1526. Then why were the girders cut? Because the top boom would not come in. I believe that they deny it strongly at home. I have a very strong impression that the bridge was made in the shop with only

only one span. I have a very strong impression (*showing diagram*) that one span was put up, and a little bit of the next span, and then, I believe, the cast-iron screen and moulding were put up on the outside of those. That would only hide the inside pillar, and when they began to fit all the struts they pushed them apart, a little out of plumb, and though that is the case with these screens they hoped no one would observe they were out of plumb, and they were delivered in that way, and I had to cut an inch and a half off. That was the accumulation of the three spans.

W. B. Wade,
Esq.
2 April, 1885.

1527. *Mr. Courtney.*] But there is a very much larger difference than that existing? —

1528. *Professor Warren.*] A difference of 2 feet? I have a strong impression that the difference is about 7 or 5 inches.

1529. *Mr. Courtney.*] That is not a matter of much importance? The reason of the cutting was this: It is quite evident that these inside pillars had been spread too far, a little out of the plumb. When we started building all the holes came as true as a gun-barrel, but we went on working and we came to a part where it would not fit any more, the diagonals did not fit the holes, and the only thing was to cut it. It is quite obvious then that the first span had pushed the first pillar out of the perpendicular. Had we known it at first we might have made a good job of it. The only thing was to cut a piece off the top boom, with the middle, and that put everything in place.

1530. So you cut some off both ends of the middle boom? In two places.

1531. *Professor Warren.*] About the bearing plates which the girders rest upon—they are not quite in the centre of the girders, not quite in the centre of the piers? That was through the timber that was found on the bottom pushing the second pair of cylinders out of position.

1532. The timber found in the —? In the bottom, the foundations.

1533. That accounts for the wall plates not being exact? That accounts for the variation of span.

1534. Have you any record of the levels taken at the time when the bridge was erected? No, I am sorry to say I have not. I do not think anyone has. Mr. Warren, contractor's agent, I think had about the earliest record.

1535. Have you any record of the state of the bridge now? Well, I have a few months after its erection, and again about two years after that. I have not tried it since.

1536. A few months after its erection you took levels across the bridge, and two years afterwards you took levels and there was no variation? Yes, and that is about twelve months ago now.

1537. You have not those levels, have you? Yes, I have. (*Record of levels produced.*) On the first pier, right, 49'82, up stream; down stream, 49'95. Next pier, up stream, 49'95; down stream, 50'04. Next pier, up stream, 50'22; down stream, 50'22. Up stream, 50'22; down stream, 50'23. So that you see the only variation worth mentioning is on that pier—the 3 and the 4; and there is no doubt that from the first time anyone took any notice of that it was low; whether it went down or was always down we have no data to show. I do not believe it has altered from the first time we tried it. What first called attention to it was that after some number of months Mr. Cowdery called the attention of some one in our office to the circumstance that the Wellington bridge had gone down. When I went up there I tried to get some levels taken exactly at the time. Mr. Clark had some levels, I understood, but I could not get them from him. He said that he had noticed some repairing gang taking up the rails. I took the levels then. July, '81, I think was the first. As far as I could get any information from Mr. Clark and Mr. Warren they had not any reliable record at the time.

1538. Do you consider the piers have sunk since the time the bridge was erected? No; as far as I could gather information they certainly have not sunk. I believe Mr. Clark made some bungle about the levels, and kept some information about it.

1539. *Mr. Blacket.*] In the erection? Yes.

1540. *Professor Warren.*] What kind of staging had you for erecting the bridge? Very light round bush timber.

1541. Did it allow you to rivet the top boom as well as the bottom boom? We always kept props from one to the other.

1542. The men were able to get at the top boom quite as well as at the bottom boom? Yes; we always put round pieces of timber from boom to boom at short distances, so as to keep them a fixed distance apart. Of course you cannot say a man can get to the top boom as well as to the bottom boom, because on the bottom boom they stand on staging without any risk of getting giddy or anything like that. If a man were standing on the top boom—a 2-feet 9-inch boom—he has not so good a chance as when standing on a stage.

1543. How did the sections of the booms come out from England;—what lengths did they come out in? They are about 12 feet, I think.

1544. In fact where the joints are shown in the drawings? Yes.

1545. And were the boom-plates riveted to the stringer-plates and angle-irons? Yes.

1546. They came out in that form, and not with the stringer-plates separate? No.

1547. So that with the exception of the joints nearly all the riveting of the bridge was done in England? Yes, and the bracing.

1548. *Mr. Courtney.*] Did you see any of the riveting done? Yes, occasionally; not very often.

1549. Do you know the system of riveting;—did they rivet with a plate with holes in it on a smith's forge? No.

1550. The reason I ask that question is that there is very great appearance of that in the work? No; I never saw that. We had a very careful inspection of the Wellington bridge. A man of the name of Maddock, a trained mechanic, equal, I consider, to any mechanic in the Colony—I believe he saw every rivet put in. He ought to have done so.

1551. *Professor Warren.*] In the Bathurst bridge, as at present, two of the spans have had repairs done to them in the way of re-riveting; but in the first span, I believe, the work was interrupted, so that the first span one can examine. Now, was the work, as far as you know, in the other two spans better or worse than in the first span from Sydney? There was no difference; the same work and the same inspector.

1552. What inspector? Fearnleigh. He is in the Redfern shops. He was a boilermaker and a man thoroughly up in his work, and he was on the bridge from morning till night every day from the beginning to the end of the job.

1553. Had they to use anything to caulk the joints with, such as rust cement, to fill up the spaces between the angle irons and stringer plates? They would only do it on the sly if they did; the inspector was always on the look-out.

- W. B. Wade, Esq.
2 April, 1885.
1554. Do you consider the first span well riveted? A very good bridge indeed. I was there once when Hilzinger and another were replacing rivets, and I felt a number of places where they had rivets marked and I could not observe the smallest appearance of looseness in them.
1555. *Mr. Blacket.*] Would those rivets go under the head of vibrating rivets with the hammer? I believe so. I felt a number of them, in their presence, and could not feel them loose.
1556. *Professor Warren.*] You remember the riveting done in the Colony: I take it that the booms were sent out just the same as in the case of the Wellington bridge? Just the same.
1557. And the amount of riveting done on the site of the Bathurst bridge was just about the same as in the Wellington bridge? Yes.
1558. Do you consider that the angle iron wrapper joints, with the riveting in those joints, are good? Yes.
1559. In all cases? In all cases, I believe. I do not believe when that bridge was left that there was a loose rivet in it. They may have loosened them since.
1560. You mean really loose rivets? Yes.
1561. Did you notice, when you examined the bridge at Bathurst, that the edge of the plates was corroded just about the angle irons and wrapper joints? No; I do not know anything about it.
1562. With reference to the testing do you remember, in the testing of these bridges, both Wellington and Bathurst, the deflections they gave? About '70. I have them somewhere. They were just the same, tested with three engines, and gave a deflection of about '70.
1563. With the level? Yes. I had not got a gauge in those days, and I took it with a level. At Bathurst bridge I had a gauge to work with. I think the extreme we have had in those bridges has been '80. They have gone from '70 to '80. With regard to the deflections I have got them in the form of end spans and centre spans.
1564. Will you give us Wellington first? End spans, centre spans, and weights: End, first, '72, '64, 174 tons. Wellington, short spans, '33, and 63 tons. Bathurst, '77, centre '77, 178 tons. I have also Aberdeen, original test, when the bridge was building, '69 and '79. Wagga is in the same proportion, '74, '63 centre, and 185 tons. In Dubbo bridge, which is perhaps as good a test as we have, the centre is the heaviest, '56 was the end, and '64 the centre.

TUESDAY, 2 JUNE, 1885.

Present:—

G. A. MORELL, Esq., C.E., PRESIDENT.

W. H. WARREN, Esq., PROFESSOR
OF ENGINEERING,

OWEN BLACKET, Esq.,

T. R. Firth, Esq., District Engineer, sworn and examined:—

- T. R. Firth, Esq.
2 June, 1885.
1565. [*President.* What position did you occupy in the Railway Department at the time of the erection of the Penrith bridge? I was District Engineer.
1566. Had you charge or the superintendence of the erection of the bridge? Yes.
1567. What other duties had you to perform at the time? I had the superintendence or the carrying out of the whole work from Penrith to Blackheath at the time. I was in charge of the whole of the construction.
1568. Who was assisting you in the superintendence of the Penrith bridge? In the ironwork I had an Inspector named Higginbotham.
1569. What were his duties? To see that the work was properly put together. He was a mechanic himself.
1570. Where is he now? I don't know; I have not heard for years. It is at least ten or twelve years since I heard of him.
1571. Was Mr. Maddock also employed on the bridge at the time? No; Higginbotham was the only one.
1572. Do you know these drawings sent by the Engineer-in-Chief to us as drawings from which the bridge was erected (*plans shown to witness*)? I have not seen them since the bridge was put up.
1573. I suppose you could identify them? Yes, from the drawings of the bridge.
1574. These (*indicating on plans*) are the development of the plates? Yes.
1575. And sections? Yes.
1576. There is another cross section here (*indicating on plans*)? Yes; I remember that.
1577. It was carried out according to this section? Yes; to the best of my knowledge it was.
1578. Do you remember the plates shown here (*indicating on the plans*) to be joggled on the top boom? I am not aware of any alteration having been made from the drawings.
1579. Was there much difficulty in riveting the top and bottom booms in some part of the cells? There was no particular difficulty, because they got in as they followed them up. There was no particular difficulty in riveting them. They are small booms. I think these (*the top and bottom booms*) came out in 10 or 12 feet lengths. I think they came out in lengths.
1580. Do you remember if those angle irons of this diaphragm (*indicating on plans*) were in close contact with the plates? I do not remember, but I do not think they would have been left unless they were close. I know the riveting was well examined when the bridge was being constructed, and if they had not been close they would have been noticed.
1581. Who were the contractors for the bridge? Peto, Brassey, and Betts. They had a Mr. Williams in charge. He is in the Harbours and Rivers Department.
1582. *Professor Warren.*] He was for the contractors? He was for the contractors.
1583. *Mr. Courtney.*] Was your attention called at any time to the expansion of the plates of the bridge—at the way the bridge was erected on the piers—to begin at the pier superstructure? No. One pier was fixed, I think, and the others had two abutments and one clear.
1584. They were set upon a timber bed-plate? Yes.
1585. Do you remember any investigation at the time of the erection as to whether the bridge moved upon it? No; I do not think there was any. I have not the slightest recollection of anything having occurred, nor do I think anything of the kind took place.
- 1586.

1586. *Professor Warren.*] You looked for the expansion, but you could not find it? No, I could not observe it. But do I understand you to say I did not find the bridge expand at all?
1587. Yes? I did notice that the bridge did expand after completion, but not during construction.
1588. *Mr. Courtney.*] Could you give us any idea of it from memory? I think it was about $\frac{3}{8}$ of an inch that it expanded. That is speaking from memory, and I think I am right. I noticed it because I have heard that it would make a noise and go off with a start. After construction I know that the bridge did expand.
1589. Have you any recollection of any correspondence or of any fault being found with any of those lengths. It is pretty evident that the top cells did come out in lengths, and that they were found not to come in right? I am not aware of it.
1590. Because there is one portion of the bridge which shows that either the right pieces were not put together, or that there was some difficulty in getting them in. There are a number of joints, and when you go two or three lengths you come upon a place where it has been necessary to punch new holes, leaving that joint so that there is every sign of a misfit; and when you go some further distance you find the same thing again. You do not remember any difficulty of that sort? No; to the best of my recollection the instructions were to be very careful to follow the painted numbers, so that each should go into its place owing to the camber of the bridge, which was 3 inches.
1591. In the middle span? Yes.
1592. Higher than the piers? Yes. There was a camber, and particular care was supposed to be taken that each plate should go into its proper place to preserve that camber; because I am assuming that some of those plates must be tapered to get the camber; parallel plates would never make a camber.
1593. You are speaking, of course, of the web plates? Yes. I assume that the plates had been fitted together before with this camber, and that therefore we should put the plates together in their proper position; and that being so, I cannot see how the top cell could be misplaced. I dare not take upon myself the removal of plate "A," and put it somewhere else. Therefore I must take it for granted that the plates were put in a proper position. I do not know how to account for the holes which you say have been re-drilled.
1594. And also flange rivets there. It occurs in one part of the bridge, as if in finishing; the four or five last lengths are not together? Is that in the old part of the bridge?
1595. *President.*] It is in the old bridge.
1596. *Mr. Courtney.*] You notice it on the up-line girder at the far end of it from Sydney? That was the last portion of it put together.
1597. But we were speaking of the flange girder. Were the curved plates of the top boom sent out loose, or were they in lengths and jointed, or, in other words, were the plates connecting the rivets with the upper pile of flange plates riveted at home or here? I am under an impression that they were riveted at home in lengths.
1598. Of course they had to be left unriveted at the scarf-joints? Yes. I am under the impression that the riveting was done at home.
1599. If it were done at home there is likely to have been some report. If the arch plate is too high for the centre web to meet it there would be a space for the plate, and the angle iron would not be in perfect contact? There was no correspondence about that, I am quite sure.
1600. *Professor Warren.*] You would have pointed that out if you had seen it? Most decidedly.
1601. Can you give us any information as to how the bottom cell was constructed? I think that came out in lengths in the same way as the top cell; I think both the bottom and top cells came out in lengths, and they had simply to be riveted together at the scarf-joints.
1602. It is no simple job in the bottom cell, the place is so circumscribed? I think they came out in lengths, because there was some idea of putting them up on blocks in the lengths in which they came. I feel almost certain about it. Of course, if anyone were to contradict me and say that they did not, I should give in; but to the best of my recollection they came out in lengths, both the top and bottom cells. Of course this is twenty years ago, and we cannot remember all these things.
1603. *The President.*] What kind of staging was made for the erection? We drove piles down into the gravel, double tiers of piles, and these had beams across, and blocking pieces put on the top of those beams.
1604. *Mr. Courtney.*] I would like to ask you if you remember seeing those joggles? I do remember seeing them.
1605. Do you remember anything further about them? No.
1606. Do you remember if the plates came out so? Yes, they did come out so. There were no means of doing them on the bridge. There was nothing on the bridge except the ordinary machinery for hoisting and hand riveting.
1607. You did not notice any plates being put in without the joggle leaving a triangular space? I do not remember.
1608. There is another matter: Was it intended in the design of this bridge to carry the cross-girders by the rivets in their ends, or were they intended to be packed? I think they were intended to be packed on the bottom cell, to rest on the bottom cell, and rivet up the angle irons as well, or at the stiffening plate? I think that was the intention. To the best of my knowledge they all rest on the bottom cell; I do not think there are any packings put under them; I think they rest on the cell.
1609. Did you ever hear any complaint of the rivets having deficient or insufficient heads on the inside of the ends of these cross-girders? No.
1610. They have attempted to make noble-headed rivets of insufficient size. Do you remember any complaint of that kind? There may have been.
1611. You have not observed them yourself? No; it is quite possible that a question of that kind might arise in the construction, and I might give instructions about it, and it may not be any more thought of. I certainly do not remember anything about it; I was always under the impression that those cross-girders rested on the bottom boom, as well as being riveted.
1612. There is only one other thing. Up to the time of your leaving the bridge was there any tendency in the diaphragm rivets to work loose? Not to my knowledge. Of course, when I left, there had been very little traffic over it; they only went over it at a walking pace, owing to the far end not having been completed. The timber portion had been washed away, and they had to put up a timber bridge for the trains.
1613. Have you any recollection of the fact that in the vertical T irons of the web, where they come under the rivet, the rivet is put in without any head? No; not even countersunk. 1614.

T. R. Firth,
Esq.
2 June, 1885.

- T. R. Firth, Esq.
2 June, 1885.
1614. There is no head to these rivets, and that occurs at every T iron; in many cases they do not reach the T, and are simply short rivets put into to fill the holes, and they remain there in their own friction. You never saw a lead rivet put into that bridge, I suppose? I never saw a lead rivet put in a bridge anywhere yet. I do not know how these things could occur very well, for I was always under the impression that the inspection on that bridge was about as good as it could be; the Inspector was continually there, and he was supposed to see everything. I was there two or three times a week and examined the rivets, and I always flattered myself that the bridge was perfect.
1615. *Professor Warren.*] What bridges had you before the Penrith bridge? That was the first iron bridge I had in this country. I had put up some iron bridges in France, on the Paris and Cherbourg Railway.
1616. *Mr. Courtney.*] Was any remark made at the time of there being no means of cleansing the bottom cells from rust? No; one might be able to cleanse the bottom booms as well as the others. There are openings in the side, I think, for cleaning the main plates. In the bottom booms a man would have to start and go right through, but that never came before me.
1617. There are two inner cells which are obstructed by a large timber beam among the timber of the bridge, so that no one has been through them since they have been built? So that there is no possibility of getting into them. It was so tight that we never thought anything could get into them to oxidise them.
1618. *President.*] Do you remember if the timber forming the packing or bedding of the girders, or some of the girders, was prepared at all with composition to prevent decay? I forget whether they were tarred or painted; there was no creosote in it, or anything of that kind. I think they were painted with red lead or oil.
1619. Were you present at the testing of the bridge? The bridge never was tested; and this was the reason: when the bridge was completed and ready for testing, we had a flood in June, 1867, which washed away the far end, and we then had to put up the temporary bridge to carry the traffic. Of course we could not then run over any train at full speed. We could have tested the bridge with dead weight, but we did not think that was necessary, until it could be properly tested with passing trains. And I think it was twelve months after that that the bridge was completed. I left that part and went up to Rydal, and it must have been twelve months after that the bridge was completed, and the trains ran over it at full speed. Whether it was tested then or not I do not know, but it was not tested when the bridge was completed.
1620. *Mr. Blacket.*] Did you have the building of the Solitary Creek bridges? Yes.
1621. *President.*] Do you remember the size or dimensions of the spans on the bridges at Solitary Creek? They are 60 feet, I think.
1622. But they came out in several sections? Yes, they did.
1623. How many sections? That I do not remember.
1624. I mean whether the girder and web were in several sections? In pieces; I could not say how many sections; they would be in about 12 feet lengths, I think, but I am not sure. Three or four pieces I think it was.
1625. Do you remember if these girders had any camber? The girders had three-quarters of an inch camber, I believe.
1626. *Professor Warren.*] Three-quarters of an inch? Yes; to the best of my belief they had three-quarters of an inch camber.
1627. *President.*] And the camber was given to them in the erection? Yes.
1628. Can you account for their having no camber now? Well, no, I cannot account for it, not knowing what they have been doing with them, but I should not be surprised to find they had been doing nothing with them, and they had no camber now after fifteen or thirteen years. I should not be surprised if they had not three-quarters of an inch camber now.
1629. *Professor Warren.*] Do you consider that you left those bridges with three-quarters of an inch camber? The girders. Yes.
1630. The main girders? Yes.
1631. *President.*] Do you remember how the girders were bedded on the piers? On sheet lead.
1632. *Mr. Courtney.*] You have never known them move on the sheet lead? I have not had an opportunity of noticing, but I think they would.
1633. *President.*] They would have a slight expansion? I think so. Mr. Warren was my Inspector there. He is now in the Government Railway Department, in Mr. Cowdery's department.
1634. *Mr. Courtney.*] One of these bridges is patched on the under flange. Was that the result of an accident or fall? In hoisting the girder up it fell down and struck a little on the bottom plate, and I had a piece put on for 3 or 4 feet.
1635. *President.*] You are positive that these girders were not built up with a sag, but built up with the camber? I believe they were put up with the camber.
1636. How do you account for the sag? The way I account for it is that rumours are not always to be believed, and rumour is not evidence; but I do not think there would be any fault to find with the bridge if they had not now three-quarters of an inch camber after thirteen years continuous running over them. Continually hammering trains over them will be sure to bring them down. I should never expect to find the camber in a bridge after ten years the same as had been put in it originally, especially with those heavy trains running over it on a hot day. I have got the tests of those bridges, if you would care to have them.
1637. *President.*] We should? These are my tests.

RESULT of test of bridges on contract No. 7—Extension Penrith to Bathurst.—2 February, 1872.

Goods Engine No. 17, weighing 42 tons, and break van 10 tons :—

| No. of Bridge. | Mileage. | | | Deflection with standing load. | Deflection passing at full speed. | |
|----------------|----------|----|----|--------------------------------|-----------------------------------|-------------------------------|
| | m. | c. | l. | | | |
| No. 7 | 99 | 73 | 67 | feet. ·020 | feet. ·025 | |
| 8 | 100 | 8 | 28 | ·030 | ·030 | |
| 10 | 100 | 62 | 86 | ·030 | ·030 | |
| 13 | 102 | 11 | 60 | ·025 | ·025 | On 16-chain curve. |
| 15 | 102 | 57 | 75 | ·030 | ·035 | |
| 17 | 106 | 68 | 87 | { ·030 ·030 | { ·025 ·035 | Eastern opening. Western „ |

In every instance the girders resumed their position *immediately* the load was off.

1638. *Professor Warren.*] You did not take the deflection with rods? With a level. As an instance, I tried the level on the George's River Bridge directly we took the wedges out. There were three spans, and they went down three-eighths of an inch. I tried them again next day, and they had gone down another eighth.
1639. *President.*] By their own weight? Yes; that is, from one day to the other, so that I am not surprised at a bridge going down in thirteen years with the trains going over it.
1640. At what time of the day did you do this? At the same time of the day.
1641. Where were the bed-stones obtained for the Solitary Creek bridges? At Mount Lambie some of them, and some of them were obtained from Lithgow Valley, and I think one or two of them came from Pymont. I think all the bed-stones were got from the top of Mount Lambie.
1642. *Mr. Courtney.*] Granite? No; sandstone.
1643. *President.*] There is a bed-stone to every girder? Yes.
1644. The string of the top of the pier seems to have been cut off, either broken off intentionally or otherwise? It was not originally so.
1645. *Mr. Courtney.* It has been built up with bricks.
1646. *President.*] But my question is, why was this cut off? They were all perfect when I left them. They were all perfect according to plans.
1647. There is no bed-plate at all under the girders; the girders rest upon the lead, and the lead was placed over the stone? Is there not an inch plate under the girders.
1648. *Mr. Courtney.*] No, nothing; nothing but the sheet lead? I think all the ends of the plates were planed.
1649. *President.*] Have you had to do with any other iron bridges since that time? No; except Cook's River and George's River.

T. R. Firth,
Esq.,
2 June, 1885.

FRIDAY, 5 JUNE, 1885.

Present:—

G. A. MORELL, Esq., C.E., PRESIDENT.

W. M'D. COURTNEY, Esq., C.E.,

W. H. WARREN, Esq., C.E., PROFESSOR
OF ENGINEERING.

OWEN BLACKET, Esq.,

Alfred Williams, Esq., sworn and examined:—

1650. *President.*] You had full charge of the erection of the ironwork of the bridge at Penrith? Yes.
1651. For Messrs. Peto, Brassey, and Betts? Yes.
1652. Can you tell us how the ironwork came out? Incomplete; detached in every way; plates and bars. None of it was riveted. It came out in pieces; in three shipments, I believe.
1653. Were the cells of the top and bottom booms riveted in sections or in lengths? It was all riveted on the work, plate by plate, as far as I can recollect. (*Produces plan.*) That is the section I made on the works, to give the thickness of the plates, to get up to the required level. All these bottom booms were built on the stage.
1654. No portion of it was riveted in England? I do not think so. I do not remember it. (*Produces another plan.*) That is the plan I made of the stage, showing the class of staging we used. I was the engineer for the contractors.
1655. These cells of the top and bottom booms did not come out riveted in sections or lengths? I do not recollect. I think it was all done upon the ground. That is my impression. It is nearly twenty years ago since it was done. I took possession of the ironwork on the ground at Penrith; I found it thrown about in the paddocks. The first thing I did was to sort all the plates, bars, &c.; to get it ready when the stage was finished.
1656. The cross-girders came in one piece? I think so.
1657. You wrote a letter to Mr. Whitton in reference to your connection with this bridge. Is that your letter (*showing letter to witness*)? Yes.
1658. Did you get very bad weather during the erection of the bridge: were there floods? There was one extraordinary flood, coming when there was no rain in the district, from rain in the country, very unexpectedly. Still I provided for the contingency of floods, and had boats and rafts. Fortunately we managed to pass the timber through the staging in this flood, without any injury to it.
1659. Was Mr. Smithyman, the inspector for the works, acting for you or for the Government? He was acting for the firm, under my instructions. He was paid weekly wages, and he had no interest in the work beyond his wages.
1660. Did not some of the ironwork get mixed, and the marks obliterated? Yes. Of course the marks on plates were to correspond with the plan I was furnished with. When I came to examine the ironwork I found that it had been so thoroughly mixed on the way out that the marks were of very little use to me, so that we had to sort, clean, and repaint the work, and get it on the stage while the staging was proceeded with, but it made it a very difficult work. If I had had all my numbers on the plates every plate would have come in its place just as it was at the yards in Birkenhead.
1661. Were you obliged to make new holes in consequence of the parts not coming together, so that there are now false holes in the work? Yes; in some cases it was necessary to repunch the plates.
1662. Was this in the bottom boom? I think it was in one section of the vertical plates.
1663. *Professor Warren.*] You say it was necessary to repunch the holes in the vertical plates. Do you remember anything of the kind in the top booms? I do not remember. It may have been necessary. It is possible some might have been done there.
1664. Probably owing to the fact of the marks being obliterated? We had to work it to make it fit.

A. Williams,
Esq.,
5 June, 1885.

1665.

- A. Williams, Esq.
5 June, 1885.
1665. Then you would not be surprised to know there are several elongated holes in the booms as well as in the vertical plates? If it was so I was not aware of it. The holes I saw punched were free of the old holes.
1666. You must have known if they came out separately; if they did you could not tell if they came out right? In looking through my old papers I cannot find anything about how they came out.
1667. In reference to the inner cells, there are several rivets left out. Do you remember it? I do not remember it at all.
1668. There are several rivets knocked in and not snapped? I never allowed anything of that kind to be done. It is quite possible something of the kind might have escaped my observation.
1669. *Mr. Courtney.*] This is a question of some hundreds of them? It might not have been possible to snap some of them.
1670. *Professor Warren.*] Do you remember any lead rivets? No. I should have had to pay for them out of my own pocket.
1671. Do you remember using lead to fill up the spaces between the plates and the top boom, where the places did not perfectly meet? There was no lead put in to fill up the interstices. I do not remember having ordered any lead whatever.
1672. *President.*] But if lead was put in? It was put in by Mr. Smithyman, I suppose, or by his knowledge, but he never informed me about it. I have not the slightest knowledge of it.
1673. Do you know how the angle iron was riveted to the centre web-plates in the top boxes? I do not remember.
1674. Do you remember that the curvature was too much, and could not be brought down? I do not remember anything of the kind.
1675. Are you aware that the arch plate did not fit down to the middle web? I am not aware that it was so.
1676. *Mr. Courtney.*] Are you aware that at the side, where the splayed angle irons are used, there is a certain length where square angle iron has been used? I do not remember it.
1677. *Professor Warren.*] In reference to the cross girders do you know whether they were allowed to rest on the angle irons, or did you depend on the rivets? No. They rested on the bottom boxes.
1678. Would you not prefer a rivet with a proper head? Certainly.
1679. Do you remember that on the bridge there is scarcely a case of a good rivet, but that they have only a portion of a head? It could not have been so; some that I could not see might have been scamped by the men.
1680. In some cases the rivets were almost flush? In some of the plates they were countersunk to admit of the rivet having a fair hold on the iron.
1681. Was there any complaint made that the rivets were too short? None.
1682. No one objected to their putting in flattened rivets? I had no communication of the kind. I used to make a practice of tapping the rivets, and I believed every man was working properly. There were two inspectors constantly looking after that part of the work. I was sometimes away in Sydney on other business in connection with the firm, and while I was absent certain advantages might have been taken.
1683. Referring to the joggles, are you aware that in some cases you have really left a space between one plate and another? It could not have been; if so they could not have abutted close up.
1684. *President.*] You do not remember that these joggles in the bottom boom were not carried out according to this plan? No, I do not remember. The bridge was erected in ten months after taking possession of the works, and we had a flood which retarded the progress of the work. I had to run the stage right through.
1685. Do you remember after the bridge was finished what expansion, if any, was there in the whole length of the girders? I think it was about 4 inches. It was very considerable, and it astonished me.
1686. On which of the piers was the rolling gear erected? On all the piers.
1687. *Mr. Blacket.*] Were both the middle ones fixed? I do not recollect. I think they had rolling plates on all of them.
1688. *President.*] Do you remember whether the timber on which the girders are resting were prepared so as to prevent decay? I do not remember, unless it was well tarred, just the same as the other timber was done.
1689. Do you think that in the course of time these timbers would decay, and require to be renewed? Yes.
1690. Were you present at the time of the testing of the bridge? No. My work terminated when the ironwork was done and the staging removed. The timber deck was laid by another contractor.
1691. Then you do not know much about the deflections? No. I know we had 4 inches of camber on each girder.
1692. Have you seen the bridge lately? Not for eighteen months.
1693. Did you see any signs of decay or damage? No. I was surprised to see it looking so good and true in every respect. There were no signs of decay or buckling.
1694. Did you think that in course of time such would occur? It might. If there was any strain on the transverse girders it might buckle, but I did not see anything of the kind.
1695. It seems to be kept in fair order? Yes; that seems to be the main thing to attend to with bridge work.
1696. *Mr. Courtney.*] Speaking about the painting: can you give us any information about the placing of a large timber caulk, which renders one cell of each girder inaccessible: Was anything said about that at the time of the erection? That would have been after my time.
1697. Was there any difficulty in getting men to work in the bottom cell to make those joints? I had no complaints. We paid first-class prices, and got first-class men. We paid 26s. per hundred for the inch rivets, and 23s. for the three-quarter inch. We got men very readily for those prices.

Mr. Richard Waring sworn and examined:—

- Mr. R. Waring.
5 June, 1885.
1698. *President.*] You were connected with the erection of the Solitary Creek bridges? Yes.
1699. With the ironwork? Yes; the ironwork.
1700. What position did you hold? Inspector of permanent ways.
1701. What was your mode of proceeding with regard to these bridges? I tested the rivets in the girders; they were already riveted when they were landed there. 1702.

1702. In how many pieces? I think it was in two pieces; it might have been three.
1703. Were those pieces riveted together and the girders riveted on the spot? They were taken bodily across if I remember right; I almost forget it, it is so long since.
1704. Were they riveted on the bank or on the line or in any other place? I think it was on the bank. Mr.
R. Waring.
5 June, 1885.
1705. Do you remember if they gave any camber to the girders in riveting? I cannot remember.
1706. Have they had any camber? I cannot say.
1707. Did you get the specifications and drawings? No I did not.
1708. The girders were sent there and you put them together? No, Mr. T. R. Firth was the engineer; I had simply to see to the riveting.
1709. *Mr. Courtney.*] Do you know what provision was made for expansion in those bridges? There is a bed-plate on the girders and they rest on the bed-plate; the bed-plate is let into the stone-work under the end of the girders; if I remember right there was a piece of lead put in, but I would not be too sure.
1710. Do you distinctly remember the cast-iron bed-plates below the lead? Yes.
1711. They must have been recessed into the stone? Yes.
1712. The stone comes up flush with the lead? Yes.
1713. Was that cast-iron bed-plate not of plane surface? A plane surface as near as I can remember.
1714. Was there a wrought-iron plate riveted to the end side of the girder? I think there was, but I am not certain; I had nothing to do with the bed-plates, only with the riveting.
1715. *Mr. Blacket.*] Did you have one of the girders fall? I had nothing to do with them, except to see that the cross girders were perfectly riveted to the side girders.
1716. *Professor Warren.*] And you do not know whether you had any camber? I had nothing to do with the main girders.
1717. *Mr. Courtney.*] All you had to do was to see that the girders were quite fast? Only with the side girders.
1718. The bridge was virtually erected before you came there? Yes.
1719. *President.*] All the riveting was well done and to your satisfaction at the time? It was thoroughly well done; I tried everyone of the rivets myself.
1720. *Professor Warren.*] You did not interfere with the rivets in the main girder? I tried them and they were thoroughly sound.
1721. *Mr. Courtney.*] Did you find any loose rivets in the portion of the work that came out from England? I do not remember that I did.
1722. Can you remember if there was any sag in the bridge? No, I cannot remember; I had nothing to do with that.
1723. Had you anything to do with the erection of the other iron bridges? No.

Mr. Thomas Smithyman recalled and re-examined:—

Mr. T.
Smithyman.
5 June, 1885.

1724. *President.*] You have already been called and sworn before this Commission? Yes.
1725. Referring to your connection with the Menangle bridge;—what position did you occupy? I brought it out from home; I was in charge of it here. I had to erect it for Messrs. Peto, Brassey, and Betts.
1726. *Mr. Courtney.*] Have you any recollection of the angle irons on the web being altogether flat and not riveted close up? Not to my knowledge; they ought to be close up, all of them.
1727. *Professor Warren.*] Could you not get a piece of hoop-iron in between? Not to my knowledge.
1728. *Mr. Courtney.*] Were the angle-irons joined and the covering plates fitted at home so as to produce good riveting? Yes.
1729. The angle-irons connecting the plates with the top cell? Yes, they fitted, all of them.
1730. Can you remember were the rivets at the end of the cross girders;—where they are attached to the main boom; was that a satisfactory job? Yes, I had no complaints about it from the inspector at all.
1731. What about the cross girders;—were they bearing upon the flange? They were riveted to the main girders.
1732. Did they not depend on the rivets? I don't think so but it is a long time back.
1733. Then you don't remember that? No, I do not.
1734. Were you there at the completion of the job? Yes.
1735. Did you make any observation as to the contraction of and expansion of the bridge? No I did not.
1736. You are aware how it is bedded on the bed plates on timber? There is timber underneath.
1737. Have you ever seen it move on that timber? No, it is only on the rollers where it moves.
1738. *President.*] With reference to the Penrith bridge, what was your position? I brought it out from home and had to erect it here under Messrs. Peto, Brassey, and Betts.
1739. You were acting under Mr. Williams' instructions? Yes.
1740. Do you remember if the cells of the top and bottom booms came in sections, in different lengths, or if all the plates came out separately? It was according to the drawings which I have here.
1741. *Mr. Blacket.*] Did you see the bridge erected in the Britannia yards at home? Yes, I had a portion of the work to do; I marked it all there.
1742. *Professor Warren.*] Did you put in the joggles as they are shown on the plan? Yes.
1743. *President.*] These are the plans from which the bridge was erected in the yard. Do you remember if these angle irons were rolled to fit the curve? Yes, they were rolled to fit the curve.
1744. Did they fit closely when the bridge was put up? They ought to do so.
1745. But did they do so? To the best of my knowledge they did.
1746. *Mr. Blacket.*] Did you ever go through the boxes yourself? No, I could not get into them at all.
1747. *Mr. Courtney.*] What did you do with the spaces;—did you attempt to fill them up with lead? No, to my knowledge we had no lead about the place at all.
1748. What was done with the spaces? I cannot exactly tell.
1749. There was a change of tenons in the plates? But there was nothing put in, I believe.
1750. You do not know that the space was filled up with iron putty, or stopping, or lead? No, there was nothing at all put in to my knowledge.
1751. Were the rivets for attaching the cross girders to the main girders all put in under your supervision? Yes.
1752. They were nobbled rivets? Some of them.
1753. There are none of them snapped? I don't remember.
1754. Do you remember that any of those rivets were too short? No, I do not.

- Mr. T. 1755. These nobbled heads in many places are extremely small ;—was there any reason for that being so?
 Smithyman. There might have been ; if they are knocked well into the hole the head does not matter much.
 5 June, 1885. 1756. *Professor Warren.*] Did the plates come out separately or in lengths? All in separate lengths.
 1757. Were the booms separate or fast? They were fast.
 1758. And you formed the booms? Three or four plates in thickness as they came out from home.
 1759. You saw the bridge erected at home and marked it? Yes, it was about half done when I took charge.
 1760. Do you know how the plates came together ;—were any of them mixed, so that they had to drill other holes? No, I do not know anything of that ; these plates were all put in as marked.
 1761. Are you not aware that there are double holes in the Penrith bridge? I am not aware of it.
 1762. *President.*] Were not the marks on some of the plates rubbed out? No, they were all right.
 1763. Were there any covering plates on the top boom with double holes? No, I do not know of any ; it might happen now and again.
 1764. *Mr. Courtney.*] You are not aware of there being twenty-four in one joint? No.
 1765. *President.*] Did you remark that some of the rivets in the main girders got loose through the traffic passing over the bridge? No.
 1766. You cannot put in a rivet without loosening others all round it? You cannot.
 1767. Do you mean to say that if you clamp plates together and then rivet them, you cannot put in a rivet without loosening others around it? Yes, where there are several plates it is impossible to make rivets really tight.
 1768. *Mr. Blacket.*] Do you believe that tapping with a test hammer would loosen those rivets? No, that cannot be done with a small hammer ; if you had about a 6-lb. hammer you might do it.
 1769. And the marks that are on the flat rivet-heads may be done from the dolly holding it up? No, they could not be done in that way.
 1770. *Mr. Courtney.*] Do you remember any rivets being heated there on the smith's hearth? No, you cannot get the boys to do it.
 1771. Are you aware that the curve of those arched plates on the top boom is such that the angle iron on the centre web does not come in contact with it only at long intervals? It might do so.
 1772. And the upside girder in the further span from Sydney in the top cells and also in the other spans they have run out of splayed angle iron and have used square iron, and it does not fit by three-quarters of an inch? That is a mystery to me—as regards the square iron.
 1773. Have you any memory of this fact: That in that same girder, the upside girder in the further span from Sydney, there are irregularities in the joints as if a piece had come from England in so many lengths—and if you have gone through a system of three or four you can open a joint as if it was misfitted—you can open a number of blank holes ; do you know anything of the existence of that? No, I do not.
 1774. *Mr. Blacket.*] How did you get men to work in those cells when there is no ventilation right through? We put one length on, riveted it, and then put another length on.
 1775. You never went right through it yourself? No.
 1776. *President.*] These cross girders bear upon the angle-iron in the bottom boom? It is intended that they should do so, but some of them might be a little off.

THURSDAY, 18 JUNE, 1885.

Present:—

G. A. MORELL, Esq., C.E., PRESIDENT.

W. C. KERNOT, Esq., C.E.,
 PROFESSOR OF ENGINEERING,
 W. M'D. COURTNEY, Esq., C.E.,

W. H. WARREN, Esq., C.E.,
 PROFESSOR OF ENGINEERING.
 OWEN BLACKET, Esq.

Mr. Thomas Smithyman recalled and re-examined :—

- Mr. T. 1777. *President.*] You were the sub-contractor for the erection of the Wellington Bridge? Yes.
 Smithyman. 1778. The contractor was Mr. Watkins, and you took the sub-contract from him? Yes.
 18 June, 1885. 1779. Who was your inspector? Mr. Maddocks.
 1780. *Professor Warren.*] In sinking the piers of that bridge did you get a good foundation? Yes.
 1781. The piers went down perfectly straight and in the position they were intended to occupy? Yes ; we dropped on logs of timber 3 feet through—from 2 feet 6 inches to 3 feet.
 1782. *President.*] In what pier was that? In number two from the Sydney side and also on the other side.
 1783. *Professor Warren.*] Owing to that the cylinders might not have occupied the exact position they were intended to occupy? They might not.
 1784. When you came to put the superstructure upon the piers then you could see that? Yes.
 1785. And the superstructure did not come in quite right? No, not in width.
 1786. Did you cut the girders? We cut them, but not for that purpose ; there was a mistake ; the top boom was 5 inches longer than the bottom boom, and we had to cut them in different places to make the holes in them.
 1787. How much did you cut off? I think about 6 inches ; it was somewhere about that ; I am not exactly certain.
 1788. How was it that the bed plates which the girders rest upon are not quite in the centre? I had to put them to suit the girders.
 1789. Did you measure the spans after you erected the girders to see that you had the right span? No ; the way that I did it was : I commenced on number two pier from the other side and worked towards Dubbo ; I found I was out of plumb about an inch and a half ; coming to the other end I could not get the holes to come in ; the top boom was longer than the bottom boom and I had to cut it in two or three places, I think.
 1790. Did you get the plates all on one level? I had Mr. Clarke there and he did all that.
 1791. *President.*] Do you remember whether the top of all the piers was perfectly level before you put on the superstructure? Well, I do not think they were exactly level ; but the bed plates were level.

1792.

Mr. T.
Smithyman.
18 June, 1885.

1792. The bed plates throughout were made perfectly level? They were.
1793. Do you know if there has been any sinking in any one of the piers since the bridge was finished? There was one pier on this end, I think; I believe it was about $1\frac{1}{2}$ or 2 inches too low.
1794. It was built that way and it did not sink afterwards? No, it never went down afterwards.
1795. *Professor Kernot.*] Was a test load placed upon the piers, and if so, how much? There were 150 tons placed on the piers.
1796. Could you say whether any of the piers yielded under that load at all;—did they come down? They went but very little indeed.
1797. What measures were taken to test the riveting? As a rule all we did was just to sound every rivet as it was put in.
1798. Can you say whether any rivets were condemned and cut out at the time the bridge was built? In almost every bridge we had to do that.
1799. Can you give any idea of how many? It might be one or two in a hundred, but not more than that.
1800. *Mr. Courtney.*] Did engines go over the bridge before you left it? I believe there were two engines there.
1801. Did you take any observations of the oscillations of the top of the girders? No, I did not.
1802. When the bridge was built did you observe the extent of the expansion and contraction? It was not very much; about three-eighths of an inch; that, I think, was the highest.
1803. *Professor Warren.*] Did you measure that expansion when the bridge was complete, or was it during its erection? During its erection, I think.
1804. Is not that rather small? When it was finished it might have been more.
1805. Were the cross girders in then? We had the girders in at that time.
1806. *Mr. Courtney.*] The angle irons on which the top boom rests are not close to the plates;—can you give any reason for that? They ought to be; it might have been overlooked; but they ought to be close.
1807. Do you remember, in the position of these piers, how much they went out of plumb, or rather out of range? I believe there were 4 or 5 inches in some of them.
1808. That was owing to meeting with timber in the sinking? Yes.
1809. Can you give us any information as to the bottom that was finally reached? I think it was marl clay.
1810. Were all the cylinders sunk to a hard bottom? Yes; the engineer saw to that before we commenced.
1811. You know that of your own personal knowledge? Yes.
1812. *President.*] What depth did you go to in sinking the piers? I think it was somewhere about 50 feet.
1813. How deep did you go before you put in the river piers? They were all alike; they were down to the clay; we went through one bed of clay and came to gravel again, and went through gravel until we got on clay the second time.
1814. *Mr. Courtney.*] You are speaking of the pier on the other side? The river piers were all alike.
1815. *President.*] You do not remember to what depth the land piers were sunk? I believe it was about 55 feet below the bed of the river—that is, the river piers.
1816. And what about the land piers? They were not so deep as that.
1817. Did they go as far as the bed of the river? Yes; but I could not tell you what the exact depth was.
1818. At what depth did you find these beds of gravel between the clay? The first was gravel on the top; we then got on to the clay; we came on to gravel again and then got clay after that.
1819. At what depth was that last clay found? I think about 50 feet below the bed.
1820. Did you sink to the second bed of clay in the land piers? We sunk down to the clay in the land piers, but I cannot exactly tell the depth of that now.
1821. But did you reach the clay in the land piers also? I do not think we had much gravel in the land piers at all; nothing but loam and clay.
1822. Was the clay at the bottom of the same nature as that in the river piers? Something of the same nature; I think we went down 40 feet on the bank.
1823. Did you go below the level of the bed of the creek? Yes.
1824. Do you remember what height the bridge is over the bed of the river? From the boom to the bed of the river I think was about 40 feet; it might be 45 feet; there is about 16 feet of water.
1825. What was the depth of sinking in the land piers? I think it was about 40 or 45 feet.
1826. *Mr. Courtney.*] Have you any recollection of the angle irons on the bottom flange being ill fitted? They were not to my knowledge.
1827. The joints were fitted on the bridge? Yes.
1828. Are you aware that any leaden rivets were put into that bridge? No, I am not aware of it at all; I could put half-a-dozen iron ones in while I was making one leaden one; it would have been no benefit.
1829. *President.*] Do you know whether any false holes were filled up with lead run into them? I have never used any lead there I am certain.
1830. In reference to the Bathurst bridge;—you were sub-contractor for the erection of the superstructure? Yes.
1831. And Mr. William Mason was the contractor? Yes.
1832. And Mr. Fearnleigh was the inspector? Yes.
1833. *Professor Warren.*] Do you know why the angle irons are not in contact with the booms? They came out in sections; the top and bottom booms just as in the Wellington bridge.
1834. Was the bad contact due to the work at home? I did not notice the work particularly, but I considered it a good job.
1835. Were the lattices in when the work came out? No.
1836. Then all the rivets in the lattice-bars were put in in the Colony? Yes.
1837. And all the joints? Except the top and bottom booms.
1838. Did you use cement to fill up the joints? No; the inspector was very strict over the job all through.
1839. In the angle iron wrappers do you consider that you put those rivets in tight—I mean did they fill the holes? Yes, I examined them all.
1840. Do you consider that the angle iron wrapper fitted the angle iron which it is intended to cover? Yes.

- Mr. T. Smithyman.
18 June, 1885.
1841. Was there any space in which you could put hoop-iron? No.
1842. Do you consider that the rivets in the lattice-bars were put in properly? Yes.
1843. You had no loose rivets in fact? Well, I am not supposed to have any, but it is possible to have one or two.
1844. How many loose rivets do you think you have in those iron wrappers? If we found any loose ones we always cut them out.
1845. And you were very particular about the joints? Yes; the inspector always tried them, and if he found any he marked them and we afterwards took them out.
1846. And you never used any caulking at all, nor any leaden rivets? No.
1847. Did you observe anything of the expansion of these bridges? No.
1848. Did you have a good foundation? Yes, there was, but the contractor put the cylinders down.
1849. Do you consider the work was uniform throughout? Yes.
1850. It was so when you left it? Yes.
1851. You are quite sure that the first span from Sydney was as good as the third span? Yes, as far as my knowledge goes.
1852. Did you have to do with the Wollondilly bridges? Yes, I think I commenced at Towrang, up to Goulburn.
1853. Had you to do with Mulwarree? Yes.
1854. *Mr. Courtney.*] That was Mr. de Bergue's? Yes.
1855. *President.*] You erected the two bridges over the Wollondilly River, 130 feet span? Only one—the Towrang one.
1856. *Professor Warren.*] Do you know who erected the Carrick bridge? Mr. Hudson; he came out from home.
1857. *President.*] You erected also the five bridges, with 60 feet spans, over the Wollondilly? One 130 feet span, and the others 60 feet.
1858. Do you remember, in connection with these Wollondilly bridges, whether the girders were erected in a good line; that is, whether each girder in the erection was placed in a straight line? Yes; I believe they were.
1859. Are not some of them on the skew and others on the square? I think Towrang is all alike.
1860. But on the skew bridges, do you remember if the girders were in a good line? I believe they were.
1861. Was there a bed-plate sunk in the stone? I think there was no iron bed-plate, but I believe that the lead under the girder is put on the stone. I believe there is one in the 130 feet opening; I cannot exactly remember about the others.
1862. *Mr. Courtney.*] Have you been to these bridges since they were ballasted and opened—I speak particularly of the Mulwarree bridge? No, I have never been up there since.
1863. You did not notice any tendency in these girders to work off the centre line? I noticed one. We were decking the bridges, and I found that one girder had moved half-an-inch on the left, and I could not make it out.
1864. It moved sideways? No, it moved endways, about half-an-inch. I put that down to the expansion, the wooden deck being all one way.
1865. You have never seen any side motion on them? No. I have never been there since it was finished; they were in a line when I left them.
1866. Do you remember what camber they had? About $1\frac{1}{2}$ or 2 inches, I believe.
1867. *Professor Warren.*] On Goulburn bridge there are several big covering plates on the top and bottom flange;—why were they put on? I forget these things; I do not know the reason why they were put on; they must have come from home with the work like that; there was no extra work done here.
1868. *President.*] You told us that the 60-foot spans were in a good line when you put them up; were they also plumb? Yes.
1869. Did you try them with the level? Yes, and the inspector tried them all.
1870. And if they have got out of plumb and out of line that must have occurred afterwards? They were both in line and plumb when we left them.
1871. Did you erect the piers? No.
1872. *Mr. Courtney.*] Were they in line after the cross girders were lifted in? Yes; we were very particular over that. If they were not in line it would have looked bad.
1873. Were they also plumb? Yes, they were.
1874. *President.*] Are you sure that in every instance the ends of the girders were bedded fairly all over? Yes, because the inspector looked after that.
1875. Were the stones made perfectly level to receive the ends of the girders? Yes.
1876. *Professor Kernot.*] Will you tell us what part of the riveting of these bridges at Towrang was done in England, and how much was done in the Colony? I cannot remember whether the side plates came out in one or two thicknesses; I know that the bridge was finished; Mr. Mason had some angle iron put in at the top, but I do not know what that was for; that was inside the boxes; they were short pieces; we had no room to put in rivets there.
1877. Were all the rivets in these bridges tested by the inspector? Yes.
1878. And all the loose ones replaced? Yes.
1879. Do you think that when the bridge was finished any of the rivets could be turned round by the fingers? No, not unless you got a hammer and hammered them on the head.
1880. *President.*] Do you know that that has been done? I have never seen it done, but a person said it was done by Mr. Hilzinger who riveted the Menangle bridge for me.
1881. *Professor Kernot.*] Were any rivets dubbed over the end instead of being perfectly riveted? No, not to my knowledge; it would be no benefit to do so.
1882. *President.*] Mr. G. F. Mann was the inspector of these bridges? He was the engineer in charge; there was a man of the name of Hampshire as inspector.
1883. He is dead? Yes.
1884. You were the contractor for the erection of the Aberdeen bridge? For the superstructure.
1885. Mr. Morrison was the inspector? Yes, in that case.

1886. How did the work of that come out from England? Just the same as the Bathurst and Wellington bridges; it came out in lengths—the top and bottom booms—and I riveted the joints then.
1887. What were the lengths of the pieces? Some of them up to 30 feet.
1888. Was the work that came out from England well put together and well riveted? Yes; I had no fault to find with it.
1889. Did you find many loose rivets? Well, I did not overhaul them to my knowledge.
1890. *Professor Warren.*] You riveted the booms sent out from England, and you also put in the lattice-bars? Yes.
1891. *President.*] Did you remark that the plates and angle-irons of the booms were in good contact? The templates were rather short; in the top booms the holes were exactly fair; they might be about the eighth of an inch apart in 30 feet; I mentioned it to Mr. Whitton myself.
1892. Did you require any false holes to be drilled? No.
1893. Were there any false holes drilled? Not to my knowledge.
1894. *Professor Warren.*] Then you do not remember anything about false holes or the elongated holes? No; they were all drilled at home, and the work came in very well.
1895. *Professor Kernot.*] Do you remember if the girders were in good line at Aberdeen? They were when I left.
1896. Do you remember on the furthest span on the up stream side on the top boom;—was there any irregularity there? I do not remember.
1897. *Professor Warren.*] Do you remember that the girder was bent? No, I do not remember it.
1898. Did you notice whether the top boom was straight? Yes, it was straight.
1899. You did not notice any bend in the top? No, I did not; it could not get out of line if the joints were met.
1900. *Professor Kernot.*] Do you remember whether any rivets were left out in the lattice-work and the holes filled up with putty instead? No, there was nothing of the kind.
1901. You are certain? I am quite certain.
1902. *Professor Warren.*] Talking about rivets being left out, do you remember the lattice in the end spans;—did you leave out any rivets there? No, I did not.
1903. Do you remember whether some defect exists at the far spans in a similar position? No, if they had been left out I would have filled them in.
1904. Do you remember whether the channel iron struts were left in close contact with the stringer plates? Yes, they were.
1905. When you left the bridge they were in contact all the way up? Yes, and the inspector tested them with Mr. Wade.
1906. Did you test them with hoop-iron? I did not.
1907. You could not say then within the extent of a quarter of an inch? No, I am not certain of that; I believe it was not so; if I had seen that I should have altered it.
1908. Do you consider that the iron covers are in good contact? Yes.
1909. And the rivets tight? And the rivets tight.
1910. Of course you put them in? Yes.
1911. You consider it was tight when you left it. You do not remember any spaces? I do not.
1912. *President.*] When I was asking you about false holes I meant double holes in the top boom in the work that was done in the Colony. You do not remember any double holes? All the work came out in first-class order.
1913. Do you remember if the ends of the cross girders were riveted quite close to the vertical plates of the booms? Yes, they were riveted close.
1914. Was there any space between the angle iron and the plate? No, I am very particular about having the plates close before they are riveted.
1915. *Professor Warren.*] Could anybody put any double holes in after the bridge was erected? It could be done, but I don't think it is likely.
1916. How long is it since you were on that job? It is about nine years ago.
1917. Do you think you can trust your memory so far back as that? Well, it takes all my time to think of these things; but I know the work came in very well from home; the Wellington bridge was just the very reverse way. I remember cutting the top booms at Wellington.
1918. You do not mean to say it came in better than Wellington in the joints? No, the joints were very well on the top boom; the work came in very well when I cut it.
1919. At the Aberdeen bridge do you remember seeing the angle-irons put on? Yes; but I have no recollection of double holes.
1920. *President.*] There was a camber given to the girders? Yes; I think it was about 3 inches.
1921. Were you there when the wedges were knocked off? Yes.
1922. How much did it come down? I cannot remember; I was there at the testing of the bridge too.
1923. *Professor Kernot.*] Do you remember the wind-bracing bars in the bridge? Yes.
1924. They were riveted there? Yes.
1925. These rivets are not riveted; they are simply put through. Do you remember anything about that? It is a mystery to me altogether; I cannot make it out at all.
1926. Do you remember whether any of the cylinders in the piers were cracked at the time the bridge was built? No, I cannot tell; there was a lot of them repaired; I cannot say whether they were put in without being repaired.
1927. *Professor Warren.*] How did you repair them? A plate was put inside.
1928. *Professor Kernot.*] How was the plate attached? By rivets, flush outside; but I had nothing to do with that.

Mr. T.
Smithyman.
18 June, 1885.

SATURDAY, 27 JUNE, 1885.

Present:—

G. A. MORELL, Esq., C.E., PRESIDENT.

W. C. KERNOT, Esq., C.E., PROFESSOR
OF ENGINEERING,

W. M'D. COURTNEY, Esq., C.E.,

W. H. WARREN, Esq., C.E., PROFESSOR OF ENGINEERING.

Gother F. Mann, Esq., sworn and examined:—

G. F. Mann,
Esq.

27 June, 1885.

1929. *President.*] You were engineer in charge of the construction of the Wollondilly bridges? Yes.
1930. The girders of the Wollondilly bridges are 66 feet spans right up to Goulburn, except two of 130 feet spans? There are two over the Wollondilly; the others are 66 feet and 140 feet.
1931. What were your duties in connection with those bridges? I was responsible for the proper erection of the work; the ironwork was sent out; I set out the work and built the bridges; I had to certify that the work was properly put together.
1932. Mr. Smithyman was the contractor? Yes, I think he was.
1933. Some of these bridges are on the skew and some of them on the square? The second crossing at Wollondilly is on the skew, and the Mulwarree Ponds is on the skew; those are the only two; I had to do with all the Wollondilly bridges; my immediate superior officer was the Engineer-in-Chief.
1934. When the work came out from England was it well put together? Yes, it appeared very fair work indeed; there was nothing in it that would warrant me in reporting to the Engineer-in-Chief.
1935. It came out in sections? The 66 feet spans; the web girders were in halves; the box girders of the 140 feet spans came in sections as far as I remember.
1936. Do you remember, in the case of the spans at Mulwarree Creek, whether the line of the girders was good? It was a very good line indeed; in the Mulwarree and all the small bridges they lined up very well.
1937. *Professor Warren.*] Have you been on the bridges since they were built? I have not seen them excepting going over them in the train. With regard to Barber's Creek the girders shifted a little out of position after they were placed. They were bedded on two thicknesses of lead. They shifted after the trains ran on the line. It was not to any great extent, and they did not shift any more.
1938. *President.*] Was there any bed-plate? Not in the 66-foot openings—only in the 140 feet spans. They have got bed-plates; in the others the lead was on the stone, but there was no plate under it.
1939. *Professor Warren.*] Did you cut a piece out of the stone? No; we just put the lead down on the flat. We may have dressed the stone to get the level.
1940. *President.*] What was the length of the bearings on the pier? About 3 feet, and 4 inches allowed for expansion.
1941. Do you think the girders could expand upon the lead? Yes.
1942. Would they expand without tearing the lead? I would not say that; they might do it, and they might shift the lead.
1943. Was there any bed-plate under the girders? No.
1944. The rivets were merely countersunk into the bottom plates? Yes, as far as I recollect; but it is so long ago.
1945. Did you observe any expansion? No; I do not remember that I did.
1946. You would not like to say that they expanded at all? No, I would not.
1947. What was the object of putting parapets between the end of each girder? It was as much for ornament as anything else. They are just simply the width of the piers, and were not put with the intention of keeping the girders up—only for ornament.
1948. But they would prevent the girders from being painted on that side? Yes, but they were well painted when they were put up.
1949. *Professor Warren.*] You could not examine the bed-plates to see how they are working with those parapets? Not very well.
1950. How were the bridges erected? The 66 feet girders were riveted down below the boxes; girders were riveted on the staging.
1951. Were you satisfied with the riveting? Yes.
1952. You did not order any of the rivets sent out from home to be cut out? I tried all the rivets; I think I did have some cut out on Barber's Creek bridge; they had been riveted up so that the snaps were not down close; but there were very few of them.
1953. You are quite sure that none of the rivets could be turned round by the finger when left? Certainly not; for if so I would have been very culpable not to have reported it.
1954. *President.*] These bridges were constructed with a proper camber I suppose? Yes, about three-quarters of an inch to an inch.
1955. Was that reduced when the bridge was opened for traffic? I could not tell because the line was not open for traffic until after I left.
1956. *Professor Warren.*] How is it that the 60 feet girders have not the same camber throughout? They were all the same camber when they were put up; in fitting these together from the different makers you get a certain camber in fitting them up and so there may be a difference of camber in the different bridges; the average was about three-quarters of an inch or an inch.
1957. *Mr. Courtney.*] After the erection did you ever plumb the main girders in the large spans to find out whether the two top flanges were nearer than the bottom? Yes; I think we did and found them correct or very near it; still I would not be positive that we did, it is so long ago.
1958. You could not give us any opinion with regard to the smaller ones? No, it is so long ago I almost forget the thing.
1959. *President.*] Were any of the small girders out of winding? No.
1960. You had not to dress any of the stone? No, only ordinary dressing; we had to do nothing to humour it.
1961. *Professor Warren.*] Did you notice in the tension joints of the 60 feet girders that the lateral plates were only 6 inches, and that you had not the proper amount of metal behind the rivet? No, that did not strike me.
- 1962.

1962. *Professor Kermot.*] Can you tell us the reason of certain small pieces of iron riveted upon the top of the Mulwarree bridge that do not exist in any of the others? As far as I remember, the whole of those girders were erected just as they came from England; it must have been part of the design. G. F. Mann,
Esq.
1963. *Mr. Courtney.*] Do you remember whether the cross girders were suspended on the rivets? I cannot remember how they were fixed; I fancy that they rested upon the bottom plates of the girder. 27 June, 1885.
1964. *President.*] Have you been connected with the erection of any other iron bridges? No, not in this colony; I am connected at present with the erection of other iron bridges, but they are not yet finished.

Mr. William Hilzinger re-called and re-examined:—

1965. *President.*] Do you know the Wagga and Wollondilly iron bridges? No, I do not know them.
1966. You remember the Menangle bridge having some timber under the end of the girders? Yes, under the sole plate. Mr.
W. Hilzinger.
1967. In what state is that timber? Some of it is very rotten and others not so bad. 27 June, 1885.
1968. Were the cells of the booms clean? No, and they are not clean now.
1969. In what state are the plates and rivets inside? Rusty and dirty—the same as Penrith.
1970. Does the water get in? Yes, all over.
1971. Is there any ventilation in the lower cells? No, nor in the top ones; I have driven a few holes in most; there were none when we came there.
1972. *Mr. Courtney.*] Does the same evil exist in the middle web not being close to the crown plate as at Penrith? No, it is flat.
1973. Is the middle web well up against the plates? I have not been there myself, but I believe it is fairly close all through; I have had the riveters there. There are some places in the Menangle bridge where the butt-plates are against the angle-iron; you can see that from the end; there is very bad work; when you get inside the ends of the rivets hang down half-an-inch; the rivets are put in so that they hang down; the men have complained many times that they have knocked their heads against them going through.
1974. Have any riveting repairs been done on the bottom cells of the Menangle bridge? No, only the ends of the cross girders; nothing has been done in the inside at all.
1975. *President.*] It would be very difficult to put in any rivets inside? It would be very difficult to work in those cells at all top or bottom.
1976. They are now kept clean and painted? They are partly painted but not finished.
1977. Has there been any very serious loss of section in those bottom cells? Well they are very rusty, but I have not been through them myself.
1978. Are they smaller than those at Penrith? About the same size; you can see in the Menangle, inside, all the butt plates being fitted in; they catch on the top plate.
1979. What are those? The covering plates on the bottom booms on the inside. I wrote a report about them and asked if I should take them off, but they told me not to mind.
1980. Now about the Penrith bridge;—do you find any difficulty in cleaning the cells? Yes, they are very difficult to clean.
1981. In what condition were those cells when they were inspected lately? They are full of rust all over the angle-irons and the rivets; there was a lot of loose dust which we swept out, and flakes which we shall have to chip out.
1982. In what state are the rivets? They are very rusty, and the heads are eaten off.
1983. Is there any provision for the water to run off? Not at all.
1984. How does it get out? Where the work is not close.
1985. How much water was there in the lower cells? It was over the flanges of the angle-irons—it was 6 inches in some places; you can see water lying inside at present.
1986. Has it been lying there for any length of time? Yes; there is some now; when the men went into the cells they came out sopping wet.
1987. It must run off partly from the camber of the bridge? The camber is upside down, especially on the piers, and any way it cannot get over the covering plates; it lies in between; I have been getting holes cut in the bottom to let the water run off.
1988. The ends of these cells were inaccessible, stopped by some timber of the approaches? Yes, by the baulking of the permanent way by irons put in loosely, and we have knocked them out; they were over the piers; there were six of them on each pier; they did as much good on the bank as they did in the bridge because they were not fastened to it at all; they were just standing up by themselves; in all those T irons inside the bottom cells of the piers there were only two rivets, and I think there were not more than six holes.
1989. *Mr. Courtney.*] When you were cutting out those rivets did you measure the thickness through the holes? No, I did not.
1990. Were there any packings in the cross girders where they were attached to the main girders? No, very few I think were resting on the angle iron.
1991. What proportion do you think? About a dozen or so.
1992. About what percentage did rest on the angle irons? I should say about one-third.
1993. Then two-thirds were hanging? Fully that. Sometimes there is not one for a long distance without a liner.
1994. Did anyone put in liners until you came? No, they were all hanging on the rivets.
1995. In what state did you find the rivets attaching the cross girders to the main boom? Some of them had no heads on them at all.
1996. In what condition are the rivets in the bottom diaphragm which transfers the strain from the cross girders to the far web? A lot of them are very loose and knocked down all on one side of the hole.
1997. In which side are the loose rivets most prevalent? I never took any notice. They are about the same all over, I think.
1998. With regard to the dummies or headless rivets that are put in over the vertical T irons, what proportion are they to the good rivets about those approaches? I think about one-third of them are dummies. They generally average two good ones and one dummy.
1999. Have you found any of those dummies driven down on the top of the T irons? Some of them have been knocked down hot, a very few. They are mostly stuck down cold.
2000. Are there any special signs showing an error in building? Yes, a great many.
2001. In any particular part of this bridge? About the butts I found them, where the plates have been cut off they have got double holes in them, and in other places where the plates overlap instead of butting.
- 2002.

- Mr. W. Hilzinger. 2002. Have you found any places where there is an appearance of the lengths having been put wrongly together? Yes, plenty of places; in some places they do not come up within half-an-inch; there are very few places where they have been put together properly.
- 27 June, 1885. 2003. *Professor Warren.*] Have you found any places in the bridge in which the holes have not come in properly? Yes, there are a good many places where there are double holes, and they are filled up with lead, and other places where they are filled up with burrs, which you can see from the outside.
2004. *President.*] Did you see those double holes inside in every plate or only in the top plate? We could not get in to see, but I should think they would be through the whole of the plates; if the holes are thrown out in one plate it must be in the whole of the pile, because they come out in piles.
2005. *Professor Kernot.*] Do you remember a row of rivets connecting the web to the angle-iron of the boom? Yes.
2006. What size are they? Three-quarter inch rivets.
2007. From end to end all through the bridge? Yes.
2008. What condition are those rivets in as a rule? They are fairly tight, except in the bottom where the bed-plates occur; generally they are pretty tight, except where the bed-plates are; those which marked the covering plates are too wide.
2009. Can you call the rivets to mind, particularly in the vicinity of piers two and three—that is, the two ends of the middle span? I cannot remember them particularly; they are bad always where the joints occur in any part of the bridge; they are bad where the coverings come, and you can get hoop-iron in.
2010. Are there double holes there? Yes.
2011. Are there many of them? I think we counted ten or twelve all of a row; there were a good many leaden rivets along that row; the row of rivets connecting the web plates with the angle-irons to the boom one side is as bad as the other, only they occur in different places—that is, in the $\frac{3}{4}$ -inch riveting.
2012. *Mr. Courtney.*] In what condition did you find the rivets in the upper side of the diaphragm? I think the upper side is worse than the bottom; the middle ones are very loose; you can shake the plates about.
2013. What about the three angle irons which are attached to the arched top of the boom;—in what state are they? The angle iron has not been bevelled to suit the curve; it is square in most places and it does not touch at the root all the way along, and very seldom at the edge of the flange.
2014. A special angle iron has not been used? Not throughout; in some parts it is fairly close; where there are thin plates they set down better to the angle irons; we have put liners in all the wide places.
2015. In what condition have you found the rivets in the cross girders? They are all machine rivets; we have never tested them.
2016. Your experience is that they are pretty sound? Yes.
2017. Were you at the erection of the Solitary Creek bridges? No.
2018. When did they come under your charge? On the 11th of October, 1881.
2019. Since then have you observed any change in the camber of those bridges? No; I reported that they were down in the middle in 1881.
2020. According to your observation they have not changed since? No; we have stiffened them since we have taken out the loose rivets and replaced them.
2021. Did you take any measures to prop them? No, we only took out one or two of the rivets at a time.
2022. What were the chief faults in the bridges before you started to overhaul them? The stiffeners were not close on the top booms and the rivets were loose.
2023. Have you made any observations about the expansion and contraction of these bridges? I found that they were not resting upon sole plates, and they have been tearing away the piers; they were resting on sheet lead, and the lead has all dissolved into putty. I took some of the putty to Mr. Watt, the analytical chemist, and he said it was caused by the action of the salts that washed out of the earth acting on the lead.
2024. *Professor Warren.*] You inserted some wedges in certain places? Yes, where the butts were not close.
2025. Where did that occur? In the top booms.
2026. Not in the bottom booms? Yes, where required.
2027. How many rivets did you find loose, say in one bridge over the Solitary Creek? I could not tell you exactly; in one bridge I found twenty-seven on the top, in another one sixty-four, and in another one eighteen.
2028. *Mr. Courtney.*] There is one girder that has been repaired with a patch at the end;—what damage was done to it? I do not know.
2029. Do you know how many rivets were taken out of the bottom flanges? No, they have been riveted, and are now in a sound condition.
2030. *Professor Warren.*] In the Bathurst bridge you re-riveted the second and third spans, but only partially the first span, I believe? Yes.
2031. What were the chief defects you found in these bridges? The work was not close; the rivets were loose, and the spaces between the angle-irons and the plates in the top boom were stuffed up with cast-iron borings and salammoniac, which we scraped out; that was done after it was riveted.
2032. Did you find this between the angle-iron and the angle-iron covers? I do not remember; it might have been so.
2033. The work in the second and third spans before you riveted it, was that as good as the work in the first span? Something about the same.
2034. Were there any special defects in the second and third spans? No, not more than in the first span; I think if anything the middle span was the shakiest of the lot; there were more loose rivets in it.
2035. The chief defects in the second and third spans were loose rivets? The work was not close and was filled up with iron-borings and sal ammoniac, and there were a good many rivets loose at the end of the cross girders.
2036. Were they packed under the ends? They lay fairly close; some of them were a little off.
2037. How did you find it in the bottom booms? I found a few loose rivets, mostly in the ends of the cross girders.
2038. How did you find the rivets in the channel-irons and lattice-bars? There were a good many of them loose, especially at the end sections; there were a good many broken; we have chipped and scraped and painted two spans of that bridge.

2039. Have you done anything to repair the Wellington bridge? Only to the wind bracing stays underneath; we have screwed them up; they were all loose; it was the same at Bathurst; I had them done before I commenced repairing the bridge at all.

Mr.
W. Hilzinger.
27 June, 1885.

2040. How were the rivets in the plates which formed the joint? Some of them were loose.

2041. You had to renew them? Yes, the nuts came off with the vibration of the bridge; they ought to have been locked; we have locked them since.

2042. You have found in the Wellington bridge about the same number of defective rivets in the top as you have in the bottom booms? Not so many in the bottom as in the top.

2043. Did you find any loose rivets in the cross-girders of the Wellington bridge? Not in the cross-girders.

2044. What about the rivets in the ends of the cross girders? There were some of them loose.

2045. Did you find any rust cement in the Wellington bridge? No; we did not find it at Bathurst until we began to repair.

2046. You found loose rivets at Wellington? Yes, in the top boom.

2047. Were they in any number? Yes, about two dozen of them; four and five of a row across the boom.

2048. You do not consider the work in the Wellington bridge at all comparable with that in the Bathurst bridge? It is much better and closer, not only in the riveting and plating part of the business but it is better in all other respects.

2049. How many rivets would you propose to renew in the Wellington bridge that you have marked? Where the work is not in contact I should cut them out; if they are a little loose and the work is fairly close I would not cut them out unless there were a great number of them all in a row; we marked all that were loose, but not necessarily that all should be cut out.

2050. How many do you think it would be necessary to renew? I think about five or six times that of the number as reported, because, when you start you have to go on until you come to where it is solid; I do not think we could stop at the number we have reported.

2051. What condition are the channel irons in;—are they well fitted to the stringer plates? Some of them are and some have a space between them, a space you can put hoop-iron in.

2052. *Professor Kernet.*] Do you consider the Aberdeen bridge in as good a condition with reference to tight rivets and contact as the Wellington bridge? No, it is far worse than Wellington.

2053. Is it worse than Bathurst was before you touched it? In some respects it is; there are not so many of those double holes in the Bathurst bridge as in the Aberdeen bridge; the work is closer in the Aberdeen bridge, but in the Aberdeen bridge there are more double holes.

2054. *Professor Warren.*] In what condition are the rivets in the wind bracing? I have not been over that.

2055. And that of the McDonald River and Peel River? We could not get in them unless we had staging erected.

2056. *Mr. Courtney.*] Have you on any of those bridges observed a failure of the lead in the wall-plates? I have not seen lead in them.

2057. *Professor Kernet.*] In cutting out the rivets what precautions did you take not to injure the plates? We split the heads off first, and then the other part comes off easily.

2058. Did you not strike it off along the grain of the plates? We never struck against the landing of the plates.

2059. That would be along the length of the boom? Yes. You cannot always go by the grain of the plate in cutting the rivet out.

2060. Do you think the plate is injured by cutting the rivet out? Not in the least. If it is a thin plate it will burr up the edge; but in such plates as we have in these bridges it does not have any effect.

2061. You never noticed any injury done to the iron? None whatever. The machine rivets should be drilled out.

2062. Have you had to cut out any of the machine rivets? No; we have not cut the rivets out of any of the cross girders; they are always tight.

THURSDAY, 2 JULY, 1885.

Present:—

G. A. MORELL, Esq., C.E., PRESIDENT.

W. M'D. COURTNEY, Esq., C.E.,

W. H. WARREN, Esq., C.E., PROFESSOR
OF ENGINEERING.

Macnamara Russell, Esq., sworn and examined:—

2063. *President.*] You held a position in the Railway department some time ago? Yes, I was chief draftsman.

M. Russell,
Esq.

2064. How long is it since you left? I left last December.

2065. You were requested by the Engineer-in-Chief for Railways to visit certain iron bridges on the northern line and report upon them—the Aberdeen, Peel-street (Tamworth), the Peel River, and the McDonald River bridges? I was.

2 July, 1885.

2066. And this is a copy of your report (*showing document*)? It is.

2067. This report you wrote to the Engineer-in-Chief for Railways? Yes.

2068. You expressed an opinion in reference to loose rivets: that a very large hammer had been used to test them;—who informed you of that? The person who accompanied Mr. Wade, Mr. Drewett, and myself, in the inspection. His name was Mr. Bewick; I suppose he spoke from having seen the hammer used.

2069. You did not see the hammer? No, I saw the heads of the rivets.

2070. What proportion of the rivets? A large proportion of them.

2071. With reference to the butts and joints not being close in the top boom, you are of opinion that it did not affect the stability of the bridge to have those joints open? Yes, I have expressed that opinion. I have also given my reasons for forming that opinion, and I produce a passage from "Stoney on Strains" in support of that opinion:

2072.

- M. Russell, Esq.
2 July, 1885.
2072. The Aberdeen bridge consists of three spans? Yes.
2073. What would you call those spans? Continuous girder, over two spans.
2074. You said that the joints in the top boom are all compression joints? No; being continuous, they are in compression and tension alternately, the change occurring at points of contrary flexure.
2075. *Professor Warren.*] You stated that you noticed marks of violent hammering. Do you think you could loosen rivets with the ordinary test hammer? No; I think not; and I understand, from practical smiths, that if you use a very heavy hammer you can lengthen the shank of the rivet, after it is cold, until by hammering you start both heads away from the work.
2076. Can you give some estimate as to how many of the marked rivets are loose? About one in ten.
2077. The rivets that bear signs of violent hammering;—how many are there? Those are the rivets I refer to—the marked rivets; and on the numbers named by me I have been guided by the report of Mr. Cowdery's officers.
2078. That gives the impression that only those rivets marked with the hammer are loose? No; some were marked with chalk marks, others with chisel cuts, and, as far as my memory serves me, the greater part of those that were marked bore signs of excessive hammering.
2079. You say that the rivets are true in line? Yes; if the bridge had sagged, that would have distorted the horizontal line of the rivets; if there had been lateral distortion it would have altered their vertical line; if the bridge had gone down at all, owing to loose rivets, or to excessive weight or constant traffic, it would present the appearance of being buckled.
2080. Are the tension and compression joints in this bridge designed in precisely the same good manner? So far as I could ascertain there were one or two exceptions, but I take it that the fact that the camber is still so nearly perfect, shows that there could have been no serious defect in the workmanship of the bridge.
2081. You did not notice any difference in the parts of the compression member over the piers and the joints and tension? No, I did not notice—I have a note-book in Melbourne which would refresh my memory on some of these details; I think one or two of the covering plates were not sufficiently large to cover the tension joints; but bridge engineering twenty-five years ago was in a very different stage to what it is now, and I think we might do worse even now than repeat the Aberdeen bridge work and design.
2082. You consider it well designed? Yes, and very faithfully built.
2083. *President.*] What difference of sectional area, if any, would be required between the area of rivets and the area of plate in making the joints? The amount of plate taken away by the rivet-holes should be compensated for by the plate over the lap-joints of (say) one-third to one-fifth; I cannot give the proportion exactly, this being a matter of detail which would depend upon the designer of the bridge. I think in some of these plates there was not sufficient area allowed for loss by riveting.
2084. You stated that one of the plates in the top boom had double or slotted holes? I think that plate should not have been put in at all; it has the appearance of being a defect—a defect or flaw in the workmanship.
2085. You stated also that it would be injurious to cut out a number of rivets and replace them;—what proportion of rivets do you think it would be injurious to cut out? If they were merely in single shear and easily got at, then the injury would be reduced, but if the rivets are mostly tight, I think it would be better to leave them in rather than resort to violence, because you cannot then withdraw them without injuring the adjacent rivets. In fact the more you take out the more you loosen. If the rivets were as loose as Mr. Cowdery's officers reported no injury could accrue; but I say they were not so loose that they could be cut out without injury.
2086. Do you know an instance in which loose rivets have been left and considered not unsafe in the bridge? I have no absolute knowledge of any instance, but I suppose it would depend upon the proportion that the loose rivets bore to the structure; if only 1 or 2 per cent., I should say leave them alone; if it was 75 per cent., then replace them; or, preferably, rebuild the bridge.
2087. On the whole you consider that the Aberdeen bridge is well put together? I think so, bearing in mind that there are one or two conspicuous but trifling defects in the workmanship which had better not have been allowed to go into the bridge. I would, for instance, take care not to leave a gap of half an inch in the jump joints, nor use plates with slotted holes, because it looks like slummed workmanship, but the camber being as perfect as it is the bridge has proved itself to be a very well-fitted bridge.
2088. *Professor Warren.*] Do you consider that the traffic would have any effect upon the camber? Yes, if the bridge had not been properly constructed. In this bridge, according to the present standard, the cross-girders are weak. I am of opinion that with the present rolling-stock some of the cross-girders are decidedly deficient in strength and approximate too closely to the factor of safety, especially perhaps in the case of the Nepean bridge, but at the time that bridge was designed the practice was to put in a great number of girders close together, a plan that is now abandoned under the new conditions of heavy rolling-stock which prevail.
2089. With reference to the flaw you spoke about, how long did you spend examining that bridge? We took the best part of a day to each of the bridges we examined; we spent a great part of that time examining the Aberdeen bridge.
2090. You did not observe in the other bridges defects of a similar character to the slotted or elongated holes? No. I did not observe any in either of the other bridges I examined.
2091. You state that if a few hundred rivets were replaced it would endanger the structure? No, only if they were replaced by means of excessive violence, which I believe would be necessary before you could get the rivets out at all; you would thereby start so much more of the other rivet work.
2092. *Mr. Courtney.*] How did you get the weight of the engines used in testing the deflection? Those were checked by Mr. Drewett and Mr. Wade, and all our calculations came very close to each other.
2093. You also inspected the bridge over the Peel River at Tamworth? Yes.
2094. You state that the remarks about the rivets on the Aberdeen bridge also apply to this bridge? I think so. I did not observe any case of slotted holes or anything of that kind.
2095. Did you test this bridge with the same load as the Aberdeen bridge? Yes.
2096. You found a deflection, as stated in the report? Yes.
2097. You made the same remarks upon every one of these bridges about the treatment of the rivets; it was assuming that the rivets had been loosened almost on purpose? I could not imagine any professional man having authorized any bridge to be used in this manner.

2098. How many blows would loosen a rivet? That depends upon the weight of the hammer and how the blows were given. I was told that the hammer was heavy. On all of these bridges the heads of the marked rivets were dented in; and more than that, the paint was knocked off corresponding to the blow. It was certainly not done with a tapping hammer. I saw some of the heads dented more than could possibly have been done by a tapping hammer.

M. Russell,
Esq.
2 July, 1885.

2099. What per centage of those rivets were there? A large per centage of those I examined—probably some hundreds of them.

2100. *Professor Warren.*] Do you think there are 100 rivets in any one of the bridges that bear marks of violent hammering? Certainly; on one of the bridges nearly the whole of the marked rivets are "marked" with two deep chisel cuts.

2101. What depth are the chisel cuts? Probably the sixteenth part of an inch.

2102. Do you think you could scratch it as deep as that with a pen-knife? No; I was told those rivets were to be cut out and if those marks are not now visible perhaps they were cut out since I was there. If the rivets have not been taken out I am sure that they were dented as I have said.

2103. *Mr. Courtney.*] The marks that you saw upon the rivets were not such as to deteriorate their strength? No; I do not think that; the marks were only to show that they were to be removed.

2104. *President.*] Those marks of violence apply also to the M'Donald River bridge? Yes; I think I say so in the report. It was on the M'Donald River bridge that I found a rivet which they had attempted to withdraw and had been unable to.

2105. Do you know how this rivet was cut out;—was the head knocked off? After cutting the head off they had tried to punch the rivet out, but it had stuck there.

2106. Did that happen in your presence? No.

2107. You do not know the circumstances connected with the cutting out of that rivet? No.

2108. You found also that the deflection was five-tenths of an inch with the same load? Yes, and the camber was very nearly perfect.

2109. During the testing of that bridge did you find that the side-way oscillation was more than it should have been? No; I think it was a well built and very firm bridge; I observed no side oscillation; of course we were not running at a very great speed as was done in some other testing of which I have heard.

2110. You made the test with the level only? Yes, with the level only.

2111. *Professor Warren.*] Did you notice the wind bracing on the Aberdeen, McDonald, and Peel River bridges? Yes, it is diagonal bracing with coupled joints.

2112. Did you think the design of the connections was a good arrangement for connecting this wind bracing? No, I did not think it was a very good arrangement; there is too little metal left where the strain is greatest.

2113. Would it be better if the plates riveted to the girders were turned the other way about? Yes, it would be better I consider, as it would distribute the strain on the rivets better.

2114. Did you notice whether the rivets in one of the Aberdeen bridge wind bracing plates were tight or loose? No, I did not; however, the bridge is still as much of a bridge to-day as it was when it was first put up—though as a matter of engineering skill I should prefer placing those coupling-plates as you suggest; it looks to me as if there had been an oversight in fitting those plates.

2115. *President.*] What experience have you had of bridge work? I have been in the profession since I was seventeen years of age. I commenced my career in my father's office, who was a civil engineer in London; subsequently I was in charge of telegraph construction in Egypt, and was there for three years in the Viceroy's service. Afterwards I was three years at the Bermudas where my father was engineer, but we did not build any big bridges there. After that I practised my profession as a surveyor and civil engineer both in Victoria and in New Zealand, where I was assistant engineer at Auckland, and designed some and superintended other important engineering works, including an iron swing bridge, the work for which came from the yards of Messrs. P. N. Russell and Company. Seventeen years ago I came to this Colony, and was at once appointed to the Department of Roads and Bridges under Mr. Bennett, and I had charge of many of his largest works. I was five years in that department, and afterwards I joined Mr. Whitton's department, in which I remained for ten or twelve years, and until the end of last year, when I retired from the Public Service on account of ill health.

TUESDAY, 18 AUGUST, 1885.

Present:—

G. A. MORELL, Esq., C.E., PRESIDENT.

W. M'D. COURTNEY, Esq., C.E.,

W. H. WARREN, Esq., PROFESSOR
OF ENGINEERING.

John Whitton, Esq., Engineer-in-Chief for Railways, re-called and further examined:—

2116. *President.*] Before concluding our inquiry we wish to ask you a few questions with reference to some of the bridges on which we have to report. Beginning with the Menangle Bridge, I would ask you first, whether, in designing that bridge, you considered the difficulty of access to the boxes of the booms? I did not. I remember that at that time there had been only about five of these bridges built. The only two that I remember before that were two bridges over the Trent; one near Gainsborough, the other higher up. There is a difficulty, no doubt, in getting access to the boxes, but a boy or a small man might get through them. I have had none built like that since.

J. Whitton
Esq.
18 Aug., 1885

2117. Do you think that the timbers on which the girders are resting could be renewed? No; I have never thought how they could be renewed. Originally the girders were all bedded on timber. Since those two bridges were erected we have bedded the girders on plates—roller plates and flat plates.

2118. *Professor Warren.*] Were the cross-girders calculated for a double line of way? Yes.

- J. Whitton,
Esq.
18 Aug., 1885.
2119. In the calculations for the cross-girders on the Menangle bridge did you allow anything for the longitudinal timbers that go over them? Yes; they distribute the load very much. They have been calculated to distribute the load. If renewing them I should use stronger timber—thicker timber.
2120. *President.*] The design of the Wollondilly bridges was prepared in your Department? Yes; all the drawings have been made in my Department.
2121. They seem to have been signed by Mr. Mason? During my absence in England they were signed by Mr. Mason.
2122. We have found that the 130 feet spans at the first and second crossings have not been carried out according to the drawings? They were not carried out exactly according to the drawings.
2123. Was the alteration made with your concurrence? I do not think it was. I think Mr. Fowler ordered them at home. Indeed, I think I sent the Commission a letter from Mr. Fowler to me, in which he stated that he had made some slight alteration in the girders.
2124. There is no expansion arrangement provided for the 60-foot girders: did you think it was unnecessary? I did not think it necessary. They are very short girders. Some of them are on plates; the others are bedded on stone.
2125. There is no fastening to one end of the girders? No; no fastening to them at all.
2126. Did you think it was unnecessary? I did not think it was necessary to fasten them.
2127. Yet there is some expansion on those bridges? In the 60-foot one there is a little, but not very much. There is plenty of space left for any expansion. The only way in which they could have been fastened would have been by leaving slot-holes in the girders and bolting them down. But there is no chance of their lifting up.
2128. A quantity of dirt, such as ballast and cinders, falls between the ends of the girders, and although the expansion is very small it seems to be sufficient between the two girders to make a strong kind of cement of the material? I have not noticed that; I have not seen the bridges for years, but the dirt could easily be removed by the permanent-way men.
2129. *Professor Warren.*] There is a matter in connection with one of the joints in the 60-foot span I should like to ask you a question about, as the bridge differs in that respect from all the other bridges. Were you satisfied with the joints in tension in the bottom flanges of the Wollondilly bridges? I was not aware that it was as you point out; still I am satisfied with it, seeing that it has been in use for so many years. I admit, however, that it would have been better with a longer lap.
2130. *President.*] The Wollondilly bridges were built with a slight camber? I think with an inch camber; the others with a three-quarter inch camber; but so far as I know they have shown no sign of further deflection. They all remain as they were originally constructed.
2131. In the case of the Penrith bridge, what was the live load the bridge was designed to carry? I think it was a ton and a half per foot for each road; that would be 3 tons.
2132. *Professor Warren.*] In Maw and Dredge's book on bridges Penrith bridge is illustrated, and it is stated that the dead load of the structure is about $2\frac{1}{2}$ tons per foot run, and that the live load has been calculated as $1\frac{1}{4}$ ton per foot run on each line of way; that makes a total load of 5 tons? I thought it was 3 tons. I am pretty sure I calculated it with 3 tons, but it is so long ago I cannot remember.
2133. The question is whether the information given in the book is correct? I dare say it is; it must have been obtained from Mr. Fowler in London.
2134. That bridge bears your name and Mr. Fowler's jointly? Yes.
2135. *President.*] And what is the dead load? About $2\frac{1}{2}$ tons.
2136. *Professor Warren.*] With reference to the horizontal line of rivets uniting the webs to the booms, and which are three-quarters of an inch in diameter and of 4 inches pitch, do you consider that they are sufficiently strong for a double line of way? Yes; I think they are. The fewer rivets there are on a bridge the better, so long as they resist the shearing strain of the plates. It was intentionally done, I suppose, but I do not know why. The rivets should be the same size throughout, no doubt. I did not know that they were smaller. Still you have seen nothing in the shape of damage done.
2137. Following up the last question, I would ask you this: Are the rivets in the webs through the quarter-inch plates sufficient in bearing area? I should think they were. The great test is that the bridge has been in use for so many years, and as no symptoms of failure have shown in any of the riveting, I think the rivets must be considered as large enough for the purpose.
2138. Of course the questions are put in view of a double line of way, not of the present single line? Yes; all the bridges were designed for a double line.
2139. *President.*] I suppose you have taken the unit stress generally recognized by the Board of Trade with regard to tension and compression? Yes; 4 tons compression, 5 tons tension, to the square inch.
2140. Did you compare in your calculations the unit stress brought on by the total load with the intensity of stress required by the regulations? Yes; they are all calculated according to the Board of Trade regulations.
2141. And there was no difference? No.
2142. Do you think that in course of time the unit stress might be increased by the annual wear and tear and deterioration of the iron-work? In time no doubt the plates will get thinner, but they ought to be cleaned and painted to prevent anything of the kind happening.
2143. Do you think it would be safe to go beyond the limit of 4 tons compression and 5 tons tension? You might go beyond it, but I think there are very few of our bridges that show as much as 5 tons tension; I think it is generally about $4\frac{1}{2}$.
2144. *Professor Warren.*] Is that with reference to the traffic or calculated loads? I am speaking of the calculated loads.
2145. What was the quality of iron used for the rivets? The best quality of iron.
2146. Was any test specified with regard to it? I think it was to be the same as the best boiler plate. The iron used for the rivets as a rule is equal to the best boiler plate. They are exceedingly good, in the Penrith bridge particularly.
2147. Would you consider $7\frac{1}{2}$ tons dangerous in the case of such a bridge as that at Penrith? I should not consider it dangerous.
2148. *President.*] Of course, the cross-girders were taken out for a double line of way;—do you consider the strength of the cross-girders in the Penrith bridge sufficient for a double line of way? Yes; they are the weakest part of the bridge yet, I think, but they are sufficient for a double line of way. If I were preparing

preparing the bridge for a double line of way I would strengthen them by placing over them longitudinal timbers 12 inches in depth. They might also be stiffened by putting in rail-bearers, the same as has been done in the lattice girder bridges.

2149. There is a letter from Mr. Fowler in which he recommends that the chairs should be fixed between the cross-girders—in that way, at least, two cross-girders would be compelled to come into action at once ; that has not been carried out here? No.

2150. You did not consider it necessary? No ; I did not consider it necessary.

2151. But in view of the heavier traffic which now passes over the bridges, and the increased weight on the driving wheels, would you consider it necessary now? I should do so if I were to renew them. The engines with the tenders are now weighing 20 tons more than they did some years ago.

2152. *Mr. Courtney.*] Can you call to mind whether the Penrith bridge came out riveted in parts or in bars ; were the booms riveted at home or here? Here, most of them, I think, but I am not quite positive about it. Nearly all the other bridges have come out in parts.

2153. *President.*] With reference to a letter, in which you state that the booms are always in compression, and that it would matter little if one-third of the rivets were slack, did you refer to the whole of the booms? I only referred to that portion of the booms which were in compression. Over the piers they are in tension.

2154. *Mr. Courtney.*] With reference to the Solitary Creek bridges and the girders on stone, have you ever had experience of the lead being destroyed by acid from the mineral underneath the bed of the girders? I have not heard of it.

2155. I ask the question because the statement has been made in evidence? I have had no experience of it myself ; but I think all girders would be much better if bedded on plates. Very often the contraction and expansion destroys the masonry.

2156. Have you observed the piers of the Solitary Creek bridges with regard to the expansion plates? They are cracked. The stone copings are cracked. The contraction and expansion of the girders are the cause of it, no doubt.

2157. They have been replaced by brickwork? Yes.

2158. What was the live load calculated on the Solitary Creek bridges? I think a ton and a half to the foot of rolling load.

2159. *Professor Warren.*] Do you not think they might have been calculated for a less load? No ; I think it was calculated for a ton and a half to the foot.

2160. *President.*] The girders of the Solitary Creek bridges were built with a camber? I think they were built with an inch camber, but I cannot be positive.

2161. *Professor Warren.*] Do you consider that the camber could possibly have been destroyed by the traffic which has passed over the bridges? I think it is possible ; they are a little sagged now.

2162. Do you attribute the sagging to the traffic or to the erection? It may have been the erection, but I never noticed it, nor did I notice that they had much camber ; but I think they were built with an inch camber, though now they are very slightly sagged. They are very strong bridges. They would no doubt have been better with a camber of about 2 inches. But even if they were perfectly straight they would look sagged.

2163. *President.*] In the Wellington bridge there is a slight difference of level between some of the piers? Yes ; in the end piers there is.

2164. What is your opinion about that? My opinion is that the District Engineer fixed them too low. I do not believe that they have settled. I think you will find among the papers you have a memorandum from him to say that he fixed them low.

2165. *Professor Warren.*] Do you consider that a difference of level, say of 2 inches, would affect in any way the strength of the bridge? Not in the slightest.

2166. Are the rods shown on the plan produced calculated for wind pressure? Yes.

2167. They are the same size throughout? Yes.

2168. On all the bridges that we have had to inspect the end attachment is made different from that on the George's River ; in fact it appears to have been put on the reverse way? I did not notice that.

2169. *President.*] Coming to the northern bridges : in the Aberdeen bridge several defects have been pointed out, such as improper butting of plates in compression ; slotted holes ; want of proper contact in the angle-iron wrappers and the angle-irons, or the angle-irons and plates ; want of proper contact in the ends of the cross-girders and the vertical plates to which they are fastened ; and other defects of that kind? I know that some of the plates do not quite butt on the top boom, but to have attempted to alter them would have ruined the bridge. No doubt it would have been better if the joints had all butted up, but it does not follow that the bridge is weak because they are not in contact, so long as the rivets are tight. I do not think they have ever moved. I have not inspected the bridges since they were put up, but I do not suppose that they have moved.

2170. Is it your opinion that if no sign of looseness should appear where those defects occur, the maintenance would be considered satisfactory if nothing were done? Yes, certainly. If the rivets are distinctly loose, it is clear that they are doing no good ; they are throwing the strain on something else. When a mere vibratory motion is found in a rivet I would not touch it ; it is doing no harm.

2171. *Mr. Courtney.*] If in making an examination of a bridge you found some rivets apparently sound and good, exposed to a pressure considerably in excess of 5 tons, say 10 or 12 tons, would you cut them out to make a larger hole and put in a larger rivet, or would you leave them in until they showed a failure? I would leave them in undoubtedly. The fewer rivets there are the better ; I should not cut them out unless I found them shearing.

2172. *President.*] Do you think that the vibration caused by the traffic will ultimately loosen some rivets? Yes, undoubtedly it will. In all rivet bridges it must be so ; you cannot avoid it. Constant running over the bridges will no doubt in time shake some rivets loose, and if I found them thoroughly loose, so that they could be turned round with the fingers, I would put in other rivets, but I would not touch a rivet unless it was distinctly loose.

2173. Have you any record of the percentage of rivets that have actually become loose through the traffic? No, I have not. I never knew a bridge in which you could not find slightly loose rivets.

2174. If you had charge of the maintenance of the bridges would you recommend that the rivets should be tested periodically, and rivets that were absolutely loose replaced? Yes, I would. 2175.

J. Whitton,
Esq.
18 Aug., 1885.

- J. Whitton, Esq.
18 Aug., 1885.
2175. And would you replace them indiscriminately, or by ascertaining what stress is brought upon the parts they connect? So long as the rivets did their work thoroughly I should not touch them, but I should take out any rivets I found absolutely loose. I think there are very few rivets in our bridges that would be found very loose.
2176. Is it your opinion that in all bridges only a proportion of the rivets are doing their work: that a certain proportion are not actually and always doing the work which they should do? A thoroughly loose rivet of course does no work.
2177. But in bridge-work generally do you think that every rivet does its work? Yes; every rivet is doing its work; either acting as a clamp or resisting the shear strain of the bridge.
2178. But as some rivets become loose, more strain is thrown on other rivets? No doubt, and therefore to prevent that I would take out all rivets that are perfectly loose, but only those.
2179. You are quite satisfied with the work on the Peel River bridge, the bridge over Peel-street, Tamworth, and the Macdonald River bridge? Yes; I do not think better bridge-work can be found in the world than we have in this Colony.
2180. *Professor Warren.*] Speaking of the wind pressure, what wind pressure has been calculated for in the case of the bridges generally? I think a pressure of 50 lbs., but I am not quite positive.
2181. To resist that wind pressure do you allow for the deck itself as well as the diagonal rods and the over-head arch? Yes.
2182. Did you place a test load on the cylinders in the piers of those bridges? Yes, in all cases.
2183. That is an important matter with reference to the Wellington bridge; what test load was placed on that? I think 150 tons over each cylinder, but we have put more on lately; I think the George's River bridge had 250 tons.
2184. *President.*] If the bridges were tested periodically, say every two years, do you think that the deflection would gradually increase if the same loads were applied? I do not think it would unless the plates became worn away to some extent; but I must say that if I had bridges under my control I would not have them tested by severe loads after being once tested when put up. I do not think you do a bridge any good by testing it with very heavy weights. All our bridges are tested with three heavy engines (we had four the other day at Narrandera), but I do not think it would be wise to test them every year with those weights, because as long as a bridge keeps its original camber there can be no fear of its tumbling down. Therefore, unless I saw some sign of weakness in that respect, I should never put on a very heavy load.
2185. But with the increase of traffic which is sure to take place in the course of time, and with perhaps heavier engines, it would probably be well to ascertain every four or five years whether the bridges showed any sign of weakness? Yes, it might; but there would never be more than two engines with a train. So long as the bridges retained their camber I would never test them with very heavy loads.
2186. *Professor Warren.*] But if we have two engines in the middle of either of the side spans, and a heavy train extending entirely over the middle span, I think that would produce a stress as great as with three engines in either span, so that it would not exceed the ordinary traffic to load with three engines? I think it would; I think a test beyond the ordinary load is dangerous to any bridge, more particularly after it has been up a number of years. But, of course, if I saw the slightest deflection in the camber itself, I would test the bridges at once, because then there must be something wrong with them.
2187. *Mr. Courtney.*] Would you regularly inspect the state of the camber? Yes, I would inspect the state of the camber and the riveting; I would keep a man employed in doing that and nothing else, and if he found anything wrong I should have it rectified at once. There could be no objection to testing any of the bridges at any time with a train and two engines; but the ordinary traffic would soon show if there was anything wrong with the bridges.
2188. *President.*] Have you remarked in any of the bridges that the expansion arrangement does not work properly? I have noticed it on the Penrith bridge and the Nepean bridge; I put a gauge upon them so as to notice the expansion. There is no doubt the expansion rollers do act. I forget what the expansion was; I think it was about 3 inches on the Penrith bridge.
2189. In the open-work girders, when the expansion rollers do not act properly, and after they have been exposed to the heat of the sun, a heavy goods train going over them will often cause a sudden jerk, as if the load combined with the expansion had produced a sudden deflection; do you think that would be injurious to the bridges? I have not found anything of the kind.
2190. In the testing we found that in some cases where the expansion had been stopped owing to want of proper attention, the effect was to cause almost a buckling of the bridge? I never noticed that. It would do so to some extent no doubt, if the expansion was stopped.
2191. Coming to the timber approaches of the Wagga bridge, what do you consider to be the life of good Colonial timber? Iron-bark will last from twenty to twenty-five years if properly attended to. Other Colonial timber, if thoroughly good when placed, should last fifteen years; stringy-bark should last that time.
2192. The co-efficient of safety is considered to be sufficient for the weakest timber? Yes; we could build the approaches with half the timber we use, but I do not think it would be safe to do so, though they might carry the load very well; but there is no economy in doing it. In fact contractors have often asked me to let them put in beams of 12 inches square to save them from having to cut 3 inches off them.
2193. Have you found what should be the limit of the length of the corbels? I have never taken the corbels into consideration at all, but if they are made long enough and bolted to the two main girders there is no doubt that they do add strength to a bridge; but if the corbels are bolted to the girders they will rock over the piers with the girders: that is to say, they will bring a kind of contrary flexure on the span, and as the deflection takes place on one girder the other will be slightly raised.
2194. Do you consider that would be injurious to the traffic passing over? Not at all.
2195. You would not attribute any jumping motion to that? No; the jumping is attributable to the train running over the solid pier at one time and then over the suspended portion.
2196. The deflection upon the timber approaches at the Wagga bridge is not likely to cause derailment more than upon the iron bridge? No, I do not think so at all. I do not remember an instance in which a train has left the rails unless the road has been in bad order. There is always a reason for an engine's getting off the rails and it should always be found out; but I have noticed lately that it is never found out, though it can easily be found out. An engine will never leave the rails unless there is some good cause for it.
- 2197.

2197. *Professor Warren.*] Why was the original design departed from in respect to the length of the Wagga viaduct? I do not think there is more in it than the original design shows; if there is it must be in consequence of information I got about the floods.

2198. Why was the span of 29 feet 6 inches adopted instead of a span of 26 feet as used elsewhere both before and since? Simply to make it less expensive, but I always found it a difficult matter to get timbers of that length, and that we could get them better and cheaper by having them 3 or 4 feet shorter. They are 29 feet 6 inches at Tamworth; in fact the bridge there is similar to the one at Wagga.

2199. Has there been any difficulty or complaint with reference to the 29 feet 6 inches span at Tamworth? Not the slightest; nor in the case of any of the bridges.

2200. We have had complaints with reference to the Wagga viaduct, and I wanted to know whether you had had any similar complaints with reference to the Tamworth viaduct? None whatever. The difference between the two viaducts is simply this: that the timber in the Tamworth viaduct is better than that in the Wagga viaduct. The uprights are better; they are principally of stringybark, I think.

2201. With reference to the width in the Wagga and Tamworth viaducts and in the viaducts generally, which is 12 feet 6 inches, do you consider that absolutely necessary? They might be made narrower, but I do not think there would be any advantage in so doing. It makes a much steadier railway to have a width of 12 feet 6 inches. If the sleepers are 9 feet, it leaves only a space of 1 foot 9 inches on each side. Our sleepers now are 8 feet, though originally they were 9 feet, but we cheapened them by making them 8 feet, and so made a worse road.

2202. *Mr. Courtney.*] Could you give us your opinion with regard to the props used in cases where there is defective timber? They were only put in originally as a sort of scarecrow to make somebody believe that there was something wrong. There was no necessity for the props at all.

2203. But from time to time, out of 2,000 girders, some will fail; do you think the propping has a bad effect on the vibration? I do not see that any good is done by propping.

2204. Has it any bad effect? I do not know that it would have any bad effect, but it does no good. It would cause the girders to have less deflection to prop them in the centre, and you might put in a certain number of props so as to make them perfectly rigid, but there is no necessity for the girders to have any props.

2205. We have evidence that timber grown 500 feet above the site of a bridge shows a great difference in its wear as compared with the timber on the lower level;—have you ever experienced that? No; but the timbers are very different in different parts of the Colony.

2206. But a difference of 500 feet in elevation does not in your opinion make a difference in the timber? No; it is the soil more than anything else which causes the difference in the timber.

2207. If you were designing these bridges again would you be disposed to put a cover on the upper side of the compound beams over the corbels? No; I should not think it necessary to do so. No doubt the best thing would be to have an iron viaduct altogether, but we had not the money and could not afford it. At one time a resolution was passed by the Assembly that no iron should be imported for any bridges whatever, it being the general wish that timber should be used wherever possible; and in the case of the Singleton bridge the House refused to vote the money for it until I had laid the plans on the Table to show that I intended to use timber and not iron. That is the reason why it is a timber bridge now. In every instance it has been the wish of every Minister and every Government that timber should be used when practicable, so that all work should if possible be done in the Colony.

2208. Is it your experience of timber that the pipes inside the piles increase? I have never seen any timber with pipes in it. Of course pipes are in many timbers, even in the best; and sometimes the inside is quite rotten in parts while the outside is quite good, but I have never noticed pipes in the piles. It does not follow that the timber is bad because there is a pipe in it.

2209. No; but the question is whether they increase or not? If they grow of course it must be that the pile is decaying, but I do not think that the fact of there being a pipe causes them to decay. It must be some other cause, such as dry rot in the timber.

2210. Do you think that tarring the new timber as it goes up is favourable to its taking dry rot? I think it is very much in favour of its taking dry rot. The timber would be much better without tar. It should not be painted or tarred for twelve or eighteen months after being put up.

2211. *President.*] If you had to erect timber viaducts now would you use 29 feet 6-inch spans? I would if I could get the timber. The difficulty is to get the timber in that length. The contractors charge more if you use that length, because the timber is difficult to get.

2212. You would consider them perfectly safe? Yes.

George Cowdery, Esq., Engineer for Existing Lines, recalled and further examined:—

2213. *President.*] We wish to ask you a few more questions before concluding our inquiry. We shall take the bridges in the order in which they come on the different lines. When you received information with respect to loose rivets in any of the bridges, were you supplied with a sketch or diagram showing the parts in which the rivets were loose? Yes, in most cases I think, excepting the bridges in the south—I am not sure whether there was a diagram with reference to them—but in those cases I went to examine the bridges myself before giving any instructions for the removal of rivets.

2214. Before you authorized the renewal of any rivets did you consider the rivet area of the parts which they joined? Oh yes, certainly.

2215. And did you ascertain the stresses that came upon those parts where the rivets were cut out? I do not say that I calculated them but I knew where the strains came, and I was careful not to have any more taken out than those that were loose before the new ones were put in.

2216. *Professor Warren.*] Do you say that you were careful not to have any rivets cut out, excepting those that were really loose? It is a difficult matter to convey the right meaning in terms like those. A rivet does not assist to carry the bridge if it is loose.

2217. Do you mean by a loose rivet one that you can shake with the hammer: do you mean to say that a rivet is not doing work if you can move it at all? Of course there are degrees of tightness. The rivets must assist the bridge if they are not very loose, if there is a strain on them.

2218. How can you ascertain that there is a strain? By the rivets being loose or tight.

J. Whitton,
Esq.

18 Aug., 1885.

G. Cowdery,
Esq.

18 Aug., 1885

- G. Cowdery, Esq.
18 Aug., 1885.
2219. With or without a load on the bridge? I do not think that makes any difference, or next to none. Some other rivets must be carrying more than their due weight. I do not think the load or the absence of the load makes any difference to the tightness or looseness.
2220. You mean to say that a live load makes no difference? I do not think you would be able to discover the difference.
2221. *Mr. Courtney.*] If you take four thicknesses of iron, and a rivet passes through three and a half tight, but in the last half does not bear up to the neck, if that rivet is struck on the head it will sound loose, and if you drive it out you have driven out a rivet that has been doing work? Yes, in the place where it was tight.
2222. And that was in three and a half plates out of four? I very much doubt if you would find a rivet under circumstances that would not feel absolutely tight.
2223. *President.*] What I want to know from you is whether before any rivets were cut out you ascertained what stresses those rivets were to transmit from one part of the girder to another? Perhaps not very definitely; but wherever there was or was likely to be a strain on the rivets I always instructed the men to be careful, and to take out only a limited number and those only that were quite loose, before putting other bolts in, screw bolts I mean, to bring the work close.
2224. The stresses vary in different places, and in some places it might not matter, while in others it might be of importance; but what I wanted to know is whether, before you sanctioned the cutting out of any rivets, you ascertained the stresses that came upon them, and the area they represented, in order to give instructions accordingly? I never gave instructions to have any large number of rivets taken out of any of the cover plates unless they were really loose, and then only as few as possible—just sufficient to enable the men to draw the plates together where they were not close. I believe they were careful in every case. Whenever I went on the work I saw no cause to complain of too many rivets having been taken out in one place.
2225. But the stresses were not ascertained? They were not calculated.
2226. In any of the bridges, when you renewed rivets, did you make any provision for supporting the girder while the rivets were being renewed? No. There was one instance where one of the small girders had dropped considerably, and which at one time I thought of stiffening, but instead of doing so I had it carefully reriveted.
2227. Had you the rivets taken out one by one? Very nearly so; a very few at a time.
2228. *Professor Warren.*] Where was that? On one of the bridges in the west; one of the Solitary Creek bridges; I forget which one.
2229. The President has asked you some questions with reference to the stresses which the rivets have to transmit, and the area in the rivets which transmit them. The stresses will vary in some parts more than others, and towards the end of the girders—for example in the discontinuous girders; you have a very low unit stress, about 1 ton on the square inch. Do you consider it necessary in such cases to take out rivets which are slightly loose and renew them? I do not know that I ever gave instructions to make any distinction between that and other parts of the girder so long as the rivets are really loose.
2230. The general principle has been to cut out rivets where they are loose without any reference to the part of the work? Yes.
2231. *Mr. Courtney.*] No instructions were given to discriminate between rivets that were found to vibrate under the hammer and those that were moved by trains passing by? You could not watch many rivets while a train was passing by, to ascertain whether they were loosened by the motion or not. You have to depend on the hammer.
2232. *Professor Warren.*] Do you consider loose rivets a source of danger? Yes.
2233. Then do you think that in any of the bridges you have had reriveted there was any danger of the bridge failing? It would depend on how many rivets were loose in certain parts of the bridge. For instance, if the bridge were resting on a few rivets, and those not of sufficient area to sustain it, or only just sufficient, the others being all loose; or if any of those that are bearing the strain gave way the strain would fall on the others and probably shear the lot.
2234. But have you met with any instance in any of the bridges in question where not to have renewed the rivets would have caused failure? I think there are one or two cases where there are a great many more loose rivets than leave a sufficient number of tight ones for the area of the iron. I think you must have discovered that in the Aberdeen bridge in one or two places in the bottom boom of one of the girders, where there is a considerable number of loose rivets.
2235. You do not consider then that in any of the bridges with which you have had to deal there was any real danger of the bridge failing owing to loose rivets? No, certainly; I never intended that. If I had thought so in any one case I should have reported it before touching the bridges.
2236. *President.*] When what you consider as defects in the Menangle bridge were reported to you, was the question of the cleaning of the boxes, top and bottom, also brought under your notice? Certainly; they were shown to me in a bad state, with the water resting on the plates, which were very much corroded, and there were no holes to let the water out. We made a lot of holes to let the water drain. Not only that, but I also gave instructions to have the plates thoroughly cleaned and hammered before being painted. Many of them had gone a number of years without being looked at at all. They had never been seen by anyone until I instructed a thorough examination of them. I had been sufficiently long with Mr. Mason to know that no instructions had ever been given to clean them.
2237. Had you any drawings of these bridges given to you? None whatever.
2238. Did you apply for them? I applied for all the drawings in each district, but never could get them.
2239. *Mr. Courtney.*] The ends of the two inner cells on the Penrith bridge were stopped with timber? Yes.
2240. Was any complaint ever made that that was so? Not that I remember.
2241. You are aware of it? I have been aware of it since.
2242. And that those bottom cells have been stopped for seventeen years? They must have been closed ever since the bridge was erected. No one had ever looked at them either in the big boxes or the small ones until I instituted an examination. When I went through some of them and saw the state they were in I thought it was time to do something. After seeing some of the bridges in the south, I thought that if the others were anything like them it was time something was done, and therefore I had a thorough examination made of them.
2243. *President.*] Do you remember the expansion arrangement in the Wollondilly bridges? I cannot say that I do.
- 2244.

2244. On the small span—the 60-foot span—the girders only rest on lead? I am not aware that they rest on anything else, and I am almost certain that they rest on a sheet of lead.
2245. You find it difficult to clear the ashes and ballast between the girders and the piers? Yes, there has been some difficulty about that.
2246. Would it facilitate the cleaning of the ends of the girders if the parapets on the top of the piers were removed? I daresay it would. I do not see what use they are. They were only put there for ornament, but there is not much ornament about them. Their removal would certainly allow the girders to be got at very much more easily.
2247. To what extent were the Wollondilly bridges riveted? A great many new rivets were put in.
2248. Have you not a list of the number of rivets put in? The number of rivets that are found loose by a man going over a bridge with a hammer is out of all proportion to the number you have to put in, because all the loose ones are not found at first. It is when you begin to replace the rivets that were first found loose—that is in the places where the work is apart—that you find out the extent of the defect. You do not find out anything like the whole number the first time you go through the bridge. In putting in the new rivets and drawing the work together you loosen a great many other rivets. It is almost impossible to leave off. You must go on till you come to a tight place where the work is close.
2249. Do you ever find a place where the plates and angle-irons are not in perfect contact and yet none of the rivets that unite those parts seem to be loose? I do not know whether you would find such a place, but you will find more rivets loose where the work is not close. In every case where the work is not close you will find some rivets loose.
2250. But there may be a very small space between the plate and angle-iron, as where there is a burr, which prevents perfect contact, and yet the work may be tight? There would be contact where the burr was.
2251. And if there was no sign of undue stress upon the rivets would you replace them? Certainly not in a case where I found the work tight, even if there was a small chink. But when you can put in a piece of hoop-iron I think the rivets ought to come out. I have seen places in the Menangle bridge where I could hit the rivets with a piece of hoop-iron.
2252. And yet some of the rivets were tight? Not one of those I speak of.
2253. When the loose rivets and other defects were pointed out to you first did you put yourself in communication with Mr. Whitton with regard to them? Never; nor with the Commissioner either.
2254. You acted on your own responsibility? Yes; I believed it to be my duty, as the person in charge of the maintenance, to repair the bridges. I did not put on a gang of men to make a show of doing something to them, because I was not so afraid of them as to think there was any great danger; but I simply put on a small gang to effect the necessary repairs without making a rush at the work; and the Commissioner, up to the time Mr. Whitton complained to him, did not know that I was doing anything more than necessary repairs.
2255. *Professor Warren.*] You considered yourself responsible for the safety of the bridges? Certainly; and that is my position now I hope.
2256. In that case have you checked the calculation of the bridges to see if the area provided is adequate to the stresses which they will undergo with the traffic? I have gone sufficiently far into them to ascertain that.
2257. With reference to the cross-girders in the Wollondilly bridges? The cross-girders in some of the bridges have shown a weakness in my opinion altogether.
2258. Have you calculated those cross-girders as cross-girders simply, or have you allowed for the effect of the longitudinal girders on top transmitting the weight from one to the other? Of course I made allowance for that.
2259. Have you renewed any of the timbers since you have had charge of the bridges? I do not know whether we have renewed the longitudinal timbers, but we have renewed the planking to a large extent.
2260. In the Wollondilly bridges the longitudinals have been joined between the same two girders, whereas at other places we find a breaking joint. The question is whether you put them in that way or whether they were so originally? I would not be certain about that, but I do not think we should make any difference in the length of them. We should only take out one at a time on account of the traffic.
2261. *President.*] If you renewed the whole length it would be in such a manner as to do it in the shortest space of time? Yes.
2262. You would not make any change in the scarf? It must have been a very exceptional case in which that was done.
2263. With regard to the Penrith bridge: do you think it is likely that the line which is now used for the road traffic may soon be required for the railway traffic? It is quite possible. I know that the Traffic Department very much want the road over the mountains to be duplicated. We are now duplicating the line from Parramatta to Penrith, and I think that in all probability we shall go over the bridge with a double line in that case, and then of course they would need to build a road bridge. There was a bridge for the road at one time, but it was washed away by a flood. On the Menangle bridge there is room for a double road, but the old road bridge stood the flood and I think it remains until the present day. I should have made all these big bridges for a double road.
2264. Were the timber approaches, a portion of which obstructed the entrance to the boxes of the bottom booms, put in by your department or by the Engineer-in-Chief? By the Engineer-in-Chief.
2265. They were part of the original design? Yes. The far end of the bridge was not; that was done on account of the flood coming up to it. It was all completed before the line was opened.
2266. *Mr. Courtney.*] Until lately you had never heard any report of the timber going wrong in the wall-plates on the Menangle and Penrith bridges? No; that part had not been examined. I do not suppose that the whole of the other bridges were thoroughly examined, but they would be examined from end to end before the repairs would be considered complete, but that has not been done until recently.
2267. *Professor Warren.*] In the Penrith bridge there is a line of rivets that unite the webs to the booms: those rivets are three-quarters of an inch in diameter;—did that strike you as being out of proportion to the rest of the work? I do not know that it did at the time but I see that it is out of proportion. I do not suppose that I paid the same attention to the bridges that you have, although I have examined them a good many times. In repairing a bridge I did not consider whether it was strong or not; if it was intended to last 50 or 100 years I thought it should be put into proper repair.
2268. *President.*] You have reported upon a great many defects or so-called defects in nearly all the bridges, such

G. Cowdery,
Esq.
18 Aug., 1885.

- G. Cowdery, Esq.
18 Aug., 1885.
- such as want of closeness in the joint, and imperfect butting of the plates;—do you consider that those defects are injurious to the bridges? To a certain extent certainly. The work is not what it is supposed to be.
2269. Has there been any change in those defects since the bridges have been built? I cannot tell you; they have not been long enough under my charge for me to ascertain that.
2270. You have not observed any change? No, I could not say so. You see the change would be so slight in a long time that you could not observe it without having special diagrams showing what they were when you first observed them. You would want to go into the matter very carefully and gauge every butt in order to see if there was any difference.
2271. Would you remedy those defects before you saw any change? Certainly I would wherever I could I would certainly try to improve those butts in every case and close the work. In fact I try to improve every part that I see any defect in.
2272. You state in some of your reports that the sagging of some of the Solitary Creek bridges was so bad that you thought at one time of propping up the girders? I mentioned that in only one case I think. I did not say that I had propped them, but that I thought seriously of doing it. I did not do it because it might have attracted people's attention and they might have thought the bridge dangerous. Instead of doing that I had the bridge carefully riveted where the rivets were loose.
2273. *Professor Warren.*] In one of your reports you say that one or more of the Solitary Creek bridges would have been down if they had not been riveted? I forget what I reported now. I was under the impression that all those bridges had some camber and I believe they had.
2274. And that they have gone down with the traffic? Yes.
2275. *Mr. Courtney.*] Do you find any indication of that in cutting out the rivets? No; I do not suppose we could tell by that. We might if the holes had been neatly drilled through, but it is seldom you find a hole of that kind.
2276. You found no indication in any of the rivets you cut that a couple of inches camber had gone? I could not say that, but I could show you a number of very crooked rivets.
2277. *Professor Warren.*] In reply to one of Mr. Whitton's letters you make this remark: "I am strongly of opinion that if the Solitary Creek bridges had not been properly attended to one or more of them would have been down by this"? Perhaps that is stronger than I intended. I might have been a little out of temper when I wrote that; it is certainly strong, but I have no doubt that they have all sagged.
2278. Have you remarked with regard to the Wellington bridge that there has been any settlement? I am perfectly certain that it has settled since the line was opened—by actual levelling and checking.
2279. Can you give us the different times when it has been tested? I can by my level book.
2280. Can you give us the difference of level at the different dates? I could send it to you.
2281. *Mr. Courtney.*] Have recent experiments shown that it is still sinking? I have not tried it since your inquiry commenced. Previous to that I know that between the two times of levelling there was about an inch of difference.
2282. Was everything thoroughly set when the first readings were taken? Oh yes; we had been running some time before that. It was the plate-layers who drew my attention to it in the first place. They could not keep the road up, and they could not make out how it was. I took a level and found there was some considerable difference, and I have levelled it since and found there was about an inch of difference. That is on one side. It is about five-tenths on the other. We have never had a flood in the river since the bridge has been built. The water has never been up to the piers on the embankment; and I feel sure that after a heavy flood, when the water has subsided, the pier will still go down. It is not down to the bed of the river by some 7 feet. I have pointed that out to Mr. Whitton since I knew that the pier had gone down, and he sent for the plan. Mr. Wade was in his room at the time. The plan he showed me was simply a section showing the depth the cylinders were sunk and the depth of the bore-hole for trying the ground. As soon as I saw it I said, "Those cylinders are not down to the bed of the river"; and he said, "Neither are they. How is that Wade?" I thought he was getting a little out of temper and I left; but there is no doubt that they are shown on that plan as something like 7 feet above the bed of the river.
2283. *President.*] Have you done anything to the northern bridges? Nothing except testing the rivets and the work generally—just a preliminary look through.
2284. What do you propose to do to those bridges? That is a difficult question to answer. In the case of one of them (that over the Peel River), although it is an excellent bridge as far as butting and all that goes, but still in my opinion the riveting is all loose. The rivets were never big enough for the work.
2285. *Professor Warren.*] Does the same remark apply to the Macdonald River bridge? Yes; but not to the same extent. I do not think there is much difference.
2286. And the Peel-street bridge? I forget what that was like. In the Aberdeen bridge the riveting is perhaps better on the whole than in the newer bridge over the Peel River, but the work altogether is not good. It is open. There is bad butting and bad riveting; I do not consider it a good job at all. You may have noticed in the Aberdeen bridge what a bad line there is in one of the girders. I call that a piece of sheer carelessness in putting the bridge together. If it had been in line it would have butted in that particular place; the butts would have been good. The extreme end is some 3 inches out of line.
2287. *President.*] You have been keeping the Wagga viaduct in good order? Yes, we have had a gang of men there, and it is very much improved, I believe. They say it is stiffer, and I believe it is; but there is one thing in connection with the tightening up that I wanted to speak to you about. In the bolts, those through the ends of the girders particularly, there is an immense strain in consequence of the long corbel being underneath. There is a great leverage causing a tremendous strain on the bolts, and thus causing them to draw through the timbers. There is a great deal more taken up in the thread by screwing up than is accountable for by the shrinkage of the timber.
2288. *Professor Warren.*] You mean to say that the deflection of the corbels draws the bolts? When the weight comes on the ends of the corbels it has a tendency to raise the end of the girder, and therefore draws the bolt through the timber. They cannot be got at easily, but where the girder has been taken out no washer has been found, but simply the head of the bolt in the girder.
2289. *President.*] How deep is the head now? They cannot tell, except in one or two cases where they have taken the girder out.
2290. *Professor Warren.*] How far do they sink in those cases? That I could not tell you. The bridge would have been all the better if there had been washers, independently of the drawing of the bolt, because it would have held the joints of the girders down when the weight came on.
- 2291.

2291. *Mr. Courtney.*] Have you or have your officers seen any increase of the pipes in the piles? They thought so the last time they went up there, when I sent an expert up, though how many of them are bigger than they were before I do not know.

2292. Do they find any of them stand still in their dimensions? It would be hard to tell that in a rough hole like that in the pile. The size of the pipes is not the great danger, but so many of them are dozy right through from the outside—soft or pithy—so that you can hardly get an auger through them. It is like boring into a piece of india-rubber.

2293. Have you had any experience or information with regard to the tarring of the piles? I have had a great deal of tarring done, but I do not know that it is of much use.

2294. I mean with reference to the idea that if new timber has any moisture in it it will retain it if tarred? Yes, it may retain it and do more harm than good; but we have some piles that have never been tarred, the same sort of wood, and yet it has all gone—all rotten. One or two piles that were taken out of the bridge the other side of Yass fell in three pieces when taken out, and every pile in that bridge I have to renew. The top is as good as can be.

2295. *President.*] You expressed the opinion that the corbels under the girders should not be longer than 6 feet? I do not think they are of any service when longer than 6 feet.

2296. You said that it caused the other end to kick up? Yes, and causes the racking of the timber work, and does more harm than good. That kicking up should not, in my opinion, be calculated on in a bridge of that description.

2297. But it will kick up with 6 feet as well as with 8 or 10 feet? Yes, to some extent, but not so much. Every corbel, however short, will have a tendency to kick up, and you must have a corbel of a certain length in order to make the joint.

