75 "
Pigs, about 500, ,, 3 $\frac{1}{4}$,, each, or	21 $\frac{2}{3}$ "	78 $\frac{1}{3}$ "
Calves, ,, 80 ,, 6 ,, ,,	18 $\frac{1}{2}$ "	81 $\frac{1}{2}$ "

When the blood is mixed with the chemical ingredients and brought to a boil there is 40% of water separated from it, leaving the remaining 41 $\frac{1}{4}$ to be pressed through the rollers, which reduces it by 26 %, leaving the remaining 15 $\frac{1}{4}$ to be evaporated. But the rollers want to be good, heavy, and powerful ones. I had some of the blood taken to the City Iron Works and passed through their heavy rollers, and found it to be a perfect success, only leaving 15 $\frac{1}{4}$ % of water in it.

The offal averages about 7 $\frac{1}{2}$ % when treated. The present experimenting plant I stated to the Commission was the one that I held a patent for, on a small scale, but it has been improved upon by me since I had the patent taken out. I also made arrangements with the Government to treat with the offal, which I have no patent for, as well as dealing with all the washing water.

I have, &c.,

H. B. SWAN.

APPENDIX.

A.

(1.)

The Under Secretary for Finance and Trade to The Under Secretary for Public Works.

Sir, The Treasury, New South Wales, Sydney, 11 December, 1879.

I have the honor to request that you will have the goodness to inform me, for the information of the Colonial Treasurer, what expenditure has been incurred in the erection of machinery in connection with Mr. H. B. Swan's desiccating process.

I may add that the information is urgently required.

I have, &c.,
G. EAGAR.

Harbours and Rivers, B.C., 12/12/79.—G.H.

(2.)

To the present time the sum of £404 10s. has been spent herein.—E.O.M., 15/12/79. B.C., Under Secretary for Public Works. Forward to Treasurer.—J.L., 17/12/79. The Under Secretary for Finance and Trade, B.C., 17 December, 1879.—G.H.

(3.)

The Under Secretary for Finance and Trade to The Inspector, Glebe Island Abattoir.

Sir, The Treasury, New South Wales, Sydney, 11 December, 1879.

I have the honor to request that you will have the goodness to furnish me, at the earliest possible moment, with a return showing,—

1. The quantity of manure, &c., produced by Mr. H. B. Swan's process since 1st January last.
2. The quantity sold during such time.
3. The amount realized.

I have, &c.,
G. EAGAR.

P.S.—The return should also state the cost of production.

(4.)

The Inspector, Glebe Island Abattoir, to The Under Secretary for Finance and Trade.

Sir, Glebe Island Abattoir, 17 December, 1879.

In accordance with the request contained in Treasury letter of the 11th instant, P.O. 1,694, I do myself the honor to transmit herewith particulars of the information required:—

Blood manure, produced by Mr. Swan's process, from 1st January to 30th November, all of which has been sold 495 tons

The amount realized for same £ s. d.

Add amount of desiccated blood manure in hands, valued at £5 per ton 30 0 0

Total £93 2 6

The cost of production of the above is as follows:—

Three men, 286 days each, at 7s. per diem 300 6 0

Mr. Swan's salary 229 12 4

Stores, chemicals, &c. 81 16 4

£611 14 8

Add amount expended in experimentalizing, from 1st October to 30th November 65 15 3

Making a total of £677 9 11

I have, &c.,
FREDK. OATLEY,
Inspector.

B.

7

B.

(1.)

Mr. H. B. Swan to The Hon. the Treasurer.

Sir,

Glebe Island, 9 January, 1880.

I do myself the honor of bringing under your notice the report laid before you, stating that three men had been employed at the experimenting plant, which is incorrect, there only being two, from the 6th of October to the 30th November, 1879; and I regret exceedingly that I could not see my way clear to apply for the blood and offal, &c., and for the use of land to erect machinery, when you have already placed it into the hands of other gentlemen. I think I have been very unfairly treated in the matter. Being the originator and the first to bring it under the notice of the Government, I think I should have had the first chance, considering I gave up all my private contracting businesses to endeavour to obliterate this intolerable nuisance. I offered (verbally) two years ago, when Mr. Farnell and Mr. Cohen were in office, to take the whole matter into my own hands and erect my own machinery, or resign; but they informed me that the Government were going to carry it out and erect machinery without delay, and £2,000 was voted for that purpose. At that time delays arose, and the engineers that had it in their hands did not seem to know what sort of machinery to design, and after a long delay I applied to you to have an experimenting plant erected to show them how to prepare a perfect plant so as there would be no mistakes, which was granted and erected, and has been working about three months, and turned out about fifteen tons, where if there had been a small alteration, at the cost of about 30s., there would have been about four times the quantity turned out without any additional expense, which was pointed out before the plant was completed, but was omitted to see if it could be worked without it.

This experiment has given the public a chance of gaining all knowledge and secrets connected with it which would not have been known if I had not shown it, through me placing such confidence in the Government that they were going to erect large machinery to carry it out properly. As for the offal, gentlemen have stated that it was impossible to deal with it, until I showed them it could be dealt with, which it proves for itself.

Trusting you will take me into consideration,—

I have, &c.,
H. B. SWAN.

(2.)

The Under Secretary for Finance and Trade to Mr. H. B. Swan.

Sir,

The Treasury, New South Wales, Sydney, 23 January, 1880.

I am directed by the Colonial Treasurer to acknowledge receipt of your letter of the 9th instant.

I am to state, in reply, that the Treasurer cannot admit that you have been unfairly dealt with. On the contrary, every facility—including the erection of machinery, which was specially provided for you, and which was pronounced by you, after trial, to be satisfactory and in every way meeting your views—has been afforded you with a view to give your process a fair trial.

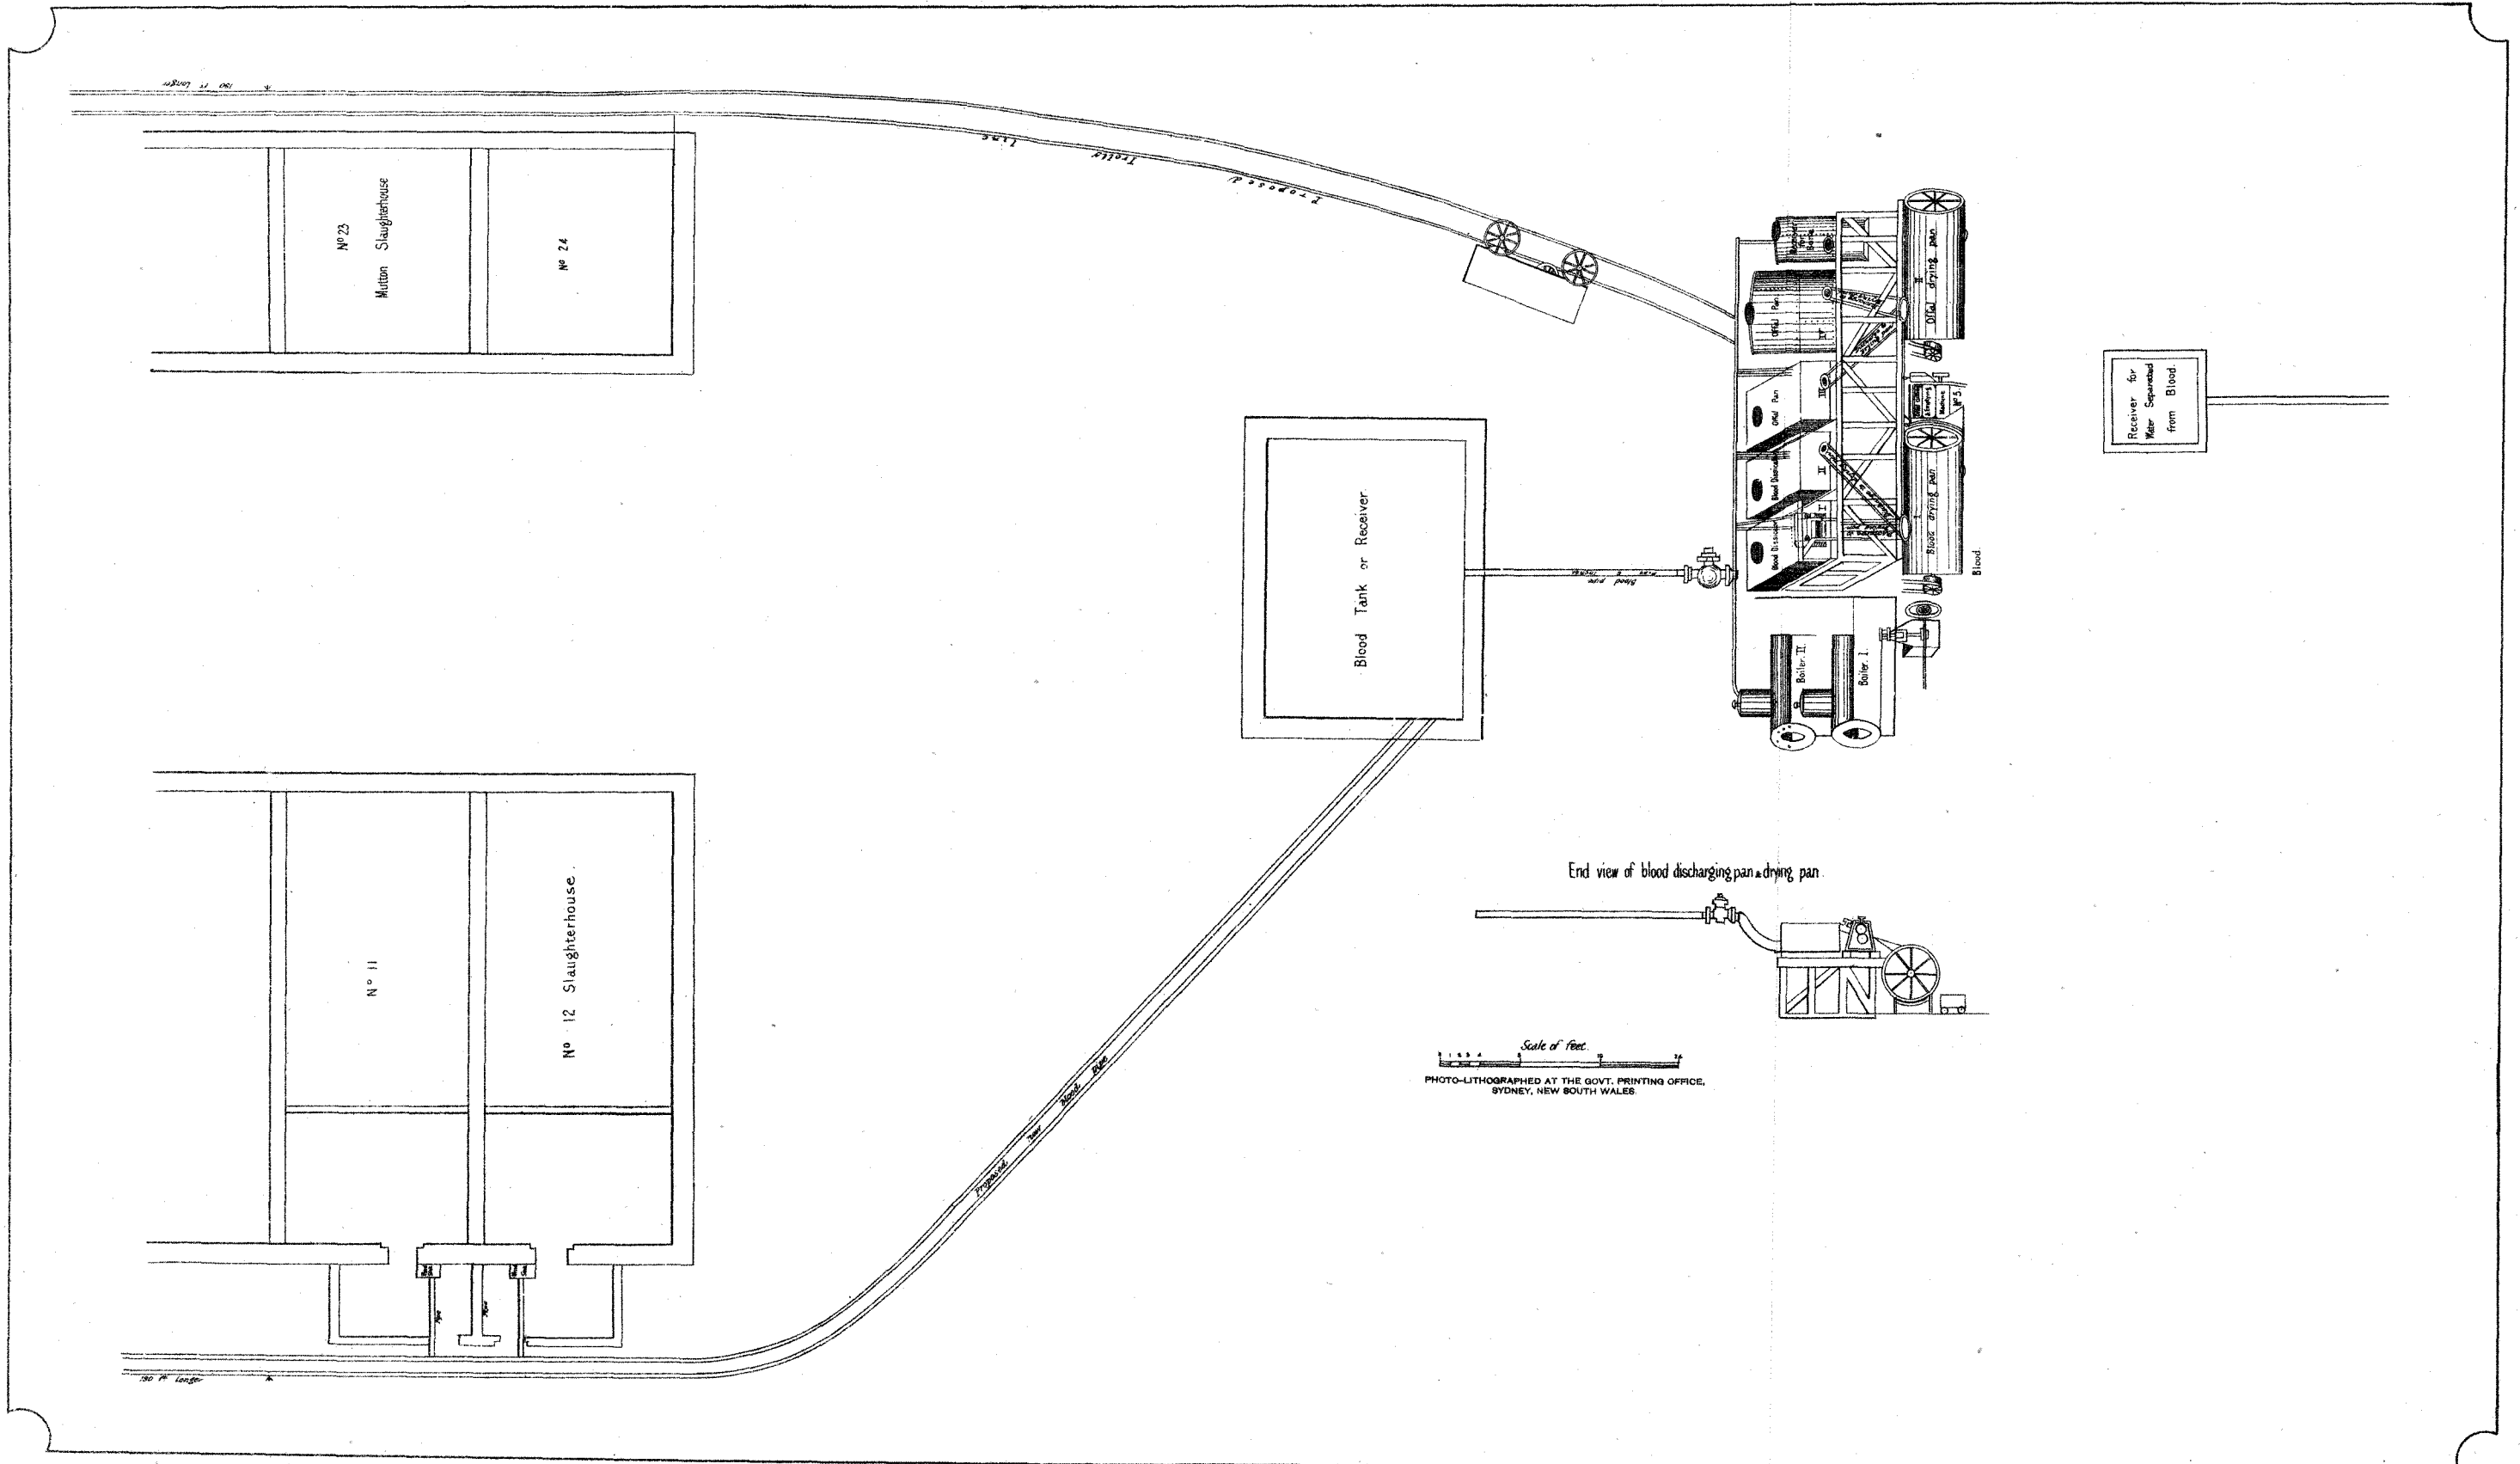

This process having, after such trial, practically failed, and the Board appointed to inquire into the matter having reported that the further machinery applied for by you was merely of an experimental character and would not answer the purpose for which it was intended, Mr. Watson has been compelled, in the interests of the community, to make other arrangements which involve the discontinuance of the work hitherto performed by you from this date.

I am to add that your services will not be required after 30th April next, although, should it be of any advantage to you, there would be no objection to your retirement at once with salary up to the date named.

I have, &c.,
G. EAGAR.

[One plan.]

APPENDIX

1879-80.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GLEBE ISLAND ABATTOIRS.

(PERSONS EMPLOYED DURING 1877, 1878, 1879, AND TO 14 FEBRUARY, 1880.)

Ordered by the Legislative Assembly to be printed, 11 March, 1880.

(Laid upon Table in accordance with promise made in answer to Question 3, Votes 56, 24 February, 1880.)

The overtime consists in the removal of offal from the Abattoirs after 6 o'clock p.m.

Archibald Grant was taken on in November as an additional labourer to assist Mr. Swan in the desiccation of blood by his latest process, on the cessation of which process he was promoted to the charge of the blood punt.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GLEBE ISLAND ABATTOIR.

(MANURE SUPPLIED TO THE HONORABLE GEOFFREY EAGAR.)

Ordered by the Legislative Assembly to be printed, 7 May, 1880.

RETURN to an *Order* made by the Honorable the Legislative Assembly, on 7th May, 1880, That there be laid upon the Table of this House a Return showing,—

- “(1.) The number of days that a person named Williams, a carpenter at Glebe Island, lately deceased, was employed with a horse and cart, owned by the Government, in carting soil and manure from Glebe Island to the private residence of the Hon. Geoffrey Eagar, Under Secretary to the Treasury.
- “(2.) The amounts paid by the Hon. G. Eagar to the Government for the services of Williams and the horse and cart, and the date or dates when such payment or payments were made.
- “(3.) The number of loads or tons of sheep manure carted to the Railway Station, Sydney, or other places, from Glebe Island, for the Hon. G. Eagar, Under Secretary to the Treasury; and the cost of gathering, bagging, and carting the same per ton or load, and specifying whether the same was put in bags belonging to the Government; and dates when each load was sent.
- “(4.) The price per ton or load paid for the said sheep manure by the Hon. G. Eagar, and the dates when payments were made by the Hon. G. Eagar for the same.”

(Mr. Bennett, for Mr. McElhone.)

GLEBE ISLAND ABATTOIR.

RETURN in relation to Manure supplied to the Hon. Geoffrey Eagar, from the Abattoir, Glebe Island.

1. The number of days that a person named Williams, a carpenter at Glebe Island, lately deceased, was employed with a horse and cart, owned by the Government, in carting soil and manure from Glebe Island to the private residence of the Hon. Geoffrey Eagar, Under Secretary to the Treasury?

None.

2. The amounts paid by the Hon. G. Eagar to the Government for the services of Williams and the horse and cart, and the date or dates when such payment or payments were made?

None.

3. The number of loads or tons of sheep manure carted to the Railway Station, Sydney, or other places, from Glebe Island, for the Hon. G. Eagar, Under Secretary to the Treasury; and the cost of gathering, bagging, and carting the same per ton or load, and specifying whether the same was put in bags belonging to the Government; and dates when each load was sent?

Up to 18 June, 1877 (see answer to Question No. 1, in the Legislative Assembly, on that day), there was delivered, as follows:—

9 tons of manure at the Glebe.
13 " " at Railway Station.

The manure was gathered in the ordinary way, "as part of the regular duty of the labourers at Glebe Island" (see answer to Question 4 in the Assembly on 22 June, 1877), and was bagged at the cost of Mr. Eagar. No charge was made for cartage. The bags were supplied by and were the property of Mr. Eagar—and that portion only of the manure was bagged that was delivered at the Railway. Since 18 June, 1877, up to this date, 9 tons of manure have been delivered to Mr. Eagar, the cartage of which has been paid by him. The dates of payment only can be given, as no account was kept of the date of each separate delivery.

4. The price per ton or load paid for the said sheep manure by the Hon. G. Eagar, and the dates when payments were made by the Hon. G. Eagar for the same?

REPORT

FROM

CHIEF INSPECTOR FOR THE YEAR ENDING 30 JUNE, 1879.

Presented to Parliament by Command.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1879.

LIVE STOCK.

REPORT FROM THE CHIEF INSPECTOR OF STOCK, FOR THE YEAR ENDING
30TH JUNE, 1879.

The Chief Inspector of Stock to The Honorable the Minister for Mines.

Stock and Brands Branch, Department of Mines, Sydney, 1 December, 1879.

I HAVE the honor to submit my Report for the year ending 30th June, 1879; and in doing so I have again to call attention to the fact that it is compiled chiefly from information contained in the reports of the Inspectors of Stock throughout the Colony, and that this information again is based almost entirely on the Inspectors' own opinions and estimates—not, as it ought to be, on reliable returns from the owners themselves.

As therefore it is unquestionably necessary that such a Report as this should be annually prepared, and as it is very essential that the information should be thoroughly reliable—otherwise the Report may not only be worthless but actually injurious—I would respectfully suggest that power be taken in Parliament, by order of the House or otherwise, to require owners to give such information with respect to their holdings, crops, and stock, as the Government may see fit to ask from them by circular or notice in the Gazette, on the understanding, of course, that all such information was to be held strictly private so far as each individual owner was concerned, and only published *in globo*.

I.—HORSES.

1. THE NUMBER.

By the statistical returns the number of horses in the Colony during the eighteen years previous to and including 1878 was as follows:—

Year.	No.	Year.	No.
1861	251,497	1870	280,304
1862	233,220	1871	337,597
1863	273,389	1872	304,100
1864	262,554	1873	328,408
1865	284,567	1874	334,462
1866	282,587	1875	357,696
1867	278,437	1876	366,703
1868	280,201	1877	328,150
1869	280,818	1878	336,468

From this it appears that there is a slight increase (8,318) in 1878 over 1877; and that the losses caused by the late severe drought are being gradually recovered.

2. THE DIFFERENT BREEDS AND THEIR DISPOSAL.

The number of the different descriptions of horses may be put at (say) two-tenths or 67-293 draught, three-tenths or 100-942 light horses, and five-tenths or 165-233 saddle. Of these, about 25,000, or say one-thirteenth, are reported to have been sold during the year.

3. HORSES FIT FOR INDIAN MARKET.

By the Inspectors' returns it would appear that there are in the Colony about 5,000 horses suitable for the Indian market. Although the Colony possesses this large number of horses suitable for the Indian market, and although a great many of them are sent to that market, very few are shipped from this Colony. They are principally sent from Melbourne,—the shippers coming as far as Goulburn and even the Hunter in making up their shipments. If steamers could be laid on at Sydney to take horses direct to Calcutta, an extensive trade in horses could be established between this Colony and India, profitable alike to our breeders and the Indian buyers, and more especially the Indian Government.

To put the business with the Indian Government on a proper footing, I would however suggest that an officer belonging to the Remount Staff should be stationed in this Colony to inspect and pass the horses prior to shipment, and that while they should still be at the risk of the New South Wales owner until delivered at Calcutta, the question of their suitability for the Government should be decided here, and if the horses were landed safe and sound in India, the Government should be bound to take them. In this way the Indian Government would have a very much greater number of horses to pick from (in fact all the horses in the Colony), and get much more suitable animals, without running any risk in conveying the horses from this Colony; and, on the other hand, owners would not have to run the risk which they now do in getting their horses rejected after they reach India, and of being unable to find purchasers for them.

4. HOW HORSES ARE KEPT.

In one district only is it reported that horses are wholly kept on open runs; in eight districts they are depastured both in paddocks and on open runs; and in twenty-four districts they are reported as being kept entirely in paddocks; while in three districts no information on this point is given.

5. INCREASE AND DECREASE OF HORSES.

In twenty districts they are reported as increasing in numbers, in eight as decreasing, and in eight no information is given on this point.

6. IMPROVEMENT OF HORSES.

In twenty-seven districts horses are reported as improving, owing to more care being taken in breeding, by culling out the weeds, by the introduction of first-class sires, and by the decrease of wild horses; in four districts they are deteriorating, owing to the want of good brood mares and stud horses; in one district they are reported as stationary, and in four districts no information is given.

7. STUD HORSES INTRODUCED.

The returns from all districts give only 70 entire horses introduced, principally draught, and thirty thoroughbred (blood) mares.

8. WILD HORSES.

The number of wild horses in the Colony, as returned by the various Inspectors of Stock, is estimated at 38,980. The number returned at the end of 1874 was 100,744; so that the decrease for the past five years has been 61,794, which must be considered very satisfactory.

The unanimous opinion is that the only effectual method of getting rid of these pests is to shoot them.

9. DISEASE.

A few cases of strangles are reported, which were successfully treated by blistering, fomentation, and bran poultices; otherwise the horses in all the districts are reported as being entirely free from disease.

10. TAX ON HORSES.

There are eleven districts in favour of taxation on entires only, six in favour of a tax on both brood mares and entires, thirteen districts are against any tax being imposed, while from six districts no information on this point has been received.

II.—CATTLE (A).

1. NUMBER.

By the Statistical Register the returns of Cattle in the Colony, during the eighteen years ending 31st December, 1878, stand as follows:—

Year.	No.	Year.	No.
1861	2,271,923	1870	2,195,096
1862	2,620,383	1871	2,014,888
1863	2,032,522	1872	2,287,660
1864	1,924,119	1873	2,794,327
1865	1,961,905	1874	2,856,699
1866	1,771,809	1875	3,134,086
1867	1,728,427	1876	3,131,013
1868	1,761,411	1877	2,746,385
1869	1,795,904	1878	2,771,583

From these returns it will be seen that the losses in cattle caused by the late drought are being but slowly recovered, the increase in 1878 being only 25,198.

2. DIFFERENT BREEDS.

Of the above number it may be said that six-twelfths are Short-horns, three-twelfths crosses two-twelfths Hereford, and one-twelfth Devon, Dairy, &c.

3. INCREASE AND DECREASE.

In three districts the information on this head is not given; in fifteen districts the cattle are increasing, in six they are stationary, in twelve they are decreasing. This decrease arises partly from the effect of the late droughts, but principally through owners replacing their cattle with sheep, as sheep are now paying better than cattle.

The "Cast" of fat Cattle.

This may be put at one-tenth of the whole number, or say 270,000 head.

4. HOW KEPT.

Cattle are kept wholly in paddocks in twenty-four districts; in eight districts they are running at large and in paddocks, in one district only are they reported as running wholly at large, and in three districts the Inspectors do not report as to this. It is universally allowed that the fencing in of the runs is attended with numerous advantages.

5. IMPROVEMENT AND DETERIORATION.

In twenty-four districts cattle are reported as improving, in eight as stationary, in one as deteriorating, and from three districts no returns have been received. The improvement in the districts mentioned is attributed to the introduction of well-bred bulls, the culling out of inferior females, and fencing in of the runs.

6. PEDIGREE STOCK INTRODUCED.

There were introduced last year into the different districts of—

	Bulls.	Cows.	Total.
Short-horns	238	100	338
Devons	6	4	10
Herefords	5	0	5
Total	353

This shows that a very small number of stud stock changed hands last year, and it is to be expected that the sales for the coming year will show a considerable increase.

CATTLE introduced by sea from places outside the Australian Colonies, from 30th June, 1878, to 30th June, 1879.

Date.	Bull.	Cow.	Breed.	Where from.	Owner or Consignee.
1878.					
18 December.....	1	1	Hereford	England	T. Duckham.
18 "	2	do	do	R. G. Yeomans.
30 "	2	2	Short-horn	do	E. B. Woodhouse.
30 "	1	5	do	do	Gilchrist, Watt, & Co.
31 "	1	Hereford	do	T. Yeo.
31 "	2	2	Devon	do	T. Yeo.
1879.					
1 February.....	3	2	do	do	W. Lamb.
4 "	2	Short-horn	do	Hon. E. Ogilvie.
4 "	1	do	do	J. Peurose.
Total	15	12			

It will be seen from the above return that twenty-seven head of cattle were introduced from England during the year ended 30th June last; they consisted of thirteen Short-horns, nine Devons, and five Herefords; several of them were said to be prize-takers at the principal shows in Great Britain.

CATTLE introduced by sea, from the adjoining Colonies, from 30th June, 1878, to 30th June, 1879.

Date.	Male.	Female.	Breed.	Where from.	Owner or Consignee.
1878.					
12 July	1	4	Jersey	Victoria	J. Pemell, junr.
20 November	3	Short-horn	do	G. Kiss, agent.
9 December	2	6	Aryshire	do	T. Peate.
21 "	4	do	Brisbane	W. Lindsay.
1879.					
13 January	1	do	Victoria	J. Beaucamp.
21 February	5	Alderney	do	Hon. E. K. Cox.
21 "	1	Short-horn	do	do
21 "	1	do	do	J. Young.
31 March	3	do	do	T. Fairburn.
2 April	2	2	do	New Zealand	L. and S. Morrin.
19 "	2	do	Victoria	R. M'Dougall.
16 June	2	2	Aryshire	do	W. Lindsay.
Total	18	23			

There have thus been introduced by sea from the adjoining Colonies, during the year ending 30th June last, forty-one head, consisting of fourteen Short-horns, seventeen Aryshires, five Jerseys, and five Alderneys.

CATTLE (B).

1. PLEURO-PNEUMONIA.

In two districts the outbreak was of a mild type, in seven districts only a few cattle were affected, in seventeen it was slight, in one district 20 per cent. of the herds in which the disease appeared were reported as infected, in five districts there was no outbreak, and from three districts there are no reports.

2. INOCULATION FOR PLEURO-PNEUMONIA.

In twenty-nine districts inoculation was practised as a preventive, and in some instances it is reported as both a preventive and cure, in four districts it was not tried, and from three there are no returns as to this. In twenty-seven districts owners are reported as being in favour of inoculation, in two they are equally divided on this question, in three they are against it, and in four they give no opinion.

These returns with regard to the efficacy of inoculation are quite in keeping with those which have been received during the last twelve or fourteen years. They are almost entirely in favour of that treatment, and I have now to adduce evidence of its efficacy of a different sort, from a different part of the world. I allude to the account of the very successful practice of inoculation by Mr. Rutherford, a veterinary surgeon in a leading position in Edinburgh, as referred to in an article in the *London Veterinary Journal* of July last, edited by Mr. George Fleming, than whom there is no higher authority in England. It is to the following effect:—

"One of the great objections offered by the opponents of inoculation is, that because it does not produce pleuro-pneumonia, therefore it cannot prevent it. But they evidently forget that vaccination does not produce small-pox; and yet we know that when carefully performed it protects the vaccinated individual from that disease. Because inoculation does not give rise to the lung disorder, we cannot assert that it will not prevent the disorder." * * * * *

"Mr. Rutherford's highly successful, intelligent, and scientific practice of inoculation on a larger scale than has perhaps ever before been attempted in this country (he inoculated over 2,000 head) leaves nothing more to be desired in the way of evidence as to the absolute immunity conferred by inoculation." * * * * *

"No animal inoculated by Mr. Rutherford has ever been known, no matter how much it may have subsequently been exposed to infection, to become diseased; and the dairymen have no fear whatever in introducing suspected or sick animals among those inoculated. So carefully and skilfully is the operation performed and its immediate results watched, that the mortality is diminished to 1 per cent., an average which will in all probability be still further reduced." * * * * *

"From the evidence and opinions we have furnished years ago, it will be seen that we were then altogether in favour of protective inoculation; but our efforts did not avail to popularize the measure. We again urge the members of the profession and agriculturalists to give their attention to it. The question as to its efficacy and safety is now beyond discussion.

discussion or dispute. Thanks to Mr. Rutherford, the problem is solved, and the freedom of Edinburgh from pleuro-pneumonia at the present time—a condition which has not been known to exist for more than thirty years—is mainly, if not altogether, due to his scientific skill, indomitable perseverance, and intelligent enthusiasm.” * * * * * “He has incontestably proved that inoculation can always put an end to an outbreak and protect from one. His very extensive inoculations have settled, as well as raised, several interesting points in connection with pleuro-pneumonia, to which we regret we cannot now refer.”

This would be very satisfactory in any case, but it is very much more so when it is recollected that some years ago, when incontrovertible evidence of the efficacy of inoculation was adduced in this Colony, it was the custom of its opponents to throw in our teeth the fact that the English veterinary authorities were almost to a man opposed to this treatment. Considering therefore that it is now established both in Australia and England beyond all question that inoculation for pleuro-pneumonia is thoroughly effective—that the losses from the operation do not exceed 1 per cent., or at most 2 per cent., and that the disease is still entailing great loss and inconvenience in this and the neighbouring Colonies—I would again strongly urge that a measure be introduced with as little delay as possible making the inoculation of all infected herds compulsory.

The present state of the law, which allows owners to travel infected cattle from one end of the Colony to the other, spreading the disease as they go, is, now that the efficacy of inoculation is thoroughly established, most unwise as well as most unjust; for quite as well might scabby sheep be travelled all over the Colony, infecting every flock whose run they pass through, as that cattle affected with pleuro-pneumonia should be allowed to travel as they now do, without let or hindrance, infecting every herd they pass, and keeping the disease alive in the Colony.

3. OTHER DISEASES.

Cancer has appeared very slightly in two districts.

Cumberland Disease.—This disease is reported to have appeared in seven districts, but only to a slight degree.

No *Ophthalmia*, *Black-leg*, or any other disease has appeared in any of the districts.

III.—SHEEP.

1. THE NUMBER.

The number of sheep in the Colony during the eighteen years ending 31st December, 1878, stand as follows:—

Year.	No.	Year.	No.
1861	6,119,169	1870	16,218,825
1862	6,550,896	1871	16,766,012
1863	7,169,126	1872	17,873,696
1864	9,089,463	1873	18,990,595
1865	9,650,106	1874	22,767,416
1866	11,644,593	1875	25,353,924
1867	15,066,377	1876	25,269,755
1868	16,000,000	1877	21,521,662
1869	16,848,217	1878	25,479,484

TABLE showing the number of Sheep in the Colony at 1st January, 1879, as returned to the several Clerks of Petty Sessions for 1878, and showing also the Increase or Decrease for the latter year.

SHEEP (A).

The number of sheep now in the Colony—25,479,484—is the highest yet reached, and the losses caused by the late drought are more than recovered, the increase on the year being 4,225,202. This has been brought about principally by the natural increase of our flocks, but to a considerable extent also by the introduction of sheep from the neighbouring Colonies. It is likewise accounted for to some extent by the fact that sheep properties are paying better than cattle, and owners are selling off their cattle and putting on sheep.

2. COMBING AND CLOTHING.

The returns give about 14,332,209 combing sheep and 9,554,806 clothing, and the balance 1,592,469 are not described as either combing or clothing.

3. LONG-WOOLLED AND CROSS-BRED SHEEP.

The returns do not show definitely how the several breeds of coarse-woolled sheep stand as to numbers; but the cross-bred and Lincoln predominate.

4. THE "CAST" OF FAT SHEEP.

The annual "cast" of fat sheep may be put at one-eighth of the whole number, or say 3,180,000.

5. HOW SHEEP ARE KEPT.

In twelve districts the sheep are depastured wholly in paddocks; in one district they are shepherded; in twenty districts they are both shepherded and paddocked; and from three districts no information as to this has been received.

6. ADVANTAGES OF PADDOCKING.

The returns from the whole of the districts in the Colony speak to the very great advantages of paddocking sheep as against shepherding.

7. IMPROVEMENT.

In twenty-five districts the sheep are reported as improving; in one district as improving on the whole; in four as stationary; in two districts as deteriorating,—in the one case from the want of classing and through using inferior rams, and, in the other, through the injudicious introduction of fresh blood into the flocks.

8. STUD SHEEP INTRODUCED.

The returns show that 3,638 Merino rams and 12,610 Merino stud ewes and 160 Lincoln rams were introduced into the several districts during the year.

9. SHEEP INTRODUCED INTO THIS COLONY BY SEA BETWEEN 30TH JUNE, 1878, TO 30TH JUNE, 1879.

(From the neighbouring Colonies.)

Date.	Rams.	Ewes.	Breed.	Total No.	Where from.	Importer.
1878.						
30 August	15	8	Merino	23	Tasmania	P. N. Trebeck.

(From places outside the Australian and New Zealand Colonies.)						
15 March	4	Shropshire Downs	4	England	W. J. Dangar.

SHEEP (B).

1. LAMBING.

The general average of shepherded flocks as shown by the returns is 71 $\frac{3}{4}$ per cent.; of paddocked sheep, 77 $\frac{1}{4}$ per cent.; and of sheep depastured both ways, 75 $\frac{1}{2}$ per cent.

2. CLIP.

The number of sheep returned as being shorn in the grease is 16,705,109; creek-washed, 2,166,213; spout-washed, 827,154; scoured, 821,172; and in the case of the balance, 4,959,836, the mode of shearing is not stated.

The average weights of the clip are estimated as follows:—

1. In the grease	5 lbs.
2. Creek-washed	3 lbs. 2 $\frac{1}{2}$ ozs.
3. Spout-washed	2 lbs. 9 $\frac{1}{2}$ ozs.
4. Scoured	2 lbs. 4 $\frac{1}{2}$ ozs.

3. COMBING AND CLOTHING.

The returns as to the difference in the weight of combing and clothing fleeces is given as follows:— In five districts combing is put at 8 ozs. more than clothing; in two districts at 10 ozs.; in three districts at 16 ozs.; in five districts a little heavier; in nine districts the Inspectors report that they cannot obtain sufficient information to enable them to offer an opinion; and from twelve districts there are no returns as to this.

SHEEP IN LOTS UNDER 500.

The number of sheep registered under section 42 of the amended Sheep Act, as belonging to owners of less than 500, was 767,842.

EAR-MARKING.

The number of districts in favour of the system of ear-marking initiated under the amended Sheep Act of 1878 is twenty-two, and the number against it five. In two small districts ear-marks are not used, in four districts no opinion is given, and from three districts no information is received. Again, in three of the five districts returned as being opposed to the system, the Inspectors report that when it gets into proper working order owners will, they doubt not, change their views.

When it is considered that the sheep-owners in almost every district in the Colony were at first opposed to the provisions of the amended Sheep Act which relate to ear-marking, the result here stated must be considered as very satisfactory, especially as the system of ear-marking is as yet neither fully developed nor thoroughly understood. But although it may be said to be as yet imperfectly initiated, the allotment has been so far carried out that no two owners in the same district have the same ear-mark, and the marks of neighbouring owners have been so arranged that they are on different portions of the ear, and owners so situated are thus able from the mere position of the mark to know each others' sheep at musters.

Owners therefore now begin to see that under this system the faking and sheep-stealing which have of late years been so prevalent will be effectually checked, and that the inconvenience and confusion formerly so common at sheep musters, through owners in the same locality using the same ear-marks, will no longer arise. Several prosecutions have already been instituted under the new Act for ear-cropping, tipping, and using unrecorded marks, in which convictions have been obtained; and this result will have a very salutary effect.

The regulations fixing the maximum sizes of the different marks, and obliging owners to use a pliers instead of the knife in marking are absolutely necessary, if the marks are to be made of a uniform shape and size and faking prevented, while the saving of time and convenience arising from using the pliers instead of the knife far more than compensate the owner for the cost.

TATTOO-MARKING.

The number of districts reported as being in favour of the tattoo mark is only seven, the number against it four, and twenty-five districts offer no opinion, as they have had no experience in its use.

Although only forty-three owners' tattoo marks have as yet been recorded, the advantages of this mode of marking the ownership in sheep are so decided as to insure its general and speedy adoption. In the first place it can be readily and easily imprinted. Mr. David Campbell, of Cunningham Plains, who

first suggested its use, states that with five hands he lately marked 5,000 lambs in one day; in the second place it is thoroughly legible and indelible, and cannot be accidentally blotched, as the fire-brand frequently is; and in the third place it is registered for the whole Colony, while the fire-brand is so for the district only. In this way no two owners in Australia (there will be different styles of tattoo-marks in the different Colonies) will have the same tattoo-mark, but every good fire-brand is given fifty times in the Colony, *i.e.*, as often as there are sheep districts. With the system of cut ear-marks now in force for the ordinary working of sheep on stations and for drafting at musters, the tattoo-mark, possessing as it does all the advantages here mentioned, is bound before long to supersede the fire-brand as the mark of ownership in sheep.

SHEEP DISEASES (c).

SCAB.

It is now upwards of ten years since scab was eradicated from our flocks, and I am glad to be still able to report that there is not a single sheep among the 25,000,000 now in the Colony affected or suspected of being affected with that disease.

In two cases during the twelve months preceding 30th June last, scabby sheep were brought from places outside the Australian Colonies to the port of Sydney, but they were at once detected and destroyed. The first arrived by the "Whampoa," steamship, from London, in September, 1878, and the second were brought by the "City of New York" from San Francisco in March last.

CATARRH.

There has been no case of catarrh in the Colony for more than eight years, and it is hoped there never will be another, as the disease was (latterly, at least) a hereditary one, and all the sheep in which the disease appeared were fattened and slaughtered.

CUMBERLAND DISEASE.

There have been few outbreaks of this disease, and those that have occurred were very slight.

FOOT-ROT.

In twelve districts this ailment has been slightly prevalent, in fourteen it did not appear, and from ten districts there are no reports. In nineteen districts foot-rot is considered as being infectious or contagious, in eight districts it is said to be neither, and in nine districts no opinion is given as to this.

The principal remedies used for this disease, after paring, are bluestone, carbolic acid, and arsenic; and are all reported as being effectual.

FLUKE.

Fluke, to a slight extent, has existed in thirteen districts; in fourteen districts there has been none, and in the case of nine districts there is no information on this point.

Fluke is reported as being contagious in eight districts, in thirteen districts owners do not think it is so, and fifteen districts express no opinion. The usual remedies, or rather preventives, are salt, accompanied occasionally with sulphate of iron. Better drainage and change to salt-bush country are also mentioned as preventives.

WORMS.

In only one district are the sheep reported as being infected with worms, and that slightly.

In five districts owners consider worms are contagious, in thirteen they think they are not, and in eighteen districts no opinion is given.

IV.—GENERAL (A).

1. IMPORTED STOCK ACT.

I would once more call attention to the urgent necessity there is for the amendment of this Act, so as to make it apply to pigs. At present it does not, and pigs are subject to rinderpest and foot-and-mouth disease as well as cattle and sheep, and quite as likely to bring those and likewise other malignant diseases in swine into the Colony.

It is very necessary also that imported horses should be subjected to inspection and quarantine; for glanders and farcy, from which these Colonies are happily free, are prevalent in England and other parts of the world from which horses are imported, and every precaution possible should be taken to prevent these terrible diseases, which not only affect horses, but are at times communicated also to man, from ever obtaining a footing in Australia.

Although, as here stated, the law does not apply to either swine or horses, these animals when imported have been regularly examined, and hitherto they have always appeared perfectly sound; but this may not continue to be the case, and it is therefore very necessary that the Act should be so amended as to place horses and pigs on the same footing as cattle and sheep.

The question has also been raised whether there is not a risk of hydrophobia being introduced by some of the many dogs which are now being brought from England and other countries north of the line; and I would suggest that the Colonial Secretary be moved to obtain, through the Agent General, the opinion of some of the last medical and veterinary authorities—such as Dr. Burdon Sanderson and Mr. Fleming, M.R.C.V.S., Editor of the *London Veterinary Journal*, on this question, for the guidance of the Government; and if the authorities to whom this question is referred consider there is any risk, they should be asked to say what steps should be taken, by prohibition, quarantine, or otherwise, to prevent its introduction.

2. REGISTRATION OF BRANDS.

Number of applications for horse and cattle brands registered up to the 30th June, 1879, is 42,237.

Number of brands registered during the year ended 30th June, 1879:—Horse brands, 1,181; cattle brands, 1,270—equal to 1,660 applications.

Transfers recorded during the year ended 30th June, 1879:—Horse brands, 45; cattle brands, 55.

Brands cancelled (horses and cattle) during the year ended 30th June, 1879:—12.

Number of addresses of owners changed during the year ended 30th June, 1879:—74.

3. NEW STOCK ROADS OR ALTERATIONS.

In three districts the Inspectors recommend new stock roads ; and an alteration in a droving road is suggested in another district.

4. WELLS, TANKS, AND DAMS.

In two districts the Inspectors recommend wells for the use of travelling stock ; in four districts they say new tanks are required ; and in six districts they recommend new dams. With regard to the cost of making tanks, it appears from the returns that the most economical mode is to use the plough and scoop, which do the work at about 1s. per cubic yard.

5. NEW RESERVES FOR TRAVELLING STOCK.

There are recommendations from eight districts for new reserves.

6. PROTECTION OF TRAVELLING STOCK RESERVES.

Since the passing of the amended Sheep Act of 1878, it has been the duty of Inspectors of Stock to see that these reserves are kept for the sole use of *bonâ fide* travelling stock ; and to some extent they have carried out that duty, and kept stock which were accustomed to trespass on these reserves prior to the passing of the Act from depasturing upon them.

In carrying out this duty, however, they have been working under considerable difficulty :—

In the *first* place, where these reserves are reserves from lease (and all the more important ones are so) there is no authentic printed list of them as such, nor have descriptions of them ever been published, as in the case of reserves from sale.

In the *second* place, the Inspectors have been unable, as yet at least, to obtain county or parish maps showing the travelling stock reserves in their several districts.

In the *third* place, some of these reserves are reserves for access to water as well as for travelling stock ; and being so, this gives the neighbouring owners the right to go upon them with their stock, and in that way they make the reserves commons, which of course leads to their being completely denuded of pasture.

And in the *fourth* place, the boundaries of the reserves are not generally marked in such a manner that the Inspector can follow them with sufficient certainty to prove any case of trespass he may bring into Court.

The *first* difficulty mentioned is being remedied ; the descriptions of the various reserves from lease are now being prepared for publication, in the same manner as reserves from sale, and when they are published copies can be obtained by the Inspectors of Stock.

As regards the *second* difficulty,—until the Inspectors are in a position to refer, when required, to the county or parish maps showing the position and extent of these reserves, they cannot be expected to look after them as they ought ; and it is suggested that the Inspectors be supplied with copies of these maps, showing the reserves in their respective districts.

The *third* difficulty again might be got over by dividing the reserves and proclaiming one portion of them for the use of travelling stock and the other for access to water ; and while proclaiming the the greater part of the reserve for travelling stock, the other portion need only be left wide enough for a road to the water.

The *fourth* difficulty could be overcome by prominently and permanently marking the boundaries of these reserves. This is very necessary, not only for the sake of their protection by the Inspector, but also to enable drovers and teamsters to know where they can depasture their stock ; and it is recommended that all reserves on the main droving roads should be thus marked, and that a beginning be at once made with those in the settled districts nearest to the Sydney and Maitland markets.

7. LOAFING SHEEP.

The Inspectors, in the case of twenty-six districts, report that no sheep have this year been travelling for grass and water, and the general impression is that the provisions of the amended Sheep Act, passed to prevent loafing, have effectually checked that evil. In eight districts loafing sheep are reported to have passed through, but the number altogether only amounted to some 18,000.

The total amount received for travelling charges during the year was £584 6s. 8d.

From this it will be seen that the amended Sheep Act is in this respect also proving very beneficial ; but it is believed that the travelling charge, 2d. per 100 per mile, is needlessly high, and through being so creates a feeling of false sympathy with the loafer ; half the rate, 1d. per 100 per mile, would have answered the purpose ; and if the law will allow such a course, a regulation might perhaps be issued, under section 21 of the amended Sheep Act, reducing the charge to that amount.

GENERAL (B.)

TAME DOGS.

In twenty-three districts there have been losses of sheep by tame dogs, in five districts it is reported no losses have occurred, and from eight districts there are no returns as to this.

As to whether there should be further legislation with regard to tame dogs, sixteen districts consider there should be, thirteen districts are against it, and seven have expressed no opinion.

The losses caused by tame dogs worrying sheep, often very valuable ones, are still considerable. The extension of the provisions of the Dog Act to the whole Colony, as is now practically the case, has done but little to stop these losses. The fact is it has been found impossible to enforce the provision which requires that all owners shall keep collars with their names and addresses on their dogs ; and this in a great measure renders the Act inoperative. The result is that there are still in almost every part of the Colony numbers of ill-bred, ill-fed, useless curs, which destroy valuable sheep, annoy the public, and at times even endanger their lives ; the owners of these dogs feeling no responsibility because they incur no risk, so long as there is nothing on the dogs to prove ownership.

I would suggest, therefore, that the provision of the Dog Act relating to the wearing of collars be repealed, and that it be made compulsory on every owner of a dog to register and brand his dog with a "tattoo" brand. It would be easy to find a sufficient number of these brands, and the fee for registration need

need be but trifling; the brands could be quickly, legibly, and indelibly marked on the dog's ear; and the operation if carefully done would cause but very slight pain. The brands would require to be registered in Sydney, and the officers in charge of the several Police Stations could be supplied with markers with movable types to brand the dogs brought to him with the certificate of registration of the "tattoo brand."

Among other advantages which this system would secure the following may be mentioned, namely:—

- (1.) The law which now fails to compel owners to mark the ownership of their dogs could then be easily enforced.
- (2.) The trouble and expense of procuring collars would be saved; and the inconvenience which collars cause to dogs at work would be avoided.
- (3.) It would then be impossible for valuable dogs to be destroyed, as they now at times are, by the police in Sydney and other towns, through the removal of their collars; and it would then be scarcely possible for a valuable dog to be lost, while the tattoo brand would also be a great check on dog-stealing.
- (4.) If a dog were caught worrying sheep or doing any other damage, there would then be no difficulty as there now is in proving to whom it belonged. This would lead owners to feel their responsibility, and to be careful not to keep more dogs than they could feed.

NATIVE DOGS.

From eighteen districts there are reports of losses of sheep by native dogs, but in nearly every case they have been slight. In thirteen districts no losses are reported, and from five districts no reports have been received.

MARSUPIALS.

The late severe drought destroyed and aided in the destruction of a great many kangaroos, but they are reported as being again on the increase, and likely to become numerous, unless some general action is taken with respect to them.

RABBITS.

These pests are fast spreading on the Lower Murray. They are also reported as having obtained a footing on the Murrumbidgee. It is very necessary, therefore, that effective measures should be at once taken for their eradication, for their inroads are most destructive, and it is with the greatest difficulty as well as at a very heavy cost that they can be eradicated.

The replies from the several districts to the question as to whether a measure should be introduced for dealing effectively with these vermin stand as follows:—

	For.	Against.	Not stated.
For Native Dogs	18	13	5
„ Marsupials	19	11	6
„ Rabbits	14	15	7

These returns show there is a very general desire that combined action should be taken in this matter; and a measure has I believe been framed by direction of the Colonial Secretary, which will admit of all or any of these vermin being dealt with in any district, as the case may require. The measure is, I understand, framed on the municipal principle, worked by a Board of directors chosen from the cattle and sheep owners of the district in fair proportions. The funds required to meet the expenses of the Act will be raised by an assessment, and the directors will take all necessary steps for destroying the vermin, and will pay for their destruction. Such a measure as this is urgently required for keeping down all these vermin; but it is especially necessary that immediate action should be taken with regard to rabbits, for they are spreading rapidly, and will soon ruin the runs where they obtain a footing. Every day action is delayed their eradication will become more difficult and the expense much greater.

ARTIFICIAL GRASSES.

Artificial grasses have been introduced into twenty-three districts, the success of which has been very varied, mostly on account of the late dry seasons.

FENCING OF RUNS.

The runs in twenty-six districts are reported as all or nearly all enclosed; in one district two-thirds of the runs are said to be so; in two districts, *one-half*; in one district, *one-fourth*; in one district, *one-fifth*; and from five districts no information on this point has been received.

ALEX. BRUCE,
Chief Inspector of Stock.

1879-80.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LIVE STOCK AND AGRICULTURE.

(RETURNS FOR YEAR ENDED 31 MARCH, 1880.)

Ordered by the Legislative Assembly to be printed, 2 July, 1880.

RETURN of LIVE STOCK in each POLICE DISTRICT of the COLONY, for the Year ending 31st March, 1880.

REAL PROPERTY ACTS INQUIRY COMMISSION.

REPORT

OF THE

ROYAL COMMISSION,APPOINTED ON THE 17TH FEBRUARY, 1879,

TO INQUIRE INTO AND REPORT UPON THE WORKING OF THE REAL PROPERTY ACTS;

TOGETHER WITH THE

MINUTES OF EVIDENCE

AND

APPENDICES.

Presented to Parliament by Command.

SYDNEY : THOMAS RICHARDS, GOVERNMENT PRINTER.

1879.

Commission.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, and so forth,—

To our trusty and well-beloved—

JAMES NORTON, Esquire, Solicitor ;
 WILLIAM HENRY ARCHER, Esquire, Barrister-at-law ;
 JOHN DAWSON, Esquire, Solicitor ;
 THOMAS ROBERTSON, Esquire, Solicitor ; and
 SAMUEL HENRY TERRY, Esquire, a Member of our Legislative Assembly of our Colony of New South Wales,—

Greeting :

Know ye, that we, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do, by these presents, authorize and appoint you, or any three or more of you, as hereinafter mentioned, to make a diligent and full inquiry into the working of the Real Property Acts of our said Colony : And we do, by these presents, give and grant to you, or any three or more of you, at any meeting or meetings to which all of you shall have been duly summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same, or any of them, may be deposited, and to inquire of the premises by all lawful ways and means : And our further will and pleasure is that you, or any three or more of you, after due examination of the premises, do and shall, within the space of two months after the date of this our Commission, or sooner if the same can reasonably be, certify to us, in the office of our Colonial Secretary, under your, or any three or more of your hands and seals, what you shall find touching the premises : And we hereby command all Government Officers and other persons whomsoever within our said Colony, that they be assistant to you and each of you in the execution of these presents : And we appoint you, the said James Norton, Esquire, to be President of this our Commission.

In testimony whereof, we have caused these our Letters to be made Patent, and the Great Seal of our Colony to be hereunto affixed.

Witness, SIR HERCULES GEORGE ROBERT ROBINSON, Knight Grand Cross of our Most Distinguished Order of Saint Michael and Saint George, our Governor and Commander-in-Chief of our Colony of New South Wales and its Dependencies, at Government House, Sydney, in New South Wales aforesaid, this seventeenth day of February, in the year of our Lord one thousand eight hundred and seventy-nine, and in the forty-second year of our reign.

(L.S.) HERCULES ROBINSON.

By His Excellency's Command,

HENRY PARKES.

Entered on record by me in Register of Patents, No. 11, pages 48-9, this seventeenth day of February, one thousand eight hundred and seventy-nine.

MAXWELL ALLAN,

(For the Colonial Secretary and Registrar of Records.)

COMMISSION to inquire into the working of the Real Property Acts.

WHEREAS it is necessary to extend the time by which the Commissioners are to make their return in the above matter : Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the said Commissioners are to make such return to and for the period of two months beyond the time in and by the said Commission appointed for such purpose.

Given under my hand at Government House, Sydney, this sixteenth day of April, one thousand eight hundred and seventy-nine.

ALFRED STEPHEN.

By His Excellency's Command,

HENRY PARKES.

Entered on record by me in Register of Patents, No. 11, page 74, this seventeenth day of April, one thousand eight hundred and seventy-nine.

CRITCHETT WALKER,

(For the Colonial Secretary and Registrar of Records.)

COMMISSION

COMMISSION to inquire into the working of the Real Property Acts.

WHEREAS the time appointed for the return of the Commission in the above matter was, by an instrument dated the sixteenth day of April last, extended for a period of two months: And whereas it is necessary to extend the same still further: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the Commissioners are to make their return, to and for a further period of one month beyond the time in and by the aforesaid instrument appointed for such purpose.

Given under my hand at Government House, Sydney, this eleventh day of June, one thousand eight hundred and seventy-nine.

ALFRED STEPHEN.

By His Excellency's Command,

HENRY PARKES.

Entered on record by me in Register of Patents, No. 11, page 87-8, this twelfth day of June, one thousand eight hundred and seventy-nine.

CRITCHETT WALKER,

(For the Colonial Secretary and Registrar of Records.)

COMMISSION to inquire into the working of the Real Property Acts.

WHEREAS the time appointed for the return of the Commission in the above matter was, by an instrument dated the eleventh day of June last, extended for a further period of one month: And whereas it is necessary to extend the same still further: Now, therefore, I do hereby, with the advice of the Executive Council, extend the time within which the Commissioners are to make their return to and for a further period of one month beyond the time in and by the aforesaid instrument appointed for such purpose.

Given under my hand at Government House, Sydney, this eleventh day of July, one thousand eight hundred and seventy-nine.

ALFRED STEPHEN.

By His Excellency's Command,

HENRY PARKES.

Entered on record by me in Register of Patents, No. 11, page 91, this eleventh day of July, one thousand eight hundred and seventy-nine.

CRITCHETT WALKER,

(For the Colonial Secretary and Registrar of Records.)

EXTRACTS FROM MINUTES OF PROCEEDINGS.

THURSDAY, 27 FEBRUARY, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.
 Samuel Henry Terry, Esq., M.P., | William Henry Archer, Esq.,
 Thomas Robertson, Esq.

The Commission and the Letter of Instructions accompanying it were read.

The members of the Commission deliberated as to the manner in which the inquiry should be conducted, and arranged the order of proceedings.

It was decided to insert in the *Sydney Morning Herald* and the *Evening News* an advertisement requesting all persons desirous of giving information upon the working of the Real Property Acts to communicate by letter with the Secretary.

Resolved to meet on Tuesday, 4th March, for the purpose of taking evidence, and to summon E. G. Ward, Esq., Registrar General, for examination.

TUESDAY, 4 MARCH, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.
 Samuel Henry Terry, Esq., M.P., | William Henry Archer, Esq.,
 Thomas Robertson, Esq.

Minutes of the previous meeting read and confirmed.

Edward Grant Ward, Esq., Registrar General, examined.

THURSDAY, 6 MARCH, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.
 Samuel Henry Terry, Esq., M.P., | William Henry Archer, Esq.,
 Thomas Robertson, Esq.

Minutes of the previous meeting read and confirmed.

Correspondence—Letter read from Mr. John Garsed, which the Commissioners did not consider had any bearing on the matter referred to them for inquiry.

Edward Grant Ward, Esq., Registrar General, further examined.

MONDAY, 10 MARCH, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.
 William Henry Archer, Esq., | Thomas Robertson, Esq.

Minutes of the previous meeting read and confirmed.

Edmund Burton, Esq., Examiner of Titles, examined.

WEDNESDAY, 12 MARCH, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.
 Samuel Henry Terry, Esq., M.P., | William Henry Archer, Esq.,
 Thomas Robertson, Esq.

Minutes of the previous meeting read and confirmed.

Edmund Burton, Esq., Examiner of Titles, further examined.

FRIDAY, 14 MARCH, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.
 Samuel Henry Terry, Esq., M.P., | William Henry Archer, Esq.,
 Thomas Robertson, Esq.

Minutes of the previous meeting read and confirmed.

Mr. Charles John Muddle, Deputy Registrar General, examined.

MONDAY,

MONDAY, 17 MARCH, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.	
Samuel Henry Terry, Esq., M.P.,	William Henry Archer, Esq.,
Thomas Robertson, Esq.,	John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
Emund Burton, Esq., Examiner of Titles, further examined.

WEDNESDAY, 19 MARCH, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.	
Samuel Henry Terry, Esq., M.P.,	William Henry Archer, Esq.,
Thomas Robertson, Esq.,	John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
Letter from Mr. John Garsed read. The Secretary was instructed to write to Mr. Garsed, stating that if he would be good enough to put his complaints in connection with the Real Property Acts into a concise form, the Commissioners would give to the matter that attention which might seem to them to be necessary.

Edmund Burton, Esq., Examiner of Titles, further examined.

FRIDAY, 21 MARCH, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.	
William Henry Archer, Esq.,	Thomas Robertson, Esq.,
John Dawson, Esq.	

Minutes of the previous meeting read and confirmed.
The Secretary reported that he had written to Mr. John Garsed, the following :—"Sir,—The Members of the Real Property Acts Inquiry Commission cannot gather distinctly from the statements you have forwarded to them what your grievance is, and I am requested to state that if you will put your complaints in connection with the Real Property Acts into a concise form, the Commissioners will give to the matter that attention which may seem to them to be necessary."

John Booth Jones, Esq., Examiner of Titles, examined.

MONDAY, 24 MARCH, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.	
William Henry Archer, Esq.,	Thomas Robertson, Esq.,
John Dawson, Esq.	

Minutes of the previous meeting read and confirmed.
Letter from Mr. John Garsed read. The Secretary was instructed to write to Mr. Garsed, informing him that the Commissioners had decided that his case did not come within the scope of their inquiry.
John Booth Jones, Esq., Examiner of Titles, further examined.

THURSDAY, 27 MARCH, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.	
Samuel Henry Terry, Esq., M.P.,	William Henry Archer, Esq.,
Thomas Robertson, Esq.,	John Dawson, Esq.,

Minutes of the previous meeting read and confirmed.
The Secretary reported that he had written to Mr. John Garsed the following letter, dated 25th March, 1879 ;—"Sir,—I beg to inform you that the members of the Real Property Acts Inquiry Commission have carefully considered the papers and letters you have forwarded to them, and have decided that your case does not come within the scope of their inquiry."

The Secretary reported also that another long and indefinite communication had been received from Mr. Garsed.

The Secretary was instructed to write to Mr. Garsed, informing him that the Commissioners did not feel called upon to waste time in inquiring into his grievance, as it seemed to have no bearing on the question referred to the Commission for consideration.

John Booth Jones, Esq., Examiner of Titles, further examined.

TUESDAY, 1 APRIL, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.	
Samuel Henry Terry, Esq., M.P.,	William Henry Archer, Esq.,
Thomas Robertson, Esq.,	John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
The Secretary reported that before writing to Mr. John Garsed, in accordance with the instructions of last meeting, two other letters were received from him and submitted to the President, who considered it best to delay communicating with Mr. Garsed until after the next meeting of the Commission.

The

The Secretary was instructed to write the following letter to Mr. Garsed:—"Sir,—Your letters of 27th and 31st March having been laid before the Commissioners, I am directed to call your attention to my letter of the 25th March, and to intimate that they must adhere to the decision therein expressed."

Letter from Mr. W. M. Brownrigg, licensed surveyor, drawing attention to an alleged violation of sections 100 and 101 of the Real Property Act, read.

The President reported having written to the Honorable the Colonial Secretary, asking for an extension of the time allowed the Commission for completing their inquiry.

Henry Dyer Maddock, Esq., Examiner of Titles, examined.

THURSDAY, 3 APRIL, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,		William Henry Archer, Esq.,
Thomas Robertson, Esq.,		John Dawson, Esq.

Minutes of the previous meeting read and confirmed.

The Secretary reported having written to Mr. John Garsed, in accordance with the instruction of last meeting.

Letter from Mr. John Garsed read. The Secretary was instructed, with regard to future correspondence from Mr. Garsed, to peruse all further letters received from him, acknowledge the receipt of them, and submit to the Commissioners only those which it was necessary should receive their attention.

Henry Dyer Maddock, Esq., Examiner of Titles, further examined.

Mr. Jonas Lander, Clerk to the Examiners, examined.

TUESDAY, 8 APRIL, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,		William Henry Archer, Esq.,
Thomas Robertson, Esq.,		John Dawson, Esq.

Minutes of the previous meeting read and confirmed.

The Secretary reported that two other communications had been received from Mr. John Garsed.

Mr. Jonas Lander, Clerk to the Examiners, further examined.

Robert Mead Pearson, Esq., Principal Draftsman, examined.

THURSDAY, 10 APRIL, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,		William Henry Archer, Esq.,
Thomas Robertson, Esq.,		John Dawson, Esq.

Minutes of the previous meeting read and confirmed.

Septimus Alfred Stephen, Esq., solicitor, examined.

WEDNESDAY, 16 APRIL, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,		William Henry Archer, Esq.,
Thomas Robertson, Esq.,		John Dawson, Esq.

Minutes of the previous meeting read and confirmed.

The Secretary reported the receipt of another communication from Mr. John Garsed.

John Solomon, Esq., J.P., examined.

Richard Jones, Esq., Commissioner of Titles, examined.

FRIDAY, 18 APRIL, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,		William Henry Archer, Esq.,
Thomas Robertson, Esq.,		John Dawson, Esq.

Minutes of the previous meeting read and confirmed.

The President reported that the time by which the Commissioners were to make their Report had been extended for a period of two months.

Alexander Oliver, Esq. Barrister-at-law and Parliamentary Draftsman, examined.

TUESDAY,

TUESDAY, 22 APRIL, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,		William Henry Archer, Esq.,
Thomas Robertson, Esq.,		John Dawson, Esq.

Minutes of the previous meeting read and confirmed.

The Secretary reported the receipt of a further communication from Mr. John Garsed. The Secretary was instructed to explain to Mr. Garsed, that the whole of his letters were so irrelevant to the matter which the Commissioners were appointed to inquire into, that they desired he would not waste further time by sending them any more communications.

Mr. John Nobbs, conveyancing clerk in the office of Messrs. McCarthy, Robertson, and Fisher, examined.

Thomas Salter, Esq., solicitor, examined.

FRIDAY, 25 APRIL, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

William Henry Archer, Esq.,		Thomas Robertson, Esq.,
		John Dawson, Esq.

Minutes of the previous meeting read and confirmed.

George Pile, Esq. examined.

Andrew Hardie McCulloch, Junr., Esq., M.P., examined.

TUESDAY, 29 APRIL, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,		William Henry Archer, Esq.,
Thomas Robertson, Esq.,		John Dawson, Esq.

Minutes of the previous meeting read and confirmed.

The Secretary reported the receipt of two other letters from Mr. John Garsed, which letters were read to the Commission.

The Secretary was instructed to write to Mr. John Garsed as follows :—"In acknowledging the receipt of your last two letters, I am directed to repeat that the matters you complain of do not come within the scope of the Commission, and that the Commissioners do not consider themselves to be a tribunal of appeal from the decisions of either the Supreme Court or the Registrar-General."

Mr. George Charles Selwyn Smith, articled clerk in the office of Messrs. Stephen & Stephen, solicitors, examined.

Henry Massey Makinson, Esq., solicitor, examined.

Mr. James Harkess, clerk in the office of Messrs. Ellis & Makinson, solicitors, examined.

FRIDAY, 2 MAY, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,		William Henry Archer, Esq.,
Thomas Robertson, Esq.,		John Dawson, Esq.

Minutes of the previous meeting read and confirmed.

Letter read from Messrs. Shorter & Fitzgerald respecting the advertising fee in transmission cases. The Secretary was instructed to reply that the letter would be forwarded to the Registrar-General, who would no doubt correct the grievance complained of.

Letter read from A. H. McCulloch, Jun., Esq., M.P. It was decided to place the letter as an appendix to Mr. McCulloch's evidence.

Algernon Sydney Gilder, Esq., solicitor, examined.

Henry Burton Bradley, Esq., solicitor, examined.

TUESDAY, 6 MAY, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,		William Henry Archer, Esq.,
Thomas Robertson, Esq.,		John Dawson, Esq.

Minutes of the previous meeting read and confirmed.

Henry Burton Bradley, Esq., solicitor, further examined.

Alfred John Cape, Esq., solicitor, examined.

FRIDAY,

FRIDAY, 9 MAY, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,
Thomas Robertson, Esq.,

William Henry Archer, Esq.,
John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
William Henry Binsted, Esq., licensed surveyor, examined.
Mr. William Shirley Muddle, counter clerk, examined.

TUESDAY, 13 MAY, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President,

Samuel Henry Terry, Esq., M.P.,
Thomas Robertson, Esq.,

William Henry Archer, Esq.,
John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
Correspondence read, including a letter from Mr. Jonas Lander, Examiners' Clerk, stating that his clerk was to be removed to another position in the office, and that the practice of removing the Assistant Examiners' Clerk in this manner interfered with the business of the Examining Branch.
Thomas Walker, Esq., of Yaralla, examined.
William Whaley Billyard, Esq., solicitor, examined.
Mr. William Shirley Muddle, counter clerk, recalled, and further examined.

FRIDAY, 16 MAY, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,
Thomas Robertson, Esq.,

William Henry Archer, Esq.,
John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
Theodore James Jaques, Esq., solicitor, examined.

TUESDAY, 20 MAY, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,
Thomas Robertson, Esq.,

William Henry Archer, Esq.,
John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
Charles Wood Readett, Esq., solicitor, examined.

FRIDAY, 30 MAY, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,
Thomas Robertson, Esq.,

William Henry Archer, Esq.,
John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
William Hilson Pigott, Esq., solicitor, examined.
Mr. John Musson examined.

TUESDAY, 22 JULY, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,
Thomas Robertson, Esq.,

William Henry Archer, Esq.,
John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
The President reported that the time by which the Commissioners were to make their report had been extended to the 17th August.
Some remarks upon the Real Property Act and its workings, received from Henry J. Brown, Esq., solicitor, and a letter from the Registrar of Titles, Victoria, were read.

FRIDAY, 25 JULY, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,
Thomas Robertson, Esq.,

William Henry Archer, Esq.,
John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
The Commissioners considered the subject of their report.

TUESDAY, 29 JULY, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,
Thomas Robertson, Esq.,

William Henry Archer, Esq.,
John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
The Commissioners resumed the consideration of their Report.

TUESDAY, 5 AUGUST, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,
Thomas Robertson, Esq.,

William Henry Archer, Esq.,
John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
The consideration of the Report of the Commissioners was continued.

WEDNESDAY, 6 AUGUST, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,
Thomas Robertson, Esq.,

William Henry Archer, Esq.,
John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
The Commissioners continued the consideration of their Report, and afterwards proceeded through the various rooms in the Department of the Registrar General, and inspected the work done by the officers employed, and their manner of doing it.

FRIDAY, 8 AUGUST, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,
Thomas Robertson, Esq.,

William Henry Archer, Esq.,
John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
The Commissioners continued the consideration of their Report.

MONDAY, 11 AUGUST, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,
Thomas Robertson, Esq.,

William Henry Archer, Esq.,
John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
The Commissioners continued the consideration of their Report.

TUESDAY, 12 AUGUST, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,
Thomas Robertson, Esq.,

William Henry Archer, Esq.,
John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
The Commissioners continued the consideration of their Report.

THURSDAY, 14 AUGUST, 1879.

MEMBERS PRESENT :—

James Norton, Esq., President.

Samuel Henry Terry, Esq., M.P.,
Thomas Robertson, Esq.,

William Henry Archer, Esq.,
John Dawson, Esq.

Minutes of the previous meeting read and confirmed.
The Commissioners finally considered and signed their Report.

Registrar of Titles, Melbourne, to James Norton, Esq.	146

REPORT.

TO HIS EXCELLENCY THE RIGHT HONORABLE LORD AUGUSTUS WILLIAM FREDERICK SPENCER LOFTUS, Knight Grand Cross of the Most Honorable Order of the Bath, a Member of Her Majesty's Most Honorable Privy Council, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

May it please your Excellency,—

WE, whose names are signed and seals affixed hereto, Her Majesty's Commissioners, appointed by Letters Patent under the Great Seal of the Colony, dated the seventeenth day of February, 1879, and issued under the hand of His Excellency Sir Hercules George Robert Robinson, G.C.M.G., to inquire into and report upon the working of the Real Property Acts, have the honor to submit to your Excellency the following Report :—

1. As we were unable to gather, either from the terms of the Commission or of the resolution of the Legislative Assembly in consequence of which it was issued, the exact limit to which our inquiries ought properly to extend, we were at first in doubt whether to confine our investigations to the working of the Real Property Office as by law established, or whether, in addition, to consider the expediency of further amending or altering the Real Property Act so far as might be advantageously done without interfering with its general scope or making changes which might diminish its value. But we ultimately came to the conclusion that our proper course was to enter upon the extended field of inquiry, and to suggest such alterations in the law as after careful consideration would in our opinion make the system more popular and more generally useful.

2. The new system was established in order—Firstly, to obviate the complication and expense resulting from the practice of making all documents in any way affecting land for at least sixty years form part of the title, and thus virtually compelling every person dealing with it to employ a solicitor for the purpose of reperusing and reconsidering every document prepared during that long period of time, notwithstanding that the same expensive process may have been gone through a hundred times before; secondly,—to make the transfer of property so simple that any person of ordinary intelligence could do all that was necessary without the intervention of a solicitor; and, thirdly,—to register titles rather than dealings, and to evidence such titles by one simple document only, instead of the long chain of complex instruments which not unfrequently constituted the title under the old system.

3. As the work of conveyancing in this colony has been principally done by a large body of solicitors, numbering at the end of the year 1878 not less than 344—to say nothing of their numerous clerks and assistants—it is not surprising that although the forms of dealing with land have been greatly simplified, yet it has been found impossible for the Real Property Office, with its officers numbering originally not more than eight besides two draughtsmen, and now numbering only twenty-five, inclusive of seven draughtsmen, to supersede the old system, or even to keep pace with the work thrown upon it by persons desirous of availing themselves of the great advantages offered to them. Nor is it to be wondered at that numerous difficulties have arisen, and complaints been made, not only in this colony but in all the other Australasian Colonies, and that many Royal Commissions have been issued, and Parliamentary Committees appointed, for the purpose of inquiring into real or alleged grievances, malpractices, and neglects. It will be presently seen that, besides the difficulties naturally to be expected, we have had in this colony others which have operated much more prejudicially.

4. When the Real Property Office was first established in this colony there were appointed to fill the office of Examiner of Titles two gentlemen who were not only thoroughly competent to perform the responsible duties entrusted to them, but who appear to have devoted their whole energies to the successful inauguration of an entirely new system, which it was their ambition to make successful, and in doing this they acquired the confidence as well of the legal profession as of the public.

5. After the deaths of these gentlemen it was found impossible to replace them by equally unexceptionable officers, and we have had no difficulty in arriving at the conclusion that the disrepute into which the office has notoriously fallen has arisen from the almost universal dissatisfaction with the manner in which the investigation of titles, and the administration of business generally, is now conducted in the Examiners' department.

6. It is most unfortunate that the present senior Examiner, though a man of undoubted integrity and high standing as a solicitor, with an extensive knowledge of Real Property law, is so laboriously minute in his examination of documents, and so scrupulously cautious, and yet so anxious to allow to every one the utmost latitude in the removal of difficulties, that the delay to which applicants for title are compelled to submit, and the expense which they are obliged to incur in order to induce him with apparent reluctance to pass their titles, not only operate most injuriously to the persons affected, but prevent others from applying to place their properties under the Real Property Acts.

7. Unfortunately the second Examiner in seniority, though equally conscientious and possessing sufficient knowledge of the law of Real Property, possesses also, in an equal degree, the like faults of extreme minuteness, technicality, and timidity, while his comparative want of experience may make persons who complain of his mode of dealing with their titles less tolerant of his objections and requisitions than of those of his senior.

8. Both of these gentlemen seem to conduct the examination of a title very much as if they were merely engaged in a contest of skill between themselves and the applicant, and if the object of the Government were to bring the system into disfavour, and to prevent titles from passing, lest the assurance fund might by any possibility be made to suffer, these officers would be invaluable.

9. It is most desirable that the assurance fund should be protected from loss, but if from extreme strictness in examining titles, and in rejecting all in which there is the slightest flaw, it should become impossible that any claim on the fund should ever be successfully enforced, then landholders may fairly ask that it may be abolished altogether. During the whole sixteen years, ending with the year 1878, in which the fund amounting to no less than £27,253 18s. 8d. has accumulated, no claim has ever been made upon it, and though it is more than probable that many oversights have been made, which if discovered and taken advantage of would materially diminish it, yet the chance of any claim being successfully prosecuted is so small that little danger need be apprehended.

10. The third Examiner being expeditious, and having a large capacity for work, appears to have given great satisfaction to the public, and to have disposed of all arrears of cases in which one Examiner had reported, and which at the date of his taking office could not be laid before the Board of Commissioners and finally disposed of for want of the report of a second Examiner. He has however not been sufficiently long in office to enable us to consider whether caution has in too large a degree been sacrificed to expedition.

11. From one of the returns comprised in the appendix hereto, we find that on the average Messrs. Holden and Dick, the first Examiners, during the time they jointly held office, passed upwards of fourteen first and second class titles and transmissions each per month; Messrs. Holden and Pennington, while acting jointly, passed upwards of fifteen each per month; Messrs. Holden and Burton, while acting together, passed less than $11\frac{1}{2}$ each per month; Messrs. Burton, Jones, and Oliver, while acting together, passed less than 9 each per month; and Messrs. Burton, Jones, and Maddock, while acting together, passed upwards of $18\frac{1}{2}$ each per month. All these averages are much below what the evidence would seem to indicate as a proper amount of work for each Examiner, and are also much below what would appear to be the average work of an Examiner in Melbourne. After making very
large

large deductions for miscalculations of witnesses, and for difficulties in titles supposed to be greater in this colony than in Victoria, the result appears to justify the complaints made by most of the gentlemen examined by us.

12. In view of what has been already stated, it can scarcely be considered singular that the office has worked much less satisfactorily than might have been expected after making due allowance for all difficulties necessarily attendant on the establishment of a new system clashing severely with prejudices so deeply-rooted and vested interests so long established as those which had incorporated themselves with the old system of dealing with land titles; and a very cursory perusal of the evidence will show that a large amount of dissatisfaction with the present state of things exists, not only among the public and the legal profession, but also among the officers employed in the establishment. We have no hesitation in stating our belief that almost the whole of the complaints which have been rife for many years have arisen from the unfortunate incapacity of the Examiners to deal with the matters over which they have jurisdiction, in a practical, business-like manner; and notwithstanding the very high respect which we, in common with everyone else who has been brought into contact with the senior Examiner, must entertain for his unimpeachable integrity, his great ability, his long experience as a conveyancing lawyer, and his laborious perseverance in the discharge of his duty, and, though we regret exceedingly the possibility of giving pain to one who is so much entitled to our respect, yet it is impossible to ignore the principle that the good of one must not be permitted to interfere with the good of the many; and it is equally impossible to allow the work of the whole country and the interests of all its landholders to be obstructed or prejudiced by the idiosyncrasies of one man, however estimable.

13. The clerk to the Examiners appears to be quite unable to get through the work with which he is now charged, and in consequence of continual interruptions by persons searching for wills, and by the public and their solicitors and clerks inquiring as to progress, and complaining of delays, his work has not only been delayed to a still greater extent but the complaints against the whole office have been greatly multiplied. We consider however that if he were relieved of the custodianship of wills, which does not properly belong to his office, and the supervision of searches against applicants for titles, which could be better done by the Examiners, he might be able for some time longer to hold his present position without further assistance.

14. It has been found impossible for the Board of Commissioners appointed under the Real Property Act, which is composed of non-professional men, to alleviate, except in a very small degree, the difficulties and delays caused by the Examiners, for they have naturally felt themselves incompetent to deal with strictly legal questions on which it was the business of the Examiners to advise them.

15. Indeed the conviction has been forced upon us that the Board of Commissioners is of no practical value whatever, and that it would be of great advantage to the office and to the public that it should be entirely abolished, and that an officer, to be called the Master of Titles, should be appointed to perform all the duties now performed by the Board, except such mere ministerial duties as may be more appropriately assigned to the Registrar General, and we consider that the officer so appointed should have the complete control of the Examiners and of the whole professional department of the Real Property office, including the draftsmen's branch, and that he should be exempted from all interference on the part of the Registrar General.

16. The gentleman appointed to fill the office of Master of Titles should be a barrister or solicitor of high standing, and of thorough knowledge of conveyancing law, with good administrative faculty.

17. We have carefully considered the question whether there is any necessity for the examination of every title by more than one Examiner, and we are of opinion that if a Master of Titles should be appointed the investigation of titles might be safely entrusted to either one or more of the Examiners, as that officer in each case, or in each class of cases, might determine.

18. The principle above recommended has been found to work well in Victoria, and it is evident that if adopted here it will save a great deal of time, and probably make it unnecessary for some time to come to appoint a fourth Examiner.

19. We consider that among the powers which ought to be granted to the Master of Titles should be that of accepting titles which might be considered defective by reason of the non-production of documents, or of the imperfect nature of the evidence of title, or by reason of some uncertain or doubtful claim or demand which might affect the land being dealt with: provided that the applicant for title should contribute to the assurance fund such additional sum of money as the Master of Titles should in each case determine.

20. Notwithstanding the existence of such a power in the Melbourne office the Assurance Fund, which there amounted at the end of the year 1877 to £47,314, had only been diminished by claims thereon to the extent of £718 0s. 4d., and we can see no reason why an equally favourable result should not obtain here.

21. It will be seen by reference to the returns comprised in the appendix hereto, that although when the Real Property Act first came into operation in this colony (1st January, 1863), 7,766,891 acres of land had been alienated by the Crown, only 477,560 acres—being little more than $\frac{1}{16}$ of the whole—had up to the end of the year 1877 been placed under the Act, although in the neighbouring Colony of Victoria no less than 541,035 acres—being upwards of $\frac{1}{3}$ of the 5,100,825 acres granted—had been placed under the Act from the date of its coming into operation (2nd October, 1862) till the end of the year 1877.

22. We infer from these particulars that the system has become more popular in Victoria than in New South Wales, although through the exertions of Sir Robert Torrens (the founder), Mr. Christopher Rolleston (the first Registrar General), and Messrs. Holden and Dick (the first Examiners), it was initiated with so large a share of popularity that during the first year 67,913 acres of land, valued at £439,278, were placed under the Act, and 65 further applications for certificates had been made though they were not finally disposed of till the ensuing year.

23. At the end of 1877 the area of lands for which titles had been issued during the year had dwindled down to 6,801 acres, of the value of £210,431.

24. We consider it impossible, even if our recommendations for facilitating the investigation and passing of titles be adopted, that three Examiners only, in addition to their other work, can within a reasonable time examine the titles to upwards of seven millions of acres of land still held under the old system, and it is obviously very desirable that as soon as possible the whole of the alienated lands of the colony should be held under one kind of title.

25. We therefore think that as business increases—which we confidently expect it will—it may be necessary to appoint a larger number of Examiners, but the prospect of the increased expenditure, which will be thereby incurred need not create any alarm, because the increased amount of fees is likely to make the office quite self-supporting.

26. We find that even at the present time the clerical staff is not sufficient for carrying on the business of the office properly, and that it is essential that at least two fresh clerks should be appointed without waiting for the complications which must otherwise arise as routine business increases.

27. The shorthandedness of the office has in some instances led to practices which it is not desirable to permit except under very special circumstances or on the pressure of very urgent business, and then only with the express sanction of the Registrar-General, or his Deputy, in each case.

28. We allude to the payment by the public of gratuities to clerks in the establishment, for work done or professed to be done after the usual hours of business, and we find that the payment of such fees has given rise to rumours of bribery, though we have been unable to find any other foundation for such rumours than the payment of the gratuities mentioned.

29. We have found that most of the routine business of the department is conducted very creditably, and that some of the officers are fairly entitled to an increase of pay—not only because the work has greatly increased since their appointments, and is likely to continue to increase, but also because the gentlemen alluded to evidently have the interest of the institution at heart, and spare no pains to do their work as promptly and efficiently as circumstances will allow.

30. In consequence of the absence of a clear definition of the status and duties of the principal officers, the question whether the Examiners' clerk is under their orders or under the Registrar-General has never been clearly settled, and much unpleasantness, interfering with the harmonious working of the office, has arisen partially

partially on this account, and still more considerably on account of the more important question whether the Examiners are in any way under the control of the Registrar-General or not.

31. With a view to the recovery of some of the lost popularity of past years, and to the lessening of delay and expense in future operations, we have carefully considered what alterations can be made without infringing on principles already established, or creating unnecessary risk to the assurance fund, and we have determined to recommend some which we believe will have a most beneficial effect in inducing the owners of the outstanding 7,000,000 of acres to concur in bringing about the very desirable result of uniformity of title throughout the whole colony.

32. The question of dower having caused much trouble in every colony where the new system of titles has been introduced, we have considered whether it is possible, without injustice to the few women married before the year 1837 who still survive, to make such alterations as will effectually dispose of the difficulties which yet exist.

33. Until dower becomes an actual estate in possession it is at the best a mere possibility, and its recovery is surrounded with so many difficulties that the successful termination of a dower suit is an event almost unknown, and we can hardly conceive it possible that any woman has ever been induced to enter into the marriage contract by the consideration that if she should survive her husband she would become dowable in all his lands, including even those acquired after the marriage.

34. We therefore consider that little or no injustice will be done to any one, but a great benefit will be conferred on landholders, if the principles of the Dower Act of 1836 be applied to all lands acquired after that year. We think however that it is advisable to allow to women married before the year 1837 the privilege of retaining all their present rights by lodging in the Registrar-General's office within a limited time notice to that effect, and stating therein the date of the marriage in respect of which such rights are claimed.

35. As the Principal Real Property Act has been drawn in such a form as to raise many doubts and difficulties, and as it will be necessary in order to carry out our recommendations that further legislation should take place, we recommend that a Bill should be introduced into Parliament for the purpose of re-arranging and consolidating so much of the existing Acts as it may be desirable to retain, of making such alterations and additions as may be considered beneficial, and of embodying therein all necessary clauses for carrying out such of the suggestions made by us as cannot be carried into effect without legislation.

36. In conclusion, we have the honor to recommend as follows:—

- 1a. That as soon as possible the services of the first and second Examiners of Titles be dispensed with, and other officers appointed in their place.
- 2a. That in consideration of the services rendered by the first Examiner, and of the improbability of his being now able successfully to resume the practice of his profession, an ample provision be made for him by giving him some other equally lucrative appointment in another department, or in such other manner as the Government may think fit.
- 3a. That the salaries of the principal officers employed in the Real Property Office, and of such other employés therein as may be considered worthy, be increased.
- 4a. That two additional junior clerks be appointed, to assist at the counter in the public room and generally in the office.
- 5a. That as soon as practicable provision be made for increased accommodation for carrying on the business of the office, which is already almost too large for the portion of the building occupied by the Real Property Department.
- 6a. That a Bill be presented to Parliament for the purposes before indicated and that by such Bill it be provided :
 - 1b. That the Board of Commissioners shall be abolished.
 - 2b. That a Master of Titles shall be appointed with all powers necessary for the purpose of giving him the complete control of the Examiners, including

- including the distribution of applications to one or more of them, and also the control of the draftsmen's branch, and with all the functions of the existing Board of Commissioners.
- 3b. That leasehold lands shall no longer be permitted to be brought under the Real Property Acts.
 - 4b. That lands comprised in abandoned private roads may be included in any certificate of title with the consent of all persons entitled to use them, or on proof that the same have been in possession of the applicant for title or persons through whom he claims, and unused for twenty years.
 - 5b. That the Examiners or Master of Titles shall not be entitled to require the production of any document affecting any title under investigation, if such document shall have been registered under the Act 7th Victoria, No. 16, and they may dispense with the production of documents registered under any prior Act for the registration of deeds.
 - 6b. That the Examiners or Master of Titles may accept as evidence, recitals, statements, and descriptions of facts, matters, and parties in deeds or instruments, not less than twenty years old, or in copies or memorials of same registered as before mentioned.
 - 7b. That after ten years from the date of any instrument executed under power of attorney, it shall not be necessary to prove that the power was in force at the date of the execution of such instrument.
 - 8b. That no applicant for title to unoccupied land shall be called upon to prove that no other person has acquired a title to the same by possession for twenty years or any other time.
 - 9b. That in every case after the expiration of one year from the date of probate of the will or letters of administration of the estate of any deceased person, or from his death in case there shall be neither probate nor administration, it shall be assumed that his debts have been paid, unless there shall be evidence to the contrary, and no evidence of such payment shall be required.
 - 10b. That in every case of successful application to the Supreme Court, under the 107th clause of the Principal Act, the applicant shall be exempted from the payment of the expenses of the Registrar General, and shall be entitled to be paid his own expenses, when taxed, out of the assurance fund.
 - 11b. That no claim under any deed or other instrument shall be allowed against the assurance fund, unless such instrument shall have been registered under the Act 7th Victoria, No. 16, or some prior Act for the registration of deeds, before the issue of a certificate of title to the property, in respect of which such claim shall be made.
 - 12b. That no assurance fees shall be payable in respect of grants henceforth issued under the Real Property Acts, or of transmissions of property held under the same Acts.
 - 13b. That the enforcement of claims against the assurance fund be relieved of all difficulties now existing, and be allowed without any preliminary proceedings against any person.
 - 14b. That whenever land is mortgaged or encumbered, all certificates of title to land comprised in the memorandum of mortgage or encumbrance shall be deposited with the Registrar General, and remain in his custody during the existence of the mortgage or encumbrance.
 - 15b. That any memorandum of transfer, mortgage, or encumbrance, not in the prescribed form, may be registered with the approval of the Master of Titles, or one Examiner, on payment of double the usual fee.
 - 16b. That all searches required to be made by any person in respect of any property held under the Real Property Acts shall be made by a clerk or officer, who shall give a certificate of the result of such search, in a form to be prescribed.

- 17b. That no notice of applications for transmission shall be published, unless required so to be by the Master of Titles.
- 18b. That if in the grant or certificate of title in favour of a woman, whether married or single, the words "To her separate use," be inserted after her name, she shall have the same power of dealing with the land during coverture as if she were unmarried.
- 19b. That women married before the year 1837, shall be put upon the same footing with respect to dower as women married in or after that year, but shall be allowed the privilege beforementioned. (Memorandum :— It will probably be necessary to deal with dower by a separate Bill.)

Certified under our hands and seals this 14th day of August, 1879.

REAL PROPERTY ACTS INQUIRY COMMISSION.

MINUTES OF EVIDENCE.

TUESDAY, 4 MARCH, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P., | WILLIAM HENRY ARCHER, Esq.,
THOMAS ROBERTSON, Esq.

Edward Grant Ward, Esq., Registrar General, examined:—

1. *President.*] You are the Registrar General of the Colony? I am.
2. Since when? Between seven and eight years, I think.
3. And all the work of the Land Titles Office passes under your cognizance? Yes.
4. Are you aware whether there is any dissatisfaction as to the working of the Real Property Acts, either in their provisions or in the mode of carrying them out in your office? Yes, I am.
5. How many classes of titles are there that are brought under the Act? Two classes.
6. What is the course of proceeding on an application for a certificate for first-class title from the lodging of it to the final issue of the certificate? The first part of the proceeding is payment of the fees. An application is presented at the counter, the fees are paid, and it is then forwarded, either that day or the day following to the examiners' clerk.
7. Yes? Searches are made, and the draftsman's report follows.
8. That is on a first-class title? Yes.
9. And then? Then it is forwarded to the Board of Commissioners.
10. Does it go to the examiners at all? First to the examiners' clerk. The examiners then send in a report to the Commissioners.
11. Yes? The title is passed under section 15 of the Real Property Act.
12. And certificate issued, I suppose? And certificate issued.
13. Will you state the course of proceeding under an application for a certificate of second-class title from the lodging of the application till the final issue of the certificate? It is exactly the same as in the case of a first-class title, except that advertisements take place.
14. I think you have got a little astray. These applications are referred to the examiners to report upon? Yes, exactly, the same as in the case of a first-class title, except that advertisements take place.
15. And what do the examiners do on these cases being referred to them? They are referred to them for report.
16. But what do they do? They generally write letters of requisitions on titles.
17. They examine the deeds? They examine the deeds, and examine the titles to report upon them. Searches are made, and the titles are examined previous to the report of the Commissioners.
18. Supposing they find the title perfect, they report in favour of it? Yes.
19. Supposing that they find it imperfect, what do they do? They advise the Commissioners to reject the title.
20. No,—they communicate with the applicants, do they not? I cannot say; none of that comes before me.
21. But you do, in fact, know—you sign the requisitions to applicants? Merely *pro forma*, as being the head of the department. No examiners' letters are signed by me until initialled by one of the examiners.
22. But, in point of fact, if the examiners find any objection, they communicate with the applicant or with his solicitor? With the applicant or his solicitor.
23. Who deals with the matter as he thinks fit for the purpose of removing the objections? Yes.
24. Can you suggest any improvement in the law with respect to the investigation of titles? No, I cannot.
25. You do not deal much with that? I cannot suggest any improvement—not in the manner in which they are investigated. There is no other way of investigating them, except by searching and forwarding requisitions to the applicants or their solicitors.
26. Is it not possible to classify titles—we have them already classified into first and second class;—is it possible to make a further classification? I think not; I cannot see it.
27. Can you make any suggestion as to the improvement of the system generally? No; I think the system is a very good one, and could be worked very well if we only had proper men to work it—competent men to work it, I may say.
28. But do you not consider that some improvements could be made in minor matters? No doubt in some details in the working of the Act some improvement might be made, but taking the Act as a whole I think the principle is a good one, and only wants competent men to administer it.
29. Have you any control over the Examiners of Titles? Not in their capacity as examiners. I consider I have departmental control as Registrar General.
30. In what shape are reports by the Examiners of Titles submitted to the Commissioners? I think I had better answer that question by getting you a form. (*Form of examiners' report produced.*)

E. G. Ward,
Esq.
4 Mar., 1879.

- E. G. Ward, Esq.
4 Mar., 1879.
31. I see that, in the form of report produced, certain qualifications are printed as being positively necessary in each case; have not those qualifications been very much extended lately? Yes, to a far greater length than you see on the printed paper. In fact, the number of qualifications has grown to such an extent that it almost amounts to a question whether those qualifications should not, in the first place, have taken the form of requisitions. In fact, under the old Examiners of Titles we had no qualifications at all. Everything was cleared up, and went to the Board of Commissioners to be passed or not, as the case might be.
32. In fact, under those qualifications as now required, the title may be rejected? It may be. They may not be able to comply with them, and, although advertised, the title may not issue.
33. *Mr. Terry.*] Although no caveat is lodged? Although no caveat is lodged. This is a principle that has crept in since the present examiners came into power.
34. *President.*] Then you consider these qualifications ought to take the shape of objections to be dealt with before advertising the title? Certainly.
35. Then you consider the system of adding further qualifications very prejudicial to applicants? I do.
36. How is transmission obtained in cases of heir-at-law (now administrator), devisee, tenant-by-courtesy, or other person claiming any estate of freehold in the land of a deceased proprietor? By an application under the Act.
37. An application for certificate? An application for certificate, yes.
38. And how is that application dealt with? It is brought to the counter with the certificate of title or grant, the will, or probate, or letters of administration, certificate of death, or other evidence, as the case may be; the fees are paid, and the application, with the documents, is forwarded to the examiners' clerk in the same manner as ordinary applications.
39. And what is done then—what do they do with it? Then the examiners fill in a report similar to the paper you have just seen, and forward it to the Commissioners generally for advertisement.
40. And on the advertisement being published, and no caveats being entered, a certificate is granted? The certificate is issued to the applicant.
41. Do you consider that the process is sufficiently simple, and that it works satisfactorily? No, I think a great change may be made with regard to transmission applications. I cannot see the necessity for the delay that at present exists in advertising.
42. Have you heard any complaints about the payment of assurance fees on transmissions? Yes, I have heard a few people complain of having paid assurance fees again.
43. Having paid them originally they considered that ought to cover all dealings with the title afterwards? Yes.
44. Is there any reason why assurance fees should be paid in the transmission cases mentioned? I think not.
45. You think that the $\frac{1}{2}$ d. in the £ paid on the original application for a title ought to cover all future dealings with the property? I do.
46. Then you think it unnecessary to go through the process of advertising in cases of transmission? I do. That is where letters of administration or probates may be granted by the Supreme Court.
47. Then you would advertise in some cases? In some cases.
48. Intestacy, for instance? I do not know what cases you may mean.
49. The cases under the Act are heir-at-law, devisee, tenant by the courtesy, or other person claiming any estate of freehold in the land of a deceased proprietor? That is the rule; those are the majority of cases.
50. Can you see the advantage of an advertisement in any of these cases? No, I cannot.
51. Have you heard any complaints of delay in advertising applications for certificates in ordinary cases? Delay in advertising.
52. Delay created by advertising? In ordinary cases, no.
53. What is the term of advertising? Seventy days in ordinary cases; thirty-five days notice in transmission cases; and thirty-five days when personal service of notice is undertaken.
54. What is the advantage of advertising at all? In ordinary cases?
55. Yes? To give people an opportunity of lodging objections to the title. It is a safeguard that I do not think ought to be done away with in ordinary cases.
56. In the case of absentees from the Colony, do the advertisements give any protection? Certainly they do. Most absentees leave some representative here.
57. But suppose they had no representative here. Many persons go away leaving vacant land and no agent, and no advertisement can protect them? No, certainly not.
58. Does not the question of dower give a great deal of trouble, and create expense to applicants for titles? It does.
59. Can you suggest any remedy? I think a Bill should be brought in abolishing dower.
60. Absolutely? Absolutely.
61. Might not that work injustice to some persons who are now really entitled to dower—in actual possession of it? I cannot quite understand you.
62. Supposing a man married before 1837, dies and leaves a wife who enters into possession of dower, an Act simply abolishing dower would take away a right of which she was in possession? There might be an exception in cases of that kind. But ninety-nine women out of 100 who were married before 1837 have not the slightest idea of having any interest in the land of their husbands. I cannot see what injustice could be done except with regard to a person who is in actual possession of it.
63. Supposing the husband is very old and in poor circumstances, and the wife is still living, looking forward to this dower as a means of existence after his death, do you not think it would be unjust to deprive her of that possibility? No, I do not think so. It is only a bare possibility that she is entitled to that dower.
64. But some know it exactly? Yes.
65. However, you think the dower ought to be swept off altogether? I think so.
66. Has not dower been abolished in South Australia and Victoria? In South Australia it has I know, and I think in Victoria. It was abolished in South Australia twenty-five years ago.
67. For the purpose of this system? No, before the system was ever contemplated.
68. You have been in South Australia? Yes, ten years.
69. Under Sir Robert Torrens in working the Real Property Acts there? Yes, I was the first Secretary to the Lands Titles Commissioners in South Australia.

E. G. Ward,
Esq.
4 Mar., 1879.

70. Is trust property sufficiently protected by the present system of caveats? I think so.
71. How are they worked? A certificate of title issues to the trustees as owners in fee; the *bénéficiaires* lodge a caveat, and also a copy of the trust deed, which is deposited with the Registrar General—the caveat referring to their trust deed.
72. Then the land after that is not dealt with except with the consent of the caveator? No dealings coming in can be registered until notice is given to the caveator.
73. Suppose cestuique trusts are infants how can they protect themselves? Any friend can lodge a caveat to protect them.
74. But suppose they are orphans with no one to protect them? The Registrar General can lodge a caveat in that case.
75. Can you suggest any improvement in the matter of caveats? No, I cannot.
76. You think it amply sufficient for the purposes of protection? I do.
77. Would it not be advisable to permit the statement on any certificate of title that the property is held in trust, so as to protect the real owners from risk in cases of death, or insolvency of trustee, and sales by the Sheriff on his account, and to save his representatives from doubt and difficulty? I can see no objection to the certificate stating that the property is held in trust simply.
78. No statement of trust but simply a statement? A statement that it is simply held in trust. I can see no objection to that.
79. Do you think it would be advantageous? I think it might be.
80. Provided it did not encumber the dealing with the property? Provided you stop there—simply that the property is held in trust. It merely gives a warning to people about to purchase property or lend money.
81. *Mr. Robertson.*] Would that interfere with the indefeasibility of the title? —
82. *President.*] We do not propose to go so far as that? There is no doubt the policy of the Real Property Act is that the land is held by trustees, and all persons interested should lodge a caveat immediately. It is quite a sufficient protection. That caveat refers to the trustees, and shows that the persons are nothing else than trustees.
83. *Mr. Terry.*] But is it not the case now that the caveat number is on the corner of the deed? Yes.
84. *President.*] Is the word "caveat" marked on the certificate? Yes, the words "number caveat."
85. *Mr. Robertson.*] But the caveat might be lodged afterwards? In all trust deeds the caveat may be lodged at once.
86. *President.*] But that caveat may be in reference to mortgages and all sorts of things; it may not be in reference to trust property? It merely says "number, caveat," and you look at the number and see what the caveat refers to.
87. Would it not be advantageous, and get rid of many trusts, if married women were allowed to hold and deal with property under the Act as if they were unmarried? Yes.
88. What is the process of appeal from the decision of the Commissioners founded on the examiners' report? Appeal to the Supreme Court; the applicant writes to the Registrar General requesting him to state his reasons for refusing to grant him a certificate of title, to state his reasons in writing.
89. Yes? And on these reasons he prepares a statement for the Court.
90. And then? Then the Registrar General is called upon to show cause why he refuses to issue the title.
91. These matters have to be brought before the Court by affidavits? I think so. That is a matter of Supreme Court practice.
92. The questions are argued before the Court and judgment given? Yes.
93. Do you consider this process sufficiently simple, expeditious, and inexpensive? I think so.
94. I suppose you do not really know much about the practical working of it? Not after it leaves this office.
95. I mean in the Court? No.
96. Do you not consider that in case the appellant succeeds it is a great hardship that he should be compelled to pay the costs of the examiners whose decision has been upset? I think it is a hardship.
97. Should not these costs be payable out of some fund—out of the assurance fund, or some other fund? Not out of the assurance fund, certainly. I think the costs ought to be borne by the Government. The Registrar General is nominally the defendant.
98. *Mr. Archer.*] If you were mulcted they would put the amount on the Estimates, I suppose? Oh, yes, I suppose so. In other cases it has been done. If the Government had to pay it would make them more careful.
99. *President.*] Would not certificates be much more readily attainable if the period of limitation for recovery of property held adversely were shortened? I think that the amended Real Property Act does lessen the time—does away with it altogether, for property under the Act. (*Section 11, 41 Vic. No. 18, referred to and read.*)
100. Well then, as far as property outside the Act is concerned, do you consider the period of limitation should be shortened, so as to enable applicants to get titles in this office more readily? I do not think it ought to be shortened.
101. Do you consider that under the present facilities for travelling and obtaining information there is any necessity for extending the twenty years allowed in cases where persons interested are beyond seas? I think not.
102. What are the duties of the Board of Commissioners? They have to meet and receive the report of the examiners on one day every week, and deal with the applications put before them. They have to instruct the Registrar General to advertise applications, to settle the time of such advertisements, and also to decide if the applications should be advertised in country newspapers.
103. Do you consider it of any advantage to have a Board of Commissioners? I do.
104. Why? I think they are a great safeguard to the public.
105. In directing advertisements and precautionary measures? Yes. They have also to allow the Registrar General to correct errors in the register book of certificates of title, and to dispense with the production of certificates of title or other instruments of registration; also to allow the Registrar General to grant provisional certificates on grants in cases of loss by fire or otherwise.
106. Could not the Registrar General alone very well perform all the duties the Commissioners have hitherto performed? I think he could, but it is a very great safeguard, and an advantage to the Registrar General

E. G. Ward, Esq.,
4 Mar., 1879. General to be associated with two other gentlemen who can assist him by advising him in many cases that come under his notice.

107. Who are the Commissioners, and are they professional men? No, they are not.

108. What are their names? Richard Jones and Alexander Walker Scott.

109. Richard Jones;—what is he? He is a gentleman without any profession. He is Chairman of the Board of Directors of the Commercial Banking Company.

110. What is Mr. Scott? Mr. Scott is a gentleman with no occupation. The Registrar General is chairman of the Board of Commissioners *ex officio*.

111. Then the Board of Commissioners consists of the Registrar General and two associates? And two associates.

112. Do the Commissioners ever question the reports of the examiners, and grant or withhold certificates in opposition thereto? They have done so when the two Examiners of Titles have differed in their opinion on the title.

113. Suppose a skilled barrister or solicitor were appointed Master or Commissioner of Titles with power to determine appeals from the decision of the examiners, would not many appeals to the Supreme Court be saved? Very likely they may by the appointment not of a skilled barrister but of a skilled solicitor.

114. Well, a skilled professional man? Very few barristers know anything of conveyancing.

115. Do you not think it might be advantageous to substitute a Master of Titles in place of the Board of Commissioners? It might be. It all depends upon the position of the man who takes the post.

116. Leaving you to perform the duties now actually performed by the Board? By the Commissioners—yes.

117. Have any claims ever been made on the assurance fund? I think not.

118. *Mr. Robertson.*] What is the amount of the fund? I sent a memorandum to the Treasury yesterday in order to get the amount, and expected to have it this morning.

119. *Mr. Terry.*] It must be a considerable sum now? Yes.

THURSDAY, 6 MARCH, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P., | WILLIAM HENRY ARCHER, Esq.,
THOMAS ROBERTSON, Esq.

Edward Grant Ward, Esq., Registrar General, further examined:—

E. G. Ward, Esq.,
6 Mar., 1879. 120. The witness said: I have got a reply from the Treasury with regard to the amount at the credit of the assurance fund—it is £27,258 18s. 8d., commencing from January, 1863, to December, 1878.

121. *Mr. Robertson.*] How is that money invested? In debentures—Government securities.

122. *President.*] As the examiners say, one case might sweep off the whole sum. There are some values above that? Oh, yes.

123. Would you be good enough to inform us what are your duties as Registrar General? They are so multifarious that I can—

124. Only generally? A general supervision of the office. I may state that the Act allows the Deputy to have even power with the Registrar General. The Deputy Registrar General does all the office work except signing Crown grants. I sign all those, and sit as Chairman of the Board of Commissioners. I supervise all the complaints that come into the office, and inquire into them. All the correspondence passes before me, and at all times, of course, I act officially when the Deputy is out.

125. I do not mean distinguishing between the Registrar General and his Deputy, but the duties of the Registrar General and the Deputy? The great duty of the Registrar General is to register documents, all documents that are brought under the Act for registration. He is the executive officer under the Act.

126. Would you not be quite able, in addition to those duties, to undertake those of the present Board of Commissioners? I think so, provided I had competent Examiners of Titles.

127. Yes? There is a great deal of legal work now that we used to refer to the Examiners of Titles, but which I dare not refer now to the Examiners of Titles, for I should never see the end of it. There are many legal questions that I am obliged to decide without legal aid at all.

128. But there is really no reason why you should not undertake the responsibility of those duties? I see none.

129. Will you state what officers are under you, and what are their duties? There is a Deputy Registrar General, and all the staff of the Land Titles Office, counter clerks, corresponding clerk, and there is the Registration of Births, Deaths, and Marriages and Statistical Branch. That branch is under me. And there are the draftsmen on the staff of the Land Titles Office.

130. Can you state the duties that each of those officers has to perform? Will it be necessary to give their names?

131. I do not care about their names? First of all, we have two counter clerks, who have to receive all documents, make out tickets for the fees, and take a cursory glance at every instrument handed over the counter for registration, to see whether there is any informality. Then I have other clerks who have nothing else to do but receive Crown grants, number them, and see that they are ready for issue and entering in the books. Then I have a corresponding clerk, clerks for indexing, clerks for entering in a book of the current transactions of the day—a kind of day-book that is kept, and which we call the journal. There are also clerks for making endorsements on grants or certificates of title, and the cashier.

132. You have not mentioned the draftsmen? And the draftsmen, of course, I mentioned them before. They are more immediately under the Principal Draftsman, who is responsible to me, and who takes charge of the draftsmen's room. The Principal Draftsman has charge of the four other draftsmen in there.

133. What are their duties? The Principal Draftsman has to check all plans that come into the office.

134. With applications for certificates? With applications for certificates, all deposited under the Act. The ordinary draftsmen have to put all plans on certificates of title. They prepare tracings for land applied

applied to be brought under the Act, in order that they might be posted to the persons who hold or occupy land adjacent to that which is sought to be brought under the Act. E. G. Ward,
Esq.

135. Those plans which you mentioned as being brought into the office, are always to be made, as I understand, by a surveyor licensed to practise under the Act? Plans to be deposited under the Act are bound to be made by a licensed surveyor under the Act. 6 Mar., 1879.

136. But not original plans? There is nothing in the Act to oblige me to receive original plans in that way.

137. Any surveyor may bring in a plan with an application, but only a licensed surveyor may bring in a subdivisional plan afterwards? Yes; our usual practice is, with city property, to insist upon a plan from a licensed surveyor.

138. Have not great complaints been made of plans being received, which have not been prepared by licensed surveyors? We have received one or two complaints from licensed surveyors that we received plans from unlicensed surveyors.

139. Do you consider it right that unlicensed surveyors should be allowed to practise at all in the office; if a license is applicable to one class of plans, why not to the other? In the case of plans deposited under the Act, there are generally subdivisions, and a great deal more care is required for cases of that kind. In cases of ordinary application all we require is to see that the boundaries are correct and that they agree with the description of the deeds. We have some check upon them there.

140. But is there not just as much difficulty in those plans as in the others. When you come to subdivide the original plan it may be found to contain 20 acres less or 20 acres more, and then there is a difficulty? When a man makes a subdivision under the Act a surveyor must go on the ground and peg out all the allotments. It will very soon be discovered whether there are any discrepancies in the area of the land, and they come in the title. But even in the case of plans brought in here by unlicensed surveyors under applications they are always tested by our draftsmen; they are plotted, and so forth.

141. But they cannot test them on the ground? Not on the ground, but on the paper. There is one surveyor, for instance, who has been practising for some time, and simply because he cannot go into the field for two years he cannot get a license. The Act does not prohibit me from taking plans on an application from anybody. In fact, in the case of a Crown grant we take a sketch from the Surveyor General's Office.

142. *Mr. Terry.*] And very often that is wrong? —

143. *President.*] How long should it necessarily take to issue a certificate of title after date of application for same? To issue a certificate?

144. From the time the application is lodged up to the time the certificate is issued, including advertising and everything else? Three months.

145. Do you consider three months sufficient for most titles? I do.

146. For every title? Not for every title—for most titles.

147. Does it, in fact, take a longer time to issue titles than three months? Yes, as a rule, considerably over that time.

148. For what reason? Because the examiners cannot get through their work.

149. What do you mean by cannot—that they will not, or that they have more to do than they are able to get through? That is a question that I can hardly answer. My own idea is, that they have not the capacity for the work, and cannot do it.

150. Well, do you think that if you had unexceptional examiners the work could be got through in the way you state? Easily. It always was before.

151. How long should it take to register, transfer, and issue a new certificate? I think a week. It ought not to take more.

152. Does it take longer? I believe it does in some cases, where a large number of grants or certificates have to be consolidated into two or three. But, as a rule, it ought not to take longer than a week. Those are my instructions.

153. Are those instructions carried out as a rule? I think they are as a rule.

154. Of course some time is necessary on account of preparing a fresh certificate and new plan? Yes, but I think a week is sufficient.

155. And you think, generally, it does not exceed a week? I think not. Of course a large number of transactions are registered by endorsement only.

156. And those occupy less time? Those ought not to take any longer than the next day.

157. By what rule are cases allotted to the examiners as they arrive in the office? I have them forwarded to the examiners' clerk immediately on receipt. As soon as they get into his hands they are usually dealt with as the examiners themselves direct.

158. That is a matter of arrangement between the examiners themselves? Yes.

159. You furnish them to the examiners' clerk, Mr. Lander, and he allots them among the examiners? No; it is a matter between the examiners themselves as to the allotment of them. I believe they are generally put away for a month in the first place, and at the beginning of every month I think they make a partition.

160. But I suppose you do not know that of your own knowledge? Yes, I know it of my own knowledge, but it is nothing to me.

161. I suppose Mr. Lander is under your control? Yes, departmentally—the same position as the Examiners of Title, but he is specially their clerk and has to obey their commands.

162. But suppose you direct Mr. Lander to take every case you send to him immediately to one of the examiners, it is his duty to obey you? I think so.

163. And yet you say these things accumulate for a month before being given to any examiner? Yes; they get into one of the examiners' rooms, and are allowed to remain there for a month before partitioning them. If Mr. Lander takes them to the examiners, the onus of the blame must rest with the examiners for the delay of the month at all events.

164. How many classes of cases are there? Two classes.

165. The first class consisting of grants to the applicants, and the second of grants under which there have been dealings? Yes, derivative titles—second-class titles.

166. Do the examiners deal with the first-class cases? They do.

167. As these do not usually involve any difficulty, would it not be better that the examiners should not be troubled with them? As a rule, I think the report of the examiners might be dispensed with in first-class cases.

- E. G. Ward, Esq. 168. Except in some very exceptional cases? Yes.
- 6 Mar., 1879. 169. Which occur very seldom? Yes.
170. Does the giving to the examiners of those first-class titles cause delay in the examination of second-class cases? It ought not to do so; they are very simple—A B C cases.
171. But is there not a great number of them? There are not a great number of first-class cases now; they have fallen off of late.
172. I suppose the great bulk of them have been brought in? No, there must be still a great many of them.
173. You are aware that many second-class cases, where there have been few dealings with the property, are almost as simple as first-class cases; how are those dealt with? They are dealt with by the examiners in the ordinary way of second-class cases.
174. In the same way as complicated cases? Yes.
175. Is there any possibility of making some arrangement by which another class might be established, so as to take those simple cases out of the category of complicated cases? You cannot very well divide the derivative titles into two classes. I cannot see how you could do it.
176. There is a difficulty, I can see? It would be a very good plan if the examiners would do it, but of course that is a matter for themselves.
177. It is a matter that I think they could very well deal with themselves? They ought to do so.
178. During what hours are the examiners supposed to attend to their duties at the office? From 10 to 4, with an interval for lunch of half an hour, or an hour. As a matter of fact, two of them are always here from 9 to 4, and have been so for some time past.
179. Do they attend punctually without absenting themselves during office hours? I think so.
180. All of them? All of them.
181. There used to be great complaints about one? I am speaking of the present time.
182. Do you consider that you have any right to interfere with them if they do not attend? I think I have the right to report them to the Colonial Secretary, the Ministerial head of the office.
183. Do the examiners take any trouble to assist applicants for titles in removing objections? I think not.
184. Did not Mr. Holden and Mr. Dick do so? Yes, always.
185. That is to say they would step out of their way to help applicants to get their titles through? Certainly.
186. And the present examiners do not? The reverse. They seem to invent objections rather than try to remove them.
187. Do the examiners try to facilitate the business of the office? What business do you mean?
188. I mean in passing titles. Do they do anything in order to get those titles disposed of? I do not think they do; not to my knowledge.
189. That is, as I understand you to say, that they rather obstruct than facilitate the passing of the titles? Two of them—Mr. Burton and Mr. Jones.
190. In Mr. Dick's time was it not customary to issue reminders to applicants who did not proceed speedily? Constantly.
191. Why was this custom dropped? I cannot say.
192. Was it not because the examiners themselves were in such arrear that they did not like to do it? Very likely; it is probable that that was the case.
193. Have there been any cases where titles have been accepted by Mr. Holden and Mr. Dick, and on fresh applications re-investigated by Mr. Burton as if they had not been passed before? I have heard of such cases.
194. Do you know whether there have been some? I know there have been cases brought under my notice, but I cannot call them to mind.
195. Have you heard complaints from solicitors or applicants that it has been the case? Yes, from solicitors.
196. Were there any complaints of delay and trouble to applicants—delay in the office, and trouble given to applicants up to the time of Mr. Burton's appointment? Not that I am aware of.
197. Were there any arrears of work then in the examiners' department? None; no arrears in the examiners'. Of course there were cases standing over waiting satisfaction of requisitions.
198. I think you will find in the former report that this is mentioned. It seems, however, that there was only a small arrear, some ten cases or so. Have any complaints reached you with respect to the conduct of the business of the Real Property Office? Yes.
199. Will you be good enough to state the nature of the complaints? The principal complaints have been of one or two of the clerks not being sufficiently attentive.
200. The counter clerks? Yes. I have also lately had a complaint that they are overworked, and require a larger staff at the counter. That has been principally owing to the large influx of Crown grants—two or three thousand in a week sometimes.
201. Are those complaints well founded? I think they are.
202. Then you think you have not sufficient assistance to carry on the business of the office? No, I have applied for additional assistance.
203. Is there any complaint in the Survey Department—the draftsmen's office? I have not heard any.
204. You think their work is kept up? I think so.
205. What has been the nature of the complaints about Mr. Burton? Simply that he delays titles for an extraordinary length of time before he issues any requisitions, and then when the requisitions are issued that they are extremely technical and troublesome, and of such a nature as very few legal men would ever dream of making.
206. And those requisitions add greatly to the expense of the applicant in getting his certificate issued? Certainly.
207. And sometimes to appeals to the Court? Yes, sometimes.
208. Can you tell us why Mr. Burton is so slow and so particular? I cannot say, I am sure. I suppose it is naturally constitutional.
209. Do you think he is able really to get through the business that is entrusted to him? I do not think so.
210. That is, he is naturally incapable of getting through his work? I will not say incompetent, but natural incapacity for that work.

211. Not energy enough? No, and not sufficient capacity for it. I mean to say he cannot get through any amount of work. The work he gets through in a day any ordinary man would get through in an hour.
212. He is very slow, and goes into titles too minutely;—is that it? Yes.
213. Have there been any complaints about Mr. Jones? No particular complaints—simply that he is in arrear, the same as Mr. Burton, in his work.
214. Does he do his work in the same way as Mr. Burton does his? To a great extent.
215. He is a man of the same temperament? Something—not quite so particular but quite as slow; and, unfortunately, whatever Mr. Burton says Mr. Jones agrees with at once. He does not seem to have an opinion of his own. He is led entirely by Mr. Burton.
216. But Mr. Jones is a younger man, and has more capacity for work? I think so—yes.
217. Was not Mr. Burton taken ill shortly after he commenced his duties here? He was.
218. And he had, I think, three months leave of absence? I think it was a month extended to another month.
219. Was that illness brought on by the excessive work in the office? I was told so.
220. You have another examiner now—Mr. Maddock? We have.
221. Have there been any complaints about him? No.
222. Does he do his work expeditiously? Very. He has got up a large number of cases in arrear left by Mr. Oliver, and other cases that have been signed by either Mr. Burton or Mr. Jones.
223. I understand you to say that you have no power to allot cases to any particular examiner? No, they arrange that among themselves. The Act says:—"Upon the receipt of such application the Registrar General shall cause the title of the applicant to be examined and reported upon by the examiners, and shall, thereafter, refer the case to the Lands Titles Commissioners for their consideration." Of course, when I forward a case to the clerk of the examiners, it is tantamount to forwarding it to the examiners.
224. Do you consider that all these three examiners are competent to examine titles, leaving the question of time out of consideration, as a matter of trust? As a matter of trust?
225. Yes; that is to say whether you would be safe in accepting a title passed by these examiners? Certainly; you would be quite safe by Mr. Burton. I am not quite certain about Mr. Jones; about Mr. Maddock I am. Mr. Jones has had no practice of his own. He was simply managing clerk when he came here.
226. Then you think Mr. Maddock is just as trustworthy as either of the other two? I do.
227. How many appeals have there been to the Supreme Court from the decision of the examiners, and can you state the result in each case? I should think there have been five or six, but I really forget the particular merits of each of them, except in the Underwood Estate title. I remember that particularly.
228. I have had three in my own office? I think there were about six; there are one or two pending now.
229. What has been the result of those appeals? The Court has always reversed the decision of the examiners.
230. Always decided against the examiners? Yes, as far as I can recollect.
231. What was the average of cases before the Board of Commissioners at each meeting previous to Mr. Burton's appointment? It is so far back that I could not quite state without referring to the minute-book.
232. Were you then Registrar General? I was Deputy Registrar General.
233. Perhaps you can state the number of cases lately before the Board, up to the time of Mr. Maddock's appointment? I think on an average three to four a week, and the Board meet once a week.
234. Has Mr. Maddock's appointment made any difference in that average? Considerably; I think the average is considerably higher now—from ten to twelve a week.
235. Was not Mr. Pennington considered a very lax examiner—he held office as *locum tenens* for some time? I have heard nothing to that effect.
236. Have any claims ever been made against the assurance fund? None.
237. And it now amounts to? £27,253 18s. 8d. up to the end of 1878.
238. Does not Mr. Burton, in cases of unoccupied lands, require the applicants to show that no person has entered upon the land, and acquired a title by possession? He does.
239. Who originated that requisition? Mr. Burton I think. The applicant declares that there is no one in possession. The application itself states that there is no one in an adverse possession.
240. Is it customary with the examiners to issue more than one batch of requisitions in each case? Yes, sometimes three and four.
241. You have heard great complaints from persons bringing in titles, that when they have answered one set of requisitions they have had another given them to answer? Yes, I have.
242. And if the whole had been given to them at once they would have considered whether it was better to withdraw their cases, or go to the expense of answering the requirements? Certainly. I do not think the public complain so much of the rigidity of the requisitions as of the great delay that takes place. One set of requisitions goes out, and is answered, and is then put away for months, and another set, and then a third or a fourth in the same way, instead of dealing with them at once.
243. *Mr. Terry.*] Does that not show incompetency on the part of the examiners? I should say so.
244. *President.*] Does this second, or third, or fourth batch of requisitions necessarily arise out of the answers to the first? Sometimes they may. I do not think requisitions can be sent out all at once, because the very answers may give cause for requisitions, but when they come in they ought to be attended to at once.
245. Then you think that there are some cases where requisitions which might have been issued in one batch are issued in two batches? Yes.
246. Where any requisitions have been made should not those requisitions be dealt with before the examiners take a new case? I think so; certainly.
247. That is, when they once start a case they should go through with it? Certainly, as soon as the requisitions are started they ought to be attended to. But they are not; they are put away for months.
248. Can you tell us how many cases were in arrear at the date of Mr. Maddock's appointment? I cannot say, but I can get the information.
249. Perhaps that had better be furnished in a tabular statement;—are there many deeds lost or mislaid in

E. G. Ward,
Esq.
6 Mar., 1879.

- E. G. Ward,
Esq.
4 Mar., 1879.
- in the office? I think not when you come to consider the number of deeds that go through the office. Comparatively, I think there are very few lost.
250. Have there not been complaints that people come here for deeds and cannot find them? No doubt there has been carelessness in putting away deeds and titles and not being able to find them at once.
251. How does that arise? Through carelessness.
252. In whose branch? In the examiners' branch as a rule; I do not know of any other instance.
253. *Mr. Archer.*] Are the applications to bring property under the Act looked at individually by all the examiners? By two out of three. Each case must be reported upon by two examiners.
254. How many cases in the year on the average do these two examiners get through? I cannot say. A return that we are preparing now will show that.
255. Have you no idea from experience as to the reasonable average that should obtain? They should get through about 300 applications in the year to bring property under the Act, and I suppose about 200 transmission applications.
256. That is to say each examiner;—supposing one examiner did all the work, how much should he do in the course of the year in regard to bringing applications under the Act? I suppose about 230, or 240 at the outside—or 200 I should think altogether.
257. Supposing each examiner did a fair share of work, in respect purely to applications to bring property under the Act? About 200.
258. *President.*] That is about four a week? Yes, I suppose that would be about the average.
259. *Mr. Archer.*] If you were informed that in a neighbouring Colony each of the examiners gets through a greater number, would you not think it possible that they would be able to do so here? Certainly. But there is one difference: our Colony being older our titles are more complicated than those in any of the other Colonies.
260. So that if in a neighbouring Colony 220 or 230 per annum were passed by each examiner you think that the average of 200 in Sydney would be a fair one? Certainly.
261. In point of fact, do your three examiners pass 600 titles in the year? Nothing like it.
262. Saying nothing as to transactions in land already under the Act? Saying nothing about them.
263. *President.*] They do not deal with them? No, they do not go before them.
264. Except transmissions? Ordinary transmissions are dealt with by the deputy and myself. In cases of doubt we used to go to the examiners, but we dare not do that now.
265. *Mr. Archer.*] But are not the legal officers appointed to this department for your guidance,—for your special assistance as a layman? Yes.
266. And are you not taking an unfair share of responsibility? Yes, certainly.
267. And what in the interests of the public you are not required to do? In the interests of the public I think I am required. I act purely as the Registrar General and with the deputy.
268. And do you feel yourself thoroughly capable to undertake this responsibility? In nearly every case I do. I should not undertake it if I did not. But I ought to be in a position to have a legal man to refer to whenever I wanted to do so.
269. But is that not the intention of the Act? It is.
270. That these gentlemen should be the legal advisers of the Registrar General and that he should be relieved of all responsibility on legal points? Certainly.
271. What is your position as Registrar General in relation to these examiners; have you any control at all over them? I have in a departmental sense.
272. How do you exercise it? In various ways. For instance, they write to me for leave of absence.
273. But you do not give it to them? I forward it to the Colonial Secretary. Everything goes through me.
274. But that is merely being a conduit pipe. I mean what authority do you exercise as Registrar General over the legal officers? If they do not do their duty I report them.
275. Have you reported them? Yes.
276. Recently? Two years ago.
277. Have the Government supported you in matters of that kind? No.
278. They have simply ignored your request? They have. For instance, Mr. Oliver remained away from the office over and over again.
279. Do you find with the gentlemen who are at present examiners any difficulty similar to that you found with Mr. Oliver? No, I do not.
280. You said that cases came before the Commissioners for acceptance or rejection. In point of fact, have you ever rejected a case where the examiners have recommended its adoption? Where the examiners differed we have.
281. But not where they have recommended it? No; where they have recommended, where both have recommended.
282. On what grounds? On certain legal grounds when they have recommended objections.
283. You have never taken upon yourself to object what they have recommended for acceptance? Never.
284. Then, in point of fact, as supervisors of the recommendations of the examiners the Commissioners are of no practical use? No.
285. Their duties are simply perfunctory? To a great extent.
286. Can you give a single action of theirs of the slightest value; that is to say, is there a single act which they perform that the Registrar General or the examiners themselves could not equally well perform? They could, provided we had competent examiners of titles. If I could be assured that the Government would always appoint competent men as examiners of titles then I would say by all means we could do it.
287. But the Commissioners invariably accept the examiners' recommendations of the acceptance of the title? Of the general acceptance of the title. We very often ignore qualifications.
288. But, in point of fact, they adopt all that the examiners recommend, and reject what is considered unnecessary? The general acceptance or rejection of a case depends upon the examiners.
289. So that the Commissioners exercise no power of revision over them? No.
290. And they are useless in that regard? They are in that regard.
291. I understood you to say you are preparing a return of the amount of work done by each of the examiners? I am.
292. How many working days have you in the year? About 300. That is after deducting Sundays and holidays.

293. *President.*] I am afraid you have less than that? No, I think not.
294. *Mr. Archer.*] You say that is the number of working days the examiners would be expected to attend? Yes, about 300 days. E. G. Ward,
Esq.
6 Mar., 1879.
295. With regard to the time that should be taken to get a case through—supposing the title is all clear and the solicitor of the applicant promptly attends to the requisitions, do you not think that four months is too long a time? Three months are quite sufficient.
296. Could you ascertain what is the average time taken, and let the Commission know? I could do so, but it would be a very difficult thing. I should have to go through the records of the minute book from the foundation.
297. Can you not take the last few months of the year and ascertain the average? Yes.
298. The average time that it takes in the majority of cases to bring the property under the Act—say during 1878? Yes. (*Witness was directed to prepare a return.*)
299. With regard to officers. You were saying that you were undermanned in the pressure of work? At present.
300. Do you adopt a system of employing supernumeraries? I have applied for them, but have never had them.
301. Are you accustomed to employ anyone in the department on piece-work? Yes.
302. To what extent? I employ law stationers to engross certificates of title.
303. And do you do the same in regard to endorsing on certificates? No, I could not do that very well.
304. Why not? Because we employ clerks who have other duties to perform as well as to do that.
305. But is not work hindered through this? No, I think not.
306. If you employed them after office hours, for example, would you not get through more work? Of course I should.
307. Or if you employed persons on contract, not the persons in the office? I should not like to employ in the office supernumeraries who are outside the office. I should not like strangers to be in the office after it is shut.
308. But they would not be strangers if you employed them constantly? Not if I employed them constantly.
309. My object is to see whether you could not secure a greater result and with benefit to the public by employing supernumeraries (or call them anything else you please) on piece-work? That is at so much per folio.
310. Yes? I think so.
311. Supposing you had to get out a great number of cases by a certain time, would you not do the work with greater facility by employing extra persons to do it? In that case I use a private printing press; I do not use writing at all.
312. Then you are not interrupted in that? Not in that kind of work.
313. Will you think over the point whether contract piece-work might not be useful to you? I will. I do not see how we can bring it into effect with regard to the current work of the office.
314. Do the draftsmen make out diagrams as officers of the department or by piece-work? As officers of the department; no piece-work.
315. Then you do not in fact employ contract work at all? Except in regard to engrossing certificates of title.
316. What is paid for that? 3d. a folio.
317. How many folios on an average? Five or six folios.
318. Then that would be (as it is in duplicate) 2s. 6d. or 3s. for each case? We always do that; we employ an immense deal on contract or piece-work.
319. With regard to transactions respecting the land already under the Act, how many of those go through the office per annum? The return will show that.
320. And as to whether all the examiners or only one deals with those as well as with applications? The examiners do not deal with transactions at all except in transmission cases.
321. Will you give what they do in regard to transmissions? Yes.
322. Practically you find yourself, as Registrar General, in a false position in relation to the examiners—not having a practical control over them? Yes, I do.
323. *Mr. Terry.*] You collect an assurance fee on grants direct from the Crown? Yes.
324. Do not you think that ought to be remitted? I do not see why Crown grantees should not pay the assurance fee of a half-penny in the pound, the same as persons bringing property under the Act. It brings in a large revenue, and after all a half-penny in the pound is a mere bagatelle.
325. Do you consider it necessary that the Crown should collect an insurance fee on transmission cases? No, I think that ought to be abolished.
326. *Mr. Robertson.*] It is chargeable by the Act.
327. *Mr. Terry.*] Has Mr. Maddock taken more cases than have been supplied monthly to him? Yes.
328. Has that practice now been stopped by the other examiners? I have not heard whether it has or not. I know that for one or two months he has come to me saying that he has had no case in hand, and I have requested the officers to forward applications upstairs to him.
329. You are not aware that the other examiners have objected to his taking more cases? He has informed me that the examiners do object.
330. Because he gets through more cases than themselves? I believe so.
331. Have you been aware that the examiners—Messrs. Oliver and Jones—have held that it requires in a dower case a special release for every case? I believe they do.
332. That they have rejected a general release of all dower on all property that the husband may be possessed of—that they have rejected that, and insisted upon a special release upon every property? Yes.
333. Do you think that is right? I should think not.
334. Does Mr. Maddock dispose of two cases to one disposed of by the other examiners? I think he could almost do ten to one. I do not know whether he has had the opportunity of having them to do.
335. Well, do you not think if Mr. Maddock is idle in his office that other cases ought to be forwarded to him, independent of the other examiners? Certainly; I have instructed the officers to do so.
336. Do you recommend any change? I recommended a change two years ago, but it has not been acted upon. I wrote a long letter to the Colonial Secretary on the subject more than two years ago.

- E. G. Ward, Esq.
6 Mar., 1879.
337. Do you think it would be an advantage to the public if Mr. Burton were pensioned off? I do. I think it would be a very great blessing—more than an advantage.
338. What would you recommend in reference to Mr. Jones;—you say he is very slow in getting rid of cases? You do not know what to do with him. Of course if he were in private employment it would be a different thing altogether.
339. I suppose you would recommend high-class practitioners to be appointed? I would recommend the appointment of two examiners at £1,500 a year each in the place of three at £800. I recommended that more than two years ago to the Government.
340. I suppose a first-class man would not take the position at the low salary? You cannot get a first-class man at £800 a year, except under peculiar circumstances.
341. Then, since the death of Messrs. Holden and Dick, the office has not worked so satisfactorily? No, it has not.
342. And the public have not so much confidence in it? I think not.
343. Have many cases been withdrawn? Yes, there have been.
344. Have some cases been pending for two years? More than that—three, I think.
345. And then passed? And then passed.
346. What is the reason of the long delay? I cannot say. I know some have been in the office more than nine years, but that was in consequence of the neglect of the applicant to answer the requisitions.
347. I understood you to say that you think the Act would work well, provided it was efficiently conducted? I think so.
348. That the Act itself does not require so much amendment? No.
349. *Mr. Robertson.*] The principal cause of delay I understand from your answers to be in the requisitions, those that might be called original requisitions being sent out in batches instead of being sent out all at once? Yes.
350. Long as some of our titles are, did you ever see a lot of deeds that could not be perused by an intelligent conveyancer in a day? Certainly not—well, yes; I may say with one exception I have not. I saw an exception the other day in a title that would take an intelligent man three days to peruse the deeds, but that is an exception.
351. Do you see anything to prevent all original requisitions from being sent out within twenty-four hours of the application being lodged? Certainly not.
352. Temperament, as well as skill, has a good deal to do with the capacity of an examiner, has it not? I think so.
353. Is it true that Mr. Jones suffers from a nervous fear of incurring responsibility? I believe he does.
354. And Mr. Burton has great skill in discovering objections to titles? He has.
355. I suppose he would be an invaluable conveyancer for an unwilling purchaser? Yes, I should say so; about the only class for which he would be any use.
356. I understand that you disapprove of any scheme for passing indifferent titles on payment of extra premiums? I do.
357. *Mr. Terry.*] Do you think it necessary to compel applicants to produce deeds not in their possession, and which are already registered? As a rule I should say it is unnecessary. There are some cases in which I think it might be necessary.
358. But do not the examiners insist in every case that these deeds shall be produced? Yes, in every case.
359. Do not the examiners generally object to go out of their way to look at a registered instrument? Yes, they do.
360. Do not you think it is their duty to go and look? I do; in fact registration is very little use to us at all, because it is not taken—it is looked upon as a dead letter.
361. Is it not a fact that in law the first registered instrument takes effect? Yes, I believe so. There is one part of my evidence I wish to supplement, in regard to piece-work. There is another part of the work in this office which we pay for as piece-work as well as engrossing, and that is searching, at so much an hour.
362. *Mr. Archer.*] Will you give a list of your officers on the staff as well as the Commissioners and examiners, with the salaries and the number and cost of supernumeraries? I will.
363. That is for last year? Yes.
364. *Mr. Robertson.*] During the time that Mr. Oliver was Examiner of Titles was he not employed by the Government drafting Bills? He was during one portion of the time—during the latter portion of his term of office—for about three months I think. He was also Registrar of Friendly Societies, and that interfered with his work.
365. *Mr. Archer.*] That caused the delays? So far as he is concerned—and his continual absence from duty.
366. *Mr. Terry.*] Mr. Lander has other duties to perform? Yes, he is Custodian of Wills.
367. Do you consider that right? It interferes with his duty as examiners' clerk. He ought to be relieved of that duty, and the work given to some other officer of the department. It ought to be attended to by some other person, who has less to do than Mr. Lander. Applications sometimes remain three months with him before he looks at them. Many people come up and look at those wills, and want to peruse them; and they may want copies of them, and that delays him.
368. *Mr. Archer.*] But when you have known of the practice of his detaining these applications for months, have you never taken any steps? Yes, I have been to him and to the examiners, with the object of relieving him of the wills, but they have always opposed me, and think it right that he should have the wills.
369. Have you reported that to the Colonial Secretary? I have not.
370. From previous experience in that regard you did not feel encouraged so to do? No, the Government do not seem to feel any interest in the department. I did what I thought proper at the time, and took no further steps.

MONDAY, 10 MARCH, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

WILLIAM HENRY ARCHER, Esq.,

| THOMAS ROBERTSON, Esq.

Edmund Burton, Esq., Examiner of Titles, examined:—

371. *President.*] I believe you are senior Examiner of Titles under the Real Property Act? I am senior as to date of appointment.

E. Burton,
Esq.

372. There are now three examiners? Yes.

373. Will you be good enough to inform us what the duties of the examiners are? I must divide the answer to that question. One part of my answer must be, the duties imposed by the Legislature, and the other must be the duties which they have been in the habit of discharging.

10 Mar., 1879.

374. Yes? I should like, if you would kindly allow me, to refer to the Act. The duties of the examiners are defined in the 5th section of the principal Act in Part I, just at the end of the section.

375. "To advise and assist in carrying out the said provisions"? Precisely. There is, of course, more definition to be collected from other parts of the Act, but that is the general definition of the duties of the examiners, given by the Legislature,—to advise and assist in carrying out the provisions of this Act.

376. Then how do the examiners carry out their duties imposed by this section;—in what manner do they carry them out? I will answer that question immediately if you require it, but that is touching another part of the Act. First of all, the 15th section deals with what we call first-class cases. It will be observed at the commencement of that section that it is made the duty of the examiners to examine and report upon cases of that kind, and indeed on all cases of application for certificate of title. The last amending Act, 41 Victoria No. 18, section 5, just touches incidentally the special perusal or perusal under special circumstances of deeds by the Examiners of Title. It is hardly worth mentioning that section, but I suppose it makes the answer more complete. Then the 7th section of that new Act imposes a clear duty on the examiners. That section says: "It shall be competent for though not compulsory on the Commissioners, if so advised by the Examiners of Titles, to dispense with a certificate of the death of the deceased registered proprietor on production of such other evidence of his death as the Examiners of Titles shall think sufficient." So that is a special duty cast upon the examiners. The latter part of that section takes off from the examiners a duty which, I think, was previously imposed upon them, but as that is a matter upon which some difference of opinion has prevailed, I do not propose, unless further asked, to say more about it.

377. That will do; we only want to get a general idea of what the duties of the examiners are? Quite so. Then the 10th section of that Act provides by enactment so as to cast a duty upon the examiners which generally they have been in the habit of performing without any enactment. That is to say, they perform the duty in similar cases though not strictly identical. The 10th section, it will be observed, provides for special cases, when an applicant deems an objection by the examiners to be not well-founded.

378. That is not the title generally, but one particular item of the title? Precisely. That section provides that to every such case there shall be annexed such observations as the examiners may think proper to make. Either in addition to those statutory duties, or under the heads of advice and assistance, the examiners have been in the habit of doing a good deal of other work.

379. Not contemplated by the Act? I do not say that, because those words "advise" and "assist" are large enough for the contemplation of anything.

380. Perhaps you will state the nature of the work? Conducting a large correspondence.

381. With whom? With applicants and their solicitors.

382. Yes? Drafting special letters to the Colonial Secretary's office.

383. Anything more? Advising the Commissioners in cases of foreclosure; advising upon transfers which give difficulty to the gentlemen at the counter; checking accounts.

384. What sort of accounts? For engrossing and searching.

385. Accounts against the office? Yes.

386. Anything further? Members of the public, as well as members of the profession, are in the habit from time to time of applying to the examiners for useful advice before bringing cases into the office at all.

387. Which they only get as a matter of favour? Which they invariably get with much courtesy. But I think it is perhaps a matter of favour. The words of the Act are very large. I have been consulted in the street, and on board steamers, as well as in the office.

388. Is that all? I think so.

389. In what manner do titles to land, for which certificates are sought, go into the hands of the examiners? There is a difference of opinion as to what going into the hands of the examiners means in this office. The Registrar General considers that as soon as a case is sent upstairs it is in the hands of the examiners.

390. Have you not a clerk? Yes.

391. Being sent upstairs then means delivered to that clerk? Yes.

392. Have you the control of that clerk? I do not think we have.

393. He is called the clerk to the examiners? He is called the clerk to the examiners. During one year he was not called so in the Estimates, but he is called the clerk to the examiners now, and no doubt we ought to have the control of him. As a matter of fact we have not.

394. Does he do other work than yours? Yes.

395. Well, suppose a title is placed in his hands for the examiners—the Registrar General considers he has done his duty as far as that application is concerned? Personally, the Registrar General has nothing at all to do with it.

396. Well, his officers then? Yes.

397. They consider when the application and the title have been handed to the clerk to the examiners, that the examiners thenceforth have charge of the case? I think they consider so.

398. Is it not so, in point of fact? No.

399. Supposing Mr. Lander does not hand you any application with the documents belonging to it, you do not consider yourself at all responsible for any delay thereby occasioned? Certainly I do not.

- E. Burton, Esq.
10 Mar., 1879.
400. Then you have no control over Mr. Lander, or in regard to seeing that the office work goes on expeditiously so far as initiating the investigation is concerned? I do not say we have no control over Mr. Lander, because I think, generally speaking, Mr. Lander would execute our directions, but we have not the control over him, because from time to time the Registrar General and the Deputy Registrar General issue orders to him which take him off our work.
401. Then, at all events, you have issued directions to Mr. Lander? Certainly.
402. As to the applications placed in his hands? No; we often tell Mr. Lander to do this or to do that, and he generally does it, but we have not given him any general directions as to what he shall do with cases.
403. Then how do cases come into your hands at all? I am glad to tell you. They are sent upstairs, and received by Mr. Lander. Mr. Lander then prepares a search paper, having gone through the deeds sufficiently for the purpose, and when that search-paper has been prepared, and the search has been made, he takes the case to the principal draftsman. That officer examines the search.
404. The principal draftsman I understand is in the Survey Office—the man who deals with plans? Yes; he is Mr. Pearson, who has been attached to the office for many years.
405. In a solicitor's office we attach the term draftsman to another officer. You mean Mr. Pearson, who deals with the plans? Yes, he is styled the principal draftsman.
406. Yes? The search-paper and the search are on foolscap paper, and folded once (if it is necessary to go into such particulars), and upon the fold Mr. Pearson marks all such dealings found on search as it is necessary for the examiners to see.
407. Mr. Pearson, you say? Mr. Pearson, the draftsman, marks on the search-paper all such deeds found on search as are not amongst the papers or in the abstract lodged in the case.
408. You mean all such deeds in any way affecting the title? He does not know anything about the title, but if the deed comprises the land he marks it.
409. Affecting the land? That is it.
410. Yes? In some cases Mr. Lander, in preparing the search-paper, sees a very palpable difficulty, as it seems to him, in the title, and he thereupon may send a letter at once to the applicant or his solicitor upon that difficulty. In that way, till the letter is answered, that particular title may be prevented from coming to the possession or knowledge of any of the examiners personally. In ordinary cases, when the draftsman has dealt with the search-paper, and made such requisitions (if any) as occur to him for a plan not furnished, and has pointed out in his report any encroachments or perhaps absolute want of title to some large piece running occasionally to 7 or 8 acres, if not more, the cases are carried into Mr. Jones's room; they remain there till about the 1st of the ensuing month; then the examiners divide all the cases between them.
411. Evenly? Generally evenly.
412. Then I understand you to say there is a division once a month. That is, cases have become ripe for examination you may say? Precisely.
413. Then you, in fact, allot them among yourselves? Yes.
414. And do you divide them evenly? Generally.
415. Whether you have an arrear on hand or not? Yes.
416. That is, whether one who is in arrear or quite up with his work, he still gets one-third of the new cases? Yes, generally. Transmission cases are also subject to this division; but they have not to go through the preliminary stages of search and draftsman's work.
417. And they are allotted and dealt with in the same way? Precisely.
418. In what manner do you investigate the titles when they do come into your hands? We pursue what I know as the late Mr. Norton's plan. That is the name I give it in my own mind.
419. What was that? We read the original deeds.
420. Not the abstract if there is one? No, we read the original deeds. We do also what Mr. Norton had not an opportunity of doing,—we read the original wills, if any.
421. What next? As to our next step there has been great diversity of proceeding. That is, there have been, at least, two or three plans pursued. The plan of the late Mr. Holden, who was senior examiner, was, I think, generally, to send preliminary requisitions out as early as possible. The preliminary requisitions having been sent the case would be put away as under requisition.
422. What was the nature of those preliminary requisitions? A memorandum which I have upon the subject is so close at hand that, if you will allow me, I can very readily refer to it.
423. Very well? The supply of plans, production of deeds, proof of births, deaths, marriages, &c., are subjects for preliminary requisition. Occasionally, parties do not answer for years. Perhaps they get reminders, but there is generally a pressure of business in the office, and subject to Mr. Lander sending them some reminders on a printed form, if they do not answer the preliminary requisitions, the cases remain till they do. We never need be idle; we have always quite enough to do in attending to the business of applicants who attend to their own business. We are never driven, for want of other work to attend to the business of those who do not attend to it themselves.
424. Are you not aware that these preliminary requisitions often cause a great deal of annoyance to applicants;—they assume that these are the objections to the title, take some pains to deal with them, and then find them the commencement of a series? I do believe it.
425. Then does the same system go on now? Not so much.
426. I suppose only in obvious cases, where some little defect can be supplied readily? I shall have to answer somewhat more at length. I should like to remark that when the word "preliminary" is written, as Mr. Holden was in the habit of writing it, at the top of the letter, it fairly warned the applicant that there were other requisitions to come. And, indeed, when any gentleman is asked to produce a deed, or to produce a certificate, or to produce a plan, he must know, if he will reflect, that objections may arise out of those very documents, when produced. Besides preliminary requisitions, strictly so called, this office has, for the most part, been in the habit of dealing with titles by correspondence.
427. What do you mean by correspondence? Sending letters to the applicants or to their solicitors, in which the difficulties occurring to the examiners have been pointed out, or further light upon matter of fact, or occasionally the applicant's own contention upon a point of law has been invited.
428. You are dealing now with preliminary objections? No, I am rather talking now of substantial objections. With regard to preliminary requisitions I should like to say this, that, although they certainly have their objectionable side, they also have their valuable side.
429. That is to say, I suppose, if put with discrimination? Well, even if put without discrimination. If

very great discrimination were to be used when putting them, one great advantage would be lost, because so much time would be necessarily involved in exercising that discrimination in a multitude of cases that the examiner may just as well make a thorough investigation with such material as he has before him in each instance.

E. Burton,
Esq.

10 Mar., 1879.

430. I think you said just now that was the present practice of the office in regard to that? No, I must not say that; I must give a full answer. The sending off of preliminary requisitions at an early stage has this great advantage, that it sets the applicant at once to search for certain things which it seems will be wanted, and so much time is saved. For all that I am not personally much in love with the system of preliminary requisitions; and if some consideration were exercised towards examiners, if it was not considered so very shocking a thing for an examiner to have a large multitude of cases in hand at once, it might perhaps be better for him not to make any preliminary requisitions, at least as a general rule. There are, of course, two sides to the question. As a general rule we have not of late years been so much in the habit of making preliminary requisitions as the office used to be. Titles have been, till a comparatively recent period, generally dealt with by correspondence, setting out the objections and difficulties which occurred to the examiners, and for some purposes that, I think, is the very best plan of dealing with titles. We have been pursuing another system to some extent lately, which has its own decided advantages; that is, of reporting a title to the Commissioners with the recommendation of its acceptance, subject to qualifications. That is practically, I am informed, the Melbourne plan. When I was in Melbourne I was informed that it was the habit of the professional Commissioner reviewing the objections to a title taken by an examiner to strike out such objections as he thought fit, to add such new objections of his own as he might see fit, and then to make an order that this title be passed subject to the following conditions. The practice of dealing with titles by correspondence has been the practice of this office for a great many years, and to the late Mr. Holden and, I suppose, to the late Mr. Dick, the credit of establishing that practice is due. The plan of reporting, subject to qualifications which we now frequently adopt, is practically identical with what I understand to be the Melbourne plan. It has its advantages. The title is brought to a certain stage; the applicant sees it advertised; he can say to himself, "My title is passed subject to only certain specified points"; he has something certain to go upon and he can apply himself to the removal of the specified difficulties.

431. Then do these qualifications comprise only such objections as it is likely the applicant can remove? Such objections or defects as it is possible he will be able to remove.

432. I can quite understand the advantage if they are simply forms he has to go through, but not if the objections are fatal to his title and he cannot remove them? I have something further to tell you. I do not know whether there is any correspondence in the Melbourne office with applicants before report by examiners, but as a general rule whether under what I call the old practice or the new, in this office that correspondence does take place. I think very well myself of the system of reporting subject to qualifications, but I am aware that it has its disadvantages. Sometimes so very great a defect may be covered by a qualification which perhaps the examiners making it had no reason to suspect—a document called for may turn out to be so very special, so very much to the contrary of anything that there was any reason to expect—that it may either almost or altogether destroy the title, which before that document was produced there seemed a fair prospect of supporting. I think, however, that the advantages of this qualification system outweighs the disadvantages.

433. Provided always that discrimination is used? Decidedly. Discrimination decidedly ought to be used in reporting, subject to qualifications.

434. Because after this the property is advertised, and if he cannot remove those preliminary objections—those qualifications—his title is destroyed? There is a danger of it.

435. Is that all? I should perhaps say that a great advantage in reporting, subject to qualifications, is that the examiner makes up his mind upon all other points in the case when he so reports; and on the other hand if the case be left open on correspondence many years may elapse before the applicant will remove the difficulties. In some instances the examiners die, and their successors have to go through the title *ab initio*. Now I think I may return to your question.

436. You got as far as perusing the deeds and the wills? The examiner having done that generally makes a skeleton abstract, and also makes his own notes.

437. Notes of objections, I suppose, or things to be inquired into? Speaking for myself, mine are not always notes of objections, but may be notes of removal of objections, such as, "I do not think this is an objection to title, because so-and-so."

438. Yes? He then sends the case to one or other of his colleagues. I keep a list, and I send cases generally to my colleagues alternately, exercising some fairness with regard to not sending one man two specially heavy cases in immediate succession—something of that kind. The examiner who receives the title in the second instance peruses it.

439. Without the assistance of the first examiner's notes? I think he generally has them. We generally leave our notes in the packet. If both the examiners are satisfied with the title they can at once report it as fit to be passed. The Board of Land Titles Commissioners thereupon order it to be passed, and it is advertised, and unless under special circumstances the examiners have no more to do with it.

440. Perhaps you will state in what manner objections are sent to applicants? There are two modes: one is for the first examiner to send on the case to another without any draft letter, and for the two examiners afterwards to agree upon what requisitions they will make.

441. And the other? The other, which I consider perhaps generally preferable, considering the saving of time, is for the first examiner to draft a letter to the applicant or his solicitor, setting out the objections which have occurred to him, and marking it, "Forward, if Mr. So-and-so (the other examiner to whom the case is sent) concur."

442. That letter then is either forwarded or you have a consultation together, I suppose, and perhaps modify it or alter it? Yes.

443. And ultimately it is forwarded, or perhaps withdrawn altogether? Generally it is forwarded—sometimes it is not. A case may be reported subject to qualifications to the effect of the letter.

444. Then a long correspondence may ensue with the applicant or his solicitor? Certainly.

445. Which occupies a time that you cannot put any limit to? Quite so. But it always may be practically limited by the applicant or his solicitor.

446. How? Asking the examiners to report whether favourably or unfavourably.

447. But applicants will not do that if they have any hope of getting the examiners to pass the title?

- E. Burton,
Esq.
10 Mar., 1879.
- title? Quite so; and the mild practice of this office, originated by Mr. Holden and Mr. Dick, has always been never to report against a title unless driven to do so.
448. Then the effect of this correspondence may be that titles which otherwise might be rejected will be ultimately passed? Certainly.
449. From the facilities you give applicants to correct what was originally defective? Quite so. I may be allowed to say that I have known a case in which a title has come in in three parts. A very respectable firm of solicitors sent it in during the time of the late Mr. Holden and myself. We were not satisfied with part first. We corresponded with the solicitors. We got part second; we were not satisfied with that. They produced part third.
450. What did those parts consist of? I will tell you directly. And we were satisfied with that—with part third. Speaking from recollection, part first consisted of a set of deeds; parts second and third consisted of another set of deeds and of counsel's brief in an action.
451. However, the title ultimately passed? The title ultimately passed.
452. And but for your giving them facilities to touch it up it might have been rejected? Must.
453. Do you consider it necessary that all three examiners should report on every title? I do not; and it is not the practice for them to do so.
454. I know it is not? If you mean in point of law I confess I have very great doubt indeed, but if you mean do I consider that it is necessary from the reason of the case I do not think it is. I think that two examiners are quite enough to investigate one case; the only question is whether it should not be done by one.
455. The Act says the case shall be reported upon by the examiners, and whether those examiners consist of two or of twenty the words remain exactly in the same state? It is so, and I have always thought if there were an Act passed in which I had any practical share I should recommend a clause to the effect that the duties imposed on the examiners might be executed by any two of them.
456. However, in point of fact the titles are reported on by only two out of three? I think so; generally.
457. I assume generally. Do you deal with cases referred to you strictly in rotation? Not absolutely.
458. There are first and second class cases? First-class cases are always cleared out of the way at once.
459. As far as second-class cases are concerned do you deal with them strictly in rotation? Not absolutely in rotation. I have gained I believe some disfavor from dealing with them almost strictly in rotation.
460. No doubt it is the proper process if they are much the same kind of titles, but although there are only two classes under the Act you are aware that some second-class titles are almost as simple as first-class titles? It is true.
461. And others are immensely prolonged and immensely difficult? It is quite true.
462. Then you do not deal with these second-class titles simply in rotation? I do not.
463. Generally? Laying it down for myself, as a general rule, I write the names of the cases in a list, and generally I go regularly down my list.
464. But you make some exceptions? I do.
465. Can you name the instances in which you make exceptions? If I have a spare half-hour or a spare hour, and I think the time will suffice for such a case, I may take that case up, and endeavour to dispose of it in that odd piece of time.
466. That is to say a case which you consider to be a comparatively short one? Quite so. Then I have sometimes been moved by the urgency of parties. On one occasion I was moved by the special circumstances of a lady. She told me she wanted to marry, and that her marriage was waiting for the passing of her title. I proceeded with her title immediately.
467. Then in cases of emergency, on any account whatever, they are sometimes taken out of their turn? Yes.
468. Were there any arrears of cases when you took office? Yes.
469. About how many? I do not think I can answer the question, but I may give some idea. I must ask you to let me refer to something I have in the next room.
470. Certainly? It has not been my strict business to prepare statistics at any time, and I always have had a very great deal of other work to do, and I had not any knowledge when I entered the office of what cases there were in arrear. As to the expression "in arrear" it is one about which sometime ago a very great difference of opinion prevailed. I always said that a case was not in arrear when the office was waiting for the applicant. But it has been attempted to confuse cases not finally reported upon, although the office was waiting for the applicant, with cases in which the applicant was waiting for the office.

WEDNESDAY, 12 MARCH, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P., | WILLIAM HENRY ARCHER, Esq.,
THOMAS ROBERTSON, Esq.

Edmund Burton, Esq., Examiner of Titles, further examined:—

- E. Burton,
Esq.
12 Mar., 1879.
471. The witness said:—I wish to add to my answer, with reference to my position as senior examiner, by date of appointment, by stating that I am not and never was senior examiner in that official sense in which Mr. Holden was. I should like to say that on the occasion of my appointment it was expressly stipulated that Mr. Holden was to be senior examiner. He consequently, during the remainder of his life, had for many purposes such a charge of the Land Titles Office, and such a control over it as I never have had. When Mr. Oliver and Mr. Jones were appointed examiners, a letter of the 13th July, 1874, was sent from the Colonial Secretary's Office to the Registrar General, stating that the three examiners would from that date hold office on an equal footing as to their duties and authority.
472. *President.*] On the average, how many titles per week do you examine, and either approve of or send requisitions to the applicants? I cannot tell at all.
473. Cannot you give us any idea? No, I cannot.
474. You can say whether one or a dozen? Of course I can say that there are more than one and less than a dozen, but I cannot give you any clearer idea. I may have a case involving £50,000 of property,

375 grants (which of course make a mechanical difficulty as to the time employed), and a point of law which has agitated the English Courts for seventy-five years. That has happened. With such a case as that I have taken great pains indeed, and it has necessarily occupied me a very long time. I cannot average such a case as that with a first-class case.

E. Burton,
Esq.

12 Mar., 1879.

475. I admit that some cases may occupy a whole week, but you may have a run of easy cases which may be disposed of at the rate of one per day—I want a sort of general average? It is very difficult to deal with these general averages. I could show you cases which perhaps no one could deal with in a week. There are cases in which you cannot get the deeds into one packet. There is the case of Tuck for instance, in which I calculated that the expense of investigating the title outside the office, if two solicitors were employed, would probably be £200, and this office would charge £11. An enormous amount of pains was taken with that case. Mr. Tuck's title was most complicated and curious. Some lots, perhaps, he had not any title for, and for others he had, perhaps, a freehold title. In others he had a long term of years by virtue of mortgage by demise. We could not under our Act give him a freehold for those portions. We took enormous pains over his case. We wrote him long and numerous letters, and he wrote us at last that he was old and infirm and should like to have his case passed. Such a case as that, which shows a large mass of my handwriting for one, obstructs the office. It requires very good management on the part of the applicant. Cases of that sort are, so to say, the bane of the office.

476. Suppose you leave out such exceptional cases as that of Mr. Tuck, of which there will not be a very large number? There are a very large number.

477. But they are estimable, I suppose? All this could be done by a statist. I suppose I could do it by taking time, but the difficulties of averaging anything of the sort are great.

478. Then will you be good enough to add to the return you are preparing an item showing what cases you have dealt with in the way indicated, from the time of your acceptance of office till the end of last year? It will take me a long time, and will stop the other business of the office, but I will give you all the information you ask. My avocations are very numerous. I have more work now than ever I had before. I praised the qualification system the other day, but that system gives me a great deal of work. The short result is that when a case is dealt with under that system we have never done with it. It is always coming back upon answers to qualifications. The work is perpetual.

479. *Mr. Robertson.*] Do you not think that it would have been advisable to have made Mr. Tuck divide his application, making a separate application for each property held under a different tenure? I think it would. It must be borne in mind that this office is conducted, to some extent, on the principle of a shop. It is desired to encourage custom.

480. *President.*] Too much, I think, in some respects? I think so too; and that is very severe on examiners. If the office were not conducted so much on the principle of a shop, of inviting custom as much as possible, the work of the examiners would be much easier. I may instance the violation of the form, which I believe was settled by the Governor and the Executive Council, for applications. That is not so very often violated, but it has been sometimes very materially violated to the retardation of the business, and to the increase of the work of the examiners. That form provides a schedule of deeds; but a gentleman has come here and lodged his application—I suppose he has been in a hurry—he seems to have been encouraged like a customer, and therefore has been allowed to make his application, and his application had been received—and this schedule has been left entirely blank, when his title has consisted of twenty or more documents.

481. That is the fault of the counter-clerk? That is the fault of the counter-clerk, or of the person over him directing his movements.

482. Well, I think, with respect to this matter, what you will have to do for us is really to add to the return you are now making up the number of cases dealt with by you, either by acceptance or by forwarding requisitions to applicants, during the same period over which you are looking for the other matters? I shall do it, of course, but it will stop my work for a very considerable period.

483. Do you remember whether you have ever passed a second-class title without requisitions? Oh, yes.

484. Then it has happened sometimes? Oh, certainly.

485. Do you consider it your duty, as examiner, to make every possible objection that can be raised to the title? No, I do not, and I do not do it. I act a good deal upon what I conceive to be a very sound view, which was expressed by the late Mr. Holden. He said to this effect: "I should always like it to appear, when there was a difficulty in a title—that we had seen the difficulty and accepted the title, if accepted at all, notwithstanding that difficulty." He meant that he would not wish it to be supposed that we had passed a title with a difficulty without seeing it; he wished it to appear that we had done the thing as a matter of judgment after investigation, instead of as a matter of chance without investigation.

486. In that way, to some extent, you would make evidence against yourself in case those difficulties ever turned out to be real difficulties? I should, and I do. In my remarks will be found from time to time one which is never sent to the applicant at all, and opposite to which will be written "Not an objection." That remark of mine is an explanatory one, stating, perhaps, in short, why I do not object on such and such a point.

487. Do you ever send out objections, or requisitions you call them, which, if not complied with, would not prevent your passing the title? If the question is put in that way I may say yes. But the thing needs explanation. It is very well known that there is in this office at all times a large mass of business, and time is, of course, always a great point. A difficulty may strike the examiner who first receives a title, and he may write a letter to the applicant upon that difficulty, and send the draft to one of his fellow examiners for concurrence. The fellow examiner may be very busy, and may not have time to fully investigate the title and ascertain whether that objection is clearly maintainable; but the letter having been drafted by one examiner, the other examiner may very well think "I shall send the applicant something, and I may perhaps save time if I send this letter on to him at once without decision on the point in my own mind, or arguing the case in my own mind."

488. Then I assume that such requisitions are sent for the purpose of saving the examiners' time, and in the hope that the applicant may show you that they are unnecessary? In some such way. It is desirable not to be under the discredit of having too many cases, either in the hands of one examiner or remaining in the office, at a time, and there is always some good done by sending any letter to the applicant. It reminds him of his case, and he can, thereupon, finding the thing has been under the notice of the examiners, come to them or write to them about it.

- E. Burton,
Esq.
12 Mar., 1879.
489. In point of fact, do you endeavour to pass all titles brought to you, or do you endeavour to reject such as it is possible to reject? Certainly not the latter.
490. You try then to pass titles which are brought—try to see them in such a light as to accept them? I try to hold the balance true. After taking some objections, or after making some inquiries, and getting such answers as I can, I am apt to consider the matter finally and say to myself, "Well, now won't it be reasonable under the circumstances, on such an amount of information as we have, to pass the title," and that frequently results in my passing it.
491. Then, in point of fact, you endeavour to pass the title if you consider it safe to do so? Finally I do, certainly. But I try to get such knowledge of facts in the first instance as possible, and in cases where there is any law I desire to be safe upon the law.
492. Did the late Mr. Holden ever object that your requirements were unnecessarily minute or strict? He never objected to them as being too minute. I suppose that he did object to them as being too strict.
493. You have seen the printed copy of the report of the former Commission, with the questions and answers? Yes.
494. And Mr. Holden, in his examination on that occasion——? I would rather turn the thing up. I should not wish to state from memory anything as to what he said, after the lapse of nine years. (*Copy of the Report and Minutes of Evidence dated 7 September, 1869, taken by Board of Inquiry into the working of the Land Titles Branch of the Registrar General's Department, handed to witness.*) There is on the first page of Mr. Holden's evidence of the 12th of August, 1869, a memorandum from which he reads and which refers to myself and to other points.
495. Question 184 of the evidence before that Board of Inquiry is as follows:—"Do you find these requisitions now more full, minute, and particular than they used to be? There is more punctiliousness about Mr. Burton, and he is more apt to make slight objections as to the construction of language and so on; and in his mode of putting objections he is very precise. A great deal more time is occupied in the business of the office in consequence of his peculiar habit of mind." What I want to get at is whether in any way, we can modify these requisitions, so as to save time and get the titles passed at less expense and trouble to applicants,—possibly with some little more risk to the assurance fund. It becomes a question whether the assurance fund should not suffer a little rather than the public should suffer so much? Quite so; and I think I see ways in which I could assist in bringing about that result. There is one very material way, but of course the risk would be increased.
496. I assume that objections given up would increase the risk? I said the other day that I followed the late Mr. Norton's plan of perusing original deeds, and sometimes of course the deed contains a variety of properties. An application is made for a title to one of those pieces. The deed is perused, and everything in it or upon it so far as refers to that particular piece of land with which we have to do is taken into consideration, but of course we are not bound to notice anything in or upon the deed which refers to pieces of land with which we have nothing to do. But then sometimes we have to do with them afterwards. Sometimes another application is made for other lands included in the same deed. Well, it may be necessary to see the original deed again for the actually safe investigation of that second title. Now if it were made a practice that the original deed having been produced once, the examiners should be quite at liberty to use the registration copy only, for the future, that would certainly be a saving of trouble to the applicants and of expense.
497. Well there is no reason why that should not be done now? Well, there may be, in some cases I think, very great reason. A deed may be brought in containing we may say—take a very simple case—two properties, and the title to property A may be quite unobjectional. There may be nothing in or upon the deed to affect it injuriously; but with regard to property B, there may be a memorandum "sold to John Thomas and conveyed to him by indenture dated the 25th of January last." Well, that memorandum may have been made after the registration copy was sworn and filed; therefore the examiner at the time when the deed was before him had no occasion to trouble himself whatever about property B. When property B came to be the subject of his investigation he would have very great reason to notice that memorandum; besides which it is quite possible that the memorandum may have been made on the deed since the examiner saw it.
498. But you make very careful searches; would you not find that on searching? No, not if it were made after registration.
499. *Mr. Robertson.*] But it would be of no consequence? I think it would. I think it would destroy the title.
500. Not at all, because our Registration Act would prevent a memorandum written upon a deed after registration having any effect? Perhaps it would. As a matter of law there is a case decided by Lord Selbourne, which, perhaps, does maintain your view. That was a case in Ireland, where a party had made some inquiries about some original deeds, and he had been put off by false information, and he had eventually accepted a mortgage and had registered his mortgage; and then as he did not actually know of the fraud which had been practised in the way of a prior security kept back from him, he was held harmless. That case had induced me somewhat to take to the idea of not requiring original deeds to be produced a second time.
501. *President.*] But, in the case you put, there might be a sale by the applicant carried out by unregistered conveyance? Precisely; that is exactly the point of danger to which my mind is directed.
502. I cannot see how the assurance fund would be damaged by that. If a man does not choose to adopt the precautions the law imposes on him to protect his title he must take the consequences, and I do not think the assurance fund would suffer? With very great respect I think it would. I think it is out of the case which I have just quoted from recollection of Lord Selbourne's decision, because there is no registered deed to protect the office. The mortgage in Lord Selbourne's case was protected, not because it was considered that he had not been negligent, but because happily he fell within the terms of the Registry Act. Now there is no Registry Act, and there is no enactment in any Act that I am aware of, to say that an unregistered transaction shall not give any claim against the insurance fund.
503. No doubt there is not. But it seems to me that if this man chooses to keep this deed unregistered, and allows his vendor to commit this *quasi* fraud, he must suffer for it. It is like the case of a person signing a paper in blank which is not filled up, as a bill or note? If I make any suggestion at all I would suggest that the law of negotiable instruments stands *per se*.
504. *Mr. Robertson.*] I understand you to say that the law now stands thus:—That the owner of a freehold estate may sell it and may be paid for it, sign his conveyance, deliver his conveyance, and if the purchaser does not register that conveyance the vendor can get a title from this office to the land that has been sold, if he signs the usual application? I think he might, certainly.
- 505.

505. And that the purchaser holding an unregistered conveyance would then be in a position to claim compensation from the assurance fund? I think he would, if the officers of this department had not exercised that vigilance which Courts of Equity require from purchasers in general and their solicitors. Calling for the production of original deeds is no doubt a very great duty of every purchaser and of his solicitors, and therefore, I suppose, is a duty of the Examiners of Titles. I may say that the late Mr. Holden, whom we all respect, was very particular indeed about the production of original deeds; it is very well known that he was. Mr. Holden seemed also to attach great importance to the making of memoranda on deeds or registration copies. He would try sometimes to save the parties expense by letting them off the registration of a document, on condition that the memorandum should be placed on the principal original deed or registration copy. I think that if we were to accept the title without showing that we had used due diligence to get sight of the original deeds, then, if there were an outstanding good equitable claim in some other person, the assurance fund might be made to suffer for it.

E. Burton,
Esq.
12 Mar., 1879.

506. *President.*] Have you not in many cases required deeds produced by applicants to be registered? Certainly.

507. On what ground? On the ground that there is nothing in this Real Property Act to conclusively put an end to the provisions of the ordinary Registration Act.

508. But do you not know that an unregistered deed is just as good as a registered one, provided that there is no conflicting deed registered? I do, certainly, and that corroborates the view I have just expressed upon the other subject. But though I know that an unregistered deed is as good as a registered one, so long as no deed is registered on the subject, yet I feel that there is always the danger of another deed being registered on the subject.

509. Then you require deeds to be registered in order to prevent the applicant for the title from committing a fraud afterwards, which, it seems to me, is beyond the duty of the examiners? I have thought it my duty to take care of the fund.

510. I do not see how it affects the fund? A party may come here with an unregistered deed. If we were not to require him to register that deed his title might be wholly destroyed before advertisement even. It seems prudent to get the applicant's title put into as secure a condition as may be, and by simply occasioning him to get his conveyance registered, and searching up to the time of that registration, we know that the title is good, and are not left to speculate as to whether any other deed—which may not have been executed by the applicant—it may be a deed by the applicant's vendor—whether that will not be registered before the applicant's deed.

511. The case I allude to is this:—Suppose an applicant, having purchased a piece of land, has it conveyed to him, he does not register that deed, but makes an application for certificate of title;—why should he not get that certificate of title without registering his conveyance? Because I think the land may be wholly lost to him, and a claim may spring up on the assurance fund the very day the examiners report in favour of his title.

512. But then you search up to the issue of the certificate? We should not unless the examiners directed a special search.

513. *Mr. Archer.*] But is not that the habit—the final search being made during the last 5 minutes? Yes, but we must bear in mind against whom. Final search is made against the applicant to the last moment, but not final search against the other parties in the title.

514. *President.*] Well could it not be made against the person who had executed same unregistered deed. You have brought the search up to a certain point; could it not be carried on further? The search must be continued till the actual signing of certificate, and the public must be put to the expense of that continued search, and I am not at all clear that the assurance fund would not, after all, have to make good the loss in case a deed should be registered after the issue of our certificate. If you will allow me I will get my copy of the Act. (*Witness referred to Real Property Act.*) I find that the 33rd section of the principal Real Property Act, and though I do not wish to dwell upon it too much, yet that 33rd section never has been judicially construed, and it may, perhaps, be a fair subject for argument as to what the exact effect of it is. I think I may at once throw some light on it by instancing the case of a certificate supposed to be lost.

515. But you know we are dealing with titles not yet under —? I know that; I think I shall get home, though I am starting at some distance. A certificate of title may be lost; a provisional certificate may be obtained; a transfer may take place; a new certificate of title may be issued to a new man. Now, it may be, and I believe it has occurred in Victoria, that the original certificate has only been alleged to have been lost, and the provisional certificate may be obtained by an impostor who personates the proprietor. Then the thing may come duly into the hands of some other registered proprietor. Let the original registered proprietor, whose certificate may have been said to be lost, return to the Colony from which he has been absent, take legal proceedings to recover his land, and put in evidence his certificate of title, I think it will be evident that great difficulty would occur to a Court of Law thereupon in construing this 33rd section. The claimant would have a certificate of title duly authenticated under the hand and seal of the Registrar General, which the 33rd section says shall be received in all Courts of Law and Equity, and shall be “conclusive evidence that the person named in such certificate of title, or in any entry thereon, is seised of or as taking estate or interest in the land therein described is seised or possessed of or entitled to such land for the estate or interest therein specified,” &c. I suppose the plaintiff would thereupon rely upon that old certificate. I doubt, however, greatly whether the Court would not hold that the subsequent certificate, duly issued, must prevail. It is a matter of construction, and the 40th section rather increases the difficulty. The 40th section says, “Notwithstanding the existence in any other person of any estate or interest whether derived by grant from the Crown or otherwise which but for this Act might be held to be paramount or to have priority the registered proprietor of land or of any estate or interest in land under the provisions of this Act shall except in case of fraud hold the same subject to such encumbrances liens estates or interests as may be notified on the folium of the Register book constituted by the grant or certificate of title of such land but absolutely free from all other encumbrances liens estates or interests whatsoever except the estate or interest of a proprietor claiming the same land under a prior certificate of title” &c.

516. That looks as if the holder of the prior certificate obtained priority? It does. The object of my saying all this is that I think the 33rd section will be held by a Court of law to mean that the certificate of title shall be evidence of title at the date of that certificate, but not necessarily of any continuing title. The Legislature indeed seems to have recently supported this view. In the new Act, 41 Victoria

E. Burton,
Esq.
12 Mar., 1879.

No. 18, section 11, is the following:—"No title to land adverse to or in derogation of the title of the registered proprietor shall be acquired by any length of possession by virtue of any statute of limitations, &c." If section 33 of the principal Act was not to be confined to making the certificate evidence of title merely at its own date of course the question of destruction of registered proprietor's title by statute of limitations never could have arisen, because he would produce his certificate of title, however old—thirty years old or any other age—and whatever the possession might have been in the meantime he would say, "This is conclusive evidence that I am seized of, possessed of, or entitled to the estate or interest specified in the certificate." The Legislature therefore seems to have considered, as I humbly also consider, that the 33rd section is to be taken as enacting that the certificate of title shall be conclusive evidence of title only at the date of that certificate. If we accept that view then it follows that whenever a certificate of title is issued upon an unregistered deed the title so given by this office may be destroyed by the registration of another deed.

517. I cannot see that? I have endeavoured to make myself very clear.

518. But I do not come to the same conclusion as you do? You think there must be some general intention in the Act to save such cases.

519. *Mr. Robertson.*] But your certificate of title is indefeasible. I can imagine a case in which a claim might arise against the assurance fund on the part of a person coming forward with an unregistered conveyance, but I cannot see how a person coming forward with an unregistered conveyance, after you have issued a certificate, can have any claim on the land for which the certificate has been issued? Of course I do not presume to be magisterial on this occasion.

520. I only want to know if I properly understand you? I think you do. I do myself, subject to correction, think that what we call indefeasible certificates of title are defeasible.

521. *Mr. Archer.*] Then the public are deceived in supposing them indefeasible? I think they are. It is not of much practical importance. I do not think that that is of much practical importance, that any loss is likely to happen through this. But I do not think that our certificates are strictly speaking indefeasible. I do not think they are indefeasible against the Crown. I know nothing in our Act to bind the Crown at all. The Crown is not specially named anywhere.

522. *President.*] Now suppose a title where there is an unregistered mortgage, either by the applicant or some of his predecessors, and also an unregistered release of that mortgage, would you require those deeds to be registered? I do not think I ever have.

523. It has been done in the office I understand? There are many things said about the office which, at the least, are incapable of proof.

524. *Mr. Robertson.*] I had a case of the kind, in which there was a bundle of deeds. There was an equitable mortgage to the Joint Stock Bank, and a discharge endorsed upon it. It was required that both should be registered? It is very convenient indeed to have all documents registered, because the originals are apt more or less to be dispersed over the country, and copies are not always procurable. The registration copy is sometimes an exceedingly valuable thing for reference in other cases, and although I am not aware that I ever have made such a requisition as that to which *Mr. Robertson* refers, I may say generally that the examiner who occasions the registration of deeds may sometimes very greatly serve both the parties and the office, and all who are concerned in any way in that land, because it is a very great thing in many cases to know where you can find a copy of a certain document.

525. *President.*] The rule of the examiners I understood to be, that up to the date of application the title should be made complete on the old Register, and then start afresh with the new title? I do not think the examiners ever agreed to a rule upon the subject.

526. That is what I understood *Mr. Holden's* rule to be? *Mr. Holden* is a very good authority, and no other examiner has ever gone beyond that, or could have gone beyond that.

527. It is a thing I have always appealed against, but very often, as you are aware, it is cheaper for applicants to comply with unnecessary requisitions than to hold out, and therefore in many cases I gave way? No doubt it is a very sensible and discreet thing to do; and I am glad to hear that that highly respectable authority, *Mr. Holden*, did hold that opinion. It is very convenient if you cannot refer to the originals to be able to refer to the copy.

528. Is it now the rule of the office? No, there is no rule laid down.

529. *Mr. Archer.*] Is it the practice? I do not think the practice of the examiners is uniform. For my own part I adhere in the main to what *Mr. Norton* says has been *Mr. Holden's* view.

530. *President.*] You think the old register ought to be made perfect if practicable? I never care about that. Different minds look at things from different points. That I know was *Mr. Holden's* view. It has never struck me whether the old register should be made perfect, or left imperfect. I have only applied myself to making this particular title safe, and I have therefore, and for convenience sake, required the deed to be registered.

531. When the title has been once passed by the office, is it ever reinvestigated? Yes.

532. For what reason? I should like to refer to a case of *Eyles'*, in which I applied for the decision of the Board of Land Titles Commissioners upon that point. If you will give me leave I will set *Mr. Lander* to find this case, and give you the information.

533. If you can save our time we would rather not? I will give you a short account of it; but my account from recollection cannot be so certainly accurate as that which I could give you if I had the papers before me.

534. All I want to get at is the principle;—when a title has been once passed by the office is it ever re-investigated? Yes, it is; but not as a rule. As a rule it is not done, but as an exception it is.

535. Has it not been held out to the public by officers in this office, that when a title has been once passed it will not be re-investigated, so as to induce them to bring their titles in? I cannot conceive that any officer would act so improperly as to make such an announcement.

536. It has been done? That is touting for business. In *Eyles'* case the decision of the Board was such as to close the mouths of all officers from making such announcements for the future.

537. Was *Eyles'* case a re-investigation of title? Yes, decidedly; and we found that the title, as we humbly conceived, had been erroneously taken by our predecessors.

538. Who? *Mr. Holden*, I think, for one; but whether *Mr. Pennington* or *Mr. Dick* for the other I cannot say without the papers.

539. Well, do you not think it would be sufficiently safe to assume that all titles passed are good, and not to re-investigate them;—do you not think it a very fair thing that the assurance fund should run that risk?

risk? In general cases I do, and in general cases it is the practice of the office. But it is necessary to distinguish between B and the bull's foot, and in very many cases a good deal of investigation is requisite in order to make what might be supposed an obvious distinction. It will be said that the title to the Greenacre Estate has been accepted, and also that a particular applicant's land is a part of the Greenacre Estate; and therefore the inference will be drawn that the particular applicant's title ought to be accepted. Now, the premises may be strictly correct, and yet the conclusion wholly illogical. The estate may consist of several grants, the title of one of which may be undeniably good, and the title of another undeniably bad. The title which has been accepted may be part of the good title grant, and the title brought in on the second occasion part of the bad title grant, and as a matter of fact where the title has been once accepted in complicated cases it perhaps really gives the examiners more trouble than if it had never been accepted at all; because without disturbing the work of their predecessors they have to look through a long heavy case passed by their predecessors, and see whether the title now presented to them really does fall upon the same lines.

E. Burton,
Esq.
12 Mar., 1879.

540. *Mr. Archer.*] Have you not investigated very heavy cases in regard to certain well known estates so thoroughly that you might advertise to the public that any transactions in regard to these estates in future would be considered as clean titles? I think it would be very indiscreet.

541. *President.*] That is advertise you mean? Yes.

542. *Mr. Archer.*] It has been done in Melbourne? Eyles' case is a very remarkable case. It was shepherded by a gentleman in the office who brought it to me, and said he thought it might be passed in an hour. There was an abstract in the case, and upon the fold of the abstract there was a pencil draft of a letter by a solicitor taking a most grievous objection to the title. The title had been accepted before my time. I had, according to my general rule, accepted the work of my predecessors, and I had in consequence accepted the title twice, but when I saw this letter taking so very grave an objection I thought, "I must hold my hand." I applied to the Board, however, by special report from myself alone, stating how many times the title had been accepted by my predecessors, and how many times it had been accepted by myself, and setting out the particular circumstances of the case. I recommended that the title be further investigated; and the answer of the Board was: "The examiners to use their discretion as to the necessity of re-investigation of previous title." The title depended upon a very difficult point of law, the point being shortly this: A man devised lands —

543. *President.*] I really think you must try and save our time a little;—we do not care about the particulars of this case? It shows that I have been willing to take the Board's decision and to accept the work of my predecessors if they should think fit to say "do so." But the Board abstained from saying so when I formally brought the circumstances of this particular case before them and recommended a further investigation, and they answered as already stated. It was the practice of our predecessors from time to time to apply to the Lands Titles Commissioners for directions concerning certain matters connected with titles. I think case No. 20, which I happened to turn up some time ago, is an instance of such application.

544. *Mr. Archer.*] Have you not investigated cases so thoroughly and completely in regard to certain large estates that you feel assured they have now a perfectly clean title, and it is not necessary to re-investigate those titles? I do not think I ever have had the investigation of the title to any very large estate in this office.

545. So that such perfectly clean titles do not exist? I do not say that. In all matters of conveyancing things have to be taken *cum grano*. I govern myself a good deal by length of time. When I find that a good period, such as twenty years, has elapsed, I give weight to that. But I think a very great deal of the necessity of seeing that you fall within the lines of the case which has been accepted,—and it does happen that there may be an estate consisting of seven or eight grants, and the titles to, say, six of these grants have been accepted, but not a single allotment has been taken out of No. 7 or 8 grant. Of course it would be rash and ridiculous for the examiner to say that because the titles to the six grants are good that the titles to the seventh and the eighth are. This, in practice, is what happens. You will find it is quite true that the title to the Greenacre Estate, speaking generally, or I should say to many of the grants comprised in that estate, has been accepted; but then there are certain other grants in that estate the title to which has not been accepted.

546. *President.*] You may instance the Riley Estate? The late Mr. Norton said to me many years ago, the Riley Estate title is one of those facts which must be accepted, and I have invariably accepted that title.

547. *Mr. Archer.*] Suppose an estate or any portion of an estate has been thoroughly examined, and the title accepted as clear, is it the practice henceforth to look upon that title as equal to a Crown grant without re-investigation? The question is put in very strong terms, and I do not think that I can give a simple affirmative to it. When I came into this office I laid down for myself a rule that I would not interfere with my predecessors' work, that I would take their work as judgments or conclusions, and would build upon them, and that no doubt I should find plenty to do even proceeding in that course; and that course in the main I have pursued, but there is no rule on the subject binding the examiners.

548. But suppose you have investigated the case yourself, and given the title, would you in any subsequent transaction go over that title again as if you had never seen it? No.

549. *President.*] Suppose the first application was for a very small part of a grant, and the second application was for the rest of the grant, would you then re-open it? I think I should simply pass it. My object and endeavour have been to do my work so thoroughly in the first instance that I should be able to adopt that course in the second.

550. *Mr. Terry.*] I understood you to say that the Commissioners would not undertake on their behalf to allow you to accept your predecessors' work? Quite so. They left me to my own discretion. It is not for me to say it more than in the way of a humble suggestion, but I do say that a reference to Eyles's case may be very valuable both as regards practice and also as regards principle.

551. *President.*] If you will give us a short written statement of it our time will be saved? If you thought good to allow me to produce the papers I could with much precision and in a few words state it.

552. *Mr. Archer.*] Is it in print? No.

553. *President.*] I think we can let it go. In cases where an applicant nominates another person in whose name a certificate is to be made out, do you require the nominee to produce a contract of sale or any other document? If there be a contract of sale in existence.

554. You make the inquiry? Generally. I am not myself so very particular on this point, but if I find another examiner making such a requisition I do not generally quarrel with it.

555.

- E. Burton, Esq.
12 Mar., 1879.
555. According to the Act I see that the applicant can ask for the issue of a certificate in his name or in the name of some person to be named by him? Yes.
556. Yet this office has wanted to know in many instances why the name of the nominee is inserted? That cannot be the motive operating upon this office. The office must have been led to suppose there was a sale.
557. Have they not chosen to assume it in some cases? You will forgive the office for desiring to have all the light it possibly can before forming a judgment, and certainly it has been asked whether there is any contract for sale between the applicant and the nominee. I think this is very material, although I do not claim the credit of having introduced or very greatly supported the practice. I think it may sometimes be very material indeed. If the applicant says in the earlier part of his application that there is an agreement for sale between him and Mr. So-and-so, or if he use any expression which in the eyes of a Court of law or equity would affect the office with notice of the existence of that document, then I take the law to be that it is gross negligence on the part of the office not to inquire for the document of which they have notice. They want to see it merely in order to see that it does not contain any harm to the title. For instance, an agreement might disclose that the applicant was really only a trustee for somebody else.
558. The contract might disclose that? Yes. The contract might disclose that or the contract might disclose that the nominee, the purchaser, was really only a trustee for somebody else. There are two things to be borne in mind, namely, one that we have to investigate the title, and another that we have to advise in carrying out the provisions of the Real Property Act. A very important subject of the examiner's advice is as to the entry of caveats by the Registrar General. Section 11, subdivision 5 of the principal Act, enables the Registrar General to enter a caveat on behalf of any person who shall be under any of the disabilities therein mentioned, or on behalf of the Queen ———
559. Mr. Robertson.] That looks as if the Crown were bound by the Act? Well, it does; but I do not think the Crown is bound; there are no express words to do it. And the Registrar General may enter caveats for other purposes. Well, it is perhaps right I should say that under this clause a considerable and very important system of caveats has sprung up; and sometimes—especially in transmission cases—more important matters are decided by an examiner in advising the Registrar General to enter or not to enter a caveat, than perhaps in any other branch of his business.
560. President.] Do you not consider it rather stepping out of your way to ask the production of these contracts, inviting these difficulties—you are not bound to do so by the Act;—it seems to me that examiners should not make inquiries that will fix them with a liability or a difficulty? I quite agree that the examiners ought not to make inquiries fixing the office with a liability if it be clear that the office was otherwise not to be fixed, but if there is any doubt on the subject it is much the best way to get all the light you can and decide in the light rather than in the dark.

FRIDAY, 14 MARCH, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P., | WILLIAM HENRY ARCHER, Esq.,
THOMAS ROBERTSON, Esq.

Mr. Charles John Muddle, Deputy Registrar General, examined:—

- Mr. C. Muddle.
14 Mar., 1879.
561. President.] What office do you hold under the Real Property Act? Deputy Registrar General.
562. You were, I think, formerly counter clerk? I was.
563. So that you know the duties of counter clerk as well as the duties of your present office? Yes.
564. What are your present duties? Multifarious.
565. Be good enough to state generally what they are? Well, I sign all titles.
566. What do you call titles? Certificates of title. Occasionally grants, when the Registrar General has no time; the examination of all registrations and signatures, and a general superintendence of the work of the office.
567. Is your time fully occupied? Oh, yes.
568. Have you heard any complaints of delays in the office, or of difficulties unnecessarily made by the examiners? I have heard a great many.
569. Were there as many complaints when Messrs. Holden and Dick were examiners? We had very few complaints then.
570. Are not delays or unnecessary difficulties created anywhere than with the examiners? I am not aware of any.
571. Then all complaints made, or rather the generality of the complaints made, about the office are with respect to the Examiners' Branch? Yes.
572. Are applications for certificates of title increasing or otherwise? They are decreasing, except for transmissions—ordinary applications I mean; they are decreasing.
573. Of course in transmissions of properties under the Act they are compelled to make transmission applications, but the others are voluntary? Yes.
574. Do you know if any applications are not made because of the fear of unnecessary difficulties made by the examiners? I have heard of many of them. I heard a solicitor state in a public room, some time ago, that he advised his clients never to bring their property under the Act.
575. On what account? On account of the delays and difficulties he had met with in dealing with former applications.
576. Are there sufficient clerks to carry on the business of the office generally? No, I do not think so.
577. In what branch are the deficiencies? I think we are short-handed in the public room.
578. That is at the counter? Yes.
579. Do you know if the office pays its expenses in fees? Not quite, I think.
580. But nearly? But very nearly.

581. But if extra clerical assistance were obtained the business might increase, and the fees would increase too? I do not know whether the extra clerical assistance would increase the business below, because people are compelled to come to transact business in the land under the Act.

582. But land not under the Act? Yes.

583. Fees are larger for the land not under the Act? Very much larger.

584. How long does it take to get a transfer registered and new certificate issued? About ten days. Urgent cases twenty-four hours; sometimes twelve; sometimes less.

585. Is not ten days much too long? It is too long; but there is a great deal of work to be done. Transfer by endorsement may be had in a couple of hours, or one hour if necessary; it may be done even in half-an-hour. We merely endorse the transfer from the instrument.

586. That can only be done exceptionally? It can be done in every case where the whole of the land is transferred, except where certificates of title are bound to issue to tenants in common.

587. Could the time for completing transfers be in any way shortened by any alteration in the mode of taking business, or otherwise? If we had more draftsmen we could get on more quickly.

588. Then you think the delay is occasioned mainly by the endorsement of the new plan? Certainly, and getting out new certificate.

589. Which do you suppose creates most delay—preparing new certificate or endorsing new plan? I think the delay is divided between our room below and the draftsmen's above.

590. To which of the examiners do the objections made principally apply? Well, I have heard great complaints made against each of them—Mr. Burton and Mr. Jones.

591. Mr. Burton was here a long time before Mr. Jones? Yes, some years.

592. Have there been more complaints since Mr. Jones's appointment, or less? I think the complaints have been kept up.

593. Do people complain more of one than the other? I think they complain more of Mr. Burton than of Mr. Jones, but I have heard very serious complaints against each of them.

594. And these complaints are made by applicants or by solicitors for applicants? Yes, people interested in the application—either the solicitor or the applicant.

595. Are you capable of judging of the value of or the necessity for objections to titles? Generally I think I am.

596. What were you brought up as? I was brought up as a commercial clerk.

597. Not as a solicitor or in a solicitor's office? No, but I have had a long experience in this office.

598. Then how are you capable of judging of the value of such objections? By my experience in this office in connection with titles.

599. And how long have you been in the office? I have had so much converse with solicitors and other gentlemen having business with this office that I have a very fair knowledge of the Real Property law.

600. How long have you been in the office? Since the opening of it—1st January, 1863.

601. Well then, as you know something about titles, do you consider the objections sent out to applicants or their solicitors are always such as ought to be taken? I do not think they are; I think they are too technical, and as a rule the examiners are far too particular.

602. Do you make that statement with reference to all the examiners who have ever been in the office? I do not.

603. To which of them particularly? I allude to Mr. Burton and Mr. Jones.

604. Has Mr. Burton the confidence of the public? He has not—not as an examiner.

605. Do you think Mr. Jones has? I do not.

606. Of course you are well acquainted with Mr. Jones? I am.

607. Do you think he has sufficient self-reliance? I do not.

608. That he would be afraid to take upon himself the responsibility of passing a title? I do.

609. But Mr. Burton, I suppose, would? He would. His experience has been very much larger than that of Mr. Jones.

610. What objections have been made to Mr. Jones? Similar to those which have been made to Mr. Burton—that he is too technical and too particular.

611. And you think these objections are really well founded? I do.

612. Was Mr. Pennington considered a strict examiner? He was not.

613. Was he efficient as an examiner? Fairly so.

614. I suppose you mean he got through his work expeditiously? He did.

615. In what repute is Mr. Maddock held by the public? He is very much approved of by the public.

616. Does he get through his work expeditiously? He does, very expeditiously. Soon after he entered the office he told me he got through 106 cases in six weeks; and at that time he had no more work in hand.

617. What kind of cases were those? Ordinary applications and transmissions.

618. First-class, second-class, and transmissions? Yes.

619. How many of those would be transmission cases? I cannot tell.

620. Do all the examiners attend to their work during office hours? I think they do.

621. They do not absent themselves unnecessarily? I have not much opportunity of observing.

622. Are they all courteous to the public and to the officers of the institution? So far as I know they are.

623. And you think that they attend regularly during business hours? I believe they do.

624. Are there complaints of any other branch of the office? Sometimes we have complaints against the delay in obtaining certificates of title upon transfers.

625. To what branch do those complaints apply? To the public room.

626. Are the complaints well founded? I do not know that they are.

627. What is the nature of the complaints—simply that it is too long before the certificate is issued? Yes.

628. You have already explained the time it takes to issue these things; do you think the complaints are unreasonable? There may be foundation for the complaints in some cases, but not in all. I think the time is too long for issuing a certificate of title; it should be finished within a week certainly.

629. Have you sufficient officers to enable you to do that? We have not. My officers below are considerably over-worked. They always remain overtime. Some of them are here till 6 o'clock.

630. Are they paid for overtime? No.

631. Do the officers of the Land Titles Office try to facilitate the business of the office, and help applicants for titles and others having business here? Yes, they do.

632.

Mr.
C. Muddle.
14 Mar., 1879.

- Mr. C. Muddle.
14 Mar., 1879.
632. They take an interest in the business of the office? They do.
633. Have you heard that any of them do any work for the public? I have not heard.
634. Either during office-hours or after office-hours? I have not heard.
635. Have you never received any complaints nor heard any complaints that work is done in the office that ought to be done by applicants themselves, or by their solicitors? I heard Mr. R. P. Abbott jokingly remark one morning to Mr. Terry, "Oh, you come here, and get the clerks of the Land Titles Office to do your work for you." But I do not think there is any foundation for believing such a thing. I have not heard of it.
636. Have you heard of any instance in which bribes, *douceurs*, or gratuities have been given to any officers in connection with the business of the office? Never.
637. *Mr. Archer.*] You said that in your room every facility is given to the public? Yes.
638. If you found any extraordinary instance of delay, would you not help the public as far as lay in your power? Individually I have always done so.
639. Have you ever met with any extraordinary instance of delay that warranted your interference? I have; a great many instances.
640. In endeavouring to rectify the delay have you gone out of your way in your zeal to push forward the particular case? I have, very frequently.
641. Have you had to do that after office-hours as well as in office-hours? Well, I have done it in the early days, but not lately.
642. But you have done it? I have.
643. When parties have found that you have exercised this creditable zeal, have they ever offered you an *honorarium*? No.
644. They have taken what you have done for them as a matter of duty, and never recognized you in any shape or way? I have never received one single six-pence.
645. Have you ever been offered it? Yes, often.
646. Did those people who offered it ever get additional assistance from you in regard to their titles? I am not aware that they have. I have tried to serve all alike.
647. If a person were very persistent would you or your officers go and help that person, or would you let his case come in its order? The rule is to take every one in his turn.
648. Then how is it that when a person comes and complains of delays, and presses for action, you cooperate with him—you tell him he must wait his turn, or do you push his case forward? If they come when I am disengaged I may take them by the hand and go to the examiner, and see what their case is.
649. And you do not look to see whether they have come in their turn or not, but act in that way simply because of their persistence? I do not know. They may call at a time when I am disengaged.
650. But if a person came and resolutely put forward his case you would go and look after that case for him quite regardless of whether he had put it in three months or three years ago? I do not know that I would do that.
651. With regard to delays can you explain how it is that they exist—can you give any signal instance of delay that has struck you as a monstrous thing? Well, I cannot single out a case just now.
652. Take a group or type of cases? Yes, there was a case in which the President was interested. That Underwood case was a very very long one.
653. Was it a legitimately long time going through? I do not think it was. I think the objections raised by the examiners were not tenable. It was taken before the Court, and the Court did not uphold them.
654. Can you give a practical instance of a case in this regard: I put in an application to-day, when would it reach the examiners? The application would be sent up either to-day or the following day to the examiners' clerk. It is then with the examiners, but there is a delay I think then in passing it from the examiners' clerk to the principal draftsman.
655. Have you any authority over the examiners' clerk? I believe I have, but I have always left him to the control of the Registrar General.
656. But if you saw any *lâches* on his part would it not be your duty to pull him up? I have pulled him up many times.
657. In what way? I have told him I would report him to the Registrar General when he has not sent cases on as he should do in a reasonable time.
658. What would you call a reasonable time? I think he ought to do it in two or three days.
659. In what time have you found him do it really? I have known him have cases two or three months.
660. Did you report that to the Registrar General? I did.
661. What action did he take? I am not aware. I told the Registrar General what the state of affairs was, and what Mr. Lander had to reply to my statement. Mr. Ward said that Mr. Lander's having to do with the wills had caused great delay.
662. Did you put this in writing? I did not.
663. How often has this occurred during the last twelve months? I cannot say the number of times,—a good many times.
664. Once in two months? Oftener.
665. Once a month? Once a month, I dare say.
666. And did your representation go to this extent: that Mr. Lander having these duties to do, or from whatever cause, was not efficiently performing his duty as clerk of the examiners? I could not say it did. I told him he was not sufficient to perform his duty towards the public.
667. Did you ever speak to the examiners? No, because I do not think the examiners have anything to do with me.
668. Under whom is the clerk to the examiners really? Under the Registrar General exclusively, but he claims to be under the examiners.
669. In what sense? I do not know.
670. Does he claim that at all in any hostility to the Registrar General? I think so.
671. Do the examiners give him any support in that, do you suppose? I should not like to say so.
672. Then why does not the Registrar General exercise control over him and insist upon his doing his duty? I am not aware.
673. Then you, in the exercise of your duty, seeing the neglect of the clerk to the examiners, have reported

reported the circumstances to the Registrar General, and he has taken no effective steps to correct that which you thought in the public interest ought to be corrected? That is so.

Mr.
C. Muddle.

674. What would you suggest, from your experience in relation to the clerk to the examiners, as to the position which he should occupy, and the course that he should take, should he still remain under the Registrar General or be under the examiners? I think he should still remain under the Registrar General.

14 Mar., 1879.

675. Then there ought to be an effective control over him, which at present does not exist? Which has not been exercised. When applicants have complained to me of delay in the office, I have come upstairs and found that cases have been lying with Mr. Lander for a certain time. I have reported it to the Registrar General, and told him that I cannot do anything in it. Mr. Lander says he is short-handed and cannot get on with his work, and cannot send on the work. The Registrar General has said that Mr. Lander's time is too much occupied with the wills, and that he ought not to be custodian of the wills.

676. If you were in a position of authority to carry out all that you in your experience believe to be desirable, what would you do in relation to the clerk to the examiners? I would see that he did his work thoroughly well, and if he did not he should be removed.

677. What would you suggest as to the mode of procedure by which he should do his work thoroughly well? If he is overworked I should take the wills from him.

678. And having done that, what would you prescribe in relation to his duty to the examiners? I should say that he should be still under the Registrar General.

679. And then? That he should perform his duties in a satisfactory manner.

680. But what I want to get at is, what check would you exercise over him;—what would you insist upon that he should do. It has been given in evidence that a case coming in, say on the 2nd of the month, is retained until the beginning of the following month? That is an arrangement of the examiners. It has nothing to do with the examiners' clerk.

681. With the examiners and whom? With the examiners only.

682. Well, the examiners' clerk is a party to the arrangement or he would not retain the cases? I do not think he retains them, not cases at that stage.

683. Perhaps I misunderstood the evidence, but the point put was, that the examiners' clerk received the applications, and that he retained them until the beginning of the month, when he sent them on to the examiners? He may retain them until the beginning of the following or of the second month.

684. Why does he do that? He says he cannot get through his work.

685. Is there no one to indicate that he must send them on? I indicate it over and over again that it is necessary that this work should be gone on with speedily.

686. Do you know from your experience how often the clerk to the examiners does send to the examiners the applications which ought to go to them? He sends them to the principal draftsman to be dealt with first, and the principal draftsman sends them on to the examiners through the same clerk.

687. But does the clerk detain them before they go to the examiners? He does. I have known some cases detained one, two, or three months. They may remain this time before they go to the principal draftsman.

688. This detention on the part of the clerk to the examiners exists with the knowledge of the Registrar General? It does.

689. Do you know of any instance of the Registrar General insisting and prescribing as a part of the duty of the clerk to the examiners that such delay should not exist? No instance occurs to my mind at the present time.

690. And the examiners having no control over the clerk to the examiners in virtue of their office are not to be blamed for such detention on the part of this clerk? I do not think they are.

691. You said that the draftsmen are under the control of the Registrar General? Yes; they always have been, and were so in South Australia I believe.

692. Would it not be more convenient for the draftsmen to be under the examiners, and for the examiners' clerk also to be under the examiners, in relation to all cases referred to them? I do not think so.

693. In order that the professional branch may be kept totally distinct from the lay branch? I do not think the work could be got through even so expeditiously as now; that is with the present officers.

694. But may not that be through the mode in which business is carried out? I do not think so; I do not think an alteration in the mode of business would—

695. Why should not all be done in this department as would be done in a first-class conveyancing office; that is to say, that the purely professional work should be done in a professional way, and that the separate staff should be made responsible for the separate business? Then you require a professional head.

696. *Mr. Terry.*] That is your opinion? That is my opinion strongly.

697. *Mr. Archer.*] You said that you gave every assistance to the public in office-hours, that you stopped after office-hours, and that you never received an *honorarium*, although it had been offered? Yes.

698. Do you know whether other officers either follow your example, or in their own spontaneous action have shown the same kind of zeal on behalf of the public? I believe they have.

699. Do you know whether they, in every instance, have acted gratuitously? I believe they have. I know nothing to the contrary.

700. Did you ever hear of any accusation, openly and boldly stated or insinuated against the honour of any one of the officers of this department? The Registrar General once told me that he heard a statement of the kind out of doors.

701. But, in your experience, you have known no instance of an expedition fee, or any other attempt to reward an officer for extra zeal on behalf of any applicant? I have not. There are no expedition fees here. Money has been placed in my hands and I have returned it, over and over again.

702. Are there any officers who, by their position, could commit such an impropriety without your knowledge? I do not think so, as regards applications certainly, because they have not the power—they have no influence with the examiners. I suppose I am the only officer, with the exception of the Registrar General, who would have the influence.

703. *President.*] Do you know that applications have been prepared in the office? They have been, by the direction of the Registrar General and by the direction of the former Registrar General. Mr. Terry may come in and say, "I am in a hurry, and will you do this for me?" It has been frequently done.

704. I think you said that Mr. Lander's time was interrupted by other business besides that of attending to the examiners? Yes.

- Mr. C. Muddle.
14 Mar., 1879.
705. By the care of wills for instance? Yes.
706. Generally, you think it would be better to have the clerk for the examiners to do nothing but attend to their work? I do; that has always been my opinion. I am sure the connection of the examiners' clerk with the wills interferes with his legitimate work.
707. I understand you to say that the duty of Mr. Lander on receiving an application for title is to pass it on to the draftsmen's department? Yes. His first duty is to make out a search; hence the delay in passing on to the examiners. He tells me that he has not time to prepare the search, he is so busily engaged. In the early days—in the days of Mr. Holden and Mr. Dick—the searches were prepared by the examiners; but Mr. Lander took upon himself, on the appointment of the late examiners, to prepare the searches. I said to him some time ago, "Why not turn the searches over to the examiners who prepare the cases?"
708. However, it has now become the duty of Mr. Lander to prepare the searches? It has; and I think he has taken that duty upon himself.
709. Well, when the application comes to Mr. Lander's hands he makes or gives instructions for the necessary searches? He prepares the search paper, but he says his time is so much occupied that he cannot get to prepare that search paper.
710. That search paper being proceeded with, and the search having been made, the result is that the application and plan are handed to the draftsman? Before the search is made; while it is being made the case is passed on to Mr. Pearson.
711. Then when the search is finished it is also passed on to Mr. Pearson? Yes.
712. Well, when Mr. Pearson has done with the case, he returns it to Mr. Lander? He does.
713. Reporting that the case is correct so far as these things are concerned, or otherwise? Yes.
714. Suppose he reports against the application? In that event the case is sent on for requisition. Mr. Pearson makes his report to Mr. Lander, who forwards it to the applicant or his solicitor.
715. Those are requisitions arising out of the draftsmen's department? Quite so.
716. When they have been satisfactorily disposed of, then, for the first time, Mr. Lander hands the case to the examiners? For the first time.
717. Then I suppose there are not very many cases where difficulties arise in the draftsmen's office? Not often. They are very exceptional cases.
718. And how long do these cases remain in the draftsmen's office? I do not think they remain long. I went to Mr. Pearson yesterday about a case which he received on the 13th of February, and he told me that it would be another fortnight before he would be able to get at it.
719. Mr. Pearson is a very active officer? An excellent officer.
720. *Mr. Archer.*] With regard to diagrams, are they done by the office staff? They are.
721. Are they at times so numerous that the office cannot overtake them? They cannot keep pace with them.
722. Have you ever tried contract work in relation to diagrams? Never.
723. Have they ever been so numerous as to warrant the introduction of contract work? I do not think so.
724. *Mr. Terry.*] After you have made a search against a person in this office, do you keep it? We do.
725. So that you can refer to it in case of any other search? At any time.
726. Have you heard, among the profession, any objection about the difficulty of negating dowers? Oh, very many.
727. What do you think in reference to that, that the law ought to be altered? I think so.
728. Abolishing dower altogether? I think so.
729. Are you aware that in the South Australian Act they have absolutely abolished dower? I believe they have, and in the Victorian Act also.
730. Do you always ask, in case there is any negating of dower, whether there is any widow of So-and-so, and whether she is dowerable;—do the examiners inquire in every case? I believe they do.
731. *President.*] You know the form in which dower is noted on certificates? I do.
732. Simply stating the fact that the certificate is issued, subject to the dower, if any, in the wife of So-and-so; but no deeds are given, nor is there anything else for anyone dealing with that land to know whether the dower is worth anything or not? No; they have to go to the original title.
733. So that the person in respect to whom dower is noted may be a young man of one-and-twenty? Possibly; I knew one case. Charles James Augustus Storey's wife was made dowerable, or apparently so, by an endorsement on certificate. I knew him to be a young man of two or three-and-thirty years of age.
734. So that in cases of young men the note is made in exactly the same form as in cases where the man was married before the year 1837? Precisely the same.
735. *Mr. Robertson.*] Do you think that it would be an advantage for the Commissioners of Title under the Act if a Commissioner of Titles were appointed who should have supreme control over the examiners and the professional branch? I do; I have already suggested to the Registrar General that there should be an appointment of Master of Titles, who should receive a large salary, and that the examiners should also receive an increase of salary, all of which should be secured by Act of Parliament; and then all titles that are passed should be submitted to a Board composed of the Master of Titles, the Examiners of Titles, and the Registrar General.
736. *President.*] Then you consider that the Board of Commissioners really ought to be kept in existence, with some little modification, such as that you propose? I think so.
737. *Mr. Archer.*] Do you mean the lay Commissioners? No.
738. *President.*] You would still have the Commission, but differently composed? Differently composed.
739. *Mr. Archer.*] Would you have any lay Commissioners as they at present exist? No, certainly not.
740. *President.*] Except in the case of the Registrar General? —
741. *Mr. Terry.*] Who would be President? No; I do not say so, though that is Mr. Ward's idea.

MONDAY, 17 MARCH, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P., | WILLIAM HENRY ARCHER, Esq.,
THOMAS ROBERTSON, Esq., | JOHN DAWSON, Esq.

Edmund Burton, Esq., Examiner of Titles, further examined:—

742. *President.*] Does not the question of dower give a great deal of difficulty and create a great deal of expense in the working of the Real Property Acts? Yes.

743. Wherever land is conveyed to a man, do not examiners require it to be shown that that man has no wife entitled to dower? Not absolutely, but very nearly.

744. And if he has not shown that there is no dower then the fact of the dower is noted on the certificate? The possibility of the dower is noted on the certificate.

745. Of course you are aware that applicants are put very often to very serious expense in endeavouring to show that the dower does not exist? I do not know that they are put to very great expense; they must be to some.

746. In what proportion of cases do you suppose there is really dower—where the question is put? It is very difficult to answer a question as to proportions.

747. I want some general idea. You can put it in any way you like? Considering that the generality of married women's dowers now fall under what may still perhaps be called the new Dower Act, although it is over forty years old, no doubt most wives cannot maintain a title to dower as against their husbands' alienee. It is a matter of common sense and not of law. There must be a great many more persons married since 1837 than before, and of course there are some bachelors and some widowers.

748. In whose cases there is no dower? There is not.

749. Do you suppose there is one case in a thousand in which there is actual dower? Yes, certainly.

750. Give us some proportion? I should say one in fifty.

751. Do you not think you are making too much of it? It is wonderful how many persons have been married before 1837, although the proportion must be largely the other way; it is surprising how often you find that persons have been married before 1837. There is a case which occurred in the Equity Court a little while ago which has been a very great warning on the subject of dower: A man named Taylor came out to this Colony a great many years ago. He acquired property here, and he disposed of it by his will. He had been in the Colony a vast number of years, something like fifty. The property was sold under a decree in Equity. There were several batches of sales. The first sale went off comfortably enough, and nobody seems to have had any difficulty about dower; but after a little while an Equity suit was actually instituted by Mrs. Margaret Ashhurst, and her new husband, claiming that she was the widow of Taylor. There must be not the slightest doubt that the facts were so, for her dower was not denied by any of the parties concerned, when she asserted it, and I think I may say for certain a compromise was made with her.

752. Then you give this as an instance of the danger of ignoring the question of dower? I do.

753. In your long experience how many suits for dower do you remember to have heard of? In such experience as I have had I have not heard of very many.

754. Do you suppose a dozen? Well, I do not.

755. And yet your experience extends over thirty years? Well, my experience extends over about thirty-seven years. But of course I was only a clerk on the conveyancing side of Carr, Rogers, and Owen's office for eight years, and I had very little to do there with equity work.

756. But would you not have known if anything of the sort were going on? It is a very long while ago, and I may have forgotten.

757. However, during the whole of your experience you do not know of a dozen suits for dower? No.

758. Or cases where dower has been actually claimed? I cannot at all say, and I do not at all think that there have not been a dozen cases within my knowledge in which dower has been claimed. I am aware that dower has been most extensively the subject of negotiation and compromise. Some years ago, when the pecuniary affairs of the Colony generally were not good, it was what might be called every day's practice for the wife of an insolvent to stipulate with her husband's trustees that they should give her up one farm, or one piece of property in consideration of her releasing her dower out of the generality of the estate.

759. But a long time has elapsed since that occurred, and the lapse of time has cured a great many dowers since then? Quite true.

760. Have you heard any complaints that titles are not examined with sufficient celerity? Yes.

761. What is the cause of such complaints? I think they are partly manufactured in this office.

762. In what way? A gentleman comes to the examiners and to the draftsman with a difficult, complicated case. He is received with very great attention, very great pains are taken in going through the minutiae of allotments which have been sold out of the property, and allotments which have become in some other way special; and that gentleman goes away apparently as much pleased with Mr. Jones, Mr. Pearson, and myself as any man can possibly be. Within a few days we may be surprised to meet with a most remarkable letter, of a character certainly not indicating gratitude or acknowledgment of that attention which we gave, and which no doubt it was our duty to give; and, being an old client of mine, this gentleman has been good enough to explain to me how he came to write the letter in question. He has stated that he has been met in the office by an official who said to him something of this sort: "If your title is not going on fast enough come this way." Then he has been bowed into the presence of another official, and then it has been suggested to him that he should write the letter he did write. The gentleman is Mr. J. K. Heydon, of Ermington, near Parramatta.

763. Then you think that part of the office is working against the other part? I do.

764. Why should that happen? There is generally a jealousy between different services. There is a jealousy in this office against all members of the legal profession.

765. Do you not think the difficulty arises from the wish of these gentlemen to push on the work of the office, and that they consider that delays take place in the examination of titles? No, I do not.

- E. Burton,
Esq.
17 Mar., 1879.
766. And you say it simply arises from jealousy? I say the jealousy is manifested in the most striking manner. The jealousy is not directed merely against those professional men who happen to be examiners. I can give an instance. A transmission case was brought into this office. I found, however, that the deceased had actually executed a conveyance of the portion of the land which was then sought to be transmitted to the party who wanted to get the transmission certificate. I said, "This is a good transfer," and the other two examiners said so also. The transfer happened to be on parchment, happened to bear a seal, and had been prepared by a solicitor. That document was not registered as a transfer. It was refused to be so registered.
767. Was it in the form required by the Act? I considered it was. That was the special matter to which I directed my attention. I considered that it was substantially in the form required by the Act; that it had all the requisites of the form required by the Act, and that it ought to be registered, not only because it was a sufficient transfer, but because the registration of it would save the party great trouble and expense.
768. And the annoyance of transmission? Well, if there be any. A delay of 1 year and 7 months took place.
769. Why do you give us this instance—what particular point is it intended to illustrate? If I am to disclose it, I must say I was told, "Oh! it would never do to have solicitors preparing these things after the old system," or words to that effect.
770. Who told you this? Mr. Muddle, the Deputy Registrar General.
771. And you say that was his reason for refusing or objecting to this form of transfer? I say he made that remark. The papers will speak for themselves. Mr. G. M. Holden was the solicitor in the transmission case.
772. Then what happened in this case? The examiners—Mr. Oliver and myself—who had charge of the transmission, having advised the right course to be pursued, and finding that the Registrar General would not pursue it, then completed the matter after the next best course, and recommended the case to be passed as a transmission case, having first brought the opinions of all three examiners before the Registrar General.
773. Before the Board you mean? No, I do not know that they went before the Board. They went before the Registrar General who is one of the Board, but I do not think they would go before the Board. A transmission case goes before the Board, but a transfer does not go to the Board. We advise the Registrar General to register a transfer; we advise the Board to register or record a transmission. It would naturally go to the Registrar General who had the power to register the instrument as a transfer, but it would not naturally go to the Board.
774. Then the case was ultimately passed? As a transmission case.
775. Involving a delay of how long? There was a period of 1 year and 7 months from the time I first advised that it should be completed as a transfer.
776. You and the other examiners? No. The date of my first advice was such that a year and seven months elapsed before the thing was completed.
777. Then did the other examiners concur with you in your advice? Yes, they did—Mr. Oliver very thoroughly indeed, and Mr. Jones also concurred. With regard to minutiae, I would refer to the original papers.
778. Do you not consider it within your duty to advise the Board on such questions? No, not to advise the Board.
779. Well, the Registrar General? Certainly, to advise the Registrar General.
780. It is the duty of the examiners to advise the Registrar General on such questions? I think it is. If the examiners see a thing going wrong, and if they can reasonably advise the Registrar General that the thing is going wrong and ought to be done right, it must be their duty to do so.
781. You consider yourselves as the legal advisers of this institution? Decidedly; we are so by statute.
782. Can you tell me who it is in the office that raises the difficulties you have referred to? I think that the Registrar General greatly encourages complaints against the office.
783. And who else? I do not say that anybody else does.
784. Do you mean against the office or against the examiners? I suppose the two phrases are almost identical.
785. Not quite? I do not mean to say that they are. I do not mean to say that the Registrar General encourages complaints against the Transfer Department.
786. Well, it comes to what I say then—he encourages complaints against the Examiner's Branch? It comes pretty much to that, but then the complaints come in a general form.
787. Is not the present Registrar General very zealous in forwarding the business of the office—I mean very desirous of forwarding the business of the office, and getting it into good repute and good standing? No; I cannot conscientiously give him credit for such a desire, because I know so much to the contrary.
788. What do you know to the contrary? The matters referred to in my letter to him dated 30th May, 1874.
789. That letter refers to a charge made by the Registrar General that seventy-four cases awaited treatment by you similar to that which the senior-examiner had bestowed upon them in writing requisitions thereon? Yes.
790. You hand in a copy of your letter of 30th May, 1874? Yes. (*Copy of letter handed in. Vide Appendix.*) The course of information generally supplied from this office to the Colonial Secretary's Office appears to have been such as to say all against the office that could be said, and to suppress anything that might have been said in its favour.
791. By "office" do you mean your department, or the office generally? I suppose I may say the Examiners' Department—I suppose it comes to that; but the form of the questions and answers has not been such as to express the Examiners' Branch.
792. Are you on terms of friendship with the present Registrar General? Oh, no.*
793. How is that? I do not like him.
794. Has not the difficulty between you arisen from his pressing you too much to get through the work which you have always thought ought to occupy more time than he thinks it ought to occupy? No; not by any means exclusively.

795.

* NOTE (on revision) :—I am on speaking terms with the Registrar General.

795. As to matters of private quarrels of course we have nothing to do? There is no private quarrel.
796. It simply arises out of the business of the office? Yes; the way in which he treats the examiners, the way in which he fails to protect his own office, and the way in which he always takes the side of every person whoever makes a complaint against the office.
797. Does that not result from his zeal in forwarding the interest of the office? No.
798. What other reason can he have? His desire to get his salary increased.
799. I suppose he could only get his salary increased by showing that the office was flourishing and could bear an increase? Well, by that means, and by persevering application for an increase, and by making all the friends that he could at the unfair expense of others.
800. In what form have complaints reached your ears—I mean complaints against the examiners? A letter perhaps exceedingly ill written and doubtfully spelt would be written to the Registrar General by somebody not too respectable, and then the Registrar General would forthwith endorse upon it something like a hypothetical condemnation of the examiners, if not an absolute condemnation.
801. I think you slightly misunderstand me. What I want to know is what are the complaints—are they complaints of getting through your work too fast? I cannot know any more about the complaints than any member of the public, except those complaints which come either in writing, or by word of mouth, to myself.
802. What complaints have come to yourself in any way or shape—what do they complain of? Insufficient speed. A gentleman has been known to have his transmission case passed within four days, and he has thereupon written a letter of complaint. That was in Bell's transmission.
803. Well, the complaints are of insufficient speed. Are they not also of over-particularity in objections or requisitions? There are no written complaints to that effect, speaking generally.
804. Have there been no complaints that the requisitions seemed to the applicants to be absurd? Very few persons use such a word as "absurd."
805. Perhaps I use a wrong expression—that the objections are untenable, ridiculous? Very few persons would use the word "ridiculous."
806. Weak? No one has ever used the word "weak" that I am aware of.
807. Well, extremely fine-drawn, highly technical? No, it is very rarely that such an objection is made to an objection. Those solicitors who receive objections are competent to judge whether the requisitions are well-founded or not, and they generally make no complaints.
808. Then the complaints they make, if any, take the form of answers to your own objections—arguments perhaps on the value of your objections? They do not put them in the form of complaints; they answer our objections. They argue against them sometimes of course. But I may say that we have very little difficulty with solicitors.
809. Do you always require the production of all instruments forming the title of the applicant, whether in his possession or not? Yes, except under special circumstances.
810. The Real Property Act does not, I think, require the production of instruments not in possession of the applicant, as a matter of course? That is a matter of opinion.
811. There is no statement—no actual requirement that these things should be produced. The applicant has to produce the instruments of title in his own possession; but the Act does not specially require that he should produce all instruments affecting the title;—is not that so? I cannot give an unqualified affirmative to that question.
812. The Act does not strictly require the production of all these instruments? That is quite a matter of opinion. The 17th section may be referred to. The 17th section seems to indicate that where the evidence of title set forth by the applicant is imperfect, a special course should be pursued. That certainly indicates an intention that the examiners should, generally speaking, require the evidence of title to be perfect.
813. Do you not think that in many cases of instruments registered at full length in the Registry Office, the production of the originals might be safely dispensed with, unless in cases where there is some apparent cause for being particular? I do not think it could be done safely.
814. In any case? As a rule, of course. I do not think it could be done safely, as a rule. Of course it will often happen that there will be no mischief.
815. You do not think it is safe to dispense with the originals in any except rare cases? I do not. I think that mischief will not often happen, but you cannot tell when it will.
816. Instruments are registered at full length? Yes.
817. Then what mischief do you suppose can happen? Something may be written on the original instrument after registration. Then you know nothing about that on the registered copy.
818. Are there any cases in which you can dispense with the production of the original deeds and satisfy yourself by the examination of copies? I very often do examine the registration copies. I very often peruse them instead of the originals, so as to get as much work done as possible. It is a more tardy process. The heavy books have to be carried from down stairs, and the registration copies, not so well written, of course may not be absolutely correct. No lawyer would like to trust to a copy when he could have the original. But notwithstanding that it has been my practice for years, in many cases, to peruse the registration copy. But when I have done this I have required the original ultimately to be produced. When the original has been produced I have looked to the registration receipt, so as to satisfy myself that it is the identical instrument. I have then looked over it to see it bears no exhibit memoranda leading up to suits and actions, and then I have been content.
819. You practised for many years as a solicitor? Yes.
820. And you know the way in which solicitors conduct the business of examining titles for purchasers? The ways, I think I may say, are various.
821. Do solicitors in every case examine the original instruments? They do not.
822. They are satisfied with copies or abstracts? I should like to say after "they do not," but I believe they are guilty of gross negligence whenever they fail to do so, and in the case of a mishap their client can make them answerable, unless they have special instructions.
823. Do you think that solicitors in large business could get through their business if they always insisted upon the production of original deeds? I believe that solicitors in large business do get through enormous businesses, and very profitably, and are in the habit of causing original deeds always to be examined.
824. And you think it would not add immensely to the delay and expense of completing purchases if they examined

E. Burton,
Esq.
17 Mar., 1879.

- E. Burton, Esq.
17 Mar., 1879.
- examined the original deeds on every occasion? Of course expense may be saved by not making that examination, but risk is run, and occasionally a bad title is taken, as in the instance of the Eveleigh House title.
825. Well then, you say the client is saved expense at the risk of the solicitor, unless the solicitor examines all original deeds? At the risk of the solicitor if he be a solvent man, unless the client has given special instructions.
826. From your long experience in dealing with titles are you not aware that even in the most careful offices oversights are continually made, which, if discovered and taken advantage of, might ruin the solicitor employed in the matter? No, I am not aware of that. I suppose oversights must be frequently made, but I very seldom hear of any.
827. Do you not think it is very likely that oversights are constantly made? Yes.
828. A solicitor in a large business cannot get through his work without the assistance of clerks? Certainly not.
829. And these clerks are indifferent, careless, and very often ignorant, and must make a great many mistakes and oversights? I should not like to condemn the clerks of solicitors in such wholesale terms, and I cannot think, if they be open to such condemnation that their course of conduct can be a proper pattern for the examiners.
830. No; I do not say that. However, you admit that mistakes are made in solicitors' offices in the investigation of titles? I have no doubt that mistakes must be made in solicitors' offices as well as in all other places where human beings work.
831. Did you ever know an instance where a solicitor ever sustained any damage in consequence of such mistakes? Yes.
832. Many? Only one—the Eveleigh House case. There was an action brought against Mr. Cooper Turner many years ago, but his talented counsel showed I believe sufficient ground to exempt him in point of law.
833. Then he sustained no damage? And he therefore sustained no damage. The Eveleigh House case is another case. In that a highly respectable solicitor concerned did I believe sustain damage.
834. But was that not a case of misconstruction of a will? No; I have always understood that that resulted from being content with the abstract of a will instead of reading the original.
835. Are not most oversights and mistakes in conveyancing, do you suppose, cured by lapse of time, or by never being found out? It is impossible to answer a question as to what one would probably suppose.
836. Of course it is a matter of opinion? I do not think it would be safe to accept a bad title in the hope that its badness would never be discovered, and I think it would not be perhaps so safe to do that in this office as it would in a private solicitor's office. The proceedings of this office are far more public than those of any private solicitor's. When the Eveleigh House slip was discovered there was a great outcry made. "Oh!" it was said, "The examiners have taken that title four or five times over." I made an examination of the cases in which it was supposed to have been taken. It had been taken once, and that is the only material slip which I know to have been made in this office. That was made in consequence of not reading the original will.
837. Were you the examiner? I was not.
838. But the examiners could have access to the original will? They could have.
839. It was in the office—in the building? It was in the Supreme Court, if not in the office.
840. Mr. Robertson.] This is the case you mentioned when you gave your evidence before the former Commission? No, I do not think so; this has happened since. The former Commission was in Mr. Holden's lifetime, and this Eveleigh House matter has cropped up since.
841. President.] Then you consider it is necessary for the examiners to be more particular than solicitors practising on their own account? I do; it would be a disgrace to the office if they were not. Here is a public department, which is to the best of its power to pronounce upon the goodness or badness of titles. If the very best opinion that they could form were not formed it would be discredit to the department.
842. Do you not think that in many cases where the deeds are given up to the office after the title has been passed it would be almost impossible for persons having objections to raise them? No.
843. Well, it would throw great difficulties in their way—the want of the possession of deeds? No, the system of registration—the old system of registration—would, generally speaking, supply their need.
844. By the old system you mean the present system, not as applicable to the Real Property Office? Yes, in the Real Property Office language the old system is generally understood to mean conveyancing at common law plus the New South Wales ordinary Registration Act.
845. The assurance fund has never been in any way touched? Never.
846. Seeing then that the risk is so small, would it not be better that some of the extreme particularity with which the examiners have been in the habit of investigating titles should be dispensed with? If it could be dispensed with, without the public knowing that it was dispensed with, it might be more safely done. I attribute a great deal of the present safety of the assurance fund to the reputation which the office has gained of being very particular about titles; consequently persons are less, much less, likely to bring in titles which they know to be bad or very doubtful. In the early days of the office some great frauds were attempted, but as they were happily punished, and as the character of the office for being very particular in the examination of titles has been maintained for years, very much less is done in the way of attempting to palm off bad titles on the office than otherwise would be the case.
847. That is to say, you have cured them of trying to bring in titles not perfectly good? I think that the course of examination by the examiners has been such as to tend in that direction.
848. That is to deter people from bringing bad titles? Yes.
849. The bulk of the people do not know whether their titles are good or bad, though the solicitors may know? But titles are brought in here by persons who know they are bad.
850. It is one of the popular errors that this institution is established for converting bad titles into good ones? There are some titles brought in which no one could ever hope to have passed unless he could succeed in forcing the examiners to work under such pressure that they have not the opportunity of discovering what the title is.
851. If you are so extremely particular in titles, why should applicants have to pay the assurance fee? The assurance fee is so exceedingly small that it can make very little difference, but the guarantee of the public must surely be worth one half-penny in the pound.
852. Not to the applicant? To the applicant I respectfully think.

853. But is not the guarantee to the outsiders, not to the applicant? It is a guarantee which the applicant can carry in his pocket, and which, when he sells his land, he makes use of very greatly to the benefit of his pocket.

E. Burton,
Esq.

17 Mar., 1879.

854. But the guarantee is in fact a guarantee to other persons. He gets the benefit of a complete title, but other persons get the benefit of the guarantee? You mean the assurance fund has the benefit. The guarantee is to the applicant to this effect: "We will warrant and defend your title against all mankind"; and the assurance fund is provided to meet the demands of those who may have been injured.

855. If the assurance fee were increased would you feel justified in relaxing a little? Yes.

856. Will you tell us in what way you could safely relax either with or without increasing the assurance fee—some general rule which could be acted upon? I do not think that an increase of the assurance fee would ever be so good as a thorough examination of the titles. What I should like to see done would be for the originals of all deeds relating to land to be deposited in the Registrar General's Office. I think that for the future that might be very easily managed. I think that if the Legislature were to provide that, upon the registration of a deed, the original should be left in the Registrar General's Office, and that a certified copy should be issued to the proprietor, that, for the future, all that is wanted would be provided.

857. But that does not relieve you of your difficulties, as you have to deal with past difficulties mainly? The lodging in the Registrar General's Office of as many original deeds relating to titles as possible should be encouraged. It might be enacted that it should not be necessary for the examiners to refer to original deeds, and that no person should have any claim against the assurance fund for anything that did not appear by the registered copy.

858. Would not that be unjust? It would only occasion the parties to be at the peril of seeing that any deed under which they claimed was registered.

859. Is Mr. Jones as particular in the examination of titles as yourself? I think he is. Of course I ought not to speak about others, but I think that Mr. Jones is highly intelligent, and quite as painstaking and quite as particular as I am.

860. And he is as precise in taking objections? I think he is. I am, of course, not desirous of saying so against Mr. Jones, for whom I have a great respect, with whom I am very happy to associate, and from whom I derive very great assistance by the coolness of his judgment and the great acquaintance which he has with cases recently decided upon points of conveyancing law.

861. Then you and Mr. Jones work cordially together? Mr. Jones and I work very cordially together.

862. Does your reliance upon his judgment and experience enable you to relax some of the extreme vigilance which you have hitherto applied to the investigation of titles? I have not relaxed it. I think that if I were, without any examination, to sign my name to a report which Mr. Jones had previously signed, I should very seldom do any mischief.

863. Is he expeditious in getting through his cases? The term "expeditious" of course conveys different meanings to different minds.

864. Expeditious as yourself? I think he is more so.

865. Are you on perfectly good terms with Mr. Maddock? No.*

866. How is that? Because I understand that he got up that petition which was presented to the Legislative Assembly about a year ago. It is generally known as "Maddock's petition."

867. That was before he came into the office? Yes.

868. Have you complete reliance on his judgment? Certainly not.

869. How is that? Because I find that he makes slips in the investigation of titles.

870. Is he expeditious? Very.

871. Then I suppose you mean he makes slips on account of his expedition? I should think it is very likely that his extreme expedition assists in producing slips.

872. Have you ever known any grave error made by Mr. Maddock in the investigation of a title? One very grave one in a transmission case the other day.

873. What was that? Leaving out one of the most important parts of a will.

874. Overlooking it, you mean? I can only suppose that he overlooked it. He carefully provides for matters of perhaps minor importance in the same will, but there is a very striking clause indeed as to survivorship, which he does not refer to at all, and he signs the report in favour of the applicant, notwithstanding this clause.

875. Are reports of one examiner as to transmissions taken? No.

876. They require two? Oh, yes.

877. Is that the only error that you are aware of on Mr. Maddock's part? There was a remarkable one about dower. He seemed to consider that although a lady was married before 1837, yet that if the conveyance to her husband declared that no wife of his should be dowable, that that declaration would be effective against the lady. I can easily produce the case in which that appears, under his own hand.

878. Anything more? There was a case which has been made the subject of a letter from Mr. Jones and myself to the Colonial Secretary, and I do not know whether I ought to say much about that, as we have written to the Colonial Secretary on the subject. It was a case in which Mr. Jones and I considered that we had been used very ill. It was a transmission application. Messrs. Macintosh, Pinnock, and Price sent it here. It was under the will and codicil of Jacob Barnes. That gentleman devised certain lands to trustees in trust for the separate use of his daughter, Mrs. Müller, and, after her decease, then, I think, to the right heirs of his said daughter, prefacing the whole, however, with a power of appointment over the fee simple given to the lady. I was very busy in December endeavouring to clear off all the transmission cases I had, and when I came upon this one I wrote a letter to Macintosh, Pinnock, and Price, touching the difficulties of the law as to the effect of the gift in trust for the married woman, for her separate use for life, with the remainder to her right heirs. It seemed likely that the remainder to the right heirs was a legal remainder, and it was clear that the gift for the separate use of the married woman was an equitable estate only in her. If so, the life estate and the remainder in fee could not coalesce, under the rule in Shelley's case. I consulted Mr. Jones, who agreed to the letter which I had drafted. The gist of that letter was to propose that the difficult question of law which might probably never need to be decided, should not be decided, but that a certificate should issue to some such effect as follows:—
"The fee simple in possession of this land stands limited to such uses, &c., as Ellen Elizabeth Müller shall by deed or will appoint, and in default of appointment according to the effect of the other limitations contained in the will and codicil of Jacob Barnes, deceased, in reference to the said land." The applicants'

* NOTE (on revision) :—I am on speaking terms with Mr. Maddock.

E. Burton,
Esq.
17 Mar., 1879.

applicants' solicitors wrote a handsome letter in reply, saying that they quite saw the difficulty to which the examiners drew their attention, and they did not see any objection to the form of certificate which the examiners proposed. The report was signed by myself and by Mr. Jones, and the case was passed by the three Land Titles Commissioners on the 8th January. After some time—I suppose when the advertisement had run out—I was informed that the parties did not mean to take out a new certificate of title, but intended to have transmission memorials endorsed upon the four grants under a provision in the new Act, and I was requested to draw the form of transmission memorial accordingly. I asked for the form generally used downstairs in simple transmission memorials, and I endeavoured to make this special memorial come as nearly as I could to the common form. Of course it would vary very considerably from the common form, the intention being very different.

879. What has Mr. Maddock to do with this? I will tell you directly. It is rather a long story: Mr. Muddle wrote upon my draft memorial a memorandum of his objection thereto, which he did not send to me, but which he sent to the Registrar General. Then the Registrar General made some alterations in my form, but did not send them to me. Then another memorandum was written by Mr. Muddle, referring to the Registrar General's opinion, and re-submitting the case for the consideration of the Board. The case was re-submitted to the Board, and was thereupon deferred for the opinion of Mr. Maddock, who was not in the case at all. Mr. Maddock wrote an opinion upon it, which I took great pains to understand, but which I could not understand. On the 3rd of March he and I both went into Mr. Jones's room to distribute the cases amongst ourselves as usual, and I then called Mr. Maddock's attention to the matter, and Mr. Jones and I talked to him upon the subject, and I pointed out that all the requisites to the execution of a power must be complied with during the life of the donee. Mr. Maddock had advised, in his original opinion, dated, I think, 26th February, as to what notification should be placed upon the certificate of title, but his opinion did not at all clearly express what the effect of the certificate of title itself should be. After the conversation with Mr. Jones and myself, Mr. Maddock wrote a new opinion in substitution for his former one, and I must say that the new opinion seems to me to show that he does not yet know the point of law which I stated to him on the 30th of March, and which I have now stated to yourselves.

880. Is not the case you have referred to that which you mentioned to me the other day? Yes, but all the facts had not happened then.

881. Did not some one object to your endorsement on the ground that it disclosed a trust, and that this office does not deal with trusts? No.

882. *Mr. Robertson.*] Who applied for the transmission; who was the applicant for it? Ellen Elizabeth Müller.

883. What was her relationship to the deceased? Daughter of Jacob Barnes, deceased.

884. *President.*] Has the transmission then been granted? The Commissioners have reversed their decision of the 8th January last, and have rescinded qualification No. 2, which Mr. Jones and I had both advised, and have directed Mr. Maddock's form, contained in or subjoined to his new opinion, to be adopted.

885. You think Mr. Maddock's is wrong? I do.

886. And on that ground you have written to the Colonial Secretary? No, not exclusively on the ground that Mr. Maddock was wrong.

887. On the ground that the decision of the Board was wrong? Well the ground or reason of our writing the letter was I think really this: Mr. Jones and I both felt that too much slight should not be received from the Registrar General, and from the Commissioners, and from Mr. Muddle, without our showing, at any rate, that we are not wholly callous,—that we are, at least, aware that we have been slighted.

888. That is to say, that Mr. Maddock's opinion is taken in preference to the opinion of the two older examiners? That the opinion of Mr. Maddock, who never was vested with the case, is taken in preference to the opinions of the other two examiners who were vested with it, and so as to override the consent of the solicitors for the applicant, and also so as to overturn the decision of the Registrar General and the other two Land Titles Commissioners, given on the 8th January.

889. *Mr. Archer.*] Do you only put it as a matter of etiquette, or do you consider that Mr. Maddock's form is really dangerous? I consider that Mr. Maddock's form is wrong; that it is contrary to law; and that unless the examiners at some future period should exercise a great deal of care and take upon themselves the authority to say, "This entry in the register is wrong, and having looked back for ourselves to Jacob Barnes's will we see that it is wrong, and we will overrule this entry in the register, though it may have been in the register book perhaps for a great many years, and will nevertheless give effect to Jacob Barnes's will and codicil"—unless the examiners for the time being would undertake to do that, the property might get into the hands of a person who is not entitled to it. I can make my meaning very simple: Speaking from recollection (and if I in any way misrepresent Mr. Maddock—of course it is always possible accidentally—I do so subject to reference to the papers themselves, which will correct me.)—I think, however, I am correct in saying that Mr. Maddock advised that the power of appointment exercisable by Mrs. Müller should be stated to be exercisable by instrument registered under the provisions of the Real Property Act; whereas the power in Barnes's will was by deed or will. Mr. Maddock provides for appointment by the lady's will. That does not refer to that part of the subject to which I am directing my attention. A very material difference exists between the two forms "shall by deed appoint" and "shall appoint by instrument under the provisions of the Real Property Act." In the former case, if the lady execute a deed of appointment she has done her work, and although she may die without that deed of appointment ever having been registered the appointment is perfectly good; but if you say, "Shall by instrument registered under the provisions of the Real Property Act appoint," then if the lady die before the registration of the instrument the appointment is good for nothing; all the requisites of the execution of the power have not been completed during her lifetime, and it is like the case of a man with power to appoint by deed enrolled in Chancery; the deed must be enrolled in his life; he has a *locus penitentiae* till enrolment, and so the lady would have *locus penitentiae* till the registration of the instrument.

890. *President.*] Perhaps you will let us look at the papers on your further examination? Very good.

891. *Mr. Robertson.*] Assuming that the certificate in this case is issued under Mr. Maddock's memo. and endorsement, she would have got a certificate of title which would have enabled her to transfer the land by the ordinary form under the Act. Instead of executing a deed of appointment she could have
used

used the memorandum of transfer? I do not mean to say that. The subject is both delicate and difficult. Whether she might not have been quite at liberty to use the ordinary instrument of transfer is another question, and depends at least in part on section 35 of the Act. Section 35 at the close says, "Such instrument when so constructively embodied and stamped with the seal of the Registrar General shall have the effect of a deed duly executed by the parties signing the same." I am, therefore, myself inclined to think that she may, by executing an unsealed instrument, and getting it registered here as a transfer, really exercise the power of appointment given by her father to be exercised by deed. But I do not think that we ought to have gone into that in our register, and I think very particularly that we ought not to have clogged her with the condition that her instrument should be registered under the provisions of our Act. No doubt if an appointment be not registered under the provisions of our Act, it may be liable to be overridden by another appointment that is so registered. That is of course analogous to every day's common practice in reference to deeds under the Act for the registration of deeds. But when you say that the woman has the power of appointment to be exercised by instrument registered under the provisions of the Act you make the registration one of the requisites to the exercise of the power, so that there is no appointment at all until the instrument be registered; the consequence of which is, that if the lady execute the instrument of transfer and unfortunately die before its registration, then the appointment is good for nothing, and the registration of that instrument after her death will also be good for nothing. I certainly think that parties ought not to be entangled with such a difficulty as that, and that, if possible, it ought not to be left to future examiners to have to go back to Barnes' will and to say, "The entry in the register is clearly wrong; Barnes' will is the thing really to go by, and we will now deal with the title in spite of the register." I think it is much against the principle of the Act that they should do so, and if they had to do so in order to avoid an injustice it would certainly be a pity.

892. I do not see why the transfer signed during the life of the donee and registered after her death would not comply with the memo.? It would be bad in law.

893. Under the will she is to execute a deed of appointment? Truly.

894. She applies under this Act to get transmission; you issue a certificate and endorse upon it that she can substitute for the deed of appointment a memorandum of transfer? No, you do not.

895. What was the effect of it then? You do not say she can exercise the power by deed, but that she may substitute a memorandum of transfer. You leave the deed out altogether; you do not allow her to do anything by deed. You tie her up to an instrument to be registered under the provisions of this Act.

896. That is the very point. You need not tie her up to have it registered? You ought not, I think.

897. Then virtually we agree? —

E. Burton,
Esq.
17 Mar., 1879.

WEDNESDAY, 19 MARCH, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P.,
THOMAS ROBERTSON, Esq.,

WILLIAM HENRY ARCHER, Esq.,
JOHN DAWSON, Esq.

Edmund Burton, Esq., Examiner of Titles, further examined:—

898. *President.*] Mr. Pennington was, I think, your *locum tenens* during your temporary absence, shortly after you were appointed examiner? No, Mr. Oliver.

899. Then what was Mr. Pennington's position? Mr. Pennington's position was that of a sort of *locum tenens* of Mr. Dick at a previous period.*

900. Have you had any opportunity of examining Mr. Pennington's work? No; I think I may say I have not. I have never made it my business to examine his work, and I do not think it has ever been necessary to examine his work in order to do my own.

901. Then you cannot tell us, as an examiner, whether he was strict or otherwise? Of my own knowledge I know absolutely nothing.

902. Has the Registrar General any control over the examiners? That may be a question either of fact or of something approaching to law.

903. Take the question of fact. Does he profess to exercise any control over the examiners? Yes.

904. In what respect? That is very difficult to say, but that he certainly claims a control over the examiners is thoroughly obvious to everyone who has been here as an examiner. But yet it would require reference to a great many of the Registrar General's minutes in order to make that thoroughly obvious to anyone else.

905. But, however, I understand you to say he does claim to exercise some control over them? Well, I certainly consider that his minutes mean "I am master."

906. He makes minutes then reflecting on the conduct of the examiners;—is that it? I never like to speak of a written document without having the document before me; but he makes, as I said before, minutes of hypothetical condemnation upon the backs of letters which come to him.

907. Then he does not, as I understand you, directly charge the examiners with anything, but he makes minutes that encourage others in the belief that he has some control over the examiners? He does not make minutes that I can remember directly charging the examiners with anything, but he makes minutes on the backs of letters, which, certainly to my mind, show a very great leaning in favour of the writer of the letter, and a very great leaning against the examiners.

908. Does he ever direct the examiners to do anything? No.

909. Then, in point of fact, he does not interfere with the examiners? I cannot at all accept that logic.

910. I only want your opinion? I think he does interfere with the examiners.

911. State the way in which he does. These minutes do not seem to me to interfere with the examiners? That of course must depend on the character of every minute. I think it must be unpleasant to an examiner or any man to be condemned hypothetically—for any gentleman to write upon the back of a letter

E. Burton,
Esq.
19 Mar., 1879.

* NOTE (on revision):—I mean that Mr. Pennington was actually Mr. Dick's *locum tenens* during the latter part of Mr. Dick's life; and that after that gentleman's death, Mr. Pennington continued temporarily to act as an examiner.

E. Burton,
Esq.
19 Mar., 1879.

letter referring to that man in any way, some such memorandum as this: "If the statements in the within letter are correct I think that Mr. So-and-so has good ground of complaint." Either the Registrar General has jurisdiction over the examiners or he has not. If he has jurisdiction over them he ought to exercise it like every other upright judge by first of all making an inquiry into the facts, and if he had to pronounce any condemnation it should be pronounced after inquiry into the facts, and not hypothetically beforehand.

912. But what you say of the Registrar General seems to me no more than what I and other practitioners have done, that is, made complaints of the examiners, and yet we have no control over them, nor do we profess to have any? To me it appears a totally different thing. It appears that any complaint which you yourself or any other practitioner might make would be on the face of it a complaint; neither yourself nor any other practitioner would claim to sit in judgment on the examiners. What I object to is that these memoranda of the Registrar General assume to be judgments.

913. But nothing results from them? Vexation must result from them.

914. But in point of fact he does not do anything to compel you to rectify those grievances? No, not to compel.

915. He does not attempt to exercise any control over you in any shape at all as far as I can make you out? Words have so many meanings that I might go on and not precisely understand your question—I must not say you do not precisely understand my answer. Of course if a written document be referred to it speaks for itself, and it is difficult for me to bear in mind the contents of all written documents which I have seen during the last almost eleven years.

916. Well, suppose I put the question in another way: Do the examiners admit that the Registrar General has any control over them? Decidedly not. I may state that the examiners are borne out in that non-admission by a recent letter from the Colonial Secretary's Office, written in Mr. Fitzpatrick's time.

917. The examiners think then that the Registrar General has no control whatever over them? The examiners—I speak for myself—think that the Registrar General is not entitled to any control over them. The Under Secretary's letter to which I refer is to the same effect, so far as regards their professional duties.

918. But then he may have control over you in other respects? That might be an implication, but that has never been decided. A letter was written to the Colonial Secretary speaking of the examiners and of other officers under the control of the Registrar General. Having regard to the 5th and 6th sections of the principal Real Property Act the examiners do not consider that they ought to be referred to as under the control of the Registrar General. It will, I think, be observed that the 5th section gives the examiners a better position.

919. Then suppose the examiners neglect their duties, to whom are they answerable? I suppose they are answerable to the Government.

920. Do you think the Registrar General has no right to interfere or report them to the Government? I think he has every right to report them to the Government.

921. But not to interfere with them beyond that? Lines of distinction of course may be very fine. It is impossible sometimes that they should be otherwise. The 5th section to which I have referred evidently places the examiners of titles upon a footing different from Deputy Registrars General, officers, and clerks. The words of the section are: "The Governor, with the advice of the Executive Council, may appoint to the said department such Deputy Registrars General and other officers and clerks as may be necessary for carrying out the provisions of this Act"; and then comes the part referring to the examiners, which I submit, places them upon a totally different ground, "And may likewise appoint two or more persons, being barristers or solicitors, to be 'examiners of titles,' hereinafter styled 'examiners,' to advise and assist in carrying out the said provisions."

922. Of what advantage is the Board of Commissioners? I can hardly say that I am aware of its being of any advantage.

923. They do not in any way interfere with titles? Yes, they do.

924. How? I must not adopt the word "interfere," because I must do those gentlemen the justice to admit and to state that what they do in the vast majority of instances is what they are thoroughly entitled and bound to do. From time to time, though very seldom in proportion to the large number of cases passed, a report comes before the Board of Commissioners, not bearing the unanimous opinion of the two examiners who sign it. The report discloses that, either in whole or in part, one examiner thinks to one effect and another to another. The matter then must necessarily be decided by the Board whether the case shall pass or not. Clearly it is the duty of the Board to decide, and the Board performs its duty.

925. Where there is a difference between the examiners? That is what I have been speaking of.

926. Then, in some cases, they have really decided to pass a title, although the examiners were not agreed upon it? Yes.

927. Do you think the Board, as constituted, is a proper tribunal for deciding such questions? No.

928. There are none of them professional men? No.

929. Have they ever acted in opposition to the reports of the examiners by either rejecting —? This case of Müller is the only one which I remember, and there, of course, they were supported by the advice of one examiner brought into the case at a late stage.

930. Then that case was not decided absolutely in opposition to the whole of the examiners? No, only in opposition to two out of three.

931. They took upon themselves to decide which of the examiners was right, perhaps improperly, perhaps properly? Yes, but I must not be understood to admit that they decided that case properly.

932. Do you think it would be advantageous to substitute, in place of the Board of Commissioners, a barrister or solicitor of standing and of sufficient knowledge who might deal with reports of examiners? My own opinion is that the very best plan is to have as many examiners as may be necessary, and to authorize any two or more of the examiners to do in short anything.

933. In connection, you mean, with the acceptance of titles? That and other things also. To discharge all functions committed by the Legislature to the examiners as a body.

934. That they have already? I do not think so.

935. Except perhaps two. There is no statement in the Act that two can examine? Precisely; that is the very point. There is nothing in the Act to say that the duties imposed upon the examiners may be discharged by any two of them.

936. Would you give power to two examiners then to do the duty cast by the Act upon the examiners? Exactly.

937. Then you would give them further powers? It would have to be decided whether the present Board is to continue or not. I wish to say very little about that, but if the Board be not continued, I would enact that the duties heretofore discharged by the Commissioners shall henceforth be performed by the examiners, and then the provision which I have already suggested would come in, that two examiners might perform any duty cast upon the whole body. I think that plan would have some very great advantages. One would be this, that when the work was found and admitted to be too large for the existing number of examiners, one more examiner might be appointed. That would produce no violent change. When there are three examiners, every case has to be disposed of by two of them, so that out of 3,000 cases every examiner will have to dispose of 2,000. If the cases increase in number, or if it be thought right that in order to promote speed, the number of the examiners should be increased; if the number of cases be supposed to be increased to 4,000 ———

938. In the year do you mean? I am taking them as a mass.

939. Then you mean the number of pending cases? Well I do, of course. The figures are large—larger than is likely to be the case for a very great many years. If the number of cases should be increased to 4,000, and the number of examiners increased to four, every man would still have 2,000 cases, but, of course, 1,000 more cases might be disposed of in the same time than if there had only been three examiners. The appointment of a barrister or solicitor of standing to be professional Commissioner would in the first instance operate just in the same manner as the plan which I have suggested, but eventually it would not operate in by any means so good a manner, while the business of the office should remain such that a very talented superior man should be able to exercise a real supervision over the examinations performed by, say three examiners, which I think, if that gentleman were to do his work at all thoroughly, would be exceedingly hard work; that would be quite as good a plan as if that gentleman were appointed an examiner. But in years to come the business of this office must enormously increase. It has in one respect enormously increased already—I mean in regard to transmission applications—and whenever the business of the office shall have increased enormously in general, any supposed checking of the examiners' work by any barrister, solicitor, or other person whomsoever must be merely nominal. No man can possibly keep pace with six others, amongst all of whom an amount of work similar to that which he personally undertakes, is divided. The plan could, I think, only operate in this manner: The examiners should be more than ever sound lawyers and careful persons. The examiner having gone through a title and having made his notes upon it would send it on to his superior, the Commissioner, and the Commissioner, if thoroughly satisfied of the high qualifications of the examiner, would probably say, "Mr. So-and-so, you find little or nothing to object to in this title?" An affirmative reply might be given, and the Commissioner would, I suppose, thereupon pass the title subject to such qualifications or conditions as the examiner had suggested, and of course subject to such modification of those qualifications as the Commissioner might think fit.

940. Do you not think it would be advantageous to appoint a Master or Commissioner of Titles, who should be a barrister or solicitor of standing, and who should be a sort of head of the examiners, and who, when two examiners had passed a title, might say, "Very well, let it pass," doing nothing with it but passing it; and when a difficulty arose and any applicant for a title were dissatisfied with the decision of the examiners might not this Master of Titles deal with the matter as a Court does on appeal? Yes.

941. In many cases? Of course he could do it in every case.

942. Do you not think it would be advantageous if such a system were brought into force? I am very doubtful about that. The barrister or solicitor must be an undeniably excellent man in every particular.

943. He should be a man of very high standing of course? He must be as good as two or three Judges of the Supreme Court.*

944. But would not the appointment of such an officer save a great deal of time and expense to applicants in preventing appeals to the Court? I do not see it.

945. Suppose he were to decide the thing at once as the Board professes to decide. In some cases there would be no occasion to appeal to the Court? He could not decide a difficult case as rapidly as the Board can decide an easy one.

946. But he would not have to decide every case? Quite true.

947. The only cases he would deal with would be where there was a difficulty among the examiners, or where there was an appeal by the applicant from the decision of the examiners; so that perhaps he would not deal with more than one case in fifty? With regard to cases in which there was a difference of opinion between two examiners, such a functionary as suggested, if a thoroughly first-class man, would be very valuable, but with regard to appeals by applicants I think his appointment would be attended by considerable disadvantages.

948. You think you could not get a man of sufficient ability to deal with such questions? I do not mean that at all. If he were sufficiently paid of course you might get almost any ability that exists in the world.

949. Then you think it would be an advantage if the man were an able man? So far as I have already stated.

950. That is to say, where there is a difficulty between the examiners? Yes.

951. But you think he could not advantageously act where the examiners were unanimous? I do not think that, but I think there would be other mischief. I think that whenever the examiners did not give the applicant exactly what he wanted there would be an appeal to the Commissioner.

952. Do you not think there should be some control over the examiners beyond the control of the Government? Decidedly.†

953. Either a Board, or a Commissioner, or Master of Titles? I have been speaking of a Commissioner, and, of course, calling him a Master of Titles makes no difference.

954. In some places he is called by one name, and in some by another? Call him anything; call him by a Hindostance name; it would make no difference whatever.

955. But at all events I understand you to say that the Board of Commissioners is of very little use? I do not desire to say anything against the gentlemen composing that Board.

956. I am not speaking of the men? I like to say so much, because really one is obliged, in order to answer

* NOTE (on revision) :—Because appeals are at present decided by at least two or three Judges.

† NOTE (on revision) :—I do not at all recollect either this question or the answer assigned to it, and I am not prepared to agree with the opinion expressed in the latter, except so far as by control is meant an appeal to the Supreme Court as at present from the decision of the Board or the control vested in the Minister in charge of the department.

- E. Burton;
Esq.
19 Mar., 1879.
- answer the searching questions which are put, to say a great deal which might not be altogether pleasing to some persons, and it may be said (I wish to say) that I have no desire to lower Mr. this or Mr. that. I have no desire to say anything against the Commissioners. I cannot say that I think they are of much use, but the fact of their sitting regularly once a week, and therefore of cases being, so far as possible, disposed of by that particular day in the week has always led to a certain degree of regularity and advantage. I do not honestly think that they are of any other use.
957. The fact of their sitting periodically then brings some kind of pressure on the examiners to proceed with cases? Precisely, to get certain cases disposed of.
958. And you think that the Board is of little value beyond that? Quite so.
959. Do you know whether applications for certificates of title or other documents are ever prepared by clerks in this office? I know that other documents are.
960. In connection with the working of the office. I mean documents for applicants? Certainly.
961. Do you think there is any objection to that? I do. I am aware that a very great recommendation of the Real Property Acts in the eyes of many persons is the saving of solicitors' costs; but then I think, at any rate, that that saving is not the only thing to be looked to. I consider it decidedly objectionable that any one in the office should be identified in any degree with any applicant.
962. Do you suppose those clerks who prepare these documents receive fees or gratuities for them? I do not suppose so.
963. Have you never heard that gratuities or fees have been paid to clerks for such work? Never.
964. What is your objection to their preparing the documents then? That to a certain extent it identifies the officer with the applicant; that it is an unfair mode of the officers currying favour with the applicant; and that it is unfair to other applicants, because this officer may be made a sort of shepherd, to see his good friend's case home, necessarily to the retardation of the cases of other people who have not friends in the office.
965. And it also, I suppose, wastes the time of the clerk who does the work? Quite so.
966. And I understand you to say that you are aware that documents have been prepared in the office for applicants? I have done so myself.
967. Why have you done so if you think there is an objection to it? I have done so for Mr. John Solomon, and although I think there is a great objection, and although, of course, it is a retardation of my other work, I very much incline to think that on the whole I expedited the business of the office generally by drawing for Mr. Solomon the declaration which I did draw, and by allowing Mr. Raymond to come up from the Union Bank and make the declaration immediately. Mr. Holden was also in the practice of drawing declarations.
968. Then I understand you have done this work to save your own time and the time of the office? Pretty much so. I have done it as a sort of *pis aller*.
969. Do you suppose that kind of motive influences the counter clerks, or other persons in such positions? I have not said anything at all about the counter clerks, and I know little or nothing of what they have done. The generality of your questions obliged me to answer in the form in which I did. I know that Mr. Holden has prepared declarations; I know that I have prepared declarations; I know that Mr. Lander has prepared declarations, but beyond seeing the handwriting in the schedule of deeds at the end of an application, I cannot say that I have ever seen or known anything of the sort to which you refer.
970. Then what you have stated applies to the examiners and to Mr. Lander? What I have stated does in substance apply to the examiners and Mr. Lander only so far as regards the fact of documents being prepared for applicants by anyone connected with the office. But what I have been really referring to in my own mind, in addition to that, is this, that I think it very objectionable for anyone in the office to perform the part of friend at Court to any applicant or his application. My mind was exceedingly impressed with that feeling in Eyles' case, to which I have already referred.
971. And who prepared the documents in that case? No one that I know of.
972. How did that case impress you with a difficulty if no one in the office prepared the documents? The case was shepherded by Mr. W. S. Muddle, the counter-clerk; the case was shepherded by him to this extent, that he came to me about it, and said that he thought I might dispose of it in an hour. That case turned out, from circumstances to which I have already referred, to be one of extreme difficulty. Mr. Oliver, as well as myself, was at work upon that case for a very long period. It became apparent that the examiners were not going to pass the case. The difficulty I may state had been disclosed to the examiners by the pencil draft of a letter which was written on the fold of an abstract. The papers were in my hands. I was asked to give them up on the ground that the case was about to be withdrawn. I gave them up, and in about four and twenty hours they came back again to me. The draft letter had been rubbed out in the meantime.
973. Mr. Terry.] Do you think it desirable in this Colony to assimilate the law with that of South Australia and Victoria, whereby dower is done away with under the Real Property system? I think that women are entitled to all the protection that men can give them. I know that dower has sometimes been a very great protection to a woman. For my own part I consider a man's wife is his first creditor, and I would certainly give her preference over all others; at least, I would not make her second to any. I should therefore personally feel an unwillingness to deprive women of their titles to dower, although, of course, I feel with everybody else having anything to do with conveyancing that titles to dower are very great plagues.
974. Mr. Robertson.] But the law as it now stands expressly deprives a married woman of any claim to dower out of any land on which her husband has secured any creditor, or upon which he has taken any advance? Yes.
975. So that the law as it now stands does not give the wife a preference; on the other hand, it expressly prefers the creditor? The law does not give a preference to the married woman over the secured creditor, but the law still gives a preference to the married woman over unsecured creditors.
976. Mr. Terry.] How does dower work in this Colony in reference to land brought under the Act? Plaguily.
977. Do you remember a case of application of Mr. Paling through his solicitor, Mr. M'Culloch? There were two cases—one by Paling, and the other by Paling and Starling.
978. Where he desired to bring land under the Act, having sold a large portion of it prior to the application, and the persons to whom he had sold consented to allow him to get a certificate? Yes.

979. Did you, in that case, recommend that each of those parties to whom he had sold ought to make an application? I do not think my recommendation went absolutely to that length; that is to say, I did not recommend that an application from each of them should be insisted upon, but I certainly thought each of them ought to have made an application.

E. Burton,
Esq.
19 Mar., 1879.

980. Why? Because the investigation of the title is, in each case, a thing of itself. I may state, however, that Mr. Paling's title was exceptionably circumstanced. He had not any conveyance to himself, so that he had no title at law. When he brought his case in he had not even paid his purchase money, so that his title in equity was only subject to the lien for unpaid purchase money. I got the solicitors to clear off that, so that there was eventually no difficulty on that head. Mr. Paling, having no title at law, had sold about 120 allotments. Of course he had no title in equity to those allotments which he had sold.

FRIDAY, 21 MARCH, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

WILLIAM HENRY ARCHER, Esq., | THOMAS ROBERTSON, Esq.,
JOHN DAWSON, Esq.

John Booth Jones, Esq., Examiner of Titles, examined:—

981. *President.*] You are one of the Examiners of Titles under the Real Property Act? I am.

J. B. Jones,
Esq.
21 Mar., 1879.

982. Will you be good enough to state what are the duties of the examiners? The duties of the examiners are mainly the examination and investigation of titles, and advising the Registrar General upon matters arising out of the administration of the Real Property Acts. According to the Real Property Act we are to advise and assist.

983. How do applications for certificates of title get into the hands of the examiners? Through the examiners' clerk.

984. And how do they get into his hands? I believe they are sent up from the counter. They are received at the counter and sent up by the counter clerk.

985. As soon as they are received at the counter they are sent to the examiners' clerk? In many cases I dare say they are not sent up as soon as received, but the course is that the applications are lodged below; they are then sent to the examiners' clerk, who prepares a search paper and places the search in the hands of the searcher; and when the search is made it goes back to Mr. Lander or to the draftsman, and from the draftsman into my room for distribution.

986. Then do you distribute the cases amongst the different examiners? No; I invite the examiners on the 1st of the month into my room, and we distribute the cases.

987. Why go to your room? As being the most convenient to the draftsmen. I do not distribute; we just simply cut them into three parts.

988. Then how long do they remain in your room before they are distributed? Never more than a month; they accumulate for the month.

989. Why cannot they be distributed before the lapse of a month? They might be, but I don't think that would tend to expedition.

990. Suppose that one of the examiners gets through his work more expeditiously than another, why is he not supplied with work? He is supplied with work. If we have no new cases to go on with we have always cases on requisition.

991. Why not allot cases when received? It might be done, but it has been found to be not so convenient. They would simply lie in the examiner's room. If an examiner wants work he knows where to go for it; that has been the experience of myself and others. If he has got through the allotted number the examiner wanting work would walk into my room and take a case, or send for it.

992. Has he a right to go in and take it? Certainly.

993. Then if an examiner has finished the work he has in hand he can go to your room and take other work to go on with? Yes.

994. But unless he does that some cases may lie in your room actually one month before being dealt with? They may, but that is on the assumption that they come in on the first of the month; but very few do come in on the first of the month. We distribute on the first of the month, and it may be a week or ten days or a fortnight before another case comes in for distribution, or rather for accumulation.

995. But a dozen may come in on the first of the month? Certainly; they may.

996. As soon as a case gets into the hands of the examiners' clerk, it is, as it were, under the control of the examiners? We do not hear of it.

997. But Mr. Lander is your clerk? He is, nominally; but we do not know when Mr. Lander receives a case.

998. Have you no control over him? Well, he has never hesitated, I think, to carry out the wishes of the examiners. If we give directions to Mr. Lander to let us know of the receipt of a case, he would let us know, but he does not tell us generally.

999. But that rests with you? Nothing would be gained by his informing either of the examiners that a certain case had been received.

1000. But supposing Mr. Lander were to allow an accumulation of three months of cases, would you take any steps? Certainly; if such a thing were brought under our notice we would take steps.

1001. What are your instructions to Mr. Lander? I cannot say we have given any instructions; the present practice is that which I found in force when I came here. Cases were sent to Mr. Lander, who prepared the search-paper without any instructions from the examiners, and sent it on to the searcher.

1002. Then it appears that Mr. Lander is his own master, with no control over him at all? I cannot say that. He well knows that his duty is to make out the search-paper immediately on receipt of the case.

1003. It is not the search-paper that I wish to deal with. Supposing all this preliminary work has been got rid of by Mr. Lander, and the case is ready for the examiners, why could not Mr. Lander immediately hand it over to the examiners? Mr. Lander prepares his search paper, puts it into the hands of the searcher,

J. B. Jones,
Esq.
21 Mar., 1879.

searcher, who makes a search; the result comes back, I am not sure whether directly to Mr. Lander or the draftsman, but at any rate it finds its way almost immediately into the draftsman's hands; the draftsman examines the search, notes the registration copies, and then carries it into my room, or he may give it to Mr. Lander, who immediately takes it into my room for the examiners. I do not think that after the search is made there is any delay on Mr. Lander's part; but there may be a little delay in giving out the search paper through pressure of work.

1004. Then those preliminary matters having been completed the case is usually brought by Mr. Lander to your room at once? I think I may say so.

1005. And there it may lie for a month before anything is done with it? It may, but very seldom does.

1006. Then at the end or rather on the first of the month the examiners meet, and divide such of the cases as require to be dealt with? Yes; there is only one exception, and that is in the case of first-class cases, which are carried immediately to the examiners, and they take them up almost immediately. We do not allow them to lie for a month. As far as I am concerned I deal with first-class cases as soon as they are placed on the table, or very soon after.

1007. Are they always placed on your table? Oh no, they are taken to the examiners, and divided.

1008. Divided by whom? By Mr. Lander. I take a certain number, a certain number goes to Mr. Burton, and a certain number goes to Mr. Oliver. Sometimes Mr. Burton, or sometimes Mr. Oliver, and myself might have taken them all if another examiner were pressed with work.

1009. Then Mr. Lander practically allots these cases? If you like to call it so, he does.

1010. If he thinks one examiner wants work he gives a case to him, and if he thinks another is in the same position he gives a case to him? I think the plan is as I have stated.

1011. On what principles are the cases allotted on the first of the month to the examiners? Equally.

1012. If there are thirty cases ten are handed over to each examiner? Yes, that is the rule. Sometimes one examiner may take more than the others, perhaps one examiner might get through his work more speedily than another. If you came to count the cases you might find that one examiner had more than the others.

1013. If an examiner wishes for more work he will get a larger proportion of cases if he chooses? Yes. The object has been to distribute the work equally. I think I ought in justice to say that Mr. Oliver and I have sometimes taken more cases than Mr. Burton, but the general rule has been to distribute equally.

1014. Has Mr. Lander any other work than that in connection with the examiners? Yes, he is custodian of wills.

1015. Does not that interfere with his duties in connection with the examiners? I think it must. It must take up much of his time. I have never asked Mr. Lander to do anything which he has refused, or hesitated long to carry out. The main delay has been in getting administration papers or probate papers when they have not been sent over by the Supreme Court. We have had sometimes to wait hours for administration papers or probate papers.

1016. I think I am right in assuming that when cases come into the hands of Mr. Lander they are practically under the control of the examiners, and beyond the jurisdiction of the Registrar General?—Do you mean by that question that after they reach Mr. Lander the Registrar General has no right to interfere with them?

1017. I mean that, in point of fact, the progress of the case then depends entirely upon the examiners? Well the progress of the case does depend upon the examiners, but I do not consider myself responsible for a case until it comes into my room, and has been allotted to me or taken by me.

1018. That is to say, that it is your idea individually. I am talking about the responsibility of the examiners as a body. The examiners do not consider themselves responsible for any delay created by Mr. Lander? I do not; I am afraid that I should get through very few cases if I had to look after Mr. Lander in every step he took in connection with the case.

1019. Is he not active enough? Well, he is not a young man. He is very accurate I think in his work, and very willing.

1020. But not expeditious? I cannot say that. I think he can get through a great amount of work within no extraordinary length of time, but I think he is very often interrupted by the public. He must necessarily be, and of course that would interfere much with his work. It will account no doubt for apparent delay in getting out search papers, for instance.

1021. You think it would be advisable to have the clerk entirely under the control of the examiners? I am sure of it.

1022. And some delay is now created by Mr. Lander having to attend to other matters? Yes; by that I mean, of course, in connection with the wills.

1023. What steps does Mr. Lander take with the titles on their coming into his hands;—you have told us I think before, but I want it concisely? He prepares a search paper. That necessitates, of course, a cursory investigation of title by him. He must ascertain the parties, and the dealings, the dates, and some particulars of the property. Then I think his duties cease until the title is investigated.

1024. What does he do with the search paper? Gives it to Mr. Hatton.

1025. Who searches for dealings with the property? According to his instructions.

1026. And returns the result of his search to Mr. Lander? I suppose so. The result then goes to the draftsman, who goes through the search paper and notes, for the information of the examiners, any deeds disclosed, and not produced affecting the property.

1027. Does the draftsman's report come back to Mr. Lander? It is enclosed in the packet, and I think it is laid on Mr. Lander's table, and then it is brought into my room; but sometimes the draftsman brings it into my room. I cannot say whether he invariably leaves it on Mr. Lander's table, but I think that generally that is done.

1028. Then it first comes to the hands of the examiners after the search has been made and the draftsman has dealt with it? Yes, after he has reported.

1029. You consider it then your duty to go into the case and investigate the title? It is then under the charge of the examiners. Before you leave this practice of distribution I should like to make an observation. There was no such arrangement, I believe, until Mr. Oliver and I came to the department, as the monthly distribution. The cases before that, I think, were carried in indiscriminately by Mr. Lander. He would take some to Mr. Burton, bring some to me, and take some to Mr. Oliver. It was found that
that

that plan did not work very well, because at the end of the month there would be a large accumulation of cases untouched. Sometimes cases which had gone out on requisition would remain untouched for a longer time than they ought. We then devised the plan of this monthly distribution in order, among other reasons, to enable the examiners to get rid of the cases which had gone out under requisition and had been returned, before going into new cases.

J. B. Jones,
Esq.
21 Mar., 1879.

1030. Those cases where requisitions have gone out, and answers to the requisitions have been sent to the office, I suppose go to the examiners who made the requisitions? That is the rule, but there have been exceptions.

1031. Does Mr. Lander make any requisitions? Oh, I think nothing beyond those of the merest preliminary character.

1032. Supposing the cases in the hands of one examiner accumulate a good deal, do you still make the allotment of cases at the end of the month evenly? Well, it has not been done in every case. There have been many instances in which Mr. Oliver and I have taken more than an equal third.

1033. In order, to some extent, to equalize the work then in the hands of each examiner? Yes, I suppose so.

1034. And from what you say I assume that Mr. Burton is slower than the other examiners in dealing with cases? Some cases. I have not spoken of "slow" at all yet.

1035. But you have spoken of yourself and Mr. Oliver taking more cases? Yes, and it has been to relieve Mr. Burton somewhat when he has had a large number of cases in hand.

1036. In what manner do you investigate titles when they do come into your hands? I go through the deeds lodged with the application. I make my notes as they arise in the title —.

1037. Notes of objections or requisitions? Any notes on the title at all which require consideration—I peruse all registration copies of deeds not lodged; I satisfy myself of the identity of the parcels, that is, the identity between the land applied for and that in the deeds. I then send the case on to a colleague.

1038. Who deals with it in the same way? Who deals with it in his own manner.

1039. What happens then? We send out the requisitions, if any.

1040. You consult together, I suppose? If necessary; if there is any doubt in the mind of an examiner not shared by a colleague, there would be a conference immediately, before sending out requisitions.

1041. And the requisitions are sent to the applicant, or to his solicitor? Yes; I would instance that if I went through a title and saw any points requiring to be cleared up, I would draft a letter, if the case were a short one, and send the case there and then with the draft letter to the examiner, for his concurrence. When he has concurred it goes forward. Sometimes an examiner will hold a letter over until he has perused the title himself. If it is a preliminary objection his attention is drawn to the particular point, and the letter goes on more quickly than it otherwise would. It is a preliminary objection which, on the face of it, shows that it ought to be cleared off before further investigation of the title.

1042. Then, in some cases, you send preliminary requisitions? By "preliminary" I mean simply what I have stated—an objection which, upon its very face, shows that the title is defective; or it may simply be for the production of deeds, without which we cannot complete the investigation.

1043. And when those preliminary requisitions are satisfied? Then I complete the investigation.

1044. At once? As soon as I possibly can. I do not mean to say that if I am in the middle of a case I would cast that case aside and take up the other.

1045. Do you go on with the case in preference to cases with which you have not yet dealt? I give the preference to cases under requisition over those with which I have not yet dealt. I ought to add that, in many cases I sign a report immediately on investigation, and then send it to a colleague.

1046. That is, if you see no difficulty and are prepared to pass the title? Yes.

1047. And if your colleague passes the title, the report goes to the Commissioners to be dealt with by them? Yes.

1048. Without communicating with applicants? Without communicating with applicants.

1049. Has that often happened? Repeatedly.

1050. What kind of requisitions do you send out; what I mean is, do you ever send out requisitions that you really do not think are essential to be answered? I do not think I ever do. I think I may disclaim ever having sent out what people call a "trivial" requisition.

1051. Then what you send out are really what you think are necessary to be dealt with? I think so.

1052. Has not a practice lately sprung up in the office of reporting in favour of titles subject to qualifications? It has; I do not say lately. There is such a practice, and it has been in force for some time past.*

1053. But has it not been much extended lately? Perhaps it has. But that is a somewhat difficult question to answer; for this reason, qualifications are dependent on the state of the title. I do not know that I can say generally that qualifications are more numerous now than in days gone by. I am inclined to think though that they are, and for reasons.

1054. Will you give those reasons? Well, they are reasons mainly in favour of the applicant. Where a title has been reported with certain qualifications, the examiners as well as the applicants know what points have been cleared off, and what points remain to be cleared off, so that they can direct their attention to the particular subject matter of qualification. I do not myself believe in qualifications except of the simplest character.