2298. *Mr. Courtney.*] You assume that the corbel does not deflect? Just so. The long corbels do deflect. They gradually get round-backed as the girder settles down, and I dare say the reason why the Wagga bridge gets stiffer is because it is being constantly screwed up; but I do not think it is good after all that.

2299. *Professor Warren.*] But the long corbels lessen the deflection of the main girder? By the other end of the corbel taking the weight of the next span.

2300. They shorten the span? They do not shorten the span very much because they lift the other end up when the weight comes on.

2301. Supposing now that you were to shorten the corbels, what would be the effect;—would the span deflect more or less? I do not think it would deflect any more. The girder in front simply would not lift so much.

2302. How would the corbels themselves be affected by shortening;—would they deflect more or less? Less. They would curve less.

2303. *President.*] Do you wish to make any remarks yourself with reference to the bridges? It is stated by one witness that Mr. Bewick, who is one of my officers, said that rivets in one of the bridges on the Northern Line had been loosened by a heavy hammer. I think in that case he should be further examined. I don't know whether he ever did say so or not.

2304. I will ask you a question on that point;—do you know for certain that a flogging hammer has never been used in testing the rivets? I believe that a flogging hammer has never been used in testing rivets.

2305. And if any workman engaged in this work under you has made a statement of that kind you think it is not a correct statement? I do. As to the calculations made by some witnesses holding high positions I do not intend to challenge them; but it must be distinctly understood that I do not concur in them.

2306. *Professor Warren.*] You mean with reference to the strength of the timber work? Timber and iron work too. I may say that I am utterly astonished that men holding such high positions should make the statements they have made as to the loosening of rivets in the several bridges with a 6 or 8 lb. hammer on such frivolous and unreliable evidence.

G. Cowdery,
Esq.

18 Aug., 1885.

SPECIAL REPORTS.

INDEX OF SPECIAL REPORTS.

THE SPECIAL REPORTS are classified under the following heads, viz. :—

| <i>Iron Bridges.</i> | | PAGES. | PLATES. |
|--|--|--------|----------------|
| No. 1.—The riveting of the bridges | | 77-80 | |
| No. 2.—Testing of the bridges | | 80-82 | 1-6 |

SPECIAL REPORTS.

No. 1.—THE RIVETING OF THE BRIDGES.

THE official reports upon loose rivets in the bridges, and the conflicting statements brought out in evidence, cannot be passed over without some remarks upon the inspection of the riveting of the bridges by the Commission, and quotations from authorities upon the subject in support of the Commission's decision.

The examination of the witnesses, and of the officers of the Department of Existing Lines, upon the inspection, workmanship, and riveting of the bridges, tends to show that—

- (1.) When any rivet showed a vibration under the stroke of a light hammer, it was to be cut out and replaced by another one irrespective of its position, or of the injury it might do by loosening adjoining rivets.
- (2.) When an angle-iron wrapper or bar-iron cover admitted the insertion of a piece of clock-spring in the joint, it was, however good the rivets were, to be cut off, heated in a forge fire, and riveted up hot.
- (3.) The selection of so-called loose rivets was to comprise all those that by sight, sound, or touch, showed a vibration, or that did not absolutely fill the holes when tapped with a testing hammer, no observation being made as to whether the rivet moved from the influence of a passing load.
- (4.) When it was reported to the Engineer for Existing Lines that loose rivets were found in a bridge, he gave instructions to the District Engineer, who sent the Inspector or foreman to mark the loose rivets, and select those to be cut out and replaced.

It appears to have been assumed by the officers of the Department of Existing Lines that a rivet which does not fill the hole is loose. But the best experimentalists on this subject show that no rivet perfectly fills the hole, the nearest approach to this being those in the joints for testing purposes when the rivets have been turned in a lathe and put in nearly cold. In the case of the testing experiments by the Rivet Research Committee, as mentioned in the proceedings of the I. M. E., 1885, page 200, the rivets in the joints, though prepared with the greatest care, and riveted with 40 tons hydraulic pressure, are spoken of as "assumed to fill the holes," and there are many other proofs that a rivet cannot absolutely fill a hole.

Proceedings
I. M. E., 1885,
No. 3, page 200.

The looseness of rivets being only a matter of degree it must be generally admitted that rivets should be cut out and replaced—

- (1.) When they are so loose that the action of the rolling load causes them perceptibly to shake.
- (2.) When rivets can be shaken with the test hammer either sideways or in direction of their length.
- (3.) When rivets, through rust, under the head or by other sign, move under the influence of strain from rolling loads, expansion, wind pressure, or other causes.

When rivets which have a key-hole or half-hole in outside plate, under head or bat, do not fill the hole, it would be necessary to remove them and replace them by very hot rivets, nobbled down into the vacancy, unless such rivets are in a position where their efficiency or the pressure of the rivets is not against the bad side of the hole.

Rivets described in evidence as "not up," occur where a rivet has to be put in an awkward place, and struck into position with a hammer by the holder-up before the riveting is commenced; this forms a collar under the head which keeps it from perfect contact with the plate. There are often very efficient rivets comparatively tight and which should not be disturbed. The mistaken practice of condemning rivets in "bridge work," because of their sound under the testing hammer, without any consideration that they are but 4 or 5 per cent. weaker in their breaking strain than the best boiler rivets, is well shown in a correspondence of Mr. Ralph Tweddell, the eminent mechanical engineer, and one of the largest producers of riveting machinery. He writes: "I think the test by holding your fingers on one end, and then striking the other end with a hammer is utterly without value, except that the more inaccurate the punching the better probably would be the result of such a test, since the rivet would not be free to slide in the hole. . . . If the rivets show no vibration under heavy passing loads they apparently exactly fulfil the object of their being . . . and, there is no connection between 'boiler' riveting and girder work. I should say that if you commence knocking out the rivets you will do more harm than good."

The difficulty of obtaining the results of reliable experiments on ordinary riveted work led the Institution of Mechanical Engineers to appoint a Rivet Research Committee. The experiments were conducted by Professor Kennedy, Messrs. Tweddell, Kircaldy, and other eminent engineers.

The result of three years' work has lately been compiled by Professor Kennedy. The experiments were made rather for boiler construction, ship building, and steel bridge building in the future than for the consideration of existing works, and were carried out with Landore Siemen's steel, of a natural tenacity of 28 to 30 tons per square inch, with an elongation of 23 to 25 per cent. in 10 inches.

With very slight modification the results of these experiments may be applied to the design or investigation of ironwork.

The

The following are extracts from the reports of the Research Committee on riveted joints :—

THE OCCURRENCE AND EFFECT OF VISIBLE SLIP:

Proceedings
Institute
Mechanical
Engineering, p.
252, No. 3, 1885.

“Visible slip or ‘give,’ occurs always in a riveted joint at a point very much below its breaking load, and is proportional to that load. It depends on the number and size of the rivets in the joint rather than anything else, and it is tolerably constant for a given size of rivet in a given type of joint. The loads per rivet at which a joint will commence to slip are :—

| Diameter of rivets. | Type of Joint. | Riveting. | Slipping-load per Rivet. |
|-------------------------|---------------------|--------------|--------------------------|
| $\frac{3}{4}$ inch..... | Single-riveted..... | Hand..... | 2.5 tons. |
| Do..... | Double-riveted..... | do..... | 3.0 to 3.5 tons. |
| Do..... | do..... | Machine..... | 7 ” |
| 1 inch..... | Single-riveted..... | Hand..... | 3.2 ” |
| Do..... | Double-riveted..... | do..... | 4.3 ” |
| Do..... | do..... | Machine..... | 8 to 10 ” |

Experiments show that long before stresses are reached which could visibly stretch the plates of a joint there will be measurable shear of the rivet. The visible slip therefore will consist almost wholly of this shear, the magnitude of which will depend primarily on the number and size of the rivets.

“The value of hydraulic riveting as compared with hand riveting, in cases where sound hand riveting is possible, lies mainly, if not entirely, in the fact that it doubles the load at which the slip of a joint commences, . . . so that the advantage of hydraulic riveting may possibly be even greater than it is here assumed to be, but there is no indication that it is likely to affect the ultimate strength of the joint.”

“The question of friction in the joint no doubt comes in the same way.”

“The friction induced by the rivet will affect the point at which slip commences, but can hardly have much, if any, relation to the breaking load.”

“It is thought that the load at which visible slip commences is probably proportional to the load at which leakage would begin in a boiler.”

SLIP OF RIVETED JOINTS.

Page 240, pro.
Inst. M. E., 1885.

“In single-riveted lap joints actual slip of the plates did not occur until the load was much higher than that at which the opening of the joint became visible, but it is again noteworthy that the joints with $\frac{3}{4}$ inch and those with 1 inch rivets show commencement of visible slip at the same total load (about 10.2 tons), not at the same load per square inch.

Page 241.

“The decrease of strength in the joint can be well understood when it is remembered how much tensile stress, in addition to the shear, is caused in the rivets by the bending of the joint as it opens out when stretched. The efficiency of the joint, or proportion borne by its strength to the strength of the solid plate was 55.1 per cent.”

SHEAR OF RIVETS.

Page 249,
Prof. Kennedy:

“It may be taken as established that the resistance per square inch in double shear is as great as that in single shear, so that allowance need not be made for the two shearing planes not being equally stressed. In single-riveted joints, however, the bending of the plates will put considerable tensile stress in the rivets; and this may diminish their apparent shearing resistance. In single-riveted joints it may be taken that about 22 tons per square inch is the shear resistance of the rivet steel, when the pressure on the rivets does not exceed about 40 tons per square inch. In double-riveted joints, with about $\frac{3}{4}$ ” rivets, most of the experiments gave about 24 tons per square inch as the shearing resistance.”

Page 250.

“The size of the rivet heads and ends plays a most important part in the strength of the joints, at any rate in the case of single-riveted (lap) joints. An increase of about one-third in the weight of the rivets (all this increase of course going to heads and ends) was found to add 8 $\frac{1}{2}$ per cent. to the resistance of the joint, the plates remaining unbroken at the full shearing resistance of 22 tons per square inch instead of tearing at a shearing stress of only a little over 20 tons. The additional strength is probably due to the prevention of the distortion of the plates by the great tensile stress in the rivets.”

Page 277.
Mr. Moberly on
boiler work.

“When first riveting steel boilers with steel rivets the heads came off; the rivet steel had been supplied too hard in quality, having a tensile strength of 50 tons per square inch. Later obtained better results, shearing strength 85 per cent. of tensile strength of the rivet steel. The tensile strength being 30 tons per square inch, the shearing 25, with punched holes in double-riveted joints, and in single-riveted joints 23 tons. What was wanted of a rivet was that it should fill the hole not when it was hot but when it was cold. Ordinary rivets are put in pretty hot, iron rivets especially at a very bright heat. They then cooled, and the arrangement was that they would rip or grip the plates together, but in doing so they also contracted laterally, and when the rivets were cold they did not fill the holes. This is less the case with steel.”

The following scale of pressures was arranged several years ago for steel rivets, tolerably bright red heat :—

BOILER WORK—LAP JOINTS.

| | Inch. | Inch. | Inch. | Inch. | Inch. |
|--------------------------------|----------------------------------|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
| Thickness of plate | $\frac{9}{16}$ & $\frac{1}{2}$ | $\frac{1}{2}$ & $\frac{7}{16}$ | $\frac{7}{16}$ & $\frac{3}{8}$ | $\frac{3}{8}$ & $\frac{5}{16}$ | $\frac{5}{16}$ & $\frac{1}{4}$ |
| Diameter, rivets | $1\frac{1}{8}$ & $1\frac{1}{16}$ | 1 & $\frac{1}{16}$ | $\frac{7}{8}$ & $\frac{1}{16}$ | $\frac{3}{4}$ & $\frac{1}{16}$ | $\frac{5}{8}$ & $\frac{9}{16}$ |
| Total pressure on rivet | Tons. 35 | Tons. 30 | Tons. 25 | Tons. 20 | Tons. 15 |

BOLT JOINTS WITH DOUBLE COVERS.

| | Inch. | Inch. | Inch. | Inch. |
|--------------------------------|-----------------|---------------|-----------------|---------------|
| Thickness of plate | $\frac{9}{16}$ | $\frac{1}{2}$ | $\frac{7}{16}$ | $\frac{3}{8}$ |
| Diameter, rivets | $1\frac{1}{16}$ | $\frac{3}{4}$ | $\frac{11}{16}$ | $\frac{5}{8}$ |
| Total pressure on rivet | Tons. 35 | Tons. 30 | Tons. 25 | Tons. 20 |

More recently the heat of the rivets had been reduced to a dull red heat, filling the holes much better, and making a better joint. The pressures of the colder rivets were 5 or 10 tons higher. To get the most perfect joint he considered the hole should be drilled and the rivets turned and riveted cold.

cold. In this matter he spoke from experience. Then, as to the heads, he believed these had often been made too small, as proved by Professor Kennedy's experiments. Hand riveting had proved inferior to hydraulic riveting, for the reason "that the rivet could not be made to fill the hole. It never did so in hand-riveting."

"The frictional resistance to slipping depends on the sectional area of the rivets; but, of course, it also varies with the pressure used in riveting and the temperature of the rivet at the moment of closing." Prof. Unwin,
P. 272.

BEARING AREA OF RIVETS.

"The intensity of bearing-pressure on the rivets exercises, with joints proportioned in the ordinary way, a very important influence on their strength; so long as it does not much exceed 42 tons per square inch (measured on the projected area of the rivets), it does not seem to affect their strength; but pressures of 50 to 55 tons per square inch seem to cause the rivets to shear, in most cases, from 16 to 18 tons per square inch. The margin was made equal to the diameter of the drilled hole." Prof. Kennedy
P. 252.

"In double-riveted butt-joints a higher pressure may be allowed, as the shearing stress may probably not exceed 16 or 18 tons per square inch when the plate tears; but in this case it would probably be wise to increase the margin. A margin (or net distance from the outside of the holes to the edge of the plate) equal to the diameter of the drilled hole has been found sufficient in all cases hitherto tried."

"To attain the maximum strength of a joint the breadth of lap must be such as to prevent it from breaking zig-zag. It has been found that the net metal measured zig-zig should be from 30 to 35 per cent. in excess of that measured across to ensure a straight fracture." Page 251.

EXCESS TENACITY OF A PERFORATED PLATE.

(1.) "The metal between the rivet-holes has a considerably greater tensile resistance per square inch than the imperforated metal. This excess of tenacity amounted to more than 20 per cent. both in $\frac{3}{8}$ -inch and $\frac{1}{4}$ -inch plates when the pitch of the rivets was about 1.9 diameters." Page 238.

It was further found that a deficiency in bearing reduced the amount of excess tenacity in the plate.

A large amount of useful information is further given in the reports—tables of sizes and rivets and pitches, as the result of experiment, the proportions which give the strongest joints, and other such matter.

All the experiments were in steel, and from each test-bar used in the joints a sample was taken and tested.

(2.) "In the result it was found that, with steel of about 30 tons tenacity in the form of $\frac{1}{4}$ -inch and $\frac{3}{8}$ -inch plates (unannealed as in all the other experiments) drilled with 1-inch holes and 2-inch pitch, the net metal between the holes had a tenacity 11 to 12 per cent. greater than that of the untouched plate. Even with punched holes the metal had a similar excess tenacity of over 6 per cent.; the diameter of the punched holes was assumed to be a mean between the measured diameters on each side of the plate. It was not found to make any difference whether the bolster was 1.32 or 3.32 inch larger than the punch."

This investigation will remove the feeling of doubt which has long existed regarding the effect of stresses on detailed parts of riveted work.

The following may be noted:—

The existence of visible slip and its occurrence at strains from 3 to $3\frac{1}{2}$ tons in a single riveted lap-joint, hand-riveted, the tested shearing resistance of the rivets being 24.8 tons, and of the plates from 28 to 30 tons per square inch area, show that in this form of connection a motion occurs in the rivet at about $\frac{1}{3}$ of the breaking strain of the joint. Visible slip.

This, no doubt, applies equally to iron as to steel.

The efficiency of the nip or grip of rivet heads has been over or under estimated in the evidence before the Commission. Rivets that had slipped into bearing under stress well within the margin of safety have been condemned as loose when judged only with a testing hammer. Shearing of rivets.

It has now been ascertained that it was an error in engineering practice to value the shearing resistance of a rivet in double shear, as only 1.5 or 1.8 times its resistance in single shear with similar plates and rivets, whereas reliable experiments show this shearing resistance to be in the proportion of 48 in the double shear with two shearing areas to 22 in the single shear.

It has also been demonstrated that the loss of shearing resistance of a rivet in a single-riveted joint is owing to the force of tension acting simultaneously with the shearing resistance, and that there is a loss of shearing resistance in a rivet under the influence of over-loaded bearing area.

Although it has been the general practice in calculating the plate area in a riveted joint not to measure it too closely, under the idea that the iron around the hole is more or less injured, it is now found that the plate is stronger per square inch remaining after perforation than it was before, even when the holes are punched. Excess tenacity.

This excess of tenacity over the natural tenacity taken by testing a piece of the same plate has been attested by the experiments in different machines and by several engineers independently during the last three years. An investigation is now being carried on to discover the cause.

It is also established that the difference between the excess tenacity of a perforated plate over natural tenacity of the same plate blank is decreased in any case where the plates have not sufficient area.

When iron is used instead of steel the following points require consideration:—

1. The excess of plate area between the holes measured diagonally over that measured straight across a double or manifold riveted joint, should be proportioned according to the tenacity of iron-plate with, and across the grain. Consideration when using iron instead of steel.
2. The margin of plate outside the rivet-holes requires similar modifications to adjust the detrusion of plates and the cross-grain strain of angle irons.
3. With the use of iron rivets the difference between the shearing resistance of the rivets and the plates does not exist as with the use of steel.

Regarding

Recommendations.

Regarding the construction, erection, and maintenance of our railway bridges, and considering that slightly loose rivets do not always occur by reason of being badly put in but from other causes, the Commission recommend that the Engineer in charge of the maintenance of the railway bridges before cutting out and replacing any rivets should make himself acquainted with the stresses which those rivets have to transmit and the effective area which is required to transmit the stresses.

When rivets not sounding favourably under a testing-hammer occur in the flanges (except in the vicinity of joints) they should not be cut out before it has been ascertained what per centage of rivet area is in excess of the effective rivet area required, unless the looseness makes them vibrate under a passing load.

No. 2.—TESTING OF THE BRIDGES.

DEFLECTION TESTING MACHINE.

THE apparatus used by the Commission for testing the bridges is shown on the accompanying sketch. It consists of a lever multiplying the actual deflection eight times,* thus giving lines which can be measured with great accuracy. It may be described as follows:—A board **A** is securely bolted to a stake **B** firmly driven into the ground, and a light lever **D** is accurately fitted with brass bearings, so as to move freely on a pin **C** fixed to the board. The long arm of the lever is provided with a lead-pencil at the end **E**, and the short arm with a small bolt and thumb-screw **F** and two small washers, between which is secured a fine steel wire **G** suspended from the point on the girder where the test is to be taken. A weight **H** is attached at the end of the wire to keep it perfectly tight. Any deflection or contrary flexure in the girder where the wire **G** is fastened causes a corresponding movement of the short arm of the lever **F**, and a movement eight times the extent at the point **E** where the pencil is fixed, and describes a line on a card **K** placed between the two fillets **L**.

The *modus operandi* is as follows:—A number of instruments being erected at different parts of the girders or spans of the bridge to be tested, the cards are slipped into their places between the two fillets, and the pencils adjusted to the datum line marked on the cards by clamping the wire between the washers with a thumb-screw. At a given signal the load is applied to the bridge, and the slightest motion in the girders or spans is recorded (multiplied as before mentioned) by the pencils either above or below the datum according to the deflection or contrary flexure. It is necessary to slide the cards a little further along after each variation in the position of the load to obtain a continuous diagram of the deflections according to the magnitude of the load applied.

DIAGRAMS OF DEFLECTIONS.

The appended diagrams are exact copies of the cards taken and recorded by the instruments during the testing of Penrith and MacDonald River Bridges respectively.

DISCONTINUOUS GIRDERS.

Taking the MacDonald River Bridge card, for instance, and referring to plates Nos. 37 and 38, it will be seen that fifteen instruments were fixed to the down-stream girder, and the deflections recorded simultaneously on all the cards. The card referred to was at the third instrument. The pencil having been fixed at the datum line, the first test was made with the three locomotive engines coming slowly on to the bridge, and the deflection recorded as shown on plate No. 38 (experiment No. 1). The card was then moved slightly sideways, the engines placed in positions shown (experiment No. 2), and the additional deflection recorded; the card being again slightly shifted, the engines were moved further on, so as to distribute the load equally over the span (experiment No. 3), and the deflection again recorded. The card was then once more shifted, and the engines moved off the bridge, the pencil returning to the datum line.

These experiments were repeated with the three engines returning across the bridge in the opposite direction, and the deflections noted on the card, and marked Nos. 5, 6, 7, and 8, the loading being applied as shown on plate No. 38 (experiments Nos. 5, 6, and 7).

These experiments were checked by a repetition of the tests as shown on the card by Nos. 9, 10, 11, and 12 in one direction, and by 13, 14, 15, and 16 in the opposite direction. Full-speed tests were then made and recorded on the cards (Nos. 17, 18, and 19); and finally, two full-speed tests with the brakes applied when coming on the bridge (Nos. 20 and 21).

Prior to beginning the above tests the passage of a mail train over the bridge was recorded (plate No. 37). The fifteen sets of instruments on the down-stream girder each recorded every test in the same manner as shown on the card marked No. 3 lever, and the result was afterwards plotted, as given by the levers (plate 37), and reduced to the actual deflections (plate 38).

NOTE.—

*At Menangle, Wagga Wagga, Bathurst, and Wellington bridges, the multiple was 8 times, but at all other bridges, 8.3 times.

CONTINUOUS GIRDER

NOTE.—The plates Nos. 37 and 38 have been photo-lithographed from the full-size drawings, but the diagrams agree with the reduced scales shown thereon.

CONTINUOUS GIRDERS.

Seven testing instruments, placed in the position shown on plates 11, 12, and 13, were used in testing the down-stream girder of Penrith Bridge. The card referred to was at the centre of No. 2 span.

The pencil having been adjusted to the datum line in the same manner as previously described for the discontinuous girders, the first test was made by placing the engines on span No. 3, as shown on plate 13, experiment No. 11, and the contrary flexure produced by this load was recorded on the card (line No. 11 below the datum). The card was then slightly shifted sideways, the engines being moved as shown (experiment No. 12, plate No. 13), and the additional contrary flexure recorded below the datum line. The card being again shifted, the engines were moved in the position shown by experiment No. 13, when the centre span was partly loaded, producing a deflection which moved the pencil from under the datum to the point shown on line No. 13 above the datum. The card was again shifted and the engines placed as shown by experiment No. 14, which recorded the greatest deflection of the centre span. The card being again shifted and the engine moved as shown (experiment No. 15), the pencil returned nearly to the datum recording line No. 15 on the diagram; shifting the card again, and moving the engines on to the first span in the position shown by experiment No. 16, a contrary flexure was produced in the centre span, which was recorded by line No. 16 under the datum; the card was again shifted previous to the engines moving in the position shown by experiment No. 17, and the contrary flexure being reduced, the pencil came nearer to the datum; the card being once more shifted, and the load removed from the bridge, the pencil returned to the datum as shown by line No. 18 on diagram.

Thus a continuous diagram of deflection and contrary flexure was produced simultaneously on all the cards. These diagrams were afterwards plotted full size, as shown on plate No. 11, and reduced to the actual deflections and contrary flexure, as shown and noted on plate No. 13. "Full-speed" and "Brake" tests were then made, one of which (experiment No. 19) is plotted on plate No. 12, showing the greatest deflection and contrary flexure produced by the extension of the line No. 19 over and below the datum.

A diagram was also taken with a passenger train going over the bridge, as marked on the card.

LOCOMOTIVE ENGINES USED IN THE TESTING OF THE BRIDGES.

The following particulars of the locomotive engines of different classes, used in the testing of the bridges, were furnished by the Commissioner for Railways:—

Appendices 29-32, pages 136-139.

| Description of Engine. | Weight in Steam. | | | Plate 1. |
|---|---------------------------|---------------------------|--------------------------|---------------|
| | Engine. | Tender. | Total. | |
| "Consolidation," Goods, 131 Class | Tons cwt. qrs. 49 11 3 | Tons cwt. qrs. 25 11 2 | Tons cwt. qrs. 75 3 1 | Plates 2, 2A. |
| "Mogul," " 205 Class | 42 8 1 | 24 6 1 | 66 14 2 | Plates 3, 3A. |
| "Express," " 255 Class | 37 11 0 | 24 11 0 | 62 2 0 | Plates 4, 4A. |
| "Express," " 265 Class | 38 19 0 | 24 17 3 | 63 16 3 | Plates 5, 5A. |

The locomotives used in testing the bridges, and the results of the testing, are given in the following table:—

| Description. | Name of Bridge. | Number of Spans. | Length of girders in each span. | Engines used in Testing. | | | Total Weight of Engines. | Load applied per foot run on span with engines used in testing.* | Live load, in tons per foot run the bridges were calculated to carry. | Re-remarks. |

* This load is not the test load reduced to tons per foot run, but the actual load divided by the span.

Before

Appendix 10,
page 121.

Before testing the bridges the Commission took into consideration the time they had been erected, and ascertained by careful inspection their actual condition, in order to determine the load with which each bridge should be tested.

The heaviest load brought on by the present traffic was compared with the live load per foot run taken in the calculations, and as it was found that only a portion of the latter could be applied by the heaviest traffic likely to pass over the bridges, the Commission decided to adopt a test-load as nearly as practicable equal to the live load taken in the calculations.

The passing of mail or goods trains was recorded when possible, and the deflections noted were, in every instance, less than those with the test-loads.

The deflection produced by the standing test—that is, with the locomotives standing on the bridge in various positions—was carefully examined at all its stages previous to applying the full-speed and brake tests, and the adjustment of the pencils to the datum lines of all the instruments was accurately checked before and after each test.

In every instance the pencils returned to the datum line after each test, showing that no permanent set had occurred under the test-loads.

Safe load.

The stability of the bridges to carry the traffic now passing over them is sufficiently shown by the diagrams of deflections produced by ordinary trains.*

On the single line bridges, however, it must be remarked that, with the test-load on the 130 ft. and 60 ft. spans of the Wollondilly bridges, as well as on the 60 ft. spans of the Solitary Creek bridges, the unit stresses recognized by the Board of Trade are slightly exceeded; but the unit stresses are not reached with the test-loads on the bridges at Bathurst, Wellington (and also its approach span), Aberdeen, Tamworth, Peel-street, Tamworth, and MacDonal River, leaving a margin of safety sufficient to ensure the stability of these bridges with the heaviest traffic likely to pass over them.

See Final
Report, page 62.

On the double line bridges at Menangle the unit stresses with the test-load, equivalent to 1 ton per foot run of span on the loaded girder, are hardly exceeded; and at Penrith, with the same test-load, viz., 1 ton per foot run of span on the loaded girder, the unit stresses are exceeded both in the booms and the web. Recommendations to provide for heavier traffic on these bridges in the future are made in the special reports.

Recommendations.

Regarding the testing of the railway bridges in the future, the Commission recommend:—

- 1st. That all new bridges be tested, if possible, before the staging is removed, or otherwise as may be found practicable, to ensure applying a sufficient number of instruments to the girders to be tested.
- 2nd. That diagrams of deflections be carefully taken at the first testing of each bridge, before it is opened for traffic, and carefully recorded.
- 3rd. That all subsequent testing of new bridges, as well as the testing of the existing bridges, be carried on every three years, or oftener if found absolutely necessary, and the deflections compared with those previously recorded.
- 4th. That the test-loads (except at the first testing of the new bridges) be less than the calculated live load per foot run of span, and only slightly exceeding the heaviest traffic over the bridges.

No. 3.—WOLLONDILLY BRIDGES.

THERE are five of these bridges, of 60 ft. and 130 ft. spans, as follows:—

- (1.) Barber's Creek Bridge, which consists of five spans of 60 ft. each.
- (2.) Wollondilly 1st Crossing, or Carrick Bridge, consisting of eight spans in the following order, counting from the Sydney end:—Two spans of 60 ft., one span of 130 ft., and five spans of 60 feet.
- (3.) Boxer's Creek Bridge, which consists of two 60-ft. spans.
- (4.) Wollondilly 2nd Crossing Bridge, which consists of seven spans in the following order, counting from Sydney end:—One span of 60 ft., one of 130 ft., and five of 60 ft.
- (5.) Mulwaree Creek Bridge, consisting of twelve spans of 60 ft. each.

Of these, Wollondilly 2nd Crossing and Mulwaree Creek Bridges are on the skew.

There are in the above bridges thirty-two spans of 60 feet each and two of 130 ft. each.

130 FEET SPANS.

These spans consist of two main girders of the plate-web box type, having each a clear span of 130 ft. The main girders are 140 ft. long overall, and are 14 ft. apart in the clear, and 16 ft. 6 in. from centre to centre. Between the main girders transverse or roadway girders are placed, at a distance of 3 ft. from centre to centre.

The piers are built of brick and cement with stone caps on which cast-iron bed plates are fixed.

Each girder is 10 ft. 3 in. deep overall, and the effective depth is 10 ft.

The top flange is formed of plates 2 ft. 6 in. wide, varying in thickness from $1\frac{5}{16}$ in. to $1\frac{3}{8}$ in., and having a total thickness of $1\frac{9}{16}$ in. in the centre.

The bottom flange is formed of horizontal plates, varying in thickness from $\frac{3}{8}$ in. to 1 in., having a total thickness in the centre of 2 in.

The angle-irons uniting the horizontal flange plates to the web vary from $3\frac{1}{2}$ in. x $3\frac{1}{2}$ in. x $\frac{1}{2}$ in. to 4 in. x $3\frac{1}{2}$ in. x $\frac{5}{16}$ in. There are two angle-irons in the top boom running the whole length of the girder riveted to the under side of horizontal plates with two packing pieces $7\frac{1}{2}$ in. x $\frac{1}{2}$ in. between the horizontal plates and the angle-irons. There are two packing pieces in the bottom boom, each $4\frac{1}{2}$ in. x $\frac{1}{2}$ in., between the horizontal plates and angle-irons. The

* The slight irregularity in some of the curves of deflections may be principally attributed to the difficulty experienced in fixing some of the testing instruments, and probably in a few cases to the improper action of the expansion rollers when the test load was applied.

The web is formed of plates varying in thickness from $\frac{3}{8}$ in. to $\frac{1}{2}$ in., and is stiffened at every 3 ft. with double angle-irons 3 in. x 3 in. x $\frac{1}{2}$ in., and T iron stiffeners 6 in. x 3 in. x $\frac{1}{2}$ in. for the first two bays from ends, and with T irons on the inside of box 6 in. x 3 in. x $\frac{1}{2}$ in., with web covers on the outside for the remaining length of the girder. The T irons are connected together on the inside with diaphragm plates, near top and bottom flanges.

The cross girders are 14 ft. long, and 1 ft. 1 in. deep, formed with double angle-irons 3 in. x 3 in. x $\frac{1}{2}$ in., riveted at top and bottom to a web-plate $\frac{1}{2}$ in. thick, with $\frac{3}{4}$ in. rivets, 4 in. pitch. On the cross girders, and directly under the rails, are laid longitudinal timber beams 14 in. x 7 in., with 3 in. planking over them to carry the ballast, sleepers, and rails. Timber kerbing runs the whole length of the bridge to retain the ballast.

The arrangements for expansion consist of cast-iron bed plates fixed into the cap stones of the piers. Brass strips 2 ft. 7 in. x 5 in. x $\frac{3}{4}$ in., planed, are fitted into the bearing surfaces on one pier.

60 FEET SPANS.

The main girders are 65 ft. 8 in. overall, and 60 ft. in the clear, placed 14 ft. 1 in. apart from centre to centre, and 13 ft. in the clear. The cross girders are 3 ft. apart from centre to centre, and at right angles to the line of railway.

The piers are built of brickwork in cement, with stone caps and strings.

Each main girder is 4 ft. 9 in. deep. The top flange is formed of horizontal plates 1 ft. 3 in. wide, varying in thickness from $\frac{1}{4}$ in. to $\frac{5}{8}$ in., the total thickness in the centre being 1 $\frac{1}{8}$ in. The bottom flange is formed of horizontal plates 1 ft. 8 in. wide, varying in thickness from $\frac{1}{4}$ in. to $\frac{1}{2}$ in., the total thickness in the centre being $\frac{3}{4}$ in. The web consists of plates varying in thickness from $\frac{1}{2}$ in. at the abutments to $\frac{3}{4}$ in. at the centre; it is connected with the flanges by four angle-irons 3 $\frac{1}{2}$ in. x 2 $\frac{1}{2}$ in. x $\frac{1}{2}$ in. riveted to them and to the web-plates; it is stiffened with double angle-irons, and plate stiffeners at abutments, and at every 6 ft. along the girders, arranged alternately inside and outside. Web-plate covers are also riveted at the intermediate spaces of 3 ft. centres. At the second crossing, and at the Mulwaree Creek bridges, there is a packing piece between the angle-irons and bottom flange plates, and the upper and under covering plates of bottom flange are the full width of the flange.

The cross girders and deck platform are the same as in the 130 ft. spans, but the attachment of the cross girders to the main girders is not uniform, every fourth cross girder being riveted to the plate stiffeners of the main girders.

The expansion arrangement consists of a $\frac{3}{8}$ in. plate, riveted to the under side of the girder with countersunk rivets, and of a loose plate $\frac{1}{4}$ in. thick bedded on sheet lead on the pier. At the intermediate piers the $\frac{1}{4}$ in. plates are in one piece and form a bearing for both spans.

The main girders of the 130 ft. spans and the 60 ft. spans, having been riveted by the Engineer Inspection. for Existing Lines, no loose rivets were found.

The webs of the main girders (130 ft. spans) were found out of plumb, and at the first crossing they were from $\frac{1}{2}$ in. to $\frac{1}{4}$ in. wider apart at the top than at the rail level. The webs of many of the main girders, 60 ft. spans, are also slightly out of plumb, from $\frac{1}{2}$ in. to $\frac{3}{8}$ in.

The camber in the 60 ft. spans is irregular, varying from nothing to 1 $\frac{1}{8}$ in. in some of the girders. Appendix 21, page 129. A sag occurs in each of the five spans of the Barber's Creek viaduct.

The expansion arrangement in the 130 ft. spans is not sufficiently protected, and in the 60 ft. spans the lead on which the girders rest is partly destroyed, and the cinder ballast accumulating between the ends of the girders and the parapets of piers, causes corrosion of the metal and prevents the proper cleaning of the bearings.

The testing of these bridges was performed as follows:—Deflection levers were attached to Testing. the centre of a number of the main girders, while at others the deflections were observed either with sliding rods held under the girders or with ordinary engineers' levels.

The engine used was No. 247, and when standing on the bridge in the least favourable position, it produced a load equivalent to a uniform distributed load of 1.5 tons per foot run on the 60 ft. spans, and of .90 ton on the 130 ft. spans. The deflections were observed both with the engine standing on the bridge, and when passing at full speed over it. The maximum deflection produced on the small spans was .625 in., and on the large spans .59 in. The deflections and the loads producing them at the different crossings are shown in Appendices 37-39, pages 140-141, and in Special Report, No. 2, page 81. Plates 1, 3, and 3A.

Some of the girders on the 60 ft. spans are out of line, especially at the second crossing and Mulwaree Creek bridges which are on the skew. This irregularity in the line of the girders is no doubt due to the bed-plates having no guiding strips, and to the accumulation of cinders between the end cross girders. Some of the bed-stones are broken, and the brickwork unset under the bearings of the girders.

1. The design of the 130 ft. spans has not been carried out in accordance with the drawings Conclusions. supplied to the Commission, which show an upper box-boom. The alteration was made at the suggestion of Sir John Fowler. (See Appendix 20, page 128.)

The calculations show that the top boom of the 130 ft. girders can only carry 1.1 ton per foot run with a unit stress of 4 tons per square inch, whereas the other parts of the girder are of sufficient sectional area for a live load of 1.4 tons per foot run. Appendix 1, calculations, page 105. Plate 7.

The flange joints and the angle-iron wrappers in these girders are barely sufficient in rivet and plate area.

2. The 60 ft. spans have been carried out according to the drawings with the exception of a slight increase of the flange plates and some difference in the arrangement of plates and angle-irons in some of the bridges.

The calculations show that the flanges and web are of sufficient sectional area for a live load of 1.20 tons per foot run. Appendix 1, calculations, page 106. Plate No. 8.

The rivets in joints of flanges are barely sufficient, and the plates are spliced with a lap of 6 in., which leaves only $\frac{3}{8}$ in. of metal between the rivet holes and end of plates.

3. The cross girders are subjected to a unit stress in tension of 7.22 tons per square inch, and in compression of 6.23 tons per square inch.

4. The expansion arrangements are not sufficiently protected from cinders and ballast falling between the ends of the girders, and on the bed-plates.

5.

Workmanship
and
maintenance.

5. The Commission could not ascertain if the riveting of these bridges by the Engineer for Existing Lines was absolutely necessary, nor if the loss of camber in some of the 60 ft. spans was attributable to the riveting or to bad workmanship. They found that the maintenance was good with the exception of cleaning the cinders and the clinkers which fell on the expansion plates and into the spaces between the two end cross girders, forming in the latter case an indurated mass into which a chisel bar could with difficulty be driven with a sledge hammer.

Deflections.
Safe load.

6. Considering the proportion of depth to span the deflections are not excessive, and the present traffic cannot affect their safety.

Recommendations.

1. The Commission recommend that the lead on which the 60 ft. spans rest be removed, and that a simple form of cast-iron bed-plate be inserted under the ends of the girders, two adjoining girders being fixed on a bed-plate and sliding at the opposite end on other bed-plates, provided with longitudinal strips to prevent lateral displacement.

2. A portion of the pilasters over piers should be cut away to facilitate the cleaning of the expansion plates.

3. The longitudinal timbers under rails to be jointed, when renewed, in alternate bays between the cross girders.

4. When heavier engines are required for the traffic over these bridges, an additional plate to be riveted to the top and to the bottom flanges, so as to bring the stresses within the limits allowed by the regulations of the Board of Trade.

No. 4.—WAGGA WAGGA BRIDGE.

THE bridge consists of two lattice main girders continuous over four openings, each having a clear span of 150 ft. The main girders are 14 ft. apart in the clear, each forming a continuous girder 639 feet long, extending over three intermediate piers. Between the lattice girders transverse or roadway girders are placed at a distance of 3 ft. from centre to centre. The piers are 159 ft. from centre to centre, and together with the abutments consist of cast-iron cylinders 9 ft. in diameter, filled with cement concrete. The top cylinders of each pier are braced together with wrought-iron diagonals and ties.

The lattice girders rest on cast-iron bed-plates fixed on piers. Bessemer steel rollers are provided for expansion, over four piers.

Each lattice girder is 12 ft. 1 in. deep between the top and bottom table. The booms are trough-shaped, connected by double lattice web. A light lattice overhead bracing girder is riveted to the top table of main girders of the piers and at mid spans.

The top and bottom booms are each formed of horizontal plates 2 ft. 9 in. wide by $\frac{1}{2}$ in. thick, except over the piers, where they are $\frac{5}{8}$ -in. thick, and of two vertical plates 15 in. deep x $\frac{3}{4}$ in. thick, riveted to four angle irons 4 in. by 4 in. by $\frac{1}{2}$ in. with $\frac{1}{4}$ -in. rivets, 4 in. pitch. The web is formed of a double set of lattice bars placed 3 ft. apart, centre to centre, at an angle of 45 degrees, and riveted at each end to the vertical plates of the booms. Each set of lattice bars consists of seven systems of triangulation, the flat tension bars varying in dimensions from 6 in. x $\frac{3}{4}$ -in. to 4 in. x $\frac{1}{2}$ in., and the channel irons forming the struts from 5 in. x 2 in. x $\frac{1}{2}$ in. to 3 $\frac{1}{2}$ in. x 1 $\frac{3}{4}$ in. x $\frac{1}{2}$ in. The cross girders are spaced 3 ft. from centre to centre, and are 14 ft. 8 in. long by 1 ft. 2 in. deep, formed of two angle irons at top and bottom 3 $\frac{1}{2}$ in. x 3 $\frac{1}{2}$ in. x $\frac{1}{2}$ -in., and web $\frac{1}{4}$ -in. thick, riveted together with $\frac{3}{8}$ in. rivets.

Appendix 6,
page 112, and
diagram, page
109.

The deck platform consists of longitudinal beams 14 in. x 7 in. over the cross girders and immediately under the rails. A floor of planks 3 in. thick is laid upon the longitudinal beams, and timber kerbing runs the whole length of the bridge on each side. The wind bracing consists of bars 3 in. x 1 in. throughout, secured at the ends with 2 $\frac{1}{4}$ in. pins.

Inspection.

The Commission, after carefully inspecting this bridge, did not find any defects, except loose rivets. The Engineer for Existing Lines had reported that there were 1,862 loose rivets in the entire bridge, but the Commission were unable to detect with testing hammers any sign of looseness in at least 50 per cent. of this number.

Conclusions.

1. The horizontal and vertical plate joints in the top and bottom booms, the angle-iron wrapper joints, and the attachment of the lattice bars, with the number and arrangement of rivets at these parts, provide rivet and plate areas consistent with the stresses they have to resist.

Design.

Main girder.

Wind-pressure.

2. The resistance of the superstructure against wind pressure and vibration is provided by diagonal tie-rods under the roadway, and by overhead bracing arches at the piers and at mid-spans. The tie-rods are of uniform section throughout, and the end attachments are fixed as shown on diagram, page 109, but should have been the reverse way. Although the resistance might have been increased, it is, however, sufficient when taking into consideration the additional resistance offered by the cross-girders and deck platform.

Cross-girders.

3. The cross-girders are to some extent relieved by the longitudinal bearers; but if these were not considered the stresses produced by the driving-wheels of the heaviest engines, added to the dead load, would be 5.12 tons in compression and 5.79 tons in tension.

Workmanship &
maintenance.

Safe load.

4. The workmanship generally is good, and the bridge is in good condition.
5. The calculations show that, with a live load of 1.4 tons per foot run on the bridge, the booms are subjected to a stress of 3.82 tons per square inch in compression, and 4.7 tons per square inch in tension. The web is consistent with the booms.

With the unit stresses allowed by the British Board of Trade Regulations, the bridge will carry a live load of 1.52 tons per foot run, and it is therefore strong enough for the heaviest traffic likely to pass over it.

Deflections.

Appendix 10,
page 121.

6. The bridge was not tested by the Commission, but the deflections previously obtained and recorded by the Engineer-in-Chief, viz., 0.74 in. for end spans, and 0.63 inch for centre spans, with three engines weighing 185 tons, is not excessive.

Recommendation.

The Commission recommend that only such rivets as are loose under a passing load should be replaced.

No. 5.—SOLITARY CREEK BRIDGES.

THERE are five of these bridges, comprising six spans of 59 ft. 5½ in. in the clear. They are all erected on the skew (66 deg. 31 min.) The bridge at Tarana has two openings, the five other bridges having only one opening each. The main girders are 65 ft. 8 in. overall, placed 13 ft. apart in the clear, and 14 ft. 1 in. from centre to centre. The cross girders (excepting those at the ends, over the skew piers) are placed 3 ft. apart from centre to centre, and at right angles to the line of railway.

The piers, which are all on the skew, are built of brickwork, with stone caps and strings.

Each main girder is 4 ft. 9 in. deep. The top flange is formed of horizontal plates 1 ft. 3 in. wide, varying in thickness from ½ in. to ⅝ in., the total thickness in centre being 1½ in.; the bottom flange is formed of horizontal plates 1 ft. 8 in. wide, varying in thickness from ½ in. to ⅜ in. in the centre. The web consists of plates varying in thickness from ½ in. at abutment to ⅜ in. at centre; it is connected with the flanges by four angle-irons 3½ in. x 3½ in. x ½ in. riveted to them and to the web-plates. A longitudinal packing strip 7½ in. x ⅝ in. is placed under the angle-irons between the upper covering plates of bottom flange. The web is stiffened at every 6 ft. with double angle-irons 3 in. x 3 in. x ½ in. riveted over ⅝ in. covering plates; other web covering plates are riveted at the intermediate spaces of 3 ft. centres.

The covering plates in flanges are 2 ft. long. In the top flange, the upper covers only are the full width of plates, with two strips each 2 ft. x 3½ in. x ½ in. on the underside, but in the bottom flange both covering plates are the full width of the flange.

The cross girders are 14 ft. 1 in. long by 1 ft. 1 in. deep, formed with double angle-irons 3 in. x 3 in. x ½ in. riveted at top and bottom to a web-plate ¼ in. thick with ⅜ in. rivets, 4 in. pitch. Over the cross girders and directly under the rails, are laid longitudinal timber bearers 14 in. x 7 in., on which is fixed 3 in. planking to carry the ballast, sleepers, and rails.

The expansion arrangements are similar to those of the Wollondilly bridges, 60 ft. spans.

During the inspection of this bridge by the Commission, it was observed that the brickwork of the piers was shaken and cracked in some places. The bed stones of the girders being of an inferior quality, or having cracked through being of an inferior quality, the defective portions were removed and replaced by brickwork in cement. Inspection.

The ends of the main girders are bedded on lead in a similar manner to those of the Wollondilly bridges.

The same defects occur regarding the want of access to the ends of the girders for cleaning the bearings.

The camber given originally to these girders has disappeared, and now shows a sag of from ½ in. to ¾ in.

The girders have all been re-riveted by the Engineer for Existing Lines, and there are now no loose rivets.

The testing of these bridges was performed in the following manner:—

The apparatus for measuring the deflection was arranged with one lever in the centre of each main girder, and the deflections observed under the following conditions:—1st, with the engine standing on the bridge; 2nd, with the engine running at full speed over the bridge; 3rd, with the engine running at full speed, and the brake applied when passing over the bridge. Testing.

Observations were also made with regard to the lateral vibration produced by the speed tests. The engine used was No. 141 of the Consolidation Goods Class, weighing 75 tons. The engine when standing in the centre of the bridge represented a load equivalent to a uniform load of 1.56 tons per foot run. The maximum deflection produced by the engine running at full speed over the bridge was .542 in. The deflection of the cross girders was also tested; the greatest deflection of those fixed to gusset stiffeners was .556 in., and of those fixed to web covers .625 in. (See Appendix 42, page 141.) Plates 1, 2, and 2A. Plate 14.

1. The calculations show that with a live load of 1.5 tons per foot run, and according to the Rules of the British Board of Trade, the metal will be subjected to a stress of 4.3 tons in compression and 6.75 in tension.* Conclusions. Appendix 2, calculations, page 107, and Plate No. 8A.

The Commission are informed that the "Consolidation Goods" engines, weighing 75 tons are used over these bridges. Such load is equivalent to 1.56 tons per foot run when occupying the least favorable position on the girders, which would be then subjected to a stress exceeding 7 tons per square inch.†

2. These bridges are stated to have been built with a camber of ¼ in., but as they have been entirely re-riveted by the Engineer for Existing Lines, the Commission could not ascertain if the camber had disappeared before the re-riveting was commenced. Workmanship and maintenance.

It is to be regretted that the Engineer for Existing Lines, having expressed doubts as to the stability of these bridges, did not adopt some more effectual means of strengthening them than re-riveting. The cracked bed stones and brickwork, caused by the defective arrangement for expansion, should also have been repaired at the same time.

3. The deflections with a Consolidation Goods engine and tender, weighing 75 tons, was .54 inch, and with an ordinary goods train .50 inch. These are less than those recorded at the Wollondilly bridges (60 ft. spans.) The lateral vibration was observable, but was probably due to the spans being on the skew, and to the damaged or defective bearings. Deflections. Final Report, page 62. Special Report, No. 2, page 31.

The Commission recommend:—

- 1st. That, in view of the heavy traffic over these bridges, an additional plate be riveted to the top and to the bottom flanges, so as to bring the stresses within the limits allowed by the regulations of the Board of Trade. Recommendations.
- 2nd. That the lead over the piers, on which the girders rest, be replaced by a simple form of cast-iron bed-plate, as recommended for the Wollondilly 60 ft. spans.
- 3rd. That a portion of the brick pilasters over the piers be cut away to give access to the bed-plates for the purpose of cleaning.
- 4th. That the longitudinal timbers under rails when renewed be strengthened and jointed at alternate bays between the cross girders.

* This amount of stress is calculated with an effective span of 62 ft. 6 in., but the slight assistance afforded to the booms by the moment of resistance of the web is not taken into consideration, nor the fact that all these bridges are built on the skew (66 deg. 31 min.)

† The span is taken as 60 ft. in the calculations.

No. 6.—BATHURST BRIDGE.

Plates Nos. 15,
16, and 17.

THE bridge consists of two lattice main girders, continuous over three openings, across the River Macquarie, at Bathurst, having each a clear span of 150 ft. The main girders are 14 ft. apart in the clear, each forming a continuous girder 480 ft. long, extending over two intermediate piers. Between the lattice girders transverse or roadway girders are placed at a distance of 3 ft. from centre to centre.

The piers and abutments are spaced 159 ft. from centre to centre, and consist of cast-iron cylinders 9 ft. in diameter, filled with cement concrete, the top cylinders of each pier being braced together with an arched box girder.

The lattice girders rest on cast-iron bed-plates fixed on the piers. Bessemer steel rollers are provided for expansion.

Each lattice girder is 12 ft. between the top and bottom tables; the booms are trough-shaped, connected by a double lattice web. A light lattice overhead bracing girder is riveted to the top table of main girders at the piers and at mid-spans.

The top and bottom booms are each formed of horizontal plates 2 ft. 9 in. wide by $\frac{1}{2}$ in. thick, except over the piers, where they are $\frac{3}{8}$ in. thick, and of two vertical plates 15 in. deep by $\frac{1}{2}$ in. thick, riveted to four angle-irons 4 in. x 4 in. x $\frac{1}{2}$ in. with $\frac{7}{8}$ in. rivets, 4 in. pitch. The web is formed of a double set of lattice bars placed 3 ft. apart centre to centre, at an angle of 45 degrees, and riveted at each end to the vertical plates of the booms. Each set of lattice bars consists of seven systems of triangulation, the flat tension bars varying in dimensions from 4 in. x $\frac{1}{2}$ in. to 6 in. x $\frac{3}{4}$ in., and the channel irons forming the struts from 3 $\frac{1}{2}$ in. x 1 $\frac{1}{4}$ in. x $\frac{1}{2}$ in. to 5 in. x 2 $\frac{1}{4}$ in. x $\frac{3}{4}$ in.

The cross girders and deck platform are similar to those of the Wagga Wagga Bridge, as also are the arrangements for expansion and wind bracing.

Inspection.

The Commission were informed that the second and third spans and about one-fourth of the first span had been riveted, and, therefore, it was in the first span only that there was any evidence of the character of the work before these repairs were commenced by the Engineer for Existing Lines. In the portion of the span which had not been riveted the defects were observed in the top booms as follows:—

UP-SIDE GIRDER.

The angle-irons were not riveted throughout in close contact with the horizontal and vertical plates of booms, nor the angle-iron wrappers with the angle-iron covered. Loose rivets were found in some of the angle-iron wrapper joints, viz., in the second and third joints from the end, in the fourth and fifth joints (where they were rather more numerous), and in the T iron stiffeners of the top boom. There were also a few loose rivets in the lattice bars, but not more than one in a group uniting the bars to the vertical plates of booms. Some rivets at the intersections of the bars were also loose.

DOWN-SIDE GIRDER.

The only defects were a few loose rivets.

Testing.

Plates Nos. 21,
22, 23, and 24.

The arrangements for testing this bridge were as follows:—

Deflection levers were attached to the girders at the points of contra flexure and in the middle of the effective spans, viz., on the up-stream girder, two levers in Nos. 1 and 3 spans, and three in No. 2 span; on the down-stream girder, two levers in No. 3 span, three in No. 2 span (arranged as in the up-stream girder) and five in No. 1 span (which had not been riveted) placed—one in the centre and two on either side at a distance of 26 ft. 6 in. apart.

Plates Nos. 1, 2,
and 2A.

The testing was made with three engines of the Consolidation class, Nos. 134, 137, and 140, weighing in all 225 tons, and equal to a uniform distributed live load of 1.4 tons per foot run of span.

The first test was made with the engines standing on the bridge in the various positions shown on Plate No. 23 (experiments 1 to 6), and the deflection and contrary flexure produced by the continuity of the girders were accurately noted. The diagram (Plate No. 21), reduced from the original and plotted to the increased scale recorded by the instrument, shows the result of each experiment. The test was repeated by beginning from the other end of the bridge, and the deflection and contrary flexure noted as shown on diagram (Plate No. 22). The last test was made with the same engines running twice over the bridge at full speed (30 miles an hour).

The maximum deflection produced with the full-speed tests in the end spans was .82 inches, and in the middle span .75 inches.

Conclusions.
Design.

1. The detail of joints, covering plates, attachment of lattice bars, and arrangement of rivets, the strength of the cross girders, and the resistance of the superstructure against wind pressure, are the same as in the Wagga Wagga iron bridge.

Workmanship
and maintenance.

2. The workmanship, with the exception of the defects stated, is good generally, and in the two spans which have been riveted by the Engineer for Existing Lines, the work is well done, and above the average of bridge work.

See final Report,
page 62.

3. The elevation and section of the girders of this bridge are shown in Plates Nos. 15 and 16. The calculations given in Appendix 5 (pages 109–111), and on diagrams (Plates Nos. 17, 18, 19, and 20), show that with a live load of 1.4 tons per foot run on the bridge, the booms are subjected to a stress of 3.68 tons per square inch in compression, and 4.33 tons per square inch in tension. The web is consistent with the booms.

Safe load.

With the unit stresses allowed by the Board of Trade Regulations, the bridge will carry a live load of 1.6 tons per foot run, which is in excess of the heaviest traffic likely to pass over it.

Deflection.

4. Considering the proportion of the depth of the effective span for the test load, the Commission do not consider that the deflections were excessive.

It should also be stated that the span which has not been riveted does not show more deflection than the two others in which extensive riveting has been carried out.

Recommendation.

The Commission recommend that only such rivets as are positively loose should be replaced.

No. 7.—WELLINGTON BRIDGE.

The bridge consists of two lattice main girders continuous over three openings, each having a clear span of 150 ft. and of four plate main girders of 61 ft. span in the clear at each end of the lattice girders, the whole forming five spans over the River Macquarie at Wellington. The lattice main girders are placed at a distance of 14 ft., and the plate main girders at a distance of 14 ft. 8 in. apart in the clear. Transverse or roadway girders are riveted between them at a distance of 3 ft. from centre to centre. The piers are four in number, and consist each of two cast-iron cylinders braced together with wrought-iron diagonals and ties. The cylinders at each end of the central span are 11 ft. in external diameter from the bottom of the foundations to above ordinary water level, and reduced to 9 ft. in external diameter from that point to the underside of the girders. The cylinders in the outer piers are 9 ft. in external diameter. All the cylinders are filled with cement concrete.

Each lattice girder is 12 ft. 1 in. deep between the top and bottom tables. The booms, web, sectional area of the various parts, the length and thickness of the plates, the arrangement of joints, and other details of construction are similar to those of the Bathurst Bridge. The lattice girders rest on cast-iron bed plates fixed on the piers. Bessemer steel rollers are provided for expansion. The plate main girders rest at one end on cast-iron bed plates fixed on the outer piers, and at the other end on the abutments; sliding plates are provided for expansion. The cross girders are 1 ft. 2 in. deep and 15 ft. 10½ in. long over all, with a clear span of 14 ft. 3 in. They are constructed with top and bottom angle irons 3½ in. x 3½ in. x ½ in. on each side of a web ¼ in. thick riveted together with ¾ in. rivets. 150 ft. span.
Plates 15, 16,
and 17.

The plate main girders are 65 ft. 8 in. long over all and 6 ft. deep; the top flange is formed of plates 1 ft. 3 in. wide by ⅞ in. thick, having a total thickness of 1½ in. in the centre, and the bottom flange of plates 1 ft. 8 in. wide, varying in thickness from ½ in. at the abutment to ¾ in. thick at the centre, and a packing strip 7½ in. wide by ⅜ in. thick. The web is ⅝ in. thick throughout, and is united to the top and bottom flanges with angle irons 3¼ in. x 3½ in. x ⅞ in. It is stiffened with double angle irons 3 in. x 3 in. x ½ in. and ⅝ in. plate at abutments and at every 12 ft. along the girder. Other stiffeners of T iron 6 in. x 3 in. x ⅜ in. over the vertical cover plates 5 in. x ⅝ in. are placed at intermediate lengths every 3 ft. The whole is riveted together with ⅞ in. rivets. The longitudinal bearers, roadway platform, and kerbs, are similar to those over the large spans. 61 ft. span.

It was observed by the Commission that the cast-iron cylinders forming the piers of this bridge are slightly out of plumb, and that the piers are not in true line; they have not been placed accurately at equal distances from centre to centre. The main girders have been placed unsymmetrically upon the cast-iron bed plates to the extent of from 4 in. to 9 in. There is also a difference of level in the underside of main girders on the piers. The east end of girder is lower than the west end by 3½ in. on the upside and by 2¼ in. on the downside. Inspection.

The Engineer for Existing Lines reported in a document submitted to the Commission that there were 2,222 loose rivets in top boom and 1,486 in bottom boom, or a total of 3,708. These rivets had been marked with chalk, but after carefully testing them the Commission could not detect vibration in 80 per cent. of them; the remaining 20 per cent. are not really loose rivets, except a few in the angle-iron wrapper joints and at the intersection of lattice bars.

It was observed that the angle-irons were not in all cases riveted in close contact with the horizontal and vertical plates of booms, nor were the angle-iron wrappers accurately fitted over the angle-irons which they cover. In a few cases the vertical boom plates project slightly above the flange of the angle-iron, and a space is consequently formed between the angle-iron and the horizontal boom plates. The channel lattice bars are slightly rounded at the back, so that they do not bed evenly upon the vertical boom plates to which they are attached.

The testing of this bridge was performed in a similar manner to that already described for the Bathurst Bridge. Deflection levers were attached to the girders at the points of contra flexure, and in the centres of the effective spans of No. 1 and No. 2 spans, but in No. 3 span, one lever was attached at the point of contra flexure and two additional levers in the effective span. Testing.
Plates Nos. 25,
26, 27, and 28.

The engines were of the same class as those used in testing the Bathurst Bridge, viz., Consolidation Goods Engines, Nos. 134, 135, and 138, weighing in all 225 tons, and equal to a uniform distributed live load of 1.4 tons per foot run of span. The first test was made with the engines standing on the bridge in the various positions shown on plate No. 27, beginning on first span; and the test was repeated, beginning in the opposite direction on the third span. The last test was made with the engines running twice over the bridge at full speed (30 miles an hour). Plates Nos. 1, 2,
and 2A.

The deflections recorded by the instruments to the increased scale (1 to 8) are shown on plates Nos. 25 and 26. The maximum deflections produced with the full speed tests were .92 in the end spans, and .57 in the centre span. Plate No. 28.

1. The 150 ft. spans of this bridge are similar to those of the Bathurst Bridge (plates 15, 16, 17, 18, 19, 20) and the calculations and details of construction apply to both. Conclusions.
2. The 61 ft. spans are referred to in the calculations. (Appendix 3, page 108, and diagram plate No. 8B.) With a live load of 1.5 tons per foot run on the bridge, the booms are subjected to a strain of 3.5 tons per square inch in compression, and 4.42 tons in tension. The web is consistent with the booms. With the unit stress allowed by the Board of Trade these spans will carry a live load of 1.78 tons per foot run. See Table, final
report, page 62.
3. The safe load the Wellington Bridge will carry is in excess of the heaviest traffic likely to pass over it. Safe load.
4. The difference of level of the piers will not affect the calculated stresses in the main girders to any appreciable extent; the observations regarding the difference of level in the piers have not been recorded with sufficient care to determine if the pier referred to has sunk. The information supplied by Mr. Cowdery in his memo. (Appendix 26, page 133) is not sufficiently complete to affirm that the pier has sunk; it may be due to an error in its erection.
5. With the exception of the defects stated the workmanship is equal to the average of good girder work, and the maintenance is good. Workmanship
and
maintenance.
Deflections.
6. Although the deflections produced by the test load are slightly greater than those obtained at the Bathurst Bridge, they are not excessive; the increase is probably due to the high speed attained by the engines in running down the approach which is on a slight gradient. 1.

Recommendations.

1. The Commission recommend the cutting out and renewal of loose rivets in boom joints, and in attachments of lattice bars and cross girders; also the renewal of angle-iron wrapper joints in the worst cases.
2. The difference of level of the piers should be carefully watched and recorded from time to time, particularly before and after heavy floods, to ascertain positively if any settlement occurs. Should any sinking take place prompt measures should be taken to prevent injury to the large continuous girders.

No. 8.—ABERDEEN BRIDGE.

This bridge is similar to the Bathurst and Wellington bridges, which have already been described.

Inspection.

The Commission found the following defects in this bridge:—

UP-STREAM GIRDER, No. 1 SPAN.

The channel-iron lattice-bars are not in all cases in close contact with the vertical plates of booms, the rounded back of the channel-irons leaving spaces, varying from $\frac{1}{8}$ in. to $\frac{1}{4}$ in. between the sides and the vertical plates to which they are riveted.* The angle-iron wrappers over joints of angle-irons of the booms are not riveted throughout in close contact; about one in every six rivets is more or less loose. In the group of rivets uniting the lattice-bars to the vertical plates of the boom, there is about one in six rivets slightly loose. The butts of the plates in the boom-joints are open in some places from $\frac{1}{8}$ in. to $\frac{1}{4}$ in.

No. 2 SPAN.

The principal defect in this span is the loose and slightly loose rivets uniting the lattice-bars to the vertical boom-plates. At one place, out of eight consecutive bars on the inner side of the girder, the rivets are more or less loose in six bars. The fourth lattice-bar from the end of this span has all its rivets loose. In the six angle-iron covers the holes are elongated and the metal broken away round the edges in an irregular manner. Some of the rivets are more or less loose. In the bracing of one of the compression diagonals two of the rivets are omitted, and the holes filled up with putty.

No. 3 SPAN.

The principal defect in this span occurs in the plates of top booms, which have been riveted out of line sideways, and are nearly 3 inches out of line at about 20 feet from the end. The diaphragms at attachment of cross-girders are not in some cases in close contact with the vertical plates of booms, and some of the rivets uniting the cross-girder to the booms are loose.

DOWN STREAM GIRDER, No. 1 SPAN.

The channel-iron lattice-bars are not in close contact with vertical plates of booms. Some rivets are loose at the angle-iron wrappers, and at four angle-iron wrappers the rivet-holes are elongated and broken away round the edges.

No. 2 AND No 3 SPANS.

Some of the defects already stated occur in these spans.

PIERS.

A crack occurs in the first length of the cylinders of No. 3 pier, on the down-stream side.

WIND-BRACING.

In the wind-bracing attachment at the Newcastle end of the bridge the rivets are badly riveted.

The Engineer for Existing Lines reported in a document before the Commission that there were 2,359 rivets loose in this bridge, principally in the top booms. After carefully testing the rivets referred to, which had been marked as being loose, the Commission did not find more than half the number apparently loose under the test-hammer. The Commission were unable to find the marks of violence in testing the rivets alluded to in the evidence of some witnesses.

Testing.

Plates Nos. 29, 30, 31, and 32.

The testing of this bridge was performed in a manner similar to that already described in the case of the Bathurst and Wellington bridges. Deflection levers were attached to the girders as follows:—On the up-stream girder seven levers were arranged on each side of the end spans, one in the centre and three on each side, spaced at equal distances of 18 feet; five levers were arranged in the middle span, one in the centre and two on each side, spaced at equal distances of 24 feet; on the down-stream girder one lever was arranged in the centre of the effective space for the maximum loading.

Plates Nos. 1, 2, 24, 5, and 5A, and Special Report No. 2, page 81.

Three engines were used in the testing of this bridge—Nos. 222, 233, and 261—weighing 192 tons, and equivalent, when standing symmetrically over the bridge, to a uniform distributed load of 1.37 tons per foot run. The first test was made with the engines standing on the bridge in the various positions shown on plate No. 31. The deflections actually registered by the testing apparatus are shown on plates Nos. 29 and 30. The last test was made with the engines running over the bridge full speed (30 miles an hour), plate No. 32. The deflections were recorded by the instruments to increased scale of 1 in 8.3. The maximum deflection produced in the end spans was .92, and in the centre span .89.

Conclusions.

1. The conclusions on the design of the Aberdeen Bridge are the same as those arrived at for the Bathurst and Wellington bridges.

Appendix 5, pages 109-111, and plates Nos. 15 to 20. Safe load.

The calculations of main girders are given in the appendix 5, pages 109-111, and the diagrams of bending moments produced by the live load, and detail of construction in plates Nos. 15 to 20.

These bridges have been designed to carry a live load of 1.4 tons per foot run, but will safely carry, according to the rules of the Board of Trade, a live load of 1.6 tons per foot run, which is in excess of the heaviest traffic likely to pass over them.

Workmanship and maintenance.

2. The Aberdeen Bridge was erected in 1871, and was the first of this type of lattice girder bridge constructed on the Government Railways. The defective fitting referred to does not affect the safety of the structure.

It

* The rounding of the back of these channel-irons has occurred in the manufacture, in the process of rolling the bars.

It is well to remark, that since the erection of the Aberdeen Bridge, improvements appear in the workmanship of the same type of bridges at Bathurst, Wellington, Wagga Wagga, Albury, Dubbo, and George's River. In the three last bridges improvements have also been made in the design.

The Aberdeen Bridge is kept in a good state of repair.

3. The result of the testing of this bridge is not quite so favourable as that of the Bathurst and Wellington bridges; but comparing the deflections obtained by Mr. Whitton when testing the Aberdeen Bridge in 1871, with three engines weighing 170 tons, which gave '79 in. on the end spans, and '68 in. on the centre span, with the maximum deflections recorded by the Commission in 1885, when three engines were used weighing 192 tons, and giving on the end span '92 in., and on centre span '89 in., the latter deflections are not excessive, and indicate sufficiently that there has not been any sign of weakness in the bridge since its erection.

Deflections.

Appendix 10,
page 122.

The Commission recommend the renewal of loose rivets in the boom-joints, and in the attachment of lattice-bars and iron girders. A few of the angle-iron wrappers, where loose rivets occur, should also be refitted and re-riveted.

Recommendations.

No. 9.—TAMWORTH BRIDGE, OVER THE PEEL RIVER.

The bridge consists of two lattice main girders, forming a clear span of 150 ft. over the Peel River, at Tamworth. The main girders are each 161 ft. 9 in. over all, and placed 14 ft. apart in the clear. Between them, transverse or roadway girders are placed at a distance of 3 ft. from centre to centre. There are two piers, each of which consists of cast-iron cylinders, 9 ft. in diameter, filled with cement concrete, and braced together with wrought-iron diagonals and ties.

The lattice girders rest at each pier on cast-iron bed plates fixed on the piers, with Bessemer steel rollers on one pier. Each lattice girder is 12 ft. 1 in. between the top and bottom tables. The booms are trough-shaped, connected by double lattice webs.

The two main girders are braced with a light overhead lattice girder over the piers and at mid span, and with wind bracing, diagonal bars, similar to those of the Aberdeen and Wagga Wagga bridges. The top and bottom booms are each formed of horizontal plates, 2 ft. 9 in. wide by $\frac{1}{2}$ in. thick (except one of the plates, which is $\frac{3}{8}$ in. thick), and of two vertical plates, 15 in. deep x $\frac{1}{2}$ in. thick, riveted to four angle-irons, 4 in. x 4 in. x $\frac{1}{2}$ in., with $\frac{3}{4}$ in. rivets, 4 in. pitch. The web is formed of a double set of lattice bars, riveted to the vertical plates of booms at an angle of 45 degrees. Each set of lattice bars consists of seven systems of triangulation, the flat tension bars varying in dimensions from 6 in. x $\frac{5}{8}$ in. to 4 in. x $\frac{1}{2}$ in., and the channel irons, forming the struts, from 6 in. x 2 $\frac{1}{2}$ in. x $\frac{1}{2}$ in. to 3 $\frac{1}{2}$ in. x 1 $\frac{3}{4}$ in. x $\frac{1}{2}$ in.

Appendix 22,
page 129.

The cross girders, deck platform, and wind bracing are similar to those of the Aberdeen and Wagga Wagga bridges.

A few of the butt joints of the booms are not perfectly in close contact. The expansion arrangement is difficult of access.

Inspection.

The Engineer for Existing Lines stated in a report submitted to the Commission that there were 2,458 loose rivets in top booms, 1,543 in bottom booms, 168 in lattice bars, and 316 in end boxes. After thoroughly testing these rivets, the Commission found that about one in five were apparently loose under the test hammer.

The marks of violence in testing rivets, alluded to by Mr. Russell in a report, were not found to exist.

The testing of this Bridge was performed in the following manner:—Fifteen deflection levers were connected with the down-stream side main girder, one in the centre, and seven on each side, spaced at equal distances of 9 ft. One lever also was connected with the centre of the up-stream girder.

Testing.
Plates Nos. 35 &
36.

Three engines, Nos. 222, 261, and 231, weighing in all 192 tons, were used in testing the bridge, and when standing symmetrically over it, were equivalent to a uniform distributed load of 1.4 tons per foot run. The first test was made with the engines standing on the bridge in the various positions shown on plate No. 36, experiments No. 5, 6, and 7. This test was repeated in a contrary direction, as shown by experiments Nos. 13, 14, and 15. Full-speed tests, with the engines running at 30 miles an hour, were made, as shown by experiments Nos. 30 and 31. Finally, a test was made with the engines running at full speed across the bridge, the brakes being applied when passing over it. The deflections were recorded by the instruments to the increased scale of 1 in 8.3, plate No. 35, from which the diagrams showing actual deflections, plate No. 36, have been reduced. The deflections produced by a mail train passing over the bridge were also recorded, as shown on plate No. 35. The maximum deflection produced with the dead load or standing test, was 0.83 in., with the full-speed test, 0.9 in., and with the brake test the deflection was slightly less than with the full-speed test, but the lateral vibration was observable.

Plates 1, 5, & 5A.

1. The calculations and diagrams, plates Nos. 33 and 34, show that with a live load of 1.4 tons per foot run, the booms are subjected to a strain of 3.72 tons per square inch in compression and 4.37 tons per square inch in tension. The web has been calculated on the assumption that the booms are stiff enough to distribute the strains equally over the several systems of triangulation. The unit strains obtained show that the web is strong enough to cover any probable increase due to the unequal distribution of the load.

Conclusions.
Appendix 4,
page 103.
Calculations and
plates 33 and 34.

2. With the unit strain allowed by the British Board of Trade the Bridge will carry a live load of 1.6 tons per foot run.

Safe load.

3. The different parts of the bridge have been well fitted together, and the workmanship throughout is above the average of girder work.

Workmanship
and maintain-
ance.

The bridge is kept in a good state of repair.

4. Considering the proportion of depth to span, the direct deflections are not excessive, but the vibration obtained by the brake test shows a want of horizontal resistance, probably due to the wind-braces not being screwed up tightly.

Deflection.

1. The Commission recommend a judicious renewal of rivets in the attachment of lattice bars, in angle-iron wrappers, boom joints, and in the attachment of cross girders. At least one-fifth of the rivets marked as loose by the Engineer for Existing Lines should not be renewed.

Recommendations.

No. 10.—PEEL-STREET BRIDGE, TAMWORTH.

THIS bridge consists of one span, 50 ft. in the clear, formed of two plate main girders, each 65 ft. 9½ in. long overall, placed 14 ft. 8 in. apart in the clear, and 15 ft. 10½ in. from centre to centre.

These main girders are 6 ft. deep and similar to the approach girders of the Wellington Bridge. The cross girders are 1 ft. 3 in. deep and 3 ft. from centre to centre, placed at right angles to the main girders; they are similar to those of the Wellington Bridge approach.

The piers are built of brickwork with stone caps, &c.

Inspection.

It had been reported by the Engineer for Existing Lines that there were 336 loose rivets in this bridge, but the Commission after testing these rivets could not find more than 40 per cent. of the number apparently loose under the testing hammer.

Testing.

Plates 1, 5, and 5A.

The testing of the bridge was performed as follows:—A deflection lever was connected with the centre of the main girder in the up-stream side. The engines used were the same as those employed at the Peel River Bridge, Nos. 222, 261, and 231. Although only one engine could come into operation at a time the heaviest of these engines when standing in the bridge with the least favourable position produced a load equivalent to a distributed load of 1.5 ton per foot run.

Experiments were made with an engine standing on the bridge and with the three engines running at full speed over the bridge. The greatest deflection produced was .29 in. (*See Appendix 35, page 140.*)

Conclusions. Appendix 3. Calculations, page 108 and plate 8B. Safe load.

1. The calculation referring to the approved spans of Wellington Bridge also apply to this bridge. With a live load of 1.5 ton per foot run, the booms are subjected to a strain of 3.5 tons per square inch in compression and 4.42 tons per square inch in tension. The web is consistent with the booms.

2. With the unit stresses allowed by the Board of Trade, this span will carry a live load of 1.78 ton per foot run, which is in excess of the traffic likely to pass over it.

Workmanship and maintenance.

3. This bridge has been well constructed and may be considered high-class girder work. It is kept in good order.

Deflection.

4. The deflections with the test load are less on this bridge than at the Wellington approach spans, but the engines used at the latter bridge were heavier. (*See Final Report, page 62, and Special Report No. 7.*)

Recommendations.

The Commission do not recommend anything to be done to the bridge except the usual maintenance.

No. 11.—MACDONALD RIVER BRIDGE.

THIS bridge is similar in design to the bridge over the Peel River at Tamworth, except that the piers are of brick, and the boom plates are ½ in. throughout.

Inspection.

The inspection of this bridge disclosed similar defects to those of the Tamworth Bridge.

The Engineer for Existing Lines reported that there were 2,033 loose rivets in top booms, 1,102 in bottom booms, 269 in lattice work, and 409 in end boxes. The testing of these rivets by the Commission showed that only about one in five were apparently loose under the test hammer.

Testing.

The testing of this bridge was conducted in a manner similar to that of the Peel River Bridge at Tamworth, which has been fully described.

Plates Nos. 37 and 38

The deflections, as recorded by the instruments, are shown on plate No. 37, and plotted to the natural scale on plate No. 38. The same engines were used in testing this bridge as were used at Tamworth. The maximum deflection produced with the dead load or standing test was 0.88, plate No. 38, and the maximum full speed deflection was 1.03. The deflection produced by a mail train passing over the bridge was also recorded.

It was observed that the lateral vibrations were very small with the mail train, but more observable with the test load.

Conclusions. (See special report, No. 9, Tamworth Bridge.) Safe load.

1. The conclusions on the designs of the Tamworth Bridge, as shown in special report No. 9, and referred to in calculation, page 108, and plates Nos. 33 and 34, apply also to the MacDonald River Bridge.

2. The safe load these bridges will carry, according to the rules of the Board of Trade, is 1.6 ton per foot run.

Workmanship and maintenance.

3. The workmanship is very good, and with the exception of loose rivets may be considered above the average of girder work.

Deflection.

4. Although the direct deflections are slightly more than those obtained at the Tamworth Bridge, they are not excessive; the lateral vibrations with the break test were equally felt, and were probably due to the same cause in both bridges.

Recommendations.

The recommendations made by the Commission with regard to renewal of rivets in Tamworth Bridge will apply to the MacDonald River Bridge.

Menangle Bridge—Great Southern Railway.

No. 12.—MENANGLE BRIDGE.

THIS bridge is designed to carry a double line of railway; it consists of two main box girders continuous over three openings across the river Nepean, at Menangle, having each a clear span of 150 ft. The main girders are 25 ft. 6 in. apart in the clear, each forming a continuous girder 486 feet long, extending over two intermediate piers. Between these girders transverse or roadway girders are placed at a distance of 3 ft. from centre to centre.

The piers are built of masonry, spaced 162 ft. from centre to centre.

The main girders are supported on a floor of planks 4 in. thick and 12 ft. long by 3 ft. 8 in. wide, resting on the top of the piers.

Expansion rollers are provided over three piers. Each set comprises sixteen rollers 4 in. diameter set in a frame and placed between two grooved cast-iron plates; the lower bed-plate is fixed to the timber planks, and the upper plate to the girders.

The main girders are 12 ft. 6 in. deep over all; the top and bottom booms are constructed on the box form 3 ft. wide by 1 ft. 4 in. deep, the side plates of the box varying in thickness from $\frac{1}{8}$ in. to $\frac{5}{8}$ in.; and a central plate of the same thickness divides the box into two compartments, the whole length of the girder; the top and bottom of the box booms are formed each of a pile of plates varying in thickness from $\frac{1}{8}$ in. to $\frac{3}{4}$ in.; the whole is put together with six angle-irons 4 in. x 4 in. x $\frac{1}{2}$ in., and rivets $\frac{7}{8}$ in. diameter. The web is 20 in. wide, and consists of a double line of vertical and parallel plates from $\frac{1}{2}$ in. to $\frac{5}{8}$ in. thick, and 9 ft. high, stiffened outside over the joints with T irons and cover strips 5 $\frac{1}{2}$ in. x $\frac{5}{8}$ in., and inside with double angle iron and T iron stiffeners placed 3 ft. apart; the angle and T irons are connected together by diaphragm plates, leaving a 2 ft. space between them.

The cross girders which are riveted to the bottom boom are 25 ft. 6 in. long by 1 ft. 4 $\frac{1}{2}$ in. deep, formed with double angle irons 3 $\frac{1}{2}$ in. x 3 $\frac{1}{2}$ in. x $\frac{1}{2}$ in. at top and bottom, and flange plates 8 in. x 3 $\frac{1}{4}$ in.; the web is $\frac{1}{2}$ in. thick. Over the cross girders, and directly under the rails are laid longitudinal timbers 14 in. x 7 in., upon which is placed a floor of 3-in. planking. The chairs for the rails are fixed on the floor exactly over the cross girders.

At present there is only one line of rails laid along the eastern side of the bridge.

The drawings of the Menangle Bridge having been destroyed in the fire at the Garden Palace, the Engineer-in-Chief was requested to supply the Commission with particulars relating to the design, testing, and deflection of the bridge. The papers received from Mr. Whitton are published in the Appendix 19, pages 126-128.

The Menangle Bridge was the first large railway bridge erected on the New South Wales Railways. Since its erection, in 1863, the design has only been reproduced in the Penrith Bridge.

The Commission observed that a large number of rivets had been cut out and replaced in the main girders on the inner or rail side, chiefly in the angle-irons uniting the web and the booms, in the angle-iron wrapper joints, and in the T iron stiffeners and web-covering plates. The new rivets have larger snap heads than the original rivets, but there is round the edge of the snap head of many new rivets an indentation or furrow in the plate, due to the effort made to produce a perfect head. On the outer side of main girders, which had not been interfered with since the bridge was erected, the Commission found that the angle-irons were not in all cases riveted in close contact with the plates of the booms and web, and that a piece of clock spring could be inserted in the angle-iron wrapper joints. Similar defects were found in the middle cell of the girders, and in a flange joint on the underside of top boom four rivets have been omitted in a cross row of five rivets. In testing the rivets of this bridge, the paint came off the heads of the rivets at each blow of the testing hammer, which gave them the appearance of having been tested with unusual severity. Inspection.

Many of the rivets of the ornamental angle-iron arch on the outside of the web of main girders are loose, and a number of rivet holes have been drilled in the wrong place and filled up with putty, but as the angle iron is more for ornament than for use, this defect is not of much consequence.

The timber platforms over the piers on which the main girders rest are more or less decayed; the Commission had holes bored in each timber platform, and found one piece much decayed.

The plates in bottom booms are corroded, through water finding its way into the cells and no outlet having been provided to drain out the water.

The testing of this bridge was performed as follows:—Deflection levers were attached at the centre of main girders, and at quarter span. Deflections were also observed with ordinary engineers' levels. Three engines were used—Nos. 265, 212, and 269, which, when standing, symmetrically on the bridge, were equivalent to a distributed load of 1.37 tons per foot run on the line loaded, and to 1 ton per foot run on the main girder tested. The experiments were made with the three engines standing on the bridge, and also with two engines, Nos. 265 and 212, running at full speed over the bridges. The greatest deflection produced was 50 in. Testing.
Appendix, pages
Special reports, No. 2, page and plates Nos. 1, 2, 2A, 5, and 5A; also Appendix 32, page 139.

1. The bridge being designed to carry a double line of way, although one only is used at present, calculations were made to ascertain the safe load it will carry when the line is duplicated over the bridge. The sectional areas in the booms and web being sufficient for a double line with a load of 1.155 tons per foot run on each line, the bridge may therefore be considered strong enough for ordinary traffic. Conclusions.
Appendix 8, pages 117-119.

2. The cross girders may be subjected, when the two lines are used, to a stress of 6.46 tons per square inch in compression, and 7.62 tons per square inch in tension, with ordinary engines; but allowance should be made for the cross girders being partially fixed at the ends, and for the distributing influence of the longitudinal girders.

3. The workmanship generally is good, and compares favourably with bridge work erected elsewhere at the same time. The defects in some of the angle-iron wrappers are to some extent due to the burr left when shearing the ends. The bridge is kept in good condition, and the top and bottom booms which had not been cleaned for many years, can now be protected from corrosion. Man-hole doors should be placed where necessary to keep the rain from the cells of the girders. The expansion arrangements should be examined and cleaned from time to time. Workmanship and maintenance.

4. The deflections observed for the various loads are not in any case excessive.

1. The decayed timber platforms upon which the main girders rest should be carefully examined from time to time, and any decayed pieces renewed. The pieces at No. 3 pier, down side, should be replaced with sound timber. Deflection. Recommendations.
2.

2. The T iron and web plates and angle-iron wrappers should be refitted and riveted where improper contact and loose rivets occur.

3. Proper drainage and ventilation should be provided in the cells of booms to prevent corrosion, care being taken to preserve the sectional areas where holes are made for drainage.

4. When the longitudinal timber bearers under rails are renewed, they should be of larger dimensions, to distribute more effectually the weight of driving wheels on the cross girders.

No. 13.—PENRITH BRIDGE.

THIS bridge is designed to carry a double line of railway; it consists of two main box girders continuous over three openings across the River Nepean, at Penrith, having each a clear span of 186 ft. The main girders are 25 ft. 6 in. apart in the clear, and 28 ft. 6 in. from centre to centre, each forming a continuous girder 594 ft. long, extending over two intermediate piers. Between these girders, transverse or roadway girders are placed at a distance of 3 ft. from centre to centre.

The piers are built of masonry, and are 12 ft. wide at the top on the underside of the main girders, and placed 198 ft. from centre to centre.

The main girders are supported upon timber platforms each 12 ft. long by 4 ft. 8 in. wide, and the expansion rollers are similar to those of the Menangle Bridge.

The approach span, which is of later date, consists of two main box girders having a clear span of 127 ft. They are placed at a distance of 25 ft. 9 in. in the clear, and are each 135 ft. in length overall; between them the cross girders are riveted as in the larger spans. The main girders rest on cast-iron bed plates fixed to the piers, and rollers are provided for expansion.

The main girders over large openings (186 ft.) are 13 ft. deep. The top and bottom booms are constructed in the box form. The bottom member is 3 ft. wide by 1 ft. 4 in. deep, and is divided into two cells 1 ft. 6 in. by 1 ft. 4 in. by a central web. The top member is similar to the bottom member, except that the upper plates are curved. The web is double and formed with parallel vertical plates varying in thickness from $\frac{1}{4}$ in. to $\frac{1}{2}$ in.; it is stiffened at every 3 ft. with T irons on the inside, and covering plates on the outside; the T irons are connected together on the inside with diaphragm plates, the whole height of inner cell at the piers, but in three separate lengths at the intermediate positions.

The cross girders are 26 ft. 3 in. long by 1 ft. 9 $\frac{1}{2}$ in. deep in the centre, diminishing to 1 ft. 4 in. at point of support. They are constructed with two angle-irons 3 in. x 3 in. x $\frac{1}{2}$ in., a flange plate top and bottom 7 in. x $\frac{3}{8}$ in. and a web $\frac{1}{2}$ in. thick, riveted together with $\frac{3}{4}$ in. rivets, 4 in. pitch.

On the cross girders are laid longitudinal timber beams 14 in. x 9 in., and close 3 in. planking upon which are laid the ballast and rails.

Each main girder over the approach span (127 ft.) is constructed in the box form for the top table with bottom tables plain. The top boom is 2 ft. 6 in. wide by 1 ft. deep; the depth of each girder is 9 ft. 10 in.

As the bridge is at present constructed, there is only one line of railway laid upon it, the remaining width being used for road traffic. A partition of galvanized iron and timber separates the road from the railway.

The dead load on the bridge is 2 $\frac{1}{2}$ tons per foot run, and the bridge was designed to carry a live load of 1 $\frac{1}{4}$ ton per foot run on each line of rails.

The live load is now unequally distributed over the two main girders.

Inspection.

The Commission inspected the interior of the girders, passing through the centre cell from end to end, and one of the Commissioners was drawn through the whole length of the top cell and made a close examination of the riveting. Only one of the two bottom cells of each main girder was accessible, on account of the timber framing of the approaches obstructing the other cell.

Appendix 25,
pages 131-132

A list was made of the different portions of the top cells, dividing the whole length 590 ft. into 56 sections, and during the examination of this cell marginal notes were made of the condition of the work at each section, which corresponded with the flange plate joints.

The down-stream girder being the more important, as it carries the greater load, the inspection was commenced in its large central cell, starting from the end, on the Sydney side. The principal defects observed were defective rivets in vertical T irons of web, chiefly at junction of these T irons with boom plates. Some double holes and a few blank holes occur in a portion of the girder at junction of horizontal plates of top cells with central cell.

The rivets in the double holes are not loose, and the loss of sectional area in blind holes could not be replaced. Sufficient area, however, is left for safety, or for the stresses at those parts of the girder. There is no indication that the blank or double holes occur through more than one plate forming part of a pile of four plates.

The bottom pile of plates at top flange was originally intended to be joggled, but the joggling was dispensed with, and the triangular space was filled with putty.

Some of the butting joints of the plates are not in close contact, and the spaces, about $\frac{1}{8}$ in. to $\frac{1}{4}$ in., have been filled up with lead or putty to protect the ends of plates.

A few loose rivets, and many vibrating under the test hammer, were found in the diaphragm plates of centre cell, but no appearance of buckling is shown under a passing load. The rivet holes made for fixing the ornamental angle-iron arches outside the main girders have, in many instances, been made in the wrong place. A number of these holes have been filled with putty or lead. A few other blind holes in diaphragm-plates have also been filled with lead. These defects do not affect the safety of the bridge.

The T iron stiffeners, to which the cross girders are attached, are not riveted in close contact with the plates.

The cross girders are secured to the main girders by sixteen rivets at each end passing through T iron and web-plate. Many of these rivets have bad heads, which is no doubt due to the difficulty of riveting in those places. These rivets, however, are not loose.

The inspection of the interior of one of the top cells by a member of the Commission, which is fully recorded in Appendix 25, pages 131-132, showed that the difficulty of access during construct on caused imperfect

imperfect work. The upper part of the cells is better than the underside. The longitudinal angle-iron in top cell is not in close contact in many places with the plates, and the riveting is irregular on account of the difficulty of holding up rivets in such a confined space (15½ in. x 13½ in.)

The Engineer for Existing Lines has had this made good by the insertion of tapered liners between the curved top-plates and the angle-irons, and by riveting the whole together.

The Commission did not see any difference of rigidity between the parts of the booms thus treated and other places where these liners had not been inserted.

Amongst other defects may be mentioned a few false holes in angle-irons of top booms.

The inspection of the bottom boom did not disclose the defects stated in the top boom.

It had been reported to the Commission that the timber bed-plates, on which the main girders rest were much decayed. The Commission caused holes to be bored through these timbers to ascertain the extent of the decay. No danger need be apprehended from this decay and the Commission found that any portion of the timber might be renewed as it became necessary to do so. This timber had not been originally coated with any preparation to preserve it. At the time of the inspection of the bridge by the Commission, the bottom cells had not been entered nor cleaned since the bridge was erected in 1867. The outer cells of bottom booms were accessible, and could have been cleaned, but the entrance at the ends of the inner cells was blocked up by the timber framing of the approaches, which prevented access to these cells. The Commission requested the Engineer for Existing Lines to have the obstructions removed and the bottom cells cleaned. The water, which had been probably lying at the bottom of the cells for some years, was drained out, and a large quantity of rust removed. The plates were corroded to the extent of almost ¼ of an inch across half their width, but the rivets were sufficiently tight to prevent drainage, and the corrosion had not attacked the necks of the rivets.

Appendix 24, page 130.

127 FEET SPANS.

The principal defect in these girders is the difficulty of access to the top cells for inspection and repairs. 127-ft span.

The testing of this bridge was performed in the following manner:—On the down-stream girder, deflection levers were attached approximately at the points of contrary flexure, and in the middle of effective spans. Thus two levers were attached to Nos. 1 and 3 spans, and three levers to the middle span. A deflection lever was also connected with the centre of the down-stream girder over the 127-ft opening.

Testing.

Plates 11, 12, and

Three engines were used (Nos. 137, 135, and 141) of the "Consolidation" goods class, weighing together 225 tons. When standing symmetrically on the bridge these engines were equivalent to a uniform distributed load of 1.5 ton per foot run on the girder tested.

Plates 1, 2, and 2A, and Special Report, No. 2, page 81.

The first test was made with the engines standing on the bridge in the various positions shown on plate No. 13, experiment Nos. 11 to 17. Full-speed tests, with the engines running at 30 miles an hour, were made, as shown on plate No. 12. The deflections were recorded by the instruments to the increased scale of 1 in 8.3, plate No. 11, from which the diagrams showing actual deflections (plate No. 13) have been reduced. The maximum deflection produced was .93 inch. The greatest deflection produced with an ordinary goods train was .75 inch.

1. The rapid progress made in bridge designing since the Penrith Bridge was erected renders it unnecessary to compare the type of girders adopted for that bridge with the designs of later railway bridges constructed in the Colony.

Conclusions.

2. This bridge having a double line of rails, although one only is used at present, calculations were made to ascertain if the load it was designed to carry, viz., 1½ ton per foot run on each line of rails, could be safely carried when the two lines are in operation.

Appendix 7, pages 112-116.

The inspection of the girders showed that the connection between the booms and the web is made with angle-irons 4½ in. x 4½ in. x ⅝ in. riveted to the booms with rivets 1 in. in diameter, and to the web-plates with rivets ¾ in. in diameter.

The analysis of stresses on the ¾ in. rivets in tons per square inch is shown on the following table:—

See also diagram, plate No. 10.

| No. | Description of load on Bridge. | Stress on ¾ in. rivets in tons per square inch. |
|-----|--|---|
| 1 | From the dead load of the structure itself | 4.5 |
| 2 | From ordinary traffic on railway (no load being on the roadway) | 6.8 |
| 3 | From ordinary traffic on one line of way with ½ ton per foot run on roadway | 7.2 |
| 4 | From a single line loaded with 1¼ ton per foot run on either side of end spans with ½ ton per foot run on roadway. | 8.4 |
| 5 | From a double line of way, each loaded with 1¼ ton per foot run on either side of the end spans | 9.3 |

As will be seen from the table of stresses in booms, the sectional area is sufficient for all ordinary traffic on a double line, but there is not sufficient area to cover all cases of complete loading, which would be possible with two lines of way, each loaded with 1½ ton per foot run. With this load the pressure on the bearing area of the ¾ in. plates of the web would be 14 tons per square inch.

Appendix 7, Calculations, pages 112-116

The rivet area is barely sufficient in the covering plates of booms, which exceed ½ in. in thickness, nor in the angle-iron wrappers.

3. In the approach main girders the booms are united to the web with rivets 1 in. in diameter, although the stresses they have to transmit are less than in the larger continuous girders.

The strength of the approach main girders is sufficient for a double line of way.

Cross girders.
Appendix 9,
page 119.

4. With a double line of way the unit stresses in the cross girders will exceed those recognised by the Board of Trade. The dead load added to the weights on the driving wheels of the heaviest engines will give a concentrated load of 8 tons at four points immediately under the rails, and the unit stress in tension will be 9.4 tons per square inch, and in compression 8.06 tons per square inch.

Workmanship
and main-
tenance.

5. The workmanship is inferior to that of Menangle Bridge, and to that of bridges more recently erected. The outer portions of the bridge and the centre cells of the girders have been generally cleaned and well maintained, but it is only recently that the upper cells were cleaned and painted. The cells of bottom booms had not been cleaned since the erection of the bridge.

effectiou.

6. Considering the proportion of depth to effective span for the test load, the deflections observed are proportionately greater than in Menangle Bridge, which is of similar design, but they are not, however, excessive.

Recommendations.

The Commission recommend:—

- 1st. That where loose rivets occur in vertical attachments of cross girders, in middle diaphragm plates, and in web covers, they should be renewed; also, that where rivets are loose in angle-iron wrappers, or where blank holes occur in them, a new wrapper should be fitted, and the joint entirely reriveted.
- 2nd. That the upper curved surface of the stone piers be cut down to the level of the underside of the timber platforms for a distance sufficient to allow of the withdrawal and renewal of the decayed timber where necessary. That the plates of bottom booms be thoroughly cleaned and protected from corrosion in future by being well painted or coated with asphalt paint, and that the ends and holes, not required for ventilation and drainage, be closed.
- 3rd. That the $\frac{3}{4}$ in. rivets uniting the webs to the booms in the main girder next to rails be removed for a distance of 40 ft. on either side of No. 2 and No. 3 piers, and for 10 ft. from ends of girders, and the holes drilled and fitted with 1-in. rivets. Not more than six rivets to be taken out and replaced at one time.

Before the line is duplicated the Commission also recommend:—

- 1st. That the $\frac{3}{4}$ in. rivets uniting webs and booms on the other main girder be replaced by 1-in. rivets in the manner described above.
- 2nd. That, to distribute more effectually the weight brought on the cross girders by the driving wheels of the engines when passing over them, a small longitudinal box girder be riveted to the cross girders the whole length of the bridge, or that a small lattice continuous girder be formed by fixing a double line of channel or angle irons at the top and bottom of the cross girders throughout the whole length of the bridge in the centre, and bracing them between the cross girders.

No. 14.—WAGGA WAGGA TIMBER VIADUCTS.

The Wagga Wagga Timber Viaducts, situated on the Great Southern Railway, have been erected over the low ground liable to flood near the Murrumbidgee River, and are a continuation of the Wagga Wagga Iron Bridge. These extensive timber structures comprise six viaducts, the details of which are given in the following table:—

| Number of viaducts— Bowen to Wagga. | Number of spans in each viaduct. | Number of beams (29 ft. 6 in. long.) | Number of timber piers. | Number of piles in the piers. | Remarks. |
|--|-------------------------------------|---|----------------------------|----------------------------------|--|
| I | 113 | 904 | 114 | 456 | |
| II | 66 | 528 | 67 | 268 | |
| III | 4 | 32 | 5 | 20 | |
| IV | 72 | 576 | 73 | 290 | |
| V | 56 | 448 | 57 | 228 | |
| VI | 5 | 40 | 6 | 44* | |
| Totals | 316 | 2,528 | 322 | 1,306 | *Including twenty extra batter piles at approach to iron bridge. |

Superstructure
Plate No. 39.

The superstructure is of ironbark. All the spans are 28 ft. 6 in. in the clear, formed of beams 29 ft. 6 in. long, bolted to corbels fixed to the timber piers. Each span consists of four compound beams 29 ft. 6 in. long. Two of these are under the rails, at a distance of 5 ft. from centre to centre. The other two are outside of these at a distance of 3 ft., centre to centre. Between these beams are eight transoms 9 in. x 6 in. checked between the beams to bring them at a uniform distance apart (6 in.). The transoms over the piers are 12 in. x 9 in., checked in a similar manner. The lower beams are butted over corbels 12 in. x 12 in. and 10 ft. long, bolted to the piers. A close flooring of 3-in. planking is fixed upon the upper beams to receive the ballast, sleepers, and rails; ballast boards, 9 in. x 6 in., are bolted to the outer beams. The beams and transoms are bolted together with 1-in. bolts, except at the corbels, where the bolts are $1\frac{1}{4}$ in. The total width of the platform between the ballast boards is 11 ft. 1 in.

Piers.

The piers are constructed of round timber piles, tenoned at the top into headstocks, 12 in. x 12 in. and 15 ft. 6 in. long. The two piles under the rails are vertical and the two outside piles are built with a batter of 1 in 10, uniform throughout the piers. Two waling pieces, 12 in. x 6 in., are bolted on each side of the piles near the surface of the ground, and two diagonal braces, 9 in. x 6 in., notched into the walings are bolted to each pile and to the headstock as shown on drawing. Fifty-eight piers are driven into the ground to depths varying from 14 ft. to 57 ft., and 264 piers are tenoned into sills, 14 in. x 6 in., bedded in concrete at depths varying from 6 ft. to 8 ft. below the surface of the ground.

Plate No. 39.

The piles and bracing generally are of different kinds of Colonial hardwood.

The

The Commission made a minute inspection of the whole of the viaducts, and the result is given in Inspection. the following table:—

| Description of Viaduct. | Species of Timber. | Pipes under 4 in. diameter. | Pipes over 4 in. diameter. | Dry knots. | Bad hearts. | Piles strutted. | Total faulty piles. | Girders split or rotten. | Girders knotted. | Girders strutted. | Total faulty girders. |

The difficulty of obtaining ironbark timber for the whole structure in the short space of time allowed for its erection, necessitated the use of other kinds of timber for the piers, such as stringybark, ash, messmate, apple, box, spotted and white gum, &c., of which a large proportion had to be cut when the sap was up, instead of during the winter months. In consequence of this the dry rot soon appeared in a certain proportion of the piles, and this decay, together with the cavity or pipe in some of them, reduced their effective sectional area, but not beyond the limit of safety.

The defective timbers may have escaped the notice of the Superintending Officers during the erection of the viaducts, but some of the faulty piles and girders in which the sun-cracks and knots have been filled with putty, should have been removed before the viaducts were opened for traffic. Bolts have since been put in to protect the sun-cracks, and the sapwood at the ground level has been cut away or burnt off the piles to stop further decay. White ants which had been found in some of the piles soon after the erection of the viaducts have been successfully eradicated by the use of kerosene, and of a mixture of arsenic and tallow.

Before

Before testing the viaducts the Commission obtained from the Locomotive Engineer particulars of the heaviest engines and trains passing over the viaducts. (*See Appendix 31, page 138.*)

The arrangements for testing the viaducts were as follows:—

Deflection levers were attached to the centre of the downside rail-bearing and outside girders in viaduct No. 1, and on the upside in viaduct No. 2.

Five consecutive spans were tested in each case, and in one bay of each viaduct the four girders were tested.

The engines used were Nos. 257 and 259 of the "Express" class, weighing each 63 tons 16 cwt. 3 qrs., and producing a maximum load on each span, equivalent to a distributed weight of 42 tons. The deflections produced by the loads as arranged in some of the spans, are shown on diagrams, plates Nos. 40 and 41. The maximum deflection observed was .59 in., with the full speed test. The side rocking was also tested with sliding rods on spans .49 and .50, viaduct No. 4, with the engines running at full speed, and found to be $\frac{3}{8}$ of an inch.

The longitudinal motion was likewise tested to ascertain the actual motion of the viaduct in the direction of its length, and it was found to be $\frac{1}{16}$ of an inch.

The comparison of the deflections obtained with full speed tests at the Wagga Wagga viaducts with those at the Tamworth Bridge approaches, which are of the same spans, and similar in construction, gave the following results:—

| | |
|--|---------|
| | Inches. |
| Maximum deflection at Wagga Wagga viaducts with two engines, weighing each 63 tons 16 cwt. 3 qrs. | .59 |
| Maximum deflection at Tamworth Bridge approaches, with two engines weighing each 64 tons 6 cwt. 3 qrs., and one weighing 63 tons 13 cwt. 3 qrs. | .576 |

1. The opinions of the Engineer-in-Chief and the Engineer for Existing Lines, and their respective officers, being so much at variance upon the rigidity of the Wagga Wagga viaducts, and upon the safety of running trains over them at a greater speed than 16 miles an hour, the Commission resolved to make experiments on a large scale, upon the strength and elasticity of compound beams, constructed of colonial timber, and similar in design to those at Wagga Wagga and other viaducts on the Government Railways. The particulars and results of these experiments will form the subject of a special report hereinafter.

2. The Engineer-in-Chief has given satisfactory reasons for his adoption of compound beams 29 ft. 6 in. long, and the experiments referred to have proved that the actual deflection of such beams with corbels 10 ft. long, is less than with corbels 8 ft. or 6 ft. long under the same load.

The testing of the viaduct also showed that a considerable portion of the load was transmitted to the side beams by the transoms and deck planking.

3. The Commission could not discover any injury to the original fitting of the bridge caused by the reported oscillation, nor that the running of a train from a curve produced more oscillation than running from the straight.

Close observation did not show that the sills of the piers moved in the concrete blocks, nor that the piles moved in the sills.

Very careful attention was given by the Commission to the plunging motion mentioned by the officers of the Existing Lines Department in their evidence, and in the papers before the Commission. There was nothing more abnormal in this motion than is usually accumulated in a large number of small uniform spans of timber with a varying load passing over them. Observations were made with delicate levels inside a passenger carriage, from the overhanging platform of a bogie car, and from the engine tender and foot plates, and when finally the Commissioners rode on the engines when running at a speed exceeding 30 miles per hour, they could hardly detect any difference when passing over the viaducts or on the embankments.

4. The timber of the viaducts has been well framed and fitted together, and with the exception of the defects caused by shrinkage or decay, the workmanship generally is good.

The viaducts are kept in good condition. Provision has been made for preserving the timber from insects and decay, the bolts are kept well screwed up, and measures are taken for the protection of the timber generally from causes attributable to atmospheric influences. The cost of maintenance of the viaducts, as reported by the Engineer for Existing Lines, from September, 1880 to 26th July, 1883, was £1,546 10s. 9d. Since the latter date the cost of maintenance has been considerably reduced and is not now excessive.

1. The inspection and testing of the viaducts having shown that they are sufficiently stiff and strong to carry the heaviest traffic that passes over them, the Commission cannot see any reason why the ordinary speed of trains should be reduced on the Wagga Wagga viaduct more than upon any of the other similar viaducts, provided the structure is well kept and maintained.

2. The faulty girders should be replaced by well-seasoned ironbark beams, and the faulty piles which are reduced in sectional area by decay, pipes, or other defects to a greater extent than three-fourths their original size, should be replaced by new piles of well-selected and seasoned timber.

3. Considering the large number of timber bridges and viaducts on the different lines of the Colony, the Commission recommend, to ensure the thorough maintenance and repairs of these structures, that a sufficient stock of selected ironbark girders and piles be kept in stock in the Government yards, and protected from atmospheric influences.

Recommendations.

866— Experiments made at the Government Yard, Clyde, for testing the strength of Timber girders—compound beam, 29 ft. 6 in.

No. 15.—CLYDE EXPERIMENTS.

EXPERIMENTS made at the Government Railway Siding at Clyde, near Granville, for testing the strength and elasticity of Compound Timber Girders, such as those used in the Wagga Wagga and other Viaducts.

The details of the construction of the Wagga Wagga viaduct are shown on drawing, plate No. 39. Plate 39.

The details of the experimental girder, both for 29 ft. 6 in. and 26 ft. spans, are also shown with Plate 43. the tables of deflections and loads producing the deflections, on drawing-plate No. 43.

The two appended photographs show the general arrangement of the apparatus. An iron cage was suspended from the centre of the experimental girder and was loaded with rails; the girder was supported at each end by trestles, and was extended for a distance of 10 ft. beyond each trestle with a length of similar girder representing a portion of adjoining spans, from which a bundle of rails was suspended by chains in the following manner:—In the 29 ft. 6 in. girders a weight of 1 ton 10 cwt. was suspended at a distance of 8 ft. 7 in. from centre of trestles; in the 26 ft. girders a weight of 1 ton 6½ cwt. was suspended at a distance of 7 ft. 8½ in. from centre of trestles.

The cage with its load of rails, when not supported by the experimental girder, rested upon four screw-jacks, arranged one under each corner, in such a manner that the weight could be lifted entirely off the girder and allowed to come gradually upon it by simply working the screw-jacks either upwards or downwards.

The apparatus used for measuring the deflections was similar to that employed for testing the deflections of the Iron Bridges. This apparatus was attached to a beam parallel to the experimental girder, which was securely fixed to the trestles so as not to interfere with the motion of the cage. A deflection apparatus was also arranged in this manner on each side of the experimental girder, and the mean of the two deflections was noted. See diagram in Special Report No. 2, on Testing of Bridges, pages 80—81.

The following experiments were made, viz. :—

COMPOUND BEAM 29FT. 6IN. CENTRES.

1. The experimental compound beam was loaded with rails, until the total weight, including the weight of the cage, was 2·62 tons.

This represented the portion of the dead weight carried by one rail-bearing compound beam in the actual viaduct.

The weights suspended by the chains in the manner already described represented the effect of the dead weight of adjacent spans.

This was shown by the equal deflections at the extremities of the corbels which were observed by means of an ordinary engineer's level.

With this arrangement of loading, the conditions of a rail-bearing girder in a viaduct were fairly represented.

2. The two 12" x 12" beams were bolted together with blocks representing transoms separating them 12 in. apart, and rails were added to those already in the cage, making a total load of 8·67 tons, and the average deflection from experiments 3 to 5, namely '84 in., was noted.

3. The 12 in. blocks were removed and 9 in. blocks inserted, and the deflection with 8·67 tons again noted. The average of experiments 6 to 9 and 17 to 19 gave a deflection of '713 inches, and consequently, 1·44 tons would have to be added in order to increase the deflection to '84 in.

4. The 9 in. blocks were removed and 6 in. blocks inserted, and it was found that the stiffness of the girders with the 5 in. blocks was slightly less than with the 9 in. blocks.

5. Experiments No. 32 to No. 57 were made to ascertain the effect of shortening the corbels from 10 ft. to 8 ft., and from 8 ft. to 6 ft.

The original load of 8·67 tons was again applied, and four additional deflection levers were fixed, one under the extremity of each corbel.

The deflections at the centre of the compound beam and at the extremities of corbels are Plate 43. represented in the table.

These deflections prove that as the corbels were shortened the central deflection of the compound beam was increased, while the deflections of the corbels were diminished.

COMPOUND BEAM 26FT. CENTRES.

6. The trestles were moved to 26 ft. centres, and a 26 ft. compound beam erected similar to those in use in viaducts of this span, but projecting 10 ft. beyond the centre of trestles, and having rails suspended by means of chains in the manner before described.

The conditions of a rail-bearing girder in the actual viaduct were thus fairly represented.

In order to compare the relative stiffness of the two spans, experiments No. 78 to No. 93 were made, commencing as before with a weight of 8·67 tons, and experiments No. 78 to No. 80 gives the ratio as 1: 1·2.

7. Experiments No. 94 to No. 102 were made after unscrewing the nuts and loosening the bolts, and experiments No. 90 to No. 96 show an increase in deflection in the ratio of 1: 1·24, while experiments No. 100 to No. 102 show a still further increase in the ratio of 1: 1·74.

8. Experiments No. 103 to No. 105 were made after removing the transoms and bolting the two beams tightly together, which show that the stiffness was increased in the ratio of 1: 1·15.

9. Experiments No. 115 to No. 117 were made after unscrewing the nuts and loosening the bolts, and they show an increase in deflection in the ratio of 1: 1·4.

Appendix 11,
page 122.

COMPARATIVE Stiffness of Experimental Compound Beam, 29 ft. 6 in. Span, in the Wagga Wagga and Tamworth Viaducts.

Plate 43.

From the table shown on plate No. 43, it is seen that 8.67 tons in the centre of the experimental beam produced a deflection of .716 in. If this weight had been uniformly distributed over the compound beam, the deflection would have been $= \frac{1}{3} \times .716 = .447$ in.

From an inspection of the table it will be seen that 1 ton distributed is equivalent to a deflection in the centre of .042 in.; so that 10.67 tons uniformly distributed would produce .531 in. deflection, or about the average deflection observed in the rail-bearing girders of the Wagga Wagga and the Tamworth viaducts, with the engines at full speed. The average deflection of the outside girders, as determined from all the full-speed tests, is .7 times that of the rail-bearing girders, or $= .7 \times .53 = .37$.

In the experiments at Wagga Wagga Viaduct, two Dubs' & Co. Express Passenger Engines were used, and the maximum load produced by these engines on one span of viaduct is equivalent to a uniformly distributed load of 42 tons. Hence $\frac{42}{3.4} = 12.4$ tons on each rail-bearing compound girder.

Plates 41 and 45.

The greatest deflection observed with these engines at full speed was .59 in.
The greatest deflection observed at the Tamworth Viaduct was .576 in.

CALCULATION OF STRENGTH OF ONE SPAN OF THE WAGGA WAGGA VIADUCT.

Plate 44.

The breaking weight of top beam, 28 ft. 6 in. clear span, was found experimentally to be 19.5 tons in the centre, and the uniformly distributed weight would therefore be 39 tons.

The breaking weight of the bottom beam, which is 19 ft. 6 in. clear span, would be 57 tons uniformly distributed.

Hence the breaking weight of the two beams would be $57 + 39 = 96$ tons uniformly distributed.

From experiments with slack bolts, it has been shown that the decrease in stiffness, due to unscrewing the nuts and slackening the bolts, varied from 1:1.24 to 1:1.74, and hence it should be inferred that the relative strength of the compound beam to the sum of the strengths of the two beams would be approximately as 1.5:1, and the breaking weight of the compound beam $96 \times 1\frac{1}{2} = 144$ tons uniformly distributed.

Plates Nos. 40,
41, and 45.

From testing experiments made at Wagga Wagga and Tamworth viaducts (see diagrams, plates Nos. 40, 41, and 45, which have been already referred to), it will be seen that the probable breaking weight of one span of the viaduct would be $3.4 \times 144 = 489$ tons. The maximum live load is equivalent to a distributed load of 42 tons, and the dead load to 20 tons, so that the factor of safety is $\frac{489}{72} = 7.9$.

CALCULATIONS OF STRENGTH OF VICTORIAN TIMBER VIADUCTS.

15 ft. Spans.

The size and arrangement of the beams in these spans are identical with those adapted in the 30 ft. strutted spans. There are, however, no struts, and the piles used for the piers are of smaller size. Up to 10 ft. in height, only two piles are commonly used for each pier. In some cases the cast-iron caps on the top of the piles have been omitted, and a pair of walings used instead. This form of structure has been very extensively adopted. It requires fewer piles than the Wagga Wagga structure, and the amount of timber in the superstructure, not including the deck or gravel beam, is 46 cubic feet per span, if the beams are 16 in. deep, and 54 cubic feet per span if the beams are 18 in. deep.

The weight of structure, including timber work, ballast, sleepers, and rails $= \frac{1}{2}$ ton per foot run. The maximum bending moment $= \frac{WL^2}{8} = 14$ -foot tons, due to the dead load only. For the live load, suppose a pair of engine-driving wheels, carrying 14-ton load exactly at mid span, the leading and trailing wheels would rest on the piers and would not therefore affect the beams.

Bending moment due to live load, $= \frac{wl}{4} = 53$ -foot tons. Total bending moment $= 14 + 53 = 67$ -foot tons. The moment of resistance $= \frac{1}{6} f b d^2$, where $f = 7,000$ pounds per square inch for red gum timber, and $b =$ sum of breadths of four beams, equals 2 ft. 4 in., and the depth $d = 18$ in.

Moment of resistance $= \frac{7,000 \times 28 \times 28 \times 18 \times 18}{6} = 10,584,000$ in. pounds, $= 393.75$ foot tons.

The gravel kerbs, 12 in. deep and 4 in. thick, which are well spiked down, will help to bear the load and will probably increase the moment of resistance to at least 440 ft. tons.

The factor of safety will therefore be $\frac{440}{67} = 6\frac{1}{2}$.

30-ft. spans.

Plate 42.

The 30-ft. spans (see drawing, plate No. 42) are divided by struts into a central span, 14-ft. centres, and two side spans of 8-ft. centres. These girders being continuous over the supports formed by the struts, the beam would be more favourably circumstanced than in the plain 15-ft. spans, and its factor of safety would be increased by a considerable, but not easily calculated amount above that already calculated. Allowing each strut to carry one-fourth of the weight of a 30-ft. span, with a locomotive weighing 40 tons upon it, the longitudinal compression would be $= \frac{15 + 40}{4} \times \sec. 45^\circ = 20$ tons nearly.

The timber being 9 in. square, or 81 square inches sectional area, the compression is 550 lbs. per square inch. As the resistance of this timber to crushing is at least 7,000 lbs. per square inch, it will be seen that there is a factor of safety against crushing of more than 12. If a similar structure were to be built of New South Wales ironbark, its strength would be increased 1.8 times, and would therefore be stronger than our present timber viaducts.

COMPARATIVE

COMPARATIVE QUANTITIES OF TIMBER IN SUPERSTRUCTURE OF NEW SOUTH WALES AND VICTORIAN VIADUCTS.

Wagga Wagga Viaduct.

| | |
|---|----------------|
| No. 8.—Beams 29 ft. 6 in. long x 12 in. x 12 in. | = 236 cub. ft. |
| „ Corbels 5 ft. long x 12 in. x 12 in. | = 40 „ |
| Transoms | = 49 „ |
| Total quantity of timber | = 325 „ |

The deck and gravel beam, which is common to each system of construction, is not included in the above.

Victorian 30-ft. strutted spans in Red Gum.

| | |
|------------------------------------|----------------|
| No. 4.—Beams 18 ft. x 7 in. | = 106 cub. ft. |
| Struts | = 22 „ |
| Packing pieces | = 16 „ |
| Total quantity of timber | = 144 „ |

In many of these viaducts the beams are not of red gum, but of other Colonial timber of greater strength against cross breaking. In this latter case the beams are reduced in depth to 16 in., and the quantity of timber in one span to 132 cubic feet.

It must be remembered that a considerable quantity of iron is used in this viaduct in the shape of shoes, caps, and fastenings, which do not appear to be absolutely necessary, and increase the cost.

No. 16.—STRENGTH AND ELASTICITY OF IRONBARK AND RED GUM TIMBER.

THE table of experiments on Colonial timber, made by the Victorian Railway Department in October, 1880, and the tables of experiments on red gum timber (*See Appendix 28, pages 135-136*) from the banks of the river Goulburn, which were completed in March, 1885, were sent to the Commission by Mr. R. Watson, Engineer-in-Chief.

The experiments made at the Sydney Mint by Captain Ward and Mr. Trickett, in 1861, were on timber of much smaller scantling.

The experiment made by Mr. John Whitton, Engineer-in-Chief for Railways, as well as those made by this Commission, were on timber of the scantling used in the New South Wales timber viaducts.

The following calculations have been made in order to compare the moduli of rupture and of elasticity as deduced from some of the experiments, with a view to their application in determining the strength and elasticity of timber beams such as those used in timber viaducts.

Ironbark timber, such as that used in the superstructure of all the Railway Viaducts in New South Wales, and red gum timber from the banks of the River Goulburn, which is used in some of the Victorian Railway Viaducts, are each considered in the following manner:—

- Let l = span or distance between supports.
 b = breadth of beam.
 d = depth of beam.
 w = breaking weight applied in centre of beam.
 f = modulus of rupture.

Since the weight in the following experiments was in all cases applied in the centre, we have:—

$$\text{Bending moment} = \frac{wl}{4}$$

$$\text{Moment of resistance} = \frac{fbd^2}{6}$$

$$\text{Therefore } \frac{wl}{4} = \frac{fbd^2}{6}; \text{ and } f = \frac{6wl}{4bd^2}$$

MODULUS OF RUPTURE.

The experiments made at the Sydney Mint were on specimens of timber 2 in. square, and on supports placed 48 inches apart in the clear, so that the bending moment

$$\frac{wl}{4} = \frac{48w}{4} = 12w$$

while the moment of resistance

$$\frac{1}{6}bd^2f = \frac{4}{3}f$$

$$\text{Hence } 12w = \frac{4}{3}f; f = 9w$$

The breaking load in three cases being 1,526, 1,904, 2,034 lbs., we obtain for the modulus of rupture the following values:—

$$f = 9 \times 1526 = 13,734 \text{ (ironbark from Albury).}$$

$$f = 9 \times 1904 = 17,136 \text{ (white ironbark from Berrima).}$$

$$f = 9 \times 2034 = 18,306 \text{ (red ironbark from Berrima).}$$

The

The experiment made by Mr. John Whitton, Engineer-in-Chief for Railways, was on a beam of ironbark 12 in. x 12 in., on supports 26 ft. apart in the clear, which broke with 23 tons;

$$\text{Hence } \frac{23 \times 2240 \times 26 \times 12}{4} = f \frac{12^3}{6}$$

$$\text{and } f = \frac{23 \times 2240 \times 6 \times 26 \times 12}{4 \times 1728} = 13,953 \text{ lb.}$$

The experiments made by the Commission were on a beam of ironbark of excellent quality, 31 ft. long and $12\frac{1}{4}$ in. square.

BREAKING EXPERIMENT.

Breaking of
29' 6" beam.

The beam was supported upon trestles spaced 28 ft. 6 in. apart in the clear, and 29 ft. 6 in. centre to centre. The weight was applied in the centre of the beam, and consisted of an iron cage loaded with rails, and resting upon four screw-jacks, placed one under each corner. The weight was gradually brought upon the beam by turning the screws of the jacks, so as to lower the cage, and the weight was taken off by turning the screws in the reverse direction. The deflections were measured by the apparatus already described, page 80-81. One multiplying lever was fixed on each side of the beam, and the mean deflection noted. The deflections were also observed with an engineer's level, by reading a graduated staff fixed at the centre of the experimental beam.

Plate No. 44.

The deflections, and the weights producing them, are recorded in diagram, plate No. 44. The general arrangement of the apparatus is seen in photographs annexed. It will be seen by an inspection of the diagram, that commencing with a weight of 3.8 tons, the load was increased by equal increments of .75 ton until the beam broke, which occurred with a weight of 19.5 tons.

The deflections were observed after each increment of load had been applied, and the weight was entirely released before applying further load, and the permanent set (if any) measured.

The modulus of rupture is derived as follows:—

$$\text{Bending moment} = \frac{19.5 \times 2240 \times 28.5 \times 12}{4}$$

$$\text{Moment of resistance} = f \frac{12\frac{1}{4}^3}{6}$$

$$f = \frac{19.5 \times 2240 \times 28.5 \times 12 \times 6}{1838 \times 4} = 12,222 \text{ lbs.}$$

The mean of Mr. Whitton's experiments and those of the Commission give the modulus of rupture, $f = 13,088$ lbs.

This value may be taken for f in large size scantlings. It will be observed, however, that this value is smaller than those obtained from the experiments made at the Sydney Mint, which have been already referred to.

The modulus of rupture derived from the experiments made at Sandhurst, Victoria, on red gum timber, is as follows (See *Table of Experiments, Appendix 28, page 135*):—

It was found that 22,330 lbs. applied in the centre of a beam 11 in. x 7 in., on a span of 14 ft. 8 in. in the clear, produced fracture.

Hence, in a similar manner to that already explained, we obtain modulus of rupture $f = 6,960$ lbs.

In another experiment, 28,997 lbs. applied in the centre of a beam 11 in. x $7\frac{1}{2}$ in., on a span of 14 ft. 8 in. in the clear, was necessary to produce fracture;

Here $f = 8,436$ lbs.

MODULUS OF ELASTICITY.

The moduli of elasticity derived from the following experiments are computed from the deflection formula thus:—

Let V = deflection.

„ W = load producing deflection.

„ E = modulus of elasticity.

„ I = moment of inertia.

„ n = co-efficient (which for a beam supported at both ends and loaded in the centre is $\frac{1}{8}$).

„ C = half span.

$$\text{Hence } V = \frac{nWC^3}{EI}, \text{ therefore } E = \frac{WC^3}{6VI}$$

From the experiments made at the Sydney Mint, on red ironbark and on white ironbark, both from Berrima, also on ironbark from Albury, the average of ten experiments gave a deflection of 1.2 inches, with a weight, applied at centre, of 1,437 lbs. The experiments were made on timber 2 in. square, on a span of 48 inches in the clear.

$$\text{Hence } E = \frac{1437 \times 24^3}{6 \times 1.2 \times \frac{1}{8}} = 2,069,280.$$

The

Experiments made at the Government Yard, Clyde, for testing the strength of Timber girders—breaking 29 ft. 6 in. beam.

The experiments made by the Commission on the $12\frac{1}{4}$ in. x $12\frac{1}{4}$ in. beam of ironbark, before referred to, were on a span of 28 ft. 6 in. in the clear. (See *Diagram No. 44.*)

$$\text{Hence } E = \frac{W \times 171^3}{6 \times 1876.5 V} = \frac{5000211 W}{11259 V}$$

A load of 4.55 tons produced a deflection of 1.57 inches.

$$\text{Hence } E = \frac{4.55 \times 2240 \times 5000211}{1.57 \times 11259} = 2,883,028 \text{ lbs.}$$

A load of 5.3 tons produced a deflection of 2 inches.

$$\text{Hence } E = \frac{5.3 \times 2240 \times 5000211}{2 \times 11259} = 2,636,224 \text{ lbs.}$$

A load of 6.05 tons produced a deflection of 2.29 inches.

$$\text{Hence } E = \frac{6.05 \times 2240 \times 5000211}{2.29 \times 11259} = 2,628,187 \text{ lbs.}$$

The mean of the three experiments gives the value of the modulus of elasticity.

$$E = 2,715,813 \text{ lbs.}$$

It will be observed that this value is greater than that obtained from the experiments made at the Sydney Mint.