1055. Is it not possible that a title may be rejected for want of satisfying those qualifications—satisfying the Commissioners on the subject of those qualifications? I do not know a case which has been withdrawn or ultimately refused, on the ground of non-satisfaction of qualifications. I cannot remember a case.

1056. Does it not put the applicant in a very awkward position. Suppose those qualifications cannot be got rid of, his title is advertised and then has to be withdrawn, a doubt being cast upon it? Yes, but I do not know of a case having been withdrawn for qualifications, and with very few exceptions the qualifications are of such a nature as would not, I think, justify the rejection of the title or its withdrawal.

1057. Are not some of those qualifications really such as ought to be put in the form of requisitions? They have been before put in the form of requisitions and they have not been satisfied, so really the case has

* NOTE (on revision):—I did not mean to convey that the former examiners did not annex qualifications to their reports.

- J. B. Jones, Esq.,
21 Mar., 1879.
- has been reported subject to those unsatisfied requisitions simply for the purpose of getting through work. 1058. Then those qualifications are simply a reiteration of prior requisitions? That is the rule. I think myself that a case ought to be reported without a qualification except such as the following: Such and such a deed to be produced and to be found satisfactory; searches to be continued; insolvency search to be made. I think those are such qualifications as you cannot well avoid.
1059. Supposing deeds are produced in compliance with such qualifications, may not a deed be fatal to the title? It might, but we have reported on the case in the interests of the applicant. He may have informed us that the deed cannot be found. He cannot prove the loss of it, and we have passed that title on the perusal of the registration copy, but it is impossible to say what the original deed may contain, or have endorsed on it.
1060. If deeds are produced in consequence of those qualifications do they go before the examiners? Before one or the other, not before both generally.
1061. And how soon is the question then dealt with? I think it is dealt with very quickly. It is as far as I am concerned. The case may remain in my room for a day or two.
1062. Are they dealt with before the next Board meeting? Qualifications never go before the Board again; they are never re-submitted to the Commissioners; they are dealt with wholly by the examiners.
1063. Then do the Commissioners pass the title? The Commissioners pass the title as reported, subject to the qualifications which the examiners think ought to be satisfied.
1064. The cases do not go again to the Board? No.
1065. Who draws up letters of requisitions? We do it indiscriminately.
1066. The examiners or Mr. Lander? The examiners.
1067. And they are signed by the Registrar General or the Deputy Registrar General? They are initialled by one of the examiners, but the mere initialling does not indicate the responsibility of the particular examiner. They are joint requisitions as a rule.
1068. Initialling, I suppose, is simply to show that they have come before some of the examiners? Before one of the examiners. I made the remark that the requisitions are generally the joint production of two examiners.
1069. I suppose all three examiners never report on one title? Only in the case of two reporting, and differing. I have known one or two cases which have been submitted for the opinion of No. 3.
1070. But as a rule you consider it sufficient if two are satisfied? Yes.
1071. And the Board of Commissioners consider it so? Yes.
1072. Do you deal strictly in rotation with the cases referred to you? Numerical rotation.
1073. Yes? Yes, but I must qualify that. The cases do not always reach us in numerical rotation. A case may lie sometimes in the room of the draftsman, who may want a plan or survey, or something of that kind, without which he cannot report, and that causes the case to fall behind.
1074. I mean in the order in which you receive them? I deal with them in the order in which I receive them, as a rule. I have advanced many cases.
1075. I think you told me that you did not allow first-class cases to accumulate—that you dealt with them at once? I have said so; and there is another class of cases which receives preference—transmissions. We have three classes of cases.
1076. Suppose you have one very long and difficult title, and a great many short and simple ones, do you still take them in rotation? I should take the simple ones, but it is difficult to find out their simplicity.
1077. Then you do not deal with them strictly in rotation, you take the simple ones first? The rule is rotation, but I depart from that rule when I have simple cases, to which I give the preference over long cases; and I also take transmissions before original applications.
1078. Are cases ever taken out of their usual course on account of extreme pressure brought to bear by applicants, or by officers of the institution? I know many attempts have been made, but unless I have been satisfied of the urgency or pressure, I do not think I have yielded.
1079. Made by whom? By the applicant or his solicitor? I must be satisfied myself of the urgency or pressure.
1080. Have any such attempts been made by the officers of the institution? I think I may say the Registrar General has made such a request. Persons have gone to him and, I suppose, represented facts, and he has endeavoured to press those cases on; but I cannot say, speaking for myself, that he has asked me to neglect other work for the sake of those particular cases. I do not mean to say the Registrar General has said, "Mr. Jones, will you take that case and leave half-a-dozen other cases undone"; but we have had cases represented as urgent and pressing by the Registrar General.
1081. Has any pressure been brought on you by other officers of the institution besides the Registrar General? I have had a little by the Deputy Registrar General, but I do not call it pressure. He may have come into my room and have spoken of what people call the delays of the office, but I do not know that he has ever unduly pressed me in relation to any particular cases. Without any egotism I might say that I do not, as far as my own work is concerned, feel any necessity for pressure, for I very seldom have any accumulation of cases.
1082. Were there any arrears of cases when you took office? Oh, there must have been, because I found upon the table in my room a great number of cases. By arrears you of course mean work remaining to be dealt with.
1083. By the office? By the office. But I cannot say whether or not they had been vouched by Mr. Burton or by Mr. Holden. I know when I came here there was a mass of work in my room waiting to be dealt with.
1084. Whom did you succeed? Mr. Oliver and myself succeeded Mr. Holden.
1085. Whose room did you go into? Mr. Holden's room.
1086. I suppose you cannot give us an idea of the number of cases in arrear? I could not. I could give a guess that I found more than fifty cases in my room, but it was long ago—four years ago. It would not be a correct thing to say the cases were in arrear, because they might have been dealt with either by Mr. Burton or Mr. Holden, and awaited the signature of the second examiner.
1087. Can you say how many titles on the average per week you examine, and either approve or send requisitions? I could not say. I have got an epitome here of the cases I have dealt with since I have been here. (*Epitome handed to the President.*)
1088. Can you make it out from that? It is hard to strike an average. I have got through as many as six or eight in a day; but that depends on the character of the cases. A dozen, or it may be twenty, first-

first-class cases could be got through in a day. I can tell you the total number examined by me since I came here, including everything—first-class, second-class, and transmissions. I keep a book in which I enter cases when received by me, when examined, and when reported on. I find I have examined 1,389. That may make a little against me or a little in my favour.

J. B. Jones,
Esq.
21 Mar., 1879.

1089. From what date? I commenced work on the 15th July, 1874, and this is up to the end of 1878. Out of these cases I have reported 1,189, leaving a balance, according to my book, of 200, either under requisition or withdrawn, or transferred from one class to another.

1090. By "under requisition" you mean —? Not passed. Of course I may have signed some of them, but they may not have been signed by the second examiner, or they may be under requisition, or withdrawn. But I have against myself 200 cases which have clearly not passed the Board.

1091. But with respect to which you have done all that is your duty to do? All I can do.

1092. Then, according to your statement, you have none in arrear? I have in my box ten or twelve cases untouched. Some have come to me during the last week, and some have been examined by one examiner, but not by me. There are about six cases not touched by either one examiner or the other.

1093. Then do I understand you to say that practically there are no arrears as far as you are concerned; nothing in arrear? I will not say that, because I have ten or twelve which I have not examined. That is all. That represents, at this moment, my arrears. I have got some cases which are under requisition, and some which have passed the Board and are waiting in my room for the clearing off of the qualifications; but I do not call these arrears. They have been dealt with; some examined, and some reported on.

1094. If you have anything to do with them I call them in arrear? I call arrears something more than that. They are simply waiting an opportunity of getting to them.

1095. Do you consider it your duty as examiner to make every possible requisition? I do not; nor do I.

1096. What do you dispense with? That depends entirely upon the particular title. I might be disposed to accept less evidence upon a point than another man might be disposed to accept. I may be more ready to waive the production of a deed than another man.

1097. Do you insist upon the production of all deeds in any way affecting a title? If we can get them. The rule is, if we can get them, to have before us all original deeds affecting the title.

1098. Supposing they cannot be got? That depends upon the ground of inability. If they are out of the Colony I do not think we have asked for originals; we are quite content with certified copies.

1099. Where the deeds are registered at full length do you still require the production of the originals? In many cases.

1100. Do you ever dispense with it on the ground of registration? It depends on the particular title. For instance, in the case of a bank, where a mortgage had been assigned to a bank, and the title was derived through that assignment, there was a difficulty in obtaining the production of the assignment;—production of that original was waived; the main grounds being that I thought we might rest content with the liability of the bank, its conveyance and covenant, and inspection of the registration copy.

1101. Do you endeavour to pass as much as possible of titles that are brought to you? Most certainly. Not only that, but I have had instances of what people call "building up titles." I have had some titles lodged which, upon their face were evidently defective, and from hunting out the titles here we have made titles for the applicants.

1102. You do not endeavour to reject any of them for fear of prejudicing the assurance fund? Oh, no—that is a secondary consideration. The only proposition with me is, "is this a good a title"; the assurance fund is a secondary consideration.

1103. Can you give us any idea of what guides you in the acceptance or rejection of a title? I really cannot say.

1104. You have heard of safe-holding titles,—that kind of thing, I mean? The difficulty here is to tell when the title is good, unless you comply with the rules of law. The title may be weak and open to attack upon a very technical point, which might escape many men, but would not escape others.

1105. Do you consider that you are bound to accept all such titles as would be accepted by the solicitor for the willing purchaser? I do not think so. I think I may say that the kind of rule which guides me is, "would a Court of Equity compel an unwilling purchaser to take this."

1106. Then, in point of fact, you require the title to be strictly perfect? That is the rule, with many deviations.

1107. But if you are absolutely correct in every case, what is the advantage of keeping up the assurance fund? I do not know that it is very much use; it is so very small that one shot at the assurance fund might, I think, carry it away.

1108. But it will never be touched if you are so particular—unless you make mistakes? Speaking for myself, I am always willing, when I cannot get the best evidence, to take that which is the second best, and which is safe.

1109. But your idea is only to pass titles which an Equity Court would accept? That is the general rule, and should be the rule to guide examiners in the acceptance of titles; but there are many cases with peculiar circumstances attached to them, and those peculiar circumstances always receive consideration.

1110. Do you require the registration of deeds forming links in the title? Not of very old deeds.

1111. But a conveyance to an applicant, or one or two back, I should say, supposing the conveyance to applicant comprises the whole of the grant? Whole of the grant or the land applied for.

1112. I say, supposing it comprises the whole of the grant? I should ask that it be registered. I think that it is a protection.

1113. To whom? To purchasers or people outside. Because, on searching in the index they would find that a person other than the applicant was the owner of the property.

1114. Have you any right to protect those persons? I do not know that we have; but I think it is a very great convenience to get the register perfect, and I do not think there is any objection on the part of the solicitor or the applicant to register such a deed of conveyance.

1115. But applicants are put to the trouble of registering the deed, the register being intended to give precedence to that deed? I have directed a notification upon the last registration that "this land has been brought under the Real Property Act, in such-and-such an application." But I have often concurred in the qualification "such-and-such a deed to be registered." I can tell you of another instance where I think registration should be insisted upon,—a conveyance to applicant of land over and above what has been applied for under the Act; in other words, where a conveyance contains several parcels of land not being

- J. B. Jones, Esq.
21 Mar., 1879.
- being brought under the Act. There, I think, registration should be insisted upon, because the original deed is taken away from us, and we have no record of it except what the examiners may make. We do not insist upon attested copies if registered deeds be taken away from us.
1116. Of course you know that an unregistered deed is as good as a registered deed, supposing there is nothing subsequently registered affecting it? Yes; we should have to be very careful with our searches because the vendor to the applicant might contract or convey, and the contract or deed might be registered before issue of our certificate of title.
1117. It seems to me, then, that it is not to protect the office that you insist upon this registration, but to protect outsiders? In such a case as you put—where the land comprised in the applicant's conveyance is being wholly brought under the Act.
1118. *Mr. Dawson.*] Assuming that the applicant cannot obtain the signature of either vendor or purchaser to a deed, and not an old deed which you have required to be registered, would that prevent the certificate ultimately issuing? No. I should then direct a memorandum to be made upon the registered copy of the last conveyance immediately preceding the deed you are referring to, to the effect that the land contained in the deed had been brought under the Act.
1119. *President.*] After a title has been once passed by the Board of Commissioners, is it ever re-investigated on a fresh application for a certificate for land coming under the same title? As a rule, it is not.
1120. Supposing you had passed it yourself, you would not re-open it? No.
1121. Supposing another examiner had passed it? Unless my attention was drawn to a particular point I would satisfy myself that the new application was on the same lines as the old.
1122. Have there not been many cases in which the titles have been re-investigated? I know of two in which attention was drawn by somebody outside the office to a particular point in the title accepted, and I think the old title was re-opened.
1123. Only on account of some subsequent supposed defect? On account of attention having been drawn—exactly. Although I may say I do not think that the examiners should be precluded, as we at present stand, from looking at the old title. It would lighten considerably the work of the examiners if they were prohibited in some manner (say) by some short section, something to this effect—that when a title has been once accepted no question arising out of the early title shall be re-opened. It would save a very great deal of time. It is sometimes a labour to ascertain whether a new title is on the same lines as the old ones, and I would myself rather investigate the title *de novo*.
1124. *Mr. Archer.*] You said that you considered the duties of the examiner were indicated in the 5th section of the Real Property Act, which prescribes that the examiners of titles should advise and assist in carrying out the provisions of the Act? The 5th section, yes.
1125. Do you so advise the department in all matters of a legal character? On all matters submitted.
1126. Have you ever advised the Registrar General and the other officers of the department in regard to the carrying out of their duties, if they brought under your notice any defects in the mode of conducting business? I do not think those defects have been brought by those officers under my notice.
1127. Has the Registrar General on no occasion come to you and stated that there is such a slowness in the mode of procedure, or that such technical objections were taken, as to in effect stay the business of the office very materially? Oh, he has, I think, both orally and by minute made observations as to the slow manner in which the work is cleared off.
1128. Have you ever attempted to satisfy his mind for the information of those complaining that there really was no unnecessary delay? The Registrar General has not sought "*my advice*" upon the subject. He has not in a friendly manner, for a very long time past, come into my room and said "there are such and such objections made to this case," or "somebody complains of the delay, will you be good enough to tell me how the matter stands, or what is the cause of delay, or can you suggest a remedy."*
1129. He has never, in your instance at all events, courted your advice and assistance as to how to concert measures to prevent delay or alleged delay? He has not. He may casually have done so when I first came here, but for some years past there has not been sufficient harmony between the Registrar General and the examiners to lead them to take that course.
1130. Do you mean harmony with the examiners as a whole, or with any one in particular? As a whole or individually.
1131. Are you in harmonious relations with him? I cannot say I am. I have had no quarrels with the Registrar General, but there is a total absence on his part of any disposition to confer with the examiners upon the Real Property Act.
1132. Did he ever speak to you as to the desirability of the clerk to the examiners being under your or his control? I think not. I think he has generally acted as if he considered the examiners' clerk under his control.
1133. Has he ever consulted with you as to the desirability of the clerk's being relieved of the duties in regard to the wills? He has never consulted with me. I believe he has made the remark, but not to me personally. He may have made the remark, but it is a long time since I had any interview with the Registrar General. I can say this: he may some long time ago have made an observation similar to that you suggest—not in the way of consulting, or in the way of asking advice, but in a casual off-handed remark, to the effect that the clerk ought to have been relieved of the wills.
1134. Can you say if he ever did make such an observation to you, whether you did or did not express hostility to Mr. Lander's being relieved of the wills? Not hostility. I saw objections to the wills being under the charge of somebody not under the control of, or subject to, the examiners; because they want to refer every day to wills or administration papers; and if these were in the charge of somebody over whom the examiners had no control, the work of the examiners would be very much interrupted.
1135. But if the Registrar General represented to you as an examiner that Mr. Lander's having the charge of the wills was a cause of his not being able to do his duty effectively as clerk to the examiners, in reference to applications, would you or would you not consider that Mr. Lander still ought to have charge of the wills? I might have said something of that sort, in the absence of any suggestion from the Registrar General. If it had come before me in the way you put it, I might have replied, "I do not think that he ought to be relieved of the wills," and I might have gone on to tell him that if the wills were beyond the control of the examiners, it would interfere with their work.

1136.

* NOTE (on revision):—I wish to add, I have always given the Registrar General any information in my possession required by him.

1136. But that is no reason why Mr. Lander should retain them? Oh, no.

1137. Can you account for this want of harmony between the Registrar General and the examiners? I think it has accumulated gradually. I know that friendly relations did not exist for very long after the appointment of Mr. Oliver and myself. There never has been what I consider there should be, a cordial relationship existing between the Registrar General and the Examiners of Titles. The Registrar General's ear has always been open to complaints made against the examiners. My opinion is that the Registrar General's duty was to see the examiners individually or as a body about complaints, not made generally, but in connection with particular cases. I think his duty was before taking any action at all in those complaints to see the examiner in charge of the case, ascertain what difficulties he had to encounter in the case, what was the cause of delay, and so on. The Registrar General's course has not been so.

J. B. Jones,
Esq.
21 Mar., 1879.

1138. He has not endeavoured assiduously to establish and maintain amicable business relations with the legal branch of the department? In so far as I am concerned he has not.

1139. Could you point to any act of a decisive character of antagonism? This want of harmony manifested itself in this way. I have pretty well stated how it has been going on. We have offensive minutes sometimes made upon letters, complaining of delay; minutes which I am perfectly sure no gentleman, no practising solicitor, would make, even to his clerk, unless he really were a very troublesome, idle, fellow; things which no gentleman would tolerate.

1140. Can you lay your finger upon any minute of the sort? I should have to look —. I think I could. Then there is this instance, which I consider an attempt at interference with the course which the examiners have adopted in regard to the speedy disposal of business. It was in connection with a letter addressed by him to the Deputy Registrar or to Mr. Lander, to this effect: complaining first of all of the delays in the disposal of cases, and then he went on to direct that for the future as the cases were received by Mr. Lander, they should be handed immediately to Mr. Oliver or to Mr. Jones for disposal. Well, I say, that is an interference. The examiners knew better than he what rules to lay down for the speedy disposal of their own business.

1141. Did you on that or any other occasion say to yourself, "Well, if this goes on, this want of harmony will be very disastrous to the public, and by all means should be obviated; I will go and see the Registrar General, and have a quiet talk with him"? I never said that to myself, nor did I do it; but I will tell you what was done in all cases. I think a courteous minute was sent in to him in reply to his.

MONDAY, 24 MARCH, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

WILLIAM HENRY ARCHER, Esq., | THOMAS ROBERTSON, Esq.,

JOHN DAWSON, Esq.

John Booth Jones, Esq., Examiner of Titles, further examined:—

1142. *President.*] In cases where the applicant directs certificates to issue in name of some other person, do you require production of a contract for sale by applicant to nominee or any other person? I may answer, generally, no.

J. B. Jones,
Esq.

1143. But you have required it? Yes, wherever a contract is disclosed.

24 Mar., 1879.

1144. What is the advantage of making the inquiry? It is to ascertain whether the nominee is entitled under his contract to the certificate.

1145. But is it not sufficient for you that the applicant has directed the certificate to issue in his name? I think not. We do not know but that the nominee may be a trustee under such a contract, and unless we have the contract I do not know how we are to protect the interests of *bénéficiaires*.

1146. It seems to me it is not your business to do so, but simply to deal with the question whether this man is the nominee or not? I do not think that is the simple question. Under the Act the applicant has the power of nominating, but we do not know, without the contract, whether the nominee is correctly nominated under it. Suppose it should be that, under the contract disclosed, the purchaser, who is taken to be the nominee, is a trustee,—the fact of the trust being disclosed by his contract—for the examiners do not ferret out the capacity in which he purchased—we would, I think, in duty bound, have to take the necessary steps to protect the interests derived through him, or rather represented by him. Suppose again the purchaser should in the contract be described as trustee of such and such a marriage settlement, I apprehend that that alone would be sufficient justification for calling for the contract and for the marriage settlement in order to ascertain his powers and to protect the interests under the settlement.

1147. And yet the nomination is unconditional? Yes, unconditional. If no contract be disclosed, my rule is not to call for any contract, or anything leading up to the nomination. If A, the owner, is applicant, and he simply directs certificate to issue unconditionally to B, it goes, as a matter of course, because I think we are protected in that instance by the Act. Then again I may go a little further with reference to the production of a contract. Where a contract has been disclosed without it, we do not know how to make our searches. It may be that the nominee, since purchase, has sequestrated, or mortgaged, or otherwise encumbered, and we would not know what searches to institute without the production of the contract.

1148. *Mr. Archer.*] What danger do you apprehend from certificate being issued in favour of an absolute nominee? There is no danger, except in the case I have mentioned, that is to say, where contract is produced and discloses the fact that the nominee or purchaser is a trustee. The purchaser moreover might be a married woman, and then we would certainly, before issuing the certificate of title, require the concurrence of the husband.

1149. What proportion do you consider that such cases obtain—what proportion of such cases come under your notice? Do you mean absolute nominations in cases of purchaser?

1150. And disclosed purchaser? I do not think that a third of the applications are disclosed purchases. I am drawing distinctions. I draw a distinction between the absolute nomination with no contract disclosed, and a nomination pursuant to a contract.

1151. *President.*] All I refer to are unconditional nominations; where an applicant does not choose to attach a condition to the nomination? Although he does disclose the contract?

1152.

- J. B. Jones, Esq.
24 Mar., 1879.
1152. Yes? Then, as I have stated, the invariable rule has been where a contract is disclosed by an applicant, to ask for its production.
1153. Does not the dower question create a great deal of trouble and expense? I do not think so. We are content with very slight evidence on the question of dower.
1154. But you require it to be negatived in every case where it is possible it may have attached? Where the parties are not known to us. We are quite content if one examiner say, "From my own knowledge of Mr. or Mrs. So-and-so, he has or had no wife, or she is not entitled to dower." I accept that, and we let it pass.
1155. That has not been my experience? Well, I think that Mr. Burton has acted upon that, and I am quite sure that both Mr. Oliver and myself have done so.
1156. Then I understand you to say that examiners do not require dower to be negatived where they personally know that there is no dower? That is my experience.
1157. Supposing there is a suspicion of dower which is not removed, the dower is noted as an objection on the certificate? Yes.
1158. And it is noted as I understand, in such a form as not to give any person dealing with the land the slightest idea as to whether the objection is a good or a bad one? It is simply noted subject to the contingent right of so-and-so, or the wife of so-and-so.
1159. And how many cases do you suppose there are of actual dower where the dower is noted? I could not say, from want of knowledge of the parties. In intestacy cases it is very often noted unless evidence of death be given, or the widow release her dower.
1160. Do you suppose that, in one case in a hundred, there is actual dower;—you must remember that the dower Act has been passed over 40 years? I could not give a proportion.
1161. One in a hundred? That actually exists? Oh! I think so. I think when noted the proportion would be greater than that of tangible claims. I am perfectly convinced of that. We have to deal with intestacies, and in those cases I think the proportion is much greater than that. That style of notification appears more frequently in transmissions than applications.
1162. I see no objection in the case of intestacies, but I am referring to applications — ? To old dowers. I think there are comparatively very few old dowers existing.
1163. Can you say not one in a hundred cases? I could not state the proportion.
1164. In how many cases do you know of dower having been actually claimed;—I should say in how many cases under the old system? At this moment I remember but one. You mean of course claimed after notification on certificate.
1165. I mean where dower has been actually claimed by the dowress against the holder of land. Never mind the Act at all? I have known of cases where dower had existed, and the wife has released for the purpose of the application. But I remember one case in which the certificate has issued with the dower noted and the widow has claimed.
1166. Claimed from whom? Claimed the dower from the registered proprietor.
1167. Actually enforced it? I think she has got the worth of it. It was compromised; a sum was paid her, and she released.
1168. Then, in your experience, you know of only one case in which dower has been actually claimed? That is all, after certificate of title has been issued. I am speaking from memory.
1169. Have you heard any complaints that titles are not examined in this office with sufficient celerity? Oh, yes; I have heard complaints from the Registrar General mainly.
1170. From anyone else? From applicants sometimes.
1171. Why should there be such complaints? The complaints have been that the work has not been done so quickly as people wish.
1172. Has it been done as quickly as it is possible to do it? As far as I am concerned it has.
1173. As far as the whole office is concerned? I cannot say; my impression is that it has been. I can speak with certainty as regards myself; and with regard to my two colleagues, Mr. Burton and Mr. Oliver, my impression is as I say.
1174. Then, if the complaints are well-founded and the examiners do all the work they can do, you want more examiners appointed? I think we do, if the work is to be done as quickly as people desire, and as consistently with accuracy as the examiners think it should be.
1175. Have any other complaints been made against the examiners? I have heard of nothing else. The burden of the complaints has been that the work has not been done so quickly as it should be.
1176. Have there been complaints that the objections to titles are untenable or too fine drawn, or highly technical, or captious? I do not think I ought to say that as regards the examiners as a body.
1177. Take them in detail if you like? I have heard remarks to the effect that some are too particular.
1178. By whom have those remarks been made? I could not say at this moment.
1179. By applicants or by their solicitors? I could not say; perhaps in some instances by applicants or by the solicitors themselves.
1180. When were you admitted to practise as a solicitor? I think in 1862.
1181. Have you practised on your own account? Yes, I practised nearly four years.
1182. Then I suppose you know the way in which solicitors for purchasers conduct the business of examining titles? I do.
1183. Do they always require production of original deeds? When they can get them they do. That is, provided they are not tied up by contract. Of course in many cases they are prepared to waive the production.
1184. Suppose they cannot get them? Then I imagine they are satisfied with searches, and are prepared to waive them, as we are.
1185. Suppose the expense of getting at them would be so great that the clients would be dissatisfied? That is, of course, a matter for the consideration of the vendor's solicitor, and the purchaser's solicitor respectively. The purchaser's solicitor, if tied by contract, certainly would not be disposed, unless his client were willing, to pay the expense of attested copies. I imagine the whole difference is between buying under an open contract, and buying subject to terms.
1186. But is it not safer for the purchaser to look at those documents even if he pays for them? By all means.
1187. Then it is a mere question of expediency and expense? Under a contract on terms; but I have known a case in which a purchaser under an open contract would not waive his right to attested copies.

1188. I do not care about attested copies—I mean in regard to examining the originals? I think it would be an exceptional case in which the purchaser's solicitor would neglect the examination of the originals. J. B. Jones, Esq.

1189. But suppose it put his client to great expense to look at the originals? That is a matter of expediency. 24 Mar., 1879.

1190. Suppose the case of a small purchase—the cost of examining the originals might be excessive in proportion to the amount of the purchase money? Then I am quite sure that the solicitor would advise his client to dispense with the examination of the originals, and to be content with the registration copies.

1191. Do you think that solicitors in large practice could get through their business if they always insisted on the production of all original deeds? It depends upon circumstances. Take yourself for instance: Suppose you are acting for a purchaser, I think that you would expect to see all original deeds affecting the title, and if you did not see them I imagine you would then exercise your judgment as to whether you would advise your client to dispense with their production or not. If it were a large purchase I imagine a solicitor would like to see the originals. If the purchase was for a small sum there would be a freer scope for advising the dispensing with the originals.

1192. Then it is a matter of judgment on the part of the solicitor whether he insists on the production of originals or not? Between the solicitor and his client, as a matter of judgment and expense.

1193. Are you not aware that in the most careful offices risks are constantly run and oversights made which, if discovered and taken advantage of, would ruin the solicitor? Of course there must be risks in every large office where the principal cannot superintend the work of his clerk.

1194. I assume that in large offices the principal cannot do everything himself? Then I imagine that, as a matter of course, risks must be run and mistakes made.

1195. You are aware that solicitors are obliged to trust clerks, who are often indifferent, careless, and ignorant, and make many mistakes and oversights? I am aware of it.

1196. Did you ever know of an instance of a solicitor having sustained loss through oversights and mistakes made in his office? I do not remember an instance of actual loss at this moment.

1197. Are not a great many oversights and mistakes sooner or later cured by lapse of time, so that no harm comes of them? Naturally; I suppose that must be so.

1198. Do you consider it necessary for examiners to be more particular than practising solicitors? I think that an examiner of titles would only be justified in accepting a perfect title or a title as nearly perfect as he could reasonably obtain.

1199. But suppose they cannot obtain a perfect title your answer goes to the length that they are entitled to accept it? No, as nearly perfect as they can reasonably obtain. Of course I include in that a title free from tangible objection.

1200. Well I think the substance of your evidence is, that examiners must be more particular than practising solicitors? I do not compare myself with any practising solicitor, but set before myself the duty of accepting the title as perfect. If I cannot get a technically perfect title, I get a title free from tangible objection.

1201. But you know that solicitors, if they took all the objections that are taken in this office, and made all the difficulties made here, could not get through their business, and would in fact lose their business? Very likely, but unfortunately we have nothing to guide us. We have no direction from the Colonial Secretary, and nothing in our Act which leaves us discretion. If we accepted a defective title which gave rise afterwards to litigation, I do not know where the examiners would be, or whether they would be able to shield themselves behind "the practice of solicitors."

1202. It seems to me they ought to be able to do so. You know that no claim has ever been made on the assurance fund? I believe no claim has been made. I know of no claim having been made.

1203. Although the office has been established for —? Since January, 1863. I look upon the examiners as placed in very different circumstances to those of practising solicitors. The discretion of a practising solicitor is considerably curtailed under the terms subject to which his client has bought. Very often his client is a willing purchaser, and is prepared to accept risk. The clients purchase, under contracts very often drawn to meet the circumstances or state of the title. They will often take guarantees and safeguards which we could not. We have simply to accept or reject the title. You have your covenants, and your bonds, and in many cases the authority of your clients.

1204. Then I suppose you would compare the position of the examiners to that of solicitors for unwilling purchasers under open contracts? That is more the position of the examiners.

1205. Seeing that the risk of claims on the assurance fund is so small, would it not be better that some of the extreme particularity with which examiners have been in the habit of examining titles should be dispensed with? I discard that imputation. I do not think that I, speaking individually, have exercised peculiar accuracy.

1206. Accuracy? Peculiar accuracy; in obtaining first-class evidence, for instance.

1207. My words were "extreme particularity"? I do not think they have exercised extreme particularity. I think we have acted as reasonable men, considering the circumstances in which we are placed.

1208. Do you think anything could be done to facilitate the passing of titles without raising so many difficulties? I really do not know. I am not prepared to suggest anything. If we have men who know their work, I do not know what there is to suggest for the purpose of facilitating the disposal of titles, or dispensing rather with what is called minute accuracy. I am not prepared to propose anything. I think that any man would act just as the examiners, as a body, have acted. If we see that the title is weak in a particular point, it is our duty, I think, to strengthen it, or to get the difficulty removed. But I am not prepared to point out any particulars in which the examiners might relax on points of title. I might in such matters as asking for the production of deeds, or dispensing with registrations.

1209. My question covers all that? I think there might be a little relaxation there; but that is so easily done. I think the same course might be adopted here as I believe has been adopted in Melbourne, of embodying in an Act a section to the effect that old memorials should be accepted as evidence of the contents of the deeds registered. For instance, we have registrations such as these: "Lease and release," "conveyance in fee," or "mortgage in fee," or "mortgage by demisc." We might accept those registrations as complete evidence and not call for the production of originals. Old dowers might be disposed of in a similar manner.

1210. How? By Act.

1211. You mean to sweep away the dower? Sweep away the dower.

1212.

- J. B. Jones,
Esq.
24 Mar., 1879.
1212. That might act unjustly? But I would not sweep away the dower of people who died intestate. I am speaking of old dowers—marriages before 1837—those which we now call old dowers.
1213. If you do not dispose of them it seems to me you do not relieve the difficulties that at present exist? Then you should go a little further and enact that dower shall not attach to land under the Act.
1214. As the examiners are so extremely particular in examining titles, what is the necessity for the assurance fund? I suppose in the best offices there will be mistakes in the pressure of business. We are not infallible; mistakes are not found out, but I am not vain enough to say that mistakes have not been made.
1215. If the assurance fee were increased, would you feel justified in relaxing? Not simply on that ground. The difficulty would be with me to know where to relax unless in those simple instances I have stated. In points of title the difficulty would be to know where relaxation should take place. You have to deal with each particular case on its own basis, and according to its own circumstances.
1216. Solicitors in private practise can make a great many allowances that you cannot? I think they can.
1217. Is Mr. Burton as particular in the investigation of titles as yourself? I think he is.
1218. Not more particular? He may be; he may be on some occasions; I think perhaps he is.
1219. Do you and he work cordially together? We do.
1220. Do you place much reliance on his judgment, his knowledge of business, and his experience? I place great reliance on his knowledge of real property law.
1221. Do you investigate titles less severely if you know he has passed them? I do not think I do; I go through them as if they came from Mr. Oliver or Mr. Maddock; but if I differ from him a conference comes about; and if we still differ I should be very much disposed to reconsider my own opinion at any rate.
1222. Is he as expeditious in his work as might reasonably be expected? If you speak comparatively I can answer that question. I think he is as expeditious as can be expected from Mr. Burton. He is not a quick man. He is very correct, but not a quick man.
1223. He is naturally slow, then? I think he is. I must amplify that a little; he is very minute, but he gets through a very great deal of work.
1224. His slowness does not result from idleness? No, most certainly not.
1225. Are you on as good terms with Mr. Maddock as with Mr. Burton? No.
1226. How is that? I would rather not speak of Mr. Maddock. I am prepared to state the fact, though, that the present examiners do not work harmoniously—certainly not so harmoniously as the old three, when Mr. Oliver was here. During four years—Mr. Oliver was here that time, I think—I never knew of a breach or anything approaching it.
1227. And there have been difficulties since? There have been difficulties since.
1228. Is Mr. Maddock a reliable examiner? I should not like to say anything prejudicial to Mr. Maddock.
1229. I only want the fact? Well, I would not place implicit reliance on his work. I say this with reluctance.
1230. Is he expeditious? Very.
1231. Do you know of any mistakes he has made? Well, I think I can only now speak positively of what, according to my opinion, was a mistake.
1232. Will you let us know what that mistake was? It was a legal point. It was on the construction of a will on a transmission, and he was of opinion—I ought not to speak without the case before me, because I might do Mr. Maddock an injustice—at any rate, he took one view of the construction of the will and I took another. I humbly think his was wrong and mine was correct.
1233. Is it not possible he was right and you wrong? Quite possible, but I think he was wrong.
1234. Did Mr. Burton agree with you? I do not think I spoke to him about the matter.
1235. Then it was simply between you and Mr. Maddock? Simply between me and Mr. Maddock.
1236. Was that case Mrs. Müller's? No; it was on a will which contained a charge of debts on the realty and a devise to trustees, who were also appointed executors. The trusts of the property were to wife for life, and a power to sell upon the death of the wife. The trustees came here for transmission. Mr. Maddock was of opinion that the trustees should by caveat be tied up, on the ground that the trustees had no power of sale until the death of the wife. I thought they had power of sale before her death.
1237. Is there sufficient cordiality between you and the Registrar General to enable the business of the office to be carried on satisfactorily? I have never allowed the relationship between Mr. Ward and myself to interfere with my business; I have gone on as if nothing unpleasant existed. It has not interfered except in this manner—that when minutes have been written, or questions have been asked in the House, there have been at times irritation and of course conferences among the examiners, which have to a certain extent led to a delay of business.
1238. Then you and the Registrar General are not quite on cordial terms? No. I am only speaking as an examiner, of course; privately, I have not the pleasure of knowing the Registrar General.
1239. Does that not interfere with the proper working of the office? I think it does. I think a want of harmony between the Registrar General and the examiners, who have entrusted to them the duties they have, must be prejudicial. It certainly tends to unpopularise the office.
1240. Has the Registrar General any control over the examiners? I do not think so, nor do I recognise it.
1241. Does he profess to exercise any? I think that must be so from some of his minutes, and from his conduct generally. I can give no other meaning to his acts.
1242. Do you not think he is bound to report anything going wrong in his office? Certainly.
1243. Is that not the object of his minutes? Well, it may be the ostensible object; but I say that these minutes have not been justified; I say that his conduct towards his examiners, or towards the examiners, has been so, I think, without warrant. I think if he had objections to any particular examiner, those objections should be so framed as to apply only to the one examiner. If he had no cause of dissatisfaction with the others he should have let that appear also.
1244. Then I understand you to say that he has made charges applicable to the whole of the examiners, when possibly they might have been intended only for one? I do not like the word "charges." He has so expressed himself. I do not know that he has made any charges beyond that of delay, and I cannot say that I think the charge has been made to me. I do not think there has been enough in the minutes to lay hold of a personal application. I do not remember that there has.
1245. However, he has made certain minutes which have been the cause of offence? Which have been the cause of offence.

1246. To whom are the examiners answerable if they neglect their duty? To the Colonial Secretary. The Colonial Secretary, Mr. Fitzpatrick, has, in a letter addressed to the examiners, or to two of them—Mr. Oliver was not here then—admitted as much, that the Registrar General has no control over the examiners in the exercise of their professional duties. We contend for nothing more than that. I have no desire to encroach upon the Registrar General's Department, or work, or interest.

J. B. Jones,
Esq.
24 Mar., 1879.

1247. Why do you suppose the Registrar General does not feel any cordiality towards the examiners? I have heard of no alleged cause except delay in getting through the work of the office. I have a minute or two here which perhaps I had better read. It is better than speaking from memory. It will show the tendency of the minutes. Here is one, dated 28th October, 1875:—"Memo.—October 28th, 1875. Mr. Muddle.—The number of complaints which I receive as to the delay in examination of titles appears to be increasing. I wish, therefore, that for the future all new applications shall be forwarded alternately to Mr. Oliver and Mr. Jones, to be reported on by both these gentlemen. This will allow Mr. Burton more time to deal with his arrears. Inform Mr. Lander that I expect no application to be over one week in the office before it is in the draftsman's hands. As each application leaves the draftsman it must *forthwith* be handed to the examiners as I have directed above.—E. G. WARD, Registrar General." That we looked upon as an attempt on the part of the Registrar General to interfere with the examiners in the conduct of their own business.

1248. Do you produce any others? Here is a memorandum written by the Registrar General and addressed to Mr. Lander for report:—"Memo.—Mr. Lander for report. Application 3,908, W. Perry. I find the abovenamed case was received on 23rd March last. The title is a very simple one, and should have been reported on—at all events within one month from date of receipt. *The delay in this case, as in nearly all others, is a source of much vexation, and sometimes of actual loss to the public.* As the head of the department I confess I feel ashamed that it is out of my power to remedy the present state of the business immediately under the control of the Examiners of Titles. Let this memo. be placed in the packet of deeds belonging to the case above referred to.—E. G. WARD, R.G." There is no date to this, but it accompanies the case which is No. 3,908, William Perry, and in which the Registrar General appears to have taken some interest. I see the application is in his own handwriting. I give this evidence very reluctantly, and would rather content myself with the general statement that at present and for some time past differences have existed between the Registrar General and the three examiners, excluding Mr. Maddock. I have no desire to go into these minute particulars, but the fact exists that there is a great want of harmony and of confidence on the part of the Registrar General and the examiners. I am prepared to assert that I know of no justification except what has been called delay in getting through the work.

1249. What we have to inquire into is, whether there are any hitches in the office, and what they are? I have no difficulty in saying what the hitches are.

1250. Will you be good enough to state what the hitches are? They are a want of confidence on the part of the Registrar General in the Examiners of Titles. I assert confidently that the examiners have done their best to get through their work and satisfy the wants of the public. I am perfectly satisfied that the work cannot be done as speedily as the people desire, and as consistently with that accuracy which the examiners think essential, with three Examiners of Titles. I have other minutes here which I think are worse than those I have read, though I would rather not publish them. Here is one, dated 25 January, 1876. Case 4,039: "It is now over five months since the application within referred to was received, and it appears the applicant has had no tidings of the progress of the case, except that it has been enrolled among a lot of names, martyrs to the same delay of which the applicant complains. Surely a sufficient time has now elapsed to satisfy even the greatest procrastinator.—E.G.W." Mr. Burton writes thereon: "Whom does the Registrar General mean by the greatest procrastinator?" To which the Registrar General replies: "I take it that the term 'greatest procrastinator' means one who is in the habit of postponing to a future time that which should be taken in hand at once.—E.G.W., 25/1/76." Another is dated the 1st of September, 1876. Case 4203: "I find that the slow and easy course of the case alluded to in this letter is as follows: Received 8th May; forwarded to Mr. Lander for the examiners' examination and report, 22nd May. Mr. Jones takes it up on the 30th June, and forwards it to Mr. Burton on the 20th July. Here it appears to stick. Some excuse, however, must be made, when I consider that Mr. Burton has been engaged of late in duties which do not pertain to the functions of his office, and to these no doubt some delay in the examination of titles must be attributed.—E.G.W., 1/9/76." To this is appended a minute by Mr. Burton:—"To what does the Registrar General allude by the words which I have underlined?" The Registrar General replies: "I cannot enter into any explanation with Mr. Burton in case of controversy, which will only produce still further delay.—E.G.W., 5/9/76." On the 4th of January, 1876, there was a minute to Mr. Muddle, on an application of Messrs. Barnes and Smith, No. 4,030: "Considering that the case within referred to has been in the office nearly five months, I think the applicants have good ground for complaint. I wonder if the time will ever arrive when the work of investigating titles will be done as well and expeditiously as some years since.—E.G.W., 4/1/76." In reply to a memo. dated 2nd March, 1877, signed by the three examiners, Mr. Oliver, Mr. Burton, and myself, respecting the weakness of the clerical staff attached to the Land Titles Department, the Registrar General wrote the following:—"I regret I cannot concur with the Examiners of title that an increase in the clerical staff is required to expedite the investigation of titles. A large staff does not necessarily imply a greater amount of work. The remedy which I would suggest is a more diligent attention to the legitimate functions of examiners of title, and a more punctual attendance on official duties. I feel satisfied that regard to the foregoing would soon show a marked improvement in the present deplorable state of arrears. In addition, I would recommend that Mr. Oliver be placed on the same footing as the other examiners, so that he might give the whole of his time to the examination of titles, and that Mr. Lander's undivided attention should be obtained, by relieving him of the custody of the wills. If the examiners still consider that the clerical staff should be enlarged, I will bring this memo. under the notice of the Colonial Secretary, with such other observations as I may deem necessary.—E.G.W., 5/3/77." The Registrar General having, without consulting the examiners on the subject, directed that the searches in the Sheriff's Office should be made by Mr. Hatton, who was not an officer or clerk in the Land Titles Office, but employed to make searches in connection with titles under investigation, a memo., dated the 22nd June, 1876, was sent to the Registrar General by the three examiners, stating that the attention of the examiners had just been drawn to the practice said to have been in existence for some months, of leaving the final search in the Sheriff's Office, in connection with applications to bring land under the Act, certified by Mr. Hatton instead of by the Under Sheriff,

J. B. Jones,
Esq.
24 Mar., 1879.

Sheriff, as heretofore, and pointing out that it was both undesirable and prejudicial to the security of the Land Titles Branch of the Department, that the guarantee afforded by the former practice should be in any respect diminished. The Registrar General did not, however, revert to the former practice. On application No. 3,979, William Barnett Smith, there is this minute, dated 20th October, 1875: "Mr. Muddle, I find that this case was received into the office 23rd June last, and was forwarded to Mr. Oliver on 27th August following, on which day Mr. Oliver referred it to Mr. Burton. Inform Mr. Lander that I wish it to be transferred to Mr. Jones, as the only chance of procuring a report to the Commissioners.—E. G. WARD, R.G., 20/10/75." The foregoing minute is, I think, rather dictatorial, and not very conciliatory in its tone. In a letter written by the Registrar General to Mr. Macintosh, M.L.A., dated 25th February, 1878, and published in the *Sydney Morning Herald*, the following passage appears:—"As constituted under the existing Act they (the Commissioners) are a great safeguard to the public. While the former examiners were in office, and the machinery of the department worked so smoothly, I was, like many others, under the impression that the Board of Commissioners might safely be dispensed with; but with the present staff of examiners I feel assured that the Board of Commissioners is of great advantage to the public."

1251. *Mr. Archer.*] Do you consider the Registrar General is justified in stating that there is undue delay on the part of yourself and Mr. Burton, as examiners? I do not think he is justified.

1252. Can you state how many cases you deal with, say in a week, on an average? It depends very much on the length of them. I have got through six or eight in a day; but I cannot, upon an average, get through more than two a day.

1253. There are about 300 working days in the year? About that, I suppose.

1254. Do you think you, individually, get through 600 applications in the course of the year? Oh, no.

1255. I leave out transmission cases? No.

1256. How many cases could you get through? I do not think, if you tot up the gross it would exceed 300 a year.

1257. That would be one a day. Do you think you get through one a day; that is, applications to bring land under the Act? No. I find from my own book I do not get through one a day.

1258. Do you remember approximately how many you have got through in the course of the year? I think about 275 a year—all classes.

1259. That is to bring land under the Act? Oh, no. I must take transmissions from that. I do not think I have got through more than 200 a year; that is exclusive of transmissions, but including first-class cases.

1260. Have you ever compared the rate of progress between yourself and the other examiners? I have not the means.

1261. You do not know whether Mr. Burton does as much or more than you? I do not think Mr. Burton does as much as I do.

1262. Does Mr. Maddock? He gets through more cases than I do, I think.

1263. Considerably more? I do not know; I have, I think, two of his cases awaiting examination now.

1264. My object is to ascertain what is the fair average number of cases that should be passed through the office with reasonable diligence by an active examiner? That depends on the length of the cases. It is so hard to come to an average. One examiner may have a case which would take a week to peruse.

1265. That would occur with all the examiners in the course of the year? Of course.

1266. I am speaking of a yearly average? I think it may be put down as I have stated.

1267. 200 a year? I think that is a good average.

1268. You are not aware whether Mr. Maddock exceeds that average? I cannot say; he has not been here a year. But I should not be at all surprised if he does.

1269. And in so doing may he not do his work safely? I must respectfully decline to answer that question.

1270. You said that Mr. Burton was slow in his mode of doing business—that he was excessively minute? I did not say excessively minute.

1271. Very minute? That he was minute.

1272. A man less minute may still be accurate? I think so.

1273. As in your own case? I think so.

1274. Might not some one be more expeditious than yourself and yet be perfectly accurate? Of course, but I think I do my work as quickly as most men.

1275. But some men might do it more quickly? Of course, and accurately.

1276. And Mr. Maddock might be one of those men? Mr. Maddock might be one of those, and is one who gets through his cases quickly.

1277. You said that there was an unpleasant relation between Mr. Maddock and yourself, as in the case of the Registrar General and yourself? Yes.

1278. Can you assign any cause as to how that arose? The unpleasantness is simply a want of intercourse, and not a very clearly-marked inclination to understand.

1279. Can you give any definite testimony in his regard as you have in the case of Mr. Ward? I can only say that Mr. Maddock is a great friend of the Registrar General.

1280. Do you mean a private friend? I believe so.

1281. And why should he not be a private friend? Certainly there is no objection.

1282. Then in what sense do you use the term private friend as inimical to business? I think there are more harmony and intercourse between the Registrar General and Mr. Maddock. I think the Registrar General would not hesitate, before making returns for the Colonial Secretary, or for the House, to talk to Mr. Maddock.

1283. Then you consider that the Registrar General treats Mr. Maddock with confidence? I think so.

1284. And that there is a want of confidence in regard to the other examiners? Yes. I do not object in the slightest degree to the Registrar General's intimacy with, or confidence in, Mr. Maddock.

1285. But how has the difference between you and Mr. Maddock arisen? I cannot account for it. I am ignorant of the cause.

1286. But what evidence is there existing of the difference—what tangible evidence,—anything in writing? These things arise so strangely that it is hard to account for their origin. I do not know the origin of the want of harmony and good-feeling which at present exists between Mr. Maddock and Mr. Burton and myself, except on hypothesis.

1287. Can you instance it in documentary evidence as in the case of the Registrar General? Yes; Mr. Maddock might peruse a title and make certain qualifications or requisitions which would go, of course, to one of his colleagues. A quiet objection to any one of his minutes, or to any one of his qualifications, would not be met in the manner in which I think it should be.

J. B. Jones,
Esq.
24 Mar., 1879.

1288. Can you give a case in point? The case I refer to is a pretty good one. In the case of the three other examiners, if a difficulty ever arose, there was a conference. If one examiner dissented from the view of another, an interview would take place immediately. We would talk the matter over quietly and freely, and modify or waive, but now such a thing never takes place.

1289. Have you ever tried? When Mr. Maddock first came here I visited his room two or three times; that was not reciprocated. Of course that is a small thing, but small things in the end amount to something.

1290. There has never been anything so evident in the shape of record with regard to these differences between the examiners as in the case of the Registrar General? All differences between Mr. Maddock and myself have been by minute in the cases, but they are not serious. Here is another instance: I have known an action of this sort on the part of Mr. Maddock. It was a case in which Mr. Burton and Mr. Maddock were concerned. Mr. Burton annexed a qualification and sent it in to Mr. Maddock, or it reached Mr. Maddock. Mr. Maddock, upon the report which was to go before the Commissioners, made a minute to the effect that he considered the above ("my colleague's") note, or above qualification, to be simply "farcical," and there was something more.

1291. Well that is a case in point? It is a very unseemly thing to send anything like that before the Commissioners.

1292. That is the sort of evidence I was alluding to? He has put a note to one or two of my cases to this effect (but if he had a doubt about anything he might have walked into my room and had it removed):—"I think my colleague's qualification—number so and so, 'altogether unnecessary.'" Well, it was a point of law and expediency whether it was unnecessary. One examiner may think it very essential, and another may be of the contrary opinion.

1293. On receiving that did you go to him? I did not see it until it had passed the Board; and I think in a case following, in which there was something of the same sort, I wrote a note to him telling him in effect that it had not been the practice hitherto; that the report should go before the Commissioners as the joint report of two examiners; that it was not a seemly thing to annex these minutes to the reports. The Commissioners have nothing to do with our differences or quarrels. I am relying upon my memory in regard to this. I would rather have the cases. I do not know whether your attention has been called to another case—the Müller case—in regard to this subject. There, I think, Mr. Maddock did not take the proper course. The case was, I think, submitted to Mr. Maddock upon the united report of two examiners, and I think Mr. Maddock's proper course when that case was referred to him, seeing that two examiners had recommended a particular course, was to take the trouble to see Mr. Burton or myself or both of us, and to talk over the matter. It was a difficult case, and I think that two minds in a difficult case are just as good as one. Instead of that we met in my room on the first of the month to take the cases, and Mr. Burton fortuitously brought this matter before the three of us. After that Mr. Maddock remodelled his view, which he had already expressed in writing, wrote something else, and sent it away. I think the door was open to him, so that he might have conferred with us on the second occasion. On the first occasion Mr. Burton removed the difficulties to a conference by talking the matter over in a quiet way in my room; and before sending the second memorandum Mr. Maddock might have talked the matter over in Mr. Burton's or my room. These are petty, paltry things, but they interfere with the harmony of the office.

1294. They indicate a want of cordiality and readiness to carry out kindly official etiquette;—is that what you mean? I think so.

THURSDAY, 27 MARCH, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P.,
THOMAS ROBERTSON, Esq.,

WILLIAM HENRY ARCHER, Esq.,
JOHN DAWSON, Esq.

John Booth Jones, Esq., Examiner of Titles, further examined:—

1295. *President.*] Of what advantage in the working of the office is the Board of Commissioners? I fail to see any use or advantage whatever. It has been said that their use is to determine the periods and frequency of advertisements, but I do not know of what essential value they are in the working of the office.

J. B. Jones,
Esq.
27 Mar., 1879.

1296. Could not those duties be very well performed by the Registrar General or the examiners? I am perfectly sure they could. In some cases time might be saved.

1297. Do they take any responsibility with respect to the acceptance of titles? None whatever that I am aware of. I presume you mean apart from the examiners?

1298. Either apart from the examiners or in opposition to the examiners? I have known them to discard some qualifications, but those would be qualifications which would appear upon their face very simple. I know of such qualifications as directions for searches to be made. I know of another qualification which I think was a very important one indeed, but there appeared a difference of opinion between Mr. Maddock and myself in that case—a difference which appeared in the report after it left my hands, and was unknown to me.

1299. Do the Commissioners ever pass titles where two examiners have not reported in their favour? I do not know of a case, not during the time that I have been here. I have known of their substituting—the case was brought before you, I think—of their substituting a qualification recommended by one examiner only in opposition to a qualification recommended by two—by the two reporting examiners on the case. I have in my mind's eye Müller's case. I do not wish it to appear that this is the only case of which I know of the Commissioners acting on the advice of one examiner in regard to qualifications.

1300.

- J. B. Jones, Esq.
27 Mar., 1879.
1300. Do they ever reject titles in favour of which the examiners have reported? No; I know of no such case.
1301. Then their duties are simply formal? I think so. I think their duty is to accept or decline as advised by the Examiners of Titles; I think that is mainly their position under the Real Property Act.
1302. And in your experience they have never interfered with the Examiners of Titles except in some small matters of qualifications? I know of one case in which the Commissioners passed a title which had been reported against and went to the Supreme Court; and the order of the Court was that the investigation should be proceeded with. I daresay you know the case yourself. That case was passed without a second reference to the examiners.
1303. Were you then an examiner? I was.
1304. Do you think the Board as constituted is a proper tribunal for deciding questions of title or qualifications? Certainly not. I cannot conceive how the Commissioners can possibly exercise any discretion or judgment whatever, because the whole of the points are considered by the Examiners of Titles, and it is a mere report which goes before the Commissioners—nothing else but a sheet of paper recommending that such a title should be passed, subject to such and such qualifications.
1305. And these all involve matters of law? Oh, not always; they are sometimes very formal, such as the continuation of searches or the production of deeds; but I have known the qualifications as to searches being dispensed with, and I know of other, perhaps not very important, qualifications being disregarded. But still, for all the Commissioners know, they may have involved matters of consequence.
1306. Would it not be advantageous to abolish the Board, and substitute a barrister or solicitor of standing and ability, with power to decide all questions in which there was a difference of opinion between the examiners? I did not think so some few months ago, but lately I am coming round to the opinion that there should be a professional head of the department, and a complete severance from the office of the Registrar General.
1307. That is to say, from the ministerial part of the office? The whole Land Titles Department,—that it should be put under the sole control of a professional head. The objection in my mind to that would be, what would the Commissioner do? It would not be possible for him to investigate the titles lodged in this office; he would have to rely very greatly upon those who reported to him; they might be "solicitors" or "examiners." It would be very hard work indeed for him. I question whether one man could do it.
1308. That is, assuming he would have to go through every title? Yes, as it is said Mr. Carter, in Melbourne, did.
1309. Could it not be arranged that he should only examine titles where there was a difference of opinion? I think so, but it would be necessary that two examiners should always report to him. You could not get the work done well and satisfactorily by only one. I think a great safeguard would be lost if the Commissioner, or the head of the department, passed or rejected a title on the report of one examiner only. And then again, another difficulty would arise from the fact that although the examiners reporting to him might be men of eminent ability, yet they might be the reverse.
1310. Of course if this head, whatever he is called, were to examine every title, he certainly could not get through the work? Certainly not.
1311. But suppose he examined only titles where there was a difference of opinion between the examiners would it not be possible for him then to get through the work? Yes, I am quite sure of that, if he accepted as a matter of course the joint report of two examiners.
1312. Would not such a system prevent many appeals to the Supreme Court? It might; it would depend entirely upon the ability of the man at the head, and of the reporting examiners.
1313. Do you not think there might be some control over the examiners beyond the control of the Government? I do not know what control there could be.
1314. Such a head as I have asked about? I do.
1315. A Commissioner or Master of Titles? I do think so. I have come to the conclusion that it is almost essential that there should be a man to whom the examiners in case of difference could appeal. As at present constituted there may be no finality. Mr. Burton and Mr. Maddock may disagree, or Mr. Burton, or Mr. Maddock, and Mr. Jones. You may take up a case, and the only way of disposing of that case may be by one or the other retiring, which would be an unpleasant thing for the third examiner.
1316. Or by an appeal to the Court? Or by an appeal to the Court, which would be very expensive and I think circuitous. The least objectionable course would be a professional head.
1317. When were you admitted to practise as an attorney? In 1862. I practised nearly four years, and I managed for Stephen and Stephen their conveyancing and equity business for about eight years I think.
1318. You were appointed examiner while employed in the office of Messrs. Stephen and Stephen? Yes.
1319. Why did you give up your practise to enter into the employment of another solicitor? Taste had a very great deal to do with it.
1320. Would you not have done better on your own account? I think I would, but it was not altogether a pecuniary object.
1321. Then why give up your practise? The main object was to devote one's time to particular branches. A man in practise cannot well do that unless he has a very large practise and has a partner. I had not a very large practise.
1322. You mean the range of practise is too extensive to be grappled by yourself? Not quite that, because that pre-supposes that a man has this extensive business. I preferred devoting my time and attention to certain branches of the law.
1323. And you had not an extensive business then? No; I practised in the country, and down here for a short time. I had a very fair business for a young man, and good prospects.
1324. I do not know whether you are aware it is said that you gave up business because you did not like the responsibility attached to carrying it on 'on your own account? I told you I did not care for the other branches of the law.
1325. Beyond conveyancing? Beyond conveyancing and equity. With reference to my leaving Stephen and Stephen, and accepting the office of Examiner of Titles, I take it there is vastly more responsibility here than in managing for Stephen and Stephen, or for oneself. I take it that every report which we sign has, in so far as the Government of the Colony is concerned, the effect of a judgment of a superior court. I take it that every title we commit the Government to, involves a vast amount of responsibility, and it is a responsibility which would weigh on one person, and perhaps not on another. It does weigh upon me.

1326. But you do not suffer in any way from that responsibility pecuniarily? Certainly not, not pecuniarily.
1327. The assurance fund would suffer, not you? The assurance fund would suffer, but one individually suffers. It is a great mental tax; one has to be very careful that he is administering the law according to the very latest exposition of the law.
1328. And that is the reason why you are so extremely particular in examining and investigating titles? I would not put it in that way. That is a very substantial reason. The main object with an examiner is to do his work according to law.
1329. Do you know whether applications for certificates or other documents are ever prepared by officers of the Real Property Office? I have seen applications in the handwriting of some of the clerks.
1330. And other documents? I daresay I may have seen other documents, perhaps declarations.
1331. How is it they prepare those documents? I have no notion. All I know is, I find the documents in the packet when they come to me.
1332. Do you see any objection to their preparing them? I think they should not give their time to the public in that manner, but that they should perform the duties allotted to them. It must take up time. I have not seen very many, but, as I mentioned the other day, there was one in the handwriting of the Registrar General.
1333. What I allude to particularly is the clerks, not the Registrar General? I have seen the handwriting of one of the clerks, at any rate.
1334. Do you know whether those clerks who prepare documents receive any gratuities or payment for the work they do for the public? I do not know.
1335. You do not know of any instance? I do not know of any instance; in fact I do not know that I had heard even of a suspicion until you asked me the question the other day.
1336. There have been such statements made openly? Before I heard you ask the question I had not heard anything of it.
1337. *Mr. Terry.*] Do you think it necessary to charge the assurance fee in transmission cases? Well, it is looked upon as a re-insurance of title. We incur a risk, because it involves the interpretation of wills, and therefore it is, to a certain extent, a new risk.
1338. *President.*] May not a dozen wills occur in a title brought in originally, for which only one assurance fee is paid? Certainly.
1339. *Mr. Terry.*] You are aware it is abolished in South Australia on transmissions? I am not aware.
1340. Do you consider that the examiners' clerk has too much work to attend to? I have been examined on that subject. He has a great deal to do.
1341. Would you recommend any alteration as to his duties? Well, the question involves the custodianship of wills. When the President asked me some questions the other day in reference to this subject, I meant to convey by my answer that it does not much matter to the examiners who is custodian of the wills so long as we have, at all times, access to the wills and the administration papers.
1342. *Mr. Archer.*] Are you aware that the Registrar General has, with a view to save time, taken upon himself to deal with any legal matter in connection with business in the Office of Titles? I do not think so. I cannot say that I remember that the Registrar General has ever disposed of legal questions.
1343. It has never come under your knowledge? I do not remember. I know that in connection with qualifications it is just possible. I think I may answer with certainty, in so far as titles are concerned before report. I do not well see how he could dispose of legal points connected with a title before the case had been reported on.
1344. The Registrar General stated, in regard to transmissions, that, in cases of doubt, he used to go to the examiners, but he dare not do that now. Are you aware that he does deal with doubtful cases of transmissions without going to the examiners? Doubtful cases of transmissions. He dare not do it.
1345. Here is the statement: "Ordinary transmissions are dealt with by the Deputy and myself. In cases of doubt we used to go to the examiners, but we dare not do that now." Then he is asked, "But are not the legal officers appointed to this department for your guidance—for your special assistance as a layman?" *Answer:* "Yes." *Question:* "And are you not taking an unfair share of responsibility?" *Answer:* "Yes, certainly." *Question:* "And what in the interests of the public you are not required to do?" *Answer:* "In the interests of the public I think I am required. I act purely as the Registrar General, and with the Deputy." *Question:* "And do you feel yourself thoroughly capable to undertake this responsibility?" *Answer:* "In nearly every case I do. I should not undertake it if I did not. But I ought to be in a position to have a legal man to refer to whenever I wanted to do so." That would seem to indicate that, in order to get through the business, he goes beyond administrative work at times? I think he is referring to something different. The transmissions he is referring to there are insolvencies, or transactions by transfer—dealings, in fact—dealings as distinguished from the Investigating Branch, Transmissions under will or administration he dare not deal with.
1346. But the point is, whatever the nature of the business may be, does he, in order to save time, go beyond the fair scope of his duties as a layman? Oh, I think he does; but I do not know of the Registrar General's disposing of legal questions.
1347. But does he take upon himself a responsibility that should not attach to him as a layman? He might do it in many cases and we not hear of it.
1348. You are not aware of it? I cannot say I am of his disposing of legal questions for the purpose of expediting business. I think if a case came before us we would draw his attention to it.
1349. Do you think there is any need of his avoiding an appeal to the examiners with the view of despatching business;—are they not always ready to assist him? I think so. I may say, without hesitation, that they are always accessible.
1350. And ready to meet him? Ready to meet him on friendly terms. I should like to interpose an observation. I think on the first day's examination a question was put to me, and my answer may not be quite clearly apprehended. I was asked whether the Registrar General had sought my advice or counsel for the purpose of getting rid of delays and so on in the office. What I intended to convey is this: that the Registrar General had never conferred with me as an examiner. He may, as I think I went on to say, have come into my room during the early months of my appointment and have stated that he had received a letter in such a case, complaining of a certain requisition or of some delay, but in the way of conferring and of seeking friendly counsel my answer remains good. I simply wish to direct my answer to that feature. I think I ought to read this letter to you, as forming the finale to the unpleasant minutes I read

J. B. Jones,
Esq.

the other day. It is one in connection with another matter, and I think had the effect of inducing the Registrar General to adopt a different course. This is the letter which was signed by the three examiners and sent to the Colonial Secretary.

1351. *President.*] Who were the three examiners? Mr. Burton, Mr. Oliver, and myself. The letter is dated 10th October, 1877:—

“Sir, “Land Titles Office, 10 October, 1877.
“We have the honor to bring under your notice, as the Ministerial head of our department, the accompanying copy of a letter under date the 4th instant, addressed by Mr. William Day to the Registrar General:—

“1. The writer of that letter, who it would appear is an applicant for a certificate of title, after informing the Registrar General that he had lodged his application on the 1st ultimo, and had called twice at the office in reference thereto, goes on to say (to use his own language) that his ‘object in writing is to know if anything can be done to expedite this matter, as it is a loss to me to have to wait, not knowing how long it may be before the first step is taken.’

“Endorsed upon Mr. Day’s letter are the following minutes by the Registrar General:—‘Mr. Muddle,—If the allegations in this letter are true, it appears to me that the examination of titles must be in a hopeless state of arrears. I should like to know the number of cases waiting the examiners’ pleasure, with the date of receipt in each case, with a view of bringing the subject under the notice of the Government.—E.G.W., 5/10/77. I should also like to have the number of cases in charge of each Examiner of Titles.—E.G.W., 5/10/77.’

“2. As a matter of fact, Mr. Day’s application, though stated by him to have been lodged on the 1st, was not forwarded for examination until the 10th of last month; and indeed it has not even yet reached that stage of preparation to entitle it to be handed to an examiner for the purpose of investigating the title.

“3. But apart from any question of facts or merits, we submit that the tone and language assumed by the Registrar General in these minutes are wholly unwarranted by the allegations contained in Mr. Day’s letter; and further, that the official relation in which the Registrar General stands towards the examiners of titles—even were there nothing to indicate that relation but the mere instinct of official courtesy—is not such as to justify that officer in minuting anything derogatory to the position assigned to the examiners by the Real Property Act, or reflecting on the manner in which the duties devolving upon them are performed.

“4. We have on many occasions been subjected at the hands of the Registrar General to the like offensive comments, and memoranda endorsed on letters and papers in our custody, which were obviously intended to attract general attention, although officially addressed to the Deputy Registrar General or to our own clerk. We have, nevertheless, hitherto abstained from bringing these matters under your consideration.

“5. But we feel that to delay doing so any longer would be to acquiesce in an attempt to subordinate our office to that of the Registrar General, and what is perhaps of more moment to acquiesce in the demoralization and weakening of the Investigating Branch of this department—a branch obviously intended to be protected from acts of aggression and interference, at all events at the instance or in the person of an officer whose principle it should be to work harmoniously and in co-operation with the professional advisers of his department.

“6. We are therefore, but with great reluctance, constrained to invite your consideration of the subject of this letter, with a view to the discountenancing for the future of the course of conduct adopted by the Registrar General towards us, and, if need be, to causing the position of that officer in his relations to the examiners of titles to be defined in accordance with the true meaning and intention of the Real Property Act.

We have, &c.,

“E. BURTON,

“J. B. JONES,

“ALEXR. OLIVER,

“Examiners of Titles.

“The Honorable the Colonial Secretary.”

With the letter are a copy of Mr. Day’s letter on his case and the minutes of the Registrar and Deputy Registrar General, and a separate minute by Mr. Oliver.

1352. *Mr. Archer.*] Did you ever get an answer from the Colonial Secretary? I do not remember seeing it. But since that time Mr. Ward has generally sent in copies of letters received by him. We do not receive minutes now, or very rarely. I suppose a clerk is kept for the purpose; we receive copies of letters which may be received on matters in hand. I think the President asked me the other day whether, notwithstanding our monthly distribution of cases, an examiner standing in need of work could go into my room and take a case. I said certainly. I should like to say that shortly after Mr. Maddock came here he sent into my room for examination a case taken up (for examination) by him direct, I think, from the counter before the usual monthly distribution, and I sent him in a minute drawing his attention to the fact of our practice of the monthly distribution, and expressing an unwillingness on my part to break in upon that rule at present, but that if the case were exceptional I should only be too glad to take it up.

1353. *President.*] Or to allow him to take it up? No, he had taken it up. I make that explanation because I subsequently heard it stated that Mr. Maddock at that time had no work in hand, and that was the reason he had taken this up in anticipation. I had an objection, but I thought it wrong that rules which we examiners found to work well should be broken in upon by one without any reference to his two colleagues.

1354. Then do you consider it better for one examiner to be quite idle than to break through a rule? Certainly not. I do not know whether Mr. Maddock knew it at the time. He could easily be informed. He knew of the practice of the monthly distribution, and he might have walked into my room and have taken a case, as he has done since; or he has sent for me. There is no difficulty in taking up cases.

1355. *Mr. Terry.*] Does he take fresh cases? He does, sometimes; so do I.

1356. *Mr. Archer.*] Would you think it a fair amount of work for an examiner to do in a year if he dealt with 250 cases long and short? Yes, a fair amount of work. I think I told you that my average was over that.

1357. That includes transmissions? That includes transmissions.

1358. I am speaking of original cases? Oh, I think it is a very fair amount. But you cannot well compare the other colonies with the circumstances of this. Our titles are longer.

1359. No, that is why I asked you. The number I mentioned is what very slow men in Melbourne would do? I find that one main cause of what appears to be delay in reporting on cases is the imperfect condition in which titles are presented for investigation. I may say I could get through a third more than I do, if the cases were ready for reporting on when lodged. And we have a great deal of correspondence.

1360. Can you give any idea of your second-class cases—such as you could pass, and such as you certainly could not pass;—is there any general type or specimen? They are as different as they can be.

1361. But different minds would look upon these cases in different ways; one mind would exclude a great many cases, perhaps, that you would not? I do not think so. I think any man would adopt the course the examiners have adopted.

1362. But they are more strict than solicitors in private offices? I do not think they are more strict: assuming, of course, that the solicitor is not tied down under contract or is not urged by his own client to waive objections.

1363. *Mr. Robertson.*] You mean they are no more strict than you think solicitors ought to be? If they are purchasers under open contract.

1364. *Mr. Archer.*] But from your experience do you think they are more strict than solicitors in such cases usually are? I think we are—than solicitors usually are. I should like to disclaim any imputation of delay on my own part. I work, I think I may say, intently from the time I come here to the time I go away, and I do not think, considering the interruptions to which we are subjected and which cause delay, that my work is in arrear at all. As I mentioned the other day, I have in hand in my box eight or ten cases which are not reported on and not examined.
1365. Do the examiners adopt the system of allowing the public to come and interfere in their work at all times? We are always open to them.
1366. Would it not be more judicious to restrict the time for the public to come;—is it not a great loss of time to be interrupted in the investigation of a title? It does interfere very greatly at times, but although a rule with regard to the public was laid down by the early examiners it was very soon departed from. I have on my mantel-piece an intimation that the examiners would be glad to receive on certain days persons wishing to see them on business, but country gentlemen and solicitors on business of an urgent nature might see them at all times.
1367. And the practice now is to allow the public to run in and out when they please? They come to see us when they please, and if we were to lay down a rule that we could be seen only on certain days I do not know what the public would say.
1368. If you were to fix certain hours each morning would that not be a protection? It might be.
1369. *President.*] Are there many interruptions? A good many.
1370. *Mr. Archer.*] How many in a day? A day may pass without any interruption, and the next day I may have three or four.
1371. Would it not be easy to revert to the old rule, and have so many hours a day open to these interruptions? I think so; if we had the minimum of authority.
1372. You certainly have authority to make those rules I think. It would not be to the prejudice but to the benefit of the public? The Colonial Secretary should be addressed on the subject.
1373. When it was known that the examiners could not see the public after a certain hour it would liberate the examiners and indicate to the profession the precise time when it was most convenient for the examiners to see them —
1374. *President.*] When you are interrupted while engaged in examining a title it is not almost impossible to take it up again at the point at which you were interrupted? Of course it is better to go right through a title from commencement.
1375. And if you are interrupted you are obliged to commence again from the beginning? Not always.
1376. *Mr. Archer.*] You act like Lord Sugden, you go right through a thing? Not always so. A very pregnant source of delay is when requisitions remain unanswered for months and months. They remain unanswered, and then it is just simply an investigation of a new title.
1377. Can you not drop them out after the lapse of a certain time—consider them no longer in the department? I think not.
1378. Then you would keep the title on for years? I think so. What an easy thing it would be for the solicitor or the applicant to reply (*i.e.*, to requisitions), “We cannot satisfy requisition number so-and-so; it is impossible to do so; we think the examiners have taken a mistaken view—see such-and-such an authority.” But instead of that we have, in many cases, no evidence furnished, just simply, “I cannot find this deed”; “I think the examiners are wrong.” That simply means writing another letter. We ought not to have such replies to requisitions. It causes delay, and necessitates labour.

J. B. Jones,
Esq.
27 Mar., 1879.

TUESDAY, 1 APRIL, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P.,		WILLIAM HENRY ARCHER, Esq.,
THOMAS ROBERTSON, Esq.,		JOHN DAWSON, Esq.

Henry Dyer Maddock, Esq., Examiner of Titles, examined:—

1379. *President.*] You are a solicitor, and now Examiner of Titles under the Real Property Act? I am.
1380. When were you admitted a solicitor? In 1862.
1381. Where? In New Zealand.
1382. And when were you appointed examiner? On the 3rd September, 1878.
1383. Were you engaged professionally in Sydney before that period? I was.
1384. And had a good deal to do with the investigation of and dealing with titles to land? Yes.
1385. Before your appointment as examiner had you any business in connection with the Land Titles Office? Yes.
1386. Can you inform us of the repute in which the office was held out of doors? Well, generally in very bad repute.
1387. On what grounds? Consequent upon the vast delays which had taken place, and also because of the frivolous and uncalled-for objections which had been taken to titles.
1388. Was that the general repute of the office in Sydney? Yes.
1389. Among solicitors? Yes.
1390. Can you say, of your own knowledge, whether there was any foundation for the opinions that were held concerning the office? Every foundation.
1391. Had the business of the office fallen off—I mean up to the date of your appointment—was the business increasing or falling off? Falling off considerably from what I could gather.
1392. But you were practising in the profession and knew what was going on? Yes.
1393. Did solicitors advise their clients to bring titles under the Act, on account of the benefits they would thereby obtain? Yes.
1394. They did? They did.

H. D.
Maddock,
Esq.
1 April, 1879.

1395.

H. D.
Maddock,
Esq.

1 April, 1879.

1395. Notwithstanding the prejudices or charges against the institution? Well, I will not say in all cases. There were some cases, no doubt, where it was considered that very few objections would be taken—where it was seen that the title was tolerably clear.

1396. Had solicitors any hesitation in recommending persons to bring their titles here and to apply for certificates? They had as a rule.

1397. As a rule? Yes.

1398. In what state did you find the work in the office when you joined it? Greatly in arrear.

1399. Can you give us any idea of the amount of arrear,—the number of cases in arrear? The number of cases left behind by Mr. Oliver, whom I succeeded, was about five-and-thirty. A great many of those were untouched, and others partially gone over, partially investigated.

1400. Were there no arrears with the other examiners? Oh yes, a great many.

1401. More than with Mr. Oliver? Well, I should say so,—that is Mr. Burton and Mr. Jones together.

1402. The two together would have more arrears than Mr. Oliver had? Yes.

1403. Not each of them? Not each of them. At least that is my idea; I cannot speak positively as regards that.

1404. Have you heard, either before or after your appointment as examiner, that titles were not examined with sufficient celerity? Yes.

1405. Why should there be such complaints? Well, I am quite at a loss to conceive. The system here is very good indeed. An application is lodged, accompanied by the title deeds, in support of the application. Then instructions are given for the search. The search is made, and I may say that the searches are made very carefully indeed. I am very much pleased indeed with the searching part. Then the search, and also the application, together with the deeds, are forwarded on to the principal draftsman, whose duty it is to see that the plans and descriptions are correct, likewise the searches. Then the case is returned to Mr. Lander, who places it upon Mr. Jones's table in his room, and then the month's applications are divided on the beginning of every month between the three examiners.

1406. Equally? Yes.

1407. But suppose one man has got all his work up and the others are in arrear; do they still divide them equally? On several occasions I have run out of applications; in fact, have had none before me to deal with, and I have requested Mr. Lander to bring me in cases that were ready to be dealt with. On the first occasion of my doing so I dealt with a case and sent it on to Mr. Jones for report. I was met by receiving a letter from Mr. Jones reminding me that it had been the practice of the examiners to divide cases on the first of every month, and that, therefore, he did not feel disposed to make a departure from the rule, which departure might be fraught with danger; but however he would have no objections to take it up if it was an urgent or exceptional case, or a first-class case.

1408. To take it up himself? Yes.

1409. Not to allow you to take it up? That he would take it up and report upon it if it was urgent or exceptional. I then sent a memo. in to Mr. Jones to say that I was perfectly aware of this practice, but inasmuch as I had no cases before me to deal with, and being desirous of facilitating the public business I asked for a case to be dealt with, although it was not an urgent one.

1410. Then did you get cases when you made such applications? Yes. This circumstance transpired about three months ago; but applications have been coming in rather rapidly of late, and the consequence has been that on the 1st of every month I have had sufficient to land me over nearly until the beginning of the following month.

1411. Simply on account of the increase of business? Yes.

1412. Not on account of the other examiners deviating from their rule? No, consequent on the increase of business.

1413. Then they have not deviated from that rule? No, but I have during the last ten days deviated from that rule by taking up several cases, and which they have dealt with, notwithstanding any objections.

1414. By what rule do the cases go into the hands of a second examiner, after having been dealt with by the first? I deal with a case and then I forward it on either to Mr. Burton or to Mr. Jones alternately.

1415. And do they adopt the same plan with you? Yes.

1416. Have there been any complaints of captious, fine-drawn, or highly technical objections being taken by the examiner of titles? Yes, very many.

1417. Is there any foundation for such complaints? Every foundation.

1418. Of course you see the objections of the other examiners? Yes, and I have protested against very many of them, and nearly in every case the Commissioners have upheld the objection raised by me.

1419. Can you give us the nature of those objections, or requisitions I think they call them? Yes, requisitions or qualifications. For instance, in an application, where the applicant requests certificate of title to issue to his nominee and nothing more, they—my colleagues—will require the contract which might be between the applicant and the nominee, and also before the issue of the certificate of title a receipt for the balance of purchase money lodged.

1420. Although the applicant has not asked for those precautions to be taken? No, and I have protested against that, inasmuch as we are bound to respect the request of the applicant, to issue the certificate to his nominee, and if any loss did attach it would not fall upon this office but would be the *laches* of the applicant.

1421. Where the contract is referred to in the application do you consider it necessary then to look at it? Yes. I have met with cases where they have asked us not to part with the certificate of title without production of the receipt for the balance of purchase money, and of course such an application is respected; and very often we have a mortgage lodged to secure the balance of purchase money, and we give effect to that by registration.

1422. But unless the applicant in some way calls for the protection of the office you do not consider it your business to go into the question of contract between him and his nominee? Certainly not. There are other objections if you desire that I should state them; for instance, transmission cases. A certificate of title or Crown grant, as the case may be, is deposited with the application, together with probate of will. It is the custom that we should see the will. We ask for the will and it is brought to us together with the accompanying affidavits used in proof of the will. These papers are very often accompanied by an affidavit of the attesting witness; but in this particular case there was no affidavit by one of the attesting witnesses

to

to the will with the papers. The attestation, however, appeared to be perfectly in order, and with the probate before us a qualification is made to this effect: "An affidavit or declaration by one of the attesting witnesses of the due execution of the will must be lodged."

1423. That was the business of the Court in granting probate? Yes; I sent a memo. to the Commissioners which they upheld, stating that inasmuch as probate had been granted, and the Primary Judge in Equity not having considered this affidavit necessary, we had no right to make that qualification and put the applicant to unnecessary trouble and expense.

1424. Was that the case of a late proof of a will, or was it one of many years back? Lately.

1425. There is no rule requiring such an affidavit at all? No.

1426. But the Judges insist upon it? Not so long I think as the attestation of the will is in order, but if there is any departure from the usual form of attestation then the affidavit is required as absolutely necessary.

1427. Then you consider that if probate was not properly granted the responsibility rested on the Court and not on the examiners? Certainly.

1428. Can you give us any other objections showing the particularity to which the examiners have gone? Yes, in administration cases, where the Registrar General is advised to enter a caveat. I have set my face against that as being entirely unnecessary. The grant of letters of administration gives to the administrator a statutory title to the land. It is very true that before granting letters of administration it is necessary that a bond should be entered into, with sureties, but the bond is only to secure the personalty and the due administration of the estate, the value of the realty not being included; so that an administrator if he chooses to act dishonestly can without any interference sell the freehold lands which may perhaps be worth £40,000, and afterwards decamp with the money. Notwithstanding all this, letters of administration having been granted, we have no right to enter a caveat. My colleagues say it is for the protection of the *bénéficiaires*, and that in other words we should not sanction any transfer unless it is for value. Now the absurdity comes in. Supposing a transfer is brought in, and the consideration expressed therein say is £50, how are we to know whether that is the true value of the land the subject of the transfer? To arrive at that it would be necessary that a valuator's report should be lodged at the same time as the transfer, so that it might be seen that the amount stated in the transfer is the true value of the land.

1429. In fact the same difficulty arises as in an Equity suit to set aside a deed for an adequate consideration? Yes.

1430. Then do you mean to say that the other examiners insist upon lodging a caveat in every case of administration? Yes. I wrote a special memo. about ten days ago to the Commissioners upon the subject, with a view to the discontinuance of lodging these caveats. In order to remove a caveat the applicant has to pay 5s.

1431. And solicitor's costs in the matter? Yes.

1432. The office seems to me to be very fond of these caveats? Yes.

1433. And use them on every possible occasion? Yes; and this no doubt arises from timidity more than anything else.

1434. Does not the constant use of them multiply the work of the office? Yes, most certainly it does; and there is another thing that saddles the office with a considerable amount of work. It is this, that if there is a reservation of coal contained in a Crown grant, or of gold, a special reservation is asked to be put on the certificate, although the form of certificate of title says "subject to all liens and encumbrances and also the conditions and reservations (if any) contained in the Crown grant hereinafter referred to." That I have put a stop to; it no longer continues.

1435. Then certificates are all issued subject to the reservations of the grant? Yes.

1436. And yet that grant is taken away from the applicant, and is lodged up here, and is virtually inaccessible? Yes.

1437. Do you not think it an advantage to put those reservations on the certificate as the grant is not accessible to the owner of the land? They can always be inspected in the office and produced in a Court of Justice on a Judge's order.

1438. My opinion is that these reservations ought to be swept out of all the grants; that would get rid of the difficulty. Are there any other objections you can mention? There is another, and that is requiring production of deeds which have already been produced to this office in prior cases.

1439. Why should they call for them a second time? I suppose to see if any endorsements have been made since the first production prejudicial to the title. I think all that is necessary, if production is required again, is to inspect the registration copy.

1440. I understood from the other examiners that they did not require the reproduction of deeds? I have had several, almost recent, cases where they required it, and where I have not concurred in it for the reason that they have already been produced in prior cases, and only serve to incur unnecessary expense to the applicant.

1441. What are those endorsements which they expect to find on them? They fancy it might be something to prejudice the title. It is some idea of their own.

1442. *Mr. Terry.*] That would be registered, would it not? Yes; it should be.

1443. *President.*] Are there any further matters? I may now state, that in order to save time in the investigation of titles I make what observations I consider absolutely necessary on the title without reference to my colleagues, and upon my requisitions (if any) in the title. Being satisfied by the applicant I prepare my report, and I send it in to one of my colleagues for signature. This means that I have investigated the title thoroughly, and that the qualifications named in the report are all the objections I have to make to the title, and subject to these being removed, the title, so far as I am concerned, is passed.

1444. Do the other examiners adopt the same plan? No, but they see no objection to the course I am now adopting. Prior to the adoption of this course I was met by their being too busy to give attention to my notes on the title, so I could not obtain their concurrence thereto.

1445. Too busy for what? So many prior cases in hand which they do not feel disposed to put aside.

1446. They mean they will take this case in its regular order? Yes.

1447. They deal with the cases they have in hand before they touch this one that you have reported upon? Just so.

1448. The result of that may be that you have reported in favour of a title, and they may not report for three or four months? Yes.

H. D.
Maddock,
Esq.
1 April, 1879.

H. D.
Maddock,
Esq.
1 April, 1879.

1449. Does it ever extend to as long a time as that? Oh yes, sometimes five or six months—five months.
1450. But you have not been here so long as that? have been here over five months.
1451. Can you suggest anything which would enable the Examiners to dispense with the extreme particularity with which they have been in the habit of investigating titles? I should fancy the appointment of a Master of Titles, who, in case of any difference of opinion between two Examiners, would have the power to —
1452. I do not mean that. That would be transferring the difficulty from one person to another. What I mean is, can you give us any idea of whether certain rules may be made by which certain objections may be ignored or got rid of; certain classes of objections I should say? The only way is the course which I am now adopting: As far as I am concerned, if I see anything which is not absolutely necessary or uncalled for, I make a memo. to that effect, which memo. goes before the Commissioners, and they expunge the qualification.
1453. You do not quite understand me. In every case searches are made against the applicants and others; what I mean is, could those searches be safely dispensed with, or some such thing as that, which would save labour and loss of time? I think not; it would be too dangerous to do so.
1454. The searches could not be dispensed with, I think, but anything of the same character—production of original deeds for instance? Yes, production of original deeds which have already been produced. It would be very dangerous to rest on the registered copies always, because I know from experience that alterations have been made in deeds afterwards, which have never been re-registered, and many things have been left out of the registration copies. Any number of registration copies no doubt come into this office, which are never examined, although sworn to as being correct.
1455. Do you consider that the requisitions made by Mr. Burton and Mr. Jones are such as ought fairly to be made? A great many, no.
1456. Are the objections of both of them alike? Yes.
1457. Of the same character? Yes.
1458. They are men of the same turn of mind? Yes, and travel in the same groove.
1459. And you think they are too particular? Yes.
1460. They could dispense with many of the requisitions without running any risk of damaging the assurance fund? Most decidedly. In investigating a title it is not only the knowledge of the principle of conveyancing that is required, but also more particularly good sound common sense, and the latter is a very material essential in administering the Real Property Act.
1461. Are Mr. Burton and Mr. Jones sufficiently expeditious in their work? No.
1462. What is the cause of the delay? I cannot account for it at all.
1463. I suppose they are constantly at work? That I cannot tell you. It is very surprising to me that they do not get through their work more rapidly.
1464. Do they get through as rapidly as you do? No, certainly not.
1465. Are you on good terms with both of them? Tolerably good terms—just speaking terms.
1466. I mean do you work cordially together? No. I cannot say we do. Certain practices have grown up between Mr. Burton and Mr. Jones, from which they do not feel disposed to depart. I kick at that in the interests of the public, and so far as I am concerned I won't submit to unnecessary requisitions being made, putting applicants to unnecessary trouble and expense.
1467. Is that the only reason that makes a difference between you? That is all I am aware of.
1468. Are they at all jealous of you? Not that I am aware of.
1469. At the expeditious way in which you get through titles? That I do not know.
1470. Are you on good terms with the Registrar General? Yes.
1471. He and you work cordially together? Yes.
1472. And he has no difficulty in consulting you as to the working of the office? Not the slightest, and the other officials of the office, the Deputy Registrar General, and others the same.
1473. You are on good terms with all the officers? Very good terms indeed.
1474. Are not the other examiners on as good terms with them? I do not think they are.
1475. The officers then consult you in preference to the other examiners? They do.
1476. Why should they do that? Simply because I am approachable and answer at once any inquiry they have come to make.
1477. What do you mean by approachable? I do not say "I am too busy," or, "I am busily engaged in this matter, and you must not disturb me," or something of that sort.
1478. Then although you are in the midst of work you would give that up to advise them when they required it? Certainly.
1479. Does that not interrupt your work? No, if that assistance was not rendered, the work in the office would be partially stopped.
1480. I think you told us how applications for titles got into the examiners hands? Yes.
1481. They are sent up from the counter to Mr. Lander? And then Mr. Lander prepares the search paper and hands it over to the searching clerk, who makes the search and returns it to Mr. Lander, and he forwards the application together with the deposit of deeds and the search to the principal draftsman. That officer satisfies himself with the plan and with the property as described, and sees that the searches are correct. Then the case comes back to Mr. Lander and goes into Mr. Jones's room, and on the first of the month the number of cases received during the past month are divided between the examiners equally.
1482. How long do these preliminary processes take, from the time the application is lodged at the counter to the time it goes into Mr. Jones's room? Too long in my opinion; and now I may mention that I think Mr. Lander requires assistance. I know of many cases where instructions for searches have not been made out for a month or six weeks, or for a couple of months. Of course that is a bad state of affairs.
1483. And that is the cause of delay? That is one cause.
1484. In their coming into the examiners' hands? Yes. Mr. Lander is a very good clerk, but I am afraid that his being custodian of wills takes up his time a great deal, and not only that, but answering questions to the public. That also takes up a lot of time.
1485. Is Mr. Lander the examiners' clerk? Yes.
1486. Do you consider the examiners have jurisdiction over him? Well, I have never considered that point. If they had any complaint to make, or if I had any complaint to make, I should make it to the Registrar General, the head of the department.

1487. Who gives him directions as to the work he is to do? It is his duty, according to the practice of the office, to make out the search paper. He also fills in the examiners' report and copies draft letters; and if I want anything in connection with my duties, I simply ask him for it and he brings it in to me.

1488. Supposing any alteration were desirable in Mr. Lander's work, who would give him instructions on the matter? The Registrar General, I should think.

1489. Not the examiners? No. If any alteration in the opinion of the examiners were required they would no doubt move the Registrar General in the matter.

1490. What do you consider the duties of the examiners? Well, of course, to investigate all titles brought before them.

1491. And to advise the office generally as to all difficulties that arise? Yes, I think so, in connection with the department.

1492. And as to forms? Yes.

1493. Prepares all forms? Yes.

1494. Does the Registrar General profess to exercise any control over the examiners? No, not so far as I have seen.

1495. Do you go on with cases in which requisitions have been answered in preference to new cases? Well no, not so far as I am concerned. If requisitions are sent in and I receive replies, I look into those at once; I look to see whether the replies are satisfactory or whether there are any evidences of titles that are necessary to be lodged in support of the application —

1496. You take them at once? Yes.

1497. Without waiting for their regular turn? Yes.

1498. Then you take them in preference to cases not touched? Yes.

1499. In what manner do you investigate titles? I make a short epitome of the title before me, and in making this epitome I note any remarks I may have to make on the perusal of each deed. So really after a perusal of the deeds I look at my marginal notes and see exactly what is absolutely required to support the title. I may make a note, and there may be nothing in it after consideration; common sense comes in then. But if there is any very glaring objection to the title, of course notice is taken of it and the requisition is made.

1500. Does that epitome go into the hands of the second examiner into whose hands the case goes? Yes.

1501. And if he choose to rely upon your investigation he passes the title? Yes.

1502. But do the examiners ever, in fact, rely upon their predecessor passing the title? In the office—I should think not.

1503. Suppose you investigate a title and hand it over to Mr. Jones, would he take your report as satisfactory? I should think he would not, because in nearly every title—whether it is from jealousy or not—he makes objections which when I come to look at them are really frivolous and should not be made.

1504. He goes beyond you in making objections? Yes.

1505. Has he ever made objections that you have omitted to see? No.

1506. The objections then are those you have considered and rejected as unnecessary? Yes.

1507. When titles come from either of the other examiners to you do you investigate the titles? Yes, most decidedly —

1508. You do not take their reports as conclusive? Certainly not. Of course they relieve me to a very great extent, for there is the matter before you; it is out of the deeds, as it were, and that assists me a little of course; it saves a lot of time.

1509. Do you find that their requisitions are more severe than yours? Considerably, and unnecessary, most of them.

1510. And suppose you do not agree with the examiner who has dealt with the title before you, what do you do, do you see him? No; I attach a memo. to his report, as he may to mine, protesting against, or rather, not concurring with, the qualifications. So, if the question afterwards came up through the outside public being annoyed, it would be seen at once that I did not concur in this unnecessary qualification or requisition, as the case may be.

1511. In the event of those objections being sent to the applicant, how are they stated;—does Mr. Lander or the examiners state all the objections taken by both examiners, although one does not concur? They all go to the applicant. Then if the applicant or his solicitor sees me upon the particular requisition or qualification to which I objected, I refer him to the other examiner.

1512. Have you any rule as to seeing applicants or solicitors? I believe there is a rule in the office, but I do not pay any attention to it.

1513. You see applicants at any time they choose to call upon you? Yes.

1514. Does not that interrupt business? I have not found that it does.

1515. Would it not be better to see them at stated times? Perhaps it would; but I do not think any one of the examiners adheres to that rule. I fancy it was a rule made by them some time ago, not by the Registrar General.

1516. I suppose you deal with cases in rotation? Yes, unless they are very urgent.

1517. What is your test of urgency? Simply taking the *ipse dixit* of the applicant.

1518. That is to say, if in your judgment the case is urgent, no matter how you arrive at that conclusion, you deal with that case first? Yes.

1519. Are you able to deal in the month with all the cases allotted to you? Yes, and more sometimes.

1520. Urgent and otherwise? Urgent and otherwise. Of course I may mention that many are transmission cases, which do not occupy very long.

1521. What rule have you as to reporting on the title subject to qualifications; what qualifications are considered as right? There is no particular rule at all. It is thought that sending qualifications serves as an incentive to exertion on the part of the applicant, or his solicitor, to comply therewith without delay. That is the only motive for adopting this particular course that I can comprehend.

1522. What is the nature of the qualifications? Requiring production of deeds.

1523. Noting of dowers? Yes, noting of dowers, and also some evidence to show that the title has not been destroyed by the Statute of Limitations—where the grant is more than twenty years old, and the land admitted to be "unoccupied."

1524.

H. D.
Maddock,
Esq.

1 April, 1879.

- H. D. Maddock, Esq.
1 April, 1879.
1524. Is that a qualification you impose? If the value of the land is small I do not make the qualification, but where the value is large I think it is desirable, if practicable, to get some evidence to show that the title has not been destroyed by the Statute of Limitations.
1525. That is negative evidence? Yes.
1526. Do you consider it right to make that objection at all? If practicable I think we ought to get it.
1527. *Mr. Robertson.*] That is not a requisition that is ever made in private practice? No; I admit that.
1528. *President.*] Is this made a matter of objection where the application states that the property is unoccupied? Yes.
1529. Then you think it is possible that some stranger may have come upon the land, held it for twenty years, thus acquiring a title, and then gone away? Yes.
1530. And you make this qualification to protect such a man? Yes. I may mention that so far as I am concerned if practicable I get it, but I do not really and in fact press it.
1531. I do not see why it should be asked for if the land is unoccupied. I know there is a case which gives some colour to the objection, but I doubt if that case would be upheld now. How many titles on an average do you investigate per week and either approve or send requisitions? About eight or nine.
1532. I do not include transmissions or first-class cases? Well, I suppose upon an average about seven; I should think so.
1533. About seven second-class titles per week? Yes.
1534. In addition to that you deal with first-class cases and transmissions? Yes.
1535. And you could deal with more, I understand you? Yes. In fact I have taken over from Mr. Burton some of his cases which he had in hand a considerable time. The applicants have come in and asked me if I had any objection to take them over from Mr. Burton, and he offering no objection I have taken them. I have said of course, that it was establishing a very bad precedent, that is I doing my colleague's work, but at any rate I have had no objection. In three or four cases which I have dealt with in that way, the applicants have certificates of title, though the cases had been in the hands of Mr. Burton for two years unreported upon. The late Mr. Raphael was the first that came in and said the case had been in the hands of Mr. Burton for two years. I got it from Mr. Burton, and the applicant received his certificate of title six weeks after.
1536. On your report solely? No; on my report and that of Mr. Jones.
1537. This case was taken out of Mr. Burton's hands, and dealt with by you and Mr. Jones? Yes.
1538. Had Mr. Burton made any requisitions in it? None at all. It simply lay with him untouched.
1539. Has that happened more than once? Yes. There was an application of Mr. J. L. Begg, which had been in Mr. Burton's hands for some considerable time, and the applicant called and asked me as a matter of favour to take it up. I did so, and now he has got his certificate of title.
1540. Has Mr. Burton objected to part with these cases? No. He has put a memorandum on the back of them, that "by the desire of the applicant, and with the sanction of Mr. Maddock, I forward this case to him, in order to be dealt with."
1541. I suppose such a thing has not happened with Mr. Jones? No.
1542. Mr. Jones is more expeditious than Mr. Burton? I have had lately several cases where applicants have come in and asked me as a matter of urgency to proceed with them, which I have done, and sent them on to Mr. Jones as urgent, but he has disregarded them.
1543. He will not step out of his way? No.
1544. In inspecting titles do you require as perfect a title as an unwilling purchaser under an open contract would require? No.
1545. To what extent do you go—do you accept such a title as a willing purchaser would accept? Not as a rule. I want to see before me and make myself satisfied first that there is an indisputable title.
1546. Well, I suppose that is all that an unwilling purchaser would require? Of course one has to be very particular. It is all very well to think we have got the assurance fund to fall back upon, but I should be very sorry indeed to see it touched. There are, however, a great many things that are not worth taking notice of in the investigation of a title.
1547. Then you can lay down no exact rule as to the titles you accept? No.
1548. Do solicitors insist upon the production of the original deeds in all cases? No.
1549. Are they not perfectly safe in dispensing with the production very often? Yes.
1550. Could solicitors in large practice get through their business if they did require the production of those deeds always? No; there would be great delay if they insisted upon it.
1551. Do you know of any case in which they or their clients have suffered by not requiring the production of deeds? No.
1552. Do you think examiners should be more particular than practising solicitors? No; I do not see that they should. I know that I simply place myself in the position of being in an office—in my own office—investigating a title. I do not feel it necessary from the position I hold that I should go in and raise all manner of objections.
1553. You do not consider it necessary to raise objections unless they are really necessary? Certainly not.
1554. To guard against an almost certain risk? Yes.
1555. You do not consider mere remote possibilities? No.
1556. Do the others? Yes. I very often have occasion to disregard too remote possibilities.
1557. Are applicants and their solicitors satisfied with your mode of treating their titles? Perfectly, so far as I know.
1558. What evidence have you of that? Well, they very often say to me that they hear I am giving great satisfaction to the public, and that they are very pleased at the way in which I took up their case and disposed of it so expeditiously.
1559. Are they equally satisfied with Mr. Burton and Mr. Jones? No, they are not. If they speak to me about them they always mention the names of Mr. Burton and Mr. Jones by contrast with myself.
1560. Do they not consider that Mr. Burton and Mr. Jones are acting conscientiously, and only taking objections that they feel themselves compelled to take? Yes, but they consider that very many objections taken should not be made.
1561. And you think they are quite conscientious? In fact over conscientious; and competent, but possessing too much of the objective faculty —
1562. Does the custody of wills interfere with Mr. Lander's work? Considerably. 1563.

H. D.
Maddock,
Esq.

1 April, 1879.

1563. Is he sufficiently active and energetic in the performance of his duties? Well, he might be more so.
1564. Notwithstanding the interruptions created by the custody of the wills he might do more than he does? Yes, but at the same time it must be remembered he is now advanced in years.
1565. Do you not think he should be entirely under the control of the examiners? I think so, most decidedly.
1566. Free from the Registrar General, and without the incumbrance of looking after the wills? Yes. I may mention that as far as the wills are concerned it offers great facilities to business to have the wills here in this department.
1567. But some other clerk might have them? Yes, no doubt; wills are wanted by the examiners almost every day.
1568. Does dower create much difficulty in dealing with titles? A good deal.
1569. Applicants are compelled to negative dower that does not exist? Yes.
1570. Do you not think the form of noting dower where it has not been negated very objectionable—it gives no idea of whether the dower is an actual claim or a mere possibility? Yes; I do not see, at the present moment, how you could act otherwise.
1571. You could easily do it if you chose to make a little more work by stating the dates of the conveyance to the person in respect of whom the dower is claimed—of course it would increase the work of the office? It would.
1572. But the mere fact of noting dower makes very serious objection sometimes—that dower may be an actual fact or a mere possibility? The best course would be to abolish the Dower Act altogether, as is done in Victoria.
1573. *Mr. Terry.*] You agree with that? Quite, although the dower question is now almost dead.
1574. *President.*] In how many cases being noted do you suppose actual dower will attach to the land. You have seen sometimes half-a-dozen cases mentioned on the certificate, where people will not take the trouble to remove them? I have seen very few lately, though since I have been in Sydney I have seen a great many cases where dower has been noted on certificates of title.
1575. Then dower is much less frequent than formerly, or have the applicants taken more trouble to get rid of the objections? They have, I think, taken more trouble to get rid of the objections.
1576. Do you know of any case in which dower has been actually claimed against land? I cannot say I do.
1577. Notwithstanding all the trouble it gives to the office you do not know of a single case where it has been actually claimed? No.
1578. Of what use is the Board of Commissioners? Well, they can expunge any qualification they like. They have the examiner's report before them, and they are clothed with full discretionary power under the principal Act to do so. The report to the Commissioners is simply a recommendation that the property be passed subject to the following qualifications.
1579. Do their duties consist of anything more than dealing with the reports of the examiners? No, that is all, except fixing times for advertisements. They have a regular scale before them, and they note on the back of the report the number of the days the application is to be advertised.
1580. Then the only good they do to applicants is to get rid of some of the qualifications that the examiners annex to their reports? Yes.
1581. Would that not be much better done by a man able to deal with such matters? I think so.
1582. By one man? By one, most decidedly.
1583. Do you not think it would be an advantage to have some person over the head of the examiners, to deal with all those questions, and to have the entire control of the department separate from the Registrar General? Yes, that has been my opinion for some time.
1584. Do you consider it necessary that the assurance fee should be paid on every transmission? I do not think so.
1585. The original fee paid on application should cover all subsequent dealings? Yes, because the subsequent dealing is a transmission under the Act, the property having already been certified to.
1586. Is it necessary to advertise those transmissions? No.
1587. The advertisements create delay and some expense? Yes. I very often dispense with some of the public notices.
1588. You are not obliged to advertise them? No, it is not compulsory; although it is expedient sometimes to do so.
1589. Then you would abolish advertisements in all but exceptional cases? Yes.
1590. And the transmission fee in all cases? Yes.
1591. Have you ever heard complaints that work is done by officers of this institution for the public, either before you were an examiner or since? Yes, I have, so far as wills are concerned—the copying of wills.
1592. Making copies of wills? Yes.
1593. Which are bespoken by some one outside? Yes. Of course the original wills are supposed to remain here, and never to go out of the office; therefore somebody must make the copies. Copies of registration deeds are made in this office by Mr. Kenyon, law stationer.
1594. Then copies are made here? Yes; but Mr. Kenyon has nothing to do with the office. This Department employs him on jobwork; he is paid for making the copies, and a regular charge goes to the office.
1595. That is not what I mean. Statements have been made that officers in this office do certain work which ought to be done by applicants themselves, or by their solicitors, and that those gentlemen are paid for that work? That is very true; it is so, according to the practice of this office.
1596. It is, in point of fact, true? Yes.
1597. How do you know that? I have seen it with my own eyes. What I have seen is copying of wills in this office by one of the clerks to the examiners, who has done this during business hours instead of doing his own work.
1598. You have only one clerk, have you not? Two; Mr. Lander, and a young clerk named Hiddlestone.
1599. Where are these wills copied? I have seen them copied in Mr. Lander's room during business hours.
1600. But the fees for those go to the office? No; they go to Mr. Lander. It is one of his perquisites.
1601. Does the Registrar General know that? I think he does.
1602. Does he permit it? I should think not. I do not know whether it continues. I suppose he has put a stop to it.
1603. Do you know of any cases of certificates of title or applications for transmission having been prepared? No; all I know is in reference to the copying of wills, and of registration copies.

- H. D. Maddock, Esq.
1 April, 1879.
1604. Have you heard that *douceurs*, gratuities, or expedition fees have been paid to any officers of the establishment for pushing titles through? Never.
1605. You do not know of any instance? No.
1606. Do you not know that there is a complaint outside that such things do happen here? I cannot say I do; I have never heard so.

THURSDAY, 3 APRIL, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P., | WILLIAM HENRY ARCHER, Esq.,
THOMAS ROBERTSON, Esq., | JOHN DAWSON, Esq.

Henry Dyer Maddock, Esq., Examiner of Titles, further examined:—

- H. D. Maddock, Esq.
3 April, 1879.
1607. *Mr. Terry.*] I should like to know if you can offer any suggestion, by way of amendment of the Real Property Acts, which would improve them? Not at the present moment.
1608. I understood you to say that you were in favour of assimilating the law of this Colony, in reference to dower, to that of South Australia and Victoria? Yes.
1609. That is, by abolishing dower? Yes.
1610. *Mr. Archer.*] Are you able to state the number of applications that come before the examiners in the course of a year—I mean applications to bring titles under the Act? You might arrive at it by the number of cases that have come before me since I have been here, from the 1st of October up to the 31st of March—226 cases, that is altogether.
1611. That is without counting transmissions? That is including transmissions.
1612. That is not what I call bringing land under the Act? Very well, then, 125.
1613. At what rate is that per annum? I should say about 600 altogether a year.
1614. What proportion of those 600 per annum have you gone through? I should think half.
1615. That is to say, you can get through, you think, about 300 applications? Yes.
1616. In the ordinary course of business? Yes.
1617. That would be about one for every working day? Yes.
1618. Then the other two examiners would get through the other 300? Yes.
1619. Then you consider you can do the work at twice the rate of either of the other examiners? Yes.
1620. In fact, you can keep pace with them? Yes. I have several times gone ahead of them, and in fact have had no cases to deal with on several occasions.
1621. And what have you done then? Simply asked for cases that have come in pending distribution.
1622. Have you obtained them? Yes.
1623. In such quantities as to keep you fairly going? Yes.
1624. Are you abreast of your work now? Yes; I have just finished a case now, and I want another case to go on with.
1625. According to your evidence you have reason to believe that there are considerable arrears still in the hands of the examiners? Oh, yes.
1626. Have you any idea of the extent of those arrears? No, I have not.
1627. Can you not judge them by scores or hundreds? Between Mr. Burton and Mr. Jones I daresay they have got 20 cases waiting for their report, *from me*.
1628. And how many cases are waiting in their hands for your report? That I do not know.
1629. Do the profession or the public complain of the number of cases waiting? Yes, every day.
1630. And you can get through all this business you describe, and yet be daily interrupted by the profession and the public calling when they please? Yes.
1631. You can drop your work and take it up again, and not only keep abreast of one examiner but of two together? Yes; it does not affect me in the slightest; it is what I have been accustomed to for the last twenty years.
1632. You were speaking of the delays occasioned by Mr. Lander having too much to do and from other causes;—have you ever consulted with the Registrar General as to the propriety of getting rid of that difficulty? Yes I have, once or twice—rather upon getting additional assistance.
1633. And what did the Registrar General say? He merely expressed an opinion that it was desirable, that was all, so far as I can remember.
1634. He did not say he had any difficulty in getting the assistance? I think, by the way, he did tell me that he had placed himself in communication with the Colonial Secretary, but had received no response.
1635. So that, in your opinion, every effort has been made so far as you as an examiner are concerned and the Registrar General to obtain a sufficient amount of clerical aid, and you have not been supported? No.
1636. *Mr. Dawson.*] You had charge of the conveyancing department for some considerable period in Messrs. Want and Johnson's office, had you not—the sole charge? Yes.
1637. For about how long? For about five years.
1638. And you were also for some period with Mr. Barker, conducting the conveyancing department? Yes.
1639. Was it not almost the invariable or *the* invariable practice when persons wished to bring titles under this Act to advise them not to do so, owing to the untenable objections and to the delays, over and over again? Yes.
1640. That was the usual course rather than the exception? Yes.
1641. Do you fancy that additional accommodation to the carrying on properly of the business of this department could be afforded by having more counter clerks to attend to applicants? No; I fancy so far as the counter clerks are concerned that the staff is large enough.
1642. You have not heard any complaints at all of delay occasioned by an insufficient number? No, I have not.
1643. Do you conceive that an undisturbed possession of land for a certain number of years, based originally upon the ordinary evidence of title, is, under any circumstances whatever, sufficient to warrant a certificate being issued? Most certainly not.

1644. Can you suggest any certain number of years, under any circumstances, for the undisturbed possession? I should like to get the twenty years.

1645. Could you with safety say what undisturbed possession, based originally on the title, ought to be conclusive on certificate issuing;—could you say thirty? Most decidedly.

1646. Would you have any particular mode of advertising so as to call in claims and show that no certificate has issued behind their backs? Yes, by special advertisements and special notices.

1647. Are you not aware that great delays, as well as great expense and considerable annoyance occasionally, are very often experienced by applicants in having a series—that is different batches of requisitions, instead of the requisitions being the subject of one communication? Yes.

1648. You conceive that the whole of the requisitions ought to be made in the first instance? Most decidedly.

1649. And that after one batch has been satisfied at great expense, another not arising from the replies should not be sent? Certainly not. It is my practice to forward in the first instance all requisitions that I may have occasion to make in connection with titles.

1650. Are you aware of any cases where requisitions being sent piecemeal, applicants, after going to considerable expense, being subjected to very great delay, and possibly having their title damnified, have had to withdraw their title, being unable to satisfy subsequent requisitions? Yes.

1651. Do you conceive that in transmissions on intestate estates, when letters [of administration are produced to you, that those letters ought to be conclusive to the examiners of the value of the property, without the examiners endeavouring to go behind the action of the Court to ask whether the property is not of a greater value? Most decidedly I do.

1652. Are they not by doing so usurping the action of the Court? Yes, to all intents and purposes.

1653. That has been done, and is being done every day, or nearly so? Yes.

1654. *Mr. Terry.*] You have had some considerable correspondence in Müller's transmission case? Yes, the Commissioners referred the matter to me. They had power to deal with it themselves, but I suppose they desired, in order to ease their minds on the subject, to seek my opinion on the matter.

1655. Would you mind producing that correspondence? Certainly. (*Correspondence in Müller's case produced.*)

1656. *President.*] This is what Mr. Burton said in his evidence respecting Müller's case:—"There was a case which has been made the subject of a letter from Mr. Jones and myself to the Colonial Secretary, and I do not know whether I ought to say much about that, as we have written to the Colonial Secretary on the subject. It was a case in which Mr. Jones and I considered that we had been used very ill. It was a transmission application. Messrs. Macintosh, Pinnock, and Price sent it here. It was under the will and codicil of Jacob Barnes. That gentleman devised certain lands to trustees in trust for the separate use of his daughter, Mrs. Müller, and, after her decease, then, I think, to the right heirs of his said daughter, prefacing the whole, however, with a power of appointment over the fee simple given to the lady. I was very busy in December endeavouring to clear off all the transmission cases I had, and when I came upon this one I wrote a letter to Macintosh, Pinnock, and Price, touching the difficulties of the law as to the effect of the gift in trust for the married woman, for her separate use for life, with the remainder to her right heirs. It seemed likely that the remainder to the right heirs was a legal remainder, and it was clear that the gift for the separate use of the married woman was an equitable estate only in her. If so, the life estate and the remainder in fee could not coalesce, under the rule in Shelley's case. I consulted Mr. Jones, who agreed to the letter which I had drafted. The gist of that letter was to propose that the difficult question of law which might probably never need to be decided, should not be decided, but that a certificate should issue to some such effect as follows: 'The fee simple in possession of this land stands limited to such uses, &c., as Ellen Elizabeth Müller shall by deed or will appoint, and in default of appointment, according to the effect of the other limitations contained in the will and codicil of Jacob Barnes, deceased, in reference to the said land.' The applicants' solicitors wrote a handsome letter in reply, saying that they quite saw the difficulty to which the examiners drew their attention, and they did not see any objection to the form of certificate which the examiners proposed. The report was signed by myself and by Mr. Jones, and the case was passed by the three Land Titles Commissioners on the 8th January. After some time—I suppose when the advertisement had run out—I was informed that the parties did not mean to take out a new certificate of title, but intended to have transmission memorials endorsed upon the four grants under a provision in the new Act, and I was requested to draw the form of transmission memorial accordingly. I asked for the form generally used downstairs in simple transmission memorials, and I endeavoured to make this special memorial come as nearly as I could to the common form. Of course it would vary very considerably from the common form, the intention being very different. Mr. Muddle wrote upon my draft memorial a memorandum of his objection thereto, which he did not send to me, but which he sent to the Registrar General. Then the Registrar General made some alterations in my form, but did not send them to me. Then another memorandum was written by Mr. Muddle, referring to the Registrar General's opinion, and re-submitting the case for the consideration of the Board. The case was re-submitted to the Board, and was thereupon deferred for the opinion of Mr. Maddock, who was not in the case at all. Mr. Maddock wrote an opinion upon it, which I took great pains to understand, but which I could not understand. On the 3rd of March he and I both went into Mr. Jones's room to distribute the cases amongst ourselves as usual, and I then called Mr. Maddock's attention to the matter, and Mr. Jones and I talked to him upon the subject, and I pointed out that all the requisites to the execution of a power must be complied with during the life of the donee. Mr. Maddock had advised, in his original opinion, dated, I think, 26th February, as to what notification should be placed upon the certificate of title, but his opinion did not at all clearly express what the effect of the certificate of title itself should be. After the conversation with Mr. Jones and myself, Mr. Maddock wrote a new opinion in substitution for his former one, and I must say that the new opinion seems to me to show that he does not yet know the point of law which I stated to him on the 30th of March, and which I have now stated to yourselves. The Commissioners have reversed their decision of the 8th January last, and have rescinded qualification No. 2, which Mr. Jones and I had both advised, and have directed Mr. Maddock's form, contained in or subjoined to his new opinion, to be adopted. *Question:* You think Mr. Maddock is wrong? *Answer:* I do. The opinion of Mr. Maddock, who never was vested with the case, is taken in preference to the opinions of the other two examiners who were vested with it, and so as to override the consent of the solicitors for the applicant, and also so as to overturn the decision of the Registrar General and the other two Land Titles Commissioners, given on the 8th January," and so on. The story is very long, and goes on to the other page of the evidence —

H. D.
Maddock,
Esq.
3 April, 1879.

1657. *Mr. Terry.*] You have heard what Mr. Burton has said:—will you be kind enough to explain your version of this transmission case? In the first place, Mr. Burton prepared a long notification, which the Commissioners did not approve of. Really the effect of what I did in the matter was simply to shorten the form to what meets the case to all intents and purposes. The notification I prepared is simply short and concise, at the same time embracing everything that was necessary. I remember meeting my colleagues and to tell you the truth I could hardly follow them—they were both speaking at the same time. Of course it was a matter in which I had nothing whatever to do with them. It was simply a matter the Commissioners referred to me and asked me to look into it and prepare what I considered in my opinion a short and concise notification to meet the case —

1658. Then you consider your form in no way dangerous or contrary to law? Not in the slightest.

1659. Be kind enough to explain the difference between the two forms—the form approved by Mr. Burton and Mr. Jones and that approved by yourself? Really and in fact there is no difference; the effect is the same, except that mine is short and concise and contains about a dozen lines and the other contains about half-a-dozen folios.

1660. Have you had no other difference of opinion between yourself and your co-examiners? A great many, which I have always referred to the Commissioners for their consideration.

1661. And whose decision have they generally upheld? Mine in every case. Of course I put my objections or differences very clearly and distinctly before the Commissioners, and they could see—common sense could see at once—that my views were correct.

1662. *Mr. Robertson.*] What Mr. Burton says about Müller's case is that Mrs. Müller inherited under her father's will, with power of appointment, and that she applied for transmission with a minute or endorsement to the effect that she should be at liberty to exercise her power of appointment by means of one of your ordinary transfer forms. Mr. Burton urges that the objection to the use of the form of transfer given by the Real Property Act in a case of a similar kind—in a case of anyone exercising a power of appointment—is, that owing to the 35th section of the Act, before the instrument can take effect under the Act, it has to be registered. Then this might arise: This lady having signed the memorandum of transfer—and of course like most persons having a right of appointment, having a right to change her mind and make a new appointment—might make another appointment in substitution of the memorandum of transfer so signed, which she might neglect to register; and she might die before it was registered. Then Mr. Burton says the instrument not having been registered, the 35th clause of the Real Property Act would prevent it taking effect, the law requiring that all deeds of appointment should take effect during the life of the donee; so that if this lady died before her memorandum of transfer, which is equivalent to a deed of appointment was registered, her intention to appoint would fail. The memo., minute, endorsement, or whatever it was that Messrs. Burton and Jones proposed to put on the certificate, has not been submitted to us; nor has your amended form. Briefly, what Mr. Burton said was this: that your endorsement would necessitate this lady using an instrument which would not take effect unless it was registered during her life-time, and that she might die before it was registered; and, therefore, her intention to appoint might, by her death and the non-registration of this instrument, be defeated. The question is whether your endorsement was open to that objection, and whether theirs was not open to it? I am quite satisfied that my endorsement is not open to that; that in fact what I prepared was substantially what they prepared themselves, but brought into a more concise form.

1663. *Mr. Terry.*] Then you committed no breach of etiquette? Certainly not, in my opinion.

1664. Well they had a perfect right to apply to you? Oh yes.

1665. Do you think that the Crown ought to charge an assurance fee on grants issuing direct from the Crown? I do not think they should.

1666. They do so now? Yes.

1667. *President.*] Will you tell us, if you can, what is the reason of the want of harmony between you and the other examiners? Well, there existed a strong feeling on their part towards me before I came here.

1668. What did you say existed? A strong feeling against me before I came here in consequence of a petition presented to Parliament some 18 months ago, and they believed I was the author of it.

1669. What was that petition? It was a petition complaining more particularly of the examination branch of the Land Titles Department, and also of the great delays that had taken place. That petition resulted in a Select Committee being appointed, and it fell through in consequence of some dispute as to who should take the chair, whether Mr. Greenwood or Mr. Lucas; I think they only examined the Registrar General.

1670. Is there any other reason? None that I know of.

1671. Do not the different modes in which you and they work create jealousy? There is no doubt it does.

1672. Are they not jealous of your getting through more work than they do? It is very likely; I should fancy they were —

1673. And that is evinced by the difficulty in giving you more cases than your fair one-third? Yes, and not only that; the Registrar General has mentioned to me several times recently that cases have come before the Commissioners in which Mr. Jones and Mr. Burton have reported upon between themselves so as no doubt to cut away my work from appearing —

1674. Why cannot they get through their work as quickly as you can? That I cannot understand.

1675. Do you suppose it a matter of temperament? It may be that but I do not think that either Mr. Jones or Mr. Burton is very strong; you cannot call them strongly constituted men. That makes a wonderful difference.

1676. They have not the same capacity as you have? No, I do not think they have.

1677. But does not their way of looking at a case entail more labour on them and make them necessarily slower? Yes.

1678. But they are perfectly honest and conscientious? Yes, I thoroughly believe that.

1679. They do not idle? I cannot say; I do not know what they do in their room.

1680. At all events you do not know that they waste their time? I do not; I know that Mr. Burton is very punctual in his attendance at the office, and is always to be found in his room.

1681. Will you tell us about this case of Dr. Chisholm's, No. 1061 which was left in the office on the 12th of February, 1879? This is the first time I have seen or heard of the case. I did not know there was such an application in the office.

1682. Perhaps by looking at the papers you can tell us why it has not been disposed of up to the present date? It appears that the case came into this office on the 12th February, 1879, and it should have been distributed on the 1st of last month (March).

1683. If you look at the papers you will see how the matter stands? Everything appears to be regular.

1684. But it has not been dealt with? Apparently not.
1685. Can you show any reason why it should not be dealt with before the present time? No, according to the date when it came into the office—the 12th February, 1879—it should have been distributed on the 1st of last month, but why it was not I do not know; it may have been mislaid.
1686. *Mr. Archer.*] In whose hands did you find it? I asked Mr. Lander for it.
1687. *Mr. Terry.*] He has not distributed it now? No.
1688. Then it will not come before the examiners till the 1st of next month? No, it would not in the ordinary course go before them till the 1st of next month, but I will take it now.
1689. *President.*] Has that not been before the Board at all? No.
1690. Is it in a state in which it could go before the Board at once? Yes.
1691. It has simply to go before the Board to pass? I will deal with the case myself at once and forward it on to one of my colleagues for report.
1692. Where did that case come from now? I do not know; Mr. Lander left me to go in to Mr. Jones' and Mr. Burton's rooms to see whether either of these gentlemen had the case; I do not know where he found it.
1693. Well, you got it from Mr. Lander? Mr. Lander first brought it into this room.
1694. *Mr. Archer.*] Should not the Registrar General or the examiners look after Mr. Lander? Yes, of course; the Registrar General is the head of the department; I should say it was his duty to look after him.
1695. *Mr. Terry.*] Is it not a fact that documents are often lost in this office for some considerable time? Yes.
1696. In which branch? Down below, I think, at the counter.
1697. That should not occur, should it, in a well organised establishment? No.
1698. *Mr. Archer.*] Did you find this hostility between the other examiners and yourself at the very onset of your entrance into the department? Well, there was a slight coolness.
1699. And that developed into more decided hostility? Yes, but I might say that this morning I came down in the train with Mr. Burton and we were chatting on the way.
1700. It is not a personal disagreement? No.
1701. But as to the conduct of business? Yes; our business views do not accord.
1702. When you find an instance of delay, such as that brought under notice this morning, do you not, yourself, take steps to try and get the thing facilitated? Well, it is more for the applicant or his solicitor to do so.
1703. What do you advise him to do? If he has any cause of complaint to make it should be brought under the notice of the Registrar-General, who would then make the necessary inquiries on the subject.
1704. Then you think that these delays should have been looked after by the Registrar General? Yes; I take it, if there is any dereliction of duty on the part of the examiners' clerk, it is a matter for the Registrar General to deal with.
1705. In fact you look upon the examiners' clerk as being directly under the Registrar General? Yes.

H. D.
Maddock,
Esq.

3 April, 1879.

Mr. Jonas Lander, Clerk to the Examiners of Titles, examined:—

1706. *President.*] You are clerk to the Examiner of Titles? Yes.
1707. Under whose control do you work? I consider that I work under the immediate control of the examiners. My official designation is Clerk to the Examiners. Mr. J. Lander.
1708. Has the Registrar General no control over you? Certainly; I do not dispute his control. 3 April, 1879.
1709. Then you have got two masters to serve? I have got four—three examiners and the Registrar General.
1710. What are your duties? I suppose I had better commence at the beginning. I receive cases from the counter. Then I prepare them for the examiners. The first step in an ordinary application to be registered is to prepare a search paper. When the search has been completed, I send the case to the draftsman to examine the search and to report. When he has done this he sends them back to me. I then put them into the examiners' room for distribution on the first of the following month. That is the ordinary practice.
1711. From the time the application is lodged at the counter till it goes to the examiners' room, how long a period of time elapses? Until I send the case to him of course he cannot report upon it; but his report generally takes perhaps a fortnight; I do not think he keeps them longer.
1712. How long is it before you send it to the draftsman? That depends on the case itself. I have got so many duties to do that I cannot take up a troublesome case. I look at it, and if it is a difficult one I put it aside and take an easy one.
1713. Then you do not deal with the cases strictly in rotation? Not strictly in rotation.
1714. Can you say as a rule how long it is before the case reaches the draftsman? Sometimes they are two or three months in my hands; I cannot get at them; I am all day long busy; each day brings its own work.
1715. What work have you to do besides what you have told us of? Attending the public constantly. The arrears of cases in the office are so great that I am all day long kept going by solicitors' clerks, and by the solicitors themselves, inquiring how their cases stand.
1716. What is the cause of some of the inquiries? The principal cause is the arrear of work in the office; the number of cases that are pending.
1717. Pending? Pending, in all stages; pending before they pass, and pending after they pass.
1718. Do applicants and their solicitors come to you principally to inquire about their cases? All of them.
1719. If cases were dealt with more quickly and expeditiously you would not be bothered with so many inquiries? Of course I would not.
1720. You have the charge of the wills I understand? Yes.
1721. Does that give you much trouble, and take up much time? Not much.
1722. I suppose the clerk under you attends to them? He does all the running up and down stairs.
1723. Then that does not make much difference with your work? Very little. The principal trouble I have with the wills is keeping the accounts. Every will that is exhibited to the public I mark down, and receive a fee of a shilling. I keep that account myself. And every will that I exhibit to an examiner I put down to his account; and in another column I keep an account of when it is returned.
1724. That does not make much work? No. One day I may produce ten wills; another day none at all.
- 1725.

- Mr. J. Lander. 1725. Do you distribute the cases of applications for certificate or transmission to the examiners? No, I do not distribute them; I put them into the examiners' room to be distributed by them.
- 3 April, 1879. 1726. And you have nothing to do with the distribution? They do the distribution themselves.
1727. You simply deliver them to the examiners and they distribute them themselves? Yes. Recently Mr. Maddock has complained that he has had no work to do.
1728. To you? To me and to Mr. Ward; and I have given him this last month all the transmission cases that have come in according as I received them.
1729. Without giving those cases to the examiners? Without putting them, as I used to do, in the examiners' room for distribution on the 1st of the month, I let him have them directly.
1730. You give those transmission cases to Mr. Maddock without first putting them into Mr. Jones's room? Yes.
1731. Do the other examiners object to that? No, not in the slightest.
1732. There was a case just now of Dr. Chisholm's, No. 1,061, an application for transmission, produced to us. That case was lodged on the 12th February, 1879, and up to the present date it has not been before the examiners. Can you tell us why? I suppose I received it about the date you mention, and I suppose a press of business prevented me from putting it in for that month's distribution, but in the following month (March) I put it in for distribution, and it remained there, and should have been distributed the day before yesterday.
1733. Where did you get it from just now? From a heap of cases in Mr. Jones's room which should have been distributed on the 1st of this month.
1734. Then that case had not been distributed? No. They generally distribute them on the 1st of the month.
1735. Were not the papers in the case mislaid for some time? I do not think so. I think it was only press of business that prevented me from disposing of it in the month of February.
1736. Then up to the present time it has never been before the Board nor dealt with by the examiners? Nor dealt with by the examiners.
1737. Can you tell us why cases are so long before the examiners while they are investigating the titles? I do not know. So far as Mr. Burton is concerned he has such a tremendous arrear of work that if he do justice to everyone it will be, perhaps, three months before a case put before him to-day will come on for its turn for examination.
1738. Can he not keep pace with his work? No.
1739. Then those arrears will go on accumulating? Certainly.
1740. If he takes three months now to deal with a case it will go on until it takes six months? At one time the other examiners relieved him and took a number of cases from him. I do not know how many.
1741. Did they do that more than once? I do not recollect more than once.
1742. Is Mr. Burton expeditious in examining titles, and in his work generally? I do not think he is as expeditious as other examiners—as for instance, Mr. Maddock.
1743. Does he work fairly; does he neglect his work? He is always hard at work—always so intent upon his work that he will not attend to anything else you put before him.
1744. He concentrates his mind on the matter before him? Yes; and if I take anything to him—even an urgent matter—he will not look at it.
1745. Does he take many objections to titles? I do not think any more than Mr. Jones does. I am sure he does not.
1746. Do Mr. Jones and he take more than a fair proportion of objections to titles? I could not say what a fair proportion of objections is; it altogether depends upon the title.
1747. You see the objections taken by them; you copy them do you not? Yes, I send them out in the shape of — they write requisitions and I send them out.
1748. You are a solicitor? I am.
1749. Of how long standing? Since 1842.
1750. Then you understand the value of objections? I think I do.
1751. Then are those objections of Mr. Burton and Mr. Jones, which are sent out, such as ought fairly to be taken? Yes, decidedly.
1752. You do not think they are too minute, too technical? They take objections, they make requisitions, and then if there is any difficulty in satisfying them they waive those minute objections.
1753. But they do take minute objections which they ultimately waive? If there is any difficulty in satisfying them.
1754. Does Mr. Maddock take as precise and technical objections as they do? No.
1755. He is more liberal to applicants? You cannot call it liberality to applicants; perhaps he does not see them.
1756. But in point of fact he does not take such minute and technical objections as the two other examiners do? No.
1757. Does he get through his work? When he examines a title, as the first examiner in the case, and makes his notes and objections, they are generally supplemented by the other examiners, and very often upon material points.
1758. That is according to your judgment? Yes.
1759. Does he get through his work as quickly as Mr. Burton and Mr. Jones do? A great deal quicker.
1760. In what estimation do the public, that is to say, the persons that have come to you and asked about their cases, hold the examiners. Take them in detail, if you like. Take them in the order of their standing, Mr. Burton, Mr. Jones, Mr. Maddock? Well, the public, that is to say the applicants themselves, think that Mr. Burton is too minute, and that he is vexatious, perhaps; that the requisitions he makes are unnecessary; but then those applicants, the public I speak of, are not capable of judging at all.
1761. Take solicitors who are capable of judging? Well, solicitors and their clerks grumble too.
1762. Just as much as the public? Yes; I have no doubt they would rather get the cases through quickly. I have no doubt they would rather a good many of the objections were not taken.
1763. I do not care about unfounded grumbling, but good grounds of complaint? Their clients worry them and fancy they are delaying the case, and then they in turn grumble at the examiners.
1764. Are cases unduly delayed? I think they are for want of sufficient strength in the examining branch.
1765. You think there ought to be more examiners? Certainly.

1766. What do the public say about Mr. Jones—do they speak of him as they do of Mr. Burton? He does not bear so bad a character with the public in general. He does not bear the character for delays.

1767. He is more expeditious in his work? He has not so great an arrear, and therefore he deals with the cases more quickly.

1768. But are not his objections quite as captious and technical as those of Mr. Burton? I think they are, if those terms can be applied to his requisitions.

1769. Then, on the whole, I suppose, the public and solicitors approve of Mr. Maddock as an examiner? The public do, decidedly.

1770. What other complaints are made of the office besides those applied to the examiners? I suppose I do not hear the complaints against myself, but I have been applying for assistance for years past, and cannot get through my work as expeditiously as I could wish.

1771. Why cannot you? I have not got the time. I work till 5 and half-past 5, and have done so constantly for years.

1772. You have stated the nature of your work, and it does not seem to be very difficult? That does not embrace all my work.

1773. Well, if you will tell us what does we shall be able to judge? My room is the centre from which all the work of the examiners' branch of the department radiates. All cases come in to me from the examiners themselves, from the draftsman, from downstairs, and we distribute them again according as they are dealt with. They come in to me for all purposes.

1774. You have a clerk under you? I have a clerk who writes letters from the examiners' drafts. I write numbers of letters myself. When cases come before me that are manifestly wrong I write a preliminary requisition before making the search or sending it on at all.

1775. These preliminary requisitions are mere unimportant matters, such as the non-production of deeds or the want of a plan? Yes; the non-production of deeds or —

1776. Or non-compliance with forms? Yes; and in transmission cases I very often find a wrong applicant.

1777. Is not that a matter for the examiners to deal with? Well, when it comes before me, and I see that it is manifest, it saves time if I send it on myself.

1778. But that involves the perusal of the wills and everything connected with the case? The wills are so important an item in the examination of a title that whenever I have to prepare a search paper I have to examine the will myself, as it very often is as necessary to be read as any other portion of the title, and in a transmission case the wrong applicant may be applying, and then I may send off preliminary requisitions myself, or lay the case before an examiner.

1779. Then do you send those requisitions out without consulting the examiners? Sometimes, to save time, and then the applicants see that there is something being done with their cases, which satisfies them to some extent.

1780. You were in the office in the time of Messrs. Holden and Dick? I was; I have been here from the commencement.

1781. Have there been more complaints since Mr. Burton's appointment than there were before? Yes; I think there have.

1782. Did Mr. Jones's appointment make any difference in the number of complaints? I think it relieved the office, because at the time Mr. Jones was appointed there were three examiners instead of two, and they got through more work. It was a relief.

1783. Then more work was got through after Mr. Jones was appointed? I think so.

1784. Has Mr. Maddock's appointment made any material difference in the amount of work got through? It made a great difference at first, but there were a number of cases that were ready prepared—examined by one examiner, and which required only to be examined by the second examiner, which were examined by him very quickly, and disposed of very quickly indeed.

1785. So that there were many more cases that went before the Board after Mr. Maddock was appointed? For the first two or three months after he was appointed a great many more went before the Board.

1786. Cannot Mr. Maddock continue the same plan of examining the cases already examined by one examiner? He has to wait for them.

1787. Then the cases which he cleared off were accumulations? Yes. I might mention that upon one occasion Mr. Maddock was away upon leave of absence, and when he returned the following morning he disposed of, before 10 o'clock, thirteen cases that had been examined by other examiners previously.

1788. What kind of cases were those—second-class cases? Yes, and transmissions.

1789. And some first-class cases, I suppose? I will not say that, because they are so scarce now, there are very few of them.

1790. Do first-class cases go before two examiners? Yes.

1791. Can you tell if the office generally is in good odour with the public—whether there is any reluctance in persons to bring properties here in order to get certificates of title? Well, I have heard that there is such a reluctance.

1792. Have cases fallen off at all? I think they have. Applicants are not so numerous as they used to be. If the cases were disposed of quicker I am sure they would increase.

1793. And yet there can be no reason for their falling off, on account of the old titles having already been brought in? The fact of there being a great number of former applications in any particular estate you would imagine would facilitate the present or pending application, but it rather tends to delay it.

1794. How is that; does not the former case having been dealt with clear the way a good deal? A good many are large estates, like the Petersham estate, which consists of a great number of grants, and it becomes necessary to hunt up a particular case in the same grant which you are now dealing with.

1795. There is no difficulty in that? Oh, yes there is; we have often to get up, to satisfy the examiner, ten or fifteen cases in the same estate before he can get the right one, and it sometimes happens that the titles themselves will so radiate and branch off in various directions, that although you may be dealing with the same property and part of the same grant, yet to get a precedent case that is passed there is a difficulty. It would be far easier if we never had the title before, and that was one of the facilities enjoyed by the first examiners.

1796. Is it part of your duty to look for those cases? It is, and I have very often, in doing so, messenger's duty to perform. We have applied for a messenger, and cannot get one.

1797. Are you on good terms with the examiners? Yes, on the best of terms with all of them. 1798.

Mr. J. Lander.
3 April, 1879.

Mr. J. Lander. 1798. And with Mr. Ward? I cannot say I am on good terms with Mr. Ward.

1799. How is that? Because he always has seemed to have a down upon me.

3 April, 1879. 1800. Does he say or show why? For example, whenever I have applied for an increase of salary (and I have seen everybody in the office but myself receive an increase—I am the only exception, and many have had three or four increases of salary put down by Mr. Ward—no one else can put it down, for if an increase is not recommended by Mr. Ward, it will not be entertained by the Minister) he has always refused me.

1801. I suppose Mr. Ward thinks you are sufficiently paid for the work you do? Mr. Ward cannot be supposed to comprehend the work I do, for I have a great deal of professional work to do which I should think was not paid for by the mere clerical salary of £300 a-year which I receive.

1802. Does Mr. Ward ever complain of your neglecting your duties? He may do so, but I must put the saddle on the right horse. It is because he does not give me assistance which I have applied for myself personally and through the examiners.

1803. That does not depend on him? No, but it would follow if he recommended it, and he distinctly refuses to recommend it.

1804. Does he, in point of fact, complain that you either neglect your work or are too slow in your work? He may complain of both.

1805. I mean to yourself;—does he make you understand that is a fault which he has to find with you? I do not know to what cause he attributes it, or why he has this down upon me. But whenever there is any promotion he has invariably refused to recommend me for it.

1806. Does he not tell you the fault he has to find with you? He says, "How is this?" I say, "I cannot get through it; I have not the time."

1807. Then he does find fault with you for being too slow? He cannot get the work of two men out of one.

1808. Are you on good terms with all the other officers in the establishment? Yes, with everyone. When I have a junior clerk pretty well trained (for it requires some training to read the examiners' abbreviations, and to understand the routine of the office, and when a case is asked for and he is not able to find it is shorter to go and find it myself than instruct a new hand to do it)—but when I have had a boy well trained, Mr. Ward takes him and puts him into a new branch and sends me another boy whom I have to train again.

1809. Do you know if any officers in the establishment do work for the public—prepare applications, for instance, or declarations, or documents, that are required in connection with their cases? I find a great many applications in the handwriting of the clerks downstairs and law stationers—I know the handwriting; they are generally simple cases, and defectively presented.

1810. Are those applications prepared during office hours? I could not say.

1811. They must be, I fancy? They work after 4 o'clock, and they are paid for it. They sometimes have got extra work to do.

1812. Do you suppose that the persons for whom they prepare these applications pay them? I could not say that they do.

1813. You do not know the fact? I do not know the fact.

1814. Do you know any cases where bribes or *donceurs* or honorariums have been given to anybody in the establishment by persons outside? No, I do not. I have been offered it myself over and over again, but have refused it.

1815. What has it been offered to you for? Only a few days ago it was offered to me for filling up a form of application and a mortgage for a man whom I had known intimately.

1816. To expedite cases? Yes, to expedite cases. But I have told them it was perfectly useless to pay me for doing things that I could not do. The examiners will not take any case from me out of its turn. Mr. Burton and Mr. Jones have refused me over and over again, no matter how urgent I may represent the matter to be; therefore I cannot assist the public in that way.

1817. Have you not heard solicitors or their clerks complain that work is done in the office here which ought to be done by applicants or their solicitors? I have heard that complaints have been made by solicitors that work properly theirs has been done by officers downstairs.

1818. Do you suppose the officers do this work merely for love of the applicant? I cannot say that; they are very willing and obliging, but whether they carry it to that extent or not, I cannot say.

1819. Are these gentlemen as much over-worked as you are? They are paid for their overtime and I am not.

1820. How are they paid—by the hour? They have got a job now; I don't know what it is, but they receive 2s. 6d. an hour for it. Several of them stay in after 4 o'clock and work as many hours as they like.

1821. Can you suggest any mode in which the business of the office could be got through more expeditiously? In the deeds branch they had £300 a year for several years, for overtime, divided amongst the clerks engaged. There has never been any overtime work in the Land Titles Office upstairs in the examiners' branch.

1822. Allowed for you mean—paid for? Yes.

1823. I suppose the people up here are looked upon more in the light of professionals, not as mere clerks? That may be, but I suppose nine-tenths of the search papers that I have done—and that is, perhaps, the most particular part of my duty—have been done at home. I take home two or three cases in my bag every night, or one good stiff one. I have had one case at home for a week every night. It took the whole week to prepare a search paper.

1824. Can you suggest any mode in which the business of the office may be facilitated? I think that in the Examining Branch they require assistance decidedly.

1825. I mean in principle, not in the amount of actual assistance, but in principle. In the conduct of the business as it were? No, I have not thought upon that, whether it could be facilitated by any change of procedure.

1826. Have you not applied several times to be appointed examiner? I have.

1827. Has Mr. Ward ever favoured that application? He did once; but, as I have heard, in a milk and water fashion.

1828. You think you are competent to deal with the examination of titles? I should not have applied for it if I did not think so.

1829. Have you ever practised on your own account? I have; but my experience since I have come to this office has been a great deal more, that is during the last 16 years.

1830.

1829. But you have not examined titles here? It requires a great deal of examination to prepare a search-
paper, to see what the deficiencies in the title are, as it is necessary to do in instructing a search. Mr. J. Lander.
1830. *Mr. Terry.*] I suppose Messrs. Jones and Burton are physically incapable of getting through as much
work as Mr. Maddock does,—their health, I mean, would not permit them to do it? I think their health April, 1879.
is perhaps quite as good, and their mental health certainly as well organized. Although they do not finish
off or put out of hand as many cases as the other, yet I think they do more work than he does.
1831. They do more work than Mr. Maddock? Yes, they exercise their mental powers more than he does.
1832. Notwithstanding that Mr. Maddock has got through very many more cases than they have, and had
a month's leave of absence during the time he has been in the office? Yes; although he has disposed of a
greater number of cases it does not follow that he gives them a greater amount of consideration, and that
is what I am speaking of. An examiner may consider a case carefully or superficially.
1833. Then you consider Mr. Jones and Mr. Burton have more respect for the assurance fund than Mr.
Maddock has? Yes. Although I am sure Mr. Maddock means to protect the fund to the best of his
ability. But I believe that the other two do it more effectually.
1834. May they not do it too effectually? It cannot be done too effectually.
1835. You say the public and the legal profession have confidence in Mr. Maddock? I have never heard
any expression of want of confidence.
1836. Then you have heard of want of confidence in both Mr. Burton and Mr. Jones by the legal profession?
No, still less; they do their business too well perhaps for the public.
1837. But the legal profession object to them? The public do generally, and the legal profession to a
certain extent when their clients get angry.
1838. How do you know that their clients get angry? By the tenor of their letters. The clients put the
blame on the solicitors, and the solicitors then put it on the office.
1839. *Mr. Archer.*] You have too much to do, Mr. Lander? Yes, I have.
1840. That is the reason you assign for delays? For delays that occur with me.
1841. Have you ever had the custom of copying documents for the general public in office hours? Never.
1842. Never on your own account? No.
1843. You have never received any fees for so doing? No; I have a good deal to do in making office
copies of wills, which are done after office hours.
1844. Have you a clerk to assist you? Yes.
1845. Have you known whether this clerk has ever been engaged doing work for the public during office
hours? I am sure he has not; my instructions in regard to copying the wills have been that he should not
do it in office hours.
1846. And you are quite sure he never has? Yes.
1847. Do you exercise supervision over him? Yes.
1848. And you never heard of his doing work of this nature for his own private advantage? No; he is
kept too hard going; he has not the time to do it.
1849. How long have you known him—how long have you worked in close proximity with him—how long
has he been connected with you? Since he came to the office—I think a couple of years.
1850. And if he had done any such work for himself during those two years, you would have known it?
Yes; he has no work but what I give him.
1851. Then if anyone has stated in evidence that he has done this work, and received private remuneration
for it, such information would be erroneous? It was stated a few days ago that he was seen copying a will
during office hours. I recollect the circumstance now. It was a will of about three folios, and I told him
he could do it in his dinner-hour. I do not know whether he exceeded the time or not. It was a quarter
of an hour or twenty minutes' work.
1852. For which he received pay? Yes.
1853. Then there is a case? Yes.
1854. How came you to say just now there was no case, and that he was kept too hard going? That is the
only case.
1855. You said it just now without exception? I recollected then that this charge was made, and that was
the only time I heard of anything of the kind.
1856. To whom was the charge made? Mr. Ward called me up to his room, and afterwards I came down
and questioned the clerk. I told Mr. Ward he had been copying this will, that he said he could do it
during his dinner-hour, and that I had let him do it.
1857. What action did the Registrar General take? He said not to do it again.
1858. Was this condemnation of the Registrar General in writing or was it verbal? Verbal.
1859. Did the Registrar General see the clerk? Either he or somebody else saw him; I do not know
where the information came from.
1860. But the clerk was not brought up before the Registrar General in your presence? No.
1861. *President.*] Are copies of wills always paid for? Yes.
1862. At what rate? We charge the person requiring it 8d. per folio, and we pay into the Supreme
Court one half, and keep the other half.
1863. You have copied many yourself? Yes.
1864. Then you have had 4d. per folio for over-work? Yes.
1865. You now make the clerk do that? Yes.
1866. And these copies are made, with the exception of that you mentioned, after office hours? Yes. It
is the only thing I can give the clerk as a perquisite in return for his assisting me with the wills, and
running up and down stairs.
1867. But you have a right to that assistance? Yes; if it is for the examiners, but not for the public;
it is not part of his duty. He runs up and down for all of them.
1868. You pay the 4d. into Court? Yes; and the search fees. When the wills were in the Court one of
the clerks of that Court had that perquisite.
1869. That is to say, the perquisite of retaining 4d. per folio for copies made? Yes.
1870. *Mr. Dawson.*] Who now actually receives this 4d. to the Supreme Court? It goes to the Government
as fees of office; it is paid in weekly.
1871. *Mr. Archer.*] In whose legal custody are the wills? They are in my custody as custodian of wills.

- Mr. J. Lander. 1872. And not as an officer of the Registrar General, but as an officer of the Supreme Court? Yes.
- 3 April, 1879. 1873. And the Registrar General has no control over you as custodian of wills? No. I got the appointment through an interview between Messrs. Dick and Holden, and the Judges, Chief Justice Stephen, Mr. Hargrave, and Mr. Wise. Mr. Dick, Mr. Holden, and myself, were present in one of the Judge's chambers, and the examiners having experienced a great deal of difficulty in getting the wills from the Supreme Court when they wanted them, it was proposed I should be custodian of wills.
1874. Was the Registrar-General present at that interview? No.
1875. Had you been previously an officer of his? I had. This was done to facilitate the business of the Land Titles Office. It does facilitate it to a considerable extent.
1876. And it was simply for the convenience of the public that these wills were handed over to you as custodian, you being an officer of the Registrar General? It was for the convenience of the examiners of titles, to facilitate their operations; and it was further urged that I was an officer and solicitor of the Supreme Court.
1877. Does the Supreme Court or any officer of it have any control over you? Oh yes.
1878. Who is he? Mr. Slattery, the Prothonotary, and I take over the wills from Mr. Powell, the ecclesiastical clerk.
1879. And do they exercise any practical authority over you? They send the wills in to me when they are ready.
1880. Do you keep indexes? Yes.
1881. Do they ever supervise you to see whether you keep up the work? No, they do not, but I was obliged to apply for assistance a short time ago. A great number of wills were unindexed, and Mr. Ward had complained so about the interviewing, respecting wills and their preventing my doing, what he calls, my proper and legitimate duties as clerk to the examiners, that I neglected the wills for a long time and did not index them. Then I applied to Mr. Slattery for assistance to bring them up, and he has afforded me that assistance and the wills are now indexed up.
1882. Then this assistant clerk is an officer of the Supreme Court too? Yes; he is a supernumerary, and gets 10s. 6d. a day, I think.
1883. *President.*] Are you paid as custodian of wills? I am paid £50 a year in addition to the £300 a year.
1884. *Mr. Terry.*] You consider that, from your long employment in this office, you are entitled to an increase of salary? I consider I have been entitled to it for years past, and Mr. Jaques, years ago (in 1870) put me down for £150 more.
1885. He recommended it when he was Registrar General? Yes; and I got a memorandum of Mr. Holden noted upon an application of mine, in which he fully concurred in the idea that I should be secretary to the examiners. He said that would more properly designate the position I held with regard to the examiners than that of clerk, which implied that my duties were merely clerical.

TUESDAY, 8 APRIL, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P.,	WILLIAM HENRY ARCHER, Esq.,
THOMAS ROBERTSON, Esq.,	JOHN DAWSON, Esq.

Mr. Jonas Lander, Clerk to the Examiners of Titles, further examined:—

- Mr. J. Lander. 1886. *President.*] You wish to be re-called, I think, to supplement your evidence in some respects? Since the day on which I was last under examination, I have counted the number of cases that are now under requisition, waiting for the solicitors and applicants to reply to and take the next step. I find there are 229 ordinary cases under requisition, and 81 which have passed the Board under another series of requisitions which we call qualifications, making a total of 310 that are now awaiting the next step to be taken by the applicants themselves.
1887. And in respect to those cases you do not consider the examiners are in any way in default? No; certainly not. On the 8th of March last year the numbers were 256 unpassed cases, and 82 which had passed, making a total of 338 waiting for the applicants themselves to make the next move.
1888. How far have you gone back to get at this result? I counted the number of cases in the pigeon-holes awaiting replies. They are all alphabetically arranged.
1889. Are some of those cases very old ones? There are some very old ones—years, perhaps.
1890. Can you say how many years? I think there is one case there, No. 177, an exceptional one; that, of course, was taken in the year 1863. The great majority are recent ones. I also wish to correct a statement which I made on the day when I was last examined, in reference to cases in which I doubted the authority of the Registrar General to control me. He directed me on several occasions not to make searches which the examiners had ordered, and said that if I made them he would deduct the cost of them from my salary. I made them, notwithstanding.
1891. And were they deducted? They were not deducted.
1892. What kind of searches were those? They were searches in transmission cases.
1893. Do you mean searches in the Registry Office for dealings with the property? Yes; they were principally cases of free-selection grants. The directions were to search against the free selector, from the time he selected until his application.
1894. Where did you make those searches? In the General Registry Office of Deeds. The old register.
1895. The old register, not under the Real Property Act? No; then under section 7 of the last amending Act, there was a provision made, perhaps to meet these and similar cases, whereby it was enacted that the examiners shall not go behind the grant, or be concerned to see into anything previous to it (*reference here made to the section.*)
1896. Would you like to say anything else? Yes, about the cases, in which I did not doubt the authority of the Registrar General to control me. In the general conduct of the office I have always submitted to his authority

authority. I will give an instance of it: Very recently I asked for the first leave of absence that I ever asked for during 16 years. I asked him for one week upon a particular important private occasion, and he refused it. That was last week.

Mr. J. Lander.

1897. Do you mean to say he had no right to refuse? No, but I think he might have given it to me in common courtesy, seeing it was the first I had ever asked for. His reason was, that Mr. Jones was absent. I submitted that that might have been a reason why he should have granted it, because there was one examiner less, and therefore that it was a favourable opportunity.

8 April, 1878.

1898. Was not Mr. Muddle also absent? Yes, but his absence does not interfere with the work of my room, that is, with the work of the examining branch.

1899. I do not quite see what this has got to do with the matter under inquiry? It is a case, in which I submit to the Registrar General's authority. It is a very strong case, in which his *animus* towards me is exhibited. I do not dispute his authority in any matter relating to official discipline, but only when he interferes with matters strictly professional.

1900. Have you any other evidence? Yes, as to the arrears in my room. On the 31st of December, 1877, I had only ten cases undisposed of, of which I received five on the 29th. On the 1st of February, 1878, I had thirteen cases. On the 8th of March, 1878, I had six ordinary cases and three transmissions—nine in all. On the 15th of March I had none. On the 30th of April I had ten, having been engaged that month in making returns for the Registrar General. When this Commission commenced its labours I had nine ordinary cases and four transmissions. Then, as to another matter, on which I was examined the last day, I wished to show this Commission the necessity of some professional control being exercised in the executive branch. The examiners direct caveats to be entered by the Registrar General in all cases in which administrators, as such, are registered as proprietors. On the 22nd February, 1878, Mr. Muddle told me that his practice was, when dealings subsequently occurred by these administrators, to treat the caveat as a nullity, in fact, to take no notice of it. Again, when two examiners make conflicting reports (as frequently of late has occurred) the Registrar General, as Chairman of the Board of Commissioners, and the Commissioners, constantly decide between those conflicting reports, and when there is no conflict they often ignore examiners' qualifications.

Robert Mead Pearson, Esq., Principal Draftsman, examined:—

1901. *President.*] You are principal draftsman under the Real Property Act, I think? Yes.

1902. What are your duties as such? They are numerous. To begin with, one of the principal of them, the examination of applications, firstly in taking the Crown grants and examining them with the plan to see that they agree in every particular.

R. M. Pearson, Esq.

8 April, 1879.

1903.] Crown grants; you mean title deeds, do you not? I have to commence with the Crown grant or grants; then taking each deed from the grantee downwards to the applicant, following the land applied for all through each deed. I then examine the application itself to ascertain that it includes only the land embraced in the said deeds, then check surveyor's plan, areas, &c.; and finally examine the search paper, ticking off all the deeds produced. If they refer to the land only I put "deposited" in red ink, opposite them; if they include other land, I write "produced." I have then to go through every item in the search paper to see if in any instance they refer to the land applied for, and if they do, to note them.

1904. Your general duty is to compare all descriptions in the deeds produced? Yes, the examination of the application, the grants, then the descriptions through all the accompanying deeds down to the applicant.

1905. And the descriptions of all dealings of land found on search? Yes.

1906. That having been done, you prepare your report? Yes, and make such remarks as may be necessary upon items in search paper, encroachments by applicant, reference to former cases of same title, and any other information that it may be necessary the examiners should have before them before commencing their examination; in fact the application at this stage is put into shape for them by me—they have no anxieties as to the land itself—and with the exception of an occasional query to me confine themselves to the law.

1907. What do you do with that report? It is sent on with the papers to the examiners by me.

1908. How long does this preliminary work occupy? It depends on the length of the case.

1909. From the time it comes to your hand to the time you send in your report to the examiners? A fortnight or three weeks at the outside. It depends on the number Mr. Lander sends in to me. It is never more than three weeks.

1910. Do you take the cases exactly in rotation? Yes, in the order in which they come in to me. As soon as they reach me, I put a memorandum on the corner of the application of the date when I receive it, and another memo. when I return it. I can then tell how long it is with me.

1911. Simple cases do not occupy three weeks? If Mr. Lander sends me in three or four during the day with one big case, they may accumulate; a heavy intricate case with search paper to match will sometimes take me three or four days (several have taken a whole week). Before I can finally report on it, this may throw others back for three weeks. The usual time they are with me is a fortnight.

1912. A fortnight is about the average time that a case is detained in your office? Yes.

1913. Could that time be shortened in any way? No, it is impossible.

1914. How do the applications come into your hands in the first instance? From Mr. Lander.

1915. Does he bring them to you as soon as they have been received in the office? No, they are two or three months before I get them.

1916. Has Mr. Lander any preliminary work to do with them before passing them on to you? Yes, the preparation of the search paper. I would like to state with respect to this that it would wonderfully lessen the time in dealing with cases if the examiners prepared the search papers. Mr. Lander has not time to do them, and as they are very important, and require special knowledge in their preparation, I think they should be drawn by the examiners. If the applications were sent from the counter to the examiners, for them to prepare the search paper, and then sent on to me, it would save at least two months in every application.

1917. That is to say, if they did their work quietly? If they were to prepare these search papers, which they do not seem to care to do. Mr. Dick did so; and when he went to England Mr. Lander commenced them, and has done them ever since.

1918.

- R. M. Pearson, Esq.
8 April, 1879.
1918. Why has he not time to do them? He has so many interruptions. There are so many people constantly in and out his room all day long.
1919. Who are those people? Solicitors and their clerks, people to see wills, and constantly applicants with reference to their applications.
1920. Why should they come to him so much? Knowing that he is in charge of applications under requisition; if applicants were to go to the examiners, they would send them to Mr. Lander.
1921. Then he has a great many more visits than otherwise on account of the time the examiners delay the issue of the titles or the dealing with them? There are so many cases under requisition, and applicants or their solicitors always go to Mr. Lander, who knows where the cases are, and can perhaps give them the information they are seeking.
1922. What I mean is, that if the cases were dealt with by the examiners quickly, and the requisitions were sent out, there would be no inquiries why the cases were not dealt with? Not these special inquiries.
1923. Are there a great many inquiries of that sort? Yes.
1924. Which would be prevented if the examiners dealt more quickly with their work? No doubt.
1925. So the delay in the examiners' office adds greatly to the work of other people? Yes.
1926. Have you ever occasion to consult with the examiners? Constant reference is made to me by them with regard to applications. When I have reported on them finally, they very often come back to me over and over again, from one or both of the two examiners who may deal with the case, with queries of all sorts on points upon which they think I ought to know best. I have a case here showing how often, and at different times they may come back to me. I have no wish to reflect on the examiners, or to imply that the queries are unnecessary, but to show that the old and new work keeps me fully employed. This case I first reported upon on the 30th January, 1877, and I did not see anything of it again till the 12th of July in the same year. Then there were queries on examiners' minutes for me, which necessitated my going through all the papers again. I lost sight of the case again until the month of February in the next year. With fresh queries again all the papers and deeds have to be examined before these can be replied to. I saw nothing of the application again until the 6th of September of that year (1878), and again have to do as before, to answer fresh queries. On the 9th and 10th of that same month it was again referred to me, finally I hope. So that there is a perpetual reference to me from one or other of the examiners upon questions relating to the application.
1927. What is the cause of those numerous references back to you? Questions asked by the examiners in reference to particular deeds—if they include such and such pieces of land, where the land applied for is part of several grants; queries under wills as to special devises, &c., &c.
1928. Is there any occasion for those things to be referred back to you? I suppose there is, or the examiners would not send them.
1929. Do you see many of the applicants or their solicitors? Yes, when they wish to refer to plans or reply to some of my own requisitions.
1930. Do they find fault with your work in any way? I have not heard of any complaints.
1931. Do they complain of the examiners? Daily; of long delays and long requisitions.
1932. Of any examiners in particular? Yes, Mr. Burton has been the scape-goat, I believe.
1933. And Mr. Jones? Not so much. Occasionally I hear a mild growl, but not as a regular thing.
1934. Any complaints of Mr. Maddock? No, I have heard of none.
1935. Do you consider that the office generally is in good odour with the public? Certainly not.
1936. Why not? Through the long delays and the very numerous requisitions of the examiners.
1937. I suppose you are not able to say whether the requisitions are fair ones to make? No, I am not.
1938. Are you on good terms with all the officers of the establishment? Yes.
1939. From Mr. Ward downwards? Yes, with all of them.
1940. Do you know of any instance where work has been done for applicants for titles, or the public, by officers in the institution? I have heard remarks out of doors, but I do not know of any instance. I should not have an opportunity of knowing, being entirely away from the public room.
1941. But you have heard the complaints? Yes, I have heard out of doors that such is done.
1942. What shape do these complaints take? That some of the officers have been in the habit of taking expedition fees, or whatever kind of fee you may term it, but I do not know whether there is any truth in it.
1943. Do you know of any work done in the office by any of the officers for the public or applicants? No.
1944. But those complaints are that some of the clerks have taken expedition fees? Yes, that is what I have heard out of doors.
1945. Can you say which of the clerks the complaints apply to? No.
1946. Have you ever had any money offered to yourself? No.
1947. By anybody? No.
1948. In the way of expedition fees or otherwise? No, none at all.
1949. Nor ever asked for any? No, certainly not. It would be useless for anyone to offer a fee to me to expedite his case, as I have no control over it when once passed by me to the examiners, and they are not to be influenced by anyone in the office without some very strong reason.
1950. Then you say there is no delay in your office? None whatever; there are no complaints that I have heard of.
1951. You could not get through the work quicker, and nobody complains that you occupy a longer time than need be? No, both applicants and their solicitors are well satisfied.
1952. Have you sufficient assistance in your room? Yes, we have six draftsmen and all are well occupied, and work faithfully and honestly.
1953. And are able to get through the work? Yes.
1954. Are you under the control of the Registrar General, not under the control of the examiners? Under the Registrar General. I have no business dealings with the Registrar General; all are with the examiners; but the Registrar General is our nominal head.
1955. Actual head, I suppose? Our interests are not identical; so far as my work is concerned, we have nothing to do, with each other. I would like again to refer to the searching in hopes of getting it shifted from Mr. Lander to the examiners. It would save two months in every application, and the delay in this respect now simply arises from Mr. Lander being utterly unable to cope with the work he has to do.
1956. *Mr. Terry.*] You think he has too much to do? A great deal too much. It is impossible for him to do it, particularly as to the drawing up these search papers, as all solicitors know this work is most important, and

and in a complicated title, of which we have very many, can only be done in a quiet room and without interruption.

R. M.
Pearson, Esq.
8 April, 1879.

1957. *President.*] But the examiners cannot get through the work at present undertaken by them. Would not putting this searching on them delay matters more than they are already delayed? I think not. There are some of them that would not take very long to do; one examiner a couple of mornings a week could manage them all easily, whereas now Mr. Lander simply cannot do them at all. They come in to me in small dribbles, and they all ought to come in to me within a few days of their receipt.

1958. Is Mr. Lander sufficiently active for the position he occupies here? Yes, I think so.

1959. And capable? Quite capable, if he were not so overwhelmed.

1960. *Mr. Archer.*] What are his chief duties? All day long there are solicitors and applicants and solicitors' clerks coming in to him and seeing how their cases stand.

1961. In reference to the office of titles? Yes, the production of deeds, declarations as to dower, declarations of possession, and sundry other matters connected with requisitions.

1962. That is because the office is in a bad condition, perhaps? As far as he is concerned it is in a very bad condition. He is not able to keep pace with the many duties required of him; and he consequently delays everybody else. Sometimes there are thirty or forty applications waiting for two or three months that never move beyond him, without he draws the search papers at home.

1963. *Mr. Terry.*] He never looks at them? He cannot, without taking them home.

1964. *President.*] Does not Mr. Lander delay a great many papers? I have not heard, but I should not be surprised if he does.

1965. Have you any other suggestion to make as to the improvement of the work in the office? That is the only thing I can think of, and I should like to make a very strong point of that, because many of the complaints arise from this cause alone. If you know that every case is delayed two months by that very thing, it shows there is something very wrong there.

1966. *Mr. Archer.*] With regard to these expedition fees, how came you to hear of their being taken? From casual conversation with solicitors in talking over delays in the office, they mentioned it to me.

1967. Did they say that they knew fees were taken, or that they suspected it? Some of them said as much as that they knew, but chiefly that they suspected it.

1968. Did you ever invite them to make a distinct statement? No.

1969. Do you not think, in justice to the office, that they should either make a distinct charge or drop it? They should, I think, have made the charge to the Registrar General.

1970. Did you refer them to the Registrar General? No, they should know without my telling them.

1971. You paid no attention to it? No, I looked upon the statements as rumours, and that if the solicitors knew, as a fact, that these things were happening, they could stop it by going to the Registrar General.

1972. You say you have six draftsmen in your room;—are they fully employed? Yes, all day long. We have an enormous number of certificates prepared in duplicate, and one of the draftsmen is wholly occupied in drawing up draft certificates. They take many forms, thirty or forty different ones, according to the nature of the transfer, all of which have to be done in the most careful manner, or the certificate would be valueless. These have to be referred to me constantly for reference as to what heading they should have. These different forms have been collected by me and kept as precedents as they have arisen during the last fifteen years, in fact since the Act commenced in January, 1863.

1973. Does this business come to you in a continual stream? Yes.

1974. You are never rushed? No, but all day long we are simply as busy as we can be.

1975. And in drawing diagrams you have no need to employ extra help to do it, or to do it by contract work? No, we never have occasion to do that; if any transfer is very urgent, and I am asked to push it on, I have it picked out and prepared at once.

1976. You give the preference to anyone who pushes you? The public or their solicitors are not unreasonable in this respect; if they give me a good reason for their urgency, such as a transferee or nominee going out of the Colony immediately, I have it ready for them in a few hours; but otherwise they take their turn.

1977. Every case comes under your supervision? Every one. There are very many transmission cases also constantly referred to me by the examiners with queries as to devises under wills.

1978. *President.*] I think there is nothing more, unless you have something further to say? This is a memorandum which I have drawn, and hope I may be permitted to hand in to the Commission. "I would respectfully beg to draw the attention of the gentlemen of the Commission to a grievance to which I have been subject for some years past, and one which, as a matter of justice ought, I think, to be removed. Mr. Arthur, my predecessor, received a salary of £600 per annum. When I was promoted from Assistant to Principal Draftsman by Sir Henry Parkes, thirteen years ago, my salary was to be £500 per annum, with the understanding (and it is on record) that it should be increased to the full amount. To this day I have never succeeded in obtaining it, although the work and responsibility have increased twenty-fold. I have drawn your attention to this matter in hope, if you see fit, you may be pleased to make some favourable comment on it in your report which may have the effect of obtaining for me what I consider I am justly entitled to."

1979. *Mr. Robertson.*] Whereabouts is it on record? In Mr. Jaques' letter (the then Registrar General) to the Colonial Secretary.

1980. *President.*] Are you entitled to practise as a surveyor? I have never sought to obtain a license, although I could have had one eighteen years ago when in the Survey Office, but never having any wish to go into the field, I did not apply for one.

1981. But I suppose you could practice on your own behalf if you chose? Yes, I am thoroughly qualified as a surveyor, and have practised on behalf of the office for the last thirteen years in city and suburbs in checking surveyors' work when doubts had arisen as to the accuracy of their work. I had eight years experience in the Survey Office before my appointment to the Land Titles Office.

1982. What income could you make? £1,000 a year without any difficulty.

1983. How do you come to that conclusion? My junior, Mr. Bishop, left the department three or four years ago to practise as a surveyor in Sydney, and I hear is making £1,200 a year.

1984. Where was he your junior? Here in this office, and he left it because he saw no prospect of an increase to his salary of £350 a year.

1985. And can you make as much as Mr. Bishop? I should think so.

1986. *Mr. Terry.*] Are you aware that complaints have been made against Mr. Bishop? I am. 1987.

- R. M. Pearson, Esq. 8 April, 1879. 1987. *Mr. Archer.*] With regard to the Registrar General's Department, is there any branch besides that of Mr. Lander, where they are under-handed? I do not think so. The only other branch is the public room—there they seem to get assistance in the shape of new clerks whenever they want it.
1988. So that the delays are not consequent, as far as you are able to observe, on a deficiency of officers? No, not in the public room.
1989. *Mr. Terry.*] Have you a sufficient number of officers in your department? Yes, but we have to work very hard; no skulking, or the transfers would overwhelm us. I do not want more than there is work for.
1990. *Mr. Archer.*] What are their office hours? From 9 till 4; if the draftsmen happen to have a spare half-hour, there are new plans to be prepared of Riley Estate blocks, Sydney sections, and other estate plans.
1991. *President.*] Do you remember a case, No. 3,169, being an application by S. J. Pearson for a certificate of title, 29 acres 1 rood 28 perches of land at Concord? I remember the case but not the particulars of it; it is an old case.
1992. In which Mr. Thomas Walker opposed the application, so far as a portion of the land was concerned? I know there was considerable correspondence from Mr. Walker respecting it.
1993. Did that case go through your hands? Yes.
1994. Can you tell us whether there was more land in the certificate than the original grant contained? I do not remember now; if I looked through the papers I could tell you.
1995. Next time you can give us the particulars? Yes.

THURSDAY, 10 APRIL, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P.,
THOMAS ROBERTSON, Esq.,

WILLIAM HENRY ARCHER, Esq.,
JOHN DAWSON, Esq.

Septimus Alfred Stephen, Esq., solicitor, examined:—

- S. A. Stephen, Esq. 10 April, 1879. 1997. *President.*] You are a solicitor in large practice? I am a solicitor, having a large amount of practice, principally in conveyancing.
1998. You have business frequently to do under the Real Property Act? Yes, a good deal.
1999. Will you be good enough to give us your opinion of the repute in which the office stands with solicitors and the public? With the public the office does not stand in good repute, and I think the solicitors as a body are dissatisfied with the way in which work is done.
2000. Can you say the nature of the objections made to it? The immense amount of time consumed in getting titles through the office, and in getting simple matters through also.
2001. Can you state of your own experience whether those objections are well-founded? I believe that there is a good deal of unnecessary delay here. When I say delay, I mean that the titles and other matters take a great deal longer in getting through than they ought to.
2002. Do these matters occupy longer time than they do in a solicitor's office? A great deal longer—speaking from my own experience—than in my office and in other offices. As a rule many matters are carried through in a solicitor's office under a month. I do not think that any cases, unless from some exceptional difficulty, take more than two or three. There are always exceptional cases. If we get a case through in the Land Titles Office in anything like that time we consider ourselves excessively lucky. They take considerably longer.
2003. I suppose you never do get a case through in a month? I do not recollect any case getting through in that time. I think they take a great deal longer than they should. Of course, there may be a great deal more to do than in a solicitor's office, but they certainly take a great deal longer time. In the ordinary course of a title coming into an attorney's office, as you are aware, he has to make his requisitions within seven days—I am talking of ordinary cases—and no matter how large his business, his requisitions have to be done in seven days. During that time he has to investigate the title, examine the parcels, to see that the land to be purchased passes under all the deeds, make his searches, write his requisitions, and send them. If the man be in large practice he may have as many or more cases to dispose of than the examiners here have. Here the practice ought to be considerably easier, because the surveyor takes up the matter in the first instance, and examines the parcels in all the deeds. That is what gives one as much trouble as anything else. Then the search is made before it goes to the examiners, and, therefore, when the title comes before the examiners they practically know that the piece of land, the subject matter of the application, passes through those deeds, or does not pass through those deeds, and therefore a great deal of work which takes up the time in our office is done before it comes to the examiners at all.
2004. Then, the business of the examiners being considerably lightened by the processes which you mentioned, they ought to get through their work more expeditiously than it is got through in a solicitor's office? In my opinion, yes.
2005. But they take much longer? As far as my experience goes, much longer.
2006. Can you say whether there is any reluctance on the part of the public, or of solicitors, to bring titles into this office? I have several cases in which, knowing the delay, I have not made the application. I have a case now in my hands, one which I have told my client it is utterly impossible to get through in the necessary time, and I am preparing two deeds rather than delay the matter, simply because I could not get it through in time.
2007. Have you advised clients not to bring titles here, simply because of the expense and the delay? Yes, I have, knowing of the delay; I have advised one client so. Of course, if there are many attendances of an attorney, his time being his money, he cannot make the attendances without charging for them. If my time is taken up in coming here unnecessarily it entails unnecessary expense on my client.
2008. Do you think the objections taken by the examiners of titles are more precise, or technical, or fine drawn than need be? I do. I think that the examiners of titles should not throw any unnecessary difficulty

S. A.
Stephen, Esq.
10 April, 1879.

difficulty in the way of any title passing where an objection almost itself carries its own answer on the face of it, and where it is of no moment. To instance what I mean, there was one case of mine where a vendor purchased a large quantity of property and did not pay for it. Under the terms of his purchase he was entitled to five years credit. He had drawn, by me, a simple form of contract under which he sold the land. He cut it up into a very large number of parcels, and sold it under a contract for 5 per cent. deposit, the balances to be payable at any time people liked, and he undertook to give a title to the purchaser under the Act on payment of the purchase money. I think he must have sold to upwards of a hundred people. When the time became due for the people to be paying up their balances, he instructed me to put the property under Torrens' Act. I had already put several parts of the same land under the same title under the Act, and I knew what the objections were likely to be. I made my application to put the title under the Act, and I got from every one of these purchasers a letter consenting to the title being put under the Act—the objection taken being that those persons had an interest in it. I pointed out particularly that my contract was that I was to give these men their title under Torrens' Act, and that I was putting it under that Act expressly to give them their title. I think that case hung fire for a number of years, and also that the examiners were taking upon themselves the duty, so to speak, of acting as private solicitor for every one of these people who did not want a solicitor. In other words, the examiners were taking upon themselves to protect these people when they did not want the protection,—they simply wanted the land to be put under the Act, and they wrote and consented to it. The examiners gave so much trouble that three or four times my client said to me, "Take the thing out of the office; I won't have any more of it." It cost him a large sum of money and immense delay.

2009. *Mr. Terry.*] Who were the examiners? Mr. Burton was one. I cannot say who was the other, because Mr. Burton was the gentleman I always saw in the matter.

2010. *President.*] Who were the examiners then in the office? It was there so many years that I am not certain it did not go in before Messrs. Jones and Oliver's appointment; but all the requisitions were Mr. Burton's, and I think finally it was settled by Mr. Burton and Mr. Jones, but I could not say for certain.

2011. I suppose the application in that case disclosed the fact of there being contracts for sale? Of course, because the man had to declare that no one had an interest in the land but himself.

2012. And that disclosure of the contracts enabled the examiners to raise the questions they did? Of course it did. One thing I was met with was that Mr. Burton said we ought to have made a separate application for every one of these purchases. Paling's was the case. Mr. Burton told me he was not at all clear that there ought not to have been a separate application by each one of these purchasers. I must say that I thought the requisitions in that case were fine-drawn to a degree that was quite unnecessary. If the persons themselves consented to the application being granted, why need the examiners, who approved of the applicant's title in other respects, act as if they were the private solicitor to those who had said, "We do not want a solicitor—we are satisfied to leave the matter as it is."

2013. *Mr. Archer.*] They did settle the case at last? At last we got it through; but I am not exaggerating, I think, when I say that that case was over three years, and Mr. Paling must have paid upwards of £100 in that case. I think every solicitor in Sydney knew something about that case.

2014. *President.*] Do you know of any other case of the same character? Well, to be perfectly candid, I have not tried to refresh my memory, to bring up these cases, but I could, if I took the trouble, find other cases in which a lot of unnecessary objections—highly technical objections—have been made.

2015. Then I understand you to say, that on the whole the objections taken by the examiners are too technical and go too far? Yes; I think that many of the objections taken by the examiners are too technical and unnecessary.

2016. That many are taken unnecessarily, and are with reference to matters which the examiners might satisfy themselves upon without taking the objections? I will tell you another instance in which I may state the objections were very unnecessary. A client of mine applied to be registered by transmission. He had sold his property, and I set out that no one was entitled to any interest in this property, except the applicant and the purchaser. The sale was made in Victoria, and I was called upon to produce a copy of the contract. Now, I did produce a copy of the contract, and it showed that the purchaser had paid a third cash, and was to pay the balance in two or three years, and on the payment of the balance of his purchase money he was to get his title, but until then his balance was to be secured by mortgage over the property sold. I went down to Melbourne, and tried to get the contract, but could not get it. I got them, however, to give me a certified copy of it—certified by the auctioneer—and I am not certain that it was not sworn to be a copy, or declared to be a copy. Not having refreshed myself about these matters, I am not certain about that point. Notwithstanding that, the examiners insisted on the production of the original document, and it was with very great difficulty that I obtained it. Here the vendor was doing all he could to get his case through, and could not get it through; and I found it was cheaper to get this original document up from Melbourne that to go and test the matter with the examiners. I also think, I may say, that when deeds are once produced and examined, it is wholly unnecessary to have them called for a second time, unless you want to cancel them. Take the case of a large number of deeds. The property is sold. They take the search up to a certain point, and they find it is sold to twenty people. I may be one of the purchasers, and I apply. They see that the deeds are all produced and examined; the surveyor has traced the land all through, and has got it up to a certain time. If another of those twenty men come in it is not necessary to have all those deeds again produced, having already seen and examined them.

2017. *Mr. Terry.*] Mr. Burton told us he did so only under special circumstances? I have been called upon to produce them in cases when it was certainly unnecessary. In another instance the matter is delayed for the production of deeds in another case; where I have got a certificate of title to other land, exactly the same title, and all the requisitions that can be made in this title have been made and answered, and still I cannot get my case through. It is a case lodged this two years. One certificate has been issued for an adjoining block of land under the same title.

2018. *President.*] Will you be good enough to give us shortly the particulars of the case? Holborrow and Clissold sold an allotment of property out at Enfield; part of it was under the Real Property Act, and part was not. The surveyor so subdivided it that a number of the lots were under both titles, and this necessitated both a transfer and a conveyance of such lots. I therefore advised that it would be desirable to put the property not under the Act under the Act; but the sale coming off soon we knew it would be useless to attempt to carry it through unless we postponed the sale. Since then I have applied for

S. A. Stephen, Esq.
10 April, 1879.

for two clients to put their purchases not under the Act under its provisions, and one case has been stuck up for nearly two years, for the production of deeds in another case on the opposite side of the Liverpool Road.

2019. Was it necessary that those deeds should be produced? Not that I know of; I have not seen the requisitions in the other case—I do not know what they have done with it.

2020. But the purchaser of land already under the Act had originally the same title as the land now applied for? Yes; I mean, of course, up to a certain point. There may have been one or two dealings since that, but only a very few.

2021. *Mr. Terry.*] Nothing to speak of? No.

2022. *President.*] But may not these extra deeds contain the very one required by the Land Titles Office? I think not; I think I myself saw these deeds produced.

2023. Then the requisition to produce deeds applied to the same deeds produced on the original application for title? No, one or two extra, but those have been produced, to the best of my belief.

2024. What I mean is, that the delay occasioned was in requiring production of deeds that had already been produced? Yes, that is my idea of it; but I further think—this is only a surmise—that the reason is this: The other title being a large matter has been gone into very closely, and possibly a lot of requisitions made, and the examiners have said, "Let us wait until we get these requisitions satisfied before we bother about this other case at all."

2025. *Mr. Burton* told us that if a small portion of a large estate came in he would examine that title with as much rigidity as the whole, so that he need not in a second case call for the production of a title? I still entertain the opinion I have expressed. The title I refer to is that of Francis Stephen's estate, and it comprised a large quantity of land; and I am certain that there are in my office a great number of parcels of the same title under Torrens' Act. I looked upon the title as good, and I never investigated it beyond a certain point; we know it up to a certain point. The difficulty in that title is now the descriptions, and that work is all saved to the examiners.

2026. Then the investigation of titles is so strict in this office that every practising solicitor thinks he is right in taking that title? We all do; none of us investigate the Riley Estate title or the Petersham Estate title. Lots of these titles we know up to certain points, and never go beyond them.

2027. But what I mean is that we know this office is so strict that we never care to investigate a title beyond what the office has done? Yes; knowing that the title has been passed in this office I am satisfied.

2028. Do you think that the examiners ought to examine titles in the same manner as a solicitor for an unwilling purchaser under an open contract would examine them? No; I think that an examiner should examine all titles as for a willing purchaser under an open contract. But as in all such open contracts the real contest between the attorneys is as to what documents are to be supplied and produced, and abstracts furnished, the office here should not put the parties to the expense of furnishing all those attested copies which they have in the Registrar General's Department, and it would therefore be merely a question of examining a title to see whether it is a good title or such as a man would pass under an open contract to a willing purchaser. I do not think that any risk should be run, because we are often protected by our clients when we point out a risk, and they say they will run that risk; but I think that a lot of highly technical objections, which it is almost impossible will ever arise, should not be taken in this office. The office should not take an objection on perhaps some little difficulty many years old which there is no human probability ever will be raised. There are many titles that come before an attorney which, if the property were not sold under conditions of sale, he would reject, and those titles the examiners ought not to pass until these matters are cleared up. But there are lots of titles which have got some little flaw in them of a technical nature that we pass, knowing that the point is such as will never in any human probability be likely to arise.

2029. Do you think it would be advisable to give the office power to pass doubtful titles on an increased assurance fee? Yes.

2030. Do you not think it would be very unsafe if we had a doubtful man to decide such questions? He may pass a bad title as a first-class one, so that the same risk would arise there. But I think it would be a great deal better for the public if a mistake or two were made in passing the titles, and for the business to be got through, than for the business to be tied up for an immense length of time, often by these titles being refused.

2031. Of course there would be immense risk with a person incapable of judging these matters passing doubtful titles;—do you think that the men we could get for the office are such that it would be safe to give them the power? I consider the salary given to the examiners is not sufficient remuneration for a first-class man, and I often doubt whether they could get a first-class man for the salary paid. I know a great many men who have not the amount of legal knowledge of any one of the examiners are making more money; and as regards Mr. Burton, I do not suppose there is his equal in New South Wales as a conveyancer. I think his knowledge of real property law is superior to that of any man here. I would rather have his opinion on a title than that of any man I know, whether at the Bar or in our profession.

2032. If you could get him to come to an opinion? That is a different thing altogether. Mr. Burton, I consider, would give an opinion as reliable as that of any one, but he would not be as successful a practitioner as inferior men would be.

2033. *Mr. Terry.*] There must be some reason for that? Simply because he is so slow, very slow, in doing what he has to do.

2034. *President.*] Do not all attorneys in large practice employ managing clerks, who take all the conveyancing business? I have two solicitors who manage various departments of my conveyancing business alone, and I have a third, who had been ten years at it, managing a third branch of the conveyancing, under myself.

2035. Do you trust them to any extent? Yes; to a large extent I trust one.

2036. Almost as much as you would trust yourself? Yes; he comes and asks my decision on any point which occurs to him, and I decide what to do.

2037. Then you are satisfied that if he does not come to you it is safe to pass it? I have been, and I have never known of a case passed wrongly.

2038. And the same rule exists in other offices? To a large extent. There are many matters settled between my office and other offices without ever seeing a principal—entirely managed by the managing clerks in the offices.

2039. Have you any objection to tell us the salaries you pay these gentlemen? I pay my head conveying clerk £500 a year.

2040. Do you think he is as competent as the examiners here? Yes, I do; I consider my managing clerk as good a conveyancer as the examiners here, but not as good a lawyer, of course, as Mr. Burton.

2041. But I think you said that Mr. Burton was almost too good? I look upon him as a man I would like to get an opinion from, but one that I would not like to manage my business.

2042. You think he wastes his energies on unimportant points? I think he wastes his energies upon a lot of things which he has no reason whatever to bother himself the slightest about.

2043. You know Mr. Jones? Yes. Mr. Jones was my managing clerk before he was appointed to this office.

2044. Is he as competent as Mr. Burton? In my opinion he is; of course, nothing like as good a lawyer as Mr. Burton, but I consider him a first-class man, though nervous and timid of responsibility.

2045. In point of fact very much the same temperament as Mr. Burton? Yes, inclined to be the same sort of man Mr. Burton is.

2046. But I suppose more active on account of his youth? More active, and having been accustomed to do more business than Mr. Burton. Mr. Burton, as a practitioner, had a small business from which he never turned out a great deal of work. Mr. Jones used to see a great many deeds in my office, pass a great many titles, and do a great deal of business. He was in the same position as my managing clerk; and he must have done in one year in my office as many titles as Mr. Burton would do in three in his own office.

2047. Then you think Mr. Jones is expeditious and industrious? I always found him so.

2048. And Mr. Burton is industrious also? I have always found Mr. Burton show great willingness to do anything I asked him to do; most obliging, and very courteous in his demeanour to me. I would not say a word against him in any way; but he has very often annoyed me—irritated me—by the extreme minuteness with which he would read through a deed or grant, when all he wanted to look at was to see whom the grant was to. As I often said to him, this is a matter which ought entirely to be done by some one before it comes to him. All that he ought to look at is the habendum or any part of the deed out of the common, and Mr. Lander ought to manage the other.

2049. He examines everything then, as it were, with a powerful microscope? I have heard that expression used many years ago by a gentleman now dead as regards Mr. Burton's investigation of titles,—that he examines everything with a powerful lens.

2050. Then from what you have said now you would advocate the appointment of grades of examiners? I think the titles ought to go up to the examiners, passed, as it were, up to certain points, and that the examiners should simply have to investigate the legal points of the title.

2051. Their clerk, for instance, might attend to these other matters? Yes.

2052. You know Mr. Lander, their clerk? I do.

2053. Do you think he is able to do such things? I should think he was.

2054. Do you know much of Mr. Maddock? I do; I have known Mr. Maddock some time. He got his first appointment in the colony through me. I recommended him to Mr. M'Lachlan, in Orange, and during the time he was in that office he used to conduct the correspondence with my firm. I then knew of his leaving there and going to Mr. Want's, and I have known him since. I have seen him hundreds of times on business matters.

2055. Do you think the appointment of him as an examiner was a good one? I do.

2056. Do you think he is in favour with the public and solicitors? I am certain in favour with the public, and I am equally certain that solicitors think the appointment is a good one.

2057. Does he get through his work expeditiously? Very.

2058. And with courtesy? I have never known him otherwise; I have heard one or two people say that he was short in manner, but, as far as I myself am concerned, I have never had any difficulty with him, or any misunderstanding or want of courtesy. Once or twice he used to write what we thought "cheeky" letters, but I do not think it was intended. He is a very hard-working man. He used to be at his office at 8 o'clock every morning. I have frequently seen him go into his office at 8, and I know it was his practice; and he got through a great deal of work. I know that the clients of Messrs. Want and Johnson had very great confidence in him.

2059. You know that when a title is examined here by the examiners, they report to the Board of Commissioners, and that the Board of Commissioners then deal with the case? Yes.

2060. Do you think that there is any advantage in having that Board? I think the Board of Commissioners, as far as I can tell, has been practically useless. I do not know whether that is the opinion of the public, but it has always been my opinion.

2061. Do you think it would be advisable to abolish the Board of Commissioners and establish some single head in their place, that is, a Commissioner, or Master of Titles? I think the Registrar General alone might constitute the passer of all matters where the examiners had agreed—where two examiners had agreed upon them; but that in the event of the two examiners not agreeing on a question of law or title, there should be some referee to decide that matter.

2062. By a Commissioner or Master of Titles, as in the other colonies? By a Commissioner or Master of Titles.

2063. You think that the Registrar General could perform all the duties that the Board now performs? If he has time to attend at the meetings of the Board, I am certain that he could do the same work done at that Board in less time by himself, because it always takes one man less time to do a thing of this sort than it takes a Board to do it; and, presuming that he has time from his other duties to devote to that work, I think he could do it quite as well as any Board.

2064. Do you think that any one of the present examiners would be fit for the office of Master of Titles, having a general control or superintendence of the examiners under him? I think that if such an officer is to decide between two examiners, as to which course is the right or the wrong one, or as to the validity or necessity of any objection to any title, no one could better fill that office than Mr. Burton. I have the highest opinion of his legal attainments, and I believe that the references would be so few as to enable him to keep the work entirely under command.

2065. Do you think he would be active enough, and keep a proper control over the other examiners—active and energetic enough I may say? As I regard the appointment only to be necessary in the case of the examiners differing on a real point, I think that he would be the best man to decide that point. I do

- S. A. do not think that it would be advisable that every little point should be referred to him—only where the
 Stephen, Esq. examiners differed on a principle or point of law.
- 10 April, 1879. 2066. Do you not think a person having such an appointment ought to have some general control of the examiners, and see that things go on regularly and properly—that the examiners do not neglect their duties—that they are not idle? I do not think Mr. Burton would be a good officer to have the control of the other examiners in that way, because I think he is a great deal too averse to finding fault with others to enable him to fill that place with satisfaction, or to be a good controller of other people.
2067. Do you not think there should be some one having control over them? I think so—to see that the examiners really do their work. But, so far as the present examiners are concerned, I do not think that is very necessary. Still, I think there should be some one at the head of the department, and not simply the Master of Titles.
2068. And free from the Registrar General? Yes.
2069. And he ought to be a professional man, able to deal with those points? And he ought to be able to deal with those points.
2070. In case of an appeal to this head by an applicant from the examiners, should he have power to decide as between the applicant and the examiners, supposing both examiners report against the title, and to have power to endorse their decision? No, I take it that it is only for him to decide between the examiners themselves as to what is to be done. That this officer, so far as the titles are concerned, should have nothing whatever to do with the public. If the two examiners agree on a report, we presume they arrive at a proper conclusion. If they do not agree, the report would be either the report of one examiner and the head official, or of the official alone. I would make him a kind of umpire.
2071. *Mr. Terry.*] And if he agreed with one of the examiners, you would have the title passed? Yes.
2072. *President.*] And you consider that if two examiners pass a title it ought to be safe? Quite safe.
2073. *Mr. Archer.*] Even against the Master of Titles? It would never come to him until two examiners could not agree upon the title.
2074. Supposing an objection were made to him? I want him to have nothing to do with the public at all. Let him be, as it were, a standing counsel, advising on all those points in dispute as they arise between the examiners.
2075. You would have no appeal against the two examiners, whether they accept or reject the title? No; if they reject the title they must show their reasons for so doing; and we presume they would show good reasons.
2076. *President.*] You would not do away with an appeal altogether? Certainly not; but supposing the examiners reject the title, and the applicant tests the matter, the examiners would be sure to fortify their opinion by taking the opinion of the Master of Titles, and if he should disagree with them they would, no doubt, reconsider their decision; and if he agreed with them, the chances are that they would be right.
2077. *Mr. Archer.*] Then he would have something to do with it? He would have nothing to do with the public, and I would keep him away from the public altogether.
2078. Unless he wished to see anyone? Of course, unless he wished to see anyone.
2079. *President.*] Do you think we have sufficient examiners to carry on the work of the country? No, I do not. I think that the amount of work entailed in my office lately—I am speaking from my personal experience—in transmission cases, is positively horrible. In regard to those transmissions, I have given a great deal of attention to the matter for some few years, because I have had, I think, more to do with transmissions than many men, and I have found that the way in which transmission cases have been worked has been perfectly ruinous to an attorney's business by giving so much more trouble, and very ruinous to clients. In one case where I had a hundred and odd grants, the grants were issued to five partners. One of those died, and the property was sold. To carry out such sale it was necessary that the partner's interest should be transmitted. I accordingly lodged, or had to lodge, an application for transmissions, we will say of a hundred grants. If the office had kept to their then practice, they would have issued to me 500 certificates of title, being one for each tenant in common. As a matter of fact, where the lands were contiguous or adjacent, and where they could fix the position of one from the other easily, they consolidated those certificates of title as much as they could. But I could not have compelled them to do it if they had not liked, and the effect of it to an attorney is this: Having a mortgage over all these lands, I had them described by certain grants, number and value, but when it comes back to me to deal with the second time, I have either a bundle of 500 deeds to deal with or a number of deeds of different particulars, and I have to go and trace each parcel out, and that necessitates an immense amount of work, all of which could be avoided if they had put on the back of the original grant: "A having died, his interest has been transmitted to So-and-so." Then all I need have done was to have the deeds signed by B, C, and D, and the representatives of A. I had some correspondence with Mr. A. O. on the subject, and I wrote to Mr. Cox on the matter when the Bill was before the House, in order to have this carried out; but before doing so I made my suggestion to Mr. Ward, pointing out that they did this in insolvencies, and that if they did the same in transmissions it would save their office the trouble of making out the new certificates of title. I went into a calculation at the time to point out how long it would take a clerk to make out the new certificates and copies that would have to be kept, and I pointed out how the stamp on the document would prevent all this. I am told that method is now adopted. Some of those transmission cases are a very great difficulty. I must have passed through, I should think, nearly a thousand grants within the last twelve months from my office, either passed through or in the course of passing through, and the necessity of investigating all those cases is very great. Mr. Burton, in my opinion, loses a great deal of time in all those cases, because he examines every single grant that comes up to him in those matters. All that he ought to do, or that any examiner ought to do, is to consider that this is an application to register those lands which belong to the applicant, either by himself or his tenant in common with So-and-so, and all that Mr. Burton would have to do then would be to examine the will or administration, as the case might be, and see what is to be done; but if he takes the trouble to examine all those deeds, he is wasting time, because I think all that the office really has to be satisfied upon is that the applicant has applied for certain deeds to which the dead person or testator is entitled. That work ought to be, and could be, done by Mr. Lander.
2080. *Mr. Terry.*] But Mr. Lander complains of having too much work in the office, and cannot take any more responsibility? Then you want a second man. If Mr. Lander has too much work already, about which I cannot speak, it will be necessary that some man should be appointed to do this work.
2081. *President.*] Can you point out any objection to the existing Acts which might be remedied? I should not like to go into that.

2082. Can you make any suggestion as to the improvement of the system? The way I think the system should be worked is by the titles being first of all examined by some person in the same way as they are now examined by the surveyor, and then coming up to the examiners, so that when they come to the examiner he has only a certain amount of work to do. I do not think that the examiner has anything whatever to do with the parcels which should be the responsibility of the surveyor. Then the person who puts out the paper for search should be responsible, as far as seeing that there is nothing peculiar in any of the deeds. As a matter of fact, nearly all the deeds drawn up in offices of any standing are almost exactly the same, and a man does not really want to read them. If the deeds come from an acknowledged office in Sydney, prepared by a practitioner every one knows, I should never read all the covenants, except for a certain object; but if the deed were prepared in a form which did not seem to be the usual form I should go through the whole of it.

S. A.
Stephen, Esq.
10 April, 1879.

2083. The suggestion I referred to was as to matters that might be amended by passing a further Act—for instance, objection has been made in cases of transmission that they advertise and go to unnecessary trouble? They do not advertise now. If the Board think fit, they do not advertise at all. I look upon it that such reforms are very great.

2084. Another objection made is that the assurance fee should not be paid on a transmission case? I have always advocated that the charge of the fee on transmissions is most unjust. I pointed this out on one occasion to Mr. Stuart, and I gave him an instance where it cost £50 in fees to put land under the Act, and if the owner died to-morrow, and by will left everything to his wife, and she wished to leave the Colony as soon as she could prove the will, she could sell the property and go, but because the land happened to be under Torrens' Act she would have to transmit, which would necessitate a delay of some time. She could not lodge the application until having proved the will and paid the £50 over again, simply for the examiners of titles reading through the certificate and will of a few lines.

2085. Then you think the assurance fee should not be paid on transmissions? Not in simple cases such as these.

2086. *Mr. Terry.*] What about grants from the Crown? I see no necessity for this charge. Surely there can be no reason for guaranteeing a Crown grant.

2087. *President.*] But does not that fee cover all charges on the future dealings under the Act? Yes, but the Crown charge you a pound for the deed. They get the value of the land, and then they charge you the fee, and on each fresh dealing a fee is payable.

2088. *Mr. Terry.*] And if you get fifty allotments you have to pay £50 for the fee? If a man get the fifty allotments let him pay for the fifty deeds.

2089. *President.*] Do you know of any instances of malpractices by officers in this department? I hardly understand what you mean by malpractices.

2090. Have you ever heard that some of the clerks here prepare documents—applications for certificates, and other documents, which ought to be prepared out of doors? I have often heard that—that parties come here, and that the clerks in the office take cases from them and push them through, while the cases of professional men stand still, and I have been told that the reason that such-and-such a case was got through was that it was done in the office by an officer of the department. I have been told that repeatedly.

2091. Do you think the officers of the department have any control over the examiners in regard to pushing cases forward? No, but they can or may put them on the top of the list, get the searches through, and put them on the top of the bundle. They have the means of smoothing many little difficulties away.

2092. *Mr. Terry.*] Do you not think all cases in this office ought to be put before the examiners within a month after they are lodged? I should think less than a month. I think that the plan of lodging the papers is a very wrong one. I think that the paper, after it goes through the regular routine, should go in to the examiners at once, and not wait for a certain day before it is distributed, and I think also that no clerk ought to be allowed to have anything whatever to do with any application or deed under this Act in the way referred to. I do not say this on the ground of a professional man, but because I consider it is unfair to persons outside.

2093. *President.*] Do you think this is done during office hours? I do not think it could be done otherwise.

2094. Do you think they get any benefit themselves by doing the work? I have been told that they do.

2095. That they are paid for their services? That they are paid for it.

2096. Can you say whether you know of any case where that has happened? Of my own knowledge, no. I have been told by persons that they have paid.

2097. By persons whom you could trust? By persons whom I believe, but I would not bring their names up against any person denying it, and I cannot tell you the name of any person who received the money.

2098. But do you believe there is any foundation for the statement? Yes, I do.

2099. Does this happen frequently? Yes.

2100. Does this system go on now to the best of your belief? Of my own knowledge I cannot speak. To my belief, yes.

2101. Could you give us any instance in which such a thing has happened—could you give us any case? I could mention the names of persons who have told me so, but I decline to do so, with all due respect to the Board.

2102. *Mr. Archer.*] Were they professional people? I have heard from both professional and un-professional.

2103. That they have actually paid? That they have paid.

2104. Expedition fees, or fees for work done by the clerks? Both.

2105. *Mr. Terry.*] Then you think it is wrong for a clerk to do work connected with the office for private people, even out of office hours? I myself offered, on one occasion, a gentleman in this office that if he would get certain work that I wanted pushed through in a great hurry done out of office hours, and have the diagrams put on by some person, I would willingly pay all the fees occasioned by that being done, and I would willingly pay him for his time. The gentleman declined to accept any payment, or to make such an arrangement until he had consulted the Registrar General, and he came back and told me that he could not do it, as it would be opening the office to a very bad practice. On that occasion the offer I made was simply to pay for the engrossing of certain certificates of title, and for putting the diagrams upon them. There was a large number, and I wanted them particularly to be done by the Board day for signature. I think that there is not the slightest harm in any officer working after office hours, with the sanction of the

Registrar

- S. A. Stephen, Esq.
10 April, 1879.
- Registrar General, or with the sanction of the head of the department, in doing work overtime, exactly the same as one pays his own clerks for doing overtime work; but I think the practice of any person taking fees in the office on your lodging matters, or for any clerk in the department to do work connected with the department for private persons in that way is very wrong.
2106. *President.*] The malpractices you alluded to in the first instance are not those you mentioned in your own case? No, the things I have heard of have been of clerks putting applications in, carrying them through, and getting the certificates of title for outside people.
2107. *Mr. Terry.*] How can the clerks get certificates of title? The application is brought up stairs, and the clerk may carry it right through for his friend or acquaintance; and I am told he is paid for that work.
2108. *Mr. Archer.*] He shepherds it? He shepherds it. Another thing that I allude to is, that on cases being lodged the clerk is paid fees by persons outside the office.
2109. *President.*] Cannot you give us some means of getting at evidence on this point? The way in which that evidence could be got at is this: I know that such fees have been paid, and the Commissioners could discover the particulars of those fees by examining the clerks in the various offices, who have charge of lodging such papers.
2110. How could they ascertain it—the fees would not be entered on the papers? But if a man is willing to give his evidence, the information can be obtained.
2111. But there are hundreds of applications, and you cannot go through every one inquiring into each? If you examine your clerk, for instance, you can see if he has ever paid such a fee.
2112. I am quite certain he never has done so? Then ask somebody else's clerk if these fees are paid. Perhaps Mr. Dawson might know something about it.
2113. *Mr. Dawson.*] Nothing of that sort has ever transpired with me, I am quite sure.
2114. *President.*] Perhaps you will tell us if the keeper of your petty cash, or if your accountant, has ever charged you with such fees? I have been charged with such fees, certainly twice.
2115. And possibly more? It might be more without coming under my notice.

WEDNESDAY, 16 APRIL, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P.,
THOMAS ROBERTSON, Esq.,

WILLIAM HENRY ARCHER, Esq.,
JOHN DAWSON, Esq.

John Solomon, Esq., J.P., examined:—

- J. Solomon, Esq., J.P.
16 April, 1879.
2116. *President.*] You have intimated your willingness to be examined by the Commission in respect to the Real Property Office? Yes.
2117. Have you any complaint to lodge against the office or against any officer in it? Well, I certainly have a great many complaints to make with regard to the delays in passing properties. I have had a great deal of experience in this office with the number of properties I have had to pass through it. In fact, I never buy any property unless I have it passed through this office.
2118. Then you think the office is a very good institution if properly worked? No doubt of it; not the slightest doubt of it.
2119. Will you be good enough to state any complaints you have to make against the office? Well, there is one, and Mr. Dawson can vouch for the truth of it: I purchased a property from Mr. Lackey, the present Minister for Works, and I gave £1,660, I think, for it. With that property I had a great deal of trouble, requisition after requisition being made. I satisfied them all as I thought, and then another requisition came to say that one of the heirs or legatees was out of the Colony, and until he could be found and had given his consent, the property could not be transferred. Well, the thing remained, and Messrs. Holdsworth and Brown threatened to commence an action against me in equity to complete the sale. After great delay, and expense of about £30 or £40, I got out of it and withdrew the application. Subsequently the property was sold for £1,900, and it passed through the hands of Mr. Dawson, who considered it a good title and passed it. I lost several hundred pounds by that matter. I cannot get any property through the office without delay. Mr. Dawson has had property for sale by auction. I have told him if he would pass it under the Act I would bid again, and he has said, "It is no use, I could not recommend my clients to do so because it takes so long to pass through the Land Titles Office; we will not consent to it"; and this answer was in consequence of the delay in the office. I have lost thousands of pounds because I will not take property unless it goes through the office. I believe in it. I consider it the greatest boon invented by man for the public good.
2120. Then your complaint is that the examiners rejected a title which a solicitor of standing accepted as a good title? Most decidedly, and Mr. Dawson can vouch for the truth of it.
2121. What we should like to know is whether you have any specific objections against the office, pointing out exactly what they are,—any errors of judgment or other matters which prejudice you or the public? There is one objection, and a very strong one, I have to the conduct or proceedings of the examiners. When you make an application to have land brought under the Act, you are supposed to hand over all papers and documents connected with it. One of the examiners takes your papers, enters them in a book as he does other cases, and this is continued every day, application after application, and your application is not dealt with till all the rest are passed. Thus, instead of examining your papers and sending you a requisition to explain whatever matters they think necessary, they send you perhaps five or six, or a dozen, or twenty, requisitions to answer. After a great deal of trouble, and sometimes of expense, you get statutory declarations and all sorts of things complied with, and think that you are done with them, but not a bit of it; they send you another batch of fresh requisitions upon your answers. It is a very hard case, but I suppose I must do it. I go to work and find out all I can, and return the answers as well as I can. But that is not sufficient. Between the one and the other, the first requisitions that come in are put by among your papers until your turn comes. Then the requisitions are looked into and the examiner makes notes on them, and sends them on to the clerk, and there is another fresh lot of requisitions on your paper, which

which are put by until your turn again comes round. If you send back your answers the day after you receive your requisitions, you have to wait your turn. Perhaps you have to wait a month or two months, until all the applications before yours are gone through.

J. Solomon,
Esq., J.P.

2122. Is it not possible that this second or third batch of requisitions may arise out of your answers to the first? It is not only possible, but it is the case, so that the thing is endless.

16 April, 1879.

2123. Then there is no objection to their sending them? There is; I consider that the examiners should examine into the title, not with the view of finding out flaws to prevent those really entitled from enjoying the land, or from getting a title, but merely to see that no other party had a valid claim to it. I say that they do just the reverse; that their object is to find as many flaws as they possibly can, with a view to prolong the case.

2124. It cannot be with that view, because it is no object of theirs to prolong a case? It appears like it, or why do they not pass the cases instead of sending requisitions after requisitions continually?

2125. Can they not do it because they are very timid? Then lawyers have no right to be timid.

2126. *Mr. Terry.*] Have you had any dealings with Mr. Maddock? No, I have not had the pleasure of having anything to do with him lately. I am full up. I think I shall not buy any more property just now. I will tell you another very curious thing. I purchased some land in York-street. I offered £100 to Messrs. Deane and Deane, solicitors for the vendor, if they would pass it through this office and obtain certificate of title, which they declined to do on account of the delay. The title was perfectly good, but the delay would not suit them. That is the kind of answer I get from every attorney in Sydney. I completed the purchase at an expense to myself of about £35, and made an application to place it under the Act after I got the conveyance. Then I received endless requisitions, the last one being to this effect: "That Mr. Solomon has to prove that Miss Little, who is now dead, was never married."

2127. *President.*] Did you furnish proof? How could I? I kicked up a row, and told them they were fools to send in such a requisition. To both Mr. Burton and Mr. Oliver I said, "I am ashamed of you, you men of ability, to send such a foolish requisition as this for me to answer, when it is an impossibility." Then my requisition stopped for two or three months before it was returned again from them.

2128. *Mr. Archer.*] What was the result? The result was that it was passed at last.

2129. Without the proof? Yes, I could not do it. Of course it was passed.

2130. *President.*] Have you any other complaints in reference to the proceedings of the office? Only general complaints. I have explained to Mr. Burton and Mr. Oliver several times that I thought that when they got into their hands cases about which there was no difficulty, they should class them by themselves, and get through them as soon as possible, and not mix them up with others about which there was a great difficulty, and so take them in their turn. I thought they should make two or three classes, and those of no difficulty be passed at once, and not kept behind until all the rest were passed, as is the general custom.

2131. Can you inform us whether the office is in general good favour with the public? I can scarcely answer that.

2132. I do not mean in reference to the principle,—you said you believed in the principle of the office? The complaints, generally, are of the examiners. I never heard any complaints against the Commissioners.

2133. *Mr. Terry.*] No, because they do not do anything? Oh, yes they do; they pass the case after it passes the examiners, and they can delay it if they choose, but they do not. If it once gets into their hands they soon get rid of it.

2134. *President.*] Have the public confidence in the office, worked as you say it now is? No, certainly not, because there is scarcely an attorney in Sydney, you among the rest, that will allow property to come into this office to be conveyed when it is sold, in consequence of the delay; and I am not sure whether our friend Mr. Robertson has not refused the same thing. I have made the same application there, and generally got the same refusal. They will not bring it under the Act in consequence of the delay—not that they object to the law, but to the constant delay.

2135. Then the office is in great disfavour with the public in consequence of the great delay with the examiners? Exactly, that is the general feeling among the profession and the outside people.

2136. Do these delays cause expense and trouble to applicants? Most decidedly, heavy expense. In the first place the person selling the property cannot get the money unless the land is passed, and consequently he loses the interest on it from the time he sells it until the thing is passed. That is the objection, that they will not wait.

2137. Have you found all the officers courteous and civil? Every one.

2138. From the Registrar General downwards? Yes, too much so.

2139. Have they ever given you any assistance? Yes, every assistance in their power, more particularly Mr. Lander.

2140. Have you had any assistance from other gentlemen besides Mr. Lander? Yes, from Mr. Pearson, from the Registrar General, from the Deputy Registrar General—from everybody. If I come here and ask for anything, they are very obliging, and will do anything for me I ask in reason.

2141. When you bring applications for titles here, with the documents, whom do you see? I fill in the application, give it to the counter-clerk, pay the fees, and away I go. I get a printed form and fill it up.

2142. Does the counter-clerk assist you in any way in passing the titles? Only by taking the papers, and answering any questions.

2143. Has he ever prepared documents for you? No.

2144. Has any one in the office? No, I prepare them myself.

2145. Have you ever paid anything to officers in the institution? Not a shilling, except the proper fees, and I generally get a receipt for them, and will not pay the money without, so that they shall not pocket the money.

2146. Have you heard any statements out of doors that *douceurs*, or expedition fees, are paid to any gentlemen in this office? I have not heard of it.

2147. And you have never paid any yourself? Not a penny. With regard to the delays to persons who sell property, I will tell you a case of mine concerning that property on which is built Alberto-terrace. I purchased that at auction from Richardson and Wrench; it was Stuart Donaldson's property. I wanted Mr. Billyard to bring it through the Land Titles Act. He said, "No, I won't do it." I said, "Why?" He said, "The delay is such that I cannot do it unless I have the money; but I will tell you what I will do with you: If you will pay me the money I will assist you in it." I said, "Will you let me see the

the

Esq., J.P.
16 April, 1879.

the papers?" and he said "Yes." I looked over the papers, and from my little experience I thought the title was quite good. I said to him, "Very well, meet me at the City Bank to-morrow morning, and I will give you a cheque for the amount." He did meet me, and I gave him a cheque for something like £4,000 or £5,000, otherwise he would not have allowed the property to be brought through the Act. I should have had to have got a separate conveyance, and then have brought it through if I thought proper to do so. But that is what I did. Now I will tell you another similar case: I purchased a property on the Darlington Road from the present Speaker, who was agent, or, in fact, was trustee, for Mrs. Plummer. I purchased this property at auction, and I went to him and said, "I want this brought through the Land Titles Act." He said, "I will not do it, because I shall not get the money for twelve months; pay me the money and I will pass it through, and charge you just the fees." I said, "Very well," and gave a cheque for the money, without seeing the title or anything else, and it was passed.

2148. How long did it take to pass? I could not tell without looking at the papers in the case, but it takes generally five or six, or seven or eight, or nine months to pass, and then the case has to be advertised for sixty or thirty days. If you serve the notices yourself it is thirty days, and if they serve the notices it is sixty. I do not see why that should make a difference at all. I do not see the sense of it. In fact there is a general objection about the country to bring land through the Act in consequence of the delays.

2149. *Mr. Terry.*] Would you give more money for property if the land were brought under the Act? I would. I have said to Mr. Dawson and to Mr. Norton: "There is the last bid going; if you will promise to give me the property under the Land Titles Act, I will bid again for it." "I cannot do it" has been the answer.

2150. *Mr. Archer.*] That is the natural result? That is the natural result. Property would perhaps fetch hundreds of pounds more.

2151. *Mr. Terry.*] It might bring five and twenty per cent. more? There is no doubt that if the solicitors had consented to bring the property under the Act it would have brought hundreds of pounds more.

Richard Jones, Esq., Commissioner of Titles, examined:—

R. Jones, Esq.
16 April, 1879.

2152. *President.*] You have been one of the Land Titles Commissioners since the Act first came into force? Yes.

2153. And have, I suppose, attended the Board meetings regularly? Yes.

2154. Can you give us any idea of the cause of the disfavour into which the office has fallen with the public? Delay in getting the cases through.

2155. And what is the cause of that delay? I suppose the want of sufficient examining power.

2156. You think there are not sufficient examiners to deal with the cases brought into the office? I should infer that there was not a sufficient number of examiners.

2157. Has there been any difference since the appointment of Mr. Maddock? Oh yes, there has been a considerable increase in the number of cases which came before the Commissioners since Mr. Maddock's appointment.

2158. His appointment has accelerated the business of the office? Yes.

2159. Can you tell us the nature of the objections to titles made by the examiners? The nature of the objections do not come before the Commissioners usually, unless in regard to qualifications, if they were stated. We have no occasion to examine the requisitions which have been sent, except some point arise in the case itself in the nature of qualifications.

2160. Do not applicants for titles sometimes appeal to the Board against the decision of the examiners? Occasionally, but very rarely.

2161. And in those cases I suppose you see the nature of the objections raised by the examiners? Yes.

2162. Are those objections, in your opinion, such as ought fairly to be raised? As a rule, I think they have been fairly raised.

2163. They are not too particular, or too minute? Not as a rule, I should say.

2164. Are they occasionally? Occasionally I think the objections are a little overstrained.

2165. And in case they are overstrained, do the Commissioners in any way deal with them? Occasionally we put aside qualifications that are attached to the reports of the examiners.

2166. And pass the title without going into the qualifications? We pass the title without insisting on some of the qualifications which are stated on the examiners' reports.

2167. Then, in point of fact, the Commissioners have very little to do with the titles? Not much.

2168. What are their duties? To pass the titles as recommended by the examiners.

2169. Anything more? Yes; they advise the Registrar General with regard to provisional certificates, and with regard to dispensing with the production of original documents in cases where they have been lost, and so on; and also, with regard to the correction of clerical errors which have been made in the issue of certificates or grants.

2170. Could not all those duties be very well performed by the Registrar General himself, without the intervention of the Board of Commissioners? I think they might.

2171. Do you think the Board is of any advantage to the public, or to the institution? I would rather not express an opinion on that point, inasmuch as I hold one of the offices myself. A man cannot be a judge in his own case, and I would not care to express an opinion.

2172. *Mr. Archer.*] You do not care about committing official suicide? I do not care so much about that, but I think the value of the Commissioners may be ascertained from the present Registrar General, and from former Registrars General, Mr. Rolleston and Mr. Jaques.

2173. *President.*] Can you suggest anything in the way of improvement of the system? Well, the general routine of the system does not come before the Commissioners, except with regard to the particular part of the business that comes before them.

2174. I mean in regard to objections or difficulties that come before you, raised by applicants or otherwise. Could you not form an opinion as to whether something might not be improved—as to whether some alterations might not be made? No; no alteration suggests itself to me in the provisions of the Act itself. I think it is desirable to have sufficient examining power to get cases through without delay.

2175. Do you think on the whole that the office works satisfactorily to the public? Except in that respect I think it does. I dare say that applicants occasionally think that the examiners are somewhat rigid in their requisitions and requirements.

2176.

2176. But you cannot tell whether they are right or wrong—you do not deal with the questions? We do not deal with the correspondence that passes between the examiners and the applicants or their solicitors. R. Jones, Esq.
 2177. How many titles do you pass in the week, on the average? I should think the average runs somewhere between six and ten, eight or nine would probably be about the average number of titles passed in a week, but the average has been considerably more during the last six months. It was less during the previous six, or nine, or twelve months. 16 April, 1879,
 2178. Was the average before the appointment of Mr. Maddock as great as it was in the time of Messrs. Holden and Dick? I scarcely think it was. We of course are not aware officially of the number of cases in arrear.
 2179. Mr. Archer.] The commissioners do not attempt to wake the office up if it is slumbering? The commissioners, through the Registrar General, express a desire to get as many cases to deal with as they can.
 2180. President.] Because there is a fee attached to each case? To get through the business of the office.
 2181. Mr. Robertson.] Can you show any cause why the Board of Commissioners should not be dispensed with; that is, assuming that we were thinking of recommending that they should be abolished, can you show us any reasons to the contrary? Looking to the position in which I stand I am indisposed to attempt to show any cause, because I am not desirous of preserving the office I hold. Originally I took it very unwillingly, and I have at all times held myself quite ready to give up the office when it was considered that the public interests required that I should do so.

FRIDAY, 18 APRIL, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P.,
 THOMAS ROBERTSON, Esq.,

WILLIAM HENRY ARCHER, Esq.,
 JOHN DAWSON, Esq.

Alexander Oliver, Esq., Barrister and Parliamentary Draftsman, examined:—

2182. President.] You were at one time examiner of titles in the Real Property Office? Yes, for four years,—I think from July, 1874, to about the same month in 1878. A. Oliver, Esq.
 2183. Who were the other examiners with you at the time you were in the office? Mr. Jones was appointed simultaneously with myself, and Mr. Burton, of course, I found here. Mr. Burton and Mr. Jones were my brother examiners. 18 April, 1879.
 2184. Then you were here, in the first instance, with Mr. Burton? Yes.
 2185. And then with Mr. Burton and Mr. Jones? No; Mr. Burton was the surviving examiner, and on Mr. Holden's death two examiners were appointed, Mr. Jones and myself; so that he and I came into the office at the same time. Before that I had been *locum tenens* examiner for about three months, for Mr. Burton, during an illness he had, and this was with Mr. Holden, the then senior examiner.
 2186. Were there any complaints of delays or of malpractices in the office at the time when you joined it first as *locum tenens* of Mr. Burton? No; I do not remember anything that could come under the class of malpractices, and I do not remember any complaints of delay.
 2187. Or arrears? Yes, there were some arrears by reason of Mr. Burton's ill-health. I think there may have been sixty or seventy cases in arrear then which had been examined by one examiner, partly by Mr. Holden and partly by Mr. Burton. There were many of those cases—I am speaking of the arrears—in which Mr. Burton had expressed some decided opinions, and Mr. Holden and myself agreed that I, as *locum tenens*, should not deal with that class of cases, because it would be hardly fair to Mr. Burton to have his opinions reviewed by one who was only temporarily in the department; therefore the cases I took up were those chiefly which Mr. Burton had not been seized of.
 2188. Did the arrears increase while you were in office temporarily, and up to the time of Mr. Burton's return? No.
 2189. What I mean is, did you leave Mr. Burton a legacy of a further arrear when you went out of office on his return? No, I think not.
 2190. You kept your work pretty well down? Yes, I think so, during that period. I was not in the office more than three months. I think—if my memory is good enough to enable me to say—that I dealt with some forty-four or forty-five cases during that period. I cannot say that they all passed into certificates of title, but I dealt with them in some form or other. Then, of course, during that time cases would be coming in, and those new cases (unless they were first-class cases) I had not time to dispose of, because, of course, my appointment was simply a temporary one, in order, I apprehend, to keep Mr. Burton's work down as much as possible during his illness. He had been ill for some time before. Necessarily the cases had got into arrear, as there was only one effective examiner to examine them.
 2191. How long was it after Mr. Burton's return that you were appointed permanently? I think it must have been not less than five years. I think it was between 1869 and 1870 when I was a temporary examiner. I cannot very well charge my memory with the date, but certainly a considerable time elapsed, not less than four or five years.
 2192. In what state did you find the work on your appointment as permanent examiner;—did you find more or less arrears than when you left the office before? That I could not say. I never compared them. Certainly, from my recollection, if there had been a very much larger amount of arrears I think I should have been struck by the fact, but I do not remember being at all surprised by the quantity of cases in arrear.
 2193. Your impression then is that the office had worked pretty satisfactorily during this interval? I think so.
 2194. Do you know the repute in which the office now stands with the public and the profession? Of course only at second-hand.
 2195. From conversations with persons? Yes.
 2196. You know that the Commission has been issued to inquire into the working of the office? Yes. For the last two or three years I have heard that the office has been the subject of a good deal of reproach, both

A. Oliver, Esq. both branches of it, the investigating branch and the executive branch. I have not heard though that the reproach has, or that the complaints have, been increasing. I have understood that there has been a general sub-stratum of outside dissatisfaction for the last three or four years, and with both branches of the office.

18 April, 1879.

2197. Can you tell what form those complaints take? I have heard that the examiners are not expeditious enough in disposing of applications for certificates; I have also heard that they are often too minute in the investigation of titles.

2198. Too captious? Yes; perhaps that word, or words to the same effect, have been used; in fact I have heard a stronger expression than that—that some of the requirements of the examiners are even frivolous.

2199. Can you say whether there is any good foundation for those complaints; I want your candid opinion on the point? To speak candidly, I must say I have never seen an objection taken by anybody in this office deserving of the name of frivolous. What will appear to an applicant or the solicitor in charge of the application as frivolous might appear to the examiner who takes that objection, or to an impartial critic, anything but frivolous.

2200. Of course allowances have to be made on both sides? I know that in some cases we have been said to be too exacting over small matters. I know that in some cases the office has been found fault with for requiring the registration of various deeds and instruments connected with the title—contracts, for example.

2201. Anything else? Yes, sometimes the office has been found fault with for going too far, as it has been thought, into titles which, perhaps, rest on peculiar foundations—for exhausting, so to speak, a pedigree, or all possibilities of such-and-such a person being alive—in requiring proof of his death, and of his having died unmarried or without leaving issue, or if there have been, exhausting every possibility of that issue representing a latent claim against the title. Sometimes the examiners' dealings with this class of cases have been made the subject of considerable complaint.

2202. Has there not been good foundation for that complaint to a certain extent;—have not those objections gone really too far? If the Government meant the examiners to take a fair holding title—a substantial holding title—I think they have perhaps gone too far. But my answer to that question must depend entirely on the nature of the title intended to be accepted here.

2203. Do you think that while you were in office objections were ever taken by the examiners which ought really in fairness not to have been taken—that is to say, such objections as the examiners really did not care whether they were answered or not? Well, often objections (that is, perhaps, the wrong term for me to use)—perhaps I ought to say sometimes—there has been a requisition inserted into one of the usual requisition letters sent out, designed more for the purpose of eliciting information than for taking an objection to the title. I have known one or two cases where a requisition, seemingly without pertinence, has had a beneficial effect on the title. So it is very difficult to say generally, and without connecting the question with a specific application, whether or not any given requisition is frivolous or unnecessary.

2204. Do you consider that the office should accept such titles as a willing purchaser would accept in buying from an ordinary seller? A willing purchaser, with a competent solicitor behind his back—yes. With a competent solicitor, I think the office might very properly take such a title as that. I wish, though, to guard that remark by what I said before, that the answer to this question must mainly depend upon the nature of the title that we ought to accept. This is what we have never known. We have always been in the dark in this department as to what class of titles we should take. It will be observed that our indemnity or assurance fee is only one half-penny in the pound on everything—for Crown grants, as well as complicated applications—and it always appeared to us to represent a permanent indemnity to the registered title, and that for this reason we should exercise the greatest care in the acceptance of titles. Now, in another Colony—Victoria—the Legislature has given the office every justification for the acceptance of good holding titles, and when such titles as you describe as that which a willing purchaser would accept under an open contract come in, the Commissioner there can increase the assurance fee if there is any infirmity in that title; and he has done it, I believe, on various occasions. There, I think, the Legislature showed clearly that that class of titles which you are describing was intended to be accepted; but here you might almost argue that the Legislature took a different view, because there is but the one assurance fee of a halfpenny in the pound, which is so small and so incommensurate with gradations of risk to the guarantors (if you are to accept doubtful titles) as to lead to the conclusion that the only class of titles to be taken were marketable titles.

2205. Then do you think it advisable to give some power to increase the assurance fee, and accept what otherwise would not be accepted? I think so. I do not think that where it has been given it has ever been injudiciously used—I mean in Victoria.

2206. Do you not think it is a very dangerous power to give? Yes, unless accompanied by proper safeguards. I think there are only certain specific cases where it should be exercised, *e.g.*, where there are certain documents asked to be produced, which cannot be produced, or where, in the case I have just now stated, it is impossible to exhaust a pedigree, or perhaps in such cases as Sydney Bank cases, where we know practically that the shareholders would never assume the position, or endeavour to assert their dormant rights of *cestuique* trusts. Still they are not the class of titles we have been in the habit of taking here.

2207. Which class of title? Those cases which have been derived through dealings by Bank Directors and others standing in quasi-fiduciary positions. I do not allude to Bank of Australia lottery cases. Besides these there are of course a great many other cases which might have some slight infirmity—I do not mean a radical infirmity, because that is a class of cases which the office should not touch.

2208. I suppose you allude to cases where there is defective evidence and presumptive good title? Yes, with long possession following it; and the Registrar General or the officer on whom the power is conferred to increase the assurance fee should be confined within prescribed limits in the exercise of such a power. Of course he would always in a matter of that sort act under the advice of his advisers.

2209. Mr. Holden I know was a great advocate for that increased fee? He was; he has often spoken to me on the subject. He also was equally certain that it might be abused unless it was surrounded by great precautions; in other words it should not be general—it should not be competent for any officer, whoever he might be, to commit the Government to any sort of title.

2210. That is what it is in Melbourne I understand? It is so expressed, but in effect it is not so, being
in

in the hands of a commissioner, who is a careful man. There is another class of cases that might be dealt with according to that view—I mean by increasing the assurance fee. Sometimes we have cases resting on long possession, but not equivalent to a complete bar, with more or less documentary support. Of course we have accepted titles here with but very slight documentary support. I think the Ryan grant title on the North Shore was in the main represented by Mr. Milson's statutory declaration of possession. That title had been accepted long before I came here, and I only mention it as a case where a very large and valuable property was accepted by this office chiefly, if not wholly, on a statutory declaration of long possession.

A. Oliver, Esq.
18 April, 1879.

2211. But you knew the grant had been issued? Of course we knew that. There would be but little danger if all possessory titles were as good as that. Then there are many in which the possession is for less than forty years, is perhaps hardly twenty years, but as to which I think the profession outside would not doubt, with a willing purchaser, to recommend that the title be accepted. Of course outside they have bonds and other forms of indemnity, which the office cannot avail itself of, and it is for these which I think Mr. Carter must have substituted in the Victorian Act the principle of the increased assurance fee.

2212. From what you say, I understand you to think the office is in the position of an unwilling purchaser under an open contract, and therefore entitled or bound to take every possible objection? Well, as you state the question now, that is pretty much the view which I am inclined to take.

2213. Do you think it is the duty of the office to accept such a class of titles as I have described, although they might reject them on some technicality? I cannot, perhaps, go so far as that. It depends on what is meant by a "technicality."

2214. You know that the office is established for the purpose of bettering titles and sweeping away long abstracts and chains of deeds? You mean, better them by simplification.

2215. Yes? Yes, for simplifying titles, doing away with abstracts and so forth, and long chains of deeds, and with expense necessarily thereby entailed; in fact, representing on a piece of parchment the concrete title, so to speak, *i.e.*, the combined results of numerous documents and dispensing with abstracts of title on transfers and other dealings. Then, admitting that, we are still left in the dark too much by the statute as to what class of titles we should put on the register. It gives no light on the subject. We, as examiners, have certainly—at least I may speak for myself—thought the only title we could safely take was the marketable title. If there had been any expansiveness in the assurance premium we should have known that the Legislature meant differently, but the $\frac{1}{2}$ d. in the £ looked like a kind of formal indemnity meant to provide against merely clerical errors.

2216. One guage for all titles? Yes, especially as it is levied on the Crown grants, which I think is absurd. There ought to be no indemnity to the Crown against its own grants.

2217. Of course you know Mr. Burton well, and his mode of treating titles? Yes.

2218. Are you not aware that great complaints have been made of his requisitions, and of delay occasioned by him? Yes, I have heard that such complaints have been made.

2219. Is he too minute in requisitions, or in examining titles—does he take too many small unnecessary objections? To answer that, I ought to speak for the period during which I have been working with him as a colleague. During that time I cannot say that I can remember half-a-dozen requisitions which he has insisted upon, and which I could characterize as being unnecessary. I cannot certainly remember half-a-dozen.

2220. And yet you know that great complaints have been made of him? And yet I have heard that such complaints have been made.

2221. Is he quick? Well, I think he is too methodical and too painstaking to be quick. No man, I think, can be methodical and painstaking over his work and quick at the same time. I think they are inconsistent attributes.

2222. While you were here was he sufficiently industrious? I have always found him at his post.

2223. Then any delay occasioned was occasioned by his laborious minuteness? I think if any delay was occasioned that must have been the cause of it. I have known him spend a good deal of time in hunting up the law on a difficult point arising upon the construction of a will. He never takes chances, but works up his points as thoroughly as he can. He is very much in the habit of going to the fountain head, I mean to the decided cases where the law is doubtful; and though perhaps sometimes an applicant may think he has reason to complain of a little delay in a case, there is this countervailing benefit—that the examiner knows the latest law to apply to similar cases, and can therefore deal expeditiously with them. If one applicant suffers a little, subsequent applicants are the gainers.

2224. Then, on the whole, do you consider Mr. Burton a good examiner? I think he is a most valuable examiner to this office.

2225. Looking at both sides of the question? Yes, because I think the probability would be that his colleagues, simply by their knowing the extreme accuracy with which he investigates a title will be likely to reduce the average by being a little less minute. I think it is a very valuable element in an office of this sort to have an examiner so painstaking, with so lawyer-like a mind and so scrupulous as Mr. Burton.

2226. Do you know anything of Mr. Jones or of Mr. Maddock as examiners? I know Mr. Jones very well.

2227. Do you know anything of them as examiners? Yes, I have been associated with Mr. Jones for four years.

2228. Are there the same objections made to Mr. Jones as are made to Mr. Burton? Well, I have heard pretty much the same objections urged against Mr. Jones as against Mr. Burton.

2229. With equal force? Not perhaps with equal force?

2230. With equal foundation? That I have no right to express an opinion upon, because it would amount to saying that I thought one was a more competent man than the other. I have worked with Mr. Jones with very great harmony, and I think that he is a very competent examiner.

2231. Do you think he is as laborious and particular as Mr. Burton, and that he goes into titles with just as great minuteness? Well, in some cases which have come before me, I have known Mr. Jones take objections which I do not think Mr. Burton would have taken, but yet on further consideration we found that those objections were substantial objections. I have two or three cases in my memory in which, at first sight, Mr. Burton was not inclined to agree with Mr. Jones, but he did agree with him afterwards. At all events, he did not insist upon his original views.

2232. Then, as far as objections to titles are concerned, you think that Mr. Burton and Mr. Jones are very good examiners? I do.

- A. Oliver, Esq. 2233. Do you think, as far as the public are concerned, they are not too strict? Well, that of course is a difficult question to answer. It raises the general question again.
- 18 April, 1879. 2234. You are aware that the office is established for the benefit of the people. If the public are debarred from that benefit by too great minuteness, or by anything at all, that must be objectionable? The difficulty is to draw the line between what is commensurate minuteness and what is excessive minuteness; but I can hardly —
2235. I admit the difficulty—it is always a matter of opinion? It is always a matter of opinion. I would even go so far as to say that a requisition is not necessarily an absurd one which should ask for information whether Mr. So-and-so had a pimple on his nose, because that might lead to the identification of a person intimately concerned in the title. Taking the most apparently absurd requisition that you could frame, it is not necessarily an absurd one.
2236. What is your opinion of the Board of Commissioners, of the advantage of the Board of Commissioners in working the Real Property Acts? I do not know that I have ever observed that they have been in any way useful as a protection either to the public or to the revenue. Their main object appears to be, as far as I can gather from the Act, to fix the number of advertisements in the case of applications, and in what newspapers they should appear. They certainly have discretionary powers vested in them: but I apprehend they do not exercise those discretionary powers unless under the advice of their legal advisers.
2237. Do you not think that all the duties they perform could be just as well performed by the Registrar General himself? I should like to answer that with very considerable qualification, because I consider there are a number of duties given by the Act which neither the Registrar General nor the commissioners ought to perform. For example, the Registrar General, with the advice of the commissioners, may correct an error in a certificate of title. That error may raise a most important question of law. For example, it may be alleged as an error that certain persons had been registered as tenants in common instead of as joint tenants. The applicants come to the Registrar General and give certain evidence to show that they take quite a different capacity. Well, that is not an error which a layman ought, in my opinion, to presume to correct. A man must be a grammatical lawyer—a conveyancer—before he should attempt to correct an error of that kind; therefore, I hardly think that some of the functions of the commissioners, which they either perform of their own responsibility or with the assistance of the Registrar General, ought to be conferred on the Registrar General, unless under the direct advice and supervision of the professional officers of the department.
2238. Do you not think that such matters as you have mentioned might be performed by the examiners themselves? Yes.
2239. That the examiners and the Registrar General between them could perform all the duties that the Board now performs? I think that could be done; that is to say, that the Registrar General, if so advised by the examiners, could do these things where they in any way are concerned with legal questions. Of course there are some other matters in which law is not an element, and in which, perhaps, the Registrar General might be allowed to exercise his power on his own motion without consulting anybody. Amongst the powers given by the Act to the Registrar General and the commissioners, there are a large number “sound” in law, and which, in my opinion, ought not to be performed by others than lawyers.
2240. Then, in point of fact, you think the Board might safely be dispensed with? I think so.
2241. Do you not think it would be an advantage to have some head in place of the Board, some professional man of standing. Cases might be dealt with by the examiners, and if they agree, let the cases pass, and if they do not agree, they would go to this master or commissioner of titles, or whatever you may call him? And that gentleman not to be primarily concerned in the investigation of titles, but only as referee?
2242. What I mean is, that the gentleman might be appointed to decide wherever the examiners differed. If two examiners agreed to pass a title, that title would never come before the commissioner or master; but supposing the examiners differed and he agreed with one of them, I think the title might be passed; so that many titles would never come to him at all, and this gentleman might have the supervision or control of the examiners, who seem to be now under no control whatever? I think if that could be carried out, it would be a very valuable improvement. The only thing I see, or seem to think I see, against it, is this possibility, that the examiners, knowing there would be a referee over them, would be more apt to differ. They would say, “Well, we have got the commissioner (or master) of titles over us; it does not matter, we will cast the responsibility upon him.”
2243. That would simply increase his work? Yes; it would by no means follow from his appointment that he would be simply a referee; he would have to act as umpire in many cases which now the examiners in conference find they are unable to agree upon, but they would feel like arbitrators who have an umpire. They would say, “I will state my case and you state yours”; and, not taking the trouble to agree, would send the papers to the commissioner (or master) of titles, and that might cause a great deal of friction in the department.
2244. But if a proper man were appointed, could he not control that a good deal and keep the examiners in their proper position? If more of the Victorian system were introduced into your idea, it would, I think, tend to greater expedition in the conduct of examinations. There would be a large class of cases which the commissioner or master of titles might hand over to one examiner, such as first-class cases (*i.e.*, where the title shows no registered dealing); I never understood why these should require two examiners to hammer at them—similarly in cases of transmissions under an intestacy; it is simply a waste of energy and time to require two examiners to examine and report upon these.
2245. I suppose it is more theoretical than practical, because the second examiner would barely look at them? No, every examination, as far as I know, has been a careful one; each examination has been just as independent as if the case had not gone before any other examiner. I have always thought it a waste of time to refer those cases to two examiners.
2246. Could transmissions be dealt with by one examiner? Transmissions through intestacy; I doubt as to transmissions through a will. The will should still have two men at it; but there are a large number of first-class cases, and a large number of intestacy transmissions, and transmissions of another class not very numerous, *e.g.*, to the Curator of Intestate Estates, under the ordinary order, to collect; and there are transmissions to official assignees, and on marriage of a female proprietor, besides others. I do not think these should ordinarily require two examiners; in other words, the only transmissions which I think ought, as a rule, to require the double examination, are transmissions by will and by settlement.

2247. Do you not think there is a great deal of unnecessary trouble over these transmissions? Which class do you allude to? A. Oliver, Esq.

2248. Ordinary transmissions as a rule; do you think it necessary to advertise as much as they have done? The Commissioners can dispense with advertisements, if so advised, under the last Act. 18 April, 1879.

2249. Do you think it necessary that the applicant should pay the assurance fee again on transmission? No, I do not. It is not a new title; it is hardly even a new "departure." There is the death of the registered proprietor, and before he got on the register, his title is supposed to have been thoroughly examined.

2250. You think that the half-penny paid in the first instance ought to cover all dealings for all time to come? I think so. Of course, it is necessary to remember that in will and settlement cases it might be said by those who hold the converse view, that those ought also to be subjected to the assurance fee, because there is in them a certain risk—an appreciable risk; but in the vast majority of cases I think there ought to be no assurance fee on transmissions.

2251. The few exceptional cases ought not to make a difference in the way of treating them? No; and if there is any discretion given to the commissioner or master of titles in matters of this kind, or relating to original applications, he would be the man to say: "We will in this case charge an assurance fee, because it comes under that class of titles to which the premium principle is applicable."

2252. Do you know whether the other branches of the office work satisfactorily? I have heard objections—indeed very great discontent frequently expressed with regard to them.

2253. In respect to what particular branch? I have heard that the public do not get their transfers—ordinary transfers, and transfers upon sales by mortgagees—as expeditiously as they should—that they often hang fire for an unnecessarily long time in the department.

2254. While you were here, were they done as expeditiously as need be? The examiners do not see these transfers, except in some special instances when some doubt has been raised as to whether they should be registered.

2255. Is not the delay caused in this office by issuing a new certificate and endorsing a new plan? Well, the Act which permitted an endorsement on the certificate ought to have relieved them of a great deal of trouble with regard to new certificates and engrossments, and so forth.

2256. But in every case where you take a certificate of a portion of a prior certificate, necessarily a plan must be endorsed and new certificate issued, and that must occupy time? I do not see how that could be avoided.

2257. That seems to me to be the main cause of delay in issuing certificates? Also in cases when a man applies for a balance certificate.

2258. Can you suggest any improvements that may be made in the Real Property Acts, in order to make them more beneficial to the public? Well, some of the matters that have been discussed would require to be made the subject of new legislation, that is to say, the placing of the investigating branch under some head, to be called the master or commissioner of titles; the relief of the office from unnecessary examination, that is to say, the proper distribution of applications, so as to dispense with a double examination of first-class applications and ordinary transmissions. And there are other matters. There is the question of empowering some officer to charge a higher scale of assurance fee, and too there are a great many minor matters in the present Act which should be altered.

2259. Is the Act well drawn? No; in my opinion it is not well drawn. It is full of mistakes and ambiguities. An extraordinary one, among many others, is, that under the mortgage provisions the Act speaks of a power of distress "hereinafter conferred." There is no such power conferred. There are two directions in which I think legislation is very much needed. One is in the section of the Act which expresses what is popularly called the extent of the indefeasibility of the certificate. I think that is very imperfectly worded. It gives, or purports to give (I think it is the 40th section), to the registered proprietors, certificate of paramount effect over everything that is not noted on the certificate, except in the case of fraud. Well, then, things that can be noted on a certificate are, I think, very defectively mentioned. There are these words, "subject to such encumbrances, liens, estates, or interests, as may be notified." That is not enough, because there are many things that do not come under any of those expressions which ought to be noted. For example, you find, perhaps, in a certain will a clause declaring that if any of the devisees contest the will in any form or shape, that the devise to that devisee shall be void, and his interest shall go over to others. That does not come under any of those expressions. It is not an estate, a lien, an encumbrance, or interest, but it is a matter which, being once on the certificate of title, must stop there.

2260. It is a claim—a possible claim, perhaps? In whom, because it may be the residuary devisees who would get the benefit of it. It may depend on the testator to say who shall get the benefit of such a clause. That is one class, and there are plenty of others. Suppose you have to do with leasehold certificates, and that you get a leasehold title on the Register, there are matters that must be required to be placed on that leasehold certificate which do not come under any of these four words—"encumbrances," "liens," "estates," or "interests," e.g., the right of re-entry on a breach of condition. And this brings me to the matter of leasehold certificates. I may mention that when Mr. Holden and Mr. Dick prepared their amended Bill, they deliberately left out all about leasehold certificates. The South Australian Act has not a word about leaseholds. It deals with nothing less than estates of freehold. It is true that in Victoria they have them, but I have been informed that in Victoria the public have not made much use of the provision. Here we have not probably so many as ten leasehold certificates on the register. I asked the Deputy Registrar General some time ago to hand me as many leasehold certificates as he could, and he could only refer me to five or six. One reason I think why the Act should not permit of the registration of such certificates, is that you cannot simplify a leasehold certificate, and it is very difficult for such a certificate to express more than this:—"You have got a title provided some one else does not deprive you of it." Then there are a good many other matters which I do not think come under those words in the clause referred to. Indeed there is a large number of qualifications upon absolute ownership which, in certain cases, ought to be on a certificate of title, but which cannot be placed on it under the provisions of the 40th section. In that section, which is a most important one, I think there is great room for improvement, because I apprehend that the intention of the Act must have been to enable the certificate to carry as a notification anything, whether a covenant, a condition, or right, which constitutes a charge on the land, or ought to run with it or affect its enjoyment or occupation.

2261. But you would not like to increase the number of notifications on the certificates? Certainly not; and

A. Oliver, Esq. and that is another reason why I should like to see the leasehold certificates got rid of. I do not think the ordinary freehold certificates are likely to require many more notifications than those usually placed upon them. For example, the examiners would never think of granting a leasehold certificate unless they had examined the freehold title, and in many cases that would not be produced. Then there is another little matter which I think requires considerable reconstruction, and that is, the remedy of a person deprived of an estate by reason of the registration of some other person. I do not think the sections in the Act which deal with this subject provide the remedy in a proper manner. It is very difficult for a man to understand whether he has to bring ejectment or to go against the registered proprietor or against the Registrar General as nominal defendant. I think there should be both simplification and enlargement here. If you give the power to the head of the office to increase in one direction the assurance fee, I think the Government, on the other hand, should take a larger degree of responsibility as guarantors of the title.

2262. Do you think it is fair that when applicants for title appeal from the decision of the examiners, and succeed, they should have to pay the costs on both sides? No; it is the case, but I do not think it is fair. 2263. *Mr. Terry.*] The losing party ought to pay? The Government, as guarantors, ought I think to pay in that case. It is not at all uncommon in land compensation Acts to provide that where the compensation awarded is more than has been tendered to the claimant the costs shall follow the result of the action as in ordinary suits. If the amount is less than that, the claimant demands, then he should not get his costs. If the amount is more than that, the costs should be paid by the other side. Under the Real Property Act it does not matter; unless the Judge certifies that there were no "probable" grounds for refusing the application, the applicant has to pay all costs, whatever the result may be. Well, the Judge, I believe, never has so certified.

2264. *President.*] Nor likely to do? Nor, perhaps, likely to certify. I need hardly point out that there is a very necessary amendment in the Act occasioned by the Real Estates Intestacy Act. In the transmission part, we have still got the "heir-at-law" as a possible transmittee. That is nonsense; he is a possible distributee, but having no estate he cannot make an application under the present law.

2265. *Mr. Terry.*] You are aware that dower has been abolished in South Australia and Victoria? I was not aware that it had been absolutely abolished. I cannot say I know the Victorian system under their Dower Act.

2266. They have abolished it absolutely. Do you think it would be advisable to do the same here in cases of land brought under the Act? Well, I think if you abolish dower you ought to abolish curtesy.

2267. Of course? And the number of dowable people is so small that I do not think it represents anything but, so to speak, an illusory cloud on the certificate. Certainly, I have known a few, but only a few cases where the contingent claim to dower might be anything but illusory.

2268. Still you are aware that in this office they require dower to be in each case negatived or noted on the certificate? Yes, because, of course, the law as it stands requires the preservation of dower rights. But in addition to the dower of women married before 1837, we have the dower of those women whose husbands have not disposed of their land in derogation of dower, and have died or may hereafter die intestate as to such land.

2269. *President.*] They are easily dealt with? Yes; I have not heard that dower has been very much objected to, for the reason I have mentioned, viz., that it is nearly always an interest which it would be a loss of money to try and enforce in equity, and is therefore in the majority of cases almost valueless. £5 or £10 would, in most cases, procure a release by the lady; sometimes even less has sufficed to do so. The difficulty is to find that there is no dower, although there may be only one case in a thousand.

2270. While dower exists, an inquiry is necessary in every case? That is quite true.

2271. *Mr. Terry.*] It puts applicants to a great deal of expense? If you proposed to abolish the right to dower on land brought under the Act, I suppose you would have some provision that the dowress, if alive, should have some notice, so that she might enter a caveat in respect of her dower.

2272. But the general notice—the advertisement—would that not be sufficient? I would abolish dower in cases of dealings with land under the Act, but not in the case of land to be brought under it.

2273. I should like your opinion as to the indefeasibility of titles. Mr. Burton has stated that, under certain circumstances, titles issued in this office are defeasible? In the case of a clean title without a notification upon it?

2274. Yes? Say a certificate in which A B is described as registered proprietor of certain land, absolutely and without any notification upon the certificate. Of course fraud, actual or constructive, in the procurement of that title would be ground for its being defeated in equity.

2275. And in no other case? Well, as far as my memory serves me, I think that a clean certificate of title could be defeasible only on the ground of fraud, or of the land being included in a prior certificate.

2276. Then you would not think it advisable to have an appeal to the Supreme Court to defeat any certificate already issued, except in the case of fraud? I do not quite understand.

2277. You would not allow an appeal to the Supreme Court to defeat a certificate of title issued under the Real Property Act—once issued you would allow it to remain? I think if the responsibility of the Government were enlarged with regard to titles by taking away some restrictions under which they are now placed in the procedure part of the Act, such a court of appeal would not be necessary. My own idea is that the Government, perhaps, hardly take upon themselves their full measure of liability as guarantors. I think cases could be easily imagined which are not reached by those provisions, but in which the Government ought, perhaps, to be responsible. A good many of these might be classified as topographical difficulties, where there is overlapping, encroachments, and matters of that sort. As to those encroachments, I think it is expressed in the Act that the title is defeasible. I do not think the certificate covers encroachments (under the 40th section), but I do not think it would be well to have the title indefinitely impeachable. If you enlarge the responsibility of the Government in respect of certificates, nothing in the way of a court of appeal would be needed.

2278. In fact, impeachment of the title, after the certificate has once been issued, would defeat the object of the Real Property Act? Of course the 40th section does not contemplate complete indefeasibility of the title, because at the very commencement, the words express that the certificate is actually subject to fraud. Equitable fraud covers a very large range, and the certificate is declared by the Act to be defeasible in respect of fraud, if it can be proved in the applicant or any person desiring title through the applicant with notice of the fraud. In other words, the certificate is not absolutely indefeasible; it is only *sub modo* indefeasible. And you are taking the case of a clean certificate, which is perhaps not the rule.

2279. Have you not seen very many clean titles in this office? I think not more than fifty per cent. of A. Oliver, Esq. the certificates are "clean."

2280. *President.*] Of course you are aware that in the case of conflicting certificates one of them must be defeasible? Yes; that is so stated in the Act. 18 April, 1879.

2281. *Mr. Terry.*] What I wanted to get at is that there should not be an appeal to the Supreme Court to upset a certificate, unless obtained in this office by fraud? You said that Mr. Burton stated he had doubts about the indefeasibility of the title?

2282. Yes. You would not advise an appeal to the Supreme Court in any case but fraud to defeat a certificate, that certificate having once been issued from this office? In addition to what I have already said on this point, I think the Act should have been framed so as to bind the Crown, and thus to get rid of a variety of difficult questions. We did not originally ask for the ordinary receipts for quit rents because the Act was not supposed to bind the Crown; I do not think the Crown is ever likely to proceed for quit rents against the holders of certificates of title without causing a great deal of disturbance. We know that outside the office receipts for quit rents are common requisitions.

2283. Do you not think it would be beneficial if the examiners could by advertisement deal with and close unnecessary roads, that is, roads left in sub-divisions of estates and then brought under the Act—where there is a willingness that the roads should be closed? If the original plan discloses any proprietary or sub-divisional roads, they remain on the certificate.

2284. They are noted on the certificate? Yes; or at all events indicated on the plan, and that has often prevented a proprietor from subdividing, because the transfer upon sub-division would be rendered in many cases nugatory; roads would be traversing them in every direction. But then again there is this difficulty: You can never tell whether the right to the road has been surrendered, or whether it is an actually existing easement, the extinguishment of which might be an injury to somebody. If you could get the consent of all the parties concerned in the maintenance of the road to its extinguishment, I think no harm would be done, where there has been no user or what amounts to an abandonment of the right of user.

2285. *President.*] But supposing the right of user has been barred by actual occupation for twenty years, then you might deal with them; you have done so in the Riley estate? Yes; that was an instance, no doubt.

2286. *Mr. Terry.*] You have done it in the Petersham estate too? Yes. The point is a very difficult one. I do not think the examiners as such should have the power of obliterating rights-of-way. I think they might advise some other authority, and that there ought to be advertisements just as in closing roads under the Land Act. I think that people ought to be able to come in and make objections.

2287. But in case these roads were advertised, and no one objected within three months, do you not think it would be advisable to clear them off the certificate? Yes, and you would have the justification afforded by the Land Act, because after the lodging of the advertisement, and no objection taken, you can under that Act purchase the site of the road. I do not see why such a system should not be followed in this office with proper safeguards.

2288. *Mr. Dawson.*] Where, apart from fraud, a certificate is issued evidently in error, either in law or in fact, and the Registrar General is called upon to show cause why it should not be cancelled, and he declines, ought not the person so calling upon the Registrar General to have an immediate right to go to the court, and not stand or fall by the views of the commissioner or the Registrar General? We must suppose that in that case the Registrar General would be advised by the examiners. You contemplate a case on the part of the claimant which raises some point not connected with fraud, not connected with any encroachment or overlapping, or the prior issue of some other certificate affecting the same land, but which raises the question of error in the original grant of the certificate.

2289. Either in law or in fact? Well, I presume that a mandamus can issue to the Registrar General of course, if he refuses to correct the error.

2290. If he declined, should there not be the remedy of an appeal to the court? I cannot understand why a matter of the kind should not be remediable by mandamus if it were clearly shown that the certificate was issued in error. That would be capable of being shown to the court.

2291. In a case of the kind to which I refer, the court, by majority, considered they had no power? In simple error, I think that the court would have the power; whether they would exercise it or not is a different matter.

2292. The court held that they had no power to compel the Registrar General to depart from his veto? That, of course, is that the court was of opinion that the Act refused. It was merely discretionary on the part of the Registrar General. I should not have taken the same view of the meaning of "error," at all events for the purpose of granting a mandamus. And as to appeals to the Supreme Court, I should not be inclined to curtail the right of any person who alleges that he has suffered a wrong by the action of the office, to appeal against that action.

2293. *President.*] So long as the certificate remained in the hands of the original grantee? —

2294. *Mr. Robertson.*] A very great deal of trouble is thrown upon applicants by the examiners requiring the production of original deeds, copies of which are on the register. It was stated by Mr. Burton that the object of calling for those original deeds was to ensure, in the first place, that they had been correctly registered, and, in the next place, that they had no pencil or other memoranda on the margin which would awake a suggestion as to a doubt about the title. Well, even supposing that on the production of an original deed, there is a pencil memorandum, why should that be held to affect the title? Nine-tenths of the requisitions that are at present made would be done away with if it were held that the examiners were not to be troubled with any titles that were unregistered. The calling for these original documents, and also requiring equitable mortgages and releases, contracts, and receipts, to be registered, assumes that it is necessary to perfect everything upon the register, and, at the same time, the examiners assume that an unregistered instrument might defeat a title. You see there is an inconsistency in the two courses. What is the object of placing all these things on the register if, when they are there, they are not to override unregistered documents? Do you not think, if it were enacted that after a certificate of title is once issued, it shall not be affected by any unregistered instrument whatever, a great many requisitions might be got rid of? Undoubtedly, I think it would be a very excellent amendment of the Act; but I apprehend that many of these original documents, for the production of which the examiners have been in the habit of calling, are a very great safeguard to the title. Because, it is not an uncommon thing for some of the originals—registered originals—to carry upon them most important endorsements. I have myself seen an original with a transfer upon it which made a clean sweep of the title, so far as that transfer

A. Oliver, Esq. transfer went. Now, if that transfer were itself unregistered, the registration of a subsequent conveyance for value would protect the applicant's title in many cases. I think the practice has grown up, because a great many of the old deeds were registered by memorial. The particulars were then very imperfectly described in the memorials, and you are probably also aware that some of those originals have been endorsed in the way I mentioned.

18 April, 1879.

2295. I am speaking now of deeds which have been registered *in extenso*. It has often happened to me that my client has been called upon to produce an original deed, which was obviously not under his control, he claiming only a very small portion of the property affected by a marriage settlement; he has been called upon to produce this original deed to prove a negative—that his title was not affected by it. In searching myself, acting for a client, I have to be content if I find nothing on the register which affects the title of the vendor. There are certain deeds which his predecessor may have covenanted to produce that I can call upon him to produce, but others I cannot. So, perforce, I must be content with the registered copy, and if it disclose no flaw or incumbrance, I advise my client to take the title. Then, of course having got his title, my client registers it. This shuts out any of those memoranda of which you speak. So we get back to the point I started from—that the whole of this difficulty may be got rid of by some enactment that these unregistered memos. shall not affect registered titles or certificates? That would certainly get rid of the main reason for asking for their production.

2296. You remember the case *ex parte* Pollard, in which there was a difficulty under a will, and the examiners thought that the construction of the will was adverse to the claimant of the title, but they took another point—that by the will the direction was given to the executrix to pay the debts of the testator, and they called for evidence that those debts had been paid, although there was no evidence of the existence of any debts. There was an appeal to the Supreme Court, and the Court decided that the examiners were wrong in calling for this proof of the payment of debts. You remember the case—are you aware that that decision has had no effect on the examiners—that they are still making the same requisition under similar circumstances? No; I was not aware of that. I was concerned in that case, and I may mention that we were rather surprised at the decision of the Court.

2297. But it was unanimous—Sir James Martin, Mr. Justice Hargrave, and Sir William Manning? Yes. The Court appears to have held that there was no charge of debts, and that if the property got into the hands of third parties the charge of debts, even if there had been one originally, would have been immaterial. The Court, by this judgment, appears to have ignored the cases of *Sabin v. Heepe*, *Wrigley v. Sykes*, and many other cases in equity.

2298. They had a Colonial Act, and under that Act the creditors had a remedy, and could not, after slumbering on their rights for twenty years, come forward and claim the property. They had a remedy, and if they did not take the remedy, they could not claim to have this property kept untransferred to a devisee or those claiming under him, that it might be available to satisfy debts which they might at some future time prove they had against the estate. I think the decision was a very sound one? It is at all events the decision of the Supreme Court.

2299. *Mr. Archer.*] Reverting to appeals to the Supreme Court in relation to the Registrar General's action—am I to understand you to say that you would be inclined to let any and every case of certificate of title be opened up, or would you jealously guard the right of appeal? No; I have no such idea as letting any and every case be opened up. I surely did not express myself in such a way as to admit of such an interpretation to my meaning.

2300. Perhaps not; but I wish to be quite clear, as I thought from the style of question put by Mr. Dawson that he was anxious to go behind the Registrar General's dictum at any time when a question of law or fact was in contest? I think that the law as it stands seems ample. If that question of law or fact can be brought within the term "error"—the express words in the section are "shall be shown to be a certificate granted in error"—if the meaning of "error" here is something distinct from "title," then, in my opinion, the remedy in the Act is sufficient. But I think that when once the title has been examined, the examination in all respects should be final. During the examination and before the issue of the certificate there is plenty of time for anybody to apply to the court, and by the new system introduced by the last Act (not yet, however, taken advantage of) I think there are enough modes of challenging a title before it is placed upon the register. When once placed on the register, I think the word "error" ought to have a very confined meaning; I do not think it ought to be "error" in granting the title. I admit, however, that express error in the description of the land or the name of the party to be registered, or the estate to be granted, may properly be the subject of inquiry by the court, even after the grant of the certificate.

2301. The 126th section provides for error in description? I think the title itself ought not to be impeached after the granting of the certificate unless on the ground of fraud. The question Mr. Dawson put to me stated the error as "error in law or error in fact," but he did not state whether that was an error going to the title itself, or arising somewhere outside the title.

2302. *Mr. Dawson.*] Error possibly in a want of knowledge of law on the part of the examiners? Of course that would, in point of fact, come to the same thing as error in title, because they would be granting a certificate of title, I presume, to some one who was not entitled.

2303. No doubt? Then in the case you mean there must have been a certificate in the possession of one person, and there must have been what you claimed to be a title in another.

2304. Undoubtedly. What I mean, in fact is this—ought any claimant to be compelled to stand or fall by the issue of a certificate by the examiners without having an appeal to the Supreme Court if he is convinced to a dead certainty that the examiners are wrong? Why did not the claimant go on the assurance fund?

2305. Well, he may yet do so, but I may not like to have the cost of it? My apprehension of the fundamental principle of the Act is that the Legislature meant that the certificate of title should be final, but that if a man had a better title, his right should be converted into a claim upon the fund, with the exception of that class of cases where a mortgagee can eject a mortgagor, an encumbrancee an incumbrancer, and so forth.

2306. *Mr. Archer.*] In fact you apprehend that if a question of error could be made the excuse for bringing in an appeal, any or nearly all of the certificates might be, as you say, ripped up? They might be all impeached in some form or other, I suppose.

2307. And it would defeat the object of the Act? If it were the object of the Act to give a finality to the title, and to give any adverse claimant a claim merely on the assurance fund—as I apprehend it was,—I think I stated in the earlier part of my examination that the remedy against the assurance fund, in my opinion, was hardly as largely expressed as it might have been; and I think the matter Mr. Dawson speaks

speaks of could be dealt with satisfactorily if the assurance fund were made more accessible to claimants. This larger liability would, according to my view, be a sort of counterpoise to the increased assurance premiums which I advocate in certain cases.

A. Oliver, Esq.
18 April, 1879.

2308. *President.*] Do I understand you to say that in no case where a certificate is issued, there should be a right of appeal by any person interested in the land? The object of which would be to get the land?

2309. Yes. Suppose for instance a man owns land and another person, we will say even without fraud, obtains a certificate to it, do you not think that the real owner should have a right to apply to the court to upset the certificate so long as it remains in the hands of the person who has obtained it; I admit that if he transfers it to a stranger, the right ought to cease, but so long as it remains in the hands of the original certificatee there ought to be an appeal to the court by the real owner of the land? Of course the assumption at the root of the existing system is, that the time during which a caveat may be lodged, coupled with the provisions of the Act relating to notice, are a sufficient protection to any person other than the applicant claiming the title. That is the ground upon which the Act has gone.

2310. But supposing the real owner is in a lunatic asylum, or absent from the Colony, and never sees any advertisement, why should he not have the two remedies—first, to come in and oppose the application by caveat, and if that happens to be lost—no matter how—why not have the right to go to the Court? Would you give him the double remedy—to approach the court on caveat, and to impeach the certificate also?

2311. Possibly I should not, but if he showed that he could not avail himself of the caveat remedy, why should he not go to the court to have the certificate cancelled, provided it remained in the hands of the original person to whom it has been issued? It is hard to understand that with competent examiners there would be such a case, unless it should arise out of fraud. I cannot understand the examiners passing a title where the rightful owner is somebody other than the applicant, unless there has been a mass of forgery, or a large tincture of fraud, in the matter, either of which would now render the certificate challengeable.

2312. *Mr. Archer.*] At all events you think the risk so small that the assurance fund might bear it? But a case has been put to me where the man wants the land and not the money.

2313. Of course you are supposing a case where there has been inefficient original investigation of title? —

2314. *President.*] Or bribery of examiners? Then I give the matter up. If the Government do not ensure an effective examination in the first instance, I think there ought to be a right to impugn the certificate of title.

2315. You know you cannot be sure of always having proper officers? —

2316. *Mr. Terry.*] But if you had an efficient head he would soon let the Government know whether the officers were proper or not? We have been singularly lucky in that regard. Neither ourselves nor our predecessors have made any slips of this kind, at least none have come to light.

2317. *President.*] I am only alluding to possibilities? If the Government machinery is not effective machinery, there is no doubt it would be a wrong thing to compel a man rightfully entitled to land to accept a sum of money in lieu of land, but I am, of course always assuming, as it is generally assumed, that when you have a certain object in view, the Government take care to have commensurate machinery to effect that object. If there is any danger or probability of weak or corrupt examination of titles, the sooner the office is abolished, the better.

2318. You are perhaps not aware that there are actual charges against officers of the department now of receiving money to facilitate the passing of titles? That question comes upon me here with something like a shock. I never have heard of any charge of that sort in connection with the examiners.

2319. I do not say it is a charge, but it is a matter of talk outside. It does not apply to the examiners, but go a step further and we may see it applied to the examiners—to future examiners possibly, and in that case the injury might be endless? No doubt it is impossible for us to say now more than that, for some fifteen years we have had an extraordinary freedom from litigation. We do not know what may be latent. There is certainly a great deal in the suggestion—that whilst the certificate of title remains in the hands of the original proprietor of the land—

2320. *President.*] The grantee of the certificate? Whilst it remains in his hand, without equities attaching to it in favour of other persons, the Court, under certain stated circumstances, should possess some measure of control over the certificate, such, for example, as the power to make a vesting order in favour of a person having a better equity.

2321. That would not bind the land but only the person? But the office would have to carry that out; that is specifically provided for in the Victorian Act. I wish to be understood, of course, that these remarks have only been made in the very doubtful contingency of such a thing as infirm administration of the Act ever happening. I mention that because, as a rule, the examiners have not been charged with that particular offence; I mean of “slumming” their work.

2322. *Mr. Terry.*] During the time you have acted as examiner of titles, have you ever come into collision with the Registrar General? I do not know that I have come into “collision” with him.

2323. Has he not made charges against the examiners to the Crown? I believe that he has made such charges to the Colonial Secretary. And I think he has sometimes indulged in minutes which I should not describe as courteous to them. The Registrar General has the reputation of being a zealous officer, and has never been quite content with the pace at which the examiners do their work; and he has often expressed that discontent in his minutes. Sometimes we have asked him for an increase of our clerical staff when we have felt quite unable to cope with the work of the office. We have frequently had to conduct our correspondence, and have on various occasions drawn his attention to the fact, but he has not shown any disposition to help us. And in a good many other respects, perhaps, he has not shown that degree of consideration for the officers connected with the investigating branch which we thought they had a right to expect. Perhaps it was because we have always taken a determined stand in our position as his coadjutors and advisers in working the Act. We have always considered ourselves in the position of standing counsel to the office.

2324. Does he not consider himself as your superior—as your head? I cannot say that he has ever asserted such a relation to the examiners. They would certainly have resented such an assumption.

2325. *Mr. Archer.*] By refusing that clerical aid, did he retard you in your action? We have had various sources of weakness to contend with; the want of effective clerical assistance has been one of the chief drawbacks.

2326. What I mean is, did his refusal to afford you the aid you sought, increase the very slowness he deprecated? I think so, undoubtedly.

2327.

- A. Oliver, Esq. 2327. So that he was, in a measure, the cause of the delay? The fact is we wanted to have an experienced clerk—some one introduced from a solicitor's office—to conduct the correspondence. We have always been obliged to put up with a novice, or be compelled to write our own letters, correct them, and do a quantity of clerical work connected with this branch of the office which we ought to be relieved from by having a competent man to do it. We work with a very much smaller staff—both as to examiners, draftsmen, and other officers—than they do in Victoria.
- 18 April, 1879. 2328. There is very much less work to do? Our results are proportionate.
2329. *Mr. Terry.*] We have more work to do in this Colony? The titles are very different.
2330. Would you recommend an increase of the examining power in this office? Most undoubtedly. I do not hesitate to say that this office will never be in proper working order unless and until we have got something like the staff they have long had in Victoria. We ought to turn out 450 instead of 250 titles a year.
2331. How many examiners would you recommend? I think we want three assistant examiners. I think the present examiners, each associated with an assistant examiner, would be able to do an immense deal of work. First of all, one man cannot direct all the searches and make the preliminary perusal of the deeds for the purpose of drawing the search papers. That now falls on Mr. Lander, and if we have a large increase of business here, it would be impossible for Mr. Lander to keep up with it. I know that he has often been obliged to take deeds home in order to prepare the search papers. The assistant examiners would be the officers to do that. They would, of course, have been trained in a solicitor's office.
2332. *Mr. Archer.*] They would be like a managing clerk? To a certain extent like a conveyancing clerk in the examiners' office, and in course of time they would be educated and qualified to do the work of examiners. There would then be no difficulty in finding an examiner, as there was lately, when that office became vacant, because we should educate our own examiners in the office.
2333. And if they were to run in couples in the examination of titles, do you think the results would be reliable? I do not think they ought always to "run in couples"; there are a large number of applications that can be dealt with on the "one-horse" system.
2334. They do that in Victoria? They do that in Victoria. Then if that were done, a great deal of the work done now in the draftsman's office could be properly verified by the examiners or their assistants. The draftsman, or one of his assistants, now prepares the description that goes in the certificates. I think that the old course ought to be revived. The old system, many years ago, was that the examiners—Mr. Dick and Mr. Holden—prepared the draft certificates of title. It is too important a matter, in my opinion, to leave to the draftsman without the supervision of the examiners, but he has to do it now because the examiners have not the time.
2335. *President.*] But there are no descriptions in certificates, as a rule? The certificate of title requires descriptions very often—*e.g.*, on applications for portions of Crown grants, &c.
2336. As a rule they do not insert descriptions? As a rule they do not if the land can be identified by reference to a plan.
2337. And, surely, the draftsman is the right person to prepare a description when many solicitors' clerks have not an idea on the subject? They have not, and they have often to employ a surveyor in consequence.
2338. And therefore the draftsman is the proper person? But I think one examiner or an assistant examiner should be available for verification.
2339. *Mr. Archer.*] Have you any idea, taking the titles all round, complicated and simple, how many an examiner might be expected to get through in a year, during the 300 working days? It is so difficult to say; I have had one case alone where the title has taken me three months to peruse.
2340. But you would not have them in the average—excluding those singular cases? Taking the average run of cases, I think if an examiner got through the perusal of two sets of deeds—*i.e.*, the deeds connected with two applications—in a day, he would do very well; I mean commencing from the application, going through the deeds and search paper, and then having the registration copies brought up to inspect. I think he will find himself tolerably brain-tired when he has completed the examination of two applications.
2341. That would be 600 a year from each examiner? A great deal of the work, indeed almost all, undergoes a second and independent examination.
2342. Would you say one a day would be a fair thing? If they had a sufficient staff they could turn out of this office 400 a year, if there were that number of applications—I mean the office as a whole.
2343. With how many examiners? With three examiners and three assistants; and with the draftsman's department correspondingly increased, I think the office could turn out 400 a year, if not more.
2344. Are you aware that in the neighbouring Colony the average number turned out by each examiner is from 220 to 230, and that even that is thought slow work? Then that must be multiplied by six, if there are six examiners, which makes 1,200—do they turn out 1,200?
2345. I think last year it was from 1,000 to 1,200? Well, we could never have disposed of that quantity, because there never has been so large a number of applications as 400 in any year which I can remember.
2346. But *pro rata*, if you had these examiners they would do the same—600 or 700 a year? I think we could not do that in this Colony. Most of our titles—seventy per cent. of them—are embedded in wills (sometimes in two or three wills), and often entangled by settlements and assignments for benefit of creditors. You have not got in Victoria, I apprehend, such entanglement of titles as we have, because, of course, that is a much younger colony.
2347. And you think that the old cases are so numerous and complicated that no fair comparison can be made between Victoria and New South Wales? I think not. The old work in Victoria has been done much better than it was done here, and we have got infirmities in titles from that reason. I have been told that in Victoria the applications are lodged in a better and more complete way, and that the titles presented do not contain so many pitfalls as here.
2348. There are difficult cases that require the greatest acumen and judgment, but it is probable that the number has not been so great as with you.
2349. *Mr. Terry.*] You know Mr. Lander? Yes.
2350. Is he an efficient officer? I may certainly say yes. He is a little slow, perhaps, but he is very trustworthy.
2351. *Mr. Archer.*] But he is an officer of the Supreme Court, and has to work at wills? Yes; and it is very important to the examiners that he should work at wills, and that they should be as accessible as they are now. If we had to send a requisition to the Custodian of Wills in the Supreme Court before

we could get ecclesiastical papers there would be another element of friction in the office.

2352. But if he is doing that work, he is not doing your work? That would be part of his work as clerk to the examiners, if we wanted a will or administration papers.

2353. But is it not said that he has too much to do in relation to wills? That may well be, in relation to the public. People are constantly coming into his office, and wanting to examine wills.

2354. He is not wholly your officer? No, he is an officer of the Supreme Court.

2355. And ought not that to be changed? I think the wills should remain as they are, but that Mr. Lander ought to be relieved of any duties, except those connected with the Land Titles Office.

2356. *Mr. Terry.*] You are aware that he complains that he cannot get through the duties of his office in consequence of the immense amount of work thrown upon him? Yes; I know, as a matter of fact, that he takes work home occasionally—that he often has in his office five or six solicitor's clerks and others, who are enquiring about certificates, requisitions, and often about wills. Of course a man cannot peruse title deeds so as to frame a search paper, with a dozen people about him.

2357. Then cases remain with him for months before the examiners see the application? If so, I suppose the reason is as I have mentioned.

2358. *Mr. Archer.*] Do you mean that he takes title deeds and wills, and other documents, to his private house? I do not think he would take wills, but I suppose he would do, as I have done—take the lodged title deeds. I have done so frequently. I know the risk, but I accepted that risk. Solicitors do the same. Of course if you lock up the deeds in this office, and say they should not go away, it might be a precaution against possible loss, but it would certainly be also a source of delay.

2359. But should an officer in his position take them away from the office? He is a solicitor, and knows the risk.

2360. He is not recognized as a solicitor by the Government? He is a solicitor of the Supreme Court, and I think he is very trustworthy and careful. I do not think he has ever lost anything.

A. Oliver, Esq.

18 April, 1879.

TUESDAY, 22 APRIL, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P.,
THOMAS ROBERTSON, Esq.,

WILLIAM HENRY ARCHER, Esq.,
JOHN DAWSON, Esq.

Mr. John Nobbs examined:—

2361. *President.*] I understand, Mr. Nobbs, that you are conveyancing clerk in the office of Messrs. Mr. J. Nobbs, M'Carthy, Robertson, and Fisher? Yes.

2362. In your capacity as such clerk, have you had much to do with the Land Titles Office? Yes, ever since the commencement. 22 April, 1879.

2363. Do you lodge applications for certificates of title? Yes.

2364. And for transmissions? And for transmissions.

2365. Have you been in the habit of paying the fees on those applications? Yes.

2366. And you know what the legal fees are? Yes.

2367. Have you ever, in any instance, paid anyone in the office more than the fees actually legally demandable? Well, accidentally. They have called my attention once or twice, or reminded me that I have paid too much.

2368. I do not mean such payments as that; I mean payments to clerks for facilitating the passing of work through the office? On one occasion we were instructed by a Melbourne firm in a matter in which a sum of £50,000 was locked up. It was a very large matter. There was a mortgage in it, in which the consideration was £50,000. The money was placed by the mortgagee in the bank, and at that time the mortgagor had to pay the interest from the date of paying it into the bank. He was not to receive the benefit of it until we reported the matter registered. As each day would cause the mortgagor the loss of a large amount of interest, he requested us to see if we could manage to get the thing pushed through as smartly as possible. I explained this at the counter to one of the clerks, and he told me that it could not be done, that it would have to take its natural course, and that if smaller matters came forward they would have to cause our matter to stand over.

2369. This, I understand, was a case where the land was already under the Act? Yes. Well, after seeing Mr. W. Muddle, the clerk, several times, he told me that it might be done by the juniors if they stopped late, and I told him that we were willing to pay them something for their trouble in staying overtime. They did do so, and I paid them. I asked Mr. William Muddle—I gave him the cheque, and asked him to distribute it as ratable as possible amongst his juniors.

2370. How much was the amount of that cheque? Five guineas.

2371. And was the case then put through? Yes, it went through more smartly. I was there one or two evenings with them when they were going through, examining. I stopped after 4 o'clock.

2372. Then this was a payment to clerks for work done in the office? Yes, overtime. It was at the suggestion of our Melbourne principals that we did so.

2373. Was the case then pushed forward out of its regular turn? I cannot say that it was so pushed forward.

2374. How soon did you get it completed? I suppose in about a week or so; it was a very large case—hundreds of grants and receipts—and caused a great deal of bother.

2375. Have you ever, on any other occasion, paid to the clerks fees not authorized in the office? I think in another case I paid a small fee for something the same. I think that was a Melbourne matter too. I think the amount was a couple of guineas. Those are the only sums I remember paying.

2376. Have you never paid fees of this kind except on those occasions? Not that I can remember.

2377. Have the counter-clerks ever suggested that fees should be paid to them? Never; not on any occasion.

2378. Except on those that you name? They never suggested it at all. I suggested it—that the work could be done by overtime, and that we were willing to pay for their overtime.

2379. Do you know that it is reported out of doors that such fees are constantly paid in the office? No; I do not know that.

- Mr. J. Nobbs. 2380. You have never heard such a report? Not that they are constantly paid.
2381. Have you heard reports that other people have paid fees of the same character? I have heard of one report, and that was in reference to Messrs. Stephen and Stephen's clerk. He had a very large matter to be dealt with, and I suggested to him, as it was a very large matter, that I remembered on one occasion paying for such as overtime, and that perhaps they would do it for him in the same way. He told me afterwards he had paid in that way. That is the only case I remember.
2382. Do you find the clerks at the counter always civil and obliging? Yes, but I find there is not sufficient assistance there. I think they ought to have another clerk. There is a great deal of time wasted by solicitors and clerks waiting there for their turn to come on.
2383. You think there ought to be another clerk? I think they are over-worked, and that they should attend to the counter solely. I believe that their work inside the office takes up a great deal of their time.
2384. *Mr Archer.*] There was one phrase you used—that those were the only two cases that you remember? Yes.
2385. Is it possible that you could have ever paid in any instance and not remember? No, it is not possible.
2386. And you are quite certain that you never paid anything to anyone as an expedition fee, but simply for clerical overtime? For overtime, that is all.
2387. Did you ask the sanction of the Registrar General for the use of his officers? No, not that I remember.
2388. Well, if you had done so, you would have remembered it? Yes, I asked Muddle, who was the chief counter-clerk, to see about it and divide it amongst the juniors.
2389. How long do you suppose they were engaged in working overtime? About a week.
2390. How many of them? I really could not say.
2391. One—two—three? Only one; I remember going there with one of them.
2392. You think that he would have the whole brunt of it? No, he would not; the work was divided somehow in the back office; it goes through one person's hands and another person's hands.
2393. Then you handed it to Muddle to distribute? Yes. The matter had been in the office some time before I thought about it, and they told me that it was a very large matter, and that if they dealt with it in the office before smaller matters, people would complain that their cases were not dealt with before this large one, and at the suggestion of the Melbourne firm I made the offer I did.
2394. And you paid the five guineas to Muddle, but do not know how or to whom it was distributed? No. I remember asking one of them afterwards whether he got a share of this money, and he said yes.
2395. *President.*] The gentleman you allude to as the one to whom the cheque was given is Mr. William Muddle, the counter-clerk? Yes.
2396. *Mr Archer.*] In both those instances you acted for Melbourne principals? Yes.
2397. Have you never found the Sydney firms anxious to push their business with equal earnestness? They all try to do it.
2398. But not in that fashion? Not in that fashion.
2399. You are not aware of any Sydney solicitor but Mr. Stephen having acted so? No; no instance but that came under my notice, and that only recently. I took it for granted that they did act in large matters like that.
2400. Then the whole of your experience is confined to three cases, two of your own and one of Mr. Stephen's? That is all.
2401. I trust you see the importance of the question, and how necessary it is that this matter should be probed to the bottom? Yes.
2402. And how incumbent it is upon any one who really knows of anything wrong in the office to take this opportunity of exposing it? Certainly, I quite understand.
2403. And you are not in any shape or way keeping back anything in your own knowledge, or of what you have heard, that would in any way inculpate the department? No.