The experiments made at Sandhurst, on red gum timber, in March, 1885 (See *Table of Experiments*), Appendix 23, page 135, were on timbers 11 in. x 7 in. and 11 in. x $7\frac{1}{2}$ in., on a span of 14 ft. 8 in. in the clear.

$$\text{Here } E = \frac{W \times 88^3}{V \times 6 \times 776.4} = \frac{681472 W}{4658.4 V}$$

A weight of 7,228 lbs. produced .5 in. deflection on a beam 11 in. x 7 in.

$$\text{Hence } E = \frac{681472 \times 7228}{4658.4 \times .5} = 2,114,756 \text{ lbs.}$$

A weight of 11,178 lbs. produced a deflection of 1 inch on a beam 11 in. x $7\frac{1}{2}$ in.

$$\text{Hence } E = \frac{681472 \times 11178}{4991.25} = 1,526,169 \text{ lbs.}$$

Mean of the two experiments gives

$$E = 1,820,462 \text{ lbs.}$$

THE DUBBO BRIDGE.

This bridge has been referred to in the special reports of the Commission and in Mr. Barnes' evidence (pages 11-13). Although of the same type as the bridges at Aberdeen, Bathurst, Wellington, and Wagga Wagga, improvements have been made in the design of the Dubbo bridge.

TIMBER BRIDGE AT SINGLETON.

In comparing the cost of timber and iron bridges of large spans, the bridge over the Hunter River, at Singleton, on the Great Northern Line, was considered. Mr. Whitton, in his evidence (No. 2207, page 69) states:—"At one time a resolution was passed by the Assembly that no iron should be imported for any bridges whatever, it being the general wish that timber should be used wherever possible; and in the case of the Singleton bridge the House refused to vote the money for it until I had laid the plans on the Table to show that I intended to use timber and not iron. That is the reason why it is a timber bridge now. In every instance it has been the wish of every Minister and every Government that timber should be used when practicable, so that all work should, if possible, be done in the Colony."

Mr. Bennett, Commissioner and Engineer for Roads, in a letter to the Commission, also states, Appendix No. 13, page 124, "that the life of timber bridges depends upon the kind of timber grown in different localities;" and in reference to iron bridges, "that, except owing to accidental injuries, no repairs have been necessary to bridges of that material" erected in his Department.

Considering the cost of maintenance and the short life of timber bridges, the Commission do not think it advisable to construct timber bridges of large spans; they also recommend that where large viaducts are necessary, the difference of cost of timber and iron structure should be ascertained, as well as the cost of maintenance, to determine the material to be used.

RAILWAY BRIDGES INQUIRY COMMISSION.

APPENDICES.

CALCULATIONS.
STRENGTH OF BRIDGES.

At the request of the Commission the following calculations were prepared by W. H. Warren, Professor of Engineering, University of Sydney, and checked by W. C. Kernot, Professor of Engineering, University of Melbourne:—

No. 1.

WOLLONDILLY BRIDGES.

MAIN GIRDERS, 140 FEET LONG.

Plate 7.

First and Second crossing of Wollondilly River.

Clear span, 130' 0".

Effective depth, 10' 0".

Dead load, 1.2 tons per foot run on bridge.

Live " 1.4 " " "

 w_1 = dead load on each main girder = .6 tons per foot. w_2 = live " " " = .7 " " c = half span. x = distance from centre of girder.

$$\text{Bending moment} = \frac{w_1 + w_2}{2} \{ 2c - x^2 \}$$

| x | B.M. = .65 (4225 - x^2). | Stress. | Area required. | | Area in Bridge. | |
|-----|-----------------------------|---------|----------------|---------|-----------------|---|
| | | | Top. | Bottom. | Top Total Area. | Bottom Net Area, deducting rivet holes. |
| 0 | 2746.25 | 274.60 | 68.65 | 54.92 | 64.52 | 55.70 |
| 10 | 2681.25 | 268.10 | 67.03 | 53.62 | 60.74 | 55.70 |
| 20 | 2486.25 | 248.60 | 62.15 | 49.72 | 60.74 | 55.70 |
| 30 | 2161.25 | 216.10 | 54.03 | 43.22 | 58.86 | 51.07 |
| 40 | 1706.25 | 170.60 | 42.65 | 34.12 | 47.61 | 40.40 |
| 50 | 1121.25 | 28.00 | 28.03 | 22.42 | 36.37 | 30.95 |
| 60 | 406.25 | 10.10 | 10.15 | 8.12 | 29.00 | 19.80 |
| 65 | 0.00 | 0.00 | 0.00 | 0.00 | 29.00 | 19.80 |

$$\text{The maximum stress in compression} = \frac{274.62}{60.74} = 4.52 \text{ tons per square inch.}$$

$$\text{The maximum stress in tension.....} = \frac{274.62}{55.70} = 4.93 \text{ tons "}$$

The girders will carry a live load of 1.1 tons per foot run with a compression stress of 4 tons per square inch.

SHEARING STRESSES.

130' 0" spans.

$$F = w_1 x + \frac{w_2}{4c} (c + x)^2.$$

$$= .6x + .00269 (65 + x)^2.$$

$$\text{When } x = 0, F = 0 + 10.56 = 10.96 \text{ tons}$$

$$\text{" } 9, \text{ " } 5.4 + 14.68 = 20.08 \text{ "}$$

$$\text{" } 18, \text{ " } 10.8 + 18.53 = 29.33 \text{ "}$$

$$\text{" } 24, \text{ " } 14.4 + 21.31 = 35.71 \text{ "}$$

$$\text{" } 30, \text{ " } 18.0 + 24.28 = 42.28 \text{ "}$$

$$\text{" } 42, \text{ " } 25.2 + 30.93 = 56.13 \text{ "}$$

$$\text{" } 57, \text{ " } 34.2 + 40.04 = 74.24 \text{ "}$$

$$\text{" } 60, \text{ " } 36.0 + 42.03 = 78.03 \text{ "}$$

$$\text{" } 65, \text{ " } 39. + 45.46 = 84.46 \text{ "}$$

CALCULATIONS—continued.

MAIN GIRDEES 65 FT. 7 IN. LONG.

Barber's Creek, First and Second Crossing, Boxer's Creek, and Mulwarree Creek.

Clear span, 60 feet.

Effective depth, 4·7 feet.

Dead load, ·76 tons per foot run.

Live load, 1·50 „ „

w_1 = dead load on each main girder = ·38 tons per foot.

w_2 = live load „ „ = ·75 „ „

c = $\frac{1}{2}$ span.

x = distance from centre of girder.

$$\text{Bending moment} = \frac{w_1 + w_2}{2} \{c^2 - x^2\}$$

| x. | B.M. = ·565 (300—x ²). | Stress in tons. | Areas required. | | Areas in Bridge. | |
|----|------------------------------------|-----------------|-----------------|---------|------------------|---------|
| | | | Top. | Bottom. | Top. | Bottom. |
| 0 | 508·50 | 108·20 | 27·05 | 21·64 | 23·37 | 20·04 |
| 3 | 503·40 | 107·10 | 26·77 | 21·40 | 23·37 | 20·04 |
| 6 | 488·16 | 103·90 | 25·90 | 20·80 | 23·37 | 20·04 |
| 9 | 462·73 | 96·80 | 24·10 | 19·46 | 21·50 | 17·97 |
| 12 | 427·14 | 90·90 | 22·70 | 18·18 | 21·50 | 17·97 |
| 15 | 381·37 | 81·14 | 20·28 | 16·20 | 17·75 | 17·97 |
| 18 | 325·44 | 69·20 | 17·30 | 13·80 | 17·75 | 13·75 |
| 21 | 259·33 | 55·10 | 13·70 | 11·00 | 14·00 | 13·75 |
| 24 | 183·06 | 39·00 | 9·70 | 7·80 | 14·00 | 13·75 |
| 30 | 0·00 | 0·00 | 0·00 | 0·00 | 14·00 | 13·75 |

The maximum stress in compression = $\frac{108·70}{23·37} = 4·63$ tons per square inch.

„ tension = $\frac{108·20}{20·04} = 5·40$ „ „

The girders will carry a live load of 1·20 tons per foot run, without exceeding a stress of 4 tons per sq. inch in compression, or 5 in tension.

The joints in flanges, 7' 6" from centre of girder are spliced 6" apart; the rivet area is ample, but the plate is pierced too near the end; this is specially seen in the bottom flanges on sketch a a.

SHEARING STRESSES.

60' 0" spans.

$$F = ·38x + ·00625(30 + x)^2.$$

When $x = 0$, $F = 0 + 5·62 = 5·62$ tons

„ 6, „ 2·28 + 8·10 = 10·38 „

„ 9, „ 3·42 + 9·51 = 12·93 „

„ 12, „ 4·56 + 11·02 = 15·58 „

„ 18, „ 6·84 + 14·40 = 21·24 „

„ 24, „ 9·12 + 18·22 = 27·34 „

„ 30, „ 11·40 + 22·50 = 33·90 „

CALCULATIONS—continued.

Considering the resistance of the web-plate against buckling between the stiffeners, and taking a strip of metal 1" wide, inclined at 45°, as a column of length 1·4 (36—6) = 42 inches, this column will not buckle as an ordinary column fixed at ends of the same length, as the tension (which acts at right angles to the strip) exceeds the compression (since the load is on the bottom flange), and will therefore counteract more or less the tendency to buckle. Ignoring the effect of this tension and calculating by Rankine's formula—

$$u = \frac{f}{1 + \frac{1}{a} \left(\frac{l}{h} \right)^2} = \frac{16}{1 + \frac{1}{3000} \left(\frac{42}{\frac{1}{2}} \right)^2} = 4.8 \text{ tons per square inch.}$$

At end bay the shearing stress per foot horizontally and vertically = $\frac{33.9}{4.7} = 7.21$ tons.

There is in the bridge at end bay $\frac{7.21}{6} = 1.2$ tons per square inch; hence the factor of safety is 4 against buckling.

At 9' 0" from centre, with $\frac{5}{16}$ " web-plates, the stress is $\frac{12.93}{4.7} = 2.75$ tons per foot horizontally and vertically hence—

$$u = \frac{16}{1 + \frac{1}{3000} \left(\frac{42}{\frac{5}{16}} \right)^2} = 2.28 \text{ tons per square inch.}$$

There is in bridge $\frac{2.75}{3.75} = .73$ tons; hence the factor of safety against buckling is $\frac{2.28}{.73} = 3.12$.

In the 130' 0" span girders there can be no danger of buckling at end bays; at 57' from centre the shearing stress is 7.6 tons per foot horizontally and vertically on two webs $\frac{5}{16}$ " thick, or 3.8 tons on each web; hence—

$$u = \frac{16}{1 + \frac{1}{3000} \left(\frac{42}{\frac{5}{16}} \right)^2} = 2.28 \text{ tons, while there is in bridge } 3.75 \text{ square inches,}$$

or a stress of $\frac{3.8}{3.75} = 1$ ton; hence there is a factor of safety of 2.28 against buckling.

The bearing area of the web-plate is sufficient.

No. 2.

SOLITARY CREEK BRIDGES.

MAIN GIRDERS, 65 FT. 7 IN. LONG.

Plate 8A.

Clear span 60 feet.

Effective depth, 4.7 feet.

Dead load, .76 tons per foot run.

Live load, 1.50 ,, ,,

w_1 = dead load on each main girder = .38 tons per foot.

w_2 = live load ,, ,, = .75 ,, ,,

c = $\frac{1}{2}$ span.

x = distance from centre of girder.

Bending moment = $\frac{w_1 + w_2}{2} \{c^2 - x^2\}$

| x | B.M. = .565 (900— x^2). | Stress. | Areas required. | | Areas in Bridge. | |
|-----|----------------------------|---------|-----------------|---------|------------------|---------|
| | | | Top. | Bottom. | Top. | Bottom. |
| 0 | 508.50 | 108.20 | 27.05 | 21.64 | 25.03 | 17.47 |
| 3 | 503.40 | 107.10 | 26.77 | 21.40 | 25.03 | 17.47 |
| 6 | 488.16 | 103.90 | 25.90 | 20.80 | 24.03 | 15.40 |
| 9 | 462.73 | 96.30 | 24.10 | 19.46 | 24.03 | 15.40 |
| 12 | 427.14 | 90.90 | 22.70 | 18.18 | 24.03 | 15.40 |
| 15 | 381.37 | 81.14 | 20.28 | 16.20 | 23.13 | 13.35 |
| 18 | 325.44 | 69.20 | 17.30 | 13.80 | 23.13 | 13.35 |
| 21 | 259.33 | 55.10 | 13.70 | 11.00 | 23.13 | 13.35 |
| 24 | 183.06 | 39.00 | 9.70 | 7.80 | 23.13 | 13.35 |
| 30 | 0.00 | 0.00 | 0.00 | 0.00 | 23.13 | 13.35 |

The maximum stress in compression = $\frac{108.2}{25.03} = 4.32$ tons per square inch.

The maximum stress in tension = $\frac{103.9}{15.40} = 6.75$ tons do

Taking the working stress at 5 tons in tension and 4 tons in compression, the bridge will carry a live load of .91 tons per foot run.

The stresses in web are the same as in the Wollondilly Bridges, of 60 feet span, and the same remarks apply to these bridges.

NOTE.—The flange joints in these bridges are superior to the Wollondilly Bridges, as they have 8" laps.

CALCULATIONS—continued.

No. 3.

Plate 8a.

PLATE WEB GIRDERS AT PEEL-STREET, TAMWORTH, AND AT WELLINGTON BRIDGE.

Clear span, 61' 0".
 Effective depth, 6' 0".
 Dead load, 32 tons per foot run on each girder.
 Live load, 75
 Bending moment, 535 (930.25 — x^2).

| $x =$ | B.M. = 535 (930.25 — x^2) | Stress. | Areas required. | | Area in Bridge. | |
|-------|------------------------------|---------|-----------------|---------|-----------------|---------|
| | | | Top. | Bottom. | Top. | Bottom. |
| 0 | 497.68 | 82.94 | 20.73 | 16.58 | 23.53 | 18.79 |
| 3 | 492.87 | 82.14 | 20.53 | 16.42 | 23.53 | 18.79 |
| 6 | 478.42 | 79.73 | 19.93 | 15.94 | 23.53 | 18.79 |
| 9 | 454.35 | 75.72 | 18.93 | 15.14 | 23.53 | 17.64 |
| 12 | 420.64 | 70.10 | 17.52 | 14.02 | 23.53 | 17.64 |
| 15 | 377.31 | 62.88 | 15.72 | 12.57 | 23.53 | 17.64 |
| 18 | 324.34 | 54.05 | 13.51 | 10.81 | 23.53 | 17.64 |
| 21 | 261.77 | 43.62 | 10.90 | 8.72 | 23.53 | 17.64 |
| 24 | 188.52 | 31.42 | 7.85 | 6.28 | 15.10 | 14.22 |
| 31 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 |

The maximum stress in compression = $\frac{82.94}{23.53} = 3.5$ tons per square inch.

„ tension = $\frac{82.94}{18.79} = 4.42$ „ „

These girders will carry a live load of 1.78 per foot run without producing stresses exceeding 5 tons in tension and 4 tons in compression. The arrangement of packing strip in bottom flange, is much better than in the case of Wollondilly and Solitary Creek bridges.

The flange covers have sufficient rivet and plate areas.

The web is of uniform thickness throughout, namely, $\frac{3}{8}$ ". Hence it is necessary to examine the strength of the end panels only.

Maximum shearing stress found from formulæ:—

$F = 32x + \frac{75}{122}(30.5 + x)^2 = 32.63$ tons = 5.43 per foot horizontally or vertically; hence number of rivets

$\frac{3}{8}$ " diameter per foot = $\frac{5.43}{6 \times 6} =$ less than 2; hence 4" pitch is ample.

Maximum unit stress in web against buckling found from formulæ:—

$$= \frac{f}{1 + \alpha \frac{l^2}{h^2}} = \frac{16}{1 + \frac{1}{3000} \left(\frac{42}{\frac{3}{8}} \right)^2} = \frac{48000}{15544} = 3.08 \text{ tons nearly.}$$

There is in bridge = $\frac{5.43}{4.5} = 1.21$ tons; hence the factor of safety against buckling is 2.7.

No. 4.

PEEL RIVER AND MACDONALD RIVER BRIDGES.

MAIN GIRDERS.

Effective span, 156' 0".

„ depth, 12' 0".

Dead load, 1.2 tons per foot run on bridges.

Live load, 1.4 „ „ „

$w_1 =$ dead load on each main girder = 6 tons per foot.

$w_2 =$ live load „ „ = 7 „ „

| $x =$ | M = 65(6084 — x^2). | Stress. | Area Required. | |

| 45 | 2638.35 | 219.86 | 54.96 | 43.97 |
| 50 | 2329.60 | 194.13 | 48.53 | 38.82 |
| 55 | 1988.35 | 165.69 | 41.42 | 33.14 |
| 60 | 1614.60 | 134.53 | 33.64 | 26.91 |
| 65 | 1208.35 | 100.69 | 25.17 | 20.14 |
| 70 | 769.60 | 64.13 | 16.03 | 12.82 |
| 75 | 338.35 | 28.19 | 7.05 | 5.62 |
| 78 | 0.00 | 0.00 | 0.00 | 0.00 |

The comparison of the above with the diagram of areas gives—

Maximum stress in compression 3.72 tons per square inch.

Maximum stress in tension 4.37 tons per square inch.

These bridges would therefore be safe for a live load of 1.6 tons per foot run.

Plates 33 and 34.

CALCULATIONS—continued.

The stresses in lattice bars in compression vary from 2 tons per square inch at abutments decreasing to .5 ton per square inch at mid span, while the stresses in tension vary from 3.4 tons per square inch at abutments, decreasing to about 1 ton per square inch at mid span.

In view of Wöhler's experiments this decrease in the unit stress towards the centre of bridge is judicious, but the unit stress might have been increased with a corresponding saving of material. The web, however, is consistent with the booms.

WIND PRESSURE.

The arrangement of wind bracing would have been better if the bars had not been uniform in size throughout; the attachment of the end diagonals is made thus—

It will not be necessary to comment on this attachment as the error has been corrected in later bridges (for example, the George's River bridge).

The resistance offered by the attachment of cross girders, by the deck and by the overhead bracing arches, will add considerably to the resistance against wind pressure.

No. 5.

BATHURST, WELLINGTON, AND ABERDEEN BRIDGES.

MAIN GIRDERS.

- Three spans each, 159' 0" centres.
- Effective depth, 12' 0" between centres of gravity of effective booms.
- Dead load, = 1.2 tons per foot run on bridges.
- Live load, = 1.4 " " "
- Dead load, = .6 tons per lineal foot on each main girder.
- Live load, = .7 " " " "

Plates 15, 16, and 17.

There are six cases to consider:—

Plates 18, 19, 20.

CASE I.—Three spans loaded with 1.3 tons per foot run.

To find bending moments over piers the theorem of three moments is assumed:—

$$8 m_n (l_n + l_{n+1}) + 4 m_{n-1} l_{n+1} + 4 m_{n+1} l_n = w_n l_n^3 + w_{n+1} l_{n+1}^3$$

here $l_1 = l_2 = l_3$.

let $n = 1$ then $8 m_1 (2 l) + 4 m_0 (l) + 4 m_2 (l) = 2 w l^3$.

$$\therefore 8 m_1 + 2 m_0 + 2 m_2 = w l^2 \dots\dots\dots(1)$$

let $n = 2$ then $8 m_2 (2 l) + 4 m_1 (l) + 4 m_3 (l) = 2 w l^3$

$$\therefore 8 m_2 + 2 m_1 + 2 m_3 = w l^2 \dots\dots\dots(2)$$

and $m_0 = m_3 = 0 \dots\dots\dots(3 \text{ and } 4)$

from (1) and (2) $\left\{ \begin{matrix} 8 m_1 + 2 m_2 = w l^2 \\ 8 m_2 + 2 m_1 = w l^2 \end{matrix} \right\}$ hence $m_1 = m_2$ and $10 m_1 = w l^2 \therefore m_1 = m_2 = \frac{w l^2}{10}$

substituting values for w and l then $m_1 = m_2 = \frac{1.3 \times 159^2}{10} = \frac{1.3 \times 25281}{10} = 3286.5$ foot tons.

Hence the equation to the 1st and 3rd spans is $-y = .65 (159 x - x^2) - 20.67 x$, where $x =$ distance from 1st or 4th pier; therefore the point of contra flexure (making $y = 0$) is 127.2 feet from 1st or 4th pier.

The equation to middle span is $-y = -3286.5 + .65 (159 x - x^2)$, from which equation $x = 115$ and 44 (making $y = 0$); hence points of contra flexure occur 44 feet from pier.

Shearing stresses.

First and third spans.—The shearing stresses over No. 1 or No. 4 pier = $\frac{127.2 \times 1.3}{2} = 82.68$ tons; over No. 3 and No. 2 pier = $95.4 \times 1.3 = 124.02$ tons.

Middle span.

The shearing stresses over No. 2 and No. 3 piers = $\frac{159 \times 1.3}{2} = 103.35$ tons.

The bending moments and shearing stresses are set out on diagram of Case I.

CASE II.—First and second spans loaded with 1.3 tons per foot run; third span loaded with 0.6 tons per foot run.

Here $\left. \begin{matrix} 8 m_1 + 2 m_2 = w_1 l^2 \\ 16 m_2 + 4 m_1 = w_2 l^2 + w_3 l^2 \end{matrix} \right\}$ where $w^1 = w^2$

$\therefore m_1 = (7w - w_3) \frac{l^2}{60} = (9.1 + .6) \frac{25281}{60} = 3581.3$ foot tons.

$m_2 = 2106.7$ "

Equation to 1st span is $-y = .65 (159 x - x^2) - 22.52 x$; therefore point of contra flexure ($y = 0$) is $x = 124.35$.

Equation to 2nd span is $-y = 0.65 (159 x - x^2) - 2106.7 - 9.27 x$; therefore the points of contra flexure ($y = 0$) are ($x = 130.65$ and 42.65) 42.65 feet from 2nd pier and 28.35 feet from 3rd pier.

Equation to 3rd span is $-y = 0.3 (159 x - x^2) - 13.26$; therefore point of contra flexure ($y = 0$) is 44.2 feet from No. 3 pier.

CALCULATIONS—continued.

Shearing stresses.

$$\begin{aligned} \text{1st span—over No. 1 pier} &= \frac{124.35 \times 1.3}{2} = 80.82 \text{ tons.} \\ &\text{over No. 2 pier} = \frac{124.35 \times 1.3}{2} + 34.65 \times 1.3 = 125.87 \text{ tons.} \\ \text{2nd span—over No. 2 pier} &= 86.65 \times 1.3 = 112.64 \text{ tons.} \\ &\text{over No. 3 pier} = 72.35 \times 1.3 = 94.05 \text{ tons.} \\ \text{3rd span—over No. 3 pier} &= 34.4 + 44.2 \times 0.6 = 60.96 \text{ tons.} \\ &\text{over No. 4 pier} = \frac{114.8 \times .6}{2} = 34.4 \text{ tons.} \end{aligned}$$

The bending moments and shearing stresses are shown on diagram of Case II.

CASE III.—First and third spans loaded with .6 tons per foot run. Middle span loaded with 1.3 tons per foot run:—

$$\begin{aligned} \text{Here } 16 m_1 + 4 m_2 &= w_1 l^2 + w_2 l^2 \\ 16 m_2 + 4 m_1 &= w_2 l^2 + w_3 l^2 \end{aligned} \quad \therefore m_1 = m_2 = 2401.7.$$

Equation to 1st and 3rd spans is $-y = .3(159x - x^2) - 15.1x$; therefore (when $y = 0$) point of contra flexure occurs at $x = 108.66$.

Equation to middle span is $-y = .65(159x - x^2) - 2401.7$; therefore (when $y = 0$) $x = 130.73$ and 28.27 and the points of contra flexure occur 28.27 feet from piers.

Shearing stresses.

$$\begin{aligned} \text{1st and 3rd spans—over No. 1 and No. 4 pier} &= \frac{108.66 \times .6}{2} = 32.6 \text{ tons} \\ &\text{over No. 2 and No. 3 pier} = 32.6 + 50.34 \times .6 = 62.8 \text{ tons.} \\ \text{Middle span—over No. 2 and No. 3 piers} &= \frac{159 \times 1.3}{2} = 103.35 \text{ tons.} \end{aligned}$$

See diagram of Case III.

CASE IV.—First span loaded with 1.3 tons per foot run. Second and third spans loaded with .6 tons per foot run:—

$$\begin{aligned} \text{Here } 16 m_1 + 4 m_2 &= w_1 l^2 + w_2 l^2 \\ 8 m_2 + 2 m_1 &= w_2 l^2 \end{aligned} \quad \left. \vphantom{\begin{aligned} 16 m_1 + 4 m_2 \\ 8 m_2 + 2 m_1 \end{aligned}} \right\} \text{from which we find } m_1 = \frac{l^2}{30} (2w_1 + w_2). \\ m_1 &= 2696.64 \text{ foot tons.} \\ m_2 &= 1222 \text{ ,, ,,} \end{aligned}$$

Equation to first span is $-y = .65(159x - x^2) - 16.96x$; therefore when $y = 0$ $x = 132.9$; hence point of contra flexure is 26.1 feet from No. 2 pier.

Equation to 2nd span is $-y = .3(159x - x^2) - 1222 - 9.27x$; therefore when $y = 0$ $x = 69.45$ and 58.65 ; hence points of contra flexure occur 89.55 feet from No. 2 pier and 58.65 feet from No. 3 pier; this is shown on the diagram 95 feet from No. 2 pier, and 64 feet from No. 3 pier.

Shearing stresses.

$$\begin{aligned} \text{1st span—over No. 1 pier} &= \frac{132.9 \times 1.3}{2} = 86.38 \text{ tons.} \\ \text{,, No. 2 ,,} &= 86.38 + 26.1 \times 1.3 = 120.31 \text{ tons.} \\ \text{2nd span—over No. 2 pier} &= 94.95 \times .6 = 57 \text{ tons.} \\ \text{,, No. 3 ,,} &= 64 \times .6 = 38.40 \text{ tons.} \\ \text{3rd span—over No. 3 ,,} &= 40.02 + 25.6 \times .6 = 55.38 \text{ tons.} \\ \text{,, No. 4 pier} &= \frac{133.4 \times .6}{2} = 40.02 \text{ tons.} \end{aligned}$$

CASE V.—First and third spans loaded with 1.3 tons per foot run; middle span loaded with .6 tons per foot run:—

Here m_1 and m_2 are the same as for Case III, viz., 2401.7.

Equation to 1st and 3rd spans is $y = .65(159x - x^2) - 15.105x$, from which (when $y = 0$) $x = 135.76$.

Equation to middle span is $y = .3(159x - x^2) - 2,401.7$; here the value of y is always negative and is never = 0; hence there is no point of contra flexure.

Shearing stresses.

$$\begin{aligned} \text{1st and 3rd spans—over No. 1 and No. 4 piers} &= \frac{135.76 \times 1.3}{2} = 88.25 \text{ tons.} \\ \text{Over No. 2 and No. 3 piers} &= 88.25 + 23.23 \times 1.3 = 118.45 \text{ tons.} \\ \text{Middle span—over No. 2 and No. 3 piers} &= 159 \times .3 = 47.7 \text{ tons.} \end{aligned}$$

CASE VI.—A load of 1.3 tons extending from middle of 1st span to middle of 2nd span, or from middle of 2nd span to middle of 3rd span, the remaining portions of the spans being loaded with .6 tons per foot run.

$$\begin{aligned} \text{Area of curve } B \text{ } \int A &= \int_0^{79.5} (41.74x - .35x^2) dx + \frac{79.5 \times 1106}{2} + \frac{2 \times 1896 \times 159}{3} \\ &= \frac{.35}{3} (79.5)^3 + \frac{41.74}{2} (79.5)^2 + 43,963.5 + 200,976. \\ &= 73,283.3 + 43,963.5 + 200,976. \\ &= 318,222.8. \end{aligned}$$

$$\begin{aligned} \text{Moment of curve } B \text{ } \int A \text{ about } B &= \int_0^{79.5} (41.74x^2 - .35x^3) dx + 43,963.5 \times 106 + 200,976 \times 79.5. \\ &= \frac{41.74}{3} \times 79.5^3 - \frac{.35}{4} \times 79.5^4 + 43,963.5 \times 106 + 200,976 \times 79.5. \\ &= 3,495,655 + 4,660,131 + 15,977,592 = 24,133,378. \end{aligned}$$

* See diagram, Case VI.

CALCULATIONS—continued.

Plates 18, 19, 20.

Hence distance of centre of gravity from $B = 75.83$." " " " $A = 83.17$.Therefore moment of curve BYA about $A = 318,222.8 \times 83.17 = 26,474,906.4$.Therefore $IK = PL = \frac{26,474,906.4 \times 2}{25,281} = 2,094.4$. $GH = QR = \frac{24,133,378 \times 2}{25,281} = 1,909.2$.

The bending moments over piers and the points of contra flexure are determined as shown in the diagram of Case VI.

Bending moment over No. 2 pier = 1705 foot tons.
Do do No. 3 " = 2720 " "

If the load of 1.3 tons per foot run, had extended from centre of first span to the centre of second span No. 3 would take the place of No. 2.

Shearing stresses.

1st span—over No. 1 pier = 37.2 tons.
No. 2 " = 58.2 "
2nd span—over No. 2 " = 54.4 "
No. 3 " = 96.38 "
3rd span—over No. 3 " = 106.98 "
No. 4 " = 44.08 "

MAXIMUM STRESSES.

Plate 17.

The maxima bending moments have been derived as follows:—In first and third span, from cases II and V; in middle span, from cases II, III, IV, and V. (See diagram of maxima bending moments.) The diagram of actual areas in bridges with the curve of areas required (as determined from diagram of maxima bending moments, taking 5 tons in tension and 4 tons in compression), show that the booms are of ample sectional area, and by comparing the excess of area throughout the bridge, the least excess occurs over No. 2 and No. 3 piers, where there is sufficient total effective area for a live load of 1.6 tons per foot run.

Shearing stresses.

1st and 3rd span—over No. 1 and No. 4 pier = 88.2 tons.
over No. 2 and No. 3 " = 125.9 "
Middle span—over No. 2 and No. 3 " = 112.7 "

Note:—The maximum shear over piers in Peel and M'Donald River Bridges = 103.35 tons.

Plates 33, 34.

On comparing these results with the table of stresses in lattice-bars in Peel and M'Donald River Bridges, and comparing also the effective sectional areas of channel iron and bars adopted for the struts and tension bars in Peel and M'Donald River Bridges, with those of Bathurst, Wellington, and Aberdeen Bridges, it will be seen that the unit stress adopted is about the same in each; hence the web is consistent with the booms, and therefore these bridges are abundantly strong, vertically.

WIND PRESSURE.

The arrangement of the wind bracing is similar to that of Peel and M'Donald River Bridges.

No. 6.

WAGGA WAGGA BRIDGE.

Plate 9.

MAIN GIRDERS.

Four spans of 159 feet centres.

Effective depth, 12 feet.

Dead load on bridge, 1.2 tons per foot run.

Live " " 1.4 " " "

Dead load on each main girder, .6 tons per ton run.

Live " " .7 " " "

There are eight cases of complete loading, of which three will be considered:—

CASE I.—The first two spans loaded with 1.3 tons per foot run; the third and fourth spans loaded with .6 tons per foot run.

$$\left. \begin{aligned} 8 m_1 + 2 m_2 &= 1.3 l^2 \\ 16 m_2 + 4 m_1 + 4 m_3 &= 1.9 l^2 \\ 8 m_3 + 2 m_2 &= .6 l^2 \end{aligned} \right\} \text{from which is obtained}$$

$$m_1 = \frac{16.3}{8 \times 14} l^2 = \frac{16.3 \times 25281}{112} = 3679 \text{ foot tons.}$$

$$m_2 = \frac{3.8}{56} l^2 = \frac{3.8 \times 25281}{56} = 1715 \text{ foot tons.}$$

$$m_3 = \frac{13}{16 + 14} l^2 = \frac{13 \times 25281}{224} = 1467 \text{ foot tons.}$$

The equation to 1st span is $-y = .65 (159x - x^2) - 23.13x$ from which when $y = 0$; $x = 123.4$.The equation to 2nd span is—(origin at No. 3 pier) $y = .65 (159x - x^2) - (1715 + 12.34x)$ from which when $y = 0$ $x = 22.4$ and 117.6 .

Shearing stresses.

$$1st \text{ span—over No. 1 pier} = \frac{123.4 \times 1.3}{2} = 80.21 \text{ tons.}$$

$$\text{Over No. 2 pier} = 80.21 + 35.6 \times 1.3 = 126.49 \text{ tons.}$$

$$2nd \text{ span—over No. 2 pier} = \frac{95.2 \times 1.3}{2} + 41.4 \times 1.3 = 115.70 \text{ tons.}$$

CALCULATIONS—continued.

CASE II.—First span loaded with 1·3 tons per foot run; the remaining spans loaded with ·6 tons per foot run.

$$\left. \begin{aligned} \text{Here } 16 m_1 + 4 m_2 &= 1·9 l^2 \\ 16 m_2 + 4 m_1 + 4 m_3 &= 1·2 l^2 \\ 16 m_3 + 4 m_2 &= 1·2 l^2 \end{aligned} \right\} \text{from which}$$

$$m_1 = \frac{24·9}{14 \times 16} l^2 = \frac{24·9 \times 25281}{224} = 2810 \text{ foot tons.}$$

$$m_2 = \frac{1·7}{56} l^2 = \frac{1·7 \times 25281}{56} = 767 \text{ foot tons.}$$

$$m_3 = \frac{15·1}{14 + 16} l^2 = \frac{15·1 \times 25281}{224} = 1704 \text{ foot tons.}$$

The equation to 1st span is $-y = ·65 (159x - x^2) - 17·67x$ from which when $y = 0$; $x = 131·8$ feet.

Shearing stresses.

$$\text{Over No. 1 pier } \frac{131·8 \times 1·3}{2} = 85·67 \text{ tons.}$$

$$\text{Over No. 2 pier } = 85·67 + 27·2 \times 1·3 = 121·03 \text{ tons.}$$

CASE III.—Second span loaded with 1·3 tons per foot run; the remaining spans loaded with ·6 tons per foot run.

$$\left. \begin{aligned} \text{Here } 16 m_1 + 4 m_2 &= 1·9 l^2 \\ 16 m_2 + 4 m_1 + 4 m_3 &= 1·9 l^2 \\ 16 m_3 + 4 m_2 &= 1·2 l^2 \end{aligned} \right\} \text{from which}$$

$$m_1 = \frac{22·1}{14 + 16} l^2 = \frac{22·1 \times 25281}{224} = 2494 \text{ foot tons.}$$

$$m_2 = \frac{4·5}{56} l^2 = \frac{4·5 \times 25281}{56} = 2031 \text{ foot tons.}$$

$$m_3 = \frac{12·3}{14 \times 16} l^2 = \frac{12·3 \times 25281}{224} = 1388 \text{ foot tons.}$$

The equation to second span is $-y = ·65 (159x - x^2) - (2494 - 2·91x)$ from which when $y = 0$; $x = 136·43$ and $27·03$.

Shearing stresses.

$$\text{1st span—over No. 2 pier } \frac{109·4 \times 1·3}{2} + 22·57 \times 1·3 = 100·44 \text{ tons.}$$

$$\text{2nd span—over No. 3 pier } \frac{109·4 \times 1·3}{2} + 27·03 \times 1·3 = 106·24 \text{ tons.}$$

The bending moments and shearing stresses for the cases considered are set out in the diagram of Wagga Wagga Bridge, from which it will be seen that the sectional areas in booms are everywhere sufficient to resist the maxima stresses produced by the cases of loading considered. The shearing stresses do not differ very much from these produced on Bathurst, Wellington, and Aberdeen Bridges. (See calculations of these bridges, also table of stresses for Peel and Macdonald River Bridges.) It will not therefore be necessary to calculate the stresses in lattice-bars, as the unit stresses adopted are about the same as those adopted for the Bathurst, Wellington, and Aberdeen Bridges. Hence this bridge is abundantly strong vertically.

WIND PRESSURE.

The resistance of the structure against wind is similar to that of Bathurst, Wellington, and Aberdeen Bridges. (See remarks on wind bracing of these bridges.)

No. 7.

PENRITH BRIDGE.

MAIN GIRDERS.

Three spans, each 198·0 centre to centre.
 Dead load on bridge, 2·5 tons per foot run.
 Live " " 2·5 " "
 Dead load on each main girder, 1·25 tons per foot run.
 Live " " 1·25 " "

Let m = bending moment at any point on girder.

Let A = area of each pile of plates in top or bottom boom in square inches.

Let f = intensity of stress on the extreme top or bottom pile in tons per square inch.

$$\text{Then } m = fA \times 13 + \frac{10}{13} fA \times 10$$

$$= 20·7 fA \text{ nearly}$$

$$f = \frac{M}{20·7 A} \text{ or } 2 fA = \frac{M}{10·35}$$

$$\text{therefore } f \times \text{total area of boom} = \frac{M}{10·35} \quad (\text{since the area of each pile may be taken as } \frac{A}{2})$$

Three cases of complete loading will be considered.

CASE I.—First span loaded with 2·5 tons per foot run; second and third spans with 1·25 tons per foot run.

$$\left. \begin{aligned} \text{Here } 16 m_1 + 4 m_2 &= 2·5 l^2 + 1·25 l^2 \\ 8 m_2 + 2 m_1 &= 1·25 l^2 \end{aligned} \right\} \text{Hence } m_1 = \frac{l^2}{30} (5 + 1·25).$$

$$m_1 = \frac{39204}{30} \times 6·25 = 8167·5 \text{ foot tons.}$$

Hence equation to first span is $-y = 1·25 (198x - x^2) - 41·25x$ from which when $y = 0$; $x = 165$ feet.

CALCULATIONS—continued.

TABLE of stresses calculated from Case I.

| x | Bending Moments. $y = 1.25(198x - x^2) - 41.25x.$ | Stress. | Area required. | | Area in Bridge.* | |
|-----|--|---------|----------------|---------|------------------|---------|
| | | | Top. | Bottom. | Top. | Bottom. |
| 10 | 1937 | 187 | 47 | 37 | 100 | 88 |

| 165 | 0 | 0 | 0 | 0 | 123 | 113 |
| 170 | — 1062 | — 103 | 21 | 26 | 123 | 145 |
| 180 | — 3375 | — 326 | 65 | 81 | 156 | 167 |
| 190 | — 5937 | — 574 | 115 | 143 | 193 | 200 |
| 198 | — 8167 | — 789 | 158 | 197 | 214 | 221 |

* These figures represent the gross area where the stress is compressive, and the net area deducting rivet holes when the stress is tensile.

CASE II.—Middle span loaded with 2.5 tons per foot run; side spans loaded with 1.25 tons per foot run.

$$\begin{aligned} \text{Here } 16m_1 + 4m_2 &= 1.25l^2 + 2.5l^2 \\ 16m_2 + 4m_1 &= 2.5l^2 + 1.25l^2 \end{aligned} \left\{ \text{from which} \right.$$

$$20m_1 = l^2(1.25 + 2.5)$$

$$m_1 = \frac{3.75 \times 39204}{20} = 7351 \text{ feet tons.}$$

Hence the equation to middle span is—

$$y = 1.25(198x - x^2) - 7351. \quad (\text{Origin at No. 3 Pier.})$$

from which when $y = 0$; $x = 161.6$ and 36.4 .

TABLE of stresses calculated from Case II.

CASE III.—Two consecutive spans loaded with 2.5 tons per foot run; third span loaded with 1.25 tons per foot run.

$$\begin{aligned} \text{Here } 8m_1 + 2m_2 &= 2.5l^2 \\ 16m_2 + 4m_1 &= 2.5l^2 + 1.25l^2 \end{aligned} \left\{ \text{from which} \right.$$

$$m_1 = (7 \times 2.5 - 1.25) \frac{l^2}{60} = \frac{16.25 \times 39204}{60} = 10618 \text{ foot tons.}$$

$$\text{and } 2m_2 = (2.5 - 2.1666) \frac{l^2}{2} = 6534 \text{ foot tons.}$$

Equation to first span is $y = 1.25(198x - x^2) - 53.62x$ from which when $y = 0$; $x = 155.1$.

Equation to middle span is $y = 1.25(198x - x^2) - (6534 + 20.62x)$. (Origin at No. 3 pier), from which when $y = 0$; $x = 35.9$ and 145.6 .

CALCULATIONS—continued.

TABLE of stresses calculated from Case III.

Cantilever No. 1 Span.

| s | Bending Moment. $y = 1.25(198x - x^2) - 53.62x.$ | Stress. | Area required. | | Area in Bridge. | |

The inspection of the columns of *areas required* and *areas in bridges* will show that if the unit stresses of 5 tons in tension and 4 tons in compression be taken in the calculations there should be in Case I, in the middle span, 24 square inches in compression and 23 square inches in tension, more than provided in the bridge, and in Case III 35 square inches more in tension over piers. Taking the last case, which is the worst, the bridge has sufficient area in booms to carry $\frac{5 \times 221}{256} = 4.3$ tons total load per foot run, or a live load on each line of way of .90 tons per foot run, which, however, is in excess of the heaviest traffic on a double line.

The excess of sectional area at points of contra flexure (which is unavoidable from the design), is not really so great as that shown in tables (which have been formed by adopting a uniform stress throughout), as the booms are here subjected to alternating stresses due to the alteration in the position of the point of contra flexure.

HORIZONTAL STRESS ON LINE OF RIVETS $\frac{3}{4}$ INCHES DIAMETER, AND 4" PITCH WHICH UNITE THE WEB WITH THE BOOMS.

The bending moment at any point: $-m = fA \times 13 + \frac{10}{13}fA \times 10.$

Horizontal stress $= fA + \frac{10}{13}fA = \frac{23}{13}fA$; but $fA = \frac{m}{20.7}$ therefore horizontal stress $= \frac{23}{13} \times \frac{m}{20.7} = .085 m.$

Let m_1 be the bending moment at a point 1 foot distant from the first-mentioned point, in a similar manner the horizontal stress $= .085 m_1.$

Hence the shearing stress to be taken off by line of rivets uniting webs with booms per foot run will be $= .085 (m - m_1).$

FROM CASE I.

Is obtained $m - m_1 = 289$ and $.085 \times 289 = 24.6.$

Hence the intensity of stress in tons per square inch on rivets $= \frac{24.6}{2.64} = 9.3$ tons.

FROM CASE III.

Is obtained $m - m_1 = 301$ and $.085 \times 301 = 25.6.$

Hence the intensity of stress on rivets $= \frac{25.6}{2.64} = 9.7$ tons per square inch.

See Table of Stresses in Web for a double line of way.

CALCULATIONS—continued.

FROM DEAD LOAD OF THE STRUCTURE ITSELF.

Here the maximum bending moment occurs over piers, and is $\frac{wl^2}{10} = \frac{1.25 \times 39204}{10} = 4900$ foot tons.

Equation to first span is $-y = .625(198x - x^2) - 24.74x$ from which when $y = 0$; $x = 158.4$ feet.

$$\left. \begin{array}{l} \text{if } x = 197, \text{ then } y = 4750 \\ x = 198, \text{ then } y = 4900 \end{array} \right\} \text{diff.} = 150.$$

Hence stress on rivets = $.085 \times 150 = 12.75$ tons per foot run.

$$\text{Unit stress} = \frac{12.75}{2.64} = 4.8 \text{ tons.}$$

STRESSES PRODUCED ON SINGLE LINE OF WAY.

From $1\frac{1}{4}$ ton per foot run on one span only.

Here the main girders next rails will carry $1.25 \times \frac{18.75}{25.75} = .9$ tons per foot run live load; or a total load of 2.15 tons per foot run.

Hence $\left. \begin{array}{l} 16m_1 + 4m_2 = 3.4l^2 \\ 16m_2 + 4m_1 = 2.5l^2 \end{array} \right\}$ from which is obtained $m_1 = \frac{39204 \times 11.1}{60} = 7252.74$ foot tons.

Hence the equation to curve of 1st span is $-y = 1.075(198x - x^2) - 36.63x$ from which when $y = 0$; $x = 164$ feet.

$$\left. \begin{array}{l} \text{if } x = 197; y = 7004.4 \\ x = 198; y = 7252.74 \end{array} \right\} \text{difference} = 248.4.$$

Hence stress on the rivets = $.085 \times 248.4 = 21.11$ tons per foot run.

$$\text{Unit stress} = \frac{21.11}{2.64} = 8 \text{ tons per square inch.}$$

MIDDLE span loaded with 2.15 tons per foot run; and side spans with 1.25 tons per foot run.

$$\left. \begin{array}{l} \text{Here } 16m_1 + 4m_2 = 3.4l^2 \\ 16m_2 + 4m_1 = 3.4l^2 \end{array} \right\} \text{from which}$$

$$\text{is obtained } m^1 = \frac{3.4l^2}{20} = \frac{3.4 \times 39204}{20} = 6664.68 \text{ foot tons.}$$

The equation to middle span is $-y = 1.075(198x - x^2) - 6664.68$ from which when $y = 0$; $x = 159$ and 30

$$\left. \begin{array}{l} \text{when } x = 197; y = 6452.9 \\ x = 198; y = 6664.69 \end{array} \right\} \text{difference} = 211.79.$$

Hence the stress per foot run on rivets = $.085 \times 211.79 = 18$ tons.

$$\text{Unit stress} = \frac{18}{2.64} = 6.8 \text{ tons per square inch.}$$

With two engines weighing 118 tons placed in middle of first span, and $11\frac{1}{2}$ loaded trucks extending from engines to end of second span, each truck weighing 6 tons 17 cwt.

Here the two engines (which are Beyer and Peacock's Bogie Class) will produce a bending moment at centre of girders, considering it as discontinuous of 4469 foot tons. Therefore the equivalent distributed load which would produce the same bending moment at the centre is found from equation $\frac{wl^2}{8} = 4469$; from which $w = 1$ ton per foot run. Hence the main girder next the rails will carry .7 tons per foot run. Hence the following cases of loading:—

FIRST span loaded with 1.95 tons per foot run; second span loaded with 1.47 tons per foot run; and third span with 1.25 tons per foot run.

$$\left. \begin{array}{l} \text{Here } 16m_1 + 4m_2 = (1.95 + 1.47)l^2 \\ 16m_2 + 4m_1 = (1.47 + 1.25)l^2 \end{array} \right\} \text{from which is obtained } m_1 = 7161 \text{ foot tons.}$$

Hence the equation to the curve of moments in first span is $-y = 975(198x - x^2) - 36.16x$ from which when $y = 0$; $x = 161$

$$\left. \begin{array}{l} \text{when } x = 197; y = 6931 \\ x = 198; y = 7161 \end{array} \right\} \text{difference} = 230.$$

Horizontal stress on rivets per foot run = $230 \times 0.85 = 19.55$ tons.

$$\text{Unit stress} = \frac{19.55}{2.64} = 7.4 \text{ tons per square inch.}$$

FIRST and second span loaded with 2.15 tons per foot run; and third span loaded with 1.25 tons per foot run.

$$\left. \begin{array}{l} \text{Here } 8m_1 + 2m_2 = 2.15l^2 \\ 16m_2 + 4m_1 = 3.4l^2 \end{array} \right\} \text{from which is obtained } m_1 = 9016.92 \text{ foot tons;}$$

and the equation to 1st span is $-y = 1.075(198x - x^2) - 45.54x$ from which when $y = 0$ $x = 155.64$

$$\left. \begin{array}{l} \text{when } x = 197; y = 8759.60 \\ x = 198; y = 9016.92 \end{array} \right\} \text{difference} = 257.3.$$

Hence the horizontal stress on the rivets per foot run = $257.3 \times .085 = 21.87$.

$$\text{Hence unit stress} = \frac{21.87}{2.64} = 8.28 \text{ tons per square inch.}$$

CALCULATIONS—continued.

ANALYSIS OF STRENGTH OF WEB.

DOUBLE LINE OF WAY.

STRESSES in Side Spans when covered with a live load of $1\frac{1}{2}$ ton per foot run on each line of way.

| Distance from pier in feet. | Thickness of web in inches. | Total shearing stress in tons. | Shearing stress per foot horizontally or vertically in tons. | Shearing stress in tons per square inch of area between the rivet holes | Bearing area per foot horizontally or vertically in square inches. | Pressure on bearing area in tons per square inch. | Intensity of stress on rivets $\frac{1}{2}$ -inches in diameter uniting web with booms in tons per square inch. | Intensity of shearing stress at which the web will begin to buckle. | Shearing stress per square inch on gross area. | Factor of safety against buckling. |
|-----------------------------|-----------------------------|--------------------------------|--|---|--|---|---|---|--|------------------------------------|
| 0 | $\frac{1}{2}$ | 206 | 17.50 | 1.80 | 2.25 | 7.80 | 6.6 | 4.80 | 1.45 | 3.31 |

CALCULATIONS—continued.

No. 8.

MENANGLE BRIDGE.

Plate 6.

MAIN GIRDERS.

Three spans of = 162' centres.

Effective average depth = 10 feet.*

Dead load = 2.2 tons per foot run on bridge.

Live „ = 2.8 „ „ „ „

Dead load on each main girder = 1.1 ton per foot run.

Live „ „ „ „ = 1.4 „ „

Three cases of loading will be considered:—

CASE I.—First (or third) span, loaded with 2.5 tons per foot run, middle and end span loaded with 1.1 ton per foot run.

$$m_2 = \frac{l^2}{30} (2w_1 + w_2) = (5 + 1.1) \frac{162^2}{30} = 5336.3.$$

Equation to 1st span is $y = 1.25 (162x - x^2) - 32.94x$ from which when $y = 0$ $x = 135.64$.

| | Bending Moment. | Stress. | Area Required. | | Area in Bridge. | |
|-----|-----------------|---------|----------------|---------|-----------------|------|
| | | | Top. | Bottom. | Gross. | Net. |
| 10 | 1571 | 157 | 39 | 31 | 108 | 86 |
| 20 | 2891 | 289 | 73 | 58 | 110 | 88 |

| 50 | 5353 | 535 | 134 | 107 | 119 | 100 |
| 60 | 5674 | 567 | 142 | 113 | 126 | 104 |
| 70 | 5744 | 574 | 144 | 115 | 131 | 106 |
| 80 | 5565 | 556 | 139 | 111 | 131 | 106 |
| 90 | 5135 | 513 | 128 | 103 | 124 | 99 |
| 100 | 4456 | 446 | 111 | 89 | 124 | 99 |
| 110 | 3527 | 353 | 88 | 70 | 119 | 95 |
| 120 | 2347 | 235 | 59 | 47 | 117 | 93 |
| 130 | 918 | 92 | 23 | 18 | 129 | 105 |
| 140 | — 762 | — 76 | 15 | 19 | 129 | 105 |
| 150 | — 2691 | — 269 | 54 | 67 | 153 | 122 |
| 162 | — 5336 | — 534 | 107 | 133 | 166 | 133 |

CASE III.—Middle span loaded with 2.5 tons per foot run, and side spans with 1.1 ton per foot run.

$$m_2 = m_3 = (w_1 + w_2) \frac{l^2}{20} = (1.1 + 1.25) \frac{162^2}{20} = 4,724 \text{ foot tons.}$$

Equation to middle span is $y = 1.25 (162x - x^2) - 4,724$, from which, when $y = 0$, $x = 133.7$ and 28.3 ; therefore the results can be set out in the following table, remembering that x is measured from No. 3 pier.

| x = | Moment. | Stress. | Area required. | | Area in Bridge. | |
|-----|---------|---------|----------------|---------|-----------------|------|
| | | | Top. | Bottom. | Gross. | Net. |
| 0 | — 4724 | — 472 | 94 | 118 | 166 | 133 |
| 10 | — 2824 | — 282 | 56 | 71 | 139 | 111 |
| 20 | — 1174 | — 117 | 23 | 29 | 139 | 111 |
| 30 | 226 | 23 | 6 | 4 | 112 | 91 |
| 40 | 1376 | 138 | 34 | 27 | 112 | 91 |
| 50 | 2276 | 228 | 57 | 45 | 119 | 104 |
| 60 | 2926 | 293 | 73 | 58 | 119 | 104 |
| 70 | 3326 | 333 | 83 | 66 | 116 | 95 |
| 80 | 3476 | 348 | 87 | 69 | 116 | 95 |
| 90 | 3376 | 338 | 84 | 67 | 116 | 95 |
| 100 | 3026 | 303 | 76 | 60 | 119 | 104 |
| 110 | 2426 | 243 | 61 | 43 | 119 | 104 |
| 120 | 1576 | 158 | 39 | 31 | 112 | 91 |
| 130 | 476 | 48 | 12 | 9 | 112 | 91 |
| 140 | — 874 | — 87 | 17 | 22 | 139 | 91 |
| 150 | — 2474 | — 247 | 49 | 62 | 139 | 111 |
| 162 | — 4724 | — 472 | 94 | 118 | 166 | 133 |

CASE II.—First and second spans loaded with 2.5 tons per foot run; third span loaded with 1.1 tons per foot run.

$$m_1 = \frac{l^2}{60} (7w_1 - w_2) = (17.5 - 1.1) \frac{162^2}{60} = 7,173.36 \text{ foot tons.}$$

$$m_2 = \frac{(wl^2 - 8m_1)}{2} = 4,111.5 \text{ foot tons.}$$

* Let m = bending moment at any point on girder; let a = area of top or bottom pile of plates in either boom; let f = intensity of stress on the extreme top or bottom piles of plates:

$$\text{Then } m = f \frac{a^2}{2} \times 12.5 + \frac{9.65}{12.5} f \frac{a^2}{2} \times 9.65 = 6.25 fa + 3.725 fa = 9.975 fa = 10 fa \text{ nearly: therefore } fa = \frac{m}{10} \text{ nearly.}$$

CALCULATIONS—continued.

Equation to 1st span is $y = 1.25 (162x - x^2) - 44.29x$, from which, when $y = 0$, $x = 126.6$; the moments of the cantilever portions only are given.

| $x =$ | Moment. | Stress. | Area required. | | Area in Bridge. | |
|-------|---------|---------|----------------|---------|-----------------|-------|
| | | | Top. | Bottom. | Gross. | Net. |
| 126.6 | 0 | 0 | 0 | 0 | 129 | 105.6 |
| 140.0 | — 2,349 | — 235 | 47 | 58.7 | 129 | 105.6 |
| 150.0 | — 4,392 | — 439 | 88 | 110.0 | 153 | 122.0 |
| 162.0 | — 7,173 | — 717 | 143 | 179.0 | 166 | 133.0 |

The equation to second span is (when origin is No. 3 pier) $y = 1.25 (162x - x^2) - (4,111.5 + 18.9x)$, from which, when $y = 0$, $x = 119.5$ and 27.5 ; hence the moments of cantilever portion of second span are

| $x =$ | Moment. | Stress. | Area required. | | Area in Bridge. | |
|-------|---------|---------|----------------|---------|-----------------|------|
| | | | Top. | Bottom. | Gross. | Net. |
| 119.5 | 0 | 0 | 0 | 0 | 112 | 91 |
| 120.0 | — 79 | — 8 | 2 | 2 | 112 | 91 |
| 130.0 | — 1,368 | — 137.0 | 27 | 34 | 112 | 91 |
| 140.0 | — 2,907 | — 291.0 | 58 | 73 | 139 | 91 |
| 150.0 | — 4,696 | — 470.0 | 94 | 117 | 139 | 111 |
| 162.0 | — 7,173 | — 717.0 | 143 | 179 | 166 | 133 |

The columns "Area required," are found by dividing the stress by 5 tons in tension, and 4 tons in compression throughout, whereas about the region of the point of contra-flexure a lower unit stress and a corresponding greater sectional area than that given are required. From an inspection of columns, "Area in Bridge," it will be seen that this excess of area is provided, although the sectional areas in the centre of side spans and over piers are not sufficient for *Cases I, II, and III*, but are ample for ordinary traffic. It was impracticable to measure these areas with accuracy from the bridge.

SHEARING STRESSES.

Side spans over No. 1 and No. 4 piers, from—

CASE I (see diagram) the shearing stress = $\frac{135.64 \times 2.5}{2} = 169.55$ tons.

Over No. 2 and No. 3 piers the shearing stress = $\frac{135.64 \times 2.5}{2} + 26.36 \times 2.5 = 242.95$ tons.

CASE II gives higher shearing stresses over No. 2 and No. 3 piers; thus $\frac{126.6 \times 2.5}{2} + 35.4 \times 2.5 = 246.75$ tons.

Middle span over No. 2 and No. 3 piers, the shearing stress = $\frac{92 \times 2.5}{2} + 42.5 \times 2.5 = 221.25$ tons.

CASE III gives $\frac{105.4 \times 2.5}{2} + 28.3 \times 2.5 = 202.5$ tons.

ANALYSIS OF STRESSES IN WEB AGAINST STRESSES PRODUCED BY CASES I, II, AND III.

Side Spans.

| Distance from pier. | Thickness of web. | Shearing stress per foot horizontally or vertically. | Shearing stress per square inch in tons. | Shearing stress at which the web will begin to buckle. | Bearing area per foot in square inches. | Pressure on bearing area per square inch. | Factor of safety against buckling. |
|---------------------|----------------------|--|--|--|---|---|------------------------------------|
| 0 | $\frac{1}{2}$ | 15 tons. | 1.25 | 4.80 tons. | 2.37 | 6.3 tons. | 3.7 |
| 18 | $\frac{1}{\sqrt{6}}$ | 11.6 " | 1.50 | 2.28 " | 1.47 | 7.9 " | 1.5 |
| 60 | $\frac{1}{4}$ | 3.6 " | .60 | 1.54 " | 1.18 | 3.0 " | 2.6 |
| 105 | $\frac{1}{\sqrt{6}}$ | 9.5 " | 1.58 | 1.54 " | 1.18 | 8.0 " | 1.0 |
| 126 | $\frac{1}{\sqrt{6}}$ | 14.1 " | 1.80 | 2.28 " | 1.47 | 9.6 " | 1.2 |
| 147 | $\frac{1}{\sqrt{6}}$ | 18.8 " | 1.80 | 3.90 " | 2.07 | 9.1 " | 2.1 |
| 162 | $\frac{1}{2}$ | 21.8 " | 1.82 | 4.80 " | 2.37 | 9.2 " | 2.7 |

Middle Span.

| Distance from pier. | Thickness of web. | Shearing stress per foot horizontally or vertically. | Shearing stress per square inch in tons. | Shearing stress at which the web will begin to buckle. | Bearing area per foot in square inches. | Pressure on bearing area per square inch. | Factor of safety against buckling. |
|---------------------|----------------------|--|--|--|---|---|------------------------------------|
| 0 | $\frac{1}{2}$ | 19.2 tons. | 1.60 | 4.80 | 2.37 | 8.1 tons. | 3.0 |
| 18 | $\frac{1}{\sqrt{6}}$ | 16.3 " | 1.80 | 3.10 | 1.78 | 9.1 " | 1.7 |
| 39 | $\frac{1}{\sqrt{6}}$ | 11.5 " | 1.50 | 2.28 | 1.47 | 7.8 " | 1.5 |
| 60 | $\frac{1}{\sqrt{6}}$ | 7.2 " | .96 | 2.28 | 1.47 | 4.9 " | 2.3 |
| 81 | $\frac{1}{\sqrt{6}}$ | 2.7 " | .36 | 2.28 | 1.47 | 1.6 " | 6.3 |

The column "Shearing stress at which the web will begin to buckle," is found by Rankine's formula $s = \frac{f}{1 + \frac{1}{1000} \frac{l^2}{k^2}}$

(See calculations of Peel-street and Wollondilly bridges). The column, "Factor of safety against buckling," is found by dividing the results of this formula for different thicknesses of web plates by the shearing stress in tons per square inch. It is necessary to state that this formula assumes the buckling to take place in a D curve, whereas it may buckle (if it buckles at all) in an S curve. The pressures on bearing areas are, however, larger than desirable.

CALCULATIONS—continued.

HORIZONTAL STRESS ON LINE OF RIVETS UNITING BOOMS TO WEB.

Let m = bending moment over No. 2 or No. 3 pier.
 m_1 = „ 1 foot from centre of pier in side spans.
 a = area of top or bottom boom.
 $m = 10fa$ and the horizontal stress.

The horizontal stress is $\frac{fa}{2} + \frac{9.65}{12.5} \frac{fa}{2} = \frac{fa}{2} \left(1 + \frac{9.65}{12.5}\right) = \frac{22.15}{25} fa$

Since $fa = \frac{m}{10}$ it follows that the horizontal stress = .0886 m , and the stress on rivets per foot run is .0886 ($m - m_1$)

The equation to first span from Case I is— $y = 1.25 (162x - x^2) - 32.94x$, from which when
 $x = 162, y = 5336$
 $x = 161, y = 5102$ } difference = 234-foot tons.

Horizontal stress on rivets per foot run = .0886 \times 234 = 20.73 tons.

The rivets in question are $\frac{3}{8}$ inch in diameter and 4-inch pitch.

Unit stress = $\frac{20.73}{3.6} = 5.78$ tons per square inch.

The equations to 1st span from Case III is— $y = 1.25 (162x - x^2) - 44.29x$, from which when

$x = 162; y = 7173$
 $x = 161; y = 6929$ } difference = 244-foot tons.

Horizontal stress per foot run on rivets = .0886 \times 244 = 21.6 tons.

Hence unit stress = $\frac{21.6}{3.6} = 6$ tons per square inch.

No. 9.

STRESSES IN CROSS GIRDERS.

In the following calculations the distributing effect of the longitudinal timber beams is not considered.

PENBETH BRIDGE.

| | |
|--|---|
| Span | 25' 6" |
| Total depth | 1' 9 $\frac{1}{2}$ " |
| Thickness of web plate | $\frac{1}{4}$ " |
| Flange plates | 7" \times $\frac{3}{8}$ " |
| Angle irons | 3" \times 3" \times $\frac{1}{2}$ " |
| Rivets $\frac{3}{8}$ " diameter, 4" pitch. | |

I.—Double line of way with ordinary engines will bring out 8.7 tons on girders from the driving wheels, which will be concentrated at each of the four points immediately under rails. The dead load, consisting of rails, chairs, sleepers, longitudinal timber girders, deck, and cross girder, is equivalent to a load of .5 tons, also concentrated at each of the four points immediately under rails.

Bending moment in centre of cross girder = $15 \times 4' 8'' + 7.5 \times 5' 0'' = 107.5$ foot tons.

Stress in flanges = $\frac{107.5}{7.75} = 61.4$ tons.

Area of top flange = 8.12 square inches.

Effective area of bottom flange = 6.81 „

Unit stress in tons per square inch in top flange = $\frac{61.4}{8.12} = 7.56$ tons.

„ „ „ bottom „ = $\frac{61.4}{6.81} = 9.01$ „

II.—With tank engines there would be 7.5 tons on each driving-wheel, which would give with dead load 8 tons concentrated at each of the four points immediately under rails.

Bending moment in centre = $16 \times 4' 8'' + 8 \times 5' 0'' = 114.66$ foot tons.

Stress in flanges = $\frac{114.66}{1.75} = 65.5$ tons.

Unit stress in tons per square inch in top flange = $\frac{65.5}{8.12} = 8.06$ tons.

„ „ „ bottom „ = $\frac{65.5}{6.81} = 9.62$ „

MUNANGLE BRIDGE.

| | |
|--|---|
| Span | 25' 6" |
| Total depth | 1' 5 $\frac{1}{2}$ " |
| Thickness of web plate | $\frac{1}{4}$ " |
| Flange plates | 8" \times $\frac{3}{4}$ " |
| Angle irons | 3 $\frac{1}{2}$ " \times 3 $\frac{1}{2}$ " \times $\frac{1}{2}$ " |
| Rivets $\frac{3}{8}$ " diameter, 4" pitch. | |

I.—Double line of way with ordinary engines will bring about 7 tons on girders from driving wheel, which will be concentrated at each of the four points immediately under the rails. The dead load, consisting of rails, chairs, sleepers, longitudinal timber beams, deck, and cross girder, is equivalent to .5 tons, also concentrated at each of the four points immediately under the rails.

Bending moment at centre = $15 \times 4' 8'' + 7.5 \times 5' 0'' = 107.5$ foot tons.

Stress in flanges = $\frac{107.5}{1.33} = 80.8$ tons.

CALCULATIONS—*continued.*

Area of top flange = 12.5 square inches.
 Effective area of bottom flange = 10.6 "
 Unit stress, top flange, in tons per square inch = $\frac{80.8}{12.5} = 6.46$ tons.
 „ bottom „ „ „ = $\frac{80.8}{10.6} = 7.62$ „

II.—With tank engines there would be 7.5 tons in each driving-wheel, which would give with dead load 8 tons concentrated at each of the four points under the rails.

Bending moment at centre = $16 \times 4' 8'' + 7.5 \times 5' 0'' = 114.66$ foot tons.
 Stress in flanges = $\frac{114.66}{1.33} = 86.2$ tons.
 Unit stress in top flange in tons per square inch = $\frac{86.2}{12.5} = 6.90$ tons.
 „ bottom „ „ „ = $\frac{86.2}{10.6} = 8.13$ „

NOTE.—The cross girders in this bridge are partially fixed at ends, and are therefore stronger than shown in the above calculations.

PEEL-STREET, PEEL RIVER, AND McDONALD RIVER BRIDGES.

Span = 14' 3".
 Total depth = 1' 3".
 Thickness of web plate = $\frac{1}{4}$ ".
 Angle-irons = $3\frac{1}{2} \times 3\frac{1}{2} \times \frac{1}{2}$.
 Rivets, $\frac{3}{8}$ " diameter, 4" pitch.

The bending moment in centre, produced by 8 tons concentrated at two points immediately under rails, is 37.3 foot tons.

Stress in flanges = $\frac{37.3}{1.2} = 31$ tons.
 Area of top flange = 6.5 square inches.
 Effective area of bottom flange = 5.75 "
 Unit stress in top flange in tons per square inch = $\frac{31}{6.5} = 4.77$ tons.
 „ bottom „ „ „ = $\frac{31}{5.75} = 5.37$ tons.

BATHURST, WELLINGTON, ABERDEEN, AND WAGGA WAGGA BRIDGES.

Span = 14' 3".
 Total depth = 1' 2".
 Thickness of web plate = $\frac{1}{4}$ ".
 Angle-irons = $3\frac{1}{2} \times 3\frac{1}{2} \times \frac{1}{2}$.
 Rivets, $\frac{3}{8}$ " diameter, 4" pitch.

Bending moment in centre, produced by 8 tons concentrated at two points immediately under rails, is 37.3 foot tons.

Stress in flanges = $\frac{37.3}{1.12} = 33.3$ tons.
 Area of top flange = 6.5 square inches.
 Effective area of bottom flange = 5.75 "
 Unit stress in top flange = $\frac{33.3}{6.5} = 5.12$ tons.
 „ bottom „ = $\frac{33.3}{5.75} = 5.79$ „

WOLLONDILLY BRIDGES AND THE BRIDGES OVER THE SOLITARY CREEK.

Span = 14' 0".
 Total depth = 1' 1".
 Thickness of web plate = $\frac{1}{4}$ ".
 Angle-irons = $3'' \times 3'' \times \frac{1}{2}$ ".

Bending moment in centre, produced by 8 tons concentrated at each of the two points immediately under the rails, is 36 foot tons.

Stress in flanges = $\frac{36}{1.05} = 34.3$ tons.
 Area of top flange = 5.5 square inches.
 Effective area of bottom flange = 4.75 "
 Unit stress in top flange = $\frac{34.3}{5.5} = 6.23$ tons.
 „ bottom „ = $\frac{34.3}{4.75} = 7.22$ „

NOTE.—The cross girders in these bridges are partially fixed at ends, and are hence stronger than shown by the above calculations.

WAGGA WAGGA TIMBER VIADUCTS.

GREAT SOUTHERN RAILWAY.

THERE are five viaducts at Wagga Wagga, comprising 316 spans of 29 feet 6 inches each, making a total length of 322 feet. They were completed in 1880 by Messrs. A. & R. Amos, Contractors.

TIMBER OPENINGS SIMILAR TO THOSE AT WAGGA WAGGA.

THE following memorandum describes the timber openings of similar construction to those in the Wagga Wagga Viaduct, erected on certain lines of railway:—

Memorandum to the Secretary of the Royal Commission on Railway Bridges.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 12 June, 1884.

TIMBER openings of 29 feet 6 inches span, and of similar construction to the Wagga Wagga Viaduct, have been erected on the following lines of railway, viz.:—

G. N. Railway—Tamworth to Glen Innes.

At 182 miles, No. 96 spans over Peel River.
At 202 " 50 chains " 3 "
At 245 " 44 " " 3 "

N. W. Railway—Werris Creek to Narrabri.

At 158 miles 71 chains, No. 6 spans, Werris Creek.
At 165 " 9 " " 3 " Deadman's Swamp.
At 168 " 55 " " 16 " Mooki River.

J. W. DREWETT,
Assistant Engineer.

No. 12.

COST OF IRON BRIDGES.

THE following is the cost of some of the Iron Bridges inspected by the Railway Bridges Inquiry Commission, as obtained from the Engineer-in-Chief for Railways:—

| | £ | s. | d. | £ | s. | d. |
|---|--------|----|----|--------|----|---------|
| Menangle Bridge (over the river Nepean, on the G.S.R., Campbelltown to Picton)— | | | | | | |
| Ironwork | 33,214 | 5 | 11 | | | |
| Masonry | 46,194 | 19 | 6 | | | |
| | | | | 79,409 | 5 | 5 |

W. H. QUODLING,
(For the Engineer-in-Chief.)

Office of the Engineer-in-Chief for Railways,
N.S.W., Sydney, 4th February, 1885.

No. 13.

COST OF REPAIRS TO BRIDGES.

In response to a letter from the Commission to the Engineer for Existing Lines, asking for a statement of the cost of the repairs to the bridges on the Southern, Northern, and Western lines of Railway during the time the bridges had been in his department, the following was received:—

Sir, Railway Department, Office of Engineer for Existing Lines, Sydney, 21 February, 1885.

Referring to your letters of 29th ult. and 15th inst. respectively, I have the honor to submit, for the information of the Railway Bridges Inquiry Commission, particulars of the cost of repairs to the principal bridges on the Great Southern, Western, and Northern lines since they have been in charge of this department.

The cost of repairing the minor bridges cannot be ascertained, as the expenditure was not charged in detail but to the item "Repairs of Bridges" generally.

TIMBER BRIDGES.

With the object of having before them all the information available respecting the timber bridges erected on the different lines of railway in the Colony, the Engineer-in-Chief was requested to furnish a return showing the localities where timber bridges and approaches to iron bridges had been erected, the length of each bridge or approach, the number of spans, the date on which each bridge or approach was erected, and (if possible) the cost. And the Engineer for Existing Lines was asked to supply a return showing the cost of maintenance of each of the timber bridges and approaches. At the same time a letter was written to the Commissioner and Engineer for Roads, requesting him to favour the Commission with a statement of his opinion regarding the life of timber bridges in this Colony, and the cost of their maintenance, and to state what repairs had been necessary to the iron bridges in his Department. The following replies were received:—

Mr. W. H. Quodling to the Secretary to the Royal Commission on Bridges.

Sir,

Department of Public Works, Railway Branch,
 Engineer-in-Chief's Office, Sydney, 7 August, 1885.

In reply to your letter of the 5th instant, requesting that the Royal Commission may be furnished with a return showing certain details about timber bridges, &c., erected on the different lines of railway in the Colony, I have the honor to state that I cannot undertake to furnish the information required, as hundreds of timber bridges have been erected on the various railways, and the preparation of such a return would involve the necessity of searching the records and analysing the accounts of the Department for a period of nearly thirty (30) years.

I have, &c.,
W. H. QUODLING,
 (For the Engineer-in-Chief.)

The Engineer for Existing Lines to the Secretary to the Royal Commission on Bridges.

Sir,

Office of Engineer for Existing Lines, Sydney, 11 August, 1885.

Referring to your letter of the 5th instant, requesting that the Railway Bridges Inquiry Commission might be furnished with a return showing the cost of maintenance of each of the timber bridges and approaches on the different lines of railway in the Colony, I regret to have to inform you that this information cannot be given, as the repairs to these bridges were not particularised but were charged generally to maintenance of bridges on the respective lines.

I have, &c.,
GEORGE COWDERY.

The Commissioner and Engineer for Roads to the Secretary to the Royal Commission on Bridges.

Sir,

Department of Public Works, Office of Commissioner and Engineer for Roads,
 Sydney, 7 August, 1885.

With reference to your letter of the 5th instant, requesting, on behalf of the Railway Bridges Inquiry Commission, to be furnished with certain information regarding the life of timber bridges, &c., I have the honor to state that some of the bridges built by the Department are still good, though now twenty-seven years old, and they seem likely to last at least ten years more; but, on the other hand, many have had to be renewed after ten or twelve years. All depends on the timber, and as we have little or no choice but to use local timber the difference is so great.

Except owing to accidental injuries to one iron bridge, no repairs have been necessary to bridges of that material. The timber floors are of course subject to the same wear as on other bridges.

I have, &c.,
WILLIAM C. BENNETT,
 Commissioner and Engineer for Roads.

No. 14.

APPOINTMENTS OF MR. MASON AND MR. COWDERY.

Mr. Mason took charge of the management of Existing Lines, 1st October, 1876.
 Mr. Cowdery took charge from Mr. Mason, 16th March, 1881.

QUALIFICATIONS OF THE ENGINEER FOR EXISTING LINES.

The following copy of the application, made by Mr. Cowdery in 1881, for the appointment of Engineer for Existing Lines, states the qualifications which that gentleman possesses for the position:—

The Commissioner for Railways,—

Sir,

Burwood, March, 1881.

I beg most respectfully to make application for the appointment of Engineer for Existing Lines of Railway and Tramways, made vacant by the resignation of Mr. Mason on the 14th instant, at which time I was temporarily appointed to the position. In making this application I may state that I am well qualified for the position, having had a long practical experience in carrying out similar works to those which the duties of the position I seek will call upon the holder to perform.

I may briefly state the chief incidents of my career: In England and North Wales I served eleven years under Messrs. Peto and Betts, the whole of the time being actively engaged. I was first employed on the Maidstone Branch Railway in Kent, in the drawing office. From there I went to the Isle of Anglesea, and was engaged on the Engineering Staff in making the portion of the Chester and Holyhead Railway, which runs through the island, and includes some heavy works. The development of the oblique arches, the making of patterns and moulds, and the instructions for their application devolved on me.

me. I was next employed on the Great Northern Railway and Toray Branch, where I was some time in the drawing office. I assisted in making drawings for the coffer dam for the Toray Bridge; measured and took a section of the branch line, and assisted in measuring up the works monthly, and setting out generally. I subsequently was engaged on some harbour works at Lowestoft, and having completed those was employed on the Oxford, Worsher, and Wolverhampton Line, where I had for some time full charge of works. I may mention that before the completion of these I had some important and difficult works, such as the lifting of the superstructure of three large bridges, specially entrusted to me, and which I successfully carried out without obstructing the traffic.

The Gloucester, Ross, and Hereford Railway was the next work, a portion of which I had charge of. The engineering upon this length (which was a considerable one, and included two tunnels and heavy viaduct), as well as the measurements of works and paying of all men (some 700), devolved upon myself.

Following this I had full charge of the construction of 14 miles of the East Suffolk Railway, and some 2 miles of sea wall near Lowestoft, which, after satisfactorily carrying out, I left in 1856 for Australia.

Upon arrival I was engaged upon the Melbourne and Mount Alexandria Railway in Victoria. I subsequently visited Sydney, and after working for a time for Messrs. Peto and Co. was appointed District Engineer on the Southern Line, where I continued until the works were completed to Bong Bong River, some 32 miles.

After some two months surveying on the Northern Railway, I was appointed to the Lithgow Zig Zag works, and these two most important undertakings I carried out without assistance to the satisfaction of the Engineer-in-Chief.

I have since had charge of some of the surveys, Clarence to New England, Orange to Dubbo, and Narromine, both via Molong and Ironbarks, and for nearly the last four years I have been Chief Assistant Engineer for Existing Lines.

Trusting you will favourably consider my claims,

I have, &c.,

GEORGE COWDERY.

No. 15.

MR. R. D. STEPHENS AND THE WAGGA WAGGA VIADUCTS.

R. D. Stephens was appointed District Superintendent, 1st November, 1881.

The approaches to the Wagga Wagga Bridge were completed in September, 1880.

The Wagga Wagga Viaduct was opened on 16th January, 1881.

See also Appendix, page 133.

No. 16.

MR. SMITHYMAN'S STATEMENT.

[To evidence of Mr. Thomas Smithyman.]

I FIRST knew Mr. J. Helsingier when he was employed riveting the Menangle bridge, about 1862, on piece-work. At that time I was superintending the erection of the iron bridge for the contractors Messrs. Peto, Brassy, and Betts, and it was my duty to see that the whole bridge was faithfully erected.

Mr. Higinbotham and the late Mr. Lacey inspected the work on behalf of the Department.

I afterwards superintended the erection of the Penrith bridge for the same firm, and the whole of that work was put together in the best possible manner. I had no interest whatever in the work beyond seeing that it was properly done. I tapped every rivet on both bridges myself as the men were paid on my certificate. The rivets were also examined by the Government Inspector.

I also fixed several iron bridges between Tourang and Goulburn for Mr. Mark Faviell the contractor. I was the sub-contractor for fixing the superstructure of these bridges, and the whole of the work was well and faithfully executed under the late Inspector Hampshire.

I was the contractor for erecting the superstructure of the Aberdeen bridge under Inspector Morrison, and sub-contractor for the erection of the superstructure of the Bathurst bridge for Mr. Mason, under Inspector Fernley; I was also sub-contractor for the erection of the Wellington bridge for the late Mr. Watkins, under Inspector Maddock.

I was personally engaged in the erection of these three bridges and can vouch that the whole of the work was well and faithfully executed.

I have had thirty years' experience in building iron bridges in England, and in Victoria, and Queensland.

I am aware of the treatment of the iron bridges by the Existing Lines Branch, and I consider that there is no necessity to cut out the rivets in the main booms, and that such treatment is injurious to the bridges.

I do not believe there were any dummy or defective rivets in any bridge erected by me, and I am satisfied that the whole of the iron was of first-class quality, and that the workmanship was also first-class.

20 March, 1883.

THOMAS SMITHYMAN.

No. 17.

MR. A. WILLIAMS REGARDING THE ERECTION OF PENRITH BRIDGE.

Mr. A. Williams to The Engineer-in-Chief for Railways.

Dear Mr. Whitton,

Harbours and Rivers, 110, Phillip-street, 3 April, 1883.

In reply to your note of the 22nd of March, respecting a leading article on the subject of Railway Bridges, and the Penrith Bridge in particular, I may say that no one is in a better position to give you reliable information as to the character of the work in the Penrith Bridge than I am, as I had full charge of the erection of the ironwork from first to last. I was employed for this purpose by Messrs. Peto, Brassy, & Betts, the contractors, and I resided on the work, and followed it through day by day, until it was completed.

You see by the endorsed copies of testimonials that my management was considered satisfactory; and I feel quite sure that any examination that may now be made of the bridge will only prove that I have not forfeited the confidence that was then placed in me. My orders were to carry out the work correctly and faithfully, regardless of cost; but I was urged to carry the work through as rapidly as possible, as the liability of the river to floods was considered a great contingency.

The whole of the work was made and fitted together in London, under Mr. Thos. Smithyman's inspection; and it was by him taken to pieces, marked, and shipped, and he came out with it, and acted as the foreman of the iron-workers all the time at weekly wages.

All the rivets and every requisite was sent out with the plates, bars, &c. The riveting and riming were done by task-work, but the men were supplied with all rivets and tools, and every rivet was tapped and examined every day. As regards lead rivets, it is not likely that I should buy them in Sydney when I had more iron ones than I could use at the work; I should just as soon have thought of buying silver ones. Some of the iron-work got mixed, and the marks were obliterated, in consequence of its being transhipped on the way out at the Cape, so that we had great difficulty in sorting and arranging it at the work at Penrith; but each little deviation that had to be made did not alter the character of the work, and every matter of this kind was pointed out to Mr. Firth, your District Engineer.

I am, &c.,

ALFRED WILLIAMS.

Mr. S. Willcox to Mr. A. Williams.

My dear Sir,

Southern and Western Railway, Queensland, 20 June, 1867.

In compliance with your request, I have much pleasure in testifying my entire approval of the manner in which you have carried out for me the erection of the iron girders of the Western Railway Bridge over the River Nepean, at Penrith, New South Wales. This work (one of the finest in the Colonies) consists of three spans of 186 feet each, and is adapted for the road and railway.

During the erection of the staging and iron-work you had sole charge, and I am much pleased to state that the work has been well conducted and expeditiously performed.

I am, &c.,

SAMUEL WILLCOX,
Agent for Peto, Brassy, & Betts.

The

The Engineer-in-Chief for Railways to Mr. A. Williams.

My dear Sir,

Department of Public Works, Engineer's Office, Sydney, N.S.W., 18 January, 1867.

In reply to your request, I have great pleasure in stating that you had the entire charge, under Messrs. Peto, Brassey, & Betts, of the erection of the timber-staging and wrought iron-work for the bridge over the River Nepean, at Penrith, on the Great Western Railway. The bridge, which consists of three openings of 186 feet each, and 60 feet above the bed of the river, was erected with great rapidity; and so complete were all the arrangements that not one accident occurred, nor was there the slightest check to the progress of the work by a single failure.

I am glad to bear testimony to the energy and ability displayed by you in carrying out this work, which was completed entirely to my satisfaction.

Believe me, &c.,

JOHN WHITTON, M.I.C.E.,
Chief Engineer to the New South Wales Railways.

No. 18.

DIFFERENCE BETWEEN THE DESIGN AND THE ERECTION OF BRIDGES.

IN consequence of the Commission finding that the drawings of some of the iron bridges did not correspond with the bridges as erected, and that it was therefore necessary to make special measurements of bridges, the following correspondence took place:—

Railway Bridges Inquiry Commission,
Board Room,

Colonial Secretary's Office, 19 December, 1884.

Sir, I am directed to state that at the last meeting of this Commission it was resolved:—"That the Commission, having found that the bridges over the Wollondilly River (five in number) have not been carried out as shown in the drawings supplied to the Commission, the Engineer-in-Chief for Railways be requested to certify that the following bridges in the west and north have been carried out in accordance with the drawings of those bridges sent to the Commission, or if there is any difference between the design of those bridges and the bridges as erected, to supply the Commission with drawings showing that difference, and with a statement of the reasons for it:—Penrith, Solitary Creek (five bridges), Bathurst, Wellington, Aberdeen, Macdonald River, Peel River, Peel-street, Tamworth."

I am directed also to return to you with this letter the drawings in the possession of the Commission representing these bridges.

I have, &c.,

CHARLES LYNE, Secretary.

John Whitton, Esq., Engineer-in-Chief for Railways.

Railway Bridges Inquiry Commission,
Board Room,

Colonial Secretary's Office, 23 December, 1884.

Sir, I am directed to request that the information asked for in my letter of the 16th instant be supplied, as far as it relates to the Bathurst and Wellington Bridges, by next Tuesday, the 30th instant, and the information with reference to the other bridges mentioned as early as possible.

I have, &c.,

CHARLES LYNE, Secretary.

John Whitton, Esq., Engineer-in-Chief for Railways.

Department of Public Works, Railway Branch,
Engineer-in-Chief's Office, Sydney, 24 December, 1884.

Sir, I have the honor to acknowledge your letter of the 23rd instant, and in compliance with the request of the Commission certify that, to the best of my knowledge and belief, the iron bridges over the River Macquarie at Bathurst and Wellington were carried out strictly in accordance with the drawings previously furnished, and which are now returned.

I have, &c.,

JOHN WHITTON.

The Secretary to the Royal Commission on Railway Iron Bridges.

Department of Public Works, Railway Branch,
Engineer-in-Chief's Office, Sydney, 19 January, 1885.

Sir, In reply to your letter of 19th ultimo, having reference to the iron bridges on the railway lines of this Colony, I have the honor to state, for the information of the Bridges Commission, that the following iron bridges have been carried out, to the best of my belief, in strict accordance with the drawings now furnished, viz., Penrith, Solitary Creek (five bridges), Aberdeen, Macdonald River, Peel River, and Peel-street, Tamworth.

I have to express my regret that the correct drawings of the bridges over the Wollondilly River, &c. (five in number), were not in the first instance forwarded to the Commission, but as these bridges have been erected upwards of sixteen years, the fact of any alteration having been made in the details of the girders had escaped my recollection. The strength of the girders, however, was about the same as in the original drawings, and the correct information has since been given to the Commission.

The only drawings of the ironwork of the bridges over the River Peel at Tamworth and the Macdonald River are those now forwarded, and which show the erecting marks, but the details are similar to the end spans of the bridge over the Hunter at Aberdeen.

I have, &c.,

JOHN WHITTON.

The Secretary, Royal Commission on Iron Bridges.

No. 19.

PAPERS RELATING TO THE MENANGLE BRIDGE.

ON the 2nd July, 1884, the Commission applied to the Engineer-in-Chief for Railways for all the information recorded in his office relative to the design of the bridge at Menangle, and to the testing of the bridge at the time of opening it for traffic, mentioning the camber and deflection in the centre of the girders and at points of contra flexure. The following papers were received in reply:—

Sir, Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 10 July, 1884.

Referring to your letter of 2nd instant, I have the honor to submit the following papers relating to the design, testing, &c., of the railway bridge at Menangle, viz.—

Copy of Inspector Morgan's report, dated 22 May, 1863.

Extract from Mr. Whitton's note-book, dated 29 June, 1863, re testing bridge.

Copy of article in *The Engineer* of 18 December, 1863.

The information asked for re the camber of this bridge is probably contained in the specification,* which is now before the Commissioner.

The Department has no information respecting the deflection of bridge at points of contra flexure.

I have, &c.,

The Secretary to the Royal Commission on Iron Bridges.

W. H. QUODLING.

* See extract from specification annexed.

MENANGLE BRIDGE.

Extract from Specification, page 7, *re* camber of Bridge.

"It is intended that each span should have a camber of 2" to ensure perfect curvature. Throughout each 150 a template must be laid down in the contractor's yard for making up the various lengths, and a platform having the true curve fixed for erection of the girders."

REPORT ON THE DEFLECTION OF MENANGLE BRIDGE.

Memorandum to John Whitton, Esq.

Sir,

Great Southern Railway, Engineer's Department, 22 May, 1863.
I beg to inform you that the slack blocks have been struck from under the longitudinal girders between Nos. 1 and 2 openings, Menangle Bridge, which proved very satisfactory, the deflection in the centre of either opening not being more than 0.03 and less in proportion towards the piers or roller plates. The width in the clear of girders was equally satisfactory, the only perceptible difference being in the centre of No. 1 opening, which was $\frac{1}{8}$ of an inch narrower after the blocks were struck.

I am, &c.,
W. MORGAN.

EXTRACT FROM ENGINEER-IN-CHIEF'S DIARY FOR 1863.

Monday, 29 June, 1863.

At Menangle testing wrought-iron girders. Box girders for double line span 150 feet.

3 engines on up road stationary, weighing about 110 tons.

Two engines weighing 90 tons, drawing twenty trucks, weighing about 200 tons; total weight, 290 tons.

First opening, deflection in centre $\frac{1}{10}$ of an inch on side dead weighted, on running side $\frac{6}{10}$ of an inch.

Centre opening similarly weighted dead load side $\frac{3}{10}$ of an inch, running side $\frac{4}{10}$ of an inch.

No. 3 opening similarly weighted, deflection dead load side $\frac{1}{10}$ of an inch, running side $\frac{6}{10}$ of an inch.

Permanent set $\frac{1}{10}$ of an inch.

Three engines were placed on up line over each opening and two engines took the waggons, &c., over the down road at a speed of about 25 miles an hour.

JOHN WHITTON.

THE MENANGLE VIADUCT ON THE GREAT SOUTHERN RAILWAY OF NEW SOUTH WALES.

From *The Engineer* of 18 December, 1863.

WE promised some time ago to give some details with regard to the Menangle Viaduct, carried out by Messrs. Peto & Co., on the Great Southern Railway of New South Wales, and we now proceed to fulfil our pledge. It was at first intended that the bridge should be of stone or brick piers, with wrought iron girders; but in consequence of Mr. Rhodes demanding what was considered too high a price for ironwork, Mr. Whitton recommended a change in the design, and drawings were made for a timber bridge. Copies of the drawings were about being prepared, when, in February, 1860, disastrous floods occurred, and the rising of the river 5 feet higher than it had ever before risen, necessitated the preparation of fresh designs in order to raise the bridge 7 feet. Shortly afterwards Mr. Rhodes left the colony, and the Railway Department then worked more harmoniously with Mr. Wilcox, who now had the entire charge of the works for contractors.

It was decided that the original designs should be carried out, and that Mr. John Fowler, of London, should act on behalf of the Government of New South Wales in agreeing with Messrs. Peto, Brassey, & Co., in England, as to the price of the ironwork of the bridge, fixed in place, and instructions were sent home to him to that effect; at the same time Mr. Whitton's designs were forwarded to Mr. Fowler, who worked out the strength and thicknesses and superintended the work in England.

The Nepean at Menangle is in summer a mere rivulet of perhaps 40 feet width, but after rains it rises with fearful rapidity; in ordinary wet seasons it is 500 feet wide, and in 1860 it rose 55 feet above the summer level and overflowed the banks for some distance. The level of the rails is 66 feet above the bed of the river, but only 6 feet above the floods of 1860. The distance between the points at which the railway meets the opposite embankment is 1,912 feet.

The ironwork was made at Messrs. Peto & Co.'s works at Birkenhead, and in October, 1861, the whole of the plates and rivets were shipped in two vessels at Liverpool; one of the vessels arrived in Sydney in the following April, but the other vessel, which contained the ironwork for the first and third spans, was unfortunately wrecked shortly after leaving the Mersey; the loss was immediately replaced, and the vessels with the replaced plates arrived in Sydney, one in October and the other in December, 1862. The plates on being discharged from the ships were placed on trucks and taken along the tramway and the railway to within a few yards of their destination. It was about the middle of October that the fixing of the ironwork commenced; it was finished in July, and therefore the work has been done in little more than six months.

Consequently, besides the tubular bridge across the river, it was necessary to construct a timber viaduct upon either bank; that on the northern bank is 980 feet in length, and that on the southern 440 feet. The iron girders rest upon four stone piers, the proportions of which were designed with a regard to the weight they would have to sustain and the concussion from timber and debris brought down by the floods. Their extreme dimensions at the base are 80 feet by 20 feet, tapering upwards to 52 feet by 12 feet; they are oval in shape and terminate at the top with an impost course. They are not entirely solid, but are constructed with vertical openings, by which a large quantity of masonry is saved without any diminution of strength. Some difficulty occurred in finding the stone for the piers, that obtained from the quarry first opened proving unfit for the work. Subsequently a sandstone quarry was discovered on the bank of the river, about a mile and a quarter from the spot, and a railway was at once laid between the quarry and the bridge; being on an easy incline the loaded trucks ran down without any traction. A temporary staging was carried across the bed of the river, upon which double rails were laid, and by means of an endless rope the loaded trucks carried down the blocks of stone to the piers—their descent on the one line exerting the force for bringing up the empty trucks on the other.

The first pier stands on the northern bank and was erected without much trouble; but great difficulty was experienced in obtaining foundations in the bed of the river for the middle piers. Repeated and discouraging obstacles were encountered in sinking for foundation for the third pier; a vast quantity of debris and soil had to be removed and an immense coffer-dam to be constructed. Steam-engines were employed night and day to pump out the water, but it appeared impossible to prevent its inflow. To give an idea of the amount of labour and anxiety which the construction of the third pier involved, we may state that a depth of 28 feet below the water level had to be excavated to obtain the foundation. The fourth pier, which is on the southern bank, does not rest upon the rock, but upon a timber platform fixed upon parallel rows of bearing and sheathing piles; the former were driven down to the rock at depths of from 45 feet to 60 feet; the latter were only driven about 8 feet below the platform—their use being to prevent the sand from being washed away from around the piles. On the top of the bearing piles longitudinal and transverse sills were placed, covered with two layers of diagonal planking, and upon these the masonry was laid. The blocks of stone were cut at the quarry in 16-inch courses and dressed. The total amount of masonry, brickwork, and concrete contained in the piers is 7,300 cubic yards. Before the masonry of the fourth pier was finished a commencement was made with the fixing and riveting of the iron plates. These, as we have said, were conveyed by the tramway and railway from the ship's side to the vicinity of the bridge. As temporary supports for the girders while being fixed, three bays of piles were driven between each pier, and the staging brought to the required level.

The viaduct to the northern pier having been completed, a continuous line of rails was carried upon the staging between the piers, and by means of travelling-crabs, worked by steam, the plates were picked up and carried to their intended places, where they were properly fixed and riveted. In describing the shape of the bridge we may say that it consists of two parallel, upright, longitudinal, tubular girders, 25 feet apart, joined at their lower extremities with cross-girders, the shape being that of the letter U with corners squared. There are three spans of 150 feet each in clear, and the girders are riveted over the piers which, being 12 feet thick and with a bearing at each end, would make a continuous girder of 486 feet.

A section of either longitudinal girders presents one oblong upright compartment, 9 feet in length by 20 inches in width, with two small compartments below called bottom boxes, each about 18 inches square, and with two boxes above of similar size. The entire height of either longitudinal girder is 12½ feet, the top and bottom boxes projecting beyond the sides of the girders. The plates which are mostly half-inch in thickness are riveted together with angle and T shaped pieces, in addition to which there are inside the girders, at intervals of 3 feet, cross-girders above and below, leaving the centre open for a space of about 2 feet, so that until the pilasters are fixed a person can see from one end of the tube to the other. The cross or kelson girders are not tubular but merely plated girders; they are about 25 feet in length and are placed 3 feet apart, their ends being riveted to the bottom boxes. Ironbark close planking is laid above the girders the entire length of the bridge; a single line of rails is laid along the eastern side, the western side being available for road traffic in the event of its being required for that purpose. The ironwork contained in the girders amounted to 1,050 tons, and there were no less than 245,000 rivets used. The two viaducts, of which the approaches to the bridge upon either bank consist, are formed of bays of four upright piles and two battering piles, fixed with walings and braces, with openings of 25 feet. The superstructure consists of double longitudinal girders above the corbels, with transverse joints between; the planking is laid upon the upper girders, and above this is the ballasting and permanent-way. In the construction of these viaducts and in the joists and planking of the bridge, 76,000 cubic feet of timber were used. The entire cost of the bridge, including the approaches, has been about £80,000. At the official trial a test was made of the strength of the northern timber viaduct, by means of a rod attached at the top to a girder in the centre of one of the openings, and which pointed to a gauge resting on the ground underneath. A heavy train was driven down and up at full speed along the viaduct, and the deflection in each case was found to be only three-eighths of an inch. Subsequently the testing of the more important and interesting part of the structure took place. For the purpose of ascertaining the amount of deflection wire had been stretched close to each of the main girders; its ends were attached to posts resting on the tops of the end piers and kept tight by heavy weights. Along the side of either girder were a number of cards marked off with eighths of an inch, and the elevation of the wire on any of these scales indicated the deflection of the girder at that part. A theodolite was also fixed on the parapet of one of the piers, from which observations were taken during the testing. The ordinary traffic along the bridge will be upon a single line of rails, but for the purpose of applying the most severe test that could be obtained a second line was laid down, and five of the heaviest locomotive-engines on the line were brought to the spot. Three of these engines coupled together were placed in succession over each of the openings upon one line of rails, and while there the other two engines, drawing a train loaded with iron, weighing about 200 tons, were driven at full speed on the other, the total weight at one time on the span being not less than 290 tons. The rapid motion of the long heavy train between the hollow tubes produced a loud rumbling noise and also considerable vibration, but, as will be seen from the following particulars, the deflection of the girders was very slight. On the first (northernmost) opening the deflection was on the up side half an inch, and on the down side three-sixteenths of an inch; on the centre opening the deflection was on the upside three-tenths of an inch, and on the down side four-tenths of an inch; and on the third opening on the up side the deflection was six-tenths of an inch, and on the down side five-tenths of an inch. These results were severally confirmed by the theodolite.

Afterwards the five engines, coupled together with all the trucks, were run over the bridge, and the total deflection was the same as with the previous experiment—six-tenths of an inch. Upon the weights being taken off it was found that the girders had settled down a little more than a tenth of an inch. We need scarcely state that, as compared with structures of the same character and dimensions that have been tested in England, the deflection is extremely small. The experiments satisfactorily demonstrated the immense strength of the girders.

No. 20.

THE WOLLONDILLY BRIDGES—ALTERATION IN DESIGN.

IN the evidence of Mr. Whitton, as will be seen by questions 2122 and 2123, reference is made to an alteration in the construction of the Wollondilly Bridges at the first and second crossings as compared with the designs for these bridges, and on this subject the following letter was received from the office of the Engineer-in-Chief for Railways:—

IRON BRIDGES, CONTRACT No. 7.

Picton to Goulburn.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 16 September, 1884.

Sir,

In further reference to your letter of 2nd instant, I regret that the original drawings of the Wollondilly Bridges were forwarded in error, and that a slight alteration in design was forgotten.

The working drawings cannot be found, but I forward, for the information of the Commission, a copy of Mr. Fowler's letter of 26th June, 1866, describing the alteration in question, and a statement of the sectional areas of ironwork of the bridges, for 60ft. and 130ft. spans.

The Secretary, Royal Commission on Iron Bridges.

I have, &c.,

W. H. QUODLING.

[Enclosure.]

2 Queen Square Place, Westminster, S.W., 26 June, 1866.

My dear Sir,

Further tracings (Nos. 4 and 5) have been duly received through Captain Mayne by this mail for the wrought iron bridges on No. 7 contract; since my last to you on the subject I have to inform you that the contract has been let by Mr. Russell to Messrs. De Bergur & Co. for the whole quantity, and the plates for the Barber's Creek Bridge are nearly all delivered and tested; I am glad to say with very good results the Rhymney Company are rolling the plates, and De Bergur & Co. are a firm of such reputation that I think we have no fear of their turning out anything but first class work.

I enclose the calculations for the 60ft. spans, together with a diagram of strains and proposed sections at top and bottom; these differ a little from the diagram sent home, but I do not think the weight of the girders will be increased.

I also enclose the calculations for the cross girders by the plans received here, which give the height of rail, 7 inches above the floor; I see it is intended to spike the chairs down to the longitudinal. I would suggest that the chairs be spiked down between the cross girders so that the 14×7 ironbark timber may distribute the load between two girders or else every time the train crosses the bridge the maximum strain will come on them if the chairs are fastened down over the girders.

I would also suggest a slight alteration in your mode of laying the floor (as per tracing) so that you can get at your longitudinal sleepers for inspection and renewals without removing the planking; if you approve of this you will perhaps instruct me through Captain Mayne as to procuring the small fangs for attaching the plank to the cross girders.

As regards the 130ft. openings, finding that the cells would be so difficult to put together by reason of the very small space left inside, I have ventured to alter the form of the top tab'le of the girder and enclose a tracing showing what I propose, and which will, I think, give equal stiffness, and enable your men at all times to paint and examine; the exact section indicated may not be adhered to because of joints, &c., but we will keep to it as closely as we can. I do not propose to differ from it in any other respect and hope you will approve of it. Will you kindly say by next mail, after receipt of this, whether the arch angle iron shall be supplied, as you had in the previous girders sent you, and which is shown in red lines; it gives a nice appearance, and relieves the effect of the elevation of a plate girder.

I am, &c.,

John Whitton, Esq., Engineer-in-Chief, Railway Department, Sydney.

JOHN FOWLER.

SAMPLES OF RIVETS FROM PENRITH AND MENANGLE BRIDGES.

SAMPLES of rivets from the railway bridges at Penrith and Menangle were forwarded to the Commission from the office of the Engineer-in-Chief for Railways, with the following correspondence :—

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 12 August, 1884.

Sir,

I have the honor to forward, for the information of the Royal Commission, two reports, furnished by Inspector Ewing, of this department, on sample rivets brought from the sites of the railway bridges at Penrith and Menangle, same being samples from rivets cut out of these bridges and of rivets supplied for renewals by the Existing Lines Department respectively.

Accompanying the reports are the cut and broken rivets, showing cross section, numbered and labelled as per accompanying list.

The Secretary to Royal Commission on Iron Bridges.

I have, &c.,
W. H. QUODLING.

Penrith

Penrith Bridge.

- Nos. 1, 2, and 3, $\frac{3}{8}$ " rivets, cut out of bridge.
 Nos. 4 and 5, $\frac{3}{8}$ " rivets, supplied by Existing Lines Department for renewals.
 Nos. 6, 7, 8, and 9, 1" rivet, " " "

Menangle Bridge.

- A B and C, $\frac{3}{8}$ " rivets, supplied by Existing Lines Department for renewals.
 D, 1" rivet " "

Penrith Bridge.

REPORT re sample of rivets (old and new) brought from site of railway bridge, Penrith.

Nos. 1, 2, and 3 are $\frac{3}{8}$ " rivets, and have, I think, been cut out of the bridge; have since been cut and broken, showing section of iron, which is excellent, giving long tenacious fibre, with good lustre, two having only about 5 % crystal.

Nos. 4 and 5 are also $\frac{3}{8}$ " rivets, similar, I suppose, to those used, replacing ones condemned. No. 4, cut and broken, shows a strong tenacious iron, with good fibre and lustre—a good specimen of rivet iron. No. 5, cut and broken, show section of very inferior iron—30 % of a coarse crystalline nature, 70 % fibrous, but short and dark, with no tenacity; broke short second blow.

No. 6, a 1" rivet, cut and broken, shows a good sample of rivet, strong and tough, with good colour and long tenacious fibre.

No. 7, a 1" rivet, cut and broken, 95 % fibrous, but short and dark, with no tenacity, broke short second blow.

No. 8, a 1" rivet, cut and broken, 50 % crystalline, 50 % fibrous, but, even when bent and broken with the grain, gave no tenacity, breaking short off.

No. 9, a 1" rivet, cut and broken, like the rest—the worst specimen of the lot; all the nature of the iron seems perished, and if the term rotten can be applied to iron it would surely be in keeping with this sample, for it broke "short as a carrot" first blow.

The original rivets give 95 % of really good chain or rivet iron, with only 5 % hard crystal. Renewing rivets give 33·3 % of good rivet iron and 66·6 % iron of very inferior quality, as per samples.

Respectfully yours,
 ROBERT EWING.

6th August, 1884.

To the Engineer-in-Chief.

Menangle Bridge.

Report on sample rivets, cut and broken, showing cross sections of same.

Sir,
 Herewith find the results of above.

A B C, $\frac{3}{8}$ " rivets; D, a 1" rivet.

A, cut and broken, shows good sample of iron, tough and fibrous, about 5 % crystalline; took five good blows to break it.

B, cut and broken, showing cross section, 50 % crystalline, portion of same firm and good, 50 % fibrous, but dark and short; no tenacity, broke off first blow.

C, cut and broken, showing section of inferior iron, 50 % coarse crystal, 50 % lustreless, dark and short in fibre; broke lean away first blow.

D, a 1" rivet, cut and broken, showing section of badly refined iron, 80 %, with crystal as coarse No. 2 pig iron, 20 % good tough lustrous iron; broke short first blow.

19th July, 1884.

ROBERT EWING.

To the Engineer-in-Chief.

No. 24.

BOTTOM BOOMS OF PENRITH BRIDGE.

DURING the inspection by the Commission of the Penrith Bridge the cells of the bottom booms were found in such a state of dirt that it was impossible for anyone to go through them. A letter was therefore written to the Engineer for Existing Lines requesting him to have the booms cleaned out, and the following reply was received:—

Sir, Railway Department, Office of Engineer for Existing Lines, Sydney, 20 June, 1885.

Referring to your letter of the 8th instant, requesting that the bottom booms of the Penrith Bridge may be swept and cleaned for inspection by the Railway Bridges Inquiry Commission, I have to inform you that the work is now in hand, but to do it thoroughly will take about four weeks, as the cleaners have to travel as much as half the length of the viaduct to get the dirt out. Otherwise the booms are ready to be inspected.

I am, &c.,
 GEO. COWDERY,
 per G. W. LANDER.

The Secretary Railway Bridges Inquiry Commission.

No. 25.

PENRITH BRIDGE.

INSPECTION inside of Main Girders, by a member of the Commission.

| Division into sections at flange plate joints. | Through the middle cell of the upside girder. Starting from Sydney end. | Notes. | Plates in bottom pile of top flange. | Plate thickness in $\frac{1}{16}$ th of inch. | Cover plates in plate joints, lower pile of top flange. | Notes and remarks, small top cell. | Through outside cell in top boom of upside girder. Starting from Sydney end. |
|--|--|--|--|---|---|---|---|
| 1 | 4 blind holes, 2 dummies in corners, 10 loose rivets in top boom. | Dummy rivets over T irons generally (about $\frac{1}{2}$ total number), after 15 cross girder attachment rivets nearly all nobbled, too small in nobbled end, very small average loose. Rivets in diaphragms and T irons many loose, most in second half girder. | $3 - \frac{3}{16}$ " | 9 | $\frac{5}{16}$ " x 2' 8" | All central web or stringer rivets are nobbled. Covers to curved plates have been re-riveted, and are good throughout. All central web or stringer rivets are nobbled. Spaces given in curved plates and side L joints are what they are open on the face and some way in, side joint liners are tapered down to nothing. | Nobble-headed rivets in vertical stringer. Fair average riveting, not quite up at curved plate. L iron $\frac{1}{2}$ off curved plate. |
| 2 | Stay rivets bad generally, 5 flange rivets vibrating. | | $3 - \frac{1}{4}$ " | 12 | " " | | |

No. 26.

WELLINGTON BRIDGE—ALLEGED SETTLEMENT OF EAST PIER.

Mr. W. H. Quodling to The Secretary to the Royal Commission on Railway Iron Bridges.

WELLINGTON BRIDGE.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 6 January, 1885.

Sir, I have the honor to forward, for the information of the Royal Commission, copies of official reports by Mr. G. C. Clark, District Engineer, dated 18th and 25th June, 1881, respectively, relating to an alleged settlement in the Wellington Bridge cylinders in 1881.

I have, &c.,

W. H. QUODLING.

Mr. G. C. Clark to The Engineer-in-Chief for Railways.

Sir,

Wellington, 18 June, 1881.

I have the honor to report there is no sign of a settlement in the Wellington Bridge cylinders. The levels taken give exactly the same result after a week of exceptionally heavy traffic, which has included the constant running of the ballast train, and a number of double goods trains with two locomotives to each.

I unfortunately did not take a set of levels over the road immediately on its completion, and before the traffic had commenced, and as most of the levellings during the progress of the works were done in company with Mr. Warren, the entries were not on every occasion booked or entered in the same book.

Mr. Warren's book, which had been taken to Sydney by Mr. Watkins, could not be obtained for a few days, and it contained the levels taken to check the tops of the cylinders in August, 1880, and these levels were taken from the cylinders of No. 4 pier, it being the first bottomed, and I adopted it as the one to complete the remainder of the work from. At this time it showed we had got the cylinder of No. 1 pier decimal .14 too low, and I instructed that the work should be regulated, so as to absorb any little difference in the levels of the cylinders.

What gave rise to a report of a settlement was Inspector Hollis applying for packing under the rails on the bridge, and Mr. Cowdery came up to Wellington immediately, arriving here on the Sunday morning; but I did not know he was in Wellington, or anything about a supposed settlement in the bridge until Monday morning, when I immediately examined the work, and pointed out the apparent settlement was due to the road being lifted too much on the approach to the bridge, and that it was not consistent to suppose a settlement had taken place when only one of the bearings of the rails was off the timber; and that, if a settlement had taken place, it could only be expected that if the rails did originally bear on the timbers that the rails would have followed with the girders and cylinders, or that more than one bearing would be off.

I went under the bridge and pointed out that the right-hand cylinder was low; but in carrying out the superstructure the work was made transversely level for the road, and the levels on the road only show decimal .02 low on the right-hand side, and this is due to the bearings being cut too deep, and it is only one of the bearings on this side, and near the change of camber, from the plate girders to the lattice girders, which change was made $\frac{3}{4}$ of an inch, and still shows the same.

From the conversation that took place at the time I did not anticipate you would be informed of what was only a supposition on the part of Inspector Hollis, and also, not having a set of levels obtainable at the moment, that I could positively identify with the work, I thought it better to wait and prove if any settlement was taking place.

I have, &c.,

GEO. C. CLARK.

Memo.

Mr. Inspector Chapman to District-Engineer Stephens.

Sir,

Goulburn, 4 July, 1885.

EXPERIMENTS IN VICTORIA ON ELASTICITY AND STRENGTH OF TIMBER.

On the 16th June, 1885, the Commissioner, in a letter addressed to the Engineer-in-Chief for Railways in Victoria, requested to be furnished with the results of timber testing experiments carried out by the Railway Department of that Colony, and in reply received the following:—

Sir, Engineer-in-Chief's Office, Railway Department, Melbourne, 19 June, 1885.

I have the honor to acknowledge the receipt of your letter, dated 16th instant, and in reply to enclose the result of some experiments made by this Department on different Colonial and other timbers, in the year 1880.

I also enclose a copy of the report of the Carriage Timber Board, dated May, 1884, which I trust may contain information that will be useful to you.

I have, &c.,
ROBERT WATSON,
Engineer-in-Chief.

Secretary Railway Bridges Inquiry Commission, Sydney, N.S.W.

No. 31.

THE HEAVIEST TRAFFIC OVER THE WAGGA WAGGA VIADUCTS.

Particulars supplied by the Locomotive Engineer.

THE heaviest trains that pass over the Wagga Viaduct are double ones, viz.—Live stock specials. The total weight of a train of this description, inclusive of two locomotives and guard-van, is 396 tons 5 cwt. 2 qrs.

Details as follows:—

| | Tons | cwt. | qrs. |
|--|------|------|------|
| 2 Beyer and Peacock's bogie engines | 118 | 9 | 2 |
| 1 goods brake-van | 11 | 0 | 0 |
| 28 sheep trucks at 6 tons 17 cwt. each | 191 | 16 | 0 |
| 2,800 sheep at 60 lbs. each | 75 | 0 | 0 |
| Gross total | 396 | 5 | 2 |

The above-mentioned trains are also the largest. Total length from front of engine to rear of guards-van, 717 ft.—made up as follows:—

| | ft. | in. |
|--|-----|-----|
| 2 engines | 93 | 8 |
| 28 trucks at 21 ft. 6 in. each | 602 | 0 |
| 1 goods brake-van | 21 | 6 |
| | 717 | 2 |

Beyer and Peacock's bogie Class.

| | Tons | cwt. | qrs. |
|--|------|------|------|
| Weight in steam of engines and tenders in general use | 59 | 4 | 2 |
| Total length of engine and tender from extremes of buffers | 46 | 10 | |
| Coupled wheel-base of bogie passenger engine | 8 | 0 | |
| Wheel-base from leading wheel of bogie to trailing wheel of engine | 19 | 7 | |
| Wheel-base of Beyer and Peacock's 6-wheel coupled goods engines | 11 | 4 | |

| | Tons | cwt. | qrs. |

WM. SCOTT,
Locomotive Engineer,
28/5/84.

Commissioner.

PARTICULARS OF ENGINE No. 207.

Description—Single Bogie Tender Goods Engine, commonly called Mogul Engines.

Makers' name—Beyer, Peacock, & Co.
Position of cylinders—Outside.
Diameter of cylinders—18 inches.
Length of stroke—26 inches.
Diameter of wheels—Leading, 2 feet 9 inches; driving, 4 feet; trailing, 4 feet.
Six wheels, coupled.
Wheel base—Rigid, 11 feet
Wheel base—Total, 19 feet.

Weight of Engine and Tender "in Steam."

| | Leading. | | Coupled. | | Driving. | | Trailing. | | Total. | | | |
|------------------|----------|------|----------|------|----------|------|-----------|------|--------|------|------|------|
| | Tons | cwt. | qrs. | Tons | cwt. | qrs. | Tons | cwt. | qrs. | Tons | cwt. | qrs. |
| Engine | 7 | 14 | 0 | 10 | 11 | 3 | 11 | 1 | 2 | 13 | 1 | 0 |
| | 8 | 5 | 0 | 8 | 2 | 2 | 7 | 18 | 3 | 24 | 6 | 1 |

W. SCOTT.

* The weight, 12 tons 7 cwt. 3 qrs., represents two leading bogie axles, and should be divided by 2 to give the weight on each axle.

No. 32.

ENGINES USED IN THE TESTING OF THE MENANGLE BRIDGE.

Diagram showing Effective and Actual Areas in Booms, also the Curve of Areas calculated from maximum stresses

Notes { Flange-Plates 12' x 2'-9" x 1/2 where not otherwise shown
 The dotted lines show the Areas of Booms
 Thick lines show parts in Compression.
 Thin " " " " " Tension

BATHURST, WELLINGTON, AND ABERDEEN BRIDGES.

HORIZONTAL SCALE & VERTICAL SCALE FOR SHEARING STRESSES
 100 Feet = 1 Foot Tons
 VERTICAL SCALE
 1000 Foot Tons

Diagram of Bending Moments and Shearing Stresses produced by varying positions of live load.

Diagram of Maxima Bending Moments derived from Cases I to V

Diagram of Maxima Shearing Stresses derived from Cases I, II, III, and V

CASE I.—Three spans loaded with 1.3 tons per foot run.

CASE II.—First and second span loaded with 1.3 tons per foot run. Third span loaded with .6 tons per foot run.

CASE III.—First and third spans loaded with .6 tons per foot run. Second span loaded with 1.3 tons per foot run.

(Sig 866-)

CASE IV.—First span loaded with 1.3 tons per foot run
Second and third spans loaded with 6 tons per foot run

CASE V.—First and third spans loaded with 1.3 tons per foot run
Second span loaded with 6 tons per foot run

Case VI—Partial loading

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS.

(STATION BUILDINGS AT BATHURST, DUBBO, AND ORANGE.)

Ordered by the Legislative Assembly to be printed, 24 November, 1885.

[Laid upon the Table of the House in accordance with promise made by the Honorable the Secretary for Public Works, in answer to Question No. 1, on Votes and Proceedings No. 9, of the 22nd September, 1885.]

- (1.) What is the total cost of Railway station buildings, Station-master's residence, and goods' sheds at Bathurst ?
- (2.) The like information as to Dubbo ?
- (3.) The like information as to Orange ?
- (4.) The total amount of salaries and wages for the year 1884, paid at Bathurst to officials and other employés at the railway station and goods' sheds in that town ?
- (5.) The like information as to Dubbo ?
- (6.) The like information as to Orange ?
- (7.) The expenditure for the year 1884, in salaries and wages, on the workshops at Bathurst Railway Station ?

- (1.) *Question.*—What is the total cost of Railway station buildings, Station-master's residence, and goods' sheds at Bathurst ?
Answer.—£18,884.
- (2.) *Question.*—The like information as to Dubbo ?
Answer.—£10,461.
- (3.) *Question.*—The like information as to Orange ?
Answer.—£7,463.
- (4.) *Question.*—The total amount of salaries and wages for the year 1884, paid at Bathurst to officials and other employés at the railway station and goods' sheds in that town ?
Answer.—£5,040 11s. 6d. (Traffic only.)
- (5.) *Question.*—The like information as to Dubbo ?
Answer.—£3,779 2s. 4d. (Traffic only.)
- (6.) *Question.*—The like information as to Orange ?
Answer.—£3,908 2s. 5d. (Traffic only.)
- (7.) *Question.*—The expenditure for the year 1884, in salaries and wages, on the workshops at Bathurst Railway Station ?
Answer.—£1,823 18s. 5d.

1885-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CARSON WOODS' PATENT PAVING.
(AT JUNEE RAILWAY STATION.)

Ordered by the Legislative Assembly to be printed, 1 December, 1885.

[Laid upon the Table of the House in accordance with promise made by the Honorable the Secretary for Public Works, in answer to Question No. 14 on Votes and Proceedings No. 14, of the 30th September, 1885.]

COPIES of all Minutes, Documents, and Correspondence, having reference to the supply and use of what is known as Carson Woods' Patent Paving on the platform and approaches to the Junee Railway Station.

(Mr. Sutherland.)

SCHEDULE.

CARSON WOODS' PATENT PAVING.

No. 1.

The Traffic Manager to The Commissioner for Railways.

As it is decided that the present platform at Junee Junction is to remain, I shall be glad if the Commissioner will approve of its being asphalted over, because in wet weather it gets into a very bad state.

Further, there is no shelter there for passengers from the weather. I would therefore recommend further that a verandah be erected the whole length of the platform, similar to what has been done at Albury. This would prove a great convenience to passengers, besides being the means of keeping the luggage and parcels dry when transferring them in wet weather.

W. V. READ,
Traffic Manager,
(per D.K.),
13/7/83.

When at Junee recently I saw what an advantage the proposed improvements would be. What would be the cost?—CH. A.G. Mr. Cowdery, B.C., 18/7/83. Mr. Stephen, for estimate of cost.—G.C., p. G.L., 19/7/83. £1,920; detailed cost attached.—R.D.S., 10/8/83. Mr. Cowdery.

Mr. J. Rose to Mr. District-Engineer Stephens.

Covering present Platform, Junee Junction (similar to Victorian Platform, Albury).

Sir,

6 August, 1883.

I estimate the above at £1,914, as follows:—

| | £ | s. | d. |
|--|-----|----|----|
| 50 cast-iron columns, @ £5 14s. each | 285 | 0 | 0 |
| 200 spandril brackets, @ 12s. 6d. each... .. | 125 | 0 | 0 |
| Wrought-iron superstructure (30 tons), @ £30 per ton | 900 | 0 | 0 |
| Corrugated iron for roof (4 tons), @ £26 per ton | 104 | 0 | 0 |
| Foundations and labour for erection | 500 | 0 | 0 |

£1,914 0 0

P.S.—I have calculated this estimate from prices paid for that now being erected at Albury, but I believe a considerable saving could be effected by having the wrought-iron superstructure made at the Permanent-way shops, Sydney.

I am, &c.,

JOHN ROSE.

You have omitted to include the cost of asphaltting; also, give an estimate of the cost if wooden posts and plates are used.—G.C. (p. G.L.), 13/8/83. Mr. Stephen.

Asphaltting, £230. If wooden posts and plates are used, cost £1,500. Wooden roof recommended; both cheaper and better and also really more artistic. Strictly speaking there is not much shelter to be derived from these narrow covered-in platforms in driving wind.—R.D.S., 15 Oct., '83. Mr. Cowdery.

The total cost of asphaltting platform and erecting verandah in iron will be about £2,144; if wooden posts and plates are substituted for iron the cost will be about £1,730.—G.C. (p. G.L.), 16/10/83. Commissioner.

When Commissioner returns?—D.V., 17/10/83. End of year.—CH. A.G., 24/11/83. Resubmitted, 4/1/84. End of June, 1884.—CH. A.G., 12/1/84.

I beg to refer the Commissioner to my minute of the 13th July last, in which I recommended that the platform at Junee Junction be asphalted and a verandah erected over it, and should be glad if he would please direct the work to be carried out as early as possible.—W. V. READ (per D.K.), 12/1/84. Commissioner.

See papers herewith.—G.B., B.C., 17/1/84. Traffic Manager. Seen.—W. V. READ (per D.K.), 28/1/84. Commissioner.

No. 2.

Mr. W. A. Harper to The Commissioner for Railways.

Sir,

Sydney 10 March, 1884.

I have the honor to bring before your notice a sample of granolith paving which is now being used at all the principal Railway Stations in Europe and America, and I would respectfully solicit your patronage to encourage this very important local industry.

The cost of this material is fully 40 per cent. less than the sandstone paving now in use at your stations; and I have documentary evidence, of an indisputable nature, to prove that this material has withstood the heaviest foot traffic in London for ten years and still shows a good prospect of another five years' wear.

I am prepared to lay any station you may select at the rate of 1s. 3d. per foot, in slabs 12 feet by 6 feet, to which the freight must be added according to circumstances, and within 10 miles of Sydney, without extra charge. The average cost of sandstone is from 2s. to 3s. per foot within 10 miles of Sydney, according to the finish specified. The sandstone for Railway Station contracts, as far as Albury, is principally obtained in Sydney so that the item of freight is considerably in favour of the granolith.

Hoping that this matter will receive your favorable consideration,

I am, &c.,

WALTER A. HARPER, Civil Engineer,
Box 828, G.P.O.

Mr. Cowdery.—B.C., G.B., 13/3/84. I recommend that granolith paving be laid down in the interior of the urinal and passage at new station, Junee.—G.C. (per G.L.), 26/3/84. Commissioner. Approved.—CH. A.G., 1/4/84.

No. 3.

No. 3.

The Commissioner for Railways to Mr. W. A. Harper.

Sir, Department of Public Works, Railway Branch, Sydney, 3 April, 1884.
In reference to your letter of the 14th ultimo, offering to lay down granolith paving at any station I may select, in slabs 12 feet by 6 feet, at the rate of 1s. 3d. per foot, freight added, I have the honor to inform you that I have approved of this paving being laid down in the interior of the urinal and passage at the new station, Junee, and have to refer you to the Engineer for Existing Lines for instructions in the matter.

I have, &c.,
CH. A. GOODCHAP,
Commissioner for Railways.

No. 4.

Mr. W. A. Harper to The Commissioner for Railways.

Sir, Sydney, 12 April, 1884.
I have the honor herewith to offer to lay the Junee Railway Platform with granolith paving, in slabs 12 feet by 6 feet, for the sum of one shilling (1s.) per foot, freight added, to the satisfaction of the Engineer for Existing Lines.

I have, &c.,
WALTER A. HARPER.

Mr. W. A. Harper to The Commissioner for Railways.

Sir, Sydney, 11 April, 1884.
I have the honor to acknowledge receipt of your letter No. 84-7,306 *re* granolith, and have to thank you for your approval, and that of the Engineer of Existing Lines, for this material in lieu of that specified for Junee. I find that the railway platform is not included in the contracts let, which I understand is to be paved with gulong stone or asphalt.

As I am very anxious to lay down a railway platform with this material, and a portion of the ingredients may be obtained at Junee, I have decided to offer to lay the whole of the platform at a lower rate. This price, which I forward in tender herewith, is only $\frac{1}{3}$ of the cost of sandstone, and only slightly dearer than common asphalt, while I will guarantee it to outwear three sets of the others without removal.

The manager of the Paving Co. leaves next week to lay the small portion in the urinal and passage, so that I would take it as a great favour if you could afford this matter consideration, as I feel certain that no better opportunity could ever be found to bring this substance practically under your notice.

I have, &c.,
WALTER A. HARPER.