Thomas Salter, Esq., solicitor, examined:—

- T. Salter, Esq. 2404. *President.*] You are a solicitor in large practice in Sydney? I am a solicitor in practice in Sydney.
2405. Have you had much experience in connection with the working of the Real Property Acts? Yes.
2406. Do you know of any difficulties in connection with them that have influenced the bringing in of business to the office, or the withdrawing of business from the office? Yes, I know there has always been a difficulty in bringing property under the Act, except in the most ordinary cases.
2407. You mean that persons have refrained from bringing cases in in consequence of the working of the Act? I am aware that they have, in consequence of the difficulties in connection with the working of the office.
2408. What form do those difficulties take? The form of objections which are considered unnecessarily taken by examiners to titles.
2409. Do the examiners take more objections to titles than they need fairly take? In many cases, in my opinion, they do.
2410. They are too particular? I do not know that they are too particular, but they take objections—technical objections—which a solicitor acting for a purchaser in an ordinary purchase, if taken, would immediately waive. They would be taken as a matter of form.
2411. And the examiners take such objections and do not waive them? Frequently.
2412. Then the difficulty of passing titles here is greatly increased by the particularity of the examiners in examining titles? To a great extent by the technicality of the examiners.
2413. And they examine them more severely than practising solicitors? Well, they take more technical objections than practising solicitors would take. I do not think that they examine them more severely, but they take objections that are more purely technical than would be taken by the solicitor of a purchaser in an ordinary case.
2414. And objections that you do not consider necessary in judging whether the title may be safely accepted? Objections that I certainly should waive in acting for a purchaser, investigating the title in the ordinary way.
2415. And you think that the Government would be quite safe if such objections were abandoned—that the assurance fund would not suffer? I do—that it would not be likely to suffer.

2416. To which of the examiners do the difficulties which arise apply? That I cannot say.

2417. You speak of them as a body? As a body, and I may say—I think I ought in fairness to say—that, in my own experience, the objections have not been taken in the same way recently—within the last few months—as heretofore. During the last few months, I myself passed several applications under the Act that I had refrained from bringing in some time previously.

T. Salter, Esq.
22 April, 1879.

2418. Then there has been within the last few months a marked improvement in the investigation of titles? That is my experience.

2419. Have there been, as far as you are aware, any unnecessary delays in the office? Yes; I consider that the delays have been most unnecessary—that there have been extraordinary delays in the office.

2420. Not sufficiently accounted for by the neglect of solicitors in attending to the requisitions that the office has made? In a great many cases not accounted for in that way. I have had cases in which the delay has arisen on my own part, and I do not blame the office for delay in such cases.

2421. Has it been your practice to recommend clients to place their properties under the Act? Not of late years.

2422. Do you not think it is an advantage to them to have the properties under the Act? Yes, if the property is got under in a reasonable time.

2423. Then why have you refrained from advising them to place the properties under the Act? Because of the difficulties—the unnecessary difficulties in the way of bringing the property under the Act.

2424. Do those difficulties involve delay and expense? They do involve very great delay and very considerable expense.

2425. Have you heard of any cases where expedition fees, or *douceurs*, or bribes have been paid to any gentleman in the office? No, not to my knowledge.

2426. You do not know of any? I do not know of any such case.

2427. You have heard rumours of such things? I have heard rumours of such things in many cases.

2428. But you do not know whether those rumours are well-founded? I have no means of judging.

2429. Have you ever paid clerks expedition fees? No.

2430. Or for working over time? No.

2431. Can you suggest anything in the system which is capable of improvement—main points merely? The Act is very imperfect, and there are many things capable of improvement, and requiring revising altogether.

2432. Do you think any improvement can be made in cases of transmission? Yes; the present mode of transmission is an expensive and complicated one.

2433. You are aware that the assurance fee is paid on transmissions the same as on an original application? I was not aware—at least I had forgotten it was so.

2434. Do you think it ought to be paid? No, I do not think so; I do not see why the assurance fee should be paid on transmissions.

2435. What questions have given you the most trouble in dealing with titles applied to be placed under the Act? I do not quite understand.

2436. The production of deeds, dower, or any other thing? The production of deeds is always a troublesome question where the deeds are not easily procurable—where they are not in the applicant's possession nor procurable by him. I have several applications myself, waiting at the present time, and cannot get on with them because there are old deeds which are not procurable. We cannot find out where they are.

2437. Do you think the examiners have been too particular in requiring production of those deeds not in the applicant's possession? Well, I have known cases in which I considered they were too particular, that is, in which there was evidence which I should have deemed satisfactory—not direct evidence of the loss of the deeds, but evidence that the deeds could not be procured and which I considered satisfactory, inasmuch as the search register did not disclose anything affecting the title.

2438. Do you think they ought to be more particular than solicitors—bearing in mind that the solicitors have to consider that their work has to be examined afterwards by some other solicitor; the work of the examiners is done forthwith and there is no further examination;—do you think they could dispense with some of their strictness in the production of deeds? I do not think the examiners can be too particular in investigating titles; at the same time I consider that if I were an examiner of titles I should look upon myself very much in the light of a solicitor acting for a willing purchaser, not bound by any conditions,—that is, not bound by any auctioneer's contract,—but under what we call an open contract of sale, unfettered by conditions as to title.

2439. Do the examiners then take up the position of acting for an unwilling purchaser? It has frequently seemed so to me. I am now speaking of what occurred some time ago rather than latterly.

2440. Do they give people the idea that they wish to reject the titles rather than pass them? People apparently have that idea.

2441. That is non-professional people? Yes. I daresay I have given people that idea myself, because in some cases it has appeared to me that the examiners considered it their duty to take what objections could be taken to a title and to abide by the objections.

2442. Mr. Archer.] Do you think that dower should be abolished? Not yet—not abolished altogether; it is becoming a very important question.

2443. As a matter of practice in the department, have you found the question of dower a troublesome one to you? I have not, because, as a rule, in ordinary cases, the ordinary evidence has satisfied the examiners of titles as far as any question of dower in which I have been interested is concerned.

2444. You have not seen any strong necessity for an amendment in the law in regard to dower in any way? It has not occurred to me so. There is an Act here which reduces the question of dower on unimproved properties to a minimum.

2445. President.] But you know the fact that the existence of a few dower cases of women married before 1837, makes the examiners inquire for dower in every case of persons dealing with property, whether married before 1837 or not? Yes.

2446. Does that not give a great deal of trouble? I dare say it does, but it is a matter easily satisfied, and it has not occurred to me as a matter in which much trouble has arisen actually; because, at the worst, the dower is marked as an encumbrance on the certificate of title—although this is objectionable, no doubt, if it can be avoided.

2447. But it is marked in such a way that no one can tell the value of it? Yes; no one can tell the value of it, and you have to satisfy a purchaser from the holder of the certificate of title that no dower is actually attaching.

2448.

T. Salter, Esq. 2448. And you know purchasers have a great horror of dower. What I mean is, that purchasers place undue value on dower, and refrain from buying property where it attaches? They do attach an undue importance to it in many cases.

22 April, 1879.

2449. And there are so few cases of dower which are worth anything, that it seems hardly worth while to make those inquiries now in every case? It does seem so. Of course, in general practice, there are many cases in dealing with unimproved land in which it does not seem worth while to make inquiry as to dower.

2450. Of course you are aware that most practising solicitors can name nearly all the cases of dower of any importance before 1837? Yes, perhaps so, inasmuch as there have been dealings with most properties since 1837; but still there are cases in which dower is still an important question.

2451. *Mr. Dawson.*] I think I understood you to say that at one time you advised clients who wished to bring their titles under this Act, not to do so, owing to the delays? Yes, if waiting for a time made no difference to them. We were always living in hopes that those delays would be done away with, and that it would become an easier matter to get a property passed under the Act.

2452. You say that within the last few months greater facilities have been given? At the time the last examiner was appointed I brought in several applications that had been in my hands for some little time previously, and which I had not been disposed to bring in before, in the hope that there would be some improvement in the mode of investigating titles that would enable the business to be done more satisfactorily and with greater expedition.

2453. *President.*] And what was the result of those applications? I can remember that I brought in at that time five or six. I remember five distinctly; three of those have been passed.

2454. *Mr. Dawson.*] Do you now hesitate to advise clients to bring land under the Act? No; I do not think that I should hesitate where a client is wishful to bring property under the Act. Of course I have scarcely had time to see whether there is any marked improvement in the working of the office.

2455. You believe there are not the like difficulties now in passing a title? I found in these applications that they were passed with greater alacrity than had been the case for some time previously. I know that two of those applications are waiting for some evidence that I have to furnish.

2456. Do you know from your personal experience if there is a want of what is called counter accommodation? From what I hear in my own office, I think there is, decidedly.

2457. That they want additional assistance? I do not know what assistance they have in the office, as I am not acquainted with the details of the office; but they want additional assistance, either in numbers or ability, which I cannot say.

2458. Complaints are made by your clerks of the delays? Not so much latterly, but a few months back and for a long time previous to that, very serious complaints were made, and I have had occasion to complain myself to the office about the delays. Probably the rumours respecting the Commission to inquire into the working of the office had something to do with the increased activity in the work.

2459. *Mr. Terry.*] Do you think it would be advisable to abolish the Board of Commissioners appointed under the Act? I have always thought so. So long as there are competent examiners. I have never seen any great utility of the commissioners myself.

2460. *President.*] But I suppose you admit that there ought to be someone to look after and control the examiners—a professional man? Well, I think there ought to be a senior examiner who has had a much larger experience than the examiners of titles at the present time. That is my own impression. Someone in the position of a senior examiner, to whom every point of difficulty should be referred—a sort of arbitrator.

2461. *Mr. Archer.*] A man of larger experience than exists among the present examiners? Yes; of larger practical experience.

2462. Do you think it possible to obtain an examiner of larger experience and sounder law than Mr. Burton? It is scarcely fair to put the question in respect to Mr. Burton.

2463. Do I understand you to say, sweepingly, it would be well to have an examiner of larger experience than any existing examiner? Of larger practical experience, because I believe Mr. Burton has a more than ordinarily good knowledge of law theoretically, but what has been well termed his objective faculty has always stood in the way of bringing this knowledge to a practical bearing.

2464. Then you mean to say he does not measure difficulties, but puts simple difficulties and large difficulties in the same category? The opinion I should form of Mr. Burton is, that he is a man of technical mind, and scarcely able to get over the technical difficulties he himself raises. That, I understand, has always been the difficulty with Mr. Burton.

2465. *Mr. Terry.*] In consequence of those difficulties you allude to, Mr. Burton is not a man who would succeed in private practice? I think it likely he would not.

2466. *Mr. Archer.*] You think if there were an examiner appointed of this practical skill and experience of which you speak, that the business would be got through with much greater facility and with equal safety, so far as the assurance fund is concerned? Yes, I do; we have had some experience of that. At the time when the Act first came into operation, and when Mr. Dick and Mr. Holden were examiners of titles, business was done with very much more expedition and with a great deal less trouble than it has been done ever since that time; and, so far as I know, there has never been any case in which the compensation fund has been called upon. Mr. Dick was a very practical man, and Mr. Holden was, as far as my knowledge of him goes, a practical man also, and a very safe and very careful man.

FRIDAY, 25 APRIL, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

WILLIAM HENRY ARCHER, Esq.,

THOMAS ROBERTSON, Esq.,

JOHN DAWSON, Esq.

George Pile, Esq., examined:—

G. Pile, Esq. 2467. *President.*] You have had a great deal to do with the Real Property Office, in bringing property under the Act, and in dealings? I have.

25 April, 1879.

2468. Have you found the office to work satisfactorily? No. I wish to give evidence principally of the actual monetary losses which have to be suffered through the inconveniences and unsatisfactory working of the office.

2469.

2469. We shall be glad to have your evidence in respect to the working of the system; will you be good enough to inform us of the causes of complaint you have against the office? The delays in commencing to investigate, and in proceeding with the investigation of titles; and I consider the complaints of these delays as very strong against the office, because the Government, by establishing this department, have entered into the business of conveyancing in such a manner as to give them a monopoly, which of course gives the public stronger claims for its satisfactory working. G. Pile, Esq.
25 April, 1879.

2470. Do you consider there is unnecessary delay in the office? Most assuredly.

2471. What does that delay arise from? Not from the law itself, but the inefficient administration of the law and the bad organization of the department.

2472. Can you point out any particular branch to which those objections apply? They apply to the whole, even to the want of a sufficient number of attendants at the counter, which keeps people—professional gentlemen and others—waiting sometimes an hour or an hour and a half before they can be attended to. The objections apply also to the time before an application is transmitted to Mr. Lander's department; to the very great delay before it reaches Mr. Pearson—a delay sometimes extending, to my own knowledge, over two months from the time it is received in the office; and I suppose to the insufficient number or insufficient working capacity of those gentlemen appointed to assist the Registrar General—I mean the examiners.

2473. You have often received objections raised by the examiners to titles that are attempted to be placed under the Act? Sometimes very absurd objections, even in a simple first-class application, and if you will permit me, I will give you an instance.

2474. Yes? I purchased from a person named James Yates, the grantee, a piece of land at St. Leonards, and he applied, at my request, to place it under the Act. I received a requisition stating that a certain James Yates had a judgment against him in the District Court, and I was asked to prove that it was not the James Yates. I did so. I then received another requisition stating that a certain James Yates had a judgment and execution taken out against him, and I was requested to prove that he was not the same man. I did so in the ordinary way, by declaration. I was then in the receipt of a third requisition stating that a Supreme Court judgment was registered against James Yates, and I was again asked to prove that he was not the person. All those could have come to me in one requisition.

2475. But you received them at three different times? Yes; after negating the first. I received the second, and after negating the second, I received the third.

2476. Did it cause you much trouble and expense to cure those difficulties? It did, certainly; the expense would be £3 or £4, and a delay of possibly a month was caused in the receipt of the title.

2477. But you ultimately obtained the certificate? Oh, yes.

2478. Can you give us other instances of the same character? I am prepared to give the instance of a case—of an application—which is now under investigation, and which I should like to send for, with your permission. Its number is 4,410, and it is an application by F. A. A. Wilson of land at Botany.

2479. A first-class title? No. I wish to produce this case as an instance of what I think is a very absurd requisition. I wish also to give in the form of evidence that in making applications we pay an assurance fee. The essence of the assurance is that it is to cover a risk, but the requisitions that we receive and have to prove when bringing properties under the Act, quite ignore the fact that there is a risk supposed to be run by the office, and a payment in the form of assurance charged.

2480. What you mean is that if the office receives a fee for assurance it ought to take some risk? Of course an assurance fee pre-supposes risk.

2481. And you think the objections so minute that there can be no possible risk? Exactly; and there has not been the slightest claim on the assurance fund from the commencement. I wish also to call your attention to the spirit in which this Act was introduced, and in which it was understood by the public. It was understood to be more for simplifying the titles. In the evidence taken before a committee of the Legislature, and given by Mr. Torrens, the spirit in which applications were to be received, was described as one in which all mere legal technicalities were to be put on one side—legal technicalities which a solicitor acting for a purchasing client would be supposed to take into consideration. But in the administration of this office, technical points, which no solicitor in common practice would ever think of taking notice of, are brought prominently forward, and the production of deeds forty, or fifty, or sixty years old required, necessitating the production of original deeds, notwithstanding the provisions of our Registration Act, which makes any registered deed take priority over all unregistered instruments.

2482. Then you consider the objections taken by the examiners are such as practising solicitors would not take for purchasers? Certainly.

2483. You consider the examiners too strict? I think that they make, not in the sense of strictness but unwarrantable and vexatious requisitions, which in no way tend to clear up the case. They ask for deeds, the production of which, in point of fact, will not assist them in their investigations. (*Case, number 4,410, produced.*)

2484. What do you refer to in the case number 4,410? This application is in the name of F. A. A. Wilson, number 4,410; it was a case for personal service, and was dated the 21st March, 1877.

2485. What do you mean by a case for personal service? Special notices. This case, after being a fair average time—I think not more than three or four months—was passed by Mr. Jones. There was a requisition for certain documents, which were lodged by Messrs. Allen, Bowden, and Allen; the application applies to a large portion of Phelp's grant at Botany, and after the case was investigated by Mr. Jones, I believe it was transmitted to Mr. Burton, who to my personal knowledge kept it in his safe, without having looked at it, for a period of from six to nine months. Then, after a great deal of bother, I got a requisition to produce the deeds taken away by Allen, Bowden, and Allen. I produced these deeds, and the Rev. Stanley Mitchell, the proprietor, going to England, applied for the deeds, which were never looked at. He took the deeds away, and I got another requisition to produce those deeds a third time. I wrote to the office about it, and informed them that they must accept or reject the title on the evidence they had got, and that I would throw upon them the onus of rejecting the title. Mr. Burton has fallen in with my views, and dispensed with the production of the originals the third time.

2486. You consider that the Deputy Registrar General's requisition (*produced*) No. 3, requiring you to show the Rev. Stanley Mitchell's title to the sums of £4,000 and £10,000 should never have been made? Certainly not, and that no solicitor's office in Sydney would ever have made such a requisition.

2487. You consider that the Deputy Registrar General has no right to inquire whether the money belonged to the Rev. Stanley Mitchell or anybody else? No; he has no right to go behind the deeds lodged in the case. 2488.

- G. File, Esq. 2488. Has the applicant sustained any loss by the delay which has taken place in the case you have mentioned? As Mr. Wilson informed me a couple of days ago, the loss in interest alone is about £150, or over. The application is dated 21st March, 1877, and was lodged on the same day.
- 25 April, 1879. 2489. Did you lodge it? Yes.
2490. Is the reference to you there? No, there is no reference at all; they know my handwriting.
2491. *Mr. Dawson.*] Is there no memorandum on the other side? "Received 21/3/77," and although the application was lodged on the 21st March, 1877, a question as to the title of certain mortgage moneys in the Rev. Stanley Mitchell, who sold to the applicant, was only intimated to applicant on the 22nd February, 1879, and the delay that has already occurred has caused a loss in interest alone of over £150. Then I think I ought to say in evidence that before the death of Mr. Holden we used to get cases through with very fair speed; and my opinion is that Mr. Holden had authority or standing and considerable weight with Mr. Burton. There was very little trouble then, and we used to get through large complicated cases with no objections; things went very fairly then. But since that time, until the appointment of Mr. Maddock, when you got an application lodged you never knew when it might be dealt with by even one examiner. Now, since Mr. Maddock has been appointed, we can feel certain that if a case has the good fortune to go before him early, it will be investigated by one of the examiners within a month or five weeks after being received in the office. Two different cases of my own—property I am interested in—have been to my knowledge investigated by him, requisitions received, satisfied, and passed on by him to another examiner within a month after the application has been received. Two, I know of, where requisitions have been satisfied and passed on a month after.
2492. *President.*] Then Mr. Maddock is in your opinion much more expeditious than either of the other examiners? Certainly.
2493. Is there any reason why those other examiners should not be as expeditious as Mr. Maddock? I do not think either of them has the working power, the capacity for work, in them. Of course I cannot give evidence as to legal qualification. Mr. Jones, to my knowledge, seems very industrious, and though more technical now than ever he has been, yet formerly I used to get the work done by him to some extent fairly. Though I have found Mr. Burton very obliging and gentlemanly in his manners, yet it is a common thing for cases to be twelve months with him before they are looked at.
2494. In what repute do these examiners stand generally with the public? As I have stated. The general opinion of the public is, that if the Government could find a suitable opportunity for promoting Mr. Burton, and appointing in his place a man of good sound capacity and standing, force of character and so on, Mr. Jones would be able to work very well, and give very good satisfaction.
2495. Then I think I understand you to mean that Mr. Burton's position in this office creates a great deal of delay that might be avoided if other examiners were appointed? Yes.
2496. Do you know of any cases in which people have refrained from applying for titles on account of the way in which the office has worked? I have known numbers of instances. With regard to myself, until the appointment of Mr. Maddock, for two years nearly I never brought a case in which I could avoid.
2497. You think people imagine it is of no use to bring titles in? Yes. But I would like to say also that the effect with the outside public of the Government establishing the Real Property Office has been to establish a test office. If any person says a single word against a title, you cannot say it has been investigated by so-and-so, the question is, "Can you give me a title under Torrens' Act?" and you are obliged, if you wish to do business, to say, "We will apply at your expense," or "We will put it under the Act for you."
2498. Do you think the system is a popular one with the public? Undoubtedly.
2499. Do you think it has advantages? Unquestionably, if it is properly conducted. As it is now it is a serious loss.
2500. Do you know of many cases of applications for certificates withdrawn on account of difficulties unnecessarily made in the office? No, I cannot say I have. I have known a large number of people who, on account of the difficulties, would not apply. I have myself persuaded numbers from applying to place their properties under the Act.
2501. On what grounds? Mainly on one ground—that it is impossible to know when you will get a title, or what expense you will be put to; and consequently in regard to people any way elderly, the delay in transmissions in case of decease is very serious.
2502. Do you think unnecessary difficulties are made in transmission cases? I think the whole principle is wrong in transmission cases. If property is not under the Act, and the person takes the property by will or by letters of administration, there is no delay at all—it is done in twenty-four hours. Here, in one case I had two wills—two different transmission applications—the will of Mr. Fisher, and the will of my father, and they were somewhere about three months before they came into this office and the case was dealt with.
2503. You mean before they came from the counter to the examiners? No; before the will of Mr. Fisher and the will of my father were accessible to the office—to this department—having been kept in the Supreme Court.
2504. Then that was not the fault of this office? No; but as it is a portion of the system of transmissions, it is a cause of a portion of the delay. Whereas, if property is not under the Act, that delay does not occur.
2505. Why should that delay occur in those cases? I was told at that time those delays were common; whether it is now or not, I do not know.
2506. As soon as the will is proved, it is accessible, I suppose, to the office here? It was not then. The information I got from Mr. Lander then was that these wills were kept a long time in the Supreme Court. Since the appointment of Mr. Slattery it may be different.
2507. Do you know whether any of the officers in the establishment ever prepared documents for the public? I have never known an instance.
2508. Have you ever paid any douceurs or fees for expedition or otherwise to any of them? No, never. I heard some years ago the term "expedition fees" mentioned, and I immediately informed the Deputy Registrar General that I had heard the expression used, and that if ever I came to know it I would report it. I only heard the expression used.
2509. Then you consider it objectionable that the clerks should be allowed to receive expedition fees? It would be destructive of all discipline to allow it.
2510. *Mr. Archer.*] How did you hear of it? From a solicitor's clerk, in speaking of the cost of bringing a property under the Act—a property that was going through his office; he said there would be an expedition fee—that was all.

2511. He did not say to whom he would have to give it? No. I heard the expression used, and I mentioned it to Mr. Muddle, the Deputy Registrar General, immediately.
2512. *President.*] Are there any salient points in the system which you could point out as requiring amendment? Certainly, the one I have just mentioned, in regard to transmission applications—I cannot see the necessity for anything being required beyond the probate of will, or the letters of administration granted by the Supreme Court.
2513. Some alteration has been made under that head lately by Act of Parliament? Yes.
2514. Does not that cure all the difficulties? I think not; I do not see why those transmissions should go before the examiners at all.
2515. Do you think an assurance fee is properly payable on transmissions? Well, I am inclined to think that there is always a certain amount of risk in wills; I am not sufficient lawyer to know whether there is any risk in letters of administration.
2516. But wills often occur in titles when they are first brought under the Act, and there is no extra assurance fee on such applications? No; I would not object to the assurance fee if the thing could be put through without the advertising, and without going before the examiners.
2517. In a case I lately brought in, I paid, for transmissions, £62—do you think that is a fair charge on applicants? No; it seems very unfair—I grant that it is enormous.
2518. My case was very a simple one too? (Of course I am answering the question in regard to assurance fees on transmissions on the assumption that there is a risk. If there is no risk, of course no insurance fees should be charged; the assurance pre-supposes a risk.)
2519. You are not aware that they have abolished it in other colonies? No; I am not aware. I should like to give evidence upon the subject of dower. I think that the time has now arrived at which dower might be completely dispensed with, and the office take the risk. The plan which I thought would be a good one is that in the event of the applicant not being able to negative any particular dower—that is, produce evidence that the dower did not exist—it should be competent for the office to charge a small additional fee on consideration thereof, and to issue none but clean certificates.
2520. What fee would you fix? It should be something nominal.
2521. A percentage? Something in the £—a farthing in the £—or something so small as would cover the risk, according to the knowledge that the office would have of the probabilities of dower.
2522. There are certain cases in which you know that dower exists, as for instance in Mrs. Hosking's case, mentioned in the papers we had just now—how would you dispose of those cases? There are half-a-dozen persons—perhaps a dozen—in the Colony, who we know are entitled to dower; but the value of the property is stated in the application, and the value of the dower there could be calculated and the risk charged for in proportion to the known value.
2523. Well, the system you would propose is that some small extra fee should be paid in all cases where dower could not be negated? Where the commissioners saw reason to believe that the dower would possibly or probably be claimed, then they might charge a small fee, but not at the counter.
2524. You would leave the question in the hands of the commissioners? Yes, within proper limits; and even then only for a limited time. There should be a time stated by any new Act, when all claims to dower, that is, all charges for dower by the office, would cease.
2525. Well, I suppose at the end of this century? I think at the end of 1889.
2526. Is there any other point on which you wish to give evidence? I would wish to state that I have lost—directly and indirectly—through delays in this office—
2527. Unnecessary delays? Unnecessary delays. Several hundred pounds, which includes, of course, the loss and injury I sustained by being kept out of moneys which I could not obtain until properties had passed the Act. I have known instances of people in a small way of business—people of small means—suffer proportionately greater loss than myself, and I have heard of a case where a person waiting for a title on a transmission application has had to borrow money at sixty per cent. or something like it. The delays in transmission applications press with very great severity on numbers of poor people who may be waiting, after the death of their husbands, to realize their properties, which they cannot do on account of the delays in their title being transmitted. For that reason I have told people that Torrens' title is a curse.
2528. Do you think further examiners are necessary? No; I think that even with the present work, with two good hard-working men, the whole of the work could be done; but the Government cannot expect to get first-class men for the salaries they offer.
2529. Have you anything further to say about the matter? I do not think I have, though I wish to press upon you what I first stated, that the Government have gone into business as conveyancers—that they have a monopoly of the particular branch which you may say they have undertaken. All properties under the Act are compelled to come to them, and by establishing the Land Titles Office they have established a test title, and if a person is unwilling to offer to place a property under Torrens' Act, it depreciates the reputation of his title immediately; consequently, people are often forced against their will—as I was in Wilson's application—to come to this department. Through the bad management of the department, the want of a sufficient and efficient staff, in many instances the delays which I have mentioned frequently take place, and the losses through those delays in all cases are very great; and, as I have said before, in transmission applications, to widows inheriting small properties it is sometimes almost ruinous.
2530. Do you think the Registrar General has the interests of the institution at heart? Unquestionably.
2531. And you think he is a very good man in his place? Well, yes; but it is open to consideration whether the office has not now attained such large dimensions that it would be advisable for it to be separated altogether from the other duties which he has to perform.
2532. You mean to have an executive head—a head of the examining department as it were? Well, no. I meant to have a master of titles, who would have sufficient standing to prevent the examiners from forming themselves as they do now, to a great extent, into a kind of a court in passing the titles. The Act states that examiners shall be appointed to assist and advise the Registrar General. Instead of that, the examiners take upon themselves the position of passing the titles and ignoring the authority of their chief, because they are professional men and he is not. I think also it is open to consideration whether it would not be advisable, seeing how large an institution this is becoming, to have a separate head for it unconnected altogether with the other departments under the Registrar General, and with sufficient standing to be completely the head and master of the office.
2533. You are aware that the examiners claim to be entirely exempt from interference by the Registrar General? Certainly, that is what I am alluding to.

G. Pile, Esq.
25 April, 1879.

G. Pile, Esq. 2534. *Mr. Dawson.*] Do you think that any benefit accrues to the public from having the Board of Commissioners? No, not now, or very little now that the examiners constitute themselves a court. As the examiners have ignored the authority of the Registrar General, and have been allowed to constitute themselves into a court, I do not think the Board of Commissioners are of much value, seeing that they do not assert proper authority.

25 April, 1879.

2535. *President.*] But I think you said you would substitute a master of titles in place of this Board? I think that is open to consideration. I did not say I would do so. It is a matter that should be considered, and one for your Commission to make any recommendation upon. I only say that it should be carefully and fully considered.

2536. *Mr. Dawson.*] Would you have a Board of Commissioners as well as this master of titles? If you had a master of titles, an equity barrister, who would be the master of the office, I think you would have no need for the lay Board; but to have one who would give thorough satisfaction, it would be necessary for him to be an equity barrister, or conveyancing barrister rather—one of higher professional standing than the examiners.

Andrew Hardie M'Culloch, junior, Esq., M.P., examined:—

A. M'Culloch,
Esq., M.P.

25 April, 1879.

2537. *President.*] You are a solicitor in practice? I am a solicitor in practice.

2538. Have you had much experience in connection with the Real Property Office? I have had a good deal latterly—for the last few years

2539. Do you think it works satisfactorily in every respect? Certainly not.

2540. What objections do you find to it? Well, I find it is a difficult matter to get any title through, and if there is any difficulty which one might expect to get rid of by bringing a title under the Real Property Act, it is almost an impossibility to get it done at all, and certainly not for a very long time.

2541. To what do you attribute the delay that takes place in passing titles? I should attribute it to the intense technicality of some of the examiners, and to the fact that the Board of Commissioners simply exercises no control over the titles at all. They seem to be guided entirely by the examiners.

2542. They are non-professional men, and I suppose do not feel themselves entitled to question the opinions of legal gentlemen? No; they do not even exercise as much discretion as a client would in dealing with an objection a solicitor might raise.

2543. Do you think there is any advantage in retaining the Board of Commissioners? Under the present system I do not see that they are of any use whatever.

2544. To which of the examiners do your objections particularly apply? More particularly to Mr. Burton, but I think that Mr. Jones is quite as technical. The only difference is that he may be a little bit quicker in his dealing with matters. I can name some instances that have lately occurred in my own practice, where the Eveleigh House property was brought under the Act, after, I think, two years of hard work. I subsequently tried to bring one or two properties in the same title under the Act. Those which came before Mr. Jones and Mr. Maddock I have got titles for; some happened to be in the hands of Mr. Burton three months before the others were through, and I have not even got them advertised, and cannot get any information as to the position they are in, although there is not the slightest difficulty in the title whatever.

2545. Was there not a difficulty about the title at one time? Yes.

2546. And has it been removed? Yes, and the title was passed in the Eveleigh House property before making an application with the others.

2547. Then, notwithstanding that the title was passed in that case, there are still delays in passing land also affected by the same title? Yes, of smaller value and under exactly the same title. I can only remember one at the present moment in Mr. Burton's hands—that is Mr. O'Connell's case, of land in Abercrombie-street. I have had occasion to write about it recently. That application was lodged three months before some of the other applications in which we got a certificate.

2548. What is the nature of the objections the examiners take; do they take such objections as solicitors for purchasers take in examining titles? I think they take many objections that solicitors acting for willing purchasers at all events would waive.

2549. That is to say, such technical objections as would not affect the risk —? That would have no effect on the right to the possession of the property whatever.

2550. And their objections are too minute, you think, and too technical? I think they are—very much so.

2551. Can you say in what repute the office stands with the public and solicitors? With the public I think it is in very bad repute, because in any attempt to bring property under the Act, it takes a very long time, and is very costly, and with solicitors, I suppose, it is almost held—I was going to say in contempt—but that is rather too strong. Certainly there is no respect for it.

2552. Do you think people refrain from bringing titles in here on account of the present state of the management? I should think so. I know it is the case that, where properties are mortgaged, mortgagees frequently refuse to allow the title to be brought through the Land Titles Office because of the great difficulty there is in passing a title, and they are afraid of frivolous objections being taken which would have the effect of depreciating the value.

2553. Have you yourself ever advised that titles should not be brought under the Act on account of the difficulties raised here? No; in any case where I have had difficulty I have advised them to bring the property under the Act, and I have pushed them through.

2554. Do you think there are sufficient examiners? I should think so, if they were prompt in dealing with the matters—dealing with them in the way in which practising solicitors do in titles that come under their notice. Three examiners ought to get through a great number of titles. I believe a great deal of difficulty arises under the transmission titles. That I have not had much experience in, and do not know what amount of time is taken up by the examiners in that work.

2555. Have you ever heard anything of malpractices by gentlemen employed in the office, such as receiving money for expedition fees, or anything of that character? No.

2556. You have never paid such fees yourself? I have never paid any such fees.

2557. Can you give us any evidence in any other respect as to the working of the office? I think I can call your attention to one case, which, in my opinion, shows the wrong way in which one of the examiners, at all events, seems to regard his duties. I had a title to bring under the Act; it had been originally in the

the

the hands of Messrs. Stephen and Stephen; it was a Balmain title—Mr. Paling's case,—and Messrs. Stephen and Stephen had been, I think, some two or three years trying to bring it under the Act, but a lot of technicalities were thrown in the way on account of the purchase being obtained on credit. In the first instance no conveyance had been executed, and it was brought under the Act under the contract, and owing to the long time it took to bring it under the Act, it was cut up and a number of allotments were sold. Eventually, I believe, there were something like 100 or 120 allotments sold. Well, after a great deal of difficulty, we got a requisition from the examiners, and obtained the consent of all these parties to the property being brought under the Real Property Act. But Mr. Burton in a memorandum he wrote on the case said—I do not remember the exact words, but the effect of the memorandum was this: That he thought the proper course for the Commissioners to take was to reject the title and insist upon separate applications being brought in by each purchaser; and he went on to remark that this would be very remunerative to the office. It seems to me that is not the object of the office, and that he takes a wrong view of the case.

A. H.
M'Callloch,
Esq., M.P.
25 April, 1879.

2558. Was the original application made before the sales? I think so; but at all events before a very large number of the sales. There could have been only a few sales made at the time of the original application.

2559. And what was the result of that case? I got it through at last, with the exception of a few of the allotments which I had to omit as I could not get the consent.

2560. And certificate issued in favour of the purchasers? And certificate issued in favour of Mr. Paling.
2161. Who then gave them titles afterwards? Yes. There is another case in which a great deal of difficulty was thrown in the way, but I think I got them to waive the difficulty, and perhaps it ought not now to be mentioned. It was a case in which property at St. Mary's had been brought under the Real Property Act, and this property originally belonged to Sir Maurice O'Connell, who had sold 40 acres of it in small allotments. It was a grant of 1,000 acres. The conveyance of Sir Maurice O'Connell to my father was of all the land not sold, and now that an application is made to bring a part under the Act, they require the surveyor's certificate that none of those numerous conveyances affect the piece of land now sought to be brought under the Act. In a matter like that, it seems to me that the draftsmen of the office should certify. To get a surveyor's certificate for each allotment would be a great deal more than the value of any of the other pieces of land on the estate as it is cut up now.

2562. Do you know of any other case of objectionable practices or requisitions or unnecessary difficulties? Of unnecessary delay. There were a number of cases I wanted to mention, but being a little bit late, I have come away from my office without them. I have written, during the last few days, I think, seven or eight letters in different cases complaining of unnecessary delay.

2563. *Mr. Archer.*] Do you get replies to those letters? I get them in due course. The last letters I wrote were to the Registrar General. If a letter has to be considered by the examiners, it is put in its turn, and you may not get an answer for three months.

TUESDAY, 29 APRIL, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P.,
THOMAS ROBERTSON, Esq.,

WILLIAM HENRY ARCHER, Esq.,
JOHN DAWSON, Esq.

Mr. George Charles Selwyn Smith examined:—

2564. *President.*] What is your position in the office of Messrs. Stephen and Stephen? I am an articled clerk there. I attend to the agency business a good deal, the Land Titles Office business, ecclesiastical, and the conveyancing generally.

Mr. G. Smith.
29 April, 1879.

2565. And you are brought a good deal into contact with the Real Property Office? Yes, with the Land Titles Office.

2566. Do you lodge applications for titles and transmissions? Yes.

2567. And pay the fees? Yes.

2568. Have you ever paid more than the regular fees authorized by the Real Property Act? Yes, I have.

2569. For what purpose—on what account? I understood that the clerks downstairs used to stay behind their time to do extra work at night, and in consideration of their doing that, in order to get through some deeds, I gave them an extra gratuity.

2770. Then those payments you have made are for overtime work by the clerks in the office? Yes.

2571. Not for work done during office hours? No, certainly not.

2572. Have you ever paid gratuities for other than work done by overtime? Well, I have only on two occasions paid gratuities at all, and on both of those occasions it was in consequence of the clerks staying behind time to work.

2573. Were those important cases? Well, yes, they were. They were sent up from Melbourne, and they were required to be got through as quickly as possible.

2574. Did they involve much work? Well, in one matter there were 281 endorsements, and in another 541 endorsements.

2575. Endorsements on grants? Endorsements on grants.

2576. And do you think that work could not have been done by the officers of this department during business hours without great loss of time? I do not think it could. We should have had to wait a good deal longer than we did if it had been done in the ordinary course. We got it done in three weeks, and we might have had to wait two months, I daresay, before we could have got it by the ordinary course.

2577. Are there sufficient clerks at the counter? I do not think so.

2578. You are a good deal here, and see, I suppose, the business that goes on? Yes.

2579. *Mr. Archer.*] How much did you pay in gratuities on both those occasions? I paid two guineas on each occasion.

2580. Four guineas in all? Yes.

2581. Did you obtain the consent of the Registrar General to employ those clerks? No, I did not.

2582. To whom did you speak? Well, I spoke to a clerk in the office of another firm of solicitors, and asked

- Mr. G. Smith. asked him if it was usual to do this. I had heard that he did it, and I asked him. He told me that he did it, and that he did so because they, the Land Titles clerks, stayed to do work overtime.
- 29 April, 1879. 2583. And was the clerk to whom you gave the gratuity the only one who stayed? I do not know how many stayed. It was only one I gave the money to.
2584. Who was he? Mr. William Muddle.
2585. At the counter? At the counter.

Henry Massey Makinson, Esq., solicitor, examined:—

- H. Makinson, Esq. 2586. *President.*] You are a solicitor in practice? Yes.
- 29 April, 1879. 2587. And, I suppose, have considerable dealings with the Real Property Office? Yes, but not much personally.
2588. But your office has dealings here? Yes, the office has.
2589. I suppose your clerks lodge applications for titles and transmissions? Yes, they take all the papers in, and transact all the ordinary business.
2590. And pay the fees? Yes.
2591. Have you ever paid more than the legal fees for work done in this office? I never have for work on our own account. I remember once paying a fee, which I believe is what was called an expedition fee, in an agency matter.
2592. What was that fee paid for? I had better state the exact circumstances. My clerk brought a letter from a country solicitor, for whom we were agents, directing us to pay the sum of two guineas to Mr. Muddle.
2593. Mr. William Muddle? I have ascertained since, that it was Mr. William Muddle. I gave the clerk a cheque for two guineas accordingly, and I presume he paid it over according to instructions.
2594. And do you know what it was paid for? The clerk told me it was in connection with an application of Croaker, and I have not much doubt it was an expedition fee. That is what he told me. He showed me that a letter had been received to pay Mr. Muddle two guineas, and I gathered from the facts told me at the time, that it was in reference to this application of Croaker, because that was down in the butt of the cheque, and I have no doubt it was an expedition fee.
2595. Was there much work in that case? I know there was a large bundle of deeds. I never went through them myself.
2596. More than ordinary work in it? Yes, there would be more trouble to go through the deeds and see that the application was in proper order.
2597. Do you suppose that this fee was paid to Mr. Muddle for working overtime? I never saw Mr. Muddle about it. I am telling you what my clerk told me. That was all that took place at the time; but I have inquired since, and have been told by the clerk that Mr. Muddle suggested that it was a proper case in which to give an expedition fee. I have been told that within the last few weeks when I inquired about the matter again.
2598. That was the form in which it was put to you? The clerk told me this lately. I inquired about it, and said, "I suppose it was to push this matter on?" And he said, "Yes."
2599. What has become of this clerk? The clerk was Mr. O'Connor, who passed the other day, and has left the office; but I believe he is in town. I saw him the other day. I heard from him and another clerk who was present at the time—James Harkess—about the matter.
2600. Do you know of any other instance in which such payments have been made? Only by hearsay.
2601. But you have heard of such cases? I have heard it often said that such payments were made, but I have not heard of any particular case that I could name now—at least I do not remember any. Our clerks sometimes told me that they had been told that things would go more smoothly if such a fee were paid, but I have always directed them not to pay such fees in our business.
2602. Will you inform us whether the office has worked satisfactorily in the opinion of the public and solicitors? No, I think it has not.
2603. What are the grounds of complaint? Delay is the principal complaint.
2604. In which branch? In the clerical branch, I think,—I mean in the branch downstairs which deals directly with the outside public and the profession. There are three or four different things which strike me as probable causes of delay in the office.
2605. What are they? The first is that when titles are brought in they are handed to Mr. Lander to make a search against the title, and it is within my knowledge that he is so overwhelmed with such work that the searches get into arrear, and sometimes cases are delayed two or three months before searches are made against them.
2606. Do you think he has more than he can possibly do? Yes, I do.
2607. Can you tell us any other cause of dissatisfaction? Well, it is only when he has made the searches that the case is passed on to the draftsman to ascertain if the descriptions are correct, and, as far as I know, I do not think the applications are delayed very long with the draftsman. Then the matter goes to one of the examiners, and he peruses the title. Well, I think that involves a treble perusal of the title, first by Mr. Lander, and secondly by two examiners, one after the other. I think the title ought to be sent in the first instance to be examined as in ordinary practice, and let the examiner read the abstract himself first, and make out his own search paper.
2608. What you mean is that the present practice involves perusal of title by three different officers? Yes, by three, one of whom is not supposed to examine it; but he cannot make out a good search paper without examining the title. Mr. Lander has to do that—peruse the title.
2609. But he need not peruse it to look out for flaws and faults in it? He has to be pretty careful, and it takes him a long time to get through a long search paper, and it involves a certain amount of discretion as to what he should search against.
2610. After that is done the case goes into the hands of the examiners? Yes.
2611. Is there any unnecessary delay there? They have a habit of sending out what they call preliminary requisitions, and afterwards the main requisitions in the case go out. I think the examiner who goes through the title should go through it once for all, and send out all the requisitions that appear on the deeds and abstracts then before him.

2612. Just the same as in a solicitor's office? Yes. I have found in my own practice, that after satisfying preliminary requisitions in producing deeds, getting certificates and proof of different facts, I have been met with an objection which I could not meet, and which has forced me to withdraw the application altogether.

H. Makinson,
Esq.
29 April, 1879.

2613. Do you not suppose titles are brought into this office in a much worse condition than into a solicitor's office? Yes, I think that titles are sometimes brought in without the person bringing them in properly examining them, or seeing, in fact, whether he had a title to be brought under the Act or not.

2614. You have seen the requisitions or objections taken by the examiners of titles, I suppose? A great many. There is another thing about the preliminary part of the work to which I wish to refer, that is the advertisements; after the searches have been made and the deeds have been examined by the chief draftsman, and after the examiners have perused the title and sent out their requisitions, and all requisitions are satisfied—then and not till then, are advertisements inserted. I have had a case nearly two years before they got so far as to insert the advertisements, and then there is a delay of I think seventy days in connection with the advertisements. I think the parties ought to be allowed, if they choose to take the risk, to have their advertisements inserted when the application is lodged. Of course if the title is refused afterwards, their money is lost, and public attention is called to a blot on the title. But I think that risk might be left to the applicants and their solicitors.

2615. Do you consider the objections and requisitions of the examiners more minute and technical than need be? I think that there are often requisitions sent from the office that would not be put by any ordinary solicitor in practice.

2616. Very often what? I think requisitions are sent from the office which a solicitor in ordinary practice would not think it necessary to send.

2617. The examiners then, you think, are more particular than practising solicitors? A great deal more so.

2618. Have you withdrawn any titles from the office after making application for certificates? Yes, two or three times I have done it because I could not afford to delay people wanting to deal with their properties.

2619. That delay arises principally from what? In a great measure from the length of time before the examiners deal with the titles at all.

2620. Do you think that is the main cause of the delay? I think it is that and the character of the objections which are sometimes taken.

2621. Do you advise clients against making applications for certificates of title on account of the present state of the office? I have told them that if they wanted a certificate of title within a reasonable time, it would be a great chance if they got it. I got a certificate the other day in a case which had been, I think, two years in the office, and yet all the earlier part of the same title had passed the office before. I made an application previously, and withdrew it because the person wanted to deal with the property, and afterwards, he having more time to put it in again, it took two years to do it.

2622. Although the title had been passed before? Yes, up to a recent period.

2623. *Mr. Terry.*] Do you see any necessity for the production of the original papers—of the original deeds—when they are registered down below? I think they should be given up if in existence—that is where parties have them. I think it is a common requisition in the office, where there is a well-known title and a great number of old deeds; but I think that where the deeds have been produced in former cases, and the examiners, like everybody else, know the title, they should not ask for the originals again as they do.

2624. I mean deeds not in the applicant's possession? Of course that is a matter of discretion; but in the case of well-known titles, where the examiners cannot possibly doubt there are such deeds, and that those deeds are faithfully represented by the registered copies, they should not put parties to the expense of getting them produced.

2625. *President.*] Can you offer any suggestion to make the Act more effective in its working? It is easier to point out the defects than to suggest any remedies. I have already mentioned one or two particulars in which I think the practice might be amended.

2626. For instance, as a solicitor, do you think the office of commissioners ought to be abolished? The only use I believe the commissioners are is this: That an examiner of titles, seeing that there is some objection to a title which, perhaps, he thinks is not very serious, but which he does not take the responsibility of passing over, refers the objection to the commissioners, who take the responsibility off his shoulders.

2627. Do they, in any instance, disagree with the examiners? I do not know. I never heard of a case. As they are gentlemen not capable of forming a judgment on points of law, I do not suppose they would.

2628. *Mr. Archer.*] Would you be able to find Mr. Harkess, as well as Mr. O'Connor? Yes; Mr. Harkess is a clerk in our office now.

2629. *Mr. Dawson.*] Do you think that the abolition of dower altogether would be fraught with much evil? No.

2630. Will you state what your views are on that subject—whether you think some remedy ought to be provided, because of the many vexatious questions often put by the examiners? Every day one finds on a title a possible claim to dower arising out of a marriage say fifty years ago, and the solicitor, on the other side, cannot say whether the woman is alive or not. In the great majority of instances, as you know, the value of the claim is small, as the dower has to be calculated on the unimproved value, and as the woman can get it only by expensive proceedings in equity. You make up your minds to chance it. I think in cases of that kind the examiners may consider that, as there is an enormous assurance fund not touched, they might chance it, as a practising solicitor does. I think that the existence of the assurance fund untouched for so many years is a proof that the examiners are too strict. I do not suppose all the dowers in the Colony now, of women married before 1837, are worth much.

2631. *Mr. Terry.*] Do you think there is any necessity for charging an additional assurance fee on a transmission case, by death or will? An additional fee?

2632. They charge one on bringing it under the Act, and another on issuing a fresh certificate obtained by a person under a will? There is, of course, a chance of something wrong in the will.

2633. *Mr. Dawson.*] But would there be any reason for charging the second fee on a transmission where it is derived from an intestate estate? There would still be a chance of the letters of administration being improvidently

H. Makinson, Esq. 29 April, 1879. improvidently granted. I remember a case where the letters of administration were granted, and I refused the title, thinking that there was not sufficient proof that the man was dead. The man turned up afterwards, and of course the letters of administration were worth nothing. There is a chance of something of that sort.

2634. But that chance is very remote? Of course in the great majority of cases you have absolute proof of death. I think that the procedure about transmissions is needlessly cumbrous. You have to go through all the forms almost of an original application; to advertise, for instance.

2635. *Mr. Terry.*] They can dispense with that now? Yes, they can; but I do not see why fees should be paid for a fresh certificate on each transmission. They might note the transmission on the certificate as they note an ordinary transfer.

2636. *President.*] That ought to be quite sufficient? Yes. I think the practice is to require a new certificate to be taken out. I remember a case where there had been three or four devolutions of property by will since the last certificate. Say A dies and leaves the property to B, and B leaves it to C. A new certificate was issued in each case, in order to secure the fees to the office, and immediately cancelled.

2637. You are aware that the assurance fee on transmissions is abolished in other colonies? I was not aware of it. I think the risk is so small that the fee on transmissions ought to be much less than the original assurance fee, and that would make it so small that practically it would not be worth while to retain it.

Mr. James Harkess examined:—

Mr. J. Harkess. 29 April, 1879.

2638. *President.*] You are clerk to Messrs. Ellis and Makinson? Yes.

2639. And in your capacity of clerk you have frequent dealings with the Land Titles Office? Yes.

2640. Do you lodge applications for certificates and for transfers, and pay the fees? Yes.

2641. Have you ever paid more than the legal fees? Myself?

2642. Yes, yourself? No.

2643. Have any unauthorised fees been paid from Ellis and Makinson's office for Ellis and Makinson? It was paid from the office, but not for them.

2644. It was paid by them for work done in this office? Yes.

2645. In what case? In the case of the application of Croaker, for the Shiraz title.

2646. What fee was paid in that case, unauthorized by the Act? Two guineas.

2647. On what grounds was that paid? Mr. O'Connor and myself were downstairs with the papers about the matter—I believe the title was a jumbled one—and in speaking to the clerk he mentioned that it was a complicated thing to look at, and about being busy, but that he would try and expedite it a little.

2648. Who was that clerk? Mr. William Muddle.

2649. Were there many deeds in that title? No, there were not many, but there were some deeds that required to be produced and were not there. I do not myself know much of the title.

2650. Was the fee actually paid? I did not see it paid, but I believe it was paid.

2651. How much was it? Two guineas.

2652. Was it paid for work done after office hours? Oh, I could not say; I do not know.

2653. What did you say was the remark of the clerk who asked for the fee? Mr. O'Connor, whilst we were standing there, asked him to look through the papers as soon as possible, as it was wanted to be done, and he said it was a troublesome matter, and he was very busy—that he would look through it; but hinted that a fee might expedite it a little, and that he would push it on.

2654. *Mr. Terry.*] Give it precedence, I suppose, before other titles? That is what we understood—that the matter would be looked to at once.

2655. *President.*] Do you know of any other cases where such fees have been paid? No, I could not say that I know of any.

2656. Do you know of any cases where clerks have asked for expedition or other fees beyond what are legally demandable? No, I do not.

2657. Was this case dealt with and certificate issued? No, it was not. I do not think the certificate was issued. I think there were some deeds that Mr. Heydon could not produce, and he not getting them we returned the papers to him, and I think he has now lodged them in an application to bring the land under the Act. It was some other application at the time the fee was paid.

2658. When did this matter that you have alluded to take place? Five or six months ago.

2659. And notwithstanding the payment of the expedition fee, no certificate was ever obtained? No; we did not have sufficient papers to complete the title.

2660. *Mr. Dawson.*] You say that no direct application for fees has ever been made to you other than that you named, but in your experience have there been any suggestions made, without expressly asking for fees, such, for instance, as that if they were forthcoming the business would progress more rapidly? No.

2661. No suggestion at all? No.

2662. *Mr. Archer.*] In this one case of Mr. Croaker, there was a distinct suggestion? Yes, it was given in a way that the fee would be acceptable.

2663. And was the amount named by the clerk? I do not think so; I cannot remember whether the amount was ever mentioned.

FRIDAY, 2 MAY, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P.
THOMAS ROBERTSON, Esq.,

WILLIAM HENRY ARCHER, Esq.,
JOHN DAWSON, Esq.

Algernon Sydney Gilder, Esq., solicitor, examined:—

A. Gilder, Esq. 2 May, 1879. 2664. *President.*] I think you are a solicitor of the Supreme Court? Yes.

2665. Have you had much experience in connection with the working of the Real Property Acts? Well, I have had some since I have been in Sydney; since, I think, about six or seven years ago.

2666.

2666. And during that time you have practised your profession in connection with the Real Property Office? Yes; I have had a number of applications to bring land under the Act. A. Gilder, Esq.

2667. Do you know in what repute the office stands with the profession, or with the public? Well, I am inclined to think, with regard to the profession, that they consider things might be done more expeditiously than they are done, and I should think the public were under the same impression. 2 May, 1879.

2668. You think they blame the office for slowness? Yes; I have constantly heard people complain of the slowness with which business is got through. I know a good many solicitors whose names I could mention, who have expressed the opinion that things in the office might be done more expeditiously than occasionally they are done.

2669. Do you think there is any good foundation for those complaints? Well, it is rather a difficult question to answer, but I know in some cases where I have applied to have land brought under the Act, objections have been taken which were not frivolous exactly, but such as I think might have been waived in a great many instances, as not affecting the title. At least the title was good enough to have been allowed to pass; but the delay in many instances is caused by the way in which the requisitions on titles are sent in. To give a case in illustration,—Messrs. Russell and Murray's application 4,331, which is still not wholly completed, although it has been in the office for nearly three years, every objection to the case might, in my opinion, have been taken in the first instance. Instead of that, preliminary requisitions are sent in—they are complied with; another set of requisitions is then sent in—they are complied with; and within the last few weeks, further requisitions were sent in with regard to the proof of a will. Those might have been made in the first instance, and the delay, and a great deal of expense, might have been saved. If Mr. Russell had known in the first instance what the expense of the application would have been, it is most probable he would have withdrawn the application. I should suppose it must have cost the applicants from £200 to £250 at the very least. The last requisition was in reference to the proof of a will, yet the will was before the examiners when the application went in. The title had been before Mr. Gordon, who had given his opinion that it was perfectly good, even in the absence of the will; and the case submitted to him, and his opinion, with all the papers, were laid before the examiners, but the case has not been passed as yet.

2670. Then you think all those requisitions could have been taken in one batch, in the first instance? I think so. Possibly on search some encumbrance might have turned up, but most, if not all, the requisitions could have been taken in the first instance.

2671. But you know the practice here is to make the search before sending requisitions at all? Then I think they could have all been taken in the first instance.

2672. *Mr. Robertson.*] Was the will proved? It was not proved. It had been lodged in the Wills Office. Proof was required that it was the last will.

2673. I mean had probate been granted? No, there was no personalty, only real estate; there was no necessity for proving it.

2674. *President.*] Were all the requisitions answered as speedily as might be by the applicants or their solicitors? I think so. Some of the requisitions were of a nature that it was impossible to answer speedily—such, for instance, which necessitated a discovery of the whereabouts of the attesting witnesses to a will twenty-six years old.

2675. Was not part of the delay you complain of caused by the difficulty in answering requisitions, not by the fault of the office here? It was, but if all the requisitions had been sent in in the first instance, a great deal of the delay might have been avoided.

2676. Then you consider, after making all due allowance for the time necessarily consumed in furnishing replies to the requisitions, that the office still has been guilty of delay? I think the practice of sending in one requisition to-day and another to-morrow is a bad one.

2677. Yes, that there is no doubt of. Do you think the examiners make delay in replying to answers to requisitions? No; I do not think much delay arises in this way. If they received a letter from me to-day I think they would answer it with as little delay as possible. Sometimes three or four weeks may elapse before they answer a letter; but that may be unavoidable.

2678. *Mr. Archer.*] But they answer it by asking another question? That is very frequently the case. In some cases the answer is deemed insufficient, and further evidence or proof is required.

2679. *President.*] When solicitors act for a purchaser, do they not send in the requisitions at once? Generally speaking, under ordinary conditions of sale they are bound to; but if there were no conditions of sale, I think most solicitors would do so.

2680. And you see no reason why the examiners should not do the same thing? I do not think they should be bound, as if they were acting for a purchaser under ordinary conditions of sale; but I certainly think they ought to do so as far as they possibly can.

2681. You do not think the examiners waste any time in examining titles too critically and too minutely? Well, of course it depends upon a man's calibre as to whether he wastes his time or not. I do not think a person can examine a title too critically or too minutely; but one man will do that in half-an-hour which it will take another man an hour or an hour and a half to do.

2682. Do you think they magnify unimportant points, and take requisitions where no requisition need be taken? Yes, I do think so—very often; especially where questions of dower arise, and where the claim could not be more than £2 or £3. And to give an instance in the case of a will: A man makes a will and it is properly witnessed: I get one of the witnesses to write a letter to the effect that he witnessed the will, that the testator was in his (the witness's) house when he made it, that he was bed-ridden, that he never was out of his bed after he made the will until he died, and that he could not have made another will because witness was his nurse during the whole period of his illness and until his death. I ask whether that, if sworn to, will be sufficient to prove that it is the last will of the testator, and get no satisfactory answer, but am told to put it in and it would be considered, and at the same time that the affidavit of the devisee under the will would be the best evidence of its being the last will of the testator—although the devisee was in a different part of the country when the testator died. I then asked to be allowed to refer to the will and to the affidavit of the attesting witness already lodged, so as to avoid the necessity of sending the will about the country; but one of the examiners said, "No, you must attach the will to the affidavit as an exhibit." I went to Mr. Lander afterwards, and said to him, "Surely, it is not necessary for me to send the will about the country in this way," and he said no, it was not. So I simply referred to it as suggested by him; I have sent this declaration in, but as yet I do not know what the result will be.

- A. Gilder,
Esq.
2 May, 1879.
2683. Who were the examiners who dealt with the case? Mr. Jones and Mr. Burton, I think.
2684. Did you not see both of them? I saw Mr. Jones.
2685. You know the nature of the requisitions taken by examiners here—the kind of requisitions they take? Well, sometimes they take very refined requisitions. Requisitions about dower are often unnecessary. Titles which have passed through the best offices in Sydney—such as Mr. Norton's, Mr. Barker's, Mr. Slade's, Messrs. M'Carthy, Robertson, and Fisher's, and Messrs. Daintrey and Chapman's offices—when they come here are often made the subject of numerous requisitions, but generally pass in the end, after a lot of expense has been gone to.
2686. Do you think the examiners then make such requisitions as would not be made by a solicitor for a purchaser? For a willing purchaser, I do, certainly.
2687. For an unwilling purchaser? An unwilling purchaser, I conceive, would take every objection he could.
2688. Say a purchaser under an open contract? I think, in the case of a person who did not want to cry off, that the examiners take objections which a solicitor would not—objections the most fastidious conveyancer would think unnecessary for the protection of his client.
2689. To which of the examiners do your objections principally apply? Well, I should be very sorry to say anything against any of the examiners. When I have had occasion to see Mr. Burton, he has always been very courteous and obliging; but if I go to a man and ask a question, to which he can say "yes" or "no" I like him to say it.
2690. But Mr. Burton is thoroughly honest and conscientious? I have no reason for believing otherwise. I think, with reference to Mr. Jones, that all I could say would be, that if I were placed in a similar position, and a person came and asked me a question such as, "I bring this letter to you; if it is embodied in a declaration, will it satisfy you, and if it won't, tell me what will, so that I may get it?" I should give him a satisfactory answer at once; but Mr. Jones's answers are often decidedly unsatisfactory, when there is no occasion, and when a simple answer to a simple question would, in my opinion, expedite the business of the office.
2691. Do the examiners do what they can to facilitate the passing of titles and to expedite the work? Of course every man has his own opinion upon that point. I cannot say that I think they do. I will except Mr. Maddock, so far as I have known him; but I cannot conscientiously say that I think the other examiners do.
2692. *Mr. Terry.*] You except Mr. Maddock from that? Yes; he has only been in the office a short time, but I have every reason to believe that he does not allow the grass to grow under his feet. Of course a good deal of delay is caused in having the titles sent about from one person to another. They make a sort of cycle, and it is hard to say when they come back again to the starting point.
2693. *President.*] Do you know of any other difficulties applying to any other branch of the office—any unnecessary delay, or any other difficulty at all? I have sometimes been downstairs two or three hours waiting to have a matter attended to, but whether that has been caused by an insufficient number of hands or not I do not know. I should fancy from what I have seen that an extra counter hand ought to be there.
2694. Are the counter hands anxious to please people, and to get through their work? I have not the slightest complaint to make against any of them.
2695. Do you know of any instances in which any of them have received payment for work, in the shape of expedition fees or otherwise, beyond what they are entitled to ask under the Act? No, not any.
2696. Have you heard such things stated? No, never. There are certain persons, whose names I do not think it is necessary to mention, who fancy—whether it is fancy or not I do not know—they can get things through the office more expeditiously than others. I do not know whether that is a matter of fees; I think if it is true at all that it is a matter of personal friendship.
2697. Do you mean solicitors? No, some of the public.
2698. Do you not think that the pertinacity of those people has something to do with the matter? I think it might have; it always has its effect.
2699. *Mr. Terry.*] Do you think it a desirable practice to pass titles subject to qualifications? No, I do not, by any means. I have known a title stuck up for weeks after being passed, simply because it is passed subject to some qualification, such as the production of an original deed. Frequently the qualifications are more difficult to comply with than the requisitions.
2700. Do you not think it advisable in an office like this that dower should be abolished altogether? I do. There can be few women now alive who would be entitled, and it is often extremely difficult to procure evidence on the question.
2701. Have you known cases in your experience where persons could not possibly be entitled to dower, and yet it has been noted on the certificate of title? Yes, I have. I believe there have been cases where the examiners must have been alive to the fact that it was almost impossible, or at any rate highly improbable, that any right of dower existed.
2702. They required proof? Yes.
2703. Which in some instances it is impossible to get? Impossible. I had to allow it to be noted on a certificate some time back, being unable to procure any evidence on the point, although quite satisfied that no claim for it would ever be made.
2704. Would it not be an advantage to abolish the assurance fee on transmission cases? I think it is an extortion—a positive extortion. Hundreds of cases might be given to illustrate the unfairness of the fee. The last I had to do with was the case of Mr. Thomas Skinner, who died a few weeks ago. There could not be a doubt as to who was entitled to be registered as proprietor by transmission—it was only necessary to look at the will; and why should there be a £20 assurance fee in a case like that? In Russell and Murray's application the assurance fee alone was £62 10s.
2705. Do you think an assurance fee should be charged on grants from the Crown? No; nor do I think commissioners' fees should be charged.
2706. Would it not be a desirable thing if the commissioners were swept away altogether? Unquestionably; I cannot see any use for them. If there was one commissioner, and he an experienced conveyancing barrister or solicitor, it might be desirable to have him to appeal to. To have three commissioners, to act only as the examiners direct, seems to me something worse than useless.
2707. Do you think it is necessary in every case to call for the production of original deeds? I think that when deeds are registered it is very hard indeed upon the applicant to compel him to produce the originals. I had in one instance to pay ten guineas for the production of original deeds which were all registered.

registered. In another case, a deed of assignment for the benefit of creditors was required. I forget how many people I went to to find out where the deed was. It was registered, and its production, in my opinion, was quite unnecessary.

A. Gilder, Esq.
2 May, 1879.

2708. Have you known cases in your practice where they have called for the deeds after they have been produced once? Yes, and occasionally I have had the same requisition twice over. Sometimes I have been asked to furnish proof of a negative kind—as for instance: that no person had acquired title by a twenty years' possession where the subject of the application was a block of unoccupied land in the country—and that since the passing of the amending Act.

2709. Does not Mr. Burton think it possible that sometimes original deeds may bear endorsements which have not been registered, and is not this his reason for always calling for their production? I think it is very likely that he does. I think a good deal of unnecessary work is cast on the office with regard to leases for short terms.

2710. Then you do not consider it right that a ninety-nine years lease should be registered in this office? Yes, I do. What I think is that the words "three years" in the 49th section of the Act should be altered to "twenty years." In my opinion it is very inconvenient and expensive to compel notification of a term for less than twenty-one years, as it is to render the use of the forms given in the Act necessary.

2711. Is not the production of the original certificate required before the lease can be registered? Yes, and when the parties are resident in the country where the land is situated, to forward the certificate or grant to Sydney to have a five years' lease noted; that is attended with expense, and there is also the risk of its going astray, and nothing that I see is gained by it.

2712. *President.*] Are there any other points upon which you can give us any evidence? I think great expense might be spared applicants if certified copies of partially cancelled deeds were in all cases dispensed with. There is also a matter with reference to searching the registers which might be altered with advantage. Parties should either be permitted to search for themselves, or, when the search is made by the officers in the department, some guarantee should be given that no incumbrance exists. At present the registers are virtually "un-get-at-able" by the public.

2713. *Mr. Terry.*] Not on payment of half-a-crown? The Act allows inspection of the registers by the public on payment of that fee; but searches are generally made by the officers in the department, and, with the present arrangements, if people were allowed to go behind the counter for this purpose, it would greatly interfere with the conduct of the business, and create confusion. This being so, I think some guarantee should at least be given that the search is a correct one when it is made by the officers of the department. Then there is the time wasted in advertising transmission applications. In the case of Mr. Skinner, before referred to, thirty-six days were wasted in advertising. Why the case was advertised it would be hard to say; and so with the large majority of cases.

2714. *President.*] Is that since the last Act? Yes. The Act gives power to dispense with advertising if the Commissioners think fit, and on the recommendation of the examiners; but in the case I mention, it was not dispensed with, and seldom is.

2715. Is there anything else? In transmission applications, where there are three or four persons appointed executors and trustees, with power to sell, I think the proving executors should be allowed to have a certificate granted to them. Cases occur where one of the executors and trustees being out of the Colony, it is very inconvenient and expensive, and occasionally very difficult to get at him in order to get him to execute a disclaimer. I may also observe that the practice which the examiners have of distributing cases once a month is bad and causes considerable delay; and I have heard this opinion expressed by one of the examiners. I think when cases come in they should, if possible, be dealt with at once; there ought not to be a specified time for distributing them. I think also that the acceptance of transfers, mortgages, &c., by the transferees, &c., might with advantage be dispensed with. It is often very inconvenient to obtain; it is a useless form, and only entails additional expense.

2716. Is there anything else? It appears to me that the Act should imply covenants for title in transfers. In the case of mortgages and leases, covenants are implied, not so in transfers. So if anything goes wrong, you simply have the assurance fund to go back upon.

2717. That results from the system; it is a registration of title, not of deeds, and nothing can go wrong if a person gets his certificate? Suppose he is ousted by a free-selector.

2718. The scope of the Act is that he will not be ousted, that the title is complete and indefeasible? There is another matter I wish to refer to: With regard to certificates of title, I think that boundaries should be set out as in the original grants, instead of a simple reference being made to the grant.

2719. I think you can get that done by application to the office. They do not do it as a rule, in order to save the work it entails? I also think that the time and the manner of advertising in the 16th section ought to be at the discretion of the commissioners.

2720. The time for what—for advertising? Yes; the Act specifies three classes of titles. Where applicant is original grantee, and no transaction registered, the certificate may issue at once. In the second class, where he is not the original grantee, the application has to be advertised for so many days, if there happens to be only one simple conveyance direct from the grantee to the purchaser. That seems a great absurdity. I think the commissioners should have a discretion given to them, as to whether advertising was necessary or not in every case.

2721. The difficulty is to draw a distinction between cases? —

2722. *Mr. Archer.*] Any arbitrary line brings a hardship? Of course if it were in the discretion of the examiners they could say: "It is a simple matter," and could pass it at once. If there were many transactions to consider, they could use their discretion.

2723. *President.*] Then you would give them a discretion in fixing the time according to the nature of the case itself? I think so. I may further state that according to the Act, a transfer, when it is lodged is to take priority according to the time when it is lodged; but parties lodging transfers have no guarantee as they have under the old system of the exact time when they are lodged. You hand in the transfer, and pay the fees, and get a receipt, but you have no guarantee that the transfer is registered in the order of time in which it is produced. I think it abundantly clear that some satisfactory evidence of the time when a transfer is lodged should be given.

2724. *Mr. Archer.*] Do they not give you a receipt for the transfer fee? Yes.

2725. Could they not put the hour when it is paid? Yes; but this would be hardly satisfactory. What I think the best way would be to have a book specially for the purpose, so that when a person took his transfer in he could see it entered—the time, and the nature of the instrument, and a number could be given it. That, of course would be satisfactory.

2726.

A. Gilder, Esq.
2 May, 1879.

2726. May there not be something in that way and you never have seen it? There may be—I believe there is ; but the entry is never made in your presence, which I think ought to be the case for the satisfaction of all parties. I might also suggest that plans and descriptions by surveyors, whether licensed or unlicensed under the Act, should be equally good. There are occasions when you cannot obtain the services of a licensed surveyor under the Act.

2727. *President.*] You mean surveyors licensed by the Government? Yes.

2728. Are they not entitled to a certificate if they apply for it, as a matter of course? I do not know whether it is as a matter of course or not.

2729. You see the duties of a surveyor licensed under the Act are different from the duties of a Government licensed surveyor? The duties of the surveyor licensed under the Act are to cut up and subdivide properties, which is often a very delicate operation. The surveyors licensed by the Government deal with new land, where there is very seldom a conflict. Of course, if the arrangement is that they have only to ask for a certificate, it is not necessary to say anything about it ; but I imagine that there must be a fee attached to it, or something of that sort.

2730. I do not know sufficiently well to say, but I think that if they are licensed by the Government they have only to make application and they get the appointment. Have you anything further to say? I do not know that I have anything more to say.

Henry Burton Bradley, Esq., solicitor, examined :—

H. Bradley, Esq.
2 May, 1879.

2731. *President.*] You are a solicitor of the Supreme Court, of long standing? I am ; of something over thirty-seven years' practice.

2732. And have had a good deal of experience in conveyancing? I have had my share.

2733. And since the commencement of the Real Property system you have practised in connection with the Real Property Office? I have done so.

2734. We should be glad if you could give us any evidence in respect of the working of the system? I will give you first my own general view of the whole subject, and you will be kind enough to put to me such questions as may occur to you. It has appeared to me that the arrangements, rather than the system, are defective. I allude to the placing of gentlemen of large legal knowledge and experience in a quasi-subordinate position to a head of the department, who is not himself legally educated ; and my own wish would be to see that a referee of matters in which the primary examiners of titles should disagree, should be appointed—a man of large legal experience in real property matters ; that the examination of the title by one examiner should be considered sufficient instead of requiring two to join in report ; that the system of requisition by the examiners in respect of objections to titles being vicious in its principle and inconvenient in its practice, I would desire to see it, at any rate, largely altered.

2735. Do you not think that system is for the benefit of the applicant? I think it is for the benefit of the applicant, but I think it is not for the benefit of truth. I think truth is what is intended to be arrived at, but I think the mode in which these requisitions are calculated to apply themselves to many minds—I do not mean to say to all (of course some are superior to any temptation of the kind)—is to the making of evidence where evidence is wanted, rather than to the production of evidence where evidence exists. I have always objected to that. For many years, as you will naturally suppose, I have conferred from time to time, more or less frequently, with my cousin, Mr. Burton, who is one of the examiners, upon legal points—not of course with the names of cases—legal points which have occurred to his mind and which have been difficult to determine ; and from a very early stage, certainly before the death of the late Mr. Holden, I felt it was to be regretted that that plan had been adopted.

2736. The present plan of sending requisitions? The illustration which I would offer is a very familiar one. We remember hearing of the Irish solicitor who told his client that he would have to prove certain things, whereupon the client went out and obtained in evidence what was intended to be proved very readily, but the evidence he got was not the evidence of truth, which is, unfortunately, the latter part of the story which I have introduced. I have felt that under the present system, or rather under the arrangements consequent on the present system, applicants have every inducement to bring very imperfect titles into the office, and then they make use of the brains of the Government officers to patch their titles for them with all such things as may be necessary to enable the examiners to pass them ; instead of bringing in their titles in the first instance in such a condition as that in which they would put their title before an ordinary purchaser's solicitor, who was not bound to swallow auction conditions, and that, by that means, a duty which ought to fall upon the applicant himself is made to fall upon the office ; that the office is thereby called upon to discharge a great deal more work—valuable work—work of a costly kind, than it ought to be called upon to discharge.

2737. Then you would have the examiners reject the title without giving the applicant the opportunity of correcting anything irregular or defective? I see the difficulty, and have not thought the matter out so as to propose exactly the remedy. I give you just these ideas of mine ; I have not prepared any statement of them ; I have not had time to do so, and perhaps it would not be convenient that I should offer my evidence in such a way. I state these things as objections that appear to me, and no doubt the commissioners will take them into consideration, and deal with them as they may think fit. It has appeared to me in practice to produce this sort of thing : A man goes to his solicitor, or to the counter below, with a bundle of deeds and a form to fill up an application to make a title for him. I do not think that is fair. He goes to a solicitor, and he says, " I want you to bring my property under Torrens' Act, and what will you charge me for doing it?" A great many solicitors will agree with their client for a certain sum to make the application for him ; they give themselves the least possible trouble, put the deeds into the schedule at the end of the application, and the title is sent in with all its infirmities about it for the office to put it to rights. I think if that system is to be continued, and the business of the country is to be done with reasonable celerity, that the Government, undertaking to do the conveyancing of the country, must provide a sufficient staff of conveyancers to get through it. Of course my objection is double in its application. The one is as to the morality of the matter, but that I must be content perhaps to dismiss here ; the other is as to the possibility of such a staff as there is now dealing with cases that are brought before them in the manner in which they are now commonly laid before them. The remedy appears to me to be very largely in this : The appointment, as I began by saying, of a skilled head, to whom the examiners in case of doubt might refer, and whose decisions might be final in reference to any point ; the
increase

increase of the number of examiners, and the ceasing to require more than one examiner to go over the same ground. I have observed that the mechanical staff of the office is under-manned, if I may call it so by reference to a vessel; that they have not men enough there to get through the ordinary work of the counter; that frequently such trifling matters as the registration of a mortgage of property under the Act, which, under the old law would be effected in five minutes, will take weeks before you get the papers back. I may mention a case which occurred to me, and in which my firm acted as agents for a house in Victoria. A gentleman who had occasion to borrow upon the security of land in this Colony near the border of Victoria, a large sum of money from one of their financial institutions, had to encumber fifty-six parcels of land. The grants from the Crown (they were all purchased from the Crown) of those fifty-six parcels of land had to be sent by post to Sydney and returned in the same way, involving a good deal of risk. Upon those fifty-six grants, and upon fifty-six folio of the register book, had to be made a memorandum in addition to the memorandum made on the mortgage. By this means there were 112 chances of error super-induced, for as you multiply the operation you multiply the risk of error. It took six weeks to register my mortgage, and I paid £6 for the registration. The reflection in my mind upon that matter was that I had not much to be thankful for. No doubt, a case involving many parcels of land must, under the present system, involve considerable delay, where every memorandum has to be stamped on every folium of the register and upon every grant involved in the title; but that it should take six weeks I do not think necessary if the staff were sufficient to perform the work. Here I might say that I believe that, in both departments, legal and mechanical, of the office, every officer is zealous and industrious, and works to the very utmost of his ability, and therefore I make no complaint when I say that in nearly every case I have had to wait from six weeks to three months to get a paper back registered relating to land which was already brought under the Act. I do not allude to cases of transmission of any sort, but to a plain ordinary case—ordinary transfer of a piece of land from me to Mr. Terry, or from Mr. Terry to me of a parcel of land under the Act—I have had such things as that in the office from six weeks to three months where there was only one piece of land concerned, and where there could be no necessity for the delay, unless the office were over-worked or under-manned.

H. B. Bradley,
Esq.
2 May, 1879.

2738. You are aware that part of the delay is caused by the system being one of registration of title, not of simple registration of instruments? No doubt that is the great distinction between the two systems.

2739. That necessarily creates some delay? Yes, necessarily. I have, or my office has had, occasion to make complaints of delays in reference to the manner in which the work has been done, and particularly we have had occasion to regret that the staff charged with the duty of making searches is also charged with other duties, and that it is impossible for a man charged with a weighty search to preserve, I would say, a continuity of thought in reference to it, by reason of his being perpetually distracted with other things. I allude to the condition of poor Mr. Lander, whom I sincerely pity. I would not occupy his position for anything that could be paid. I believe that the searches in one case—a case which I wish to adduce shortly—a case of Mr. Dibbs—I believe the searches in that case were five months in making.

2740. Mr. Lander does not make those searches? I do not know who makes them, but I fancy Mr. Lander performs a good deal of the work.

2741. He prepares the search paper; the searches are principally made by Mr. Kenyon? I think that perhaps with advantage a division of the work might be made between different examiners; that certain classes of titles might be disposed of by one gentleman or two, and certain other classes of cases by other examiners.

2742. Do you mean that you would have grades of examiners? I do not mean grades of examiners; I think that every gentleman who is appointed an examiner should be a well-skilled real-property lawyer, and I should not suggest the making of grades further than the grade which would naturally arise from my first recommendation that there should be a head—a legal man of undoubted superior capacity and knowledge—to whom the other examiners should be content to defer, and who should be the referee upon any point upon which they might feel doubt or hesitation. But what I mean is that such cases as those I allude to, cases of transmissions under wills—the difficulty of expounding which all legal men who are present will find no hesitation in admitting—that those transmission cases might very well be left to one person, who should always deal with transmission cases. Well, those transmission cases would by that means—the subjects being familiar in the mind of the gentleman to whom they should be committed—probably be disposed of with more expedition than they would be if distributed among a number of persons whose attention is not always given to cases of that class;—that another of the examiners might advise the office with reference to such questions as frequently arise, and which the mechanical part of the office is in the habit of disposing of, unless a case of difficulty present itself to the mind of the mechanical staff of the office, in which case they ask the opinion of the examiner. I think that division would be a good one to make.

2743. Would you make this division permanent? I have not determined that. It might be well that there should be an exchange of duties occasionally, but I think the work might be well got through by such a division among themselves as we make in our own offices with reference to the disposal of business of different branches, such as conveyancing and common law and equity, and other branches.

2744. Then you would leave it to the examiners themselves to make this division? That I have not determined, but I think that a division of the labour would perhaps tend to the work being done with greater celerity; and, of course, so much more celerity would be so much more to the satisfaction of the public.

2745. You would have something like the old system of making pins, I suppose, where one man spends his whole life pointing pins, and so is always engaged in that particular operation? Well, I think I have been pointing pins the greater part of my life, for I have seen little more than conveyancing during that time.

2746. I think your suggestion is a very good one? I think it is well worth consideration, or I would not trouble the Commission with it. We all know that whilst there is a disposition to fuse the branches of our profession, the Bar and the solicitors, solicitors themselves, in point of practice, divide their own branch as much as possible; and I think that as the work is so much better done in that way, it would be so much better done here, in this establishment.

2747. Division of labour always leads to perfection? We have had occasion, in reference to the matter of delay, to write several letters to the department, copies of which I have had taken from our books. I will not trouble the Commission with reading them now, but if you think fit I will lend them to you.

H. B. Bradley, Esq., 2748. We shall be very glad to have them? The dates are—11th March, 1878; 13th March, 1878; 1st March, 1879; and 8th April, 1879, in reference to Mr. Dibbs' case. I think that there appears on the face of those letters sufficient, without even what I said before, to indicate that we do not attach any blame to anybody whatever, but that our blame is attachable to the want of power in the office to get through the work. [*Letters handed to President.*]

2 May, 1879.

2749. I understand you to say that you consider Mr. Lander is over-worked? I do.

2750. Is he a man capable of performing the duties he has to perform? I should think so. As far as my observation extends I should say so.

2751. And any shortcomings on his part simply arise from his being over-worked? If there be a shortcoming on his part, it arises from over-work. He has worked in cases of our own, I know, over-hours, or at his own house; worked both very cheerfully and without asking for or receiving, or being offered, any fee or remuneration whatever. I gather from this that he is a valuable officer.

2752. Would you trust him to examine titles? I would not. My acquaintance with him does not justify me in doing so. He may be competent. I do not say he is not; but I would not trust him. I would say, perhaps, in justice to him, that I am aware he is a solicitor, and that there are many other solicitors in practice in Sydney whom I would not trust to examine a title for me. Perhaps it is because I am an old man, and attach too much importance to experience; but I have no reason to say that Mr. Lander is not equally fit with myself to examine a title, only that I would not place him in the position of doing so, because I have not the knowledge that would justify me in offering an opinion to that effect.

2753. Do you consider that the report of one of the examiners in favour of a title ought to be sufficient to enable the office to pass it? I think so.

2754. Even without the head that you are talking of? Even without the head that I suggested.

2755. Examiners, of course, may be incompetent? We ought not to have incompetent examiners appointed.

2756. Then do you not think it would be a risk to run to pass titles on the recommendation of one examiner only, considering that we may possibly have incompetent examiners? It would be a risk which every gentleman in this community accepts every day of his life, when he consults myself, or Mr. Dawson, or yourself, with reference to a title to a property which he is about to give £10,000 or £20,000 for.

2757. Yes, but he chooses his own solicitor—you are not entitled to choose your own examiner? The Government choose their own solicitor for examiner.

2758. It is not the Government, but applicants for titles, who apply for benefit under the Act. Any person may consult you or me, and will not do so unless they trust you or me, but when coming under the Real Property Act, they must trust the examiners appointed, not by themselves, but by the Government? With regard to that view, I would say that the applicant is never damaged by having the application rejected by the one examiner, for, in that case, he is entitled to get the opinion of the court if he likes to do so, or the opinion of the senior—the head of the legal staff of the establishment; or, if his application is accepted, he gets his certificate of title, and has no grounds for complaint. The Government may complain, the assurance fund may be damaged by reason of the ignorance, incompetence, or carelessness of the examiner. In the case we are supposing, the applicant himself cannot be damaged. The applicant still retains the same title he had before, whatever it was, and if it is ultimately rejected he is not damaged, though he does not get the benefit of the new Act, to which the examiner thinks he is not entitled. The applicant does not go to the court to set the examiner right, but submits to the decision. It does not seem to me that the applicant has a right to complain, but that the assurance fund would suffer if the examiner erred the other way.

2759. But it seems to me that he would be greatly damaged if his title is rejected? —

2760. *Mr. Terry.*] But you would give the applicant a right of appeal to the superior head of the establishment? Certainly.

2761. And if he passes the title the certificate will issue? Yes, so that you would get, wherever there was occasion for invoking it, the opinion of the superior intelligence—the superior learning; and for all ordinary cases the one examiner would pass the title. I would say that remuneration is not always a test of ability; that I do not think the office of examiner is sufficiently well paid; that a very much larger salary must be given to the person who is made the referee than is given to the gentlemen who now hold this office; and that, in order to the effectual working of the system, a much larger expenditure must be looked forward to than that which has hitherto obtained. With reference to that it will be of course also manifest that the work is continually expanding; that, as deaths occur, cases of transmission by will will continually be increasing in number. As property is subdivided again, a large increase of work will ensue, and that anything like the staff that was sufficient for the work at the time the first Act was passed must not be expected to contend with it now, even if no arrears existed, handed down from the old time—arrears which have always been the subject of observation, and often of complaint.

2762. *President.*] What do you consider as sufficient pay for an examiner of titles—I mean sufficient to enable the Government to procure proper men? I do not consider that that question can be answered by itself. It involves several considerations. No doubt in the case of any man, unless a very needy man—I can speak most confidently for myself, supposing that I were inclined to leave my private practice and accept office as an examiner of titles—there is no salary in reason that could be offered to me that would compensate me for being regarded as an officer in a department presided over by a layman.

2763. But suppose that difficulty were to be got rid of? Then I think that you might reasonably expect to command and retain the services of competent men for a salary of something like £1,200 a year.

2764. That is the salary at which Mr. Holden accepted office? That is the salary at which Mr. Holden accepted office, much to my surprise. I myself know from Mr. Holden that one of his great reasons for accepting office was his earnest, kindly desire to set this system forward under the most favourable circumstances, that he believed it would be a great public good, and that he sacrificed his own pecuniary interests very largely in accepting office under it.

2765. *Mr. Terry.*] What is the salary paid by the legal profession to their head clerks? I have no knowledge. I have always done my own business by myself, my son, and my partner. I have not indulged in the luxury of managing clerks. I was about to say, that some of those who have no doubt had to consider their responsibilities as a part of the payment, and that most of them have supervised their managing clerks. They have not allowed their managing clerks absolutely to deal with cases, but only to go through a sort of preliminary inquiry, comparison search, and consideration of matters, and that the principals have themselves eventually determined questions which the examiners would have to determine originally from their own stores of learning and information.

2766. *President.*] What pay do you consider would be sufficient for this head—the legal skilled head of the department you have mentioned? I would not offer him less than the present salary of the Judges. H. B. Bradley, Esq.

2767. The Puisne Judges? The Puisne Judges—£2,000 a year.

2768. He would in fact be very much in the position of a Judge? The duties of the examiner are very largely of a judicial character. Every one of us knows that in the expounding of wills, the most difficult duties which devolve upon us, a very high order of judicial intelligence is required; that a vast amount of time must necessarily be expended by the examiners in looking into outside cases, and that the great advantage of having a man well-skilled and experienced at the head of the department to whom the examiners could all alike refer when they pleased, and to whom a disappointed applicant might also refer, would be found, I have no doubt at all.

2 May, 1879.

2769. Would you have any more liberality in the examination of titles than now exists in this office? I do not know that I would. In examining a title it is almost impossible to say what objection will really turn out to be the important question. It is evident that there is a stitch dropped of some kind, but what that dropped stitch may lead you to you may not know. I have heard as a matter of history—I am not going to quote names—that a slip was made in the office very many years ago, in the days of two as good men as we have now—the days of Mr. Holden and Mr. Dick. Under a will partially read it would appear that certain persons took estates in tail. I have not seen the will myself, but I have heard the matter mentioned in the profession, and it is well-known. Upon reading the whole of the will, those estates tail were cut down to life estates. I believe that such purchases have been carefully made since, as have pretty well saved any ultimate loss or damage in consequence of the view which the examiners took in dealing with the estates devised as being estates tail instead of being estates for life; but of the particulars of those subsequent proceedings I have no information.

2770. You mean that these purchases have been made by the owners of the property who bought in outstanding interests? By the owners of the property. They bought up outstanding interests; they bought in, in fact, the reversions. I believe that the disregarding of what are called small points is liable to lead the department, as it would lead an individual, into a cursory system of examination; and whilst such a cursory system of examination may be sufficient in running over a large number of cases to justify a commercial institution in adopting such a plan, I do not think it is sufficient to recommend such a plan to an office which must deal with things upon some sort of strict legal principle. I will illustrate what I intend to convey by the case of the Bank of New South Wales: The Bank of New South Wales, many years ago, employed a gentleman who had conducted the conveyancing branch of a legal office of a good deal of experience in Sydney. They employed this gentleman as their conveyancer; they gave him a little room, and used to bring him in a bundle of deeds, as he has told me, some inches thick. In the morning, between 10 and 11 o'clock, he would be addressed, "Will you be good enough to look into this title; Mr. So-and-so, to whom the deeds belong, will return between 2 and 3 for the bank's answer—whether we will advance him a certain sum of money?" and this gentleman was expected to read through the deeds, make the necessary searches, and report upon the title. Of course no conveyancing counsel would offer to do the work in the same time; no careful solicitor would do it, and yet the bank was satisfied with the examiner almost without untying the tape, seeing from Smith to Jones, and from Jones to Robinson, and so on, and arriving at the conclusion that the last-named gentleman at the end of the bundle was the person entitled to the property. That sort of inspection, or a little more than that, could be all that that gentleman could afford to the title upon which he was required to give an answer in a day. I never heard that the bank lost any money by this careless cursory examination; but, notwithstanding that, it is not a course I could recommend, and therefore I think there is no proper mode of examining a title except a complete and perfect one. Whether after that complete and perfect examination shall have been attained every objection that appears upon the title to an absolute perfection should be sustained is quite another matter; and it is particularly with regard to such points as those that the advantage would ensue, I think, to the system, to the public, and to the office, by having the opinion of some thoroughly trained, skilled, experienced head. We are all of us familiar with the way in which such things are done. I remember perfectly well how the late Mr. Carr, a good conveyancer and man of experience, used to do his work. Thirty years ago, when Mr. Burton was his conveyancing clerk, he would get Mr. Burton to examine a title for him, and he was perfectly satisfied with Mr. Burton's examination. Mr. Burton would hand up to his master or employer certain points for Mr. Carr to determine, and he would say "Never mind this," would sustain another or more, and would deal with the matter precisely in the way in which I would propose the referee of the examiners might deal with doubtful points now.

2771. *Mr. Archer.*] Would you have that head look at every case in that fashion? Certainly not, unless required. I do not think it necessary. I would be content with one examiner's examination; and let the examiner himself, if he felt any doubt or difficulty, have the right to go to the referee to obtain his assistance. That, I feel, would be a very great advantage, and would result in this: that all simple matters would be very quickly disposed of, and the difficult matters would be disposed of with the advantage of another clear mind, which would not be encumbered by a great deal of the rubbish, so to speak, of the title, and which would be applied at once to particular points. The only objection is the expense.

2772. Expense of what? Expense of having a highly-paid officer. I think that whilst many of the fees are very large—at any rate sufficiently large for the work performed—such as the registration of an ordinary mortgage, and things of that kind, that the fees which are paid upon the bringing very difficult titles under the Act are very insufficient indeed, and that from the loose manner in which titles are brought in, and the immense amount of trouble given to examiners by titles going backwards and forwards through their hands several times, the public are mulcted to the extent by which the department is compelled to do what the applicant himself ought to have done beforehand; and although to a certain extent—I do not know to what extent—the expense of the department may be paid by the fees that come in, I do not think it at all fair that people whose titles or transactions are exceedingly simple, should be made to pay the expense which would, perhaps, be very cheaply paid for at £100 for many days' employment of skilled intelligence in examining titles. I am not prepared with a remedy for that condition of things other than the remedy which I suggested at the outset of my examination, by saying that I thought titles should be brought in in a more perfect form than in a great many cases they are now. I believe that to be not the fault of the solicitors, but the fault of the proprietors themselves, who, seeing that there are examiners appointed and paid by the public for performing a certain work, very naturally and parsimoniously think that the public might just as well bear the expense attaching to their title as that they should pay their own solicitors for doing it.

2773.

H. B. Bradley, Esq., 2773. *President.*] Could not the difficulty of patching up titles be somewhat remedied by charging extra fees for completing the title afterwards? There is no doubt that that plan would be a very good one, but I do not see how to apply it. We know that, in a case of difficulty which we send to counsel, counsel will mark his fee five or twenty guineas, according to the trouble he takes to look into the case, but he does that arbitrarily and after experience had of the work which has been done; but how shall any Legislature or department, beforehand, say in what manner an extra fee would be applied to all cases? There is a difficulty in that.

2 May, 1879.

2774. I mean if a case is patched up, after it comes in originally, extra fees might be paid for the privilege of making it correct? No doubt they should be; but I do not know how to apportion them.

2775. So much for every instrument lodged. I do not exactly see how it is to be done—but a possible scheme might be devised? I quite approve of the principle; it is what I aim at, if it could only be done.

2776. *Mr. Terry.*] Do you not think it would be an advantage to the Government if they got the whole of the titles of the Colony under the one system? I should be very sorry to see it; I merely express an individual opinion, but I would not hold land under the Act myself.

2777. *President.*] Not with amendments? Not with amendments. I do not like to see the Government charged with too much. I want to be as little governed as possible while I live. I do not admire the system of centralization.

2778. *Mr. Terry.*] I simply ask that question because of your saying you would charge additional fees; why should an applicant pay more for one title than another. He pays now according to the value of his title? I think he should pay the workman the value of his hire. I forget what the fees are now, but whatever a man pays on his application to bring land under the Act, though it may be a sufficient remuneration to the Government for doing the duty of inspecting a simple case, I think it is not sufficient to pay the Government for investigating a complicated case. I think if you employ one or two gentlemen whose services may be considered worth three or four or five guineas a day, and if you occupy the time of two of those for a fortnight for what will not pay the salary of one of them for a day, the public are defrauded, or applicants whose applications are simple pay more than they ought for the discharge of a simple duty.

2779. *President.*] That is unavoidable. In fixing the fees you must strike some general average? No doubt. By applying additional fees in the manner the President suggested, you would meet the case; but whether entirely or not you would have to determine.

TUESDAY, 6 MAY, 1879.

Present:—

JAMES NORTON ESQ., PRESIDENT.

SAMUEL HENRY, TERRY, Esq., M.P.,
THOMAS ROBERTSON, Esq.,

WILLIAM HENRY ARCHER, Esq.,
JOHN DAWSON, Esq.

Henry Burton Bradley, Esq., solicitor, further examined:—

H. B. Bradley, Esq.,

6 May, 1879.

2780. *Mr. Terry.*] Have you had any difficulty in this office in finding deeds after they have been once lodged? Great difficulty occasionally.

2781. And for that reason you object to lodge original documents? I can scarcely say that I object to lodge them, but I would much rather not, because it gives infinite trouble to get them back. I should qualify that by saying it has done so in one or two cases. I should be sorry to convey the impression that it is general.

2782. For how long have you had documents lost in this office? For two years, I remember on one occasion—the original power of attorney of the Australian Trust Company.

2783. *President.*] Who do you suppose are answerable for the loss of those documents? I cannot say. I know who found them.

2784. Who was that? Mr. Muddle found them in the drawer of his own desk.

2785. The Deputy? The Deputy.

2786. And to whom did you deliver them? I cannot at all say. They were carried into the office in the ordinary way by one of the clerks, and we sought many times for them, and many times it was denied that they were in the office. But Mr. Muddle found them for me in his desk, where they had no more business to be than in anybody's private residence.

2787. *Mr. Terry.*] Are you favourable to assimilating the law in this Colony, in reference to dower, to the law as it is in South Australia? I am not acquainted with the law of South Australia in reference to dower.

2788. They simply abolish dower? I should certainly be opposed to that. I think that women are not sufficiently protected and provided for. I should be sorry to withdraw any advantage which they enjoy.

2789. Then you would not recommend any means whatever for the abolition of it? Certainly none.

2790. Are you favourable to abolishing the assurance fee now charged on transmission cases? I would not abolish any assurance fund, or any portion of it.

2791. I do not mean the original assurance fee on the application or lodging of titles under the law, but a second charge, under will, for instance? Certainly not; I look upon it that a large amount of the risk which the office, or the fund rather, would be called upon to sustain in future time, would be found to arise under transmission cases. When I speak of transmission cases I allude, not to transmissions under insolvencies, but to transmissions by reason of death.

2792. *President.*] The assurance fee on transmissions has been abolished in other places? I am not aware of it. I answer with reference to the general principle.

2793. *Mr. Terry.*] Do you think there is any necessity for the production of original deeds in every case brought under this law where the deeds are registered below? I think it very desirable that the best evidence should always be obtained in reference to every matter, and that we should not resort to secondary evidence until the best primary evidence has been sought for and not found.

2794. Do you think an assurance fee should be charged on a purchase of land—a grant direct from the Crown to the applicant? I have never considered that question. Grants from the Crown are now liable to be defeated, not only by such means as they have always been liable to be defeated by, but also by means of free selection, and therefore a grant from the Crown made since the passing of Torrens' Act has

has ceased to be in my judgment the best title a man can hold his land by. When a certificate is obtained under this Act, an indefeasible title is obtained. A grant from the Crown to the applicant does not convey an indefeasible title. We have always supposed, until recent decisions under the Crown Lands Alienation Act, that a grant from the Crown imparted an indefeasible title. It is clear that it does not now; you have to go a little further.

H. B. Bradley,
Esq.
6 May, 1879.

2795. *President.*] Do you not think that those grants ought to be made as perfect as an indefeasible title? I do; I think it is absurd to allow a grant to be interfered with by the operation of free selectors.

2796. *Mr. Archer.*] You stated that you had experienced considerable delay at times in regard to transfers? Yes.

2797. Have you had similar experience in regard to applications to bring land under the Act? Oh, yes.

2798. What has been the nature of the delay in cases of such applications, and its extent? I do not know how exactly to answer that question. The delays have been various; the nature of them has been various also. Sometimes the nature of the delay has been that a large amount of time has been expended as I referred to in my evidence on a former occasion, in the preparation of search papers and the perfecting of search papers, the effecting of searches before the cases have gone to the examiners, strictly so called. Since I was here last week, I have referred to a letter which we received from the Registrar General, and which was alluded to in the correspondence I laid before the Commission—in which exception is taken to a statement of ours that a case, lodged in July I think, was not brought before the examiners until the following January, and in which letter of the Registrar General he refers us to a clause in the Act by which he is required, upon applications being lodged, immediately to refer them to the examiners, and stating that he had done so on that occasion. To save casuistry I would say it is evident there that the Registrar General refers to one class of examiners when we were referring to another class of examiners. We called his attention to the fact, and stated that the examiners to whom we alluded were not Mr. Lander, who prepared the search papers and conducted or directed the searches, and Mr. Pearson, the draftsman who looked after the parcels, overlapping boundaries and such things, but the legal examiners. No doubt a case may be said to be referred to the examiners when it is placed in the branch of examination; but when I or any other member of the profession, or any member of the public, complains that there has been a long delay, and the Registrar General reports that the case has been before the examiners since July, when, in point of fact, it never came to the hands of the legal examiners until the January following, a misconception is at once the result, and a complaint would seem to be thrown by our letter upon gentlemen who had not an opportunity of addressing themselves to the task at all, inasmuch as the case was never before them, although it was before branches of their legal division of the office preliminary to its coming into their own hands. I think that is the only way in which I can answer the question. I believe we must have had cases in the office for two years.

2799. How many years have you had experience of the office, personally? Ever since it was established.

2800. Have you had many cases put through? I daresay not so many as many others who have had much less business than myself.

2801. Have you had a dozen in the year? I could not tell the number.

2802. My object is to ascertain whether, on the whole, you have been satisfied with the dispatch in the conduct of business, or whether you and your clients have been much annoyed and put to trouble and expense in consequence of delays? We have been annoyed, and our clients have been annoyed, by the length of time which has elapsed between applications and certificates; but I cannot say that we have been put to unnecessary trouble, and our clients to expense, by reason of the lapse of time.

2803. You have never had what you considered unnecessary requisitions? I cannot say that we have.

2804. They have been judicious, and what you yourself would have made in your own practice? They have been cautious, and perhaps have surpassed what I should have made in my own practice; and there I must explain before I am asked another question. In my own practice, I have commonly found that auctioneers' conditions have tied my hands with regard to requisitions; that considerations of expedition, of expediency—a love on the part of clients of jumping things and taking risks themselves rather than being what they euphoniously term bothered by lawyers—in many cases they deliver me from necessities, in which I should otherwise have found myself placed in dealing with matters of title or strict evidence of title. Many people are content if they see a tolerably good holding title, and, knowing these facts, I should not be so scrupulous with regard to titles, or evidence of title under such circumstances, in practice, as I should be if an examiner of titles. An examiner of titles is a person, I take it, in the position of a surveyor of a ship for underwriters, who is bound to use every possible caution, not only for the purpose of protecting, as the illustration suggests, the assurance fund, but also for the purpose of protecting outside parties who are not before the examiners in any way—people who may not find much delectation in the perusal of the Government Gazette and who may not know of applications being carried through and legally advertised. That all those considerations would weigh with me, if I were an examiner of titles—which heaven forbid!—I have no doubt at all; and, therefore, with that explanation, I say that the requisitions of the examiners have sometimes surpassed what I should myself have made in the same cases in private practice.

2805. But from your practical experience in regard to titles, when you have received those requisitions have you ever looked upon them as in any way frivolous, vexatious, or too technical? Not at all.

2806. Then you do not share with your brethren of the profession in their complaints to us that such are their characteristics? I do not share with any one the opinion, however largely it may be entertained, and by whatever names it may be supported, that the object of the Act is to enable persons to get titles to property which they are not entitled.

2807. No, I do not put that? I must explain; or, if you wish, I can answer the question directly and give my explanation afterwards. I do not share in that opinion.

2808. Your impression in regard to the department, as I infer from your evidence, is that it is well-officered and well-conducted, both in regard to the legal and to the lay administration, but that the office is under-manned? That is my opinion.

2809. Have you had considerable personal experience in investigating titles? Very great, I suppose.

2810. Can you give us an idea of how long, on the average, taking the nature of the titles that exist in New South Wales, it would take you to go through a title? I can offer no opinion whatever.

2811. From your experience, supposing you were an examiner of titles and knowing the nature of the titles in this Colony, how many do you think that you could do in a week of the ordinary office hours? It depends entirely on the character of the titles themselves. I might find a difficulty in one title which

H. B. Bradley, Esq., would not seem to a layman a very complicated one. A title might comprise two deeds and a will, and a question of law might arise on the construction of that will which would require a long investigation of cases and an amount of consideration which would not be required in another case.

6 May, 1879.

2812. But would that not be exceptional? It would be to some extent exceptional; wills do not crop up in every title, but they do in some cases.

2813. But excluding that class of cases? We find, in practice, unless we send cases of that sort to counsel, and rid ourselves of the trouble and responsibility, that a great deal of time would be occupied in looking up a matter which a layman would give us no credit for looking up at all. In matters of ordinary conveyancing practice, you cannot lay down a rule for legal consideration in a day, or a week, or a year, as a grocer may determine how many chests of tea he may sell or put into his cart.

2814. I should not expect anything so unreasonable? I can give no idea about it, beyond approximating as nearly as you can expect me to do, in this way: I have found in practice that with two intelligent officers at work upon a matter of sale and purchase (with auctioneer's conditions, mind you), we commonly get our business done in something like a month or six weeks. If a purchase at auction takes place to-day, you get it completed within a month or six weeks; but it not unfrequently runs for six months, or even twelve, and, during the same time, of course we have other cases passed through the office, and a variety of other business along with it. The course of inquiries themselves occupies time.

2815. No doubt about that—the only question is whether you could approximate, and if I thought you could not I would not have troubled you to state it? I cannot state it in any way but that in which I have done; in ordinary business we find that cases go through our office in from a month to six weeks from the time they come in.

2816. You have not found as a rule that they get through a case in a month in this department? No, I have not.

2817. How long does it take, as a rule? I cannot say; I cannot charge my memory with it. For some years after the commencement of the operation of the Act I do not think that my office had any experience. During the days of Messrs. Holden and Dick, I am not aware that I attempted to pass a case through under the Act. When the examiners who succeeded them came into office, they inherited a large arrear of work, accumulated during that time, and of course with some little modification the rule, "first come first served," would naturally obtain, and therefore we did not expect to get our new cases disposed of immediately in preference to the scores and perhaps hundreds of cases which had been in the office a long time before ours were brought in. A great delay has arisen in consequence of our cases not being entitled to be treated at once, because there were others before them.

2818. My object in putting the question I did was simply this: It has been almost unanimously stated that the examiners are slow, frivolous, vexatious, and over-technical, and I was anxious to ascertain from you, as a man of large experience, whether those examiners are slow, *et cetera*, or otherwise; and whether you as an experienced conveyancer, could give any idea of the number of cases which a man with nothing else to do could get through in a week—I mean average cases, not exceptional ones as you illustrated, but taking simple ordinary cases, and leaving the others to be estimated by themselves? I am quite unable to do so. You are of course aware that the quality of the case must largely determine the length of time that will be occupied in its consideration; that a number of those cases which are brought before the examiners are brought because there is something avowedly awkward in the title which it is sought to cure under the operation of the Act; that, as I have known in practice myself, an objection arises in a title, the purchaser wishes to complete his purchase, the objection is a troublesome one, and the purchaser says, "I will complete the purchase if you will put the property under the Act"; and sometimes the vendor, relying upon getting up evidence meanwhile, will say, "I will put the property under the Act for you." That and similar instances show that a large proportion of the cases which go before the examiners may probably be such as, for obvious reasons, are required to be taken under the Act in preference to allowing them to remain outside with all their objections on their heads.

2819. Still, in all the affairs of life, where instances exist in large numbers, they are found to have similar characteristics, and averages can consequently be struck; if then a man has had a large experience in any particular walk, he can say on reflection how much or how little he could get through in a given time. It was in that sense that I asked you the questions I have; but of course if you cannot give any satisfactory statement as to average, I do not wish to trouble you further? I do not doubt that I could read through in an ordinary day's work, if uninterrupted, perhaps four long deeds in an hour—that unless these deeds disclose some peculiar defect I might arrive at a conclusion in regard to them at the end of the day; but it would be very unusual indeed that in the perusal of such a number of deeds, some (probably many) questions would not arise which would require not only legal research but research among the facts, and therefore, although my perusal of those deeds (say there was such a number of them as occupied six or eight hours, and four deeds to the hour), although the perusal of the title or evidence of title would be completed in one day, the consideration of that title would not be completed for a long time afterwards. I cannot tell what answers I may get to my inquiries, or what facts I may find on my searches, or how I might find decisions affecting the questions of law and difficulties which have occurred to my mind on reading the deeds.

2820. Then you consider the case that you have mentioned a fair average case? I do not consider it so; I do not consider twenty-four deeds an average case; I suppose average cases do not contain half the number of deeds—some cases would contain a great many more.

2821. Take an average case; how long would that take you according to the manner in which you have explained it? A man, if he were not disturbed, might read through probably two cases in a day—two average cases in a day.

2822. Nothing can be more satisfactory than that? But when he has read them I am not at all prepared to say he should determine upon those two cases in the day.

2823. But you think he could get through two ordinary cases? Under ordinary circumstances he could read through the evidence of title in two cases in a day if he had them before him. When he has read through this evidence of title, amongst other things that crop up is the question whether there ought not to be more evidence. With regard to that, I am quite aware that the applicants are required to make a declaration that they have brought in all papers in their possession or power relating to the title. I am quite aware also that in practice they do not do so. Deeds are found afterwards and brought in, sometimes twice—very frequently once—which ought to have been brought in at first. The effect of the neglect of applicants in respect of making their evidence of title perfect at first is very mischievous upon the examination

examination of a title. It causes very much additional work to examiners as it does to us in practice in the profession under the old law. I do not know by what means the difficulty may be avoided, because we know there is a punishment for a false declaration under the Act, but nevertheless the fear of the punishment does not deter or is not sufficiently deterrent. I believe one or two people in the early days of the Act were prosecuted for making false declarations, and one of them was convicted and punished for it—locked up for a few months.

H. B. Bradley,
Esq.
6 May, 1879.

2824. But if full information is brought you in the shape of all the documents necessary in any particular case, and you having nothing else to do, could you get through two cases a day? I could read through the evidence; whether I could dispose of the legal points with as much expedition I do not know.

2825. *President.*] Suppose you had all the materials before you, and had nothing to attend to but the investigation of titles, do you not think you could peruse the majority of titles and prepare all proper objections and requisitions at the rate of one title per diem? Average?

2826. No; the ordinary run of title; leaving out exceptionally heavy cases? Leaving those out, I should hope to do so.

2827. The great majority of titles consist of about six or eight deeds, or say not more than a dozen? In answering that question I ought perhaps to add that when this perusal and the preparation of requisitions have taken place something else comes at a future time.

2828. Never mind the future time? Namely, the replying to the requisitions, and the consideration of the manner in which those requisitions are replied to or complied with. I would not be understood to say that they should be dealt with without any expenditure of time. If a man should get through two titles in a day at the average we have been speaking of, he should be allowed certain of his days for the consideration of this additional work which comes in consequence of his first half day's work. That of course will account for a good deal of his time.

2829. What I am asking you now is about the original investigation? Yes the original investigation.

2830. You could peruse one ordinary title and prepare all necessary requisitions and objections at the rate of one title per diem—never mind what follows? Oh! certainly.

2831. Then of course questions arise under your requisitions and objections that involve further expenditure of time? That involve further expenditure of time.

2832. You mentioned just now that between two competent officers the completion of a purchase occupies a month's time? A month to six weeks, I have commonly found.

2833. Does not that completion involve a great deal besides the investigation of title—question of tenancies, arrears of rent, and various other matters that do not bother the examiners of titles? No doubt other matters are involved in the transaction of business between two attorneys' offices than those involved in the examination of titles by examiners.

2834. So that if those other matters do not come into question, a sale may be completed in much less time? If the two competent officers had not a great deal of other work to do at the same time which distracted their attention.

2835. But notwithstanding their having other work to do, and being bothered with questions which do not affect the examiners, as a rule a purchase may be completed in a month or six weeks? As a rule a purchase may be completed in a month or six weeks.

2836. Do you know of any case where an application for title has been made to this office, and where requisitions have been received by the applicant within six weeks? Oh, I think so.

2837. As a rule, are they received within that time? Requisitions or observations?

2838. Call them what you like—requisitions, objections, or observations; the document that is sent out to an applicant as the first intimation of the examiners dealing with his case? I think so. I have two or three cases in my mind where that occurred.

2839. When did that occur? Within the last two or three years; I was surprised at getting them, knowing the arrear there was in the office.

2840. *Mr. Terry.*] Do you think it right that titles should be passed, subject to qualifications, and then advertised? It is in case of the applicants.

2841. But do not some of those qualifications amount to a strong recommendation against the title? No doubt they may do so; but I find there is provision made for it in the English Act passed about the same time as our own—the English Act for registration of titles, 25 and 26 Victoria cap. 53, if I remember rightly.

2842. Is there anything in our Act as to titles passed subject to qualifications? I fancy this arises from the practice under the system prevailing here, which is, that the examiners report to the commissioners, and the commissioners grant the certificates, comprising, or not comprising, as they think fit, such qualifications as the examiners may have stated in their report to be preliminaries to the issue of a clean certificate of title.

2843. *Mr. Dawson.*] Do you consider that whenever a person conceives himself aggrieved by the issue of a certificate of title to another, or by its refusal to him, in fact, in any case where a decision has been put forth by the Registrar General or the commissioners in which decision he does not concur, he should have a right of appeal at all times to the Supreme Court? I think so.

2844. *Mr. Terry.*] After the certificate is issued? —

2845. *Mr. Dawson.*] Yes, after the certificate is issued? After the certificate is issued I should say his course is to proceed for compensation against the assurance fund.

2846. But where the certificate has issued in error, and may have had the effect of dispossessing a man of what has been his home for years and years, causing a loss which no compensation whatever would cover—in such a case as that would you not give an appeal to the court at all times? I certainly would, and one of the greatest objections to the present system is that a man may be deprived under it of that for which no pecuniary consideration would compensate him.

2847. *Mr. Terry.*] Would that not do away with the Act altogether—virtually rendering it useless? I think not.

2848. Where is your indefeasibility, if that appeal to the Supreme Court were carried out? The appeal might be hedged round with the necessary precautions, and proceedings might be required to be taken within a certain time. I have always felt that the preliminaries to the operation of the Act are quite insufficient for the purpose of warning persons who are absent, with regard to property which is not in their actual occupation; that the expectation that people who are not employed all their lives in the purchase and dealing with land, will read the Government Gazette and all the newspapers published in the Colony, is an expectation too great for any reasonable person to entertain.

2849.

- H.B. Bradley, Esq. 2849. *Mr. Archer.*] Then if a person came forward and said he had not seen the advertisements, would you make that a sufficient reason for an appeal to the court? Certainly not—not a sufficient reason.
- 6 May, 1879. 2850. *Mr. Terry.*] Was not the assurance fund under the Act established to meet all such cases as those alluded to by Mr. Dawson? I do not think that pecuniary compensation would meet cases of the character referred to by Mr. Dawson.
2851. *President.*] You think that if the certificate is wrongly issued, for any reason whatever, the person aggrieved should have the right to appeal to the Supreme Court? I think so—within a certain time. I would limit the time. I think that the applications would be very few, and probably would give very little trouble. I think that the principle is a good one. I do not like the principle of dealing with a matter behind a man's back. I approve of the maxim *audi alteram partem*.
2852. But I suppose you would not allow the right of appeal in a case where the grantee of the certificate had, previous to the appeal, transferred his property to someone else—a third party? No, certainly not.
2853. That would be a proper case for an application to the assurance fund? That would be a proper case for an application to the assurance fund.

Alfred John Cape, Esq., M.A., solicitor, examined:—

- A. Cape, Esq. 2854. *President.*] You are a solicitor in large practice? Yes.
- 6 May, 1879. 2855. And I suppose you have had a good deal to do with the Real Property Office? Yes, I have had a fair connection with it.
2856. In what repute does the office stand with solicitors and the public? Not by any means in good repute as far as my observation goes.
2857. How has it come into such disrepute? I should say owing to the vexatious delays, and to the nature of the objections that are frequently made in cases of applications.
2858. Can you say how the delays originate in the office—which branch of the office is answerable for them? The delays I have noticed most are in connection with the examiners of titles; the time taken in the investigation of titles is unusually long. If a solicitor in private practice took anything like the time taken here, the result would be that he would not get any practice. I have had one case in the office—a comparatively simple case—which, I think, took two years and four months. The average time of the cases is from twelve months to eighteen months.
2859. Are not some of the delays occasioned by the solicitors or applicants themselves? No doubt, frequently, in delaying answering requisitions that are made; but I am talking of cases in which both clients and solicitors have been anxious to get their application settled, and where there has been no unusual delays on the part of the applicant or his solicitor.
2860. Then, in cases where there has been no delay on the part of the applicant or his solicitor, the case still takes twelve or eighteen months? That is the average run, as far as my experience goes. I believe that delay arises, to a considerable extent, from the fact that there is either a want of, or too much, method in the office. Your answers to requisitions may go in to-day, but it does not by any means follow that they will be taken into consideration that day or the next day, or, perhaps, for a considerable time. Owing to some practice in the office, an application has to wait its turn for consideration of the replies to requisitions, so that if an application has been shelved by the examiners sending out a requisition, and there is a long list of other applications following upon it, when the requisition in the first application is answered it has to wait its turn on the examiner's list before the reply to the requisition is considered. That is a practice I have been given to understand prevails in the office. Thus a very simple requisition might be made which could be answered very readily, and probably would be answered the same day, yet it might take a month or two, or three months, before the reply was considered. The application has to wait its turn on the list.
2861. Then I presume you consider that when an examiner is once seised with a case he ought to go at once into the question of answers to requisitions, and not postpone them for other cases not yet commenced? I think it is a matter in which the examiners ought to use their discretion, and not follow any strict rule. Where there is a straightforward title upon which requisitions are made, and the replies are simple, it is a case that might be passed over at once. If, on the other hand, it was a title involving some very difficult point, perhaps the examiners would be justified in laying it aside until they had more leisure to consider it. I do not think this is a matter in which a hard and fast rule ought to be laid down and followed strictly. I have been given to understand that there is such a routine here, which a case, however simple it may be, has to go through.
2862. Do you think the examiners afford facilities to applicants, and try all they can to get the work through? That is rather a difficult question to answer.
2863. I mean by the way in which they deal with cases; do they seem anxious to get the cases passed, or, as some people say, anxious to reject them, for fear of incurring some possible responsibility to the assurance fund? They certainly appear to be very frightened about this assurance fund. It has always been held out to applicants and their solicitors as a kind of bugbear; but very often I think highly technical objections are taken through some fear that the assurance fund may be attacked.
2864. *Mr. Terry.*] Would you take those objections in private practice? Certainly not.
2865. *President.*] Do you think the examiners' fear of damaging the assurance fund leads them into taking too minute and too technical objections, objections that need not, in fact, prejudice the validity of the title? In very many cases I think so.
2866. You have had a great many cases where you have acted as solicitor for purchasers? Yes.
2867. Probably a good many under open contracts? Yes.
2868. Do the examiners take more captious or fine-drawn objections than you would do yourself when you act for a purchaser under an open contract? In very many cases I think so.
2869. Objections that might be fairly overlooked? Highly technical objections.
2870. That might be fairly overlooked, and cannot prejudice the title? Yes.
2871. And they insist pertinaciously upon having those objections removed, or do they give them up? They generally insist upon them. When once an objection is taken it is generally insisted upon, as far as my experience goes.
2872. Have you not known cases where they have taken objections and not insisted upon them? Not that I can recollect. They generally press for some evidence to satisfy every requisition.

2873. The objection has been cured? There has been some evidence that they have been satisfied with. Documents have been produced which satisfy them as admissions of title or something of the kind. I do not recollect cases where they have waived objections altogether. A. Cape, Esq.
Esq.

2874. Can you give us, from your experience, an idea of how long it takes to investigate a title generally? 6 May, 1879.
What kind of a title?

2875. Dealing with the ordinary run of titles, how long would it take you, if you had nothing else to do, to investigate that title and state all the requisitions and objections which present themselves? Taking the ordinary run of titles, if I were not disturbed I could easily get through a title in a day.

2876. Would you easily peruse a title and find all objections that exist, and probably prepare your objections in one day? Yes, the ordinary run of titles. There are some old titles, the Riley estate title, and other similar titles, commencing from an early period, and which contain very complicated dealings, that might take a much longer time for consideration.

2877. I do not care to go into exceptional cases. Then each examiner here ought to be able to deal with, in the course of the year, 300 titles, supposing he had nothing else to do but to examine titles? Well, I think that would be hard work, because I suppose, as a rule, the ordinary run of titles are not brought up here.

2878. Oh yes they are? I suppose an examiner of titles here would have, in the course of the year, more difficult and complicated titles to peruse than a solicitor in private practice.

2879. I do not think there would be very much difference, because a great many non-professional men bring titles here, and do not know whether the titles are difficult or otherwise. They come here only for the purpose of getting a salcable title—what they consider would be a better title than the ordinary title. Do you think there are sufficient examiners to get through the work of the office? I think so.

2880. And you think that the three examiners ought to be able to dispose quickly of all titles that are brought in? I think so. I have thought at times that it would be convenient if there were some Board of appeal, or some authorized official of ability, who could decide difficult points to be referred, and whose decision would be conclusive. Where, for example, two examiners hold different views, I think there should be some ready and inexpensive means of getting at a conclusion. I happen to know of a case in the office affecting a large property here. The title was passed in three different cases, but a fourth case was lodged and was not passed, notwithstanding that the same title had been previously passed, because of an objection taken by the then examiner; there were some decisions one way and some the other, and the examiners did not or would not decide, and the application was withdrawn. It occurred to me that in a case like that, if there had been some Board of reference or ready means of appeal the point could have been decided at once. No doubt there are many similar cases.

2881. Do you not think the Board of Commissioners is competent to deal with such difficulties? I do not think the Board of Commissioners are professional men. These matters would probably be such as would involve a good deal of legal knowledge.

2882. Have you considered whether the Board of Commissioners is of any advantage at all in working the Act? I have not considered that, because I know so little of them. The profession do not come in contact with the commissioners.

2883. But you think it would be an advantage to have some individual or body to whom applicants could appeal against the examiners? I think so.

2884. Suppose a commissioner of titles or a master of titles, as they have in some other Colonies? Yes, if considerable care were taken in his appointment.

2885. A man of standing and ability? A man of good standing and ability.

2886. Can you give us any instances of abuses in the office of any character? What kind of abuses?—I do not know of any —

2887. Do you know of any case of expedition fees paid to any officer in the department, or anything of the same character? No, I do not—nothing that I can speak of.

2888. Do you know whether the officers are all efficient? I believe they all try to do their best.

2889. Do you think there are sufficient officers to work the business of the institution? Certainly not in the clerical department.

2890. At the counter? At the counter. There is great delay and loss of time occasioned by the insufficiency of the staff, or by the want of method. I have often had to complain of the time occupied in taking up deeds. Say six persons are waiting for information or to take up deeds. Five of them might be answered at once and their business disposed of. The sixth might take half-an-hour, and the other five have to wait their turn until he is done with. There is only one clerk attending to these six people. When a person goes to take up a grant, if there are five people in before him he might wait the whole morning before he could get his grant, because some of these before him may want information which occupies the clerk a good deal of time looking up. Then if you go to deposit a transfer or mortgage, or other dealing for registration, the same clerk receives the document, examines it, enters it in a book, receives the fees, and posts up the fee book. He has to make three copies of this fee receipt, and you have to wait while all this is being done. I think that there is some want of method in this respect.

2891. Can you point out any other grounds of complaint? There is a matter in connection with the searching which, I think, requires amendment. If you go up to the office for the purpose of making a search for incumbrances you are not allowed to make the search yourself. A clerk in the office makes it, and you are obliged to take the report of that clerk as conclusive. If the clerk has made a mistake, you suffer; and, if you are a solicitor, possibly to the extent of thousands of pounds. The clerk has no special interest in the search. If, for instance, you came up just before the closing of the office and want a search made, the clerk being in a hurry to get away, may have slurred over some incumbrance on the register, and reported to you that the land was clear; you would have to take his report, and if found incorrect, you or your client would suffer.

2892. Then I suppose you would prefer having written certificates that the property is free from incumbrances? I would very much prefer having written certificates; it would relieve the searcher who cannot himself check the search, and it would bind the office—bind the assurance fund. The books are kept behind the counter, or a good many of them. If the public were allowed to make searches themselves it would cause great confusion. As a matter of regulation the public are not allowed behind the counter, but some persons do go there—some of the solicitors' clerks go there to overlook the search from anxiety in the question of searching, I have no doubt, because if they bring to their principals a wrong result they would most likely suffer.

- A. Cape, Esq.** 2893. Are there any other matters? In connection with the dealing with land previously to the issue of the grant, I think that dealings might be expedited. Formerly you were able, under section 99 of the Act, to register a dealing on the production of the Treasurer's receipt for payment of the balance of purchase money; now the department will not register unless you present a formal certificate from the Under Secretary for Finance and Trade or the Colonial Treasurer that the purchase money has been paid—a formal certificate, and that sometimes takes six weeks or two months to procure, entailing repeated applications at the Treasury and the Lands Office. Formerly a dealing was accepted simply on the Treasurer's receipt.
- 6 May, 1879.** 2894. And what do you say they require now? Before they will allow the dealing to be deposited in the office they require a formal certificate from the Under Secretary for Finance and Trade or the Colonial Treasurer, that the purchase money has been paid; and what I say is that the onus of getting that certificate is cast upon the public, and it takes a very long time to get it. Some years ago they accepted the ordinary printed receipt.
2895. Printed receipt of whom? Of a clerk on behalf of the Colonial Treasurer, given to a person when he paid up the balance on his land.
2896. And now, instead of the clerk's receipt, they require that of the head of the office? It is a formal certificate by the Under Secretary for Finance and Trade that the payment has been made. You have to go through a lot of forms to get at it. Under section 99 the Act authorizes you to register on the Treasurer's receipt.
2897. Have you any other matters to mention? In cases of transmission applications, if some amendment could be made in the Act to meet such cases, to simplify the dealing, I think it would be a large benefit. Unusual time is taken to get trustees or devisees registered proprietors by transmission. Under the old law you could deal directly the testator had died; but under this Real Property Act you have to go through a long process of getting the representatives registered proprietors by transmission, and answering a number of requisitions, very much like an original application.
2898. Do you think a fresh assurance fee ought to be paid on any of those transmission cases? I have not considered that at all.
2899. It has been abolished in some of the other Colonies. Do you think an assurance fee ought to be paid on the issue of an original grant where there are no past dealings to be afraid of? I think it would be difficult to draw a line. There might be outside dealings by the grantee which would bind the land. There is another troublesome matter in connection with original applications and the issuing of certificates of title, and that is the practice of noting dower. There are very many certificates issued in which dower is noted as an incumbrance, and the chances are ten to one, owing to the lapse of time since the Dower Act, there is no dower at all, but yet it is a blot on the certificate. It may be extremely difficult for you to get evidence satisfactory to the examiners to negative dower. If some amendment can be made to meet that, or some provision for the few exceptional cases where dower might attach, it would be beneficial. I have had cases where certificates have issued with this dower notification, and where there has been certainly no reasonable belief that any dower existed, but there was difficulty in proving to the satisfaction of the office that it did not exist.
2900. And you cannot propose any remedy for getting rid of the difficulty? I have not considered the matter.
2901. If you swept off dower altogether it might work injustice to some women? Very few.
2902. *Mr. Terry.*] You are aware that it is abolished in South Australia? I think it would work injustice in a very few cases.
2903. Would you like to see it abolished here? Yes. There is another matter I might mention. It has become a practice in this office, where a mortgagee sells under his power of sale, to require and insist on proof by statutory declaration that default under the mortgage has continued up to the time of making the declaration. As far as I understand, they will not accept a dealing unless such proof is tendered. It is under section 55. I think if this practice is pursued it will be found to open a great many difficulties. Of course in many cases such a declaration can be given, but if it is insisted on always, there may be cases in which a mortgagor makes a tender to the mortgagee after a sale.
2904. *President.*] You think that system gives the mortgagor too great privileges? Quite so. It allows the mortgagor to tender after the sale. The mortgagee could not then make the declaration. I think the Act is very explicit on these points, but the court have decided, by a majority, that a declaration should evidence default up to the time of sale.* The Act does not say that; sections 55, 56, and 57, only require proof that default has continued for two months. Here, as far as my practice goes, the department insist upon proof that the default has continued up to the time of the mortgagee making the declaration to enable the registering of the transfer, that might be years after a sale.
2905. Have you any other point to refer to? Nothing further occurs to me.
2906. *Mr. Terry.*] Have you had any difficulty in dealing with leases under this Act? No; I have had very little dealing with leasing property under this Act.
2907. Have you found any more expedition in the office since Mr. Maddock was appointed an examiner? I have not had many recent applications. The application branch has become a kind of bugbear with the public? I have advised clients several times not to bother about bringing their land under the Act, because of the delays and objections.
2908. Which of the examiners makes those most technical objections that you have alluded to? I would rather not mention any names.
2909. Does Mr. Burton? This is not purely a matter of individual opinion; different persons form different estimates. I do not wish to particularise.
2910. *Mr. Archer.*] It is scarcely a matter of opinion, it is a matter of fact? —
2911. *Mr. Terry.*] Who were the examiners in the office at the time of your bringing in applications to place property under the Act? I have had business dealings with the department almost since the Act came into force.
2912. Well, you had no difficulty when Messrs. Holden and Dick were in the office? No.
2913. Do you think Mr. Burton could succeed as a private practitioner if removed from this office? I do not think so, in conveyancing, if the same time were taken up investigating titles as is taken here.

FRIDAY,

*NOTE (on revision):—*Ex parte* Hassall, 10 Supreme Court Reports, 292.

FRIDAY, 9 MAY, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P.,
THOMAS ROBERTSON, Esq.,WILLIAM HENRY ARCHER, Esq.,
JOHN DAWSON, Esq.

William Henry Binsted, Esq., licensed surveyor, examined:—

2914. *President.*] You are licensed by the Government and by the Real Property Office? I am.
2915. And you have had some experience in dealing with titles under the Real Property Acts? I have. I have been a staff surveyor to the Government, and I am also licensed by the Governments of Victoria and Queensland. I have passed an examination in each Colony.
2916. You are aware that under the Real Property Acts of this Colony certain plans can be prepared only by surveyors licensed under the Act? I am.
2917. Do you know whether plans have been prepared and brought into this office by surveyors not licensed under the Act? I am aware that they have been, but I cannot indicate the exact plans.
2918. But you know the fact that plans have been prepared by surveyors not licensed under the Act? I know that is the fact.
2919. Do you mean plans lodged on applications for certificates? Yes, I do.
2920. And subdivision plans? Subdivision plans in cases where they have referred to two or three portions, but not in a large estate where there is a great number of allotments; they insist then on a licensed surveyor certifying to those plans. Cases of two or three or more portions of a large grant, I have known, where the people certifying have not been surveyors at all.
2921. Are you aware of any plans of land divided for a township being brought into this office, prepared by unlicensed surveyors? I am not aware of any such having been prepared by unlicensed surveyors. I cannot say whether there have or have not been any.
2922. But plans on applications for title have been prepared by unlicensed surveyors? Yes, many.
2923. Surveyors not licensed by the Government? Well, we do not recognize anyone as a surveyor unless he has passed an examination, which is the only criterion of a man being a surveyor. (*Witness's certificates handed to President.*)
2924. These certificates seem to me to be the test of a man being a licensed surveyor. Have those plans been prepared by persons not holding certificates? They have.
2925. Do you know whether any harm has come of plans prepared in such a manner? Many instances have come under my observation of considerable errors existing in the surveys.
2926. I suppose you have had to deal with those plans afterwards? I have.
2927. And that is how you have discovered the errors? Yes; measuring the ground in the vicinity. And I have discovered errors as Government surveyor—plenty of them.
2928. Do you consider it objectionable that any person should be allowed to practice in this office who is unlicensed by the office? Most decidedly; for good reasons.
2929. How is it these gentlemen have been allowed to practise when the Act requires that no person shall be permitted to practise as a surveyor under the provisions of this Act, unless specially licensed by the Surveyor General? I am unable to assign a reason for it.
2930. Can you inform us of any difficulties that have arisen in this office in the working of the Act, in connection with plans and the draftsman's department? I cannot; I have known that difficulties have occurred, but have made no particular note of them. I could not instance any of them; I presume they are well able to do so themselves.
2931. Have you any suggestions to make in reference to the Act? I would mention with regard to the working of the Act, that they have held here that only licensed surveyors need sign these plans when they are plans of subdivision of township, but when it is the surveying of a whole estate, where the boundaries are complicated and require all the experience and the judgment of years which a surveyor may have acquired, they do as they like about it, no matter whether the surveyor is licensed or not.
2932. Then you consider it just as important that a licensed surveyor should make the plan in the original instance as that he should make the subdivisional plan afterwards? Undoubtedly, in the interests of the public.
2933. The correctness of making a subdivisional plan depends on the correctness of the original plan? Entirely. A junior could make a subdivisional plan afterwards.
2934. Then you think the subdivisional plan is less important than the original plan? Certainly I do. I have had a great amount of experience in the bush and in various places in finding out old boundaries and reconciling conflicting boundaries, finding out that Government boundaries sometimes even overlap. I know the serious nature of it, and the very heavy and costly actions that might arise under these things unless thoroughly and properly done.
2935. Can you tell us any reason why these unlicensed surveyors have been employed here? The only reason given on inquiry here is that they say, I think, that the Crown Law Officers have decided that the 100th clause applies only to the plans of subdivisions, that is on land subdivided into a number of allotments.
2936. And why should these unlicensed surveyors be allowed to practise in preference to licensed surveyors? I cannot say.
2937. Is it any question of favouritism in the office? I should not wish to impute anything of the kind.
2938. Are these men persons of superior ability although unlicensed? I think not, and the door once open any one's plans may be adopted.
2939. Have many been allowed to practise in this way? Yes, many.
2940. How many do you suppose? It is impossible to say.
2941. A dozen? More than a dozen. The records would show a hundred, perhaps, rather than a dozen.
2942. *Mr. Robertson.*] The department themselves do not employ unlicensed surveyors, do they? Oh, no; they do not recognize any work but from licensed surveyors. I may say that a circular was issued by the Land Titles Office some years ago, for the guidance of licensed surveyors. I remember one paragraph, which stated that surveyors were to consider themselves more the agents of the Government than of those people who incidentally employed them. That being the case, we naturally look for some sort of

W. Binsted,
Esq.
9 May, 1879.

W. Binsted, Esq.
9 May, 1879. of protection in this department itself; but, as matters are at present, a licensed surveyor has no status at all, because anyone's work may be accepted: It rests entirely with the Chief Draftsman as to what work to accept.

2943. You mean that those instructions give you a sort of retainer to protect the interests of the Crown in making these surveys, so that the assurance fund may not be prejudiced hereafter? So that the office may not be involved in disputes. Though employed as licensed surveyors by the public, we should consider ourselves more as agents of the Government, so as to keep the Government office out of all difficulties. Of course we expect something in return for that. I dare say there is a copy of that circular in the office here. It is very stringent, as far as the surveyors are concerned, but more honored in the breach than in the observance.

2944. *Mr. Dawson.*] Does it rest with the chief draftsman to accept or refuse a plan prepared by an unlicensed surveyor? It does, in point of fact.

2945. He is the arbiter? Yes. Reading the 100th clause of the Act, it refers only to plans of subdivisions, the positive plan of a township, and something of that kind; but there are many plans here—parts of original grants—which are certified by unlicensed surveyors.

2946. *Mr. Archer.*] I suppose the base lines are often wrong? Yes, they often are.

2947. Is there not rectification of this in many instances? How?

2948. Are not places built upon, and the errors which may have existed originally, condoned by time? Sometimes; but in other cases they are not. The President can tell you that in connection with the Underwood Estate knotty questions have arisen.

2949. Do you think, in the interests of the public, these original plans should be dealt with by licensed surveyors? Undoubtedly.

2950. *President.*] Do you consider the chief draftsman a man of ability and thoroughly trustworthy? As far as I know.

2951. *Mr. Archer.*] This thing has been going on for many years? It has.

2952. Have you known of any serious loss accruing from it? I have known of many errors in these surveys, and I suppose they have led to loss.

2953. You have not known of any instance where practical importance was attached to any one of those errors? I have known instances, but cannot quote them. Very serious errors have occurred. I might also mention that there is one case, which I cannot exactly say I am in a position to prove, where a licensed surveyor was employed in a district by the Government, and then found so very incompetent that he was dismissed the department; but he has subsequently been signing plans as a licensed surveyor.

2954. *Mr. Archer.*] Is he in possession of certificates of competency? Yes; they have not been cancelled. A surveyor may go into the field and be found incompetent, but the Government may say, "If we take his license away, he loses his bread and butter."

2955. But if he is incompetent, how does he get his certificate? The examination was not so strict formerly as it has been during the last few years; a letter of introduction has been sufficient sometimes.

2956. Then it would be necessary to draw the line even with the licensed surveyors? Yes, it would be so. You will observe, from my papers, that I have separate certificates, and one is almost contingent on the other. A surveyor must pass an examination for one, and having received that, he afterwards gets the other.

2957. *President.*] Are the certificates of surveyors, allowing practice in the Real Property Office, signed by the Surveyor General? Yes, they are. In connection with the case of the surveyor I referred to just now, I might mention that he is employed as clerk in a business quite distinct from that of surveyor, and is located a long way from Sydney. His "statutory declarations" are so loosely worded, they may refer to any plan; and he probably is not aware whether his "declaration" will be appended to a plan of a few allotments near Sydney, or to a plan of 200 allotments situated 300 miles away.

2958. *Mr. Archer.*] And are those accepted in this office? Yes.

2959. *President.*] And those declarations may be annexed to another plan? Yes, and the surveyor who signs the certificate may not have the slightest idea of what the plan is.

2960. The cure for it is endorsing the certificate on the original plan itself; not having it annexed? And have it signed by the J.P. who witnesses the signature.

Mr. William Shirley Muddle, counter clerk, examined:—

Mr. Muddle. 2961. *President.*] What is your position in the Real Property Office? Counter clerk.

2962. And the duties? Well, my duty is to receive all documents for registration—all documents that pass across the counter in connection with anything.

9 May, 1879. 2963. Applications for certificates, and the title deeds and plans lodged with them? Yes; in fact it may be termed the mouth-piece of the office. Through me almost all questions and answers go.

2964. What do you do with applications when you receive them, and the documents accompanying them? Well, we first give a memorandum of fees, and then they are entered in the application book either on the day they are received or at the latest, next morning, and then passed on upstairs to Mr. Lander, to be dealt with by him.

2965. How long is it before they reach Mr. Lander's hands? An application lodged to-day would in all probability go up to-night; at all events it would not be later than to-morrow.

2966. Then they are never detained downstairs? They are never detained downstairs.

2967. Any delay that subsequently occurs arises from the acts or neglect of the officers connected with the examination of titles? Exactly so.