Mr. Cowdery.—G.B., B.C., 18/4/84. I cannot recommend this as the cost is nearly double that of asphalt, with which I propose to lay the platform at Junee.—G.C., 1/5/84.

Commissioner.—I have asked on other papers for some particulars. I should like to have a good trial of this granolith; it looks well, and if it is very durable it may be cheaper than asphalt in the long run.—CH. A. G., 5/5/84.

Mr. Cowdery.—G.B., B.C., 10/5/84. Previous paper herewith.—G.C. (*per* G.L.), 13/5/84. Commissioner. Paving platform at Junee:—What has the contractor to do, and is there any balance of work to be done in this respect; if so, who is to do it—how and when?—CH. A. G., 18/4/84. Urgent. Mr. Cowdery.—G.B., B.C., 18/4/84.

The balance of work in respect to the paving of the platforms, as provided for in the specification, is to be carried out by the Department, and I propose having them asphalted instead of using flagging or granolith paving.—G.C., 1/5/84.

I think it would be better to use granolith pavement; it is cheaper, much, than ordinary flagging, and though asphaltting would be a little cheaper the durability of the granolith would make it cheaper in the long run. I should like to know what the respective cost would be of granolith and the best asphalt pavement.—CH. A. G., 5/5/84.

Mr. Cowdery.—G.B., B.C., 6/5/84. The cost of paving the whole of the platforms at Junee with granolith, including freight at Class A, would be £951 6s. 10d.; and tar paving, £533 8s.—G.C. (*per* G.L.), 13/5/84. Commissioner.

See subsequent letter from Company, reducing their price 20 per cent. There are two platforms, and I think one should be paved with granolith, and the other with tar pavement. Let the platform in front of station-house be paved with granolith.—CH. A. G., 17/5/84.

Mr. Cowdery.—G.B., B.C., 18/5/84. Noted; I presume the price will be that quoted by Mr. Harper (*viz.*, 10d. per foot, including freight and all charges) quoted by him in his letter of the 15th May.—G.C., 20/5/84. Commissioner.

No. 5.

Mr. W. A. Harper to The Commissioner for Railways.

Sir, Sydney, 14 May, 1884.
I have the honor to inform you that as I can obtain part of the ingredients for granolith at Junee, I am prepared to carry out the arrangements proposed to you by Mr. Woods, *viz.*, to lay granolith for paving Junee Station at a reduction of 20 per cent. on previous quotation. As the Manager of the Paving Company is now at Junee awaiting instructions, I should take it as a great favour if you would confirm the arrangement.

I have, &c.,
W. A. HARPER.

Mr.

Mr. Cowdery, for report. With 20 per cent. off the cost must be very close to tar paving. Let me know to-morrow.—CH. A.G., 14/5/84.

| This will make the price as under :— | | £ | s. | d. |
|--|--------|-------|----|----|
| 16,000 sup. feet, at 1s. per foot | | 800 | 0 | 0 |
| 20 per cent. off | | 160 | 0 | 0 |
| | | <hr/> | | |
| | | 640 | 0 | 0 |
| Add freight for 25 tons, at 21s. 2d. per ton | | 26 | 9 | 2 |
| | | <hr/> | | |
| | | £666 | 9 | 2 |

A.L., 15/5/84.

Mr. C. Woods to Mr. G. Cowdery.

Sir,

253, George-street, 15 May, 1884.

Representing the Granolith Paving Company, I beg to send into you for your consideration an amended tender, consequent, as I explained to the Honorable the Commissioner for Railways, upon our finding gravel at Junee Station.

If all the paving required at Junee Station is given to that Company to be finished in their speciality, viz., the granolith pavement (acknowledged equal to blue stone flagging, if not better, as it does not wear smooth), the Company will undertake it at 1s. per foot, and also give a discount of 20 per cent. off this price.

Free freight to be given for about one-third of the granite to be used, as two-thirds of it can be found on the spot.

I have, &c.,

CARSON WOODS.

Our men are at Junee now, and we desire permission to go right along with this work, not to have to pay fares down and back.

Mr. C. Woods to Mr. G. Cowdery.

Sir,

253, George-street, 15 May, 1884.

We require to bring from Sydney the fine ground granite only.

Any quantity over 25 tons we may require for to finish this contract we will pay for. For 25 tons we ask carriage free.

If we can get the granite ground at Junee we will require no free carriage.

We have, &c.,

CARSON WOODS,

Granolith Paving Company.

On paper attached I recommend that Mr. Harper's tender be accepted for granolith paving at Junee Station at the price stated, 10d. per sup. foot.—G.C., 17/5/84. Commissioner.

Mr. W. A. Harper to The Commissioner for Railways.

Sir,

Sydney, 15 May, 1884.

In reference to my offer of the 12th April, to pave Junee Station with granolith at the rate of 1s. per foot, freight added, I have the honor to inform you that, as a portion of the granolith can be found on the spot, I am prepared to undertake to do the same at a reduction of 20 per cent. The cost of the whole station (say), 15,000 feet, at the rate of 10d. per foot, would be £625, including freight and all charges. Hoping that this reduction will meet with your approval,—

I am, &c.,

W. A. HARPER,

Box 828, G.P.O.

This is a reduction in the price, and I recommend it be accepted.—G.C., 16/5/84. Commissioner.

No. 6.

Précis of Case.

Granolith Paving.

UNDER date of 10th March, 1884, Mr. Walter A. Harper brought under notice of Commissioner the granolith pavement, which he offered to supply at 1s. 3d. per foot, plus freight charges, within 10 miles of Sydney without extra charge, and, on the recommendation of Mr. Cowdery, he was authorised to pave the urinal and passage at Junee Station with the material.

Per letter of 11/4/84 Mr. Harper wrote that he was anxious to lay a railway platform with the granolith, and that presence of his people at Junee would afford a favourable opportunity of paving that station, and he offered to do the work for 1s. per foot, plus freight.

Per letters of 14th and 15th May, Mr. Harper amended his proposals, offering to do the work at 10d. per foot, including freight, but Carson Woods & Co. wrote to ask for freight to be allowed on 25 tons of granite, intimating that for anything over that quantity freight would be paid.

Commissioner minuted that he would like to have the granolith used; that it is cheaper than stone, and more durable than asphalt, and that for that reason it would be cheaper in the long run than asphalt. Directs attention to later letters of Mr. Harper further reducing price 20 per cent. Directs that one of the Junee platforms shall be paved with granolith and the other with tar paving.

* Mr. Cowdery notes, and presumes the price will be 10d., including freight and all charges.

C.A.B., 24/5/84.

* Will Commissioner please say?—G.B., 26/5/84. Yes; I understand so; but Mr. Cowdery should have a proper understanding before giving order.—CH. A.G., 26/5/84. I have seen Mr. Harper, and have arranged for 10d. per super. foot, and he informs me he will have the work put in hand at once.—G.C. (*pro. G.L.*), 30/5/84. Commissioner.

No. 7.

Mr. W. A. Harper to The Commissioner for Railways.

Sir,

Sydney, 31 May, 1884.

As we are preparing the materials for laying down the Junee platform with granolith I should take it as a great favour if you would cause the platform to be prepared for it. The coping stone has to be laid, and the earthwork made up to the level, viz., $1\frac{1}{2}$ inch below the level of the finished platform. There are several large holes where the platform pillars have been placed; it would be of great service if these holes were filled with broken ballast, *well rammed*, to prevent future subsidence, and the material put on to bring the platform to the necessary level should be well and solidly rammed. Ballast or broken stone would be the best foundation.

I am informed that a considerable quantity of broken metal will be required for the space behind the station. If you would let me know the quantity I would take an engine and stone-crusher up, if the quantity and price would pay the cost.

Hoping to be favoured with your consideration for this subject,

I have, &c.,

W. A. HARPER,
Box 828.

Memo. from Mr. G. Cowdery to Mr. R. D. Stephens.

Railway Department, Office of Engineer for Existing Lines, Sydney, 30 May, 1884.

REFERRING to clause 27 of specification for the erection of new station at Junee, which provides that the platform will be built by the Commissioner, but the foundations under the iron columns must be built by the contractor. I wish to know at once what progress is being made with the construction of the platform, and if the coping has been laid, as the contractor for laying the platform with granolith is anxious to proceed with his portion of the work immediately.

G.C. (*per* G.L.)

Very urgent.

The wall is built, and 211 feet of the coping has been supplied; this week we commence setting this 211 feet. The remainder of the coping is now being sent in.—R.D.S., June 3, 1884. Mr. Cowdery. Would not ballast from the Hanging Rock be the best foundation for the granolith; if so, put it on at once?—G.C., 14/6/84. Mr. Stephens.

No. 8.

Mr. W. A. Harper to The Engineer for Existing Lines.

Sir,

Granolith Paving Company, Sydney, 20 June, 1884.

We beg to tender for excavating, removing, and carting away material from the back of the Junee Junction Railway Platform at the rate of three shillings (3s.) per cubic yard, and to supply and lay metal for the same at the rate of five shillings (5s.) per ton, to your satisfaction.

We have, &c.,

GRANOLITH PAVING CO.,
(*per* W. A. HARPER),
Box 828.

P.S.—We are anxious to supply this metal, as our granolith paving contract requires us to take an engine and stone-crusher to Junee.

Mr. Stephens for full report as to what this refers to; also as to cost.—G.C., 21/6/84. Report attached.—R.D.S., 1/7/84. Mr. Cowdery.

Memo. from Mr. R. D. Stephens to Mr. G. Cowdery.

Railway Department, Existing Lines Branch,

Office of District Engineer, Goulburn, 1 July, 1884.

I FORWARD for your sanction tracing showing approach road. Should you approve would you please have it returned to me.

I estimate that there is about 1,500 cubic yards of earthwork to be excavated; this we can ourselves do for 2s. 6d. per cubic yard (Mr. Harper's offer is 3s. the cubic yard). We want the stuff to widen out some of the banks adjoining Junee Junction.

We shall want some 500 cubic yards of pitching and about 400 cubic yards of broken metal. I notice that Mr. Harper makes no mention of the pitching; if you can get him to tender for this at a reasonable figure it would be an advantage to us.

The price, 5s. per ton for metal delivered and laid is satisfactory, and I would recommend that this offer be accepted on the understanding that one cubic yard weighs a ton—the metal to be measured in heaps previous to its being laid.

I may mention that the traffic is very anxious that this approach should at once be commenced.

There is about 420 cubic feet of stone kerbing required. Shall I make arrangements for this? I can readily and inexpensively procure the stone, the freight by rail being the only item which would run into money; but this should not much affect the question, the busy season being over.

R. D. STEPHENS.

As

As the traffic will be very light on this side of the line, cannot pitching be dispensed with and a little more metal used?—G.C., 2/7/84. Mr. Stephens.

Yes, I presume so, but the pitching would be preferable. The traffic will not be so light as is generally thought; June Junction is daily increasing in importance.—R.D.S., 4/7/84. Mr. Cowdery.

I recommend this offer to supply and spread about 600 cubic yards metal at 5s. per ton be accepted.—G.C., 7/7/84. Commissioner.

Recommended.—Ch.A.G., 11/7/84. Approved.—G.R.D., 16/7/84.

No. 9.

The Traffic Manager to The Commissioner for Railways.

ON Commissioner's 84/10,370 it is stated that one of the platforms at June Junction is to be paved with granolith and the other with stone.

If it is intended to erect a verandah at June Junction, as proposed in my minute of 13/7/83, enclosed, perhaps it would be desirable to have this done before the paving is taken in hand.

W. V. READ,
(per W.H.C.), 3/7/84.

Mr. Cowdery.—R.J.S., B.C., 9/7/84. No authority has yet been received to erect verandah.—G.C. (per G.L.), 5/8/84. Commissioner.

Verandah at June Junction.

PER minute of the 10th July, 1883, Traffic Manager wrote that as it had been decided that the present platform should remain, he would recommend that it should be asphalted, and that a verandah the whole length of platform should be erected.

Commissioner minuted that when at June Junction he had seen what a convenience this would be, and asked for cost.

Mr. Cowdery submitted estimate. Asphalt, £230; verandah, if cast-iron columns, &c., and wrought-iron superstructure, £1,914; if wooden posts and plates, £1,500.

About this time the material called "granolith" was brought under Commissioner's notice, and an interchange of minutes ensued as to whether granolith should be used for the platforms or asphalt. Ultimately Commissioner decided that one platform should be asphalted and the other paved with granolith.

In the course of this discussion the verandah seems to have been overlooked. In any case no instructions were issued with reference to it, and per minute of 3rd July, 1884, Traffic Manager again refers to the matter, minuting that if a verandah is to be erected it should be done before the paving is put in hand.

Referred to Mr. Cowdery; that officer minutes that he has had no authority to erect a verandah.

C.A.B.,
11/8/84.

Will trains be started from the platform upon which it is proposed to erect verandah. If it will be largely used, and the public kept waiting there for trains, I certainly think the work will be absolutely necessary, especially in summer.—Ch.A.G., 13/8/84.

Traffic Manager, B.C., 13/8/84.—G.B.

Will the south-western trains or the up main line trains still start from the up platform after the new buildings are finished on the down platform? If not, it will not be necessary to do anything to the up platform. But what about the down one? Is it being asphalted and covered over?—D.K., 14/8/84. Inspt. Roberts.

As soon as the new buildings are ready to occupy I propose, pending the erection of an overhead bridge or subway, to work the mail and south-west trains from the down platform. This will to a certain extent reduce the risk and inconvenience which passengers travelling by these trains will experience if both platforms are used. According to the plan of the proposed alterations in the station yard, provision is made for working both platforms. The mixed trains from Wagga will have to stand at the up platform, and passengers alight there; this will be very disagreeable in wet weather if the platform is not covered over as suggested. The down platform will be covered to a certain extent by the verandah of the new station building, but no more. I understand it is intended to granolith this platform. The amounts estimated for covering the up platform is in my opinion excessive, at all events would be considerably reduced if the same plan is adopted as that at Wodonga. I think a report might be obtained on the subject before anything is done. The new buildings will be ready to occupy in the course of five or six weeks, and I hope the question of covering the up platform will be settled and arrangements made for its erection by that time.—G. J. ROBERTS, 20/8/84. Traffic Manager.

But for all the passengers that will travel by the morning mixed train from Wagga Wagga I should hardly consider it necessary to erect a verandah on the up platform. If the mail and express trains, and also the south-western mixed trains, can always arrive at and depart from the down platform, all that is necessary I should think is to have that platform sufficiently protected.—D.K., 23/8/84. Inspt. Roberts.

It must be understood that my proposal is only a temporary arrangement pending the erection of an overhead bridge or subways, when one platform will be used as much as the other, and shelter will, therefore, be as much required one side as the other.—G. J. ROBERTS, 26/8/84. Traffic Manager.

But why will one platform be used as much as the other, seeing that the station buildings and the refreshment-room will be on the down platform. I should have thought that all passenger trains and the south-western mixed trains would arrive at and depart from that platform. Will that not be so?—D.K., 28/8/84. Inspt. Roberts.

In

In the morning we have the down mail, south-western, and No. 16 up mixed trains, all at the station at one time. The mail and south-western train might certainly stand alongside the down platform that being the most convenient. No. 16 up would run in alongside the up platform, and any passengers going south-west would have to cross over the line, pending the erection of an overhead bridge or subway. It would not be very pleasant for passengers going by 16 up to have to wait on the up platform without any shelter whatever. When an overhead bridge is provided or subways I shall use the up platform for the up south-western mixed trains, as there is only an interval of 10 minutes between the mixed south-west trains and the up mail, and this is not sufficient to tranship passengers, luggage, parcels, &c. This arrangement will be preferable to shunting passengers about in the train which would otherwise have to be done. Even to work the down mail and down south-west mixed train as proposed it would be awkward unless a dock is provided at the north end of the new station—which I presume will be made for the convenience of loading horses and vehicles,—to stand the south-western carriages in. The present dock will be useless when the new sidings are extended; in fact owing to the erection of the temporary refreshment-room it is almost useless to us now. The verandah on the new down side platform is an ordinary station verandah the length of the station; this will not be sufficient if we are to have the mail and south-west train at the platform at the same time. Passengers going from south-western to mail train, or *vice versa*, would not be under shelter as the mail train would take up all the space in front of the station. This would also make it awkward transshipping parcels and luggage in wet weather. I understood from the plans recently at Junee, that the Junction was to be so altered as to work trains to and from both platforms; this is when the interlocking is introduced at Junee.—G. J. ROBERTS, 30/8/84. Traffic Manager.

Send to Mr. Cowdery and ask if he will kindly let me have a look at the plan of Junee yard and station arrangements as they will be when finished.—D.K., 12/9/84.

After carefully considering this matter I think it is desirable that a verandah should be erected on the up platform, so that the south-western trains, as well as the mixed mail line trains, may arrive at and depart from it.—W.V.R., 31/10/84. Commissioner.

Verandah at Junee.

Précis of this matter is on the file. The Commissioner minuted that if the platform on which it was proposed to erect the verandah would be used to start trains from, the public would be kept waiting there, and the verandah would be an absolute necessity.

Inspector Roberts reported that as soon as the new buildings were ready, and pending the erection of foot-bridge or subway, the south and south-west trains would work from down platform; that according to the plans provision is made to work both platforms; that mixed trains from Wagga would have to stand at up platform and passengers alight there; that in his opinion the estimate for covering up platform was excessive, and might be much reduced if the Wodonga plan were adopted. Explained further that when the bridge or subway is provided one platform would be used as much as the other, and that the present verandah on the down side is only an ordinary station verandah, affording cover for one train only, whereas in the morning there are three trains all at the station at the same time, viz., the mail, the south-western, and No. 16 up.

Traffic Manager minuted that after carefully considering the matter he thought the up platform should be provided with a verandah, so that south-west and main line mixed trains might use it.

As will be seen by the *précis* Mr. Cowdery has furnished alternative estimates for the verandah. Shall the papers be sent to him for reconsideration in connection with Inspector Roberts' suggestion that a saving might be effected by the adoption of the Wodonga plan.—C.A.B., 6/11/84.

Mr. Cowdery, for further report.—D.V., 6/11/84. Mr. Overn.—G.C., 14/11/84. I wish to see Mr. Parry with plan of Junee station.—F.M.A., 16/12/84. Mr. Parry. I have seen Mr. Overn *re* verandah.—J.P., 22/12/84.

It seems that this station will shortly have to be worked as a double line station, and Mr. Parry thinks with me that what is required is that offices and verandah similar to those proposed for Goulburn and Bathurst are what is really required to meet this case. Will Traffic Manager please say if he is of this opinion.—F.M.A., 30/12/84. Traffic Manager.

That would involve too much expense. I think if the up platform is protected by a good verandah and a waiting-shed provided it will be sufficient.—W.V.R., 7/1/85. Engineer for Existing Lines.

No. 10.

The Traffic Manager to The Engineer for Existing Lines.

My attention has been drawn to the new platform at Junee Junction, which has worn badly in four or five places already. Will Mr. Cowdery please have it seen to at once? It ought not to be allowed to become unsafe for passengers.

Mr. Cowdery.

W. V. READ,

13/3/85.

Mr. Stephens, for report.—G.C., 16/3/85. Report attached.—R.D.S., 19/4/85. Mr. Cowdery.

Junee Junction Passenger Station granolithing.

Goulburn, 19 April, 1885.

THIS granolithing is, as you are of course aware, a complete failure; and from its component parts could not be expected to be anything else but a failure. It is expensive, weak, and totally unsuitable to the climate.

It being a patent we did not particularly care to interfere with its manufacture, as, should we have interposed, its failure would at once have been ascribed to our interference. I perceive that it has also been tried in Sydney, with what result you of course know. No doubt special care was taken in Sydney, but even there the result is simply a wearing into holes which might naturally be expected. The only thing to be done with it now is to pick out the 1½ inch of top layer of useless material, and substitute for it good asphalt,

asphalt, or rather, tar pavement, utilizing the—it is to be supposed—solid underlying foundation. It will be found to be by far the least expensive, and also by far the most effective substitute. In fact, when properly laid down as it is at the Goulburn and some of the suburban stations, I do not see what can be better than it for comfortable walking and even where it surpasses to my thinking the best flagging.

I would recommend that the above suggested course be pursued with regard to the Junee Junction new Passenger Station Platform.
R. D. STEPHENS.
Mr. Cowdery.

I beg to refer Mr. Cowdery to my minute of the 13th ultimo, relative to the platform at Junee Junction requiring repairs, and to remind him that nothing has yet been done in the matter. Will he please have the necessary work carried out at once.—W. V. READ (*per* W.H.C.), 7/4/85. Mr. Cowdery.

Mr. Stephens' previous papers were forwarded to you on 16/3/85.—G.C. (*per* G.L.), 10/4/85. Report attached.—R.D.S., 19/4/85. Mr. Cowdery. What will be the cost of carrying out the work as suggested by you.—G.C. (*per* G.L.), 23/4/85. Mr. Stephens. £75.—R.D.S., 24/4/85. Mr. Cowdery.

This refers to the platform at Junee Junction which was paved with granolith. As the platform now requires repairs, and as Mr. Stephens reports the granolith a failure, I recommend it be asphalted at a cost of £75.—G.C., 28/4/85. Commissioner.

Approved.—CH.A.G., 4/5/85. Mr. Cowdery, B.C., 5/5/85.—G.B. Mr. Stephens, to carry out.—G.C. (*per* G.L.), 6/5/85. I have given the necessary instructions. Please state how cost is to be charged?—R.D.S., 13/5/85. Mr. Cowdery. Please say how work is to be charged?—G.C. (*per* G.L.), 14/8/85. Commissioner. Working expenses.—CH.A.G., 18/5/85. Mr. Cowdery.—G.B., B.C., 18/5/85. Mr. Stephens, to note.—G.C. (*per* G.L.), 19/5/85. Noted.—R.D.S. (*per* C.E.F.), 20/5/85. Mr. Cowdery.

Mr. R. D. Stephens to Mr. G. Cowdery.

Railway Department, Existing Lines Branch, Office of District Engineer,
Goulburn, 4 June, 1885.

REFERRING to my M.P., 85/1,327, in which I estimated the repairs at £75, I regret to inform you that this matter is far more serious than was at first anticipated, and far more will have to be taken up, and also to a greater depth than was at first contemplated. In fact my first estimate will now be more than doubled—it is now £160—which kindly authorize. This includes the relaying the whole of the platform. At first we thought that some of the not much used granolithing might be made to do, but somehow it appears to and does go whether it is used or not. In a previous report I mentioned to you that the component parts of this granolithing would never make a good pavement. I am sorry to say that my prediction has more than been realized; in fact far beyond my own expectation. It is simply a complete failure; and the worst of it is that you never seem to know when you have come to the worst. I suppose it would not do to take up the whole and throw it away for rubbish; but that is precisely what it is.

I have made arrangements to start work next Monday, and do the most pressing portion of the platform; but it will look very patchy unless you authorize me to do the whole length. Please authorize me.
R. D. STEPHENS.

Mr. Cowdery,—I have seen this platform, and consider that the whole of the granolithing must be removed at a further cost of £85, and recommend it to be done.—G.C., 8/6/85. Commissioner. Approved—Working expenses.—CH.A.G., 11/6/85. Mr. Cowdery.—G.B., B.C., 11/6/85. Mr. Stephens to note and carry out work.—G.C. (*p.* G.L.), 11/6/85.

No. 11.

Extract from *Evening News* of 7 August, 1885, *re* Junee paving.

A defective pavement.

"THE Railway Department has put down at the Junee Junction a patent pavement which ought to create a row when Parliament opens. It has been in use only a few months, but is full of holes, and in places consists of nothing but loose sand. A puddled clay would have lasted twice as long."

Mr. Cowdery, for report.—G.B., B.C., 12/8/85. Urgent. What progress has been made with asphaltting platform. Let me know on Saturday morning certain.—G.C. (*p.* G.L.), 13/8/85. Mr. Stephens. The greater part of the asphalt is made up, and a part of the granolith on Sydney end of platform taken up; men will commence laying asphalt to-day.—R.D.S. (*p.* C.E.F.), 15/8/85. Mr. Cowdery.

Report herewith.—The renewal of this platform with asphalt was commenced on Saturday last.—G.C. (*p.* G.L.), 17/8/85. Examine for cost when completed.—B.C., M'L., 18/8/85. The cost of this work must be shown separate from ordinary repairs in the time sheets.—J.P.F., 11/9/85. Mr. Cowdery.

Mr. Stephens informed.—G.C. (*p.* G.L.), 14/9/85. Attached is a voucher in favour of Robert W. Johnston for asphaltting platform at Junee, amounting to £150 14s. 8d. Authority was obtained on Commissioner's 85/2,865 to carry out the work at a cost of £160. Authority is required for payment of the voucher.—J.P.F., 21/10/85. Secretary,—Pay.—CH.A.G., 23/10/85.

1885-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ILLAWARRA RAILWAY.

(AMOUNTS OF CLAIMS AND OF VALUATIONS FOR LAND RESUMED FOR.)

Ordered by the Legislative Assembly to be printed, 5 February, 1886.

[Laid upon the Table of the House in accordance with promise made by the Honorable the Secretary for Public Works, in answer to question No. 17, asked by the Hon. Member for South Sydney, Mr. J. Davies, on Votes and Proceedings No. 21, of the 4th February, 1886.]

1. Total amount of the claims for compensation for land resumed by the Government for Railway purposes on the Illawarra line.
 2. The valuations fixed by the Government Valuers.
 3. The names of the proprietors of the land resumed by the Government, and the amount claimed by each of the owners.

RAILWAYS.

No. 1.

The Engineer-in-Chief to The Minister for Works.

Department of Public Works, Railway Branch,
Engineer-in-Chief's Office, Sydney, 5 March, 1878.

Proposed Junction of the New South Wales Lines with Queensland Railways near Tenterfield.

I HAVE SEEN Mr. Stanley, as requested by the Minister, with reference to forming a Junction between the Railways of New South Wales and Queensland, on the New England border.

It appears that the Queensland Government have invited Tenders for the construction of their Railways as far as Stanthorpe, and that surveys are in progress towards the boundary of this Colony, following generally the course of Accommodation Creek, through Tenterfield North, to about the head of Tarban Creek in this Colony. This would bring the Queensland line within 12 miles of Tenterfield.

The trial surveys in this Colony are completed as far as Tenterfield, and I have arranged with Mr. Stanley to send a surveyor to complete that portion between Tenterfield and the Queensland boundary, to ascertain if a practicable line can be found.

The surveyors on the Queensland side are not yet finished, and it is possible that, in order to avoid what is considered to be a difficult country, some other point of junction will have to be determined upon.

JOHN WHITTON.

No. 2.

Mr. Palmer to The Engineer-in-Chief.

Government Railways, Engineer-in-Chief's Branch, 11 May, 1878.

IN accordance with your verbal instructions, that our Northern Railway trial surveys at Tenterfield should be connected with the trial surveys made by the Queensland Railway Department from Stanthorpe to the boundary of the two Colonies, I have to inform you that Mr. Francis left yesterday for Brisbane to proceed with this survey.

I gave Mr. Francis a letter to Mr. Stanley, asking him to supply the necessary information as to the terminal point of their surveys.

Mr. Francis takes one man with him, and no equipment, and I have instructed him to make inquiries at Tenterfield concerning the cost of the conveyance of himself and his men to and from work, while the distance is too great to walk, and to submit the price for your approval before settling.

HERBERT PALMER.

No. 3.

Mr. Francis to The Engineer-in-Chief.

SIR,

Brown's Hotel, Tenterfield, 19 May, 1878.

I have the honor to report that, in compliance with instructions received at your office, I called at the office of the Engineer-in-Chief for Railways at Brisbane, on my way to Tenterfield, and received there all the information necessary to enable me to find the points on the New South Wales and Queensland borders at which the surveys made by the Queensland Government in direction of Tenterfield terminate.

The Engineer-in-Chief for the Queensland Railways proposes two routes from Stanthorpe in direction of Tenterfield. One (of which the survey is completed) terminates at a point on the New South Wales and Queensland Borders, at the head of a creek and swamp known as M'Namara's Swamp; the other (of which the survey is now in progress) terminates at the intersection of the Ballandean Road with the New South Wales and Queensland Borders. This point is about 4 miles to the eastward of the first-named point. On my arrival at Tenterfield I engaged Mr. Cubis, who has a thorough knowledge of the Tenterfield district, to accompany me to the Queensland border, and to assist me in examining the country between Tenterfield and the points at which the Queensland surveys terminate. On Friday, the 17th, I examined the route by the Ballandean Road, and found the country generally easy, the only place likely to offer any difficulty being a gap or saddle in the range known as the Eight-mile Gap; but there is nothing very bad about this place.

Yesterday I examined the route by M'Namara's Swamp, and found the country easy until I arrived at the top of the Boundary Range, where the ground is steep and broken on the New South Wales side, and does not afford the same facilities for getting away from the range as the ground at the Ballandean Road. The distance from the Tenterfield Mill to the Queensland border, by the Ballandean Road, I estimate at about 12 miles, and by M'Namara's Swamp at about 15 miles. The route by the Ballandean Road therefore possesses the advantage of being the shortest by about 3 miles, and would afford a better plan and section at the Boundary Range. I consider this the best route for the New South Wales side. I purpose to commence staking out this route to-morrow, and wish to be informed whether it will be sufficient to survey this route only, or whether you wish to have a survey made of both routes.

I have, &c.,

A. FRANCIS.

The Queensland survey ends at a stake on the boundary marked 28M over 0.594, and a B.M. marked broad-arrow over QL over RY over B-M over 76. There is also a stake and B-M-75 at 28 miles.

No. 4.

3

No. 4.

Mr. Francis to The Engineer-in-Chief.

Sir,

Brown's Hotel, Tenterfield, 21 May, 1878.

I have the honor to report that Mr. Phillips, of the Queensland Railway Department, called on me yesterday on the work, and wished me to ride with him to the Queensland Border. I therefore went with him and rode over both the routes described in my report of the 19th inst. Mr. Phillips, after seeing both routes, concluded that the route by the Ballandean Road (the route recommended in my report as the best) is the best for both sides, and will recommend it to Mr. Stanley for adoption. I think, therefore, that there will be no necessity for me to survey more than one route—the one by the Ballandean Road.

I have, &c.,

A. FRANCIS.

No. 5.

Mr. Palmer to Mr. Francis.

29 May, 1878.

THE route recommended in your report of the 19th inst., and described as following the direction of the Ballandean Road, is the only one that you need survey.

HERBERT PALMER.

No. 6.

Mr. Palmer to Mr. Francis.

1 June, 1878.

A TRAVERSE connecting our trial line at Tenterfield with the Queensland survey on the Border, showing the practicability of joining the railways of the two Colonies, is all that is required at present, so do not stake out curves or take up time in working up your first rough trial line, and on completing the field-work you may send in June books to this office to be plotted.

HERBERT PALMER.

No. 7.

Mr. Quodling to Mr. Francis.

8 June, 1878.

WHEN you have completed this survey from Tenterfield to the Queensland Border *via* the Ballandean Road be good enough to furnish Mr. Surveyor Cannon, of the Queensland Railway Staff, with the necessary information for properly connecting the work of the two surveys at their point of junction, and obtain from that gentleman similar information.

W. H. QUODLING.

No. 8.

The Chief Engineer, Queensland, to The Engineer-in-Chief, Sydney.

Department of Public Works, Railway Branch, Chief Engineer's Office,

Sir,

Brisbane, 3 June, 1878.

Referring to the interview I had with you when recently in Sydney on the subject of connecting our railway surveys at the Border, near Tenterfield, I have the honor to inform you that, according to arrangement, an officer of my Department, Mr. Surveyor Phillips, has, in company with Mr. Surveyor Francis of your staff, made an examination of the country lying between Tenterfield and Nicholl's Gap, on Accommodation Creek, through which our trial line passes.

Mr. Phillips reports that both Mr. Francis and himself have formed a decided opinion in favour of the route *via* the Ballandean Road, as against that by Macnamara's Creek, the latter route being that which would join into the original trial survey on the Queensland side. In consequence of this I have instructed Mr. Surveyor Cannon, who is engaged upon these surveys, to make a deviation from the original trial line with the object of joining the survey now being made by Mr. Surveyor Francis *via* the Ballandean Road; and I should be obliged, therefore, if you would request that gentleman, when he has completed his survey to the Border, to furnish Mr. Cannon with the necessary information for properly connecting the work of the two surveys at their point of junction.

I have, &c.,

HENRY C. STANLEY,

Chief Engineer.

No. 9.

Mr. Quodling to The Chief Engineer, Queensland.

Sir,

Sydney, 10 June, 1878.

I am instructed by the Engineer-in-Chief to acknowledge the receipt of your letter of the 3rd inst., requesting that Mr. Cannon of your Department might be furnished with the necessary information for properly connecting the surveys on the Border at their point of junction, and, in reply, to state that Mr. Francis has been instructed in accordance with your request.

I have, &c.,

W. H. QUODLING,

Chief Clerk.

No. 10.

No. 10.

The Minister for Works, Queensland, to The Minister for Works, New South Wales.

Sir,

Public Works Department, Brisbane, 7 August, 1882.

Referring to a telegram which I had the honor to address to you on the 2nd inst., regarding the extension of your Northern Line to Tenterfield, and your reply duly received, I have the honor to invite your consideration to the subject of the point of junction of the New South Wales and Queensland Railways. It appears important that this matter should receive consideration as soon as possible.

I have, &c.,

JOHN M. MACROSSAN,
Secretary for Public Works.

Minute on No. 10.

By arrangement with the Engineer-in-Chief for Queensland, a survey was made (in 1878) from Tenterfield to Ballandean, on the border of the two colonies.—J.W., 16 Oct., /82. The Under Secretary for Works, B.C.

No. 11.

The Minister for Works, Queensland, to The Minister for Works, New South Wales.

Sir,

Department of Public Works, Railway Branch,
Brisbane, 14 November, 1882.

Reverting to the question of the probable junction near the Border of the New South Wales and Queensland Railways, I have the honor to address you upon the subject, and would invite your co-operation in the matter.

As time is pressing, I would suggest that the Government of New South Wales should appoint an officer of the Railway Department to meet an officer under the Queensland Government with the view of this subject being discussed, and the respective Governments advised thereon.

I have, &c.,

JOHN M. MACROSSAN,
Secretary for Public Works.

Minutes on No. 11.

It would seem that the Queensland Government is not aware that their Engineer-in-Chief for Railways arranged with Mr. Whitton that a survey should be made from Tenterfield to Ballandean (the latter on the Border of the two Colonies) with a view to a junction being made there. The survey was made in 1878. (See Mr. Whitton's report of 16 October last, on 82/12,826.) What the result of that survey was is not shown by these papers, nor whether any determination was arrived at as regards the point of junction.

I have stated that the Queensland Government do not seem to be aware, &c. I assume that they are not from the terms of their communication, and I am aware that Mr. Stanley, the Chief Engineer for the Queensland Railways, is in England on leave of absence.

Would it not be well to give the Queensland Government a reply of some kind?—CH. A.G., 12/2/83.

This matter has only now been brought under my notice, and I am desirous of immediately sending to Queensland an answer, already too long delayed. To enable me to do so, I will be glad to know from the Engineer-in-Chief whether the survey to Ballandean alluded to in his minute of 16/10/82, led to any conference with the Chief Engineer of Queensland, or otherwise, as to approval of a place of junction (if such a term be applicable to railways of differing gauges), or have any circumstances since 1878 (the date of such survey) transpired to cause any change in Ballandean being the place of junction?—A.S., 7/4/83.

How far is Ballandean from our farthest north contract,—and has sanction been obtained for carrying it to the Border?—A.S.

Mr. Surveyor Francis, of this Department, met Mr. Surveyor Phillips, of the Queensland Railway Department, by arrangement, and decided that the best place for the junction of the two railways would be at a point 12 miles from Tenterfield, *via* the Ballandean Road, and indicated by a stake on the Border marked thus:—28 M over 0,594, and a B. M. marked broad-arrow over QL over XX, over BM over 76. The Engineer-in-Chief of the Queensland Railways was furnished with information for properly connecting the two surveys at the point indicated. (See Assembly Papers, No. 71a, 1881, page 143.) I am not aware of any circumstances having occurred since the date of survey to necessitate a change in the proposed point of junction.—J.W., 17 May, 1883.

To be communicated to Queensland Government.—A.S.

No. 12.

The Minister for Works, Queensland, to The Minister for Works, New South Wales.

Sir,

Commissioner for Railways Office, Brisbane, 9 May, 1883.

Referring to a communication addressed to your Department on the 14th November last, regarding the probable junction of the New South Wales and Queensland Railways at the Border, I have the honor to ask you to favour me with the views of your Government on this matter, as discussion upon the subject with the object of a mutual understanding being arrived at as soon as convenient appears desirable.

I have, &c.,

A. NORTON,
Secretary for Public Works.

No. 13.

The Colonial Secretary, New South Wales, to The Colonial Secretary, Queensland.

Sir,

Colonial Secretary's Office, Sydney, 31 May, 1883.

Referring to a letter of 14th November last, addressed by the Secretary for Public Works of Queensland to the Secretary for Public Works of this Colony, with reference to the junction of the railways of the two Colonies, I have the honor to inform you that it appears that a railway surveyor from each Colony met by arrangement, and decided that the best place for the junction of the two railways would

would be at a point 12 miles from Tenterfield, *via* the Ballandean Road, and indicated by a stake on the border marked thus, 28M over 0594, and a BM marked broad-arrow over QI over NX over BM over 76, and that no circumstances have occurred since the date of survey to necessitate a change in the proposed point of junction.

I have, &c.,

ALEXR. STUART.

No. 14.

Minute by Engineer-in-Chief.

I HAVE been over this proposed extension from Tenterfield to the Queensland Border, and should it be decided to make a connection with the Queensland lines at the boundary of the Colonies, the ground is favourable for such a purpose. Naturally, the inhabitants of Tenterfield wish the connection to be made at Tenterfield, 12 miles from the border.

J.W., 30/6/84.

No. 15.

Minute by Commissioner for Railways.

I LEARN from Mr. Stanley, Engineer-in-Chief, Queensland, that the Queensland Government have accepted the site indicated in the enclosed letter from this Government. Mr. Stanley showed me a plan of station arrangements at this site, and I suggested some improvements in it, notably the lengthening of platform to 400 feet, the construction of a refreshment room, the placing of the sheds (two) for local goods on the same side of the line, instead of one on each side as proposed. The Traffic-manager North will be good enough to report on plan herewith, and furnish a time-table showing probable time of arrival and departure of through trains. Mr. Stanley promised to submit detailed plan of station building, which I suggested, as they are in advance of us with their construction towards the Border, should be built by them at joint expense. There will be, of course, final arrangements made in regard to this.

CH.A.G., 9/8/84.

[Urgent.] Plan herewith. Report herewith.—J. HIGGS, 15/8/84.

No. 16.

Memorandum by Mr. Higgs, Traffic Manager, Great Northern Railway.

Re Interchanging Station arrangements at the junction of Queensland and New South Wales Railways.

WITH the exception of the passenger platforms, which are far too short, I think the proposed arrangements would suit very well, assuming that the present table will be extended when the Border is reached. The down mail would arrive at the Border station at about 1:30 a.m., and depart about 4:30 a.m.

J. HIGGS, 15/8/84.

As the trains will arrive and depart at hours not usually given to the refreshment table, it would seem to be unnecessary to erect a refreshment station at the Border.—CH.A.G., 19/8/84. Send on with other papers to the Engineer-in-Chief.—CH.A.G.

No. 17.

Petition.

To the Honorable the Minister for Works, Sydney.

Sir,

The Humble Petition of the residents of Tenterfield and surrounding districts respectfully sheweth,—

That the near approach of the Great Northern Railway to Tenterfield induces your petitioners to respectfully request you to take into your favourable consideration the question of the break of gauge between this Colony and that of Queensland.

That your Petitioners are of opinion that if the break of gauge is made at the Border line, some 12 miles from Tenterfield, it will seriously affect the vested interests and trade of Tenterfield and northern New England, without giving any adequate return to this Colony in the shape of the sale of Crown Lands or otherwise. That it will necessitate the erection of a Border Station and other buildings, and the maintenance of a large staff of officials, as well as of Customs officers.

That the convenience of the necessarily large passenger traffic that will ensue upon the opening of the through line could be more effectively studied at the established town of Tenterfield than at a Border station, while the excellent and central site selected for the Tenterfield Railway Station would render it a comparatively easy matter to control the intercolonial goods traffic, which could be under the supervision of the resident Customs officer.

That your Petitioners beg most respectfully to request when the question of the break of gauge is before the Government for consideration that it will be determined to have the same at the Tenterfield railway terminus—to which place the Queensland line could be run at a nominal cost—and thus conserve to this portion of the Colony its legitimate traffic, and avoid the necessity for expensive Border stations and officials.

That your Petitioners desire to point out that in the erection of the Railway Station and other buildings at Tenterfield you will be pleased to give due consideration to the question of the break of gauge, so that sufficient accommodation may be provided to efficiently carry on the traffic between the two Colonies at Tenterfield.

And your Petitioners, as in duty bound, will ever pray.

(Here follow signatures.)

No. 18.

No. 18.

Mr. C. A. Lee to The Hon. Sir John Robertson, K.C.M.G.

My dear Sir John,

Respecting the break of gauge between here and Queensland, I hear it is likely to be fixed at the Border; could you also wire me if anything has been definitely fixed about it. We are most anxious for a reply to both matters. I send a letter to your care, addressed to Sir Henry Parkes; will you kindly see it is delivered to him on his arrival?

I am, &c.,

CHARLES A. LEE,

Hon. Secretary.

So far as I know, this matter has not yet been decided.—J.W., 27/8/84.

No. 19.

The Acting Commissioner for Railways, Queensland, to The Commissioner for Railways, Sydney.

Sir,

Commissioner for Railways Office, Brisbane, 7 August, 1884.

Referring to the enclosed copies of questions put to the Hon. Secretary for Public Works in the Legislative Assembly of your Colony, and of Mr. Dibbs's replies thereto, I have the honor, in connection with Mr. Dibbs's reply, No. 2, to enclose for your information copy of report from the Select Committee of the Legislative Council of this Colony relative to the extension of the Southern Railway to the Border, and to invite your special attention to pages 5 and 6 thereof.

I have, &c.,

F. CURNOW,

Acting Commissioner for Railways.

Thursday, July 31.

Junction with Queensland Railways:—Mr. W. J. Fergusson asked the Secretary for Public Works,—

(1.) If he has received any communication from the Queensland Government in reference to the junction of the New South Wales Railway with that Colony?

(2.) Will he state to the House what arrangements (if any) have been made about the joint Railway Station?

Mr. Dibbs answered,—

(1.) No communication on this subject has been received from the Queensland Government since June, 1883.

(2.) No arrangement has yet been made.

Prepare minute for the Executive Council for approval of the site. The Engineer-in-Chief will at once proceed with the survey, and furnish the plans, book of reference, &c., for approval of Parliament. Mr. Whitton will be good enough to inform me if this can be done before the close of the present Session, say in six weeks time.—G.R.D., 15/8/84.

Inform Queensland Government that the site has received the approval of the Governor and Executive Council, and the approval of Parliament will be asked for as speedily as possible.—G.R.D. Informed, 21/8/84.

Send Mr. Francis and as many other surveyors as you think can be profitably employed to make the working survey of this extension, and urge upon them the necessity of completing the surveys as early as practicable.—J.W., 27/8/84.

Mr. Francis is to leave for Tenterfield to-night, and Mr. Jamieson will proceed to the Queensland Border on Monday or Tuesday next. These two surveyors will work to meet each other, and will forward plottings of their traverses and sections as quickly as possible, so that a parliamentary plan and section may be prepared, if practicable, during the present Session.—J.W., 28/8/84.

No. 20.

The Commissioner for Railways to The Acting Commissioner for Railways, Queensland.

Sir,

Department of Public Works, Railway Branch, Sydney, 21 August, 1884.

Referring to the proposed junction of the New South Wales and Queensland Railways, I have the honor to inform you that the site indicated in Mr. Stuart's letter of the 30th May, 1883, to the Hon. the Colonial Secretary of Queensland, has been approved of by the Governor and Executive Council of this Colony. The approval of Parliament will be asked for as speedily as possible.

I have, &c.,

CHAS. A. GOODCHAP,

Commissioner for Railways.

No. 21.

Mr. Quodling to Mr. Palmer.

Junction with Queensland.

12 August, 1884.

HEREWITH I forward a tracing presented by Mr. H. C. Stanley, Chief Engineer, S.D., of Queensland Railways, showing the proposed junction with that Colony at the Border.

You are requested to see the Engineer-in-Chief on the subject at an early date.

W. H. QUODLING.

No. 22.

No. 22.

Memorandum from Mr. Palmer to The Engineer-in-Chief.

Sydney, 9 December, 1884.
 THE working section of the Tenterfield and Queensland Border Extension is now completed, with the exception of the grade at the junction with the Queensland Railway on the Border.

To make this connection it will be necessary to procure a copy of the final portion of the working section of the extension from Stanthorpe to the Border, for which application may, I presume, be made to the Queensland Railway Department.

HERBERT PALMER.

I shall be glad to have the Minister's instructions as to where the break of gauge is to take place, whether at the border between the two Colonies or at Tenterfield.—J.W., 10/12/84.

The Minister has asked me for my views in this matter.

There will be an active competition for a good deal of the traffic, as between Sydney and Brisbane, for the port of shipment, and even Grafton, if the line from Glen Innes is made—if the Queensland Railway is brought to Tenterfield the handicap against our successfully competing for the traffic in question will be proportionately increased.

I can see no good reason for making the break of gauge at Tenterfield. By making it on the Border we should have the control of the charges as far as that point, and should Queensland be inclined to follow the tactics of Victoria and make unfair differential charges for goods coming into New South Wales from Queensland, we should be able to checkmate such a movement. The capital of Queensland being by distance so much nearer to the debatable area, the trade of which will have to be competed for, we have only our cheaper charges for carriage to aid us, cheaper because the light engines of Queensland (made light necessarily owing to the lightness of their rails) cannot haul more than a very moderate load, and consequently higher charges than ours have to be levied. But we have experience that Queensland will not always consider remunerative freight charges if their object is to secure a trade. To give encouragement to their coal mines in competition with Newcastle coal they established a rate which did not even pay working expenses, and brought the coal to Brisbane at a direct loss; but I believe they accomplished the object they had in view, and made Brisbane the terminus for the line of mail-boats. I would strongly recommend that Queensland be not allowed to come further than the Border with their railway.—CH. A. G., 16/12/84.

No. 23.

Mr. C. A. Lee to The Minister for Public Works.

Sir,

Tenterfield, 16 December, 1884.

As the question of the break of gauge between this Colony and that of Queensland at the Border north of Tenterfield is likely to receive the early attention of the Government, and as the continued prosperity of this portion of the Colony depends in a large measure upon the settlement of this momentous question, I venture to lay before you a few reasons why the break of gauge should be at the town of Tenterfield, and not on the Border.

I freely admit that the Government may have to consider the Colony of Queensland in settling this matter; but I am conscious of the Government being desirous of approaching it on its broadest basis; and while refraining from interfering with any vested interests in Queensland, yet not disposed to allow its own interests to be sacrificed, and therefore I have no hesitation in addressing you now upon the subject.

1. I desire to refer you to the annexed copy of the petition that was presented through Sir John Robertson in August last, to which was attached some 1,200 signatures.

2nd. In alluding to the second paragraph of the petition it will be necessary to consider what are the vested interests of Tenterfield and Northern New England; how they arose and are maintained; how the fixing of the break of gauge at the Border would affect them, and consequently the prosperity of the Colony generally to a certain extent. And I cannot more clearly do so than by pointing out that the large vested interests in the district have arisen more from the *bonâ fide* nature of the conditional purchases than from any other cause, whereby the population has steadily increased; produce of every kind has increased; the demand for all classes of labour has increased; large and expensive public buildings have had to be erected to meet the steady progress of population, causing a corresponding increase in the value of Crown Lands, which in 1874 sold for £10 per acre in central positions, and in 1884 for £50 per acre on the outskirts of the main streets, thus causing an amount of vested interests to be set up on a sound and progressive basis, and which would certainly be severely checked if the important break-of-gauge station was erected at the Border, at which place another township would spring up—certainly of a sickly and uncertain character—but quite sufficient to divert the traffic and ruin the interests of the old established town of Tenterfield. If the land on the Border was suitable for agricultural or pastoral purposes it would have been selected years ago; but owing to its barren and rocky nature it is perfectly useless for such purposes, and is still unalienated. Consequently the Government would not receive any revenue from the sale of land there, while, on the other hand, the large number of unsold allotments on the southern side of the town of Tenterfield would materially increase in upset value if the break of gauge were at Tenterfield.

The fact of there being no water at the Border, and none nearer than 5 miles, proves how unsuitable it would be as a site for a township or for railway purposes.

Among other reasons why it would not be desirable to have a Border township may be mentioned that the line of demarcation between the two Colonies at that point is simply a "marked-tree line," and not an obstructive feature, such as a river, &c.; and it will be seen how easily the evil disposed could carry on a system of smuggling by obtaining an allotment on either side of the line, the back boundaries of which would almost adjoin, while the dissimilarity between the two Publicans' Licensing Acts would lead to great annoyance; and the ease with which any person committing an offence could step across the marked-tree line and defy the authorities would bring about a most undesirable state of disorder and contempt for the law; and further, it would unfortunately afford great facilities for the evasion of the payment of civil debts, which is already too largely availed of in Border districts, but which our civil process of law is unable to deal with. To attempt to cope with these several matters would require a permanent staff of police, Customs officers, and a resident Magistrate; in addition to which would be necessary

necessary a staff of railway officials, for whom quarters would have to be erected. Besides which, expensive railway buildings would be required, which, in the aggregate, would amount to a very large item. The whole of this expense could be saved to both Colonies by the adoption of the suggestions I have to make further on.

In the event of making the Border the terminal point, it must follow that access be given to it by way of roads; and as it is situated some distance away from the main western road, down the Dumaresque River, from the main eastern road towards the Clarence, and from the northern and southern portion of the Great Northern Road, in all about 25 miles of dray roads would have to be made, at a cost of £25,000; besides, a bridge across the Tenterfield rivulet, at a cost of about £2,000; and after all this enormous outlay it would for all time prove a general inconvenience to everybody; indeed I do not know of one single reason why the Government of New South Wales should entertain the idea for one moment, other than the alleged opposition shown by the Queensland Government, which I will now proceed to show is untenable.

The Queensland Government has no township nearer than Stanthorpe, distant some 26 miles from the Border, and is well known to be a rapidly-failing mining township. From there to the Border their railway line passes through two cattle stations, and there are about six selections, most of which are nearest to Stanthorpe. They could not, therefore, argue that they would either benefit or destroy any existing or vested interests on their side. They have an idea of laying out a township at the Border, but as the land there is like our own at that point—barren, rocky, and waterless—it could not attract a population, consequently would not deprive the Government of any revenue from the sale of Crown Land; hence no injustice would be done that Colony by having the break of gauge at Tenterfield.

My suggestion is simply this: That as our Government have already voted more than sufficient money to construct the line from Tenterfield to the Border, it would be wise policy to lay down a *third* rail on the same sleepers, and which would carry our own rolling stock as well as the narrower gauge of Queensland. That our Government could fairly allow the Queensland Government the use of it at a rate to be agreed upon. That by this arrangement the Queensland traffic and that of New South Wales would be deposited at the Tenterfield Railway Station; could be attended to in the one set of buildings, under the supervision of one set of railway employes and the local resident Customs officer, without any additional police protection than the ordinary staff employed at Tenterfield. That it would greatly facilitate the transferring of the goods traffic, and be a great boon to the passengers. That every main road passes the excellent and commodious site selected for the Tenterfield Railway Station—which is about five minutes walk from the town. That the cost of expensive Border stations and various staffs of officials would be saved, and, besides being a convenience to all concerned, it would preserve the vested interests of this portion of New South Wales without in the slightest degree injuring those of Queensland.

I have based my remarks upon a personal knowledge of the trade and the country in question after an experience of over fifteen years' residence, and I have been over the surveyed railway route within the past week.

I venture to hope our Government will not readily consent to make the break of gauge at the Border, as it would prove to be a disastrous mistake.

I have, &c.,

CHARLES A. LEE.

No. 24.

Mr. C. A. Lee to The Minister for Works.

Sir,

Tenterfield, 20 December, 1884.

Since the date of my last communication *re* the break of gauge on the Border, I have seen a notice in a Queensland paper to the effect that the Minister for Works for that Colony had stated in the House that his Government and that of New South Wales had agreed to make the break of gauge at the Border, and that they had mutually agreed to erect station buildings.

Would I be asking too much to be informed whether such is really the case, or whether the question is still unsettled.

I deem it expedient to inform you that on Thursday last, the 18th instant, a Sydney land-jobber, in his own name and the names of three dummies, selected the whole of the water reserve 112 extended, 20th December, 1880, in all 1,280 acres, as mineral conditional purchases, through which the surveyed railway line runs, and completely blocking access to it at the Border, thus rendering it imperative for the Government to purchase land from them to get to the Border point; and I urge this as a further reason why the break of gauge should not be at the Border, and prevent this monopoly on the part of speculators whose sole desire is to enrich themselves at the expense of the country.

I have, &c.,

CHARLES A. LEE.

No. 25.

Mr. C. A. Lee to The Minister for Works.

Dear Sir,

Tenterfield, 26 January, 1885.

As the matter of the break of gauge is exercising a good deal of attention here, and having in view my previous communications addressed to you in your official capacity, I do not want to be troublesome, but I would be glad if you could see your way clear to give me some idea when the matter is likely to be settled, and whether there is any prospect of the terminal point being at Tenterfield? The completion of the section to Tenterfield from Glen Innes will no doubt be completed before the end of the year, and as the question of station buildings for Tenterfield must soon be decided it seems that the early settlement of the break-of-gauge point would greatly facilitate the progress of the necessary drawings, &c. I venture to hope that if the Queensland Government will not consent to run their rolling stock into Tenterfield that you will not consent to the erection of costly buildings at the Border, but place a temporary building there, and the principal buildings, sheds, &c., at Tenterfield; and I have no hesitation in saying that the ultimate result will prove the correctness of your action, for it must be remembered that the Queensland Government have already determined to lay down a portion of their new rail tracks to admit of the same gauge as ours being used; in fact, it is the prevailing opinion in Queensland that they must discontinue the narrow gauge.

I

I would also point out that unless the break of gauge is determined during the reign of the present Queensland Government that there will be much more difficulty in doing so if Sir J. M'Ilwraith comes into office again, as that gentleman is averse to joining our Great Northern Line at the present part of the Border. His idea is, and he expressed himself in emphatic terms, to carry the line from Stanthorpe to the New South Wales Border at Wilson's Downfall, a distance of about 10 miles. This would of course necessitate our line being continued to that point, a distance of 28 miles, through exceedingly heavy and worthless country. I am aware that your time is fully occupied during the recess, but I consider the settlement of the question of such great moment to the country that I venture to urge upon you to have the matter fixed as early as convenient.

I am, &c.,

CHARLES A. LEE.

No. 26.

Minute from Mr. Secretary Wright to The Engineer-in-Chief.

I SHALL feel obliged if the Engineer-in-Chief will give me his views with regard to the break of gauge between the Railway system of this Colony and that of Queensland, and a *précis* of the negotiations that have taken place between himself and Mr. Stanley, Engineer-in-Chief for Queensland.

I understand that the distance from Stanthorpe to the border of New South Wales is 26 miles, and from Tenterfield to the Border, 17 miles, for which distances lines will have to be constructed by the respective Governments. The inhabitants of Tenterfield are naturally anxious to have the break of gauge in that town, and I shall be glad if the Engineer-in-Chief will give me his views in the matter as regards the most convenient place for the break of gauge, whether any engineering difficulties exist on either the New South Wales or Queensland side, and information as to the nature of the country at the proposed junction.

F.A.W., 22/12/84.

No. 27.

The Engineer-in-Chief to The Minister for Works.

I FORWARD, for the information of the Minister, a compiled map of the district round Tenterfield, showing the direction of the proposed Railway extension from Tenterfield to the Queensland Border.

The Minister, in his memo. dated 22nd December, 1884, having asked for my opinion as to where an interchange of traffic should take place between the Railways of New South Wales and Queensland, I have to state that I have always considered the Junction Station should be at Tenterfield, and not at the Border.

The distance from Tenterfield to the Border is 12 miles, and from the Border to Stanthorpe is 26 miles, and it has been suggested to run the New South Wales trains to Stanthorpe, and the Queensland trains to Tenterfield. This arrangement I do not think desirable, as it would necessitate laying down a mixed gauge for a distance of 38 miles.

If the New South Wales trains stop at Tenterfield, I think there would be no difficulty in obtaining Parliamentary sanction to the passing of a short Act, empowering the New South Wales Government to lay down the Queensland gauge of 3' 6" from the Border to Tenterfield, and thus permit the Queensland trains, on terms to be hereafter arranged, to run into the Tenterfield Station, where the interchange of traffic could take place much more conveniently than at the Border.

If this were done, all the station work could be performed at Tenterfield, and the expense of a separate staff and station at the Border avoided.

To place a station at the Border is, in fact, to build it in a wilderness, where there are no roads, no water, no inhabitants; and I cannot but think that if proper representations be made to the Queensland Government it will consent to the interchange of traffic taking place at Tenterfield.

I have made no arrangement with Mr. Stanley, the Chief Engineer for the Queensland Government; but he called upon me in Sydney, and laid before me a plan which he had prepared, and which provided for the interchange of traffic at the Border. I, however, offered no opinion on his proposal, as I knew it was a matter which must be settled by the respective Governments.

JOHN WHITTON, 12/2/85.

No. 28.

The Engineer-in-Chief to The Minister for Works.

REFERRING to my minute of 12th February last, No. 85/234, *re* Tenterfield to the Queensland Border line,—as the plans have now been approved by Parliament, I shall be glad to obtain the Minister's decision as to where the changing station is to be, Tenterfield or the Border.

JOHN WHITTON, 1/4/85.

No. 29.

Mr. C. A. Lee, M.P., to The Minister for Works.

Sir,

Tenterfield, 17 April, 1885.

I have the honor to transmit herewith a large and influential Petition from the residents of Tenterfield and the surrounding districts, bearing 1,239 bona fide signatures, praying for the break of gauge to be fixed at Tenterfield. I feel assured that in considering this momentous intercolonial question you will give due weight to the views expressed by so large a number of the people resident in this portion of the Colony, who, from their long residence in this district and nature of their varied occupations, are capable of giving a practical expression of opinion on this question, and whose vested interests have arisen in consequence of the steady development of the resources of this district, and who are alive to the fact that the establishment of a Border changing station or break of gauge would so depreciate the value of all classes of property that it would virtually be a direct blow levelled at the interests they have through long years of industry built up, and the consequence would be general discouragement, and at the same time no advantage would be gained by the country.

136—B

In

In my previous correspondence, which includes a very numerous signed Petition, I have endeavoured to point out all the bearings on the question, which can be briefly enumerated as follows:—

1. The barrenness of the land at the Border line.
2. The unsuitability of that point as a railway station site in consequence of the utter absence of water.
3. The surrounding land having been taken up under mineral conditional purchases on the last land day in December last by land non-resident speculators, with a view of fleecing the country.
4. That there is not any land left available for selection or a township, the sale of which would benefit the revenue.

5. The first and enormous outlay required to erect station buildings, goods sheds, quarters for officials, Customs officer's quarters, police quarters, Telegraph and Post Offices, stockyards for shipping stock, and the innumerable minor requirements incidental to forming a terminal station, must all be looked upon as duplicates, inasmuch as the position and importance of Tenterfield must necessitate a similar or increased provision at that terminus.

6. The distance of the Border line from all the main roads on which large sums of money have for years past been expended, and the cost of making dray roads from the Border to these main thoroughfares, will necessitate an expenditure of at least £20,000.

7. The line of demarcation between the two Colonies being simply one that is devoid of any distinctive or obstructive character by which the traffic in contraband goods could be controlled renders it a grave question whether, in the interests of good government, it would be desirable to offer further facilities for this demoralising traffic by the fixing of a terminal station there; and which traffic could not be prevented unless a large staff of Customs officials and police were permanently maintained there and further, the difficulties existing in enforcing the intercolonial Criminal Law by warrant and backing of warrants would render it imperative that a resident Magistrate be stationed on the spot. Otherwise the greatest confusion would prevail, and contempt for the law ensue, as the perpetrators of misdemeanours would escape before the necessary process of law could be obtained to legally arrest them.

8. The great disadvantage the travelling public would have to submit to for all time in having to change at a miserable wayside station in the wilderness (so aptly named by yourself), and the damage to goods, inconvenience, and extra expense to shippers in retranshipping at the Border, would be felt to be so irksome that the railway would not be so largely availed of as it should be.

9. The great natural advantages that Tenterfield offers as a site for an intercolonial break of gauge or changing station are many, viz:—The large area of land already resumed is more than ample for all purposes of a changing station. The abundant water supply. The main roads all running past the station doors. The convenience it would be to through passengers from one metropolis to the other wishing to break the journey. The ease and cheapness with which the goods traffic could be controlled and effected. The saving of the cost of all duplicate buildings at the Border; of all extra officials and quarters for them. No extra roads to be made. No extra Customs officials required. No more police protection, and the benefit from all the Government establishments already located in the town. These items would in the aggregate prove to be a formidable sum, and would materially affect the interest on the expenditure.

10. The only real question that could influence the Government of this Colony in erecting a Border changing station would be consideration for the views of the Queensland Government; and now that it is so broadly asserted that that Government is not offering any objection to the break of gauge being at Tenterfield (and from my personal interviews with several of the members of that Government I can confirm the reports) it may be fairly assumed the greatest difficulty has been overcome and I am bound to state that that Government is to be commended for its broad views on the important intercolonial question, which I feel assured are in accord with the wide and just views you have always held upon the matter, and which reciprocal views I am satisfied would be unanimously endorsed by Parliament, and the country as the happy and amicable settlement of one great step towards intercolonial federation.

11. That the settlement of this question on any lines akin to that at Albury and Wodonga would not be nationally approved of is I think beyond all doubt. And it is satisfactory to note that the Hon. the Colonial Secretary, Mr. Stuart, expressed himself in the House on the 1st June, 1884, in reply to Mr. Lyne's motion condemning the running of trains to and from Albury and Wodonga, in these words "that he considered it was a very undesirable arrangement, and his belief was that a short experience would show that a single station would be preferable"; and further, when the plans and book of reference for the section from Tenterfield to the Border were before the Assembly, a number of Members expressed the desire that similar arrangements would not be made on the northern Border as were made on the southern, and hoped the break of gauge would be fixed at Tenterfield. I maintain that as a spontaneous expression of Parliament the latter is very significant.

12. The manner in which the Queensland trains could be brought into Tenterfield is, I take it, a matter of easy accomplishment, as, in the first place:—"We are pledged to construct our line to the Border. The amount granted, viz., £173,500, is considerably more than sufficient for the construction of that section. That the rails could be laid to the gauge of Queensland to admit of their trains passing in. That if it was not necessary to obtain an Act of Parliament to run our trains into Wodonga and permit the Victorian trains to run into Albury, it would not be necessary to ask for parliamentary sanction to allow the Queensland trains to run into Tenterfield."

Supposing, however, that we laid our broad gauge to the Border, it would be an easy matter to lay an inner or third rail to suit the gauge of the Queensland rolling stock, and the cost of which would not exceed £7,000.

The Queensland Government would of course have no objection to pay the proper rates for use of rail and station accommodation.

I do not think it necessary that I need further enlarge upon this subject, and I must be pardoned if I have dealt at too great a length upon the details, but as the question is one of such great moment to this Colony, I am impelled to lay aside all purely local considerations, and, as a representative of the people, approach the question on its merits, as I would do if the question was to be settled by Parliament; but as it must necessarily be decided by the Cabinet at an early date, in order that the construction of the remaining section may be proceeded with, I now beg to urge upon the Cabinet, through yourself, the necessity for fixing the break of gauge or changing station at Tenterfield, which will in every sense be a desirable settlement of a great intercolonial question, and one that will meet with the approval of Parliament and prove satisfactory to the country.

I have, &c.,

CHARLES A. LEE.

The Petition and sheets of signatures are forwarded by this mail under separate registered cover.—
C.A.L.

No. 30.
Petition.

To the Hon. the Minister for Public Works, Sydney.

Sir,

The humble Petition of the residents of Tenterfield and surrounding districts respectfully sheweth:—

That in consequence of the plans and books of reference for the remaining section of the Great Northern Railway to the Queensland Border to a point near Tenterfield having received Parliamentary sanction, and the last section on the Queensland side being in course of construction, your Petitioners are again induced to urge for the early and favourable consideration of the break of gauge between this Colony and that of Queensland.

That your Petitioners beg to reiterate their opinion that if the break of gauge is made at the Border line some 12 miles from Tenterfield it will seriously affect the vested interests and trade of Tenterfield and Northern New England, without giving any adequate return to this Colony in the shape of the sale of Crown Lands or otherwise.

That it will necessitate the erection of a Border station and other necessary buildings, and the maintenance of a large and duplicate staff of Railway officials and Customs officers, besides extra police protection.

That there is no water, permanent or otherwise, at the Border line of demarcation, which consequently renders it quite unsuitable for a railway site.

That it is 12 miles away from the Western, Eastern, and Northern roads, and would necessitate a large expenditure to make roads fit for dray traffic, besides requiring a bridge across the Tenterfield Creek *en route*.

That the whole of the expenditure for Border stations, extra Railway officials, Customs officers, and police protection, would be avoided by running the Queensland trains into the Tenterfield Railway Station at Tenterfield, which is so centrally situated that it commands the whole of the roads diverging to the north, east, west, and south, and at which place the convenience of the necessarily large passenger traffic that will ensue could be more effectively studied, and the intercolonial goods traffic carried on free from difficulty, and under the immediate supervision of the existing Customs and other officers.

That your Petitioners beg most respectfully to request that the break of gauge may be fixed at Tenterfield, to which place the Queensland trains could be run at a nominal cost, and to the great advantage of and saving of unnecessary expenditure to both Colonies.

And your Petitioners, as in duty bound, will ever pray, &c., &c.

(Here follow signatures.)

No. 31.

Telegram from Mr. C. A. Lee, M.P., to Minister for Works.

GREAT excitement prevails *re* settlement of break of gauge, and monster petition course of signature praying for the same to be fixed at Tenterfield. Will you kindly inform me if matter is yet settled?

CHAS. A. LEE.

Not determined. Will submit matter to Cabinet on early date.—MINISTER, 14/4/85.

No. 32.

Mr. C. A. Lee, M.P., to The Minister for Works.

Dear Sir,

Tenterfield, 16 May, 1885.

The enclosed paragraph is from the *Brisbane Courier*, and purports to give a very emphatic expression by Mr. Miles, the Minister for Works, *re* the settlement of the break of gauge, that for your information I deem it advisable to bring under your notice.

I do not of course attach the slightest importance to it, because I have so frequently had your assurance to the contrary.

You will notice his statement is twofold:—

- 1st. That the respective Engineers had agreed as to the site of the Border terminus.
- 2nd. That the two Governments had approved of the plans, and agreed that the change of gauge should be at the Border.

Yours, &c.,

CHARLES A. LEE.

No. 33.

Minutes by Colonial Secretary and Mr. Secretary Wright.

Railway Junction with Queensland.

Colonial Secretary's Office, Sydney, 27 June, 1885.

I HAVE read the papers herewith. I consider that Tenterfield would have been the best point of junction, but it does not rest solely with us to decide; the concurrence of the Queensland Government is necessary, and it seems to me that the site of Ballandean has already been approved by it, as well as by our officers. Whether it ought now to be changed is a subject for consideration, the worthless barren character of the land about Ballandean renders it extremely unsuitable, and I see no difficulty as to running the narrow gauge into our territory. It is not for our running, but for that of the Queensland trains, and is therefore no more contrary to our Railway Act than was our laying the broader gauge at Albury for the Victorian trains. Nor do I see much force in the Commissioner's argument as to the competition. The distance is so short (12 miles) that no differential rate that we could impose would prevent such competition.

On

On the whole, I think that negotiations might be opened with the Queensland Government with the view of adopting Tenterfield, but if they have strong ground for opposing it then we had better adhere to Ballandean. I would, however, like to know whether it is the case that all the available land round about the proposed junction has been secured by speculators?

A.S.

In submitting the matter, *re* break of gauge, to my honorable colleagues, I beg to recommend that the break of gauge take place on the Borders of the Colonies at the site decided upon by the Engineer-in-Chief of Queensland and New South Wales. I would suggest that no accommodation be provided at this place further than what is absolutely necessary for the interchange of traffic, both passengers and goods; that wooden buildings be erected, and a running shed capable of holding one or two engines, while the depôt for our engines, workshops, &c., should be established at Tenterfield.

At the Border where the break of gauge will take place there is no population, the country is of the most sterile description, and it is questionable whether water is obtainable unless at great expense; while at Tenterfield there is an abundance of water, a settled population, and comparatively good country.

For these reasons I think Tenterfield should be the site selected for the depôt.—F.A.W., 1/7/85.

Cabinet approved this suggestion of the Minister for Works.—A.S., 3/7/85.

No. 34.

Mr. Quodling to Mr. Drewett.

14 July, 1885.

HEREWITH I have the honor to forward the working plan and section of the proposed extension of the Northern Railway from Tenterfield to the Queensland Border, together with an extract from the minute conveying the Cabinet's decision as to where the break of gauge shall take place, and the accommodation to be provided.

I forward also plan and section of the Queensland line from 120½ miles to the New South Wales Border.

W. H. QUODLING.

1885-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS.

(MESSRS. STEVENS & CO.'S CONTRACT—TENTERFIELD TO QUEENSLAND BORDER.)

RAILWAYS.

No. 1.

Schedule of Tenders.

SCHEDULE of Tenders opened 19th January, 1886, for the construction of the Railway from Tenterfield to the Queensland Border, being "Section 4," Great Northern Railway Extension. (Length, 10 miles 76 chains 69 links.)

| No. | Tenderer. | Amount. |
|-----|---|-------------|
| | | £ s. d. |
| 1 | W. John Blunt & Co., Paddington, Sydney | 96,778 2 4 |
| 2 | M'Ardle & Thompson, Forest Lodge | 82,849 1 8 |
| 3 | Cobb & Co., Sydney | 98,228 11 8 |
| 4 | George Bashford, Sydney | 91,511 10 0 |
| 5 | Monie & Co., Sydney | 79,916 16 8 |
| 6 | Stephens & Co., Sydney | 79,673 0 0 |
| | Engineer's Estimate | 89,617 10 6 |

The tender of Messrs. Stephens & Co. is the lowest, and I therefore recommend it for acceptance. Messrs. Stephens & Co. are unknown to me, but I suppose they have had experience as contractors on railway works.—J.W., 20/1/86.

The Under Secretary for Railways.—J.R., 22/1/86. For Minister's approval.—CH.A.G., 22/1/86. Approved.—J.G., 22/1/86.

No. 2.

The Commissioner for Railways to Messrs. Stephens & Co.

Department of Works, Railway Branch,
Sydney, 25 January, 1886.

Gentlemen,

I have the honor to accept your tender, dated the 19th instant, for the construction, in accordance with plans and specification, of the railway from Tenterfield to the Queensland Border, being section 4, Great Northern Railway Extension, at the Schedule of prices named therein, and have to refer you to the Crown Solicitor for the purpose of executing the necessary bond.

I have at the same time to inform you that the Government have had under their consideration the practice which has obtained of allowing contractors for railway works additional time beyond that named in the conditions, and to inform you that under no circumstances, excepting of course for those delays which are referred to in the 14th clause of the general conditions, will any extension of time for the completion of the contract be allowed.

This intimation is made to you at this time to urge upon you the necessity for making such arrangements as will enable you to complete the work within contract time.

Your tender is accepted, subject to your depositing within the stipulated time the money required as security and executing the required agreement and bond.

I have, &c.,
CHAS. A. GOODCHAP,
Commissioner for Railways.

No. 3.

Messrs. Ahearn, M'Ardle, & Co. to The Commissioner for Railways.

Sir,

Sydney, 3 February, 1886.

Herewith enclosed is an application from Stephens & Co. to have their contract for the construction of the railway from Tenterfield to the Queensland Border transferred to us, and should such transfer be accepted by the Government, we hereby agree to accept the contract under the same conditions as the said Stephens & Co. held it.

We herewith also enclose a Bank deposit receipt for the sum of £5,000, which amount is to your credit in the English, Scottish, and Australian Chartered Bank as security for the due performance of the contract.

We are, &c.,
JOHN AHEARN,
M'ARDLE, & THOMPSON,
Trading as Ahearn, M'Ardle, & Co.

No. 4.

Messrs. Stephens & Co. to The Commissioner for Railways.

Sir,

Care of Briscoe, Drysdale, & Co., Sydney, 3 February, 1886.

We have the honor to request that you will consent to a transfer of our contract for the construction of the railway from Tenterfield to the Queensland Border, to Messrs. John Ahearn, Hugh M'Ardle, and William Murray Thompson, trading as Ahearn, M'Ardle, & Co.

STEPHENS & CO.

I

I can see no objection to this transfer. Is the Engineer-in-Chief aware of any?—CHAS. A. GOODCHAP, B.C., 3/2/86. I have the strongest objection to speculative tenderers, and advise that the acceptance of Messrs. Stephens & Company's tender be cancelled and their deposit forfeited. It is currently reported that this contract has been offered to contractors, and also to financiers, and that it has been sold to Messrs. Ahearn & Co.; such proceedings cannot in the interests of legitimate tenderers, and also of the public works of the Colony, be tolerated for a moment; and I recommend that the tender of Messrs. Monie & Company, which is only £243 16s. 8d. in excess of Messrs. Stephens & Co.'s, be accepted.—J.W., 12/2/86.

Under Secretary.—B.C. Railways.—J.R., 13/2/86. Submitted.—13/2/86. Submitted to Minister—of course if the transaction bears the complexion the Engineer-in-Chief puts upon it the Department should not encourage such proceedings, which it would do if the transfer was agreed to, but there may be some legal difficulty in the way of cancelling the acceptance of Stephens & Company's tender.—CHAS. A. GOODCHAP, 18/2/86.

No. 5.

Messrs. Stevens & Co. to The Minister for Public Works.

Sir,

33, Pitt-street, Sydney, 15 February, 1886.

Referring to the matter of the application of even date, in which Messrs. Ahearn, M'Ardle, & Co. have unconditionally placed their £5,000 deposit in favour of the Commissioner for Railways as security for the due fulfilment of my contract for the railway line from Tenterfield to the Queensland Border, I wish respectfully to point out certain reasons why the contract should be continued in my name as accepted by the Government.

The deposit of £5,000 was made by Messrs. Ahearn, M'Ardle, & Co. in accordance with the terms of the general conditions on the 3rd instant; and had the Engineer-in-Chief for Railways (who was unavoidably absent) been in Sydney on that day the deposit would, upon his refusal to accept transfer that evening, have been placed unreservedly to the credit of Stephens & Co.

I think, therefore, it would be very hard upon me to now forfeit the contract and my deposit of £500 through no fault of my own.

I have all through endeavoured to act up to the strict terms of the conditions, but the party that originally agreed to pay his portion of the deposit, having failed to carry out his part, I was compelled to look for other partners, and I respectfully submit that having now complied with the terms of the general conditions at the earliest possible moment, and my deposit being in, I am entitled to your favourable consideration in this, to me, most important matter.

I have, &c.,

STEPHENS & CO.

Engineer-in-Chief will obtain papers.—J.G., 16/2/86.

No. 6.

Messrs. Ahearn, M'Ardle, & Co., to The Minister for Public Works.

Sir,

33, Pitt-street, Sydney, 15 February, 1886.

Referring to our letter of the 3rd instant to the Commissioner for Railways, applying to have the contract for the railway line Tenterfield to the Queensland Border, transferred from Stephens & Co. to us, on accompanying which application a Bank deposit receipt for £5,000 in favour of the Commissioner for Railways; we have now to request that you will now agree to accept the £5,000 deposit for Stephens & Co., as we have arranged to join Mr. Stephens as partners in the contract.

We have to state further that Stephens & Co. would have had this amount placed to their credit by us on the 3rd instant, if any doubt existed in our minds, if any objection would have been held to the proposed transfer. To protect Stephens & Co. from the loss of the contract, we place the deposit unconditionally to their credit.

We have, &c.,

AHEARN, M'ARDLE, & CO.

Place with other papers that are with the Engineer-in-Chief for report.—J.G., 15/2/86. Engineer-in-Chief. Urgent.

Tender—Tenterfield to Queensland Border.—As Messrs. Stephens & Co. failed to comply with the conditions of the specification, viz., to deposit £5,000 within six days from the date of the acceptance of their tender, and have in the meantime offered the contract for sale, as currently reported, I think there should be no difficulty in carrying out my recommendation of the 12th instant. As the matter now stands they propose to hand over the contract to Messrs. Ahearn & Co., for, no doubt, a monetary consideration; this should not be permitted, and I consider that the next lowest tender, that of Messrs. Monie & Co., should be accepted.—J.W., 15/2/86.

Under Secretary.—Let me know the date on which the £5,000 deposit was made in favour of the Commissioner for Railways, as security for this contract—who made the deposit; get as many particulars as possible.—CHAS. A. GOODCHAP, 15/2/86.

The deposit was received on the 4th instant, with Messrs. Stephens & Co.'s letter, asking to be allowed to transfer the contract. The two letters were pinned together, and had the deposit receipt attached to the back of the under one. Please see M.P. 86/808 herewith.—D.C.M'L., 16/2/86.

In advocating caution in adopting the course recommended by the Engineer-in-Chief, I am animated solely by a consideration of the consequences that may follow. The letter of acceptance of Stephens & Co.'s tender is dated 25th January, that is to say, it was written on that date. The messenger's book shows that it did not leave this office till the 27th (the 26th was a public holiday). I think, therefore, the 28th would have to be considered the first clear day; the sixth clear day expired on February the 2nd. The 22nd clause of the conditions of contract stipulates that "within six days after notice of his tender shall have been given, the contractor shall deposit, &c., &c., &c." The deposit made in Commissioner's favour is dated 3rd February, so it seems to be clear that the deposit was not made till one day after the stipulated time. Notice of the deposit was given on the 3rd February, by letter from M'Ardle, Thompson, & Co., who at the same time forwarded the Bank deposit receipt. It is to be inferred that the money was deposited not by Stephens & Co., but by M'Ardle, Thompson, & Co., although as it was absolutely at the disposal of the Commissioner

Commissioner for Railways as security for the due performance of the contract, it does not, I think, much matter who paid in the money. If the Minister shares the belief of the Engineer-in-Chief, that the circumstances of the case justify the course he recommends, I believe that course can be taken, in consequence of the one day's delay in paying the deposit; but still, I would advise that the matter be referred to the Crown Solicitor, in case "the practice of the Department" in regard to the time within which those deposits are accepted, may have a bearing on the transaction.—CHAS. A. GOODCHAP, 16/2/86.

Forward to Crown Solicitor, with copy of conditions, for his opinion on the case as set forth in Commissioner's minute. An early reply will oblige.—J.G., 16/2/86.

No. 7.

The Engineer-in-Chief to The Minister for Public Works.

Engineer-in-Chief's Office, Sydney, 17 February, 1886.

THE deposit receipt for £5,000 (now enclosed) I had not previously seen, nor was I aware of its existence but from the letter which accompanies it. It appears the deposit has not been made by Messrs. Stephens & Co., but by Messrs. Ahearn & Co., on the condition that the contract be transferred to them.

The conditions of the specification are, that the contractor shall deposit £5,000 within six days after notice of the acceptance of his tender; or should such deposit not be made, the Commissioner shall have the option of, and full power and authority of, declaring such acceptance to be annulled.

In this case no deposit was made by Messrs. Stephens & Co., and therefore the acceptance of their contract is null and void, and their deposit should be forfeited.

The deposit by Messrs. Ahearn & Co. was made on the assumption that the contract was to be transferred to them; but surely the Department will never permit a contractor to sell his contract not only to escape the forfeiture of his deposit (of £500), but most probably to make a profit out of the transaction.

The tender of Messrs. Monie & Co. is the next lowest, and I again recommend the acceptance of their offer.

JOHN WHITTON.

Forward to Crown Solicitor, in accordance with my minute of yesterday. Urgent.—J.G., 17/2/86.
Crown Solicitor.—J.R., 17/2/86.

No. 8.

The Crown Solicitor to The Under Secretary.

Sir,

Crown Solicitor's Office, Sydney, 19 February, 1886.

I have the honor to return herewith the Engineer-in-Chief's minute, of date 17th February instant, with reference to the tender of Messrs. Stephens & Co. for the construction of the railway from Tenterfield to the Queensland Border, and to state that I do not think it clearly appears by the letter of Messrs. Ahearn & Co., with which the deposit receipt was forwarded, that such deposit was made by them on account of the contract if same is transferred to them, or on the condition that the contract should be so transferred; nor does it appear to me that it can be said that it appears by the letter referred to that the deposit was made on the assumption that the contract was to be transferred to them.

In forwarding the deposit receipt, Messrs. Ahearn & Co. say,—“We herewith enclose a Bank deposit receipt for the sum of £5,000, which is to your credit, for the due performance of the contract.”

The only contract mentioned in the letter is the contract with Stephens & Co., which was the only contract then existing. Messrs. Ahearn & Co. say,—“Herewith enclosed is an application from Stephens & Co. to have their contract for the construction of the railway from Tenterfield to the Queensland Border transferred to us; and should such transfer be accepted, we hereby agree to accept the contract under the same conditions as the said Stephens & Co. held it.”

It may no doubt be inferred that Ahearn & Co. intended this deposit to be the security for their carrying out the contract if same should be transferred to them, but they do not say so in express terms; and it is quite possible that, by an arrangement between Stephens & Co. and Ahearn & Co., the latter have found the deposit money, and paid same into the Bank to keep alive Messrs. Stephens & Co.'s contract, having arranged with them as to how the deposit is to be refunded if the transaction is not assented to by the Government.

It will be noticed that Messrs. Ahearn & Co., in their letter of 15th February, state that “Stephens & Co. would have had this amount placed to their credit by us on the 3rd instant if any doubt existed in our minds if any objection would have been held to the proposed ‘transfer.’ To protect Stephens & Co. from the loss of the contract, we placed the deposit unconditionally to their credit.”

In a letter from Messrs. Stephens & Co., of same date, they refer to the deposit made on 3rd February instant, and state that, if the Engineer-in-Chief had been in Sydney, the deposit would, upon the refusal to accept the transfer, have been placed unreservedly to the credit of Stephens & Co., from which it would seem that the deposit was made by Messrs. Ahearn & Co. in the expectation that the contract would be transferred to them; but, as before stated, this is not made a condition in their letter of 3rd February. *It was open to the Commissioner to contend that the deposit was made without condition, and as they in their letter of 13th February directly assent to the money so deposited being dealt with as placed unconditionally to the credit of Stephens & Co., I do not see how the Government can contend that the deposit has not been made, and claim a forfeiture of the money sent in with the tender.

Upon the question as to payment into the Bank on the 3rd February instant being out of time, I have advised fully in my letter to the Commissioner for Railways on this subject of this day's date.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

* I do not really contend that this is so. The use of the term conveys to me the idea that I am supposed to be in favour of Stephens & Co. obtaining the contract if possible; that is to say, if it could be done without risking the chance of a successful action for breach being brought against the Department. I should be glad to see the work taken from them, as I believe, from what I have heard, that it was quite a speculative tender.—CHAS. A. GOODCHAP, 22/2/86.

No. 9.

Messrs. Stephens & Co. to The Commissioner for Railways.

Sir,

33, Pitt-street, Sydney, 16 February, 1886.

Referring to our letter of yesterday's date, addressed to the Honorable the Minister for Public Works, I have the honor to inform you that the letter, accepting our tender for the Tenterfield to the Queensland Border Railway Contract, and bearing date the 25th ultimo, only reached me on the morning of the 28th ultimo, and, as a matter of fact, the envelope bears the Post Office date of 6.30 p.m. of 27th ultimo.* I may also point out that the communication from the Works Department of 2nd instant, requesting us to pay the deposit of £5,000 at our earliest convenience, was complied with, as per Ahearn, M'Ardle, & Co.'s letter of 3rd instant, without delay.

We may also point out that a holiday having intervened would not affect our position, as the general condition gives us six clear days from receipt of notification of acceptance, which was the morning of the 28th ultimo.

We have, &c.,

STEPHENS & CO.

* This is the first I have heard of this communication. Will the Under Secretary let me have a copy, it may bear on the case materially.—CHAS. A. G., 17/2/86. Copy herewith; it is the usual notice we send.—G.B., 17/2/86.

Gentlemen,

Department of Railways, Sydney, 2 February, 1886.

Referring to your contract (No. 4) for the construction of a line of railway from Tenterfield to the Queensland Border, I shall be glad if you will forward, at your earliest convenience, a Bank deposit receipt for £5,000, in the name of the Commissioner for Railways, as security for the due and proper performance and completion of the contract, as provided for in clause 22 of the general conditions relating to same, and apprise me of the names (in full) of the members of your firm for preparation of bond.

Yours, &c.,

H. M'LACHLAN,

pro Chief Clerk.

The papers, I understand, are with the Crown Solicitor,—this paper should go to him also. It seems to me that, under the circumstances of the case, it is a most unfortunate communication, as it would seem to be a waiver of the condition that the deposit should be made within six days. I am informed that it is the usual practice for the Chief Clerk to write such letters to the contractors if the deposits are not made, but I certainly never authorized the course either in this or in any other case.—CHAS. A. GOODCHAP, 17/2/86. Crown Solicitor.

No. 10.

The Crown Solicitor to The Commissioner for Railways.

Sir,

Crown Solicitor's Office, Sydney, 19 February, 1886.

I have the honor to return herewith Messrs. Stephens & Co.'s letter to you, of date 16th February instant, and to state that if your letter, intimating the acceptance of the tender, was posted on 27th January and received by the contractors in due course of post on the 28th January, the deposit was, I think, made a day late; but this has been waived by your letter of date 2nd February instant, which requests that the money shall be paid in at the contractor's "earliest convenience," and they, in response thereto, paid same into the Bank on the following day.

I think also, that irrespective of this letter, as the deposit was made on 3rd February and the receipt forwarded to you on that day, and retained ever since, it would be considered as accepted by you.

From other papers forwarded from the Department of Works, it appears that it is questioned whether the deposit has been in fact made by Messrs. Stephens & Co., or by Messrs. Ahearn & Co., a letter from whom accompanied the receipt. It is suggested that the money has not been deposited on account of Messrs. Stephens & Co., but by Messrs. Ahearn & Co., in expectation of the contract being transferred by Messrs. Stephens & Co. to them.

Messrs. Stephens & Co., in their letter of date 16th February instant, assert that the deposit was made by Messrs. Ahearn & Co. in accordance with the general conditions, "That the contractor shall make deposit, &c." As the proposed transfer to Messrs. Ahearn & Co. had not at the time been assented to, the contractors were clearly Messrs. Stephens & Co.; and if Messrs. Ahearn & Co. assert that the deposit was made by them on account of Stephens & Co., to keep alive the contract, I do not see how the Government can refuse to accept it as so deposited.

The letter of 3rd February, from Messrs. Ahearn & Co., does not in terms state that the deposit has been made by them on condition that the contract shall be transferred to them, although probably this was intended. This letter forwards a request for the transfer of the contract to Ahearn & Co., and concludes by stating that the Bank deposit receipt is sent as security for the due performance of the contract; whether this performance is to be by Stephens & Co. or Ahearn & Co. is not stated.

* As the deposit receipt was accompanied by the letter which does not clearly state upon whose account the deposit was made, both should have been at once returned.

As the letter referred to raises a doubt as to the person on whose account the deposit was made, I suppose the only course will be to inquire of Messrs. Ahearn & Co. whether the deposit was made by them on behalf of Messrs. Stephens & Co. or not, before further action be taken in the matter.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

* Not being aware of the reasons which have since transpired, I saw at the time no objection to the proposed transfer. Had the Engineer-in-Chief been in Sydney the objection would have been taken, and action decided upon at once.—CHAS. A. GOODCHAP, 22/2/83.

I see very little use of making the inquiry proposed by the Crown Solicitor. It would seem that Ahearn & Co. are acting in the interests of Stephens & Co., and will doubtless say that the deposit was made on account of the latter. However, I suppose, the inquiry may be made.—CHAS. A. GOODCHAP, 22/2/86. For Minister's decision.

Let the inquiry be made, as suggested by Crown Solicitor.—J.G., 23/2/86. Let me see letter; write cautiously.—CHAS. A. GOODCHAP, 23/2/86.

No. 11.

The Commissioner for Railways to Messrs. Ahearn, M'Ardle, & Co.

Gentlemen, Department of Public Works, Railway Branch, 24 February, 1886.
Referring to your letter of the 3rd instant, forwarding an application from Messrs. Stephens & Co., the successful tenderers for the railway extension from Tenterfield to the Queensland Border, for the transfer of the contract to you, and enclosing a Bank deposit receipt for the sum of £5,000 as security in connection with the contract, I shall be glad if you will say on whose account the deposit referred to was made.

I have, &c.,
CHAS. A. GOODCHAP,
Commissioner for Railways.

No. 12.

Messrs. Ahearn, M'Ardle, & Co., to The Commissioner for Railways.

Sir, 33, Pitt-street, Sydney, 24 February, 1886.
We have the honor to acknowledge the receipt of your letter of to-day's date, No. 86/1,066, asking us to say on whose account the deposit of £5,000 (as security for the contract for the railway line, Tenterfield to the Queensland Border) was made.

In reply we have to state that the deposit was made by us to your credit as security for the due fulfilment of the contract, and we have further to state that £2,000 of the money is the absolute property of George Stephens, the head of the firm of Messrs. Stephens & Co., for which he holds our receipt, and we assure you most positively that we received the money.

We have, &c.,
AHEARN, M'ARDLE, & CO.

Enclose copy of our letter, to which this is a reply, and forward the two documents to Crown Solicitor to say whether, under the circumstances, this means that in effect the amount was deposited in the interests of Stephens & Co.—CHAS. A. GOODCHAP, 24/2/86. Crown Solicitor.

This is not a reply to the question put in your letter. Messrs. Ahearn should state that it was made on account of Stephens & Co.'s contract, if the fact was so.—J.W. The Commissioner for Railways.

No. 13.

The Commissioner for Railways to Messrs. Ahearn, M'Ardle, & Co.

Gentlemen, Department of Public Works, Railway Branch, 25 February, 1886.
Referring to your letter of yesterday's date, respecting the deposit made by you in connection with the contract for the railway extension to the Queensland Border, I have the honor to point out that the statement therein contained is scarcely a reply to the question put in my letter of the 24th instant. I shall be glad if you will furnish me with a definite answer thereto.

I have, &c.,
CHAS. A. GOODCHAP,
Commissioner for Railways.

No. 14.

Messrs. Ahearn, M'Ardle, & Co., to The Commissioner for Railways.

Sir, 33, Pitt-street, 26 February, 1886.
We are in receipt of your letter of yesterday's date, No. 86/1,107, referring to our previous letter of the 24th instant, in reply to your own of same date, in the matter of the deposit of £5,000 as security in connection with the railway extension from Tenterfield to the Queensland Border.

In reply we have to state that if our letter of the 24th instant is scarcely a reply to your letter of the 24th instant, then we must frankly admit that we do not understand the tenor or purport or meaning of your question. We have assumed that your question "on whose account was the deposit made" meant by whom and in whose name was it paid into the Bank, which we have, we submit fully answered.

Any more definite answer than that we cannot give, beyond stating that the money was placed to your credit by us in the English, Scottish, and Australian Chartered Bank, as security for Stephens & Co.'s contract, Tenterfield to the Queensland Border.

We trust the Department will see their way clear to have the bond prepared for signature without delay, in terms of Stephens & Co.'s letter to the Minister for Works, of the 19th instant.

We have, &c.,
AHEARN, M'ARDLE, & CO.

Crown Solicitor, *pro* Commissioner.—G.B., B.C., 26/2/86. This is sufficient.—J.W., 27th February, /86. The Commissioner for Railways.

No. 15.

Minute of Secretary for Public Works.

Extension—Tenterfield to the Border.

Department of Public Works, Sydney, 6 March, 1886.
Messrs. Ahearn, M'Ardle, and Thompson waited upon me to-day with reference to the acceptance of Messrs. Stephens & Co.'s tender for the construction of the railway from Tenterfield to the Border.

It will be remembered that Ahearn, M'Ardle, & Co. have applied for the transfer of the contract from Messrs. Stephens & Co. to them, and they state that they have been waiting for a reply to their application. Mr. Stephens was not present at the interview. I

I informed them that the whole proceedings in connection with Messrs. Stephens & Co.'s relation to the contract were most unsatisfactory, the intimation had been made to them that their tender had been accepted, and they appear immediately in a speculative spirit to have offered the contract for sale to any firm that would agree to give them the terms demanded; it was a matter of common report that the tender had been hawked about, and I had myself seen one letter where Stephens & Co. had written to one firm offering to sell them the tender. This course of procedure was most objectionable, and if it were allowed would tend to seriously prejudice the system of tendering. It would further lead to dishonest practices, as one firm might send in two tenders, one low (a bogus tender), the other high; if the low tender were accepted and their second tender was the next in order to it, they could withdraw the first offer on the assumption that their next tender would be accepted. If there happened to be an intermediate tender then the first and lowest tender could be taken up, and a transfer asked for from the firm in whose name the first tender had been submitted. I did not wish to say that there had been any dishonesty in the present transaction, or that their application was not "*bonâ fide*," but the procedure in itself was most objectionable, and if recognized would open the door to serious evils, and tend to bring the system of public tendering into disrepute.

Further, their letter dated 3rd February, asking for the transfer covered the security under the contract, and as the letter of acceptance was sent on the 25th January, the security was not therefore lodged within the six days provided in the general conditions and rendered the acceptance liable to cancellation.

Messrs. Ahearn & Co. stated that there had been no underhand work so far as they were concerned. Mr. Stephens had found that his partner had not sufficient means to carry on the contract, and he had therefore to cast about for a firm that would join him in carrying out the work, they had no knowledge of the contract having been hawked about, and certainly were not paying such a consideration as was represented; they were unaware such a feeling existed against a transfer, as they knew they had a good name for the work they did, and thought the transfer would have been accepted without demur. They had, however, decided to withdraw the application for a transfer, and Mr. Stephens was prepared to go on with the work in which they would act as his partners, and together constitute the firm of "Stephens & Co."

They pointed out that Mr. Stephens had to deposit £500 with the tender, which would be lost if he failed to go on with the work, and in view of the risk he would hardly put in a speculative tender.

Further, with regard to the security they pointed out that the letter of acceptance did not reach Mr. Stephens till the 28th January, and the deposit was put in within the stipulated time, and in accordance with the request made to them by letter of the 2nd February. Even this time would not have elapsed only it was understood there would be no objection to the transfer.

I intimated to them that the matter would have my further consideration and that I would submit the case for the decision of Cabinet.

W.J.L.

No. 16.

Messrs. Ahearn, M'Arde, & Co. to The Minister for Public Works.

Sir,

33, Pitt-street, 9 March, 1886.

Referring to our conversation at the interview you did us the honor to grant on Saturday *re* Stephens & Co.'s deposit as security for the railway, Tenterfield to the Queensland Border, you stated that our deposit was not made until the 4th day of February last, and was consequently one day too late to fulfil the conditions under which Stephens & Co. tendered. To place the matter fairly before the Cabinet meeting, we have now to assure you most positively that the deposit was made and the receipt handed in to the Commissioner for Railways on the 3rd of February, and not on the 4th, as stated in the minute that you quoted from.

We attach great importance to this fact, and trust that in deciding the matter you will give it every consideration.

We have, &c.,

AHEARN, M'ARDLE, & CO.

The question of extension from Tenterfield to the Queensland Border was considered by the Cabinet, and it was decided the exchange should be as formerly decided with the Queensland Government, and the Minister to accept such tender as desirable.—P.A.J., 10/3/86.

No. 17.

C. A. Lee, Esq., M.P., to The Minister for Public Works.

Sir,

Tenterfield, 12 March, 1886.

I have the honor to address you on a matter of urgent and public importance, viz., "The construction of the G. N. Railway from Tenterfield to the Queensland Border, 11 miles."

I am aware that the lowest tender was accepted, but am informed the tenderer has not complied with the conditions of the contract, and consequently has not started the work, nor am I aware that any other tender has been subsequently accepted. I am also aware that one of the conditions were that the work should be finished by the end of the year. This no doubt was wisely provided for on account of the Queensland section to the same point having to be completely finished by that time.

It must now be remembered that three months of the time has elapsed, and not a stroke of work done, consequently it will require capital and energy on the part of a contractor now to complete the work in the time.

I am persuaded that no contractor can complete the work within the time, and at the price of the lowest tenderer. I am also strongly of opinion that several of the lowest tenders were below what the work would actually cost, and taking these facts into consideration, and having in view the necessity for completing the work simultaneously with the Queensland section, it is necessary that more vigorous steps be taken to complete our remaining section for reasons in addition further urged below. The question then is how can it be done? My suggestion is a simple and a practical one.

1st.

- 1st. Consult the contractors of the sections from Glen Innes to Tenterfield, they are good substantial men of means, they have the whole of the working plant, tools, and running gear at command, and consequently could do these 11 miles much cheaper than any outside contractor, who would have to provide all working plant, and who could not possibly construct the work so cheaply, besides could not get into work for some weeks. If the Glen Innes to Tenterfield contractors were tenderers for the section, would it not be advisable to see if they would reduce their price so as to enable the Department to accept it.
- 2nd. One condition should be that if the contractors named would reduce their price, and the Department would accept, it would be that they should employ a number of the unemployed men in the city, and whom the Government are attempting to provide work for. By this arrangement a large number of the unemployed could be drafted up here, and immediate work found for them without causing any additional expenditure of public money.
- 3rd. There are over 200 unemployed men camped around the town awaiting work when this section commences, and I am urged daily by these men to induce the Government to go on with the work to keep them from starving.
- 4th. I have taken the trouble to interview the manager for the contractors named to see if they would now be willing to meet the Government, and if possible agree to a price, and to execute the work by the end of the year, and I am assured that they would do so and would be prepared to employ many of the men now seeking work in the city, and could employ and put to work within 48 hours after signing contract, not less than 600 to 800 men.

I am induced to urge you to come to terms, if possible, with the contractors, because they are men of means, and have been and are good and prompt paymasters, consequently any men employed by them would be sure of getting their wages promptly, and further it cannot be denied that there is a great deal of unemployed labour at present, through the prevailing and universal depression, and I know of no readier and better means of finding employment for a number of the men than by drafting them on to this urgent work, which will not cost the country one shilling more than if the contract was carried out in the ordinary employment of labour.

I cannot too strongly urge this matter, and would ask your early consideration so that in the first place the contractors may be availed of before they dispose of their plant, and secondly to alleviate some of the distress that undoubtedly exists among the working classes.

I have, &c.,
CHAS. A. LEE.

No. 18.

The Minister for Public Works to C. A. Lee, Esq., M.P.

Dear Mr. Lee,

Department of Public Works, Sydney, 16 March, 1886.

I am duly in receipt of your communication of the 12th instant, further respecting the contract for the extension, Glen Innes to Tenterfield, and note your suggestion that endeavours should be made to arrange with Messrs. Cobb & Co. for the carrying out of the work.

The whole matter I may say is now having my best consideration, and I will as early as possible bring the question to a settlement.

I am afraid, however, that we could not in the face of the excessive price submitted for the work by Messrs. Cobb & Co. offer them the contract, and to ask them to amend their tender now would be opposed to the spirit and system of public tendering.

The lowest contractor, Stephens, is now urging his claim to be allowed to proceed, and I am afraid as we have accepted his tender formally that we must let him proceed with the work.

He has associated with him, Messrs. Ahearn, M'Ardle, & Co., who bear good names as contractors, and I dare say they will, if entrusted with the extension, carry it out with expedition and satisfactorily.

I am, &c.,
WILLIAM JOHN LYNE.

No. 19.

Minute of Secretary for Public Works.

I HAVE given the matter further and fuller consideration, and in view of the opinion expressed by the Crown Solicitor in his letter of the 19th ultimo, it seems to me that Stephens & Co. must be allowed to proceed with the contract.

I wish, however, to express very strongly my disapproval of their action in "hawking" the contract about for sale, and if I could have done so without creating any legal difficulties, I would certainly have cancelled contract.—W.J.L., 16/3/86.

Inform.—G.B., 20/3/86. Stephens & Co. informed,—22/3/86.

No. 20.

Commissioner for Railways to Messrs. Stephens & Co.

Gentlemen,

Department of Public Works, Railway Branch, 22 March, 1886.

With reference to correspondence which has passed respecting the proposed transfer of your contract to Messrs. Ahearn, M'Ardle, & Co., I understand that you have withdrawn the request for transfer, and that the contract will therefore be carried out in your own name as originally intended.

I

I have, however, to direct your attention to the minute of the Minister for Public Works (copy enclosed*) in reference to this matter.

I have, &c.,

CHAS. A. GOODCHAP,
Commissioner for Railways.

* Minute, 16/3/86. The papers should be forwarded at once to the Engineer-in-Chief, upon their return the Crown Solicitor will be instructed in regard to preparation of contract bond.—CHAS. A. GOODCHAP, 22/3/86. Seen by Engineer-in-Chief.—H.H.Q., 23/3/86.

No. 21.

Messrs. Stephens & Co. to The Commissioner for Railways.

Sir,

33, Pitt-street, Sydney, 23 March, 1886.

We are in receipt of your letter of the 22nd instant, No. 86/1,134 with reference to the carrying out of our contract for the railway line—Tenterfield to the Queensland Border.

In reply we have to state that we are anxious to go on with the work and regret that the Department should have so long delayed us the necessary authority to do so.

We herewith submit the names of the firm to be named in the bond, and trust that you will as soon as possible have it prepared and ready for signature.

We have, &c.,
STEPHENS & CO.

Names constituting firm {
GEORGE STEPHENS.
JOHN AHEARN.
HUGH M'ARDLE.
WILLIAM MURRAY THOMPSON.

RAILWAY FROM PEARCE'S CORNER TO BALL'S HEAD.

No. 1.

Minute by Secretary for Public Works.

Proposed Railway from North Shore to Pearce's Corner.

(Extract from M.P. 83/2339.)

12 June, 1883.

INSTRUCTION from the Minister for Works (Hon. F. A. Wright) to make a resurvey of line from St Leonards to Pearce's Corner.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Whitlock.

Post Office, Gordon, 14 July, 1883.

CARRY out the instructions already given to you verbally, viz., to resurvey the trial line as staked by Mr. Wells from the junction with the Southern and Northern Junction Railway near to Pearce's Corner towards Blue's Point, to meet Mr. Jones, who is making a survey to meet you; and be careful to plot both plan and section (4 chains to vertical inch) from right to left, so that they can be joined to Mr. Jones' plan and section, and so be made continuous from St. Leonards to Pearce's Corner. Your survey may be designated "Trial Survey, St. Leonards to Pearce's Corner."

HERBERT PALMER.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Whitlock.

23 August, 1883.

ON the completion of the field work of your length of the resurvey of proposed line from the North Shore to a junction with the Homebush and Waratah line, near Pearce's Corner, you may come to this office to complete the plotting of plan and section. I cannot give you instructions as to your next field work until I have examined both the plan and section of trial survey. Your men, while you are in the office, may be employed in making and distributing pegs for the permanent staking.

HERBERT PALMER.

No. 2.

The Assistant Engineer for Trial Surveys to The Engineer-in-Chief.

[Extract.]

North Shore to Pearce's Corner.

18 October, 1883.

"A RESURVEY has been completed of the original trial from Blue's Point to a junction with the Southern and Northern Junction Railway. This line commences at Blue's Point, thence round the head of Berry's Bay, thence across the Lane Cove Road at a point about a quarter of a mile to the east of the Cemetery, and thence generally in the direction of that road to near Pearce's Corner, where the line bears in a more northerly direction to a junction with the Homebush and Waratah line at a point nearly 21 miles from Redfern; the length of the branch line being about 12½ miles. An alternative line is now being surveyed, which will remove the starting-point of this line from Blue's Point to Ball's Head."

No. 3.

Mr. B. O. Holtermann to The Secretary for Public Works.

Sir,

I have the honor to inform you that a deputation from St. Leonards and the surrounding districts will wait upon you on Friday next, 21st instant, at noon, with reference to certain resolutions recently passed at a public meeting at St. Leonards, copy of which resolutions are herewith attached.

I have, &c.,

B. O. HOLTERMANN.

That, in the opinion of the people of North Shore and Lane Cove, the fork line of railway from Pearce's Corner should be carried out upon the original survey to Blue's Point.

Resolutions unanimously adopted by public meeting held at the "Green Gate Hotel," Lane Cove, on Wednesday evening, 12th March, 1884:—

- 1st. That, in the opinion of this meeting, the Government should adopt the line originally surveyed from Pearce's Corner to Ive's Point, or some other line east of Ive's Point, instead of that recently surveyed to Ball's Head.
- 2nd. That the Government be requested to construct steamboats similar to those which they recently proposed to employ between St. Leonards and Sydney, to run between the proposed terminus and the city.
- 3rd. That the following gentlemen, viz., B. O. Holtermann, Esq., M.L.A., R. B. Smith, M.L.A., J. F. Burns, Esq., M.L.A., George Withers, Esq., M.L.A., and Messrs. Dodds, Seldon, Pockley, Richardson, McKeown, and Edwards, form a deputation to wait upon the Minister for Public Works, with the view of bringing the foregoing resolutions under his notice.

W. H. MCKEOWN,
Chairman.
Engineer-

Engineer-in-Chief for Railways, for report.—F.A.W., 25/3/84. Blue's Point is not suitable either for a coal line or a passenger line, and sufficient information has not yet been obtained to justify any definite expression of opinion as to the best position for the termination of any line to the North Shore.—J.W., 27/3/84.

Under Secretary, B.C. Submitted, 31/3/84.—J.R. Will Mr. Whitton see me about this matter.—F.A.W., 2/4/84. B.C., 3/4/84.—J.R. I saw the Minister as requested.—J.W., 3/4/84. Under Secretary, B.C. Submitted, 5/4/84.—J.R. Seen.—Mr. W. Matter is under consideration.—F.A.W., 7/4/84.

No. 4.

The Under Secretary for Public Works to Mr. B. O. Holtermann.

Sir, Department of Public Works, Sydney, 8 April, 1884.
Referring to your communication on the subject of the proposed line of railway from Pearce's Corner to Blue's Point, North Shore, I am directed by the Secretary for Public Works to inform you that the matter is at present under consideration.

I have, &c.,
JOHN RAE.

No. 5.

Minutes of Secretary for Public Works.

Railway to North Shore.

Department of Public Works, Sydney, 4 April, 1884.
AN influential deputation, accompanied by Messrs. Holtermann, Burns, Ferguson, Sutherland, Withers, R. B. Smith, Dalton, Chapman, Murray, and Slattery, waited upon me to-day to ask that no delay might be allowed to occur in carrying out the construction of the Railway to St. Leonards, and that the original survey should be adhered to.

I informed the deputation that the junction point—Pearce's Corner—had been definitely decided upon, the place chosen being the most suitable from an engineering point of view, and the most suitable for the residents. The site for the terminus at North Shore had not been definitely fixed, and I had asked the Engineer-in-Chief to take time and give full consideration to the matter, in order that the site would not be disputed afterwards.

I thought that two terminal points would have to be selected, one for the discharge of coal, and the other for passengers and ordinary goods.

F.A.W., 4/4/84.

No. 6.

The Assistant Engineer for Trial Surveys to The Engineer-in-Chief.

Sydney, 13 May, 1884.
As Mr. Wells has returned to the office, after satisfactorily completing the trial survey between Parkes and Wellington, I can recommend his being employed on the North Coast trial survey from Port Macquarie in a southerly direction to meet Mr. Thornbury, who is working from Maitland.

HERBERT PALMER.

I arranged with Mr. Palmer to-day to send Mr. Wells to obtain information for completing the trial survey from Pearce's Corner to St. Leonards.—J.W., 14/5/84. H.P., 15/5/84.

Mr. Surveyor Wells to The Engineer-in-Chief.

Railway Survey Camp, North Shore, 10 June, 1884.

I HAVE the honor to report that I have completed the staking of trial line from Crow's Nest Junction with loop line to Ball's Head. I will finish the levelling on Thursday.

SAMUEL S. WELLS.

Mr. Surveyor Wells to The Engineer-in-Chief.

Railway Survey Camp, North Shore, 12 July, 1884.

I HAVE the honor to report that I will complete trial survey, from Milson's Point to Kerosene Bay junction, with line from Ball's Head, on Tuesday next (15th instant). In consequence of the broken weather we had lately and the many obstacles in the way, such as houses and back-yards, and more especially the heavy scrub, which retarded my progress very much.

SAMUEL S. WELLS.

Mr. Palmer.—W.H.Q., 14/7/84. This work would have been completed by the date mentioned had the weather been fine; as it is the levels will not be completed before the 17th instant.—H.P., 15/7/84.

No. 7.

Minute by Under Secretary for Public Works.

Subject :—Branch line of railway from Pearce's Corner to the waters of Port Jackson at St. Leonards.

Department of Public Works, Sydney, 9 July, 1884.

WHEN will the plans for the branch railway line from Pearce's Corner to the waters of Port Jackson, St. Leonards, be ready to lay upon the Table of the House? The Engineer-in-Chief for Railways, B.C., 9/7/84.—J.R. Very urgent. Mr. Palmer.—W.H.Q., 10/7/84.

The survey of the last proposed route to Milson's Point will be completed this week. It will then be necessary to trace copies of the plan and section of the route it may be decided to submit for the approval of Parliament. These tracings should be ready by the end of next week.—H.P., 10/7/84. An estimate of cost must also be made.—J.W., 15/7/84. Mr. Palmer. Will

Will the Engineer-in-Chief please say if the earthwork quantities of each through line from the water at St. Leonards to Pearce's Corner are to be computed as for a single or a double line of railway.—H.P., 16/7/84. The Engineer-in-Chief. I think a single line will be sufficient for the present, but land should be taken for a double line.—J.W., 16/7/84. Parliamentary plan, section, and book of reference, with approximate estimate, handed to the Engineer-in-Chief.—H.P., 31/7/84.

No. 8.

Memo. by Assistant Engineer in charge of Trial Surveys.

THE accompanying tracings show the plan and section of a proposed line of railway from Ball's Head, on the North Shore, to a junction with the Southern and Northern Junction Railway near Pearce's Corner, with a branch line, starting from the summit of St. Leonards at the Crow's Nest to a junction with the Ball's Head line at Chatsworth.

The first of these lines starts at the point known as Ball's Head, and skirts the shore of Ball's Head Bay, thereby securing a site with deep water frontage for the shipping of coal, exceeding half a mile in length; thence the line crosses Kerosene Bay, thence by a tunnel to Gore Cove, and by a second tunnel under the Greenwich Road to Gore Creek; thence, passing about half a mile from Longueville, ascends by a grade of 1 in 50 to the Lane Cove Road at Chatsworth, and follows along the eastern side of this road throughout to a point about half a mile east of Pearce's Corner, and thence to a junction with the Homebush and Waratah line at a point $20\frac{3}{4}$ miles from Redfern, the length from Ball's Head being $12\frac{3}{4}$ miles. The passenger branch connecting with this line starts in the vicinity of the Crow's Nest; thence bears in a straight direction past Magney's brickworks to a junction with the Ball's Head line at Chatsworth, at a point about $4\frac{1}{4}$ miles from Ball's Head, the length of the branch from Crow's Nest being $2\frac{3}{4}$ miles.—H.P., 4/8/84.

No. 9.

The Engineer-in-Chief to The Secretary for Public Works.

4 August, 1884.

PURSUANT to clause 9 of the "Government Railways Act of 1858," I have the honor to forward, to be laid before Parliament, copies of the plan, section, and book of reference of the proposed railway from the North Shore to Pearce's Corner.

Description.

The accompanying tracings show the plan and section of a proposed line of railway from Ball's Head on the North Shore to a junction with the Southern and Northern Junction Railway near Pearce's Corner, with a branch line starting from the summit of St. Leonards at the Crow's Nest to a junction with the Ball's Head line at Chatsworth.

The first of these lines starts at the point known as Ball's Head, and skirts the shore of Ball's Head Bay, thereby securing a site with deep water frontage for the shipping of coal exceeding half a mile in length; thence the line crosses Kerosene Bay; thence by a tunnel to Gore Cove, and by a second tunnel under the Greenwich Road to Gore Creek; thence, passing about half a mile from Longueville, ascends by a grade of 1 in 50 to the Lane Cove Road at Chatsworth, and follows along the eastern side of this road throughout to a point about half a mile east of Pearce's Corner; and thence to a junction with the Southern and Northern Junction Railway to a point $20\frac{3}{4}$ miles from Redfern, *via* Homebush, the length from Ball's Head being $12\frac{3}{4}$ miles.

The passenger branch connecting with this line starts in the vicinity of the Crow's Nest; thence bears in a straight direction past Magney's brickworks to a junction with the Ball's Head line at Chatsworth, at a point about $4\frac{1}{4}$ miles from Ball's Head, the length of the branch from Crow's Nest being $2\frac{3}{4}$ miles.

JOHN WHITTON.

No. 10.

Mr. Surveyor Bell to The Engineer-in-Chief.

Sir,

Railway Survey Camp, Gordon, 11 September, 1884.

The traverse and section of the proposed alteration at Gordon I finished yesterday, but had not the plotting done in time for last night's mail. To-night I send you tracing with traverse of deviation, commencing 3 m. 20 ch., shown in red. As the ground between B and C (on plan) is sideling, I kept the traverse as near the road as possible; but to avoid the dwelling-houses at B and C—a villa and a cottage—it might be advisable to adopt for the centre line the line shown green on plan. On the other hand, if the houses are interfered with, the line should be taken half a chain nearer to the road than the red line. The continuation of the green line past the end of the traverse shows the proposed route from "D" to the junction with S. and N. Jn. Railway.

The red ground line (full) on section from A to D is the section along the traverse on plan; its continuation (dotted) from D onwards is the section along the green line from D to the junction.

One of my men will call at the Trial Survey Office on Saturday, if you will kindly have the plan ready to return to me with instructions, if you cannot have it posted to me on Friday night.

I have, &c.,

WM. REID BELL.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Bell.

17 Sept., 1884.

WITH reference to the clearing of lines on the permanent staking of the North Shore and Pearce's Corner Railway, the Engineer-in-Chief has directed that, unless absolutely necessary, no fruit-trees are to be cut down, and then only after an interview with the owner. Compensation will be paid when any damage is done; and you must be careful to report in every instance the number of trees, and their probable value, which you cut down on each property.

H. PALMER.

Copy of letter as above sent to Mr. Wells on same date.—H.P.

The Chief Clerk to The Assistant Engineer for Trial Surveys.

8 October, 1885.

THE plan and section of the Pearce's Corner to North Shore Railway returned herewith.

The Engineer-in-Chief is much surprised that they are not finished, and wishes them to be completed immediately. As many draughtsmen as possible are to be employed on the work, and the plan and section are to be returned completed to this office within a week.

W. H. QUODLING.

No. 12.

The Engineer-in-Chief to The Secretary for Public Works.

North Shore Railway, single line—Pearce's Corner to Crow's Nest, &c.

8 October, 1885.

I FORWARD, for the consideration of the Minister, the plan and estimates of the above railway from Pearce's Corner, on the Southern and Northern Junction Railway, to the Crow's Nest, in the parish of St. Leonards, being a distance of 11 miles 15 chains, with a branch line for the conveyance of coal to Ball's Head, of a length of 3 miles 37 chains. The estimated cost (exclusive of land and compensation) of the passenger line from Pearce's Corner to Crow's Nest, is £330,000, or at the rate of £29,511 per mile for a single line.

The earthworks are very heavy, being about £9,500 per mile. I have included £70,000 for stations, which, though apparently high, will I think be required, as it will be a suburban line, with stations very close together, for the whole distance.

The branch to Ball's Head for the coal traffic is to be a single line, and leaves the passenger line to St. Leonards at a distance from Pearce's Corner of 8 miles 30 chains, and is 3 miles 37 chains in length.

After passing through a rough country, with very heavy cuttings, and two tunnels of an aggregate length of 968 yards, it reaches the waters of Port Jackson, on the western side of Ball's Head, where the erection of coal-shoots is proposed, of sufficient elevation to load the largest ships without the use of cranes. The estimated cost of this length, including tunnels, *for a double line*, sidings at Ball's Head, coal staiths, over-bridges, &c., is £380,000.

The total estimated cost of these lines, being a length of 14 miles 52 chains, is £710,000, of which amount a sum of £140,000 has been voted by Parliament *towards* their construction.

I informed the Minister this morning that the working plans and sections of these lines were ready; but on sending for them I found, I regret to state, that for some reason or other (which in Mr. Palmer's absence I cannot ascertain) they appear to have been laid aside for the last few weeks.

I have however directed that they be completed within a week from the present date, as there is not much to be done to them.

JOHN WHITTON.

Railway from North Shore to Pearce's Corner.

9 October, 1884.

PURSUANT to the Minister's instructions, I forward for the Honorable the Colonial Treasurer a tracing from the Parliamentary plan of the Railway from North Shore to Pearce's Corner.

JOHN WHITTON.

No. 13.

The Engineer-in-Chief to The Under Secretary for Public Works.

WITH reference to the Minister's verbal instructions to invite tenders for the North Shore Railway, I shall feel obliged if you will please ascertain if tenders are to be invited for the railway from Pearce's Corner to the North Shore, with a branch line for coal traffic to Ball's Head, or *for the passenger line only?* J.W.

Under Secretary, 12 Oct., 1885. Submitted, 12/10/85.—J.R. Call for tenders at once for line, Pearce's Corner to North Shore, including coal traffic line to Ball's Head.—H.S.B., 12/10/85. Mr. Whitton, for forms of notice.—J.R., 12/10/85. Forwarded, 12/10/85.

Minute Paper.

Engineer-in-Chief to Secretary for Public Works.

Pearce's Corner to North Shore, Railway, including Ball's Head Branch.

12 October, 1885.

HEREWITH I forward a draft advertisement, inviting tenders for the construction of a line of railway from the Southern and Northern Junction Railway at Pearce's Corner to St. Leonards, North Shore, including a branch line for coal traffic to Ball's Head, being a total length of 14 miles 52 chains.

JOHN WHITTON.

The Chief Clerk to The Assistant Engineer for Trial Surveys.

13 October, 1885.

Pearce's Corner to North Shore.

REFERRING to my memo. of the 8th instant—the Gazette notice inviting tenders for this line having been issued—I have the honor, by direction, to request you to be good enough to push forward the working plans, &c., in time for the preparation of lithograph plans by the 3rd proximo.

W. H. QUODLING.

No. 14.

No. 14.

Memo. to Engineer-in-Chief.

Sydney, 20 October, 1885.

Pearce's Corner to St. Leonards.

THE branch to Ball's Head crosses three bays, named respectively Gore Creek, Gore Cove, and Kerosene Bay, besides another indentation of the coast-line between the latter and the Head. As the bottom in these bays may possibly prove as treacherous as is the case in Mullet Creek, on the Southern and Northern Junction, it will be desirable to take borings on the centre line in these places, and also to the left and right of the centre line, at 1 chain or 2 chains distance, as circumstances may decide, so that cross sections of the firm bottom may be plotted.

If the Engineer-in-Chief wishes me to mark the position of the borings required, I have to request that Mr. Palmer will furnish me with a tracing of the line from 11m. 10c. to the end; otherwise, perhaps, the Engineer-in-Chief will be good enough to instruct Mr. Palmer to get the borings sunk.

Robert Stanley has put in a price for the work.

H.-DEANE.

If these borings are required on the proposed contract for the Branch to Ball's Head, Mr. Palmer had better supply Stanley with a tracing, and mark where the borings are to be taken.—J.W., 22/10/85. Mr. Palmer. I have given Stanley instructions as to the boring required at Gore Creek, and will continue to give him particulars of the remaining borings wanted as he proceeds with the work.—H.P., 26/10/85.

No. 15.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Bell.

24 October, 1884.

I HAVE examined the section of the portion of the North Shore and Pearce's Corner line staked by you, and find that there is no necessity to make any further alterations in the centre line. You may therefore proceed with the survey of details; and it will be necessary to survey everything between the centre line and Lane Cove Road, and to the boundaries of all properties on the other side of the centre line, so that the notices of resumption may show the entire property, and the portion resumed in each case.

H. PALMER.

The Assistant Engineer for Trial Surveys to Mr. Surveyor Bell.

25 October, 1884.

It has been decided that the through chainage of the permanently staked centre line of the North Shore and Pearce's Corner line shall be commenced at the junction with the Homebush and Waratah line, and not at Ball's Head. You will therefore be good enough to start the chainage without delay, so that you can give it over to Mr. Wells as early as practicable. You will of course understand that your starting-point will be 0ms. 0chs. 0lks., thence to 0ms. 10chs., and so on; and that the working plan and section will be plotted from left to right, as usual, starting at Pearce's Corner.

H. PALMER.

No. 16.

Memo. from Mr. Assistant-Engineer Drewett to Engineer-in-Chief.

Southern and Northern Junction Railway, Pearce's Corner to St. Leonards.

Sydney, 3 November, 1885.

THE plans, sections, drawings, and specification for the above works, which are advertised to be seen this day (3rd November) are not yet ready, and as yet I have not received the plan from Mr. Palmer's office, where, I understand, that as many hands as it is possible to employ on this work, in order to get it finished quickly, have been put on; but as there has not been sufficient time allowed for the preparation of this contract, I would suggest that the time for the exhibition of the drawings, &c., should be extended.

J. W. DREWETT. •

May be extended to the 16th for seeing plans, and for receipt of tenders to the 15th December.—J.W., 3/11/85.

Railway line, North Shore to Pearce's Corner, &c.—Extension of time for inspection of plans, &c., and receipt of tenders.

4 November, 1885.

As the specification, &c., for the above railway could not be got ready in time for inspection on the 3rd instant, as advertised in the Government Gazette, I have the honor to request that the date for inspection of the plans, &c., may be extended to Monday, the 16th instant, and for the receipt of tenders to Tuesday, the 15th December proximo.

Urgent.

JOHN WHITTON.

No. 17.

Mr. Surveyor Bell to The Engineer-in-Chief.

Railway Survey Camp, Gordon, 18 November, 1884.

IN reply to your memorandum of yesterday, I have to inform you that there are $2\frac{1}{2}$ miles of my section to permanently stake, and I shall have the levelling for the permanent section completed on the 25th instant, when I shall send you the level-book made up. The chainage is checked, and the track has been cleared of all logs and stumps, and the pegs are being ringed as I go along.

WM. REID BELL.

Mr. Surveyor Wells to The Engineer-in-Chief.

Railway Survey Camp, St. Leonards, 18 November, 1884.

I HAVE the honor to acknowledge the receipt of your memo. of yesterday, No. 84/251. I beg leave to state that I have not got the through chainage from Mr. Bell yet; my work is all ready; it will not take me long, once I get it. While waiting I have made a most accurate survey of the foreshore, from Berry's Bay to Greenwich Point, together with roads, houses, and subdivisions that are upon and close to the centre line. At present I am traversing creeks and watercourses.

SAMUEL S. WELLS.

No. 19.

Mr. A. Armstrong to The Secretary for Public Works.

Sir, Lands Agency Office, 26 Bridge-street, Sydney, 23 Nov., 1885.

The Mayors of St. Leonards, East St. Leonards, and Victoria, and many others wish to wait upon you without delay to bring before your notice the fact that a subdivision of the Berry Estate has been effected, and sale is advertised to take place on next Saturday, and will embrace a large portion of the surveyed line at its terminus, inclusive of station site.

May I name 11 o'clock to-morrow to wait upon you in the matter?

I have, &c.,

A. ARMSTRONG.

Yes, inform.—W.J.L., 23/11/85.

The Under Secretary for Public Works to Mr. A. Armstrong.

Sir, Department of Public Works, Sydney, 23 Nov., 1885.

In reply to your letter of this day's date, I am directed to inform you that the Secretary for Public Works will receive the deputation on the subject of sale of Berry Estate subdivision to-morrow, Tuesday, at 11 o'clock.

I have, &c.,

JOHN RAE.

No. 20.

Minute of Secretary for Public Works.

Land resumption—Pearce's Corner to North Shore.

Department of Public Works, Sydney, 24 November, 1885.

A DEPUTATION from the North Shore, introduced by Mr. I. Ives, M.P., and comprising Messrs. Jenkins, Smith, Armstrong, M'Mahon, Clarke, and Richardson, waited upon me this morning with reference to land resumption for the railway to the North Shore. It was stated that it was proposed to sell the Berry Estate on Saturday next, and the site of the proposed railway station would be then sold in small allotments. They thought it would be greatly to the advantage of the Government if they at once served the notice of resumption upon the original owner rather than have to deal with a number of owners who would purchase on Saturday if no action is taken. Consequently, instead of having simply to deal with Mr. Berry's claim, we would have to meet numerous small owners who would require a profit upon their transactions, and in view of the after resumption a fictitious value might be put upon the land on Saturday.

I admitted, with them, the importance of the matter, but whether the resumption took place before or after Saturday's sale I did not think it would much affect the value of the land. However I promised to look into the question at once so that if any action was necessary it might be taken to-morrow.

W.J.L., 24/11/85.

Cabinet approves of resumption of land from the Crow's Nest to Pearce's Corner; from the former point a division can be made to Ball's Head, or to some other point on St. Leonards; the approval of the House will be required as to the course the line will take from the Crow's Nest. This decision has been arrived at in view of the increased estimate of the Engineer-in-Chief for Railways for the extension to Ball's Head.—G.R.D., 25/11/85.

Let the resumption notices be issued in time for Friday's Gazette.—W.J.L., 25/11/85. The plans have not been approved by the Governor and Executive Council. This will be necessary, and the line proclaimed in accordance with the provisions of the Railway Act before any resumption can legally be made.—CH.A.G., 26/11/85. What was the decision arrived at? The matter is very urgent; sale takes place to-morrow. Submitted, 27/11/85.—J.R. When were the plans, &c., of the line from Pearce's Corner to Ball's Head approved by Parliament?—CH.A.G., 28/11/85.

Approved by Assembly, 26 August, 1884. Approved by Council, 10 September, 1884. Commissioner.—G.B., 28/11/85.

No. 21.

The Engineer-in-Chief to The Secretary for Public Works.

Report—Railway from North Shore to Pearce's Corner, &c.

Land resumption.

30 November, 1885.

IN the minute of the Hon. the Colonial Treasurer, dated 25th November, 1885, having reference to the resumption of land for the proposed railway from Pearce's Corner to the Crow's Nest, St. Leonards, the following paragraph occurs:—

"This decision has been arrived at in view of the increased estimate of the Engineer-in-Chief for Railways for the extension to Ball's Head."

This statement requires explanation. The amount of £140,000, placed on the Estimates, and voted in April, 1883, was not an estimate in any sense, but was placed in the loan votes towards the construction

tion of the line from Pearce's Corner to Crow's Nest. At this time no surveys of the North Shore line had been made from which any estimate could be made, nor at that time was it decided where the terminus of the line for passengers and goods would be. Therefore *one estimate* only has been made by me of this extension.

With reference to the resumption of land on this line, I carefully avoided proclaiming it, as I knew it was subdivided into very small allotments along the centre line of railway, which would render the cost of the land *only* very expensive, and therefore, before proclaiming it, I desired to have the express authority of the Minister.

The works also on this line are heavier than on almost any other line in the Colony.

My impression has always been that for some time to come the traffic on this line would be very small; and it is also doubtful if any considerable coal traffic would be obtained from the northern districts to justify a separate arrangement for the shipping of coal; and as an arrangement for the coal traffic from the Southern and Western districts will have to be provided, probably at Glebe Island, the one arrangement might be sufficient for all the lines.

I therefore recommend that, in lieu of the passenger railway proposed from Pearce's Corner to Crow's Nest, a light railway or tramway be made on the existing road as far as possible, joining the present cable tramway at the top of Miller-street, and the Northern and Southern Junction Railway at Pearce's Corner.

Considering the valuable orangeries through which the railway would pass, and the manner in which the land has been cut up for sale in small allotments, I have an impression that the light railway or tramway along the road would cost little more than would have to be paid for the land and compensation alone on the proposed passenger line.

I have no section of the Lane Cove Road, but by making a few deviations I have no doubt a practicable line can be obtained.

A line of this description would, in my opinion, give every reasonable accommodation to the Lane Cove District.

JOHN WHITTON.

No. 22.

Minute for Executive Council.

Railway from Pearce's Corner to North Shore.

THE Secretary for Public Works having decided that the plan and book of reference of the above are to be submitted to the Governor and Executive Council for the approval of the line from Pearce's Corner to a point marked "A" upon the said plan, I have to request you to be good enough to have a minute prepared for submission to the Governor and Executive Council for the necessary approval.

CH.A.G., B.C., 7/12/85.

Prepare minute for Executive Council. Done.—8/12/85.

Department of Public Works, Sydney, 8 December, 1885.

I HAVE the honor to submit, for the approval of his Excellency the Governor and the Executive Council, plan and book of reference of a proposed line of railway from Pearce's Corner to a point marked "A" in said plan in terms of the Act 22 Victoria No. 19.

WILLIAM JOHN LYNE.

The Executive Council advise that the intended formation of the railway line referred to be notified in terms of the Act 22 Victoria, No. 19.—ALEX. BUDGE, Clerk of the Council.

Approved.—A.S., 8/12/85. Confirmed, 15/12/85. Railways, B.C.—J.R., 18/12/85.

No. 23.

The Chief Clerk to Mr. Surveyor Bell.

Cutting down fruit-trees on Railway Survey, North Shore to S. & N. Junction Railway.

Railway Survey Camp, Gordon, 29 November, 1884.

IN reference to your report, dated 28th September (? November), forwarding a list of fruit-trees cut down by you on this survey, I am desired to direct your attention to the enclosed copy of a minute, dated to-day, by the Engineer-in-Chief, on this subject, who expresses his surprise to learn that you should have found it necessary to destroy so many valuable trees.

W. H. QUODLING,
per A.R.M.

[Enclosure.]

Engineer-in-Chief's Minute, dated 29th November, 1884.

If orange or other valuable trees are cut down, the Department will have to pay for them, at probably a most extravagant rate, and therefore do not cut any such trees down if by any possibility such a course can be avoided.

The list you have sent to me of trees cut down is sufficiently extensive, and will amount to a very large sum, and I must express my regret that such destruction was a necessity.

J.W., 29/11/84.

No. 24.

Mr. Surveyor Bell to The Engineer-in-Chief.

Railway Survey Camp, Gordon, 12 December, 1884.

THE junction of this line with the Southern and Northern Junction Railway at Pearce's Corner is at 20 m. 6,810.8 lks. from Sydney, being the tangent point of the first curve.

By this mail I send you a sketch of the centre line of my section, for the purpose of plotting, with a table of particulars of curves.

WM. REID BELL.

No. 25.

No. 25.

Minute from Under Secretary for Public Works.

Sir,

Department of Public Works, Sydney, 15 December, 1885.

The tenders, eleven in number, for the work specified in the margin, are referred to you for report, and you will have the goodness, as early as possible, to return them to me direct for submission to the Minister.

I have, &c.,

JOHN RAE.

Construction of railway from Pearce's Corner to the North Shore, with a branch line for coal traffic to Ball's Head.

No. 26.

The Engineer-in-Chief to The Secretary for Public Works.

17 December, 1885.

Railway from Pearce's Corner to North Shore, with a branch line to Ball's Head.

Report on tenders.

THE enclosed tenders (eleven in number) for the construction of the North Shore lines, have been received. The lowest tender is that of Messrs. Morton & Hardy, the amount being £207,647 15s. This amount, however, includes the line to Ball's Head; but as the Government decided, after the tenders had been invited, not to construct this branch, the cost of the works on this portion of the line has been deducted at the prices stated in Messrs. Morton & Hardy's tender.

| | | | |
|---|---------|-----|-----|
| The amount of tender including the Ball's Head branch, is ... | £ | s. | d. |
| ... | 207,647 | 15 | 0 |
| The cost of Ball's Head branch, to be deducted, is ... | ... | ... | ... |
| ... | 77,486 | 14 | 8 |

The amount of the tender for the main line from Pearce's Corner to Crow's Nest is therefore 130,161 0 4

Before this tender can be accepted, the contractors should be communicated with, and their sanction obtained to the omission of the works on the Ball's Head line, and the consequent reduction of their tender.

Should the contractors agree to this reduction, and their tender be accepted, it should not be forgotten that the proclamation of this line has not been made, and that under the Railway Act no building or ornamental grounds can be entered upon in less than six months. *Portions of the line, therefore, could not be entered upon in less than six months from the date of notice to resume such lands, and to act in contravention of this provision might give rise to considerable litigation.*

It would therefore, in my opinion, be better to delay the acceptance of any tender for this length, and to obtain a careful estimate of the probable cost of the land and compensation to be paid to owners and occupiers of the ground required for the railway, before the construction of the line be determined upon.

I may remark that this tender (£130,161 0s. 4d.), does not include land, permanent way materials, stations, gate-houses, engineering, and other incidental expenses, which will add considerably to the cost of construction.

I annex schedule of tenders.

JOHN WHITTON.

SCHEDULE of tenders opened 15th December, 1885, for the construction of a railway from Pearce's Corner to the North Shore, including a branch line for coal traffic to Ball's Head.

| No. | Tenderer. | Amount. | Remarks. |
|-----|---|--------------|---|
| | | £ s. d. | |
| 1 | Lemm & Spence..... | 241,436 8 4 | |
| 2 | Richd. Rothwell | 226,730 5 0 | |
| 3 | Carey & Maund..... | 245,402 5 0 | |
| 4 | Mondy & Co. | 271,934 8 4 | |
| 5 | G. Blunt | 254,801 5 0 | |
| 6 | John Chaplin & Co. | 245,813 13 4 | |
| 7 | Morton & Hardy | 207,647 15 0 | } Reduced by deduction of Ball's Head Branch, £77,486 14s. 8d., to £130,161 0s. 4d. |
| 8 | Edw. Pritchard..... | 232,778 3 4 | |
| 9 | A. & R. Amos | 277,148 16 8 | |
| 10 | M'Ardle & Thompson | 218,128 6 8 | |
| 11 | Monie & Co. | 216,133 13 4 | |
| ... | Engineer's estimate, £259,630 17s., from which deduct the estimated cost of Ball's Head branch, £91,929 13s. | 167,701 4 0 | |

JOHN WHITTON.

No. 27.

The Engineer-in-Chief to The Secretary for Public Works.

22 December, 1885.

North Shore to Pearce's Corner railway.

In accordance with the request of 21st instant, I forward herewith the proclaimed plan and book of reference of the proposed railway from North Shore to Pearce's Corner, Southern and Northern Junction Railway.

Description: Commencing at Pearce's Corner on the Southern and Northern Junction Railway, and terminating at a point marked A in the township of St. Leonards, being a length of ten (10) miles sixty-nine (69) chains and thirty-five (35) links.

JOHN WHITTON.

No. 28.

Messrs. Morton & Hardy to The Commissioner for Railways.

Sir,

Sydney, 6 January, 1886.

We have the honor to bring under your notice our tender for the construction of the proposed railway from Pearce's Corner to North Shore. We have been informed by the Department that our tender is the lowest given in for said work, but notwithstanding our repeated applications we are unable to learn whether it is intended for the works to be carried out, and as this suspense is prejudicial to our interest in tendering for other works we hereby beg to notify that we withdraw our tender, and will esteem it a favour if you will have the necessary steps taken for returning our deposit.

We are, &c.,

MORTON & HARDY.

Address—Care William Shenstone, 359, George-street, Sydney.

No. 29.

I. E. Ives, Esq., M.P., to The Secretary for Public Works.

Sir,

Sydney, 20 January, 1886.

I shall esteem it a favour if you will kindly furnish me with all particulars in reference to the North Shore Railway from Pearce's Corner to the Crow's Nest, tenders for which were to be in on 15th December last, and were opened by your predecessor, Mr. W. J. Lyne, on or about that date.

The resumptions necessary were also to have been gazetted, but this has not yet been done.

Full particulars showing the exact state of affairs will enable my constituents to decide what steps are necessary (if any) to have this most important work immediately proceeded with.

Yours obediently,

I. E. IVES.

Railways inform tenders now under consideration.—J.G., 21/1/86.

The Commissioner for Railways to I. E. Ives, Esq., M.P.

Sir,

Department of Public Works, Railway Branch, Sydney, 27 January, 1886.

In reply to your letter of the 20th instant, asking to be furnished with particulars respecting the projected railway from Pearce's Corner to the Crow's Nest, tenders for which were opened on the 13th ultimo, I have the honor to inform you that the matter is now under the consideration of the Government.

I have, &c.,

CHAS. A. GOODCHAP,

Commissioner for Railways.

No. 30.

Minute for Cabinet.

Department of Public Works, Sydney, 25 January, 1886.

Railway Pearce's Corner to North Shore.

THIS extension was authorized in 1882—46 Victoria, No. 23—the wording of the authority being:—“Towards construction of a line from North Shore to junction with Southern and Northern Junction Railway. Amount of appropriation, £140,000. The plans for the line were approved of in the Assembly on the 26th August, 1884.”

Tenders were subsequently invited and opened on the 15th December, 1885.

The contract, including the line to St. Leonards, Crow's Nest, and also a branch to Ball's Head, the total distance being 14 miles 46 chains. Eleven tenders were received, the lowest being that of Messrs. Morton & Hardy for £207,647 15s. This of course including the Ball's Head branch. It was proposed after the tenders were opened to omit the Ball's Head branch, and Mr. Whitton found that the value of Morton & Hardy's tender for the direct line to St. Leonards would be £130,161 0s. 4d.

This price it must be mentioned includes only the mere excavation, forming culverts, &c., in fact making the road bed, and to it would have to be added the cost of the permanent-way materials, &c., land required, stations, gates, houses, engineering and other incidental expenses which will be very considerable.

Mr. Whitton estimates the cost of line Pearce's Corner to Crow's Nest, exclusive of land, but including rails, stations, &c., at £330,000, or with the Ball's Head branch, wharves, &c., at £710,000.

Since the receipt of tenders, Morton & Hardy, the lowest tenderers, have withdrawn offers. In view of all the circumstances of the case I recommend that the acceptance of a tender be delayed until an estimate of the cost of resumption of the land required be made, and that the tenderer's deposit be returned.

J. GARRARD, 25/1/86.

The Cabinet concur. Approved.—JOHN R., 25/1/86. Let the valutors see to this matter at once.—J.G., 25/1/86. Land valuer.—D.C.M'L., 27/1/86. Approximate estimate herewith.—F.S.M., 16/2/86.

No. 31.

The Acting Railway Land Valuer to The Commissioner for Railways.

Railway Department, Land Valuator's Office, Sydney, 16 March, 1886.

Approximate estimate of the cost of the land, &c., proposed to be taken for railway purposes, Pearce's Corner to North Shore.

IN compliance with the Commissioner's instructions of 25th January last, the land valuer submits herewith an approximate estimate of the value of the land proposed to be taken from private persons for railway purposes, from Pearce's Corner to North Shore; considerable time has been spent in this inquiry, and

and a close inspection made of all the properties in question and all the information available respecting them obtained.

The land valuer believes the estimate here given to be a fair and sufficiently liberal one.

F. S. MACDERMOTT,
Acting Railway Land Valuer.

ESTIMATE of probable cost of Land, Pearce's Corner to North Shore.

No. 32.

Mr. J. G. Edwards to The Secretary for Public Works.

Sir,

278, Pitt-street, Sydney, 15 March, 1886.

I beg to inform you that at a public meeting held at St. Leonards on the 22nd ultimo, several resolutions relative to the construction of the railway from Pearce's Corner to St. Leonards were unanimously passed.

A committee was also appointed by that meeting to bring the resolutions adopted under your notice.

A meeting of the committee was held at the Exchange this afternoon, and the following gentlemen were appointed a deputation to wait upon you, viz.:—Sir Henry Parkes, K.C.M.G., I. E. Ives, M.P., J. C. Neild, M.P., B. Jenkins (Mayor of St. Leonards), M. M'Mahon (Mayor of Victoria), H. Fleming (Mayor of North Willoughby), Hon. Alexander Dodds, M.L.C., and Messrs. W. H. M'Keown, G. R. Whiting, F. Smith, Blomfield, and A. Achison.

If you would early appoint a time when you could give a deputation audience we should feel obliged.

I have, &c.,

JAMES G. EDWARDS.

Minister will see deputation Tuesday (23rd) at 11 a.m. Informed.

North Shore, 23 March, 1886.

WE, the undersigned, owners of land through which the proposed North Shore to Pearce's Corner Railway is to pass, hereby agree to give the land to be resumed for the construction of the said line, as shown on plan prepared by the Railway Department, provided we are compensated for our improvements, and that the line is proceeded with at once.

A. G. BLOMFIELD, 1½ chain.

T. HARNETT, JUNIOR.

R. & W. GREEN, Lane Cove Road.

R. ARCHIBALD.

E. ABRAHAM.

North Shore, 23 March, 1886.

WE, the undersigned, owners of land through which the proposed North Shore to Pearce's Corner Railway is to pass, hereby agree to accept the amount opposite our names for the land to be resumed for the said line as shown on plan prepared by the Railway Department, provided we are compensated for improvements on such land, and that the line is proceeded with at once.

A. G. BLOMFIELD, 1½ chain.

R. & W. GREEN, Lane Cove Road.

GERALD ARCHIBALD.

JAMES MONTGOMERY.

PHILIP J. RICHARDSON.

Mr.

Mr. J. Edwards to The Secretary for Public Works.

Sir,

North Shore, 23 March, 1886.

At a large and representative meeting, convened by the Mayors of St. Leonards, East St. Leonards, Victoria, and North Willoughby, held at the Masonic Hall, North Shore, on Monday, the 22nd day of February last, the following resolutions were unanimously carried:—

1. That this meeting respectfully requests the Government to proceed at once with the construction of the railway from Pearce's Corner to St. Leonards.
2. That this meeting pledges itself to use its influence collectively and individually to induce proprietors along the said proposed line to accept the Government valuation of lands to be resumed.
3. That the following gentlemen, with power to add to their number, be a Committee to act as a Deputation to submit results of this meeting to the Government, and generally to proceed as they deem advisable, until the objects of this meeting are fulfilled, viz.:—B. Jenkins, Mayor of St. Leonards; Mr. McMahon, Mayor of Victoria; H. Fleming, Mayor of North Willoughby; Hon. Alexander Dodds, M.L.C.; P. F. Richardson, J.P.; W. H. McKeown, J.P.; H. Cornwell; J. G. Edwards; G. R. Whiting; W. F. Muston; T. Forsyth; A. Armstrong; G. T. Clarke; F. Smith; J. Ward; Vernon; N. P. McBurney; W. Wilson; W. Sayers; J. W. Cliffe; R. Harnett; Blomfield; Donnelly; Fisher; J. Robertson; W. Waterhouse; F. Punch; J. Monday; James Hobson; Captain Brett; J. C. Neild, M.P.; Gracey.

In presenting the foregoing resolutions we would submit that the North Shore to Pearce's Corner Railway, for the following reasons, should be proceeded with at once:—

1. Land along the proposed route is daily increasing in value, which must considerably add to the cost of resumption unless the land is taken at once.
2. The proposed line forms an important link in the railway system of this Colony.
3. The construction of the said line will open up the most beautiful, attractive, and productive district existing within many miles of the city.
4. The deep waters on the north side of Port Jackson cannot be fully utilized till this line is constructed.
5. Our suburban lines have proven themselves to be the best paying lines in the Colony.
6. The line has been approved of by Parliament, and its immediate construction has been promised by every Government holding office during the last five or six years. We therefore respectfully beg to urge that you will at once resume the land along the proposed route, and take immediate steps for the construction of the said railway.

I have, &c.,
 JAMES G. EDWARDS,
 Secretary N.S.R.C.

No. 33.

Minute of Secretary for Public Works.

Department of Public Works, Sydney, 23 March, 1886.

Railway—North Shore to Pearce's Corner.

A DEPUTATION, consisting of Messrs. I. Ives, M.P., the Hon. A. Dodds, J. C. Neild, M.P., Captain Jenkins, Mr. McMahon, Fleming, Allison, Smith, Whiting, Blomfield, McKeown, and Edwards, waited upon me to-day with reference to the railway from Pearce's Corner to the North Shore.

The statement enclosed was presented in favour of the objects of the deputation.

The deputation urged that the construction of the line should be at once proceeded with in pursuance of the implied promises previously given. The proposed line would pass through a splendid residential area and give facilities for settling a large suburban population in most healthy localities. At the present time the district was only sparsely populated through the want of facilities, but a great portion of land had been taken up and would be built upon if the line were constructed.

They urged that the line would not merely be a local one but that it would be of national importance, and sooner or later would have to be undertaken.

The coal traffic too would pass over this extension, and furnish a large source of revenue.

I informed them that when previously in office, some four months ago, a deputation waited upon me to urge the Government to invite tenders for the line, and also to provide for the resumption of land for the terminus at Crow's Nest. I promised that no time would be lost, and although a little delay occurred in arranging the necessary legal forms, I ultimately had tenders invited, but shortly afterwards the then Government vacated office.

The tenders were in due time received but action was delayed by the succeeding Government presumably on account of the cost that would be entailed in resuming the land required, and the matter was then further complicated by the lowest tenderers withdrawing their offer and there the matter seemed to drop.

One of the most important considerations in the matter was that of the cost of the land that would have to be resumed.

I had had a rough estimate prepared and found that the cost would probably be from £60,000 to £70,000, and this was standing in the way of carrying out the line. I understood it was the intention of the Committee appointed to watch this matter to endeavour to arrange for the land as far as possible to be given free, or the Government valuation accepted, and in view of the enhanced value that would be given to the properties by the construction of the railway, I thought it only reasonable that the Government should be treated liberally, and the land required given free; of course I did not expect all to give their land free, as in the case of small allotments perhaps nearly the whole of the holding would be taken and consequently there would be no enhanced value.

The amount voted for this work was £140,000 and the tender for the earthworks alone to the Crow's Nest was £130,000; if the cost of the land, permanent way, and stations had to be added, the cost would be nearer £300,000 altogether, so that in view of the excess over the vote, the question had to be carefully

carefully considered, but if the land were given free matters would be very much facilitated, and I urged upon them to take definite action in the matter. I had done all in my power to complete the matter, and had not altered my opinion if the item of land compensation was reduced. I did not think there would be anything further that would prevent the line being carried out.

It was not the practice to ask for the free gift of land for railway purposes, but the present was an exceptional instance, as the cost would so largely exceed the vote that something would have to be done to give a reduction. It was a strong reason in favour of the construction of the line that it would improve Government land, and this matter would not be lost sight of. Another reason was that the line would probably form a coal branch, the coal being taken to the deep waters of Port Jackson. The original proposal in this connection had been abandoned in the first instance, because of the cost involved, but another scheme was under consideration, and no doubt something definite would ultimately be adopted.

With regard to the amount of the reduction that I would consider necessary, I stated I would fix no amount but if the sum was reduced by a fair proportion I would submit the matter to my colleagues, with a view of obtaining their approval to the work.

I was informed that Mr. Harnett and Mr. Gracey would give the land required so far as they were concerned, free, and I thought this an evidence of public spirit that should be imitated.

With regard to land compensation I took occasion to mention that I knew of many cases in the interior where the railways had run through large properties, increasing their value two and three fold, and yet in addition the owners claimed and received large sums for compensation.

This it seems to me is wrong in principle, as I think the Government should receive some consideration in view of the enhanced value given to land by the construction of the railway.

W.J.L., 23/3/86.

No. 34.

Mr. R. Harnett to The Secretary for Public Works.

Sir,

310, George-street, Sydney, 24 March, 1886.

I have the honor to state that the great interest I have taken in the welfare of North Shore and its inhabitants for the last quarter of a century has induced me to wait upon you in furtherance of the views of the inhabitants.

A railway from Pearce's Corner to Cremorne is urgently wanted with a lead off at one or more intermediate points of the harbour. As I purchased large areas of land in the district or parish of Willoughby I am prepared to allow the Government to construct a railway to go through my land so purchased, and such railway to be completed within three years, and not to exceed one (1) chain in width, and where the area did not exceed one-tenth of the block through which the line may pass—for which I shall never require compensation, and I have little doubt that my co-partner will approve of my action in the matter.

I have, &c.,

R. HARNETT.

Further, since the first sod was turned in Australia for railway purposes the interests of Australians have suffered immensely through alienation of funds in payment of compensation for lands resumed, which lands had been previously useless, and which were only made valuable by the action of the authorities in pushing forward railway lines.

I have, &c.,

R. HARNETT,

(*pro* HENRY CHAS. CATT.)

Please acknowledge, and put with papers to await the result of action to be taken by the North Shore Committee in regard to having the land required conveyed free as far as possible.—W.J.L., 25/3/86. Acknowledged.

No. 35.

Mr. J. T. Chaplin to The Secretary for Public Works.

Sir,

Sydney Sewerage; Section 8, Brown-street, 26 March, 1886.

Seeing that a deputation of influential gentlemen have waited on you *re* the construction of the North Shore and Pearce's Corner Railway, in the event of your deciding to carry out the work as per plans and specifications upon which Tenders have been called for, mine being the second tender and the lowest having withdrawn his, I beg most respectfully to offer to return the £500 and leave my tender open for your acceptance.

I have, &c.,

JOHN T. CHAPLIN,

Attorney for EDW. PRITCHARD.

Acknowledge.—W.J.L., 27/3/86. Done, 29/3/86. Put with tender papers.—CH.A.G., 30/3/86.

No. 36.

Mr. H. E. M'Intosh to The Secretary of the North Shore Railway Committee.

Sir,

Church Hill, Gordon, 17 April, 1886.

I am willing to give 2 chains in width out of the $4\frac{1}{2}$ chains required for railway purposes through my orchard (2 chains being the ordinary width of line), provided that the present survey is adhered to; also, that I receive full compensation for all fruit-trees and improvements, and for all other land required for station, railway roads, or other purposes; also, for all loss or damage whatever sustained by me.

This offer will hold good for the term of twelve months from this date.

I am, &c.,

H. E. M'INTOSH.

Mr.

Mr. D. Roberts to The Committee of the North Shore Railway.

Gentlemen, The Premier Property Investment Co. (Limited), Sydney, 20 April, 1886.
I am authorized by the Directors of the above Company to offer as a subscription towards the Railway fund one hundred and twenty guineas, equal to £1 per acre of land held by the Company near the proposed line.

I am, &c.,
D. ROBERTS,
Manager.

Mr. M. A. Johnson to Mr. P. F. Richardson.

Sir, I send this according to promise to inform you that I have concluded to accept the sum of one hundred pounds per acre as compensation for what land the railway requires of mine.
Hoping this may prove satisfactory,

Gordon, 20 April, 1886.
I am, &c.,
M. A. JOHNSON.

Mr. S. H. Lewis to Mr. J. G. Edwards.

Sydney and Suburban Mutual Permanent Building and Land Investment Association (Limited).
Sir, 126 Pitt-street, Sydney, 21 April, 1886.
I duly received your esteemed favour of 17th instant, and laid the same before my Directors yesterday.

I am instructed to say that they have no objection to join with other proprietors in giving the land necessary for the railway to pass through.

I am, &c.,
S. H. LEWIS,
Manager.

Mr. W. Clarke to Mr. J. G. Edwards.

Anglo-Australian Investment, Finance, and Land Company (Limited),
Dear Sir, Sydney, 20 April, 1886.
My Board of Directors have this day agreed to convey to the Commissioner for Railways the land required by him from the block in Lane Cove Road, we own.

The width to be taken is not to exceed a chain in measurement. This offer is conditional on the line of railway from North Shore to Pearce's Corner being at once proceeded with.

I have, &c.,
WILLIAM CLARKE.

No. 37.

I. E. Ives, Esq., M.P., to The Secretary for Public Works.

Dear Sir, Sydney, 5 May, 1886.
After I had a conversation with you yesterday evening I received the enclosed note. Will you make an appointment to receive the report of the Committee.

I am, &c.,
I. E. IVES.

[Enclosure.]

The Acting Secretary to I. E. Ives, Esq., M.P.,

Dear Sir, 16 Macquarie-place, Sydney, 4 May, 1886.
Will you be kind enough to write to the Minister, asking if he will receive a deputation of the Railway Committee to present their report on the cost of compensation of the land between Pearce's Corner and St. Leonards, for Friday next, or, if not convenient for him on that day, will he be kind enough to appoint a day.

I am, &c.,
A. G. BLOMFIELD,
Acting Secretary.

The Under Secretary for Public Works to I. E. Ives, Esq., M.P.

Sir, Department of Public Works, Sydney, 6 May, 1886.
In reply to your letter of the 5th instant, I am directed to inform you that the Secretary for Public Works will receive the deputation of Railway Committee, on the subject of cost of compensation for land between Pearce's Corner and St. Leonards, on Tuesday, 11th instant, at 11 o'clock a.m.

I have, &c.,
JOHN RAE.

Are the plans &c., for North Shore Railway, in a sufficiently advanced state to enable tenders to be called? Have they been laid upon the table of the House and passed?—W.J.L., 16/4/86.

The plans were approved by Parliament in August and September, 1884, but they have not been approved by the Governor and Executive Council. Tenders were received in December last, but no offer was accepted. The drawings and specifications are available for the invitation of fresh tenders, but before any further action is taken in regard to this railway I should like to have an interview with the Minister.—J.W., 16/4/86. The Hon. the Minister. Will see Mr. Whitton, in reference to this matter, on Wednesday next.—W.J.L., 22/4/86.

No. 38.

Minute of Secretary for Public Works.

Department of Public Works, Sydney, 11 May, 1886.

North Shore to Pearce's Corner Railway.

A DEPUTATION from the North Shore, consisting of Sir Henry Parkes, Mr. Ives, M.P., Jenkins, McMahan, Cliff, and McKeown, waited upon me to day with reference to the above. At a previous deputation I informed them that the action of the Government in connection with the construction of the railway would largely depend upon the cost of the resumptions of the land required, but if they could induce the landowners to give the land free, or accept a nominal amount, it would greatly aid the Government in coming to a decision.

They

They stated that the matter had been taken up by a Committee, who had interviewed the various owners, whose lands would be taken for the railway; and the result of their labour is shown in the accompanying report. Briefly stated, the valuation of the whole resumptions necessary was about £63,000, but so many owners had decided to give their lands free, or to accept a nominal amount, that the valuations would be reduced they believe to about £30,000, and in this estimate was included the cost of Mr. Berry's land, valued at from £10,000 to £15,000; it was probable that Mr. Berry would give the land or accept a nominal sum, and thus further reduce the amounts to be paid. It was also said that if necessary a sum of money would be contributed towards the expense of the line.

I stated that I thought it rather unfair to those who promised to give the land free that a number should demand compensation, but I promised that if Mr. Berry would give his land free, or accept a nominal amount as compensation, I would unhesitatingly recommend the construction of the line as soon as possible. When they were here previously I had made it a condition they should attempt to get the land at the lowest price, and I thought they had meritoriously carried out that condition, and in my opinion the same principle should operate in all railway resumptions, as I thought it very unjust that a man should have his land greatly improved by the Government Railway, and at the same time receive a large value for the land actually taken.

The Committee offered to give any further assistance in their power in connection with the settlement of the resumptions, and I promised finally, that if they could induce Mr. Berry to give his land free, or accept a nominal amount, I would recommend to my colleagues that no time should be lost in going on with the line.

Mr. Ives further mentioned that a contractor had informed him that he would be prepared to construct the line at £30,000 less than the lowest tender previously submitted. W.J.L., 11/5/86.

THE RAILWAY COMMITTEE'S REPORT.

APPENDED is the North Shore Railway Committee's report to the Government:—

Gracey's 35-acre block.—Mutual Provident Building Company will give their consent.

Jacob Price's is the second portion, and the land taken is entirely orchard and improved. He requires to be paid for improvements, and will no doubt accept anything in reason; but it must be remembered that it takes 1a. Or. 4p. out of his small area.

Messrs. Ross, Robertson, and Macrae. The next private property, at the north corner of Bush-street, and is unimproved. The railway will require about $6\frac{1}{2}$ acres; and we saw them, and they are willing to give the land to the Government if the railway is proceeded with at once.

Pomeray—the next property the railway touches—we have not seen, but as it only takes a corner of about 17 perches it is not worth considering, and we can safely guarantee it.

Henry Ingram.—Same as Penning; only 25 perches, and cannot hurt his property. Did not see him, but not considered necessary.

Herbert Fowler.—Will give land at cost. Now National Building Company.

Frank Mooney and L. Hamel will give land.

Peter Kershlaw.—A. G. Blomfield has signed an agreement to give the land required for actual railway line if the works are proceeded with at once.

Patrick Norman.—The railway merely takes in 20 perches, or ten young orange trees. We saw Mrs. Norman, and they will give the land, provided they get paid for improvements, but we believe they will give everything in any case.

J. B. Lucas.—He was absent, but the railway takes his house and orchard, ruins his small property of about 5 acres entirely, and we were informed by Mrs. Norman and Mr. Dobson, his neighbour, that he will require compensation, and we agreed that his was a case in which we could not ask him to give, but in which the committee hope themselves to assist the Government in bringing forth evidence, and assisting them in getting it at a fair and reasonable cost.

Joseph Dobson.—We saw Mr. Dobson, who was very willing to assist, but pointed out that the railway took the best part of his orchard, and that so long as he was paid for improvements he would give the land, and would take what the Government offered. We, however, apprehend no difficulty in dealing with Dobson, as he is anxious for the railway.

R. B. Smith and others—the next on the line—have agreed to give the land for nothing, provided the railway is proceeded with at once.

Reuben Tawyer—the next on the list—we interviewed at considerable length, but could do nothing with him; he will stand out for all he can get. All his land taken is orchard land, and consisting of young trees. His arguments are too absurd to dwell on, and his claim will be absurd, but the committee will act with the Government, and it can be cut down to a reasonable sum.

Trustees late J. F. Jones.—Bush land; no one living on the land. We have not seen Jones and Jones, solicitors, but feel confident of getting the land for nothing.

John Brodie, sen. and jun.—Will accept Government valuation.

Henry Hare.—Will accept Government valuation.

David Ryan.—Orchard and bush land. Take the Government valuation that all his neighbours are doing.

E. K. Wilson.—Saw him, but could do no good, as he is one to be fought with. Committee will assist the Government, but if he is reasonably paid for improvements the cost of the land will be nominal.

Wm. Ray.—Saw him, and he was agreeable to take whatever was offered to him; but as his land was of so small an area he could not afford to give it for nothing, but he appeared to us a very fair and reasonable man.

Captain Craig.—His land is highly improved, but the proper men to see are Messrs. Jones and Jones, solicitors, Pitt-street, and will see them later on.

Peter Gilroy.—Saw him, but he would give nothing, and uses the arguments of the ignorant, and is blind to his own interests, so he must be looked upon as one to fight; a fair thing can be arrived at, as it takes his dwelling, &c. Committee will assist Government.

Port Jackson Land Co.—Will give all land required.

John Brodie.—Will accept Government valuation.

Mr. McMillan.—Government valuation.

Wm. McMahan.—Bush land, not being other land. Decided to leave him to Mr. Cornwall to arrange with.

A. J. Brady.—Bush land ; no dwelling or improvements. This land is owned by Mr. Brady and Mr. J. A. Brown. Will give the land for nothing.

Henry Cornwall.—We called and saw Mr. Cornwall, who was most kind and hospitable, and said at once that he would give all his land required for the railway unreservedly, and would also do what he could in the neighbourhood.

Porter Bros.—Richard, Thomas, and Michael.—We saw Michael, who said he was not going to give Government anything, and required to be paid handsomely, and he was so narrow-minded and stubborn that it was useless wasting time with him ; his brothers are the same. Their claims were absurd, but we will gladly act with the Government, and they can be reduced to a reasonable figure.

Mrs. Drewell.—Decided to leave her to Mr. Cornwall. Will report later on.

George McIntosh.—Will accept Government valuation.

James Jones.—Part of small allotment ; will take what is offered.

Osborne.—Part of small allotment ; area too small to bother about.

Michael O'Grady.—Ditto ; nominal sum we should say.

Edwin McIntosh.—Will accept Government valuation.

Buckingham.—Report later on.

Ann Hill.—Small allotment. Would require to be paid, as the railway ruins her small property.

Jane Pymble.—Did not see her. She has a small allotment, and will no doubt require to be paid, but a nominal sum would satisfy her.

H. C. Buckingham.—Did not see him ; to be interviewed, and report further on. We think that he will give the land ; if not a very small sum need be paid.

W. McKeown.—Will give all but improvements.

McMahon Family.—Will take Government valuation.

Menzies.—Will take Government valuation.

Trustees of the late John Brown.—Saw Mr. Brady, solicitor, Phillip-street, who says he acts for trustees, that they will no doubt give the land.

Menzies and Vernon (now Waterhouse).—Will take Government valuation.

McIntosh Family.—Will take Government valuation.

R. Precious, G. Precious, H. Kitchin, Miss Gazelly.—Government valuation.

George Waterhouse.—Will take Government valuation.

Robert Neville, Wm. McIntosh, Mrs. Edwards, J. E. Connors.—Will give the land, we understand, if paid for improvements.

Mrs. Powell.—We saw this old lady, who is very old, will give nothing, but agreed to accept at the rate of £100 per acre for her land.

Capt. Pockley.—We believe he will give his land if paid for improvements.

McGillvery (Bell and Scott).—Wrote Mr. Bell, but no reply, yet every reason to believe he will give the land.

M. Johnstone.—We saw Mr. Johnstone, who was very fair and reasonable, and agreed to take what was offered.

W. Johnstone.—Now property of Mrs. W. Johnstone, widow. Will accept Government valuation.

William Bickle.—Saw Mr. Bickle, who admitted the advantages of the railway, and said if he could afford it he would gladly give the land and improvements, but he pointed out that he had only just given the Government a 66 ft. road out of his land, but he would take whatever the Government gave him.

W. Braham will give the land.

Precious and Doust, now Curran and Johnson.—We understand from Mr. W. Clarke, M.P., that they will give the land.

John Kent, Jas. Burns, and Erwin.—Think they will want to be paid. Saw Erwin next day, and he says he is agreeable to give the land, but before signing he must consult his partners, Kent and Burns, but we think can consider it as given.

Seldon, trustees of late Robert Seldon.—Will give the land required.

J. F. Montgomery.—To be seen in town.

Thos. Coleman.—Saw Coleman, who was unreasonable, and would not give the land, as he said he did not want the railway, and we could see that he was simply living on waiting for the railway, as his fruit trees and place generally is going to decay. However, he agreed later on to accept the Government valuation, whatever it may be.

Precious.—This land belongs to Anglo Investment Company. Mr. W. Clarke, M.P., the manager, has written stating that he will give the land required for railway for nothing if proceeded with at once.

Richard Archibald.—We saw Mr. Archibald, and had a very long interview, and at first he refused to give the land for nothing, but would take Government valuation. However, after considerable amount of argument, and Mr. McMahon's seductive eloquence, Mr. Archibald agreed to give the land for nothing, and signed a paper to that effect ; and as the area taken by the railway amounts to 5 acres 1 rood and 18 perches, Mr. Archibald's liberality should be thoroughly appreciated.

Gerald Archibald.—We saw this gentleman, who refused to give the land for nothing, as he said it cut off his frontage to the road, but he agreed to take the Government valuation.

Geo. Waterhouse.—He is not agreeable to give the land, we understand, so he must be looked upon as one to be fought.

John Haughton.—Will accept Government valuation.

F. B. Treatt.—All small lots, and cannot well be asked to give the land, but will take Government valuation.

Edward Haines.—Only half perch required ; not worth bothering about.

Harnett and Stuart (Sir A.)—Have already agreed to give the land all along the line owned by them, as required by the railway, as advertised in the *Sydney Morning Herald*.

Mr. M'Keown (William).—Will give the bush land for nothing, but the other small lots he agrees to take the Government valuation for.

John Basham.—Will accept Government valuation.

Harnett and Stuart.—Will give land, as aforesaid.

Rev. Geo. M'Intosh.—Did not see him, but look upon it as useless, as they are all small lots, and ruined by the railway, so to speak, but will no doubt take Government valuation.

Minis Asher.—Did not see this gentleman, as all his land is comprised of small lots, and he not being noted for liberality will no doubt require to be paid for the land, and we might look upon him as one to be fought. Committee will assist the Government.

E. H. Day.—Will accept Government valuation.

Harnett and Stuart.—Will give the land, as aforesaid.

Phillip F. Richardson.—All comprise small lots, and whole area of holding only about 6 acres, and the railway ruins the property, but Mr. Richardson is agreeable to take the Government valuation whatever it may be.

Harnett and Stuart will give the land, as aforesaid.

James Montgomery.—Saw Mr. Montgomery, who was very reasonable, and although the railway cut up his small allotments purchased by him at subdivision sales, he is agreeable to accept the Government valuation whatever it may be, if railway is proceeded with at once; signed to that effect.

Thomas Dalton.—Bush land, no buildings or improvements. To see Mr. Dalton in Sydney.

Dr. On Lee.—Will take Government valuation.

James Walsh.—Publican in St. Leonards to be left to Mr. M'Mahon to interview.—Government valuation.

Henry Piddleton.—Will accept Government valuation.

Francis Murphy.—Not at home when we called. To be left to Mr. M'Mahon.—Government valuation.

James Medley.—Will accept Government valuation.

Henry Ingram.—Will accept Government valuation.

J. F. Burns and Edward Lee.—Will give the land.

John Cardwell.—1 rood 23 perches—will accept Government valuation.

William L. Horsley.—Area taken by railway, 3 perches. Too small to bother about. Not being on the ground we did not see him.

Geo. Jones.—Area taken only $14\frac{1}{2}$ perches. Not being on the ground we did not see him. Area too small to be worth considering.

E. E. Brett.—Area taken, 16 perches and only one small allotment owned by Mr. Brett. Will not give it for nothing, but will accept Government valuation.

John Clatworthy.—Small allotment; not occupied and is unimproved. Report later on, but do not expect him to give it.

Sir Alexander Stuart and Henry Russell.—Will give the land required for railway, if proceeded with at once by the Government.

Thomas Broughton.—Have written him to his residence, Glenmore Road. No reply yet, title to land being contested.

Francis Lord.—This gentleman agreed to give the land, provided he was paid for the house and improvements, which the line takes.

Ann Archibald.—Will give the land; improvements to be paid for.

Sydney and Suburban Mutual Permanent Building, Land, and Investment Association (Limited).—Will give the land.

John Dawson, late Sergeant of Police, is the owner of the next block, and we saw him. He is not agreeable to give the land, but will accept the Government valuation.

David Berry.—Five blocks, containing an aggregate of 20 acres 32 roods 12 perches.

Summary.

The foregoing may be briefly summed up as follows:—

1. That the most important man to induce to give his land is Mr. David Berry, because of the extent of his claims should he demand compensation. The committee hope, however, to get the land for nothing, or at a comparatively nominal figure.

2. That there are considerable number of persons who own land near where the railway passes. The railway will not actually touch those properties, but it will greatly increase their value, and the owners are willing to contribute to a fund to help to pay compensation to those who may require it.

3. That the committee are happy to find only a few instances in which the people are unreasonable, and simply looking forward to the railway as a means by which to extort money from the Government; but against these owners the committee are willing to assist the Government in reducing the compensation to a fair and reasonable amount.

4. That the committee, when going over the land to be taken for the railway, noticed that in many instances where it passed through orchards or improved land the fruit trees were either in a decayed or almost useless condition, or that young trees had been put in, with a view, no doubt, of making the Government pay for them. They noticed also that any building, &c., included in the resumed portions, were of a miserable description, and comparatively of little or no value.

5. That it must be remembered in the case of those who refuse to give their land that it must be valued only at its cost or market value without the railway, and not what it would be worth when the railway is completed. And while admitting that the claims of the stupid and unreasonable will be ridiculously high, the fair price to pay all through after passing Chatsworth or the "Great Northern Hotel," up to Hornsby, will only be from £35 to £50 per acre, and from the "Great Northern Hotel" to the terminus at St. Leonards, from £200 to £400 per acre at the outside. The committee consider that very few, if any, of the property owners will go to law or arbitration.

6. That the committee are agreeably surprised at the result of their undertaking, as most of the land along the line has been offered for nothing. The amount to be paid for compensation will, they can see, be absolutely so small that the matter of compensation can be reduced to a minimum, so as in no way to form a bar to the commencement of the railway.

7. That if the Government is not prepared to carry out this railway at once, they might be willing to support a private Bill to enable its being done by a private company, on the condition that the line should be put into full working, and that the Government should have the right, should it so desire, of taking the line over on terms to be specially provided.

8. That the present committee, appointed by the public meeting previously referred to, pledge themselves, if the Government will accept their services, to assist them in reducing the cost of resumptions

in all cases to the lowest possible amount, and they humbly consider that they could be of great service in that respect to the Government.

9. That if the Government do not see their way to proceed with the line at once, after this report and previous promises, which, if taken in the liberal sense, would mean nothing more or less than repudiation, it surely could have no objection to pass a Bill through Parliament, enabling a private company to construct the line upon the Government survey, plans and specifications which the committee presume the Government would have no objection to hand over to a private company for the purpose. It would, of course, be understood that the company did not intend to touch the Ball's Head line, but simply the one from Hornsby Junction to St. Leonards.

10. That the matter of this railway is to all intents and purposes one that could be carried out by rough labour, and that the present time is the most fitting to get it done cheaply, as there are so many unemployed about, and the Government might save the enormous profits of contractors, were it to consider the subject in a practical light.

11. That the railway would improve thousands of acres of Crown land, which otherwise would be comparatively worthless. That, apart from any other considerations, the carrying out of this line, even if the Government had to pay for every inch of land at full value, the increase in the value of the Crown lands would more than pay the cost. The committee is convinced that the line would pay handsomely, even at first, and that as time went on it would become one of the best paying lines in the Colony, for the simple reason that there is not another place to compare with St. Leonards and the North Shore as a future suburb of the city. The district contains all the facilities for health at present obtainable at Bowral, Mossvale, or Mittagong on the southern railway line, and the Blue mountains on the western line, whilst possessing the advantages of close proximity to the City of Sydney.

Engineer-in-Chief, *pro* Commissioner.—G.B., B.C., 18/5/86. Seen.—J.W., 19/5/86. Resubmit when Mr. Berry's determination about the land is known.—CH. A.G., 25/5/86.

No. 39.

I. E. Ives, Esq., M.P., to The Secretary for Public Works.

Sir,

Argyle Bonded and Free Warehouses, Sydney, 17 June, 1886.

I have the honor to enclose a statement signed by twenty-four landowners on the line of rail from Pearce's Corner to the Crow's Nest, and as I understand it is your intention to visit this district to-morrow, I have no doubt you will have an opportunity of hearing personally from some of the persons whose signatures are attached.

I am, &c.,

I. E. IVES.

[Enclosure.]

To the Hon. the Minister for Works.

WE the undersigned wish to call your attention to the report laid before you by the self-appointed committee, who have been traversing the proposed line of railway from Pearce's Corner to St. Leonards.

We wish to show that that report is not true, and that we are not a lot of ignorant stupid people. Each of those men that came up here to assist the Government as they say in reducing the cost of this line are all connected with some land syndicate or are speculators themselves. We have circulars from some of these men, wishing to become our agents, and not succeeding with us they have forced themselves upon the Government.

By the report they state that the land from Chatswood to Hornsby is only worth £35 to £50 per acre, yet the first block mentioned, 35 acres, has only been bought since the line has been surveyed at £90 per acre by a company of land speculators, and every available acre has been bought up that was on or near to the line at £70 to £130 per acre, all since the line has been surveyed.

This land has not been bought for cultivation but to be sliced up into small lots and sold on the time payment system.

We are told that manufactories will spring up if this line is made; the only manufactory will be the making small lots of land out of large ones for the benefit of these speculators.

Cherry's old orchard and bush has been sold to a company for £200 per acre, and yet these men say our cultivated land is only worth £50 per acre. This plainly shows that those speculators are pressing the Government to make the line for their own benefits. It cannot help the fruit-growers; if we each had a station against our own door we should have to cart our fruit from the shore to the markets.

It is not true that any of us are willing to give our land. Some of us are classed as ignorant and absurd and some are to be fought with; if we had taken the *whiskey* these men wished us to do, and brought up for the express purpose of bamboozling us out of our lands, we might have been called ignorant, and some of us might have been fightable; but the fruit-growers of Gordon are a peaceable law abiding class of people; but seeing by the report laid before you that our character and good names have been defamed, we take this means of letting you know the truth that this line is being forced upon the Government by land speculators only.

EDWARD K. WILSON & OTHERS.

1885-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY TRIAL SURVEYS.

(EXPENDITURE OF VOTE FOR.)

*Ordered by the Legislative Assembly to be printed, 4 May, 1886.**[Laid upon the Table of the House, in accordance with promise made by the Honorable the Secretary for Public Works, in answer to Question No. 13 on Votes and Proceedings No. 40, of the 6th April, 1886.]*

RETURN showing the Surveys upon which the Vote for Railway Trial Surveys has been expended, and the sums paid for each Survey.

Questions.

1. What was the amount of the last vote for Railway trial surveys?
2. The date of such vote?
3. Upon what surveys has the vote been expended?
4. The sums paid for each survey?

Answers.

1. £25,000.
2. 1st November, 1884.
- 3 and 4.—

No. 1.

Extract from the *Sydney Morning Herald* of 16th October, 1874

Report of Deputation from Borough Council of Ashfield

A DEPUTATION from the Borough Council of Ashfield, consisting of the Mayor (Mr D Holborow, J P) with Aldermen Fyle and Muir, waited on the Honorable the Minister for Public Works on Wednesday, the 14th instant, for the purpose of calling attention to the state of the culverts under the Liverpool Road and the railway line, at Ashfield, which cause the flooding of the road and adjoining lands during rains, and also to request that something might be done to place the approach to the Railway station from the Parramatta Road in proper repair. The deputation was courteously received by Mr Sutherland, who expressed his willingness to meet the views of the Municipal Council of Ashfield as far as lay in his power. In the course of conversation, the subject of the inconvenience and danger of the crossings on the railway line at Ashfield was introduced and discussed. Mr Sutherland stated that the proper officers would be directed to inspect the works to which attention was thus called, with the view of remedying the defects. The deputation then withdrew, after thanking the Minister for his courtesy.

End of month—for Mr Whitton's report about culvert—CH A G, 19/10/74.

Memorandum to Engineer-in-Chief

Government Railways, Engineer-in-Chief's Branch, 21 October, 1874

I HAVE taken a section of the present approaches to the level-crossing immediately beyond Ashfield station, for which the Municipal authorities there wish to substitute a bridge under the Railway

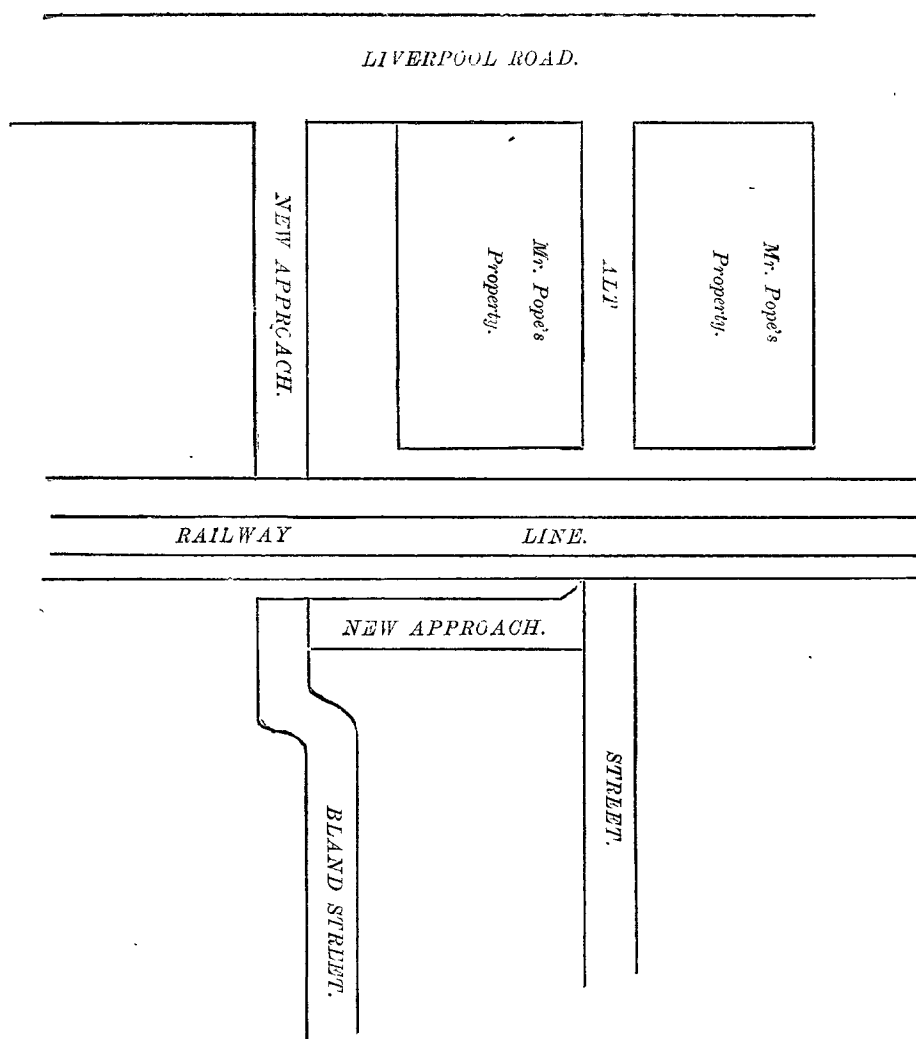

It will be seen from the enclosed section that if a bridge be put under the line it would destroy the entrance to Mr Pope's property, and would involve retaining walls to be built on each side of the approach, that on the lower side is embanked, and might be removed without injury to the adjoining lands.

I have also taken levels with reference to the lowering of the culvert under the line (See sketch on other side)

The Mayor of Ashfield suggested that the road might be diverted to a deeper portion of the embankment in the direction of Parramatta. Of course this can be done, but would involve great expenditure

What does Mr. Pope think?—J R

W M., 21/10/74.

It is proposed by the Ashfield Corporation to dig a drain 6 feet deep in the proposed street A to drain the whole of this land. I can see no necessity for a drain of that depth. It will be seen that the inlet of the culvert which they ask to have lowered is already 3'30 feet below the surface of ground about where the drainage would be discharged from street A, and supposing a drain were made 2 feet deep and sufficiently wide this would then allow 1'30 feet fall from the street A to the culvert without any alteration.—W.M., 21/10/74.

I advise the Commissioner not to make any alteration to the drainage, which appears to be sufficient for all purposes. To build the bridge under the railway on line A B on sketch enclosed would not only be expensive in itself but would necessitate the purchase of Mr. Pope's property on the side of the road.—J.W., 23/10/74. Commissioner.

No. 2.

The Commissioner for Railways to J. Pope, Esq.

Sir,

6 November, 1874.

I have the honor to inform you that the Borough Council of Ashfield waited upon the Honorable the Minister for Public Works, on the 14th September last, and represented the desirability of a bridge being constructed at the gates beyond Ashfield Station, so as to afford a crossing under the line, instead of the present level-crossing.

The Engineer-in-Chief has furnished me with a sketch (which I now enclose, with a request for its return), showing that if a bridge were put under the line it would affect the entrance of your property.

Before proceeding further in the matter, it is desirable that you should express your views thereupon, and I have to request that you will favour me with an early reply.

I have, &c.,

CHAS. A. GOODCHAP,
(Pro. Commissioner for Railways.)

J. Pope, Esq., to The Commissioner for Railways.

Sir,

Ashfield, 11 November, 1874.

I have the honor to acknowledge your letter of the 7th instant, relative to the proposal for a bridge to be constructed at the gates beyond the Ashfield Station.

To this I will give you a reply in the course of a day or two.

I am, &c.,

JOHN POPE.

J. Pope,

J. Pope, Esq., to The Commissioner for Railways.

Sir,

Ashfield, 19 November, 1874.

I have the honor to acknowledge your letter of the 6th instant, referring to an application made by the Councillors of the Borough of Ashfield to have a bridge constructed at the gates beyond Ashfield Station, to afford a crossing under the railway line. Upon this you request my views.

I have, therefore, the honor to submit that, in my opinion, the present crossing is the only one that any practical man could consider suited to the position of the ground on either side of the line of rails.

The cutting, as per plan, would wholly destroy my property and frontages in the street for about 1,000 feet, and access to my house and ground could only be attained by flights of steps from 10 to 16 feet from the cutting up. As my house and property would thus be rendered next to useless to me, I should seek a compensation of, at least, six thousand pounds (£6,000.) I, therefore, have to request that before any further proceedings are taken in the matter, you will cause an inquiry to be made and obtain such further information as will confirm to you the correctness of my statement, and I trust the examination of the line and the land on either side of it, both east and west of the present crossing, will afford more desirable places for opening up other means of passing both under and over the rails than by altering the existing one alluded to.

As a resident of Ashfield for many years, I shall be glad to render any aid to carry out such scheme as may be considered of advantage to the residents of the Borough, respecting the additional convenience for crossing the railway line, *i.e.*, from the south to northward, and will meet any one you may appoint to confer on the matter.

I have, &c.,

JOHN POPE.

Under these circumstances, the work cannot be done. Inform.—J.R., 30/11/74.

No. 3.

The Commissioner for Railways to The Council Clerk, Ashfield.

Sir,

Department of Public Works, Sydney, 3 December, 1874.

In reference to your letter of the 2nd October last, suggesting, at the instance of the Mayor of Ashfield, that a bridge at the gates beyond the railway at that place should be constructed so as to afford a crossing under the railway line instead of over it, as at present, I have the honour to inform you that Mr. Pope, to whom the land belongs, has been communicated with, and in reply states that in his opinion the present crossing is the only one that any practical man could consider suited to the position of the ground on either side of the railway; and that if a bridge were constructed at the place mentioned, it would entirely destroy his property and necessitate his seeking for heavy compensation.

Under these circumstances the work proposed by the Municipality of Ashfield cannot be carried out.

I have &c.,

JOHN RAE,

Commissioner for Railways.

No. 4.

The Council Clerk, Ashfield, to The Commissioner for Railways.

Sir,

Municipal Council Chambers, Ashfield, 31 December, 1874.

In reply to your letter of the 3rd instant, respecting the proposed alteration in the railway crossing at Alt-street, in this Borough, I am directed by his Worship the Mayor, to point out:—

1. That it does not appear clear what is meant by your statement that the land belongs to Mr. Pope, the road in question having been a public road for many years before that gentleman became possessed of the land on either side.
2. That as regards the practical nature of the proposal, there cannot be the slightest doubt that, compared with the present dangerous crossing, the plan suggested is the only remedy that can be applied, and one, which in view of the rapidly increasing traffic, must at no distant period be carried out, there being in fact no safe crossing except the bridge on the Main South Road, which is too remote and circuitous to be available for a large portion of the traffic.
3. That as to the distinction of Mr. Pope's property, and his consequently being compelled to seek heavy compensation, it is not easy to perceive what material damage can be done to that person's property by the proposed alteration. Nothing more than his personal convenience could be interfered with, as no part of his property would be touched, and as Mr. Pope's claim to the road is not greater than that of any other resident in the Borough, the convenience or caprice of one person should not be allowed to obstruct an improvement which would be undeniably beneficial to a very large number, and in no way deteriorate his property.
4. That the expense of the alteration and compensation (if any) that might be payable, would soon be more than repaid by the saving effected in the expense of maintaining a gatekeeper at the present crossing.

I have, &c.,

W. BEAMES,

Council Clerk.

Seen.—J.W., 12/2/75. Commissioner.

No. 5.

Minute of Secretary for Railways.

Re Subway, Ashfield.

WHEN the deputation waited upon Mr. Sutherland, they brought under his attention the desirability of an under-bridge being made in place of the level-crossing, about 200 yards beyond the Ashfield Station, towards Burwood.

As the present deputation refer to other matters which they wish to bring to Mr. Lackey's notice, this bridge will probably be one of them.

Mr.

Mr. Pope owns the land on either side of the level-crossing, and the construction of this bridge would necessitate an immense cutting, which would injure Mr. Pope's property to the extent, he states, of £6,000, for which sum he would seek compensation.

In addition to this, there appears to be no great necessity for the bridge; as to the danger, there is nothing to make crossing at this place more dangerous than it is at many other parts of the line; indeed, there are several level-crossings over which the traffic is greater than it is at Ashfield.

There is a gatekeeper at the place, and no accident has occurred.—CH.A.G., 5/4/75.

The Council were informed of Mr. Pope's objection, and they replied in effect that Mr. Pope's interest should be sacrificed to the larger interests of the Borough. This was in December, 1874. Nothing has been done since.

No. 6.

Memorandum from Station-master to Traffic Manager.

Sir,

Ashfield Station, 3 July, 1876.

I am informed that a petition to Minister for Works is in course of signature, praying that a road be cut under the railway, at King's gate, alongside Mr. Pope's property, Alt-street. Amongst other grievances they state that several accidents have happened at the crossing they wish to be abolished. I cannot help thinking that such a remark is something approaching to a "slur" on your branch of the Department, also your Officers, as well as an "untruth."

I have been here nearly four years; had there been any accident, or the probability of one, I certainly should have known it. However, if possible, I will obtain for your information a copy of this petition. In the event of my not doing so, I trust you will inform the Hon. the Minister for Works that the petition (that is forthcoming) is not founded on facts.

Yours, &c.,

G. BONAMY, S.M.

No. 7.

The Mayor of Ashfield to The Colonial Secretary.

Sir,

Borough Council Chambers, Ashfield, 25 November, 1876.

I have the honor to forward herewith a petition signed by a large number of the residents of this Borough and others respecting the crossings over the railway within the Borough, which I beg to request you will have the goodness to lay before the Executive Council.

The Municipal Council of Ashfield fully endorse the complaint therein set forth, and respectfully request the favourable consideration of the Executive, with a view to applying a remedy most urgently required.

I have, &c.,

DANIEL HOLBOROW,

Mayor.

To The Honorable the Minister for Public Works of the Colony of New South Wales.

The petition of the undersigned residents of Ashfield and others interested,—

RESPECTFULLY SHEWETH:—

That most of the crossings on the railway line within the Borough of Ashfield are dangerous and inconvenient, and for the rapidly increasing traffic totally insufficient.

That since the closing of the station crossing to wheel traffic, vehicles are compelled to use either the crossing in Alt-street, where a gatekeeper is stationed, or the very inadequate small bridge near the Main South Road, the route by the bridge by that road being too circuitous for the greater portion of the traffic within the Borough.

That the crossing in Alt-street, which is principally used on account of its central position is, as already stated, so dangerous as to be a source of much annoyance to all who are compelled to use it, the crossing being attended with considerable risk, and several accidents have occurred.

That further, the locking of the gates at an early hour in the evening is also the cause of much inconvenience to those requiring to cross at night, and your petitioners do humbly submit that Alt-street, having been a public road for many years before the formation of the railway should at all times of the day and night be available for traffic of every kind.

That your petitioners believe that the only effectual remedy to be the carrying of the road under the railway by a cutting and a bridge which would render it a safe crossing, and by saving the expense of maintaining a gatekeeper at that point soon repay the cost of the alteration.

Your petitioners, therefore, trust that such steps will be taken as will afford the accommodation so much required.

And your Petitioners, as in duty bound, will ever pray.

JOHN H. GOODLET and Others.

Minister for Public Works.—J.R., 1/12/76. The Under Secretary for Public Works, B.C., 5/12/76.—W.H. The Engineer for Existing Lines, B.C., 11/12/76.—CH.A.G.

See my former report on this, dated October 21, 1874, I cannot recommend a bridge to be built under the railway on account of the great expense it would involve.—W.M., 15/12/76. The Commissioner for Railways.

The Commissioner for Railways to The Mayor of Ashfield.

Sir,

Department of Public Works, Sydney, 27 March, 1877.

In reference to your letter of the 25th November last, addressed to the Colonial Secretary, forwarding a petition signed by a large number of the residents at Ashfield, praying for alterations to be made at the railway crossing at Alt-street, by a cutting being made and a bridge erected, I have the honor to inform you that I cannot authorize the large expenditure which would be incurred in carrying out the prayer of the petitioners.

I have, &c.

JOHN RAE,

Commissioner for Railways.

No. 8.

No. 8.

The Council Clerk, Ashfield, to The Commissioner for Railways.

Sir,

Council Chambers, Ashfield, 13 April, 1877.

In acknowledging the receipt of your letter of the — March, 77—391, I am directed by his Worship the Mayor to request the favour that this Council may be informed of the estimated cost of the much required bridge under the railway, in Alt-street.

I am further to state that the continual expenses under the present system of gatekeeper and repairs would, in a very few years, more than repay any outlay made.

I have, &c.,

W. BEAMES,

Council Clerk.

W. Mason, B.C., 18/4/77.—J.R. I have not made any estimate of the cost of such a bridge, and certainly have not time to do so for the information of the Municipal Council of Ashfield. I consider the Council ought to employ some one to give them this information.—W.M., 23/4/77. The Commissioner for Railways. The Council might be so informed.—J.R., 1/5/77.

The Commissioner for Railways to The Council Clerk, Ashfield.

Sir,

Department of Public Works, Sydney, 7 May, 1877.

In reference to your letter of the 13th ultimo, requesting that the Municipal Council of Ashfield may be furnished with the estimated cost of the proposed bridge under the railway in Alt-street, I have the honor to inform you that the matter has been referred to the Engineer for Existing Lines, who reports that, as his time is fully occupied with the ordinary business of his Department, he is unable to spare the time necessary to make an estimate of the cost of the bridge in question, and suggests that your Council should employ some person from whom the information sought may be obtained.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 9.

The Council Clerk, Ashfield, to The Secretary for Public Works.

Sir,

Council Chambers, Ashfield, 7 June, 1877.

I am directed by his Worship the Mayor to hand you the enclosed, at the same time to urge your earnest attention to the dangerous crossing of the railway line in Alt-street, and that you would be pleased to give instructions for preparing plans and estimates for the cutting the much needed bridge in Alt-street, in this Borough.

I have, &c.,

W. BEAMES,

Council Clerk.

Dr. R. T. Jones to The Borough Council of Ashfield.

Gentlemen,

Ashfield, 2 June, 1885.

Seeing that there is no immediate prospect of having uninterrupted communication along Alt-street from one side of the railway line to the other, I respectfully beg to suggest that Thomas-street be put into a fit state for traffic as early as possible.

My reasons for proposing this improvement are the following:—

1. The great inconvenience experienced at present by all, except foot-passengers, in getting from one side of the railway line to the other at night time.
2. Communication from Croydon, a portion of Burwood, Parramatta Road, Concord, and Five Dock, to the centre of Ashfield is much more speedy *via* Thomas-street than any other route except Alt-street.
3. The gates at Croydon crossing are opened at night with very little delay; whereas at the Alt-street crossing much time and trouble is expended in turning the old man out of his bed, in order to let one through.
4. At present, on account of the bad state of Thomas-street, traffic has to go direct into the Liverpool Road and then along the Seven-mile Hollow into Ashfield. This round-about way more than counterbalances the benefit of the quick opening of the gates.

By taking this matter into your favourable consideration, gentlemen, you will confer a boon on those who have occasion to cross the line at night, and especially on the doctors.

I remain, &c.,

R. T. JONES, M.D.

Railways, B.C., 12/6/77.—J.R. Mr. Mason, B.C., 18/6/77.—CH.A.G.

I cannot recommend that drawings and estimates be prepared as asked for by the Mayor. I have no time to spare myself for this purpose. I have no assistants capable of doing this work; and I now suggest again that, if the Mayor require this information, let it be furnished by the Corporation of Ashfield. It would form a very awkward precedent to comply with such requests.—W.M., 19/6/77. Commissioner for Railways.

As the Engineer for Existing Lines is of opinion that the crossing of the line at Alt-street provides ample and safe accommodation for the residents of the locality, and as Mr. Mason further considers that it would not be advisable to have an over-bridge at this place, having in view the large amount which would be required for compensation by the persons whose land adjoins the railway there, as well as to there not being any necessity for such a structure, I cannot accede to this application, but now instruct the Traffic Manager to send a younger man to act as gatekeeper at Alt-street. The Mayor of Ashfield to be informed.—J.H., 23/6/77.

No. 10.

The Commissioner for Railways to the Council Clerk, Ashfield.

Sir,

Railway Department, 29 June, 1877.

In acknowledging the receipt of your letter of the 7th instant, in further reference to the dangerous crossing of the railway line in Alt-street, and requesting that instructions may be given to have plans prepared and estimates made of the proposed bridge under the railway in that street, I have the honor to inform you that as the Engineer for Existing Lines is of opinion that the crossing of the line at Alt-street provides ample and safe accommodation for the residents of the locality, and considers that it would not be advisable to have an over-bridge at this place, having in view the large amount which would be required for compensation by the persons whose land adjoins the railway there, as well as to there not being any necessity for such a structure, your application cannot be acceded to. Instructions have, however, been given to have a younger man appointed to act as the gatekeeper at Alt-street.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 11.

The Council Clerk, Ashfield, to The Commissioner for Railways.

Sir,

Borough of Ashfield, Council Chambers, 7 July, 1877.

Referring to your letter of the 29th ultimo, I am directed by his Worship the Mayor to request that the Engineer for Existing Lines of Railways be instructed to meet him at the crossing, in Alt-street in this Borough, as the inhabitants and others crossing the line at that point, do not consider the crossing in question either ample or safe, and unless the required bridge is made some fatal accident will occur which would be far more expensive to the Government, than any sum expended in carrying out the work.

I have, &c.,

W. BEAMES,

Council Clerk.

Mr. Mason will be good enough to meet the Mayor as requested, and report the result of meeting.—
J.R., 9/7/77.

I met the Mayor as requested on the 12th instant; he wished to have the approach to level-crossing improved, to which I agreed as far as the Commissioner's boundary, the Corporation of Ashfield to do the rest of the work outside. The Mayor promised to call at my office to arrange this work on the 16th instant, but has not yet done so.—W.M., 30/7/77. Commissioner.

No. 12.

The Council Clerk, Ashfield, to The Secretary for Public Works.

Sir,

Borough of Ashfield, Council Chambers, 13 June, 1879.

I am directed by the Council of this Borough to bring under the notice of the Hon. the Minister for Public Works the urgent necessity for some improvement in the crossings over the railway line within this Borough. This subject has been repeatedly brought under notice by the Council by letters, deputations, and by a petition numerous signed and presented nearly three years since, calling attention to the inconvenient and dangerous nature of the crossings, with special reference to that in Alt-street, where a gatekeeper is stationed, which is beyond doubt the most dangerous, and at the same time the most easily capable of improvement by an archway under the line. This was pointed out in the petition referred to, and its completion urged on the Minister.

The necessity for this alteration is becoming daily more apparent from the great addition to the number of trains and the large traffic across the railway, consequent on the rapid increase of the population of this Borough, and the fact that there is no safe and convenient crossing suitable for the requirements of traffic within this Borough, renders it desirable to provide without delay for its accommodation. Reference was also made in the petition to the locking of the gates at a comparatively early hour in the evening, which is a cause of great inconvenience to those having occasion to cross at night.

The Council trusts that these representations may be favourably considered, and the necessary alterations authorized.

I have, &c.,

W. R. MUIR,

Council Clerk.

I think the Council should be informed that there will be no objection to the construction of the under-bridge, and the work will be carried out on condition that the Council arrange for the payment by them of all claims to compensation for injury to lands affected by this alteration.—Ch.A.G., 29/6/79. Approved.—J.L., 23/7/79.

The Commissioner for Railways to The Council Clerk, Ashfield.

Sir,

Railway Department, 30 July, 1879.

I am directed by the Secretary for Works to acknowledge the receipt of your letter of the 13th ultimo, bringing under his attention, by direction of the Municipal Council of Ashfield, the necessity for some improvement in the railway crossings over the line at Ashfield, and making special reference to the need for an archway under the line at Alt-street, and to inform you that Mr. Secretary Lackey will have no objection to authorize the construction of an under-bridge at the point mentioned if your Council will arrange for the payment by them of all claims for compensation for injury to lands which will be affected by this alteration.

I have, &c.,

CHAS. GOODCHAP,

Commissioner for Railways.

No. 13.

The Council Clerk, Ashfield, to The Commissioner for Railways.

Sir,

Council Chambers, Ashfield, 13 August, 1879.

I have the honor to state that your letter of the 30th July, No. 3,205, in reply to the application from the Council of this Borough for the construction of an archway under the railway line, at Alt-street crossing, has been duly considered, and I am directed to inform you that the Council does not consider that it should be asked to undertake responsibility in respect of such a work for the reason that the obstruction to the traffic in this street is entirely caused by the railway embankment, and that, therefore, the street should be restored as nearly as possible to its former condition by the Railway Department without requiring the Borough to be responsible for alterations rendered necessary by such works and urgently needed for security to life and property.

I have, &c.,

W. R. MUIR,

Council Clerk.

Mr. Mason, B.C., 20/8/79.—G.B. Seen.—W.M., 21/8/79. Commissioner. We have given a level-crossing over the line. This level-crossing has been in use for twenty years; the Council now want an underway. It is only reasonable to ask them to pay the land claims which would arise. If we made the underway they must lower the street to avail themselves of it. In so doing neighbouring properties would be injured, and claims would be preferred which certainly the Railway Department should not be called upon to pay.—CH.A.G., 25/8/79.

No. 14.

The Council Clerk, Ashfield, to The Secretary for Public Works.

Sir,

Council Chambers, Ashfield, 21 November, 1879.

I am directed by the Mayor of this Borough to enclose for your information, copy of a letter and enclosure received from Dr. Jones, of Ashfield, respecting the inconvenience of getting from one side of the railway line to the other after certain hours, and respectfully to request that you will inform me at your earliest convenience upon what day it will be convenient to you to receive a deputation upon the subject.

I have, &c.,

P. T. SAYERS,

Council Clerk.

Dr. R. T. Jones to The Borough Council of Ashfield.

Gentlemen,

Ashfield, 15 November, 1879.

Loud and frequent complaints I often hear from persons who come in a hurry to me at night-time on account of the gates at the crossing places being locked and consequently having to make a long detour to come to the Liverpool Road side of the railway line. I have asked one of these persons to put his grievance in writing in order to forward it to the Ashfield Municipal Council. I now beg to enclose for your perusal the few lines he wrote.

Seeing that our former petition for a roadway under the railway line in the centre of Ashfield have been of no avail, I think that another effort should be made as we now have a member, the Premier, who is personally acquainted with the great disadvantages we are under in the matter of communication.

Compare Burwood and Ashfield, and see the difference between the two Boroughs in this respect. The former has two bridges at convenient distances and a level-crossing in the centre, with one man by day and another man by night always ready to open to any one requiring to cross. The latter (Ashfield) has one bridge at a very inconvenient place, and only serving to perform a semi-circle instead of leading direct to main roads, then three crossing places in succession, all of which are locked from 8 p.m. until 6 a.m.

This is not a creditable state of affairs for so populous and influential a place as Ashfield. I question whether any other place on the line is so badly off in this matter of communication from one side of the Borough to the other.

Until we get a clear course under the railway, I think the Government should be urged to put a man to attend to the gates by night and not expect us to shout ourselves hoarse in trying to awaken a man from his sleep, who has been fourteen hours at his post, and then waiting patiently for over a quarter of an hour for him to dress and unlock the gates.

Trusting that you will take this matter in hand early,

I remain, &c.,

R. T. JONES, M.D.

Mr. Chas. M. Kerr to Dr. Jones.

Burwood, 16 October, 1879.

Dear Sir,

On leaving your house the other night I tried to cross at King's crossing, found it locked. Went from there to Croydon, found that locked also, asked the man at the gate to let me pass through; he said it was against orders to open after eight o'clock at night, the result was I had to ride some 3 miles out of my way to get home. I think it is high time some alterations were made in reference to the above crossing.

Yours, &c.,

CHAS. M. KERR.

Submitted, Friday, 12th, 11 a.m.—J.L., 28/11/79. Will Traffic Manager let me have by the 10th a report upon the proposal to place a man in charge of gates at night? What amount of traffic is there after night-fall? Compare with Burwood in this respect, B.C., 5/12/79.—CH.A.G. Report herewith.—THOS. CARLISLE, 8/12/79. Commissioner.

To the Commissioner for Railways.—With reference to the proposal to place a man in charge of King's gates, Ashfield, at night, I have made inquiry as to the number of vehicles passing through between 8 p.m. and 6 a.m. The gateman informed me that the average number could not exceed one per night; occasionally four or five vehicles pass through in one night, then again for five or six nights not a single vehicle would pass through. As regards the crossing at Burwood Station, twenty to thirty vehicles pass through

through the gates every night. The man in charge cleans lamps, oils points, &c., in addition to his occupation as night gateman. King's gate cannot be compared with Burwood crossing as far as the number of vehicles passing through is concerned, and if a man is put on at night he could render no assistance at Ashfield Station owing to the distance from the station to the gates—nearly a quarter of a mile.—THOS. CARLISLE, 8/12/79.

No. 15.

Report of Deputation to Minister.

THE Mayor of Ashfield, Mr. D. Holborow, with Aldermen Clissold, Hammond, Muir, and Read waited on the Minister for Works yesterday, to ask for some improvements in the construction of the crossings of the railway line at and near Ashfield, and desired to call the Minister's attention to the closing of the gates after dark, which compelled vehicles to make a detour of 3 miles to get from the north to the south side of the line. The heavy traffic at the Croydon crossing, in consequence of instructions being given to open the gate there after dusk, make it a dangerous undertaking. The Mayor stated that 150 vehicles used that crossing daily, and the Minister he thought would easily understand that the traffic concentrated in this way was extremely inconvenient and dangerous. There were 1,400 tax-payers in the Borough, and he thought the importance of making some better provision would be apparent. They had been led to understand some time ago that a bridge would be erected, but he would suggest that an underground crossing would get rid of the difficulty, and be more suitable for vehicles.

Mr. Lackey said, in the course of his answer, no doubt proper provision ought to be made for the convenience of the public. He thought the underground road was a matter well worthy of consideration. Already the Department had made arrangements to make these roads in some places, and although he had not hitherto had time to reflect much on the matter he would be happy to place the proposal before the Government and see what could be done.

13 December, 1879.

No. 16.

The Council Clerk, Ashfield, to The Secretary for Public Works.

Sir, Municipal Council Chambers, Ashfield, 1 November, 1880.

Referring to previous communications upon the subject of a low-level crossing at Alt-street, in this Borough, I am directed by the Mayor to inform you that the want of a crossing is so much felt that the residents have, through one of the aldermen, again brought the matter before the Council. His Worship, therefore, requests that you will inform him if any steps have been taken by the Government in the matter.

I have, &c.,

E. T. SAYERS,

Council Clerk.

Railways, B.C., 5/11/80.—J.R. An under-way at Alt-street is, on account of the large compensations which would have to be paid owners of adjoining property, out of the question if the expense is to be provided from railway funds. Will Mr. Mason report on the other proposal, viz., an underground way at Bland-street. B.C., 8/11/80.—CH.A.G.

No. 17.

The Council Clerk, Ashfield, to The Secretary for Public Works.

Sir, Municipal Council Chambers, Ashfield, 17 March, 1881.

I am directed by the Mayor of this Borough to request that you will inform him when it will be convenient for you to receive a deputation from this Council upon the subject of the crossing under the railway, at Alt-street.

I have, &c.,

E. T. SAYERS,

Council Clerk.

Deputation appointed, Friday, 1st April, at noon. Railways, B.C., 29/3/81.—J.R. Mr. Cowdery for report, B.C., 30/3/81.—G.B. Most urgent.

I have visited the ground at Ashfield, and find it practicable to build an under-bridge some 2½ chains beyond the down platform, but it would be a very expensive job if the Department have to purchase land for approaches. Alt-street is not a suitable place for a bridge, the embankment being too low.—G.C., 6/4/81. Commissioner.

The Mayor of Ashfield to The Secretary for Public Works.

Sir, 118 King-street, Sydney, 26 March, 1881.

I have the honor to request that you will inform me of the earliest date and hour that it will be convenient for you to receive a deputation that was appointed at a public meeting, of which I was Chairman, held at the Odd-fellows' Hall, Ashfield, on the 23rd instant, respecting the vehicle crossing at the Railway Station, Ashfield.

I have, &c.,

THOS. L. NICHOLSON,

(Pro G.S.)

1st April appointed. Railways, B.C., 29/3/81.—J.R. Mr. Cowdery for report, 30/3/81.—G.B. Most urgent.

This crossing has always been a very dangerous one, and should be closed on that account; but it is also a very inconvenient one, as the station and railway cannot be properly fenced in as long as it (the crossing) remains open. The foot-bridge now being erected cannot be put in any other place to answer the purpose for which it was designed. Matilda-street bridge is about to be taken down and another erected in line with the street, which will be a great improvement.—G.C., 6/4/81. Commissioner.

Extract from *Sydney Morning Herald* of 9th April, 1881.

THE same deputation then asked the Minister for Works for a crossing over the railway, at Ashfield, that would not interfere with the vehicular traffic. Mr. Lackey said he had already consulted the Engineer on the matter, and when a report was received from that officer he would see to it at once.

Railways, 14/4/81.—J.R. Mr. Cowdery will please say what the cost of the under-way would be without the land for the approaches, and submit a plan showing the area of ground required for approaches on both sides. Perhaps if the Municipal Council were to obtain the land for the approaches the Minister might not be unwilling to approve of the formation of approaches and construction of under-way at the Government expense.—CHAS. A. GOODCHAP, 21/4/81.

Estimated cost about £4,000. Tracing showing land required for approaches marked red herewith.—G.C., 22/7/81. Commissioner. What will be cost of land—will Land Valuer please say?—CH.A.G., 27/7/81. Urgent.

Memo.

URGENT instructions have been received from the Commissioner for an estimate of the cost of land, at Ashfield, required as approaches to a proposed crossing there. Will the Engineer for Existing Lines be good enough to have the names of the owners supplied on the accompanying tracing, and also information as to whether the land comprises the whole or only part of original blocks, &c. If this information can be supplied this afternoon the Land Valuator will carry out the instructions to-morrow.

J.B.T., 27/7/81.

Engineer for Existing Lines. The land required for this under-way is in each case only a portion of a block. The names of the owners are written on the accompanying tracing.—E.M.H., 28/7/81. Mr. Thompson.—G.C., 29/7/81.

Estimate of cost of land at Ashfield, required for approaches to proposed under-bridge. The Commissioner for Railways, Sydney.

The portion south of the railway, containing 2 roods 4 perches 8 feet, has a frontage of 66 feet to the Liverpool Road by a depth of about 5 chains to the railway fence, and will cost about £12 10s. per foot, or altogether about £825. The portion north of the railway, containing 1 rood 24 perches, 3104, has a frontage of 66 feet to Elizabeth-street by a depth of about 4 chains to the railway fence, and will cost about £8 per foot, or altogether about £528. The land south of the railway is occupied by Mr. W. G. Williams as part of a timber yard, but as I have no information as to the tenure upon which he holds it I am unable to give any estimate of the amount of compensation to which he would be entitled.

The total cost for land will be about £1,353, and with Mr. Williams' claim it will probably amount to about £1,500 or £1,600.

J. B. THOMPSON, 30/7/81.

No. 18.

The Council Clerk, Ashfield, to The Under Secretary for Public Works.

Sir, Municipal Council Chambers, Ashfield, 14 June, 1881.

I am directed by the Mayor of this Borough to request that you will inform me at your earliest convenience at what time the Minister for Works will receive a deputation to urge upon him the necessity of at once providing an under-crossing convenient to the Ashfield Railway Station.

I have, &c.,

E. T. SAYERS,

Council Clerk.

Railways, B.C., 17/6/81.—J.R.

The Council Clerk, Ashfield, to The Under Secretary for Public Works.

Under-crossing at Ashfield Railway Station.

Sir, Municipal Council Chambers, Ashfield, 11 July, 1881.

Referring to my letter of the 14th ultimo, respecting an under-crossing convenient to the Ashfield Railway Station, I am directed to ask if the deputation which will wait upon the Minister by appointment on Friday, the 15th instant, upon the subject of a crossing to connect Carlton with Grosvenor Crescents, might be permitted to introduce the former subject, and thus save the valuable time of the Minister. An early answer will oblige.

I have, &c.,

P. T. SAYERS,

Council Clerk.

The Under Secretary for Public Works to The Council Clerk, Ashfield.

Sir, Department of Public Works, 13 July, 1881.

In compliance with request contained in your letter of the 11th instant, I am directed to inform you that there will be no objection to the deputation appointed to wait upon the Minister on Friday next, representing the subject of the necessity for an under-crossing convenient to the Ashfield Railway Station, as an additional matter.

I have, &c.,

GERALD HALLIGAN,

(For U.S.)

| | | | | | | | |
|--|-----|-----|-----|-----|-----|-----|--------|
| | | | | | | | £ |
| The cost of the under-way at Ashfield, will be | ... | ... | ... | ... | ... | ... | 4,000 |
| Cost of land for approaches | ... | ... | ... | ... | ... | ... | 1,600 |
| | | | | | | | £5,600 |

The only justification there is for this expenditure, is that the Department has recently closed a level crossing over the line at Ashfield. This crossing was allowed only in sufferance, there was no claim to it on the part of the public, but they have had the use of it for many years, over twenty.—CHAS. A. GOODCHAP, 4/8/81.

The

11

The Under Secretary of Public Works to The Council Clerk, Ashfield.

Sir,

Department of Public Works, Sydney, 24 September, 1881.

Referring to your letter of the 14th July last, requesting an interview for a deputation on the subject of a crossing to connect North and South Ashfield, I am directed to request that you will be so good as to substitute for the proposed deputation a statement of the circumstances in writing, to which the full consideration of the Secretary for Public Works will be given, and the result promptly communicated to you.

I am to add that this course is rendered necessary by the largely increased applications from deputations, which have become inconvenient to the arrangements and business of the Department.

I have, &c.,

JOHN RAE.

No. 19.

The Council Clerk, Ashfield, to The Under Secretary for Public Works.

Sir,

Council Chambers, Ashfield, 22 December, 1881.

Referring to your letter of the 24th September, asking that the circumstances of the Alt-street crossing might be submitted to the Minister in writing, I am now directed to bring under his notice the following facts, upon which the Council bases, on behalf of the ratepayers, its claim for an under-crossing at this place.

It is the opinion of this Council that the Government have supposed that this road has been opened since the railway was made, but the road has really existed for over forty years, and, until blocked by the railway, was most extensively used, being the connection of the Liverpool and Parramatta Roads, and since its obstruction the Council has been inundated with petitions and complaints, and have in their turn urged upon the Government to restore the thoroughfare, the absolute necessity of which I am to hope has forced itself upon the Minister.

The present gate is an expense, and the gradient on the north side of the line is so great that horses become restive. Several narrow escapes from accident have occurred through vehicles blocking the line, thereby endangering the lives of hundreds of passengers, the gate being closed. The gate being closed at 6 o'clock is also a source of great annoyance, more particularly to medical men, one recently having failed to get across here went to Croydon, and from thence positively to Burwood before a crossing could be effected. Since the closing of the line at the station, the want of a crossing without obstruction has been very much felt; goods arriving on the north side, intended for parties on the south, have to be carted at least 2 miles additional to reach their destination.

The Council, therefore, respectfully demand a restoration of the rights and privileges enjoyed by the inhabitants before the obstruction by the railway embankment, and hope that the Minister will give instructions for an under-crossing to be commenced without delay.

I have, &c.,

E. T. SAYERS,

Council Clerk.

No. 20.

Extract from the *Sydney Daily Telegraph*, 14 January, 1882.

"THE attention of the Minister for Works was yesterday drawn to the want of crossing accommodation over the railway line, in the district of Ashfield, by Messrs. Pigott and Henson, M.'sL.A. The Minister for Works pointed out that difficulties existed in the way of the construction of a subway, as land would have to be purchased by the Railway Department, and for which there was at present no funds available. There was no doubt that the street crossings would be made so as to meet the requirements of the district, and that the gates would be widened and road-way cut away in order that traffic might be assisted."

No. 21.

The Mayor of Ashfield to The Secretary for Public Works.

Sir,

Ashfield, 31 January, 1882.

At a numerous and influentially attended public meeting, held at the Oddfellows' Hall, Ashfield, on the 30th instant, I was empowered to transmit to you the following resolution in regard to the reply received from you by Messrs. Henson and Pigott, M.'sP., relative to the through and uninterrupted vehicular crossing asked for at Alt-street, Ashfield, viz. :-

"That the answer given by the Hon. Minister for Works to Messrs. Henson and Pigott, as reported in the *Herald* of the 14th instant, will not in any way remove the difficulty complained of, and that this meeting is of opinion that the commercial prosperity and general convenience of the inhabitants of the Borough of Ashfield alike demands and fully justifies the Government proceeding immediately to construct a through and uninterrupted vehicle crossing under the railway, at Alt-street.

I have, &c.,

THOS. L. NICHOLSON,

(Mayor of Ashfield),

Chairman of the meeting.

No. 22.

W. Henson, Esq., M.P., to The Secretary for Public Works.

Dear Sir,

Ashfield, 6 February, 1882.

Will you kindly say if you will, and when, receive a deputation, appointed at a public meeting, in regard to the Alt-street railway crossing.

An underway in lieu of a way over the line is deemed most desirable.

Yours, &c.,

WILLIAM HENSON.

The

The Under Secretary of Public Works to W. Henson, Esq., M.P.

Sir,

Department of Public Works, 10 February, 1882.

I am directed to inform you that the Secretary for Public Works will receive the deputation mentioned in your letter of the 6th instant respecting Alt-street railway crossing, Ashfield, on Thursday next, the 16th instant, at 11 o'clock a.m.

I have, &c.,

JOHN RAE,

Mr. Cowdery, B.C., 11/2/82.—G.B.

Alt-street is not at all suitable for a subway, there not being sufficient headway, and the approach on the Liverpool Road side would be very steep. Land would also be required on both sides of the approaches. The best site, as I have before stated, is at Bland-street, there being more headway, and it is close to the station, which would be of far more advantage to the public.—G.C., 15/2/82.

Commissioner.

The under-way will be made at Alt-street. The residents, in public meeting, have asked this, and it is not the intention to buy land at an exorbitant price to make the under-way at Bland-street. The Crown Solicitor had better be asked if Mr. Pope would have any claim for damage against the Department.—J.L., 16/2/82.

No. 23.

Extract from *Sydney Morning Herald*, dated 17th February, 1882.

“Deputation.—Ashfield Railway Crossing.

“YESTERDAY a deputation consisting of Mr. W. H. Pigott, M.L.A., Mr. Henson, M.L.A., the Mayor of Ashfield, Dr. Haylock, and some other gentlemen, waited on the Hon. Minister for Works for the purpose of urging upon him the great inconvenience to the people of the Borough of Ashfield through the want of a crossing over the railway in that locality. They pointed out that the matter had been brought under the notice of the Department on several occasions, and that they had been appointed by a public meet as a deputation to wait upon the Minister with a view to call his attention to the inconvenience that they suffered under. They further stated that the Borough Council had not the means to contribute towards the purchase of private lands in order to make a subway at Bland-street, and that the residents were almost unanimously of opinion that the under-way should be constructed at Alt-street. They also produced a plan of the locality, showing that a subway could be constructed at the spot they indicated without any difficulty.

“Mr. Lackey, in reply, informed them that the matter had been delayed in the hope that the residents of the Municipality would have raised sufficient money amongst themselves for the purpose of purchasing a suitable piece of land at Bland-street, so that the Government could make an under-way opposite that street. This not having been done, he supposed the next best plan would be to construct an under-way at Alt-street, as at first proposed. He would give instructions to the Engineer for Existing Lines to report upon the practicability of making an under-way at this place, and if there were no difficulties other than those which now suggested themselves the work should be carried out.”

Mr. Cowdery will please submit plan and section showing the way Mr. Pope's land would be affected, and will state the quantity of land which will be required to make the under-way. Only land will be required for this purpose.—CHAS. A.G., 16/2/82. Mr. Hyndman for plan and section.—G.C. (*pro* G.L.) Tracing herewith.—R.A.H. Engineer for Existing Lines.

Plan and section herewith, showing how Mr. Pope's land will be affected. Area of land required to be taken from Mr. Pope, 18½ perches. Land will be required to form approaches to subway.—G.C., 24/3/12. Commissioner.

Assuming that Mr. Pope would have no claim for compensation for the way in which his property would be affected by the lowering of Alt-street to form the under-way, what would be a fair valuation of the 18½ perches of land which it would be necessary to take from him? The Land Valuer might be asked to make estimate of this. And Mr. Cowdery might say what the cost of the under-way would be at Alt-street as compared with Bland-street, assuming that Mr. Pope would have no claim beyond the value of the land actually taken from him.—CHAS. A.G., 27/3/82. Land Valuer first, 27/3/82, B.C.

| | | | | | |
|--|-----|------|-----|---|---|
| I value the land proposed to be taken from Mr. Pope, in Alt-street, at | ... | £342 | 3 | 9 | |
| For destruction of twenty pine trees of many years growth | ... | ... | 100 | 0 | 0 |

£442 3 9

Mr. Cowdery.—25/4/82.

J.B., 24/4/82.

Mr. Hyndman for estimated cost of under-way at Alt-street as compared with Bland-street, assuming that Mr. Pope would have no claim beyond the value of the land actually taken from him.—G.C. (*pro* G.L.), 18/5/82. Mr. Hyndman.

Apart from the value of land required in either case, the cost of erecting an under-bridge 50 feet wide would be, for Alt-street, £6,850; for Bland-street, £6,529.—R.A.H., 6/7/82. Engineer for Existing Lines.

Estimated cost of constructing under-way bridge at Alt-street, exclusive of land, £6,850. Estimated cost at Bland-street, £6,529.—G.C. (*pro* G.L.), 26/7/82. Commissioner.

No. 24.

Minute of Commissioner.

Railway Under-bridge at Ashfield.

It is proposed to make a bridge under the railway at Ashfield, to give access to both sides of the township.

If made at Alt-street, the present level-crossing, the bridge will cost £6,850, land to be taken from Mr. Pope £442 = £7,292; but in making this under-way, Alt-street, which divides Mr. Pope's property, will be required to be lowered very much, and as some land must be taken from Mr. Pope to make under-way the question arises whether he would be able to claim compensation for the damage he may sustain by the lowering of the street. He estimated this damage some years ago at £6,000, but says he would have to claim more now.

The alternative proposal is, to make the bridge at a point on the line which leads to Bland-street, but an approach road would have to be provided. Bridge

Bridge would cost £6,529, road £1,600 = £8,129.

It will be seen that if Mr. Pope would not be entitled to compensation for damage to his property, the underway by Alt-street would be the cheaper work, but if anything like £6,000 is to be paid for damage (and our land valuer thinks that such a claim would not be excessive), then of course, the underway by Bland-street would be the cheaper scheme.

In the event of the Government giving an approach and underway by Bland-street, could they resume Alt-street, the one being substituted for the other from Liverpool Road to railway? Mr. Pope is the owner of the land on both sides, and would pay for the approach to Bland-street and the road to connect Bland-street with Alt-street (shown in blue), if allowed to have the road which divides his property. Attached is a rough sketch.

Will Crown Solicitor please advise in questions raised.

CHAS. A. G., 29/7/82.

Make copy of this and rough sketch for Crown Solicitor. Copy sent to Crown Solicitor.

No. 25.

Crown Solicitor's opinion.

Sir,

Crown Solicitor's Office, Sydney, 10 August, 1882.

I have the honor to return herewith your minute paper relating to the proposed railway under-bridge at Ashfield, and to state it is established by decisions in the English Courts that if, in the construction of railway works by lowering or raising a highway the access to private property is impeded, the owner of the land is entitled to compensation, on the ground that it has been "injuriously affected." Mr. Pope will, therefore, if the level of Alt-street is altered in the way suggested be entitled to receive compensation from you, but whether a Jury would find that he was entitled to the very large amount stated, I of course cannot advise.

Under the Railway Act you may close roads and substitute others, if the alteration is required in the construction of the line or for railway purpose, or you may take any land required; but the suggested mode of dealing with the portion of Alt-street extending from the Liverpool Road to the railway line by transferring same to Mr. Pope in exchange for another road would not be a taking it for railway purposes within the meaning of the Act. The land so dealt with would not be in any way used in connection with the railway, or as a portion of the railway land, but as compensation or payment for other land which would be used for that purpose; instead of being taken for the railway the portion of the road referred to would in effect be taken for the purpose of being sold to Mr. Pope.

As you do not appear to be under any legal liability to construct this under-bridge, which does not appear to be required for the better working of the railway but for the convenience of the inhabitants of Ashfield, possibly the Municipal Council will consent to be at the expense of making this bridge or to contribute liberally to the cost of its construction, which will remove the difficulty as to forming the approach from the Liverpool Road to Bland-street.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

No. 26.

The Council Clerk, Ashfield, to The Secretary for Mines.

Sir,

Municipal Council Chambers, Ashfield, 28 December, 1882.

I have the honor, by direction of the Mayor of this Borough, to draw your attention to a promise made to this Council some time since, that the work of making an underground crossing at Alt-street, in this Borough, would be commenced as soon as the works in connection with the crossing at Stanmore were completed. This work having been finished, I am directed to urge the immediate necessity of at once proceeding with the crossing at Alt-street, as its present condition renders it very unsafe for traffic, and further, it is the only place of crossing for some distance on either sides, thereby necessitating its being used at the risk of accident.

I have, &c.,

THOMAS GLASSOP,
Council Clerk.

Acknowledge and forwarded to the Works Department.—W.H., 4/1/83. The Under Secretary Public Works.—5/1/83. Railways.—J.R., 9/1/83. The Commissioner, for instructions.—D.V., 1/2/83.

Look through the papers, and let me know if there be anything in the correspondence to justify the statement that a promise was made to make the underway at Alt-street. In the face of the large compensation claimed by Mr. Pope, I could not recommend the underway at this place.—CHAS. A.G., 3/2/83.

I attach report (*Sydney Morning Herald*) of deputation which waited upon the Minister in this matter in February 1882. On the date the deputation waited upon Mr. Lackey, he wrote on the papers.

"The underway will be made at Alt-street, the residents in public meeting have asked this; and it is not the intention to buy land at an exorbitant price to make the underway at Bland-street. The Crown Solicitor had better be asked if Mr. Pope would have any claim for damage against the Department."

The Crown Solicitor was asked accordingly, and advised that Mr. Pope would legally have a claim against the Department.

The above seem to be the only circumstances that justify the statement referred to.—H. M'L., 6/2/83.

The promise or expression of intention to make the underway at Alt-street seems to have been conditional upon its being found that Mr. Pope, the owner of the adjoining land, would not be entitled to compensation. The Crown Solicitor has advised that he would be entitled to compensation, and, as the amount would make the cost of underway at Alt-street an indefensible outlay of public money, the project must be abandoned.—CHAS. A.G., 6/2/83.

No. 27.

The Council Clerk, Ashfield, to The Commissioner for Railways.

Sir,

Municipal Council Chambers, Ashfield, 4 April, 1882.

I am directed by the Mayor of this Borough, to draw your attention to the state of the foot-paths in Hercules-street, and to suggest the advisability of at once kerbing the same.

I have, &c,

E. T. SAYERS,

Council Clerk.

Mr. Cowdery, B.C., 6/4/82.—G.B. Mr. Hyndman for report.—G.C., (*pro G.L.*), 11/4/82.
Mr. Purton.—R.A.H., 27/3/83.

The foot-paths herein referred to require attention, and to make a proper job would be to kerb and gutter them. Estimated cost of the above work, including excavation and constructing gully shafts, &c., complete, £240.—J. V. PURTON, 31/3/83. District Engineer.

The cost of this work if approved, will be about £240, chargeable to Schedule G.—G.C. (*pro G.L.*), 6/4/83. Commissioner.

See Mr. Mills' letter of 12/12/81, upon which Mr. Hyndman was requested to report on 26/12/81. No report received. The letter was sent to Mr. Hyndman for report on 11/4/82, and within a few days of *one year* Mr. Hyndman replies.—CHAS. A.G., 10/4/83.

Please forward a report on Mr. Mills' letter.—G.C. (*pro G.L.*), 14/4/83. Mr. Hyndman. I have seen Mr. Mills about this, he strongly advocates the subway in Alt-street, of which we have all particulars.—R.A.H., 3/5/83. Engineer for Existing Lines. Mr. Mills strongly advocates to construction of a subway in Alt-street. All papers referring to Alt-street subway are with Commissioner.—G.C. (*pro G.L.*), 9/5/83. Commissioner.

Mr. J. Mills to The Secretary for Public Works.

Sir,

Sydney, 12 December, 1881.

In bringing under your notice the necessity for a subway for vehicles at the Ashfield Railway Station, I do myself the honor to state, for your information, that I believe I have discovered a plan by which a subway more satisfactory for working the station, and convenient for all general purposes, can be effected at a trifling cost for the approaches.

I do not desire to say more at present, but should you consider this communication worthy of your notice I shall be pleased to explain my views to any officer you might direct to call on me, who would then be enabled to report to you whether my plan could be carried out or not.

The land for the approaches cannot possibly cost much, and I believe can easily be obtained at its fair value.

I have, &c.,

JOHN MILLS.

Mr. Cowdery, 16/1/81.—G.B. Mr. Hyndman to meet Mr. Mills, and report.—G.C. (*pro G.L.*), 26/12/81.

No. 28.

Mr. J. Mills to The Secretary for Public Works.

Subway under the Railway, at Alt-street, Ashfield.

Sir,

John-street, Ashfield, 30 January, 1883.

In bringing under your notice the above, I do myself the honor to ask the favour of an interview, and shall feel obliged by your informing me when it will be convenient for you to receive a deputation in connection therewith, as the work was promised to be commenced early last year.

I have, &c.,

JOHN MILLS.

Railways.—J.R., 6/2/83.

See papers herewith—There is no doubt that the people of Ashfield have been deprived of a valuable crossing, and there is equally no doubt that the level-crossing at Alt-street is inconvenient and dangerous. If a compromise could be effected it would be advantageous to all concerned—a bridge (underway) at Bland-street would effect this, provided an approach from the Liverpool Road to under way could be secured and Alt-street be closed.—CHAS. A.G., 12/2/83. Under Secretary, Public Works.

No. 29.

Extract.

EXTRACT from *Sydney Morning Herald*, 24/2/83.

RAILWAY CROSSING AT ASHFIELD.—A deputation consisting of the Mayor of Ashfield (Mr. Mark J. Hammond), and a number of leading residents, waited yesterday morning upon the Hon. The Minister for Works for the purpose of bringing under his notice the necessity for the construction of a subway under the railway, at Alt-street, Ashfield. It was pointed out that in the construction of the line an embankment 12 or 14 feet high had been thrown across the road at this point, and the crossing was consequently very dangerous for vehicular traffic. The gates were also closed at 6 o'clock, and anyone wishing to cross the line would have to go in that direction as far as Burwood. Several members of the deputation stated that on a former occasion Mr. Lackey had said that he saw no difficulty in the way of carrying out the work, and promised to give instructions that it should be gone on with forthwith. Subsequently he told them it would be proceeded with as soon as the one between Newtown and Stanmore was finished. As this had now been completed they thought the present the most favourable time to bring it under the notice of Minister.

Mr.

Mr. Copeland said he saw that amongst the papers there was a report from Mr. Cowdery, in which it was stated that Alt-street was not at all suitable for a subway, as the approach from Liverpool Road side was very steep, and that the best place was at Bland-street, as there would then be more headway, and it was closer to the station. He might say he was thoroughly aware of the necessity of having these subways; he believed in them in preference to level-crossings, and therefore, he did not need any convincing of the necessity for work of that kind. But it seemed it was almost impossible to have the crossing at Alt-street as it would be necessary to pay a large sum for land on both sides of the road, whereas he understood there would be little difficulty at Bland-street. So far as he could judge from the papers, the latter place was best in the public interest, and he thought that was the place to construct a crossing. He was informed that the road at Alt-street would have to be cut down 12 feet to provide sufficient headway, which would entail very considerable expense.

It was pointed out by the deputation that all the cutting away necessary would be to bring the road down to the level of the adjoining ground.

Mr. Copeland said he would have a report made, and if it were as they said, he saw no difficulty in constructing the crossing.

The deputation thanked the Minister, and withdrew.

The deputation promised to furnish me with a plan of survey showing 16 feet of clear headway at Alt-street, and I promised on receipt of such plan to have a further report as I was in favour of subways in preference to level-crossings or bridges.—H.C., 23/2/83. Railways.—1/3/83., J.R.

No. 30.

Mr. J. Mills to The Secretary for Public Works.

Subway under the Railway, at Alt-street.

Sir,

7 March, 1883.

In again bringing under your notice the above subject, I do myself the honor to state that the plans referred to by the deputation on the 23rd ultimo, are now in their possession, and I shall be glad to learn when it will be convenient for you to receive them, so that they can present the same for your inspection.

I have, &c.,
JOHN MILLS.

Having personally inspected the ground since the deputation, I don't particularly require to see the plans at present.—H.C., 7/3/83. Inform.—J.R., 8/3/83.

The Under Secretary for Public Works to Mr. J. Mills.

Sir,

13 March, 1883.

Referring to your letter dated the 7th instant, I am to inform you that the Secretary for Public Works having personally inspected the ground, does not now consider it necessary that he should see the plans of the proposed subway at Alt-street, Ashfield.

Thanking you for your courteous offer,

I have, &c.,
JOHN RAE.

No. 31.

Mr. W. W. Rodd to The Secretary for Public Works.

Sir,

Barnstaple Manor, Five Dock, 13 March, 1883.

Referring to the printed paper headed "Railway Crossing at Ashfield," and assuming the report to be correct, I do, as ratepayer, crave leave to make the following remarks:— See No. 29.

1. In my opinion, Alt-street is the natural and proper line to have a crossing. It commences on south side of Parramatta Road and continues in a straight line over the railway to the Liverpool Road. It is nearly on the old line of road, forty-five years since. There is little or no difficulty on the Liverpool Road approach; no land would have to be resumed; perhaps Mr. Pope may claim compensation, but I really do not see what material harm it would do him.
2. Bland-street would be more expensive. Land of Mr. Brinstead, surveyor, would have to be resumed, and to go by the back part of Mr. Alderman Hudson's premises, and on the other side it would go right through a timber-yard, and the land also would have to be resumed.
3. I think a cutting of 2 or 3 feet in Alt-street would give sufficient headway—perhaps a sharp dip from Liverpool Road.
4. I claim to have some knowledge of amateur roadmaking, &c., for the last forty years; for eighteen years I was manager of the Parramatta Trust (or Sydney). I believe I am not personally known to you, so add that I am the senior attorney of the Supreme Court, sixty-two years in the Colony, and only seventy-three years old.

When the railway was being constructed, I pointed out to Captain Martindale that the road should go under the line, the northern approach being so dangerous (many accidents having happened), and when I applied to the Railway Office to fence the side I was told the Commissioner of Roads was the person to apply to.

Now, sir, if you could spare one hour after the present Session is over, and personally inspect the locality, you would at once see that Mr. Cowdery's report is not the right thing—in fact, is incorrect.

I remain, &c.,
W. W. RODD.

Mr.

Mr. W. W. Rodd to The Secretary for Public Works.

Dear Sir,

Barnstaple Manor, Five Dock, 7 May, 1883.

Now the session being over, I hope you will have breathing-time to look into a letter I sent just before Mr. Copeland resigned, in reference to the bridge over the line (railway) so much wanted at Ashfield, passing near Pope's property.

Since I wrote I took a surveyor with me, and he approves of all I stated.

I remain, &c.,

W. W. RODD.

It would seem that, by making underway at Alt-street, we shall incur an expenditure altogether in excess of the merits of the case. If the Municipal Council of Ashfield would consent to the crossing being opposite Bland-street, I think all interests will be served. If Mr. Pope obtained the present approach to Alt-street crossing in consideration of his giving land for approaches to Bland-street, what would be the cost to the Department for underway, and the saving effected (capitalized) for the closing of the level-crossing.—CH.A.G., 12/5/83.

Mr. Cowdery. Mr. Hyndman, for cost as required by Commissioner.—G.C. (*pro G.L.*), 15/5/83. Very urgent. A section of Bland-street is now shown on plan; also section for drainage; an estimate is given on Mr. Cowdery's M.P., 26/7/82. The capitalized value of gatekeeping expenses is £500 at 5 per cent.—R.A.H., 13/7/83. Forward plan showing section of Bland-street, and section for drainage.—G.C. (*pro G.L.*), 17/7/83. Mr. Hyndman. Herewith.—R.A.H., 24/7/83. Engineer for Existing Lines. The cost of subway at Bland-street will be £6,529, and the saving effected, capitalized by the closing of the level-crossing, would be £500 at 5 per cent.—G.C. (*pro G.L.*) 25/7/83.—Commissioner. I think there must be some mistake about this. What is the total amount paid for wages, &c.—CHAS. A. G., 2/8/83. Traffic Manager, 2/8/83.—L.P.T. There is only one gatekeeper at Ashfield, whose wages is 30s. per week, or equal to £78 per year. Capitalized, that would be £1,560.—W. V. READ (*per D.K.*), 3/8/83. Commissioner.

No. 32.

Mr. W. Marshall to The Secretary for Public Works.

Sir,

Liverpool Road, Ashfield, 30 June, 1883.

I have to address you upon a matter that I am sure you will give your earnest and prompt attention, so as to relieve the responsibility of the Department. At Ashfield Railway Station the public are permitted to pass from the down train platform on to Alt-street and intermediate homes, causing a danger which is perfectly unnecessary, and entailing a possible liability should accident occur.

This morning my little boy, four years old, wandered on to the line, when he was just saved from destruction as the up funeral train passed. At no other suburban station is a similar risk permitted.

Children are continually on the line at the place indicated, and I have brought the matter under the notice of the Station-master, as well as others, several times.

Trusting the remedy will be practical and prompt at your hands,

I have, &c.,

W. MARSHALL.

Will Commissioner for Railways reply to this, and do what he thinks the case requires?—F.A.W., 4/7/83. The end of the platform should be built up as suggested. Will Mr. Cowdery see to this?—CH.A.G., 6/8/83. Mr. Hyndman,—to have end of platform built up as suggested, and charge to working expenses.—G.C. (*per G.L.*) Mr. Purton.—R.H. (*per H.J.M.*) Noted.—J. PURTON, 11/8/83.

Mr. W. Marshall to The Commissioner for Railways.

Dear Sir,

Liverpool Road, Ashfield, 3 July, 1883.

On the 30th ultimo I addressed an official letter to the Minister *re* danger to the travelling public and others and responsibility to the Department by allowing indiscriminate traffic from the down platform, Ashfield Station, to Alt-street, and I feel sure that you will agree with me that a serious risk does exist, and wants prompt attention when pointed out.

I know that the vexed question of a subway at this place has received your careful attention, and if that were decided upon the risk spoken of would, I expect, be avoided, but in the meantime the public would be placed in a safer state by putting the Ashfield platform similar to Newtown, and no one inconvenienced.

I have heard it expressed by residents that if ever an accident occurred or life lost, that a Jury should assess heavy damages, especially when the matter has been brought under your notice as an existing danger.

I expect before long it will be necessary to loop the trains at Ashfield, to carry the enormous traffic that is springing up on the line.

Hoping to have your sympathy in carrying out the necessary alterations at the platform,

I remain, &c.,

W. MARSHALL.

Acknowledge receipt with thanks. The passengers must not be allowed to travel along the line from the station to Alt-street. Traffic Manager will please see to this.—CH.A.G., 4/7/83.

The Commissioner for Railways to Mr. W. Marshall.

Sir,

Department of Public Works, Railway Branch, 4 July, 1886.

I have the honor to acknowledge the receipt of your letter of the 3rd instant, bringing under notice the danger incurred by allowing indiscriminate traffic from the down platform, at Ashfield Station, to Alt-street, and, while thanking you for drawing attention to the matter, have to inform you that it shall receive immediate attention.

I have, &c.,

CHAS. A. GOODCHAP (*per G.B.*),

Commissioner for Railways.

Inspector

Inspector Richardson and Station-master, Ashfield, to see and carry out.—W.V. READ (*pro* D.K.), 9/7/83.

I spoke to Mr. Read about the place only a few days ago, and am very glad to see it closed; at same time I am sure there will be great complaints from a certain number of residents who have been using this track for very many years, and if records are searched I think it will be found that the right-a-way was given to these people, as the platform was not only made so as to give a way down to the end of it, but a lamp was also put up to show the way down. Mr. John Pope is the principal person affected by this track being closed, as it will make him and others, living in same direction, to walk double the distance now.—H. RICHARDSON, 9/7/83.

I beg to suggest that the end of the platform be built up at once and a railing put on it, as at present it is only a trap for people, as it has been made purposely for the public to get off the platform on to the track to Alt-street.—H. RICHARDSON, 7/9/83.

I recommend that the end of the platform be built up and fenced off.—W. V. READ (*pro* D.K.), 12/7/83. Commissioner. I concur.—D.V.

No. 33.

The Mayor of Ashfield to The Secretary for Public Works.

Sir,

Municipal Council Chambers, Ashfield, 25 July, 1883.

I have the honor to acquaint you that, at a special meeting of the Council, held on the 24th instant, for the purpose of considering the important question of railway crossings in this Borough, at which the whole of the Council were present, the following resolution was submitted, and after full discussion, agreed to, viz.: "That the Hon. the Minister for Works be respectfully requested to allow the Engineer for Existing Lines or other officer to meet this Council with plans, &c., &c., *re* under-crossing at Ashfield, with the object of viewing and considering together the best positions, and that he will be pleased to make an appointment at his earliest convenience."

I have therefore to ask that you will kindly name a day and hour on which such an interview could be held.

The cause of this, perhaps unusual request, has been brought about through the great necessity for additional crossings and the continual applications to the Government during the last seven or eight years for one at Alt-street, the necessity for which has not been disputed by them on any occasion; but the expediency as to locality combined with conflicting interests appears to have been the reason of the long delay on their part.

The Council, therefore, whilst apologising for taking this step, consider that it is the only practical way in which this matter might be brought to a successful issue.

I have, &c.,

MARK J. HAMMOND,

Mayor.

Underway, Bland-street, Ashfield.

Cost of underway, £6,529; saving effected by closing Alt-street level-crossing, capitalized at 5 per cent., £1,560, at 4 per cent., £1,950; at the lowest computation, the bridge would cost £4,579.

Alt-street level-crossing is dangerous, and the people of Ashfield have been deprived of level-crossing at station. They are entitled to consideration.

No doubt they would like an underway at Alt-street, but that could only be given at great cost, as Mr. Pope, whose property Alt-street intersects, would have a claim to compensation if Alt-street were lowered.

CH.A.G., 6/8/83.

No. 34.

The Council Clerk, Ashfield, to The Secretary for Public Works.

Sir,

Municipal Council Chambers, Ashfield, 15 August, 1883.

I have the honor, by direction of the Mayor of this Borough, to draw your attention to my letter of 25th ultimo, *re* under-crossing at Ashfield, to which no reply has yet been received.

I have, &c.,

THOMAS GLASSOP,

Council Clerk.

The Council requests that the Engineer for Existing Lines may be directed to meet them to consider question of under-bridge, producing plans, &c. I see no objection to this.—CH.A.G., 31/8/83. I concur.—F.A.W., 3/9/83. What day and hour will be convenient for Mr. Cowdery to meet the Council, and where?—G.B., B.C., 4/9/83. Monday next at 9 a.m., at Ashfield Station.—G.L., 7/9/83. Commissioner.—Inform., G.B.

The Commissioner for Railways to The Council Clerk, Ashfield.

Sir,

Department Public Works, Railway Branch, Sydney, 7 September, 1883.

With reference to your letter of the 25th ultimo, addressed to the Hon. the Minister for Public Works, asking that the Engineer for Existing Lines may be directed to meet your Council to consider the question of railway crossings within your Borough, I have the honor to inform you that Mr. Cowdery will meet the Aldermen of Ashfield at the railway station there, at 9 a.m., on Monday next.

I have, &c.,

C. A. GOODCHAP,

Commissioner for Railways.

The Council Clerk, Ashfield, to The Secretary for Public Works.

Sir,

Municipal Council Chamber, Ashfield, 30 August, 1883.

I have the honor, by direction of this Council, to again draw your attention to my letter of 25th July last, and also that of 15th August, on the subject of an underground crossing in the Borough, to which no reply has yet been received.

A requisition having been forwarded to the Mayor, since the date of the last communication, to convene a public meeting of the ratepayers to consider the matter, is the cause of this further correspondence.

Your early attention to the matter will oblige.

I have, &c.,
THOS. GLASSOP,
Council Clerk.

The Council Clerk, Ashfield, to The Commissioner for Railways.

Sir,

Municipal Council Chambers, Ashfield, 11 September, 1883.
I have the honor to acknowledge receipt of your letter of 7th instant, also telegram of 8th, notifying that Mr. Cowdery will meet the members of this Council on Wednesday next, at the railway station, at 9 o'clock, a.m., and to inform you that arrangements have been made for the Council to be present.

I have, &c.,
THOS. GLASSOP,
Council Clerk.

Mr. Cowdery, B.C., 12/9/83.—G.B. I met the Mayor and Aldermen and inspected both Alt and Bond Streets, but up to the time I left they had not arrived at any decision as to which was the best site for a subway.—G.C. (*pro G.L.*), 17/9/83. Commissioner.

No. 35.

The Mayor of Ashfield to The Secretary for Public Works.

Sir,

Municipal Council Chambers, Ashfield, 13 September, 1883.
I have the honor to inform you that at a public meeting of the ratepayers held in the School of Arts, Ashfield, on Wednesday evening last for the purpose of determining what steps should be taken to urge upon the Government the necessity for commencing to construct a subway under the railway at Alt-street, it was resolved,—

- 1st. That this meeting is of opinion that the Government should not resume Alt-street.
- 2nd. That this meeting is of opinion that the Government should be requested to construct a subway under Alt-street. (Unanimously.)
- 3rd. That a deputation wait on the Honorable the Minister for Works to represent this matter, and to urge him to personally inspect the locality.

I have, &c.,
MARK J. HAMMOND,
Mayor, Chairman of Meeting.

The Council Clerk, Ashfield, to The Secretary for Public Works.

Sir,

Municipal Council Chambers, Ashfield, 13 September, 1883.
I have the honor to inform you that at a public meeting of the ratepayers of this Borough held last evening for the purpose of determining what steps should be taken to urge upon the Government the necessity of commencing to construct a subway under the railway, at Alt-street, a deputation consisting of the Hons. R. White and S. H. Terry, M's.P., A. H. Jacob, M.P., his Worship the Mayor, M. J. Hammond, Aldermen Holborow, Watkin, Ireland, and Mortley, and Messrs. William Henson, John Mills, and Thomas F. Jackson was appointed to wait on the Honorable the Minister for Works to request him to personally inspect the locality.

I have, therefore, to request that you will kindly name a time when it will be convenient to receive such deputation.

I have, &c.,
THOS. GLASSOP,
Council Clerk.

Will Mr. Cowdery report on this matter. Where are the papers.—Ch.A.G., 18/9/83. Urgent.

An under-bridge at Alt-street will be very costly on account of the approaches, Bland-street would be a more suitable site for the general public, and before long another under-bridge will be required south of Alt-street, where there is a good site and plenty of headway, but I would not recommend either of these last sites unless the level-crossing at Alt-street be closed.—G.C., 20/9/83.

Will the Minister, in compliance with the request contained in this letter, personally inspect the locality?—Ch.A.G., 22/9/83. Is there a deputation arranged for this matter.—F.A.W., 25/9/83. No, but there is only one for Friday next.—J.R., 26/9/83. Arrange for Friday next, and fix the hour.—F.A.W., 26/9/83. Railways, for the requisite information.—W.F. (*pro U.S.*), 26/9/83.

The Under Secretary for Public Works to The Mayor of Ashfield.

Sir,

Department of Public Works, Railway Branch, Sydney, 20 September, 1883.
Referring to your letter of the 13th instant, I am directed to inform you that the Secretary for Public Works will receive the deputation on the subject of construction of subway under the railway line, at Alt-street, Ashfield, on Friday next, the 28th instant, at 11:30 o'clock, a.m.

I have, &c.,
J. RAE,
Under Secretary for Public Works.

No. 36.

Minute of Minister.

Re Subway at Alt-street, Ashfield.