2968. And you can say that they are never detained by the counter clerks or in their department? Never detained; we are too anxious to get rid of the work and get it out of the road; we should be swamped if we did not do so.

2969. And they are detained in the examiners' department? I cannot say; I believe they are.

2970. Have you heard complaints to that effect? Frequently.

2971. The public or solicitors come to you and make complaints that they cannot get their cases proceeded with? Precisely so, and frequently I have endeavoured by my own efforts to get cases passed through, when it has been represented to me that the cases are particularly trying ones.

2972. And you cannot give us any idea whether there is any unnecessary delay? Well, of course, I have

have my opinion about the matter, which is only a layman's opinion at the best. If I have the permission of the Commission I may perhaps give expression to my opinion, though it will be only a lay opinion against that of the legal men.

Mr.
W. Muddle.

9 May, 1870.

2973. We shall be glad to have any facts, or even your opinion? Well, I think myself that the applications before certain examiners might be dealt with much more expeditiously if a different method were adopted in the examination. For instance, I cannot conceive why short cases, which should not take an ordinary man ten minutes or half-an-hour to pass, should be kept back for long and difficult matters which may occupy a week or a fortnight, as the case may be.

2974. Do you have many complaints made at the counter in reference to the delay in completing cases? Frequently; they are almost of daily occurrence.

2975. Do those complaints occupy much of the time of the clerks at the counter? They occupy this much time—that when it is represented to me that cases have been delayed, I have made it my business to go upstairs and hunt the matter out, see what was delaying it, and suggest anything that might expedite it or get it through.

2976. So that the other work in the office is necessarily delayed by the time occupied in making those inquiries? Yes. I have conceived it to be my duty, and I have always been taught that it was, when persons have come to me to know the state of their applications and the reason of the delay, to see what the nature of the delay is, and use my endeavours to get rid of it.

2977. Have you sufficient assistance at the counter? Not nearly enough.

2978. How many clerks are there? Two counter clerks—myself and an assistant; and we find the work too heavy for us to do. There have been complaints made to the Registrar General by parties of the delays at the counter, or arising solely from the fact that we cannot get rid of the work that comes in upon us. For instance, there are many matters that come in to the counter which will take three-quarters of an hour or an hour to get the full information wanted, and while we are employed in getting that information, other people have to wait.

2979. Are people frequently detained when they come for information, or for making necessary inquiries at the counter? Only in the way I have pointed out to you.

2980. When I have been in that office I have always seen a good many people waiting? I have counted as many as five-and-twenty in the room at one time.

2981. And you think the present staff is insufficient to deal with that? The present staff is totally inadequate. The work is very difficult, and requires a great amount of care and attention. I have known the clerks here for years past to have been stopping and working overtime. They stop sometimes till 5 o'clock, half-past 5, 6, and sometimes till they have to light candles.

2982. *Mr. Terry.*] Are they not paid for that overtime? Never been paid a sixpence. Of my knowledge of them for many years I can conscientiously say that they discharge their duties with a greater regard for the convenience of the public and everybody concerned than any set of clerks in any office I ever knew of.

2983. *President.*] When grantees apply for their grants do they go to the counter for them? Yes, they get them from the counter.

2984. How is it they are so long detained before they can get the grants issued to them? That is a matter which rests with the Lands Office; we know nothing of the grants until they come to us for record.

2985. How long does it take you to deal with them after they arrive here? If they come up in ordinary batches, as they came up before that great rush when the Governor went away, we should take only a day or a couple of days to deal with them, and they would then be ready to be handed over.

2986. Then the detention arises in the Survey Office? In the Lands Office—in the Survey Office. We know nothing of them until they come to us for record and delivery.

2987. And do you say they are ready for delivery within two days after they arrive here? If they come up in ordinary batches. We had a rush of 12,000 or 13,000 before the Governor went away, and we could not get through them; we had to make representations to the Registrar General that we could not get through them.

2988. *Mr. Archer.*] Is there any signature affixed in this office? Yes, the Registrar General's signature is affixed to every grant and to the memorandum of record.

2989. What do you call an ordinary batch? Say 250 or 300; but they have been coming up to us in batches of 600, 700, 800, and 900, lately—when the Governor went away. Directly they are received at the office, a clerk attaches the date to them, prepares them for the Registrar General's signature, and sends them upstairs. The Registrar General, as a rule, signs them the same night, and then they are sent downstairs and numbered, and we deliver them.

2990. *Mr. Terry.*] Papers are frequently mislaid in this office? Yes; they pass from the examiners' hands to the examiners' clerk, and back again, and perhaps to Mr. Pearson, and perhaps downstairs, and going backwards and forwards they get mislaid sometimes. It cannot very well be helped. I do not think there is any great blame attachable to anybody. Papers are frequently brought upstairs and downstairs for the information of the examiners.

2991. How is it that certificates of title are sometimes mislaid? Simply because the area of the office is too small; the documents are too numerous for the area of the office—we can find no place for them.

2992. *President.*] Have you not arranged them systematically? Yes, but they are continually taken out for record purposes and reference.

2993. *Mr. Terry.*] Is that not inconvenient? Very.

2994. *Mr. Archer.*] When papers are removed is there no check as to where they are gone to? No; we do not generally keep a check, because if they are removed we generally know where they go to, and we can go to the clerks for them. I think the appointment of a record clerk would obviate a good deal of that.

2995. To supervise where papers are taken to? Yes; he would have charge of all records under his hand, and have the responsibility.

2996. *Mr. Terry.*] Is there not a charge made for taking dower off a certificate? We charge an endorsement fee of 2s.

2997. *Mr. Archer.*] Is that prescribed by the Act? Yes; endorsement fee, 2s.

2998. *Mr. Terry.*] It is not an endorsement? We have to endorse for the satisfaction of our office, and we charge for endorsing the satisfaction.

2999. That is taking it off? Yes, but we make the charge under the last item in Schedule P of the Real Property Act. It is an endorsement on the certificate.

3000. No, it is taking it off? Satisfaction is endorsed.

3001.

Mr.
W. Muddle.
9 May, 1879.

3001. *Mr. Archer.*] What is that 2s. for? If you lodge a mortgage to-day, and you have twenty grants in the mortgage, we charge you 10s. for every mortgage, and every grant after the first grant 2s.
3002. You take this transaction in regard to dower in an official sense as a memorial? Yes.
3003. *Mr. Terry.*] And do you think that last paragraph in the schedule bears out that charge. I do.
3004. And that it is a legal charge? Certainly; I have always been under the impression that it was a legal charge. It is an endorsement on the certificate, and the office should get the benefit of it.
3005. Do you mean to say that the endorsement of dower on a certificate is a memorial? The cancellation of dower is.
3006. *President.*] You said just now that the clerks have for years past been detained for hours after the regular time in doing the work of the office? Yes, frequently; it has been almost of daily occurrence.
3007. They are detained in the office? They stop in the office.
3008. Doing the business which is supposed to be done during working hours? Yes, during working hours.
3009. Do they get any pay for that? No.
3010. Do not the applicants for certificates or persons dealing with the office pay them for it? No. There were one or two instances in which, in very peculiar matters, they gave the clerks some slight remuneration for stopping over hours.
3011. What do you call slight remuneration? Three or four guineas, I think, between them.
3012. For how much work? The cases were very particular ones; they were large Melbourne mortgages, and it was represented to us that the mortgagor in Melbourne was paying interest for his money, and that the money would not be advanced to him until intimation was received from the agent in Sydney that the mortgages were duly recorded in this office, and the question was put to me as to when it would be done. These were very large matters—some 500, 600, or 700 grants. I said I could not possibly tell when it would be done, as they were very large matters. After conversation, it was said to me, "If the clerks will stop over hours and work at it, get it done, and we will pay them for their trouble."
3013. And then the work was done? The work was done.
3014. Within the time, satisfactorily to the persons concerned? Quite so. I never heard of any complaint to the contrary.
3015. Was that done with the knowledge of the Registrar General? No, I do not think it was.
3016. He was not applied to to permit such things? He was not.
3017. And has never been? And has never been.
3018. Have not your clerks downstairs received other fees in other cases—expedition fees? Never expedition fees.
3019. In no case whatever? In no case whatever. The only fees I have ever known them receive are those I speak of.
3020. Which were given for overwork—for working over hours? Those are the only cases I know of. The peculiar nature of the dealing is this: A large dealing may be lodged to-day at a quarter to 4 or between 3 and 4, and they may say it is a matter in which a man is paying his interest on between £50,000 and £60,000, and cannot get the advance of the principal until it is known that the mortgage is registered here, and they want it done as quickly as possible. The only way to get at that dealing is to clear off all the work in front of it, because all the cases bear consecutive numbers, and to get at any particular dealing we have to clear off the work in front of it. By stopping after hours to get the large urgent matter through, we expedite the work in front of it and also the work coming after it, because the whole of the grants in the matter are cleared away. So that by getting rid of this case by work after hours, we benefit everybody—the persons concerned in the particular case, the public, and the office.
3021. This practice tends materially then to the progress of business in the office? It does. By getting rid of a large dealing, it expedites the work, and leaves the track clear for all the work afterwards. That was my reason for thinking there would be no harm in letting the clerks do this work.
3022. I see no harm if it is done with the consent of the Registrar General, but otherwise I see that it may lead to great abuses? Yes, it might do so; but in regard to the matter I speak of, there were only one or two cases of the kind.
3023. Has no money ever been offered to you for expediting work? Oh yes, frequently. I have frequently been offered money for expediting cases.
3024. *Mr. Terry.*] What did they mean by that—putting a case before the others? For pushing it through the office. I have been offered money to do that, and have refused. If I took it it would be in the sense of robbing people, for I have no influence with the examiners in pushing through the work; not so much as you, for instance, for a letter from you would do far more good than all my representations. In no single instance did I receive an expedition fee for putting an application through.
3025. Merely for endorsing the grants? Yes.
3026. *Mr. Archer.*] Did you receive that? Yes, and distributed it.
3027. Did you retain any for yourself? I retained a part for myself, for I did a part of the work myself. I do not wish to conceal anything; I wish the Commission to understand the thing in its true light.
3028. *Mr. Terry.*] You are aware that it has been mooted out of doors that the clerks have been in the habit of taking expedition fees? A great many things have been mooted out of doors, but I guarantee there is not a legal man nor a layman who can lay to my charge one single instance where I have demanded from him a sixpence more than he was entitled to pay under the Real Property Act. I have heard about the matter, and have felt somewhat hurt about it.
3029. *President.*] There has been a statement made that in Heydon's case an expedition fee of two guineas was paid to you for forwarding that case? Allow me to explain. This was a matter that Heydon sent down to me to fix up for him. He could not do it himself, and he sent it to me through Messrs. Ellis and Makinson. It appeared that Ellis and Makinson could not do it, and they came to me to do it. It was suggested through them that for the time and trouble I took over the matter, and over many other matters I did for Heydon, they ought to pay me something. He sent me down a cheque for two guineas by a letter, in which he said I ought to receive something. So far from it being an expedition fee, the case was not in the office then, and has not come in since.
3030. What was the case? It was a peculiar transmission case, and he wanted to know how he should fix the application.
3031. Did you prepare the application? No, I only gave him the instructions.

3032.

3032. And the application has not come into the office? No; it was never contemplated to bring it into the office, and, as far as I know, it is not in the office now.

3033. *Mr. Archer.*] And did they actually send you the money before you did the work? No; the instructions were sent away.

3034. I understood you to say you received two guineas? Yes.

3035. Did you send back the cheque or retain it? The two guineas were sent down after I sent him the instructions.

3036. You did do the work? Yes.

3037. And it has not been utilized? No.

3038. *President.*] When was this work done? After office hours.

3039. Quite after office hours? Quite after office hours. I explained to the clerk, "I could not do this now; if you will leave it I will do it after office hours." When the suggestion was made about the payment I said, "You can do what you like about that; I will do what I can for Mr. Heydon, and give him the benefit of my experience in these matters whether he thinks fit to send me anything or not." I am not aware of anything in the service to prevent me earning a little after hours.

3040. The difficulty is that it leads to such abuses. If it were done under certain rules, and was a recognised thing, there would be no difficulty; but if it is done in an underhand way it may become a usual thing, and be demanded in every case? It was never demanded. I never demand anything.

3041. How was this fee suggested? I cannot tell you.

3042. Was it not suggested by you as a case in which you ought to get some fee? I think not. I do not think I made any such suggestion.

3043. The shape in which it comes to us is that you suggested this was a proper case for an expedition fee—I think those were the words—and that thereupon Ellis and Makinson wrote to Heydon, and he sent down a cheque, which was handed to you? Who makes such a statement?

3044. We have heard it made? I think it is only fair that I should know who it was that made it.

3045. *Mr. Archer.*] Who was it came to you from Messrs. Ellis and Makinson? Their clerk, Mr. O'Connor.

3046. And do you not remember what occurred between him and you? I do not, because I thought no more of it afterwards. I could not recollect the whole of the conversation that occurred.

3047. But it is the only case of the kind you say? Yes, the only case of the kind.

3048. One would suppose that would strike you? The fact of receiving the money would. I cannot recollect all the conversation.

3049. You are not clear whether you or he suggested it? I think he suggested it. It cropped up in the course of conversation; but how, I cannot tell. I am satisfied on one point, that I never demanded it.

3050. *President.*] How much have you received during the last twelve months for overwork such as you have mentioned, or for any other work in connection with the business of the office? I think £5 would cover the whole lot of it.

3051. For twelve months? I should not be sorry to hand over all I am likely to get for £5 a year.

3052. Then how is it that these reports have got abroad so generally that such fees are paid in the office constantly? I cannot tell; I have not the slightest idea.

3053. They have been very general? So I have heard since the Commission have been sitting. I cannot tell you how they could have got abroad.

3054. Do you know whether expedition fees or other similar fees are paid in other Government offices? I have been led to believe that they are paid in some of the other offices, but as to the truth of the statement, I cannot say.

3055. You have merely heard so? I have merely heard so. I believe up in the Supreme Court, in cases there, they get expedition fees.

3056. Principally in arrest cases? Principally for attachment.

3057. Not for attachment, in arrest cases, *ca. re.*? —

3058. *Mr. Dawson.*] After office hours? Yes; they give them a fee of two guineas, perhaps, as the case may be. The clerk stops after office hours.

3059. *Mr. Terry.*] Is this office in good odour with the public out of doors? With some in very good odour.

3060. And with others not? With others not. I could bring, I suppose, 100 people to testify to the work done in the office—to the manner in which it is done, and to the way in which the clerks perform their duties. I could bring overwhelming testimony in reference to this matter of expedition fees. It is said that it is utterly impossible to fight with shadows, and you cannot grapple with the statements that have been made respecting expedition fees because there is nothing definite in them.

3061. *President.*] We want to see whether there is any truth in the statements, and that is why we ask you about them? If you could get it down in black and white, of course you know what to do with it.

3062. The only statements we have in that definite form are the cases we have mentioned to you.

3063. *Mr. Archer.*] It is but just to you that you should know of them, so that you should be able to make an explanation and clear up the difficulty that exists.

3064. *Mr. Dawson.*] In order that you should be justified, if you can justify yourself, which I have no doubt you can;—has there ever been, upon any occasion, apart from those mentioned in which you deny having made it, any suggestion that a fee would expedite matters? From me?

3065. Yes? Never, in any single instance. I have been offered money over and over again to put matters through the office.

3066. And assuming that a fee were offered, and taken by you, it would not tend in any way to expedite the work, or get one case passed before another? Not one iota.

3067. The cases would have to take their turn? They would have to take their turn.

3068. *Mr. Terry.*] Can you give any reason why delay takes place with the titles when they get to the examiners' clerk before the examiners see them? The only reason I know of is that he is overwhelmed with work; he is besieged with parties all day making inquiries. His time is taken up entirely in attending to the outside public, and the other work necessary to get applications prepared for the examiners' perusal must, in consequence, be delayed.

3069. Then you think more assistance is required there? I am satisfied of it; I am satisfied more assistance is required throughout the office, from top to bottom.

3070.

Mr.
W. Muddle,
9 May, 1879.

- Mr. W. Muddle. 3070. *Mr. Dawson.*] Then do you require more examiners? I do not know that we require more examiners. I think if some of the examiners had more business capacity they would get through the work more quickly.
- 9 May, 1879. 3071. *President.*] How many clerks at the counter do you think sufficient to get through the work within the proper time? You see we could not put in more clerks at the counter, because the counter work is so peculiar that it requires a man of special experience. You go to the counter as a legal man, and it is not everybody that you could put in a Government office who can deal with legal questions. Legal men come to me every day to satisfy them on points in reference to the Act, to frame matters for them, to put them into shape, to show them how to do things. Just as you sent down for me, one legal man came to me and wanted to know how to frame an application where the land was conveyed to trustees, giving the wife the power of appointment. I turned to and showed him how to do it. Those are cases where a man unless he had plenty of training that way, would not be worth having.
3072. *Mr. Dawson.*] Do you consider it part of your duty to frame those applications, and assist an applicant to fill in an application? I always assist anyone.
3073. *Mr. Terry.*] He assists the legal profession more than anyone else.
3074. *Mr. Dawson.*] It must interfere with your legitimate duties? That has always been considered one of my legitimate duties.
3075. *Mr. Archer.*] The Act was intended to do away with the legal profession altogether? I do not see that at all. I think the legal profession is necessary under this as under the old Act.
3076. Was it not so contemplated? I do not know what was contemplated in that way.
3077. May not the process which you now carry through be inherited from that idea that you were to assist the public in transferring property from one person to another—that you were to give every assistance at the counter? Quite so.
3078. And that the necessity of applying to a legal adviser would be reduced to a minimum? I presume so.
3079. But it appears that you advise the legal advisers? Oh, yes, every day.
3080. *President.*] Who makes the endorsements which you mentioned just now as being necessary in case there are more than one grant dealt with? The endorsement is put on by the registration clerk.
3081. Is he one of the counter clerks? No, his duties are purely those of registration.
3082. Then, how could the duties of the office be facilitated by appointing more clerks? There are many matters we have to do as counter clerks which are purely clerical work, and which we could turn over to them, instead of which we now do it ourselves, and it entails a great waste of time.
3083. How many clerks do you think would be sufficient to do this service? I think if we had a couple appointed it would be enough.
3084. Would not one be sufficient, so as to relieve the clerks from the duty of stopping over hours? One might be sufficient, as Mr. Ward has recommended the appointment of another one downstairs to attend to particular matters—to the Treasury receipts, under the 99th section, which are very nasty things. They require more attention than can now be given to them.
3085. *Mr. Terry.*] Are applications to bring property under the Act falling off or increasing? Falling off, I think.
3086. Can you give any reason for that? The only reason is that delay in passing an application has had the effect of deterring people from bringing land under the Act.
3087. *Mr. Archer.*] How do you want assistance when business is falling off? That is only with reference to applications. The business, in regard to applications, with the counter clerk, is infinitesimal. The difficult portion of the counter work is attending to the public and the legal profession. They require constant and unremitting attention. To give you some idea of what it is, from the time the office opens in the morning until we shut at 4, the clerks are constantly at work, and they are here sometimes until half-past 4. During the whole of the time I myself never sit down, being constantly busy.
3088. And is this in relation to properties under the Act? In relation to business of all sorts.
3089. *Mr. Terry.*] As the public and solicitors complain about the examiners, which examiner have they the most complaint against? As the question is put, I suppose I must answer it. I have heard them speak very bitterly of the delays caused by Mr. Burton.
3090. *President.*] Do they not complain of the others also? Yes, they have complained of Mr. Jones.
3091. And have you heard of any complaint of Mr. Maddock? No.
3092. He has not been here very long? No; Mr. Maddock gets through his work very expeditiously.
3093. *Mr. Archer.*] Do you find that your constantly coaching up solicitors' clerks and others, or solicitors themselves whenever they come to you, has any effect in lessening your labour in regard to those individuals, or do they come to you on every trivial occasion, as if they had never seen you before? Not on every trivial occasion, but there are frequently matters cropping up in which they are uncertain how to act.
3094. Novel questions? Yes; and I am only too desirous to give any assistance I can.
3095. *Mr. Dawson.*] You are speaking of questions in practice? Yes, and construction too.
3096. *Mr. Terry.*] Surely solicitors do not come to you to know about the construction of the Act? Yes, they do, frequently, and it gives me great pleasure to assist them; I do not care who it is.
3097. *Mr. Archer.*] It appears to me, according to your statement, that you are the adviser of the legal profession? Not exactly that.
3098. *Mr. Terry.*] I suppose more solicitors than private individuals come to you? Well, not exactly more solicitors, but solicitors' clerks, principal clerks, and so on. I guarantee that you will find some of them here every day. There is one especially, from Messrs. M'Carthy, Robertson, and Fisher's office—there is not a day that he is not here.
3099. *Mr. Archer.*] Wanting to know? Inquiring about matters. If Nobbs is away a day it is spoken of as being extraordinary. He is a most indefatigable man.
3100. *Mr. Terry.*] I ask you the question because you have been accused of helping private individuals. I think the solicitors get most of the help? I am willing to help anybody, and I think it is, to some extent, flattering to be asked by solicitors for information.
3101. *President.*] Can you tell us what Mr. Nobbs comes here for? They have always matters coming under the Act, and he is always hunting them up.
3102. Does he come to lodge matters properly under the Act, or for advice and assistance in lodging those matters? Both; he comes for advice and assistance, and to watch his matters going through the office, and to make inquiries as to what progress they are in.

3103. Then you have frequently advised Mr. Nobbs as to the particular course or form of instrument he ought to adopt? Frequently.
3104. *Mr. Archer.*] Did Mr. Nobbs ever pilot a case through by paying fees such as you alluded to a little while ago? Yes, it was one of the two cases I spoke of?
3105. He has only done so in that instance? That is all.
3106. *Mr. Terry.*] It must have been from people speaking of those accusations that the reports got abroad? My reason for accepting the fee was, that I saw, by expediting this matter in this way, that instead of doing other people an injury, it would be actually creating a benefit.
3107. *President.*] I see no possible objection to such a practice, provided it is under certain regulations to prevent its abuse, that is to say, with the sanction of the Registrar General. Then, it seems to me, it is a benefit to the office that the clerks should work over hours, and get the business through? Understand, Mr. Norton, that these were isolated cases, and the only two I ever knew of. They were very particular and extremely urgent matters, as it was represented to me that the mortgagor was paying interest upon the property that he had mortgaged, and that he could not possibly get the principle until he had received intimation from the agents up here that the mortgage had been recorded on the register book; and taking all the circumstances of the case into consideration, that this man was perhaps losing large sums of money, which might be ruinous to him, and seeing that allowing the clerks to do the work in over-time would not injure anybody, but would benefit everybody, I conceived that it would be no harm to allow them to do it. That was my only object in doing it.
3108. *Mr. Terry.*] Do you think the salaries paid to the officers in this department are sufficient? I think they are wretchedly low, conscientiously speaking. They are the lowest of any department under Government.
3109. *Mr. Robertson.*] Have you plenty of help? No, we have not enough help.
3110. *President.*] What is your salary? I get £250 a year, which I have had for nine years, and the prospect of an increase is so remote that I cannot see in the future the slightest chance of it.
3111. Have you received that rate of salary since your first appointment? Yes, over nine years ago. When I was brought over to the Land Titles Branch, £50 a year increase was recommended for the counter clerk, in consequence of the onerous nature of his duties; but that £50 was disallowed by the Government then in power, and it was never reinstated. £50 was proposed for me last year, and it was struck off.
3112. *Mr. Terry.*] Has not Mr Lewis been recommended for an increase of salary frequently? Once or twice.
3113. Is his salary not particularly low? He gets £300 a year. It is too low for such work as he does.
3114. What did Mr. Bishop receive? He got £350.
3115. And Mr. Lewis is doing the same duties as Mr. Bishop did when he was in the office? Yes.

Mr.
W. Muddle.
9 May, 1879.

TUESDAY, 13 MAY, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P.,
THOMAS ROBERTSON, Esq.,

WILLIAM HENRY ARCHER, Esq.,
JOHN DAWSON, Esq.

Thomas Walker, Esq., of Yaralla, examined:—

3116. *President.*] Our Secretary received a letter from you on the subject of a case of complaint which you have against the Real Property Office? Yes.
3117. Will you be good enough to state the nature of your complaint against the office? My complaint is, in general terms, that the office has granted a certificate of title wrongfully and unjustly to a person who has not the shadow of a title to the property with respect to which they have granted the certificate. I have given the particulars of the case in a letter dated 31 March last, which I addressed to the commissioners.
3118. Did you apply for a certificate of title to this particular piece of land? No. I happen to be connected with the case, inasmuch as a part of the land in respect of which the certificate of title was granted is mine. The certificate of title includes a portion of land which belongs to me. It is in that way I am connected with it; I was not an applicant.
3119. Then you are deprived of land you claim as yours by the issue of a certificate to some other person, as you say, wrongfully? I have sufficiently inquired into the case to be able to assert that the party to whom this piece of my land has been granted by certificate of title has not any title to it whatever, and therefore I conceive that injustice has been done in the administration of the affairs of the office, and that the action of the department in such a case is one that ought to be inquired into to ascertain upon what principle it has proceeded. It may be discovered that the grant has been made on the ground of possession, which I conceive is a principle that cannot be upheld.
3120. Did you ever have possession of this particular piece of land? I do not know that I, myself, have, but my predecessors had.
3121. You are the present owner of the land? Yes.
3122. And you claim it as part of your property? Yes, I claim it as part of my property, but I sink the idea of whose property it is, and say that the department has acted wrongfully in giving a title to a person who had no title. I take up the abstract question; I do not view it as one personal to myself at all.
3123. Can you inform us who was in possession at the time the certificate was granted? I have assumed in my letter to the Commission that the applicant was in possession of it. The allegation I make is that irrespectively of who is the owner of the land, the department have acted wrongfully in granting a certificate of title to a person who has no title. It is upon the abstract principle I take my stand.
3124. *Mr. Robertson.*] What you object to is that a certificate of title has been given to a wrongful possessor of land, who came originally wrongfully into possession? Just so, and I conceive it to be a most important matter of inquiry whether the office gives titles upon grounds of mere possession.
3125. *President.*] Of course you are aware that, under the Statute of Limitations, a person may acquire a title by mere possession? I entirely differ from you. By the statute to which you refer, I am prevented from

T. Walker,
Esq.
13 May, 1879.

- T. Walker, Esq.
13 May, 1879.
- from bringing an action of ejectment, but it confers no title—and here is the department actually making and granting a title, which I humbly submit they have no right to do.
3126. What you mean is then that the statute prevents your recovering land from somebody else wrongfully in possession, but that it does not give him a title? Just so. I am aware that if a man takes possession of land belonging to me and retains adverse possession for twenty years, I am debarred by Act of Parliament from bringing an action of ejectment against him; but my argument is that he does not thus acquire a title to my land. The purpose of the Real Property Act is not to enable anybody to acquire a title. It is to give a certificate of title—a certificate which can lawfully be given only when the person receiving it had a title; and the point I bring under notice is that if the administrators are giving certificates upon any other grounds, it is a proper matter for inquiry. I do know that they do so; indeed, on the contrary, I understand that they do not do so, and do not affect to do so, but it is a subject for inquiry.
3127. *Mr. Robertson.*] We have been informed by Mr. Burton that they do recognize possessory titles, that if the rightful owner of the land is in the country, and not under disability, and the occupant has been in possession for twenty years, they recognize that as a complete title. If the rightful owner is not known, so that possibly he may be under disability, then they would not give a title for forty years; but they do go the entire length of giving titles to what you would call wrongful possessors if the legal owner is in the country and does not assert his claim for twenty years? I was told, on the contrary, that they do not do so, and I submit they have no authority to do so.
3128. *Mr. Dawson.*] I have always understood that an application must be founded originally on some documentary evidence of title, and I know that I have refrained from bringing land under the Act in cases of such possession as you speak of? I beg leave to submit that the administrators of the Act have no authority to grant a title on the ground of possession; they are only empowered to give certificates of title to those who have titles. They are entrusted with the duty of bringing property under the operation of a certain statute. That I conceive to be the object of the Act. Their office is not to create or to make titles, but to give certificates of title to those who have title, which certificates are substitutes for the original title, and carry with them their own advantages or disadvantages.
3129. *President.*] That is not the only case in which they have done the same thing; to my knowledge they have issued certificates depending on possession? Then I conceive that it is a proper subject of inquiry to ascertain whether they are acting within or without their authority. In a young country like this, to grant certificates of titles on the ground of possession would tend to great injustice, because we know how scant and widespread the population is, and how people neglect their rights of possession, and others get into wrongful possession.
3130. The question of limitations of actions of ejectment is in this country a very serious one where land is not capable of being turned to profitable annual account? Yes; for the statute to say that a man is to be deprived of his right to recover his property merely because some one has held adverse possession of it for a given number of years, seems to me to be very unjust.
3131. *Mr. Archer.*] It is not peculiar to this country; it is the same in England and Victoria.
3132. *Mr. Terry.*] If you bring your property under the Real Property Act, the Statute of Limitations will not apply? We have included in our own laws the statute limiting the right to eject, and I know that in England—we see it by the papers—they have actually limited the period within which you can bring your action of ejectment to fifteen years.
3133. *President.*] Twelve years? But in England it may be defensible, because it would be strange if the rightful owner did not occupy in some way his property. Here it is different. That, however, is as to the policy of the law, and I am not entitled to speak to that, except in general terms; but I say they have no right here to grant certificates of title, founded on mere possession, for the fullest extent to which this remarkable statute goes is to deprive the owner of the right of bringing an action of ejectment.
3134. *Mr. Archer.*] But in practice in Victoria, they act in that way. I mean that it is not a novelty there. The Commissioner of Titles there has looked upon possession for the statutory period as creating a title—that the person in possession becomes, by operation of law, the owner? The Victorian statute may authorize him to do so; but we are not called upon to follow Victorian precedents. I do not know what their law is. Perhaps it may be different from ours.
3135. Is this your position—that, although the law in this country provides that if a person neglects to use his land for a certain period, and that another residing on it cannot be ejected, it does not give to the possessor a statutory title? I am satisfied it does not. It restricts the owner from bringing an action of ejectment, but that is all.
3136. If I understand you rightly, the person of whom you speak may have lived long enough on the land to have acquired a statutable right to it? The gentleman never did live on it, but a portion of the land was fenced. It may have been for twenty years.
3137. But do you suppose he may have obtained the statutable right we are alluding to? I assume that he has acquired immunity from an action of ejectment on the part of the owner.
3138. If he has done that and you could never eject him, where is the hardship of allowing him to have a certificate of title? Because it gives a marketable title to a wrong-doer. The law has deprived the owner of his right to recover his property, but does not give the wrongful possessor a title to it, and he never could have a moral right to it, assuming that it is a robbery. In giving to the applicant in the case a marketable title, the administrators have altered his position altogether. They have added to the value of the property enormously. He previously could not have sold it, but now he can do so. They have put him in a position far different from that which he held before. I do not venture to go into the policy of the law limiting the right of bringing an action of ejectment, but I think it very doubtful, as a matter of policy, whether the same law which is good in England is good in a colony like this, where the population is very scant, and where people use property in a very loose manner.
3139. *Mr. Robertson.*] In America, where the Statute of Limitations applies, they do not let the statute run until the land has been fenced in. That is to meet the circumstances of a new country? They have interpreted it differently.
3140. *Mr. Archer.*] There they have such a limitation, but here we have not? These are points that do not affect the present case. The accusation I bring against the administrators of the "Real Property Act" is simply this: That they, in contravention of the provisions of the Act, have given a certificate of title to a person who had no title. The case (No. 3,639) is fully described in my letter of 31 March last, to which I beg leave to refer.

William Whaley Billyard, Esq., solicitor, examined:—

3141. *President.*] You are a solicitor in practice in Sydney? Yes.
3142. And you have had a good deal to do with the Land Titles Office? Yes.
3143. Have you any complaints to make of the administration of the Act? Yes.
3144. Will you be good enough to state what you object to? I object to the highly technical character of the objections taken to titles.
3145. Are those objections more technical and minute than are taken by solicitors for willing purchasers? Certainly.
3146. Why do you suppose this great particularity exists? I have had very great experience, and it appears to me that the examiners place themselves more in the position of an adverse counsel to the applicant than anything else.
3147. Do they act as if they wish to reject titles? Certainly.
3148. Not as if they wished to pass all that they could pass? No; I have withdrawn several cases because the objections were so numerous and so startling.
3149. Were not those proper objections for them to take? No, I do not think so.
3150. Were they such objections as you would have taken for a purchaser? Certainly not; they seem to attach the same importance to objections that are really of no consequence as to those that are of consequence.
3151. With which of the examiners have you had dealings in these matters? I will say chiefly with Mr. Burton; of course I have had dealings with the others as well—with Mr. Jones.
3152. And Mr. Maddock? No, I have not had anything to do with the office since Mr. Maddock was appointed.
3153. Are Mr. Jones' objections of the same character as Mr. Burton's? Pretty much—I think not quite so highly technical.
3154. Can you propose any remedy for curing the difficulty you have raised? As to the re-modelling of the department?
3155. No, I mean as to the extreme technicality of the objections? I do not know how it is to be removed. I wish to state that I consider Mr. Burton a very able Real Property lawyer, but I believe the objective faculty is so strongly developed in him that he cannot avoid taking objections to titles which would never occur to any other person. I think he is a very conscientious man, and he may think all his objections necessary, but they are very annoying to practitioners and give a great deal of unnecessary trouble, and I cannot see what benefit they are. If a party can prove a fair and equitable title, and no one is damnified by his having a certificate, I do not see why he should not have it.
3156. Do you not think those objections are taken for the purpose of saving the assurance fund from risk? I am not aware of any claim having been made upon the assurance fund. I think, as a general rule, that titles in this Colony are very fair titles. Very few titles that occur in practice are really bad ones.
3157. How could the examiners justify themselves in passing titles without investigation and consideration of the difficulties arising under them? I think they ought to pass any title that a solicitor for a willing purchaser would take. The objections sometimes are so highly technical that it is difficult for me to comprehend the meaning of them in some cases.
3158. Do you think the nature of the objections made by examiners prevents persons from bringing titles into the office? Certainly.
3159. Has it ever prevented you and your clients? Yes; I am solicitor to the Savings' Bank, and they object to concur with any mortgagors or persons in bringing properties under the Act.
3160. The Savings' Bank do? Yes.
3161. I thought they made it a rule to take titles under the Act in preference to those not under the Act? After they are brought under the Act, but if properties are mortgaged that are not brought under the Act, then they object to concur with the mortgagors to bring them under it, partly because they find a difficulty in getting the deeds back again, and partly on account of the delay.
3162. Do the objections made by the Savings' Bank originate with the trustees of the bank or with yourself? With the trustees—the late managing trustee, Mr. Allan, not me.
3163. *Mr. Terry.*] Do you not think it would be a good thing if dower were swept away in reference to properties brought under this Act? Yes, I think it would be a beneficial change. It is very difficult to prove that a person has not left a wife dowable, and, in some cases, where the conveyance has been made forty years ago, I have had to prove that there was no dower, though the doweress, if living, must have been 100 years of age. But still it is put on the certificate of title if you cannot prove it; and the difficulty I have found is getting evidence from the registers, particularly through Mr. Kerrison James.
3164. Do you not think it would be a good thing to do away with the assurance fee on transmission cases, people having paid it on application to bring the property under the Act? Yes, I think it would.
3165. Do you think the Government ought to charge an assurance fee on a grant direct from them to the grantee? No, I should think not.
3166. *Mr. Archer.*] I understood you to say that from your experience in regard to titles in this country, you did not consider that the majority were difficult and intricate titles? No; I should think that a competent man, in an hour's time, would pronounce a tolerably positive opinion whether a title is good or not.
3167. That is what I am coming to. Supposing you had nothing else to do than to sit in this office as an examiner, with a body of searching clerks, draftsmen, and all other officials requisite, to bring you information you desired about a title, how many titles of an ordinary character do you think you could get through in a day? I should say half a dozen.
3168. If, in the discharge of your duties as a solicitor, you only got through one a day, would you be able to make bread and cheese? No.
3169. Do you think one a day is a fair average to expect from each of these examiners? Not taking them altogether. I do not think so.
3170. You think each ought at least to do one a day? Certainly.
3171. Would it be fair to expect more from them, taking the cases all round, difficult and easy ones? I think they ought to do more.
3172. Could you do more than that a day? Yes.
3173. Could you do two? Yes; I think I could do half-a-dozen; but I have given up my whole life to this one branch of law.

W. Billyard,
Esq.

13 May, 1879.

- W. Bilyard, Esq.
13 May, 1879.
3174. Truly, but it is to be supposed that an examiner also gives up his whole life to it? Yes; I never could understand the extraordinary delays that occur; it is incomprehensible to me.
3175. *Mr. Terry.*] Do you think it would be a good thing to do away with the commissioners and appoint a master of titles, to whom cases could be referred when differences take place between applicants and the examiners? I think there should be a master of titles, with a large salary, say £2,000 a year.
3176. *Mr. Dawson.*] Do you conceive the Board of Commissioners to be of any service at all, bearing in mind that they are laymen? I do not see that they are of any service.
3177. *Mr. Archer.*] How many years have you had practical experience as a conveyancing solicitor? Forty years.
3178. So that you thoroughly know the character of the titles in New South Wales? Oh, yes. I have been thirty years here, and I had a large conveyancing practice before that.
3179. *Mr. Terry.*] Do you think Mr. Burton would gain a livelihood in private practice, if he made all the objections he makes now? No, he never would.
3180. Have you ever lost title deeds in this office? Yes.
3181. *Mr. Archer.*] Really lost them—never had them back? They have said they have not had powers of attorney from me, and I have had to send to England for fresh powers of attorney because they could not be found, and then afterwards they turned up. Mr. Terry is alluding to an old case of mine, which was really in Mr. Holden's time. I had the title deeds of the Terry estate, and I brought a number of the properties under the Act. The title deeds were very voluminous; they declared that they had not them here, and I searched my own office, searching every deed and every box, and it took me three or four days. I charged one of my conveyancing clerks with having had the deeds last. Then I went up to the Real Property Office, and they said that they would search, but that they had not the deeds. Well, it became a serious matter, and I said, "Look here, I require you to produce all the deeds in every case I have brought under this Act," and they brought up the missing deeds. They gave me certainly a week's search and more than a week's anxiety. It makes conveyancing so expensive, because all the offices now take the points they think Mr. Burton would take.
3182. *President.*] They do so particularly as to dower? Indeed, it has become so common, particularly among the younger solicitors, that they have stereotyped forms of objection—a sort of thing applicable to every case.
3183. Have you had cause to notice whether there is sufficient counter accommodation down below,—do you find your business occasionally or ever delayed by reason of the want of a sufficient number of clerks? Yes, very much so.
3184. Would you suggest that another or more should be appointed? Oh, no; I thought you meant when I have asked if the certificate has been issued, and they have said they had searched for some time and I must call again, and I have had to call again several times before they could find it out—I thought you meant whether there was any such thing as that. They have said that they had several thousand certificates to go through before they could find it out. I think the clerks are very obliging. I think Mr. Muddle and all of them are exceedingly obliging, and they seem most courteous in the office to every solicitor.
3185. What I wished to ascertain from you was whether you had had complaints from your clerks or had experienced it yourself, of having to wait a long time at the counter to acquire information that is wanted? I have not experienced that myself.
3186. *Mr. Terry.*] You say you have had a good deal of experience in this office,—do you think it necessary that two examiners should be employed on every case? I do not say it is absolutely necessary. I think the salaries paid to the examiners are too low.
3187. You do not think those salaries will get efficient men? No; you cannot expect, you know, to have a man like Mr. Dick. He knew most of the titles and he used to suggest how difficulties could be got rid of. Of course, we got on very well with him.
3188. *President.*] Do not the present examiners suggest how you can remove their difficulties? No. I may add that I think in simple cases of transmission it should not be necessary to advertise the application.

Mr. William Shirley Muddle, counter clerk, recalled and further examined:—

3189. *President.*] I have received your letter, Mr. Muddle, and shall be very glad if you will read Mr. Heydon's letter which you allude to? The letter I hold in my hand. It is as follows:—

Mr. W. Muddle.
13 May, 1879.

My dear Muddle,
Bathurst, 9 May, 1879.

I am in receipt of your letter of 8th instant. I have not the slightest difficulty in stating that the fee paid to you in Croaker and Clements' matter was not an "expedition fee" in respect of any matter in your office. The easiest way to explain the matter is to narrate the fact. I was attempting to get a title for my client. He had previously had the papers in another solicitor's hands for three years. The title consisted of an ante-nuptial settlement, settling all after-acquired property on wife; grants of after-acquired land—some to husband, some to trustee for wife; and the will of the husband, inconsistently with the settlement devising the land; and everything was hopelessly confused by a decree in Equity. My client was purchaser from a devisee under the husband's will. The complications were so appalling, that, with the probability of any application that might be framed not meeting the view of the case taken by the examiners of titles, no application had been framed. When the case was put into my hands I thought it rather better not to frame an application and send it in and perhaps have it rejected, but to be sure beforehand that the application framed would be such a one as would pass through the office smoothly, and, knowing that you were acquainted with the idiosyncrasies of the examiners, I sent down all the papers, settlements, grants, probate and decree, to my agents, with instructions to get an application settled in the office with you and then send it to me for signature. The mere trouble of perusing and considering such a title was worth the fee, and the work was no part of your duty. The fee was certainly not demanded even then. It was, I understand, suggested by my agent's clerk, and certainly most willingly paid by me. I can understand how Mr. Makinson might very easily have received a general idea, from the clerk's account of the matter to him, that the fee was some sort of expedition fee. But it certainly was not so. As a fact, the application in the form settled, making use of your suggestions, has not yet been signed, nor, of course, ever lodged in your office. You have many times very kindly answered my inquiries, and saved me much delay and trouble by advising me how to shape cases so as to humour the practice of the office and pass without any hitch. You had never made any hint at payment, and I had felt myself under an obligation for so much extra work. I must have received more than a dozen private letters from you on points of office practice. I very much regret that your courtesy and intelligence, by causing your suggestions to be sought and acknowledged, should have brought on you the suspicion of asking payment for doing your work; for, according to my experience, you certainly have been, of all the clerks in your department, one of those who did most to alleviate the inconveniences of the system and to supply the shortcomings of others.

Yours, &c.,
LOUIS HEYDON.

FRIDAY,

FRIDAY, 16 MAY, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P.,
THOMAS ROBERTSON, Esq.,WILLIAM HENRY ARCHER, Esq.,
JOHN DAWSON, Esq.

Theodore James Jaques, Esq., solicitor, examined:—

3190. *President.*] You are a solicitor? Yes.

3191. And formerly Registrar General? Formerly Registrar General.

3192. Do you wish us to examine you on any particular points in connection with the Real Property Acts? No; I was not aware that I was to be examined. In conversation with one or two—with Mr. Terry on one occasion—I have expressed my opinion on the subject of the present working of Torrens' Act. I might state that I was in the office when the system was first introduced into the Colony by Mr. Dick, and at that time I was opposed to his ideas and to the present arrangement. My idea, formed from many years practice in the Registrar General's Office was that a person should submit his title to a competent board of examiners, and that upon a certificate being issued by that board that his title was perfect, he should go on dealing with the land as under the old system without having his title challenged—antecedent to the certificate, thus avoiding the large machinery of the present department. He could then go on dealing with his property in a variety of ways which cannot be carried out under the present system; and at any future time, and as frequently as the title became troublesome or complicated, he could renew his application and get a fresh certificate, paying of course such fees as, according to the value of the property, would keep up the establishment or pay for the expense of the department. By that arrangement it appears to me we would avoid the immense investigation of title from the first foundations, *i.e.*, the original grant. We would then start with a new title, the certificate of the board of examiners being equivalent to a new grant, and no purchaser should be allowed to take exception to the title anterior to the certificate. I might mention that before the system of Torrens' was introduced, Governor Denison, who was governor at the time, established the Pitcairn Islanders, prisoners who had escaped from somewhere, on Norfolk Island, and he asked me if I could draw up papers by which they could deal with their lands one to another. As he intended to issue grants to them of portions of the island, for good conduct, I did so, and they were printed at the Government Printing Office. I told him in conversation that the forms would do for all simple transactions in land, but that when they came to marriage settlements, and a variety of other dealings, difficulties would arise. He did not see that any difficulty of that kind would arise for many years, because such difficulties were not likely to occur, the number of persons being small.

3193. Then did you by your rules establish a kind of office for dealing with land, for transferring it? Yes, there was a registry office. Every instrument was to be executed in duplicate, and one copy to be deposited in the registrar's office and certified as registered something similar to certificate issuing under Torrens' system upon simple transfer of land.

3194. Did you embody the principles you think ought to be adopted here? No; I explained to the Governor that in a large colony, with deep and heavy transactions, it could not be carried out. It was a simple notion of the present system of certificates issuing at that time, I foresaw the difficulties which since, in practice, I have met with. There are many difficulties which arise under the present system that you cannot deal with, for instance in wills; the testator devises all his property to his trustees; that will does not operate according to the present system until the transmissions are recorded in the Registry Office; that necessitates a record affecting each separate property as devised by the testator, multiplying the records to such a terrible extent that in years to come I look forward to this establishment being so immense that it will be impossible to carry it out unless there are country registers established; those country registers will also open up many difficulties. Another difficulty I have met with in the present system, is that when a transaction is completed and purchase money paid, you have to wait for a month before you get your title. It may have been that the purchaser has agreed with some friend to advance him a portion of the purchase money, and he has agreed to deposit the title deeds as soon as they are executed, which cannot be done where a new certificate has to issue, as it takes so long to prepare the certificate. It therefore causes great dissatisfaction to the purchasers that they are so long in getting their deeds, as the uninitiated call it, and they cannot understand the delay that takes place. That delay is caused by the fact that the certificate has to be prepared in the office, whereas under the old system the two instruments, *i.e.*, the deed and registration copy are prepared at once and signed; one being placed on record, and the other delivered to the purchaser. The purchaser then gets his title at once.

3195. Then the principle you would advocate is something like the principle adopted in the Encumbered Estates Commission in Ireland? Something after that system. It was seeing the working of that which gave me the idea that a person having a complicated title should go to a board of examiners and submit his title, and they being satisfied that his title was a good one up to a certain date, no exception by law should be taken to the title anterior to that certificate.

3196. The principle of dealing with land under the Act is so incorporated into the systems in all the colonies that I do not think it could be altered, though what you suggest might be an advantage? I would suggest that even now a person should be at liberty to withdraw his title from Torrens' Act, and then let him deal with it as heretofore, the certificate he receives being equivalent to a fresh grant from the Crown. Marriage settlements and other complicated trusts do not appear in any way on the records, and you are also in a manner crippled in many transactions.

3197. Then do you think that the present system does not sufficiently protect settlements and wills and such complicated dealings? It may protect them, but it does not give the facility of working.

3198. You know that trusts are not recorded here at all? They are recorded, but *sub rosa*; they are not on the face of the instrument.

3199. And a dishonest trustee might, by getting the caveat removed, make away with the property —

3200. *Mr. Terry.*] How can he? There is a caveat entered; a person may represent the caveator and get it removed, and then the dealings go on. You do not know what the trusts are, and it appears by the certificate that the man has got a clear and free title, whereas, under the other system, as soon as you produce your title the trusts are disclosed.

T. J. Jaques,
Esq.
16 May, 1879.

- T. J. Jaques, Esq.
16 May, 1879.
3201. *President.*] You can hardly take precautions against such frauds as that. They are perpetrated under the present system? If the trust cannot be disclosed, there should be something on the instrument itself which could not be removed, disclosing that there are trusts.
3202. There is something under the late amending Act with reference to that? Which notifies the caveat.
3203. Yes? That can be simply removed; it is not sufficiently impressed on the instrument itself, and does not disclose the trusts.
3204. The whole system is intended to ignore trusts? Yes.
3205. And to facilitate dealing with property, without the difficulty created by trusts? Yes; but is it advantageous to cripple the transactions of a landed proprietor in his dealings with the land?
3206. That is a matter of expediency—both sides have to be considered? Then, again, in intestacies and wills, where minors are dealt with, under the old system an administrator could dispose of the land. I know of a case where property was left to the wife and to a young child, and the officials tell me that the property cannot be dealt with to pay the debts of the testator until the child becomes of age, except under these two arrangements—sequestration of the estate, or by a judgment creditor selling.
3207. You mean that the machinery of the Acts does not authorize the winding up of the estate and the payment of debts out of the estate which the testator happens to leave in that manner? Yes. In a case like that I think the simple way would be to let the person withdraw his title from Torrens' Act, and deal with it as he could under the old system.
3208. You could hardly withdraw it after the man is dead? I think his legal representative, his administrator or trustee under his will, should have the same power as the testator, and the estate being committed to him, he should have full powers to deal with it.
3209. That would not mend the matter, because the will does not give him power to sell—he would have to go to the court? He might have to go to the court, but still the property left, subject to the debts of the testator, and, under the old system, the administrator could sell the property to pay off the debts. Then there are many other difficulties that the applicant is met with as to his title, which, in dealing with his land under the old system, would not be considered as fatal objections. Every cloud does not foretell a storm; but, under the present arrangement, the examiners think if there is the slightest cloud in your title, that there is a storm pending, and you must remove it.
3210. Does that arise from the extreme caution of the examiners? Over extreme caution of the examiners.
3211. Do you think the examiners go too far in the investigation of titles? Yes, by bringing up difficulties which would not be considered as fatal in the ordinary transactions in land, and requiring you to remove these difficulties, which would pass on with the title without being considered as fatal objections by any solicitor.
3212. Do you think they raise more difficulties than would be raised by solicitors for purchasers of land not controlled by a contract? I think so, in many cases; in requiring proof of negatives which, with others, they do not expect you to prove. The matter of dower is very often met with as a very difficult objection under the present examination. Identifying parties is another difficult matter under the present system. I can illustrate one difficulty that occurred to me, which I thought quite unnecessary. In the case of a renunciation by a trustee under the will, probate having been granted to the other two trustees, I was compelled to register the renunciation. The testator was dead, and could not be considered a party to the deed of renunciation; the other two trustees were not parties to the deed, and could not be considered as parties for the purpose of signing the registration copy, and the difficulty was to get the signature to the registration copy of the renouncing trustee.
3213. I suppose you got a Judge's order? I ultimately got the signature of the renouncing trustee. The original document was deposited and was still in the Wills' Office, and available for production at any time, and the property being under Torrens' Act, the registration had to be made under the old system. It struck me as being a most strange requisition on the transmission from the testator to the present trustees. I had to obtain the original deed from the Wills' Office in order to make the registration copy.
3214. I know that the examiners have insisted very pertinaciously on the registration of documents, and in many cases most unnecessarily. In the case you mention, there could not have been any necessity for registration? It struck me so, they having the custody themselves of the original, and the registration being outside their province, being under the old system, the property under Torrens', and nobody after the certificate is issued is expected to search under the old system. Certificates had issued to the testator, and still I had to register under the old system the renunciation by a trustee of property, certificates of which had issued under the new system.
3215. *Mr. Terry.*] Then you think they ought not to look behind registered documents? Mr. Burton raised the objection. He said that the original instrument might get burnt or destroyed. But so may a man's certificate, or all the records of the department get burnt or destroyed. There was no more likelihood of the original recorded with the will than the other, *i.e.*, the registration copy filed in the same office.
3216. *President.*] Do you know of any other difficulties in the working of the office? I had made a great number of notes upon different matters when I was Registrar General, but never dreaming that I would go back to my profession—which I have been compelled to do by the Government in reducing my allowance to less than one-half what I retired upon—I believe I handed the notes over to Mr. Ward, or to some gentleman in the office. Therefore, many of the notes I have made I have forgotten, and it was only yesterday your Secretary called upon me to say you wished to examine me. I made, however, one or two notes last night. There is another difficulty I found, and that is this: Many landed proprietors having their certificates of title, and not knowing that it is necessary to fill up the forms that are mentioned in the Act and place them on record, deal with the property by endorsement on the certificate; the land passes from hand to hand by these endorsements, and the original holder of the certificate is not to be found, or dies. The present owner cannot become registered proprietor, because none of the intermediate transactions can be placed on the register, not having been filled up in the precise form required by the office. I think many of these things will come to light as the system gets older. There are many parties holding certificates (not engaging a professional gentleman to complete the transactions), who deal with their properties, as they would under the old system, by endorsement on the back of the certificates—sufficient to pass an estate, but not in sufficient form as required by Torrens' Act to place it on the register; and then they are shut out entirely, as they cannot get the transfer recorded, or a new certificate issued.

3217. Then you think there should be some means of recognizing those dealings with property? I think, on proof of those dealings—the same as a solicitor would require if transferring the property under the old system, *i.e.*, proof that the dealings are genuine and sufficient for passing the estate—that in some way the certificate should issue to the present owner. When once the property is under the Act, you cannot under the present system apply to have it placed under the Act again, or get these intermediate transactions recorded, and there is no provision by which the present holder of the land can get a certificate.
3218. Do you not think that, when people get better acquainted with the Act, these things will not be carried on? In a colony with a scattered population like that of this Colony, people are not likely to get acquainted with it; the more illiterate portion of the population think that by making endorsement on the certificate, such as “I have this day sold for £50, paid to me, all my right and interest in the land within-described, and transferred the same to ‘John Jones,’ who shall hold the same to him and his heirs and assigns for ever,” and having it signed and witnessed, it is all that is necessary. This would be accepted under the old system where no other deed could be obtained, but under the new it would not be recognized.
3219. That which goes on now, then, is very like what went on seventy or eighty years ago by simple endorsement? It still goes on, but under the new system the present owner cannot in any way deal with the land in a proper form, because he cannot get himself recorded as the proprietor.
3220. Do you think there are many cases of that sort? I have heard of several.
3221. *Mr. Archer.*] Do you mean that the registration should be merely for rectification, or that persons should be allowed to transfer in this informal manner? In the case of such dealing there should be some method by which the present owner could get a fresh certificate in his favour, or he should be permitted to withdraw his title from the new system.
3222. Would that not necessarily disturb the very foundation of the system of passing land by registration? No; I mention this as one of the difficulties that cannot be met under the present system, and that there should be some means of re-application for a fresh certificate.
3223. *President.*] Would you not give these people relief whether they withdraw the title or not, because they would not know anything about the right to withdraw? I would give them relief where these difficulties have cropped up; and where a person wished to withdraw a title and deal with complicated trusts, or anything of that sort, I think he should be at liberty to withdraw his title in order to do so. I believe there is a case where the Master of the Rolls has ordered the withdrawal of a title from the register. *Mr. Burton* told me of a case when I was speaking to him on the subject. He said he saw that the Master of the Rolls had been compelled to allow the withdrawal of a title from the record upon the application of the proprietor of the estate. I have not seen the case.
3224. *Mr. Archer.*] Would you not open the door for the destruction of the whole system by that power of withdrawal? No more so than that persons are not compelled to bring it under the present Act. A person could make his application and get his certificate, and he could withdraw it, having a perfect title, for purposes of settlements or trust dealings. This would of course give him a certificate of title up to date of withdrawal.
3225. And why should any man having got a certificate go and withdraw it; would not withdrawing it depreciate the value of his property? I do not think so when withdrawn for such purposes.
3226. Or rather does not the possession of a certificate of title enhance the value of most properties? It does.
3227. Then why should any man in his senses wish to withdraw it? Because he cannot deal with it in the way he wishes.
3228. Do you know of a single case which has occurred in this Colony of hardship or difficulty in the way you are alluding to? I have known cases where parties have been advised that they could not carry out their wishes, simply because the property was under *Torrens’ Act*.
3229. Do you know any extent of hardship to warrant any alteration in the law? No, but these are some of the difficulties I have foreseen in studying the Act, and I think provision should be made to allow re-application for certificate in such cases as I have mentioned, and for allowing the withdrawal where the proprietor wished it.
3230. A theoretical difficulty that may inflict hardship practically on occasion? It limits the free action in matters of real property.
3231. *President.*] Have you got anything else to mention? There is also that which I think multiplies the number of records. A will, for instance, deals with the whole of a man’s property. He may be possessed of thirty or forty different properties, but you have to get a transmission of each of those properties placed or noted on the register, whereas the will deals with the whole, and so it did under the old system; a man could convey thirty distinct properties by one deed, but under the present system, unless the properties are very closely attached to each other, you have to get a separate certificate for each. One bargain may contain fifty different properties, and you have to get fifty different transfers.
3232. One bargain? One bargain, buying the whole of the properties. Under the present system you must have a distinct transfer of each property, which entails a very much larger amount of expense than under the old system. I think there should be some provision made by which a man buying the whole of the properties should have a certificate, and that the one certificate should embrace the whole.
3233. He may include as many properties as he likes in the transfer, but he should be entitled to one certificate including a great number of properties? Yes. I do not see the actual necessity for their being a certificate for each distinct property, even where they are not adjoining.
3234. They would issue one certificate if the plan could be made to include the properties; they issue one certificate now for half-a-dozen allotments if they are contiguous, and can be got into the same plan? But why not have one certificate to embrace properties in separate localities. If you are dealing with any properties that are contiguous, you have to deposit your certificate, and get it noted. Why not, if there were ten properties, have one certificate for them. I do not see the actual necessity for confining one certificate to the one property, or to contiguous allotments.
3235. Would you abolish the plan that they endorse on certificates? I do not see the necessity of plans unless in the subdivision of allotments.
3236. Is not the plan a very good means of identifying property? Not the plan they put on. I do not see the slightest facility of identification. It gives you no starting point; it gives you some lines, but does not say so far from this or that road. It gives you some chains of frontage, but I defy any surveyor, from the plan on the certificate, to go and settle down, or point out the land.
3237. Is that plan not as reliable as what you see in ordinary deeds? In ordinary deeds you have the description, commencing, for instance, from a point 10 chains from the road, or such a description as would enable a surveyor to measure off the land.
- 3238.

T. J. Jaques,
Esq.
16 May, 1879.

- T. J. Jaques, Esq.
16 May, 1879.
3238. Sometimes? The surveyor's description generally goes from some point, from which you can start for survey purposes.
3239. Deeds are made with very vague descriptions sometimes? Yes; that is the fault of the surveyor, or of the person accepting the title.
3240. The plan adopted here may give you all the necessary information you require just as well as a written description? If it were to show on the plan the distances from certain places, or the adjoining properties.
3241. What you want is a definite starting point? Yes; that the plan should be something more instructive.
3242. *Mr. Archer.*] Do they not give bearings? Yes; but bearings are of no use unless you first get on the land. I will illustrate my meaning. (*Witness explained by rough pencil diagram.*) I would benefit the identification by having a more definite description in the certificate, without relying too much upon the diagrams. As regards the work, to relieve the department of such an immense amount of work—and it multiplies fearfully as the subdivisions take place—I think that the certificates should be prepared outside the office, deposited with the transfer, and simply examined by the department as to its being correct—not that the department should prepare every certificate. That would relieve the department of considerable work, and I do not think it would become more expensive to the purchaser. When found correct, the certificate could be signed and stamped, and would be ready for delivery in a much shorter time.
3243. *President.*] That is the very thing that Torrens—originating the system—wished to avoid? Yes. I know it was one of his ideas that all the work should be done in the department. I think that the department in a few years, will become so magnified, that it will be next to impossible to manage it, unless by having district registrars.
3244. *Mr. Terry.*] That is very easy to do? There are many difficulties that crop up with respect to district registrars.
3245. *Mr. Archer.*] But the business of transfer of land has gone on in Victoria and South Australia to an extent far beyond what it has attained in New South Wales, and difficulties have not yet been realized there in practice? I have heard of many difficulties arising in South Australia.
3246. Of being so overburdened that they require district registrars? No; but difficulties from delays in the transactions.
3247. Difficulties exist under any system. The old system of conveyancing was so cruel and inflicting on the public, that the new system was hailed with delight? The new system is advantageous where there are nothing but simple subdivisions of property, and the facility with which a transfer can be made, not necessitating any investigation of title. I think it is a mistake to say the new system is a more inexpensive way of dealing with the land. I believe it costs a person as much to get a transfer as it did a simple conveyance under the old form. It is the investigation of the title from its first date, and the necessary searches, which occupy the time and cause expense. This would be avoided if such a certificate of good title as I have before-mentioned were issued to the land owner.
3248. Is that not the fault of the mode of administration—is it a fault inherent in the system? It is necessary under any system. For instance, if you employ a solicitor, he has to fill up the necessary forms, which occupies his time as much as making out a short conveyance. There are the necessary attendances to file the transfer, and again to get the certificate—sometimes two or three attendances for the last purpose.
3249. Does that not show a defect in the mode of administration? I do not see how you can avoid it; Forms must be filled up, and there must be attendances to file documents, and again to get certificate, and this occupies time.
3250. How would you make it less expensive by your system? I could not do so. I say it is partly a mistaken idea for the public to suppose it is less expensive to get a transfer under the present than under the old system, except where there are complicated titles, which I would avoid, as I have before stated, by issue of certificate that title was perfect up to date of certificate.
3251. And I say, may not that be from a fault in the mode of administering the system? No, not exactly that. Work has to be done under either system, and is expected to be paid for.
3252. If you had the administration of this department, could you not undertake to transact ordinary transfers on behalf of the public at a very low rate? Do you mean for the department to fill up all transfers, and virtually act as conveyancers?
3253. Not as conveyancers, but as conveyancing clerks, who would fill up formal or ordinary things in a kind of perfunctory manner? Yes; but the question would then arise as to the great expense of the establishment and the strength that would be required to fill up all transactions. Your idea, I suppose, is to have one immense transferring establishment?
3254. I am simply asking this, accepting the system, as established by law, of registration as proof of title;—could you not, from your official experience, organize such a plan as would render that system cheap and efficacious to the public? Yes, by having a wholesale transferring establishment by Government.
3255. Which the Office of Titles is supposed to be? All transfers would then necessarily have to be transacted in this one office—a large conveyancing establishment.
3256. But is that not the system that is supposed to exist—that a person having a certificate of title here could at this office cause an endorsement to be made there and then, in half-an-hour, and dispose of his property? Yes, but that never has been carried out, and could not be unless by having a large wholesale transferring establishment where all parties would have to attend to transact their business.
3257. Is not this office, as constituted by law, a wholesale transferring establishment? No, because they are not supposed to prepare the transfers, make the necessary searches, have all parties to attend to execute the documents, pay over purchase money, &c.
3258. Why not prepare them? There is nothing to prevent them.
3259. And could they not do so if the work were properly done? Yes, by charging a fee to pay expenses of the department, and by having a number of gentlemen in the office to fill up the forms of transfer, make all necessary searches for judgments, insolvencies, &c., it could be done.
3260. Was not that the original idea? Not that I am aware of. There would be difficulties—money would have to pass, and everything else transacted in the one office; parties would have to go there and transact their business, and pay over the purchase money, &c., in the Registrar General's Office, which would be a large conveyancing establishment—and it would have to be an immense establishment.

3261. Was it not intended to do with land as is done with ships? Yes; it was spoken of that dealings with land should simply be under the same system—that there should be a transferring office, where all transfers could be filled in by officials in the department, and the business could be transacted in that department, and the parties could call again and get their certificates; but it was not the intention of the Act, and was never commenced.

T. J. Jaques,
Esq.
16 May, 1879.

3262. *President.*] Do you think it advisable that all transfers of land should be prepared in the office? Not to compel persons to transact their business in the office, because most persons prefer to go to their own solicitors to do their business.

3263. If the transfer is a mere form, it does not seem very material whether it is done here or done outside? That is what I say. It is immaterial where it is done; but persons should not be compelled to transact their business at the one office.

3264. It seems to me that if it were done in the office it would require such a large staff that the business could not be got through? Yes, and would necessitate much travelling expense on persons in the country coming here. For the one department under Government to do the work, as suggested, would require the strength of the whole of the Sydney solicitors' conveyancing clerks combined.

3265. *Mr. Archer.*] You know that in South Australia persons licensed to do this work for the public were not lawyers? Yes; but the work was not necessarily done better or cheaper.

3266. It is not necessary that a legal man should be engaged in this transfer work; it is not of such a complicated or difficult character? No; most persons could do it. But gentlemen prefer to go to their solicitors to have their work done.

3267. There is no reason why they should not? This is the difficulty. You say it is not necessary to go to a lawyer; people put endorsements on their own certificates, intending to deal with the land, and when the certificates come before the Registrar, the difficulty arises. These endorsements put on the certificates are of no use; they complicate the matter. Not being on the prescribed form, they cannot be dealt with by the Registrar.

3268. From your experience as formerly Registrar General, and your present position as a solicitor, can you say whether or not the Act has had a beneficial tendency? Beneficial, undoubtedly.

3269. In what way? In removing great difficulties of title to very insignificant property as regards value. That is, if you have a title to property worth about £20 it would cost you as much under the old system to get a transfer as for a property worth £20,000, simply because there was a long tail of title attached to the property. By bringing that property under Torrens' Act you get a clear certificate to date.

3270. But you would let him get it only for a number of years? I say that he should be at liberty to deal with the land as he likes, after he has received his certificate of title.

3271. *Mr. Terry.*] From your experience as former Registrar General, do you think it necessary to retain the Board of Commissioners? I said from the very first I did not see the use of them, and I never could.

3272. *President.*] Did you join the office from the first establishment of the system? Long before. This system was an attachment to the old Registrar General's Department to which I belonged.

3273. Then you have been in the office during the times of the different examiners? Yes, from the first.

3274. While Messrs. Holden and Dick were examiners, did there arise the same difficulties about passing titles as have since arisen? I do not think that minor difficulties were so pertinaciously insisted upon as they are at the present time. Attention was called to them, but on explanation they were allowed to pass, if only a blemish in title, but not a defect. At present, with some of the examiners they are persisted in, and there is very great difficulty in removing them, of which I have already given an illustration.

3275. Were Messrs. Holden and Dick anxious to bring the office into a good state, and to bring into it all the titles that could be brought? Yes. Messrs. Holden and Dick predicted that in less than five years every title in the Colony would be under the Act. I predicted the opposite.

3276. You think they worked with that object in view? No doubt, to get as many titles as possible; but I do not accuse them of passing defects in title for the purpose of carrying out their prediction—not at all. Where there were difficulties such as proving negatives, or identity, and other such things, they did not insist upon them, but took such evidence concerning them as solicitors between themselves would be satisfied with if working for a willing purchaser.

3277. Then you think they were neither too lax nor too stringent? No,—a happy medium.

3278. And the office worked successfully under them? Yes. The contrast I make is that Mr. Dick and Mr. Holden acted as solicitors wishing to complete a transaction; Mr. Burton's idea is that he must work as an attorney endeavouring to get out of a bargain, raising objections as if he wanted to throw the title over.

3279. When did the change take place in the office in the mode of examining and dealing with titles? It was after Mr. Dick and Mr. Holden's removal from the office that the difficulties began to magnify.

3280. With any particular appointment? I cannot but say that Mr. Burton is the great obstructionist.

3281. *Mr. Terry.*] He is absolutely an obstructionist? I cannot but apply that term to him, though it may be harsh. I am speaking now, of course, as a solicitor. I have found him as an obstructionist when bringing a title under the Act, as instanced by his insisting upon the registration of the renunciation of one of the executors of a will, the original being deposited in the Wills Office, a part of the same department in which the copy would have to be lodged.*

3282. *Mr. Archer.*] Do not those obstructions increase the cost? Greatly.

3283. That is an illustration that the increase of the cost is not necessarily the result of the system, but arises from the idiosyncrasy of those administering it? Yes, but a man may have a title to a small property which when sold would necessitate the removal of many of these difficulties. A person brings his title for investigation, upon application for certificate, and the difficulties then crop up. Therefore it is not the department itself that brings about the difficulties, but the application to bring land under the Act that brings them forth.

3284. I understood you to say that these difficulties would not have been treated by Messrs. Holden and

*NOTE (on revision) :—Case—Transmission, under will of late E. W. Cameron. Application lodged, 9th July, 1879. Certificates received with transmissions endorsed, 15th November, 1878. The only requisition being the registration of the renunciation by one of the trustees.

- T. J. Jaques, Esq.
16 May, 1879.
- Dick with the particularity with which they are treated by Mr. Burton? Precisely so.
3285. My question was whether Mr. Burton does not increase the expenditure to the public? Necessarily by these objections.
3286. *Mr. Terry.*] Would any solicitor in private practice make the same objections to a title as Mr. Burton makes? Certainly not with regard to the objection I alluded to, and to many other objections. I believe many objections are raised by Mr. Burton which attorneys would not raise unless acting for a purchaser who wished to get out of a purchase.
3287. Have you had any dealings with Mr. Jones? Yes.
3288. Does he take the same kind of technical objections as Mr. Burton? No, I think not so strict. Of course I have found him back up Mr. Burton's objections. Probably he feels a difficulty where Mr. Burton has noted an objection on the title, and the title comes to him; he cannot remove the objection by striking it out, and the second examiner is compelled in a way to carry out the objections started by the first.
3289. Have you had any dealings with Mr. Maddock? No, I have not had any titles passed under Mr. Maddock.
3290. Then you cannot speak of him? No, I cannot speak as to him.
3291. *Mr. Archer.*] Are the generality of titles that come into the office difficult ones? No, some are most simple.
3292. If you were an examiner, how many could you get through in a week, having nothing else to do but investigate the titles? If I were an examiner I should adopt a different system to what is adopted here; I should not allow a difficult title to be a dead-lock to a simple title; I should devote a certain proportion of my time to passing on simple matters. I believe Mr. Burton's system is that, where there is a difficult title he makes it a dead-lock to all minor titles. His argument to me is that it would look like favoritism to take the small ones when the big one stands in the way; but if there are a number of carriages, and one of them is from some defect obstructing the way of the others, you are at liberty to urge off the ones that are ready to move off in order to get rid of them.
3293. That is sound common sense; and looking at business in that light as you know it in this office, how many cases do you think you could go through by your system in a week, having nothing else to do? That is a difficult question, but a gentleman of quick perception would pass through from five to nine or from five to seven ordinary simple titles.
3294. In a week? In a day. Assuming that there is a grant, and that the different deeds—seven or eight in number—are correct, I do not think it would take an attorney an hour or a couple of hours to see that those deeds are properly executed—sufficiently enough to pass the estate and to see that the present applicant is the proper person.
3295. Are there many cases coming into this office having only seven or eight deeds? I cannot say.
3296. Are you sufficiently informed of the nature of titles in this Colony to be able to say whether the investigation of them would involve as a rule more than half a dozen deeds? Very many titles do not, but I should think it would be the more complicated titles that would be brought into the office for examination.
3297. You do not know of your own knowledge what in the main is the character of titles that come into this office? No.
3298. *President.*] You have had experience in dealing with titles, and taking the difficult and simple ones together in fair proportion, how many could you investigate in a day? I cannot say, unless I had seen the titles that came before the examiners.
3299. I mean titles generally that you have to deal with outside as a solicitor. You know some are very simple and others complex, but take the average? You mean simply pointing out the difficulties, but not removing them.
3300. Perusing a title, preparing requisitions of title? How many in the day, taking the generality.
3301. How many a week if you like to put it that way? I should say that in extensive practice an attorney would require two days to each title; that is, taking very complicated titles among them, and working them to final issue. I am scarcely able to answer the question, because one title I lately passed which took me fully a fortnight to work up to a good title.
3302. Exclude those exceptional cases and take the ordinary run of titles—some consisting only of one deed, some of a dozen, some perhaps of more? Taking the ordinary run of titles, a solicitor would deal with two a day.
3303. You said just now from five to seven? That is simple titles, where there is no complication or settlements, or trust deeds, or other deeds of that nature.
3304. Do you think, taking the average run of titles, you could deal with two a day? I think so.
3305. Then you think if an examiner does not deal with more than one a day he does not do sufficient work? No, I do not say that, because I believe more complicated titles would be brought to this office than would go before a solicitor in his ordinary practice.
3306. I think it is not so in point of fact, because persons bring titles here for the sake of subdivision afterwards. Those are simple titles? Yes, but there are many more complicated titles—people wishing to remove difficulties from their titles—than would go before an ordinary solicitor.
3307. You mean to get a good title for a bad one? Yes, probably so; more correctly a simple title for a complicated one.
3308. *Mr. Archer.*] It is your impression that it is likely—not that you know it is so? I should fancy that was the object of the office—to rectify the complication of titles, and also to facilitate the transferring of land from one to another.
3309. *Mr. Terry.*] Do you not think it would be an advantage if the examiners had power to pass, on payment of an extra premium, a title not absolutely good, but so good that no charge would be made on the assurance fund? I think so, and that the examiners should have the power to increase the charge for assurance when there were difficulties, which could not be removed, but under which they thought claims might be made, but were very remote; such a title, for instance, as a willing purchaser would accept, but an unwilling purchaser could not be compelled to take unless under special conditions of sale.
3310. Do you think an extra assurance fee should be paid to the Crown on transmission cases, the original applicant having paid an assurance fee to bring his property under the Act? I do not see why, any more than on a transfer.
3311. They do it now? I have often wondered why, because the transmission is simply dealing with the property by will instead of by transfer, and with transfers there is no assurance fee.

3312. Then you think it ought to be done away with? Certainly; I do not see the necessity for an assurance fee on transmissions. I believe the idea is that they have to examine the will to see as to its full effect, as the will may not pass the absolute estate, and for their judgment on the will (in case they err in that judgment) they charge the assurance fee.

T. J. Jaques,
Esq.
16 May, 1879.

3313. *President.*] The will is looked upon as a complicated, dangerous document to deal with? It is more so than a transfer.

3314. But, nevertheless, you think there is not sufficient difficulty to justify the charge of an extra assurance fee? I think there is not. I have known an instance of a party executing transfers at the same time he as executed his will, for the very purpose of preventing the assurance fee. He said: "Keep the transfer along with the will; when I die you can lodge the transfer, and at the same time prove the will." That has never yet been tried, but I know it has been done, though not yet carried through, and as I have mentioned, to avoid the assurance fee. The property say, is worth £5,000; he executed the transfer of it to the very person to whom he intended to leave by his will.

3315. The devisee? Yes, the intended devisee. Then he makes a will of other personal properties. By the record of the transfer the certificate issues to the devisee, instead of going through the will and paying the assurance fee.

3316. Do you know of any irregularities in this office in the working of the Act, on the part of the officials? No; nothing has come before me that I can call to mind.

3317. Do you know of any instance of money unauthorised by the Act being paid to any of the officials here? No, I have never heard of a case.

3318. You know that when an application for title is lodged, there is generally lodged with it a plan? Yes.

3319. Which plan may be prepared by any surveyor, whether licensed under the Act or not? It may be prepared, but it is not accepted here unless certified by a surveyor licensed under the Act.

3320. It is accepted here? Not original plans, or of subsequent subdivisions of properties.

3321. I mean the plan lodged with the application for title? Yes, there is a plan, signed by surveyor, lodged with the original application.

3322. And do you know that a plan will be accepted here, although not prepared by a surveyor licensed under the Act? I do not know. In all matters that have come before me, I have always had a licensed surveyor. I was not aware that any but those were accepted.

3323. In point of fact, they accept plans not prepared by licensed surveyors;—do you think that an objectionable practice? As long as there is a competent surveyor I do not see why he should require a special license under the Act.

3324. Why should they require a special license for subdivision plans? I am answering the question generally. I do not see why a competent surveyor, although not licensed under Torrens' system, should be debarred from preparing plans under Torrens' Act.

3325. But you know that this license is issued as a test of competency? But if they get their license from the Surveyor General, and do not undergo any further examination under Torrens' Act, why should it be necessary for them to get a certificate under Torrens' Act?

3326. Then you think surveyors licensed by the Government should be allowed to practice in this office without further certificate? Yes.

3327. Do you see any difference between subdivision and original plans? None.

3328. Would you have them all prepared by a surveyor duly licensed by the Government? Yes.

3329. *Mr. Terry.*] Do you not think it would be an advantage to abolish dower, as in South Australia? Undoubtedly.

3330. *President.*] Abolish it altogether? Very great difficulties crop up from fictitious and absurd dowers—dowers that would cost fifty times as much to recover as they are worth. I would not abolish the right to dower on properties under the Act unless with the wife's consent; if persons having property under the Act die, I do not see why it should be ignored. I would not deprive all women of their dower; but I say that the objection as to dower on old titles should be removed, and should not be a reason for refusing a title under the Act.

3331. Nor is it at present.

3332. *Mr. Terry.*] They notify it on the certificate? Yes.

3333. And thereby damage the certificate? And damage the certificate; and I say they should not do so, but that the assurance fund might be made to meet all those objections as to dower.

3334. *President.*] Do you not know there are many instances of dower actually existing in the case of women married before 1837? I do not know of many. I know of one lately died out—that of White's estate, in George-street South.

3335. I know of several, and I do not think it would be quite fair to sweep them away? That difficulty might be met by having a dower assurance fund, the same as having the other assurance fund. I think there are very few owners of land married prior to 1837 having the land now, whether under the Act or not,—that is, that the person married prior to 1837 is the now actual proprietor of the land on which the dower would arise; it is vested in somebody else than the husband whose wife is entitled to dower. In that case I think the dower should be removed, because the husband has sold the property long since for its full value, and had the benefit of the money, and having had that, the wife has also had her share of the benefit.

3336. Possibly; but suppose the wife had separated from her husband? Yes, possibly, but rarely.

3337. *Mr. Terry.*] Then you think the assurance fund ought to be chargeable for dower, and that the certificate should issue not marked with it? I think there would be very few claimants for it.

3338. Do you think the Government should charge an assurance fee on a grant direct from the Crown, issued by them? I do not see why they should.

3339. They do it? Yes, I know they do it.

3340. Should not that be abolished? Yes; it is as much as to say there may be a defect in the grant, and that the owner of the grant may be dispossessed by the error of the person who charges the assurance fee.

3341. And therefore the Government should not charge the purchaser of land an assurance fee? Decidedly not; there should be no assurance payable on the grant under the Act by the grantee. The assurance is to prevent the Government being a loser through some error of the examiners in passing a title. The Government issuing a grant for valuable consideration should not charge the grantee an assurance fee, which is as much as to say "I have made a mistake in selling this land, and you may be deprived of it."

- T. J. Jaques, Esq.
16 May, 1879.
3342. *Mr. Robertson.*] And when they are deprived of it they are not paid out of the assurance fund. That is another reason why the grantees should not contribute to the fund. Why should they contribute to a fund out of which, even if the grant turns out to be void, they are not recouped? The Government are the vendors, and get the purchase money. To charge an assurance fee is equivalent to a vendor receiving the purchase money for land sold, and charging the purchaser an assurance fee should he, the vendor, have made a mistake in selling the land and be called upon to pay back the whole or a part of the purchase money. The Government sell the land and issue a Crown grant, and I do not think they should charge an assurance fee to indemnify themselves against a mistake committed by them.
3343. And when they do commit the mistake, they do not indemnify the grantee from the assurance fund, but take it out of general revenue. They have made several mistakes; several grants have been made and called in again, and the grantees have not been compensated out of the assurance fund, but out of general revenue? That is quite right from my point of view.
3344. What I mean is that the grantees contribute towards one fund, and when the contingency arises that they should be compensated they are paid out of another fund altogether; they are not compensated out of the assurance fund? I look upon the assurance fund in this way: It is to meet any error in judgment in originally placing the title under the Act. It is not for any subsequent dealing with the property under the Act. We admit that the Crown has a good title, and if they sell the land twice over that has nothing to do with the assurance fund. A mistake has been committed by themselves, and they have received the purchase money twice. They should therefore recoup out of the money they have received twice, and not come upon a fund which is to indemnify the Government for any error committed by their officers in the examination of titles.
3345. That is what the Government do? And then I say the grantee ought not to contribute to the assurance fund, which is to indemnify the Government for errors committed by the examiners of titles.
3346. *Mr. Terry.*] Are you aware that the examiners now are passing titles subject to certain qualifications, and advertising them? I believe that has been done—that is during the time for caveats to come in. Certain difficulties must be removed before the issue of the certificate.
3347. Do you think that is right—ought not those difficulties to be removed by requisitions before they advertise the property? I think it is quite correct to advertise that on a certain date certificate will issue, so that parties may come in with caveats. In the meantime the applicant will have to remove certain difficulties in title.
3348. Might not some of the qualifications, if they could not be removed, amount to a very serious defect in the title? In that case they will not issue the certificate.
3349. Is not the person holding the property damnified by the action of the examiners? I presume it is done with the consent of the applicant, to avoid delay.
3350. They do it without that consent in numerous cases? Looking at it in that light they might get the consent of the applicant, and ascertain as to whether he could remove the objections, which I understood they always did. There is another thing which damnifies your title, and that is, that when the title deeds are brought into the office they are stamped. If your application is refused, your deeds go forth with a brand upon them as bad.
3351. Do they stamp your deeds before the certificate is issued? Yes.
3352. That they ought not to do? My impression is that they stamp them when they come into the office.
3353. Do you think it right for the examiners to demand the production of the same deeds two or three times over? I do not see how you are to avoid the difficulty.
3354. On the same property, but different applicants? Assuming the one deed deals with ten or twelve different properties, and the deed has been produced and certificate issued, and subsequently on another of the properties being brought under the Act, and they want the deed again produced, I do not see how you are to avoid the difficulty unless by making a copy of every deed. They do not retain in their mind sufficient knowledge of the deed to pass the title when the second application comes in; the deed has passed from their memory.
3355. But they frequently require the production of the same deed for the same property. One man brings in his application, and then another, and they require the same deed twice over? I do not think they require it where an application has been made for a portion of the property, and a subsequent applicant applies for a certificate for another portion of the same property.
3356. They do; latterly they do? I have never met with a requisition of that sort. So soon as I point out that a title has been passed, and my abstract discloses the same title as that passed, they dispense with the production of the deeds.
3357. Would you recommend an increase of the examining power in this office to enable them to get through the work more expeditiously—examiners of titles, I mean? I do not know what number of applications are brought in, but I fancy the present staff of examiners of titles should be able to get through the work.
3358. Do you think it would be an advantage to this department to have a master or commissioner of titles? I certainly think there should be a person as a final referee, whose decision should be final.
3359. Do you think it necessary that two examiners should examine all the simple cases? I do not see the necessity for it. There are very many titles that could be passed by one person without going through a second.
3360. Do you not think it would expedite matters if all simple cases were dealt with by one examiner, subject of course, to the approval of the master of titles? I presume the master of titles would have no cases referred to him for investigation, but only the difficulties pointed out by the different examiners. Of course two heads are better than one, and it would probably increase the risk to the assurance fund to allow one examiner only to deal with cases, but there are many titles that might be passed without asking the advice of a second examiner. An attorney seldom gets the advice of a second, and it is a very rare case to refer to counsel. The master of titles would I presume act as counsel, having difficult points referred to him.
3361. If you had a master of titles, it would be for him to distribute the cases, to hand the simple cases over to one and the difficult cases over to two;—would that not expedite the work? Then the master of titles would have to examine the title sufficiently to pass it as a simple or complex title, before he passed it to the other examiners to examine again.
3362. He would simply look through them to see whether they were simple or not,—say one remove from the grantee? That would expedite simple cases, by having examiners on simple matters and examiners

examiners on complicated matters, and the dead-lock I mentioned would not arise—one examiner having the difficult or complicated cases to deal with, and the simple cases could be dealt with by another examiner, and would go on much more expeditiously, or the examiners I think should devote a certain portion of their time each day to simple cases. If the head of the department should pass some as being simple and others as being complicated, it would take away the difficulty Mr. Burton mentions as to favouritism. The favouritism, if any, could only be charged on the head of the examiners' department, as he would say, "That is a simple case and I pass it as such; this is a complicated case and I place it as such." I think it is a good suggestion that there should be a head of the examiners' department, he being the chief, not acting as examiner, but to whom difficulties should be referred for investigation and decision.

T. J. Jaques,
Esq.
16 May, 1879.

3363. And that gentleman, you think, should have a good salary? Yes, and should be a very competent person.

3364. What salary do you think would be sufficient? That person would be one to whom the other examiners would refer the difficulties appearing on the titles; he would have to judge of what was actually necessary to be removed, and what he could, in his own judgment dispense with without troubling the applicant; and he ought, of course, to be a most competent solicitor.

3365. What salary do you think would be sufficient? I am not in a position to say what the salary of a competent solicitor should be.

3366. Would you give him the same salary as the Judges receive? I forget what the salaries of the Judges are; at any rate he would not be compensated under £1,200 a year.

3367. Do you think £2,000 a year would be enough to give a master of titles? I should say that would be ample.

3368. And you think you could get a good qualified man to accept that? I think so. He ought to be well paid, because the risk is, of course, upon him, and his judgment would have to be very deep as to all the applications for title; he would be, as it were, a Judge. I should fancy £2,000 would be ample. I am not a competent judge of the salary that one of the principal solicitors would accept. I should say that you ought to get one for £2,000. While speaking on the subject of salary, I would suggest that investigation should be made as to the salaries of some of the gentlemen attached to the department, the very heavy and responsible duties they have to perform, and the remuneration paid, which I think is very inadequate.

TUESDAY, 20 MAY, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P.,	WILLIAM HENRY ARCHER, Esq.,
THOMAS ROBERTSON, Esq.,	JOHN DAWSON, Esq.

Charles Wood Readett, Esq., solicitor, examined:—

3369. *President.*] You are a solicitor of the Supreme Court? Yes; residing at Newcastle.

3370. Our Secretary has received a letter from you intimating that you wish to give evidence in some matter? Yes.

C.W. Readett,
Esq.

3371. Will you be good enough to state what you have to say? It is in the matter of Mr. Robson. Application was made in 1871 to bring under the Act some land—his property, situated at Tighe's Hill, Newcastle, and that has been going on up to the present day; and after supplying a great deal of information to the best of our ability to the examiners, we can get, up to the present time, no satisfactory answer at all from them, either one way or the other. They will not even reject it. They "hum" and "ah," and that is about all we can get from them.

20 May, 1879.

3372. Have they sent you requisitions or objections? The title is passed subject to the qualifications. They sent us the usual form, saying, "this title is passed subject to the following qualifications." Those qualifications we have answered to the best of our ability, and since they were answered, we can get no answer from the examiners. They will not say whether they will accept them or reject them, and we are just as we were when we started.

3373. Of course you are aware that you are entitled to call upon them to give a statement of their objections, and that then you can appeal to the Supreme Court? We know that, and we have threatened that in a dozen letters.

3374. *Mr. Terry.*] One examiner can strike off the qualifications? Yes. I and my father have been here I am sure fifty times. I am certain that Mr. Muddle can bear us out in that. We saw nobody but Mr. Burton in the meantime, and he would hold his head down and "hum" and "ah," and so on, and we would come away without any satisfaction; we got perfectly sick of it.

3375. *President.*] Do you say you have satisfied all their objections? There is no doubt about it.

3376. Then why not compel them to give their reasons, and appeal to the court? We have threatened that a dozen times over. We have not carried it into effect. I may state that some time ago I went to Mr. Burton, and said, "Now I want you this morning, if you will kindly do it, to give me an answer—'yes' or 'no'; that is all. If you will state now that you have come to the conclusion that you have got some compunction about passing the title, intimate that to us, and we will take the usual course and apply to the Supreme Court, and serve a writ upon you to show cause why." I said, "We do not want to do it, and if it can be avoided we will do all we possibly can to avoid it." Then he said he had consulted with Mr. Jones about this matter, and he went on—"Well, Mr. Jones is favourably inclined to it, and," rubbing his hands, "perhaps I may make some concession in the matter, and I may agree with it." I said, "Very well, Mr. Burton, but this matter has been going on for years and years; when will you do it? Will you kindly say if you will take a month? Let there be a limitation; let us know what we are doing. My client cannot understand it, and nobody can understand it. My client is beginning to doubt me; you place me in a very awkward position." Well, he said he would do it. I came down again, and he said he had been very busy, and one thing and another, and he had really forgotten all about it, and he would go into the matter again. That is the way we were treated, and can get nothing satisfactory.

3377.

- C.W. Readott, Esq.
20 May, 1879.
3377. Had the property been advertised? Yes. I am given to understand, and I believe it is the case, that previous to Mr. Holden's death he drew out a draft report favourable to this title. I forget when he died, but no doubt you could obtain that draft report. I may state that we have had Mr. Owen's opinion about this matter, and he had not the slightest doubt about this title. Mr. Robson has been in possession of this land for thirty-five years, independent of any documentary title, and we have a good documentary title as well as a possessory title.
3378. A documentary title preceding the thirty-five years' possession? No, but we have a documentary and possessory title.
3379. Why has the case taken so long—you brought it into the office in 1871? That is a mystery to me. All I know is that we—father and myself—are almost ashamed of writing and coming to the office.
3380. You received objections from the office? Yes.
3381. And did you answer them expeditiously? We did.
3382. There was no unnecessary delay there? Certainly not. There was some information for which we had to write to India.
3383. That would cause some delay? But not more than six months. This matter has been going on for nearly eight years now. That is where the complaint lies; and as I said, Mr. Holden, I believe, drew out a favourable report in this matter.
3384. *Mr. Dawson.*] What is the nature of the qualifications? I have not got them with me. (*Papers in this case produced and examined.*)
3385. *President.*] After lodging the application for certificate of title, did you receive objections or requisitions from the Registrar General? In answer to that I should like to look up the correspondence to see what we did receive. I believe, if my memory serves me right, we received objections.
3386. You said just now that you answered all their objections as soon as practicable after receiving them, and that there was a delay of about six months in sending to India? We had to send to New England and to other places like that, as well as to India. We had to find out about the death of Mr. Campbell.
3387. Was there any delay on the part of the applicant beyond the necessary delay of six months through getting evidence from India? Decidedly not.
3388. You know the qualifications appended to examiners' reports? Yes.
3389. Were those qualifications sent to you at any time in the shape of objections or requisitions? That I told you just now; I will not be sure of the form they took—whether they took the form of objections or requisitions. You see it is a long time ago—nearly eight years ago. Father was the first to initiate this matter, and he had the whole of the matter in hand up to a short time ago.
3390. But when you tender your evidence we expect you to come with all the particulars; we cannot make out your case? I know that, but what I think is that those papers (*alluding to case produced*) ought to prove the dates, and show the position in which the matter stands.
3391. It is impossible for us to go through the papers, especially in such large matters as this? All I say is we put in our application in 1871, and I want to know why the examiners do not in a reasonable time from that date go into the title, and then within a reasonable time send us these objections or requisitions.
3392. *Mr. Archer.*] But how do you know they did not do that? The date would show it.
3393. But how do you know that they did not immediately on receipt of the title make certain requisitions which you did not answer until a late period? I am certain of it. I know my father used to come down here repeatedly, and see Mr. Burton, who would say he would do it; and I have come down, and immediately I have gone into the room he has looked up at me and said, "Dear, me! I quite forgot your case."
3394. Is it your impression that they allowed seven years to pass over, and then discovered a blot on the title they had never before seen? I can come to no other conclusion.
3395. But it is a question of fact.
3396. *Mr. Terry.*] Have you applied to them since these qualifications have been answered for this certificate? Certainly. I have also seen Mr. Muddle several times, to know why they did not give us an answer if they had received the qualifications. The position Mr. Robson is placed in is that some time ago he sold some portion of the property by auction for £5,000, and received the deposit money. At that time, nearly two years ago, Mr. Burton led me to believe the title had passed.
3397. It has passed subject to these qualifications? Yes. Ever since the sale of a portion of the property the purchasers have endeavoured to get Mr. Robson to give them a title, and he in many cases has had to give back the purchase money, and I daresay you will find several letters in which we have threatened to take proceedings under the 106 section of the Act, and apply to the court. Every time we saw and threatened Mr. Burton he used to say, "I will decide the matter; we will do something with this matter one way or the other," but it has gone on day after day and month after month.
3398. Have you seen Mr. Jones in reference to this? No, because Mr. Burton had the matter in hand.
3399. Mr. Jones is one of the examiners; I should have seen him? I have not seen Mr. Jones in the matter, because they informed me that Mr. Burton had the matter in hand. Now he has thrown it up.
3400. *Mr. Archer.*] And now that the title has passed with certain qualifications, you say you have supplied all those qualifications? They are there among the papers; Mr. Norton has read the qualifications and the answers.
3401. *President.*] I see among these letters a copy of a letter containing objections forwarded by Mr. Muddle, the Deputy Registrar, to your father, on the 19th December, 1871? Yes.
3402. There was not much delay in sending those requisitions? No, I do not see very much.
3403. Do you say those are answered? I do, most decidedly. They have been answered by interviews between Mr. Burton and my father, who came down to Sydney.
3404. *Mr. Terry.*] Have you got a statutory declaration in reference to the first declaration from Parry Long that the papers—the contract for sale—had been burnt? We never did try to obtain such a declaration.
3405. They require a declaration to that effect? According to the qualifications, they are so vague—why do they not say they require a declaration to this effect.
3406. That is what they do require.
3407. *President.*] All they do is to point out the objection, and leave you to remove it as you think best.
3408. *Mr. Terry.*] I would go and get a statutory declaration that you removed that objection? They say,

say, "if practicable"; we say it is not practicable. Neither Mr. Owen nor ourselves can see how the producing of this memorandum is of importance to this particular title. We say we have held possession for thirty-five years.

3409. *Mr. Dawson.*] It does not seem to me that the want of that declaration of the loss of the contract is the only objection to the title. I think there are divers other things that would crop up if one knew really what the case is? I will tell you another thing that has occurred to my father and me, as regards the Statute of Limitations. Mr. Burton says it runs as regards the mortgagee, and that a possessory title as against the mortgagee is not good.

3410. *Mr. Robertson.*] Is there an unsatisfied mortgage over the property? That is what he makes out.

3411. *Mr. Dawson.*] To my mind every one of those qualifications could be readily adopted.

3412. *Mr. Terry.*] They could be answered easily enough? (*Qualifications read by President.*) The last thing we have to deal with are the qualifications. You will find there is not one word about the Statute of Limitations, where he bases his legal difficulty.

3413. *Mr. Dawson.*] That is not mentioned in titles subject to these? And therefore you see what the President has been reading does not touch the matter now. Mr. Burton has waived that. The only things we have to deal with now are the qualifications.

3414. *Mr. Archer.*] Can you not deal with them? You can see our answers.

3415. *Mr. Terry.*] One of them is not answered; they will require a declaration about the loss of those papers? They say "if practicable"; what does that mean?

3416. *President.*] You must prove you cannot get it.

3417. *Mr. Terry.*] You must make a declaration? If they had only said a declaration was required if obtainable —

3418. They never say that; they leave it to you to supply it? Well, then you might as well require a declaration for each qualification; that is to say that the answer shall be in the form of a declaration.

3419. *President.*] So it must, as a rule? Then I must state that I am informed there are only two qualifications to be cleared up.

3420. There appear to be only two? And therefore the way in which we have answered the others is satisfactory without a declaration.

3421. It appears to me you have produced most of the deeds required in qualification 3, possibly all of them. Surely Mr. Burton or Mr. Jones will mark this off. Then the only other qualification appears to be the production of the contract. You can prove the burning down of the office? I can get a declaration to that effect from somebody.

3422. *Mr. Terry.*] That will satisfy that qualification? Of course we can only say it is presumed that particular document is burnt.

3423. *Mr. Archer.*] It simply comes to this: You think you will be now able to pass the title, but you come here to complain of the extraordinary delay? There is no doubt about it. We say unnecessary delay in this matter.

3424. *Mr. Terry.*] I would advise you to go and get the qualifications marked off, and try and satisfy the other? Then I will go to Mr. Jones.

FRIDAY, 30 MAY, 1879.

Present:—

JAMES NORTON, Esq., PRESIDENT.

SAMUEL HENRY TERRY, Esq., M.P.,
THOMAS ROBERTSON, Esq.,

WILLIAM HENRY ARCHER, Esq.,
JOHN DAWSON, Esq.

William Hilson Pigott, Esq., solicitor, examined:—

3425. *President.*] You are a solicitor, in practice in Sydney? I am.

3426. Have you had much experience of the working of the Real Property Acts? Yes.

3427. Have you found any difficulties arise in the office? Well, the complaint that we have is as to the great delays in the office. That is the principal complaint—the great delays in passing titles.

3428. With which branch of the office do those delays rest? With the examiners.

3429. Can you give us any instance? I can refer you to one or two. With regard to two cases which I may mention, I may say first, that my partner has had more to do with them than I have, but I can state the simple facts. The first case is number 4,628, the application of Michael Fitzpatrick and others. The application was lodged on the 18th February, 1878. On the 9th March, 1878, we received a requisition to have the bearings of the land put on the plan. That, of course, was a matter which could not affect the investigation of title. A little time was taken up in endeavouring to get this done, but it was again lodged on the 18th June, 1878. Numerous inquiries were made from time to time at the office to ascertain when the case would be proceeded with, but we could get no information at all. On the 15th January, 1879, we wrote a letter to the Registrar General, pointing out that delay was very prejudicial, and asking what was being done in the matter.

3430. That is a year after the case was first lodged? Eleven months after the case was first lodged we wrote a letter to the Registrar General, pointing out that delay was very prejudicial, and asking what was being done in the matter. We received no reply to that letter. On or about the 18th March, 1879, Mr. Fitzpatrick asked a question in the Legislative Assembly as to the cause of the delay, and the reply was that the delay was caused by searches and complications. We failed to see what difficulty there could be—what complications there were, or what difficulty there could be in the searches, because the abstract of title shows a very simple title. I believe I am correct in stating that the adjoining piece of land had already been brought under the Act, and had been held under the very same title. On looking at the abstract I find it was part of Mrs. Underwood's estate.

3431. Ashfield? Ashfield; and I think I am correct in saying that Mr. Pope's property is the adjoining property,

W. H. Pigott,
Esq.

30 May, 1879.

- W. H. Pigott, Esq., property, and had already been brought under the Act. The search would properly begin on the 21st December, 1861, which appeared to be anything but a long search, there being a conveyance from Mrs. Underwood to purchaser, and the title after that appears to be a very simple one. Within a few days after the question was asked in the Legislative Assembly we received certain requisitions dated the 27th March, 1879. They were all very simple, and on the 8th April, 1879, they were answered, and the certificate is not yet issued.
3432. Have you removed all the difficulties raised by the requisitions? Yes, as far as we are aware.
3433. And produced the deeds asked to be produced? We produced all the originals that could be found, and with regard to the others they were all registered. Some could not be found, but they were all registered.
3434. Have you received any reply to your last communications? No reply, I believe.
3435. Do you know any reason why the certificate should not at once issue? I know no reason whatever, and cannot understand it.
3436. *Mr. Archer.*] Have you ever sought for a reason? I have inquired over and over again.
3437. What do they say? We can get no information.
3438. But have they not said anything about it? They say the matter is still before the examiners.
3439. Have you ever appealed personally to the examiners? Personally I have not; but my partner had more to do with this matter.
3440. *Mr. Terry.*] Who are the examiners that have your case under consideration? That I cannot tell.
3441. *President.*] Have you any other case that you can mention? There are two other cases; one is an application in the name of a person named Brandy. The application was lodged on the 23rd November, 1878. We have heard nothing at all of that.
3442. *Mr. Terry.*] Probably they have passed it? We can find nothing at all about it.
3443. *President.*] Has it not been advertised? No; we know nothing at all about it, and it is a very simple title.
3444. *Mr. Archer.*] There is no reason to suppose the papers are lost? No.
3445. *President.*] Have you any other case? There is another case that I had in hand myself pretty well all through—a case of Compagnoni, No. 4406. The application was lodged on the 16th March, 1877. There were a good many inquiries between the 16th March, 1877, and the 19th December, 1877—a great many inquiries I made personally and through my clerks as to what was being done in the matter. On the 19th December I wrote this letter to the Registrar General:—"On the 16th March last we lodged the necessary application, deeds, &c., for the purpose of having certain lands belonging to Mr. Compagnoni brought under the provisions of the Real Property Act. We have made inquiry several times, but cannot ascertain that any progress has been made with the application. May we respectfully ask whether the matter has yet received attention?" We received a reply from the Registrar General on the next day. He said: "In reply to your letter of 19th instant relative to the above-named case, I have to state that I am informed it is at present in the hands of Mr. Burton, one of the examiners of title to this department. I have this day forwarded a memo. to the examiners calling their attention to the subject. Regretting that there has been so much delay in the investigation of this case, &c." On the 22nd January, 1878, or somewhere about that, we received a letter from the Registrar General. A person named Dixon had become security at the Joint Stock Bank for a person named Beverley, and Beverley had given a mortgage to Dixon. Dixon had signed the usual discharge, but the examiners required also that the bank should sign a discharge also. We replied that it was unnecessary; but we were obliged to yield. They required also the contract of sale for part of the land from Compagnoni to a Mr. John Murphy. On the 16th February we replied to that letter, stating that the mortgage from Beverley to Dixon had been duly discharged, and we forwarded them a statutory declaration from Dixon to that effect, and also the contract of sale from Compagnoni to Murphy, and objected to do anything further. Then on the 27th June, 1878, we received another letter referring us to a case in Fisher's Digest to the effect that when the surety for the payment of a debt, or one standing in the relation of a surety, receives a security for indemnity, the principal creditor is, in equity, entitled to its full effect. Therefore they say it is impossible, without the bank's concurrence, to get the mortgage discharged. We had to give way. On the 27th June we received these letters. We then had the discharge from the bank prepared, and that was lodged on the 22nd July. On the 15th October a letter was written to the Registrar General, asking whether the application was to be passed or not. On or about the 24th December, 1878, we received another letter from the Registrar General, stating that it should be shown that the memorandum of 1st December, 1876, which was the contract of sale from Compagnoni to Murphy, was the original contract between the applicant and Murphy, failing which the original should be produced in order to see that there was nothing on it to prejudice the title. That original had been lodged a good many months before.
3446. I think you say the requisition is that you are to show that the contract lodged was the original contract? Yes, that is it.
3447. Was there any justification in asking for proof of that? We thought there was no justification for a good many of these requisitions, but of course when you are dealing with the examiners you are compelled to give way, otherwise the title will not be passed; and if it is rejected it is a blot upon the title afterwards.
3448. Did the contract lodged look like a mere copy? It was the original, signed by the parties.
3449. Written in their own handwriting? Yes, I believe so—written by one of them, and signed by both.
3450. Of course, if written by one and signed by him, they might take it for a copy only? It was written, I believe, in the handwriting of one and signed by both.
3451. What took place after receipt of the letter? We received the letter dated 23rd December, and on the 30th December, 1878, we wrote: "In reply to your letter of the 23rd inst. we have the honor to state that our client has informed us that memorandum of 1st December, 1876, filed with the papers in your office, is the original contract between the applicant and Mr. Murphy." Then, I believe, about the end of February we received these certificates. I may mention also in this case that the whole of the surrounding land had been brought under the Act before our application was lodged—all being under the same title.
3452. What title was that? It was Priddle's title, out at Marrickville.
3453. Most of that has been placed under the Act? Yes; it is Priddle's title. So that the date of lodging the application was the 16th March, 1877, and we received the certificate at the end of February, or the beginning of March, 1879; and that was a very simple title indeed.
3454. Those are all the cases you wish to mention? Those are all I brought with me.

3455. Can you tell us what causes these great delays? I certainly cannot. I do not know what reason there should be for the delay. W. H. Pigott, Esq.

3456. In your experience do the examiners take more strict objections than are necessary? They certainly take objections which we should never dream of taking in private practice. 30 May, 1879.

3457. If you acted for a purchaser under an open contract, and were therefore not bound by any special conditions of sale, would you take as strong objections as they take here in this office? I certainly would not. I should not dream of taking some of the objections which the examiners have taken.

3458. Do you know of any other difficulties in working the Act? There are one or two matters which I might, perhaps, be permitted to mention. Section 99 (this is a case which has cropped up in a matter in which we are concerned for a client) provides for dealing with the receipts of the Colonial Treasurer, and it is there provided that upon the receipt of the Colonial Treasurer being handed in it is to be registered; but I believe I am safe in saying that no such registration takes place, because it is alleged that you must have the receipt of the Colonial Treasurer himself, and that is never obtained. I think it will be found that there are numbers of those receipts in the office tied up together, but not registered, because they are not the receipts of the Colonial Treasurer himself, and therefore it is easy to be seen what complications may arise in dealing with these matters. These receipts, not being signed by the Colonial Treasurer himself, are not registered, and cannot be dealt with.

3459. *Mr. Archer.*] Are they not signed on behalf of the Colonial Treasurer? Yes, but the office takes no notice of that.

3460. *President.*] Have they told you so? They have told my partner so. Then there is another matter. Section 13 of the Amending Act—the last Act—requires that a *fi. fa.* must be renewed every six months, and be lodged in the office. One would imagine that this is altogether unnecessary because under the ordinary law a writ of *fi. fa.* remains in force for twelve months, and binds all laids. One cannot see why a *fi. fa.* should not be lodged here, and why it should not operate upon whatever lands defendant may have at the time of lodging the writ, or upon whatever lands he may acquire during the currency of that writ. We had this thing crop up the other day, and the way in which we found it out was this: That the defendant was selling a piece of land to a client of ours, and a judgment had been standing against the defendant for a considerable time, and the *fi. fa.* had been lodged in the Sheriff's Office; but when we came up here to deal with it, and were about to lodge the copy of the *fi. fa.*, we were told "no, your *fi. fa.* is in force under the ordinary law, but as the *fi. fa.* is more than six months old we cannot receive it." In this case our client was at the time absent from the Colony, and we therefore could not get the *fi. fa.* renewed. I cannot see why you should not be able to lodge a *fi. fa.* in this office, and that it should have the same operation as when lodged in the Sheriff's Office.

3461. Had the *fi. fa.* been lodged in this particular case? In the Sheriff's Office, but not here, as explained in my last answer. You cannot lodge a *fi. fa.* in the Real Property Office, excepting against particular land, and you may have no means of knowing whether or not a man has that particular land. You may search on one day and find no land registered in the defendant's name, and the very next day a transfer may come in in favour of the defendant, and you know nothing about it, and he may immediately re-transfer the land.

3462. What you mean is that the *fi. fa.* if lodged here must be lodged to bind a particular piece of land, and if he has any other land that is free? Yes.

3463. Which is contrary to the practice that obtains in the Supreme Court, which binds all the man's land? Yes; but here you must lodge it against a particular piece, and though when you come up here to lodge it there is nothing registered, yet a day after there may be something, and the creditors are simply sold.

3464. Do you know of any other point? There is nothing that I need call special attention to. I think it is perhaps fair to the gentlemen in the office to mention that we have received from them every consideration and courtesy.

3465. The whole of your difficulties, as I understand, have arisen with the examiners of titles? In my experience the whole of the difficulties have arisen with the examiners.

3466. *Mr. Terry.*] What is your opinion as to the law of dower in relation to land brought under the Real Property Act;—do you think it would be beneficial to abolish it? I think it would. Judging from the operations of the examiners, at all events the question as to dower creates more difficulty than anything else.

3467. Do you think that the Government ought to charge an assurance fee on land granted direct from the Crown? I think they ought not to do anything of the kind.

3468. Do you think an assurance fee ought to be charged in transmission cases? Certainly not.

3469. Do you think it would be beneficial to the interests of the public if you did away with the commissioners and established in their place a person of superior ability—call him what you like, commissioner of titles, or by any other name; a legal gentleman, to whom cases might be referred in the event of a difference between the applicant and the examiners? I am not quite sure that I quite understand your question.

3470. Suppose you had a case, and you considered the objections taken by the examiners not proper ones, do you think it would be advisable to have, in lieu of the present commissioners, some officer who would be over the heads of the examiners, and to whom an appeal could be made? I have not thought the matter over very carefully, but speaking off-hand I should think it would be a good thing.

3471. Have you ever had occasion to come into personal contact with Mr. Burton. Yes, sometimes.

3472. Do you think the objections he takes to titles highly drawn, and technical? I certainly think they are.

3473. Do you think that if Mr. Burton were a practising solicitor he would obtain practice if he took those objections? Well, I think if he insisted upon his objections he would never pass a conveyance. I know there is one case—I have not the papers with me because the matter has now passed out of my hands—in which I saw Mr. Burton, with Mr. M'Laughlin (of Gannon & M'Laughlin), some two or three months ago, and where an objection was taken that there was no evidence that a deed of assignment made by Willis and others, somewhere about 1840 or 1841, had been advertised, and the title is still pending, and application is being made by Mr. Simpson (counsel) to have the title brought under the Act. It relates to a piece of land at Enfield. An application is now before the examiners, and has been for a considerable time, and I believe has not been passed almost solely because of that; statutory declarations have been given of possession for thirty-six years at all events.

3474. *Mr. Dawson.*] I know the title well; it would be about that time? It passed through your office.

W. H. Pigott, Esq. 3475. *Mr. Terry.*] Do you not think that the examiners require the production of deeds too frequently when they are on the register below? I certainly think so. In the case I have cited—that of Fitzpatrick and others—there is evidence of that.

30 May, 1879. 3476. Would it not be a good thing to compel the examiners not to go beyond the registered instruments in dealing with the land under this Act? I cannot say that I could give an affirmative answer to that, because there may be evidence of title required, and which we, as practising solicitors, would require beyond the registered documents.

3477. Do you not think it would be advisable in amending the Real Property Act to compel all persons to register every document dealing with the land? Well, I am not at all sure that it would—I am not prepared to give a well-considered answer to that; there are advantages and disadvantages in it.

3478. Would you give any person having a title claimed through unregistered instruments a claim on the assurance fund, provided the title issues to another person? I think not.

3479. Do you think they have a sufficient clerical staff in this office to conduct the business? From what I have seen I think so.

3480. Sufficient examiners? I think so.

3481. Then all they require is a superior head to whom cases might be referred? Yes, and that the examiners should be made to get through their work more quickly than they have hitherto done.

3482. *Mr. Archer.*] Are conveyancing cases in your experience generally very complicated? No, not in this Colony.

3483. If you were an examiner, and had nothing else to do but investigate titles, how many do you suppose you could on an average get through in a week? That would depend on the circumstances of each particular case; some titles are very short and require very little consideration, but others require great investigation.

3484. Can you approximate roughly, having nothing else to do but to investigate titles? I think that, speaking roughly, each examiner ought to be able to get through six or eight, at all events, in a day. That is a very low average.

3485. That is from your experience as a solicitor in this city? Yes.

3486. Having a considerable amount of conveyancing business? Yes, we have had a very large conveyancing business for a great many years.

3487. *President.*] Perhaps Mr. Pigott refers to preparing deeds? No, investigating the title. I think, taking the general run of the titles we have, that an examiner should get through eight or ten a day easily—that is if he had nothing to do but to examine titles.

3488. *Mr. Archer.*] You could not get bread and cheese if you did only one or two a day? I think not; it would be a poor supply.

3489. You have had experience of Mr. Burton, I think you said? Yes.

3490. Have you had any experience of Mr. Jones? Not much.

3491. Did he strike you as an improvement upon Mr. Burton as to rapidity of work, or otherwise, or as much of a muchness? Well, about the same.

3492. In fact your whole experience in regard to examiners has been one of dissatisfaction? Altogether as to the rate of progress and as to the requisitions.

3493. *Mr. Terry.*] Have you had any experience of Mr. Maddock? I have latterly.

3494. What do you think of him? I think he has got through his work more quickly than any of them.

3495. And his objections are not so technical? No; he takes fair objections, such as we would take in ordinary practice, and apparently he gets through his work. Of course I cannot say what urges him.

3496. Have you ever had to complain of the loss of documents in this office? No. I think the objections which have been taken very highly technical and unnecessary, and in saying that I might say that I have been told I am too particular in the profession, and yet notwithstanding that I should not dream of taking the objections which have been taken.

3497. I suppose you are aware that some cases are not put before the examiners for three months after they are received in this office? I am not aware of that.

Mr. John Musson examined:—

Mr. J. Musson. 3498. The witness said—"I have been a sufferer under the Act in regard to that clause under which six months arrears of rent determine a lease. From inadvertence six months' rent was not paid within the specified time, and the lessors entered into possession of the property."

30 May, 1879. 3499. *President.*] How soon afterwards? Oh, I think it was a few weeks. Evidently they were watching their opportunity. I was making no use whatever of the property, which was on the Annandale Estate; and, in fact, the lessors were making use of it.

3500. And they cancelled your lease for non-payment of rent? For the non-payment of £12 10s., and the lease was worth £1,200 or £1,500.

3501. Per annum? No, the lease was worth that. It was a forty-two years' lease from Captain Johnson to me, before the Annandale people got possession of the ground.

3502. Is this part of the Annandale Estate now purchased by a Company? Yes. My lease was granted some three years ago, prior to the sale of the land. I had spent a considerable amount of money on it, and the industry I started on it had not succeeded, and I was just keeping it on.

3503. Do you blame this office in connection with the matter? Not at all. I blame the Act. I believe they conformed to the Act in the case; but what I complain of is the power any lessor has over a lessee when through an inadvertence he may forget to pay his rent.

3504. *Mr. Terry.*] There is a certain time specified in the Act? Yes, the Act says six months.

3505. *Mr. Archer.*] Would you never allow the lessor to forfeit? I do not know in regard to that; I am not much up in the subject. In this particular case it was a hardship. I think the lessee should have notice. Certainly for £10 or £15 he would not sacrifice property worth perhaps £1,500 or £5,000.

3506. *Mr. Terry.*] Why should they serve the lessee with notice—suppose he is out of the Colony? The lessors were themselves using the property. Mr. Young had put a fence on it. I thought the property was perfectly safe, and I forgot the matter. I think notice should be given to the lessee.

3507. But you knew you had to pay the rent? I did. (*Clauses 52 and 53 of the Real Property Act referred to, and read.*)

3508. *President.*] You were in arrear with your rent for over seven months, I understand you to say? I think so.

3509. They could not proceed under six months? It was certainly over six months, and they have acted legally.

3510. *Mr. Terry.*] Strictly in accordance with the law.

3511. *President.*] Do you not think it reasonable that landlords should have some security for their rent in this way? I think that landlords, where they think there has been negligence, should serve the lessee with some notice.

3512. I think the negligence excuses them? Here is a lease worth £1,500 or £2,000, and for £12 10s. it is forfeited. The lease has been an eyesore to the lessors, and they have watched their opportunity.

3513. Is this the first time you made default in payment of your rent regularly? I was very careless about the rent, I must admit. The rent was very low—merely nominal—and I was ignorant of the law in regard to the rent.

3514. Notwithstanding the nominal rent you always got in arrear with it;—is that what you mean to say? The property was leased to me, but they were in fact using it. The company's horses and cattle were running over it, and I did take notice of it. I had copper works erected upon it, and movable plant.

3515. What are you? A civil engineer and contractor.

3516. And what was the use you applied this land to? I leased it for the purpose of making copper by a chemical process, and for other purposes.

3517. Did you carry on that work? At first I did, but then I ceased working on the property.

3518. How long before the company took possession? I do not think I have done anything on it for two years, and they took possession two or three months ago.

3519. So you let the property lie idle, and the rent get into arrear? Yes. The chairman had, in fact, encroached on my leasehold with a fence, and I threatened, on a previous occasion, if they did not remove the fence I would not pay my rent. The case is going into Equity now. Mr. John Young put up a fence, and another director of the Company ran his stock there.

3520. Do you say it is in Equity now? I think so. I think we shall commence an action in Equity against them. What I think is, that in a case like this notice should be given.

3521. Well we will consider this matter? I mention this as a personal grievance.

Mr.
J. Musson.
30 May, 1879.

REAL PROPERTY ACTS INQUIRY COMMISSION.

APPENDIX.

[To E. Burton, Esq.'s Evidence.]

A.

E. Burton, Esq., to The Registrar General.

Sir,

Land Titles Office, Sydney, 30 May, 1874.

The matter of the replies furnished by yourself to the questions asked by the Honorable John Robertson, in the Legislative Assembly, on the 12th instant, appearing to place me in a condition of default, which I do not admit, I had the honor, on the 20th instant, to apply to you by memo. for information, "which are the 74 cases referred to, and which are the 251?"

I think it must be obvious, without argument, to a person familiar with the course of practice of the office, that the replies furnished by you may very incorrectly inform the Government and the Parliament on the subject of the condition of arrear of the business entrusted to this branch of the department, inasmuch as while it is well-known to us, it is unknown outside the office, that all cases were first taken to Mr. Holden, and that many of them were dealt with by him either in a preliminary legal manner, or from notes furnished by the draftsman, or by Mr. Lander; and it by no means followed, as, of course, that these cases ever came before me—though some of them no doubt did, and in some the requisitions had my concurrence—but others were at once made the subject of reference to the applicants upon Mr. Holden's preliminary requisitions alone, and until these should be answered the cases were virtually not before the Examiners at all, and certainly did not, in the ordinary sense of the words, await treatment by Mr. Burton.

It may even be questioned whether outside of the profession the word "requisition" is generally understood. By this term we denote the asking for something to be furnished by an applicant. Some requisitions are, in fact, objections to title—others are not.

Letters making requisitions are frequently marked "preliminary," to intimate to the applicant that his case has not been fully considered.

The supply of plans, production of deeds, proof of births, deaths, marriages, &c., are subjects for preliminary requisitions.

I trust I do not erroneously conceive that the character of this branch of the department, and the accuracy of the statistical information to be obtained from its records, have such a place in your estimation as to render my somewhat lengthy communication excusable, notwithstanding the trespass upon public time which it may involve.

I believe that if you had acceded to my application I could have relieved the office and myself by a suitable division and classification of cases, from much of the arrear now alleged, and while I admit that I am actuated by the spirit of self-defence, the furnishing of the particulars required may be useful in the future transaction of business.

My surprise, therefore, may be imagined on receiving your reply to this effect: "I am not in a position to give Mr. Burton details, neither do I think that it would be a proper use of public time, especially when the business of the office is so much in arrear, to order such a return to be made. I have full confidence in the figures supplied by Mr. Lander.—E.G.W., 21/5/74."

Upon receipt of your minute I immediately wrote a memo. asking Mr. Lander to hand me such of the 74 cases as I have not already; and without waiting for their receipt I put to him on the following morning the annexed questions, to which I subjoin, in red ink,* his replies.

These replies, without at all impugning Mr. Lander's accuracy, conclusively to my mind support the views entertained by myself with regard to the bearing and meaning of your answers to the Parliamentary questions and of their effect on persons unacquainted with the routine of the office.

It may perhaps be said that it is safe to leave to yourself the maintenance of the character of your department, but it will not, I think, be denied that I am also interested in maintaining my own character and in setting myself right with those who may judge of it from your answers.

I trust that I have shown sufficient reasons for being furnished with a list of the 74 cases, and also of the 251, but inasmuch as in your opinion the public time may not be so used, I request you to have the goodness to submit this letter to the Honorable the Colonial Secretary for his information and decision.

I had written so far, and was about to forward this letter to you on the morning of the 26th instant, when Mr. Lander came into my room and inquired whether I still wanted what he called the return, meaning of course the list of cases. I replied that I certainly did, and he then informed me that you had on the previous Friday (22nd instant) instructed him in that event to let me have it.

A little after 4 o'clock on the 28th instant I received from Mr. Lander a list purporting to include the 74 cases, but which list was authenticated only by the signature of Mr. Lander.

The next day (29th instant) I forwarded that list to you, with an inquiry endorsed upon it: "As to the 74 cases—is this the Registrar General's reconsidered reply to my memo. of 20th instant?"

I have received that list again, with your minute thereon, saying, "I am not aware that I have made any reply to Mr. Burton's memo. as to the 74 cases. My reply was to a question put to the Colonial Secretary by a member of the House of Assembly.—E.G.W., 29/5/74."

It appears to me to be now incumbent on me to despatch this letter.

In further elucidation, I subjoin two additional appendices, one being the copy of a set of requisitions and the other the form of Examiners' Report.

I have, &c.,

E. BURTON.

A 1.

Memo. referred to in above Letter.

Mr. Lander,—

I cannot comprehend how the number of cases on which Mr. Holden had written requisitions before 16th April last, and which awaited similar treatment by me, can be 74.

The practice has been to take titles to Mr. Holden who would frame requisitions upon them—some preliminary—others substantial?

Some preliminary requisitions originated with Mr. Holden personally. Others (inclusive of ones) were adopted from report or memorandum furnished by yourself or by the draftsman?

Head 1. In some cases the preliminary requisitions would be brought to me, for concurrence, which I generally gave?

Head 2. In others, Mr. Holden's requisitions would be despatched to the parties without the papers being brought to me?

Head 3. Other cases would be left with me for perusal or consideration?

I understand from you that in calculating the number 74 you have included cases falling under above-mentioned heads 1 and 2—

Although those cases have been put away as under requisition, and, although I have concurred in forwarding preliminary requisitions in some of them, and although others have not been brought to me at all. Am I correct?

Yes.

Yes.

Yes. Those were such as Mr. Holden requested might be submitted for your concurrence.

Yes.

A. When you did not see fit to concur immediately.

B. Others, when Mr. Holden's requisitions were satisfied.

Head 3 might be subdivided into other varieties.

and 3.

Yes.—J.L., 22/5/74.

E.B., 22 May, 1874.

A 2.

A 2.

Copy of a set of requisitions.

No. 3,594.—Applicant, J. Hellmann.

PRELIMINARY.

1. The grant to S. A. Porry, and conveyance from him to Christian should be produced.
(A covenant for their production is contained in the conveyance from Christian to Wilton, of 17 December, 1851.)
2. Also the deeds covenant for production whereof is contained in the conveyance Newton and Irving to Hatton, of 10 July, 1869, viz. :—

26 July, 1858, Wilton to Bettridge and another.
22 January, 1861, Sempill and others to Clark Irving.
14 August, 1861, Thompson and another to Ashdown.
11 July, 1862, Irving and Ashdown to Wilton.
12 July, 1862, Wilton to Irving.

Examination in disposing of former cases may probably dispense with the requirement of further production of the other documents connected with the title derived under the will of the late Clark Irving and Newton's mortgage.
If necessary a further requisition will be made to that effect.

[To E. Burton, Esq.'s Evidence.]

B.

E. Burton, Esq., to James Norton, Esq.

Royal Commission to inquire into the working of Real Property Acts.

Sir,

Land Titles Office, 12th August, 1870.

In the course of my examination before the Royal Commission I was asked (Question 468) "Were there any arrears of cases when you took office?" I answered "Yes"; and in Question 469 I was further asked "About how many?" I could not then answer the latter question, and it was arranged that I should prepare a return of the cases referred to. In Question 478 it was suggested that I should add an item showing what cases I had dealt with by examination and approval or by sending requisitions to the applicant, from the time of my acceptance of office till the end of last year. On the 11th instant I had the honor of orally explaining that the searching out of the materials for making such an addition would occupy some weeks, and would involve the laying aside of the current work of the office, whereupon you expressed the opinion that it could not be made.

I now therefore forward the Return itself—the preparation of which has necessarily occupied a considerable time.

As to the expression "arrears," I adopt it because it was used in the question put to me. I do not mean to say that my predecessors were blameworthy in regard to the Cases which I have included in the Return. I do mean to say however that those Cases were in the office before I came into it, and that I have had to aid in disposing of them subsequently.

There were indeed many other Cases undisposed of at the time of my appointment, some of which have occupied portions of my time; but I have included in the present Return hardly any Case on which I have not finally reported as to the whole, or in rare instances a part, of the land sought by the applicant.

The particulars disclosed by the Return will however speak for themselves.

The number of the cases included in the Return will be found to be 49.

Some of them were of a very difficult character; and indeed it may fairly be presumed that their difficulty was in many instances the reason of their accumulation in the hands of my predecessors.

I have, &c.

E. BURTON.

B 1.

[Enclosure in foregoing letter.]

SOME cases in arrear or undisposed of at the time of my appointment as an Examiner of Titles, taking effect on 6th July, 1868, but disposed of by me afterwards.

257. *Broughton*.—A very difficult case, at which I worked in time which I might otherwise have had for recreation. Reported by Mr. Jones and myself in November, 1874.

1132. *Anderson*.—Reported by Mr. Holden and myself.

1446. *Delow*.—Reported by Mr. Holden and myself.

1533. *Willis and others*.—So difficult that an Attorney General would not give a positive opinion upon it. Reported by Mr. Holden and myself in December, 1873. Ultimately went to Supreme Court by arrangement with Mr. Norton, applicant's solicitor.

1534. *Willis and others*.—See remarks on 1533.

1717. *Watkins*.—Reported by Mr. Holden and myself in March, 1874.

1787. *Callaghan*.—Reported by Mr. Holden and myself in July, 1868.

1833. *Barker*.—A long and complicated title. Reported by Mr. Holden and myself.

1834. *Barker*.—A long and difficult title. Reported by Mr. Holden and myself.

1837. *Jeanneret*.—Difficult. Reported by Mr. Holden and myself.

1865. *Laker*.—Long. Reported by Mr. Holden and myself.

1868. *Lloyd*.—Reported by Mr. Holden and myself in August, 1870.

1895. *Nainby*.—Very complicated. Reported by Mr. Holden and myself in August, 1870.

1899. *Campbell*.—Perused by me. Withdrawn 29th October, 1869.

1915. *Williams*.—Long title. Reported by Mr. Holden and myself in September, 1868.

1959. *Vidler*.—Reported by Mr. Holden and myself in August, 1868.

1905. *West*.—Title under Will &c. Reported by Mr. Holden and myself in December, 1869.

1906. *Fariell*.—Long. Reported by Mr. Holden and myself in December, 1869.

1919. *Rundle*.—Reported by Mr. Holden and myself in November, 1868.

1981. *Jones*.—Reported by Mr. Holden and myself, September, 1868.

1982. *Richardson and another*.—Reported by Mr. Holden and myself in July, 1868.

1986. *Ryan*.—Reported by Mr. Holden and myself in June, 1869.

1998. *Griffiths*.—Reported by Mr. Holden and myself, July, 1868.

2006. *Campbell*.—Examined by me, application ultimately withdrawn.

2008. *Mitchell*.—Reported by Mr. Holden and myself, July, 1868.

2009. *Love*.—A long and special title. Will not proved. Reported by Mr. Holden and myself in November, 1868.

2010. *Williams and others*.—Long title. Reported by Mr. Holden and myself in July, 1868.

2011. *Stewart*.—Special. Reported by Mr. Holden and myself, 23rd November, 1870.

2013. *Cross*.—Reported by Mr. Holden and myself, July, 1868.

2014. *Bourne*.—Reported by Mr. Holden and myself, July, 1868.

2015. *Moore*.—Reported by Mr. Holden and myself in April, 1869, as to part of the land. Application for rest was

I think not prosecuted.

2016. *Thornton*.—Difficult. Mr. Holden and I were engaged on and off for about a week with this title in July, 1868. Withdrawn same month.

2017. *McDonell*.—1st class. Reported by Mr. Holden and myself, 8th July, 1868.

2018. *Cameron*.—1st class. Reported by Mr. Holden and myself, July, 1868.

2019. *Hudson*.—1st class. Reported by Mr. Holden and myself, 8th July, 1868.

2020. *Dangar*.—Reported by Mr. Holden and myself, September, 1868.

2021. *Treewe*.—Voluntary settlement. Examined by me. Letter sent to Wilson, 7th May, 1869. Case withdrawn, 13th May, 1869. 2022.

2022. *Bulmer*.—1st Class. Reported by Mr. Holden and myself, July, 1868.
 2023. *Welsh*.—1st Class. Reported by Mr. Holden and myself, 8th July, 1868.
 2024. *Rannard*.—Reported by Mr. Holden and myself, 8th July, 1868.
 2025. *Cave*.—1st Class. Reported by Mr. Holden and myself, 8th July, 1868.
 2026. *M'Kay*.—Reported by Mr. Holden and myself, 26th August, 1868.
 2027. *Winderlick*.—1st Class. Reported by Mr. Holden and myself, 8th July, 1868.
 2028. *Winderlick*.—1st Class. Reported by Mr. Holden and myself, 8th July, 1868.
 2029. *Cameron*.—Reported by Mr. Holden and myself, 7th July, 1869.
 2030. *Allen*.—Special title. Perused by me. Requisitions forwarded, 8th August, 1868. Withdrawn in 1872.
 2031. *Fisher*.—A very difficult case. Reported by Mr. Holden and myself, in October, 1868.
 2032. *Hutchinson*.—1st Class. Reported by Mr. Holden and myself, 8th July, 1868.
 2033. *Dillon*.—1st Class. Reported by Mr. Holden and myself, 8th July, 1868.

12th August, 1879.

E. BURTON.

C.

Memorandum furnished by the Registrar General.

THE Registrar General in Melbourne has under his control the Registrar General's Department. He is also Registrar of the Supreme Court and Registrar of Titles. The Branches do not appear separate as in Sydney, therefore the cost of each cannot be ascertained. During the year 1878 there were 48 ordinary officers, with 13 supernumeraries and 7 professionals, consisting of a Commissioner of Titles and 6 Examiners of Titles. The total amount expended in 1878 for salaries was £19,528. This does not include the cost of supernumeraries.

The Registrar General's Department in Sydney comprises the following: Statistical Branch, Deeds Branch, and Lands Title Branch, with a total of 32 ordinary officers, and 3 professionals, who are Examiners of Title. The amount expended in salaries during 1878 was as follows:—

The Registrar General	£700 0 0
Statistical Branch	1,500 0 0
Deeds Branch	995 0 0
Lands Title Branch	6,125 0 0
	£9,320 0 0

The fees collected in the Registrar General's Department are a sure test of the amount of work performed. I make a comparison between the years 1863 and 1878:—

	Total Amount collected.	Amount paid into Consolidated Revenue.
	£ s. d.	£ s. d.
1863	4,303 11 10	2,975 1 3
1878	19,480 10 10	13,614 13 2
Increase	15,176 19 0	10,639 11 11

I take these periods in order to show that some of the salaries are quite inadequate for the duties and responsibilities imposed, and they are moreover very low as compared with the salaries in other departments.

SALARIES.

	1863.	1878.
Registrar General	£800	£700
Deputy Registrar General	500	450
Principal Draftsman	600	500

These salaries were reduced by the late Sir C. Cowper on the resignation or death of former occupants, and have never been restored, though the business has so materially increased. There have not been any increases in salaries for many years. The cashier who has the collection and accounting for all our revenue receives only £175 per annum. In South Australia the Registrar General receives a salary of £750, with only the Deeds and Lands Title Branches. There is also a Registrar General of Births, &c., at £500, and the Statistical Branch is carried on by the Under Secretary as statist. These are all combined in New South Wales under one official—The Registrar General.

RETURN of the Officers and the amount of salaries received by them during the years 1863 and 1879 respectively:—

Appointment.	Salary for 1863.	Salary for 1879.
	£	£
Registrar General	800	700
Examiner of Titles	1,200	800
Do	1,000	800
Deputy Registrar General	500	450
Principal Draftsman	600	500
Assistant Draftsman	350	300
Clerk to Examiners of Titles	300	300
Clerk	225	225
OFFICERS APPOINTED SINCE 1863:—		
Examiner of Titles		800
Draftsman		250
Do		175
Do		125
Do		125
Do		75
Clerk		250
Do		200
Do		150
Do		150
Do		125
Do		100
Do		75
Do		50

E. G. WARD,
Registrar General.

D.

D.

[To A. H. McCulloch, Jun., Esq., M.P.'s. Evidence.]

A. H. McCulloch, Jun., Esq., M.P., to The Commissioners, Land Titles Office.

Gentlemen,

I have the honor to forward you (on the other side) a copy of a letter received by me in answer to the letters of inquiry referred to in my evidence. I regard the letter as procrastinatory and altogether unsatisfactory.

I have, &c.,

A. H. McCULLOCH, Jun.

165, Pitt-street, Sydney, April 30, 1879.

D 1.

The Registrar General to A. H. McCulloch, Jun., Esq.

Registrar General's Department Land Titles Office, Sydney, 25 April, 1879.

Applications.

No. 4723—Read.

No. 4776—Wardrop.

„ 4728—McCrorry.

„ 4778—Mount.

Sir,

In reply to your four letters, dated respectively 21st instant, inquiring as to the progress of the abovenamed cases, which you state were lodged in this office on the following respective dates, viz., 30th July last, 6th August last, 18th October last, and 22nd October last, I have to inform you that the Examiner in charge of these (Mr. Burton) makes the following report to me:—“This is one of the Eveleigh cases. As soon as I can confer with one of my colleagues as to how much of the title he and Mr. Oliver accepted in the case which they investigated, I may proceed with this application.

The like remarks apply to cases 4,728, 4,776, and 4,778.”

I am, &c.,

E. G. WARD,

Registrar General.

E.

Remarks on the Real Property Acts and their working.

I TAKE it that the objects sought to be attained by the principal Act were simplicity, certainty, safety, cheapness, and despatch.

It is obvious this last-mentioned desideratum could scarcely be expected where the State with a moderate staff endeavours to do the whole of the conveyancing of the country, together with such surveyors' work as may be incidental to the transactions dealt with. It would, however, be well worth while to put up with some delay if the other objects of the Act were attained. I believe that were the Act amended, and carried out in its proper spirit, they could be attained, but it is unfortunately too notorious that they are not so at present.

It was no doubt intended that titles under the Act should consist of one document only, which should confer an indefeasible title. It so happens that the form of certificate in use refers to, and therefore gives notice of, the instrument by virtue of which it is issued, and it is very questionable therefore whether the register should not be searched to see that the instrument in question did really confer the estate expressed in the certificate. I understand this very question arose in South Australia, and that it is or was the practice to require an abstract of the previous title as under the old system, it being considered the saving clauses in the Act did not meet the case. Again, it is the practice of the office in issuing certificates to state the holders have a title subject to the conditions and reservations contained in the original grant from the Crown without specifying them, so that it is necessary for the purchaser to obtain a copy of the grant. Further, in very many instances no proper description is given of the land, but reference is made to a plan lodged in the office. In the event therefore of an action being brought involving a question of title it would be necessary to subpoena the Registrar General to produce the plan, and of course on a sale a similar difficulty would arise. The small plans in the margin are of no use, they simply show the outline of the land, not its locality or bearing towards any point which might enable it to be identified. I have in my possession a certificate of title which describes the land as in “Dawson-street, in the parish of Newcastle, allotment — on a deposited plan” and nothing more. Now there are besides the city of Newcastle several townships miles apart in the parish of Newcastle; which of them the land is situate in my client, who took the land as a bad debt, does not know, but believes it to be in one some miles out of Newcastle. If he attempted to sell I am afraid he would be put to some expense in identifying the land.

As regards expense, I would refer in the first place to the cost of obtaining a fresh certificate in every instance where a property is sold in lots, unless the owner chooses to risk leaving his title in the office, and unless purchasers are willing to take his word as to its existence. It frequently happens also that under the Act several instruments have to be prepared to meet a case that one deed only would suffice for under the old system, and that an expensive process has to be gone through in many instances where none was previously necessary. In one instance I was very poorly paid with £30 for work done under the Act which under the old system I would cheerfully have done for £5, and it recently cost a client nearly £20 to be registered as devisee under his father's will, a source of expense peculiar to the Act and I think utterly unnecessary. The necessary steps to appoint a new trustee are very costly.

As to the risks run, there may be included those arising from trustees having it in their power to make away with the Trust Estate, the fact that searches do not appear to be made prior to a property being brought under the Act, and that no provision is made for any record being inserted in the old register that a property is being or has been brought under the Act, and from the apparent neglect to compare references to instruments with the instruments themselves. Some little time ago a client of mine purchased a valuable property in two lots. I was furnished with an abstract of title under the old system, had it compared with the deeds, and had a careful search made which disclosed no encumbrances. Shortly before the settlement the vendor's solicitors informed me some of the property was being brought under the Act, and had been advertised long prior to my being supplied with the abstract. As the deeds related to several properties, and would therefore not have been delivered up, I should, but for this information have settled, little dreaming that my client's title was in process of extinction. In another instance a client made large advances on the deposit of some certificates of title, &c. After a considerable sum had been advanced he brought me the papers to make as good a security as I could. The land was coal land, and I observed an endorsement stating there was an encumbrance of a Royalty of 6d. a ton on all coal that might be raised. It turned out this was an untrue statement, as the encumbrance was actually an overdue charge of several thousand pounds. There were besides several matters in connection with this title which showed that proper precautions had not been taken in the office.

I think a great deal of the delay that occurs arises in the first place from want of proper system, and in the second from the Examiners in their very laudable desire to have matters correct, making requisitions which a Court of Equity would disallow in a suit for specific performance. My own experience is that matters are not attended to in the order of their being left at the office, as I frequently get back matters complete before others of much longer standing and of no greater complexity, and weeks or months may elapse between the return of the first and last of a batch of papers sent in at the same time.

Among other requisitions which I think might be dispensed with, are those requiring proof of payment of debts of the testator or intestate in cases of transmission by will or intestacy, and of the mortgage money being due in cases where a mortgagee exercises his power of sale and his security contains the customary clause exonerating the Registrar General and the purchaser from seeing to the fact or from the effect of notice that it is not due. It is a well-known rule that a charge

of debts generally does not follow land in the hands of a purchaser, and it might be impossible for the administrator to pay the debts without selling the land, and he certainly would not in any case if it formed the only asset do so where they exceeded its value, and there would in such case be no chance of the creditors getting paid without wasting the assets in an Equity suit. A purchaser in the second instance mentioned might have raised the very point in a suit for specific performance which would of course be overruled, and he would be compelled to complete his purchase with the full knowledge that the office would not give him a title.

I think the examiners are too technical in their ideas as to the forms which should be used where none are prescribed by the Act. I have frequently had papers sent back which were in a form that certainly would have passed muster in a matter under the old system, because they were not technically worded, although the words more clearly expressed the meaning of the parties than the altered form did.

Of course I have mentioned a few instances only out of a great many, but one result that has arisen from difficulties created in the most simple cases where the Act has been fairly observed is that the solicitor for the local Building Society, in cases where the vendor of land under the Act is to be paid by means of money to be advanced by his clients, refuses to allow the money to be paid until both the transfer and mortgage are registered, and the vendor is therefore kept sometimes for months out of his money. He informs me he has found this absolutely necessary, as in several instances he has had papers returned to comply with some out-of-the-way objection not justified by the Act, and where the vendors had left the district he had in one or two cases great trouble in completing the title.

There is no means under the Act (at all events the office hold there is not) of entering into covenants to run with the land in cases of transfer of the fee simple. The want of such a provision has given rise to a great deal of the litigation in the celebrated case *Dibbs v. Brown*. Years ago I prepared an agreement which has been much litigated, and inserted conditions in the transfer made in pursuance of it to meet its provisions, but they had to be struck out. This ought to be remedied, and I think also any agreement or instrument relating to land should be registered whatever its nature may be.

The list of implied covenants is far too meagre. It does not for instance meet the case of a mining or building lease. I do not see the necessity for requiring notices, &c., before a mortgagee can exercise his power of sale. The mortgage is sure to negative such necessity, and this and all other forms should be as much as possible in accordance with ordinary practice so as to avoid need for alteration as much as possible.

One great obstacle to the successful working of the Act is the ignoring of trusts, while at the same time protection is sought to be given to the parties beneficially interested by a mode at once cumbrous, expensive, and insecure, besides throwing difficulties in the way of carrying out the trust, and even of appointing new trustees. The plan of the Act is taken, in a great measure, from that part of the "Merchant Shipping Act of 1854" which relates to titles and dealings with vessels, and the framers seem to have lost sight of the different nature of a perishable chattel like a ship which is scarcely ever the subject of a trust, and which is practically indivisible to that of land which is perpetual, capable of almost infinite subdivision, and in which an infinite variety of interests can be held, many of them from the fact of marriage, infancy, &c., absolutely requiring the action of a trustee. There is no earthly reason why a certificate of title should not say, "A B is entitled to an estate in fee simple upon trusts, &c." [specifying briefly the nature of them], just as well as it should say he is entitled simply, and oblige him to have declarations of trust filed, caveats lodged, &c. Where property was left by will the trusts would be copied from it *verbatim*, where the trusts were created by an instrument under the Act, a statement of the nature of them without technical language would suffice. It appears to me this simple proceeding would meet the whole difficulty. The instrument need not be long; it would show the exact interest of everybody interested under it; it would dispense with reference to any other document, would prevent fraudulent dealings by trustees where no caveats were lodged, facilitate the appointment of new trustees, do away with declarations of trust, caveats, and a whole host of other obstructions, and be infinitely more simple and inexpensive. If the plan were adopted the system of caveats could be abolished. Except in case of trusts, at present they simply enable a malicious man to injure his neighbour. Very few people who had any real claim would ever resort to them. They would do at once what they would have to do ultimately, namely, resort to a Court of Equity. Supposing, however, it should be thought desirable to retain caveats, every caveator should be compelled to lodge with his caveat a statutory declaration affirming *bona fides* and setting out fully the circumstances on which he bases his claim, and also to deposit all papers in his possession proving it. The examiners might decide on the claim with power to appeal to the Supreme Court.

In many cases an owner of land might desire to have dealings with it which the Act could not provide for. To meet such cases he might be allowed to deal with his certificate as with a Crown grant under the old law, notification of the fact appearing on the register. If he subsequently thought it desirable to do so he could again bring the property under the Act.

As before suggested, search should be made against all applicants to bring property under the Act. Licensed searchers might be appointed, whose certificate of result of search should be receivable.

Every application to bring property under the Act should be registered under the old system. If the application fail or be withdrawn, a certificate by the Registrar General should be registered. If it be carried out to a successful issue that should be notified on the registered copy of the application.

It would be a great boon to people in the country if business were transacted by correspondence as was done some time ago.

I think it would very much facilitate matters if a separate register were kept for each county, or for each district, containing two or more counties. One or more registers could be in charge of one officer, instead of having several to attend to all. The effect of any delay or obstruction would be confined to the particular register in which it arose; it would facilitate searching and be more convenient for reference; and ultimately, when the population of any particular part of the country became sufficiently numerous to justify the establishment of a local register, the particular books relating to it could be forwarded at once without the delay, expense, and risk of mistake, to be incurred by making the extracts which would otherwise be necessary.

Wherever title deeds which relate as well to property brought under the Act as to property remaining under the old system are retained by the proprietor, or other person entitled to their custody, the Registrar should endorse on them a reference to the transactions coming within the scope of his duties.

Where property devolves by will or intestacy, there ought to be no necessity for the present expensive process of registering the transmission; on a sale by the devisee or administratrix the transferee should be entitled to have his title on depositing his transfer, and producing the probate or letters of administration.

The power to require deposit of maps is I think frequently unnecessarily used and might with advantage be curtailed.

The necessity for the proprietor of land sold in lots depositing his title deed and thus having nothing to show might be avoided by permitting him to have endorsed on his certificate of title a plan shewing the subdivision. The certificate could accompany each transfer sent to be registered, and have endorsed on it a memo., showing the number of the particular lot transferred, and be then returned to him, thus shewing all the transactions in case of a subdivision as if the whole had been sold.

A book ought to be kept shewing the date of receipt of every instrument sent in for registry, and also when certificate issued, and with a column of remarks. This daily looked over would show the officer keeping it what matters he had in hand incomplete, and prevent many papers from lying forgotten for months in the pigeon-holes. It should be made penal to take any matter out of its proper turn.

HENRY J. BROWN.

Newcastle, 30 May, 1879.

E. G. WARD,
Registrar General.

G.

The Registrar of Titles, Melbourne, to James Norton, Esq.

Sir,

Office of Titles, Melbourne, 26 June, 1879.

I have the honor to acknowledge the receipt of your letter of the 21st instant, asking for certain items of information as to the working of the Transfer of Land Statute in this colony, and have pleasure in furnishing the following replies:—

1. The system came into force on the 2nd October, 1862.
2. The total area of land alienated by the Crown up to that date was 5,101,825 acres, valued at £10,489,560.
3. The total area of land brought by application under the system up to the end of 1877 was 541,035 acres, valued at £9,180,315.
4. Total area of land granted by the Crown under the new system up to the end of 1877—6,004,753 acres, valued at £7,837,048.
5. There are six Examiners of Titles—one at £800 per annum, four at £700, and one at £500. (The Commissioner of Titles receives £1,800 per annum.)
6. The average number of titles reported on by each Examiner during 1878 was 246. No distinction by class is made as to titles—long and short ones being taken equally by all Examiners.
7. During the year 1878 there were effected 1,162 entries of executor, &c., as transferee or proprietor.
8. It would be difficult to arrive at the highest and lowest rates of additional assurance as, when the indemnity is fixed by the Commissioner, it is according to what, in his judgment, will be sufficient to cover the risk attached to the flaw in the title (see section 32). From $\frac{1}{8}$ per cent. to 5 per cent. have been paid. Where registered memorials of deeds are accepted as evidence 20s. is charged for each memorial, without regard to the value of the land.
9. The balance of the Assurance Fund at the end of 1877 was £47,314.
10. Several demands for compensation have been made upon the Assurance Fund, but have been abandoned—I presume because the claimants had no good grounds upon which they could legally prosecute them.
11. Three claims against the Assurance Fund have been successfully prosecuted—the total amount recovered being £718 0s. 4d.

For your further information I enclose a copy of the Statistical Register of Victoria, for 1877—Part VII—Law, Crime, &c.

Registrar of Titles.

P.S.—In consequence of some of the returns not yet being completed for 1878, I have given the information up to the end of 1877.

* Signature of Registrar of Titles accidentally omitted.

1879-80.

NEW SOUTH WALES.

REAL PROPERTY ACT.

(RETURNS UNDER FOR 1879.)

Presented to Parliament by Command.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

COLONIAL ARCHITECT.

(ESTIMATES PREPARED BY.)

Ordered by the Legislative Assembly to be printed, 18 December, 1879.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 20th day of June, 1879, That there be laid upon the Table of this House,—

“The number of Estimates prepared during the last three years by the
“Colonial Architect for which further sums have had to be voted by
“Parliament, showing the original amount and the further sums so required
“in each case.”

(*Mr. Cameron.*)

COLONIAL ARCHITECT.

RETURN showing number of Estimates prepared during the last three years by the Colonial Architect for which further sums have had to be voted by Parliament, showing the original amount and the further sums so required in each case. [Mr. Cameron's motion, 20th June, 1879.]

Building.	Work.	Amount of Estimate.			Year.	Original amount of Vote.			Further sum required.			Remarks.
		£	s.	d.		£	s.	d.	£	s.	d.	
Parramatta Lunatic Asylum ...	Additions, &c. ...	38,000	0	0	1877	25,000	0	0	13,000	0	0	The original amount voted was given as an approximate estimate of the cost of a new wing to this Asylum, asked for by the Inspector of the Insane, and before particulars and requirements were furnished of the accommodation considered necessary.

Cooma Lunatic Asylum	do	1,300	0	0	"	1,300	0	0	375	0	0	

Building.	Work.	Amount of Estimate.	Year.	Original amount of Vote.	Further sum required.	Remarks.
		£ s. d.		£ s. d.	£ s. d.	
Montague Island Light-house ...	Erection	15,000 0 0	1877	15,000 0 0	1,900 0 0	£3,000 of the amount voted for this work was required for lantern, and a contract taken for £13,900, or £1,900 more than the balance of the vote; the contract however has been cancelled.
Murrumburrah Court-house ...	do	2,000 0 0	„	1,200 0 0	800 0 0	This estimate was the approximate value of the work, no particulars having been furnished when the amount was placed on Estimates. On the plan being prepared providing the accommodation asked for, the building was estimated to cost £2,000.
Euston Court-house, Lockup, &c.	do	2,400 0 0	„	1,500 0 0	900 0 0	£1,500 was placed on Estimates as the approximate value of the work, but when particulars of accommodation were furnished it was found that the cost would be increased by the further sum named.
Victoria Barracks	Drainage	5,000 0 0	„	3,000 0 0	2,000 0 0	The further sum is required in consequence of the line of drainage being altered and increased, necessitating a larger outlay.
Morpeth Post and Telegraph Office.	Erection (including purchase of site).	2,200 0 0	1879	2,000 0 0	200 0 0	The original sum included in Colonial Architect's draft estimates was £2,200, but as only £2,000 was placed on printed Estimates the further sum was asked for.

Colonial Architect's Office,
Sydney, 4 December, 1879.

JAMES BARNET,
Colonial Architect.

1879-80.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

REMOVAL OF CAMPBELL'S WALL.

(CORRESPONDENCE, &c.)

Ordered by the Legislative Assembly to be printed, 3 February, 1880.

RETURN to an Order made by the Honorable the Legislative Assembly of New South Wales, dated 1st November, 1878, That there be laid upon the Table of this House,—

“ Copies of all Correspondence, Letters, &c., between the Municipal Council, Australasian Steam Navigation Company, and the Government, with reference to the removal of Campbell's Wall, Lower George-street.”

(Mr. J. Davies.)

SCHEDULE.

NO.	PAGE.
1. Memorandum by Mr. F. W. Unwin, proposing to form an opening through the ridge of rock intersecting Argyle-street, and to continue that street to its junction with Kent-street. 20 May, 1831	3
2. Memo. by Mr. Unwin to Colonel Dumaresq, with minute. 20 June, 1831	3
3. Colonial Secretary to Mr. Unwin. 29 June, 1831	3
4. Memorial by Messrs. Aspinall, Brown, & Co., and twenty others, to His Excellency the Governor, with minute. 28 July, 1831	3
5. Mr. Charles Wilson, Department of Public Works, to the Colonial Secretary, with minute and enclosure. 22 November, 1831	4
6. Same to same, with minutes and enclosure. 21 December, 1831	4
7. F. W. Unwin to Charles Wilson, Esq., with minute. 8 February, 1832	5
8. Do. to the Colonial Secretary, with minutes. 13 March, 1832	5
9. Colonial Secretary to the Surveyor General. 19 March, 1832	6
10. Colonial Secretary to F. W. Unwin, Esq. 19 March, 1832	6
11. Colonial Secretary to A. Hallen, Esq. 19 March, 1832	6
12. Ditto to the Surveyor General, with enclosure. 4 April, 1832	6
13. Colonial Secretary to Mr. F. W. Unwin. 13 April, 1832	7
14. Description of lands leased and granted to Mr. Robert Campbell	7
15. Surveyor General to the Colonial Secretary, with minutes. 13 July, 1832	7
16. Colonial Secretary to R. Campbell, Esq. 27 July, 1832	8

REMOVAL OF CAMPBELL'S WALL.

No. 1.

Memorandum by Mr. F. W. Unwin.

MR. UNWIN proposes to form an opening through the ridge of rock intersecting Argyle-street, and to continue that street to its junction with Kent-street. The opening to be 30 feet wide, and the sides of the rock to be cut down even and left with a fair face, and to be protected by a firm railing on each side for its whole length. The width of Argyle-street being 60 feet, and the central opening 30 feet, there will remain two causeways for foot-passengers over the rock of, 15 feet in width between the opening and the line of the buildings, which are to be ascended by a flight of steps at each end of the ridge. The levels to be taken from the top of the culvert crossing Argyle-street, agreeably to a plan of the ground made in contemplation of a tunnel, in the Office of Works. The communication in Prince's-street and Cumberland-street to be preserved by means of two bridges of wood of a structure and form to be approved of by Government. The entire work to be completed in eight months, and to be carried on and finished to the approbation of the Director of Public Works or other officer to be appointed by His Excellency the Governor.

In compensation, Mr. Unwin to receive a grant of so much of the Crown Land abutting on the line of street as is marked red in the annexed *plan, and to have assigned to him four mechanics (viz., two quarrymen, one carpenter, and one smith) and eight labourers.

Sydney, 20 May, 1831.

F. W. UNWIN.

* Not with the papers.

No. 2.

Memorandum by Mr. Unwin.

MR. UNWIN has the honor to present his compliments to Colonel Dumaresq, and requests to be informed whether the Governor has come to any determination with respect to his proposal to form a communication through Argyle-street to Darling Harbour.

Mr. Unwin applied yesterday at the Colonial Secretary's Office, and was referred by Mr. Macleay to Colonel Dumaresq.

Sydney, 20 June, 1831.

Minute on No. 2.

* It will be better to tell him I am not prepared to enter into this matter at present, the Government having so many pressing matters in hand at this moment.—June 27.

* This minute has evidently been written by His Excellency Gov. Darling, although no initials are attached thereto.

No. 3.

The Colonial Secretary to Mr. Unwin.

Sir,

Colonial Secretary's Office, Sydney, 29 June, 1831.

Referring to the proposal made by you on the 20th ultimo, to form an opening through the ridge of rock intersecting Argyle-street, and to continue that street to its junction with Kent-street, I am directed by His Excellency the Governor to inform you that he is not prepared to enter into the object in question at present, the Government having many pressing matters on hand at this moment.

I am, &c.,

ALEX. MCLEAY.

No. 4.

Memorial by Messrs. Aspinall, Brown & Co., and others.

To His Excellency Lieutenant-General RALPH DARLING, Governor of the Colony of New South Wales and its dependencies.

The Memorial of the undersigned proprietors and occupiers of land and premises in the Town of Sydney,—

SHOWETH:—

That from the rapid increase of the town of Sydney and the extension of its trade, the Cove does not afford sufficient space for the convenient mooring of the shipping, whilst the small extent of its shore applicable to such a purpose prevents the formation of additional wharfs and warehouses which have become absolutely necessary to carry on the traffic of the place, and that in consequence many of the larger mercantile establishments have been carried round into Darling Harbour.

That the very general success of the whale-fishery has caused that to be the channel in which a great part of the capital of the Colony is now employed, and it may reasonably be expected that branch of trade will continue to be a main object with the colonial merchants, whilst the obvious advantages attached to this port as an entrepôt for the fishery render it highly probable that the English ship-owners will fit out their fishing-vessels from hence. The insufficient accommodation of Sydney Cove will of course cause the new establishments to be made in Darling Harbour.

That the communication from the shore of Sydney Cove to that of Darling Harbour is extremely inconvenient from the natural position of the town, the eastern side of which is divided from the western by an abrupt ridge of rock, and the only present access from one shore to the other by any description of cart or carriage is by the steep and difficult road over the Church Hill, or the circuitous track by Dawes' Battery

Battery—a disadvantage seriously felt by the present occupiers of premises on the shore of Darling Harbour, and operating strongly against further improvements on that side of the town; some merchants connected with the whale fishery having preferred carrying their establishments altogether over to the North Shore to encountering this difficulty of access.

That a short and easy communication between these two parts of the town would be effected by cutting through the dividing ridge at Argyle-street, and either forming a tunnel (the distance being but 280 feet) or cutting down the rock, and throwing a bridge over the hollow so as to preserve the line of communication in Princes-street.

That your memorialists believe that this subject has already occupied your Excellency's attention, and that a plan for the formation of a tunnel has been submitted to and received the approbation of Government.

Your memorialists, lastly, beg to call your Excellency's attention to the fact that the expense of this work would be almost defrayed by the increased value it would confer upon the Crown Land on the western side of the town, whilst the advantage and convenience of it to the public mark it as one of the most important as well as necessary works that can engage the attention of Government.

But should the public works now in progress fully occupy the means at the disposal of Government, your memorialists do not doubt that individuals will readily be found willing to undertake the work on receiving as a remuneration such of the Crown Lands as abut on the line of the proposed opening.

Your memorialists, therefore, humbly pray your Excellency to take the subject into your Excellency's early consideration, and afford them such relief and assistance as to your Excellency shall seem proper.

And your memorialists shall ever pray, &c.

ASPINALL, BROWN, & CO.,
And twenty others.

Minute on No. 4.

Mr. Unwin has been informed by the Colonial Secretary that this proposition cannot be entertained at present.—R.D., 28 July, 1831.

No. 5.

Mr. C. Wilson to The Colonial Secretary.

Sir,

Office of Public Works, Sydney, 22 November, 1831.

Enclosed.
*Letter-book not obtainable.

I have the honor to return you Mr. Campbell's letter, dated 17 September last, transmitted with you letter of the *21st October, directing my report thereon. In attention I have to acquaint you, for the information of His Excellency the Acting-Governor, that the Town Surveyor, on examining the books in the Surveyor General's Office, states that he can find only two leases to Mr. Campbell, containing 2 acres 2 roods 16 perches, and 2 roods, dated 11th August, 1804, for fourteen years. On comparing them with his present land the difference is so great that he is at a loss to know how the descriptions were made out, as they contain more than double the above quantity, and encroach considerably on the adjoining allotments.

* Not with papers.

Under these circumstances, I conceive it will be necessary that Mr. Campbell should be required to furnish an extract from the deed or leases upon which he claims the land he occupies in this part of Sydney, unless the letter he refers to, dated *3rd April, 1830, addressed to His Excellency, contains the information required, which letter or copy does not appear in this office.

I have, &c.,
CHAS. WILSON, C.E.

Minute on No. 5.

The Town Surveyor should apply to Mr. Campbell for information, to enable him to report satisfactorily.

[No initials to this minute; supposed to have been written by Acting-Governor Colonel Lindsay.]

[*Enclosure to No. 5.*]

Mr. R. Campbell to The Colonial Secretary.

Sir,

Sydney, 17 September, 1831.

Perceiving that the Government gangs are widening and repairing the street in front of the residences of the Venerable Archdeacon and the Collector of the Customs, which runs through my property, I have the honor to request that you will be pleased to submit to His Excellency the Governor the reasonableness of making me some remuneration, on the part of the Government, in consideration of the same, on the ground that the street in question is of public utility, and that in the original leases of the land, which I purchased in 1799, as stated in my *letter to His Excellency, 3rd April, 1830, provision was made for only one road through it 66 feet wide, leading to Dawes' Battery.

* Not with papers.

I have, &c.,
ROBT. CAMPBELL.

Minute on above.

Not initialed by the writer.

Refer, as usual, to the Director of Works.

No. 6.

Mr. C. Wilson to The Colonial Secretary.

Sir,

Office of Public Works, Sydney, 21 December, 1831.

21 October.
29 November.
20 December.
Book containing letters not obtainable.

With reference to the instructions contained in your letters, as per margin, I have now the honor to submit the Town Surveyor's report upon Mr. Robert Campbell's allotment in Sydney.

I have, &c.,
CHAS. WILSON, C.E.

Minutes on No. 6.

Mr. Campbell, senior, states that a road is being conducted through his land, and claims compensation for it, the original leases having only reserved one road 66 feet wide.

The

The Town Surveyor reports that the original leases expired in 1818; that the road left by Mr. Campbell is only 30 feet wide, instead of 66; that the land now held by Mr. Campbell differs altogether, as to the boundaries, from that described in those leases; and that while a *grant* (of which Mr. Campbell seems to be unaware) reserving what may be required for the streets has been executed for one-half of the land, he has no title whatever beyond possession of the other half.

In addition to this, it may be observed that the conducting streets through town property, especially property so rugged as that in question, confers a very considerable benefit upon the proprietor, whether more or less than is equivalent to the land they occupy is of course open to determination in every separate case.

These papers should be transmitted to the Surveyor General, desiring him to report whether Mr. R. Campbell occupies any of the Crown Lands in Sydney for which occupation there is no title recorded in the Surveyor General's books.

Where is the deed of grant of which Mr. C. seems unaware?

R. B., 2 April, 1832.

Surveyor General written to, 4 April, 1832. Write again.

[Enclosure to No. 6.]

Mr. A. Hallen to The Director of Public Works.

Sir,

Town Surveyor's Office, Sydney, 20 December, 1831.

In answer to the Colonial Secretary's letters* of the 21st of October and 29th of November, directing a report to be made on the application of Mr. Robert Campbell requesting that some remuneration might be given him for the road running through his property in front of the Archdeacon's residence, and for which no reservation was made in the leases he became the purchaser of in the year 1799, the only leases I can find in favour of Mr. Robert Campbell are two dated the 11th of August, 1804, for fourteen years, in which a road is reserved leading to Dawes' Battery, (66) sixty-six feet wide—Mr. Campbell has not left it (30) thirty feet—and the descriptions are altogether erroneous. However, they appear to be included in a subsequent grant correctly surveyed, dated 29th June, 1814, in which is a clause giving the Governor for the time being the power of taking any part of the land for the purpose of making and improving the streets. Of this grant Mr. Campbell does not appear to be aware, by his letter stating "no provision being made." The land in the possession of Mr. Campbell on the west side of the road leading to the Battery, "it appears" he has no other title to than possession, the above grant only describing the land on the east side of the road.

* The letter-book containing these letters cannot be found.

I have, &c.,

AMBROSE HALLEN.

No. 7.

Mr. F. W. Unwin to The Director of Public Works.

Sir,

Sydney, Pitt-street, 8 February, 1832.

Several of the subscribers of the memorial to the late Governor respecting the formation of the tunnel in Argyle-street having applied to me to ascertain the decision of Government on the subject, I have the honor to request that as the business falls within your department, you will bring it under His Excellency's notice at your early convenience. Fearing from the length of time that has elapsed since the memorial was presented that it may have been mislaid, I have enclosed a copy*. Should His Excellency think favourably of the object of the memorialists, I shall feel much flattered by his permission to wait upon him to explain more fully their views, and the means they have of carrying this great improvement into effect.

* Not necessary for original see No. 4.

I have, &c.,

F. W. UNWIN.

Minute on No. 7.

To see Mr. Unwin on Monday next at $\frac{1}{2}$ past 10.—R. B., March 2.

No. 8.

Mr. F. W. Unwin to The Colonial Secretary.

Sir,

Sydney, 13 March, 1832.

I have the honor to acquaint you, for the information of His Excellency the Governor, that a public meeting of the proprietors of lands in Sydney interested in the formation of an opening from George-street through Argyle-street to Darling Harbour, was held at the Custom House yesterday, when it was agreed to form a Joint Stock Company, and raise the sum of £2,000 in 100 shares of £20 each, which sum, it was considered, would exceed the necessary expense of the undertaking.

These shares were immediately subscribed for, and no difficulty is apprehended in the accomplishment of the work, provided the Government would afford the Company the facilities of drawing such powder from the public stores as may be required for the purpose of blasting at cost price, assign to them such number of mechanics and labourers as may be necessary, and empower them to levy such a toll as will afford an interest of 10 per cent. on the amount of capital actually paid up.

The present calculation and estimate are made upon the plan of cutting through the ridge of rock to a depth sufficient to preserve the level of Argyle-street and forming a new street 30 feet wide, with bridges in Cumberland and Princes Streets, to maintain the communication, and carrying a footpath guarded by a parapet wall over the rock on each side of the opening, with a flight of steps at both ends.

It is estimated that with the assistance of fifteen mechanics and thirty labourers the whole work will be completed within eight months from the day of commencement.

I am requested by the subscribers who attended the meeting to solicit His Excellency's assistance to the extent above mentioned, and, in the event of the proposed plan meeting with His Excellency's approbation, the favour of his initiating a Bill in the Legislative Council granting them such authority as will enable them to carry it into effect.

I have, &c.,

F. W. UNWIN,

Hon. Secretary.

Minutes

Minutes on No. 8.

Mr. Unwin is requested to attend at Government House on Tuesday, at 3 o'clock in the afternoon, with any plans or drawings of the projected new street. The Colonial Secretary is requested to procure the attendance of Surveyor General and Mr. Hallen at the same time.—R.B., 17 March, 1832.

Inform Mr. Unwin that, having seen a section of the proposed lot and heard his explanation of it, I accede to the proposal of the Company, and will lay before the Council the Bill to enable them to execute their design. I also consent that the Company shall be furnished with gunpowder at the cost price, namely, the actual expense of the powder delivered here, in which the freight and charges are included, to be paid for as issued from the magazine; and further, with the mechanics and labourers demanded for the space of eight months, the Company paying monthly to the Dy. Commissary General the cost of the rations with which the persons will be supplied. The plans, drawings, and descriptions of the proposed work as explained this day by Mr. Unwin are to be lodged with the Surveyor General, and there is to be a clause in the proposed Bill prohibiting the collection of toll before the work has been approved of by the Surveyor General on behalf of the Government. The draft of the Bill is to be submitted for approval of Government when drawn up by the Company's agent.—R.B., April 5, 1832.

If the Bill does not interfere with any private property further than the responsibility incurred by the Company, it may be made a public Act.

No. 9.

The Colonial Secretary to The Surveyor General.

Sir,

Colonial Secretary's Office, Sydney, 19 March, 1832.

I have the honor, by direction of His Excellency the Governor, to request that you will be pleased to attend at Government House on Tuesday next (to-morrow), at 3 o'clock in the afternoon, for the purpose of meeting Mr. F. W. Unwin, who has been requested to attend with plans explanatory of a proposal submitted through him by a public meeting of landed proprietors in Sydney, who are desirous of making an opening from George-street through Argyle-street to Darling Harbour.

I have, &c.,

ALEX. McLEAY.

No. 10.

The Colonial Secretary to Mr. F. W. Unwin.

Sir,

Colonial Secretary's Office, Sydney, 19 March, 1832.

With reference to your letter of the 13th instant, submitting the result of a public meeting of the proprietors of lands in Sydney interested in the formation of an opening from George-street through Argyle-street to Darling Harbour, I have the honor, by direction of His Excellency the Governor, to request that you will be pleased to attend at Government House on Tuesday next (to-morrow), at 3 o'clock in the afternoon, with any plans or drawings of the projected opening—where the Surveyor General and the Town Surveyor have been instructed to attend also.

I have, &c.

ALEX. McLEAY.

No. 11.

The Colonial Secretary to A. Hallen, Esq.

Sir,

Colonial Secretary's Office, Sydney, 19 March, 1832.

I have the honor, by direction of His Excellency the Governor, to request that you will be pleased to attend at Government House on Tuesday next (to-morrow), at 3 o'clock in the afternoon, for the purpose of meeting Mr. F. W. Unwin, who has been requested to attend there with plans explanatory of a proposal submitted through him by a public meeting of landed proprietors in Sydney, who are desirous of making an opening from George-street through Argyle-street to Darling Harbour.

I have, &c.,

ALEX. McLEAY.

No. 12.

The Colonial Secretary to The Surveyor General.

Sir,

Colonial Secretary's Office, Sydney, 4 April, 1832.

In transmitting to you the accompanying papers connected with the application of Mr. Robert Campbell to be allowed remuneration in consideration of the road being conducted through his property in front of the Archdeacon's residence, I am directed by His Excellency the Governor to request that you will report to me for his information whether Mr. Campbell occupies any of the Crown Lands in Sydney for which occupation there is no title recorded in your office.

I have, &c.,

ALEX. McLEAY.

List alluded to.

List of papers transmitted to the Surveyor General for his report, connected with Mr. Robert Campbell's application to be allowed some remuneration in consideration of the road being conducted through his property in front of the Archdeacon's residence.

Mr. Campbell's application to the Colonial Secretary for remuneration, dated 17 September, 1831.
Director of Public Works to the Colonial Secretary, enclosing a report of the Town Surveyor, dated 21 December, 1831.

No. 13.

No. 13.

The Colonial Secretary to Mr. F. W. Unwin.

Sir,

Colonial Secretary's Office, Sydney, 13 April, 1832.

I duly received and submitted to the Governor your letter of the 13th March, representing See No. 8. that at a public meeting of the proprietors of lands in Sydney, interested in the formation of an opening from George-street through Argyle-street to Darling Harbour, it was agreed to form a Joint Stock Company, and to raise £2,000 in £20 shares, that no difficulty is apprehended in the accomplishment of the work, provided that Government will at the cost price dispose of such powder as may be required for blasting, assign the Company fifteen mechanics and thirty labourers, with whose assistance it is calculated the work will be completed within eight months, and pass a Bill upon the subject authorizing the levying of a toll to afford 10 per cent. interest on the capital to be expended.

In reply, I am directed by the Governor to inform you that, having seen a section of the cut and heard your explanation of it, His Excellency accedes to the proposal of the Company, and will lay before the Council the Bill to enable them to execute their design, which Bill you will have the goodness to have prepared accordingly.

His Excellency also consents to furnish the Company with gunpowder at the cost price, namely, the actual expense of the powder delivered here, in which the freight and charges are included to be paid for as issued from the magazine. And further, with the mechanics and labourers demanded for the space of eight months, the Company paying monthly to the Deputy Commissary General the cost of the rations.

The plans, drawings, and descriptions of the proposed work as explained by you to His Excellency are to be lodged with the Surveyor General, and there is to be a clause in the proposed Bill prohibiting the collection of toll before the work has been approved of by the Surveyor General on behalf of the Government.

I have, &c.,

ALEX. McLEAY.

No. 14.

Descriptions.

DESCRIPTIONS of lands in Sydney, leased and granted to Mr. Robert Campbell, as extracted from the Registers in the Colonial Secretary's Office.

1. Register β , page 160, lease, dated 11 August, 1804, for fourteen years.

2 ac. 2 r. 16 p. An allotment of ground now in the occupation of Mr. Robert Campbell, in the township of Sydney, and situate as follows:—South-west corner, west 37° south 4; west side, north 46 west $7^{\circ}20'$, and north $37\frac{1}{2}^{\circ}$ west 250; north side, east 37 north $6^{\circ}50'$ to water, including a road through of 66 feet wide, bearing north 37 west to Dawes' Point; the whole containing 2 acres 2 roods and 16 poles, with a recommendatory clause for a renewal for fourteen years at the expiration of this lease, on account of his present expensive erections, &c.

2. Register β , page 160, lease, dated 11 August, 1804, for fourteen years.

$\frac{1}{2}$ an acre. An allotment of ground now in the occupation of Mr. Robert Campbell, in the township of Sydney, and situate as follows:—South side, west 3 chains to the corner of his above lease; west side north 2 chains; north side east to water, the whole containing half an acre, with a recommendatory clause for a renewal for fourteen years at the expiration of this lease, on account of his present expensive erections, &c.

3. Register No. 2, page 15, grant, dated 29 June, 1804.

3 acres 3 roods of land lying and situate in the town of Sydney: Bounded on the south side by premises in the occupation of the naval officer; on the south-west side by the road leading to Dawes' Point, bearing north $36\frac{1}{2}$ degrees west, 629 feet; on the north-west side by a line east, $31\frac{1}{2}$ degrees north, 200 feet; and on the east side by the water of Sydney Cove (in consequence of his having erected thereon several large and expensive buildings). Reserving at all times the right to the Governor for the time being of appropriating such part thereof as may be deemed necessary for the making and improving the streets.

No. 15.

The Surveyor General to The Colonial Secretary.

Sir,

Surveyor General's Office, Sydney, 13 July, 1832.

In returning to you the accompanying papers, transmitted by your letter of the 4th April last, for my report, whether Mr. Campbell occupies any of the Crown Lands in Sydney for which occupation there is no title recorded in this office, I have the honor to report to you, for the information of His Excellency the Governor, that the land which Mr. Campbell claims as his property in front of the residences of the Archdeacon and the Collector of Customs appears to have been originally held by Captain Waterhouse and Mr. Boughan, and afterwards leased to Mr. Robert Campbell by Governor King for fourteen years, commencing from the 11th August, 1804. It also appears that in consideration of certain expensive buildings and improvements Governor Macquarie, on the 29th June, 1814, executed a deed of grant in favour of Mr. Robert Campbell for (3 a. 3 r.) three acres three roods, *being a portion of the said lease, subject to a reservation of right, on the part of the Government, for the improvement of the streets; and as no mention is made of the portion then remaining on lease, the conclusion is that it was not intended to renew it after the expiration of the term of fourteen years from the date above referred to.

Originals returned.
See No. 12.

In two leases.

* Mr. Campbell states that this is not correct.
† Leases.

It is moreover evident that no renewal could have taken place, because the quantity was altered by Governor Macquarie's grant, and consequently a fresh lease of the portion so remaining after the deed of grant had issued would have been requisite, and in point of fact there is no trace of occupation of the ground between the continuation of George-street and the street for the widening of which Mr. Campbell claims compensation.

I have, &c.,

S. A. PERRY,

Deputy Surveyor General.

Minutes

Minutes on No. 15.

MEMO.—The Surveyor General states that the land claimed by Mr. Campbell was originally held by Captain Waterhouse and Mr. Boughan, and afterwards leased to Mr. Campbell, who subsequently obtained a grant of three acres and three roods, being a portion of the said lease.

On looking over the registers I find a lease to Henry Waterhouse of 1 acre 3 roods 6 perches (part of the land in question) in Sydney, dated 1795, for fourteen years.

This is, however, noted as cancelled by another lease to Waterhouse, being the one mentioned below.*

I do not find a record of any leased grant to Boughan, although the above lease refers to an adjoining one of 2 roods to that person (John Boughan).

In 1797 there is a record of a lease to Mr. Waterhouse for fourteen years "of the piece of ground now in the occupation of Captain Henry Waterhouse, being 60 feet in breadth and 100 feet in depth, situated on the west side of Sydney Cove; on 11th August, 1804, is the lease to Mr. Campbell of the precise quantity as contained in the last to Mr. Waterhouse, and also another of land adjoining containing half-an-acre (this last is the quantity leased to Boughan), both for fourteen years; and in 1814 is the grant to Mr. Campbell of 3 acres and 3 roods, which instead of being a *portion* of the two former leases contains a greater extent of ground.

By the register it would appear that there is no compensation reserved for land taken to improve streets.

Probably it might prevent correspondence if Mr. Campbell was called on to produce the particulars of his claim; it is not unlikely but that he may have purchased the remainder of the land of which he is in possession.

Mr. Campbell informed Mr. Macleay that the ground included in the leases is quite distinct from that in the deed of grant, and as the supposition to the contrary arose originally with Mr. Hallen, I was desired to speak to him on the subject.

I have done so, and Mr. Hallen states that such was his idea on looking at the descriptions and the land, and that he still considers that impression correct.

* In 1799 is recorded a lease for fourteen years to Mr. Waterhouse of land on the west side of Sydney Cove, containing 2 acres 2 roods 16 perches, divided by a road of 60 feet leading to Dawes' Point.

Let me see the leases and the grant. See leases, 3 register, page 160; grant, 2 register, page 15. No date or signature to the foregoing minutes.—T. P. BANKS, Examiner.

See enclosure to No. 5.

Inform Mr. R. Campbell, in reply to his letter of the 17th September, 1831, that it appears in the grant made to him by Governor Macquarie on the 29th June, 1814, of 3 acres 3 roods of the land in question, the usual reservation for the improvement of streets is inserted; and that it does not appear that Mr. C. is entitled to any other portion of the land held by him under a lease which expired in 1818 than the 3 acres 3 roods above mentioned.—R.B., July 18, 1832.

No. 16.

The Colonial Secretary to R. Campbell, sen., Esq.

Sir,

Colonial Secretary's Office, 27 July, 1832.

See enclosure to No. 5.

I had the honor to receive and submit to the Governor, together with the reports of the Surveyor General and Town Surveyor thereon, your letter of the 17th September, 1831, stating that the road in front of the residences of the Archdeacon and Comptroller of the Customs passes through your property, and therefore claiming compensation for the ground recently taken in widening it.

In reply, I am directed by his Excellency to inform you that, from the reports abovementioned, it appears that your claim to the ground in question rests upon two leases, each for fourteen years, commencing on the 11th August, 1804, executed in your favour by Governor King; but as these leases have expired, and as Governor Macquarie, on 29th June, 1814, executed a grant in your favour of a part of the same land, to the extent of 3 acres 3 roods, it appears to His Excellency that there was no intention of granting the remainder or of renewing the lease of it. I am therefore directed by His Excellency to inform you that it does not appear that you are entitled to any portion of the land in question beyond the 3 acres and 3 roods described in the grant of 29th June, 1814, and to add that, as this grant contains the usual reservation for the improvement of the streets, it is not in His Excellency's power to admit your claim for compensation.

I have, &c.,

ALEX. McLEAY.

No. 17.

R. Campbell, Esq., to The Colonial Secretary.

Sir,

George-street, Sydney, 3 August, 1832.

No. 16

I have the honor to acknowledge your letter of 27th ult., communicating the Governor's decision on the subject of my claim to compensation for the ground taken by the Government for the purpose of making a street through my property, in front of the residences of the Archdeacon and the Comptroller of the Customs.

In reply, I beg to observe that the "leases upon which my claim to the ground in question rests" have not, as "His Excellency has directed you to state, expired"; but that, before I answer the concluding part of your letter at such length as its strange import in regard to my interests demands, I must request the favour of being furnished with copies of the reports of the Surveyor General and Town Surveyor to which you allude, in order that I may ascertain correctly the grounds on which His Excellency has been led to cast on me the extraordinary imputation "that I am in possession of land" to any portion of which "it does not appear that I am entitled."

I have, &c.,

ROBT. CAMPBELL.

Minutes

Minutes on No. 17.

1st lease, 1804, containing 5 acres.

2nd lease, 1804, not to be identified.

The grant, 1814, containing 2 acres 3 roods 21 perches.

Land actually occupied at present, containing 7 acres.

Mr. Campbell, senior, requests that he may be furnished with copies of the reports of the Surveyor General and Town Surveyor, upon which the Governor has been induced to cast on him the imputation of his being in possession of land to which he is not entitled.

A *sketch is enclosed, obtained from the Town Surveyor, by which it appears that the first lease of 1804, containing nominally 2 ac. 2r. 16p., comprises actually 5 acres. *Sketch appended.
AEEG in sketch.

That the second lease of 1804, containing half an acre, cannot now be identified.

That the grant of 1814, containing nominally 3 a. 3 r., comprises actually only 2 a. 3r. 21p. ABCD.

That the total quantity of land occupied by Mr. Campbell is 7 acres. AHIKLD.

No signature or date to above minutes.—T. P. BANKS, Examiner.

No. 18.**Memo. by Surveyor General.**

Memorandum respecting the accompanying letter (No. 32-354.)

See No. 16

THE report is correct, with one trifling exception, namely, that the lands of Waterhouse and Boughan were leased in two portions, not in one, as may indeed be inferred from what is stated. The report and sketch agree exactly with all the old maps and with the descriptions contained in the deeds. The grant of 3 acres 3 roods *does* form part of the original lease.

No blame can attach to the Surveyor General if Mr. Campbell's claim to his property has been thus brought in question. A direct question came from the Secretary as to whether or not Mr. Campbell occupies lands in Sydney for which there is no recorded title, and the answer is that he does, the circumstances being explained.

Surveyor General's Office, 20th Sept., 1832.

Minutes on No. 18.

It appears to me that Mr. Campbell has been informed correctly when it was stated that there is no evidence in the Secretary's office of his being entitled to hold more land in Sydney than 3 acres 3 roods, granted by Governor Macquarie.—R.B.

I have seen Mr. Campbell, who is to furnish some other papers on this subject. I am inclined to think he should receive some formal confirmation of the title to the land he now holds in Sydney, *i.e.*, his wharf and the land adjoining.—R.B.

No. 19.**R. Campbell, Esq., to His Excellency the Governor.**

Sir,

George-street, 19 October, 1832.

I beg leave to address your Excellency on the subject of my leasehold property on Bunker's Hill.

In 1798 and 1799 I purchased the ground in question, together with that on which my dwelling-house and warehouses, &c., have been erected, from the original lessees, Captain Waterhouse and Mrs. Boughan.

Our Governor, at that early period, did not possess the power of granting land to individuals in the townships, but Governor King renewed the leases in my favour, and in consideration of the sum of money I had expended in improvements recommended an extension of them. These leases expired on the 12th August last.

I received a promise from General Macquarie, on his arrival, that the leases should be converted into a permanent grant. This promise, your Excellency may observe noticed in his despatch to the Secretary of State, No. 22 in the appendix to the printed Report of the Select Committee of the House of Commons on Transportation in 1812. Upon my return from England, however, in 1815, I found that His Excellency, in my absence, had only given my agent a grant for such of the ground as was occupied by my garden and dwelling-house, &c. Had I been in the Colony I should have refused this grant, as no reason could possibly have been assigned for depriving me of any portion of the land which I had bought, and not received as a gift from the Crown. Subsequently I was informed by the Governor that I should have a grant of the rest of the ground when I had erected suitable buildings thereon. This I have done. Enclosed.

I have not hitherto availed myself of General Darling's proclamation of 8th June, 1829, respecting town allotments, because I conceive that I ought not to be compelled to pay the high quit-rent fixed by that proclamation, on land which I have been in possession of upwards of thirty years, and which I have enclosed and built upon. Under the old leases, both the allotments were subject only to a quit-rent of 10s. each per annum. Governor Macquarie was pleased to impose a quit-rent of £2 10s. on the part which he made freehold, but in so doing I have always thought that he acted unfairly towards me.

Under these circumstances, therefore, I beg to submit to your Excellency that I am entitled, in justice to a grant of my hill ground, subject only to the rate of quit-rent specified in the original leases.

I have, &c.,

ROBT. CAMPBELL.

Minutes on No. 19.

If there is any evidence of the second promise of Governor Macquarie, Mr. Campbell ought to have the land at the low quit-rent. If not, he should pay that fixed by General Darling upon the part not made into a grant by Governor Macquarie.

No date or signature to above minute.—T. P. BANKS, Examiner.

[Enclosure to No. 19.]

Appendix to Report from Select Committee on Transportation.

No. 22.

COPY of the 78th paragraph of letter from Governor Macquarie, dated 30th April, 1810.

"78 par. : As there are now a considerable number of opulent merchants and others residing in the town of Sydney who would build handsome and permanent houses if they could obtain grants instead of leases of the grounds, I respectfully submit that I may be permitted to use my discretion in giving persons of this description permanent grants to build on, both here and in the other parts of the territory. Mr. Robert Campbell and Mr. Simeon Lord, both opulent and respectable merchants, having already built very spacious and elegant houses and warehouses in the town of Sydney at a very great expense, I have taken the responsibility on myself of promising to convert their leases into permanent grants, and I conceive it would be good policy to extend the same indulgence to all such other persons as are able and willing to erect substantial and handsome buildings within the town."

No. 20.

Extract from Summary of Council, No. 33-2, of 14th January, 1833.

4. His Excellency the Governor then submitted an application from Robert Campbell, senior, Esq., requesting that grants may be made out to him of certain lands in the town of Sydney (of which he has held leases from the Crown for many years back), subject only to the rate of quit-rent specified in the original leases; and the Council were of opinion that Mr. Campbell's application could not be complied with, but that grants should be made out to him of the land in question under the proclamation of the 8th June, 1829, and consequently subject to the quit-rent of sixpence per square rod per annum from the 30th June, 1823, as therein specified, or from the period to which rent has been paid, as stipulated in the leases in question, if subsequent to that date.

E. DEAS THOMSON,
Clerk of the Council.

Minute on No. 20.

Mr. Campbell to be informed of the substance of this minute, in reply to his letter of the 19th October, 1832.—R.B.

No. 21.

Memorandum by His Excellency the Governor.

MEMO.—I shall request the opinion of Council upon the application of Mr. R. Campbell, contained in his letter of the 19th October last. The Surveyor General will attend to give what information may be required from the records in his office.

The exemption from quit-rent is the principal subject for consideration.

R. B.

See No. 19.

No. 22.

The Colonial Secretary to R. Campbell, Esq.

Sir,

Colonial Secretary's Office, Sydney, 26 January, 1833.

I have the honor by direction of the Governor to inform you that His Excellency submitted to the Executive Council your letter of 19th October last, soliciting grants, subject to a lower rate of quit-rent than that prescribed by the proclamation of 8 June, 1829, on certain ground in the town of Sydney held by you under lease, and that the Council were of opinion that your request could not be complied with, but that grants of the ground in question should be made out under the proclamation mentioned, and consequently subject to the quit-rent of sixpence per square perch per annum from 30 June, 1823, as therein specified, or from the period to which rent has been paid, as stipulated in the leases in question if subsequent to that date.

I have, &c.,

ALEX. McLEAY.

See No. 21.

No. 23.

The Colonial Secretary to The Surveyor General.

Sir,

Colonial Secretary's Office, Sydney, 30 January, 1833.

With reference to your letter of the 13th July, 1832, I am directed by the Governor to inform you that it has been decided in Council that grants agreeably to the proclamation of 8th June, 1829, shall be given of the allotments at Bunker's Hill, in the town of Sydney, held by Mr. Robert Campbell, senior, under old leases from the Crown, and to request therefore that you will furnish the necessary descriptions for the deeds.

I have, &c.,

T. C. HARRINGTON,

(For the Colonial Secretary.)

See No. 15.

No. 24.

The Surveyor General to The Colonial Secretary.

Sir,

Surveyor General's Office, 23 November, 1833.

With reference to the correspondence relative to the plans of various improvements proposed in the alignment of streets in the neighbourhood of Church Hill and the northern part of George-street, I have the honor to submit two plans (Nos. 1 and 2), which have been completed by the Town Surveyor, and which appear to combine the various advantages afforded by the ground; and I would have the honor to suggest that these or some similar plans when approved of by Government should be laid down and adhered to, as partial alterations and adaptations become practicable by the laying out and improvement of property by individuals, where streets become indispensable and when they become essential, on bringing into operation the powerful means afforded by the iron gangs which His Excellency has been pleased to employ with the prospect of so much benefit to the inhabitants.

It

Plans transmitted.
See Appendix.

It will appear by plan No. 1 (intended to show what might be effected on Church Hill), that by removing the Government windmill and small mound on which it is situated, Clarence-street may be united with Princes-street, and the ground on this elevated plateau laid out in building allotments forming a crescent, through the centre of which an archway would lead into Kent-street. Were the buildings erected on a uniform plan they would not only command the finest scenery on each side, but they would together give a grandness of effect to the general appearance of the town. Clarence-street is one of the most level and extensive in Sydney, and if improvements of this kind were made on Church Hill, it is probable that a better description of buildings would sooner replace those now in it. If the vista from Clarence-street terminated in an obelisk or statue, which might in time ornament such a crescent, the street scenery might become of the finest description. It will appear also to His Excellency by the plan, that when a street may be brought across the present barrack ground in prolongation of York-street, it would lead direct towards Cumberland and Gloucester Streets, both of which would fall into it with scarcely any turn, while the line thus continued across the present shapeless space on Church Hill would square it so as to compensate in some degree for the irregularity of the sites of the two churches, especially if an enlargement of the Infant-school or an additional building were built parallel to the proposed line; * another communication might cross Church Hill from York-street to Princes-street, the intervening spaces being filled up with shrubbery, and railed in for the benefit of the neighbouring families, as in some squares of London. The proposed new buildings in Bridge-street appear to be in keeping with this plan, and I would submit that the measure is likely to promote the more speedy improvement of that part of Sydney, so good in point of situation, which is now disfigured by the buildings known as "The Rocks." But this object is still more likely to be accomplished by the adoption of plan No. 2, showing a continuation of George-street in the line of the new Custom-house. This is supposing the street to be opened diagonally across the site of the present gaol, so as to fall into what is called Cambridge-street, leaving a space of the width of a street quite round the new Custom-house, and cutting down the rock in extending further on the same level so as to leave a line of allotments on the lower level along the west side, and a line of allotments backing to these along the higher level with frontage on Cumberland-street. The whole of that property belongs to Mr. Campbell, who is now about to dispose of it in allotments for building; and having had some communication with the parties on the subject, I believe they are willing to adopt the proposed plan, and that uncertainty as to its final adoption at present retards the arrangement for sale. For this reason also, I consider it advisable to submit these plans for the consideration of Government; and respecting this, I would also beg further to observe that by the extension of George-street on this line a nearly level communication would be established quite round the hill of Sydney, embracing Dawes' Battery, Miller's Point, and leading into Kent-street, the crescent proposed, Clarence-street.

I have, &c.,

T. L. MITCHELL,

Surveyor General.

* With deference, I think it would be a better plan to build a church on the crest of the hill, and appropriate to the parsonage, Public School, &c., the land bounded on the east by the continuation of York-street, and on the west by Kent-street, afterwards pulling down the old church and throwing Charlotte Place into one open space.

Minute on No. 24.

The proposal for laying out Church Hill is judicious, and I will lay it before the Executive Council the next opportunity. The improvement of George-street can only be effected under the provisions of the Road Act (4 Gul. IV. No. 11), and upon giving up the old gaol by the Government. I have no doubt that the latter measure will be accomplished before long, but I am not at present enabled to assure the proprietors of land on the Rocks of the intentions of His Majesty's Government in this respect; but the Surveyor General may be informed that I approve of the plan he has proposed, and that I have no doubt but that the improvement he suggests may be carried into effect, with great convenience to the public and advantage to the proprietors of allotments through which the new line is intended to be carried. Upon obtaining authority to build a new gaol and dispose of the old one, I will lose no time in taking the steps required by the Act for opening the line of street.—R.B., Dec. 11, 1833.

No. 25.

The Colonial Secretary to The Surveyor General.

Sir,

Colonial Secretary's Office, 4 January, 1834.

I duly received and submitted to the Governor your letter of the 23rd November, enclosing See No. 24. two plans for the improvement of the streets in the neighbourhood of Church Hill and the northern part of George-street.

In reply, I have the honor, by the direction of His Excellency, to inform you that he approves of the plan you have proposed, and that His Excellency has no doubt but that the improvements you suggest may be carried into effect with great convenience to the public, and advantage to the proprietors of allotments through which the new line is intended to be carried. Upon obtaining authority to erect a new gaol and dispose of the present one, His Excellency will lose no time in taking the steps required by the Act of Council for opening the line of street.

I have, &c.,

ALEX. McLEAY.

No. 26.

The Surveyor General to The Colonial Secretary.

Sir,

Surveyor General's Office, 6 August, 1834.

Accompanying I have the honor to transmit to you measured descriptions of four allotments belonging to Mr. Robert Campbell at Bunker's Hill, as called for by your letter, for the purpose of preparing deeds of grant; and with reference to the stipulations contained in the original lease of this ground, dated 11th August, 1804, I have to observe that there is a reservation for one road only to Dawes' Battery of 60 feet wide, in lieu of which there are now two roads or streets, viz., that in continuation of George-street, See No. 23.

12'

street, and the other the prolongation of Cumberland-street, both to Dawes' Battery, the former being 37 and the latter 30 feet wide; and as Mr. Campbell has agreed to open the northern communication between George-street and the Battery, as recommended in my report of the 23rd November last, the necessity for increasing the width of the old street, except at the junction of the two streets, no longer exists.

See No 21

I have, &c.,
T. L. MITCHELL,
Surveyor General.

Minutes on No. 26.

Description not enclosed. See No. 1.

The land required for extending George-street through the site of the old gaol to the Custom-house appears to be excluded from the accompanying descriptions, and I am not aware, therefore, of any objection to the preparation of the deeds after the usual advertisement. Let this be done.

No. 27.

The Deputy Surveyor General to Mr. W. Redmond.

Sir,

Surveyor General's Office, 29 October, 1841.

The Board appointed to make arrangements for opening the new line of George-street request the favour of your attendance at this office at 2 o'clock to-morrow.

(For the Board),
S. A. PERRY,
Deputy Surveyor General.

No. 28.

Mr. M. Charlton to The Committee for valuing land.

Gentlemen,

Sydney, 1 November, 1841.

Being informed that it is proposed to carry the line of George-street through my premises, situated near the old gaol, and it being necessary for me to furnish an estimate of the value of them to me, I beg leave to state that the yearly rent of these premises is £195, and that amount at 10 per cent. is £1,950, which sum I claim, together with the same quantity of land.

I have, &c.,
MATTHEW CHARLTON.

No. 29.

A. B. Spark, Esq., to The Committee for valuing land.

Gentlemen,

Sydney, 2 November, 1841.

As I am permitted to select one portion of land in preference to another in compensation for the land required in opening the new line of George-street, subject to the approbation of His Excellency the Governor, I have the honor to acquaint you that my decision is in favour of that portion of the old gaol attached to my store in the present line of George-street.

With regard to the quantity to be allowed, I would beg to claim an extension of frontage, on four grounds, viz. :—

1. That the dwelling-house, in which a clerk of mine with his wife and family resides, will have to be removed, and which, although of no great intrinsic value, will occasion an expenso of at least £50 a year.
2. That a workshop rented by me to Mr. Richard Dawson must also be removed.
3. That the remnant of my ground to the west of the new line is so narrowed at the point of intersection as to become of little value.
4. Should the Government require any part of the land to widen the present street, I submit that this also should be taken into consideration.

I have, &c.,
A. B. SPARK.

No. 30.

Mr. W. Redmond to The Deputy Surveyor General.

Sir,

George-street, Sydney, 3 November, 1841.

In reply to your letter to me of the 29th ultimo, I beg to inform you that, as sole executor and legatee of the late Edward Redmond, the grantee of the premises in Cumberland-street, Sydney, conveyed by grant dated 23rd September, 1839, I am now and always was ready to comply with the terms made by Government in said deed, and am ready to name my arbitrator when required, in conformity with the terms of said grant. For further communication on the subject I beg leave to refer you to Messrs. Chambers and Thurlow.

I am, &c.,
W. REDMOND.

No. 31.

Mr. G. Thornton to The Deputy Surveyor General.

Sir,

Elizabeth-street, Sydney, 5 November, 1841.

I do myself the honor (according to promise) to offer you my proposition with regard to my premises in George-street. I have fully considered your offer of giving me a piece of land in lieu of the piece you take from me, and beg to say that I must decline that offer.

The only proposition I can make is (so that I shall not be a loser by the circumstance), that the Government should take the whole of the property, paying me the value of the ground and the buildings thereon,

thereon, which I estimate at lowest to be £5,000. I am receiving a rental of nearly £500 per annum, which will give you an idea of the value of the property. I shall be most happy to meet the Board at any time to make arrangements.

I have, &c.,
GEORGE THORNTON,
 (For SAMUEL THORNTON).

No. 32.

Abstract of loss of premises in Harrington and Globe Streets.

Loss of premises situated in Harrington-street.

No. 33.

Mrs. E. Underwood to The Deputy Surveyor General.

Sir,

Ashfield Park, 17 November, 1841.

In reply to your *letter of the 16th instant, on the subject of opening the new line of George-street, I have the honor to state that it will not be convenient to me to visit town for the purpose of meeting the Board on Friday next, but that I have no intention whatever of deviating from what I have demanded in the shape of compensation for my property in Essex-lane, and which I now beg to repeat, viz., £500 cash for the two cottages, and an equal quantity of land with frontage to the new line of George-street.

I have, &c.,
E. UNDERWOOD.

No. 34.

The Colonial Secretary to Mr. F. Wilkinson.

Sir,

Colonial Secretary's Office, Sydney, 7 February, 1842.

Referring to your letter of the 27th July last, requesting to be allowed to purchase the piece of ground which intervenes between your premises in Gloucester-street and the proposed new line of George-street, I do myself the honor to inform you that no positive answer can be given to your request until the line of George-street shall have been set out; but the Surveyor General has been instructed to bring the matter under notice as soon as a line of street has been so set out.

I have, &c.,
E. DEAS THOMSON.

No. 35.

No. 35.

The Colonial Secretary to Mr. James Ewen.

Sir,

Colonial Secretary's Office, Sydney, 7 February, 1842.

In respect to your communication of the 24th September last, addressed to His Excellency the Governor, and requesting to be informed of the proper building-line of Harrington-street, I am now directed to acquaint you that the building-line of the above street cannot be determined until the arrangements in contemplation for the prolongation of George-street have been completed.

The Surveyor General has, however, been requested to bring your application under notice as soon as these arrangements have been perfected.

I have, &c.,

E. DEAS THOMSON.

No. 36.

A. B. Spark, Esq., to The Colonial Secretary.

Sir,

Sydney, 15 February, 1842.

I have to apologize for again troubling you on the subject of the extension of George-street, but the value of the property now lying at waste will plead my excuse. It has been suggested to me that an assessment of the damages sustained by each individual, done by a commission to which all must submit, would be a ready method of bringing matters to a close. At the sale of the adjoining land, each might be permitted to purchase to the amount of his assessment; or should he decline purchasing, be paid from the proceeds of the sale. I have every reason to think, from the calculation made in your office, that the Government would have nothing to disburse.

I have, &c.,

A. B. SPARK.

Minutes on No. 36.

This still seems to proceed on the assumption that every proprietor is to be indemnified by the Government for the whole of his loss, and to receive all the benefit that will accrue to him by the opening of the street without cost to himself. The business is in the hands of Colonel Barney, to whom this should be referred.—G.G., Feb. 19.

See No. 38.

By letter dated 2nd May, 1842, addressed by the Board to the Colonial Secretary, it is recommended that the site of the old gaol be put up to sale by auction in building allotments, leaving the full breadth of New George-street from Essex-street to Mr. Spark's wall.—S. A. PERRY, 3rd May, 1842.

For the Board.

No. 37.

Memoranda.

Has the report of the Board been received respecting the prolongation of George-street through the site of the old gaol? April 18.—Immediate.

I have not seen any reports. Herewith appears to have been the original proposal for continuing George-street through the site of the old gaol. 19.

Some of the parties are very pressing for a decision in this case, as they are prevented in the meantime from improving their property lest their operations should interfere with the intended new street.—April 19.

I have directed that the papers were to be returned by Col. Barney, and the land on which the old gaol stood be sold.—G.G.

I have frequently declined to do more than to allow the street to be opened. They ask me to give up the whole of the land on which the old gaol stood, as well as some other portions in or near Harrington-street, also to make the question of compensation a Government one. I have declined to do more than give up, the land actually required for the street.—G.G., 20 Apl.

No. 38.

The Board for opening George-street to The Colonial Secretary.

Sir,

Colonial Engineer's Office, 2 May, 1842.

Having had under consideration the several communications from the Government, as well as numerous applications from individuals interested in the arrangements proposed for opening the new line of George-street, we have the honor to report that, notwithstanding frequent and long conferences with the proprietors and principal tenants on the proposed new line of street, we have been unable to arrive at any satisfactory conclusion, in consequence of the high rate of valuation put on the premises by the parties themselves.

We therefore recommend that the site of the old gaol be divided into building allotments and sold by public auction, leaving the full breadth of the new line of George-street from Essex-street to Mr. Spark's wall.

We have, &c.,

GEO. BARNEY, Lt.-Col., R.E.

S. A. PERRY, Dy. Survr. General.

WM. MACPHERSON, Reg. Sup. Court.

Minutes on No. 38.

Approved, and the parties to be informed.—G.G., May 5. Inform the Surveyor General, and request him to have the land divided for sale, in the manner recommended.—G.G., May 5th.

15

No. 39.

The Colonial Secretary to The Surveyor General.

Sir,

Colonial Secretary's Office, Sydney, 9 May, 1842.

The Board appointed to report on the proposed continuation of Lower George-street having stated that they were unable to arrive at any satisfactory conclusion in consequence of the high rate of valuation put on the premises that would thus be affected by the parties interested, I do myself the honor to request that you will cause the site of the old gaol to be divided into allotments for sale, leaving the full breadth of the new line of George-street from Essex-street to Mr. Spark's.

I have, &c.,

E. DEAS THOMSON.

No. 40.

The Colonial Secretary to Mr. M. Charlton.

Sir,

Colonial Secretary's Office, Sydney, 9 May, 1842.

Referring to your letter of the 1st November, 1841, stating the terms on which you are No. 29. willing to give the portion of land near the old gaol required for the proposed continuation of Lower George-street, I do myself the honor to inform you that the Board appointed to report on this matter having stated that, in consequence of the high rate of valuation put on the premises by the parties themselves, they were unable to arrive at any satisfactory conclusion, the Government have been compelled to forego the intended improvements.

I have, &c.,

With reference to my letter of 7th February last, informing you that no positive answer could be given to your application to purchase a piece of land in Gloucester-street until the arrangements then in contemplation for continuing the new line of George-street would be completed, I now beg to inform you that the Government have abandoned the arrangements alluded to, in consequence of the high rate of valuation put on the premises by the parties interested.

I have, &c.,
E. DEAS THOMSON.

No. 47.

Colonel Barney to The Colonial Secretary.

Sir, Colonial Engineer's Office, Sydney, 15 July, 1842.

In consequence of an application from Mr. Isaacs to use the building-line upon his allotment in Argyle-street to be marked out, I viewed the ground and found that in building as he proposed (see sketch herewith) the width of the street would be reduced to 22 feet; I therefore cautioned him as to the necessity for obtaining the views of the Surveyor General on the subject, there not being any plan of this line in my office.

On examination of the sketch, it will be observed that a great portion of the building called the "Royal Oak" is apparently an encroachment, and that the building-line of Argyle-street is as marked on the sketch, making the width of the street about 58 feet. This line, however, will embrace nearly the whole of Mr. Isaacs' allotment, as well as one between that and the "Royal Oak," and if adopted will, it is presumed, entitle the parties to compensation; on the other hand, it would be very improper to reduce this thoroughfare to 22 feet or even 28 feet (see dotted line AB). This being a subject of some importance to the inhabitants of Miller's Point, and not being in possession of any official information respecting this portion of the town, I beg to recommend that the question be referred to the Surveyor General.

Mr. Isaacs is anxious for a decision as early as possible, having made arrangements for building.

I have, &c.,
GEO. BARNEY, Lt.-Col., R.E.

Minutes on No. 47.

The Surveyor General is requested to report.—B.C., 18 July, 1842, E.D.T. Urgent.

Colonel Barney's sketch is nearly correct. The "Royal Oak" inn is an encroachment. I annex a tracing showing the true line as proclaimed on 31st December, 1834. The question of compensation is another matter, and is to be dealt with as follows, in Isaacs' case, who must give way (I presume at least under the circumstances). The land was granted on the 15th January, 1834, the Crown reserving the right to resume any portion required for the improvement of the street, on giving twelve months notice and paying the fee-simple.—T.L.M., 23 July, 1842.

I cannot hold out the expectation of any compensation being given by the Government. I cannot, therefore, resume any land that has been granted, but on the other hand, Mr. Isaacs must be restrained, as far as the law permits, from encroaching on the public street, or on what ought to be the public street.—G.G., July 27.

No. 48.

The Colonial Secretary to The Surveyor General.

Sir, Colonial Secretary's Office, Sydney, 30 July, 1842.

See No. 47. With reference to your report of 23rd instant, on a letter from Colonel Barney, relative to a supposed encroachment on the line of Argyle-street, at Miller's Point, made by Mr. Isaacs, in which you state that the house known as the "Royal Oak" is an encroachment on the street, and recommend that the land required to carry out the line of street, as proclaimed on the 15th January, 1834, should be resumed and Isaacs compensated for it, I do myself the honor to inform you that the Governor cannot hold out the expectation of any compensation being given by the Government. His Excellency cannot therefore resume any land that has been granted; but that on the other hand Mr. Isaacs must be restrained, as far as the law permits, from encroaching on the public streets, of which Colonel Barney has been apprised and requested to acquaint Isaacs.

I have, &c.,
E. DEAS THOMSON.

No. 49.

The Colonial Secretary to The Colonial Engineer.

Sir, Colonial Secretary's Office, Sydney, 30 July, 1842.

No. 47. With reference to your letter of the 15th instant, relative to an enclosed encroachment on the line of Argyle-street, at Miller's Point, made by Mr. Isaacs, I do myself the honor to inform you that, having referred the subject to the Surveyor General, that officer reports that the house known as the "Royal Oak" is an encroachment on the street, and recommends that the land required to carry out the line

line of street, as proclaimed on the 15th January, 1834, should be resumed, and Isaacs compensated for it; but, as the Governor cannot hold out the expectation of any compensation being given by the Government, His Excellency cannot resume any land that has been granted; but on the other hand, Mr. Isaacs must be restrained as far as the law permits from encroaching on the public streets, or on what ought to be the public streets, and I am to request that you will acquaint Isaacs accordingly.

I have, &c.,
E. DEAS THOMSON.

No. 50.

Mr. M. G. Golden to The Colonial Secretary.

Sir,

15 November, 1842.

I take the liberty of writing to you about four houses I have entered into an agreement with Mr. John Isaacs to build on his allotment, situated at the corner of Argyle-street and Unwin-street, Miller's Point, Sydney, for which you refused permission to allow two of the houses to be built on a line with the frontage of the "Royal Oak" tavern. The Governor then being written to about it, and receiving no answer (it being now six weeks since the letter was written to him), I, having made preparations and arrangements for building the houses, do not wish to be at a loss by them. I require, if it is pleasing to you, to give a decided answer about the building of them, that I may come to some conclusion with Mr. Isaacs, and you will much oblige—

Your humble servant,

MICHL. G. GOLDEN,
Architect and Builder.

Minutes on No. 50.

Probably the reply may be in the Col. Secretary's Office.—GEO. BARNEY, Lt.-Col., R.E., 16 Nov.
Refer the Colonial Engineer to my letter to him of the 30th July, 1842.—Nov. 19.

No. 51.

The Colonial Secretary to The Colonial Engineer.

Sir,

Colonial Secretary's Office, Sydney, 22 November, 1842.

In reference to your memorandum of the 16th instant, covering a communication from one Michael Golden, relative to the line of building at the corner of Argyle-street, I do myself the honor to refer you to my letter of the 30th July last, in which, in reply to your communication on this subject, you were apprised that the Governor could not hold out the expectation of any compensation being given to Mr. Isaacs (the proprietor of the allotment which encroaches on the line of Argyle-street), that His Excellency could not therefore resume any land that had been granted; but that on the other hand, Mr. Isaacs must be restrained as far as the law permits from encroaching on the public street, or what ought to be the public street, of which you were requested to acquaint Mr. Isaacs.

I have, &c.,
E. DEAS THOMSON.

No. 52.

The Surveyor General to The Colonial Secretary.

Sir,

Surveyor General's Office, Sydney, 30 January, 1843.

In attention to your letter of the 9th May last, in which you informed me that the Board appointed to report on the proposed continuation of Lower George-street, having stated that they were unable to arrive at any satisfactory conclusion in consequence of the high rate of valuation put on the premises, that would be thus expected by the parties interested, and requested that I would cause the site of the old gaol to be divided into allotments for sale, leaving the full breadth of the new line of George-street from Essex-street to Mr. Spark's wall, I have now the honor to transmit a plan showing the proposed division of the land in question into allotments for sale, for the approval of His Excellency the Governor.

I have, &c.,
T. L. MITCHELL.

Upset price, £10 per foot.

13. Sydney, $4\frac{1}{4}$ p. Four and three-quarter perches, county of Cumberland, parish of St. Philip, allotment No. 17 of the site of the old gaol; bounded on the south by the building-line of Essex-street, 24 feet 5 inches easterly; on the east by Anvil-lane northerly 48 feet; on the north by a line at right angles westerly 29 feet dividing it from part of No. 14 allotment; and on the west by a line at right angles to Essex-street southerly 51 feet 7 inches, dividing it from No. 16 allotment, to Essex-street aforesaid. Upset price, £10 per foot.

* * * * *

Given under my hand and Seal of the Colony, at Government House, Sydney, this second day of June, in the year of our Lord one thousand eight hundred and forty-eight and in the eleventh year of Her Majesty's reign.

CHAS. A. FITZ ROY,
By His Excellency's command.
E. DEAS THOMSON.

God save the Queen!

No. 65.

The Town Clerk to The Colonial Secretary.

Sir,

Town Clerk's Office, Sydney, 15 December, 1848.

*Not with papers.

I am directed by the Right Worshipful the Mayor, with reference to my letter to you of date* 20th November, 1847, on the subject of the proclamation of certain streets therein mentioned, to request that His Excellency the Governor will be pleased to issue the necessary instructions for expediting the proclamation of the said streets, and also of George-street North from Charlotte-place to Fort-street.

I have, &c.,

JOHN RAE,
Town Clerk.

Minute on No. 65.

Transmitted for the report of the Surveyor General.—B.C., 20 December, 1848.—W. ELYARD, JUN., for the Colonial Secretary. To be returned.

No. 66.

Mr. J. Armstrong to The Surveyor General.

Sir,

No. 7, Macquarie-street, 8 January, 1849.

Having had the honor to receive an intimation that I might send in a tender for the survey of George-street, from Charlotte-place to Fort-street, and furnish a plan on a scale of 2 inches to 1 chain, representing thereon the required "curb and building lines," I beg to inform you that I shall be happy to undertake that service (with the mode of performing which I am familiar), including the pointing out to the City Corporation the proper spots for the posts, and conferring with the various proprietors along both sides of the line, for the sum of £30—including all expenses.

I beg to add that this part of the town being very irregular and intricate is the reason for my naming the above sum.

I have, &c.,

JNO. ARMSTRONG.

No. 67.

Memo. by Surveyor General.

THE survey of the streets formerly mentioned as in progress, and the copy of a tender made by Mr. John Armstrong to survey the portion of George-street, from Charlotte-place to Fort-street, alluded to, for the sum of £30 (which I consider a fair and reasonable tender), is enclosed herewith.

Surveyor General's Office, B.C., 29 January, 1849.

Approved.—C.A.F., 4 Feb.

Minutes on No. 71.

Schedule and plan of streets in the city of Sydney sent to Executive Council.—31 March, 1849.
 Executive Council.—B.C., 23 May, 1849. Laid before the Executive Council, 2 June, 1849.

[Enclosure to No. 71.]

SCHEDULE accompanying letter to the Surveyor General, with plan of Lower George-street.

	Carriage-way.	Each footway.	Total width.
Lower George-street, from Charlotte-place to an angle near the centre of allotment 7 in section 82	36	12	60
From that point to the south end of the Commissariat Stores, the increased intermediate widths (including wall) being	103	12	127
And	99	12	111
At the south end of the Commissariat Stores	36	12	60
From that point to Argyle-street	each footway.		
From do. to the north end of the wall of the enclosure appropriated to the Water Police Office, turning off to the new Government landing place	36	12	60
From do. to the junction of Lower George-street with Fort-street	36	12	60

No. 72.

Summary of Proceedings of Executive Council.

SUMMARY of Proceedings of the Executive Council on 2nd June, 1849, relative to the breadth of the carriage and foot ways in Lower George-street.
 Minute No. 49/23.

Executive Council Office, Sydney, 19 June, 1849.
 His Excellency the Governor lays before the Council a letter from the Surveyor General, submitting a plan showing the breadth of the carriage and foot ways which he proposes to establish in Lower George-street, with a view to their proclamation.

2. As it appears from this plan that the exterior edge of a portion of the proposed footway on the eastern side of Lower George-street is placed upon land not hitherto forming part of the street or footway, the Council recommend that the Surveyor General should be requested to report whether the consent of the proprietors of this land has been obtained in accordance with the provisions of the 3rd clause of the Act 5 William IV. No. 20, and if not, that he should be instructed to communicate with the proprietors for the purpose of ascertaining whether or not they will assent to the alignment proposed.

FRANCIS L. S. MEREWETHER,

Clerk of the Council.

Approved.—C.A.F., 20th.

The Colonial Secretary to The Surveyor General.

Sir,

Colonial Secretary's Office, Sydney, 27 June, 1849.

No. 71.

In acknowledging the receipt of your letter of the 21st ultimo, enclosing for approval a plan of a portion of George-street, between Charlotte Place and Fort-street, with a schedule of the width of the carriage and foot ways, I do myself the honor, by the direction of the Governor, to inform you that the same was duly laid before the Executive Council.

2. As it appears from the plan that the exterior edge of a portion of the proposed footway on the eastern side of Lower George-street is placed upon land not hitherto forming part of the street or footway, I am directed by His Excellency, at the recommendation of the Council, to request that you will have the goodness to report whether the consent of the proprietors of this land has been obtained in accordance with the provisions of the 3rd clause of the Act 5 William IV. No. 20, and if not, that you will have the goodness to communicate with the parties for the purpose of ascertaining whether or not they will assent to the alignment proposed therein.

I have, &c.,

W. ELYARD, JUN.

No. 74.

The Surveyor General to The Colonial Secretary.

Sir,

Surveyor General's Office, Sydney, 10 July, 1849.

No. 73.

1st. In attention to your letter of the 27th June, 1849, in which, in reference to the design for the alignment of the part of George-street, you allude to the circumstance of the exterior edge of the proposed footpath on the east side of Lower George-street being placed upon land hitherto not forming part of the street or footway, and inform me that you are directed by His Excellency the Governor, at the recommendation of the Council, to request me to report whether the consent of the proprietors of the land has been obtained in accordance with the provisions of the 3rd clause of the Act 5th William IV. No. 20,—

2nd. I have the honor to state, for the information of His Excellency the Governor, that the arrangement was made with the privity and at the desire of the Messrs. Campbell, the proprietors of the land on which nearly the whole of the curb-line encroaches; but at the extremity of George-street are some premises formerly belonging to Mr. Cunningham, now the property of Mr. Hanson; the curb will take from these premises a small triangle to which Mr. Hanson does not object.

I have, &c.,

T. L. MITCHELL.

Minutes on No. 74.

For the Executive Council.—C.A.F., 13th. B.C., 14th July, 1849.—E.D.T. Laid before the Executive Council, 23rd July, 1849. Minute No. 49/34.

No. 75.

Summary of Proceedings of Executive Council.

SUMMARY of Proceedings of the Executive Council on the 23rd July, 1849, relative to a letter from the Surveyor General respecting alignment of George-street North.

Minute No. 49/34.—Confirmed 30th July, 1849.

Executive Council Office, Sydney, 13 November, 1849.

WITH reference to the Proceedings on the 2nd June last, His Excellency the Governor lays before the Council a letter from the Surveyor General, reporting that the owners of the private property upon which the alignment of George-street (proposed in his letter of the 21st May last) would encroach had consented to the arrangement.

See No. 71.

2. The Council thereupon advise the issue of a notice, under the 2nd clause of the Act 5 William IV. No. 20, declaring the distances from the curb-stone or exterior edge of the footways in Lower George-street within which it shall not be lawful to erect any building to be those shown in the plan and schedule laid before them on the 2nd June last.

FRANCIS L. S. MEREWETHER,

Clerk of the Council.

Approved.—C.A.F., 13 Nov.

No. 76.

Gazette Notice.

Executive Council Office, Sydney, 13 November, 1849.

Sydney Streets.

His Excellency the Governor, with the advice of the Executive Council, has directed it to be notified, in conformity with the provisions of the Act of the Governor and the Legislative Council, 5 Will. IV. No. 20, that the breadth of the footways in the undermentioned street shall be 12 feet each, and consequently that

that it will not be lawful for any person to erect any building within 12 feet of the curbstone or exterior edge of the said footways, as delineated on the plan submitted to His Excellency and the Executive Council, in conformity with the said Act, which said plan lies at the office of the Surveyor General, for the inspection of the public.

Name of Street.	Carringe-way.	Each Footway.	Total.
	feet.	feet.	feet.
Lower George-street, from Charlotte Place to an angle near the centre of allotment 7, in section 82	36	12	60
From that point to the south end of the Commissariat Stores, the increased intermediate widths (including wall) being	103	12	127
and	99	*12	111
And at the south end of the Commissariat Stores	36	12	60
From that point to Argyle-street	36	12	60
From that point to the north end of the wall of the enclosure appropriated to the Water Police Office, turning off to the new Government Landing-place	36	12	60
From that point to the junction of Lower George-street with Fort-street	36	12	60

* Footway at one side only.

By Command,
FRANCIS L. S. MEREWETHER,
Clerk of the Council.

The Colonial Secretary to The Surveyor General.

Sir, Colonial Secretary's Office, Sydney, 27 November, 1849.
In reference to your letter of the 10th July last, I now do myself the honor to draw your No. 74. attention to the notice in the Government Gazette of the 16th instant, respecting the breadth of the foot- See No. 74. ways in Lower George-street, Sydney. I have, &c.,

W. ELYARD, JUNR.

No. 78.

Messrs. Campbell & Co. to The Colonial Secretary.

Sir, Campbell's Wharf, 10 December, 1849.
Agreeably to your public notice, and with reference to the plan exhibited at the Surveyor General's Office for widening George-street, upon which our premises abut on the eastern side, we beg to submit a claim for taking 24 feet of the same, the value to be determined by disinterested parties. We have, &c.,

CAMPBELL & CO.

Minutes on No. 78.

Transmitted for the report of the Surveyor General.—B.C. 12 Dec., /49. W. ELYARD, JUN. (for the Colonial Secretary). To be returned.

The Government will not, I apprehend, make compensation under any circumstances; and if the Messrs. Campbell be not content to devote the 24 feet to the public for the benefit of their own property the only alternative seems to be to alter the plan.—T.L.M.

Surveyor General's Office, 17th December, 1849. Executive Council, B.C., 28th Dec., /49.
Laid before the Executive Council the 31st December, 1849. Minute No. 49/64.

No. 79.

The Surveyor General to Messrs. Campbell & Co.

Gentlemen, Colonial Secretary's Office, Sydney, 12 December, 1849.
I do myself the honor to inform you that it has been found necessary to refer to the Surveyor General your letter of the 10th instant, claiming compensation for land required for widening See No. 78. George-street. I have, &c.,

W. ELYARD, JUN.

No. 80.

Proceedings of the Executive Council.

PROCEEDINGS of the Executive Council on the 31st December, 1849, relative to Messrs. Campbell's claim to compensation for the widening of George-street.

Minute No. 49/64.—Confirmed 8th January, 1850.

Executive Council Office, Sydney, 16 January, 1850.

WITH reference to the proceedings on the 23rd July last, His Excellency the Governor lays before the Council a *letter from Messrs. Campbell & Co., referring to the plan for widening George-street, upon See No. 75. which their premises abut on the eastern side, and submitting a claim for taking 24 feet of the same, the See No. 78. value to be determined by disinterested parties.

2. When the plan referred to was laid before them on the 2nd June last, the Council observed that the exterior edge of a portion of the proposed footway on the eastern side of Lower George-street was placed upon land not hitherto forming part of the street or footway, and they called upon the Surveyor General in consequence for a report as to whether the consent of the proprietors of this land had been obtained in accordance with the provision of the 3rd clause of the Act 5 William IV. No. 20; and if not,

not, they recommended that he should be instructed to communicate with the proprietors for the purpose of ascertaining whether or not they would consent to the alignment proposed. The Surveyor General then reported that "the arrangement was made with the privity and at the desire of the Messrs. Campbell, the proprietors of the land on which nearly the whole of the curb-line encroaches." On this understanding the alignment was approved by the Council, and they cannot entertain the claim for compensation which the Messrs. Campbell now prefer. The Council therefore advise that the Messrs. Campbell should be so informed, and that the above explanations as to the course taken by the Council in the matter should at the same time be communicated to them.

FRANCIS L. S. MEREWETHER,
Clerk of the Council.

Approved—C.A.F., 16th.

No. 81.

The Colonial Secretary to Messrs. Campbell & Co.

Gentlemen,

Colonial Secretary's Office, Sydney, 4 February, 1850.

No. 79. Referring to my letter to you of the 12th December last, I have now the honor to inform you that your communication of the 10th of that month, claiming compensation for land proposed to be taken from your premises for the purpose of widening Lower George-street, together with the Surveyor General's report thereon, has been brought under the consideration of the Executive Council.

2. When the plan for widening Lower George-street was first laid before the Council, it was observed that the exterior edge of a portion of the proposed footway on the eastern side was placed on land not hitherto forming part of the street or footway, and the Surveyor General was called upon in consequence to report whether the consent of the proprietors of this land had been obtained, in accordance with the provision of the 3rd section of the Act 5 William IV. No 20, and if not he was recommended to communicate with them for the purpose of ascertaining whether or not they would consent to the alignment proposed.

3. The Surveyor General then reported that the arrangement was made with the privity and at the desire of the Messrs. Campbell, the proprietors of the land on which nearly the whole of the curb-line encroaches.

4. On this understanding the alignment was approved by the Governor and Council; and His Excellency has directed me to inform you that he regrets that, under these circumstances, the claim preferred by you for compensation could not be entertained by the Council.

I have, &c.,

No. 82.

Messrs. Campbell & Co. to The Colonial Secretary.

Sir,

Campbell's Wharf, 9 February, 1850.

No. 81. We have the honor to acknowledge your letter of 4th instant.

In reply we beg to state, for the information of His Excellency the Governor, that there must be some mistake in the report from the Surveyor General's Department that we had consented to the arrangement, as this is the first intimation we have received of such a proposal having been made.

See No 79.

We beg further to state that when we received your communication of 12 December last, that you had referred our claim to the Surveyor General, we thought it unnecessary to call that officer's attention to his *letter in 1841 to the late Mr. Robert Campbell, wherein due notice was taken of the width of New George-street having been given up for the improvement of the city, and that the width of 60 feet now claimed by the Crown and abutting on our eastern boundary should be given up. We now suppose that this communication has been overlooked,—but upon it we rested our claim made to you in our letter of 10 December last.

• Not with papers.

Independent of the foregoing we have further to state that, as no consent was given by us in terms of the respective Acts of Council 4 William IV. No. 11 and 5 William IV. No. 20, Her Majesty's Government cannot continue the proposed improvement without compensation.

We respectfully suggest that, as we do not look for any great remuneration, the amount awarded to us might be allowed to us out of the portion of the vacant Crown Land adjoining our south boundary when put up for sale.

We have, &c.,
CAMPBELL & CO.

Minutes on No. 82.

Before this is laid before the Executive Council let it be referred to the Surveyor General for explanation as to this mistake which Messrs. Campbell state must have occurred, and also for his report on their present proposal.—C.A.F., 14th. The Surveyor General, B.C., 15 February, 1850, W. ELYARD, Jun. (for the Colonial Secretary). To be returned.

No. 83.

The Colonial Secretary to Messrs. Campbell & Co.

Gentlemen,

Colonial Secretary's Office, Sydney, 15 February, 1850.

See No. 82

I do myself the honor to inform you that it has been found necessary to refer to the Surveyor General your further letter of the 9th instant, respecting your application for compensation for ground required for the purpose of widening George-street.

I have, &c.,
W. ELYARD, JUN.

No. 84.

The Surveyor General to The Colonial Secretary.

Sir,

Surveyor General's Office, Sydney, 23 February, 1850.

See No. 82.

I have the honor to acknowledge the receipt under your blank cover of the 15th instant, of a letter from Campbell and Company, dated 9th instant, and other papers relative to the proposed intrusion of the eastern side of Lower George-street into their property, and on which is indorsed a minute of His Excellency the Governor, as follows:—

"Before

"Before this is laid before the Executive Council let it be referred to the Surveyor General for explanation as to the mistake which Messrs. Campbell state must have occurred, and also for his report on the present proposal."

2. I have accordingly the honor to state, for the information of His Excellency the Governor, that it does now appear from this letter of Messrs. Campbell that the statement in my letter of the 10th July, See No. 74. as to the arrangement having been made with the privity and at the desire of the Messrs. Campbell was written under an erroneous impression. The private surveyor, Mr. Armstrong, who made the survey of the street, was known to be the professional adviser of the Messrs. Campbell in matters of survey and subdivision, and it was concluded, hastily perhaps, that this bold arrangement was desired by them. As however it appears that this is not the case, and as I see no great objection to narrow streets, and consider that except in very peculiar cases the granting of compensation by the Crown for questionable public convenience may be regarded as a bad precedent, I beg to repeat what is stated in my blank cover of the 17th December, 1849, on the previous demand of the Messrs. Campbell for compensation, that the only alternative seems to be to alter the plan; that is, provided the Government consider themselves bound by the letter of 1841* (but which does not appear to be recorded in this office) not to insist upon the width of 60 feet, in pursuance, I suppose, of the reservation in the deed of the right of improving the streets with such part of the land as the Government may think proper.

I have, &c.,
T. L. MITCHELL.

* What is this? This is the letter referred to by Mr. C. in his of 9th Feb., 1850, but of which the Surveyor General can find no trace, and Mr. C. has not furnished him with a copy as requested. Inform Mr. Campbell that the letter referred to does not appear to have been recorded in the Surveyor General's Office, and request him to furnish a copy of it. It is probable there may be some error in the date which has prevented it from being traced among the records of the Survey Office. 2 March.

No. 85.

The Colonial Secretary to R. Campbell, Esq.

Sir,

Colonial Secretary's Office, Sydney, 7 March, 1850.

I do myself the honor to inform you that the letter referred to in yours of the 9th February See No. 82. last, as having been addressed by the Surveyor General to the late Mr. Robert Campbell, of date 1841, respecting the line of Lower George-street, does not appear to have been recorded in the Survey Office, and to request that you will therefore have the goodness to furnish me with a copy of it.

I have, &c.,
W. ELYARD, JUN.

No. 86.

The Surveyor General to The Colonial Secretary.

Sir,

Surveyor General's Office, Sydney, 19 March, 1850.

With reference to your letter of the 27th November last, wherein you directed my attention to No. 77. the notice in the Government Gazette of the 16th of the same month, respecting George-street North, See No. 76. from Charlotte-place to Fort-street, I have the honor to forward herewith the copy of a letter which I have received from the City Surveyor, applying to me that I may cause the alignment of that portion of George-street to be set out; and I have to request to be informed whether I may consider, pending the application of Mr. Campbell on the subject, the alignment as finally approved of and authorized.

I have, &c.,
T. L. MITCHELL.

Minutes on No. 86.

Have Messrs. Campbell answered the letter written to them on 7th instant?—22 March, 1850. Apparently not.—23. The matter cannot be finally decided until Messrs. Campbell's answer is received. If it is not forwarded within a few days they should be reminded.—C.A.F., 23rd March, 1850. Surveyor General apprised.—30 March, 1850. Write again to Messrs. Campbell.—27 April.

[Enclosure to No. 86.]

The City Surveyor to The Surveyor General.

Sir,

Town Hall, 5 March.

The City Council being desirous of immediately proceeding with the repairs of George-street North, from Charlotte Place to Fort-street, I have the honor to request you will please to direct that the alignment of that portion of the street be set out as early as your convenience will permit.

The posts are ready, and men will be in attendance upon the surveyor upon an application being made.

I have, &c.,
FRANCIS CLARKE,
City Surveyor.

No. 87.

The Colonial Secretary to The Surveyor General.

Sir,

Colonial Secretary's Office, Sydney, 30 March, 1850.

With reference to your letter of the 19th instant, respecting the alignment of Lower George-No. 80. street, from Charlotte Place to Fort-street, I do myself the honor, by the direction of His Excellency the Governor, to inform you that this matter cannot be finally decided until an answer is received from Mr. R. Campbell to a communication made to him, respecting his letter to you, which is referred to in yours See No. 84. of the 23rd ultimo.

I have, &c.,
W. ELYARD, JUN.,
(For the Colonial Secretary).

No. 88.

The Town Clerk to The Colonial Secretary.

Sir, Town Clerk's Office, Sydney, 13 April, 1850.

With reference to your letter to me of date 8th ultimo, on the subject of opening and aligning certain streets in Sydney, I am directed by the Right Worshipful the Mayor to request that His Excellency the Governor will be pleased to cause the necessary steps to be taken for the aligning of George-street from Charlotte Place to Fort-street without delay, to enable the City Council to make the necessary improvements on that portion of George-street.

I am to add that when the Surveyor General is prepared to point out to the City Surveyor the building and curb lines of the street, in accordance with your letter of date 2 May, 1848, the Corporation will provide the alignment posts.

I have, &c.,
JOHN RAE.

Minutes on No. 88.

It appears that this matter awaits the reply to letter written to Mr. Campbell on *27 April. He is reminded. I conclude that the Town Clerk may be apprised of the cause of the delay in the matter.—1st May. Yes.—3.

* 7 May.

No. 92.

The Colonial Secretary to The Town Clerk.

Sir, Colonial Secretary's Office, Sydney, 10 May, 1850.

In acknowledging the receipt of your letter of the 7th instant, respecting the alignment of George-street, from Charlotte Place to Fort-street, I do myself the honor to refer you to my communication of yesterday's date, apprising you of the cause of delay in the matter.

I have, &c.,
W. ELYARD, JUN.

No. 89.

No. 93.

Messrs. Campbell & Co. to The Colonial Secretary.

Sir, Campbell's Wharf, Sydney, 20 May, 1850.

We have the honor to acknowledge your letters of 7 March and 7th instant, addressed to Mr. R. Campbell, and in reply beg to say we find we erroneously stated the communication to be in the year 1841, and that the letter alluded to as having been received by our late father, Mr. Campbell, from the Surveyor General is, we regret to say, mislaid; but in support of our assertion that such a letter was written, we respectfully beg reference to the Surveyor General's letter to your predecessor, dated 6th August, 1834, stating that in consequence of the line of New George-street it was unnecessary that 60 feet should now be retained from our grant.

Upon the faith of this arrangement, roads were given up by our late Mr. Campbell, and grants for the separate quantities issued.

We have, &c.,
CAMPBELL & CO.

Minutes

See Nos. 85 & 90.

See No. 28.

Minutes on No. 93.

Mr. N.—*Précis*, 1 June.

On looking to the correspondence herein referred to, particularly my letter of the 6th August, See No. 26. 1834, it does appear that the Government cannot equitably insist upon the retention of 60 feet for this street, as provided for by the deed of grant. The only course, therefore will be, as was previously suggested, to allow the street to remain at its present width, or at any width that may suit the convenience and interests of Mr. Campbell, as it is a matter in which the public have no great concern.—T.L.M.

Surveyor General's Office, Sydney, 10 July, 1850. Mr. N.—13.

If the Government should, under the circumstances, hesitate to carry out its original intention, as notified, perhaps the Surveyor General should communicate with Mr. Campbell respecting the width of the street, as well as with Mr. Hanson, the other proprietor of land here, who, I am aware, has only consented to such arrangements as may be entered into with Mr. Campbell.—15.

Approved.—17th, C.A.F. End of September. Re-submitted.—10 Oct. To be expedited.
The Surveyor General to report.—2 July, 1851. Yes.—4 Aug. Re-submitted.—6 Oct. A report
should be requested from the Surveyor General.—8 Dec., 1851. Yes.—8. End of year.

No. 94.

Précis on the case.

IN 1848-9 it was proposed to proclaim the carriage and foot ways of Lower George-street, between Charlotte Place and Fort-street, but, before doing so, the Governor, under the advice of the Executive Council, directed that as the exterior edge of a portion of the proposed footway on the eastern side appeared to be placed upon land not hitherto forming part of the street and foot way, the Surveyor General should state whether the consent of the proprietors had been obtained in accordance with the 3rd clause of the Act 5th William IV. No. 23.

To this inquiry the Surveyor General reported in the affirmative, stating that the arrangement was made with the privity and at the desire of the Messrs. Campbell, the proprietors of the land on which nearly the whole of the curb-line would encroach. Under this report the proposed alignment was approved of by the Executive Council and duly notified.

In pursuance of that notice, the Messrs. Campbell claimed compensation for 24 feet taken from their land; but the Council declined to entertain the application, it appearing that the Messrs. Campbell had, as reported by the Surveyor General, consented to the alignment, to which effect those gentlemen were apprised.

Messrs. Campbell, in their communication, deny the alleged consent, and refer to a letter stated to have been addressed by the Surveyor General, in 1841, to the late Mr. Campbell, wherein the proposed width of the street where their property would be affected, of 60 feet, now claimed by the Crown, was stated to be given up; and they further stated that independently of the above circumstances, that as no consent was given by them under the Act of Council 4th William IV. No. 11, and 5th William IV. No. 20, the proposed improvements could not be made without compensation. They added that they were willing to take compensation out of land adjoining their south boundary when put up to sale.

Upon this representation the Surveyor General states that he now finds his former report, as to the consent of the Messrs. Campbell, was erroneous. He considers compensation for public convenience objectionable, and proposes to alter the plan, provided the Government consider themselves bound by the letter of the Surveyor General, alluded to by the Messrs. Campbell, of which however he cannot find any record in his office. The Messrs. Campbell were requested to forward a copy of that letter. They now state that the original is mislaid; but, in support of their assertion, refer to a letter addressed by the *Surveyor General* to the *Colonial Secretary*, of date the 6th August, 1834, in which is contained the following remark:— See No. 26.

"That in continuation of *George-street*, and the other the prolongation of *Cumberland-street*, both to *Dawes' Battery*, the former being 37 and the latter 30 feet wide, and as Mr. Campbell has agreed to open the northern communication between *George-street* and the *Battery*, as recommended in my report See No. 24. of the 23rd November* last, the necessity for increasing the width of the old street, except at the junction of * *Qy.* 1833. the two streets, no longer exists."

How far this and the other correspondence on the subject, in 1832 and 1833, bears out Messrs. Campbell I do not clearly understand, and perhaps the Surveyor General has overlooked it, and it may therefore be as well for him to see the papers before anything further is done in the matter.—8th June.

Minutes on No. 94.

Let this be sent to the Surveyor General, and request his attention to the concluding remarks.—C.A.F., 18th. Forwarded to the Surveyor General accordingly.—W. ELYARD, JUN. (for the Colonial Secretary), B.C., 26 June, 1850. To be returned.

No. 95.

The Town Clerk to The Colonial Secretary.

Sir.

Town Clerk's Office, Sydney, 8 June, 1850.

With reference to your letter to me, of date 9th ultimo, respecting the alignment of *George-street* from *Charlotte Place* to *Fort-street*, stating that the cause of delay is a complaint of encroachment No. 91. on the part of Messrs. Campbell and Company, I am directed by the Right Worshipful the Mayor respectfully to represent to His Excellency the Governor that the street in question is now almost impassable, and to request that His Excellency will be pleased to give instructions for the alignment of the street from *Charlotte Place* northwards as far as possible, without encroaching on the premises of Messrs. Campbell and Company.

I have, &c.,

JOHN RAE,
Town Clerk.

Minutes

Minutes on No. 95.

This matter seems only to await a decision on Messrs. Campbell's claim to compensation; but I am aware that the other proprietor, Mr. Hanson, has only acquiesced to the arrangement on the same terms as the former gentlemen. The Town Clerk has been apprised of the state of the case.

Inform him that the matter is still under consideration—that the Mayor will be made acquainted with the result when it is decided.—C.A.F., 18th.

No. 96.

The Colonial Secretary to The Town Clerk.

Sir,

Colonial Secretary's Office, Sydney, 24 June, 1850.

With reference to your letter of the 8th instant, respecting the alignment of George-street from Charlotte Place to Fort-street, I do myself the honor, by the direction of His Excellency the Governor, to inform you that the matter with respect to the encroachment on the premises of Messrs. Campbell and Company is still under consideration, and that the Right Worshipful the Mayor will be duly made acquainted with the result when it is decided.

I have, &c.,

W. ELYARD, JUN.

No. 97.

The Colonial Secretary to Messrs. Campbell & Co.

Gentlemen,

Colonial Secretary's Office, Sydney, 24 July, 1850.

In reply to your letter of the 20th May last, relative to the proposed line of Lower George-street, I do myself the honor, by direction of the Governor, to inform you that in looking into the correspondence referred to by you in the above communication the Surveyor General has reported that it does appear to him that the Government cannot equitably insist upon the retention of 60 feet for the street, as provided for by the deed of grant, and he has consequently recommended, as the only course to be adopted, that the street be allowed to remain at its present width, or at any width (not less than its present) that may suit your convenience and interests.

2. His Excellency, concurring in this view, has, however, instructed the Surveyor General to communicate with you, and the other proprietors of land in the locality who may be similarly circumstanced, in order to ascertain and fix what width may be agreeable and generally convenient to them and you.

I have, &c.,

E. DEAS THOMSON.

Sir,

Colonial Secretary's Office, Sydney, 17 February, 1851.

Not having received a reply to my blank cover letter of the 24th July last, respecting the width of Lower George-street, Sydney, I am directed by His Excellency the Governor to draw your attention thereto, and to request the favour of your early report as to what has since been done in this matter.

I have, &c.,

W. ELYARD, JUN.,

(For the Colonial Secretary).

No. 101.

The Colonial Secretary to The Surveyor General.

Sir,

Colonial Secretary's Office, Sydney, 7 August, 1851.

With reference to my letter of 17th February last, on the subject of the width of Lower George-street, I am &c., &c., your early report.

W. ELYARD, JUN.

The above is a printed letter of which a copy is not obtainable.—T. P. BANKS, Examiner.

No. 102.

No. 102.

Memorial from the City Council to His Excellency the Governor.

To His Excellency SIR CHARLES AUGUSTUS FITZ ROY, Knight Companion of the Royal Hanoverian Guelphic Order, Governor-General of all Her Majesty's Australian Possessions, and Captain-General and Governor-in-Chief of the Territory of New South Wales and its Dependencies, and Vice-Admiral of the same, &c., &c.

WE, the Mayor, Aldermen, and Councillors of the City of Sydney, in Council assembled, beg most respectfully but most earnestly to represent to your Excellency the urgent necessity which exists for a general and efficient drainage of the city, to provide for its cleanliness, and the consequent health and comfort of its inhabitants; and would venture to suggest that the necessity which has hitherto existed for an efficient system of drainage in the city has been rendered more apparent by the late discovery of the gold-fields of the Colony, and the vast increase to the population of the city which that discovery is certain to produce.

In a memorial which they had the honor to present to your Excellency, soon after your Excellency's arrival in the Colony, your memorialists stated that, by an estimate prepared by the City Surveyor, it appeared that for the construction of underground drains (exclusive of surface drainage, curbing, forming, and metalling the streets) the large sum of £380,528 would be required,—a sum far beyond the present or prospective means of the Corporation to undertake without some Government assistance.

That the same difficulty in grappling with this great work was experienced by the Government before the incorporation of the city; for tenders were invited by them and one accepted for the drainage, but the undertaking was subsequently abandoned on the great expense which it involved.

That by the Act for the better sewerage, cleansing, and draining of the City of Sydney and to promote the health of the inhabitants thereof, your memorialists are empowered to borrow on mortgage of the rates or rent to be derived from the contemplated sewers, any sum not exceeding £20,000; but your memorialists are so satisfied with the insignificance of this amount for a work of such magnitude that they consider it useless to commence an undertaking which, without assistance from the Government, they have no means of completing. The first portion of the principal sewer to be completed would necessarily be at its embouchure into the waters of the Cove in the line of the Tank Stream, and the £20,000 might soon be swallowed up in sewers in this locality without yielding sufficient revenue to pay the interest of the loan, much less to afford additional capital to proceed with the work.

That the Corporation of Sydney was called into existence, not as in towns and cities of the Mother Country, when the population was small and their wants proportionately few, but when the city covered a large surface and contained many miles of streets and many thousands of inhabitants. By the incorporation of Sydney, accordingly, the Government was relieved of a large annual expenditure, which was cast upon the citizens without any equivalent worthy of notice; and they were called upon by direct taxation, not only to keep in repair the streets and alleys already imperfectly formed and others that might thereafter be formed at their expense, but are also expected to incur an expenditure of nearly £400,000 for the sewerage of the city, a work which your memorialists submit ought to have grown with the growth of the town, and to have been performed by the Government before the incorporation of Sydney.

That the citizens of Sydney were induced to consent to the introduction of the Corporation Act by the promises held out by your Excellency's predecessors in the Government of the Colony; for in the minute of His Excellency Sir R. Bourke, of date 7th July, 1835, it was proposed to hand over to the City Commissioners, to be appointed by the inhabitants, the licenses to retail spirits in the town, markets, water and quit-rents,—revenues which would at first amount to £13,000 a year and were likely to increase annually; while the Police establishment was to continue a charge upon the public Treasury. And His Excellency the late Sir G. Gipps, the parent of the Corporation, while the Act was under discussion, expressly stated that as the Government proposed to give to the Corporation £14,000 a year, it was no longer an economical measure.

That instead of £14,000 per annum, however, it appears from the published records of the Corporation that the value of the endowments which have been handed over to the Corporation by the Government has averaged during the eight years of its existence only £5,000 per annum, and after deducting the expense of corporate machinery, salaries, and commission for collecting, about £3,000 per annum, leaving a clear annual endowment for city improvements of £2,000 per annum; on the other hand, the Corporation have raised by direct taxes and paid for the support of the Police £8,208 19s. 5d., although no other portion of the Colony except Melbourne was subject to direct taxation for the same service.

Your memorialists venture to reiterate the opinion which they formerly expressed to your Excellency that every portion of the Colony is entitled to the benefit and disposal of its own local revenues. Among these they submit are included publicans' licenses and the licenses of hawkers, peddlers, auctioneers, carters, and porters, confectioners and watermen, quit-rents, wharfage dues, and a portion of the revenue derived from sales of land by the Government within the limits of Sydney. The reasonableness of your memorialists' claim for the publicans' licenses was distinctly recognized by His Excellency Sir R. Bourke; and His Excellency the late Sir G. Gipps, allowing their right but questioning the expediency of granting it, had no doubt that if these licenses were withheld from the Corporation the Legislative Council, would give an annual money grant of £5,000 to the Corporation as an equivalent; and such a sum was in fact paid out of the General Revenue to the Corporation under the Appropriation Act 6 Vict. No. 5, until the expiration of twelve months after the first meeting of the Legislative Council, when it entirely ceased without any adequate cause being assigned, and without any equivalent or compensation being given to the Corporation.

That the large proportion which the citizens of Sydney (numbering upwards of a fifth of the whole population of the Colony) contribute to the general revenue appears to your memorialists to establish a claim to have a portion of that revenue expended in permanent improvements in the city. In this opinion they are borne out by that of His Excellency the late Sir George Gipps. While the Corporation Act was under discussion, His Excellency, in reply to some objections to the Bill, is reported to have said:—"He never asserted that nothing in the shape of additional pecuniary assistance should be granted to the Corporation in aid of its expenses in the construction of sewers, the repairs of streets, and other public works of a similar nature; on the contrary, he thought it not only equitable but desirable that some such aid should be granted to them, more especially as a great portion of these works might be said to apply as much to the benefit of the Colony at large as of Sydney individually, which was in itself a sufficient fact to give the Corporation a claim for assistance from the general revenue." But

But these views of your memorialists are further corroborated by even higher and later authority. In the despatch from the Right Honorable Earl Grey to your Excellency transmitting the Act for the better Government of Her Majesty's Australian Colonies, His Lordship, in expressing his views on the subject of Crown Land Revenue, expressly states that, after providing for the protection and civilization of the aboriginal natives of New South Wales, and the expenses incurred on account of surveys and the cost of collection, such proportion of the revenue derived from the sale or leasing of Crown Lands as is not required for emigration ought, as far as possible, to be applied in local improvements in the districts in which it arises; and in the despatch to His Excellency Sir William Denison on the same subject, His Lordship says more pointedly:—"The Committee of Privy Council on the proposed constitution of the Australian Colonies has advised that whenever local bodies are constituted representing the inhabitants of different districts, the application of half the land fund to objects of this kind (public works, roads, bridges, and buildings) should take place under their superintendence. I am strongly impressed with the importance of adopting this recommendation, and I should anxiously desire to see the establishment of such municipal bodies at the earliest possible period; and whenever they are established it would be highly expedient that the expenditure of a portion of the land fund in the manner I have described should take place under their direction, subject to the approval of the Lieutenant-Governor." If this just principle of appropriating the Crown Land Revenue be applicable to municipal bodies hereafter to be established, your memorialists submit that the same principle ought in fairness to be applied to those at present in existence, nor can any just reason be assigned why Sydney, the metropolis, should be placed on a less advantageous footing than the other districts of the Colony. In direct contradiction, however, to this principle of His Lordship, the Government here, instead of handing over to the Corporation any portion of the revenue derived from the sale of Crown Lands in Sydney, have appropriated the whole of this revenue for other purposes, and called upon the Corporation to tax the citizens directly for making and repairing the streets which have been opened through their lands, and thus increasing their value for the sole benefit of the Government.

Your memorialists therefore most respectfully pray that your Excellency will be pleased to introduce into the Legislative Council, at an early period of its first Session, a Bill for securing to your memorialists the licenses from publicans, hawkers, paddlers, carters, porters, confectioners, wharfage dues, and other local revenues, or such pecuniary aid from the general revenue as will enable them to undertake and complete the underground sewerage so necessary to provide for the cleanliness and the consequent health and comfort of the citizens.

And your memorialists, as in duty bound, will ever pray, &c., &c.

WILLIAM THURLOW,
Mayor of Sydney.

Passed the Council of the City of Sydney, 13th Oct., 1851,—
JOHN RAE, Town Clerk.

No. 103.

Memo. by His Excellency the Governor.

City Council Memorial for Endowment.

I VERBALLY informed the deputation which presented this memorial, that I was not in a position to give an answer to it at present, more especially as the proposed financial arrangements for the ensuing year had already been submitted to the Legislative Council; but that as I was aware it was intended to present a similar memorial to the Legislative Council, I deem it desirable to await the result, and when the views of the Legislative Council on the subject were ascertained, I would bring it before the Executive Council for consideration.—C.A.F. 28 Oct., 1851.

The above had better be forwarded to the City Council officially.

Sir, Surveyor General's Office, Sydney, 26 May, 1852.

See No. 109.

In attention to your letter of the 28th February last, wherein, with reference to your letter of the 11th May, 1848, respecting the site of the old gaol in Lower George-street, you request, by direction of His Excellency the Governor-General, that I will cause the land referred to be brought forward for sale, which it is presumed has been measured in conformity with the instructions conveyed to me in your letter of the 9th May, 1842, and may be sold without impeding the proposed ultimate alignment of Lower George-street, I have the honor (before bringing the allotments forward for sale as directed) to state for His Excellency's information that on the receipt of your letter of the 29th July, 1847, a design for the division of the site of the old gaol (without including new George-street, by which it was crossed diagonally, and its area limited and impaired) was prepared, and allotments laid out in accordance therewith, and descriptions of some of the allotments fronting Harrington-street submitted for sale in my letter of the 22nd May, 1848, and to inquire whether it is not intended that the sale should proceed according to this latter arrangement, rather than according to the arrangement shown on the plan including new George-street (returned to me in your letter of the 29th July, 1847).

I have, &c.,

T. L. MITCHELL.

Minutes on No. 112.

According to this arrangement, I presume? Yes. This arrangement appears to have been abandoned in consequence of the high rate of valuation put upon the land required for the new line of George-street by the proprietors.—M.F. Yes.—3.

No. 116.

The Town Clerk to The Under Secretary for Lands.

Sir,

Town Clerk's Office, Sydney, 19 August, 1864.

I have the honor, by direction of the Right Worshipful the Mayor, to submit herewith for the information of the Honorable the Minister for Lands, a tracing of the proclaimed alignment of George-street, north of Argyle-street, showing the extent to which the wall of the old dockyard over-reached upon the roadway and footway of the street, and am desired by His Worship to solicit from Mr. Secretary Wilson the necessary authority to remove the wall from its present position, and to re-erect it upon the proclaimed line of street, as a similar improvement is now being carried out at the "Sailors' Home," adjoining the dockyard.

I have, &c.,

C. H. WOOLCOTT,
Town Clerk.

Minutes on No. 116.

Surveyor General.—M.F., 23rd August. There is no objection to the proposed arrangement, and it will much improve the street.—P. F. ADAMS (for Surveyor General), 26th August. Under Secretary for Lands. Approved.—J.B.W., 2nd September. For the Surveyor General.—B.C., 6th September, 1864. Inform Treasury.

No. 117.

The Under Secretary for Lands to The Under Secretary for Finance and Trade.

Sir,

Department of Lands, Sydney, 7 September, 1864.

I am directed to state, for the information of the Finance Minister, that application having been made by the Town Clerk for permission to remove the old wall in George-street enclosing the dockyard, and to re-erect the wall upon the proclaimed line of George-street, Mr. Secretary Wilson has approved of the arrangement so proposed.

I have, &c.,

MICHL. FITZPATRICK.

No. 118.

The Under Secretary for Lands to The Town Clerk.

Sir,

Department of Lands, Sydney, 8 September, 1864.

Referring to your letter of the 19th ultimo, applying for permission to remove the old wall in George-street enclosing the dockyard, and to re-erect the wall upon the proclaimed line of George-street, I am directed to state, for the information of the Right Worshipful the Mayor, that Mr. Secretary Wilson has approved of the arrangements so proposed, of which the Surveyor General has been apprised.

I have, &c.,

M. FITZPATRICK.

No. 119.

The Town Clerk to The Under Secretary for Lands.

Sir,

Town Clerk's Office, Sydney, 26 November, 1877.

I have the honor, by direction of the Right Worshipful the Mayor, to respectfully request that the Honorable the Minister for Lands will be pleased to give such instructions as may be necessary for having the portion of George-street, northwards of the Mariners' Church, opened in accordance with the proclamation in the Gazette, of date the 13th November, 1849.

As it is understood that a portion of the property known as Campbell's Wharf, abutting on to George-street, is about to be offered for sale, His Worship would be glad if this matter could receive early attention.

I have, &c.,

C. H. WOOLCOTT,
Town Clerk.

Minutes on No. 119.

Unless it can be ascertained by search in the early records (possibly in the Colonial Secretary's Office) that a consent has been given by Mr. Campbell, or the then owner of the property in question, to the alignment, as notified in the Government Gazette of the 13th November, 1849, I am of opinion that such alignment is void, and that though 12 feet could have been taken without the consent of the owner, it probably is not now within the power of the Government to take even that space. In the absence of the consent of the owner, the direct violation of the terms of the Act 5th William 4th, No. 20, may however be considered as enabling the Surveyor General to act *de novo* in the matter; or it may be possible, under the 34th clause of the Act, 4th William IV, No. 11, to resume the portion of land in question by proclamation, &c., and by appointment of Commissioners, and payment of compensation if such a course be deemed necessary and expedient.—R. D. FITZGERALD, for Surveyor General, 10/12/77.

The Principal Under Secretary will perhaps be good enough to cause a search to be made in the records of his office, with a view to the required information being obtained.—B.C., 14 December, 1877. O.R. W.W.S.

All papers in this case appear to be with 52-2,674. Town Clerk, 24 March, 1852, requesting immediate disposal of site of old Sydney Gaol. Sent to Surveyor General, 24 April, 1852, and returned 14 April, 1853. A very careful search has been made by Mr. Goodman and myself for these papers, but they cannot be traced.—C.W., 22/12/77.

Immediate. Mr. W.—Obtain for me a sight of the register of letters received by the Surveyor General from individuals (as it was called), that is, from private or unofficial persons, in the year 1850.—27 Dec., 1877.

Mr. A.—I find nothing in the register. If you can take the matter in hand, pray do.—12/1/78.

No. 120.

The Town Clerk to The Under Secretary for Lands.

Sir, Town Clerk's Office, Sydney, 10 January, 1878.
Referring to my letter of the 26th November last, respecting the opening of North George-street to its proclaimed width, I have the honor, by direction of the Right Worshipful the Mayor, to inquire whether the matter has received the attention of the Honorable the Minister for Lands, as the Australian Steam Navigation Company have again intimated their intention of offering their land abutting on to the street for early sale.

I have, &c.,
C. H. WOOLCOTT,
Town Clerk.

Minutes on No. 120.

This matter has already been reported on by me on the previous paper.—ROBT. D. FITZGERALD. (For Surveyor General), 11 Jan., 1878. Forwarded to the Principal Under Secretary with reference to previous papers sent to his office on the 15th ultimo.—W. W. STEPHEN, B.C., 25 Jan., 1878. To be returned. The papers cannot be found here.—The Under Secretary for Lands, B.C., 29 Jan., 1878. M.R.A.

No. 121.

The Town Clerk to The Under Secretary for Lands.

Sir, Town Clerk's Office, Sydney, 28 January, 1878.
Referring to my letter of the 26th November last, respecting the opening of George-street north of the Mariners' Church to its full proclaimed width, I have the honor, by direction of the Right Worshipful the Mayor, to state that the land now encroaching on the line of street has been advertised for sale by the Australian Steam Navigation Company, and His Worship therefore begs to urge immediate attention to the matter.

I have, &c.,
C. H. WOOLCOTT,
Town Clerk.

Minutes on No. 121.

It is recommended that my minute of the 10th December, 1877, be submitted to the Secretary for Lands, with the information now received from the Colonial Secretary's Office to the effect that former papers relative to any agreement cannot be found. There has, however, been considerable correspondence with reference to the width of this part of George-street, as the enclosed extracts from old record books show, and such extracts may possibly lead to the finding important documents. It is necessary that I should qualify my former report, as, upon careful perusal of the deed of grant, I find that the provision which was considered to amount to one of a power of obtaining material for road-making may possibly be construed into one of resumption.—R. D. FITZGERALD (for Surveyor General), 8th February, 1878.

Approved.—J.S.F., 28 Feb., 1878. Forwarded for the information of the Under Secretary, Colonial Secretary's Office. B.C., 7 March, 1878.—O.R. W.W.S. Former papers now herewith.—19/3/77. The Under Secretary for Lands, B.C., 19/3/78.—M.R.A. Surveyor General.—W.W.S., B.C., 20 March, 1878.

No. 122.

The Town Clerk to The Under Secretary for Lands.

Sir, Town Clerk's Office, Sydney, 2 March, 1878.
I have the honor, by direction of the Right Worshipful the Mayor, to inquire whether the Honorable the Minister for Lands will be pleased to receive a deputation from the City Council upon the subject of the proposed opening of George-street North, through the property known as Campbell's Wharf, and if so, when it will be convenient for him to do so.

I have, &c.,
C. H. WOOLCOTT,
Town Clerk.

Minutes on No. 122.

Will the Minister for Lands name a time for receiving the deputation.—W. W. STEPHEN, 7/3/78. Tuesday next, at 11 o'clock.—J. S. FARNELL, 7/3/78. Obtain papers quickly.—O.R.

No. 123.

The Under Secretary for Lands to The Town Clerk.

Sir, Department of Lands, 8 March, 1878.
With reference to your letter of the 2nd instant, inquiring, by direction of the Right Worshipful the Mayor, when it will be convenient for the Minister for Lands to receive a deputation from the City Council on the subject of the proposed opening of George-street North through the property known as Campbell's Wharf, I am instructed to inform you that Mr. Secretary Farnell has appointed Tuesday next, the 12th instant, at 11 o'clock a.m., to receive the deputation in question.

OSBORNE RICH,
(For the Under Secretary).

No. 124.

Memo. by Deputy Surveyor General.

Alignment of part of Lower George-street.

As there appears to have been no consent from Mr. Campbell, I am of opinion that the alignment of the portion of Lower George-street under consideration, proclaimed in Government Gazette 13th November, 1849,

1849, folio 1,710, was void; and it is now submitted whether, as suggested in my previous minute, the direct violation of the terms of the Act does not enable the Surveyor General to act *de novo* and align the street, resuming a width of 12 feet for footway, and whether it is desired that such action should be taken, or compensation be paid to the present owner for the obtaining of a wider street, or whether the matter should be left as it is.

In connection with the above report, however, I must again draw attention to the wording of the provision contained in the deed, viz., "reserving at all times the right to the Governor for the time being of appropriating such parts thereof as may be deemed necessary for the making and improving the streets," which may be considered either as a power of resumption of land for streets, or for obtaining material for the formation of streets. See copy enclosed.

26 March, 1878.

R. D. FITZGERALD,
(For Surveyor General).

Minutes on No. 124.

The matter to remain as it is for the present.—J.S.F., 13/4/78. The Deputy Surveyor General.—29. May now be put away.—E.G., 8 May, 1878.

[Enclosure to No. 124.]

Sydney. Town Grant.

UNTO Robert Campbell, Esq., his heirs and assigns, to have and to hold for over 3 acres 3 roods of land, lying and situate in the town of Sydney, bounded on the south side by premises in the occupation of the naval officer; on the south-west side by the road leading to Dawes' Point, bearing north 36½ degrees west 629 feet; on the north-west side by a line east 31½ degrees north 200 feet; and on the east side by the water of Sydney Cove (in consequence of his having erected thereon several large and expensive buildings). Reserving at all times the right to the Governor for the time being of appropriating such parts thereof as may be deemed necessary for the making and improving the streets; quit rent, £3.

In testimony, &c., this 29th day of June, 1814.

Witnessed by—

JOHN WATTS.

CHARLES WHALAN.

L. MACQUARIE, L.S.

I certify the above and preceding page to be a true copy of the entry or copy of the original deed of grant from the Crown, kept as of record or for public or official purposes in the office of the Registrar General of the Colony of New South Wales.

Registrar General's Office, Sydney, 2nd February, 1878.

E. G. WARD,
Registrar General.

No. 125.

The Under Secretary for Lands to The Town Clerk.

Sir,

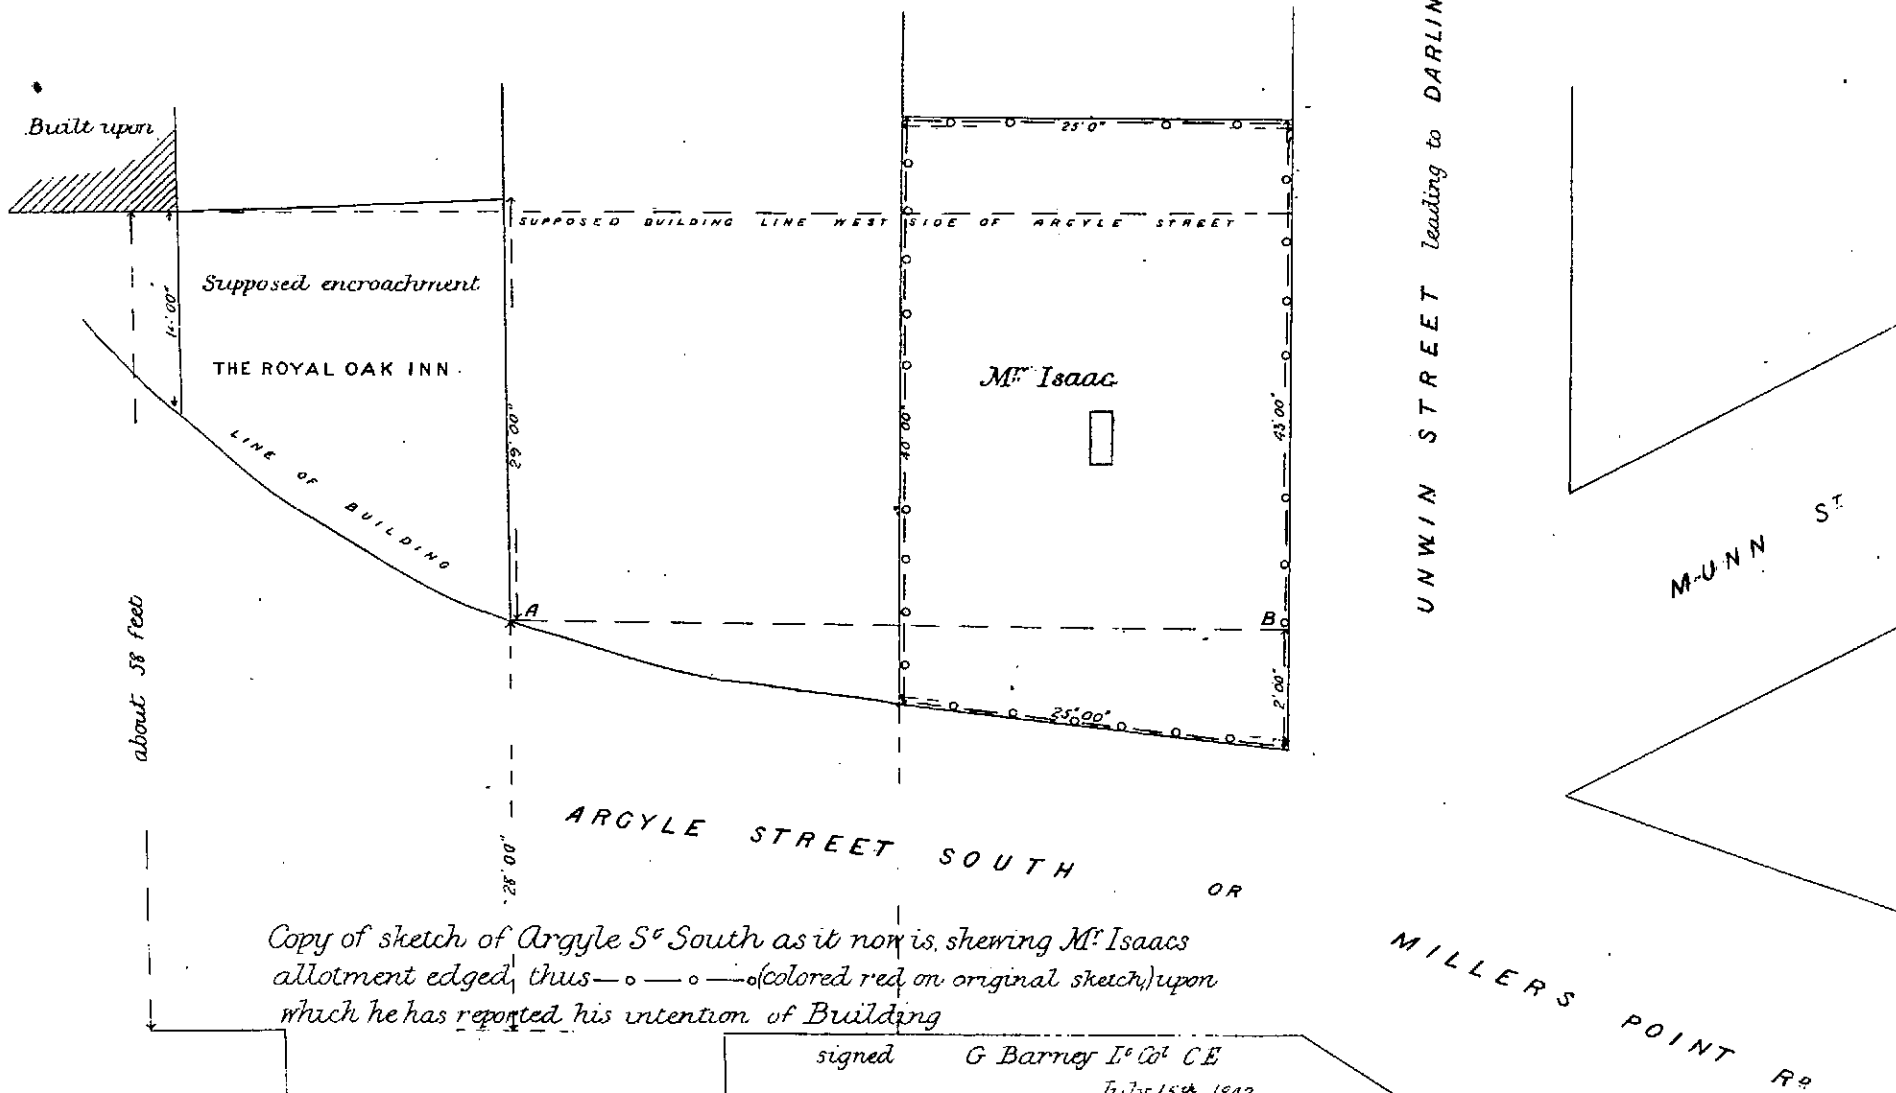

Department of Lands, 26 April, 1878.

I am directed to inform you that, as there appears to have been no consent from Mr. Campbell, the Surveyor General is of opinion that the alignment of the portion of Lower George-street under consideration is void. The Minister for Lands has, therefore, decided that the matter shall remain as it is for the present.

I have, &c.,

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF PROCEEDINGS

OF THE

INTERCOLONIAL METEOROLOGICAL CONFERENCE,

HELD AT SYDNEY

ON THE

11TH, 13TH, 14TH NOVEMBER, 1879.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
27 January, 1880.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1880.

INTERCOLONIAL METEOROLOGICAL CONFERENCE.

TUESDAY, 11 NOVEMBER, 1879.

The Conference met at the Sydney Observatory, at 10 a.m.

PRESENT :—

JAMES HECTOR, Esq., M.D., C.M.G., F.R.S., Inspector of Meteorological Stations, New Zealand.

C. TODD, Esq., C.M.G., F.R.A.S., Government Astronomer, South Australia.

R. L. J. ELLERY, Esq., F.R.S., Government Astronomer, Victoria.

H. C. RUSSELL, Esq., B.A., F.R.A.S., Government Astronomer, New South Wales.

H. C. RUSSELL, Esq., was called to the Chair.

The Chairman read the following letter :—

Sir,

Colonial Secretary's Office, Sydney, 8 November, 1879.

I am directed by the Colonial Secretary, at the instance of the Minister of Justice and Public Instruction, to transmit herewith copies of propositions for the consideration of the scientific men nominated by the several Australian Colonies to consider what means should be adopted to improve the system of intercolonial weather signals.

I have, &c.,

CRITCHETT WALKER.

The Chairman of the meeting of scientific men appointed to

consider what means should be adopted to improve the system of intercolonial weather signals.

Propositions for Meteorological Conference.

1. To consider the meteorology of Australia and New Zealand, with a view to united action in its investigation.
2. To consider whether additional first-class stations shall be established, and if so, in what localities.
3. To consider the desirability of using the same class of instruments at all stations and making the observations at the same local hour.
4. To consider the desirability of securing the co-operation of the meteorologists of New Zealand and Tasmania in the system of weather telegrams, which now embraces the Colonies of South Australia, Victoria, New South Wales, and Queensland.
5. To consider by what means the weather telegrams may be transmitted and published for public information at an earlier hour than they are at present.
6. To consider whether meteorological stations should be established upon the highest available mountains for the special study of winds.

Observatory, 27 October, 1879.

H. C. RUSSELL.

He said the object for which the Conference had met was to devise some system by means of which more united action might be established in respect to meteorological observations, and especially with regard to weather telegrams. He had experienced great difficulty in obtaining telegrams from the different Colonies with sufficient punctuality, and he thought that if the matter were discussed in Conference some suggestions would be made by which the transmission of these telegrams might be greatly facilitated, and earlier information furnished to the public. Holding this opinion, he had suggested the desirability of having a Meteorological Conference, and the Government of New South Wales had sent invitations to the Colonies of South Australia, Victoria, Queensland, Tasmania, and New Zealand. Queensland and Tasmania had not responded to the invitation, or at least they had not sent representatives. He very much regretted the absence of the representatives of the Colonies of Queensland and Tasmania, but thought the Conference should proceed with the business before them.

United investigation of Meteorology.

To consider the meteorology of Australia and New Zealand, with a view to united action in its investigation.

Mr. ELLERY thought it would be well to start by affirming the desirableness of united action, and he would therefore move formally, before entering upon other questions, the following resolution in reference to the first proposition :—

That in view of the great importance which a better knowledge of the movement and origin of strong gales and storms on our coast lines and neighbouring seas is to the shipping and commercial interest generally, it is desirable to secure, as far as possible, co-operation in all the Australasian Colonies for the investigation of storms, as well as for agricultural and general climatological purposes.

It had already been shown that the westerly gales which visit New Zealand and the easterly gales occurring on the coast of Australia were marked by premonitory signs; and some co-operative action in the transmission of information could not fail to lead to profitable results.

The resolution, after discussion, was agreed to.

Dr. HECTOR moved :—

That with the view of giving effect to the foregoing resolution, similar observations and the same form of publication should, as far as possible, be adopted throughout the Colonies.

He explained that he did not mean that no other form of observations should be published, but that the Government of each Colony should be asked to sanction the expense of publishing certain observations taken at the same local hour in the form required by the Conference, so that they could be compared with each other.

The resolution, after discussion, was agreed to.

First-class Stations.

The CHAIRMAN read the second proposition :—

To consider whether additional first class stations shall be established; and if so, in what localities.

He thought the Conference should free themselves from the task of defining what constituted a first class station, as circumstances might arise to alter their opinion on that point.

Mr.

Mr. TODD: There would in reality be only one first class station in each Colony, which would be the Observatory.

Mr. ELLERY did not think it would be desirable to lay down any fixed rule on this point. The different Colonies worked under different circumstances; and all that was required was to secure their co-operation.

Dr. HECTOR thought the number and position of the different stations should be left for each Colony to determine. The Conference should not dictate to the Colonies what expenditure they should incur; nor did he think they should lay down any expensive or elaborate scheme, which might have the effect of preventing cordial co-operation.

The CHAIRMAN said his object in submitting this proposition was to suggest one or two more stations in the western district. It would be seen in the map that there was a scarcity of stations in the interior; and as most of the atmospheric disturbances came from the west, the establishment of additional stations there would supply valuable information.

Mr. TODD moved:—

That in order effectively to carry out the objects of the Conference as affirmed in the foregoing resolutions, it is desirable to establish first class meteorological stations in certain well selected positions in the several Australasian Colonies, including New Zealand, in addition to those now existing.

The resolution, after further discussion, was agreed to.

On the motion of Dr. HECTOR, the Conference adopted the definition of the work of a first-class station given in the preface to the New Zealand Meteorological Report for 1873.

“The observations taken are limited to those for determining atmospheric pressure; maximum and minimum daily temperature of atmosphere, and of insolation and radiation; the average daily amount of moisture, the rainfall and number of rainy days; the force and direction of wind, and amount and character of cloud.”

3rd proposition:—

Similar Instruments.

To consider the desirableness of using the same class of instruments at all stations, and making the observations at the same local hour.

The CHAIRMAN said he was aware that in some cases instruments of different kinds were used, and thus the results were not comparable. He did not think temperature observations could be exact at all stations—a different way of exposing the thermometers made such a difference in the result. With regard to the barometer, it would be sufficient to say that it should be a mercurial barometer and not an aneroid; and with respect to the wet and dry bulb, it should mean an instrument of good class, certified to by a firm of recognized position; and the same with regard to the maximum and minimum thermometers; and the rain-gauges should be used at the same altitude from the ground.

Mr. ELLERY moved:—

That the instruments at each first-class station consist of a mercurial barometer of either the standard or Board of Trade form; thermometers of Kew or approved patterns, compared with standards as frequently as possible; rain-gauges of 8 inches collecting diameter; and wind-gauges of any approved form. The local hours of observation to be 9 a.m., 3 p.m., and 9 p.m. Beaufort's scale of wind to be adopted; the observations to be recorded in equivalents in velocity and pressure.

The resolution, after discussion, was agreed to.

Desirability of co-operation.

4th proposition:—

To consider the desirableness of securing the co-operation of the Governments of New Zealand and Tasmania in the system of weather telegrams, which now embraces the Colonies of South Australia, Victoria, New South Wales, and Queensland.

Mr. ELLERY said, with regard to Tasmania, that for the meteorological knowledge of that Colony they were indebted to the long and valuable gratuitous services of F. ABBOTT, Esquire, of Hobart Town. But in order to provide for carrying out the proposed scheme, which involved a daily expenditure for telegrams, he would move: That it is very desirable to obtain the co-operation of the Government of Tasmania and to persuade them to establish a station at the public expense at Hobart Town. He did not think this would be a difficult matter if the Conference suggested it. At present there was no machinery to co-operate with, and it was very desirable that one or two first-class stations should be established. He thought it would be better not to take Launceston for a second station, which was a long way inland, but rather to take George Town.

The resolution, after discussion, was agreed to.

Dr. HECTOR moved:—

That it is desirable to secure the co-operation of the Governments of Western Australia, New Zealand, and Tasmania, in the system of weather telegrams, which now embraces the Colonies of South Australia, Victoria, New South Wales, and Queensland.