A DEPUTATION from Ashfield waited upon me to-day to ask that a subway might be made under the railway, at Alt-street. They stated that Mr. Lackey had promised the work should be carried out, and it was now urgently required as the present level-crossing was unsafe. They further stated the work could be done without unduly interfering with Mr. Pope's property. The subway at Bland-street would not be suitable, and they considered, in fact, it could not be given.

I informed the deputation that the great objection to the work was the excessive cost it would entail.

When the papers were submitted to me it was recommended the subway should be made at Bland-street, and Alt-street closed, but I thought the better plan would be to make public the proposal to see whether it would be acceptable to the people of Ashfield, and a paragraph was then put in the *Herald* (attached).

In other places over or under bridges were not given. In America, for instance, where the traffic was very great, the traffic crossed the line on the level.

There was no record in the office of a promise having been made by Mr. Lackey to construct the subway at Alt-street. I promised on an early date to visit the place in company with Mr. Goodchap and Mr. Cowdery to inspect the locality.—F.A.W., 28/9/83.

EXTRACT from *Sydney Morning Herald*, 16 August, 1883.

WE understand that it has been determined to form an underway for vehicles, &c., at Bland-street, Ashfield, and when the work has been completed Alt-street will be closed as a level-crossing, and the roadway between the railway and Liverpool Road will be resumed.

No. 37.

Mr. W. Marshall to The Secretary for Public Works.

Re Underground Crossing, Ashfield Station.

Sir, Commercial Store, Liverpool Road, near railway station, Ashfield, 28 November, 1883.

I desire respectfully to bring under your notice that at a meeting of the Municipal Council of this Borough, held on 6th instant, it was agreed to petition Parliament that a subway underneath the railway should be made in Alt-street, Ashfield. I submit that that street would not be a suitable place for the following reasons, viz:—

1. It is only 50 feet wide, and it is proposed to give the owner of property (south side of line) 10 feet on both sides for private entrance, thus reducing the width to 30 feet opening, which I submit is too narrow.
2. The distance from station is objectionable, and is not where the general traffic would centre.
3. That the depriving of public of crossing at Hercules-street binds the Minister to make the subway as near to the station as possible, giving the greatest convenience to the largest body of inhabitants, and to owners of property their vested rights, as near as practicable.
4. That in view of the large traffic at Petersham, the Commissioner must ere long make Ashfield a terminal suburban station, and as land is available now on south side of line, a plan could be made to embody the crossing close to the station.
5. That the Council in advocating Alt-street is represented by a minority, and have not the general interest at heart.
6. That the difference in cost of Alt-street and a place adjacent to the station to be selected by the Minister would be such as to deprive Alt-street from being selected other than a foot-passenger subway.

Trusting these views may meet with your favourable consideration,

I have, &c.,

WILLIAM MARSHALL.

Proposed Subway at Ashfield.

WILL Commissioner of Railways obtain for me the following information. 1st. The distance from over-bridge at Liverpool Road to Ashfield Station. 2, 3, and 4, the distance from same station to Bland-street, and the same to Alt-street.

F.A.W., 6/12/83.

P.S.—The distance from Frederick-street to crossing at Croydon.—F.A.W. Mr. Cowdery.

- 1st. From Liverpool Road to Ashfield Station, 28 chains.
 - 2nd. From Ashfield Station to Bland-street, 8 chains.
 - 3rd. From Ashfield Station to Alt-street, 17 chains.
 - 4th. From Ashfield Station to Frederick-street, 32 chains.
 - 5th. From Frederick-street to Croydon crossing, 17 chains.
- Diagram herewith.
Commissioner. Obtain.—CHAS. A.G., 13/12/83.

G.C. (*pro* G.L.), 10/12/83.

Proposed Subway at Ashfield.

WILL Commissioner for Railways inform me why information asked for some time since upon this question has not yet been furnished. I should have thought the information I wanted could have been supplied in half an hour.—F.A.W., 17/12/83. It could not have been supplied in the time stated by Minister, as the exact distance had to be obtained. No time was lost in getting the information, and the Minister, I believe, has the papers on the subject.—CHAS. A.G., 17/12/83. Let plans be prepared and submitted to me for a subway at Alt-street, no land to be taken.—F.A.W., 17/12/83. Mr. Cowdery. Mr. Thompson for plan of subway at Alt-street, without taking any land.—G.C. (*pro* G.L.), 19/12/83.

No. 38.

Mr. J. Mills to The Secretary for Public Works.

Subway under the Railway at Alt-street.

Sir, John-street, Ashfield, 29 January, 1884.
 Referring to the above, I do myself the honor to ask you to cause to be forwarded to me your decision, as it will allay the anxiety existing in the minds of the 560 inhabitants signing the petition.
 I have, &c.,
 JOHN MILLS.

Inform the Mayor of Ashfield this subway will be constructed at Alt-street.—F.A.W., 30/1/84.
 Inform and let me have previous papers without delay.—CHAS. A. GOODCHAP, 30/1/84.

The Mayor of Ashfield to The Secretary for Public Works.

Sir, Ashfield, 31 January, 1884.
 I am directed, by order of the Council, to respectfully ask whether any decision has yet been arrived at by you with reference to an under-crossing at Ashfield, the object of your visit on 12th September last.
 I have, &c.,
 MARK HAMMOND,
 Mayor.

Inform that subway is to be made at Alt-street.—F.A.W., 1/2/84.

The Commissioner for Railways to Mr. J. Mills.

Sir, Department of Public Works, Railway Branch, 1 February, 1884.
 With reference to your letter of the 29th ultimo, addressed to the Honorable the Minister for Public Works, inquiring what the decision has been in respect of the memorial signed by yourself and other residents of Ashfield, asking that a subway may be constructed under the railway, at Alt-street, I have the honor, by direction of Mr. Secretary Wright, to inform you that it has been decided to carry out this work.
 I have, &c.,
 CHAS. A. GOODCHAP,
 Commissioner for Railways
 (pro D.V.)

The Commissioner for Railways to The Mayor of Ashfield.

Sir, Department of Works, Railway Branch, 1 February, 1884.
 Referring to the memorial signed by the residents of Ashfield, asking that a subway may be constructed under the railway, at Alt-street, I have the honor, by direction of Mr. Secretary Wright, to inform you that it has been decided to carry out this work.
 I have, &c.,
 CHAS. A. GOODCHAP,
 Commissioner for Railways
 (pro D.V.)

Mr. Cowdery, B.C., 12/2/84.—G.B. Mr. Cowdery to submit plans, &c.—CH.A.G., 28/2/84.
 Mr. Thompson for plans, &c.—G.C., 1/3/84. Plans are in hand, and half finished; will be ready for tenders to be invited in six weeks.—M.T., 21/4/84. Engineer for Existing Lines.

No. 39.

Question asked by Mr. Abigail, M.P.

Legislative Assembly, No. 87, Tuesday, 22nd April, 1884.

9. Railway Subway, at Alt-street, Ashfield.—Mr. Vaughn, for Mr. Abigail, asked the Secretary for Public Works:—When will the subway under the railway, at Alt-street, Ashfield, as promised by the Commissioner in a letter addressed to John Mills, Esq., Ashfield, dated 1st February, 1884, be constructed?

Mr. Wright answered,—Tenders will be invited in about six weeks from this date.

Mr. Cowdery, B.C., 6/6/84.—G.B. Are plans and specifications now ready.—G.L. (per G.C.), 9/6/84. Mr. Thompson. Plans and specifications (two of each) herewith. Estimated total cost, £5,650. The specifications were delayed in the Printing Office.—M.T., 30/6/84.

The Engineer for Existing Lines.—Draft advertisements (2) herewith, also plans (2) for Commissioner's approval.

No. 40.

The Council Clerk, Ashfield, to The Secretary for Public Works.

Sir, Municipal Council Chambers, Ashfield, 14 July, 1884.
 I am directed by His Worship the Mayor to ask when it is likely that the proposed subway at Alt-street will be commenced.
 I have, &c.,
 THOS. GLASSOP,
 Council Clerk.

Railways, B.C., 16/7/84.—J.R. Mr. Cowdery, B.C., 17/7/84.—G.B.

Minute Paper.

To Commissioner for Railways.

I BEG to inform the Commissioner that in August last I brought under the notice of the Engineer for Existing Lines the desirability of some repairs being effected to the gatehouse at level-crossing, Ashfield, but the matter has been standing over since then pending the decision as to whether a subway should be constructed in lieu of the crossing which would render the services of a gatekeeper unnecessary.

Will the Commissioner please inform me whether anything has yet been decided upon; if not, I think the repairs to the gatehouse should be carried out without delay.—W. V. READ, Traffic Manager, (*pro* W.H.C.), 30/7/84. Mr. Cowdery for report.—R.J.S., B.C., 1/8/84.

Plans are now ready and will be submitted to Commissioner in a few days.—G.C., (*pro* G.L.), 5/8/84.

No. 41.

Mr. J. Mills to The Secretary for Public Works.

Subway under the Railway, at Alt-street, Ashfield.

Sir,

30 July, 1884.

Referring to the above, I do myself the honor to state, for your information, that on April 22nd, in answer to a question put by Mr. Abigail,—“When will tenders for the subway under the railway, at Alt-street, Ashfield, be called for?” The Honorable the Minister for Works said: “In about a month or six weeks.”

Believing, as many of the memorialists do, that the severe indisposition of the Honorable the Minister for Works has caused the delay in calling for tenders, on their behalf I shall feel obliged by being informed when tenders for the above work will be called for.

I have, &c.,

JOHN MILLS.

Railways, B.C., 1/8/84.—J.R. Mr. Cowdery for report.—R.J.S., B.C., 22/8/84. I have seen the Commissioner, and he informed me that this matter could stand over for next year.—G.C., 26/8/84. Are the plans ready; if not, when will they be?—CH.A.G. Mr. Cowdery. The plans are ready.—G.C., (*pro* G.L.), 2/9/84. Commissioner.

The Council Clerk, Ashfield, to The Secretary for Public Works.

Sir,

Municipal Council Chambers, Ashfield, 26 August, 1884,

I am directed by His Worship the Mayor, to urge upon you the necessity for immediately commencing the proposed works in connection with the subway in Alt-street.

This street, between the railway line and Elizabeth-street, is in a very bad state of repair, and accidents are exceedingly liable to arise therefrom; but, in view of the works being commenced, any further expenditure on the street by the Council now would be absolutely thrown away.

I am also directed to point out that my letter on the subject of the subway at Alt-street, under date 14th ultimo, has not yet been replied to.

I have, &c.,

THOS. GLASSOP,
Council Clerk.

Railways, B.C., 27/8/84.—J.R.

No. 42.

Question asked by Mr. Hammond, M.P.

Legislative Assembly, No. 159, Friday, 19 September, 1884.

3. Subway under Railway, at Alt-street, Ashfield:—Mr. Hammond asked the Secretary for Public Works, “When is it the intention of the Government to proceed with the construction of a subway under the railway line, at Alt-street, Ashfield.”

Mr. Trickett answered,—The plans are ready and tenders will be invited at an early date.

Mr. Cowdery.—R.J.S., B.C., 30/9/84. Draft advertisements (2) herewith inviting tenders.—G.C., 3/10/84. Commissioner. Prior to these advertisements going in, I wish to know whether any compensation will have to be made to Mr. Pope. Plans should be submitted.—CH.A.G., 6/10/84. Mr. Cowdery. I think the Land Valuer should be asked to see Mr. Pope and ascertain if he requires any compensation.—G.C., 8/10/84. Commissioner. Land Valuer.—R.J.S., B.C., 10/10/84. Land Valuer saw Mr. Pope on this subject and finds that compensation will be required. A plan and tracing should be prepared, showing what is required.—J.B., 20/10/84. Commissioner. Mr. Cowdery.—R.J.S., B.C., 21/10/84. No land is required to be taken from Mr. Pope, but the excavated approach to bridge will destroy the frontages of his property.—G.C., 23/10/84. Commissioner. Land Valuer, B.C., 25/10/84.—G.B. Engineer for Existing Lines for Plan.—J.B., 27/10/84. Plan showing how Mr. Pope's property is affected herewith.—J.A., 14/11/84. Mr. Cowdery.

F. Abigail, Esq., M.P., to Mr. G. Berner.

Dear Sir,

Parliament, N. S. Wales, 11 October, 1884.

I have not yet received a reply that the tenders for the subway, Alt-street, Ashfield, have been accepted. I shall feel obliged if you will let me know, as I do not wish to bring it before Parliament again, if I can help it.

Awaiting reply.

I am, &c.,

F. ABIGAIL.

Memo.

Memo. for District Engineer, Sydney.

Railway Department, Office of Engineer for Existing Lines, Sydney, 7 November, 1884.

PLEASE show on accompanying tracing gateway to Mr. Pope's property, on west side of the line, roughly marked in pencil.

FRED. M. AVERN.

Position of gate shown on tracing.—M.T., 12/11/84. Assistant Engineer. Mr. Abigail is pressing in his inquiries on this matter; please expedite.—D.V., 7/11/84. Mr. Cowdery. Mr. Avern.—G.C., 13/11/84. Plan herewith for Land Valuer. Section for Corporation to-morrow.—F.M.A., 17/11/84. Section for Corporation herewith.—F.M.A., 19/11/84. Mr. Byrnes, with tracing asked for.—G.C. (*pro* H.A.), 20/11/84.

Forward tracing to Municipal Council, Ashfield, and say that when they have proclaimed the street to the levels shown on such tracing, the work of constructing the underway will be proceeded with.—CHAS. A. G., 27/11/84.

Council Clerk, Ashfield, informed. 28/11/84.

The Commissioner for Railways to The Council Clerk, Ashfield.

Sir,

Department of Railways, Sydney, 28 November, 1884.

Adverting to the correspondence that has passed, respecting the necessity of immediately proceeding with the construction of a subway under the railway line, at Alt-street, Ashfield, I have the honor to enclose herein tracing showing the levels of foot-path and roadway under the proposed bridge, and to inform you that when your council has proclaimed the street to the levels shown on such tracing, the work of constructing the underway will be proceeded with.

I have, &c.,

CHAS. A. GOODCHAP,
Commissioner for Railways.

No. 43.

F. Abigail, Esq., M.P., to The Secretary for Public Works.

Sir,

Parliament of New South Wales, 22 November, 1884.

I have the honor to bring under your notice that no tenders have been called for the subway at Alt-street, Ashfield, and the residents express surprise at this—seeing you gave them a promise some time ago that this necessary work should be done. Since I had my last conversation with you upon this question I have seen the Commissioner, and he appears to think there are insurmountable difficulties in the way of proceeding with this work. I cannot see them, nor can those you gave the promise to, and they have asked me to again request that you will have the work proceeded with at once; and if any person have or think they have a claim for compensation let them make good their claim in a Court of law, which will prevent the possibility of a suspicion that unfair influence was moved in the matter. Hoping to hear that the work will be carried on at once.

I am, &c.,

F. ABIGAIL.

The Commissioner for Railway to F. Abigail, Esq., M.P.

Sir,

Department of Public Works, Railway Branch, 5 December, 1884.

Referring to your letter of the 22nd ultimo, addressed to the Secretary for Public Work, asking that the construction of subway at Alt-street, Ashfield, may be proceeded with, I have the honor to inform you that when the Municipal Council have proclaimed the street to the levels shown in a tracing with which they have been furnished, the work of constructing the underway will be proceeded with.

I have, &c.,

CHAS. A. GOODCHAP,
Commissioner for Railways
(*pro* D.V.)

No. 44.

M'Culloch & Pope to The Commissioner for Railway.

Re Subway, Alt-street.

Sir,

121 Pitt-street, Sydney, 24 December, 1884.

We are instructed by Mr. John Pope to give you notice, that the sum of £6,000 will be required as compensation for damage by severance or otherwise to his land, on both sides of the street, caused by the cutting down of same.

We have, &c.,

McCULLOCH & POPE.

Inform that this representation should be made to the Municipal Council of Ashfield, who have, I understand, given notice of alteration of levels.—CHAS. A. GOODCHAP, 30/12/84.

The Commissioner for Railways to M'Culloch & Pope.

Department of Public Works, Railway Branch, 31 December, 1884.

Gentlemen,

I have the honor to acknowledge your letter of the 24th instant, intimating on behalf of Mr. John Pope that £6,000 will be required as compensation for damage by severance or otherwise to his land, on both sides of Alt-street, Ashfield, by the cutting down the same.

In reply, I have to inform you that this representation should be made to the Municipal Council of Ashfield, who have, I understand, given notice of alteration of levels.

I have, &c.,

CHAS. A. GOODCHAP,
Commissioner for Railways.

No. 45.

The Mayor of Ashfield to The Secretary for Public Works.

Sir, Municipal Council Chambers, Ashfield, 30 December, 1884.

With reference to the plans showing the proposed alteration in the levels of Alt-street, Ashfield, which have been forwarded by the Government to the Council preparatory to the Government undertaking to restore the street to its former passable condition. This work is of course rendered necessary through an obstruction caused by the construction of the railway. As Mayor of this Borough, I therefore desire, before placing these levels before the Council for their adoption, to be informed whether in the event of compensation being claimed from the Council, it is the intention of the Government to undertake all responsibility in connection therewith.

It will be understood that the adoption of these levels is not made necessary under the Act.

I have, &c.,

J. W. WATKIN,

Mayor.

If the claims are submitted in a reasonable shape before the levels are finally adopted, the question of contribution of costs will be considered, but I am not prepared to admit there is any claim against the Government.—F.A.W., 9/1/85.

Subway at Alt-street, Ashfield.

THE question of a subway in this locality was long ago mooted. Memorials from the residents, records of depositions, and numerous letters from Mr. Abigail, Mr. John Mills, and others are on the file.

For some time it was an undecided point whether Alt-street or Bland-street was the more suitable site for such subway.

Ultimately the Minister decided in favour of Alt-street, and by his instructions the Mayor of Ashfield and Mr. John Mills were informed (by letters of 30/1/84 and 2/2/84) that the subway would be put in at that point. The work was afterwards postponed for a time.

In September, 1884, Mr. Cowdery submitted for Commissioner's approval draft advertisement calling for tenders for the work, but as the plans involved some interference with the property of a Mr. Pope, Commissioner minuted that before inviting tenders it must be ascertained if Mr. Pope would look for compensation.

The matter was referred to the Land Valuer, who reported that Mr. Pope would require compensation. Commissioner thereupon forwarded to the Ashfield Council a tracing of the street showing Mr. Pope's land, and intimated that when they had proclaimed the street by the levels shown, the subway would be proceeded with. This by letter of 28/11/84.

Under date of 24/12/84, M'Culloch & Pope gave Commissioner notice that Mr. Pope would require £6,000 compensation for damage, by severance or otherwise, to his land on both sides of Alt-street.

Commissioner replied that this representation should be made to the Council who, it was understood, had given notice of alteration of levels.

On the 30/12/84, the Mayor of Ashfield wrote to the Minister referring to the plans forwarded by the Government "preparatory to undertaking to restore Alt-street to its former passable condition," desiring to know if, in the event of compensation being demanded, it was the intention of Government to undertake all responsibility, and stating that the adoption of the levels was not compulsory under the Act.

Hereon Minister minuted that if the claims were submitted in a reasonable shape, before the final adoption of the levels, the question of contribution of costs would be considered, but he was not prepared to admit that there was any claim against the Government.

It is not clear if the Mayor's letter above quoted is intended to be a reply to Commissioner's of 28/11/84, but if so it is indirect and inconclusive.

If, on the other hand, it is *not* a reply, Commissioner's letter has not been answered. I am informed that the street has not been proclaimed.

C.A.B., 26/1/85.

Has the Minister's minute of 9/1/85, been acted upon—if not, write to Council in terms thereof.—CHAS. A. GOODCHAP, 28/1/85.

The Commissioner for Railways to The Mayor of Ashfield.

Sir, Department of Public Works, Railway Branch, 4 February, 1885.

I have the honor to acknowledge your letter of the 30th December last, referring to the proposed alterations and improvements in Alt-street, and asking whether, in the event of compensation being claimed from the Council, it is the intention of the Government to undertake all responsibility.

I am authorized by Mr. Secretary Wright to inform you that, if the claims are put forward in a reasonable shape before the levels are finally adopted, he will consider the question of contribution of cost, but that he is not prepared to admit that there is any claim against the Government.

I have, &c.,

CHAS. A. GOODCHAP,

Commissioner for Railways.

No. 46.

The Council Clerk, Ashfield, to The Secretary for Public Works.

Sir, Municipal Council Chambers, Ashfield, 6 February, 1885.

I have the honor to forward herewith a copy of letter received by this Council from John Pope, Esq., on the subject of the subway under Alt-street, in this Borough.

I have, &c.,

THOS. GLASSOP,

Council Clerk.

Mr.

Mr. J. Pope to The Mayor of Ashfield.

Sir,

Ashfield, 29 December, 1884.
Referring to advertisements of proposed cutting down Alt-street, in this Borough, for the purpose of opening a road under the railway, I hereby tender my objection to the same as being of the greatest detriment to my property and destroying my present approaches, which I have enjoyed upwards of eighteen years. The injury is one of too serious a nature to me to be treated by anything short of a protest, and as a crossing or crossings can be made without injury to anyone's property, I submit that the matter deserves more consideration than it has yet had, and that the roads on both sides of the railway should be raised in Alt-street rather than lowered.

I am, &c.,

JOHN POPE.

Commissioner for Railways.—F.A.W., 13/2/85. Mr. Cowdery for report.—D.V., (*pro* D.C.M'L.), 16/2/85. Urgent. This is a question to be decided by the Municipal Council. The Commissioner has decided that nothing can be done until the levels of the street are approved.—G.C., 19/2/85. Commissioner.

See letter sent to Council on 4/2/85; it is probable that this letter and our letter crossed. I do not see what the Department can do except to refer the Council of Ashfield to our letter of 4th instant.—CHAS. A.G., 26/2/85. Inform.—F.A.W., 27/2/85.

The Commissioner for Railways to The Council Clerk, Ashfield.

Sir,

Department of Railways, 21 March, 1885.

I have the honor to acknowledge the receipt of your letter of the 6th ult., with further reference to the proposed alterations and improvements in Alt-street, Ashfield, and enclosing copy of letter received from Mr. John Pope, in which he protests against the adoption of any plan which will have the effect of lowering the existing levels of Alt-street.

In reply, I have to refer you to my letter of the 4th ultimo, which apparently crossed yours in transit, in which I communicated to you Mr. Secretary Wright's decision respecting the willingness of the Department to entertain a reasonable claim without, however, admitting its liability to do so.

I have, &c.,

CHAS. A. GOODCHAP,
Commissioner for Railways.

No. 47.

Question.

Legislative Assembly, Tuesday, 24 March, 1885.

Railway Subway, Alt-street, Ashfield.

MR. HAMMOND asked the Secretary for Public Works,—When is it the intention of the Government to proceed with the construction of a subway under the railway at Alt-street, Ashfield, as previously promised?

Mr. Wright answered,—Directly the Municipal Council will furnish the Department with the authorized levels of Alt-street.

Anything further been done?—G.B., B.C., 13/4/85. No. The Municipal Council have not yet furnished the Department with authorized levels of Alt-street.—G.C. (*pro* G.L.), 23/4/85. Commissioner. Any further tidings?—G.B., B.C., 2/5/85. Mr. Cowdery. No communication has been received from the Municipal Council. G.C. (*pro* G.L.), 4/5/85. Commissioner.

No. 48.

The Council Clerk, Ashfield, to The Commissioner for Railways.

Sir,

Municipal Council Chambers, Ashfield, 17 June, 1885.

I have the honor to inform you that this Council has had under its consideration your letter of 28th November last, No. 84-5,956, accompanying a tracing showing the levels of foot-path and roadway at the proposed subway at Alt street, in this Borough, and asking the Council to proclaim the street to those levels, and also your letter of 4th February last, No. 85-400 on the same subject.

I am now directed to state that this Council is prepared to adopt the levels referred to on the distinct understanding only that the Government accept all responsibility in the matter of compensation to any person or persons who may make claim on account of same.

I have, &c.,

THOS. GLASSOP,
Council Clerk.

Mr. Cowdery, B.C., 20/6/85.—G.B. I think this should be referred to the Land Valuer for an estimate of compensation likely to be required.—G.C., 22/6/85. Commissioner. Land Valuer, B.C., 27/6/85.—G.B.

22 September, 1885.

12. Mr. Henson to ask the Secretary for Public Works.—When will the subway under the railway line at Alt-street, Ashfield, be commenced, and what is the cause of this work being delayed?

Nothing further has been done pending a report from the Land Valuer as to the amount of compensation likely to be required.—G.C., 18/9/85. Commissioner. Will Land Valuer please say how this matter stands?—D.C.M'L., 21/9/85. Land Valuer will report on this matter to Commissioner next week.—J.B., 21/9/85. Commissioner. Question answered—Please return papers to Land Valuer.—D.C.M'L., 22/9/85.

No. 49.

Question.

Legislative Assembly, Tuesday, 22 September, 1885.

Subway, Alt-street, Ashfield.

MR. HENSON asked the Secretary for Public Works,—When will the subway under the railway line at Alt-street, Ashfield, be commenced, and what is the cause of this work being delayed?

Mr. Wright answered,—It is delayed owing to the action of the Municipal Council of Ashfield in declining to give the levels, unless they are relieved of all responsibility as regards compensation to those affected by such levels.

Has

Has any report been received from Land Valuer *re* compensation.—D.C.M'L., 2/10/85. Not yet.—J.T.W., 3/10/85. Land Valuer.—D.C.M'L., 3/10/85.

Proposed alterations of Alt-street, Ashfield, in connection with subway.

LAND Valuer having on several occasions looked into this case, finds it by no means an easy matter to satisfy himself as to the amount of compensation that would be fair to allow the owner of property damaged on each side of Alt-street, but after a full consideration of the subject, suggests that a larger sum than £2,000 ought not to be paid as compensation for any damage accruing from altering the levels in Alt-street.

JAMES BURNS, 14/10/85.

The question whether this expense (or a larger one if the case be taken into Court), is to be paid by Government or the Municipal Council. I can see no reason why the Railway Department should be at the cost.—CH.A.G., 20/10/85.

No. 50.

Mr. J. Mills to The Secretary for Public Works.

Subway under the Railway, at Alt-street, Ashfield.

Sir,

16 November, 1885.

In bringing under your notice the above, I do myself the honor to ask that you may be pleased to appoint a day when you will receive a deputation with the view to facilitate the construction of the above oft-promised, and much needed subway.

I have, &c.,

JOHN MILLS.

The deputation, Messrs. Hammond, Henson, Judd, M.'sP., Mills, Halloran, and Carter waited upon me to-day with reference to the vexed question of the subway at Alt-street, Ashfield. They recapitulated the position of affairs in this matter, and urged that early action should be taken by the Government to proceed with this work. They were of opinion, that as the line had been made to suit the great majority of the people, any disability which it imposed upon Ashfield should be removed; and they urged, therefore, that all responsibility in connection with the work should be undertaken by the Government. In regard to compensation, they were aware that Mr. Pope, whose property would be interfered with by the subway, has made a claim for £6,000. This they considered extravagant, as an adjoining property thought to be more valuable—and assessed as more valuable—was in the market for £6,500, so that Mr. Pope was claiming more for depreciation than the whole property was worth. I informed them that there was no objection to make the subway, and for the Department to bear the expense of the work, but the whole cause of the delay was as to the settlement of the claim for compensation, which the Department did not feel it should recognize.

If the Municipal Council would undertake the responsibility of arranging this matter, the whole thing would be settled, and the work proceeded with; but the Department could not consent to accept any responsibility for a service that, as in this case, seemed outside its province. With regard to the compensation, I mentioned that the Land Valuer of the Department had estimated the depreciation of Mr. Pope's property by the making of the subway at £2,000.

I promised to further consider the matter, but stated that it seemed to me the Municipal Council would have to accept the responsibility of arranging for the settlement of Mr. Pope's claim.—W.J.L., 20/11/85.

Inform Municipal Council.—W.J.L., 21/11/85.

The Commissioner for Railways to The Council Clerk, Ashfield.

Sir,

Department of Public Works, Railway Branch, 23 November, 1885.

Referring to the deputation which waited upon the Secretary for Public Works respecting the proposed subway under Alt-street, Ashfield, I have the honor to inform you that the matter has received careful consideration by Mr. Secretary Lyne, and while he is agreeable that the actual work connected with the subway should be undertaken by the Department, he is unable to approve of the Department accepting any responsibility for claims which may arise out of the necessary levelling of Alt-street. If your Council will give an undertaking that they will bear the responsibility of arranging this matter, the work will be proceeded with.

I have &c.,

CHAS. A. GOODCHAP,

Commissioner for Railways.

The Council Clerk, Ashfield, to The Secretary for Public Works.

Subway, Alt-street, Ashfield.

Sir,

Council Chambers, Ashfield, 16 December, 1885.

I have the honor, by direction of His Worship the Mayor of this Borough, to acknowledge the receipt of your letter of 23rd ultimo, No. 6,145, on the subject of the subway at Alt-street, in this Borough, and to inform you that the same was duly laid before the Council, but no order was made thereon.

I have, &c.,

THOS. GLASSOP,

Council Clerk.

No. 51.

The Council Clerk, Ashfield, to The Secretary for Public Works.

Deputation *re* Crossing under Railway Line, Ashfield.

Sir,

Council Chambers, Ashfield.

Referring to the subject of a crossing under the railway line, at Ashfield, I have the honor by direction of His Worship the Mayor, to request that you will kindly name an early day on which you would be prepared to receive a deputation from this Council, who are desirous of submitting a scheme by which it is believed the much desired project may be carried out without the obstacles that have presented themselves in other plans submitted. The proposal, which I might state, meets with the unanimous approval of the Council and a large number of the ratepayers, is by continuing Bland-street from Elizabeth-street, under the railway embankment, and then by a turn at right angles, to come out into Hercules-street, close to the Railway Station. Awaiting the favour of an early reply,

I have, &c.,

THOS. GLASSOP,

Council Clerk.

For consideration of my successor.—W.J.L., 18/12/85.

There has been no report obtained as to the practicability of the proposed scheme, the cost, nor whether there is sufficient headway for underway at this portion of the line. It should, however, be born in mind that it has always been a condition, that if an underway is given at any other place than Alt-street, the crossing at that street is to be closed.—CH.A.G., 8/1/86.

Subway under Railway, at Ashfield.

A DEPUTATION from the Ashfield Council, accompanied by Messrs. Henson and Hammond waited upon me to-day with reference to the proposed subway at Ashfield. The Department, it will be remembered, is prepared to make the subway at Alt-street provided the Council will arrange any claims for compensation which might be submitted by residents and others, whose property might be affected, but the Council will not accept the condition.

Mr. Pope (Mayor) now makes an alternative proposal. He suggests that the crossing should be made by continuing Bland-street from Elizabeth-street under the railway, and then continuing it on to Hercules-street. The continuation from Elizabeth-street to the railway would pass through Mr. Pope's land, but he is prepared to give the land free if the subway is undertaken, although the land he considers is worth £1,500 to him, but he will do this in order to have the matter settled and to avoid the annoyance to him that a subway at Alt-street would entail; at the same time, he states that he will be leaving for England in seven days, and the matter must be settled before that time, otherwise he will withdraw offer. The continuation of Bland-street, from the railway to Hercules-street (south-side) would pass through Government land. Other members of the Council stated that they were comparatively indifferent to the location of subway, either at Bland or Alt Streets, but they would accept no responsibility of any kind in the matter. Probably if a subway were given at Bland-street, a foot-crossing would be all that was required at Alt-street.

I informed the deputation that I had not had much time to peruse the mass of papers in this matter, but so far as I could gather, the Department was willing to provide a subway at Alt-street, but the Council declined to take the responsibility of arranging any matters outside which might arise through the construction of subway. I regretted that Mr. Pope could only allow such a limited time for the settlement of this question, but I promised to call for an immediate report, and ascertain what could be done in the matter. If possible, I would visit the locality. The Engineer for Existing Lines, will please furnish me at once with rough plan and estimate of proposed subway at Bland-street, and if time will allow, I will visit the locality.—J. GARRARD, 8/1/86. Mr. Thompson for report.—G.C. (*pro G.L.*), 11/1/86.

Tracing herewith showing roughly the proposed extension of Bland-street into Hercules-street, also proposed extension into Liverpool Road. It will be seen that land will have to be resumed on the south of the line in both cases, as the street could not be taken through railway land, as stated by Mr. Pope. The cost of a subway at Bland-street (50 feet wide) will be about £5,200, roughly estimated.—M.T., 11/1/86. Eng. Ex. Lines.

The estimate does not include cost of land or making street.—G.C. (*pro G.L.*), 11/1/86. Commissioner. For Minister's information.—CH.A.G., 12/1/86. I will visit the place sometime on Thursday next. Mr. Cowdery to attend.—J.G., 12/1/86.

Department of Public Works, Sydney, 13 January, 1886.

WILL Mr. Goodchap please wire Mr. Pope, Mayor of Ashfield, of my intention to visit site of proposed subway by 2.30 p.m. train 14th instant. J. GARRARD.

Send down to Mr. Pope at once.—CH.A.G., 14/1/86. Seen.—J.G., 14/1/86.

I saw Mr. Pope in this matter, but he states he would rather the Minister would determine the matter uninfluenced in any way by him, and that he would prefer the Minister to view the place without him. At the same time he wishes to acknowledge the Minister's courtesy in consulting him and to thank the Minister for his invitation.—H. M'L., 14/1/86.

Subway at Ashfield.

PLEASE note that Mr. Secretary Garrard purposes visiting this place to-morrow, and wishes Mr. Cowdery to be present.—D.C.M'L., 13/1/86. Mr. Cowdery. (Urgent.) I presume I will be informed at what time the Minister will leave Sydney for Ashfield.—G.C. Commissioner, 13/1/86. Papers herewith: The Minister will leave by the 2.30 p.m. train.—D.C.M'L., 13/1/86. Mr. Cowdery. Seen. I visited this place with the Minister yesterday.—G.C., 15/1/86. Commissioner. For Minister's decision.—CH.A.G., 18/1/86.

I visited this place yesterday, and while the direct access to the station from the northern side of the line is a recommendation to Mr. Pope's proposal, yet the expense of resuming the land at the back of the Liverpool Road lots, and the difficulty of providing for the drainage after passing through the proposed subway, are so serious as to prevent my accepting the offer. Let Mr. Pope be informed.—J.G., 19/1/86.

No. 52.

The Commissioner for Railways to J. Pope, Esq.

Sir,

Department of Railways, Sydney, 21 January, 1886.

Referring to the deputation which waited upon Mr. Secretary Garrard on the 1st instant, whereat you promised to convey certain land near Ashfield Station to the Government, provided the railway crossing was made at Bland-street instead of Alt-street, as proposed, I have the honor to inform you that the matter has had Mr. Secretary Garrard's careful consideration, but he regrets he is unable to accept your offer as considerable expense would have to be incurred in resuming land to make the connection with street leading into the Liverpool end, and there would be great difficulty in providing for the drainage of the subway and vicinity.

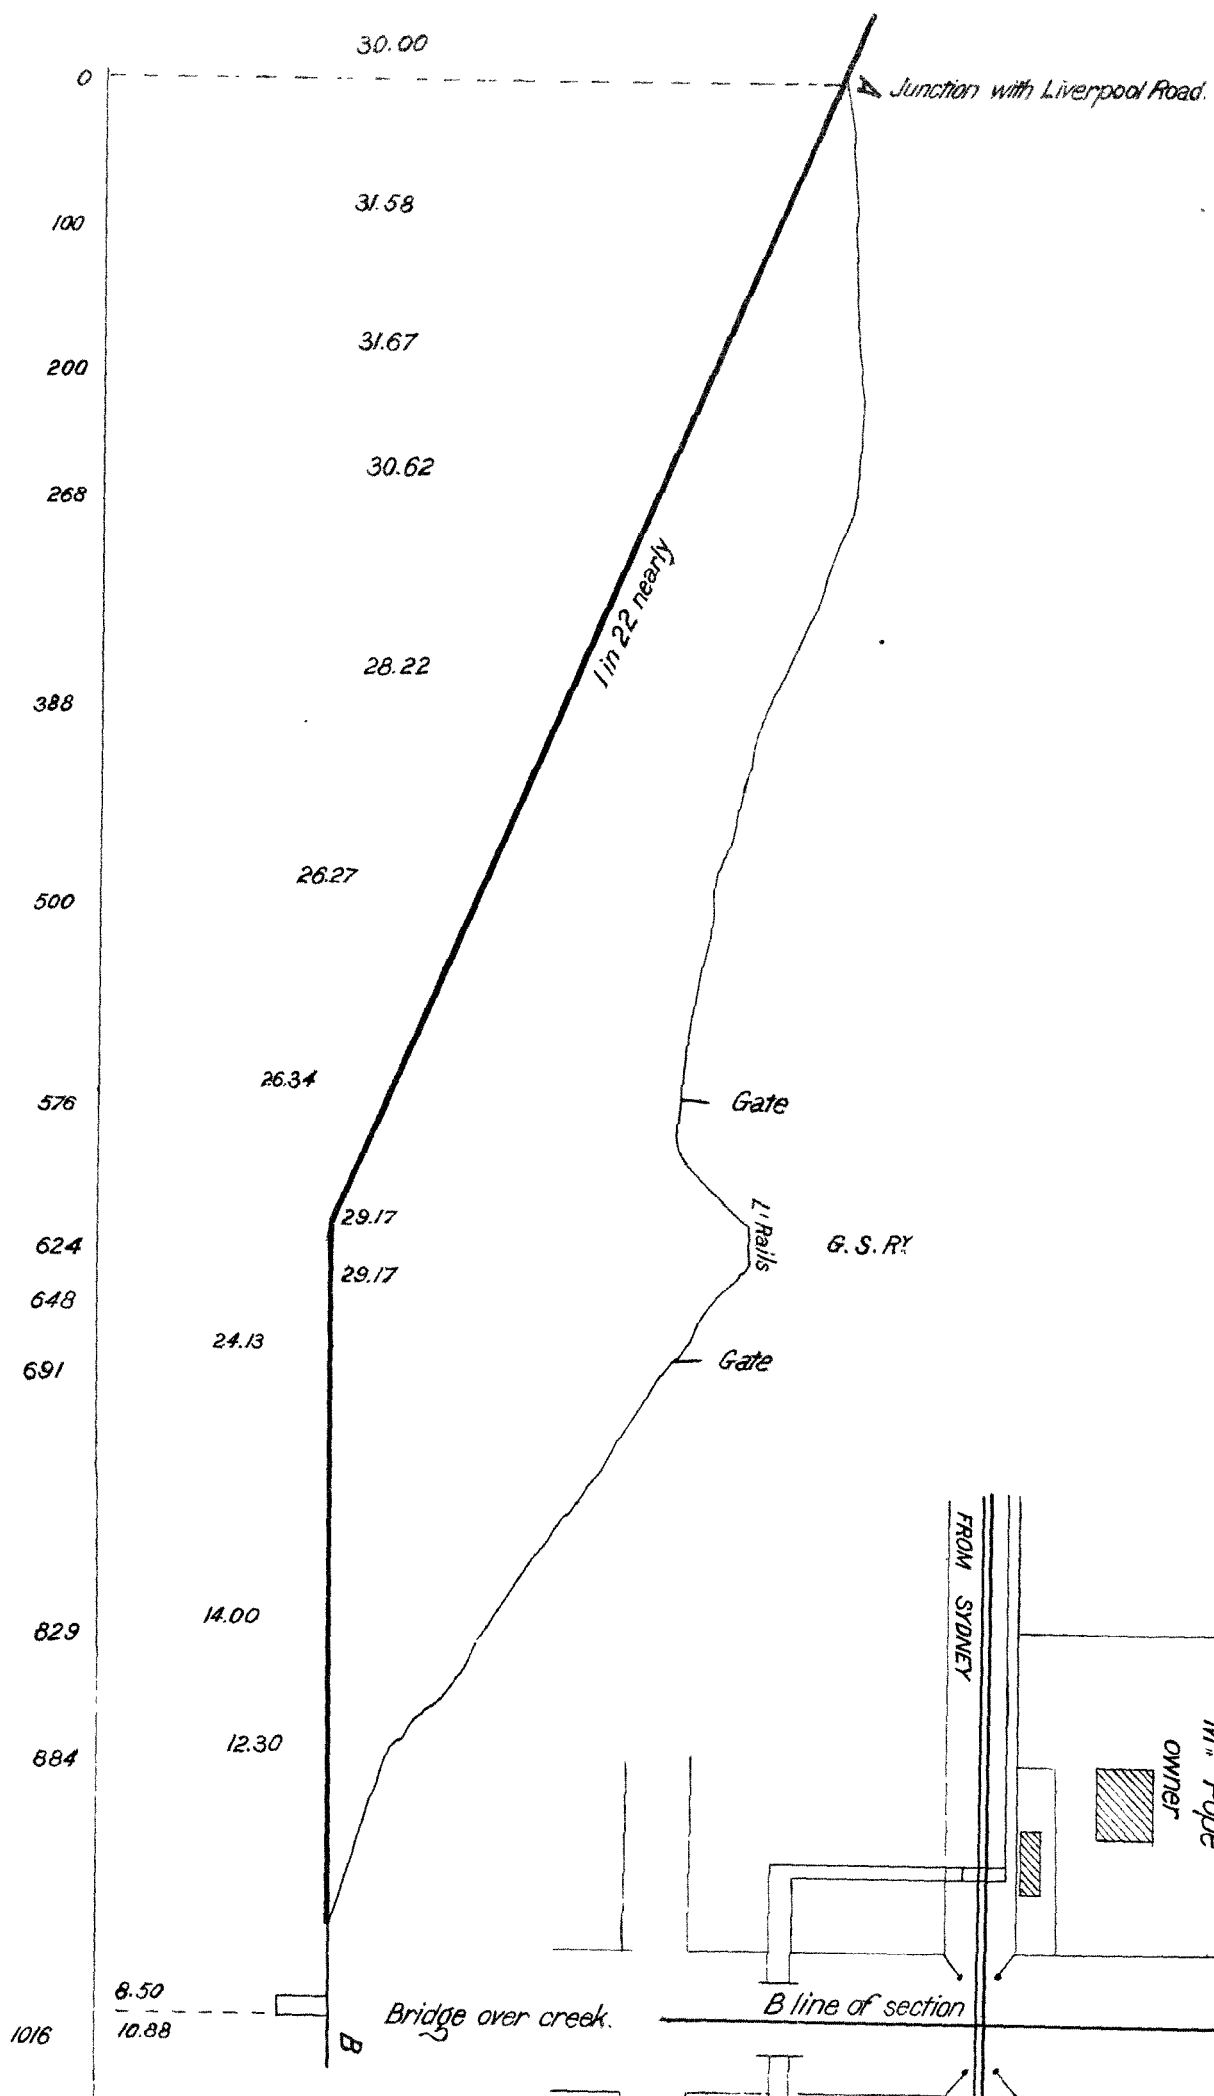

I have, &c,

C. A. GOODCHAP

(*Pro G.B.*),

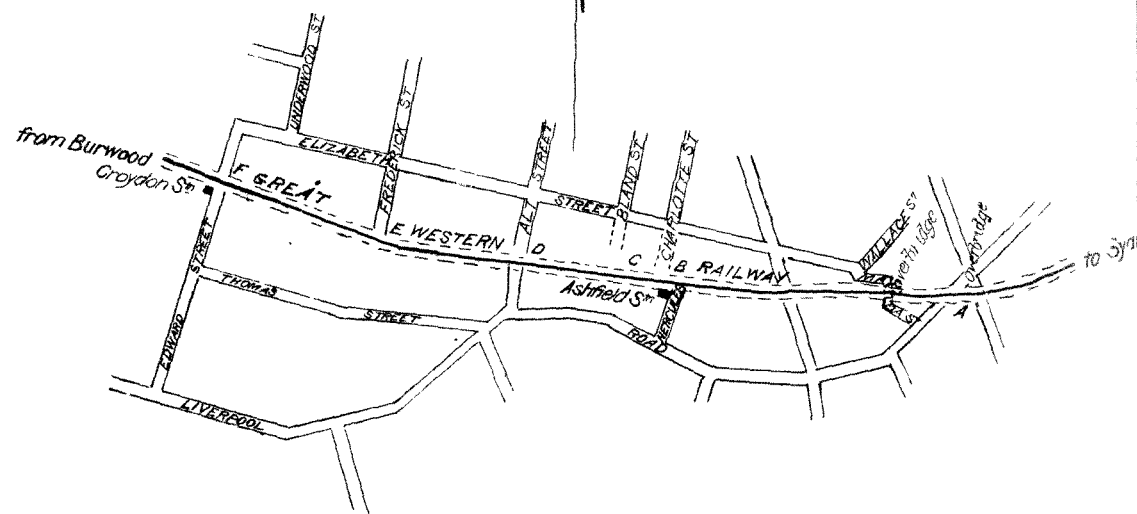

Commissioner for Railways.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS.

(RETURN RESPECTING EMPTY WAGGONS ON GREAT NORTHERN AND NORTH-WESTERN RAILWAYS.)

Ordered by the Legislative Assembly to be printed, 20 September, 1886.

[Laid upon the Table of the House in accordance with promise made by the Honorable the Secretary for Public Works, in answer to Question No. 1 on Votes and Proceedings of 23rd June, 1886.]

- How many empty waggons were despatched from Glen Innes and Narrabri, on the Great Northern and North-Western Railways, respectively; and how many from and through each of the following Stations, namely:—Armidale, Tamworth, Gunnedah, Murrurundi, Singleton, and West Maitland, by up trains, during each of the first five months of the present year?
- What was the cost to the Railway Department attendant upon running such empties?

| Month. | Glen Innes. | Armidale. | | Tamworth. | | Narrabri. | Gunnedah. | | Murrurundi. | | Singleton. | | West Maitland. | | Cost. |
|----------------|------------------|---------------------|------------------|---------------------|------------------|------------------|---------------------|------------------|---------------------|------------------|---------------------|------------------|---------------------|------------------|---|
| | No. trucks from. | No. trucks through. | No. trucks from. | No. trucks through. | No. trucks from. | No. trucks from. | No. trucks through. | No. trucks from. | No. trucks through. | No. trucks from. | No. trucks through. | No. trucks from. | No. trucks through. | No. trucks from. | |
| January | 253 | 219 | 48 | 67 | 113 | 164 | 166 | 70 | 412 | 142 | 557 | 247 | 557 | | In cases in which special trains with empties are run the cost is about 2d. per truck per mile, but as a rule the empties are worked from one station to another, where required, by the ordinary goods trains, as traffic and convenience allow, and then the cost is trifling only. |
| February | 149 | 107 | 105 | 149 | 471 | 208 | 120 | 67 | 411 | 109 | 616 | 188 | 539 | | |
| March | 267 | 99 | 143 | 138 | 709 | 307 | 145 | 67 | 521 | 110 | 405 | 399 | 565 | | |
| April..... | 183 | 55 | 198 | 101 | 622 | 281 | 115 | 92 | 289 | 123 | 257 | 550 | 564 | | |
| May | 150 | 46 | 171 | 89 | 472 | 277 | 180 | 45 | 349 | 90 | 344 | 466 | 558 | | |
| | 1,002 | 526 | 665 | 544 | 2,387 | 1,237 | 726 | 341 | 1,982 | 574 | 2,179 | 1,850 | 2,783 | | |

This statement embraces empty waggons of every description, sheep, cattle, and powder vans, general goods trucks, &c., and also "return empties," which were run on the down journey with the material for the extensions in course of construction, which will not in the future be required in such large quantities. The empties shown on the above return did not journey to Newcastle empty, but were intercepted *en route* by stations to meet their requirements. Thus the number shown as passing through Singleton went to feed the wants of all stations between that place and Newcastle, and only an average of seven empties a day, including sheep, cattle, powder-vans, &c., reached Newcastle. It will be seen, therefore, that if the empties were loaded at the distant stations it would be necessary to send out empties from Newcastle for the traffic at intermediate stations.

1885-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS.

(CITY EXTENSION—REPORTS, PLANS, &c.)

Ordered by the Legislative Assembly to be printed, 29 September, 1886.

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, adopted on 24th September, 1885, That there be laid upon the Table of this House,—

- “(1.) Copies of all Reports, Plans, and Specifications, together with
“ Ministerial and Cabinet Minutes thereon, upon, in connection with, and
“ of the proposed extension of the Railway from Redfern to the waters of
“ Port Jackson.
- “(2.) Estimates of the cost of and revenue to be derived from the same.
- “(3.) A Return describing the areas and estimated value of all public and
“ private land required to be taken or resumed for carrying out the pro-
“ posed line.
- “(4.) The like particulars as to the contemplated extension of the above-
“ mentioned line.”

(Mr. Garrett.)

1. The Plan and Section were laid upon the Table of the Legislative Assembly on the 9th September, 1885.

CITY EXTENSION RAILWAYS.

No. 1.

Extract from Report by Engineer-in-charge of Trial Surveys, dated 18 October, 1883.

34. City Extension.—Four surveyors are now occupied in making the necessary surveys to enable me to prepare accurate plans and sections of a proposal for an extension, for passenger traffic from Redfern *via* Belmore and Hyde Parks to the Supreme Court, thence between Elizabeth and Phillip streets to Bent-street; thence by reverse curves to the western side of the Circular Quay, terminating at the site of the Sailors' Home; also for a passenger and goods extension, leaving the Darling Harbour branch railway at Ultimo-street; thence in a northerly direction, west of Sussex-street, to Erskine-street; thence between Sussex and Kent streets to a point opposite to the Observatory; thence crossing in an easterly direction to Pottinger-street; thence under Lower Fort-street and Lower George-street, and, in a southerly direction, terminating at the Queen's Wharf at the Circular Quay. Additional levels will also be taken for proposed branches from this line from a point opposite the Observatory, and from Pottinger-street to Miller's Point, also from the Queen's Wharf round the Circular Quay to Port Macquarie.

No. 2.

The Engineer-in-Chief to The Secretary for Public Works.

Department of Public Works, Railway Branch,
Engineer-in-Chief's Office, Sydney, 5 February, 1884.

Subject: Report on Mr. Oscar Schulze's City Railway Extension proposals.

As requested by the Minister I submit the following brief report on Mr. Schulze's City Railway Extension proposals.

The plans and sections furnished in connection therewith are (perhaps almost necessarily under the circumstances of the case) of a very crude and meagre character; and they afford very little data whereby to determine the practicability and cost of the various works included in the design.

The deficiency of such usual and necessary information is certainly not compensated for by the extensive and attractive model exhibited at the Exchange, which simply seems to convey a good general idea of the rashness of the scheme proposed, but completely fails to indicate either the extent of the existing accommodation in the way of wharfage, &c., or the very costly nature of the improvements contemplated by the design. On these two points, however, a pretty good clue is afforded by the three large scale drawings, showing the existing frontages effected by this scheme and over which tracings are placed, indicating the outlines of the boundaries of the proposed new wharfage, streets, goods warehouses, &c., and the extent of the proposed reclamation.

In examining these plans, &c., I have endeavoured to confine my attention, as far as possible, to that portion of the scheme bearing strictly upon the "City Railway Extension;" but it so happens that this is intimately, in fact completely, dependent upon the adoption and execution of the Darling Harbour reclamation and wharfage improvements, the proposed lines of railway extension, as well as the central passenger station at the foot of Erskine and King streets, and the Circular Quay station, &c., being all designed to occupy ground proposed to be reclaimed from the harbour. As the boundaries of such proposed reclamations extend into the deep waters of the harbour and are outside of and include all the existing numerous wharves and landing places on the eastern shore of Darling Harbour, it is evident that a very long time must elapse—probably many years—before the railway is constructed in the position designed for it.

I have marked upon the accompanying plan of this part of the city the approximate position of these reclamation boundaries, and by which it can be seen that the whole of the railway extension scheme, from the head of Darling Harbour right round to and including the Circular Quay Station, is dependent upon the reclamation being first effected.

Supposing, however, that such reclamation were an accomplished fact, and the proposed railway extension a possibility, it seems to me that there are several serious objections, not only to the route selected for it but in other important respects.

The proposal to take the whole of the passenger traffic for the city down to and along the eastern boundary of Darling Harbour is in itself a most inconvenient, and, I think, a most indefensible, proposition.

The bulk of the traffic would in this way be either discharged at the foot of the various intersecting streets (such as Goulburn, Liverpool, Bathurst, Market, King, and Erskine streets), and have to make its way up the steep gradients of those thoroughfares to reach the level of centre of the city itself, or else have to be carried on to the underground Church Hill Station, a station convenient enough for a certain portion of the traffic, but that is all.

Leaving the present Darling Harbour Railway at the point proposed by Mr. Schulze, his six lines of rails would intersect the present lines of railway and sidings, sheds, &c., at the head of Darling Harbour, near Dixon-street, and seriously obstruct if not completely destroy them.

A more important defect in the proposal is the position selected for the so-called "central passenger station," at the verge of Darling Harbour, between King and Erskine streets. This unnecessarily large station, some 900 feet by 230 feet, is not only in no sense of the word "centrally" situated as regards the city or its railway passenger traffic, but it is designed to be erected entirely upon made ground, and its foundations would have to be carried down to an unascertained but certainly great depth, to assure the stability of the buildings.

And I may add that this objection applies also to a large proportion of the other extensive railway goods-sheds, warehouses, &c., which would occupy reclaimed ground.

The site proposed for the Circular Quay station is open to the same grave objection, as it would be entirely upon reclaimed and made ground, and in its combination character of an elevated railway and tram station on one floor, and wharfage and office accommodation, &c., on its lower or basement floor, it is quite certain that this matter of foundations would be very serious indeed, and a very costly one.

Again,

Again, the navigable and useful area of the Circular Quay water-way would be very considerably curtailed by the reclamations proposed (*vide* plan), a remark which is applicable also to the "inner basin," as Mr. Schulze terms it, of Darling Harbour, and which would be so reduced in area by his reclamations as to make it extremely doubtful whether it would be at all worth while going to the enormous expense of that two-decked "swivel opening" bridge included in his scheme in line of King-street, and which bridge he proposes to substitute for the Pymont Bridge in the line of Market-street.

This item challenges considerable criticism of course, and opens up the important question of vested rights of thoroughfare by way of the existing bridge, &c. The railway extension part of the consideration is however confined to Mr. Schulze's original proposition, to connect the Darling Harbour eastern railway lines with a line to Pymont by way of this new bridge, a proposal which appears to be omitted in his later memorandum, and which would, I may add, have been impracticable as at first proposed.

The matter of curves and gradients I do not propose to refer to here, as the design is in too incomplete a state to convey much information thereupon; but I notice that Mr. Schulze proposes to employ special shunting engines for working the numerous sharp curves on the goods lines, an inconvenient expedient in so important and comprehensive a railway scheme, to say the least of it.

Mr. Schulze also proposes to make a very extensive provision for goods-sheds in connection with his railway scheme, some 10 acres of ground being shown to be thus utilized. The large semicircular structure shown on the plans as "goods-sheds" at Dawes' Point, would in itself suffice for the storage of the combined cargoes of several of the largest steamers afloat.

This matter of the storage of goods for transmission by rail, or by shipping from the new wharves, &c., seems to me to be greatly over-estimated; for I imagine that by far the greater part of the goods by rail, and cargoes by ships or steamers, will be sent on board or into trucks (as the case may be) and require but comparatively little storage room, except in the shipper's and agent's own premises.

The thought has suggested itself to me while examining this scheme, what is to become of the present Darling Harbour wharfage trade during the reclamation, and all else that pertains thereto, in these important proposals. Either the trade must find quarters elsewhere, or be suspended, if not even permanently destroyed.

But probably this has been taken into account by the designer, and provision made for compensation, or otherwise, in his estimates of cost. At any rate it is an important consideration.

I do not attempt to challenge or investigate any of the very rough estimates of cost with which Mr. Schulze's railway extension proposals are accompanied; any criticisms thereof would be useless in the absence of all detailed data as to the extent and character of the various extremely large works and constructions embraced by his designs.

I have to thank Mr. Schulze for placing at my disposal all the papers and plans in his possession referring to this subject, and for his kind offer to give me every information in his power with reference to his designs.

I trust it is obvious, from the tenor of the few remarks I have furnished, that they are put forward in no spirit of hostility to the design; but that I have been actuated solely by the desire to record as clearly and impartially as possible what to my judgment appears to be the defects of this proposal so far as the railway extension part is concerned.

JOHN WHITTON.

No. 3.

Extract from Report of Engineer-in-Charge of Trial Surveys, dated 27/2/84.

City Extension Railway.

PLANS and sections have been prepared for a passenger line from Redfern to the Circular Quay, and for a goods line from the Darling Harbour branch line to the Circular Quay, both of which routes have already been described.

With reference to those lines for which surveys have not yet been completed, and the sections of which I have consequently not received, I am not in a position to give any definite information further than what was contained in my former report, in which, from my general knowledge of the country, I made comparison as to their probable cost, with the cost of construction of other lines of railway in similar country.

No. 4.

The Engineer-in-Chief to The Secretary for Public Works.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, 23 September, 1884.

Subject: Extension to the Circular Quay (for passenger traffic only).

ESTIMATED cost, £450,000, exclusive of land and compensation.

Description of the route proposed by the Engineer-in-Chief, shown by a red line on map, for extending the railway into the City of Sydney for passenger traffic only.

From Redfern terminus, near Devonshire-street, through the Benevolent Asylum and Carter's Barracks, over Belmore Road; thence across Belmore Park, on brick arched viaduct, crossing over Elizabeth-street at junction of Hay and Blackburn streets, over Campbell-street, Exeter-place, and Wexford-street, crossing Goulburn-street on the level; thence to Liverpool-street, entering tunnel at the south side of Liverpool-street; thence under Hyde Park and St. James' Road to King-street; thence to Bent-street by tunnel, and emerging at the proposed station at Bridge-street; thence upon brick arched viaducts and iron girder bridges over Loftus, Arbitration, and Pitt streets, and road to Queen's Wharf; thence to proposed terminus at Circular Quay, upon the site of the Royal Naval Dépôt, between Queen's Wharf and Argyle-street.

It is proposed to erect stations at the following places, viz., Liverpool-street, Park-street, King-street, Bridge-street, and a terminal station at Circular Quay.

The whole of these stations will be what are called "Daylight Stations," no artificial lighting being required.

JOHN WHITTON.

No. 5.

The Engineer-in-Chief to The Secretary for Public Works.

Department of Public Works, Railway Branch,
Engineer-in-Chief's Office, Sydney, 21 October, 1884.

Subject: City extension proposed by the Minister for Works from Redfern to Port Macquarie.

In compliance with the Minister's verbal request of the 18th inst., I have had an approximate estimate made of the proposed line from Redfern to Port Macquarie, which amounts to £470,000, exclusive of the cost of land and compensation.

The description of this route was handed to the Colonial Treasurer by Mr. Palmer on the 15th inst.
JOHN WHITTON.

No. 8.

Mr. W. H. Quodling to The Honorary Secretary, Benevolent Asylum.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 10 August, 1885.

Sir,

In reference to your letter of the 28th ultimo, drawing attention to the damage done to the galvanized iron fencing of the Benevolent Asylum, through the city extension railway survey operations, I am desired to say that the Engineer-in-Chief regrets that the damage was done, and that the Department will pay the cost of the necessary repairs to the fence.

I have, &c.,

W. H. QUODLING.

No. 9.

The Engineer-in-Chief to The Secretary for Public Works.

Subject: City extension, forwarding "Parliamentary" plan, section, and book of reference.

Department of Public Works, Railway Branch,

Engineer-in-Chief's Office, Sydney, 9 September, 1885.

I HAVE the honor to forward herewith the "Parliamentary" plan, section, and book of reference of the proposed city extension railway line for the consideration of Parliament.

JOHN WHITTON.

No. 10.

Cabinet Minute—Approval of Plan.

I HAVE not as yet seen Mr. Whitton's proposal for the City Extension, but I understand his line will cross the Cemetery and Belmore Park, intersecting Elizabeth-street somewhere in the vicinity of Hay-street. It then crosses that street and runs along the eastern side of Elizabeth-street for some distance till it crosses Goulburn-street; thence it runs, I believe, under Liverpool-street and Hyde Park to a point at the back of St. James's Church. Mr. Whitton's idea is then to carry the line along and under Phillip-street to the Circular Quay. I am not, I may say, quite positive about this route, but from conversations I have had with Mr. Whitton, I think that this is the line he would recommend.

My idea is that, after the line crosses Elizabeth-street at Hay-street, the whole of the houses on the western side of Market-lane to Goulburn-street should be resumed, and the line taken at the back of Elizabeth-street, because the resumption of the land will not be nearly as expensive as that in Elizabeth-street. I would then follow the same course through the Park, crossing under Liverpool-street at or near the site of the Unitarian Church. Then under Hyde Park to the open space in front of Hyde Park Barracks; thence across Macquarie-street, still under ground, into the Domain; through the site occupied by the Mint buildings, and continue along near the western side of the Outer Domain, under the site of the late Garden Palace, through the Inner Domain, coming out near Fort Macquarie, where sufficient land could be obtained for a shunting-yard and depôt by adding to the land already there a few acres of land, which could be resumed without detriment to the Harbour.

The line could then be brought around Circular Quay, and continued, if necessary, underneath the hill to the wharves on the Darling Harbour side, and so around by the fore-shores to the Darling Harbour Railway. This would practically make two lines—one of which would be for goods, joining the main line at Redfern by the present Darling Harbour Branch, and the other for passenger traffic, as I have already described.

I consider that, by following the route I have indicated, the line could be cheaply constructed comparatively, as the cost of resumption would be but small; whereas, if we pass the entire length of Phillip-street, as proposed by Mr. Whitton, the whole of the land will have to be resumed, which will cost an immense sum.

This is a matter, however, where the local knowledge of my honorable colleagues will enable them to form quite as good an opinion as I can; but I feel positive the line I have sketched out is at once equal to any that can be devised, and at the same time can be constructed at a much lower cost than by any other proposed route.

F.A.W.,

31/7/84.

The Cabinet approves of the City Extension plan as sketched out in this minute, from Redfern Station to Fort Macquarie, and would like to obtain from the Engineer-in-Chief a trial survey and estimate.—A.S., 16/9/84.

No. 11.

No. 11.

The Engineer-in-Chief's Report.

City Extension Railway—Descriptive Report.

30 September, 1885.

THIS Railway is 2 miles 12 chains in length, and is designed for a double line of rails throughout. The line commences at the Quay wall, at the point on the eastern side of Sydney Cove, passes near the centre of Port Macquarie, and enters the Government House grounds at the eastern end of the Tarpeian Way. It passes 33 feet to the east of the guard-house at the entrance to Government House, and then sweeping round through the upper Gardens, and under the site lately occupied by the Garden Palace, it crosses a corner of the Outer Domain; thence under the Infirmary grounds and the Mint till Hyde Park is reached, at a point near the Albert Statue; after following a curve for a few chains, the centre line traverses the park in a direction parallel to Elizabeth-street, passing under Park-street and Liverpool-street. The line is then continued in a direction to reach Belmore Park; Goulburn-street, Wexford-street, Exeter-place, John-street, Campbell-place, and Elizabeth-street being crossed on the way. The line enters Belmore Park at its north-east corner, and after traversing the park and crossing Belmore-street, it passes through the Police Barracks and Benevolent Asylum grounds, cutting off a corner of the cemetery, crossing Devonshire-street, and enters the present Railway Station at Redfern.

The following is a general description of the works proposed:—

At Fort Macquarie the fort will be removed, and the ground levelled for the terminal station.

Platforms 400 feet in length are provided for, and two additional roads for purposes of shunting, &c.

The present road traffic to the North Shore Ferry will not be interfered with.

Between Fort Macquarie Station and the Tarpeian Way a level crossing will be provided for the traffic to the waterman's steps and Botanical Gardens.

The centre line cuts the steps leading from the Tarpeian Way towards the Botanical Gardens. The steps will be removed and a light bridge for passengers over the line, and new steps fixed.

The railway then enters a tunnel 216 yards in length, after which follows an open cutting, with retaining walls 210 yards long.

Opposite Albert-street a station is provided with platforms 400 feet long, this being the best position to serve the northern part of the city, and the most economical in cost.

After leaving this Station, the line enters a tunnel 1,000 yards long, and after passing under the Infirmary and the Mint at a depth of 40 feet below the surface of the ground, emerges again on reaching Hyde Park, where a third station, with platforms 450 feet long, is provided.

From this point the line passes again into tunnel for a length of 688 yards, the whole length of the Park being traversed, and Park-street and Liverpool-street being crossed without their levels being interfered with.

Immediately after passing under Liverpool-street, the line again emerges, and here a Station occupying most of the distance between Liverpool-street and Goulburn-street is provided.

The platforms are 450 feet in length.

Goulburn-street is crossed at a few feet above its present level. To allow of a level crossing the street will have to be raised for a distance on each side of the line.

After this the line is carried on a viaduct, consisting chiefly of brick arches, the principal street crossings however being spanned by wrought-iron girders. It is proposed to divert Wexford-street, in order to gain more headway and avoid a very oblique crossing, and provide a bridge for the diversion at 1 m. 53 ch. with a clear width of 44 feet. Exeter-place and Campbell-street will be crossed by bridges of 20 feet and 45 feet clear span respectively. Over John-street it is proposed to throw a brick arch 33 feet wide. Elizabeth-street and Belmore Road will be crossed by lattice-girder bridges for the full extent of the roadway in both places.

A short distance (35 yards) beyond the crossing of Belmore Road the viaduct terminates, and the line, which in level approaches the surface of the ground, is carried on bank and in cutting as far as Devonshire-street.

It is proposed to cross Devonshire-street by a girder bridge, and, in order to get sufficient headway for the traffic underneath it, to lower the level of the street to the extent of 11 feet, the approaches being made with an incline of 1 in 20. This alteration of the levels of the street will involve the removal and reconstruction of the present sewer, which runs under this street. There is no way of avoiding interference with the levels of Devonshire-street, except by diverting the traffic altogether, and resuming sufficient land to the east of the line between Belmore Road and Devonshire-street to form a new roadway.

The whole length of the line is, as before stated, 2 miles 12 chains, or 3,784 yards. Of this length, 568 chains are taken up by the platforms; 1,898 yards are in tunnel; 210 yards open, with retaining walls; 638 yards on viaduct, leaving 470 yards in length of earthwork only. For the ventilation of the tunnels, which occupy about half the length of the line, vertical shafts are provided at short intervals, which communicate with the open air. There are two kinds of these, the smaller being circular and 10 feet in diameter, and used only when passing under the Infirmary and the Mint; while the larger ones, which occur in Government House grounds, the Gardens, and the Park, are rectangular, 26 feet by 20 feet.

JOHN WHITTON.

 Estimate

Estimate of probable Revenue to be derived from the Railway—Redfern into Sydney.

If this line can be constructed, including compensation for land, &c., for the sum of £600,000, the interest will amount to £24,000 per annum.

The following charges are proposed :—

| | £ |
|--|---------|
| Upon every season ticket an extra charge of 2s. per week 1st class, 1s. 6d. per week 2nd class. There are 1,761 1st class season tickets, and 1,048 2nd class, and the increased revenue will be | 13,244 |
| Upon daily tickets to and from suburban stations it is proposed to add 3d. 1st class, 2d. 2nd class. There are 1,149,120 1st class tickets issued, and 2,180,424 2nd class, the increased charge upon which will amount to | 32,534 |
| Upon tickets outside the suburban circle the increased charge is proposed to be 6d. 1st class and 4d. 2nd class. There are of these tickets—1st class, 226,320 ; 2nd class, 454,500 ; the increased charge upon which will amount to | 13,233 |
| Total for passenger traffic | £59,011 |

The heaviest portion of the goods traffic will be taken to Darling Harbour, but there will be a tonnage available from and to the terminus in Sydney, as under :—

| | |
|---|------------|
| Outwards, 84,065 tons ; inwards, 40,829 tons. Total, 124,894 tons, which at 1s. per ton, will realize | £ 6,244 |
|---|------------|

| | |
|---|-------------|
| This estimate of passenger and goods traffic is based upon existing transactions :— | |
| Before the extension into Sydney is completed both will have increased to a very considerable degree, but the total revenue at present figures amounts to in round numbers | £ 65,000 |
| The working expenses of this extension will amount to a large sum, but calculating that there will be 150 trains inwards daily, and 150 outwards daily, the train running may be put down (including shunting) at 200,000 miles per annum, which at 4s. per mile will amount to | 40,000 |
| Leaving the sum of | £25,000 |

nett, which will pay over 4 per cent. on the capital expended, provided it does not exceed £600,000.

CH. A. G., 29/9/85.

1885-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAY FROM FORBES TO WILCANNIA.

(CORRESPONDENCE RESPECTING ORDERING OF SLEEPERS AND PERMANENT WAY MATERIALS.)

Ordered by the Legislative Assembly to be printed, 21 September, 1886.

[Laid upon the Table of the House in accordance with promise made by the Honorable the Secretary for Public Works in answer to Question No. 2 in Votes and Proceedings No. 98, of the 23rd July, 1886.]

SCHEDULE.

| NO. | PAGE. |
|---|-------|
| 1. Mr. E. Quinn, M.P., to the Secretary for Works, <i>re</i> Darling River navigable, &c. 31 May, 1886 | 1 |
| 2. The Engineer-in-Chief to the Secretary for Works, forwarding notice inviting Tenders for sleepers. 8 July, 1886 | 2 |
| 3. Same to same, forwarding indent for permanent way materials. 12 July, 1886 | 2 |
| 4. Mayor of Wilcannia to the Secretary for Works, forwarding copy of resolutions passed at a public meeting, in favour of proceeding with line at Wilcannia end. 1 July, 1886 | 3 |
| 5. The Under Secretary for Works to Mr. E. Quinn, M.P. Rails and fastenings and sleepers ordered by the Minister. 8 July, 1886 | 3 |
| 6. The Commissioner for Railways to the Minister of Works, minute <i>re</i> providing sleepers and rails for the Railway from Wilcannia. 11 September, 1886 | 3 |

No. 1.

E. Quinn, Esq., M.P., to The Secretary for Public Works.

Sir,

Reform Club, Sydney, 31 May, 1886.

I respectfully beg to call your attention to the fact that the River Darling is likely to be navigable, and that such would be highly favourable to the Government getting rails and sleepers landed at Wilcannia at a nominal rate. It would be wise to have a large quantity of such material at the Wilcannia end, and no matter where the connection may be made with. I sincerely trust that you will give the matter your favourable and prompt attention, as at no time of the occupation of the western country has a greater necessity for railway communication existed. If tenders were called in the *Argus* (Melbourne), *Echuca papers*, *Adelaide papers*, also those of *Milang and Goolwa, S.A.*, for (say) sleepers in lots of 10,000, I feel sure you would have offers of a most favourable character.

Iron rails *are* very cheap, so the time is most favourable.

I have, &c.,

EDWARD QUINN.

Submitted for report; but I presume nothing can be done until plans are approved of, &c.—W.J.L., 8/6/86. Engineer-in-Chief, B.C. It was always my intention to get both rails and sleepers via Wilcannia, but nothing can be done until the plans have been approved by Parliament.—J.W., 14/6/86. Under Secretary, B.C. There is a splendid opportunity *now* with a good river to get both rails and sleepers to Wilcannia, and it should on no account be lost. About 11,000 tons of rails, with the proper complement of fastenings, should be at once ordered to Victor Harbour; and about 176,000 sleepers (equal to about 15,000 tons) ordered as soon as possible. If the plans and books of reference, &c., are not approved when payment is to be made, the money might be taken from the store advance account vote in advance, or else for general votes to be recouped.—W.J.L., 19/6/86. Engineer-in-Chief.

No. 2.

Minute from Engineer-in-Chief to Under Secretary for Public Works.

Subject :—Inviting Tenders for Railway Sleepers—Forbes to Wilcannia Railway.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 8 July, 1886.
IN compliance with the instructions of the Honorable the Minister for Works, I forward herewith a draft advertisement, inviting tenders for supplying and delivering 176,000 sleepers for the Railway from Forbes to Wilcannia.

JOHN WHITTON.

[*Enclosure.*]

Department of Public Works, Railway Branch, Sydney, 8 July, 1886.

To Timber-getters, Contractors, &c.

TENDERS will be received at this office until 11 o'clock on Tuesday, the 14th September next, from persons willing to contract for the supply and delivery of 176,000 Railway sleepers for the proposed Railway from Forbes to Wilcannia.

Plan, specification, and form of tender may be seen, and further particulars obtained, on and after Monday, 26th July, at the Engineer-in-Chief's office, Sydney, and at the following police offices, viz. :—Bourke, Wilcannia, Pooncarie, Wentworth, Euston, Balranald, Deniliquin, Hay, Albury, and Narrandera, and at the Police office, Echuca, Victoria.

Tenders to be endorsed "Tender for Railway sleepers."

The Commissioner does not bind himself to accept the lowest or any tender.

No. 3.

Minute from Engineer-in-Chief to Under Secretary for Public Works.

Subject :—Forbes to Wilcannia Railway.

Indent for permanent-way materials, for (say) 117 miles, to be delivered at Victor Harbour, South Australia.

Department of Public Works, Railway Branch, Engineer-in-Chief's Office, Sydney, 12 July, 1886.
PURSUANT to the Minister's instructions of the 19th ultimo, I forward an indent on London for 11,000 tons of rails (light line pattern) and fastenings—say 117 miles of permanent-way materials,—to be delivered at Victor Harbour, South Australia, for the proposed extension, Forbes to Wilcannia. The total estimated cost of the material, delivered f.o.b. England, is £73,300.

JOHN WHITTON.

PROPOSED LINE FORBES TO WILCANNIA.

INDENT on England for (say) 11,000 tons of steel rails (60lb. per yard) and fastenings for a light line of railway (say 117 miles), to be delivered at Victor Harbour, South Australia.

| Quantity. | Material. | Estimated Cost. |
|---------------------|---|-----------------|
| | | £ s. d. |
| *411,840 lin. yards | Steel rails, single-headed, about 60lb. per yard | 60,000 0 0 |
| 110,000 | Steel fish-plates | 4,000 0 0 |
| 220,000 | Wrought iron bolts and nuts | 2,000 0 0 |
| 600,000 | Do Screws | 5,300 0 0 |
| 380,000 | Do Spikes | 2,000 0 0 |
| | Total | £ 73,300 0 0 |

Delivered f.o.b. England.

* Rails to be supplied in the following proportionate lengths, viz. :—75% of 24' and 25% of 21'
Engineer-in-Chief's Office, Sydney, 12 July, 1886.

JOHN WHITTON.

Write fully to Agent-General in forwarding him the indent, and state why this departure from the usual course of shipping is determined upon. Ask him to let us know some time previous to the shipments when they may be expected, as we shall have to make arrangements for transporting them by river to Wilcannia.—CHAS. A.G., 24/7/86.

The Secretary for Public Works to The Agent-General.

Sir,

Department of Railways, Sydney, 28 July, 1886.

I have the honor to forward herein an indent for permanent-way materials for the extension Forbes to Wilcannia, to be delivered at Victor Harbour, South Australia.

This departure from the usual practice in regard to the port of delivery is made in consequence of the position of the proposed terminus, Wilcannia being situated on the river Darling. In ordinary seasons the river navigation is easy, and it will be both convenient and economical to the Department to have the rails delivered at Wilcannia by river. I shall be glad if you will let me know some time previous to the shipment of the materials when they may be expected, as the Department will have to make arrangements for transshipping them by river to Wilcannia.

I have, &c.,

W. J. LYNE,
Secretary for Public Works.

No. 4.

The Mayor of Wilcannia to The Secretary for Public Works.

Sir,

Municipal District Council, Wilcannia, 1 July, 1886.

I have the honor herewith to transmit copy of resolutions passed at a public meeting held here on the 23rd ultimo, respecting the Forbes and Wilcannia Railway.

I cannot do more than to commend the request to your favourable and early consideration, as the need of some communication with this district and the seaboard is and must be apparent to you.

I have, &c.,

W. F. STANBURY,

Mayor.

[Enclosure.]

No. 1. Mr. Hartier moved,—“That the Government be urgently requested to lay the plans of the Forbes-Wilcannia Railway before Parliament for approval at as early a date as possible, in order that advantage may be taken of the favourable opportunity afforded by the re-opening of navigation in the river Darling to transport the necessary material to Wilcannia, to enable operations to be commenced from this end of the line.” Seconded by Mr. Barnes, and carried.

No. 2. Mr. Carney moved,—“That in the interest of the Colony at large, and of the trade of the Port of Sydney, it is imperative that the Government of New South Wales take prompt action in this matter, in consequence of the approaching completion by the South Australian Government of their railway to the border, whereby the trade of the western and south-western portions of this district must gravitate to Adelaide.” Mr. Booth seconded, and carried.

No. 5.

Memorandum by The Secretary for Public Works.

Sleepers for Forbes-Wilcannia Line.

Department of Public Works, Sydney, 8 July, 1886.

PLEASE have an official letter sent to Mr. Quinn, M.P., relative to his representation in favor of at once obtaining sleepers for the Forbes-Wilcannia Line by river, and my minute of the 19th ultimo in reference thereto.

W.J.L., 8/7/86.

Done, 8/7/86. I have already directed that Mr. Quinn should be informed of the steps taken to have the material carried to Wilcannia.—W.J.L., 12/7/86.

No. 6.

The Under Secretary for Public Works to E. Quinn, Esq., M.P.

Sir,

Department of Public Works, Sydney, 8 July, 1886.

Referring to your letter of the 31st May last, in regard to the advisability of sending railway material to Wilcannia, I am directed to inform you that the Secretary for Public Works has decided that a large supply of rails, with fastenings, be at once forwarded to Victor Harbour, and also that about 15,000 tons of sleepers be ordered as soon as possible.

I have, &c.,

JOHN RAE.

1885-6.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CIVIL SERVICE ACT.

(MEMORANDUM OF CIVIL SERVICE BOARD AS TO EFFECT OF CERTAIN CLAUSES.)

Ordered by the Legislative Assembly to be printed, 5 February, 1886.

Memorandum from the Civil Service Board, in reply to Question No. 10, asked by Mr. Davies, relating thereto.

10. MR. DAVIES *to ask* THE COLONIAL SECRETARY,—

- (1.) When will the Superannuation Fund Accounts, which, in accordance with Civil Service Act, should be laid before Parliament at end of June and December in each year, be laid upon the Table?
- (2.) Will he ask the opinion of the Crown Law Officers as to whether clause 40 of the Civil Service Act (relating to leave after certain period) includes those Civil Servants in section 7 and Educational Divisions of list issued by Civil Service Board?
- (3.) Will he ask the opinion of the Crown Law Officers whether Servants in Educational Division and section 7 Civil Service Bill, are compelled to contribute 4 per cent. per annum to Civil Service Superannuation Fund?
- (4.) Will he be good enough to lay such opinion when obtained upon the Table of the House?

The Honorable Member's questions have been referred to the Civil Service Board, from whom the following replies have been received :—

- (1.) The Superannuation Fund Account, in terms of the 62nd Clause, is directed to be laid before Parliament annually, and not half-yearly as the Honorable Member supposes, and it will be laid upon the Table within the 31st March next.
- (2.) The opinion of the Crown Law Officers does not appear to be necessary, as clause 40 refers to "Officers" only, and Civil Servants in section 7 and the Educational Division are not "Officers" within the meaning of the Act.
- (3.) It does not appear to be necessary to take the opinion of the Crown Law Officers in relation to section 7 of the Act, as all persons coming under Rules and Regulations are, by the section referred to, specially brought within the provisions of Parts V and VI of the Act.

(3.)—THE total mileage run, and the net revenue derived from these Trains.

| Total mileage run. | Net Revenue derived from running the Trains. | | |
|---------------------|--|----|----|
| 14,480 miles | £ | s. | d. |
| | 2,813 | 16 | 8 |

NOTE—Nothing is allowed in this statement for the cost of the return journey, as the passengers returned by detachments with the ordinary Trains. Under the present arrangements the outgoing Train, termed a Tourist's Train, also brings in a revenue, as it takes the carriages into the country necessary to bring back the persons travelling by the Farmers' Trains to Sydney.

The Commissioner,—Can you let me have a return of the result of the first trip of the cheap Trains, south and west?—W.J.L., 16/12/85. Department of Public Works.

I will obtain fuller particulars than the subjoined, but the figures given will afford some information. The Western Train carried 380 passengers and the revenue amounted to £280, equal to 14s. 9d. per head, showing that the passengers travelled an average distance of 177 miles. The earnings were 11s. a mile, and the expenses 5s., but the Department has to take the people back by the ordinary Train, and this may be put down at 2s. 6d. a mile, leaving a net profit of 8s. 6d. a mile,—£87 10s. The Southern Train carried 500 passengers and the revenue derived was £350, equal to 14s. per head, showing the passengers travelled an average distance of 168 miles. The earnings were 18s. 1d. a mile, calculating Albury to Sydney, but the passengers from Hay and Jerilderie were brought by Ordinary Trains, and some reduction in the earnings per mile must be made for this (say) £30; leaving the earnings at 16s. 6½d., the return journey will have a net profit of £149.

Seen.—W.J.L., 16/12/85.

This statement was prepared upon wrong information obtained through telephone from Traffic Manager. The earnings for the West were said to have been £280; it seems they were £378 8s. 6d. and the train mileage given was wrong. So with the South the earnings were said to have been £350 and they really were £486 8s. 10d. The figures have been published as correct, but I said, in reply to Minister's inquiry, an answer to which he wanted at once, that I would obtain fuller particulars, and that only some idea could be formed by the hurried figures, which however I find were not even approximately correct owing to the blunder in stating gross receipts.—CH.A.G., 19/12/85.

SUMMARY of earnings and expenditure in connection with Farmers' Trains, run on the Southern and Western systems of Railway, on the 9th December, 1885. -

| Line. | No. of Passengers. | No. of Train miles. | Gross earnings. | | | Working expenses. | | | Net earnings. | | | Gross receipts per mile. | | | Working expenses per mile. | | | Net earnings per mile. | | | Earnings per passenger. | | | Average distance per passenger. |

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS.

(TARIFF OF PRICES AT REFRESHMENT-ROOMS ON GREAT NORTHERN AND NORTH-WESTERN LINES.)

Ordered by the Legislative Assembly to be printed, 3 August, 1886.

[Laid upon the Table of the House, in accordance with promise made by the Honorable the Secretary for Public Works, in answer to Question No. 4 on Votes and Proceedings No. 101, of the 3rd August, 1886.]

ARE the Lessees of Refreshment-rooms on the Northern Lines subject to any tariff of prices; if so, will he cause copies of tariffs to be laid upon the Table of the House?

SCALE of charges, Railway Refreshment-rooms, on the Great Northern and North-western Railways.

The following is the scale of charges authorized to be made at these refreshment-rooms:—

| | s. | d. |
|------------------------------|----|---------|
| Meals at Table d'Hote | 2 | 6 each. |
| Meat and vegetables | 1 | 0 |
| Soup | 0 | 6 |
| Pudding or pastry | 0 | 6 |
| Cup of tea or coffee | 0 | 6 |
| Roll or sandwich | 0 | 6 |

The contractor is bound by the terms of his contract to supply articles of the best description only; and passengers who consider they have reason to complain should do so to the Station-master.

Department of Public Works, Railway Branch,
Sydney, 21st August, 1882.

CHAS. A. GOODCHAP,
Commissioner for Railways.

GOVERNMENT Railways Refreshment-rooms.

The following are the charges authorized to be made at this refreshment-room:—

| | Prices per reputed pint. | Prices per reputed quart. |
|--|--|---------------------------|
| Champagne | 6s. to 7s. | 10s. 6d. to 13s. 6d. |
| Clarets and other foreign wines | 3s. to 6s. | 6s. to 10s. 6d. |
| Australian wines | 1s. 6d. to 2s. 6d. | 3s. to 4s. |
| Cordials | | 2s. 6d. |
| Brandy | Flasks, $\frac{1}{2}$ -pints, 2s. to 3s. | 6s. 6d. and 7s. 6d. |
| Whiskey | { " " 2s. ... } " $\frac{3}{4}$ -pints, 3s. 6d. } | 5s. to 6s. |
| Rum | | 5s. 6d. |
| Gin (square) | | 6s. |
| Gin (Old Tom) | | 5s. |
| Schnapps... .. | 2s. 6d. and 3s. | 5s. to 6s. |
| Ale | 1s. 3d. | 2s. |
| Porter | 1s. 3d. | 2s. |
| Colonial Ale (draught) | 6d. | 1s. |
| English Ale (draught) | 1s. | 2s. |
| Spirits | 6d. per glass. | |
| Clarets and foreign wines | 6d. " | |
| Australian wine | 3d. " | |
| Aerated waters | 6d. per bottle. | |

The lessee is bound by the terms of his contract to supply liquors of the best quality only; and passengers who consider they have reason to complain should do so to the Station-master.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS.

(PARTICULARS OF FREE PASSES TO RAILWAY OFFICIALS.)

Ordered by the Legislative Assembly to be printed, 20 September, 1886.

[Laid upon the Table of the House in accordance with promise made by the Honorable the Secretary for Public Works, in answer to Question No. 3 on Votes and Proceedings No. 35, of the 25th March, 1886.]

Question :—How many Railway Officers are entitled to travel at half rates?

Answer :—320 Tickets have been issued at half rates to Railway Officers.

Question :—How many Railway Employés are entitled to travel free?

Answer :—355 Passes have been issued to Employés whose duties are confined to the running of trains.

Question :—What is the annual value of such half and full fares respectively?

Answer :—The value of the Tickets issued at half rates is £1,055 8s. 9d. If full rates were charged the amount would be £2,110 17s. 6d.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

FREE RAILWAY PASSES TO SCHOOL CHILDREN.

(PETITION AGAINST—ELECTORS OF THE NEPEAN.)

Received by the Legislative Assembly, 30 March, 1886.

To the Honorable Speaker and Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The Petition of the undersigned electors of the Nepean Electorate,—

HUMBLY SHOWETH :—

1. That the Public Schools of the Colony are the nationally approved ones.
2. That all encouragement should be given by the Government to enable the children throughout the land to avail themselves of their splendid advantages.
3. That no State aid or public encouragement should be rendered by the State to Schools carried on in opposition to the National Schools; and that while not wishing to prevent people from sending their children to Private or Denominational Schools, we think they should be held responsible for all the charges incurred thereby.
4. Believing in the above, your Petitioners humbly pray your Honorable House not to pass any resolution for conveying children free on our Railways to Schools other than those constituted by the State, such being held by your Petitioners to be going back to State aid to Schools of a Denominational character.

And your Petitioners, as in duty bound, will ever pray.

[*Here follow 400 signatures.*]

RAILWAYS.

No. 1.

Precis.

Combination Truck.

THE Evans combination truck was brought prominently under the notice of the Commissioner (who was already aware of the invention), by the report of the Board on the carriage of Live Stock.

The Board considered the design of sufficient promise to warrant a trial of its merits, and they recommended that four or five of the trucks should be obtained for the purpose of experiment.

The Commissioner, who had already formed a favourable opinion of the truck, went beyond the suggestion of the Board and recommended (with a view to make the trial a perfect one) that a full train load (fourteen trucks) should be ordered. This recommendation was approved by Mr. Secretary Wright.

Hudson Brothers, learning from the Report of the Live Stock Board that a trial of the truck had been recommended and approved, addressed the Commissioner by letter of 25th June, 1884, stating that they were in a position to undertake the building of the trucks and to give proper supervision to the work, that as the assignees of the patentee they were prepared to leave the question of royalty in abeyance until the vehicles had been built and tested, and that the price to be paid for the trucks would be the present price of cattle trucks plus such extra expense for labor and material as they might incur.

And here it should be explained that under the conditions of the five years' contract held by Hudson Brothers they were entitled to claim to construct any vehicle which exhibited any departure in detail or dimensions from the type of vehicle named in the contract, the price to be regulated in the manner set forth in Hudson Brothers letter above quoted, *i.e.*, the price of the vehicle in the contract schedule to be taken as the basis of the price and any extra labor and material to be paid for—the value of such extra labor and material to be ascertained in case of dispute by arbitration.

Commissioner minuted that he did not know any better mode of settling the question of cost than that suggested by Hudson Brothers, which moreover, as shown, was in accordance with the conditions of contract.

Hudson Brothers were instructed by letter of the 9th July, 1884, to proceed with the building of the fourteen trucks, the duty of inspection being assigned to Mr. Bourne.

Commissioner minuted on the 14th November, 1884, that one truck had been completed by Hudson Brothers, that it seemed to be highly satisfactory, and promised to fulfil all that was expected of it. No time should be lost in completing the remaining trucks, and it would be well to postpone the construction of the cattle waggons and covered goods under order, until it was known whether they could be made to the combined pattern.

Mr. Scott reported that twenty-seven cattle waggons and twenty sheep-vans were under order, but half were ready for delivery, and the ironwork was ready for the others. The order, therefore, could not be cancelled or postponed. There were no covered vans on order.

In April, 1885, Hudson Brothers sent in their claim for the fourteen trucks, charging £295 per truck.

Mr. Bourne reported that the price charged was excessive, and that £260 would be a fair price.

Commissioner minuted that he was not prepared to pay the price demanded, that the price was to be the price of the cattle trucks plus the cost of extra work, as provided in the contract. Locomotive Engineer should be able to say what the proper amount should be.

Locomotive Engineer confirmed the correctness of Mr. Bourne's estimate of price.

Hudson Brothers were therefore paid at the rate of £260.

In November, 1885, Mr. Secretary Lyne called for a report upon the cars.

Traffic Manager reported that the centre partitions with which the trucks were filled was a decided advantage in checking the rush of sheep with the attendant risk of some being smothered, while in the case of bullocks it prevented them from surging at a jerk of the truck. At the same time the partition was a disadvantage in retarding the loading of stock, and for this reason was not viewed favourably by some. The Live Stock Board recommended a partition, but the Minister did not sanction it. This was the only objection to the truck, an objection which Mr. Evans himself admitted, and was endeavouring to obviate in future trucks. Traffic Manager further stated that whether the truck would continue to act as well as a combination truck he was not prepared to say at present. The trucks had been but little used as yet for cattle, and it was that which would test the working parts of the upper deck. If after a sufficient trial these were found to act well, the truck would be a boon to the Department, but the loss of time in loading (owing to the partition) would always be felt, while without the partition the truck would not carry cattle more safely than an ordinary truck.

Mr. Secretary Lyne directed that the trucks should be tested as much as possible with a view to arriving at a decision.

In letter of 20th June, 1886, Mr. Halloran forwarded a statement of the result of the trial of the trucks, showing the work done, weight carried, money earned, &c., by trucks. This statement dealt with official figures which had not at the time been furnished, even to Commissioner, indicating that the writer had had access to official documents, or had received the information from an official source.

Commissioner called upon Traffic Manager to explain why the results had been made known to Mr. Halloran, before they had been reported to him (the Commissioner).

Traffic Manager stated that although he had given instructions for statistics to be recorded, they had not been reported to him.

On inquiry it turned out that the result of the trials had been furnished to Mr. Halloran by Mr. Evans, by whom the statistics were in the course of his duty recorded, the former thus becoming possessed of the official figures before they were known either to the Commissioner or the Traffic Manager.

Commissioner minuted that there could be only one opinion—that it was very reprehensible conduct on Mr. Evans' part.

Subsequently, after receiving an explanation from Mr. Evans, which however did not alter the facts of the case, Commissioner minuted further that although there had undoubtedly been a breach of the rule that official information shall not be divulged outside the Department, he was not disposed to view Mr. Evans' action harshly.

Per letter of 9th February, 1886, Mr. Speight wrote, stating that Mr. Evans had shown him a model of the combination truck, and that he would be glad if Commissioner would state his opinion as to

to their usefulness, and what the cost of them would be compared with the cost of ordinary trucks, and what it would cost to convert ordinary trucks to the Evans type. He would be glad also to know when one of the trucks would be at Albury.

Commissioner referred to Mr. Scott on the following points:—(1) Cost of truck (not the cost of experimental ones, which was excessive); (2) cost of converting present vans into Evans vans; (3) the manner in which the mechanical fittings of the fourteen trucks had stood the test of wear and tear.

Mr. Braid reported:—(1) That the cost of a new truck would be £300; (2) that it would be cheaper to make new trucks than to convert existing stock; (3) that the mechanical fittings stood the test very well.

Commissioner called for more definite reply to question No. 2, and Mr. Braid reported further that the framing and the iron-work of our vans was quite different from that of the combination van, and that very little of either could be utilized. The cost of converting sheep and cattle trucks to the Evans type would be £240 each. The prices of our existing stock were—cattle-trucks, complete, £169 8s. each; sheep-trucks, complete, £174 8s.

Commissioner minuted that it had been reported that a contract would be taken to build vans of the Evans type for £150 which, with springs, wheels, &c., at a cost of £55, would make £205 without Royalty.

Commissioner informed Mr. Speight, 23rd February, 1886, that it depended very much upon the framing of existing stock whether it would be economical to convert the vehicles, and that our Locomotive Engineer was of opinion that, for the reason stated, it would not pay to alter our trucks. It was calculated, Commissioner said, that the Evans trucks would cost 50 per cent. more than the ordinary trucks; that, if the down traffic is to places from which the live stock traffic is coming, the Evans van will do all that is claimed for it, but its usefulness must be governed by the tide of traffic; and that the mechanical parts had been found to work well, and were not liable to get out of order.

On the 8th March, 1886, Commissioner wrote to Mr. Halloran that, admitting that the Evans vans could be made serviceable, and be used with economy, it was not of such advantage as was claimed for it by Mr. Halloran. The Commissioner would however be glad to know on what terms the patentee would grant to the Department the right to use the patent.

Mr. Halloran replied 17th March, 1886, that he was authorised to offer the entire patent, including the use of future improvements, either in design or construction of new vans, or in altering or converting the present stock, for the sum of £17,000. This was equal to about £16 per truck on the number of live stock and covered vans in use at the end of 1884, or one-fifth of the amount which would be saved in one year by the use of the combination truck. The patentees were anxious to ascertain what would be the cost of altering the present stock into the combination type, and for this purpose they would like to have a sheep or cattle truck placed at their disposal for alteration.

Commissioner referred the request for a truck to alter to the combination form to Mr. Secretary Lyne, who said he had no objection to the applicants having a truck for the purpose, and Mr. Evans was allowed to select the truck which best suited his purpose.

On the 9th April, 1886, Mr. Halloran wrote, urging the offer to dispose of the patent for £17,000.

The truck as altered was delivered on the 21st June, 1886.

In letter of 14th July, 1886, Mr. Halloran forwarded his account for £95 10s. for the alteration of the truck, and the matter was referred to the Locomotive Branch for report.

Mr. Braid reported that Mr. Evans asked him to look out a van in which he wished to make some alterations; that he (Braid) did as he was asked, but Mr. Evans did not explain the nature of the alterations; that having seen no drawings of the Evans van, he was unable to say if the work done to the altered van had been done properly, but it had not the same work in it that the original combination van had. The former had three doors instead of six, loose battens in centre in lieu of a solid partition, no screw break, and no continuous and strong draw-gear, besides numerous minor differences. As Mr. Evans supervised the work and reported the truck as ready for use, he presumed the alterations had been made by him.

Subsequently Mr. Braid minuted further that the price charged was fair and reasonable for the work done.

Commissioner minuted to let him know if the van was now a good one which could be used with advantage, as many doubts were expressed, or rather insinuated—capable, no doubt, of after expansion if the truck should fail—so much desire to shirk responsibility that he (Commissioner) lost confidence. If this van was not a good one let it be stated plainly. Mr. Braid need not be afraid that any consequence would follow from what appeared to be an excessive estimate for converting a sheep-van into an Evans van. If Mr. Braid had made a mistake he was not the first person who had done so, and he would probably be more careful in future. What he (Commissioner) wanted to know was whether he could accept the car as a serviceable one?

Mr. Scott forwarded a further report from Mr. Braid to the effect that in his (Braid's) opinion the van was not a good one, and would not prove a serviceable one in the long run for the following reasons:—(1) It would have to be kept exceptionally clean and free from dung, and the iron-work from rust*; (2) The rough usage our live stock vans suffered would tell upon this van; the flaps would get out of order and after a few years the cost of repairs would be very heavy; (3) The weather sheeting would be expensive to keep in good order as without great care in winding it would be destroyed when closing the doors. As long as the combination vans were few and well nursed they would be successful, but if a great number were run and they were sent to outlying stations and neglected, the cost of repairs would be very heavy.

Mr. Scott, in forwarding Mr. Braid's report, minuted that he with Mr. Braid, had inspected the converted van and that in his opinion the work was of a very inferior description† while that in Hudson's vans was very good. He agreed with Mr. Braid that the cost of keeping this car in repair would be considerable and that so long as these cars were few in number they could be nursed and cared for, but if they were much increased this could not be done.‡ He did not think the car a good one and thought it inadvisable to obtain any more until those we had had been in use for some years.§

Commissioner

* Commissioner asked in the margin if this was not common to all trucks. Did it apply in a larger degree to the altered van than to the ordinary design of trucks?

† Commissioner asked in margin was the work so inferior as to warrant the rejection of the van?

‡ Commissioner asked in margin, Would the cost be greater than the cost of keeping in repair this design of car generally, and if so how much?

§ Commissioner asked in margin, Was Mr. Scott alluding to the design generally or to this particular car?

Commissioner minuted that his reference had been misunderstood, that he did not ask for a report upon the Evans car, but whether the altered van had been finished in a satisfactory manner. Mr. Braid had stated the cost of altering our sheep and cattle trucks to the Evans type at £240; and with a view to show that this estimate was excessive, those interested had asked to be allowed to alter a sheep van into an Evans van. This had been done and they asked £95 10s. for doing it. The question now was not whether the work done was worth the money charged for it, but had a serviceable van to correspond with the general design of Evans' van been constructed and how much more would have had to be expended on the van to make it equal in all respects to those made by Hudsons?

Mr. Braid in reporting stated that he had not been influenced by any desire to shirk responsibility for the estimate given by him for converting the old stock into combination vans. In his estimate of £240, which was based on the prices paid under the five years' contract, allowance was made for a considerable amount of renewals which would be necessary if that conversion were effected. We had fifty-nine cattle vans, and 271 sheep vans 1 foot narrower and 1 foot 2 inches less in height than the combination vans. Those 330 vehicles, if converted, would require new headstocks, and nearly all the framing. There would in fact be very little of the old material used. Still, had he thought* there would be competition for the alterations, he would not have estimated so high, but he was under the impression the work would come under the five years' contract. Van 209, which was altered, was the nearest approach to the combination van of any of our stock, both being of the same width; so that neither headstocks nor under-framing had to be renewed. If the van was intended to be similar to the combination vans, he would not accept it either for design or workmanship. In addition to defects already mentioned, it had no support for the longitudinal that takes the bearing of the flaps; and when loaded, the gear would get out of order. It was not fitted with Turton's buffers, chain, brake, steps to get to brake, or screw-couplings. Safety-chains were not so strong. It had only had one coat of paint instead of two, and the roof two coats instead of three. To make this van equal in all respects to those built by Hudson Brothers would involve a further expenditure of £90. The Traffic Branch would be able to say if this van was as suitable for loading as the combination van built by Hudsons.

Commissioner, by letter of 17th August, 1886, informed Mr. Halloran of the substance of Mr. Braid's report; and Traffic Manager, in reply to Commissioner, stated that the van in his opinion could be used like the Evans vans, and recommended that it should be taken into use. The Minister approved, and directed that the altered van should be placed alongside one of the other vans in order that he might see where the difference lay.

The account for £95 10s. was thereupon paid.

Per letter of 30th August, 1886, Mr. Forsyth, M.L.A., wrote to the Minister requesting that he might have an opportunity of inspecting certain specified papers in connection with this matter, and the papers were placed at his disposal.

On the 5th October, 1886, Mr. Halloran wrote that the patentees were open to receive an offer for the patent, and pointed out that a great saving would accrue from the use of the van, and that the proved reasonable cost at which the existing stock could be converted to the Evans type rendered the purchase of the patent a desirable measure.

On the same day Mr. Forsyth sent to the Minister a list of papers selected from the foregoing correspondence, which he (Mr. Forsyth) wished to have laid on the table of the House.

Commissioner minuted that he must ask Minister to lay *all* the papers on the table, not the extracts asked for by Mr. Forsyth. If required at once, he would ask that the originals might be laid on the table as exhibits until they could be printed.

C.A.B., 9/10/86.

No. 2.

Extract from General Conditions of Contract for Rolling Stock.

If at any time during the progress of the contract it shall be considered expedient by the Commissioner for Railways to increase or diminish either the length, breadth or height of the body (inside) or the carrying capacity of any of the vehicles specified by more than 5 per cent., the contractor, at the request of the Locomotive Engineer for the time being, shall execute such increase, diminution, or alteration, and no such increase, diminution or alteration shall in any way annul or set aside the contract. Such increase or alteration shall be allowed and paid for to the contractor, or such diminution credited to the Commissioner for Railways, as the case may require, according to a price to be agreed upon between the contractor and the said Engineer. But if the contractor and the Engineer cannot agree as to the price to be given or allowed for in the altered vehicles, the question in dispute shall be referred to arbitration, and shall be settled by the award, order, or determination of a disinterested Civil Engineer or disinterested Civil Engineers to be appointed to arbitrate thereon as hereinafter. That is to say, if the Commissioner for Railways and the contractor concur in the appointment of a single arbitrator, then the matters and questions aforesaid shall be referred to and decided by such single arbitrator; but if the Commissioner for Railways and the contractor cannot concur in the appointment of a single arbitrator, each party, on the request in writing of the other party, shall by writing under his hand, nominate and appoint an arbitrator to whom such questions and matters mentioned in this proviso shall be referred. Every such appointment shall be delivered to the arbitrator and be deemed a submission to arbitration on the part of the party by whom the same shall have been made; and neither party shall have power to revoke the same without the consent in writing of the other; nor shall the death of either party operate as a revocation. And if for twenty-one days after the notice in writing by the contractor, or by the Locomotive Engineer, that the contractor and the Locomotive Engineer cannot agree shall have been served, and for seven days after a request in writing to appoint an arbitrator shall have been served by the one party on the other party, such last-mentioned party fail to appoint such arbitrator, then upon such failure the party making the request, and having himself appointed an arbitrator, may appoint such arbitrator to act on behalf of both parties; and the arbitrator may proceed to hear and determine the matter or question covered by this proviso between the contractor and the Engineer aforesaid; and in such case the award or determination of such single arbitrator shall be final.

* * * * *

The

The arbitrator or arbitrators or their umpire may call for the production of any documents in the possession or power of either party, which he or they may think necessary for determining the questions or matters in dispute and so referred, and may examine the parties and their witnesses, and may inspect the works and view the place out of, from, or in respect of which any of the matters referred to shall have arisen.

The award of the arbitrator or arbitrators or umpire shall be in writing ready to be delivered to either party within three weeks from the appointment of such arbitrator or the last of such arbitrators. This submission may be made a rule of the Supreme Court. The amount of cost, and by whom payable, shall be decided by the arbitrators, arbitrator, or umpire.

No. 3.

Extract from Report of the Board *re* carriage of live stock by Railway.

77. The Board had submitted to it a model with description of a combined cattle truck, sheep van, and goods truck, designed by Mr. Evans, the Goods Superintendent of the N.S.W. Railways. In this truck the boxing-in of the sides is made as flaps hinged half-way up the sides, and capable of being raised into a horizontal position so as to form an upper deck for sheep. The flaps in this position are supported in the centre by a beam the length of the truck, which is lowered by means of a handle at the top of the truck, working a worm-wheel and screw.

78. The Board believes that the invention of a good and simple convertible sheep van and cattle truck is of the greatest importance, and worthy of every encouragement by the Department as being likely to materially economize the quantity of rolling stock, and as offering greater facilities for the conduct of the stock traffic.

79. The Board considers Mr. Evans to be deserving of great credit for having gone far towards realizing the idea, and for the display of considerable ingenuity in his proposed truck.

The Board recommends the construction by the Department of four (4) or five (5) of Mr. Evans' trucks; but the following matters in which the truck is wanting should receive his attention:—

1. Some more effective arrangement for raising the flaps forming the upper deck.
2. Some means of giving efficient foothold to sheep on the upper deck, without such means, rubbing or otherwise injuring cattle, when the flaps are down and the truck in use as a cattle waggon.
3. Some means of ventilating and getting rid of droppings and urine from the upper deck.
4. Divisions in the upper and lower decks.
5. An alteration in the heavy bottom door in the centre; such a door having been found too heavy and inconvenient in the old cattle trucks.
6. That the truck complete have the full inside dimensions of the box cattle trucks, and shall not exceed 6 tons 14 cwt. in weight.

No. 4.

Extract from the Report of the Commissioner for Railways.

The Board has recommended the construction of four of Mr. Evans' combination trucks, with certain improvements which they point out, and I endorse the recommendation with the addition that a sufficient number of these trucks be built to form a train load—say fourteen. In this way a more effectual trial can be given to them.

It seldom happens that there is a large cattle and sheep traffic at the same time, and a suitable combination truck would therefore effect an immense saving to the Department; indeed, some years ago so satisfied was I on this point that I obtained the Minister's approval for the construction of a combination car, designed by an officer of the Engineer for Existing Lines Branch, but it failed owing to the imperfection of some of the working parts. Mr. Evans in his design seems to have overcome this difficulty.

No. 5.

Messrs. Hudson Bros. (Limited) to The Commissioner for Railways.

Sir,

Sydney, 25 June, 1884.

We see that the Australian combination truck has been brought under notice by the report of the Live Stock Board, and that a suggestion to construct a train load, as an experiment, has been approved by you.

As the assignees of the patentee, we desire to draw your attention to the fact that the present is a very favourable opportunity to give effect to the recommendation, as we are in an exceptionally good position to turn the trucks out speedily, and to give that supervision to the work that is so essential to the success of new principles.

We are content to allow our royalty rights to remain in abeyance until the vehicles have been subjected to a fair trial, and are prepared to construct a train load of the Australian combination trucks on the following terms:—

The present contract price for cattle waggons with the addition of such extra expense for the labour and material as may be incurred in forming them into Australian combination trucks.

The amount of royalty to be paid us to be mutually fixed after delivery and trial of the vehicles; and such payment, with the further charges above mentioned, to constitute the entire cost of the trucks to you.

Trusting you will favor us with a reply as soon as convenient.

We have, &c.,

HENRY HUDSON,

For Self and Colleagues.

Put copy of report with this.—CH.A.G., 1/7/84.

Herewith, 3/7/84.

No. 6.

Minute of Commissioner.

THE Minister has approved of my recommendation that fourteen trucks be made. They must contain the improvements suggested by the Board.

I do not know a better mode of settlement of cost than that suggested by Hudson Brothers, and this course may be taken.

Inform Hudson Brothers, and refer them to Locomotive Engineer for further particulars before proceeding; then send to Locomotive Engineer.

CHAS. A. G., B.C., 3/7/84.

Mr. Bourne should be instructed to inspect the work as it progresses.—W. SCOTT, per D.C.M'L., 13/8/84. Loco. Overseer.—Mr. Bourne to inspect.—T.M., 14/8/84. Noted.—E. BOURNE, 15/8/84. Loco. Overseer.—T.M., 16/8/84. Noted.—G.A.S., 21/11/84.

No. 7.

The Commissioner for Railways to Hudson Brothers.

Sir,

Department of Railways, Sydney, 9 July, 1884.

With reference to your letter of the 25th ultimo, stating that, under certain conditions named therein, your Company are prepared to construct a train-load of the Australian combination trucks, I have the honor to inform you that the Acting Secretary for Public Works has approved of fourteen such trucks being made by you, but before putting the work in hand I shall be glad if you will be good enough to confer with the Locomotive Engineer as to particulars regarding the construction of the trucks. Your terms are agreed to.

I have, &c.,

CHAS. A. GOODCHAP,
Commissioner for Railways.

No. 8.

Minute of Commissioner.

The Combined Live Stock and Merchandise Truck.

HUDSON BROTHERS have an order for fourteen of these trucks. As the first one built seems to be highly satisfactory, and promises to carry out all the provisions which were claimed for it, no time should be lost in proceeding with the fourteen, so that a perfect trial can be made.

What number of cattle waggons and covered goods vans are being made or under order? It would be well to postpone, if possible, the construction of these cars till it be known whether they can be made as per combined pattern.

CHAS. A. G.,
14/11/84.

Locomotive Engineer, B.C. Urgent.

There are 27 cattle vans and 20 sheep vans under order, and not yet delivered, but the construction of these vehicles cannot well be postponed or cancelled, as the contractors have one half the number ready for delivery, and the ironwork made for the others. There are no covered vans now under order.—W. SCOTT, 3/12/84. Commissioner.

Minute of Commissioner.

Seen. End of March to see what progress has been made with Evans's vans.—C.A.G., 15/12/84.

No. 9.

Hudson Bros. to The Locomotive Engineer.

Sir,

Redfern Works, Sydney, 26 November, 1884.

Replying to your letter No. 84-2,331, of 18th instant, in which you request me to expedite the completion of fourteen combined live stock and merchandise trucks we are now constructing, I beg to say that we are pushing on with these as fast as possible, and shall be ready for the wheels and axles for one half of them in about fourteen days.

As regards the construction of the cattle and sheep vans now under order, I beg to say that the whole of the ironwork is completed for this year's order, and one half of the vehicles are waiting for wheels and axles to deliver.

I have, &c.,

HENRY HUDSON,
Managing Director for Hudson Bros.

No. 10.

Hudson Brothers to The Commissioner for Railways.

Sir,

Redfern Works, Sydney, April, 1885.

Herewith I forward account for the 14 Australian combination wagons ordered by you in July last. The amount charged is in accordance with our letter of June 25th, and I shall feel obliged if you will be good enough to let us have a cheque at your earliest convenience.

I have, &c.,

HENRY HUDSON.

Please ask Mr. Bourne to report.—R.J.S., 27/4/85. Report herewith.

Account.

Account.

Redfern, April 24/85.

The Commissioner for Railways,—

Dr. to Hudson Brothers (Limited),
Steam Saw-mills and Joinery Works.

1885.

Ap. 17.—To 14 Combination Waggons at £295—4,130 0 0

No. 11.

Memorandum to Locomotive Engineer.

Sir,

Locomotive Engineer's Office, Redfern Station, 4 May, 1885.

The sum asked by Messrs. Hudson Brothers, viz., £295, for the construction of an Evans combined Australian van is, I consider, excessive. There is, no doubt, a considerable amount of extra work in these vans compared with our own live-stock vans, and the alterations that have been made from time to time, at the suggestion of Mr. Evans, have also involved a great deal of extra work, and should be taken into consideration.

Under these circumstances, I am of opinion that the sum of £260 is a fair average price per van.

E. V. BOURNE.

It would appear from Messrs. Hudson Brothers' letter that the price has already been determined. I consider the price asked very high. Mr. Bourne's valuation is, I think, a fair one.—W. SCOTT, 7/5/85.

Minute of Commissioner.

Where is Hudson Brothers' letter of 25th June, 1884, in accordance with which they state the charge is made.—CH.A.G., 16/5/85.

I am not prepared to pay the amount demanded. The price to be paid is the price for cattle trucks with such additional sum as will represent the extra cost incurred, presumably, at the schedule of prices for cattle trucks. These are the terms upon which departures from standard rolling stock contracted for are to be paid. The Locomotive Engineer should be able to say what the proper amount is.—CHAS. A. G., 18/5/85.

Mr. Bourne's valuation has been made on the lines laid down above, and I consider £260 is a fair price for them.—W. SCOTT.

Minute of Commissioner.

It seems to me that £260 for these cars is a very full price. £290 was claimed. If any more be required, I think tenders should be invited.—CHAS. A. G., 12/6/85. Approved.—F. A. W., 12/6/85.
Loco. Engineer. Noted.

Minute to the Loco. Overseer.

Please note attached papers and return.—W.S., pro C.A.N., 16/6/85. Seen.—T.M., 17/6/85.
Voucher herewith.—R.J.S., 25/6/85. The Examiner. Voucher forwarded for payment: £3,640.—
J.P.F., 27/6/85. Secretary.

No. 12.

Minute by Secretary for Public Works.

Combination Cars.

Department of Public Works, Sydney, 3 November, 1885.

WILL you obtain a report upon these cars already in existence? Let me have it as soon as possible.

WILLIAM JOHN LYNE.

The Commissioner for Railways. Traffic Manager, B.C., 4/11/85.

No. 13.

Traffic Manager's Report.

THESE cars are, as is well known, provided with a centre partition, which is beneficial to the stock when it is loaded, inasmuch as it prevents sheep from rushing from one end of the van to the other when they become frightened, and so causing the risk of some of them being smothered; while, in the case of cattle, it prevents the weight of eight or nine bullocks from "surging"—when a coupling is jerked, or the engine-brake is suddenly applied when descending a hill—against the animal which happens to be at the end of the truck, upon which the weight of the other animals falls.

In that way the partition is beneficial, but because of the extra expense and time involved in loading this partition is not favourably regarded by some, at least of the trucking agents. It will be remembered that when the Board, which was appointed in the beginning of last year to inquire into the live stock traffic, reported in deference to the expressed opinion of a majority of the witnesses who were examined, in favour of a centre partition, which, however, the Minister declined to approve of.

I have all along contended that, while the partition would be beneficial, it would be objected to for the reasons stated above, and my opinion has proved correct.

The partition means, of course, that every truck loaded with cattle must be moved twice against the race, and with sheep four times, because the top doors are directly over the lower ones, and do not, therefore, suit the races; while if the latter were altered they would not suit any of our other vans. Moreover, if one race were placed over the other sheep would never be got to run up the lower race, which would virtually be a tunnel.

Mr. Evans has seen the disadvantages himself, and purposes having a movable partition in any future orders he may get (if it is desirable to have one at all), so that loaders can use it or dispense with it at will, and, if it is dispensed with, there will be no more trouble in loading the trucks with cattle than any of our own, although it will still necessitate an additional movement, and consequent loss of time when loading sheep.

This is really the only objection that can be offered to the truck.

Whether it will continue to act well as a combination cattle and sheep truck, I would rather not express an opinion until it has had a much longer test than it has had. The

The greater portion of the above goods and live stock were carried long distances, where the rates are lower than for shorter distances. This is shown by the annexed calculation, which embraces long and short journeys. This calculation shows £95,144 in favour of the combination truck for twelve months; according to the traffic for 1884, the mean of the two amounts is £91,553. When it is taken into consideration that in the former of these calculations the ordinary trucks going up the country with goods are held to come back loaded to the same extent as the combination trucks, which cannot be the case, as the latter will carry sheep and cattle, as well as other kinds of goods carried by the ordinary trucks. The live stock vans and covered trucks in 1884 amounted to 1,096 in number. The use of the combination trucks would enable a reduction to be made to the extent of at least 30 per cent., and the decreased number of empty trains would ease the traffic, thereby increasing the capabilities of the lines to carry increased traffic when it is required, besides the advantages above enumerated. The combination affords more room for the same number of cattle, and they have been carrying 20 per cent. more sheep during the time they have been working; but this is not credited to them in the above calculations. They will carry railway bars, merchandise, wool, live stock, and every description of goods, with the exception of long timber, girders, boilers, and heavy machinery.

The extra cost of the fourteen combination trucks now running, above the ordinary trucks, must not be taken into account, as they were made under exceptional circumstances, which increased their cost about £120 each over and above the price at which they have been offered to be made; and even of the decreased price it must be borne in mind that at least one-half of the extra cost above the ordinary ones is caused by the superior construction and stability to resist tear and wear as compared with the ordinary sheep and cattle vans.

In the calculation of average rate the train mile is calculated at the running mile rate; the exact mile rate is 39.58. As the calculation is only for comparison the decimal is struck out and 39 used. The train mileage on live stock amounts to 396,413, and as the whole or nearly so of the trucks for live stock have to travel the single journey empty and have to bear the cost, it would be incorrect to charge this at the train mile rate instead of at running mile rate, as it would increase the charge above the actual cost.

Sydney, 20 January, 1886.

HENRY HALLORAN,
For the Patentee.

No. 15.

Mr. H. Halloran to The Commissioner for Railways.

Sir,

54 Wentworth Court, 1 February, 1886.

I have the honor to inform you that we have discovered two errors in the report forwarded to you in my letter of the 20th ultimo, of the combination trucks.

At the foot of the first, or the top of the second page, it is stated that the haulage would have amounted to £2,929 as against £2,194, showing difference of £731, whereas it should have given the difference as "£594, as shown hereafter."

On the last sheet, showing average rates, the difference in favor of the combination trucks is shown to be £170; but in the proportional statement at the foot of the page, this term of £170 has been omitted, and the answer put in its place. It should have stood thus—

As 1,912 = 1,070,094 = 170 - 95,144.

I should wish to amend the report in these particulars.

I may add that the second term 1,070,094 is the freight of the goods which the combination trucks are adapted to carry.

I have, &c.,

HENRY HALLORAN,
For the Patentees.

No. 16.

Minute of Commissioner.

WILL Traffic Manager please report upon enclosed statement if it be correct, and the result should be known to the Traffic Manager sooner than it should be to the patentee's agent. I am surprised Mr. Read has not reported upon it before.

CH. A. G., 27/1/86.

No. 17.

Traffic Manager's Report.

IN reply to the Commissioner's minute of the 27th ultimo I have to state that I was not in a position to give him the information contained in the enclosed statement, because, although I had given directions for statistics to be kept to enable me to frame a report, they had not reached me when I received the enclosed papers. It is hardly necessary for me to remind the Commissioner that Mr. Evans, the inventor and patentee, is in a position which peculiarly enables him, more readily than any other officers, to get at the information contained in Mr. Halloran's statement; whether he was fairly justified in his official capacity in furnishing any one unconnected with the Department with that information without getting permission to do so is a question about which there can scarcely be two opinions.

As regards the suitability of the vehicles that have been built, I can add little or nothing to my minute of 9/11/85 on the Commissioner's M.P. 85-418 D. If the Loco. Engineer is satisfied that the working parts will continue to work satisfactorily the only drawback the vehicles will have, apart from the cost, are:—

First.—The extra labour involved in loading, consequent upon the necessity of moving each van after filling one deck with sheep before the other can be filled. And,

Second.—The absence of means for getting rid of sheep droppings and urine from the upper deck, as recommended in report of the Live Stock Board, a copy of which is attached. (See pages 7 and 11.)

These drawbacks have already been felt by the public, and pointed out.

The next point to consider is the cost of the vehicle. I notice that, for the first fourteen that they built, Messrs. Hudson Brothers claimed £295 each, but that was considered excessive and a settlement was made for £260, exclusive, of course, of wheels, axles, and springs, which were supplied by the Department. Mr. Halloran's informant seems to say that future supplies can be built for about £120 less, but Mr. Braid, of the Locomotive Department, estimates the cost at about £300 complete, but that does not include any royalty; our cattle waggons cost £169 8s., and sheep vans £174 8s. each.

I see it is stated that since they commenced running, the trucks have carried sheep, cattle, and merchandize, and are equally capable of and adapted for carrying wool. That is admitted, but nearly all the live stock traffic, and the whole of the wool traffic, are conveyed on the up journey, and it would be a great waste of power to use such heavy vehicles for wool traffic. When vehicles get loading in both directions the saving to the Department must necessarily be great, but it would never pay to use such heavy ones as combination and cattle trucks with general goods on the down journey, and any other traffic other than live stock on the up journey, because an open truck would serve the purpose equally well, while the former is 50 per cent. heavier than the latter. (The weights of the combination trucks range from 7 tons 4 cwt. to 7 tons 10 cwt., average 7 tons 7 cwt. 1 qr.—while the D truck is only 4 tons 17 cwt. 2 qrs.)

As regards the earnings of the combination trucks, I have to say that the statement which was prepared and submitted to me a few days ago, shows that from the time they began to run, in June last, up to the end of December, they earned in respect of merchandize conveyed from Sydney to country stations £5,864 5s. 6d. The amount named by Mr. Halloran is £5,877, but the difference is so trifling as scarcely to be worth while inquiring into.

On the up journey for the conveyance of live stock to Homebush they earned £1,375 9s. 6d., the amount named by Mr. Halloran being £1,382, or a difference of between £6 and £7 only.

Long before the combination trucks came into use I urged upon the Goods Superintendent and his staff the importance of loading cattle trucks with goods to those stations on the most distant parts of the line where they were required to load stock, instead of sending open wagons with goods and hauling them back empty, while at the same time the cattle trucks were being sent empty to bring back cattle; yet, although there are only fourteen combination trucks, they earned for this traffic in about six months, £5,864 (or £5,877), while for the same period our 300 cattle wagons only earned £4,224 for a similar service.

As

As a matter of fact, while the combination trucks have been running to the distant western stations with goods to bring back stock, we were for a considerable period running empty waggons westward at the same time to return with wool.

I cannot make out how 10,970 train miles are made up. According to the statements furnished to me it appears that during the period in question the fourteen combination trucks travelled 163,370 miles altogether, and that number divided by 14 gives 11,670 train miles; notwithstanding the discrepancy I cannot make out in what other way Mr. Halloran's figures have been arrived at.

Taking 11,670 miles as the correct distance, and calculating the working expenses at 4s. per train mile, as quoted by Mr. Halloran, we find it amounts to £2,334, while the aggregate earnings were £7,240, leaving a net earning during the six months (nearly) of £4,906, as against £5,065 named by Mr. Halloran.

I do not know whether it is necessary that I should follow all the calculations shown on pages 2 and 4 of the statement and deal with them *seriatim*.

The 10,970 train miles must either have been calculated incorrectly, as I have already explained, or the figures have been obtained on some different basis than that adopted by me; and the amount of £148 shown as allowance for removals I cannot explain, as I do not know what it means or how it has been got at.

The estimated saving by the general adoption of the combination trucks is greatly overstated, because, while I am quite prepared to admit that our sheep vans (of which we have 272) are only useful when conveying sheep, there is absolutely no reason why, if combination trucks are used for the conveyance of general goods, the ordinary cattle trucks should not be equally suitable, and of these we have, as I have already stated, 300.

I observe, too, that the fourteen combination trucks loaded are calculated as one train, while in the case of empty sheep trucks twenty-one are allowed; and I wish to point out that fourteen combination trucks loaded to the extent of 4 tons 6 cwt. 2 qrs., as they have been, give an aggregate of 163 tons 12 cwt. 2 qrs., and that is equal to twenty-four empty sheep vans, so that the cost of running the latter would have to be considerably reduced.