With regard to New Zealand, on account of the greater expense of communication, the great range of latitude, and the consequent complicated phases of weather which occurred simultaneously in the different coastal areas, it was desirable that instead of any definite observations or readings of instruments being transmitted, a daily synoptical report of the general conditions of the weather should be prepared at the Head Office in New Zealand and transmitted, together with immediate telegraphic notice of any important or exceptional phenomenon; and that the return communications to New Zealand should be comprised in a similar synoptical report of the state of the weather in the different coastal areas of Australia, to be prepared and transmitted from the Observatory in Sydney.

The resolution, after discussion, was agreed to.

Mr. ELLERY moved:—

That, in the opinion of this Conference, it is desirable that weather telegrams and forecasts shall in all cases depend upon the observations used for general meteorological and climatological statistics, and be under the direction of the head of the meteorological department in each Colony.

Mr. TODD thought such a resolution was essential to prevent conflicting reports and to ensure public confidence.

The resolution, after discussion, was agreed to.

The Conference adjourned at 1 p.m., until Thursday, 13th instant, at 10 a.m.

THURSDAY,

THURSDAY, 13 NOVEMBER, 1879.

The Conference met at the Observatory at 10 a.m.

PRESENT:—

Dr. HECTOR,
Mr. ELLERY,

Mr. RUSSELL,
Mr. TODD.

H. C. RUSSELL, Esq., in the Chair.

The minutes of the previous meeting were read and confirmed.

The Conference resumed their consideration of the 4th proposition, affirming the desirableness of securing the co-operation of the New Zealand and Tasmanian Governments in the system of weather telegrams.

Mr. TODD moved:—

That this Conference, having been informed that the Eastern Extension Telegraph Company will charge half rates for the transmission of weather reports through the cable connecting Australia and Tasmania, and probably also the cable to New Zealand, recommend that the cost of such reports be defrayed by the participating Colonies in equal proportions; and that, in the opinion of this Conference, such cost need not exceed in the aggregate £350 per annum.

2. That, in the opinion of the Conference, this expenditure is justified by the extreme importance to the shipping interest of early information of the approach of dangerous easterly and westerly gales.

He said that as these reports transmitted through the cable would be merely synoptical reports of the state of the weather in Australia on the one hand, and in New Zealand and Tasmania on the other, they need not be of great length. Messages comprising ten or twelve words would probably, by means of the code adopted, convey all the information that would be required. A message of ten words would cost—to or from New Zealand—at the reduced rate, about five shillings. The amount named in the resolution would therefore, in his opinion, be ample.

The CHAIRMAN said that from the experience in reference to gales which he had obtained during a number of years, it was quite evident that from the observations taken in New Zealand and the southern Colonies valuable warnings might be given. A short warning of the approach of a gale in many instances would be the means of saving a large amount of property, as the vessels could take refuge in the coast harbours. Warnings of dangerous gales might be given several days in advance, and considerable importance was attached to such information by the shipping interest. For instance, in the severe gale in which the "Dandenong" was wrecked, it had subsequently appeared that valuable information might have been given sufficiently in advance to prevent the great loss of property which took place, if that information could have been furnished to the shipping interest at the different ports along the coast.

Mr. TODD entirely concurred with the Chairman as to the importance and value of this information, and especially of the reports from western stations. His observations tended to show a great regularity in the easterly march of disturbances from the westward, and the stations in South Australia, and especially in Western Australia, should be able to give the easterly Colonies timely warning of approaching gales, because they would be able to report the effect of a gale which had already reached one of these stations. The information would therefore not be hypothetical, but an actual fact of which timely notice could be given.

Dr. HECTOR said that from a New Zealand point of view, he thought it would be very advantageous that Queensland should join in this co-operation, as it would be from that quarter they would receive early notice of the origin and progress of the dangerous and suddenly occurring cyclones that crossed the northern part of New Zealand. On the other hand, the southerly gales could not, of course, be directly predicted in Australia for New Zealand, but New Zealand could give early information to Australia of the occurrence of such gales, and probably Queensland would receive the greatest benefit from such predictions.

Mr. ELLERY said that in that view of the case, great advantage would be derived from the establishment of a station at Hobart Town, because if Hobart Town observations were discussed in connection with this movement on the western coast of Australia and the subsequent weather on the east coast, it would be found that those observations would often determine whether that easterly movement had become deflected by any other current. The observations at Hobart Town would indicate a considerable time beforehand whether the disturbance would become a serious one on the eastern coast of Australia. For instance, it was a fact that the gale in which the "Dandenong" was wrecked was indicated at Hobart Town thirty hours before it reached Sydney.

Mr. TODD called the attention of the Conference to the hurricane which struck the Lacedpede Islands and the north-west coast of Australia on the 24th and 25th of December, 1878, as a case in point. The barometer fell to 29.50 and 28.94; at Alice Springs, in the centre of the continent, it began to fall on the 30th, reaching 29.6 on the morning of January 2nd; at Eucla, the barometer fell from 30.2 on December 29th, to 29.50 on January 1st; at Cape Borda, it fell from 30.23 on December 30th, to 29.53 at midnight on January 1st; at Cape Northumberland, it fell from 30.2 on the morning of the 30th December, to 29.35 at 6 p.m. on January 2nd, or six hours after Cape Borda; and the barometer fell to 29.30 at Hobart Town in the afternoon of January 2nd, or about twenty-four hours after passing the Great Bight. The storm between the Great Bight and Hobart Town was probably identical with, or the subsequent effect of, the hurricane on the north-west coast, in which case it must have had a slow progressive motion over the Australian continent, between the north-west coast and the Australian Bight, emerging from the coast at about the Great Bight, and occupying twenty-four hours in passing from the Great Bight to Hobart Town.

The resolution was then agreed to.

Weather Telegrams.

5th proposition:—

To consider by what means the weather telegrams may be transmitted and published for public information at an earlier hour than they are at present.

The CHAIRMAN said the idea which was present to his mind in submitting this proposition was to suggest that weather telegrams should, in Australasia, as in Europe, take precedence of all other telegrams. This arrangement would not add in any appreciable respect to the time occupied in

in transmission, and the delay of five or six minutes caused by sending these messages first could not be any serious detriment to business. He thought it probable that if the matter were represented by the Conference to the several Governments, the general principle would be adopted, and weather telegrams would take precedence of all other messages, Government telegrams of course excepted.

Mr. TODD entirely concurred with the Chairman in thinking it highly desirable that weather telegrams should have the precedence, and he saw no practical difficulty in giving effect to the resolution. No doubt the hour which had been agreed to—9 o'clock—might appear at first sight to clash with the ordinary routine business at the telegraph offices; but as a matter of fact, with the exception of the transmission of messages from the different stations to the central office at 9 o'clock, there would be no reports sent at that hour. It would probably be 11 o'clock before all these messages would be received at the central office. In his case it was generally a quarter-past 10 before he could send any weather reports to the other Colonies. In the case of Western Australia it was still later, on account of the difference in longitude. So that the sending of these weather reports would not really clash with the office reports, and there was no reason why they should not be transmitted immediately, and take precedence of all private messages. He thought it only required to be properly represented to the different Governments, so that the telegraphic departments might be instructed that the weather reports were to take precedence, and the Telegraph Superintendents in the different Colonies be relieved from any responsibility in the matter. It should be borne in mind that by the adoption of the cypher code, the messages were reduced to the minimum in point of length.

He would now move—

That the several Governments be requested to cause precedence to be given to the regular weather telegrams and special storm reports.

Dr. HECTOR said, that in New Zealand they had three kinds of telegrams—*urgent*, *ordinary*, and *delayed*. The public could take advantage of this scale, and by paying two shillings could make a telegram *urgent*. Messages arriving in the evening could be sent as *delayed* telegrams in sufficient time for the morning post.

Mr. ELLERY said the value of weather information was lost in many cases by delay, while it was increased in proportion to the punctuality with which it was furnished. He might state that in his last Annual Report he had made reference to the procedure in America and several European States who had at first to be coaxed into allowing weather telegrams to take precedence, but they now generally accorded it. Weather telegrams were of no value to the shipping and commercial interest unless they were transmitted punctually. In Victoria the Chief Secretary had entered into correspondence with the Telegraph Department of that Colony on the subject, and precedence had always been accorded. He thought it would only be necessary to bring the matter before the several Colonial Governments. The only difficulty would lie with the Telegraph Departments themselves.

The resolution was agreed to.

Mountain Stations.

6th proposition:—

To consider whether meteorological stations should be established upon the highest available mountains, for the special study of winds.

The CHAIRMAN said, his object in putting this proposition before the Conference was to obtain if possible records of the winds that pass over-head, and were therefore lost to the records of the lower stations.

From observations made years ago by Strzelecki, it appeared that at the top of Mount Wellington, he had noticed a hot wind which was not felt at all 3,000 feet lower on the same mountain; and from similar observations in this Colony, it appeared that hot winds were frequently felt at the high stations and not at those which are at a lower level.

Similar facts might be stated with regard to the south-east gales, which frequently appeared first at lofty stations. He thought these facts were a sufficient reason for the establishment of stations on high mountain peaks,—the only means which appeared to him available to secure the desired information.

Mr. ELLERY moved:—

That, in the opinion of this Conference, there should be established in each of the Colonies, upon a high mountain peak, a meteorological observatory for the special study of winds and other meteorological phenomena:

And that the most desirable positions for them would be the following:—

	About
South Australia—Mount Lofty 2,500 feet above sea level.
New South Wales—Kiandra 4,600 "
New Zealand—Tauhara Taupo 4,600 "
Do. Mount Herbert 4,000 "
Tasmania—Mount Wellington 4,000 "
Victoria—Mount Macedon 3,500 "

The resolution, after discussion, was agreed to.

The Conference adjourned at 1:15 p.m., until to-morrow, Friday, 14th instant, at 9 o'clock a.m.

FRIDAY, 14 NOVEMBER, 1879.

The Conference met at the Observatory, at 9 a.m.

PRESENT:—

Dr. HECTOR,		Mr. RUSSELL,
Mr. ELLERY,		Mr. TODD.

H. C. RUSSELL, Esq., in the Chair.

The minutes of the previous meeting were read and confirmed.

Mr. TODD moved:—

That the revision of the present telegraph weather code be referred to Messrs. Russell and Ellery, with a view to its simplification and extension.

The resolution, after discussion, was agreed to.

Dr.

Dr. HECTOR moved :—

That the interchange of weather statistics, in carrying out the suggestions of this Conference, between the different Australasian stations, should be in the form of a diagram; and that this should not interfere with the printing of statistics by the different Colonies in any way they like.

He would, at the same time, strongly recommend that some uniform system of publication should be gradually approximated. *

The resolution, after discussion, was agreed to.

Mr. ELLERY moved :—

1. That the monthly graphic records for interchange consist of curves, showing—
Barometer,
Velocity and direction of wind,
Temperature,
Humidity,
Rainfall,

with remarks upon weather, especially with reference to storms and atmospheric disturbances and that specific forms be prepared and distributed to the co-operating Colonies.

2. That the mean humidity curve be derived from the means of maximum and minimum of wet and dry bulb thermometers.
3. The barometer curve to be constructed from barographic records, so as to depict the turning points.
4. The temperature curve to represent maximum and minimum and mean for each day.
5. The velocity and direction of the wind to be deduced from the anemometer.

The resolution was, after discussion, agreed to.

Dr. HECTOR moved :—

That, in the transmission of cablegrams, the reports be generalized from the local weather reports.

For New Zealand the following subdivision into districts is recommended for convenience of reporting :—

A.	N.E. aspect	North Cape to East Cape.
B.	N.W. aspect	Cape Maria to West Cape (exclusive of Cook Straits).
C.	S. aspect	West Cape to Moeraki.
D.	S.E. aspect	Moeraki to East Cape (exclusive of Cook Straits).
E.	Cook Straits	Comprising Wanganui, Wellington, Cape Campbell, and Cape Farewell, Nelson.

A code to be framed to express the weather in each of the above aspects in general terms, according to the judgment of the reporter, thus—

Aspect.	Wind and Weather.	Rain.	Sea.
---------	-------------------	-------	------

No remark to indicate absence of marked phenomena.

The resolution, after discussion, was agreed to.

Mr. ELLERY moved :—

That the cablegrams furnished to Melbourne by Tasmania should conform with those between the Australian Colonies.

The resolution was, after discussion, agreed to.

Mr. TODD moved :—

1. That weather telegrams from the Australian Colonies shall comprise—

- (1) Barometer reduced to 32° and sea level,
- (2) Dry bulb,
- (3) Humidity,
- (4) Maximum and minimum,
- (5) Direction and velocity of wind,
- (6) State of weather,
- (7) Rainfall,
- (8) Sea disturbances,

with a synoptical report of the weather generally.

2. And that within New Zealand the same system should be adopted.

The resolution, after discussion, was agreed to.

Mr. ELLERY moved :—

That the extreme importance of the weather system proposed be strongly urged upon the Queensland Government, with a view to obtain their more active co-operation.

The resolution was, after discussion, agreed to.

It was further resolved,—

That Australia be divided into six meteorological areas for transmission of reports to New Zealand, viz., Western Australia, South Australia, Victoria, New South Wales, and Queensland; South Australia being divided into two districts, tropical and extra-tropical.

The Conference adjourned at 11.30 a.m., until half-past 7 o'clock the same day.

The Conference met again at 7:30 p.m.

PRESENT :—

Dr. HECTOR,		Mr. TODD,
Mr. ELLERY,		Mr. RUSSELL.

H. C. RUSSELL, Esq., in the Chair.

The minutes of the previous meeting were read and confirmed.

It was resolved,—

That weather telegrams be written on paper of a special colour, so as to be readily distinguishable in the offices.

Mr. TODD moved :—

1. That the solar radiation thermometers should be blackened bulb thermometers in vacuo, and should be exposed on an open space at an elevation of 4 feet 6 inches from the surface of the ground, supported by a post carrying two light arms.
2. And that radiation thermometers be placed over grass.

The resolution, after discussion, was agreed to.

Mr. ELLERY moved :—

That the following subjects for experiment be referred to each member of the Conference, for future consideration and report :—

1. Shade temperature.
2. Swinging thermometer and thermometer sheds in use.
3. Standards to be swung with 2 ft. 6 in. string during sunshine and after sunset.
4. Observations to determine the difference in humidity by self-registering maximum and minimum thermometers, and by other methods.
5. The best method of measuring the velocity and pressure of wind.
6. Whether any better method than black bulb thermometers can be devised for measuring the direct effect of the sun.
7. As to the best method of determining spontaneous evaporation.

The resolution was discussed and agreed to.

Mr. ELLERY moved :—

That as investigation of the Newcastle tide-gauges has shown that such instruments give valuable indications of distant earthquakes, gales, and sea disturbances, it is desirable, in the opinion of the Conference, that self-registering tide-gauges be established in as many convenient places as possible on the coast, in connection with the Meteorological Departments of the different Colonies.

The resolution was agreed to, after discussion.

Dr. HECTOR moved :—

That the foregoing minutes be adopted as the Report of this Conference on the various matters referred to it, and that the Chairman be requested to report to the Government of New South Wales.

H. C. RUSSELL.
ROBT. J. ELLERY.
CHARLES TODD.
JAMES HECTOR.

1879-80.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

FLOODS IN THE HUNTER RIVER.

(REPORT AND ESTIMATE.)

Ordered by the Legislative Assembly to be printed, 13 January, 1880.

[Laid upon the Table of the Legislative Assembly, with reference to Question No. 11 of the 19th November, 1879.]

Memo. from Assistant Engineer to The Engineer-in-Chief, Harbours and Rivers.

Harbours and Rivers Office, Newcastle, 3 September, 1879.

Re flood outlet for Hunter River viâ Telligerry Creek, 79-719.

I TRANSMIT herewith a plan and section showing the line of proposed channel to the waters of Port Stephens. From the point marked "A" on the plan I have shown two routes, the first leading to the head of Broadwater Bay in Port Stephens Harbour, the second to a point on Telligerry Creek, about $6\frac{1}{2}$ miles up from its mouth. The distance from water to water by the first above mentioned line would be about $12\frac{3}{4}$ miles, and by the second about $11\frac{1}{2}$ miles; but as Telligerry Creek should be deepened and widened in places, I estimate this would be practically the longer route of the two, besides the former would give a better hydraulic gradient, as the mean fall might be reckoned to high-water in Broadwater Bay; whereas viâ Telligerry Creek the fall should be taken to high-water at the mouth of the creek, thus making the distance for calculating the grade viâ Broadwater $12\frac{3}{4}$ miles, as against 18 viâ Telligerry Creek. I have therefore confined my attention to the first or the Broadwater route.

On the plan I have drawn to an enlarged scale a cross section of the channel, on which I have based my estimate.

It is a most difficult question to ascertain, even approximately, to what extent such an outlet would lower the flood level at Raymond Terrace, owing to the varying circumstances under which floods occur. For instance, when the Hunter is chiefly in flood the waters rise slower and the channel would pass a greater quantity in proportion on account of the greater time, and thus prevent the flood from reaching a great height; but when the heaviest portion of the flood occurs on the Williams, as in 1875, which was the highest flood known at Raymond Terrace for many years—the water came down almost in a wave and reached the maximum height rapidly—in this case the extra outlet would no doubt assist in carrying away the water quicker, but would not keep down the height by very much.

I have calculated the discharging capability of the channel for different heights, and by comparing the results with the discharging area of the Hunter below the Terrace, I estimate that in a flood such as that which occurred in 1870, the maximum height might be reduced by about 4 feet, at which height the water would be just over the wharves, but I do not think the '75 flood would have been lowered more than 2' 6" to 3' 0" at the outside.

The following table shows the discharging capability of the proposed channel, from Eytelwein's formulæ:— $V. = .91 \cdot \sqrt{E \cdot R}$.

Maximum height of 1875 flood.

Height over H.W.M. at R. Terrace.	Fall in feet per mile = $\frac{F}{2}$.	Area of Section.	Wetted Perimeter.	Hydc. Rad. or Mean Depth R.	Mean Velocity = V.	Discharge in cubic feet per second.
9'53	.747	7,061'3	361'4	19'539	4'916	34,712
8'00	.627	6,528'0	351'8	18'556	4'390	28,658
6'00	.470	5,852'0	339'2	17'252	3'664	21,442
4'00	.314	5,200'0	326'5	15'926	2'877	14,960

Upon reference to the sections, it will be seen that the country through which the channel would pass is mostly swampy; and although I have selected the lowest ground throughout, the average height of surface is from 22 to 25 feet over high-water-mark, instead of 8 feet as estimated by the proposers of the scheme.

I believe the cutting would be in sand throughout, excepting through the hill at the back of Raymond Terrace, which is rock; this I have tinted blue on the section.

Estimated cost of opening a channel to connect the Hunter River at Raymond Terrace with the waters of Port Stephens:—

	£	s.	d.
Rock cutting, 1,260,804 cubic yards, @ 5s.	315,201	0	0
Earthwork, 22,201,680 " " @ 1s. 6d.	1,665,176	0	0
Land, 1,275 acres, @ £2	2,550	0	0
Roads—Bridges over channel, four @ £4,000... ..	16,000	0	0
	<hr/>		
	£1,998,927	0	0

or say two millions sterling.

I have estimated the earthwork at a very low figure, but it is assuming that a large quantity would be removed by dredging at a cost not exceeding (say) 8d. per cubic yard; this allows a higher rate for the excavation which should be run to spoil. In estimating the quantity of land, I have allowed sufficient throughout for spoil-banks.

I think it will be seen that the cost puts all idea of such an undertaking quite out of the question, while the amount of relief it would afford is very doubtful. I conclude by reiterating the conclusion arrived at by the Commission in their Report on Floods in the Hunter (see page 26), in which I fully concur.

* 8 miles less.

"The distance from Raymond Terrace to the sea is less* by way of the Hunter than by Telligerry Creek, and therefore nothing could possibly be gained by the proposed cutting which could not be more easily and cheaply accomplished by enlarging the existing channel."

C. W. DARLEY, 3/9/79.

Minute of Engineer-in-Chief on Mr. Darley's report.

I HAVE already shown, in my Report on the Hunter River Floods (herewith), how utterly impracticable it would be to mitigate this injury the floods occasion by any cutting in the direction of Telligerry Creek, even if a channel could be formed for any reasonable amount.

B.C., Under Secretary, Public Works.

E.O.M., 4/9/79.

Stores Department,
Sydney, 17 March, 1880.

L. I. BRENNAND,
Superintendent of Stores.

1879-80.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SWEETMEATS AND HAIR DYES.

(REPORTS OF THE GOVERNMENT ANALYST ON CERTAIN DELETERIOUS INGREDIENTS IN THE MANUFACTURE OF.)

Ordered by the Legislative Assembly to be printed, 28 May, 1880.

No. 1.

The Government Analyst to The Colonial Secretary.

SOME time ago considerable uneasiness was felt and publicly expressed with reference to the composition of the various pigments used by confectioners to give colours to that kind of confectionary which is consumed to a large extent by the younger portion of the community. My attention as Government Analyst was directed to this subject, and from time to time, extending over a considerable period, I obtained samples of these articles as imported through the Collector of Customs. I also obtained similar articles from the various shops in Sydney. I found that almost all the sweetmeats coloured red, yellow, and green were coated with pigments composed of oxide of tin, combined with various vegetable colours. Upon a late occasion I had an opportunity of examining these pigments themselves, as prepared for and sold to the makers of confectionary, many of whom I have reason to believe are quite unaware of the nature of the compounds in question. All the pigments were found to be tin compounds. To prove that this matter rests more with the manufacturers of the pigments than with the makers of the sweetmeats, I should state that an English firm sells these colours to the latter in bottles, upon which, as a portion of the label, a printed copy of a certificate from an English Health Officer and analyst of repute is placed, and which states that the colours are purely vegetable and harmless.

Although the quantity of tin compound upon each sweetmeat may by some be considered as small, nevertheless it has to be borne in mind that these articles are given to very young children and often in liberal quantities; and I think that almost all medical men will state that there is no knowing how small a quantity of a metallic compound frequently and unknowingly administered may cause serious disturbance to the health, especially of the young and delicate. This portion of the subject, however, I leave for their decision.

I think it also my duty to call attention to certain hair washes and lotions which are sold under names given in the margin, and which I have lately seen much advertised about Sydney. These compounds are in reality hair dyes, and contain large and dangerous quantities of lead in solution. Perhaps the following quotation from Dr. Taylor's *Principles and Practice of Medical Jurisprudence* may to some extent act as a caution to persons who use these dangerous compounds until some law is in force to prevent their sale:—"Cosmetics and hair dyes containing preparations of lead may also produce dangerous effects. I have met with one case in which paralysis of the muscles of one side of the neck arose from the imprudent use of hair dye containing litharge"; this is an oxide of lead. Persons using articles of this kind will do well to bear in mind this—when the symptoms of chromo poisoning by lead make their appearance the skill of the physician is often of but little avail.

CHAS. WATT,
Government Analyst,
30th April, 1880.

No. 2.

The Government Analyst to The Inspector General of Police.

Sir,

17 May, 1880.

I have the honor to report that I have examined the hair washes or dyes received from you and marked as per margin, and that I found each to contain a considerable quantity of a salt of lead in solution.

There cannot be a doubt that much injury may be done to the health by the continuous use of such articles.

I have also to state that the fluid sold under the name of "Zylo-balsam" was found to be quite free from lead.

I have, &c.,
CHAS. WATT,
Government Analyst.

1879.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

THE "TOTALISATOR."

(REPORT OF INSPECTOR GENERAL OF POLICE UPON WORKING OF.)

Ordered by the Legislative Assembly, to be printed, 1st December, 1879.

The Inspector General of Police to The Principal Under Secretary.

Police Department, Inspector General's Office, Sydney, 5 December, 1879.

THE "Totalisator" was worked at Randwick Racecourse simply as an indicator of the number of times each horse in a race (according to his number on the official card) was backed to win, by the deposit of a sovereign and purchase of a ticket.

Any person desiring to bet or take a chance could readily see the number of pounds invested, and consequently calculate the odds about each horse.

The total amount or sweep was at the conclusion of each race divided between those persons who had taken tickets for the winning horse, 5 per cent. being deducted by the proprietor for commission.

If the winning horse should not have been backed at all, the sums deposited would be returned to the ticket-holders, less 10 per cent. commission.

It was pointed out to me by several persons that the instrument could be unfairly manipulated by a signal from a confederate seeing the winning horse pass the post to the operator at the Totalisator, who could readily add several numbers to the chances taken for the winning horse, and so come in for a division of the stakes.

This I had under observation by a careful officer in plain clothes, but he could not discover any such fraud.

It is unnecessary for me to add that no suspicion was directed against Mr. Franck.

The fairness of this system of betting has been urged as the strongest point in its favour, but something might be said on the other side. The fact that the return (if any) for the investment is prompt, equitable, and certain, might be viewed as affording an increased incentive to gambling, and I have no doubt that many persons who never do business with a bookmaker would try a chance in the Totalisator. It is further worthy of notice that boys might readily gamble by obtaining tickets in the Totalisator with fatal facility, whilst it would be less easy for them to do business with a bookmaker.

The chief objection to the instrument if legalized would be that not only would gambling be sanctioned, but that it would be encouraged.

It is quite true as asserted that the law is at present broken by bookmakers receiving cash for wagers beforehand on the ground, but it would be very difficult to prove the offence.

EDMUND FOSBERY,
Inspector General of Police.

1879-80.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MRS. MARY JONES.

(PETITION OF.)

Received by the Legislative Assembly, 21 April, 1880.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Mary Jones, of Crown-street, Sydney, in the Colony of New South Wales, widow,—

RESPECTFULLY SHOWETH:—

That on or about the fifteenth day of June, one thousand eight hundred and thirteen, John Leighton, the father of your petitioner, did, together with one William Wall, purchase from one Nathaniel Lucas, who was then the promisee of a Grant from the Crown of the same certain premises then bounded as follows, namely: On the north by Darling Harbour, three hundred and thirty links; on the east by a line five hundred and thirty links; on the south and south-west by the Mill Road to Sydney, three hundred and forty links; and on the west by two lines to Darling Harbour, seven hundred and twenty links: containing one acre two roods and nine poles, on which premises there stood a Grist Mill, and the said Nathaniel Lucas, by deed bearing the date above-mentioned, duly transferred the said Mill and premises to the said John Leighton and the said William Wall, after the said purchase, the said John Leighton and the said William Wall, duly went into and remained in occupation of the said property.

That on or about the eighteenth day of March, one thousand eight hundred and fourteen, the said John Leighton purchased from the said William Wall, and the said William Wall by deed of that date duly transferred to him all the right, title, and interest of the said William Wall in and to the said property, whereupon the said John Leighton duly obtained and kept sole possession of the same.

That at the end of the year one thousand eight hundred and twelve, the said John Leighton was the owner and possessor of all that piece of land having a frontage of two hundred and fifty feet to or near the southern boundary of the Flag-staff Reserve; bounded on the east by the Military Hospital Garden Land, two hundred and sixty-eight feet; on the west by said garden land, two hundred and sixty-eight feet; and on the north by said Military Hospital Land, two hundred and fifty-feet, situate near the site of the Government Windmills.

That upon this land the said John Leighton built a house, and with his family resided thereon, and cultivated the land as a garden. The said land being required by the Government for military purposes, the said John Leighton gave it up to the Government on further consideration that the said Government should grant and convey to him the land now claimed and described in description annexed to a letter dated the tenth day of April, one thousand eight hundred and twenty-nine, written from the Colonial Secretary's Office, and signed by Alexander McLeay to the said David Leighton.

That in the month of August, one thousand eight hundred and twenty-four, the said John Leighton, who had in the meantime remained in sole possession of the said Mill and premises, died intestate, leaving him surviving—Ann Leighton, his wife; David Leighton, his only son; Mary Leighton, now Mary Jones, your Petitioner; and two other daughters who died intestate.

That the said Ann Leighton who obtained Letters of Administration of the Estate and effects of her said husband, went into possession of the said Mill and premises, and remained in possession until the year one thousand eight hundred and twenty-eight, when she delivered up possession of the same to the said David Leighton.

That the said David Leighton, being so in possession of the said Mill and premises, attained the age of twenty-one years on or about the eleventh day of March, one thousand eight hundred and twenty-nine, and thereupon duly claimed them, as heir-at-law of the said John Leighton.

That on or about the second day of April, one thousand eight hundred and twenty-nine, the said David Leighton, being still in possession of the said property as heir-at-law of his said deceased father, duly presented His Excellency, the then Governor of the Colony, his Petition, showing his right and title to the said property, and praying that a Grant thereof might be issued to him, and on the tenth day of the said month of April he received a letter from Alexander McLeay, Esquire, then Colonial Secretary, transmitting him a description of the said property, being the description set out in the first paragraph of this Petition, and referring to the said property as belonging to the said David Leighton, and informing him that no deeds could be prepared until certain arrangements then in progress were completed.

That many other applications were made by the said David Leighton for a grant of the said property so acknowledged by the Government of the Colony to be the property of the said David Leighton, but no Grant thereof has ever been issued to him.

That in the year one thousand eight hundred and thirty, the said David Leighton having up to that time remained in possession of the said property, was obliged to leave the Colony and live beyond seas without having obtained the said Grant, and he did not return to the Colony until on or about the month of June, one thousand eight hundred and fifty-three.

That your Petitioner's husband, Joseph Henry Jones, to whom she was married on the fifteenth day of May, one thousand eight hundred and forty, died on the twenty-eighth day of October, one thousand eight hundred and fifty-four.

That your Petitioner was unable to discover the whereabouts of the said David Leighton until on or about the _____ of _____, one thousand eight hundred and fifty-six. And that the said David Leighton, by Deed dated the seventh day of March, one thousand eight hundred and seventy-six, duly conveyed the said property to your Petitioner, and the said Deed was duly registered on the twenty-ninth day of March, one thousand eight hundred and seventy-six.

That the Government of the Colony, without application or notice to the said David Leighton, or to your Petitioner, has sub-divided the said property to several persons, applicants to be registered as Proprietors under the Real Property Act, 2 Vic, No. 9, and has issued Grants and Certificates of Title respectively to several of such persons in assumed compliance with the provisions of the said Act; and has received considerable sums of money by reason of such, its dealings with your Petitioner's property.

That under the circumstances herein appearing your Petitioner has (without any fault of her own, but by the action of the Government who had already as aforesaid recognized the title of her brother, from whom she purchased) been deprived of and lost the said property, and is therefore entitled to compensation for such deprivation and loss, and the consequent thereupon.

Your Petitioner therefore humbly prays that you will take into your early and favourable consideration, and afford such relief in the premises as to your Honorable House may seem meet.

And your Petitioner will ever pray, &c.

M. JONES.

PETITION OF MRS. MARY JONES.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 4th May, 1880,—“with power to send for persons and papers, to inquire into and report upon the Petition of Mrs. Mary Jones, respecting certain property at Darling Harbour, presented on 21st April, 1880,”—have agreed to the following Report:—

1. Your Committee having examined the Witnesses named in the List,* * See List, page 5. and carefully considered the Evidence taken, find,—

- (1.) That in and previous to the year 1815 John Leighton, the father of your Petitioner, owned and resided on certain land on Flagstaff Hill.
- (2.) That in about the year 1815, the Government required and took his land for the purposes of a Military Hospital, and in exchange therefor gave him other land at Miller's Point.
- (3.) That the said John Leighton resided and died on the land in question, without applying for or obtaining the deeds of grant.
- (4.) That the heir-at-law (Mr. David Leighton) after the death of his father applied for the said deeds, and received a promise, dated 10th April, 1829, from the then Colonial Secretary, Mr. Alexander Macleay. (See Appendix A 1.)
- (5.) That in the year 1830 Mr. David Leighton left the Colony and lived beyond seas, without having received the said deeds, and without having disposed of his interest in the land.
- (6.) That during the absence of the said David Leighton the Government alienated the said land to various persons.
- (7.) That in or about the year 1860 Mr. David Leighton returned to the Colony and found the land in possession of various persons, purchasers from the Government and assigns of such persons, and a number of buildings erected thereon.
- (8.) That he then took possession of the land, but was compelled to leave it in consequence of the threats of the persons in possession.
- (9.) That he transferred his title and interest in the said land to his sister, Mrs. Mary Jones, whose Petition has been referred to your Committee by your Honorable House. (See Appendix A 3.)

2. Your Committee are of opinion that your Petitioner has a good claim for compensation against the Government, and recommend such claim for favourable consideration.

JAMES. S. FARNELL,
Chairman.

No. 3 Committee Room,
Sydney, 7th July, 1880.

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 13 MAY, 1880.

MEMBERS PRESENT :—

Mr. Farnell,		Mr. Thompson,
Mr. Murphy,		Mr. Day.

Mr. Farnell called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Printed copies of the Petition of Mrs. Mary Jones, before the Committee.

Committee deliberated.

Ordered,—That Mrs. Mary Jones, George Hill, Esq., Mr. Michael Farrell, and Mr. David Leighton, be summoned to give evidence next meeting.

[Adjourned to Thursday next, at *Eleven o'clock*.]

THURSDAY, 20 MAY, 1880.

MEMBERS PRESENT :—

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

PETITION OF MRS. MARY JONES.

THURSDAY, 20 MAY, 1880.

Present:—

MR. DAY,		MR. FARNELL,
MR. MURPHY,		MR. THOMPSON.

JAMES SQUIRE FARNELL, Esq., IN THE CHAIR.

John Williamson, Esq., called in and examined:—

1. *Chairman.*] You are a solicitor? Yes.
2. You are aware that Mrs. Mary Jones has petitioned Parliament in reference to a claim to certain land at Miller's Point? Yes.
3. Have you any documents having reference to her claim? I produce a promise of grant, dated 10th April, 1829, and signed by Mr. Alexander M'Leay, then Colonial Secretary, in answer to a petition of one David Leighton. (*Original produced, and copy handed in. See Appendix A 1.*)
4. Is that a true copy? Yes. I also produce an original conveyance of a portion of the same land by one Nathaniel Lucas to William Wall and John Leighton, dated 15th June, 1813, and a copy of that I also put in. (*See Appendix A 2.*) I also produce an original conveyance from David Leighton, transferring his interest to his sister, Mary Jones. I will put in a copy of that also. (*See Appendix A 3.*)
5. Is David Leighton the son of John Leighton? Yes.
6. I suppose you cannot give any further information of your own knowledge? Yes, I have searched in reference to this land, and I find that a great portion of it has been brought under Torrens' Act, especially that part purchased from Lucas.
7. In the names of various proprietors? Yes.
8. Where is this land situated? At Miller's Point. It commences at the corner of the road leading down to Moore's and Towns' Wharves, running along Bettington-street, at that time by the old plan called Miller's Road, down Moore's Wharf Road to a brick house that is now standing—an old brick house which I recollect used to be a gateway at one time, and I have had pointed out to me a stone house upon the ground which was adjoining this building, that Leighton, senior, built and occupied.
9. Here is a tracing, will you put that in? That is a tracing of the position of the land, from the original description mentioned in this letter promising the grant.
10. What is the area of the land comprised in the promise? 1 acre 2 roods 39 perches.
11. The petition says 1 acre 2 roods 9 poles? That is an error in the petition then; it is 1 acre 2 roods 39 perches. From a surveyor's valuation I think the property is now worth £70,000.
12. I suppose you do not know of your own knowledge whether Mrs. Jones ever had possession of this land herself? I know that David Leighton some years ago went on a portion of the land and resumed possession under my instructions, and I saw him turned out of possession by a person claiming a title under Torrens' Act.

J. Williamson,
Esq.
20 May, 1880.

- J. Williamson, Esq.
20 May, 1880.
13. Do you know whether Mrs. Jones has taken any means of trying to get possession of this land by legal process? I do not.
14. Is there any legal process by which she could get possession of this land under the circumstances? None that I am aware of. The Government has sanctioned new titles,—we are always debarred by that answer.
15. Do I understand that the Government have actually sold this land claimed by Mrs. Jones? I am aware of my own knowledge that the Government have issued grants embracing the whole of the land mentioned in this promise. I know that from my own searches in the Surveyor General's Office.
16. Have the grants issued by the Crown for the same land as that promised to Leighton in 1829 been subsequent to the date of that promise? Yes, they have been made subsequent to the promise, I can say that from my own searches; but to find out all the dates would cause great delay,—search would have to be made for every different grant. I think the information could be got from the Surveyor General's Office.
17. *Mr. Day.*] Do I understand you to say that the grants were issued by the Government right down to the Point? Yes, for the whole of it.
18. And on the strength of these Crown grants the property has been brought under Torrens's Act? Yes.
19. So that it is absolutely gone for ever? Yes, absolutely gone from Leighton, through whom Mrs. Jones claims.
20. *Chairman.*] If I understand you rightly, no grant has ever issued in accordance with the promise to David Leighton? No grant has ever issued in accordance with that promise to any of the Leighton family, to the best of my knowledge and my inquiries.
21. Who was legally entitled to this land after the death of John Leighton, the elder? David Leighton, the eldest son and heir-at-law.
22. Has David Leighton disposed of his interest? Only to his sister lately, that I am aware of. I can give the reasons for disposing of his interest to her. He was an invalid and blind, and his sister, Mrs. Jones, had to look after and take care of him.
23. In this petition there is a blank in reference to the time that Mrs. Jones discovered her brother David Leighton,—do you know about what date it was? She can answer that question. It is only of late years, I know, that she found him. I know that some seven or eight years ago I was always speaking of the matter to her, and she was then making inquiries and advertised for him.
24. Do you know whether Mrs. Jones has made application to the Government at any time for compensation for the loss of this land? She has not; if she had I would have known it, because I am the only person in possession of the facts that have been disclosed to you.
25. Is there anything else you desire to state? I do not know whether I might mention that my appearance in the matter is not as a legal adviser; it is merely in a friendly spirit that I am moving in the matter for this old lady.
26. *Mr. Murphy.*] If I understand you rightly, there is nothing to show that this land was ever given up to the Government? I have never seen or heard of any documents showing a surrender; I have searched in the Colonial Secretary's and Surveyor General's Offices, and found nothing.
27. Is there any grant issued to any of the Leighton family? No. In those days there was no such thing as a grant—only a promise.
28. Where is the promise contained? The whole of the promise is contained in the letter of the 10th April, 1829, which I have put in. In those days that was the only thing you got. You first went and settled on your land. It was called a lease in fee; and certain things being done, you got your land.
29. This letter was apparently intended to serve until a deed of grant was issued? Yes, as a security until the grant issued from the Crown.
30. *Chairman.*] I suppose you do not know what claim Mrs. Jones makes upon the Government for the loss of this land? I do not think Mrs. Jones makes any special claim—she merely leaves her case for the consideration of Parliament; whatever they think fit to award her she will accept. Other persons being in possession of the land under indefeasible titles, it is impossible she can ever regain it.
31. *Mr. Murphy.*] She thinks that if she has a claim Parliament will recompense her for it? Yes.

Mrs. Mary Jones called in and examined:—

- Mrs. Mary Jones.
20 May, 1880.
32. *Chairman.*] Are you a widow? Yes.
33. How long has your husband been dead? He died about 1854.
34. Do you remember your father, John Leighton? Perfectly.
35. How old were you when he died? I suppose I must have been sixteen or seventeen.
36. Have you any brothers or sisters? I had one brother and one sister; but only my brother is alive now—my sister is dead.
37. What was your brother's name? David Leighton.
38. Did he reside with you and your father? Yes, until father died.
39. Did your father own some land at Miller's Point? Yes.
40. Had he a mill there? Yes.
41. And a residence? Yes, which he built himself.
42. It was formerly known as "Jack the Miller's Point," was it not? Yes.
43. What is your earliest recollection of when you resided there with your father? I resided there till he died. I took him up in my lap when he fell off the mill, which caused his death.
44. Could you tell me what year that was? In the year 1826.
45. You lived upon the land previous to that? Yes.
46. About what year did your father first go into possession of the land? That would be some years after he purchased the land from Mr. Lucas; it took some time to clear away the rocks and build a residence.
47. Do you remember the year when you first went there to reside with him? No.
48. How old were you when your father died? Sixteen or seventeen.
49. How old were you when you first went to live with your father there? I could not tell.
50. Do you think it was so far back as the year 1815—your earliest recollection of living there? It would be before 1815, because my sister was born there, and mother always said she was born in 1815, behind the hospital—the soldiers' hospital they called it then. It is the Fort-street School now.

51. Your sister was born on the land that belonged to your father, behind what is now the Fort-street School? Yes.

52. Do you remember your father building a mill there? I do not remember his building it, because the outside of the mill was built when Mr. Lucas sold the property, he had to do all the rest himself—all the machinery and everything.

53. Did he build a house to reside in? Yes, he built a house and made improvements.

54. Did he cultivate, or do anything else? He made a garden. He had to bring soil to make a garden, for it was all rocks and scrub. He also put up sheds and all that was required, and fenced it in.

55. What was about the position of the first house that he built? It was well away towards the water. The land ran down to the water.

56. Was there a hospital built there then? Not that I recollect.

57. Do you know the Fort-street School? Yes.

58. Was the Fort-street School a hospital at one time? Yes; I saw it being built—I saw the men at work.

59. Did your father build a house near to the hospital? Yes, not very far from it.

60. Did your father build any more houses there? Only the improvements that were necessary; no other house for a residence; only stables and other things that were necessary.

61. Whereabouts did he build these? Below the house, at the very bottom of the ground.

62. Near what is Kent-street now? I do not recollect where Kent-street is.

63. Did you know a Dr. Martin, a military surgeon here? Yes, of the 73rd regiment.

64. Did you know Colonel O'Connell? I did.

65. Did Dr. Martin and Colonel O'Connell ever call to see your father? Yes, I saw them in conversation with him; not inside the house, but outside.

66. Did they come frequently to see your father? Yes, I saw them two or three times.

67. Do you know what business they came upon? I believe it was about this property. I heard my father say to my mother that they required the land for something for the military.

68. They wanted your father's land and cottage for military purposes? Yes; my mother was grieved at it, I know.

69. Do you recollect any offers having been made as to the purchase of this land or any money consideration? I did not hear any offer, only what my father said to my mother, that money was offered for the land and he said he did not want the money, but he would take land adjoining the mill property.

70. You heard your father telling your mother of the offer made by Dr. Martin and Colonel O'Connell in reference to the purchase of this land, and you heard your father say he was not desirous of selling the land, but would rather exchange it for other land? Yes.

71. Do you know whether they did make that exchange? Yes; they took possession of it. He made a road round the rocks going to the mill—he could not get up to it without. The mill was on a hill, and the house and other improvements were built lower down. Of course the mill was on the highest ground.

72. If I understand you rightly, the Government only wanted a portion of this land that belonged to your father? They wanted it all, and they had it all.

73. And they gave land in exchange for it to your father at Miller's Point? Yes, they told him to take whatever he liked, as he would not receive a money compensation, and he took the two portions adjoining the mill.

74. Do you remember Governor Macquarie coming there to see your father? Very often. He often used to come to see my father's improvements that he had made. Governor Macquarie and his lady often came to the gate, not inside—I never saw them inside the house.

75. Did Governor Macquarie say anything to your father, within your recollection, in reference to this land? Yes, I heard my father often say that the Governor said—"Mr. Leighton, you are very industrious here; you might as well take the whole point;" and he said—"No, thank your Excellency, I have taken sufficient." He said—"I have had a great deal of rocks and scrub here to cut away, at a great deal of expense, and I do not want any more."

76. Do you know whether your father had possession of the whole of the land contained in the promise? He had possession so far as making the road to the mill on the portion which is Bettington-street now. There was a spade-mark, but whether it was his mark or not I could not say.

77. Will you explain what you mean by a spade-mark? A spade-mark, a line along the ground, dug out.

78. A trench dug out? Yes; not a deep trench, but a line made with a spade. It commenced at the road to the mill.

79. *Mr. Thompson.*] Was this spade-mark to carry the water away? I do not know what it was for.

80. *Chairman.*] Do you remember in what year your father died? In 1826.

81. Did your mother continue to reside there after your father's death? Yes.

82. And you lived with her and your brother and sisters? Yes.

83. How long did you reside there after your father died? Until David Leighton threatened to take possession of the land and residence and mill. My mother had the residence and mill till he came of age.

84. After your father died your brother claimed possession of the property? Yes, he tried to get all he could.

85. How many years did you live there with your mother after your father died? Only a short time. I think my brother was seventeen when he died.

86. Did you live there till your brother came of age? No, I got married in the meantime.

87. Did your mother live there? My mother lived there for a time, and then went to the Princes-street property.

88. Did your brother take possession of this land? Yes. Mr. Stephen, Sir Alfred's brother, was his solicitor.

89. Do you know whether your brother applied to the Government for a grant? I believe he did. My mother applied also; she had letters of administration for my father's estate.

90. Did your father make a will? No, not that I know of.

91. *Mr. Day.*] I suppose you do not know the extent of this land? I do not know the extent of it; but there were too large pieces.

92. I suppose when you were there you knew the boundary of it? Yes, there was a fence.

Mrs. Mary Jones.

20 May, 1880.

- Mrs. Mary Jones.
20 May, 1880.
93. Was it fenced in? Yes.
94. What was it fenced with? The paddock part from the house was fenced with dry stone. My father had the rocks broken up and made a good dry wall, running down to the water.
95. Was it fenced all round with that stone wall? No, just from the top of the hill, at the cottage, down to the water, and at the bottom adjoining the garden.
96. So that it formed a paddock? Yes, we used to call it the paddock.
97. *Chairman.*] Was there any other kind of fence upon it besides the stone wall—on the other part? Yes.
98. Was it all fenced in? Yes, fenced in with palings. There were cow-sheds, stables, piggeries, and a store where my father used to store the wheat for the mill.
99. Could you tell the Committee what became of your brother after he took possession of the land—did he leave the Colony? I believe he did.
100. You did not see him for a number of years? I did not.
101. Did you take any means to discover his whereabouts? After he returned from Europe, or wherever he went to, I saw him.
102. *Mr. Day.*] Was that about 1856? I do not know. I got Mr. Colls, of Yass, to advertise for him. I wanted to find him because of this land; I knew he had not sold it, and no other person could.
103. Has your brother conveyed his interest in this property to you? Yes, for a purpose.
104. For the purpose specified in the deed laid before the Committee to-day by Mr. Williamson? Yes.
105. You believe you are entitled to some compensation from the Government, from the fact of the Government having sold this land claimed by you to other persons? Yes.
106. You say letters of administration were granted to your mother? Yes; she paid £18 for them.
107. Where are these documents now? Mr. Williamson has all the documents about the matter.
108. Did these documents convey to your mother this land, or only the chattel property, such as furniture and all that kind of thing—did they give her a right to the land? No, it gave her no right to the land.
109. Did your brother, the heir-at-law, and your mother go to law about this property? Yes.
110. Your mother thought she was entitled to it? Yes, it was the younger children she was fighting for. My brother took the real property—my mother never interfered further about that.

Mr. David Leighton called in and examined:—

- Mr. D. Leighton.
20 May, 1880.
111. *Chairman.*] Are you Mrs. Jones's brother? Yes.
112. Are you the eldest son of your late father, John Leighton? Yes.
113. Where did your father reside? At Miller's Point when he died.
114. Were you born there? No.
115. Could you tell us the year you first went to live there with your father at Miller's Point? No, I cannot exactly bear that in mind.
116. How old were you when you went to live with your father at Miller's Point? Three or four years old; I must have been very young.
117. How old are you now? Seventy-two.
118. The place you lived at is what is called now Flagstaff Hill or Miller's Point? We first went to live at Flagstaff Hill.
119. Then you went to Miller's Point? Yes.
120. Do you remember the Government putting up a grist-mill there? Yes.
121. Did you live near that? Yes, close to it.
122. Do you remember the Military Hospital? Yes.
123. Did you live near that? Yes, within a stone's-throw of it.
124. Did your father build a house there? Yes, he built one in the yard near the Military Hospital.
125. Do you know whether it was on land that he purchased from Mr. Lucas? No, I do not think it was; I think the land he purchased from Mr. Lucas was on the point.
126. On Miller's Point? Yes.
127. Do you know what became of that house? It was taken by the Government for the use of the military.
128. Did any accident happen to it by catching fire, or anything in that way? Not that I am aware of.
129. Do you remember whether any military gentlemen called to see your father upon any occasion, and how often? Colonel O'Connell and Dr. Martin did.
130. Do you remember what their business was with your father? Not particularly; I don't know what their conversation might have been about; I think it was something with regard to the land.
131. Did you ever hear your father say what it was about? I heard him talk about the place that he had taken in lieu of what they took from him.
132. Do you know whether they purchased the place? They offered money for it, but he would not take the money; he took some land adjoining what he purchased from Lucas instead of the land they wanted.
133. Do you remember anything of a letter dated 10th April, 1829? Yes.
134. Does that letter describe this land in any way? I do not think it describes the land—it might—I forget now; I cannot say whether it did or not.
135. You do not remember anything about the letter of 10th April, 1829? I remember there was a letter.
136. Could you identify the document? (*Original letter handed to witness*). That is the letter that came down by the light-horseman; the light-horseman brought that letter down.
137. From Government House? I think it must have been from there it came.
138. Did your father improve this land—fence it in, and so on? Yes, built on it, and fenced it in.
139. And used to carry on the mill business there? Yes.
140. Do you remember the time your father died? Yes.
141. How did he meet his death? By a fall from the mill.
142. After the death of your father, did you assert any right to this property? Yes, I claimed it as my own on account of my being the eldest son; I claimed it as belonging to me.
143. Was there some dispute between your mother and yourself as to who had a right to it? Yes.

144. Did your mother take out letters of administration after your father died? Yes.
145. Do you know whether she claimed this land in virtue of these letters of administration? She claimed it as having a right to it, and I claimed it as the eldest son.
146. The letters of administration gave her no right to the real property? Not that I am aware of.
147. Did you apply for a grant of this land? I did.
148. Was the grant ever issued to you? That is the answer that came down.
149. The letter of 10th April, 1829—was that the answer to your application for a grant? Yes.
150. What did you do after you got that document? I still remained on the property for a short time.
151. How long? It may have been five or six months after that before I left.
152. When you left, where did you go to? To England.
153. Do you know about what year you left for England? I think it was in the year 1830; I almost forget now.
154. How long was it before you returned to this Colony again? Nearly twenty years altogether from the time I left till I got to Sydney again.
155. Are you sure it was not more than twenty years? Well, I was in Van Diemen's Land three or four years, and I was whaling two or three trips after I left England. I dare say it was more than twenty years before I returned to Sydney.
156. Do you remember the year you returned? No.
157. Was it thirty years after you left? It might have been; I did not keep any particular account of it.
158. Did you ever get married? Yes.
159. Where? In Sydney.
160. Is your wife dead? Yes, I am informed so.
161. Did she die while you were away? No.
162. *Mr. Day.*] Did she die after you came back? When I came back we parted, and I never saw anything of her since. I received information that she was dead years ago.
163. *Chairman.*] Could you inform the Committee what was your object in going to England? It was reported that there was some money to be had if I went after it—my wife's fortune; I went on that business.
164. Were you disappointed? I was.
165. Did you ever at any time lose your eye-sight? I did; I have scarcely got my sight now.
166. Did you endeavour, when you returned here, to find your sister, Mrs. Jones? Yes.
167. And you did find her? Yes, after a number of years.
168. Did you reside with her for any length of time? I did.
169. *Mr. Day.*] Where was she living? At Bargo, the other side of Picton.
170. *Chairman.*] Prior to going to England, did you ever sell or transfer this land to any one? I never did.
171. While in England did you deal with the land in any way? Never in any way.
172. Since your return to this Colony have you transferred or conveyed this land to your sister? Yes, on account of her kindness to me and taking care of me when I could not help myself.
173. Do you know whether the Government ever issued any grant for this particular land? I do not.
174. Did you ever authorize any person to obtain a grant for you from the Government? I never did.
175. You are quite positive about that? Quite positive; not in any way whatever.
176. Are you now the only surviving son of your father? Yes.
177. Have you any sisters? They are all dead except Mrs. Jones.
178. As heir-at-law you claim to be the rightful owner of this particular land? I do.
179. Has any information been given to you that the Government have issued grants for this land? No.
180. Do you know whether any of this land has been brought under the Real Property Act? No, I do not.
181. Do you think you could identify the land now if you went to it? I think so.
182. Have you seen the land lately? Yes, a short time ago.
183. At the time you left for England, what do you think was about the value of the land? I could hardly say—it might be worth £30,000.
184. Now? It is worth double that now.
185. Did you ever attempt to take possession of this land? I did.
186. *Mr. Day.*] After you came back from England? Yes, a short time ago. I went and took possession and slept on it for two or three nights; I put up a tent on it.
187. *Chairman.*] What was done with you? I took the tent down after being there two or three days.
188. Did anybody interfere with you? No, only one person came and pulled my tent down by force and threatened to put me off the land.
189. *Mr. Day.*] It is not vacant land now, is it? It has been built on since; some portion is built on.
190. When you slept on it were there any buildings? No, there were houses on some parts of it, but not on the part I slept on. Since that more houses have been put up.
191. *Chairman.*] Did you ever apply to the Government for compensation for this land? Never.
192. You have not received any? No.
193. Do you remember the area of land owned by your father? I should say there ought to be three or four acres altogether, with what was purchased.
194. Do you remember the area of this particular property? No.
195. Was the land enclosed? It was enclosed in my father's lifetime.
196. After your father died, what became of the mill business? After my father died it was my uncle's; my mother rented it to him. I do not know what became of it afterwards.
197. *Mr. Thompson.*] Did you reside on the land from the death of your father till you left the Colony? No, I did not, because I was not of age, and after the death of my father I could not get possession, because it was rented to my uncle. I went down to Port Stephens and remained there till I came of age.
198. Were you in possession at any time? Yes, after I came of age.
199. Were the boundaries defined in any way? Yes, the boundaries were well understood; it was fenced in.
200. Was land in that locality at the time you left, about 1830, of much value? It was of great value then, but not so much as it is now.
201. Your claim to the land was not then disputed in any way? No.
202. It would have been well worth disputing if there had been any rival claim? Yes, the ground was valuable, of course.

Mr. D.
Leighton.
20 May, 1880.

- Mr. D. Leighton.
20 May, 1880.
203. *Mr. Day.*] Do you remember the Military Hospital? I do.
204. The land your father bought from Mr. Lucas adjoined the Military Hospital, did it not? No; what my father purchased from Lucas was on the point.
205. Was any one in possession when you went away to England? No.
206. Was any one in possession when you came back from England? My wife was living there on the ground.
207. When you came back from England? Yes.
208. Did you go to live there? No; my mother and I came on terms before I went away. It was very expensive paying the lawyers. Some land was sold to pay the lawyers when we came on terms with each other. The portion sold was Lucas's land.
209. Your mother sold it? Yes; she laid claim to it, and I laid claim to it.
210. *Mr. Murphy.*] Are we to understand that some part of this land that you took possession of when you came of age was sold by your mother? No, the other part; nothing to do with that part that is in question now at all.
211. *Chairman.*] Nothing to do with the land contained in the promise of the 10th April? Nothing to do with that whatever.
212. Other land belonging to your father? Yes.
213. *Mr. Day.*] You say your wife was in possession when you came back again? Yes.
214. How long ago is that? I cannot recollect.
215. About how long? It might have been forty years ago.
216. Are you aware whether the parties now in possession of the land have got grants from the Crown? I am not aware.
217. Are you aware whether the Government sold it or not? I never heard that they did sell any. I was told down there, when I slept on the ground, that a person wanted to purchase it, but there was no title to show for it.
218. Did you never ask the Government to give you a title to it when you came back? No, I never did.
219. Where were these documents when you went to England? They were in possession of Mrs. Jones.
220. We understand from you that you base your claim to that land upon that letter from Mr. M'Leay, the then Colonial Secretary? I base my claim to the land that my father got in lieu of the land that was taken for military purposes.
221. We understand that you have never disposed of that land to any one but your sister? I never did.
222. Nobody else but you had authority to do so? I should say not. I was the eldest son and heir-at-law, and I never gave any one authority or made it over to any one.

TUESDAY, 8 JUNE, 1880.

Present:—

MR. MURPHY, | MR. THOMPSON.

JAMES SQUIRE FARNELL, ESQ., IN THE CHAIR.

Mrs. Mary Jones called in and further examined:—

- Mrs. Mary Jones.
June, 1880.
223. *Chairman.*] You have already given evidence in reference to the death of your father: can you tell the Committee whether your father survived Mr. Wall or not? Yes, he did, a great many years.
224. And held possession of the property after Mr. Wall's death? Yes.
225. How many years did Mr. Wall die before your father? He died about sixty years ago.
226. How many years before your father's death? My father died in 1826.
227. What year did Mr. Wall die in? That I could not tell you.
228. How many years do you think? I know it was a great many years before my father died; I believe he was found hung in York-street.
229. There was no relationship between your father and Mr. Wall? None whatever.

George Hill, Esq., J.P., called in and examined:—

- George Hill, Esq., J.P.
8 June, 1880.
230. *Chairman.*] You are a native of the Colony? I am.
231. I think you have a vivid recollection of all the early life of the Colony? Pretty well.
232. Do you remember a Mr. Leighton, commonly called Jack the Miller? Yes, John Leighton, near Towns' Wharf, and before Towns' Wharf was there a long while.
233. Do you know whether he was the owner of any property at a place now called Miller's Point? Yes, he owned a windmill there. He and his family were living there from fifty-five to sixty years ago.
234. Do you know whether the land he then occupied is the land upon which the Fort-street Public School now is—the old Military Hospital? No, it was not there; it was on the next point, down to where Towns' Wharf is, on the left-hand side as you turn the elbow round. He had no mill to my knowledge at the place you are speaking of now.
235. You know he occupied the land near Towns' Wharf? Yes, he lived there and had a windmill there.
236. Do you know whether it was enclosed or not? There was a sapling fence round the lower part of it. There has been a road taken out of a piece of it. I mean a road to the south and a road to the west has been taken off the land that he used to claim.
237. Do you know whether anybody held this land prior to him? No; it was a bush when I recollect it.
238. Do you know whether any person had any claim to it prior to him? No, I cannot say that. I know my father was superintendent of Government mills, and there was great acquaintance between himself and Mr. Leighton.
239. You have often been on the land occupied by Mr. Leighton? Yes, hundreds of times I may say. I was there on one occasion when Governor Macquarie was there and Commissary Broughton.

240.

240. On any particular business? I do not know; I did not poke my nose into what was their business. My father was Superintendent of the Government mills, a little to the right of where the school is now; and the Governor, my father and myself walked down, when I was a boy, to Leighton's mill, and Leighton met us at the mill. George Hill,
Esq., J.P.
8 June, 1880.
241. Do you remember about the time of his death? No, I do not.
242. Do you remember how he met his death? No, I do not, only from talk, which is no evidence, you know.
243. Will you tell us what you heard? I heard he was killed in some way at the mill—by some part of the mill.
244. You are aware that he occupied that land for many years? Yes; I cannot say how many years, but for a long time.
245. I suppose you do not know anything of any negotiations between Leighton and the Governor? No. Leighton had a stone house on the left-hand side of the Government mill, on what is now known as the Flagstaff Hill.
246. Did you know that Leighton was the reputed owner of the land he occupied? Yes, he was known as the owner. I know he lived there many years along with his family.
247. Do you know whether the Government took possession of Leighton's land on the Flagstaff Hill? Yes, the Government occupied a portion of it.
248. And built the hospital on it? Yes, the hospital was on a portion of it.
249. Did you ever hear anything of any exchange of land between the Government and Leighton? No.
250. At that time people had only promises of grants for the land they occupied? Yes; if anybody went to His Excellency and said they would like to have lot so-and-so; the Governor's answer would be—"You know the conditions; you will have to build a house if you take it, and fence it in."
251. At the time you went down, that you speak of, was there any conversation between the Governor and Leighton about the land? Not that I heard.
252. *Mr. Thompson.*] Did the land remain in the possession of Leighton's family after his death? Yes, of course it did. I am not so sure upon that point. I knew Mr. and Mrs. Leighton and family. There was a son, David; I do not know what became of him.

Mr. Michael Farrell called in and examined:—

253. *Chairman.*] You are a very old resident? Yes.
254. You know Miller's Point? I do, well.
255. Did you know a Mr. Leighton? A miller.
256. Yes, commonly called Jack the Miller? Yes, I did know him.
257. Do you know whether he had a mill on Miller's Point? I do.
258. He used to carry on business as a miller? Yes.
259. Do you know what area of land he occupied? I cannot say, but it was a very large piece of ground where the mill was; what complement was in it I could not say.
260. Do you know where Mr. Leighton resided prior to the erection of the mill or about the time of the erection of it? I do not.
261. You do not remember him living at the Flagstaff Hill? No, I only remember him living at the Point—Jack the Miller's Point.
262. Do you remember the time of his death? I do, very well.
263. Do you know about what year he died in? I do not.
264. You remember the fact? Yes, I remember the accident he met with.
265. He died from an accident? He did.
266. Do you know whether any of his family occupied this land after his death? I think they did; I am not sure whether they occupied it after the accident occurred to him or not; but they were living there at the time of the accident.
267. *Mr. Murphy.*] Did you always suppose Leighton was the owner of the property? Yes, I always thought so. If a person built a mill and occupied it in those days so long as he did it must have been his own. He only had to ask for the land to get it in those days.
268. *Mr. Thompson.*] Was the land enclosed in any way? Not to my knowledge.
269. You do not remember it? I do not.

Mr. Michael
Farrell.
8 June, 1880.

Mr. Peter Martin called in and examined:—

270. *Chairman.*] Are you a native of the Colony? Yes.
271. Did you know John Leighton? Yes; he went by the name of Jack the Miller.
272. Had he a mill at Miller's Point? Yes, he had a wooden windmill; you had to go up to it by ladders.
273. Were you in the habit of going there? I was.
274. Do you know whether Leighton and his family lived on that land? That I cannot positively say, but when we went there to get corn ground Mr. Leighton was always there.
275. Do you know what area of land Leighton occupied at Miller's Point? I do not.
276. Was the land enclosed in any way? I can recollect an old fence there; it was not very old in those days.
277. *Mr. Thompson.*] Enclosing the land the mill stood on? No, not the land the mill stood on; it was below the mill.
278. *Chairman.*] Did you ever know of Leighton having lived anywhere else? Not to my knowledge; I was only eleven years of age at the time.
279. You do not remember him living at the Flagstaff Hill? I cannot positively say.
280. Do you remember the house that Leighton built on the land where the mill was? I saw a small house there, but I do not remember what the size of the house was or what it was built of.
281. Did you ever see Leighton at work there? Yes, I have seen him come and take the bag from me and my brother.
282. Did he do any other kind of work? Nothing but the grinding that I saw.

Mr. Peter
Martin.
8 June, 1880.

- Mr. Peter Martin.
8 June, 1880.
283. *Mr. Murphy.*] Did you always suppose Leighton to be the owner of the land? Yes, and so did my father. I have often heard him speak of him; he used to call him Jack the Miller.
284. You have heard your father say he was the owner of the property? Yes, I have heard him say it was granted to him.
285. Do you recollect this land being partly enclosed with a stone wall? I recollect a rubble wall being there.
286. That enclosed part of the land that Leighton held possession of? No doubt it did, but I do not know the extent of his ground.

Mr. John Bolton called in and examined:—

- Mr. John Bolton.
8 June, 1880.
287. *Chairman.*] Are you a native of this Colony? Yes.
288. Were you born in Sydney? Yes, on the Rocks in Princes-street.
289. Do you know Miller's Point? Yes.
290. Do you know from whence it derived its name? From Jack the Miller—John Leighton.
291. Did you know John Leighton? Yes.
292. Did you know that he had a mill on certain land at Miller's Point? Yes.
293. Whereabouts is the land on which the mill stood? The highest on to the road going up to Miller's Point now; as near the road as possible it was. There were two other mills stood away back, but I never saw them working; they were different mills to his.
294. Were they Government mills? I do not know.
295. Where did they stand? More towards the Point—towards Cockle Bay.
296. Were they windmills? Yes.
297. Do you know whether Leighton lived on that particular property? Yes; the house he lived in is there at the present time.
298. I suppose you do not know the area of land he occupied? No.
299. Do you know whether the land was enclosed or not? I fancy there was a rubble stone wall at the back of the mill, a good distance off it, and a fence where the house is now. The house he lived in stands back 50 or 60 feet from Moore's Road now. The south side, next to the road that goes to Bettington's wharf, was not enclosed; it was all rocks—a cart could not go up.
300. Was the property reputed to be the property of Leighton? I could not undertake to say.
301. Did you understand it to be his own private property? I was too young at that time to know anything about that.
302. How old were you? Twelve or fifteen.
303. Do you remember Mr. Leighton's death? Yes, but I could not tell you what year it took place in. I remember the circumstance quite well; he fell down the stairs of the mill, 30 feet high I suppose. It was one of those mills that travelled round on a spindle, and the stairs let down from the mill. The other two mills were not the same shape.
304. Was Leighton a married man? He had a wife and two sons and two daughters.
305. Do you know whether they lived on this property after his death? Yes, for a time after his death, and then they went to live at a property they had at Princes-street. The mill stood for ten or twelve years after his death.
306. Did any one else take possession of the mill? I do not remember it. The mill worked very little after his death. David and Joseph Leighton I knew well.
307. Which was the elder? David.
308. *Mr. Murphy.*] Leighton exercised the right of ownership over the property, as far as you know? Yes; he lived there from the time I can first remember till the time of his death.
-

PETITION OF MRS. MARY JONES.

APPENDIX.

[To the Evidence of John Williamson, Esq., 19 May, 1880.]

A 1.

The Colonial Secretary to Mr. David Leighton.

Sir,

Colonial Secretary's Office, Sydney, 10 April, 1829.

With reference to your petition, received the 2nd instant, for a grant of your premises in Darling Harbour, I am directed by His Excellency the Governor to transmit you the accompanying description of the boundaries of the same, but to inform you that no deeds can be prepared until the arrangements now in progress are completed.

I am, &c.,

ALEX. McLEAY.

Bounded on the north by Darling Harbour three hundred and thirty links, and on the east by a line five hundred and thirty links; on the south and south-west by the Mill Road to Sydney three hundred and forty links; and on the west by two lines to Darling Harbour seven hundred and twenty links, containing one acre two roods and thirty-nine poles.

A 2.

15 June, 1813. Sale and transfer of a Grist Post Mill, from Mr. Nathaniel Lucas to Messrs. Wm. Wall and John Leighton.

This indenture had made and concluded this fifteenth day of June in the year of our Lord one thousand eight hundred and thirteen between Nathaniel Lucas of Sydney on the one part and Mr. William Wall of Sydney gentleman and Mr. John Leighton of the same place on the other part as follows Whereas the aforesaid Nathaniel Lucas is seized and possessed of a grist post mill with the apparatus and appurtenances thereto appertaining situate at Phillip Point Sydney in the territory of New South Wales aforesaid together with three-quarters of an acre of ground thereto belonging and attached and immediately occupied and enjoyed therewith as member of and appurtenant thereto by the said Nathaniel Lucas his heirs executors and administrators And the said Nathaniel Lucas being desirous to sell the same Mr. William Wall and Mr. John Leighton of Sydney aforesaid have agreed to become the purchasers Now this indenture witnesseth that the said Nathaniel Lucas for and in consideration of the sum of four hundred pounds of lawful money of Great Britain to him in hand fully paid the receipt whereof in every part he doth hereby acknowledge hath sold bargained assigned and transferred unto the said William Wall and John Leighton their executors administrators and assigns the said post mill with its apparatus and appurtenances thereunto belonging And also the said three-quarters of an acre of ground hereinbefore expressed to be enjoyed by the said William Wall and John Leighton and their executors administrators and assigns And the said Nathaniel Lucas doth hereby declare that he hath never executed any deed of gift grant mortgage or sale unto any person or persons whatsoever or whomsoever and that he will truly warrant and defend the right of possession unto the said William Wall and John Leighton their executors administrators and assigns in the full possession and enjoyment as held and enjoyed by him the aforesaid Nathaniel Lucas against any person or persons claiming or to claim for ever against the said William Wall and John Leighton their executors administrators or assigns In witness whereof we have hereunto set our hands and seals (no stamps being used in the Colony) the day and year above written.

Signed sealed and delivered in the presence of,—

JAMES VANDERCOM.
W. E. BENNETT.

NATHANIEL LUCAS. (L.S.)
WILLIAM WALL. (L.S.)
JOHN LEIGHTON. (L.S.)

Registered in the Judge Advocate's Office, Sydney, 28th August, 1813, No. 1,067.

JAMES J. FOSTER,

Principal Clerk.

A 3.

Dated 7 March, 1876. Mr. David Leighton to Mrs. Mary Jones. Conveyance.

This indenture made the seventh day of March in the year of our Lord one thousand eight hundred and seventy-six between David Leighton of Aborombie River but now of 542 Bourke-street Sydney in the Colony of New South Wales miller of the one part and Mary Jones formerly of Bargo but now of Sydney in the said Colony widow of the other part Whereas John Leighton formerly of Sydney miller departed this life in or about the month of July one thousand eight hundred and twenty-six leaving the said David Leighton his eldest son heir-at-law him surviving And whereas the said John Leighton was at the time of his death seized of or well entitled to certain pieces of land hereinafter mentioned situated in the city of Sydney together with certain promises from the Government of New South Wales for certain grants of pieces of land which had not been completed at the time of the death of the said John Leighton And whereas the said David Leighton has contracted and agreed with the said Mary Jones for the absolute sale to her of all his right title and interest to any real estate hereinafter mentioned or any personal estate whatsoever which he was or might have been entitled to as eldest son and heir-at-law of the said John Leighton at or for the sum of ten pounds Now this indenture witnesseth that in pursuance of the said contract and in consideration of the sum of ten pounds of lawful British money in hand paid by the said Mary Jones to the said David Leighton the receipt whereof is hereby acknowledged he the said David Leighton doth hereby grant bargain sell alien release transfer and convey unto the said Mary Jones her heirs executors administrators and assigns all those pieces or parcels of land situate in Cumberland-street Sydney at the corner of Frazer's land and formerly occupied by David B. Long And also all that property situate in Gloucester-street known as the "Whale Fishery Public House" then occupied by Jasper Tunn And also all those pieces or parcels of land situate at Miller's Point Sydney And also all those pieces or parcels of land situate in Prince-street and Cumberland-street Sydney And also all that piece or parcel of land situate in George-street Windsor opposite "Freeman's Cricketers' Arms" and known by the name of the "Goat House" Together with all houses lands messuages and premises hereby described or any part thereof belonging or in anywise appertaining And all the estate and interest claim and demand of him the said David Leighton in or to the said hereditaments and premises or any part thereof To have and to hold the said hereditaments and premises unto the said Mary Jones her heirs and assigns for ever And this indenture also witnesseth that in further pursuance of the said agreement and for the consideration aforesaid he the said David Leighton doth hereby sell assign transfer and set over unto the said Mary Jones her heirs executors administrators and assigns all his right title interest benefit claim and demand he may have or be entitled to under the promises of grants made by the Government of New South Wales to the said John Leighton deceased or any payment allowance or consideration which he would or might be entitled to as aforesaid and all the estate and interest of the said David Leighton in to or out of the said premises hereby sold and assigned or intended so to be And the said David Leighton for himself his heirs executors and administrators hereby covenants with the said Mary Jones her heirs executors administrators and assigns that he the said David Leighton now hath good right full power and absolute authority to grant convey and assure the said hereditaments and premises and every part thereof unto the said Mary Jones her heirs and assigns free from all incumbrances And that it shall be lawful for the said Mary Jones her heirs executors administrators and assigns at all times hereafter to hold and enjoy the said hereditaments and premises respectively and receive the rents and profits thereof and every part thereof to and for her own absolute use and benefit And that the said David Leighton his executors administrators and assigns and every person claiming under him or them will at all times upon the request and at the costs of the said Mary Jones her executors administrators and assigns do make and perfect all acts for more perfectly assuring the said hereditaments and premises as by the said Mary Jones her heirs executors administrators and assigns or her or their counsel in the law shall be required or advised In witness whereof the said parties to these presents have herunto set their hands and affixed their seals the day and year first above written.

DAVID LEIGHTON. (L.S.)

Signed sealed and delivered by the said David Leighton in the presence of—

JOHN WILLIAMSON, Solicitor, Sydney.

Received

Received the day and year first within written of and from the within-named Mary Jones the sum of (£10) ten pounds being the full consideration money in and by the foregoing indenture expressed to be paid by her to me.

Witness—JOHN WILLIAMSON.

DAVID LEIGHTON.

Received into the Office for the Registration of Deeds &c. at Sydney this twenty-ninth day of March A.D. 1876 at twenty-five minutes to twelve o'clock in the forenoon from William John West a true copy of the within deed verified by the said William John West and numbered 4 Book 158.

C. J. MUDDLE, Deputy Registrar General.

We hereby certify that the three preceding pages contain a true copy of the original deed of conveyance of which it purports to be a copy the same having been carefully compared and examined therewith by us this twenty-ninth day of May, A.D. 1880.

WILL. J. WEST, } Clerks to John Williamson, Solicitor, Williamson's
J. A. FLYNN, } Chambers, King-street, Sydney.

1879-80.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION BILL.
(MESSAGE No. 25.)

Ordered by the Legislative Assembly to be printed, 4 March, 1880.

AUGUSTUS LOFTUS,
Governor.

Message No. 25.

In accordance with the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to provide for the acquisition by Government of Lands for Public Purposes.

Government House,
Sydney, 3 March, 1880.

1879-80.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MR. AUSTIN FORREST WILSHIRE.

(PETITION OF.)

Received by the Legislative Assembly, 18 May, 1880.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Austin Forrest Wilshire,—

SHOWETH AS FOLLOWS:—

In the year one thousand eight hundred and five my father, Mr. James Wilshire, established a fellmongery and a manufactory of leather, soap, candles, parchment, &c., on a spot outside of what was then called the Camp of Sydney. A grant of an adjacent piece of land was subsequently made to my father by Governor Macquarie for the especial purpose of extending the manufacture of leather in this Colony, upon which my father carried on the business of a tanner, without any complaint being made against the establishment until his death, which occurred in the year one thousand eight hundred and forty. The tannery and its appurtenances fell to the share of my brother, the late Mr. James Robert Wilshire and myself, by whom in fact it had been principally managed for some time previously. The tannery was in full operation in the year one thousand eight hundred and forty-nine, and in the month of October in that year the Act 13 Victoria number 42 was passed, coming into operation on the first day of January, one thousand eight hundred and fifty, and directing that after the lapse of ten years from the latter date various trades, among others that of tanning and currying, should not be carried on within the limits of the city of Sydney.

As originally introduced, the Act did not include tanning and currying among the prohibited businesses, but an alteration was made in the Bill during its passage through your Honorable House so as to include them. My brother and I were only warned of the intended prohibition on the day that the alteration for that purpose was made, and had but time to prepare a hasty Petition against such prohibition. But our representations were unheeded, and the Bill in its altered shape was hastily passed the same evening. It so far came into operation on the first day of January, one thousand eight hundred and fifty, that the ten years allowed for the removal of tanneries, &c., began to run from that date. Foreseeing the ruinous losses which the enforcement of this law would entail upon us, my brother and myself petitioned Parliament for the amendment of such law by the exemption of tanning currying from its operation.

Other Petitions on the same subject were presented, and a proposition for the amendment of this Act was actually before Parliament. The whole matter was referred to a Select Committee of the Legislative Assembly on the twenty-ninth day of February, one thousand eight hundred and sixty, but the proceedings of this Committee were stopped by a prorogation. In October, 1860, the subject was revived, and another Committee was appointed, but the action of this second Committee was stayed by a dissolution of the Assembly.

A third Committee was named in March, 1861, which shared the fate of its predecessors, its proceedings being stopped by prorogation.

In August, 1862, a fourth Committee was appointed, and on the nineteenth day of September, in the same year, a report was brought up from this Committee. They considered it undesirable to have the business of tanners and curriers carried on within the limits of the city of Sydney, "and were therefore not prepared to recommend any relaxation of the provisions of the Act 13 Victoria, No. 42." This was in effect the whole of their report. It left the question of compensation wholly untouched. In the meantime (in the year 1860) my brother had died, and on the division of our properties his interest in the tannery passed to myself, a large allowance being made for it to his family in adjusting such division. From various causes my claim remained in the background until March, 1865, when I petitioned the Legislative Assembly to take it into consideration. My Petition, in accordance with the rules of the House, was nothing more than a dry statement of the principal facts, but its object was to obtain some pecuniary compensation for the very heavy losses to which the action of the Legislature had subjected me—losses which if I had had no other resources would have reduced me from comparative affluence to absolute penury, and which as it is have entailed little short of utter ruin. It was no longer a question with me as to whether I should be compelled to abandon a lucrative business (for this in obedience to the law I had already done), but whether the representatives of the people who had deemed it necessary to decree such abandonment should not, as has hitherto been the rule in all such cases as mine, relieve me from at least

least some portion of the difficulties created by their decree. A Select Committee was appointed to consider my application. I laid before the Committee various documents showing the nature and extent of the losses to which I had been subjected. I proved that the total profits of the business for six years, from 1852 to 1857, were ten thousand three hundred and six pounds fourteen shillings and five pence, giving an average profit per annum during that period of one thousand seven hundred and seventeen pounds fifteen shillings and nine pence. I proved that in 1843 the land with the tannery upon it was estimated to be worth at least six thousand pounds, and that upon the stoppage of the tannery it had become depreciated in value at least one half; and on the eighth day of June, 1865, the Committee reported to your Honorable House that my case was one which "deserved to be taken into consideration by the Government." Nothing further was done on this occasion.

My brother, the late James Robert Wilshire, died in the year 1860, and I then became the sole proprietor of the tannery, having allowed the sum of five thousand one hundred and seventy-two pounds in adjustment of account with the representatives of my deceased brother, which sum was much beyond the market value of the property with the tannery closed, but was agreed to by me in the expectation of fair compensation being made by the Government.

In the year 1868 I published a statement of my case in the form of a letter to Sir James Martin, and the result was that the Government placed upon the Estimates the comparatively small sum of two thousand pounds as compensation to me; but your Honorable House, in Committee of Supply, on the second day of April, 1868, refused to pass the item by a majority of sixteen against nine, but several members who voted in the majority subsequently assured me that had they been more fully informed about the matter they should have voted differently. Since that time I have fully experienced the bitterness of hope deferred "which maketh the heart sick," and I have pressed upon the Members of many successive Governments a claim which if it has become stale is no fault of mine, and which in justice to my family I can never abandon while my life lasts, and I now appeal to your Honorable House in the hope that you will not allow a grievous wrong to remain longer unredressed.

Your Petitioner therefore humbly prays that your Honorable House will be pleased to take his case into your favourable consideration, and grant your Petitioner such relief as your Honorable House may deem meet.

And your Petitioner, as in duty bound, will ever pray.

A. F. WILSHIRE.

1879-80.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

BUTCHERS' SHOPS.
(PETITION FROM CITIZENS OF SYDNEY.)

Received by the Legislative Assembly, 10 June, 1880.

To the Honorable the Legislative Assembly, in Parliament assembled.

The Petition of the undersigned Citizens of Sydney beg to bring under the notice of your Honorable House that butchers' shops are permitted to be open on Sundays for trading purposes, and compelling the enforced labour of a hardworking portion of the community, namely, journeyman butchers; and as it is not necessary for the public good, but on the contrary has a most demoralizing effect, we pray your Honorable House to pass a law enforcing the closing of butchers' shops from Saturday night to Monday morning.

And your Petitioners, as in duty bound, will ever pray.

[*Here follow 411 signatures.*]

1879-80.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ANIMALS PROTECTION BILL.
(PETITION FROM MAYOR AND OTHER RESIDENTS OF WEST MAITLAND.)

Received by the Legislative Assembly, 17 June, 1880.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned,—

HUMBLY SHOWETH:—

1. That the attention of your Petitioners has been engaged by a Notice tabled by an Honorable Member of your Honorable House to go into Committee to consider the expediency of bringing in a Bill to protect birds and animals.

2. That your Petitioners, influenced by a surmise that the deliberations of such Committee may terminate in a desire to alter the present law for the protection of birds and animals, would respectfully submit for your favourable consideration certain alterations which may be thought desirable.

3. That an experience of the habits of feathered game in this Colony has taught your Petitioners that the breeding season does not commence until and after the month of September; and that the progeny of such game is not fully developed and strong on the wing until the end of the month of March.

4. That, in the opinion of your Petitioners, the omission of the mention of quail in the Schedule to the existing Game Act was judicious, inasmuch as the habits of quail are known to be migratory upon well recognized authorities.

Your Petitioners would therefore respectfully urge upon your favourable consideration that the most suitable season for the protection of game from destruction would be from the beginning of the month of September until the end of the month of March; and that the migratory habits of quail render it unnecessary that they should be protected, and pray your Honorable House to make provisions accordingly.

And your Petitioners, as in duty bound, will ever pray.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GRASSHOPPER PLAGUE.

(PETITION FROM INHABITANTS OF SOUTHERN RIVERINA.)

Received by the Legislative Assembly, 17 March, 1880.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned inhabitants of Southern Riverina, in the Colony of New South Wales,—

RESPECTFULLY SHOWETH:—

- (1.) That your Petitioners are residents in that portion of the Colony known as Southern Riverina.
- (2.) That your Petitioners are dependent for their support either directly or indirectly upon the prosperity of the pastoral and agricultural interests in the said district of Southern Riverina.
- (3.) That your Petitioners view with serious apprehension the threatened extinction of the interests before mentioned, in consequence of the ravages of the insect known as the grasshopper.
- (4.) That your Petitioners can vouch for the fact that formerly only a few of these insects were to be seen each season, and no serious inconvenience or loss was then felt, but of late years they have appeared in myriads and have occasioned enormous losses.
- (5.) That your Petitioners have known many instances of individual loss arising from the total destruction of pastures, cultivated crops, and gardens, by these pests, almost incredible to those not familiar with the extent of the desolation they cause, and the total of which losses really amounts to a public calamity.
- (6.) That your Petitioners ascribe the surprising increase in the number of these insects to the destruction in season and out of season of the native birds—their natural enemies.
- (7.) That your Petitioners therefore humbly pray that you will cause a special enactment to be passed into law during the present session of Parliament, prohibiting the destruction in any part of Southern Riverina of the following birds or their eggs for a period of three years, namely—the emu, turkey, ibis, native companion, wild duck, magpie, and such other birds as your Honorable House may in its wisdom think fit to preserve for your Petitioners' relief.

And your Petitioners will ever pray, &c., &c., &c.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LICENSING BILL.

(MESSAGE No. 32.)

Ordered by the Legislative Assembly to be printed, 13 April, 1880.

AUGUSTUS LOFTUS,

Governor.

Message No. 32.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to provide for the establishment of General Licensing Courts and for the regulation of Licensed Trades.

Government House,

Sydney, 13 April, 1880.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LICENSING BILL.

(PETITION IN FAVOUR OF—MINISTER AND OTHERS OF ST. BARNABAS' CHURCH.)

Received by the Legislative Assembly, 27 May, 1880.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Minister and others of St. Barnabas' Church,—

HUMBLY SHOWETH :—

That your Petitioners having for many years observed the evils arising from defective licensing laws, desire to express their approval of the measure introduced by the present Government as an improvement of the laws now in force, and would humbly pray your Honorable House, in Parliament assembled, to pass the said measure into law.

And your Petitioners, as in duty bound, will ever pray.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LICENSING BILL.

(PETITION IN FAVOUR OF—MEMBERS AND FRIENDS OF THE INDEPENDENT ORDER OF GOOD
TEMPLARS UNDER THE RIGHT WORTHY GRAND LODGE OF THE WORLD, AND OTHERS.)

Received by the Legislative Assembly, 15 June, 1880.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South
Wales, in Parliament assembled.

The Petition of the undersigned Members and Friends of the Independent Order of Good Templars,
under the jurisdiction of the Right Worthy Grand Lodge of the World, and others residing at
Rocky Mouth, Maclean, and other parts of the Lower Clarence,—

HUMBLY SHOWETH :—

That your Petitioners have been assiduously striving for the diminution of drunkenness and
the numerous evils arising therefrom ; and fully recognizing the many glaring defects of the existing liquor
traffic, hail with satisfaction the efforts of the Government to reform the present licensing laws. That
whereas the houses licensed for the sale of intoxicating drinks are presumably so licensed for the convenience
and accommodation of the public, and, moreover, that the cost of the crime, pauperism, and other con-
comitant evils arising from such sale has to be borne by the people ; your Petitioners, therefore, while
recognizing in the new Licensing Bill now before your Honorable House many improvements as compared
with the existing laws there anent, humbly submit the following amendments for your earnest consideration
and approval, viz. :—

- 1st. That the proposed licensing Boards be constituted on an elective in contradistinction to a
nominee basis, and that the principle of " local option " be strictly adhered to in respect to the
granting of licenses and transfers, and by which any licensing district shall have the power to
veto the traffic in their midst ; also, to make the necessary provisions for the faithful carrying
out of these fundamental principles.
- 2nd. That, with the view of preventing the desecration of the Sabbath day and the midnight
drinking practices and orgies that now prevail to such an alarming extent, provision be made
for the entire closing of all public-houses on Sundays, and on the other days of the week at
not later than 10 o'clock p.m.
- 3rd. That clauses 46 and 47 be struck out, with a view of effectually preventing the pernicious
practice that obtains in the transfer of licenses, such being a privilege which has hitherto been
prostituted for the purpose of opening up new drinking shops, some of them of the lowest
type, in neighbourhoods where they have not been asked for nor required.
- 4th. That clause 53 be amended by striking out " twelve years " and substituting " sixteen years," so
that no youth under the latter age shall be supplied with intoxicating drinks under any pre-
text whatever at such licensed houses.

We humbly pray that you will take the foregoing premises into your most favourable consideration,
and that they, with other amendments and additions as you may deem advisable in the interests of humanity
and justice, be embodied in the new Licensing Bill, and passed into law with the least possible delay.

And your Petitioners, as in duty bound, will ever pray.

[*Here follow 23 signatures.*]

Similar Petitions were received :—

1879-80.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LICENSING BILL.

(PETITION FROM J. B. OLLIFFE, CHAIRMAN OF THE LICENSED VICTUALLERS' ASSOCIATION OF NEW SOUTH WALES.)

Received by the Legislative Assembly, 20 May, 1880.

To the Honorable Sir George Wigram Allen, Knight, Speaker of the Legislative Assembly of New South Wales, and to the Members of the said Legislative Assembly.

The Petition of the Licensed Victuallers' Association of New South Wales,—

HUMBLY SHOWETH:—

That at a public meeting held by your Petitioners at the Guild Hall, in the city of Sydney, on the tenth day of May instant, your Petitioners for the first time heard the clauses read of a Bill introduced into your Honorable House, for the purpose of providing "the establishment of General Licensing Courts, and for the regulation of licensed trades"; and that at such meeting it was unanimously resolved to present a Petition to your Honorable House, as to the injurious effects of such a measure as that proposed being passed into law without amendment.

That your Petitioners respectfully ask your serious consideration of the sixth section of the proposed Bill, as to the constitution and composition of Licensing Courts, officers, &c., and ask of your Honorable House that, in lieu of the provisions proposed, the Licensing Court or Board should for the city of Sydney be comprised of the Mayor for the time being of the city, assisted by two of the Police Magistrates and three other gentlemen nominated by the Governor in Council.

That should Honorable Members be opposed to such a constitution being adopted, your Petitioners beg to suggest that the Court should be held and presided over by a responsible and professional gentleman, having powers vested in him analogous to the Recorders for the cities of London or Dublin.

That the tenth clause would be a serious injury to persons holding licenses in country districts, as, under sub-section four, no license could be granted where any retail store existed in the same building, and that the production of plans and skilled witnesses in remote districts would be in most cases an utter impossibility for any ordinary applicant, unless the applicant incurred ruinous expenditure.

That your Petitioners submit the twenty-fourth section of Part two would confer unnecessary and excessive powers to persons, under colour of performing duty in breaking and entering into licensed or unlicensed premises, either by night or day, as they might consider proper.

That under the thirtieth section of Part two, parties therein mentioned are permitted to sell liquor in quantities very little in excess of that for which we are so highly taxed, and that it is not contemplated by the proposed Act to subject these persons to the restrictions imposed on our trade.

That the thirty-fourth clause (of said Part two) clothes the officers therein mentioned with most unusual powers, although the public have no guarantee as to their capabilities for performing the responsible and extra professional duties intended to be vested in them.

That under the thirty-eighth section, your Petitioners submit they would have no certainty of their recovering costs from parties making objections to applicants for licenses; and your Petitioners suggest that, in order to preclude unnecessary objections being made, that all parties at the time of lodging objections should deposit with the officer of the Court a sum of ten pounds each at the least, to provide for the applicant's costs being discharged in event of such objections not being sustained by the Court.

That the increased charge for licenses contemplated by the forty-third clause would, at this depressed period, have a very disastrous effect upon legitimate industry, because a great number of persons connected with the trade and otherwise have, at considerable cost and risk, built and established hotels for public accommodation when no such imposition was contemplated; which, with the additional two shillings per gallon which we are paying on spirits since the commencement of the present year, would cause a considerable reduction in the value of house property to innocent parties.

That we submit the forty-ninth section should be omitted, in order to permit members of the trade to obtain licenses as other ordinary members of our community.

That as the city of Sydney is lighted with gas, and no other traders are compelled by law to keep lamps burning before their houses, we submit the fiftieth clause, so far as it refers to the city, should be omitted, and thus place us in the same position as our other fellow-citizens, and with whom we are equally taxed for lighting the public thoroughfares.

That, so far as country districts are concerned, we believe the spirit of the Act would be more effectually fulfilled by the fifty-fourth section being amended, so as to vest power in any of Her Majesty's Justices to grant certificates authorizing the performances of theatrical or other amusements to be held or exhibited in any licensed house which may be situate in a country district.

That under the one hundred and sixty-fifth clause the power of appeal would be greatly restricted; and we submit that all parties appealing should have the liberty, if they were so advised, of prosecuting their appeals before their Honors the Judges of the Supreme Court.

That the 148th and 149th sections would, if enacted, have a most disastrous effect, not only on persons holding licenses but also on all owners of licensed hotels or other property, and we submit the said sections are very uncertain in meaning and would be oppressive on the subjects of Her Majesty.

That the one hundred and seventy-first section would, if passed, vest in the Court a permission to reject or receive evidence or proof as therein mentioned, and that the vesting of any discretion as contemplated should not be permissive but mandatory.

That, as your Petitioners contribute very largely to the revenue of this territory, and as such revenue is payable by us before we derive any profit from the trade affected by the proposed Bill, we most respectfully pray your Honorable House that the several sections of the proposed Act of Parliament hereinbefore referred to may be amended; and that you may be also pleased to give your Petitioners such further or other relief as to you may seem fit.

And your Petitioners, as in duty bound will ever pray.

J. B. OLLIFFE,
Chairman.

For and on behalf of the said Association.

1879-80.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LICENSING BILL.

(PETITION FROM JOSEPH ORAM, CHAIRMAN OF THE WESLEYAN CONFERENCE OF NEW SOUTH WALES AND QUEENSLAND.)

Received by the Legislative Assembly, 20 May, 1880.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned,—

HUMBLY SHOWETH:—

1. That the Wesleyan Conference for New South Wales and Queensland did, at its Session in January last, appoint a Committee of its Ministerial and Lay Members to take such steps during the current year as to them might seem expedient, with a view to bring about amendments of the present Liquor Licensing Laws of this Colony.

2. That the said Committee, now your Petitioners, through their Chairman, has learned with great satisfaction that a very comprehensive measure for the above-named purpose has been laid by the Government before your Honorable House.

3. Your Petitioners desire especially to express their approval of those clauses of the Bill which make better provision for granting and cancelling licenses, for the due entrance of public-houses by the Police, for an authorized inspection of licensed premises and the liquor sold therein, and of other clauses whose effect must be to prevent such immoralities as abound under the present system.

4. Your Petitioners desire also humbly to suggest the expediency of so amending the Bill that barmaids may not be employed in any City or Town public-house; that bars in public-houses should be altered and improved, with a view to prevent the present obnoxious habit of disorderly persons congregating thereat, to the great danger of the public peace, and that redress should be obtainable in a Court of Justice against any publican who has sold liquor to any customer so as to seriously damage his health and estate.

5. Your Petitioners, therefore, humbly pray that your Honorable House will take the foregoing premises into your favourable consideration, and grant such redress as in your wisdom may seem meet.

And your Petitioners, as in duty bound, will ever pray.

Signed for and on behalf of the said Committee, now your Petitioners,
Sydney, May 20th, 1880.

JOSEPH ORAM, Chairman.

1879-80.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LICENSING BILL.

PETITION FROM VICE-PRESIDENTS AND TREASURER OF THE CITY AND PROVINCIAL LICENSED VICTUALLERS ASSOCIATION.)

Received by the Legislative Assembly, 27 May, 1880.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Humble Petition of the undersigned members of the City and Provincial Licensed Victuallers' Association,—

SHOWETH:—

That your Petitioners have read the Bill recently introduced into Parliament for the establishment of general Licensing Courts and regulation of licensing trades.

That your Petitioners have held a meeting of their members to consider the provisions of the said Bill, and at such meeting it was resolved that a petition should be presented to Parliament, protesting against the Bill becoming law.

That your Petitioners therefore humbly protest against the following clauses in the said Bill, viz.:—

Clause 6. The appointment of the Inspector General of Police as one of the Board, as he would have the power to instruct his subordinates and then sit in judgment on their actions; but your Petitioners would humbly suggest that instead thereof a Recorder or Judge be appointed, similar to the practice in England and Ireland.

Clause 10. Your Petitioners humbly suggest that in sub-clause 4 the provision as to a retail store should not apply to houses in the country parts.

Clause 21. Your Petitioners humbly protest against the appointment of any member of the police force below the grade or rank of a sub-inspector being appointed to any office under this section.

Clause 22. Your Petitioners humbly protest against the power proposed to be given to inspectors to enter any part of any licensed premises, and suggest that the power to enter and search should be limited to the bar where the liquors are sold, or to the cellars where the same are kept. Your Petitioners also protest against the powers given to any inspector to take a list of their stock, and suggest that, owing to the large interests involved and the revenue derived from the duties on spirits, the Government should appoint an analytical chemist to analyze all liquors before they leave the bonded warehouse or wine and spirit merchants' stores, and issue a voucher for same.

Clause 24. Your Petitioners most humbly protest against this clause, as being most arbitrary and despotic.

Part II, Clause 25. Your Petitioners humbly suggest that, in sub-clause 5, liquors should not be allowed to be sold to any civilian under a penalty; and that, in sub-clause 6, liquors should only be sold to members of the club, under a penalty for any breach thereof.

Clause 27. Your Petitioners suggest that the hour of selling be altered from 6 o'clock in the morning to 4 o'clock, as provided for in the 66th section.

Clause 29. Your Petitioners humbly suggest that a holder of a colonial wine license shall not permit wine to be consumed on the premises, and that not less than one pint bottle shall be sold, and the license fee increased to £10.

Clause 30. Your Petitioners humbly protest against the bottle license proposed by this clause, and suggest that no wine and spirit merchant be allowed to sell less than four gallons at one time of the same spirit or liquor to others than licensed victuallers.

Clause 32. Your Petitioners humbly object to this clause requiring notice of intended applicants for licenses having to post notices of their intention on their doors, and inserting the same in newspapers. And your Petitioners would also humbly suggest that all board and lodging houses should be licensed, and the keepers be made to contribute towards the revenue.

Clause 34. Your Petitioners humbly protest against this clause, as being antagonistic to the interests of the licensed victuallers, and tending to decrease the number of first-class hotels, and to the increase of low public-houses or drinking shops.

- Clause 38. Your Petitioners humbly object to the five sub-clauses of this section, and to the seventh ground of objection to the granting of a license.
- Clause 43. Your Petitioners humbly protest against this clause, and suggest that £25 per year ought to be the standard fee for a license, as in the neighbouring Colonies. That no sliding scale of fees will work successfully. That bush hotels should pay a less license fee, and the distance be four miles apart. And that no fee be charged for a booth license, as holding a publican's license, the holder ought to have the privilege of using his license at races or other places without a fee.
- Clause 47. Your Petitioners humbly protest against the power given to the owner of premises being allowed to object to the removal of a license, as great hardship might be cast upon a publican whose lease of premises might expire, and having paid for his license, have to forfeit it, unless he could get the consent of his landlord to remove it.
- Clause 49. Your Petitioners humbly protest against this clause, as a loan may be made by a publican to a relative, another publican, which would give him an interest in the house and license; or a publican may be the holder of a license for one hotel and be the owner of another, and so would have a beneficial interest in each, which would make him liable to a penalty.
- Clause 50. Your Petitioners humbly protest against this clause requiring publicans in the city of Sydney to keep a light burning all night, and humbly suggest that a proviso should be introduced into the clause exempting any publican within the city from keeping a light burning after the hour of closing his hotel.
- Clause 51. Your Petitioners humbly suggest that upon any conviction under this section an informer should get half the fine.
- Clause 60. Your Petitioners humbly suggest that a new clause be inserted as an amendment as follows—the first part of which is objected to, that publicans be able to sue for liquors sold by the bottle or in larger quantities, but not consumed on the premises.
- Clause 66. Your Petitioners humbly suggest that the hours for selling on a Sunday should be the same as those mentioned for Good Friday and Christmas Day, and that liquors be allowed to be consumed on the premises.
- Clause 67. Your Petitioners humbly suggest that the distance for travellers be reduced to one mile, and that it should not be compellable to prove a customer as a *bonâ fide* traveller by the person selling.
- Clause 73. Your Petitioners humbly suggest that brewers should not be allowed to sell less than ten gallons of beer at one time to others than licensed victuallers.
- Clause 95. That the objections against a publican's being competent to hold a partnership in any business, and hold as many privileges as any other tradesman, your Petitioners humbly deem most oppressive.
- Clause 148. Your Petitioners also humbly protest against this clause, as being most arbitrary and despotic; and they wish to draw the attention of the Legislature to this fact,—that if a publican should be convicted of the most trifling offences under the Act on three occasions for a period of three years previously he becomes disqualified from holding a license for a period of three years, and this disqualification he would be subject to if convicted three times for not having a light over his door.
- Clause 157. Your Petitioners humbly suggest that the police acting under this clause should wear some badge or other mark of distinction.
- Clause 159. Your Petitioners humbly suggest that this clause be expunged, as they think they ought not to be made the subjects of any proceeding under this clause any more than any other tradesman.
- Clause 160. Your Petitioners humbly suggest that the words "to remain in or knowingly harbouring" should be inserted in this clause.

Your Petitioners therefore humbly pray that your Honorable House will take their case and the several matters referred to in this Petition into your favourable consideration, and afford them such relief and assistance as to your Honorable House shall seem meet.

And your Petitioners, as in duty bound, will ever pray, &c.

(For and on behalf of the City and Provincial Licensed Victuallers' Association.)

Dated the 27th day of May, 1880.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LICENSING BILL.

(PETITION FROM LICENSED VICTUALLERS, HOUSEHOLDERS, AND INHABITANTS OF DENILIKUIN)

Received by the Legislative Assembly, 8 June, 1880.

To the Honorable Sir George Wigram Allen, Knight, Speaker of the Legislative Assembly of New South Wales, and to the Members of the said Legislative Assembly.

The Petition of Licensed Victuallers, Householders, and Inhabitants of Deniliquin,—

HUMBLY SHOWETH :—

That your Petitioners have read a Bill introduced into your Honorable House for the purpose of providing "the establishment of General Licensing Courts, and for the regulation of licensed trades."

That your Petitioners submit that as they live in remote districts the above Bill, if passed into law, would be very detrimental to their interests and business transactions and cause great inconvenience and annoyance to travellers or others passing through or living in their district.

That your Petitioners respectfully ask your serious consideration of the sixth section of the proposed Bill, as to the constitution and composition of Licensing Courts and officers, and ask of your Honorable House that, in lieu of the provisions proposed, the Licensing Court or Board for this and other country districts should be composed of two of the Police Magistrates and three other gentlemen nominated by the Governor in Council.

That should Honorable Members be opposed to such a constitution being adopted, your Petitioners beg to suggest that a Court should be held and presided over by one of the District Court Judges.

That the tenth clause would be a serious injury to us, as, under sub-section four, no license could be granted where any retail store existed in the same building, and that the production of plans and skilled witnesses in remote districts would be in most cases an utter impossibility for any ordinary applicant, unless the applicant incurred ruinous expenditure.

That if such clause be passed no storekeeper could accommodate travellers, and that in very remote districts it would be impossible for publicans to live from the profits of an hotel business or publican's license unless he kept a store to assist him in his business.

That your Petitioners submit the twenty-fourth section of Part Two would confer unnecessary and excessive powers to persons, under colour of performing duty, in breaking and entering into licensed or unlicensed premises, by night or day, as they might consider proper.

That the thirty-fourth clause (of said Part Two) clothes the officers therein mentioned with most unusual powers, although the public have no guarantee as to their capabilities for performing the responsible and extra professional duties intended to be vested in them.

That under the thirty-eighth section your Petitioners submit they would have no certainty of their recovering costs from parties making objections to applicants for licenses; and your Petitioners suggest, that in order to preclude unnecessary objections being made, that all parties at the time of lodging objections should deposit with the officer of the Court a sum of ten pounds each at the least, to provide for the applicant's costs being discharged in event of such objections not being sustained by the Court, and also leave their addresses, and that no person unless a ratepayer of the district should be permitted to lodge objections.

That the increased charge for licenses would, at this depressed period, have a very disastrous effect upon our trade, where in country districts trade is fluctuating; and as several of your Petitioners and others not connected with the trade and otherwise have, at considerable cost and risk, built and established hotels for public accommodation when no such imposition or restrictive legislation was contemplated, and, coupled with the additional two shillings per gallon which we are paying on spirits since the commencement of the present year, would cause a considerable reduction in the value of hotel and store property to innocent parties.

That we submit the forty-ninth section should be omitted, in order to permit members of the trade to obtain licenses as other ordinary members of our community.

We submit that in this and other country districts the spirit of the Act would be more effectually fulfilled by having the fifty-fourth section amended, so as to vest the power in any of Her Majesty's Justices to grant certificates authorizing the performances of theatrical or other amusements to be held or exhibited in any licensed house which may be situate in a country district.

That

That under the one hundred and sixty-fifth clause the power of appeal would be greatly restricted ; and we submit that all parties appealing should have the liberty, if they were so advised, of prosecuting their appeals before their Honors the Judges of the Supreme Court.

That the 148th and 149th sections would, if enacted, have a most disastrous effect, not only on persons holding licenses but also on all owners of licensed hotels or other property, and we submit the said sections are very uncertain in meaning and would be oppressive on the subjects of Her Majesty.

That the one hundred and seventy-first section would, if passed, vest in the Court a permission to reject or receive evidence or proof as therein mentioned, and that the vesting of any discretion as contemplated should not be permissive but mandatory.

Your Petitioners therefore pray that, as they contribute very largely to the revenue of this territory, and as such revenue is payable by many of us before we derive any profit from the trade intended to be affected by the proposed Bill, and as a considerable number of your Petitioners have during the most inclement seasons of the year to travel long distances from our homes, we most respectfully pray of your Honorable House that the several sections of the proposed Act of Parliament may be amended ; and that you may be also pleased to give your Petitioners such further or other relief as to you may seem fit.

And your Petitioners, as in duty bound, will ever pray.

1879-80.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

LICENSING BILL.

(PETITION FROM CHAIRMAN OF A PUBLIC MEETING HELD AT ORANGE.)

Received by the Legislative Assembly, 24 June, 1880.

The Honorable the Speaker and Legislative Assembly, Sydney.

The humble Petition of the undersigned,—

RESPECTFULLY SHOWETH :—

That your Petitioner was the duly constituted Chairman of a Public Meeting held in the School of Arts, Orange, on Monday, 21st June, 1880, at which the following resolutions were unanimously carried :—

1. That, in the opinion of this Meeting, the Licensing Bill introduced into Parliament is unsatisfactory ; inasmuch as it does not provide for the entire closing of all public-houses on Sundays ; makes no provision for any diminution in the liquor traffic, but introduces a single-bottle system, which would probably grow to gigantic proportions ; and generally would make no thorough change in the existing law.

2. That inasmuch as the ancient and avowed object of licensing the sale of intoxicating liquors is to supply a supposed public want without detriment to the public welfare, this Meeting is of opinion that a legal power of restraining the issue or renewal of licenses should be placed in the hands of the persons most deeply interested and affected, namely, the inhabitants themselves, who are entitled to protection from the injurious consequences of the present system, by some efficient measure of "local option" through the ballot box.

3. That the foregoing resolutions be embodied in a Petition to the Legislative Assembly, and signed by the Chairman on behalf of this Meeting.

Your Petitioner therefore humbly prays your Honorable House to take this Petition into your earnest consideration.

And your Petitioner will ever pray, &c.

JOSIAH PARKER, J.P.

1879.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

PUBLICANS LICENSING ACT.

(PETITION—GENERAL ASSEMBLY OF THE PRESBYTERIAN CHURCH OF NEW SOUTH WALES.)

Received by the Legislative Assembly, 18 November, 1879.

Unto the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the General Assembly of the Presbyterian Church of New South Wales,—

HUMBLY SHOWETH :—

That the General Assembly being met, and duly constituted, adopted the following resolutions in regard to the licensing of public-houses :—

1. That the power of licensing should be transferred to local Boards.
2. That these Boards should have power to reduce, where necessary, and to limit the number of public-houses and in all respects to regulate the liquor traffic, each in its own district.
3. That public-houses should be closed not later than 10 p.m. on week-days, and that on the Sabbath hotels shall supply refreshments only to resident lodgers and *bonâ fide* travellers.

The General Assembly therefore prays the Honorable the Legislative Assembly to take the premises into its favourable consideration in the proposed amendment of the licensing law of the Colony.

And your Petitioners, as in duty bound, will ever pray.

Signed in the name and by the authority of the General Assembly of the Presbyterian Church of New South Wales,—

GEO. GRIMM,
Moderator.JAMES S. LAING,
Clerk.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

PUBLICANS' LICENSING ACT.
(PETITION—CHAIRMAN OF CONGREGATIONAL UNION.)

Received by the Legislative Assembly, 20th January, 1880.

Liquor License Amendment.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the Congregational Union of New South Wales,—

RESPECTFULLY SHOWETH :—

That your Petitioners believe the present licensing system to be extremely defective and a fruitful source of crime, misery, drunkenness, and immorality, as proved by the records of our Police Courts.

They therefore believe it necessary to the welfare of the community that the Act under which publicans' licenses are now granted should be amended in such a manner as :—

1st. To place in the hands of the electors or residents of districts the power to prevent public-houses being forced upon them against their will.

2nd. To compel publicans, like other tradesmen, to close their places of business on the Sunday.

3rd. To suspend the granting of additional licenses for a period of three years.

Lastly, that a thorough system of police supervision be provided for.

Your Petitioners therefore humbly pray that your Honorable House will make such amendment in the present Act as may be deemed necessary to secure the foregoing objects.

And your Petitioners will, as in duty bound, every pray.

Signed on behalf of the Congregational Union of New South Wales.

Sydney, 8th January, 1880.

J. C. KIRBY,
Chairman.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SALE OF LIQUORS LICENSING ACT.
(PETITION FOR AMENDMENT OF—RESIDENTS OF MOLONG.)

Received by the Legislative Assembly, 16 December, 1879.

To the Honorable the Speaker and Members of the Legislative Assembly, in Parliament assembled.

The Petition of the Residents of the District of Molong,—

RESPECTFULLY SHOWETH:—

1. That at a public meeting held at Molong, on the 12th day of November, 1879, it was resolved that in the opinion of such meeting it was desirable that there should be a reform in the "Sale of Liquors Licensing Act"; and that such reform should embody clauses giving to the people a controlling voice, by the institution of elective District Boards, to regulate the granting, renewal, and transfer of publicans' licenses; and that the franchise of the electors be household suffrage.

2. That at such meeting it was further resolved that, in order to strengthen the power of such Board, no new licenses should be granted unless recommended by a two-thirds vote of the electors in the immediate neighbourhood.

3. That a Bill for the purpose of amending the "Sale of Liquors Licensing Act" being urgently desired by the public throughout the Colony, your Petitioners respectfully pray your consideration of the foregoing resolutions.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 98 signatures.]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LICENSING PUBLIC-HOUSES.

(PETITION FROM THE PRESIDENT OF THE SYNOD OF THE DIOCESE OF SYDNEY.)

Received by the Legislative Assembly, 1 July, 1880.

To the Honorable the Speaker and the Members of the Legislative Assembly, in Parliament assembled.

The Petition of the undersigned, the President of the Synod of the Diocese of Sydney, being in
Synod of the United Churches of England and Ireland, in the Colony of New South Wales,—

HUMBLY SHOWETH:—

That your Petitioner views with grave apprehension the evils arising from a continuance of the present system of licensing public-houses.

That your Petitioner prays your Honorable House to pass such measures as in your wisdom may seem fit for the amendment of the same, or for the temporary suspension of licenses in the County of Cumberland.

And your Petitioner will ever pray.

F. SYDNEY,

President of the Synod of the Diocese of Sydney.

1879-80.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MEDICAL BILL.
(PETITION FROM RESIDENTS OF MAITLAND.)

Received by the Legislative Assembly, 5 February, 1880.

To the Honorable the Legislative Assembly of New South Wales.

The Petition of the undersigned Residents of Maitland and surrounding District,—

HUMBLY SHOWETH:—

That your Petitioners pray that in any legislation on medical practice by your Honorable House, the interests of a large and increasing portion of the population who have embraced more economic and modern treatment of disease may be provided for.

That such legislation may not be retrospective, or affect a present class of practitioners of years standing.

That any School of Medicine or Hospital receiving State-aid shall be open to medical students without any stipulation as to their choice of practice.

That any Medical Board formed shall not be exclusive but representative, and that students or persons holding diplomas from accredited Colleges in any part of the world may obtain certificates to practise.

That before any Bill be adopted by your Honorable House, your Honorable House may admit Counsel at the Bar on the subject aforesaid.

And your Petitioners pray that you may be pleased to take the said premises into consideration, and will, as in duty bound, ever pray.

[Here follow 653 signatures.]

1879-80.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MEDICAL BILL.
(PETITION FROM HOMŒOPATHIC PRACTITIONERS.)

Received by the Legislative Assembly, 18 February, 1880.

To the Honorable the Legislative Assembly of New South Wales,

The Petition of the undersigned Homœopathic Practitioners of New South Wales.—

HUMBLY SHOWETH:—

That your Petitioners pray that in any legislation on medical practice by your Honorable House, the interests of a large and increasing portion of the population who have embraced more economic and modern treatment of disease may be provided for.

That such legislation may not be retrospective, or affect a present class of practitioners of years standing.

That any School of Medicine or Hospital receiving State-aid shall be open to medical students without any stipulation as to their choice of practice.

That any Medical Board formed shall not be exclusive but representative, and that students or persons holding diplomas from accredited Colleges in any part of the world may obtain certificates to practise.

That before any Bill be adopted by your Honorable House, your Honorable House may admit Counsel at the Bar on the subject aforesaid.

And your Petitioners pray that you may be pleased to take the said premises into consideration, and will, as in duty bound, ever pray.

[Here follow 9 signatures.]

1879-80.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MEDICAL BILL.

(PETITION RESPECTING—PRESIDENT AND MEMBERS OF THE PHARMACEUTICAL COUNCIL.)

Received by the Legislative Assembly, 9 March, 1880.

To the Honorable the Members of the Legislative Assembly, in Parliament assembled.

The humble Petition of the undersigned President and Members of the Pharmaceutical Council,
representing the Pharmaceutical Society of New South Wales,—

SHOWETH :—

That this Council cannot but observe with much regret and apprehension the introduction of the last paragraph of section three of the Medical Bill introduced by Dr. Bowker, now before Parliament, as materially affecting the established rights, privileges, immunities and customs enjoyed by the chemist and druggist all over the world, by virtue of Pharmacy Acts introduced by various Governments (several of which are enumerated below), and they therefore feel bound to offer it their most strenuous opposition.

That in addition to the above objections your Petitioners feel that, if the said Bill passed as it now stands, the pharmaceutical chemist would be liable to the most vexatious prosecution and constant penalties, injurious to the chemist as well as to the public, seeing that it cannot be denied that, without infringing upon the province of the medical practitioner, the chemist is frequently called upon to prescribe simple remedies, especially to the poor who could not afford medical advice; and in cases of emergency such as poisoning it may safely be contended that it is the chemist's duty to at once administer an antidote, as delay might eventuate in death.

That Pharmacy Acts have been passed in the following countries, viz., in

	A.D.		A.D.		A.D.
Great Britain	1841	New York	1832	Quebec (B.N.A.) ...	1845
France	1803	Germany	1820	Antwerp	1835
Russia	1839	China	1846	Mexico	1843
Norway	1672	Belgium	1641	Portugal	1836
Philadelphia	1820	Poland	1839	Spain	1845

and in Denmark and Switzerland, as well as in the sister Colonies of Victoria and Van Diemen's Land.

That Schools of Pharmacy are being founded in all parts of the civilized world, to extend the knowledge of chemistry, botany, materia medica, practical pharmacy, and toxicology.

Your Petitioners, therefore, humbly pray that a clause may be introduced into the said Bill for the purpose of securing to the pharmaceutical chemist rights and privileges similar to that contained in the Apothecaries Act passed by the Imperial Parliament in 1815, and exempting him in the exercise of his accustomed business from the penalties of that Act; and also that your Honorable House, upon taking the premises into your consideration, will be pleased to insert, after the words "medical services," on the thirty-fourth line of the third section of the said Bill, and in lieu of the remaining portion thereof, the following amendment :—

Provided always and be it enacted that nothing in this Act contained shall extend to prejudice or affect the trade or business of a pharmaceutical chemist in the buying preparing or compounding dispensing and vending drugs medicines and medicinal compounds wholesale or retail but all persons using or who shall hereafter use the said trade or business may carry on the same in such manner and as fully to all intents and purposes as the same trade or business was carried on by chemists and druggists before the passing of this Act.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 6 signatures.]

Sydney, 4th March, 1880.

—

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

—

MEDICAL BILL.

(PETITION FROM RICHARD SADLEIR, R.N.)

—

Received by the Legislative Assembly, 14 May, 1880.

—

To the Honorable the Legislative Assembly, New South Wales.

The humble Petition of Richard Sadleir, R.N., J.P., &c.,—

HUMBLY SHOWETH:—

That the proposed Medical Bill now before your Honorable House is unsuitable to the scattered state of population of this Colony.

That numerous signed Petitions have been presented to your Honorable House, both this and last Session, against said Bill.

That the proposed Council would be partly elective and partly nominated by the retention of the old Board and mode of construction to the exclusion of the lay element, in matters deeply affecting them.

That the proposal to entitle persons who have practised for seven years, and then to undergo an examination when there would be no Board qualified to examine, unless the Board be partly composed of medical men of different Schools of Medicine, and there is no school of medicine established in the Colony,—would be holding out a futile hope to persons who have large constituencies and incurred much expense.

That by the letter (a) in the schedule persons holding diplomas from Homœopathic Colleges would be excluded from practice in New South Wales.

That the Bill would establish a Medical Corporation, all medical men to try misdemeanours possessing no power of committal or otherwise, if so established, should have the lay element in it.

That the proposed scheme of election would secure to Sydney large majorities, and an exclusive Council or Board, and would be better vested in hospitals and infirmaries, wherein the lay element would have a voice and interest in a question deeply affecting them.

Your Petitioner fully acknowledges the necessity of qualification for practitioners, but not to be exclusive to one school of medicine, which at present prevails in all public departments at a heavy cost to the State.

And your Petitioner prays the consideration of your Honorable House to aforesaid premises; and will, as in duty bound, ever pray, &c.

Sydney, May, 1880.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

ST. LEONARD'S ROMAN CATHOLIC SCHOOL LAND
SALE BILL.

THURSDAY, 20 NOVEMBER, 1879.

Present:—

MR. BURNS,

MR. DAY,

MR. FARNELL,

MR. JACOB,

MR. KERR,

MR. THOMPSON.

J. S. FARNELL, Esq., IN THE CHAIR.

H. M. Makinson, Esq., appeared as Solicitor on behalf of the Promoters of the Bill.

The Rev. Joseph Dalton examined:—

1. *Mr. Makinson.*] You are one of the trustees under the indenture of the 9th of January, 1879, mentioned in this Bill? I am.
2. You are aware of the purport of this Bill? I am.
3. It has been brought in at your request, and that of your co-trustees, the Most Reverend Roger Bede Vaughan, Roman Catholic Archbishop of Sydney, and the Reverend James Kennedy? Yes.
4. You know the land alluded to in the Schedule to this Bill? Yes.
5. I believe there is a school for Roman Catholic children built upon this land? Yes; it is a wooden structure which was built some years ago, and it is in a very bad state at present.
6. This Bill contains a recital that "the said land and the said school thereon are by reason of insufficient size and the increase of population in the said borough inadequate to supply the requirements of the Roman Catholic children of the locality." Is that true to your knowledge? It is.
7. The population there has increased fivefold since that school was built? It has increased greatly.
8. In fact, you now have it in contemplation to secure, or have secured, a larger and better site in a more central position? Yes.
9. You wish to sell the old building and land, and to apply the proceeds of such sale, together with other money you are raising, in securing a more suitable site and in the erection of a school? Yes.
10. I believe the land you propose to purchase with the proceeds of the sale of this, and to dedicate for a school, is adjacent to the land which has been secured as the site for a church and a clergyman's residence? Yes.
11. It is a large block surrounded by four streets? Yes.
12. Besides being the trustees of this land, I believe yourself and the Reverend James Kennedy mentioned in this Bill, have charge of all that district or parish? Yes, of St. Leonards and the North Shore.
13. *Chairman.*] You intend, in the event of this Bill passing, to apply the proceeds of the sale of this land to a like purpose to that for which it was granted? Yes, for a similar purpose and no other.
14. This land is too small to afford the accommodation now necessary owing to the increase in population in that part of the district? Much too small.
15. Do your co-trustees concur with you in this application? Entirely; my co-trustee, Father Kennedy, was not aware that the Bill was coming on, or he would have been here to have given his evidence if necessary.

The Rev. J.
Dalton.

20 Nov., 1879.

Henry Massey Makinson, Esq., said :—

- H. M. Makinson, Esq.
20 Nov., 1879.
16. I produce the deed, bearing date 17 May, 1865, mentioned in the preamble. (*The witness produced the same, marked A.*) The purport of that deed is truly stated in the preamble. The Bill recites that the "said Most Reverend John Bede Polding and the said Very Reverend Peter Powell have since both departed this life." That is since the date of this deed. That is within my knowledge. Afterwards Thomas Cooper Makinson, the sole surviving trustee, executed a deed dated 9th January, 1879. That I also produce. (*The witness produced the same, marked B.*) By this indenture Mr. Makinson, in the exercise of his power as trustee, did appoint the Most Reverend Roger Bede Vaughan, Roman Catholic Archbishop of Sydney, and the Reverend Joseph Dalton, and the Rev. James Kennedy, in lieu of the original deceased trustees, and himself as survivor. The land proposed to be sold is not a Crown grant for school purposes, but a private gift by the late Thomas John Fisher, as appears by the first recited deed.
17. *Chairman.*] The present school is only a temporary building, and was erected in 1865? Yes; it is much decayed, and is not of much value. I believe it is still used.
18. Is it necessary to build a new school? It is.
19. And you want a new school on a more commodious site? Yes; in fact they have selected a large piece of land in the centre of St. Leonards, at the intersection of four streets, and it is intended to apply the proceeds of this land with other moneys to the purchase of part of this site and the erection upon it of a school.
20. *Mr. Day.*] What is the value of this piece of land? I cannot say.
21. *Chairman.*] How many feet frontage is there to Mount-street? The area is one rood six perches. The frontage to Mount-street is 95 feet. I think it is worth about £600 or £700.
22. *Mr. Day.*] This land is unfit for the purpose for which it was originally conveyed? I think so; it is not sufficiently large to have a playground or a separate school for girls. The place we have now secured for the church and school contains in all 3 acres.
23. *Mr. Jacob.*] Is it near the present school? It is more central than this—it is part of Mr. Lord's subdivision.
24. *Chairman.*] It is not 200 yards away I think? No.
25. *Mr. Day.*] What were the trusts originally? The trusts are truly recited in the preamble—"upon trust for the erection thereon of a school for the education of Roman Catholic children."
26. The reason of your desire to sell this land is that it is not sufficiently large for the purpose? It is not sufficiently large for the purpose, and it is necessary now to build a good school. This land is not sufficient.
27. You think by the sale of this land you will be enabled to purchase a better site? They have purchased it, but have not sufficient funds; and the proceeds of the sale of this land will go a small way towards the purchase of a better site and the erection of a more suitable building.
28. Then it is simply an alteration of the trust to provide a better site? It is simply transferring the trust property to a better site.
29. *Chairman.*] It is necessary in the erection of new schools to have ample space for playgrounds for the children, which you could not have on this piece of land? No.
30. *Mr. Jacob.*] I suppose there is nothing in the deed of grant to show that the grantor wished the school to be in this position? No; the whole object of the trust is the erection of a school for the education of Roman Catholic children.
31. Was the grantor of the land the proprietor of the land adjoining, do you know? Mr. Fisher was the proprietor of a great deal of land on the North Shore—his property extended for a long distance on both sides of this grant.

MERRIWA CHURCH AND PRESBYTERY LAND SALE BILL.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly for whose consideration and report was referred, on 16th March, 1880,—“*the Merriwa Church and Presbytery Land Sale Bill*,”—beg to report to your Honorable House :—

That they have examined the witness* named in the margin (whose evidence will be found appended hereto), and that the Preamble having been satisfactorily proved to your Committee, they proceeded to consider the Clauses and Schedules of the Bill in which it was not deemed necessary to make any amendment.

* The Rev.
Patrick Purcell
Ryan.

Your Committee now beg to lay before your Honorable House the Bill without amendment.

W. T. COONAN,
Chairman.

No. 3 Committee Room,
Sydney, 24th March, 1880.

PROCEEDINGS OF THE COMMITTEE.

WEDNESDAY, 24 MARCH, 1880.

MEMBERS PRESENT :—

Mr. Coonan,		Mr. Thompson,
Mr. Murphy,		Mr. Bowman,
	Mr. Beyers.	

Mr. Coonan called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, *read* by the Clerk.

Printed copies of the Bill referred, together with original Petition to introduce the same, before the Committee.

The Reverend Patrick Purcell Ryan (*one of the Trustees*), called in and examined.

Witness *produced* Deeds of Grant referred to in the preamble and *handed in* certified copies of the same.

Witness withdrew.

Preamble considered.

Question,—“That this Preamble stand part of the Bill,”—put and passed.

Clauses 1 and 2 read and agreed to.

Schedules read and agreed to.

Chairman to report the Bill without amendment to the House.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON THE

MERRIWA CHURCH AND PRESBYTERY LAND SALE
BILL.

WEDNESDAY, 24 MARCH, 1880.

Present :—

MR. BEYERS,		MR. COONAN,
MR. BOWMAN,		MR. MURPHY,
MR. THOMPSON.		

WALTER THOMAS COONAN, ESQ., IN THE CHAIR.

The Reverend Patrick Purcell Ryan called in and examined :—

1. *Chairman.*] You are a clergyman of the Roman Catholic Church stationed at Lambton, and formerly at Merriwa? Yes.
2. You are one of the trustees for certain land at Merriwa? Yes.
3. Do you produce the deeds of that land? I do. (*Deeds produced.*)
4. You produce two grants from the Crown, bearing date, respectively, 4th December, 1879? Yes.
5. In these two grants you, in conjunction with the Right Reverend James Murray and Mr. Charles Joseph Gallagher, are appointed trustee of this land for the purposes therein mentioned? Yes.
6. The sites given by these grants are not eligible for the purposes for which they were granted? No.
7. And you have purchased other sites since then? Yes.
8. And you wish to sell these sites for the purpose of investing the proceeds arising therefrom in paying the purchase money of the other sites, and in erecting a Church and Presbytery thereon? Yes.
9. There has been no opposition whatever to the sale of this ground, or to the purchase of the other? I am not aware of any.
10. In fact, so far as you know, the congregation have been made thoroughly aware of the fact by reason of your having purchased the other land, and going on with the erection of the church? Yes.
11. So that the sale of this land and the purchase of the other land meets with the total concurrence of the congregation? Yes.

Rev. P. P.
Ryan.

MINUTES OF EVIDENCE

TAKEN BEFORE

THE SELECT COMMITTEE

ON

ARCHIBALD THOMPSON'S TRUST ESTATE BILL.

FRIDAY, 9 APRIL, 1880.

Present :—

MR. BARBOUR,
MR. COHEN,
MR. DAY,MR. FITZPATRICK,
MR. TERRY,
MR. THOMPSON.

HENRY EMANUEL COHEN, Esq., IN THE CHAIR.

Mr. Elliott Meyer appeared as Solicitor for the Bill.

Thomas Thompson, Esq., called in and examined :—

1. *Mr. Meyer.*] You reside in Sydney? Yes.
2. You are the brother of the late Archibald Thompson, of Sydney, wine merchant? Yes.
3. When did your brother die? On the 22nd February, 1879.
4. You produce the probate copy of his will, do you not? Yes. (*Produced and copy handed in.*)
5. You are one of the executors appointed by that will? Yes.
6. Who was the other? Mr. Stephen Campbell Brown.
7. Probate of this will was granted to you on the 4th day of April, 1879, was it not? Yes.
8. Since that date Mr. Brown has renounced probate, has he not? Yes.
9. By the will your brother bequeathed all his real and personal estate to his trustees upon trust to convert his personal estate and to stand possessed thereof upon trust after payment of his debts and legacies to invest the balance upon the securities mentioned in the will? Yes.
10. Under the will you are empowered only to invest upon real or Government securities in New South Wales, or in the stocks, shares, or debentures of any public company, except mining companies? Yes.
11. And under the will you are to divide the annual income, share and share alike, among the testator's wife, Jane Thompson, and all his children, and the issue of any deceased child or children, during their respective lives, or until the final distribution of the estate as therein provided? Yes.
12. The corpus of the estate is to be distributed upon the death of all his children? Yes.
13. The testator left a wife, Jane Thompson, and eleven children, I believe? Yes.
14. Nine of whom are under the age of twenty-one years? Yes. One of them was born after his death, making the eleventh.
15. I believe you have paid the debts and legacies under the will, and you have a balance in hand amounting to 4,700 and odd pounds? Yes.
16. A portion of the real estate of the testator consists of a block of land in Pitt-street, Redfern, does it not? Yes.
17. The land, I believe, has about 240 feet frontage to Pitt-street, by a like depth? Yes.
18. Upon this land a house called Redfern Lodge is erected? Yes.

T. Thompson,
Esq.
9 April, 1880.

- T. Thompson, Esq.
9 April, 1880.
19. At one side of the house called Redfern Lodge there is a vacant block of land 120 feet by 240? Yes.
20. I believe under the testator's will you have only power to lease real estate for fourteen years? Yes.
21. It is upon this vacant land that you desire to erect a terrace of houses? Yes, on 120 feet south of Redfern Lodge.
22. I believe you have been advised by counsel that you have no power to expend the personal estate in building upon the realty, nor could the Court give you any such power? Counsel so advised.
23. And the only course is to apply for an Act to enable you to do so? Yes.
24. Do you think you could get a fair rent for this block of land for the short term you are authorized to lease it for? No; I endeavoured to let it upon building leases, and could not.
25. Nobody would lease it for only fourteen years? No.
26. I believe you have had plans and specifications prepared for a terrace of six houses proposed to be erected on this land? Yes.
27. How many rooms will there be in each house? Ten rooms in all in each house.
28. How much do you expect these houses will be erected for? £4,200.
29. What rent do you suppose you would get for them? At the lowest estimate about £90 each. The land is in one of the best letting positions in Redfern.
30. With regard to Redfern Lodge itself, that, I believe, is now in a bad state of repair? Yes.
31. And you desire to have power also to expend part of this money you have in hand in improving that house? Yes, and adding to it.
32. By doing so, will you get a much larger rent for it than you can in its present state? Yes. It is too small for the block of ground it is standing upon, and for the class of tenants that would occupy it.
33. I believe you have given this matter your serious thought; do you think it would be beneficial to expend the moneys of the estate in this manner? I have not a doubt of it. I have considered the matter fully, but it really admits of no doubt; it is obviously the best course for the estate and those interested.
34. Do the parties interested, Mrs. Thompson and her children, approve of the course you have taken? Yes.
35. *Chairman.*] You said you propose to erect six houses, and that each of them will return a rental of £90 per annum? Yes, at the lowest estimate.
36. You can fairly estimate that you will get £90 as a net rental? Yes.
37. That would give £540 a year? Yes.
38. I see you have about £4,700 in hand? Yes.
39. At what rate of interest is it invested? At present it is invested in the Bank at 6 per cent., but the time has nearly run out, and I cannot get more than 5 per cent.
40. Could you lease this vacant block of land at all, do you think? Only as pasturage for cows, nothing else.
41. What rent would it fetch for that purpose? £25 a year.
42. That would give £260 a year as the income from the land and the money invested according to the will? Yes.
43. What increased rent would you get from Redfern Lodge if improved in the manner suggested? £52 a year.
44. Extra? Yes.
45. So that by taking the course proposed by the Bill before us the income would be increased by the difference between £592 and £260 a year? Quite so.
46. You would get £332 extra income by investing the money in the manner proposed by the Bill? Yes.
47. I suppose you have satisfied yourself that the houses proposed to be erected will be substantial houses? Yes; I have the advice of one of the very best architects in Sydney, Mr. Morell, as to the probable cost. We have gone through the plans carefully. (*Plans exhibited.*) I may state that I submitted the matter to the family before I took any steps in it.
48. *Mr. Day.*] How old is the eldest child? About twenty-five.
49. You have not the slightest doubt that there would be no difficulty in getting tenants for these houses if erected? I feel sure there will not be the slightest difficulty. I reckon I could let them at present for £100 a year at least, and that £90 a year can be relied on as the net income from each of them. We get £2 a week for Redfern Lodge, which is very much inferior at present to any of these houses. It was in fact my late brother's wish and intention to have built these houses himself.
50. *Mr. Fitzpatrick.*] This Bill pre-supposes that the whole of the balance of the personal estate will be invested in the Redfern property? Yes.
51. *Chairman.*] The trusts of the will with regard to the personal estate are the same as the trusts with regard to the real estate? Quite so.
52. *Mr. Day.*] I suppose these buildings will be of brick on a stone foundation and cemented? Yes.
53. Have you had any experience in building? Yes, I have had some experience.
54. Do you not think that £700 each is a very cheap rate for such houses as these? Not for a terrace. It is not my opinion; it is Mr. Morell's, who feels sure that at present prices he could get them done for the money. He thought they could be built for about £4,000, but to make sure I have put them down at £700 each.
55. I suppose you know that in nearly every building there are a lot of extras? Yes. I have had some £12,000 expended under Mr. Morell's direction, and I have never had to pay £50 extra for any work entrusted to him; he seems to make provision for everything, every nail almost.
56. Suppose the money you have in hand should not be sufficient to complete these buildings, could you borrow money to do so? I have not power to borrow. The fact is there is in hand £4,700 at least, and I would have to improve Redfern Lodge according to my means with the balance that was left.
57. *Mr. Fitzpatrick.*] You would build all these houses first, and improve Redfern Lodge afterwards with what money might be available? Yes.

Gustave Alphonse Morell, Esquire, called in and examined:—

- G. A. Morell, Esq.
9 April, 1880.
58. *Mr. Meyer.*] You are an architect, practising in Sydney? Yes.
59. You know the land adjoining Redfern Lodge? Yes.
60. I believe you have prepared plans and specifications for a terrace of houses proposed to be built upon the vacant land to the south of Redfern Lodge? Yes.

G. A. Morell,
Esq.
9 April, 1880.

61. Those houses are to contain ten rooms each? Yes, besides bath-room and the usual out-houses.
62. Of what material are the houses to be built? Brick, on stone foundations, slate roofs, and cemented outside.
63. Will the houses be of a substantial character? Yes, as substantial as any houses of that description. Although not within the city, they will be built pretty well in conformity with the provisions of the City of Sydney Improvement Act.
64. What would this terrace of houses cost? About £700 each, or £4,200 for the six. The cost might be 2½ or 3 per cent. more or less; but there is great competition just now among builders, and they will probably be lower. I have built similar houses and they have not cost more.
65. Do you think the position is one in which such houses will readily let? Yes; it is better than any other in the locality. There are no houses empty in that locality now. The situation is convenient and close to the park and the University land.
66. Then you think it a very good site for houses of this description? Yes; it is only fit for dwelling-houses, not for shops.
67. What rent is likely to be obtained for these houses? Similar houses on the other side of the road, built a short time ago, are letting now for £2 a week—houses not quite so good as these will be. I am certain they will produce 35s. a week, if not more. There will be greater likelihood of getting £2 than 35s.
68. You consider that from the way in which these houses are to be finished they will bring £2 a week? Yes.
69. Do you think rents in that locality, and for that class of house, are more likely to improve or to decline? I think rents will improve, because the space between these houses and the park is inconsiderable, and they will always be desirable residences on account of the fresh air coming across the park to them.
70. Have these other houses in the neighbourhood, fetching from 35s. to £2 a week, the same amount of land attached to them as these will have? No. These will be about 18 feet frontage, with a depth of 120 feet.
71. These houses will also have the advantage of a large paddock at the rear? Yes.
72. Have these other houses any such advantage? No, nothing of the kind.
73. Will you look at the description in the Schedule and tell me whether that is a correct description of the land on which these houses are proposed to be built? It is, exactly.
74. Do you know the house called Redfern Lodge? Yes.
75. That house, I believe, is at present in a rather bad condition, in want of repair? Yes. A better rental could be got if it was improved.
76. *Chairman.*] Do you think you could reasonably rely on getting a net rental of £90 a year for each of these houses—35s. a week net? Yes, I think so.
77. What do you think would be the increased rental of Redfern Lodge if improved? From a sketch I prepared some time ago I fancy that an outlay of £700 or £800 would produce an increased rental of about £100 a year. Say £800 was spent upon the house in putting additional rooms, raising the roof, verandah, and so on, I think they could get £100 a year more than the present rental.
78. By spending £500 on it, could an increased rent in proportion be obtained? Yes. There is so much extra ground, accommodation for stables, and so on, that they could always get a good rental for a house of that kind.
79. *Mr. Day.*] How long do you think these houses will last without repair? I do not think they will require much repair beyond painting for the next twenty-five or thirty years. All the general work, if well done, is sure to last for that time at least. The cementing may require painting occasionally, but that will not cost much? In thirty years they will be almost as good as new if kept painted.
80. The reason I ask the question is that £700 seems a low price for ten-roomed houses? It is; but being a terrace it comes cheaper. A single house of the same sort would probably cost £850. Contractors are content with less profit on each house when a number are taken together.
81. Will there not be some additional outlay for what are called extras? Very little, if any. The specifications are carefully drawn. £100 will certainly cover everything in that way.

R. A. R.