Then I notice that the cost of hauling 231 ordinary trucks of goods is calculated at the same load per train as combination trucks (the weight in each truck being the same), although it takes seventeen and three-quarters ordinary trucks to weigh as much as the fourteen combination trucks; and while it is true that nothing has been shown as the cost of working the ordinary trucks on the up journey it must also be noted that nothing is credited to them in the shape of earnings, and I think it goes without question that throughout the year the latter are very much greater than the former.

The 1,070,094, shown on pages 2 and 4, is said, in Mr. Halloran's letter of the 1st instant, to represent the freight of goods which the combination trucks are adapted to carry. It is a pity particulars are not given, because without them it is not in my power to express an opinion on the subject.

For the information of the Commissioner, that the following are the tares of the respective vehicles, viz. :—

| | Tons | cwt. | qrs. |
|--------------------------|------|------|------|
| Combination truck | 7 | 7 | 1 |
| Sheep van | 6 | 17 | 0 |
| Cattle truck... .. | 6 | 3 | 1 |
| D truck | 4 | 17 | 2 |

These have been obtained from the Locomotive Engineer.

W.V.R., 18/2/86.

I have but one opinion, viz., that it was reprehensible conduct on the part of Mr. Evans, and he should be called upon for an explanation.—C.A.G., 23/2/86. Seen, and Mr. Evans informed.—W.V.R., 24/2/86. What reply is to be made to Mr. Halloran?—D.V., 1/3/86. Commissioner. There can be no question that these trucks can be made very serviceable, and be used with much economy; but not to the extent claimed for them. I must suggest that the patentees be asked to say for what sum they will confer upon the Department the right to use the design.—C.A.G., 3/3/86. Approved.—W.J.L., 4/3/86.

No. 18.

Mr. R. Speight to The Commissioner for Railways.

Dear Sir,

Victorian Railways, Melbourne, 9 February, 1886.

Mr. Evans, when over in Melbourne, showed the Commissioners a model of his combination truck, and stated that you had a number of them in actual use which answered the purpose for which they were designed very satisfactorily. Would you kindly inform me of your experience in regard to these trucks, and what is the difference in their cost as compared with the cost of ordinary trucks, together with the cost of converting the present trucks to his plan. If it is possible to place one of the trucks at our disposal for inspection, we would not detain it more than a day or two after hearing it was at Albury, and would appreciate the advantage of seeing one of the trucks which had been in use for several months.

Yours, &c.,

R. SPEIGHT.

Will Traffic Manager see me to-morrow about this—CHAS.A.G., 11/2/86.

Telephoned, 12/2/86.

Will Mr. Scott let me have a reply to-morrow on the following points:—1st. Probable cost of truck. It will not do to take the cost of experimental vans, as it was excessive, owing to various causes. 2nd. The cost of converting present vans into "Evans" vans. The manner in which the mechanical fittings of the fourteen trucks supplied have stood the test of wear and tear.—CHAS.A.G., 12/2/86.

Reply attached.—W. SCOTT, 12/2/86. For full report on this matter be good enough to refer to my minute of this date on your M.P. 86-456 D. I have given directions for one of the combination trucks to be loaded and sent to Albury. It will leave Sydney by Monday, and will be in Albury ready for inspection by any of the Victorian Railway officers by Thursday next, the 25th instant.—W.V.R., 18/2/86.

To

To Mr. Braid,—Please let me have on this paper a reply to the Commissioner's questions *re* Evans' combined trucks as quickly as possible.—W.S., *per* C.A.N., 12/2/86.

This is hardly a reply to the Commissioner's inquiry; he asks for the cost, and requires the figures.

In reply to the Commissioner's questions, I beg to state, firstly, that the probable cost of a new truck would be £300; secondly, that it would be cheaper to make new trucks than convert the present vans into "Evans'" vans; thirdly, that the mechanical fittings of the fourteen "Evans'" trucks now running have up to the present stood the test of wear and tear very well.

Loco. Engineer,—The £300 mentioned above would include the fittings, such as wheels, springs, &c., supplied by the Government to the contractors.—T. BRAID, 12/2/86.

Loco. Engineer,—The Commissioner wishes a more definite reply to his second question. Please furnish on Monday morning.—D.C.M'L., 13/2/86.

Mr. Braid.—W. SCOTT, 13/2/86. Further explanation herewith.—T. BRAID, 15/2/86. Loco. Engineer. The Commissioner,—Urgent.—W. SCOTT, 15/2/86.

It has been represented to me that a contract would be taken for constructing vans to Evans' design for £150 plus the price of wheels and springs—fifty-five, £205; but without royalty. Will Mr. Read report, now that he has the statement from the Loco. Engineer as to the working of the mechanical parts, how the trucks answer in other respects. Please send one of the trucks to Albury for Mr. Speight's inspection, and let me know when it will be there.—CHAS. A.G., 18/2/86.

No. 19.

Memorandum to Loco. Engineer.

Sir,

Locomotive Engineer's Branch, 15 February, 1886.

Our cattle and sheep vans are so constructed that the expense of taking them down and converting them into "Evans" vans would cost more than making new ones, as the framing is quite different from that of the combination vans, and the timber could not be utilized, as also very little of the ironwork.

The cost of converting our present cattle and sheep vans into "Evans" vans would be about the sum of £240 per van.

| | | | | | | | | | | | |
|---|-----|-----|-----|-----|-----|-----|-----|-----|------|---|---|
| The present price for our ordinary cattle waggon is | ... | ... | ... | ... | ... | ... | ... | ... | £107 | 0 | 0 |
| Extra for buffers | ... | ... | ... | ... | ... | ... | ... | ... | 5 | 8 | 0 |
| Extra for draw gear | ... | ... | ... | ... | ... | ... | ... | ... | 2 | 0 | 0 |
| Material supplied by the Department, such as wheels, springs, &c. | ... | ... | ... | ... | ... | ... | ... | ... | 55 | 0 | 0 |
| | | | | | | | | | £169 | 8 | 0 |

| | | | | | | | | | | | |
|---|-----|-----|-----|-----|-----|-----|-----|-----|------|---|---|
| The present contract price for our ordinary sheep van is | ... | ... | ... | ... | ... | ... | ... | ... | £112 | 0 | 0 |
| Extra for buffers | ... | ... | ... | ... | ... | ... | ... | ... | 5 | 8 | 0 |
| Extra for draw gear | ... | ... | ... | ... | ... | ... | ... | ... | 2 | 0 | 0 |

| | | | | | | | | | £174 | 8 | 0 |

These prices are based on present contract prices.

T. BRAID, 15/2/86.

Inform Mr. Speight that the truck will be at Albury on Thursday next. That it depends very much upon the framing of existing live-stock trucks whether it would be economical to convert them into vans of Evans' design. The Locomotive Engineer here states that it would not be economical to convert our vans into combination vans, for the reason given, *viz.*, difference in framing. That Evans' combined vans are, it is calculated, 50 per cent more costly to construct than the ordinary vans. That, if the down traffic is to places where the up live-stock traffic is coming from, the vans will do all that is claimed for them, but their usefulness in this respect must necessarily be governed by the tide of traffic. That the mechanical parts have been found to be quite workable, and do not get out of order.—CHAS. A.G., 22/2/86. R. SPEIGHT, Esq., 23/2/86. Traffic Manager, 24/2/86.

No. 20.

The Commissioner for Railways to Mr. Speight.

Sir,

Department of Railways, Sydney, 23 February, 1886.

Referring to your letter of the 9th instant, respecting the model of truck shown to the Victorian Railway Commissioners by Mr. Evans, our Goods Superintendent, and asking the cost, and our experience of them, and, further, that one of these trucks might be placed at your disposal for inspection, I have the honor to inform you that, agreeably to your request, a truck of this pattern will be at Albury on Thursday next, when it may be seen by your officers.

It depends very much upon the framing of the existing live-stock trucks whether it would be economical to convert them into one of Evans' design.

The Locomotive Engineer here states that it would not be economical to convert our vans into combination vans, for the reason given, that the difference in framing Evans' combined vans is, it is estimated, 50 per cent. more costly to construct than the ordinary vans.

If the down traffic is to places where the up live-stock traffic is coming from, the vans will do all that is claimed for them, but their usefulness in this respect must necessarily be governed by the tide of traffic.

The mechanical parts of the van have been found to be quite workable, and do not get out of order.

I have, &c.,

CHARLES A. GOODCHAP,
Commissioner for Railways.

13

No. 21.

The Commissioner for Railways to Mr. H. Halloran.

Sir,

Railway Branch, 8 March, 1886.

With reference to correspondence which has passed respecting the trials made of the Evans combination truck, and the desirability of its adoption on the lines of this Colony, I have the honor to inform you that inquiry has been made, and while admitting that the trucks can be made very serviceable and be used with much economy, they are not of such advantage as is claimed for them in your letters. I shall be glad, however, if you will say for what sum the patentees would confer upon this Department the right to use the design.

I have, &c.,

C. A. GOODCHAP,

Commissioner for Railways.

No. 22.

Mr. H. Halloran to The Commissioner for Railways.

Sir,

54, Wentworth Court, 17 March, 1886.

I have the honor to acknowledge the receipt of your letter of the 8th instant (1886), wherein you reply to my letter of the 1st ultimo, and request that I will say for what sum the Patentees of Evans combination trucks would confer upon your Department the right to use the design.

I beg to state in reply that I am authorised to offer the entire patent of such trucks for the Colony of New South Wales for the sum of seventeen thousand pounds (£17,000), to include the use of any future improvements either in design or construction of entirely new vans, or in altering or converting the present live stock vans into combination vans.

The sum named is equal to about £16 per truck on the number of live stock and covered vans in use at the end of 1884; and I may here point out that the number of combination trucks would enable the Department to make a large reduction in the number of waggons now in use. Looked at from another point of view, the consideration named amounts to about one-fifth part only of the money which the use of such vans would save to the Railway Department for a period of twelve months, when fully brought into use, and the entire saving for ever after the first year.

The Patentees are anxious to ascertain the cost of altering the present live-stock vans into the combination type; and to effect this they are desirous of being put in possession of a sheep or cattle van to be converted into a combination van, so that the estimate of cost may be tested by actual construction.

I therefore beg, on their behalf, to apply for an order that one van may be delivered to the Patentees for that purpose.

I have, &c.,

HENRY HALLORAN.

No. 23.

Mr. H. Halloran to The Commissioner for Railways.

Sir,

Wentworth Court, 24 March, 1886.

I have the honor to request with reference to the last paragraph of my letter of the 17th instant in the matter of the Evans combination trucks, that should you have approved of the transfer to the patentees of one of the trucks in use, for the conversion thereof into a combination truck and proof of actual cost of such conversion, I may receive at once the order for such transfer.

I have, &c.,

HENRY HALLORAN.

Minute of the Commissioner.

Does the Minister approve of a van being delivered to the patentees for the purpose stated? Mr. Braid reports that the cost of altering sheep vans and cattle trucks into Evans trucks would cost more than constructing new ones to Mr. Evans' design; but there seems to be some inconsistency in this statement, as in the same paper he gives the cost of a new van at £300 and the cost of a converted van at £240, unless the cost of conversion is minus the first cost of sheep or cattle trucks—in which case I take leave to doubt the estimate that the cost would be £240.—C.A.G., 26/3/86.

I see no objection to the applicants having a truck as desired.—W.J.L., 31/3/86.

To the Traffic Manager, Redfern,—I have to inform you that an application has been received from Mr. Halloran, on behalf of the patentees of the Evans combination truck, for the loan of a live-stock truck, in order that the cost of converting it into a combination truck can be ascertained; I shall be glad if you will make arrangements for having the same set apart for him.—G.B., *pro* Commissioner, B.C., 6/4/86.

Mr. Evans can appropriate any truck he likes.—W.V.R., 13/4/86. Noted, and will arrange.—G.T. EVANS, 14/4/86. T. Manager.

No. 24.

Mr. H. Halloran to The Commissioner for Railways.

Sir,

Wentworth Court, Sydney, 9 April, 1886.

In returning to you the thanks of the patentees of Evans combination truck for your having kindly allowed the transfer to them of one of the ordinary cattle trucks for its conversion into an Evans combination truck that the cost of such conversion may be practically determined, I am, in their interest, to ask your early consideration of their offer, contained in my letter of the 17th ultimo, of transfer to the Government of the right to patent, and of all improvements devised by the inventor hereafter, for the sum of £17,000, and awaiting your reply,

I have, &c.,

HENRY HALLORAN.

What has been done in reference to the truck that was allowed to be altered?—W.J.L., 11/5/86. Mr. Bourn will please see No. 209 cattle van, which I believe is standing at the works of Mr. J. Wearne, Glebe, undergoing alterations, and report as to what is being done to it.—T. BRAID, 18/5/86.

I

I have seen this truck at Mr. Wearne's works, and have to inform you that the top frame of old body has been taken down, and new framing necessary for the alteration is now being fitted. The truck, I was informed, will be completed in a fortnight from date.—E. J. BOURN, 19/5/86. Mr. Braid.

For Minister's information.—C.A.G., 27/5/86. Mr. Wearne says that the van will be finished on Saturday next, and delivered on the following Monday, the 14th instant. Report as to alterations will follow.—T. BRAID, 9/6/86. Loco. Engineer. Please report when completed.—C.A.G., 12/6/86.

No. 209 cattle van, fitted up as a combination truck, was delivered on the line at goods shed, Sydney, on the 21st instant, and is now having weather-sheets fixed to it. I think it would be advisable to ask Mr. Supt. Evans when it will be ready for traffic as he has charge of the alterations.—T. BRAID, 22/6/86. Loco. Engineer.

Goods Superintendent. Cattle van No. 209, fitted up as a Combination.

The Locomotive Engineer informs me that cattle van, No. 209, fitted up as a combination truck, was delivered on the line at goods shed, Sydney yard, on the 21st instant, and is now having weather-sheets fixed to it. Will Mr. Evans please examine this truck, and report when it will be ready for traffic.—W. V. READ, *per* W.A., 26/6/86.

This truck is now ready to be taken into traffic.—G. T. EVANS, 10/7/86. T. Manager.

I am having the brake gear altered, as it does not work effectively. I am also having the boxes properly oiled, and the truck will be ready for traffic by 10 a.m. to-morrow, 20th instant.—T. BRAID, 19/7/86. Locomotive Engineer.

No. 25.

Mr. H. Halloran to The Commissioner for Railways.

Sir,

54, Wentworth Court, 14 July, 1886.

In reference to previous correspondence, and especially to your letter informing me that you had given instructions for an ordinary railway waggon to be handed over, that it might be altered or converted into a combination truck according to Evans' patent, I have now the honor to inform you that the work of conversion or alteration has been completed, at an actual cost of £95 10s., and that the waggon so altered has been delivered at the Redfern Station.

I enclose the account for the work of alteration, which represents the actual cost of alteration only, and not the royalty which the proprietors of the patent will allow to remain for settlement with that of the fourteen others now on trial.

I have, &c.,

HENRY HALLORAN,

Agent for the Proprietor of Evans' patent.

Let me have this back early with papers.—CHAS. A.G., 14/7/86. Papers herewith.

Dear Mr. Goodchap,

14 July, 1886.

As pertinacious tradesmen say, "a cheque will oblige."

Yours faithfully,

HENRY HALLORAN.

54, Wentworth Court, 13 July, 1886.

The Commissioner of Railways to the Proprietor of Evans' Combination Truck.

| | | |
|---|-----|------|
| To alteration of cattle waggon No. 209 to Evans combination truck | £93 | 0s. |
| Tarpaulins | 2 | 10s. |
| | £95 | 10s. |

Dear Mr. Goodchap,

20 July, 1886.

I am looking after cheque for conversion of the waggon or truck; is it ready, or when may I have it?

HENRY HALLORAN.

Has the work been properly carried out and is there any reason why amount should not be paid.—D.C.M'L., 23/7/86. Locomotive Engineer, urgent. Received 24/7/86. Mr. Braid, for report. 26/7/86. Report herewith.—T. BRAID, 29/7/86. Locomotive Engineer.

Memorandum to the Locomotive Engineer.

Sir,

Locomotive Engineer's Office, Sydney, 29 July, 1886.

Re No. 209 cattle van converted into an Evans combination van.

I am unable to say that the work has been properly carried out as to design, as I have not seen any drawings or received any instructions as to what was to be done.

Some time ago Mr. Evans asked me to look out a suitable cattle van for certain alterations he required to have made, and I did so; but he did not explain what the alterations were to be.

On 12th February last, I was asked by you to give cost of converting our present vans into Evans vans, and as the papers are with these I infer that the alterations made to the cattle van bear on the subject.

No. 209 cattle van, the van altered, has not the work in it as the original combination van, the principal difference being that it has only three doors each side instead of six, loose battens in centre of van in lieu of partition, no screw brake, and has neither the continuous and strong draw gear, besides other minor alterations that should have been made have been omitted.

As Mr. Evans has supervised the work and reported to the Traffic Branch when the truck was ready for use, I presume the alterations were effected by his directions; if so, I see no reason why the amount claimed should not be paid.

T. BRAID.

Received, 29/7/86.

Please value the work, and say if you consider £95 10s. is a fair price for it.—W. SCOTT, 29/7/86. Mr. Braid. I have examined the van, and considered the sum quoted for carrying out the alterations to be fair and reasonable.—T. BRAID, 31/7/86. Locomotive Engineer. Received, 31/7/86. The Commissioner, 3/8/86.

Minute

Minute of Commissioner.

Let me know to-day if the van is now a good van for the purpose, and can be used with advantage. There are so many doubts expressed, or rather insinuated—capable no doubt of after expansion if the van should fail—so much apparent desire to shirk responsibility, that I lose confidence. I want the officers to speak their minds boldly; if the van is not a good van let it be stated plainly, and I shall know what to do. Mr. Braid need not be afraid that any consequences will follow from what appears to be an excessive estimate he made when the question was put to him as to what the cost would be of converting a sheep van into an Evans' car. If, as seems to be the case, he made a mistake, he is not the first person who has done so, and he will probably be more careful in future, but what I want to know now is whether I can accept the car as a serviceable one.—CHAS. A. G., 3/8/86. Mr. Scott. Report herewith.

Evans' Combination Truck.

I have, in company with Mr. Braid, inspected the Combination Truck, converted (under Mr. Evans' supervision) from a cattle van, and am of opinion that the work is of an inferior* description, whilst the work in the vans made by Messrs. Hudson Brothers is really very good.

Like Mr. Braid, I think the cost† of keeping in proper repair the van altered by Mr. Evans will be considerable.

I also agree with Mr. Braid that so long as there are only a few of this class of vehicle on hand they can be nursed and cared for, but if the number should be considerably increased this could not be done.

In my opinion the van is not a good one,‡ and I do not think it would be advisable to further increase the number until those we have on hand have been in use for several years.

Report from Mr. Braid enclosed.
The Commissioner.

W. SCOTT, 5/8/86.

Notes by the Commissioner.

* Now, the question is, is the work of such an inferior description as to warrant the rejection of the van?

† Will the cost be greater than the cost of keeping in repair this design of car generally; and if so, how much greater?

‡ Is Mr. Scott alluding to the design generally, and not to this particular car?

CH.A.G.

Sir,

Locomotive Engineer's Office, Sydney, 5 August, 1886.

In my opinion the van is not a good van, nor yet do I think it will prove a serviceable one, in the long run, for what it is intended for, for the following reasons:—

* In the first place it will have to be kept exceptionally clean and free from dung, and the ironwork—that is the screws and joints—free from rust. Secondly, that the rough usage our waggon stock receives will prove a great detriment, more especially when the van is loaded with cattle, as the flaps will get out of order, and when the vans have been in use a few years the cost for repairs will be heavy. Thirdly, that the weather sheeting will be expensive to keep in good order, as, if care is not used in winding the sheets up, they will be destroyed with closing the doors.

There is no doubt that so long as the combination vans are limited in numbers and well nursed they will answer the purpose; but my belief is that if in future a great number run, and there will be, if approved, and they are sent to the outlying stations and neglected, the repairs will be heavy.

T. BRAID.

Note by the Commissioner.

* But this is common to all the trucks, not specially to the altered one. Is this with reference to altered van, or to a larger degree than it applies to the present design of van.
CH.A.G.

My reference on the last occasion has apparently been misunderstood. I did not ask for a report upon the design of the Evans car, but whether the sheep van altered to that design was finished in a satisfactory manner. Mr. Braid, when the question of altering sheep-vans to Mr. Evans' design of car was referred to him, said the cost would be £240 for each van. It was then asked, by those interested, that a sheep-van might be entrusted to them for alteration, and they would show that £240 was altogether an excessive estimate. This was allowed, and they return the van as altered, and ask £95 10s. Od., for altering it. The question now is, can the van be utilized? It is not sufficient to say that the work done is worth £95 10s. Od., but has a serviceable van been constructed, and so as to correspond with the general design of Evans' vans? How much more would have had to have been expended to make the van in all respects equal to those built by Hudson Brothers.—CH.A.G., 6/8/86. Mr. Scott, B.C.

Memo. to The Locomotive Engineer re Evans' Combination Trucks.

Sir, Locomotive Engineer's Office, Regent-street, Redfern, Sydney, 14 August, 1886.

I very much regret that I misunderstood the purport of the information required by the Commissioner, and in doing so take the liberty of saying that I was not influenced by any desire to shirk responsibility for the estimate previously given by me for the cost of converting old stock into combination vans. In my estimate of £240, which I may state was based on the prices paid under the existing five years' contract, new rolling-stock, there was an allowance made for a considerable amount of renewals that would be necessary to a large portion of the old stock before the alterations could be made with advantage, as there are now running 59 cattle vans and 271 sheep vans 1 foot less in width and 1' 2" less in height than the combination van, and to alter the whole of the aforesaid 330 vans into Evans' vans, having a due regard to width and height of the latter, would necessitate not only new headstocks being supplied, but also nearly all new framing, in fact, as I before stated, very little of the old material could be used, but there is no doubt that had I have thought that there would have been any competition for the alterations I should not have estimated so highly. I was under the impression that the work would come under the five years' contract. See Mr. Braid's explanation.

The van No. 209 which has been altered is one of the latest design, and the nearest approach of any of our existing stock to the combination van, both being the same width, so that neither the under-framing or headstocks had to be altered or renewed.

If the van, as altered, was intended to be similar to the combination truck I would not accept it, either as regards workmanship or design. It can be utilized, but it is not so serviceable as the combination

nation van built by Hudson Bros., as, in addition to the defects mentioned in my memo. to you, dated 29th ultimo, there is no support for the longitudinal that takes the bearing of the flaps, and when loaded with sheep it will be found that the gear will get out of order; neither has it been fitted with Turton's buffers, chain brake, steps to get to brake, or screw coupling. The safety-chains are not so strong. The knees for supporting pillars are separate instead of being formed with the angle iron, and there is only one edge plate in centre of roof instead of two; in addition to which it has only received one coat of paint inside instead of two, and two coats instead of three on roof.

I must beg to say that it was a cattle and not a sheep van that was altered, and that the price claimed is £95 10s., not £90.

As to the question of how much it would cost to make the altered van equal in every respect to those built by Hudson Bros., I do not think it could be done under about £90 more.

I would refer you to the Traffic Department for them to say if it is as suitable for loading as the combination van built by Messrs. Hudson Brothers.

T. BRAID.

Minute of Commissioner.

Inform Mr. Halloran that it has been reported that the van has not been completed in the way that Hudson Brothers' vans were completed. Point out what constitutes the difference. Say that inquiry is being made of Traffic Manager as to the effective value of the alterations to the Department.—CH. A. G., 15/8/86. Then to Traffic Manager.

I should not like to be obliged to reject the van. Mr Braid's report shows the matter in a very clear light. It is not a question *now* whether the Evans' van is of a good design, but whether the alteration made to the cattle van will admit of its being used in the same way as Evans' vans are used, or are capable of being used—the work is not so good it seems, and there are several omissions, but still it may be an useful van well worth the amount spent in altering it.—CH. A. G., 15/8/86.

Mr. Halloran informed, 17/8/86. Traffic Manager, D. C. McL., 17/8/86. The van can, I am of opinion, be used as Evans' vans are, and I recommend that it be taken over and put into use.—W. V. R., 28/8/86. Commissioner. For Minister's approval.—CH. A. G., 11/9/86. Approved. Place the altered and one of the other vans side by side for my inspection. The difference in estimated and actual cost is so very great I should like to see wherein the saving lies.—W. J. L., 16/9/86. Locomotive Engineer to see and forward voucher. Urgent.—D. C. McL., 16/9/86. Mr. Braid.—R. J. S., 22/9/86. Traffic Manager informed. See memo. Certificate herewith. S. Braid, 24/9/86. Locomotive Engineer.

No. 26.

The Commissioner for Railways to Mr. H. Halloran.

Sir,

Railway Branch, Sydney, 17 August, 1886.

Referring to correspondence that has passed relative to the conversion of No 209 cattle-van into a combination truck according to Evans' patent, I have the honor to inform you it has been reported that the van has not been completed in the same way that Messrs. Hudson Brothers' vans were completed, the principal differences being that it has only three doors on each side instead of six. It has loose battens in the centre in lieu of partition, and has neither screw brake nor the continuous and strong draw-gear. Besides these defects there is no support for the longitudinal that takes the bearing of the flaps, and when loaded with sheep it will be found, the Locomotive Officer states, that the gear will get out of order; neither has it been fitted with Turton's buffers, chain brake or steps to get to brake, or screw coupling. The safety chains are not so strong, the knees for supporting pillars are separate instead of being formed with the angle iron, and there is only one edge plate in centre of roof instead of two; in addition to which it has only received one coat of paint inside instead of two, and two coats on the roof instead of three.

I may add, however, that inquiry is being made of Traffic Manager as to the effective value of the alteration to the Department.

I have, &c.,

CHAS. A. GOODCHAP,
Commissioner for Railways,
(Per D. V.)

Conversion of a Cattle-waggon into an Evans' Combination Truck.

The attached vouchers in favour of Mr. Halloran, for work in connection with the above, which has not been supervised by any officer of this Branch, show £93, with extras amounting to £2 10s., as the cost of such conversion, instead of £90, as quoted in your minute of the 6th ultimo. I have certified to it, on the report of Mr. Braid, that the work done is worth the money claimed.—W. SCOTT, 25/9/86.

Pay.—CH. A. G., 27/9/86. Examiner. Voucher forwarded for payment.—T. C., *pro* Examiner, 28/9/86. Secretary. B. C., Loco. Engineer.—*Pro* Chief Clerk, J. T. W. Seen.—W. SCOTT, 30/9/86.—The Commissioner.

No. 27.

Mr. A. Forsyth to The Secretary for Public Works.

Sir,

Sydney, 30 August, 1886.

In response to your offer to let me inspect the original documents relating to certain works carried out for the Department of Railways by Messrs. Hudson Bros., Limited, I beg to ask you to be allowed to inspect the papers relating to the following works:—

The existing contracts for rolling stock.

Construction of 2 State carriages and their subsequent alteration.

Construction of 14 combination trucks.

Proposed

Proposed alteration of ordinary live stock trucks into combination trucks.
 Alteration of one ordinary live stock truck into a combination truck.
 Construction of portable coal boxes to fit into railway trucks.

I have, &c.,
 A. FORSYTH.

P.S.—To give time to look up the papers I will call on Thursday.—A.F.

Urgent.—The Minister promised to have these papers ready to-morrow (Wednesday).—H.M'L.,
 31/8/86.

No. 28.

Mr. H. Halloran to The Commissioner for Railways.

Sir,

Wentworth Court, Sydney, 5 October, 1886.

I have the honor to invite your attention to my letters of the 17th March and 9th April last in the matter of the purchase by the Government of the right of patent in this Colony of "Evans' Combination Truck," and to request that I may be favoured with a reply to those communications.

I am open to receive for my principals any offer which the Government may be pleased to make in the place of the amount which I had been authorized to ask.

The great public saving which must accrue from the use of the "combination truck," whether improvements may hereafter be possible or not, and the proven comparatively reasonable cost of converting the common vans into combination trucks being before the world, an arrangement for the purchase of the right to use the latter appears very desirable.

I have, &c.,
 HENRY HALLORAN.
 (For the Patentees.)

Acknowledge receipt.—Ch.A.G., 5/10/86. Done, 6/10/86.

No. 29.

Mr. A. Forsyth to The Secretary for Public Works.

Dear Sir,

Sydney, 5 October, 1886.

The following list are the papers of which copies were given to me, and which you are to lay on the table of the House and to have printed; and I would beg to suggest that, to make them complete, you should print the Locomotive Overseer's and Engineer's, the Minister for Works, and the Commissioner's memos. *re* Mr. Braid's valuation of the combination truck made by Messrs. Hudson Brothers, and such other as you think desirable. I hope you will have them printed as early as possible.

I have, &c.,
 A. FORSYTH.

Mr. H. Hudson to Commissioner, *re* making fourteen combination trucks, dated 25th June, 1884.

Commissioner to Locomotive Engineer, giving instructions *re* making, 3rd July, 1884.

Commissioner to Hudson Brothers, notifying acceptance of offer, 9th July, 1884.

Mr. Braid to Locomotive Overseer, *re* value of new combination trucks, 4th May, 1885.

Mr. Scott to Mr. Braid, to report on Commissioner's memo., and Mr. Braid's report, 12th February, 1886.

Mr. Braid to Locomotive Engineer, as to cost of new and converting old trucks, 15th February, 1886.

Commissioner to Mr. Read, to inquire as to working of combination truck, 16 February, 1886.

Mr. Halloran to Commissioner, *re* payment for converting cattle van into combination truck, 20th July, 1886.

Mr. Braid to Mr. Scott, reporting on converted truck, Mr. Scott directing him to value and report on valuation, 29th July, 1886.

Commissioner to Locomotive Engineer, asking for full report, 3rd August, 1886.

Mr. Braid to Mr. Scott, *re* converted truck; Mr. Scott to Commissioner, *re* converted truck, both dated 5th August, 1886.

Commissioner to Mr. Scott, *re* his reports on converted truck, 6th August, 1886.

Mr. Braid to Locomotive Engineer, *re* his estimate of cost of conversion, 14th August, 1886.

Commissioner to Traffic Manager, *re* combination truck, and Mr. Read's report, 15th August, 1886.

Commissioner to Mr. Halloran, *re* combination truck, defects in conversion, 17th August, 1886.

Mr. H. Hudson to Mr. Scott, *re* coal boxes, 5th June, 1886.

Mr. Scott to Commissioner, recommending acceptance of Messrs. Hudson Brothers' offer, 6th August, 1886.

Commissioner's memo., 9th August, 1886.

Mr. Read's report on coal boxes, 12th August, 1886.

The Minister wants all these papers at once to have them copied.—H.M'L., 5/10/86.

Minute of Commissioner.

I must ask the Minister to lay *all* the papers upon the Table—not the extracts which Mr. Forsyth asks for. If they are wanted *at once* I would ask that the originals be laid on the Table as exhibits till they can be printed.—Ch.A.G., 5/10/86.

No. 30.

Minute from Commissioner.

Explanation from Mr. Braid.

IN Mr. Braid's report, dated 14/8/86, he states that if he had known there would have been competition for the alterations (of vans) he would not have estimated so highly, but that he was under the impression the work would come under the five years' contract. I shall be glad to know exactly what Mr. Braid intended to convey by this remark.

CH. A. G., B. C., 7/10/86.

Locomotive Engineer.

My estimate was based upon the contract prices for live stock vehicles, as I assumed that if the alterations were to be carried out they would be done by the Contractors who had tendered for vehicles for which these would be substituted, and my reason for saying "had I known there would have been competition I should not have estimated so highly," was at that time, as now, trade was very dull, and I am sure that if tenders had been called for there would have been a keen competition for the work, as Contractors, to keep their works and men going, would have taken the work at cost price, or very little over.—T. BRAID, 8/10/86. Locomotive Engineer.

| NO. | SCHEDULE. | PAGE. |
|-----|---|-------|
| 1. | Minute by Traffic Manager to Mr. Evans, Goods Superintendent, <i>re</i> information afforded to Mr. Halloran. 24 February, 1886. | 18 |
| 2. | Minute of Mr. Evans to Traffic Manager in reply to above. 10 March, 1886. | 18 |
| 3. | Minute by Traffic Manager to Commissioner <i>re</i> Mr. Evans' minute. 16 March, 1886. | 18 |
| 4. | Minute by Commissioner <i>re</i> Mr. Evans' action in furnishing information to Mr. Halloran. 22 March, 1886. | 18 |

No. 1.

Traffic Manager to Goods Superintendent Evans.

THE Commissioner recently forwarded to me a letter written by Mr. Henry Halloran, on behalf of the patentees of the combination trucks, enclosed with which were certain statements respecting the mileage and earnings of these trucks since the 2nd June last.

In sending the papers to me the Commissioner wrote as follows:—"Will Traffic Manager please report upon enclosed statement. If it be correct, and the result should be known to the Traffic Manager sooner than it should be to the patentees' agent, I am surprised Mr. Read has not reported on it before."

In replying to the above minute I stated that I was not in a position to give the Commissioner the information contained in the statement because, although I had given directions for statistics to be kept to enable me to frame a report, they had not reached me when I received the letter, and I further minuted as follows:—"It is hardly necessary for me to remind the Commissioner that Mr. Evans, the inventor and patentee, is in a position which peculiarly enables him more readily than any other officer to get at the information contained in Mr. Halloran's statement. Whether he was fairly justified in his official capacity in furnishing anyone unconnected with the Department with that information without getting permission to do so, is a question about which there can scarcely be two opinions."

The Commissioner has replied as follows:—"I have but one opinion, viz., that it was most reprehensible conduct on the part of Mr. Evans, and he should be called upon for an explanation."

W. V. R., 24/2/86.

No. 2.

Minute from Goods Superintendent Evans to Traffic Manager.

NOR having seen Mr. Halloran's letter, I cannot say what information he has submitted the only figures furnished by me to the proprietors of the combination truck were the gross earnings during the time they have been running. This information was also furnished to the Traffic Manager, and as the Minister expressed a wish to have it, I adopted this means of furnishing it by having it forwarded to the Commissioner, and in doing so I certainly did not think I committed any breach of confidence or discipline.

G. T. EVANS, 10/3/86.

No. 3.

Minute from Traffic Manager to Commissioner.

IN forwarding the attached paper to the Commissioner, I have only to say that, as stated in the Traffic Manager's first report, the information alluded to by Mr. Evans was not supplied to this office, when Mr. Halloran's letter reached it, through the Commissioner.

D. K., 16/3/86.

No. 4.

Minute by Commissioner.

SEEN.—I am not disposed to look harshly upon Mr. Evans' action; he has designed what promises to be a serviceable truck, but there has been a breach of the rules that information respecting the transactions of the Department are not to be made use of outside the Department without permission.

CHAS. A. G., 22/3/86.

SCHEDULE.

| NO. | PAGE. |
|--|-------|
| 1. Minute of Commissioner <i>re</i> method of washing out combination cars, &c. 16 January, 1885. | 19 |
| Minutes from Traffic Manager, and Report of Engineer for Existing Lines on Commissioner's minute. | 19 |
| 2. Letter from Commissioner to Town Clerk, Sydney, <i>re</i> Supply of Water at Homebush for above purpose. 4 March, 1885. | 19 |
| Further minutes by Commissioner <i>re</i> above, and replies from Engineer for Existing Lines, &c. | 19 |
| 3. Letter from Pitt, Son, and Badgery to Minister for Works <i>re</i> construction of siding at sale yards, Homebush, for cleaning cars, with minute by Minister thereon. 24 March, 1885. | 20 |
| 4. Letter from Town Clerk, Sydney, in reply to Commissioner's letter of 4th March, with minutes thereon. 24 March, 1885. | 20 |

No. 1.

Minute of Commissioner.

I WROTE some time since about water for washing out the new combination car to be provided at Homebush. I think I suggested steam jets. I should like to know what has been done.—C.A.G., 16/1/85. Urgent.

Does Traffic Manager know anything of this matter? If so, please report.—D.V., *per* D.C.M'L. 17/1/85. Urgent.

Nothing. There is no water at Homebush, and it will be for the Engineer for Existing Lines or the Loco. Engineer (if steam is used) to report upon the best method of carrying out the Commissioner's wishes.—D.K., 19/1/85. Commissioner.

I must have an immediate report upon this matter. I am quite certain I have written before on the subject. The Engineer for Existing Lines or the Loco. Engineer should be prepared with a scheme for a good supply of water, with a good fall, at Homebush, for washing out live-stock trucks. The success of the Evans truck will depend mainly upon the facilities afforded for keeping them clean, &c.—C.A.G., 20/1/85. Engineer for Existing Lines.

The Commissioner wishes to be furnished with a report upon this matter as early as possible.—D.V., *per* D.C.M'L., 21/1/85/. Urgent. Mr. Thompson, for report on best means of getting water supply at Homebush.—F.M.A., 26/1/85. District Engineer, Sydney.

I would propose to draw the water from the Corporation water-supply, and pump it into a tank about 40 feet above rail level, from which a pipe would be laid along the cattle platform, with hydrants at about every chain, from which the trucks would be washed out by means of hoses, as shown in green on attached tracing. The tank, being fixed 40 feet high, will ensure a good pressure of water and the effectual cleaning of the trucks. The capacity of the tank, I estimate, should be about 5,000 gallons, and the capacity of the pumping engine, about 5,000 gallons per hour, in order that the work of cleaning may be speedily done. The cost of this arrangement will be about £1,175.—M.T., 5/2/85. Engineer for Existing Lines.

I presume the sanction of the Corporation must be asked. Mr. Thompson's estimate of cost is very high, it seems to me.—F.M.A., 16/2/85. Engineer for Existing Lines. Will Commissioner approve? I think this is absolutely necessary. The Corporation's sanction will be required.—G.C., 19/2/85. For Minister's approval.—C.A.G., 24/2/85. Approved.—F.A.W., 25/2/85.

No. 2.

The Commissioner for Railways to The Town Clerk.

Sir,

Railway Branch, 4 March, 1885.

I have the honor to inform you that in order to facilitate the proper cleansing of our new combination cars at Homebush, it is proposed to draw a supply of water from the Corporation dam, and pump it into a tank built at sufficient elevation to afford the required pressure. I have therefore to ask that you will be good enough to obtain the acquiescence of your Council to the adoption of this course. I enclose herein tracing, showing how we propose to utilise the water, and shall be glad if the matter can receive early attention.

I have, &c.,

C. A. GOODCHAP,

Commissioner for Railways.

Water at Cattle Yard for Trucks.

Let me have papers. I wrote the other day a minute on the subject, and have not had a reply.—C.A.G., 6/3/85. We are awaiting reply to our communication sent to Municipal Council on the 4th inst.—D.C.M'L., 7/3/85.

The Corporation will, of course, give consent—it can be obtained on a summer's morning by application. Let this work be no longer delayed. I shall expect it to be finished by end of this month.—C.A.G., 9/3/85. Mr. Cowdery.

Mr. Thomson to carry out as quickly as possible.—G.C., *per* A.M.A. Please say how this work is to be charged. Please return tracing.—M.T., 11/3/85. Engineer for Existing Lines. Will Commissioner please state charge.—G.C., *per* F.M.A., 12/3/85. Schedule G. I hope it has not been delayed while this inquiry was being made.—C.A.G., 14/3/85. Mr. Cowdery. Mr. Thomson to note charge.—G.C., *per* F.M.A., 17/3/85. Mr. Purton to note charge. You have instructions already for the work.—M.T., 17/3/85. Noted.—J. PURTON, 19/3/85. District Engineer. Noted. The work was taken in hand 11/3/85, and will be completed without delay.—M.T., 20/3/85. Engineer for Existing Lines. Please authorize purchase of pump for this work, on my memo. 85-211, 16th instant. If not, obtain at once, or the work will be delayed, as it has to be fixed before the pipes can be laid complete.—M.T., 20/3/85. Engineer for Existing Lines. Will Commissioner please say if purchase of pump has been approved. The papers, my 85-1,628, were forwarded to Commissioner 18/3/85.—G.C., *per* G.L., 23/3/85. Commissioner. Papers with Superintendent of Stores.—G.B., 25/3/85. Engineer for Existing Lines. Mr. Thomson to see.—G.C., *per* G.L., 26/3/85. Seen. Pump is being fixed now.—M.T., 27/3/85. Engineer for Existing Lines. Noted.—G.C., *per* G.L., 28/3/85. Examiner. Seen.—J.F., 2/4/85. Secretary.

No. 3.

Pitt, Son, and Badgery to The Secretary for Public Works.

Sir,

Sydney, 24 March, 1885.

We have the honor to call your attention to works now being proceeded with at the northern end of the new siding at the sale yards, Homebush, and to state that as we understand these works are in progress for the purpose of making conveniences to wash out the stock trucks, that there will be great danger of destroying the only available water for stock at the yards, viz., the Corporation water-reserve and our large tank, if this course is pursued, and that we shall suffer very seriously in our business by reason of having the water, so necessary for stock on arrival, rendered unfit for use.

We would respectfully suggest that instead of washing the trucks when so much damage will be done, and when want of space would interterfere with the already unsatisfactory working at the sidings, that you should make arrangements to wash out at Menangle, or some such place where water would be abundant and where the washings would be valuable.

We have, &c.,
PITT, SON, & BADGERY.

This matter must be looked into at once, as nothing must be done that will pollute the limited water-supply at Homebush.—F.A.W., 25/3/85.

No. 4.

The Town Clerk to The Commissioner for Railways.

Sir,

Town Clerk's Office, Sydney, 24 March, 1885.

With reference to your letter of the 4th instant, requesting permission to draw water from the Corporation dam at the Homebush sale yards for the proper cleansing of the new combination cars, I have the honor, by direction of the Right Worshipful the Mayor, to state that there appears to be a grave objection to granting this request from the fact that (unless some arrangement is devised for draining from the siding) all the refuse and foul waters from the cars will be returned to the source whence it is pumped, and then find its way into the reservoir for the supply of drinking-water for stock. If this difficulty be overcome, there does not seem to be any objection to your obtaining water, so long as the supply in the dam is more than sufficient for the requirements of the cattle-yards, but it must be understood that this permission will be withdrawn if found necessary.

I have, &c.,
CHAS. A. WOOLCOTT,
Town Clerk.

There are previous papers on this subject which I should like to see before replying to these.—W. V. READ, *per* D.K., 27/3/85.

As you will perceive, some of the papers are with Mr. Cowdery, and the remainder with Mr. Richardson (Stores.) Will you please obtain them, and furnish an early report to the Commissioner.—*Pro* CHIEF CLERK, R.W., B.C., 31/3/85. Traffic Manager.

The other papers are now with Mr. Cowdery, who is, by the Commissioner's instruction, to see Mr. Badgery, M.P.—W.V.R., 10/4/85. Mr. Cowdery.—D.C.M'L., 13/4/85. Previous papers were returned to the Commissioner.—15/4/85., G.C., *per* G.L. Commissioner. They were returned to you yesterday.—*Pro* CHIEF CLERK, R.W., 16/4/85. Mr. G. Landers.

I wish to see, to-morrow, Thursday, at 11 a.m., the Traffic Manager and Mr. Cowdery respecting the water-supply for truck washing at Homebush, the source of supply and drainage, and space available.—C.A.G., 8/4/85. Mr. Badgery says he wrote a fortnight ago on the subject. How is it that I have not seen the paper?

Noted.—G.C. *per* G.L., 8/4/85. Commissioner. Traffic Manager. The letter referred to from Mr. Badgery was sent to you on the 31st ultimo.—D.C.M'L., 8/4/85. Very urgent. Will Mr. Cowdery see Mr. Badgery, and submit to him the plans by which it is intended to divert the drainage into tanks.—C.A.G., 9/4/85. Mr. Badgery has not yet called at this office.—G.C. *per* G.L., 12/5/85. Commissioner.

No. 1.

Minute by The Secretary for Public Works.

THE deputation, Messrs. Targett, Henson, Abigail, Ms.P., North, Hall, Street, Hutchinson, and others interested in the coal trade, waited upon me to-day with reference to the shipment of coal at Darling Harbour. They stated that the output from the southern and western mines adjoining the railway was becoming greater every year, and they were extending their trade, but the mines in connection with the shipment of coal were greatly handicapped by the want of proper appliances at Darling Harbour. At the present time, coal or shale, if brought down for shipment, had to be taken out of the trucks in small quantities, and wheeled in small barrowfuls to the lighter ready to receive it, thus making the shipment an expensive matter. They asked that, pending the scheme which was to be carried out, of providing ample facilities for the shipment of all minerals, &c., at Darling Harbour, that some temporary arrangement might be made so as to enable the coal and shale to be shipped at Darling Harbour without inconvenience or undue expense.

I informed them that the question of the shipment of coal and produce was a very comprehensive one, and required grave attention before being settled finally, even though at the present time the shipments outwards were considerable. Before long the Illawarra Railway would be opened to the extensive coal mines at Coal Cliff, Wollongong, Bulli, &c., and the connection between Newcastle and Hombush

would be made; and these lines would no doubt bring a much larger coal traffic into Darling Harbour, which would require that ample facilities should be given. I had had a scheme to meet this probable traffic before me, but the completion of the scheme would require time, and be expensive in carrying out.

Until the railway was completed beyond the Pyrmont Bridge, and the scheme I referred to put in hand, I could not see that much could be done at Darling Harbour; but I promised to have inquiry made, to see if something temporary could not be done to remedy the grievances that at present were alleged to exist, and inquired whether the mine-owners would be prepared to supply their own trucks.

W.J.L., 27/11/85.

Railways, to see and return.—J.R., B.C., 2/12/85.

No. 2.

Minute from Engineer-in-Chief for Harbours and Rivers to Under Secretary for Public Works.

Deputation about Shipping Appliances, Darling Harbour.

Harbour and Rivers Branch, Sydney, 26 November, 1885.

THERE are at present at Darling Harbour two sets of appliances designed for the shipment of coal, but they have never been used, in consequence of no coal having been sent for shipment by them.

It is only for the Companies interested to provide suitable trucks, such as are in use at Newcastle, to obtain the facilities they need at once.

E. O. MORIARTY.

No. 3.

Minute by Commissioner.

Coaling at Darling Harbour.—Shipment of Coal.

WHEN the appliances at Darling Harbour intended for shipping coal were first received, there was sent out a plan of truck—on the hopper principle—with two divisions, I think, to each truck, which would admit of each division being lifted by the crane and the coal shipped without trouble.

As there is some intention of shipping coal at Darling Harbour at once, this plan of truck should be looked up, with a view to immediate action being taken.

In the meantime, inquiry should be made in regard to the fifty trucks with coal-boxes intended to be used for locomotive coal at Goulburn; if these are ready, coal-shipping at Darling Harbour could be commenced without any delay.

I wish to have at once the joint report of Locomotive Engineer and Traffic Manager in this matter.

CH.A.G., 28/11/85.

No. 4.

Joint Report of Traffic Manager and Locomotive Engineer.

THE appliances for shipment of coal from railway trucks at Darling Harbour consist of two over-head travelling cranes, which will lift the bodies of trucks containing about 6 tons of coal and convey them from the rails over the wharf to the shoot at the water's edge, where the coal can be discharged into vessels. It appears to us, however, that this will be a tedious matter, as we estimate that at the most not more than ten lifts per hour can be made, and to do this special hopper waggons will also be required. Our ordinary trucks could not be unloaded in this way. There is a large iron box capable of holding about 4 tons of coal belonging to this crane. The coal loaded in ordinary trucks would have to be shovelled into this box and then lifted and discharged over the shoot. To use the trucks fitted with coal-boxes would be a most unprofitable proceeding. Each box weighs 3 cwt. 0 qr. 22 lb. A "D" waggon will hold eight of them, and a "G" waggon sixteen; so that in a "D" truck there is an extra dead weight of 1 ton 5 cwt. 3 qr. 8 lb., and in a "G" truck 2 tons 11 cwt. 0 qr. 16 lb. The boxes hold half a ton each, and a "D" waggon will therefore only carry 4 tons in place of 7 tons, and a "G" waggon 8 tons instead of 15 tons. On the up-journey 3 tons less of coal would be carried in the "D" waggons, the freight on which from Esk Bank would amount to £1 4s.; and in the "G" waggons 7 tons less would be carried, and the trackage for the same distance would be £2 16s. Then there would be the difficulty in getting the boxes filled at the mines; and on the down journey there would be the extra dead weight, and the trucks could not be used for carrying goods while the empty boxes were in them. It would be much more economical to load the coal in our ordinary trucks and shovel it out at Darling Harbour—it could be done for under 1s. per ton.

W. V. READ, 5/12/85.

W. SCOTT, 9/12/85.

The Commissioner.

No. 5.

Minute by Commissioner.

WRITE to the Coal Companies, Western Line, and say that, if they be desirous of shipping coal at Darling Harbour at once, we can make temporary provision. There is a large iron receiver attached to the coal shoots at Darling Harbour which will hold 4 tons, and the estimated cost of filling this from the truck, and then lifting it into the vessel, is 1s. a ton. The Department will be prepared to divide the cost with the Companies, and will ship the coal in this way at a charge of 6d. a ton.

There are two of these appliances at Darling Harbour, each capable of shipping 40 tons per hour, or (say) 800 tons a day; so that, if the requirements of the Companies do not exceed this quantity, shipping appliances are already supplied.

Add

Add that, no doubt, while the Pyrmont Bridge spans the Harbour, it will be difficult to get suitable vessels to come to the wharf to take coal, and therefore the scheme of shipping referred to must be considered a tentative one only. A general scheme for the establishment of a coal-shipping depôt is under consideration, and as the requirements for shipping of the Coal Companies expand, the Department will be prepared with appliances to respond to them.

CH.A.G., 19/12/85.

Then inform Traffic Manager, so that he may be prepared to meet the Companies' requirements, and re-submit these papers for the purpose that the general scheme may be matured.—CH.A.G., 19/12/85.

No. 6.

The Commissioner for Railways to The Hon. E. Webb, M.L.C.

Sir,

Railway Branch, Sydney, 23 December, 1885.

Referring to the deputation which waited upon Mr. Secretary Lyne on the 27th ultimo, respecting the shipment of coal at Darling Harbour, and urging that facilities might be given so as to enable the western coal to be unloaded from the railway trucks and vessels at the Darling Harbour Branch Wharf, I have the honor to inform you that, if the Coal Companies are desirous of shipping coal at once, temporary provision can be made for the service. There are two large iron receivers, capable of holding 4 tons each, attached to the shoots at Darling Harbour, and they will together ship 80 tons per hour, or (say) 800 tons per day; so that, if the requirements of the Companies do not exceed this quantity, the necessary appliances are already provided.

The expense of filling these receivers and then lifting them into the vessels is estimated at 1s. per ton. The Department will be prepared to divide the cost with the Companies, and will ship the coal in this way at a cost of 6d. per ton.

No doubt, while the Pyrmont Bridge spans the harbour, it will be difficult to get suitable vessels to come to the wharf to take coal, and therefore the scheme of shipping referred to must be considered a tentative one only. A general scheme for the establishment of a coal-shipping depôt is under consideration, and as the requirements for shipping of the Coal Companies expand, the Department will be prepared with appliances to respond to them.

I have, &c.,

CHAS. A. GOODCHAP,
(Per D. C. M'L.)
Commissioner for Railways.

No. 7.

Minutes by the Commissioner for Railways, Traffic Manager, and others.

It is expected that the first consignment of coal from Katoomba for shipment at Darling Harbour will arrive there to be shipped on Monday next. The men now employed by the Locomotive Engineer getting the coal cranes ready do not seem to thoroughly understand them; and I think it is desirable, in order that no hitch will occur, especially in the first trial, that an Engineer from the Harbours and Rivers Department be sent to put the cranes in good working order at once, or rather to superintend the work.—W. V. READ (*per* W. C.), 5/2/86. Commissioner.

Commissioner's 85/16,746 and 85/17,018 have a reference to these cranes, I think. Mr. Barling. B.C., 8/2/86.—G.B. B.C. Mr. Holy, please attend to this.—E.O.M., J.W., 11/2/86. Attended to.—J.H., 16/2/86. How did the trial go off?—E.O.M., B.C., 17/2/86. Mr. Holy.

The coal is first shovelled into a square box with a level bottom, and then lifted up to the shoot. The box discharges very badly, as there is no arrangement for tipping it. There is too much handling of the coal. If the ordinary form of coal-waggons with bodies which lift off were used, the arrangement would be successful.—J.H., 19/2/86.

The apparatus has been designed to load coal from the ordinary and usual form of truck used for the purpose, and cannot be made without difficulty to ship from an unusual and unsuitable truck.—E.O.M., B.C., 23/2/86. Commissioner for Railways.

Ask Mr. Henry Hudson to see me *re* the construction of some suitable receptacle for coal to be used in present trucks that will admit of coal being shipped with facility. In the mean time, try and find the hopper-boxes plans which were sent out with the cranes.—C.A.G., 13/3/86.

Please see plan with papers herewith.—D.C.M'L., 15/3/86. Please see me.—C.A.G., 17/3/86. I have searched the Records each year to 1886, and can find no other papers except papers already attached.—L.P.J., 25/3/86. Has inquiry been made at Harbours and Rivers Department? The plan of Hopper came out with plans for shoots.—C.A.G., 26/3/86. Inquiry now made; and after search made in that office no trace of papers or plan can be found.—L.P.J., 9/4/86. Mr. Hudson was to have submitted to me a design of a receiver for coal in the truck. Remind.—C.A.G., 12/4/86.

No. 8.

The Commissioner for Railways to Mr. Henry Hudson.

Sir,

Department of Public Works, Railway Branch, 15 April, 1886.

Referring to your personal interview, respecting the construction of some suitable receptacle for coal for use in our present trucks, whereat you promised to submit to me a design for a receiver, I shall be glad to learn whether you have completed such design yet.

I have, &c.,

C. A. GOODCHAP,
(Per G.B.)
Commissioner for Railways.

No. 9.

Minutes by The Commissioner for Railways and Locomotive Engineer.

Shipping of Coal at Darling Harbour.

I ASKED Mr. Hudson if he could design me coal boxes for D waggons, to carry three tons each, and so formed as to be readily shipped by the cranes provided at Darling Harbour.

He has provided me with the enclosed. If Mr. Scott approves of them, the Traffic Manager will estimate the number that will be required for the export trade, and order accordingly from Messrs. Hudson Brothers.—C.A.G., 16/4/86. Loco. Engineer.—D.C.McL., 16/4/86.

Mr. Hudson has called upon me with the plan of the proposed coal-boxes and trucks for shipping coal at Darling Harbour. After fully discussing the several points, I now fully concur with the proposed arrangements.—W. SCOTT, 19/4/86. The Commissioner.

Traffic Manager should see them, and submit an estimate of the number he will require.—C.A.G. 20/4/86.

Memorandum *re* the Coal Shipping Staiths at Darling Harbour.

Under the arrangement now existing a wrought-iron box, about 6 ft. 6 in. × 6 ft. 6 in. × 4 ft. high, is filled from the trucks by shovels. This box is then hoisted by two wire ropes from a travelling crane, and travelled across the wharf until it is over the shoot; it is then lowered to rest on the shoot bottom, and a catch at each side is loosened, when the hinged front opens and lets the coal out on the shoot, and thence into the vessel's hold. The box is then rehoisted, traversed back to the railway, and lowered to be refilled, the hinged front being first locked.

If the shoot is at a very steep angle, the box with the coal will slip down it; if it is too horizontal the coal will not run out. The man in charge of the hoist has no control of the tipping, and the whole operation takes up a long time, and is uncertain in its operation. The crossheads from the hoist-ropes do not suit the rings on the coal-box, and new slings have been introduced which do not give the advantage of allowing the box to tip with parallel slings. Owing to the box having to be filled from the trucks, there is an immense amount of manual labour required, and extra breaking of the coal is entailed, and it is hardly possible that the work can be done much cheaper than by ordinary coal carriers.

Proposal for Alterations.

The travelling cranes as constructed have no appliances to enable the man in charge to tip the coal when over the shoot; it is therefore proposed to add to the plant an apparatus to enable this to be done, and to fit a number of trucks with two boxes, to be filled at the mines and tipped at Darling Harbour, in accordance with plans submitted herewith.

Drawing No. 1 shows a general side view of the coal staiths at Darling Harbour with wharf, truck on rails, and shoots to vessels; it also shows the hoisting and travelling machinery with a coal-box suspended in two positions. The black line shows the present hoist-ropes, the blue line shows the tipping rope, and the dotted part the tipping gear, proposed to be added. This tipping gearing consists of a winding barrel for the rope, fitted with a foot-brake, a hand-wheel for turning or starting it, and an arrangement for counterbalancing the weight of the rope, and running it up as the box is hoisted. This is to save the attendant from having to do the work of winding up the rope by hand, as he already has two engines to attend to—the hoisting and the travelling—and has really only to put his foot on the pedal of the brake when he lowers the box to cause it to tip. When the box is lowered to the truck, it draws down the tip rope, which is then unhooked and attached to another box. The details of this arrangement are shown on plan 2.

Plan 3 shows a truck as proposed to be fitted with guards to save it from damage when loading and carrying the boxes, and also the boxes themselves.

The boxes are a little smaller than the present one, to give more room to get them into the trucks, with the guard-irons and the hinged door as shown, so that the two fastenings can be opened and closed by one lever.

No. 10.

Minutes by Locomotive Engineer and Traffic Manager.

Boxes for Unloading Coal at Darling Harbour.

WITH reference to your 86/1,984 on this subject, will you please inform me what will be the weight of one of these boxes, and how many can be placed on a "D" truck.—W. V. READ, *per* W.H.C., 24/4/86. Loco. Engineer.

I think they will weigh about 1 ton each; and I understand Mr. Hudson intended only to put two on each waggon.—W. SCOTT, Traffic Manager, 30/4/86.

I do not like the idea of having two boxes on one waggon frame, because it means that the trucks would be practically useless except for coal and such like traffic. I should think there would be no difficulty in arranging to have only one box on each frame, the box to be perfectly flat on the bottom, and to be discharged either from the sides or the ends. Such waggons could be used for any kind of traffic, and 100 of them might be provided in lieu of an equal number of "D" trucks that were estimated for under the five years' contract. It is not necessary at present to increase the rolling stock in excess of our estimate, particularly as I do not think coal will come from the Lithgow mines to be shipped at Sydney on a very extensive scale.—W.V.R., 5/5/86. Commissioner.

Since writing the above, Mr. North and Mr. Ewing, of the Katoomba mine, have called to say that they should like the matter to receive early attention, as they have some orders for coal for shipment.—W.V.R., 5/5/86. Mr. Scott, for immediate report on Traffic Manager's suggestions.—G.B., B.C., 6/5/86. Report herewith.—W.S. (*per* C.A.N.), 7/5/86. Commissioner.

No. 11.

Minutes by Commissioner and Locomotive Engineer.

Boxes for Unloading Coal at Darling Harbour.

If it be decided to place only one box in each truck, the iron used for making the box will have to be much thicker than would be required if two boxes are used. Not only would the dead weight be thus very considerably increased without any corresponding advantage in the shape of increased load, but the cost would also be greater. It would also be much more difficult to manipulate one box than two. If the doors of the trucks are made to fall down in a similar manner to the doors on the "D" trucks at present in use, and the boxes so placed on the trucks that their doors will open towards the side of the truck, there will be no difficulty in using them for any kind of traffic. I therefore strongly recommend that two boxes be placed in each truck.—W. SCOTT, 6/5/86.

The boxes are to be used in ordinary "D" trucks. No special trucks are to be made. It would seem from the Traffic Manager's report that 200 boxes will be required. That is sufficient for 100 "D" trucks. As to other loading there should be no difficulty. The boxes will hold the goods if there are any offering; but as shipping coal will not for the present be a continuous business, the boxes can be taken on or left off the trucks as required. Mr. Scott should place himself in communication with Hudson Bros. and ascertain at what price they will make the boxes, care being taken that they are easily put in and taken out of the truck.—CH. A. G., 7/5/86.

No. 12.

Mr. Henry Hudson to the Locomotive Engineer.

Sir,

Redfern Works, Sydney, 25 May, 1886.

I have the honor to inform you that I have made an estimate of the cost of coal-boxes, for carrying coal in "D" waggons on the Western line, and find the cost, if made out of $\frac{1}{4}$ -inch plate, will be £40 each, and if made out of $\frac{3}{8}$ -inch plate, will be £38 each.

I have, &c.,
HENRY HUDSON.

No. 13.

Memorandum from Draftsman to Locomotive Engineer.

Re particulars of proposed combined open Goods-wagon and Coal-trucks, &c.

JOHN GOFF.

Write to Messrs. Hudson, offering £32 each for 100 boxes, which I consider a fair price for them ($\frac{1}{4}$ -inch plate). Hudson Brothers' letter, 86/1,501.—P.F.F., 28/5/86.

I have seen Mr. Hudson, and ascertained that he declines to reduce price; however, I have since learned that his tender is for two 4-ton boxes, whereas we only require 3-ton boxes. I will now send him a blue print, showing exactly what is required, and request him to submit a price accordingly.—W.S., 3/6/86. Letter, 86/1,559, to Hudson Brothers, 3/6/86.

No. 14.

Mr. Henry Hudson to the Locomotive Engineer.

Sir,

Redfern Works, Sydney, 5 June, 1886.

I have the honor to acknowledge receipt of your letter, dated the 3rd instant, No. 86/1,559, together with drawing, showing exactly what you require, for coal-boxes for loading coal at Darling Harbour.

In submitting this amended offer, I beg to point out that the cost of the labour in making this box is precisely the same as that tendered for by me on the 25th ultimo. There is certainly a little less iron; and we now offer to make 100 boxes, as shown on your drawing, for the sum of £36 each.

I am, &c.,
HENRY HUDSON,
Managing Director.

No. 15.

Minutes by The Commissioner, Locomotive Engineer, and Traffic Manager.

I HAVE seen Mr. Hudson, with the view of getting him to reconsider his tender of £38, when I learned that the price was for 4-ton boxes instead of 3-ton as required. He has now reduced his price to £36 each box, which, in view of the urgency of the matter, I recommend for acceptance.—W. SCOTT, 8/6/86. The Commissioner.

100 boxes will fit 50 trucks. The cost will be £3,600, which at 5 per cent. represents £160 a-year. Will that amount be saved by the adoption of this plan of shipping as contrasted with the present ineffective system? Traffic Manager, for early report. Please report by the 12th instant.—CH.A.G. 9/6/86.

The question asked by the Commissioner is rather a difficult one to answer. If a large quantity of coal is shipped, no doubt much valuable time will be saved by tipping it direct from the waggons into the vessels' holds; added to which, the breakage, which is inseparable from excessive handling, will to a great extent be avoided.

I cannot see how any saving is to be effected by the Department by using the boxes. On the contrary, as they are to weigh 35 cwt., every waggon in which they are to be placed must necessarily have its load curtailed by that weight—thus, a waggon capable of carrying 7 tons will only carry 5 tons 5 cwt. of coal, which from North's siding to Darling Harbour means 9s. 11d. each trip.

And on the down journey the waggons will be practically useless, because it will not be possible to load them with general goods. Still, as the cranes at Darling Harbour are only capable of lifting 5 tons, I do not well see how any different system can be adopted than the box system, if any improvement is to be effected at all.

It will be a serious thing, however, if after boxes are provided they are not much made use of.—W.V.R., 12/6/86.

Write to Coal Companies, to say what the outlay will be, and my unwillingness to incur it unless some assurance can be given of constant freight for export. Add that, in consideration of the extra facilities given, and the reduced weight of load which box-trucks will necessitate, a charge of 9d. a ton will have to be paid for shipping.—CH.A.G., 12/6/86.

Letter to be sent to Companies herewith. Will Traffic Manager please furnish at once a list of the Companies' to which the letter should be addressed.—D.C.M'L., 18/6/86. Very urgent.

No. 16.

The Commissioner for Railways to J. B. North, Esq.

Sir,

Department of Railways, Sydney, 21 June, 1886.

With reference to the question of the shipment of coal at Darling Harbour, and to the representations made as to the necessity for some arrangement being made, so that better facilities might be given for unloading the coal into the ships at Darling Harbour Wharf, I have the honor to inform you that the matter has had attention, and a box for holding coal has been devised, which it is anticipated will meet all requirements in respect to unloading. Each box will hold 3 tons, and will be so made that two of them will fit on a "D" truck; the crane at Darling Harbour will be able to lift each from the truck, and shoot the coal into the ship that may be in waiting.

The matter, however, will be attended with considerable expense, as each box will cost £36—for one hundred (100), the number proposed to be ordered; the cost will therefore be £3,600, and I am unwilling to incur this expense unless some assurance is given that constant freight will be given for export.

Further, while the use of the boxes will give extra facilities for the shipment of the coal, it will at the same time increase the dead weight to be carried, and consequently the load hauled.

In consideration of these facts a charge of 9d. per ton will have to be paid for shipping.

I have, &c.,

C. A. GOODCHAP,

Commissioner for Railways,

Per D.V.

I shall be glad to receive an early reply.

(Similar letters to the above were sent to Messrs. John Ward, J. Mulholland, and Thomas Wilton, 21/6/86.)

Send reminders.—D.C.M'L., 7/7/86.

No. 17.

The Commissioner for Railways to The Manager, Katoomba Coal Company.

Sir,

Department of Railways, Sydney, July 10, 1886.

Referring to my letter of the 21st ultimo, relative to the shipment of coal at Darling Harbour, I shall be glad if you will reply to same as early as possible.

I have, &c.,

CH. A. GOODCHAP,

Commissioner for Railways,

(*Per D.C.M'L.*)

(Similar reminders were sent to Messrs. John Ward, J. Mulholland, and Thomas Wilton, 10/7/86.)

Commissioner to see. We are unable to get any reply from the Coal Companies.—D.C.M'L., 27/7/86. What has been done in regard to ordering these boxes?—CH.A.G., 29/7/86. Locomotive Engineer. Nothing that I am aware of.—W. SCOTT, 3/8/86. The Commissioner.

Minute by Mr. Secretary Lyne.

HAS any order been given for making these boxes?—W.J.L., 13/9/86. Locomotive Engineer. None have been ordered from this office.—W. SCOTT, 28/9/86. The Commissioner. No order has been given.—D.C.M'L., 29/9/86. For Minister's information.—C.A.G., 30/9/86.

1885-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CLAIM OF NEW LAMBTON COLLIERY COMPANY.
(CORRESPONDENCE.)

Ordered by the Legislative Assembly to be printed, 6 April, 1886.

RETURN (in part) to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 25th March, 1886, That there be laid upon the Table of this House,—

“Copies of all minutes, documents, and correspondence having reference to the claims of the proprietors of the New Lambton Colliery Company against the Crown for the sum of £28,000, and the offer of the Government of £500 in respect of the resumption of certain land near Newcastle.”

(*Mr. Shepherd.*)

The Crown Solicitor to The Commissioner for Railways.

Sir,

I have the honor, in reply to your letter of date 1st April instant (received this morning), to forward herewith the papers relating to the claim of the New Lambton Colliery Company.

As the arbitration is still proceeding, I shall be obliged by your returning the papers at your earliest convenience.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

The Crown Solicitor to The Commissioner for Railways.

Re New Lambton arbitration.

Sir,

I have the honor to inform you that I am in receipt of a letter from Mr. Croudace, herein, of which I now forward you a copy. I await your instructions in the matter.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

Minute of Commissioner.

Land-valuer, B.C., 25/3/85.—CH. A. G. Urgent.

337—A

[805 copies—Approximate Cost of Printing (labour and material), £8 4s. 9d.]

Mr.

Mr. T. Croudace to The Crown Solicitor.

Arbitration case—New Lambton Company v. the Commissioner.

Dear Sir,

22 March, 1886.

The probable amount required, not later than Thursday next the 25th, to pay wages at the shafts, will be £70 or £75, exclusive of the £10 I have in hand. Will you kindly see that this comes forward.

The drill has just gone through the small seam, about 80 feet below the upper or main seam, proving all I have stated. I do not think it the least use going any further than (say) 10 feet below it.

Please ask the Department for instructions.

I am, &c.,

THOS. CROUDACE.

Minute of Land-valuer.

It is submitted that the amount asked for should be paid. The depth bored might be left to the discretion of Mr. Croudace.—J.B.T., 27/3/86. Comm.

Minute of Commissioner.

It would be well perhaps to adhere to Mr. Croudace's suggestion in this matter.—Ch.A.G., 29/3/86. Crown Solicitor, B.C., 30/3/86.—Pro Comm., G.B.

The Crown Solicitor to The Commissioner for Railways.

Copy of Commissioner's, 86/949, being a letter from Crown Solicitor of 12th February, 1886.

Sir,

I have the honor to forward herewith a letter I have received from Mr. Croudace respecting the arbitration with the New Lambton Coal Company. I am not sure that Mr. Croudace's recommendation can be carried out, as I think the shafts he proposes to sink would be on the Company's land, and I do not think they would give their consent, in view of the great probability of its being found that there is no coal.

As I am afraid, if the matter should be referred to the umpire, the award will be for a sum that will render it necessary to go to a Jury, I would suggest that one or two shafts be sunk upon the land taken for railway purposes, so that it may be seen whether the suggestion made by some of the witnesses, that in this and the adjoining land there is a fault in the coal seam, may be ascertained with certainty.

Although Mr. Mills is reported to have said that he will take no evidence for the diamond drill, it is probable that the evidence of a bore would be taken into account by a Jury; and as the diamond drill is now on the spot, it may be as well to have a bore or two put down on the Government land, even though it should be necessary hereafter to sink shafts. Will you please consider this as an urgent matter.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

Mr. T. Croudace to The Crown Solicitor.

Sir,

Lambton, 10 February, 1886.

Case of Dibbs and Brown v. Commissioner for Railways proceeding; the former, as also Mr. Mills, most positively refused to take any evidence from diamond drill.

I strongly recommend a couple of small shafts to be sunk; one near furnace shaft, so that we can hole into drive from that shaft into the New Lambton workings; the other to be sunk further westward, and close to the diamond drill, so that one can check the other. The first will be about 120 feet deep, the second 180 feet or little more; they will each cost from 20s. to 30s. per foot—they might be done for less. If this is not done I fear the case will go against the Government. The expense might be made a cost in the case.

I can recommend some good men, and it should be pushed on day and night; size of shaft (say) 5 feet by 3 feet 6.

They seem terribly embittered against me; I cannot say why.

I am, &c.,

THOMAS CROUDACE.

Minute of Minister.

Have this shaft sunk as speedily as possible.—J.G., 13/2/86.

Minute of Chief Clerk.

Land-valuer to see at once. Inform Crown Solicitor.—G.B., B.C., 13/2/86.

Seen.—J.B.T., per A.B., 15/2/86. Commissioner. Crown Solicitor.—Pro Commissioner, G.B., B.C., 15/2/86.

Minute of Crown Solicitor.

Will the Commissioner please inform me if the Land-valuer is attending to this matter. If he is not, it may be as well that I should request Mr. Croudace to have it attended to.—J.W., 15/2/86, B.C. Commissioner for Railways.

Minute of Commissioner.

The matter is left in the hands of the Crown Solicitor. It is desirable that the shafts should be sunk as early as possible.—C.A.G., 17/2/86.

Notice to produce papers, &c.

In the matter for the arbitration, Brown and others *v.* The Commissioner for Railways.

TAKE notice that you are hereby required to produce on the hearing of this arbitration, at Newcastle, in the Colony of New South Wales, on Monday, the 8th instant, at the hour of ten in the forenoon, and thence from day to day, at the same hour of each day until the said arbitration be determined, all deeds, instruments, books, papers, maps, plans, specifications, writings, letters, vouchers, receipts, instruments, and memoranda, and all drafts and copies thereof in your possession or power, relating to or in anywise concerning the matters in dispute, or which can or may afford any evidence or information respecting the said matters, and all letters, papers, maps, plans, books, correspondence, and vouchers in connection with or in anywise relating to claims made by the proprietors of the Old Lambton Colliery and Waratah Colliery, at or near Newcastle, in respect of lands resumed for railway purposes, and particularly a certain letter dated 23rd May, 1884, addressed to you by Messrs. Robertson, Fisher, and Ralfe, Solicitors of the Old Lambton Colliery. Dated at Sydney, this fourth day of February, A.D. 1886.

GEORGE CHARLES WALDRON,
Solicitor for the Applicants,
100, Castlereagh-street, Sydney.

Land-valuer first.—G.B., B.C., 5/2/86.

Minute of Land-valuer.

Noted. All papers in possession of Land-valuer will be produced.—J.B.T., 5/2/86. Comm.
The papers referring more particularly to the New Lambton Colliery Company's claim are with the Crown Solicitor.—M.O'B., 6/2/86. Crown Solicitor, D.C.M'L., *pro* Comm., B.C., 6/2/86.

[Very urgent.]

Minute of Crown Solicitor.

Some of the papers required, as will be seen by perusal of this notice, are papers relating to the "Old Lambton Colliery and Waratah," which are not with me.—J. WILLIAMS. The Commissioner for Railways.

Minute of Chief Clerk.

The papers referring to the Old Lambton Colliery and Waratah Colliery Company's claim were handed to the Land-valuer, by whom they will be produced.—*Pro* Comm., G.B. Crown Solicitor, B.C., 8/2/86.

The Crown Solicitor to The Commissioner for Railways.

Brown and others *v.* You.

Sir,

Crown Solicitor's Office, Sydney, 5 January, 1886.

I have the honor to state that this matter will be proceeded with at Newcastle on Monday.

As it is probable that the case will ultimately be sent to the Supreme Court, it is desirable that full notes of the evidence should be taken; and I shall therefore be obliged by your directing the shorthand writer who took notes of evidence in the Illawarra case to proceed with the Land-valuer to Newcastle to report this case.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

Mr. A. Brown to The Commissioner for Railways.

Sir,

New Lambton Colliery Office, Newcastle, New South Wales, 27 June, 1885.

I have the honor to acknowledge receipt of your letter of 26th instant, in which you intimate that the claim for compensation and damages made by the proprietors of the New Lambton Estate of £25,899 3s. has been subjected to assessment by competent valuers, and offering in settlement of such claim the sum of £492 18s. In reply, I have the honor to inform you that, on behalf of the owners of the New Lambton Colliery, such offer is respectfully declined, and to request that, in terms of the Act, you will appoint an Arbitrator to whom the case may be submitted without delay.

I have appointed Mr. J. Y. Mills to represent the owners of the New Lambton Colliery.

I have, &c.,

ALEXANDER BROWN.

Appoint Mr. Mackenzie.—C.A.G., 1/7/85.

Minute of Commissioner.

Ask Land-valuer if he sees any objection, or knows of any one better able to act for the Commissioner in this matter.—C.A.G., 1/7/85. Urgent.

Minute of Land-valuer.

Land-valuer rather approves in this case.—J.B., 3/7/85. Commissioner.

Minute of Commissioner.

Letter to be written to-day without fail.—C.A.G., 6/7/85.

Letters to Mr. Mackenzie and Alex. Brown.—6/7/85.

Land-valuer.—D.C.M'L., 7/7/85.

Noted.—J.B., 8/7/85. Commissioner.—J.B., B.C., 8/7/85. Crown Solicitor.—GEO. B., B.C., 9/7/85.

As shown on blank notice herewith, underlined in red ink.—J.B.T., 26/5/85. Commissioner. See

Minister's decision on Old Lambton claim (Scottish Australian Coal Company). In both cases the omission

to make claim within prescribed time to be waived.—CH.A.G., 4/6/85. Please make offer in usual

way. Land-valuer, B.C. Scheduled.—J.B.T., 15/6/85. Ex. Min. 87/17, 30/6/85. Offer

made, 26/6/85. Land-valuer, B.C., 16/5/85.—G.B.

Minute of Assistant Land-valuer.

The notice of resumption was served at the offices of the Company in Newcastle on the 26th September, 1883, and the claim was made on the 9th December, 1884, and therewith an acknowledgment of the receipt of the notice referred to.—J.B.T., 18/5/85.

The

The Commissioner for Railways then minuted as under :—Where is this acknowledgment—is it inferred from the fact that claim was made? I do not see any special acknowledgment of notice.—
 CH.A.G., 23/5/85. Urgent.—Land-valuer, B.C. Land-valuer to see.—D.C.M'L., 8/5/85.
 Seen.—J.B.T., 11/5/85. In a fortnight.—12/5/85.

A. Brown, Esq., to The Commissioner for Railways.

Sir,

New Lambton Colliery Office, Newcastle, 14 May, 1885.

I do myself the honor to acknowledge receipt of yours of the 8th inst., advising me that, in consequence of my not having sent in claim for compensation therein referred to within a prescribed time, you are precluded now from entertaining the application. In reply, I have the honor to state that I have no knowledge of ever having been served with the notices, as required by the Railway Act.

The title to the ownership of this property has been the subject of litigation extending over a period of twelve years; and while the Messrs. Dibbs and myself are in reality the owners of the property in question, the fee simple remains, pending the litigation, vested in the names of "James and Alexander Brown" (the latter deceased), and it is more than probable that the notices have been in this, as I have known in other important matters in connection with the New Lambton Estate, served on the owners in law in fee simple. But, under any circumstances, I do not suppose the Crown desires to avail of any oversight (supposing any oversight to have been committed) to avoid its liability for the value of any land taken.

I shall esteem it a favour if you obtain the Minister's approval to a waiver of your strict legal rights.

I am, &c.,

ALEXANDER BROWN.

The Commissioner for Railways to A. Brown, Esq.

Sir,

8 May, 1885.

Referring to your letter of the 9th February last, submitting, on behalf of the owners of the New Lambton Colliery, an amended claim of £25,899 3s. for land resumed for the Homebush-Waratah extension, I have the honor to inform you that the claim was not sent in within the prescribed period of twelve months from the date of service of notice, and I am precluded by the terms of the Railway Act from entertaining it.

I have, &c.,

CH. A. GOODCHAP,
 Commissioner for Railways.

Report by Railway Land-valuers.

Land Claims Branch.

Southern and Northern Junction Railway.—Extension from Gosford to Waratah.

Particulars of Claim.

Claimant and owner, New Lambton Colliery Company. Reference number, 501, 502. Area taken, 7 acres 0 roods 23 perches. Amount of claims, £8,686 13s. and £25,899 3s.

Report.

The land taken from this Company is of little intrinsic surface value. Being stony and poor soil, very scrubby, and distant from any important public road, it has nothing to give it special value except coal seams exist, which are stated to underlie the railway and adjacent lands, the property of this Company. The seams referred to are now being worked at the C and D new pits, and are of the thickness shown in the particulars of claim furnished by Alex. Brown. These pits are situated in a south-easterly direction, and distant about 53 chains from the land resumed for the railway through this property. The old pits, from which this Company formerly worked, lie east of north, and distant about 50 chains from the land resumed, and towards which land the workings were extended until, at about 20 chains from the railway line, they were discontinued, owing to the coal being bad, as shown by a plan in the office of the Examiner of Coal-fields, Newcastle. Between the abandoned or discontinued workings just mentioned and the new pits now being worked, and close to the railway, two shafts have been sunk—one on the claimant's land, used as a ventilating shaft, in which no payable coal was found, and one on the Waratah Company's adjoining land, in which no seam of any value exists. The deterioration in the character of the coal lying a short distance north of the railway, as shown by the workings of the Company, and the absence of payable coal in the shaft sunk in the immediate vicinity of the land resumed, in the judgment of the Land-valuers, furnish such evidence of the absence of payable coal seams under and north of the land resumed that, without actual proof of its presence, they feel themselves bound to reject that part of the claim which is for coal taken and coal severed on the north of the railway. A tracing is annexed, showing the land owned by the Company, the railway line severing that land, and the positions (approximately) of the pits and shafts referred to in this report.

The attention of the Commissioner is requested to the fact that the notice of resumption was served upon the Company, at their offices in Newcastle, on the 26th September, 1883, and that no claim was made until the 9th December, 1884, or nearly three months over the period allowed for making it, under the provisions of the Railway Act, 1858, when one was sent in for £8,686 13s.; and on the 9th February, 1885, a second was sent to the Commissioner, in the form of an account, for £25,899 3s.

7/5/85.

Inform

Inform Company to-day that, as their claim was not sent in within the prescribed twelve months, I am precluded by the terms of the Railway Act from entertaining it.—C.A.G., 8/5/85.

The New Lambton Colliery Company's claim has not yet been reported on by the Land-valuer, as he was awaiting the report of the Examiner of Coal-fields upon the bores put down on the A.A. Company's land. The report was only received on the 25th instant, and forwarded to Land-valuer on same day, but as Mr. Thompson left town on the 24th instant to serve notices, &c., on Young to Blayney line, the matter has remained in abeyance till his return, which will be about Monday next.—M.O'B., 28/2/85.

For Commissioner's information.—G.B., 28/2/85. I shall be glad to have the matter expedited, as Mr. Brown is pressing for settlement.—CH.A.G., 28/2/85. Land-valuer, B.C., 28/2/85.

The Crown Solicitor to The Commissioner for Railways.

New Lambton Coal Company's arbitration.

Sir,

Crown Solicitor's Office, Sydney, 9 March, 1886.

I have the honor to request that the further sum of £300 may be placed to the credit of my public account, the previous advance of £250 made to me on the 29th January last having been found to be insufficient to meet the expenses connected with the above case.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

Make out voucher. Voucher herewith. Examiner.—L.P.I. (for Secretary), 12/3/86. Pay £300.—D.V. (*pro* Commissioner). Voucher forwarded for payment.—A.W.T. (*pro* Examiner), 17/3/86. Accountant. Entered voucher, 2,385, £300, 18/3/86.—H.H. V. at Treasury.—F.J.W. Secretary, B.C., 21/3/86. Land-valuer, B.C., 23/3/86.—G.B. Entered, Commissioner, B.C., 24/3/86.—J.B.T. (*per* A.B.)

The Crown Solicitor to The Commissioner for Railways.

The New Lambton Co.'s claim.

Sir,

Crown Solicitor's Office, Sydney, 4 March, 1886.

I have the honor to inform you that the work of sinking the shafts, in order to determine the fact of whether there is coal in the land taken for the railway, is being rapidly proceeded with. On 26th February last I received a letter from Mr. Croudace, in reply to one I sent, asking to be informed of the probable cost of sinking the shafts, in which the amount is stated at £350; and on 2nd March instant I received a letter from Mr. Croudace reporting progress. I forward both letters for your perusal.

Mr. Croudace has telegraphed to me to-day, asking to be placed in funds to pay for sinking the shafts (telegram herewith). I shall therefore feel obliged by your placing money to my credit to meet this expenditure, or arrange that money may be forwarded to Newcastle for that purpose.

Will you please let this matter have your earliest attention.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

Place the money to Crown Solicitor's credit.—CH.A.G., B.C., 5/3/86. Voucher herewith.—Examiner.—L.P.I., *pro* Secretary, 8/3/86. Voucher forwarded for payment.—T.S., *pro* Examiner. Accountant. Entered voucher, £350.—H.H., 8/3/86. Voucher at Treasury.—F.J.W., 10/3/86. Secretary, B.C. Inform.—10/3/86. Crown Solicitor, 11/3/86. Land-valuer, 11/3/86. Entered.—J.B.T. (*per* A.B.), B.C., 16/3/86.

Mr. T. Croudace to The Crown Solicitor.

Dear Sir,

Lambton, 1 March, 1886.

To-day I sent you a telegram touching the North Illawarra arbitration case, and stating the arbitrators were anxious to fix the 9th instant to proceed with same.

I received your telegram thereon, but too late to reply to. I have now the honor to state that, owing to Gill's case being in abeyance, and it being uncertain as to when Mr. T. Cook, the Umpire, may be able to meet us, I really think you should proceed with the North Illawarra case on the day fixed by the Arbitrators, viz., the 9th. *Unless I hear by telegram to-morrow to the contrary I will sign the document finally fixing the 9th.* I presume all the cases will be gone on with and the case settled.

New Lambton v. Commissioner for Railways.

I am glad to report good work at both shafts; that nearest the furnace shaft is down about 30 feet from surface, and when I was out this morning had just struck the out-crop of the 20th seam, which overlies the bore-hole seam about 70 feet.

The more westerly shaft was down about 38 feet from the surface and was getting a little water, which I hope won't be much. I consider this very good work, for besides the actual sinking, each shaft was to timber for a considerable distance from the surface. I have told the men to push on all they can, and they have promised me to do so. I may have to incur a little additional expense in the shape of erecting a whip at the westerly or deeper shaft to expedite work there.

I did not see Archibald, who is in charge of the diamond drill, but left word for him to commence boring again, and be very careful. I will probably see him to-morrow.

I am, &c.,

THOS. CROUDACE.

Mr.

Mr. T. Croudace to The Crown Solicitor.

Dear Sir,

Lambton, 25 February, 1886.

I am in receipt of yours of 24th (No. 86B-425). The probable money required each fortnight to pay the men who are sinking the shafts will be about £100. I think one shaft will be about 130 feet deep, the other about 150 feet; the total cost should not much exceed £350.

I am confident it will not be necessary to sink 240 feet before reaching the borehole seam. As soon as ever I reach the seam with the shaft near the New Lambton furnace shaft, I purpose putting a drive from the bottom into the drive which we know exists between the New Lambton workings and their shaft; this will give us proof beyond doubt. I am glad to hear the Arbitrators have postponed their decision; the shafts will be down before that.

I think I should place a man to watch them (the shafts) on the Sundays—what say you?

I am, &c.,
THOS. CROUDACE.

Memo. from Mr. T. Croudace to Crown Solicitor.

Sydney, 4 March, 1886.—12.10.

PLEASE arrange money matters for men sinking shafts.

THOS. CROUDACE,
Lambton.

The Crown Solicitor to The Commissioner for Railways.

Sir,

Crown Solicitor's Office, Sydney, 25 January, 1886.

I have the honor to forward herewith a letter I have received from the Arbitrator appointed by you in the New Lambton Coal Company's claim for compensation, in which he suggests that the arbitration should be held on Friday next.

In this case you will recollect that it was suggested that the diamond drill should be used to ascertain the value of the seams of coal underlying the land taken. I am not aware however that this has been done.

It was also understood that Mr. Croudace was preparing a plan of this and the adjacent coal-fields. I have not however received same.

I do not think it would be practicable to hold the meeting on Friday next, but propose that a day next week be appointed for that purpose. Will you inform me if this would suit you.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

Land-valuer, 27/1/86.—L.P.I., *pro* Secretary.

Mr. Thompson is at Gundagai. The Crown Solicitor proposes that a day next week should be appointed for holding the meeting. This, I think, would suit all parties.—Commissioner, B.C., 28/1/86. J.B., *per* A.B.

Appoint a day next week.—CH.A.G., 28/1/86.

Crown Solicitor, 28/1/86, with letter from Mr. Mackenzie.

Land-valuer to see and inform Mr. Mackenzie.—G.B., B.C., 28/1/86.

Seen. Mr. Mackenzie informed verbally. Commissioner, B.C., 28/1/86.—J.B. *per* A.B.

Mr. T. Croudace to Mr. T. Thompson.

Dear Sir,

Lambton Colliery, Lambton, 8 January, 1886.

I think a sufficiently accurate inspection could be made of the New Lambton furnace shaft by the erection of a small pulley-wheel upon a couple of logs placed across the shaft so as to allow a rope to pass from a winch over it, the said rope to be strong enough to carry an ordinary iron kibble or cradle if necessary. I think nearly the whole of the material could be borrowed or hired in the district, excepting the rope. I subjoin a sketch showing what I think sufficient.

I am, &c.,
THOS. CROUDACE.

The Engineer for Existing Lines might be requested to provide the materials suggested by Mr. Croudace when required for making an inspection of the shaft referred to.—J.B.T., 19/1/86. Commissioner. Mr. Cowdery, B.C., 20/1/86.—G.B.

Memo. from Mr. F. Croudace to Mr. G. Bewick.

Dear Sir,

28 January, 1886.

I wrote my father, relative to yours of Monday last, and in reply he requested me to write to you saying he was in Sydney just now, but would arrange matters upon his return home.

Yours, &c.,

FRANK CROUDACE.

The Under Secretary for Mines to The Commissioner for Railways.

Sir,

Department of Mines, 31 December, 1885.

I have the honor, by direction of the Secretary for Mines, to request that you will be good enough to arrange with Messrs. Amos Brothers for the removal of the diamond drill No. 12, from Newcastle to the site where the bore is to be put down on the New Lambton property, which is about 2 miles from Adamstown, on the railway under construction from Waratah to Sydney.

I have, &c.,

GERARD E. HERRING,

(For the Under Secretary).

Land-valuer, 6/1/86.—L.P.I. *pro* Secretary. This might be referred to the Traffic Manager, at Newcastle, for the action required—J.B.T., 14/1/86. Mr. Higgs, 16/1/86.—L.P.I., *pro* Sec.

Can you arrange the matter with Messrs. A. & R. Amos or their representative?—R.N., 20/1/86. Mr. Herald. Urgent.

Messrs. Amos Brothers will deliver the drill on arrival.—E.S.P., 28/1/86. Traffic Manager. To Commissioner.—J.H., 28/1/86. Inform, 29/1/86. Under Secretary for Mines, 29/1/86.

The Crown Solicitor to The Commissioner for Railways.

Sir,

Crown Solicitor's Office, Sydney, 16 December, 1885.

I have the honor to request that you will be so good as to cause the sum of £250 to be placed to the credit of my public account in the Commercial Bank, Sydney, to enable me to pay counsel's fees, witnesses' and other expenses connected with the above arbitration.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

Make out voucher.—G.B., 18/12/85. Voucher herewith.—J.R., 18/12/85. Examiner, 19/12/85.—L.P.I., *pro* Sec. Pay £250.—D.V., *pro* Commissioner. Voucher forwarded for payment, —T.S., *pro* Examiner, 29/12/85. Accountant entered voucher, 11,971, £250, 31/12/85.—W.H. And at Treasury.—J.M., 5/1/86. Land-valuer, 6/1/86.—L.P.I., *pro* Sec. Entered, Commissioner.—B.C., 11/1/86.—J.B., *per* A.B.

Mr.

Mr. A. Brown to The Hon. J. Byrnes.

Dear Sir,

New Lambton Colliery Office, Newcastle, N.S.W., 12 December, 1885.

Referring to your communication of the 7th instant, addressed to Mr. J. C. Dibbs, proposing to put down a bore on the New Lambton Estate to test the coal under the land taken for the Homebush Waratah Railway, I beg to inform you that I consider this as a most unreliable and unsatisfactory method of testing either the quality or thickness of the seam. I certainly will not consent to or pay any part of the expenses for such a process.

I have asked for arbitration, which has been agreed to by both parties, and am now prepared to proceed at once on the evidence and proof at my disposal. If the award is unsatisfactory to either party, each has a remedy in the Supreme Court.

As the matter has been a long time on hand, I shall be glad if you will forward the arbitration with as little delay as possible.

I am, &c.,

ALEXANDER BROWN.

The Hon. J. Byrnes to J. Dibbs, Esq.

Dear Sir,

Land Valuer's Branch, Railway Department, Sydney, 7 December, 1885.

In accordance with my suggestion to you this afternoon and your request that I should drop you a line on the subject, I now propose that the diamond drill should be employed in putting one or more bores down on the line of railway running through the New Lambton mining property, in order first to ascertain whether there is coal underlying the railway, and secondly, whether such coal has any mercantile value, and the expense of such test shall be borne by the losing party at the close of the arbitration.

I am, &c.,

JAMES BYRNES.

Minute Paper.

Subject: Collecting evidence at Newcastle *re* New Lambton Coal Company's arbitration.

Railway Department, Land Valuator's Office, Sydney, 30 November, 1885.

THE Land-valuer being about to proceed to Newcastle for the purpose of reporting on some urgent matters there, begs to suggest that the Crown Solicitor might be requested to allow one of his officers to visit Newcastle at the same time, in order to collect evidence and information on behalf of the Commissioner in the New Lambton Coal Company's claim for compensation, which is to be submitted to arbitration immediately.

The Land-valuer purposes leaving for Newcastle to-morrow, Tuesday, 1/12/85, and would be glad to know whether the Crown Solicitor approves of the proposed arrangement, in order that he may provide himself with all the papers, plans, &c., connected with the case referred to.

J. B. THOMPSON,

The Commissioner for Railways, Sydney.

Railway Land-valuer.

Will the Crown Solicitor say if he can detach one of his officers for this purpose.—CH.A.G., 30/11/85.

The business of this office does not enable me to send a clerk with the Land-valuer to Newcastle upon so short a notice, but Mr. Stafford can proceed to Newcastle by the Thursday night's steamer. I understood from the previous correspondence in the matter that the Land-valuer had, prior to making his valuation, ascertained the opinion of local residents as to the value of the land taken, who could be called upon to give evidence, in the event of litigation arising, in support of this valuation. From the above minute I fear this is not the case, as the Valuer now proposes to collect evidence on behalf of the Commissioner—that is, I suppose, to now seek for evidence in support of the Land-valuer's valuation. This is another of the cases in which it is difficult to understand in what way the valuation, which is £492 18s., can be supported, as the claim is for £25,899 3s. Making every allowance for the claim being enormously in excess of any sum the claimants can expect to recover, I fear it will be difficult to uphold the valuation made on behalf of the Commissioner.—JOHN WILLIAMS.

B.C., the Commissioner for Railways, 1/12/85. Land-valuer, B.C., 1/12/85.—CH.A.G.

Before reporting on this claim, I collected sufficient evidence and information to fully justify me, as I believed, in rejecting that part of the claim which is for coal taken and coal severed by the railway. The valuation therefore is for the surface only, the item of coal (which is the bulk of the claim) being rejected. All this is clearly set forth in the Land-valuer's report, even a cursory perusal of which would remove any difficulty in understanding the cause of the enormous discrepancy between the claim and the valuation.

The Crown Solicitor was furnished with a list of witnesses on the 12th October last, and there are others to be had if required; but although aware of the nature of the evidence these are prepared to give, I could not undertake to formulate and arrange that evidence in the shape of a brief for counsel; I therefore made the request for assistance, and also, in accordance with the Crown Solicitor's own suggestion, in the sixth paragraph of his letter of the 6th October last, made in the following words—"I propose (if Mr. Thompson can afford the time) to send Mr. Stafford of this office with him to Newcastle to collect evidence."—J. B. THOMPSON, Ry. Land-valuer, 2/12/85. Commissioner.

Land-valuer will no doubt be able to proceed to Newcastle with Mr. Stafford to-morrow (Thursday) evening; please communicate this to the Crown Solicitor.—CH.A.G., 2/12/85.

I have arranged with Mr. Stafford, of the Crown Solicitor's Office, who is going with me to Newcastle to-night.—J.B.T., 3/12/85. Commissioner. Land-valuer, B.C., 4/12/85. Noted.—J.B.T., 14/12/85. Commissioner.

The Crown Solicitor to The Commissioner for Railways.

Sir,

Crown Solicitor's Office, Sydney, 26 October, 1885.

I have the honor to acknowledge the receipt of your letter of date 20th instant, respecting the arbitration of the New Lambton Colliery Company's claim, and forwarding for my perusal a copy of a report of the Land-valuer in the matter.

With reference to that report, I have to state that I do not clearly understand what is intended by that portion of it in which the Valuer says that I refer to his report as though it "differed in some essential particulars from the practice in all previous cases." I think a perusal of my letter will show that it hardly bears that construction, and I admit that the instructions sent to me are in the usual form.

Referring to the fourth paragraph of my letter, in which I speak of the singular difference between the valuation and the claim, the Valuer states: "But this difference is not the only singular circumstance connected with the case, as for instance the substitution of a claim for £25,899 3s. in February, in lieu of a claim for £8,686, which was all the compensation asked for in the preceding month, January." The only meaning that can fairly be given to this paragraph, used in the way it is, is, that I made or assented to this change in the valuation, which is absolutely untrue, as the Valuer must have known at the time he wrote the paragraph referred to; I knew nothing of either claims or of the valuations until the papers were forwarded to me in relation to the arbitration.

As to the remaining portion of the paragraph, by which I am glad to find that the valuations are based to some extent upon the opinion of persons having local knowledge, I was afraid such was not the case; and although the Valuer's great experience probably renders such reference unnecessary when the land taken is ordinary farming or bush land, or village allotments, there are cases in which, from position, the land is supposed to have an exceptional value, owing to special circumstances; and in these cases local opinion to a great extent creates the additional value, and cannot be dispensed with in dealing with the question of compensation. I think the present case is such an exceptional case.

In explaining why a list of witnesses was not sent, the Valuer suggests—"Nor could they be required unless it were necessary to anticipate litigation." The Valuer is correct in stating that a list of witnesses is not usually sent as a portion of the report to the Commissioner, nor is it required; but when the papers are forwarded to me, it is as well that I should be informed of the manner in which "one of the most ordinary and obvious means of determining the value" has been carried out, in order that I may make the information which had guided the Valuer available in support of his valuation when it has to be upheld before arbitration.

In this case it is hard to believe that the Valuer did not anticipate litigation; Messrs. Dibbs and Brown are both men of business. The mine is not a probable mine, but one in full work, and an estimation can therefore, I should suppose, be made of what the loss or damage occasioned by the Railway taking really is. The claim is for £25,899 3s., and the valuation £492 18s. The Valuer must surely be one of the most sanguine of men if he supposed that the claimants would abandon their claim and accept his valuation.

I have not said that Mr. Cowlshaw's valuations were more successful than the present Valuer's. I had not considered the matter in that way at all, and had not the information, even if I had thought it to be desirable to institute a comparison in figures. I am glad (and surprised) to find, from the elaborate calculations supplied by the Valuer, that results of the arbitrations upon his valuation have proved to be thirteen and a fraction per cent. more favourable to the Commissioner than those of the late Mr. Cowlshaw.

I also have noticed that the recent arbitrations have been, as suggested by the Valuer, chiefly remarkable for their want of success; and upon referring to the officer of this Department who has attended them, have been informed that this arises from the difficulty in obtaining evidence to support the Valuer's views,—a class of evidence which can only be obtained by inquiry being made at the time of the inspection of the land for valuation, as, after a dispute as to value has arisen, it is difficult to get information from local residents tending to depreciate their neighbours' claims. I know that Mr. Cowlshaw was in all cases able to afford information as to the local residents who could be called on the Government behalf; and as this information did not appear, so far as I was informed, to be obtainable in the same degree in recent cases, I was afraid that the Valuer depended upon evidence as to value being obtained after the dispute had arisen, rather than the necessary information being obtained at the time he was making his valuation.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

Land-valuer.—G.B., B.C., 29/10/85. Noted.—J.B.T., 2/11/85. Commissioner.—2/11/85.

Railway Land-valuer Thompson to The Commissioner for Railways.

Railway Department, Land Valuator's Office, Sydney, 12 October, 1885.

Subject: New Lambton Colliery Company arbitration.

THE Crown Solicitor's letter of the 6th instant, in reference to the above arbitration, which has been referred to me, proposes that I should accompany Mr. Stafford to Newcastle to collect evidence, which, with the sanction of the Commissioner, I am prepared to do at any time required. As it also appears to reflect upon the manner in which this case has been submitted, and upon my practice in connection therewith, I beg to be allowed to make a few remarks thereon.

The Crown Solicitor throughout his letter refers to this case, as it has been presented to him, as though it differed in some essential particulars from the practice in all previous cases. I find, however, after careful inspection of the records, that the procedure herein differs in no respect whatever from that followed in all previous cases for the last thirty years.

In the fourth paragraph of his letter the Crown Solicitor speaks of the *singular* difference between the valuation and the claims; but this difference is not the only singular circumstance connected with this case, as, for instance, the substitution of a claim for £25,899 3s. in February, in lieu of a claim for £8,686 13s., which was all the compensation asked for in the preceding month of January; and the fact that

that the Scottish Australian Mining Company adjoining on one side, and the Waratah Coal Company adjoining on the other side of the land now in question, have unhesitatingly accepted offers of compensation consistent in every detail with that which is now submitted to arbitration. In this paragraph the Crown Solicitor complains that my "report does not show that it is based upon information obtained from persons acquainted with the value of coal land generally or of this land in particular," and also that I "do not suggest the names of persons who can be called to support my valuation." As to the omission from my report of the statement quoted, I submit that its insertion could only be required, were it necessary to show that I had employed one of the most ordinary and obvious means of determining the value; and the absence therefrom of the names of proposed witnesses has never before in any similar case been objected to, nor—I respectfully submit—could they be required, unless it were necessary to anticipate litigation in every case, and even then the supplying a list of witnesses with the valuation would be of doubtful expediency.

In the concluding paragraph the Crown Solicitor expresses his ignorance of what my practice is, and then relates that of the late Mr. Cowlshaw as having met with his approval. I cannot find that there has been any change in the practice since Mr. Cowlshaw's time; but in order to ascertain how far the contrary opinion is borne out by the facts, I have made a careful search of the records of arbitration cases during Mr. Cowlshaw's tenure of office, and of those upon my valuations during the last five years, for the purpose of comparison, and the result is given below in tabulated form. The indisputable figures given clearly show that Mr. Cowlshaw's arbitrations were not more successful than have been those of his successors. If the results can be taken to indicate the character of the action of the Land-valuer, which I do not assert or believe, they show that, however superior Mr. Cowlshaw's practice may have been, his arbitrations, like those of more recent date, have been chiefly remarkable for the uniform want of success which attended them.

J. B. THOMPSON,
Railway Land-valuer.

COMPARATIVE Statement of Arbitrations above referred to.

| Valuer. | Period. | No. of Cases. | Claims. | | | Offers. | | | Awards. | | | Increase in Awards, per cent. | Ratio of Awards to Claims, per cent. |
|----------------------|-----------------|---------------|---------|----|----|---------|----|----|---------|----|----|-------------------------------|--------------------------------------|
| | | | £ | s. | d. | £ | s. | d. | £ | s. | d. | | |
| T. Cowlshaw | 1858 to 1874... | 43 | 68,952 | 3 | 0 | 22,460 | 1 | 4 | 37,253 | 4 | 9 | 65·86 | 53·89 |

Witnesses suggested:—Joseph Creer, Newcastle; H. Harper, M.E., Newcastle; John Ripon, Newcastle; John M'Kenzie, Newcastle; Thomas Lewis, Wollongong; and to consult Thomas Croudace, Esq., Newcastle, and Messrs. J. & A. Brown, Newcastle.

The Crown Solicitor to The Commissioner for Railways.

Sir,

Crown Solicitor's Office, Sydney, 6 October, 1885.

I have the honor to inform you that I have this day received a letter from Mr. Mackenzie, informing me that he and Mr. Mills have appointed Mr. J. R. M. Robertson as Umpire in the matter of the arbitration of the New Lambton Colliery compensation claim, and asking when an appointment to proceed can be given.

The only information at present forwarded to me is the claim made by the Company and the valuation by Mr. Thompson. The claims are for £8,686 13s. and £25,899 5s., and Mr. Thompson's valuation, which has been offered to the Company, is £492 18s.

I notice in Mr. Thompson's report he calls attention to the fact that both of the claims made by the Company are out of time, and this is noted by the Commissioner; but I suppose the objection was ultimately waived, as an Arbitrator has been appointed on behalf of the Commissioner; anyway I think that appointment would operate as a waiver.

The singular difference between Mr. Thompson's valuation and the claims is so great, that it is absolutely necessary that the valuation should be supported by a large amount of evidence of unquestionable value; but Mr. Thompson's report—the only information sent me—does not show that it is based upon information obtained from persons acquainted with the value of coal land generally or of this land in particular, nor does he suggest the names of persons who can be called to support his valuation.

I suppose, in coming to an opinion as to the amount to be offered in settlement of the claim, Mr. Thompson has not relied solely upon his own views of the matter, but has consulted persons having a special knowledge of the subject, and is prepared to give the names of persons who can be called as witnesses on your behalf; no information of this sort is, however, with the papers.

I propose, if Mr. Thompson can afford the time, to send Mr. Stafford, of this office, with him to Newcastle to collect evidence, as it clearly will not be safe to rely upon Mr. Thompson's unsupported evidence.

I do not know what Mr. Thompson's practice is; but it was customary with the late Mr. Cowlshaw, in making a valuation, to ascertain, at the time he was viewing the land, the names of persons who could give evidence in support of the valuation; there was, therefore, then no difficulty in obtaining evidence if the matter subsequently came to arbitration.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

Land-valuer, B.C., 8/10/85. Report herewith.—J.B., 12/10/85.

NEW SOUTH WALES.

RAILWAY WORKSHOPS, EVELEIGH.
(RETURN RESPECTING COST OF, &c.)

Ordered by the Legislative Assembly to be printed, 14 October, 1886.

[*Laid upon the Table of the House in accordance with promise made by the Honorable the Secretary for Public Works, in answer to Question No. 3, on Votes and Proceedings No. 109, of the 12th August, 1886.*]

Questions.

- (1.) What is the total amount paid to date for machinery, of whatever kind, for the Eveleigh Workshops?
- (2.) What is the total amount paid for labour, of whatever kind, in connection with the machinery?
- (3.) What is the amount of all other charges in connection therewith?
- (4.) What Officer recommended the purchase and erection of the machinery?

Answers.

- (1.) Total amount paid for machinery, £51,555.
 - (2.) Total amount paid for labour, £3,133.
 - (3.) Amount of all other charges:—Machinery, £2,579; foundations for do., £5,982.
 - (4.) The Locomotive Engineer.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY EXTENSION, GLEN INNES TO INVERELL.

(PETITION FROM RESIDENTS OF NEW ENGLAND IN FAVOUR OF, *via* URALLA.)*Received by the Legislative Assembly, 24 February, 1886.*

The Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble petition of the undersigned residents in the New England district,—

RESPECTFULLY SHOWETH :—

That the contemplated extension of the Great Northern Railway from Glen Innes to Inverell if adopted would be injurious to the commerce of the Northern portion of the Colony, and detrimental to its best interests, in proof whereof we would respectfully submit the following :—

1. That the line from Newcastle to Inverell by Glen Innes would be 50 miles longer than by Uralla.
2. By following the line to Glen Innes an elevation of 1 200 feet has to be ascended and descended, and thence to Inverell the incline is nearly double what it would be from Uralla to Inverell.
3. The character of the country between Glen Innes and Inverell is pastoral, and a large portion freehold, whilst the shorter line from Uralla to Inverell passes through a populated district, embracing Yarrowyck, Bundarra, Tingha, Stanborough, and Stannifer, being a mineral country throughout, over 30 miles of the line passing through gold and tin mineral reserves.
4. The surveyed line from Uralla to Inverell is not only direct but also has an easy and gradual decline the whole way, and passes through the centre of Cope's Creek tin-fields, whilst the projected line from Glen Innes to Inverell would afford little or no benefit for the conveyance of the produce of these mines to a port of shipment.
5. Your Petitioners are strongly of opinion that in the construction of railway lines at present preference should always be given to those which are in most direct communication with the metropolis, and that the proposal to connect Inverell with the Great Northern Railway Line at Glen Innes would indicate a desire to benefit the ports of Queensland, rather than those of New South Wales.
6. That in view of the 50 miles extra haulage and great ascent and descent of the line over Ben Lomond and Waterloo Ranges, your Petitioners consider that a permanent and unnecessary loss both to the public and Government would result.

Your Petitioners therefore pray that your Honorable House will take the above premises into favourable consideration, and adopt the short and direct route from Newcastle to Inverell *via* Uralla.

And your Petitioners, as in duty bound, will ever pray, &c.

[*Here follow 347 signatures.*]

1885-6.

—
LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GREAT NORTHERN RAILWAY LINE THROUGH URALLA.
(PETITION FROM RESIDENTS IN URALLA AND DISTRICT.)

Received by the Legislative Assembly, 23 September, 1886.

The Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned, residents in Uralla and District,—

RESPECTFULLY SHOWETH:—

That your Petitioners have been and still are put to much inconvenience by the whole of the eastern boundary of the Municipality of Uralla being fenced in by the Great Northern Railway.

That there is but one way of ingress or egress on that side, and this is a crossing at the extreme south end of Municipality.

That your Petitioners, who live on the south-east side of town and outside of Railway, have to make a detour when coming to the town on business, or to attend service in either the Presbyterian or Roman Catholic Churches, and those who live in the town have no means of communication for procuring firewood, &c., on the south-east side of Municipality, except by going round by the way at extreme south end.

When the Railway was in course of construction the residents in the town and district, foreseeing the great inconvenience to which they would be put by the projected fence, protested strongly against what they considered an injustice, but no attention was paid to the protest.

Subsequently the Municipal Council wrote to the Commissioner of Railways. That gentleman hearkened to their protest and made an inquiry into the matter, and then informed the Council that their request could not be granted.

Your Petitioners would most respectfully point out that a high level bridge could be made at a point on the Railway near the intersection of King-street, and thus the danger and expense attendant on a level crossing would not be known.

Your Petitioners therefore pray that your Honorable House would take the above premises into your favorable consideration and grant to us an opening from the town across the Railway.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 136 signatures.]

1885-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAY FROM LAWRENCE TO TENTERFIELD.
(PETITION FROM J. H. JAGGERS, CHAIRMAN OF PUBLIC MEETING HELD AT LAWRENCE.)

Received by the Legislative Assembly, 18 February, 1886.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned, Chairman at a Public Meeting, held at Lawrence, on the 19th December last, *re* Railway from Lawrence to Tenterfield,—

HUMBLY SHOWETH,—

1st. That Lawrence is one of the best sites for a large population on the river, being high and level land, which is principally in the hands of the Crown, the sale of which would return a large sum.

2nd. A further advantage to be gained is the shortness of the line asked for, viz., 10 miles to the Cross Roads; thence to utilize the coast line for a distance of 32 miles to Deep Creek (such coast line being looked upon as a certainty). Thence up the valley of that creek to the Richmond Range; thence crossing that range down the Tabulam Waters to Tabulam, a distance of 28 miles; thence to Tenterfield, a distance of 37 miles; making a total length of 75 miles.

3rd. That the sale of land in Lawrence, and between there and Tenterfield, we believe would realize sufficient money to pay for the construction of the proposed line. These facts, coupled with the probable cost of deepening the river from Lawrence to Grafton, a distance of 22 miles, is, in the humble opinion of your Petitioners, a sufficient reason why the route from Lawrence should be adopted.

Your Petitioners earnestly pray that your Honorable House will take these foregoing facts into favourable consideration.

And your Petitioners, as in duty bound, will ever pray.

J. H. JAGGERS,
Chairman of Meeting.

1885-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MICALAGO RAILWAY STATION.

(PETITION FROM SQUATTERS, FARMERS, GRAZIERS, &c.)

Received by the Legislative Assembly, 13 July, 1886.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned, Squatters, Farmers, Selectors, Graziers, Traders, Artizans, and others,—

HUMBLY SHOWETH :—

1. That the site at present adopted for the Micalago Railway Station, situated as it is in the midst of a very large area of private property without means of either ingress or egress, is so unsuitable as to cause great inconvenience to the residents of Micalago and surrounding neighbourhood, as well as to the travelling public.

2. That as the business of our Post and Telegraph Offices will no doubt eventually be performed at the Railway Station, it is expedient that the said station should be so situated as to be convenient to the majority of residents of this neighbourhood.

3. That in view of the extensive farming operations that will be created in this district by the opening of the railway to Micalago, it is desirable that the local Railway Station should be situated as near as possible to a point opposite the Public School, thus taking advantage of the only road available to the majority of the farming population by which they can gain admission to the station-yard.

4. That the erection of the station within easy access of the Public School will afford many children resident in this district who are suffering from the want of education an easy mode of conveyance to the said school.

Your Petitioners therefore pray that your Honorable House will take the foregoing premises into favourable consideration and grant that the site at present adopted for our Railway Station at Micalago may be substituted by a more suitable one.

And your Petitioners, as in duty bound, will every pray.

[Here follow 114 signatures.]

1885-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAY TO BURROWA.

(PETITION—RESIDENTS OF YASS AND TANGMANGAROO.)

Received by the Legislative Assembly, 27th November, 1885.

To the Honorable the Speaker and Honorable Members of the Legislative Assembly, in Parliament assembled.

The Petition of the undersigned,—

HUMBLY SHOWETH :—

That it is contemplated to construct a line of railway from the Great Southern Railway to the Town of Burrowa.

That the line of railway as proposed, namely, from the Great Southern Railway, at the Galong Siding, will be a much inferior line than one which would connect Burrowa with the Bowning Railway Station, *via* Tangmangaroo, for the following reasons :—

- 1st. That a commodious Railway Station, goods shed, and all other necessary buildings, with a staff of officers to meet the requirements of a large trade, are already erected and stationed at Bowning, while a large outlay would be entailed in the erection of the necessary station buildings at Galong Siding, and a continuous drain upon the Treasury in maintaining an extra staff of officers if the proposed scheme be adhered to.
- 2nd. That a line of railway from Bowning to Burrowa would pass through comparatively level country, while the Galong to Burrowa route passes through comparatively broken, uneven country, unless a considerable deviation be made from a direct line.
- 3rd. That the distance along the railway line from Bowning to Galong is exactly twenty-two miles (the distance from Galong to Burrowa eighteen miles), while the distance direct from Bowning to Burrowa, *via* Tangmangaroo, is only twenty-two miles in all. Therefore, if a line is constructed from Galong to Burrowa, as contemplated, it will necessitate eighteen miles of extra haulage for all time, which is a serious item of expenditure, especially to all persons who would use the line, as they would have the extra mileage to pay for in goods and passengers, besides the cost of maintenance of eighteen extra miles of railway.
- 4th. That if a line of railway were constructed between Bowning and Burrowa, the line would pass, the greater part of the route, through a thickly populated agricultural district; and, by having one or two sidings between the starting-point and terminus, the products of graziers and agriculturalists alike, in the localities of Tangmangaroo, Wargeila, Pudman, Rye Park, Throsby's Creek, Lang's Creek, and a number of settlers on the Burrowa River, would be readily conveyed to market, while the Galong to Burrowa route would pass through the holdings of only two or three individuals (if not the whole) on most of the route.
- 5th. That the district around Burrowa is rich in mineral deposits, there being a large and increasing output of copper at the Frogmoor Mines; and, as a consequence, the greater necessity exists for the constructing of railways along routes which not only give the greatest amount of benefit to the greatest number of persons, but minimise the distance as regards haulage and wear and tear in maintenance of the line and rolling stock.

Your Petitioners, therefore, pray that your Honorable House will not proceed with the construction of the line from Galong to Burrowa before a trial survey of the route suggested by your Petitioners, *i.e.*, from Bowning to Burrowa, *via* Tangmangaroo, has been made, but will take such steps as, under the circumstances, your Honorable House in its wisdom shall deem meet.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 283 signatures.]

1885-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MRS. CATHERINE BUTTERLY.

(PETITION OF.)

Received by the Legislative Assembly, 12 August, 1886.

To Parliament assembled.

The humble Petition of Catherine Butterly, of Sydney, in the Colony of New South Wales, widow,—
HUMBLY SHOWETH:—

1. That your Petitioner's late son, Stephen Butterly, deceased, was an employé in the New South Wales Government Railways in the year 1882, and was employed at Blayney, on the Great Western Line, in the capacity of Railway platform porter.

2. That your Petitioner's said deceased son, by his earnings as such employé, was the only support of your Petitioner and her daughter.

3. That in the exercise of his duties as such employé the said deceased had occasionally to assist at shunting and other Railway work.

4. That on the morning of Monday, the 20th November, 1882, upon the arrival at Blayney aforesaid of the daily morning trains from Bathurst, the deceased with several other men at the Blayney Station were required to detach some waggons or trucks from the said train.

5. That during shunting and whilst being engaged in coupling one of the waggons the said deceased in trying to get out of the way of some approaching trucks got jammed between the buffers of the waggons he had been endeavouring to couple, and was so seriously injured that he died almost immediately.

6. That your Petitioner's said deceased son was a young man of steady habits and quiet disposition, and respected by all his fellow employés. Zealous in his work and anxious to acquire the knowledge requisite to enable him to rise in his vocation the better to enable him to support his mother, your Petitioner, and the lamentable accident, which caused his untimely death, and left your Petitioner in almost destitute circumstances, could not in the remotest way be attributed to any want of care, diligence, or forethought on his part.

Your Petitioner therefore humbly prays that the Honorable House will kindly take the foregoing statement into favorable consideration and will grant such relief to your Petitioner as will recompense in some measure the irreparable loss sustained by her through the death of her only son, whilst in the execution of his duty, who was her only support.

And your Petitioner, as in duty bound, will ever pray.

her
CATHERINE × BUTTERLY,

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GOVERNMENT RAILWAY BILL.

(MESSAGE No. 56.)

Ordered by the Legislative Assembly to be printed, 5 August, 1886.

CARRINGTON,
Governor.

Message No. 56.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to constitute the office of Minister for Railways, to make better provision for the construction, maintenance, and management of Government Railways and Tramways, and for the regulation of persons employed in the Railway and Tramway Services, and for other purposes.

Government House,

Sydney, 5th August, 1886.

1885-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

TRAMWAYS.

(PROGRESS REPORT UPON TRANSACTIONS FOR 1885.)

Ordered by the Legislative Assembly to be printed, 28 April, 1886.

The Commissioner for Railways to The Secretary for Public Works.

Sir,

Railway Department, 24 April, 1886.

I have the honor to submit a Progress Report upon the transactions of the Tramways for the year 1885. A summary only is here appended; the detailed account will follow, and will be published in the usual Annual Report upon the Railways and Tramways of the Colony to be issued in July next.

The Report of the Tramways for the year 1884 disclosed that out of the gross revenue—£219,942—the expenditure absorbed £215,167, leaving only the sum of £4,775 net, which returned 0·76 per cent. upon the capital invested, viz., £643,111.

At the close of 1885 the capital expenditure had been increased to £708,109, and the gross revenue to £223,340. The expenditure fell from £215,167 to £207,995, leaving the sum of £15,345 available for interest upon capital—a return equal to 2·17 per cent. upon the gross amount expended on lines in operation.

This comparatively favourable result has been achieved—(1st) by economy in working; and (2ndly) by a reduction in the train mileage, which latter fell from 1,242,491 miles run in 1884 to 1,220,500 miles run in 1885.

The detailed Report to follow will show the particulars of the transactions which have contributed to this result, and will demonstrate that to a further reduction in the train mileage—that is, to the curtailment of what has been proved to be the unprofitable running of trams in certain parts of the day—must we look, chiefly, for better returns.

I have, &c.,

CHAS. A. GOODCHAP.

SUMMARY.

COMPARATIVE RETURN of the Tramway transactions for 1884 and 1885.

| Year. | Gross Revenue. | Working Expenditure. | Net Revenue. | Capital Expended. | Return of Net Revenue to Capital Expended. |
|--------------|----------------|----------------------|--------------|-------------------|--|
| | £ | £ | £ | £ | |
| 1884 | 219,942 | 215,167 | 4,775 | 643,111 | 0·76 |
| 1885 | 223,340 | 207,995 | 15,345 | 708,109 | 2·17 |
| Increase ... | 3,398 | | 10,570 | 64,998 | 1·41 |
| Decrease ... | | 7,172 | | | |

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

TRAMWAYS.

(TOTAL COST OF, INCLUDING ROLLING STOCK, BUILDINGS, AND LAND.)

*Ordered by the Legislative Assembly to be printed, 4 May, 1886.**[Laid upon the Table of the House, in accordance with promise made by the Honorable the Secretary for Public Works, in answer to Question No. 3 on Votes and Proceedings No. 40, of the 6th April, 1886.]*

- (1.) Return of the total expenditure on the permanent ways of the Tramways, including that which is in course of expenditure.
- (2.) The same for all rolling stock, buildings, machinery, &c., &c., paid out of capital.
- (3.) The total amount paid for land, and where situated.
- (4.) Total miles opened, and average cost per mile.

1. What has been the total expenditure on the permanent ways of the Tramways, including that which is in course of expenditure?

Answer :—£461,614 18s. 7d.

2. The same for all rolling stock, buildings, machinery, &c., &c., paid out of capital?

| | £ | s. | d. |
|--------------------------------------|-----------------|----------|-----------|
| <i>Answer</i> :—Rolling Stock | 204,986 | 16 | 6 |
| Buildings | 53,969 | 9 | 11 |
| Machinery | 4,847 | 15 | 2 |
| Sundries | 14,553 | 3 | 4 |
| | <u>£278,357</u> | <u>4</u> | <u>11</u> |

3. The total amount paid for land, and where situated?

| | | | |
|---|-----------------|----------|----------|
| <i>Answer</i> :—Redfern to Circular Quay | 17,286 | 0 | 1 |
| Liverpool-street to Randwick and Coogee | 14,381 | 4 | 6 |
| Darlinghurst to Woollahra and Waverley | 2,110 | 12 | 10 |
| Newtown (Glebe Junction) to Marrickville | 136 | 19 | 4 |
| Glebe Junction to Forest Lodge | 1,690 | 19 | 6 |
| Railway Station Junction to Botany | 160 | 17 | 2 |
| Campbelltown to Camden | 3,438 | 6 | 9 |
| North Shore Cable Tram | 12,309 | 7 | 7 |
| Circular Quay to Kent-street | 99,236 | 19 | 7 |
| | <u>£150,751</u> | <u>7</u> | <u>4</u> |

4. Total miles opened, and average cost per mile?

Answer :—Total miles opened, 35.

Average cost per mile opened, including all charges, £21,386.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

TRAMWAYS.

(DISMISSAL OF ENGINEER HOSKINGS.)

Ordered by the Legislative Assembly to be printed, 24 November, 1885.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 24th September, 1885, That there be laid upon the Table of this House,—

“ Copy of a letter from one of the Members for Redfern, Mr. Sutherland,
“ to the Commissioner for Railways, having reference to the dismissal of
“ Engineer Hoskings from the Tramway Works.”

(Mr. Abigail.)

The Commissioner for Railways to J. Sutherland, Esq., M.P.

Sir,

Department of Public Works, Railway Branch, Sydney, 4 July, 1884.

Adverting to your personal interview respecting the dismissal of William Hoskings, a fitter, lately employed in the Tramway Branch, I have the honor to enclose herein copy of report by the Superintendent of Tramway Rolling Stock. In my opinion Hoskings is unable to rebut the statements made therein, and I think the action taken was called for by the circumstances of the case.

I have, &c.,

CH. A. GOODCHAP,
Commissioner for Railways,
Per G.B.

[*Enclosure.*]

REPORT by Superintendent of Tramway Rolling Stock.

WHEN W. Hoskings, fitter, was reinstated by Commissioner's order, he asked me to allow him to work at Pitt-street yard instead of Randwick, as he thought, under the circumstances of his reinstatement, there would be a feeling against him at the latter place. To prevent the possibility of this I acceded to his request.

The occasion which led to my dismissing him was:—Some of the night fitters had been absent through sickness, and the night repairs increasing, the foreman applied for extra assistance for two nights. Hoskings and Allerdice were instructed to come on the Saturday and Bruce on the Sunday night. Hoskings did not complain of overwork, but distinctly told his foreman he would not come for any one. It was pointed out to him that the department required his assistance for one night only, but he still refused. The other men came and worked as instructed.

For a week previous to this request Hoskings had not been employed extra time; and as he left work at noon on the Saturday, and was not required until 11 p.m. that night, he had eleven hours rest; then he would have from 6 a.m. on Sunday to 7.45 a.m. on Monday for further rest. The Commissioner will see the statement of overwork made to cover his refusal is without the slightest foundation.

I felt a workman, whom the exigencies of the department demanded should work another seven hours, under the circumstances refusing to do so, deserves no consideration. If I had allowed Hoskings to do as he pleased with impunity, other men, when called upon to work, would be encouraged to refuse if it did not please them, and as a consequence the department and public would be subject to serious inconvenience. I am sure the Commissioner will say the proper course has been pursued towards Hoskings, especially if discipline is to be maintained.
Commissioner.

GEORGE DOWNE, 1/7/84.

Send copy of this report to Mr. Sutherland, and express my opinion that if Mr. Hoskings is unable to rebut the statements made he was rightly served in being dismissed.—CH. A. G., 2/7/84.

J. Sutherland, Esq., M.P., to The Commissioner for Railways.

Sir,

76, Abercrombie-street, Sydney, July 10, 1884.

I am in receipt of yours of the 4th instant, *re* Hosking's case. I must thank you for the courtesy extended by your reply, and the trouble I may have given you in this case.

You will remember that I called on you and only asked you to see Mr. Hoskings, and let him state his own case; you afterwards did so, as I informed you I knew very little of Mr. Hoskings, except what I knew from his previous employers, and that was very commendable of his character, for honor and ability as a tradesman and a good citizen. I believe he deserves and still retains the same good name. You say that in your opinion Mr. Hoskings is unable to rebut the statements made in the report, that he had refused to come to work on Saturday night. Mr. Hoskings has never to me denied that statement, but always said he refused, and gave me his reasons for so doing. What I know personally of this case is as follows:—

When coming from the country on Monday, by train, and not far from the Sydney station, I met Mr. Hoskings, with his head bandaged, one side of his face swollen, and the mark of a blister on one side of his head; he said he had contracted a severe cold while working in the draughts. I said he should be in bed; he then informed me he was unable to do anything, but had to go to the works, and we parted. Some days after he called at my residence, and informed me that he was dismissed for refusing to work on Saturday and Sunday nights. He said—"From the severe cold and excruciating pain I had for the previous few days it would have been death to me if I had gone into the pits to work at night time, and when asked by the foreman, when passing out from work on Saturday, to come back to work at 11 o'clock on that and Sunday night, I said I had worked very hard for fifty hours that week, and that was two hours more than the Minister for Works said publicly that any man in the Government service was required to work, and with the severe cold I then had I could not come to work on Saturday or Sunday nights; he said nothing, but passed on; this was about mid-day on Saturday. I went home, and by advice blistered one side of my head and applied other remedies necessary to relieve me of the excruciating pain I was then suffering. Early on Monday morning I sent my boy to the foreman on the works, with a note stating I was unable to come to work."

I have said nothing here with the view of inducing the Commissioner to reconsider the opinions he has formed on this apparently small, but I think very important, case, and, from the evidence before the Commissioner I am free to admit he could come to no other conclusion than he has come to. I only desire to place on record my opinion on this case, as it is forced upon me, and is a fair sample of the many cases brought under my observation as having been decided on insufficient evidence, and subversive of the pure principles of justice or fair play.

Mr. Downe very properly, and in this case very successfully, refers the Commissioner to the necessity for the maintenance of proper discipline in his Department. There is no one admits the necessity for that more than I do; but experience has proved to me that profitable discipline can only be carried out by doing justice to all, by careful inquiry, and discriminating between the good, bad, and indifferent. Has this case been treated on these lines? I unhesitatingly say, no.

I am aware there is in some places a system of discipline carried out exactly the reverse of this, and that system will always prove itself to be unreasonably costly in its maintenance, and unsatisfactory and irritating to all concerned.

Hoskings as an individual is nothing to me, but Hoskings as one of the working bees of this country's hive is of some importance to all, as his case has been decided on the same lines as most others that has been brought under my observation, and he has been dismissed the service, not for being a drunken, inferior workman, not for being an unprofitable workman, but for not obeying the order of his foreman, whereas if he had obeyed that order in his then state of health he would have endangered his life, and having a wife and eight helpless children depending on him for protection and support, I think he was perfectly justified in not complying with the request to go to work at night. No inconvenience could arise to the Department, there being five hours before any one was required, and plenty willing to do the work; and he said under other circumstances he would have complied with the order, even if he believed it was given unnecessarily, to injure and annoy him. I regret very much the necessity for me thus having to comment on the Commissioner's letter, registered No. 84-2,801.

I have, &c.,

JOHN SUTHERLAND.

Let me have papers.—CH. A. G., 11/7/84. Papers herewith.—J. S., 14/7/84.

If this man was suffering in the way described, and Mr. Sutherland's evidence can of course be relied upon and is unimpeachable, then I think he was treated harshly—no doubt, unconsciously, because the state of health he was in was not known.—CH. A. G., 15/7/84. Mr. Downe.

The statements made by Hoskings are untrue, and as these have led the Hon. J. Sutherland to record his opinion so strongly, being under the impression full inquiry was not made before Hoskings was dealt with, I shall be glad if the Commissioner will personally examine Hoskings with Mr. Howe and Mr. Davy in reference to his (Hoskings') conduct for which his services were dispensed with, as I feel confident the Commissioner will see and be able to assure the Hon. J. Sutherland that discrimination was exercised and justice done to Hoskings, consistent with the maintenance of discipline in the Department.

—Geo. Downe, 17/7/84. Commissioner.

I

I will make the inquiry suggested. Let all concerned know. Make the day Monday, at half-past 11.—CH. A. G., 24/7/84. Mr. Downe. Urgent. B.C.

Mr. Howe and Mr. Davy will be at Commissioner's office at time stated. Hoskings has also been communicated with and requested to be present at same time.—GEO. DOWNE, 26/7/84. Commissioner.

The Commissioner for Railways to J. Sutherland, Esq., M.P.

Sir, Department of Public Works, Railway Branch, Sydney, July 25, 1884.
Referring to your letter of the 10th instant, respecting the dismissal of William Hoskings from the Tramway workshops, I have the honor to inform you that, in order to see that justice is done in this case, I have decided on holding an inquiry, and the same will be held at this office on Monday next, at half-past 11 o'clock.

I have, &c.,
CH. A. GOODCHAP,
Commissioner for Railways.
Per G.B.

I have seen Hoskings in the presence of Howe and Davy. I can do nothing for him. He said he did not think he ought to be called upon to work extra time, and had a right to refuse.—CH. A. G., 28/7/84.

Hoskings who was employed in Tramway Branch as a fitter has lost his employment for refusing to work overtime; he is a good workman, I believe, and is sorry for his disobedience. I cannot reinstate him in Tramway Branch, but as the man has a large family, and is out of employment, I shall be glad if Mr. Scott can make room for him.—CH. A. G., 29/8/84.

Please let me know; I am anxious to find work for Hoskings.—CH. A. G. An additional fitter can profitably be employed in this Branch. Please arrange for Hoskings being taken on.—W. SCOTT (*pro* D.C.M'L.), 30/8/84. Locomotive Overseer. William Hoskings commenced work on the 8th instant. Proposed rate of pay, 10s. per day.—T. MIDELTON (*per* D.L.N.), 15/9/84. Locomotive Engineer. Approved.—W. SCOTT, 15/9/84. Hoskings has been found employment.—W.S. (*per* D.C.M'L.), 18/9/84. Commissioner. Inform Mr. Sutherland.—CH. A. G., 23/9/84.

The Commissioner for Railways to J. Sutherland, Esq., M.P.

Sir, Department of Public Works, Railway Branch, Sydney, 25 September, 1884.
Referring to the correspondence that has passed respecting the case of William Hoskings, formerly employed in the Tramway Department, and who was dismissed for refusing to work overtime, I have the honor to inform you that the matter has been reconsidered, and I have approved of his being employed in the Locomotive Engineer's Branch, and I am informed that he commenced duty on the 8th instant at 10s. per diem.

I have, &c.,
CH. A. GOODCHAP,
Commissioner for Railways.
Per G.B.

1885-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

TRAMWAY BETWEEN WAVERLEY AND RANDWICK.
(PETITION FROM ELECTORS IN THE BOROUGHES OF RANDWICK, COOGEE, AND WAVERLEY.)

Received by the Legislative Assembly, 7 September, 1886.

To the Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.
The humble Petition of the undersigned owners of property and electors in the Boroughs of Randwick, Coogee, and Waverley,—

SHOWETH:—

That your Petitioners, being owners of property and electors in the Boroughs of Randwick, Coogee, and Waverley, having heard that it is in contemplation by the Government of this Colony to connect, by a loop-line, the tram terminus at Waverley with the engine-sheds at Randwick, beg to call your attention to the numerous advantages offered by an alternative connection, *viâ* Coogee.

We beg respectfully to request that the Government will cause a survey to be made of the route mentioned below, before any further steps are taken in the matter, *viz.*:—From the present terminus in Leichhardt-street, along Albion-street, Fern-street, Susan-street, Brook-street, Division-street, Arden-street, and Allison-street, to the crossing of Beach-street; thence through the reserve to a point near the cliff at the back of the “Baden Baden Hotel”; thence southerly along the reserve between the hotel fence and the sea for about 20 chains; thence westerly through the reserve to Beach-street, opposite the Ice Gardens; thence to the present Coogee tram terminus, being a total distance of about 1 mile and 60 chains.

We have reason to believe that a grade could be obtained on this route not exceeding one in thirty-five, being much easier than the present one between Coogee and Randwick.

In the event of this line being constructed it is certain that there would be a very large traffic over it, as it would give the inhabitants of Waverley, Paddington, Woollahra, and Bondi, easy access to Coogee, and it would prove a most attractive route for the people of Sydney and visitors from other places, who would be enabled to see the whole coast-line from Bondi to Coogee in the course of a Saturday afternoon or on Sundays and holidays.

The route, as herein proposed, would only necessitate some twenty chains more formation than the proposed connection *viâ* Frenchman’s Road, with the Randwick engine-sheds, and as nearly the whole of the line would pass over either public streets or public reserves the expenditure on the purchase of land for the purposes of the tram-line would be reduced to a minimum.

For these and other weighty reasons your Petitioners humbly pray your Honorable House to take the foregoing premises into your favorable consideration.

And your Petitioners, as in duty bound, will ever pray, &c.

[*Here follow 50 signatures.*]

1885-6.

NOTE.—The amount per mile proposed to be expended on each class of Roads is as follows:—1st class, £50; 2nd class, £25; 3rd class, £15; 4th class, £10; 5th class, £7; 6th class, £5.

| | £ |
|-----------------------|----------------|
| Northern Roads | 6,931 |
| Western Roads | 140,807 |
| Southern Roads | 64,992 |
| | 120,525 |
| Total | 17,858 |
| | 326,324 |

N.B.—All votes for roads within Municipal limits have been excluded from this Schedule. No sum herein contained is, therefore, to be expended within the boundaries of any Municipality.

N.N.B.—The whole of the roads contained in this Schedule are subject to a reduction of 5 per cent, in order to bring the amount within the reduced Estimate.

WILLIAM JOHN LYNE.

1885-6.

—
LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ROAD FROM FELLTIMBER CREEK TO CARCOAR.

(CORRESPONDENCE.)

Ordered by the Legislative Assembly to be printed, 4 February, 1886.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 24th September, 1885, That there be laid upon the Table of this House,—

“Copies of all Surveyors’ reports, and reports of other Public Officers, and
“of all petitions, documents, declarations, and other papers, in reference
“to a request made by the people of Carcoar for a Road from Felltimber
“Creek to Carcoar.”

(*Mr. Garrett for Mr. Baker.*)

VOTES No. 11.—Motion, Thursday, 24 September.

I FORWARD papers herewith. We really have not assistance to make the copies required; the cost of same would almost make the road; perhaps the original papers would suffice.

Mr. G. Campbell to The Under Secretary for Public Works.

Sir,

Union Club, Sydney, 23 January, 1885.

I have the honor, at the desire of Mr. T. A. McKillop, of Carcoar, to forward herewith, to lay before the Minister for Works, certain Statutory Declarations relating to objections which have been lodged against the “proposed road from Felltimber Creek to Carcoar.”

I have, &c.,

GEORGE CAMPBELL.

Mr. Hiles,—See me. I think the papers refer to roads to Blayney, not to Carcoar; are there not other papers on road with the name on Mr. Campbell’s letter, Felltimber Creek to Carcoar,—W.C.B., 6/2/85.

Mr. Flynn, urgent. By Mr. Scarr’s report appended, it will be seen that the officers of both this and the Survey Department concur in a directly contrary opinion, though without Statutory declarations I see no reason to alter decision.—W.C.B., 9/2/85. Under Sec. B.C.

[806 copies—Approximate Cost of Printing (labour and material), £17 2s. 3d.]

OUR ROADS.

To the Editor of the Blayney Argus.

Sir,—I am glad you are stirring us up to do something with our terrible roads. Bad roads mean commercial loss, as well as personal danger and discomfort to travellers. When the first stage of the new railway is opened, Blayney will lose all the trade from the Lachlan district, or nearly all, at any rate, and will then have to compete with Carcoar, Newbridge, and Milthorpe, for a due share of the local business. The only way to secure this is to provide ourselves with safe and convenient roads. Distance has less to do with the market than the facilities of getting there. *The farmers of Number One prefer to come here for business rather than to go to Carcoar, although Carcoar is 5 miles nearer, simply because the road to Carcoar is over "The Mount," and is traversed with difficulty by teams.* There is less time lost and less difficulty experienced in getting to Blayney than to Carcoar. The road over "The Mount," however, is being improved, and although never likely to be a good one, will attract some of the traffic that now comes to Blayney. The only way for us to hold our own with regard to the Number One business is to afford still further advantages by constructing the whole of the highways from the Shaw, Five Islands, and Osborne districts to Blayney. Our "ways" need "mending" all round the town. We were better off in the old days, when the land was undivided into farms, and when lanes and fences were rare. As it is now there is no choice for teamsters in bad weather; the hole that one man sinks in must be passed through by his neighbour. Perhaps it is very easy to find fault, but it seems to me that the roads get mended where they do not require it, *and lots of money is spent on dry level patches, while bogs and hills are left untouched.* Some months ago the road to Moorilda was "cleared" for a distance of 2 or 3 miles, in the lane between the railway crossing and Glasson Brothers' woolshed—that is to say, the trees were cut down, *the leaves and small branches burnt, and the timber left across the old track almost as it fell.* This made things worse than ever. It is possible to twist and turn a light vehicle amongst the trunks and logs, but no loaded team can use the road. Time goes by, and still the timber lies there, blocking up the thoroughfare and impeding the traveller.

How this unsatisfactory state of things is to be remedied I cannot tell. We have no citizens of wealth and enterprise to do the work for us; we have no Pastor Oberlin to set us to work ourselves; and unless we carry out your idea of a Progress Committee I think we must only growl and be patient.

27/12/84.

Yours, &c.,

B. McADAM.

Statutory Declaration.

I, WILLIAM TUCKER, now of Wood's Flat, farmer, but for many years resident in Carcoar, do solemnly and sincerely declare as follows, in answer to the undermentioned questions relative to objections lodged against the proposed road from Felltimber Creek to Carcoar:—

- | | |
|--|--|
| From your own knowledge of the present and prospective traffic, should you say that the proposed road "is not required?" | I say it is required. |
| Is the statement correct, that the proposed road "would be useless for any kind of traffic other than by people on horseback?" | Of course not. |
| Is the statement correct, that the said road is very rarely used, except by butchers? | It is not correct. |
| Is the statement correct, that, if opened, the said road would be used by only twelve families? | No. |
| In regard to the present road from Felltimber to Carcoar, <i>via</i> Mount Macquarie (referred to by one of the objectors as a good road proclaimed thirty years), do you consider it a good, a fair, or a bad road? | I consider it a very bad road. |
| Would the fencing off the said proposed road through Messrs. Charles Icely's and Cobband Co.'s freeholds for a distance of 2 miles and 45 chains—there being already 85 chains of fencing on one side—cost £250? | A seven-wire fence, sheep and cattle proof, for the 4 miles 5 chains, would cost about £170. |
| If the fencing would cost £250, do you consider the probable traffic would justify such expenditure? | I do. |
| Is the proposed road through said freeholds rendered very rough and broken by numerous gullies? | No, it is not. |
| Would the bridging of gullies on said road cost £500, or any sum approaching it? | No; I do not believe it would cost anything approaching it. |
| Do you consider the proposed road would be a great convenience to residents of Peelwood, Tuena, Trunkey, Binda, Bigga, Greenmantle, Rocky Bridge, Number One, Galley Swamp, and Felltimber Creek, or not? | I believe it would be a great convenience to them. |

And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of extra-judicial Oaths and voluntary Affidavits."

Subscribed and declared at Carcoar, this 3rd }
day of October, 1884, before me,— }

WM. TUCKER.

J. LITHGOW COBB, J.P.

I may add that I leased Mr. Charles Icely's paddock from him for the space of five years.—WM. T.

Statutory

Statutory Declaration.

I, WILLIAM CROUCHER, of Galley Swamp, miner, do hereby solemnly and sincerely declare as follows, in answer to the undermentioned questions relative to objections lodged against the proposed road from Felltimber Creek to Carcoar :—

- | | |
|---|---|
| From your own knowledge of the present and prospective traffic should you say that the proposed road "is not required?" | I think it is required. |
| Is the statement correct that the proposed road "would be useless for any kind of traffic other than by people on horseback?" | No, it is not correct. |
| Is the statement correct that the said road is very rarely used except by butchers? | No. |
| Is the statement correct that if opened the said road would be used by only twelve families? | I think it would be used by a good many people. |
| In regard to the present road from Felltimber to Carcoar <i>via</i> Mount Macquarie (referred to by one of the objectors as a good road proclaimed thirty years), do you consider it a good, a fair, or a bad road? | I do not know it. |
| Would the fencing off the said proposed road through Messrs. Charles Icely's and Cobb and Co.'s freeholds for a distance of 2 miles and 45 chains—there being already 85 chains of fencing on one side—cost £250? | I cannot say. |
| If the fencing would cost £250 do you consider the probable traffic would justify such expenditure? | I should think it would. |
| Is the proposed road through said freeholds rendered very rough and broken by numerous gullies? | No; I know of only two of any importance. |
| Would the bridging of gullies on said road cost £500, or any sum approaching it? | No. |
| Do you consider the proposed road would be a great convenience to residents of Peelwood, Tuena, Trunkey, Binda, Bigga, Greenmantle, Rocky Bridge, Number One, Galley Swamp, and Felltimber Creek, or not? | I believe it would be a great convenience to most of them. I have lived for nearly ten years in the vicinity of Trunkey and Tuena, and know the country well. |

And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of extra-judicial Oaths and Voluntary Affidavits."

Subscribed and declared at Carcoar, this 18th }
day of October, 1884, before me,— }
J. O'Dodd, J.P.

WILLIAM CROUCHER.

Statutory Declaration.

I, THOMAS LANE, of Galley Swamp, near Carcoar, miner, do solemnly and sincerely declare as follows, in answer to the undermentioned questions relative to objections lodged against the proposed road from Felltimber Creek to Carcoar :—

- | | |
|---|--|
| From your own knowledge of the present and prospective traffic should you say that the proposed road "is not required?" | I would not. I consider it is very much required. |
| Is the statement correct that the proposed road "would be useless for any kind of traffic other than by people on horseback?" | No; I have myself seen drays and waggons loaded with produce and drawn by six and eight horses travel by it. |
| Is the statement correct that the said road is very rarely used except by butchers? | No. |
| Is the statement correct that if opened the said road would be used only by twelve families? | No. |
| In regard to the present road from Felltimber to Carcoar <i>via</i> Mount Macquarie (referred to by one of the objectors as a good road proclaimed thirty years), do you consider it a good, a fair, or a bad road? | Most undoubtedly it is a bad road. |
| Would the fencing off the said proposed road through Messrs. Charles Icely's and Cobb and Co.'s freeholds for a distance of 2 miles and 45 chains—there being already 85 chains of fencing on one side—cost £250? | No, I do not believe it would. |
| If the fencing would cost £250 do you consider the probable traffic would justify such expenditure? | Yes. |
| Is the proposed road through said freeholds rendered very rough and broken by numerous gullies? | No. |
| Would the bridging of gullies on said road cost £500, or any sum approaching it? | No. I know of only one gully where a culvert would be required. I would do it for £40. |
| Do you consider the proposed road would be a great convenience to residents of Peelwood, Tuena, Trunkey, Binda, Bigga, Greenmantle, Rocky Bridge, Number One, Galley Swamp, and Felltimber Creek, or not? | To most, if not all of them. |

And

And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of extra-judicial Oaths and Voluntary Affidavits."

Subscribed and declared at Carcoar, this 21st }
day of October, 1884, before me,— }
J. HOWARD LANCHE, J.P.

THOMAS LANE.

Statutory Declaration.

I, GEO. SPALDING, of Abercrombie River, Pine Bluff, do hereby solemnly and sincerely declare as follows, in answer to the undermentioned questions, relative to objections lodged against the proposed road from Felltimber Creek to Carcoar:—

- | | |
|--|---|
| From your own knowledge of the present and prospective traffic should you say that the proposed road "is not required?" | I say it is required. |
| Is the statement correct that the proposed road "would be useless for any kind of traffic other than by people on horseback?" | Of course not. |
| Is the statement correct that the said road is very rarely used except by butchers? | It is not correct. |
| Is the statement correct that if opened the said road would be used by only twelve families? | No. |
| In regard to the present road from Fell-timber to Carcoar <i>via</i> Mount Macquarie (referred to by one of the objectors as a good road proclaimed thirty years) do you consider it a good, a fair, or a bad road? | I consider it a very bad road. |
| Would the fencing off the said proposed road through Messrs. Charles Icely's and Cobb and Co.'s freeholds for a distance of 2 miles and 45 chains—there being already eighty-five chains of fencing on one side—cost £250? | I cannot say. |
| If the fencing would cost £250 do you consider the probable traffic would justify such expenditure? | I do. |
| Is the proposed road through said freeholds rendered very rough and broken by numerous gullies? | No, it is not. |
| Would the bridging of gullies on said road cost £500, or any sum approaching it? | No, I do not believe it would cost anything approaching it. |
| Do you consider the proposed road would be a great convenience to residents of Peelwood, Tuena, Trunkey, Binda, Bigga, Greenmantle, Rocky Bridge, Number One, Galley Swamp, and Felltimber Creek, or not? | I believe it would be a great convenience to the people. |

And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled, "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of extra-judicial Oaths and Voluntary Affidavits."

day of October, 1884, before me,— }
GEO. M'GUINNESS, J.P.

GEORGE SPALDING.

Statutory Declaration.

I JAMES HORNER, of Galley Swamp, miner, do hereby solemnly and sincerely declare as follows, in answer to the undermentioned questions, relative to objections lodged against the proposed road from Felltimber Creek to Carcoar:—

- | | |
|--|---|
| From your own knowledge of the present and prospective traffic should you say that the proposed road "is not required?" | I say it is required. An old track near it has been used for twenty-seven years, or more. |
| Is the statement correct that the proposed road "would be useless for any kind of traffic other than by people on horseback?" | No, it is not. I have frequently brought a spring cart by the same road, and have also brought loads of wool and wheat by it. |
| Is the statement correct that the said road is very rarely used except by butchers? | It is used by all sorts of people. |
| Is the statement correct that if opened the said road would be used by only twelve families? | It is not. |
| In regard to the present road from Felltimber to Carcoar <i>via</i> Mount Macquarie (referred to by one of the objectors as a good road proclaimed thirty years), do you consider it a good, a fair, or a bad road? | I consider it a bad road, and 5 miles of a round. |
| Would the fencing off the said proposed road through Messrs. Charles Icely's and Cobb and Co.'s freeholds for a distance of 2 miles and 45 chains—there being already eighty-five chains of fencing on one side—cost £250? | To get the stuff and put up a wire fence would cost about £10 a mile, or a little over £160, in my opinion. |
| If the fencing would cost £250 do you consider the probable traffic would justify such expenditure? | Yes. |
| Is the proposed road through said freeholds rendered very rough and broken by numerous gullies? | No, it is not. |

Would

- Would the bridging of gullies on said road cost £500, or any sum approaching it? No. I could do it myself for £20.
- Do you consider the proposed road would be a great convenience to residents of Peelwood, Tuena, Trunkey, Binda, Bigga, Greenmantle, Rocky Bridge, Number One, Galley Swamp, and Felltimber Creek, or not? I consider it would be a great convenience to most of them.

And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled, "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of extra-judicial Oaths and voluntary Affidavits."

day of December, 1884, before me,— }

JAMES HORNER.

J. HOWARD LANCHE, J.P.

Statutory Declaration.

I, GEO. RIDLEY, of Greenmantle, do hereby solemnly and sincerely declare as follows, in answer to the undermentioned questions relative to objections lodged against the proposed road from Felltimber Creek to Carcoar:—

- From your own knowledge of the present and prospective traffic should you say that the proposed road "is not required?" I say it is required.
- Is the statement correct that the proposed road "would be useless for any kind of traffic other than by people on horseback?" Of course not.
- Is the statement correct that the said road is very rarely used except by butchers? It is not correct.
- Is the statement correct that if opened the said road would be used by only twelve families?" No.
- In regard to the present road from Felltimber to Carcoar *via* Mount Macquarie (referred to by one of the objectors as a good road proclaimed 30 years) do you consider it a good, a fair, or a bad road? I consider it a very bad road.
- Would the fencing off the said proposed road through Messrs. Charles Icely's and Cobb and Co.'s freeholds for a distance of 2 miles and 45 chains—there being already 85 chains of fencing on one side—cost £250? I cannot say.
- If the fencing would cost £250 do you consider the probable traffic would justify such expenditure? I do.
- Is the proposed road through said freeholds rendered very rough and broken by numerous gullies? No; it is not.
- Would the bridging of gullies on said road cost £500, or any sum approaching it? No; I do not believe it would cost anything approaching it.
- Do you consider the proposed road would be a great convenience to residents of Peelwood, Tuena, Trunkey, Binda, Bigga, Greenmantle, Rocky Bridge, Number One, Galley Swamp, and Felltimber Creek, or not? I believe it would be a great convenience to the people.

And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the Reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of extra-judicial Oaths and voluntary Affidavits."

GEORGE RIDLEY.

GEO. M'GUINNESS, J.P.

Statutory Declaration.

I, JAMES PATRICK O'BRIEN, of Mount Macquarie, farmer, do hereby solemnly and sincerely declare as follows, in answer to the undermentioned questions relative to objections lodged against the proposed road from Felltimber Creek to Carcoar:—

- From your own knowledge of the present and prospective traffic should you say that the proposed road "is not required?" It is required.
- Is the statement correct that the proposed road "would be useless for any kind of traffic other than by people on horseback?" No. I generally use it with my dray and have to-day driven in on my buggy by it.
- Is the statement correct that the said road is very rarely used except by butchers?" No.
- Is the statement correct that if opened the said road would be used by only twelve families? No.
- In regard to the present road from Felltimber to Carcoar *via* Mount Macquarie (referred to by one of the objectors as a good road proclaimed 30 years) do you consider it a good, a fair, or a bad road? I consider it a bad road at the best, and being so steep thousands of pounds would not improve it much.
- Would the fencing off the said proposed road through Messrs. Charles Icely's and Cobb and Co.'s freeholds for a distance of 2 miles and 45 chains—there being already 85 chains of fencing on one side—cost £250? I cannot say.

If

- If the fencing would cost £250 do you consider the probable traffic would justify such expenditure? Yes.
- Is the proposed road through said freeholds rendered very rough and broken by numerous gullies? No; there are only two gullies on it.
- Would the bridging of gullies on said road cost £500, or any sum approaching it? No; not more than £20 or £30 each.
- Do you consider the proposed road would be a great convenience to residents of Peelwood, Tuena, Trunkey, Binda, Bigga, Greenmantle, Rocky Bridge, Number One, Galley Swamp, and Felltimber Creek, or not? I consider it would to most, if not all, of them.

And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the Reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of extra-judicial Oaths and voluntary Affidavits."

GEO. M'GUINNESS, J.P.

Statutory Declaration.

I, CHARLES HENRY GREEN, of Felltimber, near Carcoar, farmer, do hereby solemnly and sincerely declare as follows, in answer to the undermentioned questions relative to objections lodged against the proposed road from Felltimber Creek to Carcoar:—

- From your own knowledge of the present and prospective traffic should you say that the proposed road "is not required?" I should not say so; I consider it is much required.
- Is the statement correct that the proposed road "would be useless for any kind of traffic other than by people on horseback?" No.
- Is the statement correct that the said road is very rarely used except by butchers? No, it is not.
- Is the statement correct that if opened the said road would be used by only twelve families? No.
- In regard to the present road from Felltimber to Carcoar *via* Mount Macquarie (referred to by one of the objectors as a good road proclaimed thirty years), do you consider it a good, a fair, or a bad road? It is a bad road any way you take it.

Would

- Would the fencing off the said proposed road through Messrs. Charles Icely's and Cobb and Co.'s freeholds for a distance of 2 miles and 45 chains—there being already 85 chains of fencing on one side—cost £250 ? No, it would cost about £170 for a seven-wire fence.
- If the fencing would cost £250 do you consider the probable traffic would justify such expenditure ? Yes.
- Is the proposed road through said freeholds rendered very rough and broken by numerous gullies ? No.
- Would the bridging of gullies on said road cost £500, or any sum approaching it ? No.
- Do you consider the proposed road would be a great convenience to residents of Peelwood, Tuena, Trunkey, Binda, Bigga, Greenmantle, Rocky Bridge, Number One, Galley Swamp, and Felltimber Creek, or not ? To most if not all of them.
- And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the Reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of extra-judicial Oaths and voluntary Affidavits."

Statutory Declaration.

I, MICHAEL O'BRIEN, of Felltimber, near Carcoar, farmer, do hereby solemnly and sincerely declare as follows, in answer to the undermentioned questions relative to objections lodged against the proposed road from Fell-timber Creek to Carcoar:—

- From your own knowledge of the present and prospective traffic should you say that the proposed road "is not required" ? No; I say it is required.
- Is the statement correct that the proposed road "would be useless for any kind of traffic other than by people on horseback" ? No, it is not; I have used it frequently—four times within a month—the past winter in bringing loads of produce to Carcoar.
- Is the statement correct that the road is very rarely used except by butchers ? No.
- Is the statement correct that if opened the said road would be used by only twelve families ? No.
- In regard to the present road from Felltimber to Carcoar *via* Mount Macquarie (referred to by one of the objectors as a good road proclaimed thirty years) do you consider it a good, a fair, or a bad road ? I consider it a bad road, and for loading it means two days travelling to me, instead of one by the proposed road.
- Would the fencing off the said proposed road through Messrs. Charles Icely's and Cobb and Co.'s freeholds for a distance of 2 miles and 45 chains—there being already 85 chains of fencing on one side—cost £250 ? My 7-wire fencing cost me about £40 per mile. At this rate the fence would cost between £160 and £170.
- If the fencing would cost £250 do you consider the probable traffic would justify such expenditure ? Yes.
- Is the proposed road through said freeholds rendered very rough and broken by numerous gullies ? No. I consider if a little money were spent on it, it would be the best road into Carcoar.
- Would the bridging of gullies on said road cost £500, or any sum approaching it ? No. I would undertake to make them passable for £50.
- Do you consider the proposed road would be a great convenience to residents of Peelwood, Tuena, Trunkey, Binda, Bigga, Greenmantle, Rocky Bridge, Number One, Galley Swamp, and Felltimber Creek or not ? It would to some, if not to all.

And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the Reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of extra-judicial Oaths and voluntary Affidavits."

N. CONNOLLY, P.M.

Statutory Declaration.

I, NICHOLAS REILLY, of Felltimber Creek, in the district of Carcoar, farmer, do hereby solemnly and sincerely declare as follows, in answer to the undermentioned questions relative to objections lodged against the proposed road from Felltimber Creek to Carcoar:—

- From your own knowledge of the present and prospective traffic should you say that the proposed road "is not required" ? I should not say so; it is urgently required.
- Is the statement correct that the proposed road "would be useless for any kind of traffic other than by people on horseback" ? No; I have used it myself in carrying in wheat and oats on my waggon. Is

- Is the statement correct that the said road is very rarely used except by butchers? No.
- Is the statement correct that if opened the said road would be used by only twelve families? No.
- In regard to the present road from Felltimber to Carcoar *via* Mount Macquarie (referred to by one of the objectors as a good road proclaimed thirty years) do you consider it a good, a fair, or a bad road? It is a bad road to Felltimber.
- Would the fencing off the said proposed road through Messrs. Chas. Icely's and Cobb and Co.'s freeholds for a distance of 2 miles and 45 chains—there being already 85 chains of fencing on one side—cost £250? A seven-wire fence similar to that used by Cobb and Co. would cost about £40 a mile; this for 4 miles 5 chains would be about £160.
- If the fencing would cost £250 do you consider the probable traffic would justify such expenditure? Yes.
- Is the proposed road through said freeholds rendered very rough and broken by numerous gullies? No.
- Would the bridging of gullies on said road cost £500, or any sum approaching it? No, not more than £50 would be required to make the gullies passable.
- Do you consider the proposed road would be a great convenience to residents of Peelwood, Tuena, Trunkey, Binda, Bigga, Greenmantle, Rocky Bridge, Number One, Galley Swamp, and Felltimber Creek, or not? Yes.

And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the Reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of extra-judicial Oaths and voluntary Affidavits."

Statutory Declaration.

I, RICHARD O'BRIEN, of Rose Hill, near Felltimber, farmer, do hereby solemnly and sincerely declare as follows, in answer to the undermentioned questions relative to objections lodged against the proposed road from Felltimber Creek to Carcoar:—

- From your own knowledge of the present and prospective traffic should you say that the proposed road "is not required"? No. I consider it is urgently required. It would save me nearly 4 miles travelling, and many others the same.
- Is the statement correct that the proposed road "would be useless for any kind of traffic other than by people on horseback"? No. I have myself brought loading to Carcoar on my dray by it.
- Is the statement correct that the said road is very rarely used except by butchers? No. The farming class would principally use it.
- Is the statement correct that if opened the said road would be used by only twelve families? No.
- In regard to the present road from Felltimber to Carcoar *via* Mount Macquarie (referred to by one of the objectors as a good road proclaimed thirty years) do you consider it a good, a fair, or a bad road? I consider it a bad road.
- Would the fencing off the said proposed road through Messrs. Charles Icely's and Cobb and Co.'s freeholds for a distance of 2 miles and 45 chains—there being already 85 chains of fencing on one side—cost £250? No. I consider it would cost about £170.
- If the fencing would cost £250 do you consider the probable traffic would justify such expenditure? It would in my opinion.
- Is the proposed road through said freeholds rendered very rough and broken by numerous gullies? No. There is only one gully I consider bad.
- Would the bridging of gullies on said road cost £500, or any sum approaching it? No.
- Do you consider the proposed road would be a great convenience to residents of Peelwood, Tuena, Trunkey, Binda, Bigga, Greenmantle, Rocky Bridge, Number One, Galley Swamp, and Felltimber Creek, or not? I consider it would.

And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of extra-judicial Oaths and Voluntary Affidavits."

day of October, 1884, before me,—

RICHARD O'BRIEN.

THOMAS HILLIAR, J.P.

Mr. Road-Superintendent Scarr to The Commissioner for Roads.

Road, Felltimber Creek to Carcoar.

Roads Office, Orange, 24 October, 1884.

AFTER perusing the reports already made by the Surveyor-General's officers, and applying my own knowledge of the requirements, I quite concur in the opinions expressed that this road is not required in the public interest. It is only another instance of the efforts made by this Carcoar Progress Committee to force business to Carcoar in opposition to the natural tendency of the traffic.

If the road was opened now there would be little traffic on it, and when the railway is opened to Mandurama, still less.

There are no grounds for making the large expenditure necessary to open this road, and make it passable.

The statement that the road from Carcoar to No. 1 Swamp is impracticable is quite incorrect, as has already been shown in previous discussions respecting that road.

PERCY SCARR.

Road Superintendent.

I forward Mr. Scarr's report. I would add that there is much correspondence of similar intensity from the same quarter in this office, and I find the vehemence of the arguments generally in the inverse ratio of the merits of the case.—W.C.B., 25/10/84. Under Secretary, B.C. Inform road not required in the public interest.—J.M.P., 31/10/84.

The statement of Mr. McKillop that the road from Carcoar to No. 1 is impracticable is denied by the Commissioner and Engineer for Roads, whose report, in consequence of that statement, was specially obtained (to which attention is invited).—A. J. STOPPS (for Surveyor-General), 19/11/84.

Inform that on the reports received from the officers of the Government it does not appear that there is any necessity for the road in question; that therefore I shall not approve of it being opened.—J. P. ABBOTT, 21/11/84.

Mr.

Mr. Warden Connolly to The Under Secretary for Mines.

Sir,

Carcoar, 16 January, 1885.

I have the honor to state, for the information of the Honorable the Minister for Mines, that yesterday, at the conclusion of my inspection of the proposed site for a common at the Galley Swamp Gold-field, the miners assembled made special request that I would bring under the notice of the Department the fact that there is no direct road from Galley Swamp to Carcoar, with which town the principal business of the miners is transacted, in consequence of its being the capital town of the district, where the Government offices and banks are located.

At present the miners are compelled to make a detour of at least 4 miles, *via* Mandurama, making a total of between 12 and 13 miles, whereas by the opening of a branch from the proposed Felltimber to Carcoar Road the distance from Gally Swamp Gold-field to Carcoar would not be more than about 8½ miles, and that so great a saving in distance would be of considerable importance to the miners is evident.

Having ridden over the proposed road and its intended connection with the Gally Swamp Gold-field, I have no hesitation in saying that it is perfectly practicable, and, with a moderate expenditure, could be made equal to any of the country roads of the district.

I have, &c.,

N. CONNOLLY,

Warden.

Will the Minister be good enough to let me have copies of the reports asked for in the accompanying paper.—E. A. BAKER, Reform Club, 22 December, 1884. Inform Mr. Baker that the reports in question cannot be supplied for the purpose of being furnished to the gentlemen at Carcoar, but that he may see them himself.—J. P. ABBOTT, 30/12/84.

The Under Secretary for Mines to G. Campbell, Esq., M.P.

Sir,

Department of Mines, Sydney, 21 November, 1884.

With reference to the application of the Carcoar Progress Committee for the opening of the part of the road from Felltimber Creek to Carcoar, viz., from the east boundary of Collins' (now Cobb & Co.) 2,000 acres to the road from Carcoar to Cowra, I am directed by the Secretary for Mines to inform you that on the reports received from the officers of the Government it does not appear that there is any necessity for the road in question, therefore he will not approve of it being opened.

I have, &c.,

GERARD E. HERRING,

For the Under Secretary.

The Hon. Secretary, Carcoar Progress Committee, to E. A. Baker, Esq., M.P.

Proposed Road, Felltimber to Carcoar.

Dear Sir,

Carcoar, 17 December, 1884.

You will recollect my having brought this matter pointedly under your notice while here recently. I now enclose, for perusal and return, a letter from the Department of Mines, dated 21st ultimo, informing me for the third time that the Minister cannot approve of this road being opened; on this occasion because the reports received the officers of the Government go to show there is no necessity for the road. I have no fewer than sixteen statutory declarations to a directly contrary effect; but I wish, before going any further, for a copy of one or all of the officers' reports, as I am desirous of meeting all objections fully. Can you procure some for me?

Yours, &c.,

J. A. M'KILLOP,

Hon. Sec., Carcoar Progress Committee.

Scarr, P., report on road, Blayney to Shaw; sent Works, 8/10/84:—The work required to make road passable would cost £360, and this, though an approach to an important railway station, is within municipality; and I think next year no work should be done by the Departmental funds within such limits in order to make a beginning for real local government in the municipalities already existing, and also to avoid law.

This has no reference to the road, Felltimber Creek to Carcoar whatever, but refers to a matter inside Blayney municipality.—PERCY SCARR, 14/10/84. The Commissioner for Roads, B.C.

Mr. George Campbell and Mr. A. Lynch, M'sP., wish a copy of Mr. Iceley's objections to road, Felltimber Creek to Carcoar, to be forwarded to Mr. M'Killop, Commercial Bank, Carcoar.

There was a report not many days since on this; let me have it.—W.C.B., 10/10/84.

Telegram from Commissioner for Roads to Mr. Road-Superintendent Scarr.

PLEASE return soon as possible with your report paper, 8,719, road Carcoar to Number One Swamp, sent you 20th instant.

The papers are now returned, but I would point out that it is not the Carcoar to Number One Swamp Road but Carcoar to Felltimber Creek.—PERCY SCARR, 24/10/84.

Extract from *Sydney Morning Herald*, 8 September, 1884.

Carcoar, Saturday.

MUCH inconvenience has been caused to residents in the vicinity of Felltimber Creek, Gally Swamp, and the neighbourhood, by the delay in opening a direct road to Carcoar, the same having been applied for by several petitions to the Department, the road having been surveyed nearly two years ago. In many cases farmers and other residents are compelled to travel a distance of 12 miles instead of 5 miles to reach the town. It is to be hoped that the authorities will move in the matter.

What does this mean? Report at once.—J. P. ABBOTT, 10/9/84.

This newspaper paragraph is mainly the subject of a letter of Mr. M'Killop's, Manager of the Commercial Bank at Carcoar, writing as Secretary of the Carcoar Progress Committee (see within papers.) The road has been refused, its importance being thought insufficient to warrant cost of fencing, amounting to £250 (see roads 81-1,289/21, S.G.O.) A perusal of the papers might almost lead to an inference that the advocacy for the establishment of the road was made more with the object of attracting business to Carcoar than as a necessity in the interests of the public, which is very limited. With respect to the complaint in Mr. M'Killop's last letter, that a road more recently surveyed than the one in question has been lately established, viz., that from Number One (or Macquarie) to the village of Somers, it might be said that it appears to be of much greater importance than the one sought by Mr. M'Killop, and is reported to be required generally by the settlers of Mount Macquarie, Number One, Gally Swamp, for taking their produce to and returning with stores from Cowra, Grenfell, Forbes, and the Lachlan. There appear to be no reasons in Mr. M'Killop's last letter to cause a departure from previous decision, or any new facts, except that it be the statement that the road from Carcoar to Number One is almost impracticable, on which statement a report can be obtained if desired. Should the road be granted, cost of fencing would probably not be all the cost involved, as the road is described as being fit for horse and light vehicle traffic only.—A. J. STOPPS (for Surveyor-General), 12 Sept., 1884.

Approved.—J. P. ABBOTT, 18/9/84. A. Lynch, M.P., informed, 20 Sept., 1884.

As the road Carcoar to Number One, which is by Mr. M'Killop stated to be simply impracticable, is understood to be in charge of the Works Department, probably the report as to its condition should be obtained through the Commissioner and Engineer of Roads, to whom it is recommended these papers be now sent.—A. J. STOPPS (for Surveyor-General), 25 Sept., 1884.

Approved.—J. P. ABBOTT, 7/10/84.

The Hon. Secretary, Carcoar Progress Committee, to Messrs. Campbell & Lynch, M's P.

Proposed Road, Felltimber to Carcoar.

Dear Sirs,

Carcoar, 5 August, 1884.

I enclose herewith Mines Department letter to Mr. Lynch of 30th ultimo, notifying that the confirmation of this road cannot be granted, and a portion of the district map, marked by me to indicate plainly to you the importance of the road, both to the residents of Felltimber, Gally Swamp, and Number One, and to the tradespeople of this town.

In requesting you, gentlemen, on behalf of the Carcoar Progress Committee, to lose no time in seeing the Minister for Mines, with a view to his reconsidering his decision in this matter, I beg to assure you that I know of no matter (excepting, of course, the railway) placed in your charge by repeated correspondence in which the Minister's adverse decision has caused so strong a feeling of exasperation here, whether the subject of consideration be the very protracted delay on the part of the Minister, the untruthful information on which his decision is based, or the apparent apathy and want of knowledge of the subject on the part of our representatives, evidenced by Mr. Lynch's being unable to show the untenableness of the objections to the road.

To put the matter plainly—the decision is regarded, coupled with the recent proclamation of a portion of the road from Number One to Mandurama, surveyed ten months later than the road now refused to us, as a direct subordination of the interests of the inhabitants of Carcoar to those of the people of Mandurama, and as the plan will make plain to you, a most unfair one. Further, there appears no reasonable ground for doubt that the objections have been lodged principally by Messrs. Cobb & Co., the owners of (say) nine-tenths of the private township of Mandurama.

Taking the objections quoted in the Minister's letter:—

1. I shall be prepared, if necessary, to make a statutory declaration that the importance of the road will justify the expenditure of £250 or more, as if once opened it would, in preference to present roads (?) in use by them, be adopted by the residents of Gally Swamp, Felltimber, and Number One. The road in question is that indicated by the line B to C, that marked D, B, E, being the portion of the road Number One to Mandurama recently proclaimed.
2. An exaggeration of the grossest kind. £50 expended would render this road quite passable, and infinitely preferable to the present road to Number One and Felltimber, especially as regards gradients.
3. That the road would be of use only to twelve families is absolutely false. The whole of the residents of Gally Swamp, Felltimber, and Number One, who do not do their banking business in Blayney, deal with the banks in Carcoar. The road applied for would shorten the distance from Gally Swamp to Carcoar by nearly 4 miles, from Felltimber (A) by about the same, and from Number One by nearly 1 mile. As regards the last, the present road, say from G to F, is simply impracticable, and it has already, in forcing heavy traffic to Blayney, done Carcoar very serious injury in trade matters.

4.

4. It being $5\frac{1}{4}$ miles from B to Carcoar, and $5\frac{1}{2}$ from the same point to the private town of Mandurama, the "probability," supposing justice be done in this matter to Carcoar, seems to be just the reverse of that indicated by (I presume) Mr. Whitney.

Trusting this very important matter will have your very earliest attention.

I am, &c.,

J. A. M'KILLOP,

Hon. Secretary, Carcoar Progress Committee.

Mr. Andrew Lynch, M.P., wishes to be informed what action is being taken *re* Felltimber Creek road—Cowra to Carcoar. The Surveyor-General, B.C., 25/6/84.—H.W., for U.S.

This road would cost £250 to fence, a sum out of all proportion with the non-importance of the road. The alienated land that would be traversed by it for about $2\frac{1}{2}$ miles at least is grazing land of a rough and broken character, and public gates would meet all requirements; but in face of the objections lodged, and in view of the facts that the road is not of general public utility, and would be a convenience to but twelve families, and that when the Blayney and Murrumburrah Railway is opened the traffic will probably tend to Mundurama, the forcing of the acceptance on landowners of public gates does not appear to be desirable. Confirmation is therefore not recommended.—A. J. STOPPS (for Sur.-Genl.), 28 July, 1884.

Inform Mr. Lynch.—J. P. ABBOTT, 30/7/84. A. Lynch, M.P., informed, 30 July, 1884.

The Clerk of the Executive Council to The Under Secretary for Mines.

Part of road from Felltimber Creek to Carcoar, viz., from the S. to the N. boundary of James Grant's $6\frac{1}{2}$ ac., por. No. 37, parish of Somers, county Bathurst.

Sir,

Executive Council Office, 23 January, 1884.

Referring to your letter of the 15th December, I do myself the honor to inform you, that no objection has been lodged with me to the formation of the proposed parish road noted above.

I have, &c.,

ALEX. C. BUDGE,

Clerk of Council.

The Surveyor-General, B.C., 4/2/84.—H.W., U.S.

The Hon. Sec., Carcoar Progress Committee, to The Minister for Mines.

Sir,

Carcoar, 30 January, 1884.

The plans and books of reference of the proposed parish road from the Carcoar-Cowra main road to the Felltimber Creek having now been exhibited for considerably more than thirty days in the local Court-house, I am to convey to you the respectful request of the Carcoar Progress Committee that said proposed road be proclaimed *with as little delay as practicable* open for the use of the public. Complaints on the score of the delay in this matter have been repeatedly made by the farmers of Felltimber and vicinity.

I have, &c.,

J. A. M'KILLOP,

Hon. Sec., Carcoar Progress Committee.

Inform the Clerk of the Executive Council will be asked if there are any objections.—H.W., U.S., 31/1/84. J. A. M'Killop informed objection received and now being considered.—4 Feb., 1884.

N. Connolly, Esq., P.M., to The Under Secretary for Mines.

Court-house, Carcoar, 30 July, 1884.

THE plan and book of reference, as per number in margin and description, have been duly exhibited for thirty days, as required by law.

Description of Road.

Part of the road from Felltimber Creek to Carcoar, viz., from the south to the north boundary of James Grant's $62\frac{1}{2}$ acres, portion No. 37, parish of Somers, county Bathurst.

N. CONNOLLY, P.M.,

(For the Bench).

Minute for Executive Council.

Preliminary Notification of Road.

Department of Mines, Sydney, 17 November, 1883.

THE authority of His Excellency the Governor and the Executive Council is sought for the opening of the undermentioned line of road, as shown by the accompanying plan and book of reference, in accordance with the provisions of the Act 4th William IV No. 11, viz.:—Part of road from Felltimber Creek to Carcoar, viz., from the south to the north boundary of James Grant's $62\frac{1}{2}$ acres, portion No. 37, parish of Somers, county of Bathurst.

J. P. ABBOTT.

The Executive Council advise that the course herein recommended be approved.—ALEX. C. BUDGE, Clerk of the Council.

Min., 83-48, 20/11/83. Confirmed, 27/11/83.

Department of Mines, Sydney, 14th December, 1883.

PRELIMINARY NOTIFICATION OF PARISH ROADS.

HIS Excellency the Governor, with the advice of the Executive Council, having deemed it expedient to open and make the several Parish Roads mentioned in the schedule appended hereto, to be maintained at the expense of the parishes through which they pass: Notice is hereby given that in accordance with the provisions of the Act 4th William IV, No. 11, plans and books of reference, showing the intended lines of the roads in question, are now deposited at the Office of the Surveyor-General in Sydney, and at the Police Offices mentioned.

It is requested that any well-grounded objections that may exist to the formation of the roads in question may be transmitted in writing to the Clerk of the Executive Council, within one month from this date.

By His Excellency's Command,
JOSEPH P. ABBOTT.

Sir,

Referring to your letter of the 15th December, I do myself the honor to forward the objection that has been lodged with me to the formation of the proposed Parish Road noted in the margin.

I have, &c.,
ALEX. C. BUDGE,
Clerk of the Council.

PART of road from Felltimber Creek to Carcoar, viz. :-From the east boundary of T. Collins' (now Cobb & Cos.) 2,000 acres, to the road from Carcoar to Cowra, within T. Icely's (now C. Icely's) 1,396 acres, parishes of Shaw and Somers, county of Bathurst.

The Surveyor-General, B.C., 4/2/84.—H.W., U.S.

Mr. W. T. Whitney to The Clerk of the Executive Council.

Sir,

Coombing Park, 14 January, 1884.

With reference to the notice of 14 December, 1883, in the Government Gazette, of intention to open road from Felltimber Creek to Carcoar, parishes of Shaw and Somers, county of Bathurst, part of which passes through my property, I have the honor to urge the following objections against the opening of the road :-

1. That it will injuriously sever my property, cutting off the bulk of it from water frontage and render the small portion between the road and the creek valueless.
2. That the number of persons likely to use the road, and the convenience (if any) it may afford the public, are insufficient to justify the large expenditure that will be necessary to fence the road.
3. That the present road to Mandurama affords all requisite accommodation for the public.
4. That already the property is intersected by roads and will be still further injured by the Railway from Blayney to Murrumburrah, which will pass through it.
5. That the nature of the country passed over renders the road unfit for vehicular traffic, and could not without great expense be made even tolerably passable.
6. That when the Railway is constructed the traffic will tend towards Mandurama, the road to which place is infinitely superior to that proposed to be taken through my property, the country passed through presenting facilities for a good road.
7. In conclusion I would urge the injustice of opening a road which without conferring any corresponding benefit on the public would inflict serious injury on the properties severed, separating me from the only source of permanent water supply, viz., Coombing Creek, and necessitating the expenditure of large sums of money for fencing and construction.

I would urge that public wants are met by the existing roads and the accommodation provided by the Mount Macquarie Road, about ½ a mile distant, is sufficient to carry the traffic for the next century.

I have, &c.,
WM. T. WHITNEY.

The

The Surveyor-General to The Under Secretary for Mines.

THE accompanying plan and book of reference of part of road from Felltimber Creek to Carcoar, viz., from the east boundary of Thos. Collins' (now Cobb & Co.'s) 2,000 acres, to the road from Carcoar to Cowra, within Thos. Icely's (now Charles Icely's) 1,396 acres, parishes of Shaw and Somers, county of Bathurst, are forwarded with the view to the opening of the line as a parish road under the Act of Council, 4 William IV, No. 11.

A. J. STOPPS,

For Surveyor-General, B.C., 13 November, 1883.

Approved.—J. P. ABBOTT, 16/11/83.

Mr. Licensed-Surveyor Glasson to The Surveyor-General.

Sir,

Carcoar, January 20, 1883.

I have the honor to transmit herewith the plan of a portion of the road from Carcoar to Felltimber Creek, parish of Somers, county of Bathurst, measured in accordance with instructions dated the 29th July, 1883, No. 82-273; to Mr. Surveyor Crouch. This road traverses level country and is suitable for traffic. The crossing at Thumbby's Creek, however, is a bad one, but a culvert would meet all requirements.

The improvements on this road consist of partially cleared land, £3; and 1 chain of rail and wire fencing, worth £60 per mile. The huts shown on plan were unoccupied at the time of survey. The road was measured in close proximity to these as the only other available route would be through the cultivation paddock; and as this route would necessitate a bridge being erected over Thumbby's Creek, and would considerably damage the property, I considered the former route preferable.

As considerable loss of time was incurred inspecting this locality, I would most respectfully submit that I be allowed special rates for this survey.

I have, &c.,

R. G. GLASSON.

Submitted.—Unless the part of the road shown on plan with Mr. Glasson's letter of the same date, No. 83-4, is adopted, the confirmation of this portion would be of no value. I am of opinion that the importance of the road through this portion is insufficient to warrant cost of fencing.—H. A. CROUCH, A.D.S., 19 March, /83.

Book of Reference of part of road from Felltimber Creek to Carcoar, viz., from the east boundary of Thos. Collins (now Cobb & Co.'s) 2,000 acres to the road from Carcoar to Cowra, within Thos. Icely's (now Charles Icely's) 1,396 acres, parishes of Shaw and Somers, county of Bathurst, proposed to be opened as a parish road, under the Act of Council, 4 William IV, No. 11.

Mr. Licensed-Surveyor Glasson to The Surveyor-General.

Sir,

Carcoar, 20 January, 1883.

I have the honor to transmit herewith the plan of a portion of the road from Carcoar to Felltimber Creek, parishes of Shaw and Somers, county of Bathurst, measured in accordance with instructions, dated the 29th July, No. 82-273, to Mr. Surveyor Crouch.

The country traversed by this road is very rough and suitable for horse and light vehicle traffic only. The best available route, however, was selected by me after making a careful inspection of the surrounding country.

The only improvements upon the road consist of about 7 chains of wire and 2-rail fencing, worth £40 per mile.

Two enclosures are severed, viz., a portion of Messrs. Cobb's property on the south of Coombing Creek, and Mr. Charles Icely's property on the north. Both of these properties are used for grazing purposes, and considerable damage is done to them by this road, as the area severed from the main properties are too small to be of much value for grazing purposes, and, in the case of Messrs. Cobb's property, the country is too rough for purposes other than grazing. Near the Carcoar-Cowra Road a deep gully is crossed, over which it will be necessary to erect a bridge, at a cost of about £50, before the road is available for traffic.

The old track is not at present used by the public, but the road, if opened, would prove a great convenience to about a dozen families residing in the parish of Somers and in the locality of Felltimber Creek.

I have, &c.,

R. G. GLASSON.

The objections made by Mr. Icely, Rds. 81-1289-7, are substantially the same as reported by my letter, No. 82-75. I am of opinion that the importance of the road is not sufficient to warrant the cost of fencing, and unless "public gates" can be erected I cannot recommend the formal opening.—H. A. CROUCH, A.D.S., 19th March, /83.

C. Icely, Esq., to The Minister for Mines.

Sir,

86, Victoria-street, Sydney, 13 December, 1882.

I have the honor to inform you that a road has been lately measured by Mr. Surveyor Glasson, of Carcoar, through my land, known as the Triangle Paddock, about half a mile from Carcoar, in the parishes of Shaw and Somers, which renders my paddock almost useless for grazing purposes, as it is surveyed through my paddock, leaving one part too small to be of any use, and the other portion unless fenced, not safe to run stock in. The proposed road too is useless for any kind of traffic, other than by people on horseback, as it is over a very rough country, very much broken by large water-washed gullies, which would have to be bridged at the expense of not less than £500. I maintain that the road is not required, as there is a good proclaimed road of 30 years' standing, which leaves the Cowra Road about half a mile from Carcoar, and another very good road to the same spot (Felltimber Creek), *via* Mandurama, which is infinitely better to travel, and much faster for wheels than the other. This being the case, I think you will agree with me that the creation of another road is unnecessary. The Government are very often led astray by petitions numerous signed, without knowledge or regard as to who signs those documents; for instance, a man wants a short cut to his farm, and gets up a petition, and invites all persons by to sign it, no matter whether they live in the locality or not, and by this way he musters up a good many signatures, and the Minister naturally thinks that the terminus of this road must be of some importance, and grants a road.

I oppose this proposed road upon the ground that it is not required. I know myself, and others can prove my statement, that the road to Felltimber Creek is very rarely used, except by butchers taking stock to and from Carcoar; and again, under the Travelling Stock Act you will see the amount of land (unless fenced by a sheep proof fence, 5 wires) that would be trodden down and made useless. If a road was necessary I would not oppose it "but it is not." I have addressed my applications to you thus early in order that you may have the opportunity of ascertaining the truth of my statement, before you decide to open the road to the public. I trust that you will give this letter your immediate consideration, and if I have not fully explained my case, shall be most happy to wait upon you with a plan of the road, so that I may convince you that the road is not required. In addition to this road I have the railway line through my paddock, which is another serious loss to me.

I have, &c.,

CHARLES ICELY.

Now with Mr. L.-S. Crouch to lay out, objection will be duly considered, 15/12/82.

It is recommended that Mr. Icely be informed that the road in question will be preliminarily notified in *Government Gazette*, with the view to obtaining all the objections that might exist to the contemplated establishment of the road, and that all the objections lodged will be fully considered before determine upon establishing it by confirmation under the Parish Roads Act.—A. J. STORRS (for Sur-General), 13 Nov., 1883.

The Hon. Sec., Carcoar Progress Committee, to The Deputy Surveyor-General.

Road, Felltimber to Carcoar.

Sir,

Carcoar, 21 July, 1882.

Adverting to my letter to you of 17th May last on the above subject (in regard of which I have not been favoured with even the cheap courtesy of an acknowledgment), I again beg to inquire if the District Surveyor's report on same has yet been received. If it has, I am further to again request that a copy of the report be kindly forwarded to me.

I have, &c.,

J. A. M'KILLOP,

Hon. Sec., Carcoar Progress Committee.

The report referred to has been received, and instructions for the survey of the road have issued to the District Surveyor.—A. J. STORRS (for Sur.-Genl.), 29th July, 1882.

Mr. District-Surveyor Crouch to The Surveyor-General.

Sir,

District Survey Office, Orange, 12 July, 1882.

In connection with your instructions of the 25th October, No. 81-796, to Mr. District-Surveyor Fisher, transferred to me on the 3rd November, relative to a petition for parish roads from the Felltimber Creek and Gully Swamp Gold-fields, towards Carcoar, parishes of Somers and Shaw, county of Bathurst, I do myself the honor to report:—

1. That the track from Felltimber Creek towards Carcoar, as shown by red band on tracing herewith, has been reserved in all contiguous measurements, except where it passes through James Grant's 62½ acres, and T. Collin's 2,000 acres, and T. Icely's 1,396 acres; but of late the traffic has been almost entirely diverted, owing to the fencing in of the latter properties.

2. The only alternative road is that *via* Mandurama, which is the one now used, and is about 5 miles longer.

3. There are about twelve families between Felltimber Creek and Carcoar to whom the road would be a convenience.

4. The road could not materially injure any of the properties intersected, neither would it be of advantage to either.

5. The enclosures severed are T. Collins (now Cobb and Co.'s) 2,000 acres, and T. Icely's (now Charles Icely's) 1,396, the probable cost of fencing which would be about £250.

6. The traffic, which is local, would be confined on the southern end to the families named.

7. But little Crown land of inferior quality is available for alienation.

8.

8. With respect to this road I have the honor to report that the broken nature of the country, the probable modifications of traffic which may be expected to result from the construction of the authorized line of railway from Blayney to Murrumburrah, and the cost of fencing renders this matter somewhat difficult to deal with. It appears probable that, consequent on the construction of the line, the general traffic from the Felltimber Creek will go to Mandurama, the intervening country being much more easily traversed; but as a fairly direct road to Carcoar, the local seat of Justice, Land Office, and most important commercial centre, the road sought must be considered as required for the convenience of persons travelling on horseback or in light vehicles. From the nature of the traffic I consider that the provisions of the Public Gates Act would be well applied, but I do not think the owners of the properties intersected would make application.

9. As the actual length of survey required is but short, I think it is desirable that instructions should be issued for such.

10. Referring to the branch road to Gully Swamp gold-field, the population of which numbers about thirty, I am of opinion that, owing to the less difficult nature of the ground traversed, the general traffic therefrom will always by preference pass *via* Mandurama, but if the road from Felltimber Creek is adopted provision will be made in the future subdivision of the Gully Swamp gold-field for the branch road required.

I have, &c.,
HENRY A. CROUCH, A.D.S.

Mr. Surveyor Crouch for survey of the road recommended by him.—A. J. STOPPS (for Surveyor-General), 29 July, 1882. Transferred to Mr. Licensed-Surveyor Glasson for survey of the portions shown approximately by red firm lines. If Mr. Glasson will give me a day or two's notice before he effects survey I will endeavour to meet him on the ground.—H. A. CROUCH, A.D.S., 3 August, 1882. Transmitted with my plans and letters of the 20th Jan., No. 83-4 and 83-5.—R. G. GLASSON.

PART of road from Carcoar to Felltimber Creek, viz., from the east boundary of Thomas Collins' (now Cobb and Co.'s) 2,000 acres to the road from Carcoar to Cowra, within Thomas Icely's (now Charles Icely's) 1,396 acres, parishes of Shaw and Somers, county of Bathurst.

MEMORANDUM showing the names of the owners or reputed owners of the enclosed lands through which the above-mentioned road passes, the length of new fencing required to be erected within each enclosure, and the cost thereof. Also the length of the existing fences which will require removal, and the cost of their re-erection.

The Hon. Secretary, Carcoar Progress Committee, to The Deputy Surveyor-General.

Sir, Carcoar, 17 May, 1882.

In accordance with a resolution passed at a recent meeting of the Carcoar Progress Committee, I beg to inquire if Mr. District-Surveyor Fisher's report has yet been received on the road Carcoar to Felltimber Creek and Galley Swamp, petitioned for by residents of those localities in September last. If the report is received, I am further to request a copy of same.

In connection with the petition referred to I beg to draw your attention to the circumstance that what is sought is, as a matter of fact, merely the re-opening of an old road in use thirty years ago, but obstructed at present by fencing erected in defiance of the right of user. I may add that Mr. Surveyor Glasson is now actually at work on the spot where the obstruction occurs, and, if you will pardon the suggestion, if so instructed could readily report to you on the matter, and hasten the removal of a grave inconvenience.

The whole difficulty lies between the northern boundaries of portions 70 and 37, parish of Somers, the road having been actually surveyed and plainly marked on each side of the interval indicated.

I have, &c.,
J. A. M'KILLOP,
Hon. Secretary, Carcoar Progress Committee.

The Hon. Secretary, Carcoar Progress Committee, to The Minister for Mines.

Sir, Commercial Bank, Carcoar, 14 March, 1882.

Referring to my letter to you of 17th October last, enclosing, by request of Andrew Lynch, Esq., M.L.A., a district map with sketch indicative of road Felltimber Creek to Carcoar, petitioned for by residents of same, I have the honor to request that you will cause an intimation to be sent to the Department for Roads on the subject of the reception by your Department of the petition and sketch referred to. Diligent search has, I understand, been made on two occasions for these documents in the office presided over by Mr. Commissioner Bennett, but of course without success. The inference has been that the petition was never forwarded by Mr. Lynch until I looked up my private letter-book. The want of the road prayed for is a grave inconvenience to the public here.

I have, &c.,
J. A. M'KILLOP.

Inform map was duly received, and papers are with Mr. D.-S. Fisher for a report—H.W., U.S., 15/3/82.

The Hon. Secretary, Carcoar Progress Committee, to The Under Secretary for Mines.

Sir,

Commercial Bank, Carcoar, 17 October, 1881.

Referring to your letter (81-2,841 Roads) of 26th ultimo, addressed to Andrew Lynch, Esq., M.P., I have the honor, by request of that gentleman, to hand you under separate cover a district map, on which are sketched the roads prayed for in the Petition acknowledged in your letter.

I have, &c.,

J. A. M'KILLOP.

Forwarded to Mr. District-Surveyor Fisher for report, in terms of paragraph No. 75 of Surveyor's instructions.—A. J. STOPPS (for Surveyor-General), 25th October, 1881. Reported upon by my letter of the 12th July, No. 82-75.—H. A. CROUCH, A.D.S.

[Presented and recommended by Andrew Lynch, M.P., to the favorable consideration of the Minister.—21/9/81.]

To the Honorable the Minister for Mines, Sydney.

The humble Petition of certain inhabitants of the Town and District of Carcoar,—

RESPECTFULLY SHOWETH :—

1. That a large population have settled in the vicinity of Felltimber Creek, parish of Somers, district of Carcoar, and a large area of land has been bought under cultivation.

2. That the residents of that place, in order to carry their produce to market at Carcoar, are compelled to travel by a road via Mandurama, as shown on plan annexed hereto and marked with blue, which road is 5 miles longer than by a direct road.

3. That a direct road, which would also be a good one, can be surveyed from Felltimber Creek to Carcoar along the back of the Coombing Estate and through land belonging to Mr. Charles Icely, and join the main road from Carcoar to Cowra, about 1 mile from Carcoar, as shown on plan and marked red.

4. That such road would not in the slightest degree depreciate the value of the land through which it would pass.

5. That your Petitioners would be greatly inconvenienced if such road were surveyed and opened to the public.

Your Petitioners therefore humbly pray that the required road be surveyed and proclaimed to be a public road with as little delay as possible.

And your Petitioners, as in duty bound, will ever pray.

Dated this _____ day of _____, in the year of our Lord one thousand eight hundred and eighty-one.

ROAD FROM FELLTIMBER CREEK TO CARCOAR.

(FURTHER PAPERS.)

Ordered by the Legislative Assembly to be printed, 2 April, 1886.

FURTHER RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 24th September, 1885, That there be laid upon the Table of this House,—

“Copies of all Surveyors’ Reports, and Reports of other Public Officers,
“and of all petitions, documents, declarations, and other papers, in refer-
“ence to a request made by the people of Carcoar for a road from
“Felltimber Creek to Carcoar.”

(*Mr. Garrett, for Mr. Baker.*)

Mr. Road Superintendent Scarr to The Commissioner for Roads.

Copy of Mr. Road Superintendent Scarr’s reply to Mr. M’Adams’s letter *re* Roads in the Blayney District (Felltimber Creek to Carcoar).

Roads Office, Orange, 2 March, 1886.

Re letter *Blayney Argus*, signed M’Adam.

THIS is another example of the numerous effusions with which the lower class of provincial papers teem, written in most cases in lamentable ignorance, generally with reckless disregard to truth, and in many instances by persons having no real stake or interest in either the districts referred to or the matters treated of.

I have prepared a skeleton tracing showing the subsidized roads converging at Blayney, and also those within a radius of (say) 15 miles of that town, and have written thereon the amount per mile and total expended on each road annually. A glance at this will show pretty conclusively the entire absence of truth in the inference that this town has been neglected in this respect.

There are three first-class and five second-class roads actually leading into Blayney, the total expenditure on which, within a radius of 15 miles, will be for 1886 close upon £4,000, including a bridge at Five Islands, which will especially tend to facilitate traffic to the town. In fact, there is scarcely a road leading into Blayney which is not annually subsidized, or has had special grants.

On the roads referred to as actually converging at Blayney there exist not less than 30 miles of metalled road.

There is no creek which is not bridged, and no road that is not cleared throughout, with the exception of that from Blayney to Millthorpe, and 1 mile on the Blayney and Teapot Swamps Road, both of which will be done in 1886.

As to the allegation “that the roads get mended where they do not want it, and money is expended on dry level patches while bogs and hills are left untouched.”

An experience in studying the distribution of funds of nearly twenty years under the Department, and an intimate knowledge of this district for the last eight years, together with the guidance obtained by consultation with the more intelligent residents, should, I think, be quite sufficient to make me quite as good a judge of where or in what manner the Road Votes should be laid out as any one casually using the roads, and having perhaps interested motives in particular localities. On the whole the residents are well satisfied.

The statement that timber was left for months lying on the road is incorrect.

From the work having been let to a bad contractor (a contingency the Superintendents have no power to prevent under existing regulations) some delay was caused in getting the trunks of the trees drawn off, and other persons had to be employed to complete the work.

This was finished fifteen months since, about the date of the letter in question.

As to the remedy for the asserted unsatisfactory state of things, the only remedy will be a comprehensive system of local government, whereby people can have the privilege of both raising and expending their own road funds; and there are few districts so well adapted for the introduction of such a system as the area surrounding Blayney.

PERCY SCARR,

Road Superintendent.

ROAD—THE ISLANDS TO COWRA THROUGH BINNIE ESTATE.

No. 1.

The Hon. Sec. Cowra Progress Committee to The Secretary for Public Works.

[Presented by Mr. Baker, M.P.]

Sir,

I have been instructed by my Committee to urge upon you the necessity that exists for clearing and forming the road—Cowra to Walli, *via* Binnie Creek. In view of the railway line to Cowra being open for traffic in a very short space of time it is hoped that all the avenues leading to that town will be placed in a thorough state of repair. The population in and around Walli is considerable, and considerable inconvenience is experienced by teamsters journeying between that locality and Cowra in consequence of the almost impassable condition of the thoroughfare.

Trusting that you may be pleased to give the subject your prompt attention,

I have, &c.,

J. C. RYALL,
Hon. Sec.

Acknowledged, 2/11/85. Roads, B.C.—J.R., 3/11/85.

Commissioner's Minute.

Mr. Bartlett for report. He will show all these new roads asked for. Many of them are merely municipal works; and because the country has gone to the expense of railways is no reason why a further increased outlay should be made on roads, but rather the contrary.—W.C.B., 3/11/85.

Mr. Bartlett, B.C. Report and litho. herewith.—J. V. BARTLETT, 9/11/85.

No. 2.

Mr. Road-Superintendent Bartlett to The Commissioner for Roads.

Sir,

Roads Office, Cowra, 9 November, 1885.

In conformity with your minute of 3/11/85, I beg to submit the following report upon the attached letter from the Cowra Progress Committee.

In the first place I must point out that until the road through Mr. Alford's paddock—21, parish of Cowra—is opened, I consider any expenditure useless. The opening of this portion of the road has been the subject of petitions and correspondence during the past three years, but the matter has not been before me officially.*

Secondly.—The work proposed in Brisbane-street is the commencement of this road.

Thirdly.—When this road is classified the vote on the Cowra to Canowindra Road can be reduced.

I find these Committees are ever ready to make demands, but I never knew of any reduction being suggested.

I have, &c.,

J. V. BARTLETT,
Road Superintendent.*Commissioner's Minute.*

* Nor do I think it has been before me, but I fail to see why a short deviation at so remote a point should in any way affect the question of road into Cowra. The work in Brisbane-street is arranged for, as far as funds admit. When 1886 money is available I can then authorize contractor to continue and complete work. Mr. Bartlett makes no recommendation.—W.C.B., 10/11/85. Mr. Bartlett, B.C.

Mr. Bartlett's Minute.

I beg to recommend that where the old track has been fenced across it be opened—(On the north side of 21 is a very steep hill, the natural gradient is, in the worst place, about 1 in 6, and as it is a long hill it will be very costly to improve it, and in any case it will not be equal to the old track. The petitions and correspondence I referred to have been addressed to the Departments of Lands and Mines)—that where the fencing of another portion of the track, about 3 miles south of 21, causes a detour, it be removed, and that this road be scheduled third-class, as it leads to and passes through the most thickly populated farming community in the Cowra District.—J. V. BARTLETT, 16/11/85. The Commissioner.

Commissioner's Minute.

Mr. Airey,—Note this road to be classified. Cowra to Canowindra to be reduced. Colonel Wells, have inquiry made at Surveyor-General's Office as to action about opening road through Alford's 21.—W.C.B., 17/11/85.

Mr. Airey's Minute.

Mr. Bartlett does not state what distance this road is, nor to what class "Cowra to Canowindra" should be reduced. This latter road has already been reduced from £15 to £10 a mile on next year's schedule.—C.B.A., 17/11/85. Mr. Bartlett.—W.C.B., 24/11/85.

Mr. Bartlett's Minute.

From Cowra to Walli, *via* Binni Creek, 17 miles, third-class, £255. This sum will not be required annually after the first year; class four would suffice. £10 per mile is ample for the Cowra to Canowindra Road; for 1887 £7 is sufficient.—J. V. BARTLETT, 27/11/85.

The Commissioner. Mr. Airey,—W.C.B., 30/11/85. Road Cowra to Walli noted on schedule, and "Cowra to Canowindra" noted for reduction to fifth-class.—C.B.A., 30/11/85. Seen.—J. V. BARTLETT, 1/12/85.

3

No. 3.

C. L. Garland and E. A. Baker, Esq's., M.P's., to The Secretary for Public Works.

Sir,

In view of the heavy traffic between Cowra and Walli, *viâ* Binni Creek and the "Islands," we beg that you will cause the road to be classified, and a sum of money expended on it.

We have, &c.,
CHAS. L. GARLAND.
E. A. BAKER.

Acknowledged, 28/1/86. Roads.—J.G., 22/1/86. B.C.—J.R., 27/1/86. Mr. Bartlett for report and tracing.—W.C.B., 28/1/86. Mr. Bartlett, 28/1/86. Report and tracing attached.—J. V. BARTLETT, 20/2/86.

No. 4.

C. L. Garland, Esq., M.P., to The Secretary for Public Works.

Sir,

The Progress Committee of Cowra have requested me to ask that you will cause a survey of a road to be made between Cowra, Binni Creek, and, if necessary, portions of freehold resumed. There is a large farming population at Binni Creek, and as several of the freeholders *en route* threaten to fence the road now in use, very great annoyance and inconvenience may result. This matter, I am assured, is most important.

I have, &c.,
CHAS. L. GARLAND.

Acknowledged, 3/2/86. Roads for report.—J.G., 3/2/86. B.C.—J.R., 4/2/86. Previous papers.—W.C.B., 5/2/86. 85-10,300 herewith, 6/2/86.

Commissioner's Minute.

I think this relates to 86-899 herewith. Mr. Bartlett to report.—W.C.B., 8/2/86. Mr. Bartlett, B.C., 9/2/86. 86-981 attached.—J. V. BARTLETT, 20/2/86.

No. 5.

Mr. Road-Superintendent Bartlett to The Commissioner for Roads.

Sir,

Herewith I forward tracing showing the proposed road. With exception of the necessary angles to avoid the stoney barriers on the Temporary Common and the connection between allotment 82 and water reserve 117, the country being hilly with tracks in various directions, the red dotted line should be adhered to. This line represents the course of the old track, slightly modified to avoid sharp turns, and if departed from will lead to complications.

The classification of this road was dealt with on paper 85-10,300, viz. :—17 miles at £15 = £255. The second paragraph of this paper refers to the portion of road fenced across which forces the traffic over a very steep hill, viz., allotment 21, parish of Cowra (see tracing), and if the fencing off of this track is sanctioned the survey and vote should stop at No. 103. On two occasions I have recommended the opening of this road. About two years ago a petition was sent to the Department of Mines, and subsequently to the Lands Department, but not until recently has it been referred to in my reports to you.

Yours, &c.,
J. V. BARTLETT.

Commissioner's Minute.

Ascertain at Surveyor-General's Office if any steps have been taken to open road through allotment 21, Mount Alford, parish of Cowra; if so, what date, &c.—W.C.B., 22/2/86.

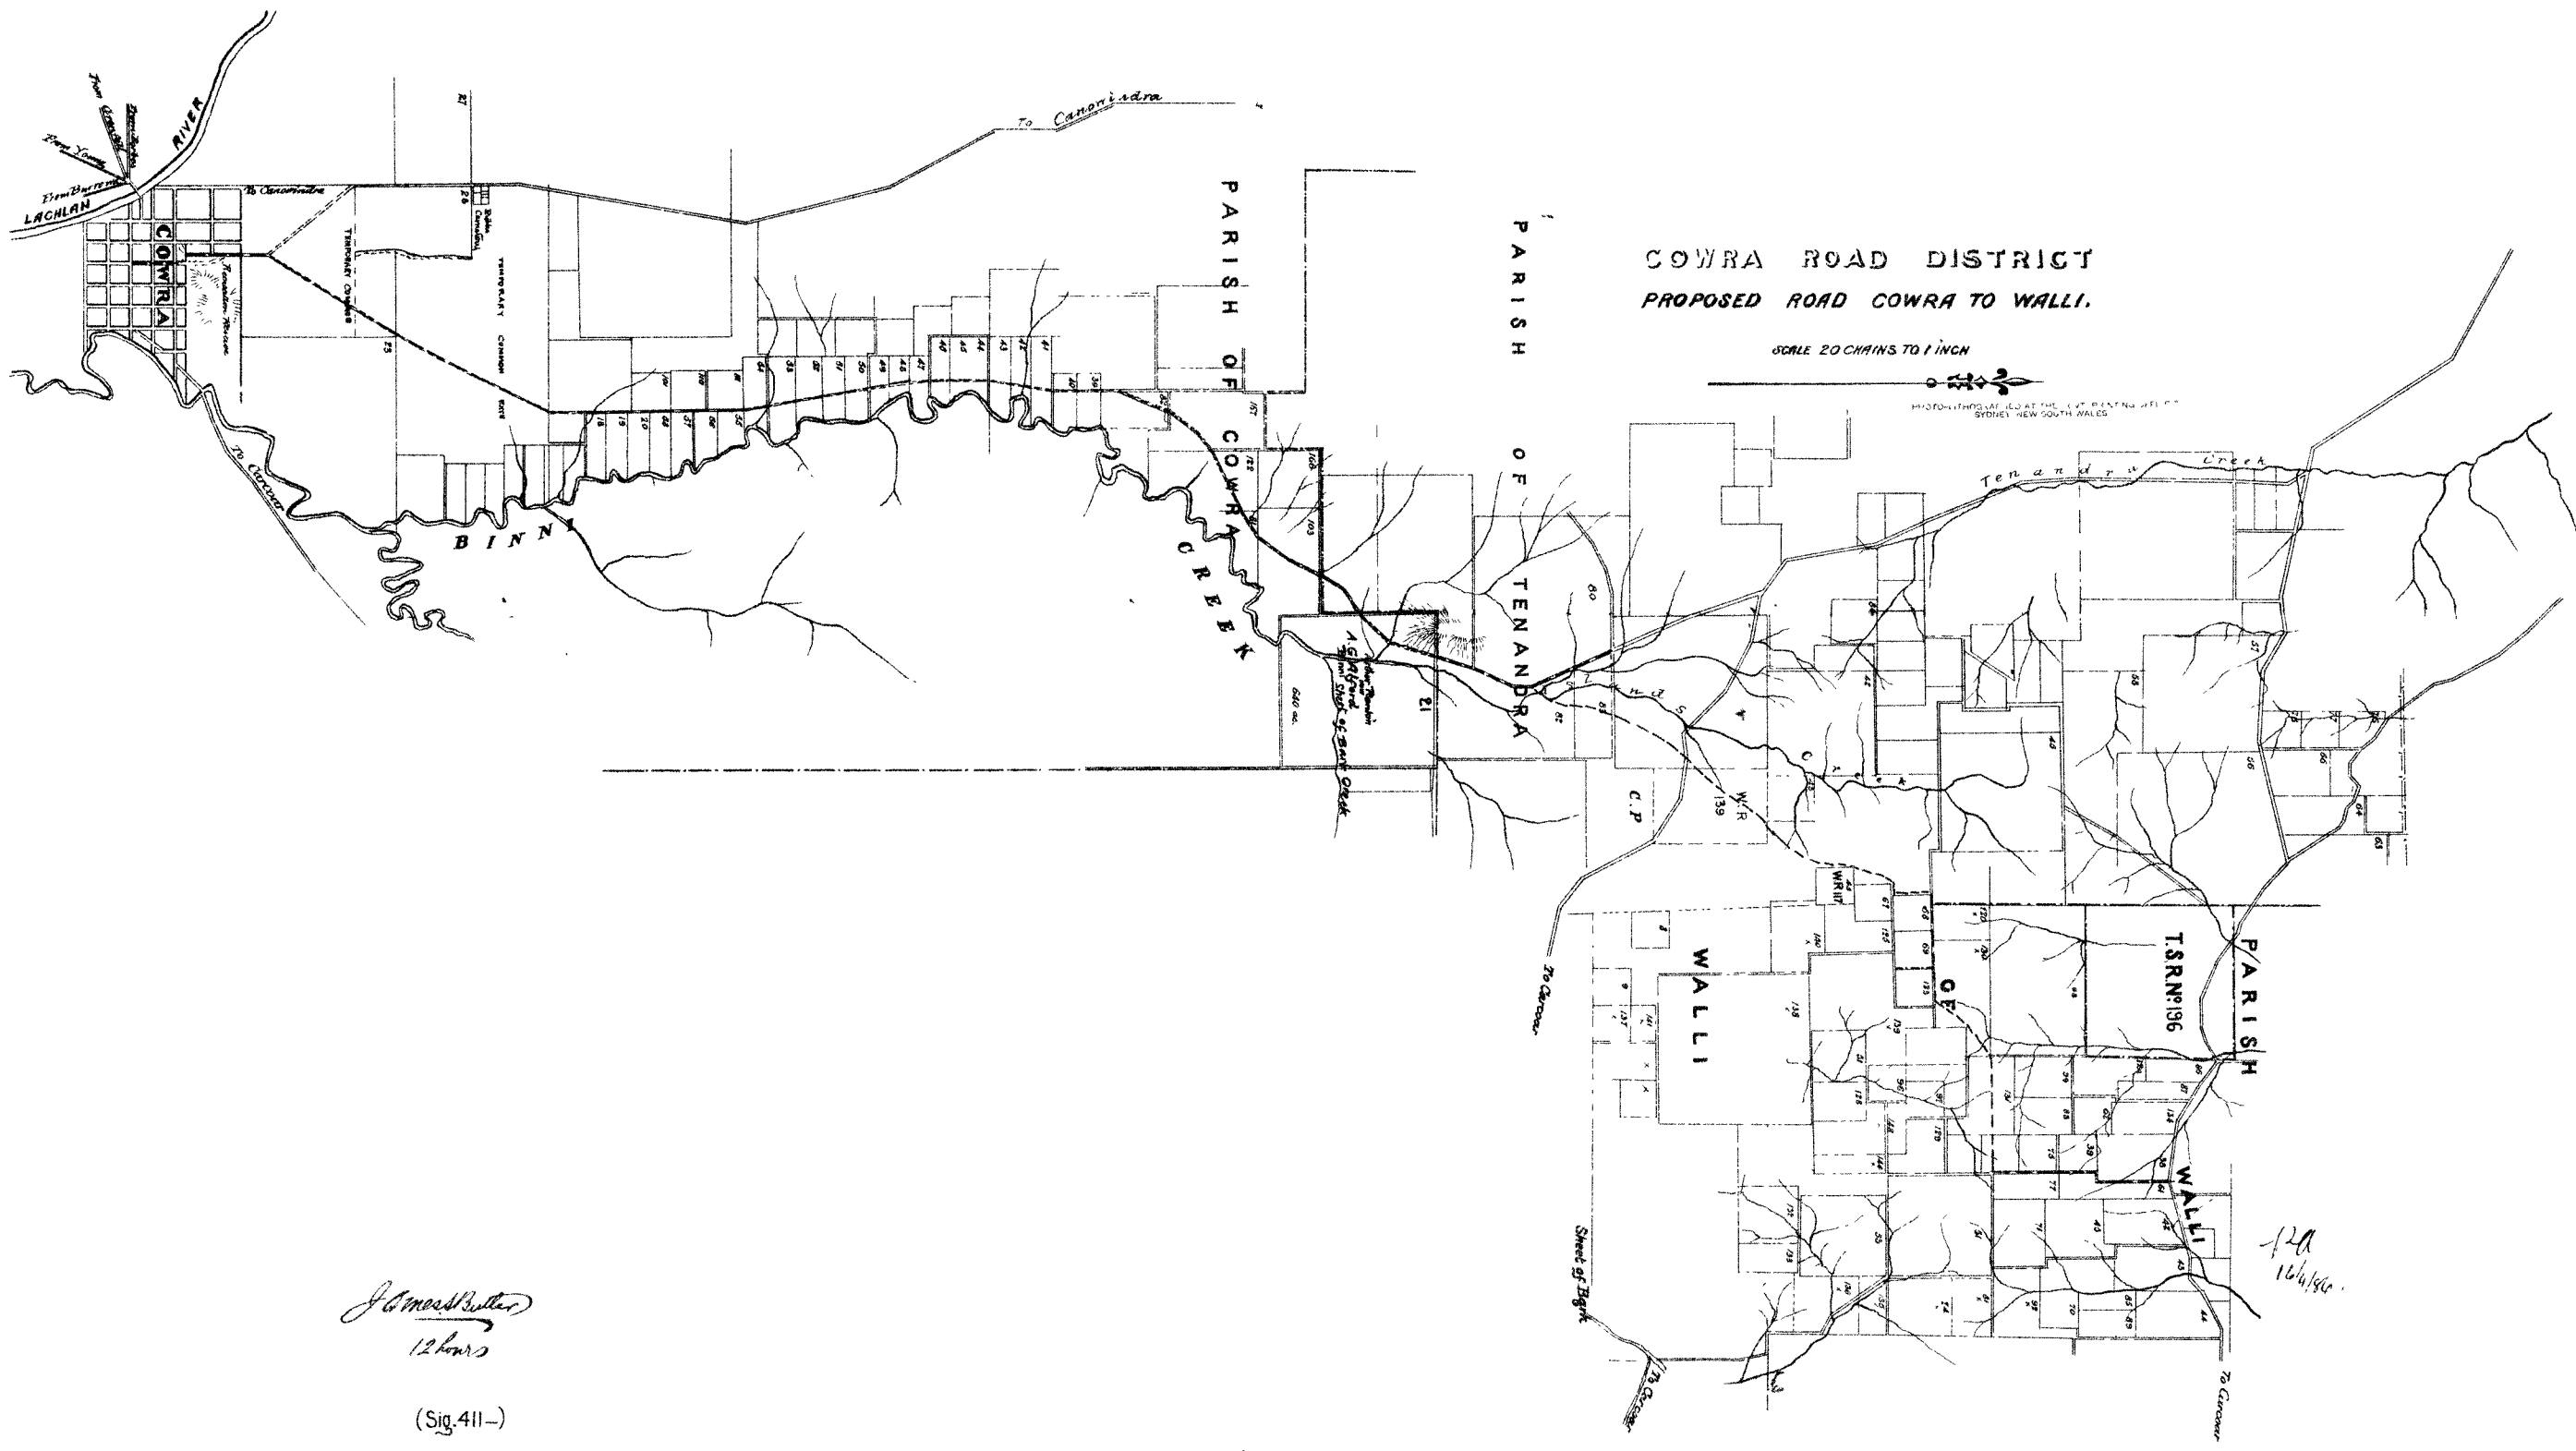

Mr. Flynn's Minute.

No steps have been taken, and Mr. Stops states that it has been decided not to open the road.—P.H.F., 24/2/86.

Mr. Bartlett.—W.C.B., 25/2/86. Noted.—J. V. BARTLETT, 27/2/86. File.—W.C.B., 1/3/86.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ROAD, BOWAN PARK TO CUDAL.

(MONEY EXPENDED ON DURING LAST TWO YEARS.)

Ordered by the Legislative Assembly to be printed, 6 October, 1886.

QUESTION.

(4.) Road, Bowan Park to Cudal:—Dr. Ross asked the Secretary for Public Works,—

(1.) Has any money been expended in repairing the road between Bowan Park and Cudal during the last two years; if so, will he state the amount so expended, and the nature of the work performed?

(2.) Is he aware that the road at present is in a bad state?

Mr. LYNE answered,—Information not yet received from local Officer.

ANSWER.

1. If question refers to Road Cargo to Cudal the sum of £180 was expended in 1884, entirely upon the erection of Oakey Creek Bridge, at Roberts'. The 1885 vote, £300, was expended near Cargo in clearing, forming, metal, &c., and it is proposed to expend the vote for 1886, £285, which is still untouched, in metalling near Coach's. If the road referred to is that from Cargo Road via Paling Yard Creek to Cudal, the vote for 1884, viz., £126, was expended by Trustees. The 1885 vote of £84 is being expended by local Officer in clearing and forming now in progress, and tenders will be called at an early date for works to amount of 1886 vote, £84.

2. Neither road has been reported as bad.

1885-6.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(NOTIFICATION OF RESUMPTION OF LAND FOR APPROACHES TO BRIDGE OVER MANDURAMA CREEK.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.NOTIFICATION OF RESUMPTION OF LAND UNDER
44 VICTORIA No. 16.

NEW SOUTH WALES, } By His Excellency The Right Honourable
to wit. } CHARLES ROBERT, BARON CARRINGTON,
a Member of Her Majesty's Most
(L.S.) } Honourable Privy Council, Knight
CARRINGTON, } Grand Cross of the Most Distinguished
Governor. } Order of Saint Michael and Saint
George, Governor and Commander-in-
Chief of the Colony of New South
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works, viz., the erection of a Bridge over the Mandurama Creek, on the Road from Mandurama to Galley Swamp, in the said Colony, for and towards the completion of which said works public funds are available under the provisions of the "Appropriation Act of 1885;" and whereas the lands hereinafter described are required for approaches to the said bridge: Now I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do by this notification, published in the Gazette and in certain newspapers, that is to say, the "Sydney Morning Herald" and the "Carcoar Chronicle," circulated in the Police District wherein the said lands are situated, declare that the lands hereinafter described have been resumed for the public purposes hereinafter mentioned, that is to say, for and in connection with the approaches to the Bridge over the Mandurama Creek aforesaid, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said lands shall forthwith be vested in the Minister for Public Works and his successors on behalf of Her Majesty for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent, further, that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee with the powers

stated in the said last-mentioned Act. And I declare that the following is the description of the lands hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the parish of Somers, county of Bathurst, Colony of New South Wales, being part of S. W. Ward's portion No. 6, required for access to a bridge over Mandurama Ponds Creek, containing by admeasurement 1 rood 4¼ perches more or less. Commencing at the south-west corner of S. W. Ward's portion No. 6 of 28 acres 3 roods aforesaid; and bounded on the south by a road 1 chain wide bearing east 1 chain 94½ links; thence on the south-east by a road 1 chain wide bearing north 59 degrees 1 minute east 1 chain 31 links; thence by the last-mentioned road north 19 degrees 59 minutes east 1 chain 59 links; and thence by a line bearing south 59 degrees 1 minute west 4 chains 21 links, to the point of commencement.

Also, all that piece or parcel of land situate in the parish of Lucan, county of Bathurst, Colony of New South Wales, being part of S. W. Ward's portion No. 165, required for access to bridge over Mandurama Ponds Creek, containing by admeasurement 1 rood 26½ perches more or less. Commencing at the north-east corner of S. W. Ward's portion No. 165, of 53 acres aforesaid; and bounded on the south-east by a road 1 chain wide bearing south 59 degrees 1 minute west 6 chains 35 links; thence by a line bearing north 38 degrees 55 minutes east 2 chains 91 links; thence by a line bearing north 59 degrees 1 minute east 1 chain 95 links to a road 1 chain wide; thence by the south side of that road east, to the point of commencement.

Given under my Hand and Seal, at Government House Sydney, this sixteenth day of July, in the year of our Lord one thousand eight hundred and eighty-six, and in the fiftieth year of Her Majesty's Reign.

By His Excellency's Command,

WILLIAM JOHN LYNE.

GOD SAVE THE QUEEN!

George, Governor and Commander-in-
Chief of the Colony of New South
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the construction of an approach to the Ferry at the Spit, Middle Harbour, in the said Colony, for and towards the completion of which said works public funds are available under the provisions of the Acts to apply sums out of the Consolidated Revenue Fund of New South Wales towards services of 1885 and 1886, and for services to be hereinafter provided for by loan; and whereas the lands hereinafter described are required for the construction of the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do by this notification, published in the Gazette and in a newspaper, that is to say, in the "Sydney Morning Herald," circulated in the Police District wherein the said lands are situated, declare that the lands hereinafter described have been resumed for the public purposes hereinafter mentioned that is to say, for and in connection with an approach to the Ferry at the Spit, Middle Harbour to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said lands shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent, further, that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee, with the powers stated in the said last-mentioned Act. And I declare that the following are the descriptions of the lands hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the parish of Manly Cove, county of Cumberland and Colony of New South Wales: Commencing at a point on the boundary line of the lots presently owned and occupied by Peter Ellery and Mrs. Smith, marked by a broad arrow cut in the rock, said point being the point of junction of said boundary line with the existing road line to Manly; thence bounded by the eastern side of said road line bearing north-west 160 degrees 38 minutes for a distance of 277·24 links; thence further by said road line bearing north-west 165 degrees 44 minutes for 221·37 links; thence running north-east by a line bearing 49 degrees 56 minutes 30 seconds for 308·68 links; thence north-east by a line bearing 71 degrees 27 minutes for 509·23 links; thence north-east by a

line bearing 43 degrees 51 minutes for 240·57 links; thence north-east by a line bearing 13 degrees 13 minutes 30 seconds for 9·06 links; thence north-west by a line bearing 103 degrees 13 minutes 30 seconds for 565·24 links; thence south-west by a line bearing 81 degrees 33 minutes 30 seconds for 196·69 links to another portion of the road line to Manly; thence north-east along the eastern boundary of said road line bearing 194 degrees 48 minutes 30 seconds for 108·8 links; thence north-east by a line bearing 81 degrees 33 minutes 30 seconds for 172·91 links; thence south-east by a line bearing 103 degrees 13 minutes 30 seconds for 606·3 links; thence south-east by a line bearing 90 degrees 45 minutes for 196·46 links; thence south-east by a line bearing 102 degrees 12 minutes for 278·38 links; thence south-east by a line bearing 147 degrees 57 minutes 30 seconds for 67·08 links; thence south-east by a line bearing 102 degrees 57 minutes 30 seconds for 135 links; thence south-west by a line bearing 192 degrees 57 minutes 30 seconds for 100 links; thence north-west by a line bearing 102 degrees 57 minutes 30 seconds for 135 links; thence south-west by a line bearing 57 degrees 57 minutes 30 seconds for 67·03 links; thence north-west by a line bearing 103 degrees 43 minutes for 220·73 links; thence south-west by a line bearing 89 degrees 31 minutes for 213·72 links; thence south-west by a line bearing 43 degrees 51 minutes for 223·03 links; thence south-west by a line bearing 71 degrees 27 minutes for 514·79 links; thence south-west by a line bearing 49 degrees 56 minutes 30 seconds for 217·04 links; thence south-east by a line bearing 171 degrees 57 minutes for 334·38 links; and thence south-west by a line bearing 190 degrees for 116·96 links to the point of commencement, containing 3 acres 1 rood 00·7 perches, and now or recently the property of Peter Ellery and Mrs. Smith.

Also, all that piece or parcel of land situate in the parish of Manly Cove, county of Cumberland and Colony of New South Wales: Commencing at a point on the western boundary of the road line to Manly, bearing south-west 81 degrees 33 minutes 30 seconds from the westernmost extremity of the parcel of land before described, and distant therefrom 108·8 links; thence bounded by the western side of that road line by a line bearing north-east 194 degrees 48 minutes 30 seconds for 289·6 links; thence running south-west by a line bearing 52 degrees 48 minutes 30 seconds for 330 links; thence south-east by a line bearing 153 degrees 30 minutes for 112·9 links; and thence north-east by a line bearing 81 degrees 33 minutes 30 seconds for 140 links, to the point of commencement, containing 1 rood 19·1 perches, and now or recently the property of Peter Ellery.

In witness whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this seventeenth day of August, in the year of our Lord one thousand eight hundred and eighty-six, and in the fiftieth year of Her Majesty's Reign.

By His Excellency's Command,
WILLIAM JOHN LYNE.

GOD SAVE THE QUEEN!

ACCIDENT TO JOHN LIVINGSTONE M^cCALLUM.

No. 1. Tender.

Main Western Road—Nymagee-street.

SCHEDULE of Tenders opened this day at the Court-house by R. A. Fraser, Road Superintendent, in the presence of L. M^cGuinn, junr., C.P.S.

| Name, number, and description of Contract. | Name of Tenderer. | Amount of Tender. | Amount of Estimate. | Remarks. |
|---|--|--------------------|---------------------|--------------------------------------|
| Task 23 N. Clearing in Nymagee-street 50 chains long. | 1. S. Gregson | £ s. d. 67 10 0 | £ s. d. 44 0 0 | F.G.L. Sec. 1 only. Informal. |
| | 2. Hayes & M ^c Fadyen | 33 10 0 | | |
| | 3. D. McCallum | 25 0 0 | | |
| | 4. G. Oliver | 28 0 0 | | |
| | 5. A. Carey | 53 11 0 | | |
| | 6. Young & Quilky | 55 0 0 | | |
| | 7. J. Scoul | 80 0 0 | | |

We certify the above to be correct, and that we have initialled all the tenders—

L. M^cGUINN, Jun., C.P.S.

R. A. FRASER, Road Superintendent.

Dubbo, 20th day of May, 1884.

No. 3 is much too low. It is incorrect also. I recommend acceptance of Hayes and M^cFadyen's tender.—R.A.F., 20/5/84. The Com., B.C. I recommend acceptance of Hayes and M^cFadyen's tender.—W.C.B., 22/5/84. Under Secretary, B.C. Submitted, 24/6/84. Approved.—G.R.D., 26/6/84.

TASK 23 N.

Department of Public Works—Road Branch.

General Conditions of Road Contracts and Taskwork.

1. The works to which these conditions refer include the supply of 'all tools, materials, and labour and everything else requisite to complete the works specified, to the entire satisfaction of the Commissioner and Road Superintendent.

2. The contractor is on no account to commence any contract without an order in writing, signed by the Road Superintendent; and no claim for any work executed without an order will be admitted. No extra work will be paid for without the production of an order in writing for the same, signed by the Commissioner and countersigned by the Superintendent; the price for any work not in the Schedule to be determined on previous to its execution, and set forth in the said order.

3. In every case the Commissioner reserves the right of executing any greater or less quantity of the work than that mentioned in the specifications, such increase or decrease to be valued at the Schedule rates, and added to or deducted from amount of contract, as the case may be. Schedule rates must be in accordance with bulk sum; if not, the Commissioner shall have power to fix rates in accordance therewith, and use them for such valuation.

4. During continuance of this contract the contractor is to maintain in fair order the portion of road comprised therein (except where contract is for supply of metal only), and also to afford every facility for the passing of the traffic during the execution of the work, and, if necessary, to provide new or keep the existing out-turns in repair, and also to provide proper guards for the drains and water-tables, and to stop all adjacent tracts by which the traffic can avoid the new metal, by felling the trees, drawing logs, or such other means as the Superintendent may direct. The contractor to take all due precaution to prevent accident to the public from leaving culverts open or placing heaps of stones in dangerous positions, and will be responsible for all damage arising from his neglect of these precautions.

5. The Road Superintendent will have the power of immediately dismissing any agent or workman employed by the contractor, and the contractor is not to sublet or assign any contract or portion of contract without the approval of the Road Superintendent.

6. All gravel, stone, ballast, metal, timber, iron, or other materials, placed on the road, or within 1 chain of centre thereof, for purposes of this contract, to become the property of the Commissioner when so placed.

7. To secure the proper quantity of metal or gravel it will be measured in a continuous heap of the requisite cross section before being spread; but it shall be competent for the Road Superintendent to re-measure such metal on the road when spread, should he consider it necessary.

8. When a certain gauge is specified, it is intended that every stone shall pass in every way through a ring of the diameter of specified gauge, the metal to be clean cuboidal and of sharp fracture; no laminated or jointy stone will be admitted.

9. All water-tables and side drains to have a proper fall to outlets and culverts, and new outlet drains made where directed by the Superintendent.

10. The sides of all cuttings, side drains, water-tables, &c., to have a slope of 1 to 1, except when in rock or otherwise specified; the sides of embankments to have a slope of 1½ to 1.

11. The contractor to be liable to all risk from floods or other accidents during the execution of the works. Should the state of the country from drought cause a liability to bush fire spreading, contractors must not use fire in clearing, but will give written notice to the Road Officer accordingly, when a proportionate

proportionate time will be allowed for completion of contract; and in the event of a fire of the kind referred to occurring from contractor's neglect of this precaution, he and his sureties will be held liable for damage to grass, fencing, or other property.

12. The Road Superintendent will have power to employ men, horses, and carts, and purchase materials, to do all necessary and urgent work, or to remove rejected materials on this contract, and deduct cost of same from contract price, provided the contractor shall have neglected to do such work after due notice. Should there be no funds belonging to contractor in the hands of the Commissioner for removal of rejected materials, all such materials, if not removed by contractor within one month from date of rejection, to become the property of the Commissioner, and be used in any manner he may direct.

13. Should the Road Superintendent be dissatisfied with the rate of progress or mode of carrying on the work, or with the character of the work done by the contractor, the Commissioner will have power to annul the contract, and the contractor shall forfeit all claim to payment for work done or material delivered; and the Commissioner shall be at liberty to deduct amount of penalty from any sum or sums due to contractor on this or any other contract under him.

14. The contractor shall not sublet this contract, or any material part of it, without notice to the Superintendent, and the permission of the Commissioner being granted if for the whole contract.

15. If the contractor shall become insolvent, have his estate placed under sequestration, or shall make an assignment of his estate for the benefit of his creditors, it shall be lawful for the Commissioner, without previous notice to the contractor, or to the Official or other Assignee or Assignees of his insolvent estate, or to the trustee or trustees under the assignment, to take the works out of the hands of the contractor, and of the assignees or trustees of his estate, and to re-contract with any other person or persons to proceed with and complete the same, upon such terms, stipulations, and conditions as shall be deemed expedient, using all the then remaining materials, implements, and plant, that may be required to complete the work.

16. Payments to be made at the rate of 80 per cent., the remainder to be paid after the Road Superintendent and overseer shall have certified that the whole of the works have been completed to their entire satisfaction; and the obtaining of such a certificate shall be a condition precedent to the Contractor having any claim or cause of action in respect of any work done or materials provided, to the payments from time to time to be made hereunder, or to the final payment upon completion of the contract.

17. All moneys due on account of contract will be paid to the contractor himself, or to his credit at such Bank as he may request, and the contractor shall not assign over any of the moneys payable under this contract to any other persons by deed of assignment, letter, or order, to the Commissioner or Superintendent. The contractor for each and every breach of this condition shall pay to the Commissioner for Roads the sum of £5, to be deducted on face of pay-sheet from amount due to contractor.

18. The contractor to attend constantly on the work, or employ a properly authorized agent to represent him, any order to whom will be considered as given to the contractor himself.

19. In case of any defective description or ambiguity in the specification, or in memoranda of contracts, the explanation given by the Commissioner shall be final and binding on the Contractor; the measurements to be made according to the actual dimensions, notwithstanding any general or local custom to the contrary.

20. The cuttings and culverts to be completed, and the ballast or metal ready for spreading in the time specified for each contract.

21. If, after the completion of this contract and approval of the work by the Road Superintendent, it shall be discovered that officer has been wilfully deceived, and his approval obtained by fraudulent or improper means, or by the concealment of inferior work or material, and that the work has not been faithfully done according to specification and general conditions, the Road Superintendent shall have power to employ men, horses, and carts, and purchase materials necessary to complete the work in accordance with the specification, and the Commissioner shall be at liberty to deduct the cost of the same from any sum or sums due to the contractor on this or any other contract under him.

THESE are the general conditions referred to in our bond to Her Majesty, dated the 27th May, 1884.

Witness—R. A. FRASER.

A. McFADYEN.
THOMAS HAYES.

Main Western Road, Dubbo District, Task 23 N, Nyngan-street, Nyngan.

THIS contract commences at the trucking yards, and extends along Nymagee-street to the Bogan River, comprising the clearing on the following sections:—

Section 1. From the trucking yards to railway-station gate, clearing road $1\frac{1}{2}$ chain wide—15 lineal chains.

Section 2. From edge of plain to Bogan River, clearing road $2\frac{1}{2}$ chains wide—35 lineal chains,—making a total of 50 chains clearing.

The clearing to be full width of the street; all trees, stumps, roots, rocks, or boulders within the street shall be thoroughly grubbed out to a depth of 12 inches below the natural surface; all the holes to be left open for inspection by the Road Superintendent, after which they shall be filled in with ballast, or approved clean gravel, well rammed. All trees, brushwood, stumps, or roots to be completely consumed by fire. Any trees or large boughs that overhang the clearing, or whose fall would cause obstruction on the road, are to be cut down and removed. Any fences injured during the execution of the work to be immediately repaired at the contractor's cost.

All the works specified to be completed within one month from date of signing the bond under a penalty provided for in the "General Conditions for Road Contracts," hereto attached, irrespective of bad weather, or any other cause of delay, except a written order be given by the Road Superintendent not to proceed with the work, or to increase the same, when a proportionate extension of time must be allowed.

Tenders to state a bulk sum for the execution of all the works specified, also a schedule of prices at which any deductions or additions shall be valued. Such additions or deductions, no matter to what extent ordered, shall not vitiate or set aside the contract.

In all matters relating to this contract not herein specified, the contractor to be bound by the printed general conditions hereto attached.

These are the general conditions referred to in our Task Agreement to Her Majesty, dated 27th May, 1884.

Witness—R. A. FRASER.

A. McFADYEN.
THOMAS HAYES.

No. 2.

Agreement for Clearing in Nymagee-street, Nyngan.

27 May, 1884.

Nyngan to Cobar, Road, Dubbo District.

I, THOS. HAYES AND ANGUS McFADYEN, hereby undertake to execute the following work for the Government of New South Wales, to the perfect satisfaction of Mr. R. A. Fraser, the Road Superintendent, viz., all the work mentioned in specification for task 23 N. clearing in Nymagee-street for the sum of £33 10s., and in accordance with the printed general conditions signed by me, which I declare shall be read and considered as part of this contract; and I agree and declare that the obtaining certificates from time to time as the work proceeds, that same so far as it has been executed has been done, and upon its completion that the work has been completed in all things to the satisfaction of Mr. R. A. Fraser shall be a condition precedent to my having any claim or right of action in respect of the said works.

Witness—R. A. FRASER.

A. McFADYEN.
THOMAS HAYES.

No. 3.

Mr. E. Barker to The Secretary for Public Works.

Sir,

Nyngan, 16 June, 1884.

I have the honor to inform you that a fortnight ago I was passing along the road on which the railway bridge abuts, on the east side of Nyngan, in company with Mr. J. L. McCallum, when he suddenly perceived a tree falling over us, which had been set fire to at the foot by the contractors for clearing the road. The tree suddenly commenced to fall, myself having the good fortune to escape from being crushed to death, but McCallum fared very much worse, having received a bad fracture of the thigh by the fall of the tree. Mr. McCallum is now, and has been, confined to his bed for the last fortnight, and, although progressing favourably, it is impossible to say when he will be able to attend business, or if he will have the full use of his limbs again. Mr. McCallum naturally looks to some one to indemnify him for his loss and injuries. There was no one to warn any passer-by of the danger, and evidently the contractors must be held responsible. I should feel obliged if you would inform me of the names of the contractors for the clearing of the road in Nyngan, and also if there is not a clause in the contract compelling them to take measures to prevent injury to public or loss of life, and generally say what you deem advisable to do according to the circumstances. The nominal contractor here appears to be a man without means, but surely Government would see that adequate protection is afforded to the public.

I have, &c.,

EDWARD BARKER.

Roads, B.C.—J.R., 24/6/84. Telegram sent Mr. Fraser—resubmit with his report.—W.C.B., 25/6/84. Should be informed his claim is against contractor, who is bound to provide for the safety of the public.—W.C.B., 4/7/84. Under Secretary, B.C., P.W.O., 5/7/84. Submitted, 5/7/84.—J.R. Approved.—G.R.D., 8/7/84. Mr. E. Barker informed, 10/7/84. Roads, B.C.—J.R., 10/7/84.

No. 4.

The Under Secretary for Public Works to Mr. E. Barker.

Sir,

Department of Public Works, Sydney, 10 July, 1884.

In reply to your letter of 16th ultimo, respecting injuries received by Mr. J. L. McCallum by alleged negligence on the part of the contractors for clearing street, Nyngan, I am directed to inform you that Mr. McCallum should prefer his claim for compensation against the contractors, Messrs. Hayes and McFadyen, who according to the terms of their contract are bound to provide for the safety of the public.

I have, &c.,

JOHN RAE.

No. 5.

Telegram from Mr. Road-Superintendent Fraser to The Commissioner for Roads.

Nyngan Station, 26 May, 1884.

HAYES AND McFADYEN in clearing streets set fire to a small tree. The tree fell when McCallum was walking past, and broke his leg. I warned them against allowing anything dangerous in the streets, and made them fill the holes as trees were grubbed.

Have these men been paid? Let me see vouchers in full.—W.C.B., 27/6/84. We do not appear to have received any vouchers yet for Hayes and McFadyen.—O.C., 27/6/84. Resubmit letter claiming compensation.—W.C.B., 28/6/84. Records, 30/6/84. 84-5173 herewith. In terms of general conditions (clause 4) contractors are liable for accidents occasioned by leaving culverts open, or placing heaps of stones in dangerous positions. Contractor is bound to provide for the safety of the public.—P.H.F., 4/7/84.

No. 6.

Mr. J. L. McCallum to The Secretary for Public Works.

Sir,

Nyngan, 17 July, 1884.

I have the honor to acknowledge receipt of your letter of 10th instant, addressed to Mr. E. Barker, relative to the injury (fracture of the thigh) sustained by me from the fall of a burning tree in the main thoroughfare of Nyngan, and caused by the criminal neglect of Messrs Hayes and McFadyen, the contractors for clearing the road or street. You state in your letter that I should prefer my claim for compensation

compensation against the contractors, from which information I presume you have taken adequate guarantee from the contractors and their sureties against any claim such as mine, which may be made against them. I have also to advise that I had a call from Mr. Fraser, from your department, on the subject of my injury. He found me in bed, and I shewed him my leg, encased in plaster of Paris. I succinctly told Mr. Fraser the cause and nature of the accident. I told him further that I happened to know something about Hayes, the contractor. About a week before the accident occurred a labourer called William Barber came to me in a state of destitution, and stated that he had been discharged by Hayes from the bridge contract and was unable to obtain the wages due to him from Hayes. I got the man employment from my own employers. This fact bears either on Hayes' honesty, or his impecunious state. Half an hour after Mr. Fraser left, Hayes called on me, having seen Mr. Fraser in the interim. He pretended to me that he had only heard, when he was laid up with fever, that someone had met with injury, but did not know who the person was, or where he lived, and only found out my address that day. He thus asserted a tissue of falsehoods. Everybody in Nyngan knew that my thigh was fractured, and it was fully detailed in the local paper. Hayes' employé, who set fire to the tree, slept in the same room with me, saw me the night of the accident, and was daily in contact with Hayes, who was not ill as he asserted; and my employer's address and my own were well known in Nyngan. So much for Hayes' humanity. He pretended poverty, and offered me successively one, two, five, and then £10, which of course I refused. At this stage of the conversation my medical attendant happened to call. I told him who Hayes was, when he at once told the latter that he (the doctor) had passed underneath the burning tree in his buggy about 10 minutes before the accident happened to me. Hayes then saw the doctor examine my leg and finally made me an offer of £20, which I at once rejected, and if I did not take that I would get nothing but impudence. My actual pecuniary loss will not be less than £50—from loss of salary (I am bookkeeper to Messrs. Croaker and Co.), doctors' fees, medicines, &c. To show the reckless disregard of human life by Hayes, I may mention that the day previous to my accident a waterman with his cart passed between two burning trees, which suddenly and unexpectedly fell, and about half-an-hour before my accident a lorry with two horses, and several men on it, passed underneath the same tree that fell on me. I am informed that the contractors were bound to cut down the trees and not burn them. All the foregoing facts can be proved by independent witnesses, and it would appear strange and unjust if you can permit operations to be carried on in such a manner, in the most frequented part of this town, in the daring, reckless, and criminal manner in which they were effected, with the most contemptuous disregard of human life and not be held responsible for damages. I have not yet consulted a solicitor, but will do so when I receive a reply to this. In the meanwhile I respectfully request you to guard my interests in the suit I may have to institute against the contractors, by retaining as much money as you can, belonging to them, pending a settlement of my claim, as from my knowledge of Hayes I am fully persuaded that as soon as he gets all his moneys from your department he will decamp. I would therefore like to know who are the sureties for Hayes and McFadyen, and if they are responsible for damages, such as I claim. I am 45 years of age, and once held a first-class position, and might do so again, were it not for this accident. If I obtain compensation at the same rate as the young man who recently got £900 from a Sydney jury for a tram accident I shall be content. I would calmly leave the matter in your hands, being confident that you have more regard for the public safety than the public property, were it not that you referred me to Hayes and McFadyen for compensation, since when Hayes has informed me that he is almost penniless, and if that is the case whom can I obtain adequate compensation from. Confiding in your justice, and feeling sure you will do your utmost to assist me in obtaining a settlement of a just and righteous claim, and awaiting the favour of your early reply,

I have, &c.,

JOHN LIVINGSTONE McCALLUM.

P.S.—So that you can identify me I may add that I have been personally known to you for years. Address, c/o Croaker and Co., Nyngan.

Roads, B.C., 21/7/84. A voucher for £41 is now in office which we will detain.—O.C. Mr. Fraser for further report. This is a very serious case.—W.C.B., 22/7/84. Report herewith.—R.A.F., 26/7/84.

No. 7.

Mr. Road-Superintendent Fraser to The Commissioner for Roads.

Sir,

Roads Office, Dubbo, 26 July, 1884.

Respecting the clearing in question, the tender of Hayes and M'Fadyen was accepted. I showed them what to do, and gave them to understand (verbally) that they must provide for the safety of the public, and that they would be held responsible for any damage done, adding that they must fill in any dangerous holes, and I would have them opened for inspection if necessary.

They began on section 1, and on it carried out my instructions. They did not here burn any of the trees down; but on section 2 they used fire in the felling of the trees, with the unfortunate result that one of them fell on and fractured the thigh of McCallum. The contractors aver that they had cleared one side of the street—here 2½ chains wide—and filled the holes for the traffic; that the tree McCallum got his hurt from was away altogether from the said cleared track, and he must have been picking his way through the fallen timber, &c., at the time of the accident.

They also assert that McCallum was not sober at the time, and that he had been on the spree for a fortnight previous thereto; but this McCallum of course denies.

Hayes says also that he made the men cut down any dangerous trees before knocking off work at night, or set men to watch them; but the tree in question was not set fire to by any of his men or by his orders, the truth of all which he is prepared to prove.

I called on McCallum, and afterwards induced Hayes to visit him, with a view of settling the affair. Eventually Hayes offered £20, but it seems McCallum wants £50. Thus the matter stands, without any likelihood of a peaceable solution. Hayes told me he would not give McCallum anything without he accepted the £20, and there is no doubt that if the contractors were fully paid up McCallum could "whistle for his money."

With

With respect to the treatment of the men working for them, no complaint has been made to me, other than what McCallum said, and I do not think they treat their employes more harshly than the generality of contractors. For the clearing a voucher, £41, has been forwarded to head office, where it now is, besides which the contractors have in hand a "Road Construction Contract," at Dubbo (£584), of which £80 or £100 worth has been done, and no payments made on account thereof.

McCallum, I hear, is again at his work in Croaker & Co.'s office.

I have, &c.,

R. A. FRASER,
Road Superintendent.

No. 8.

Minute of Commissioner for Roads.

J. L. McCallum's claim for compensation.

28 July, 1884.

J. L. McCallum writes on the 16th June, stating that a fortnight previously, when passing at night, a clearing being made in Nymagee-street, Nyngan, by Hayes and M'Fadyen, contractors under this Department, a tree which was being felled by burning, fell on him, and broke his thigh, putting him to great expense for medical advice, much suffering, and long detention from employment, and claimed compensation for all this from the Department. He was informed by letter, dated the 10th instant, that contractor, not department, was liable; but he objects that the contractor if paid will not pay him, and will not be worth following, and that he will look to the Government.

The contractor, on the other hand, states that he cleared one side of the street for the traffic, and that McCallum had no business to be on the side he was when accident occurred; that McCallum was not sober at the time, but that in order to prevent law he offered him £20. McCallum refused to take less than £50, and writes again to the Department, holding the Government liable. Hayes also states that the tree in question was not set fire to by his orders.

The report of Road Superintendent herewith sets forth Hayes' defence clearly.

I have to request that papers be sent to Crown Solicitor to know if the Department should hold over money due to Hayes and M'Fadyen, the contractors, to the amount of £50, to prevent loss to the Government, or if liability to them (Hayes and M'Fadyen) for breach of contract, will be incurred thereby.

I should point out that by the general conditions of contract attached contractors are held liable for safety of public.

WILLIAM C. BENNETT.

Department of Public Works—Road Branch.

General conditions of Road Contracts and Taskwork.

1. The works to which these conditions refer include the supply of all tools, materials, and labour, and everything else requisite to complete the works specified, to the entire satisfaction of the Commissioner and Road Superintendent.
2. The Contractor is on no account to commence any contract without an order in writing, signed by the Road Superintendent; and no claim for any work executed without an order will be admitted. No extra work will be paid for without the production of an order in writing for the same, signed by the Commissioner and countersigned by the Superintendent; the price for any work not in the Schedule to be determined on previous to its execution, and set forth in the said order.
3. In every case the Commissioner reserves the right of executing any greater or less quantity of the work than that mentioned in the specifications, such increase or decrease to be valued at the Schedule rates, and added to or deducted from amount of contract, as the case may be. Schedule rates must be in accordance with bulk sum; if not the Commissioner shall have power to fix rates in accordance therewith, and use them for such valuation.
4. During continuance of this contract the contractor is to maintain in fair order the portion of road comprised therein (except where contract is for supply of metal only), and also to afford every facility for the passing of the traffic during the execution of the work, and, if necessary, to provide new or keep the existing out-turns in repair, and also to provide proper guards for the drains and water-tables, and to stop all adjacent tracks by which the traffic can avoid the new metal, by felling the trees, drawing logs, or such other means as the Superintendent may direct. *The contractor to take all due precaution to prevent accidents to the public from leaving culverts open or placing heaps of stone in dangerous positions, and will be responsible for all damage arising from his neglect of these precautions.*
5. The Road Superintendent will have the power of immediately dismissing any agent or workman employed by the contractor, and the contractor is not to sublet or assign any contract or portion of contract, without the approval of the Road Superintendent.
6. All gravel, stone, ballast, metal, timber, iron, or other materials, placed on the road, or within 1 chain of centre thereof, for purposes of this contract, to become the property of the Commissioner when so placed.
7. To secure the proper quantity of metal or gravel it will be measured in a continuous heap of the requisite cross section before being spread; but it shall be competent for the Road Superintendent to remeasure such metal on the road, when spread, should he consider it necessary.
8. When a certain gauge is specified it is intended that every stone shall pass in every way through a ring of the diameter of specified gauge, the metal to be clean cuboidal and of sharp fracture; no laminated or jointy stone will be admitted.
9. All water-tables and side drains to have a proper fall to outlets and culverts, and new outlet drains made where directed by the Superintendent.
10. The sides of all cuttings, side drains, water-tables, &c., to have a slope of 1 to 1, except when in rock or otherwise specified; the sides of embankments to have a slope of $1\frac{1}{2}$ to 1.
11. The contractor to be liable to all risk from floods or other accidents during the execution of the works. Should the state of the country from drought cause a liability to bush fire spreading, contractors must not use fire in clearing, but will give written notice to the Road Officer accordingly, when

when a proportionate time will be allowed for completion of contract; and in the event of a fire of the kind referred to occurring from contractor's neglect of this precaution, he and his sureties will be held liable for damage to grass, fencing, or other property.

12. The Road Superintendent will have power to employ men, horses, and carts, and purchase materials, to do all necessary and urgent work, or to remove rejected materials on this contract, and deduct cost of same from contract price, provided the contractor shall have neglected to do such work after due notice. Should there be no funds belonging to contractor in the hands of the Commissioner, for removal of rejected materials, all such materials, if not removed by contractor within one month from date of rejection, to become the property of the Commissioner, and be used in any manner he may direct.

13. Should the Road Superintendent be dissatisfied with the rate of progress or mode of carrying on the work, or with the character of the work done by the contractor, the Commissioner will have power to annul the contract, and the contractor shall forfeit all claim to payment for work done or material delivered; and the Commissioner shall be at liberty to deduct amount of penalty from any sum or sums due to contractor on this or any other contract under him.

14. The contractor shall not sublet this contract, or any material part of it, without notice to the Superintendent, and the permission of the Commissioner being granted if for the whole contract.

15. If the contractor shall become insolvent, have his estate placed under sequestration, or shall make an assignment of his estate for the benefit of his creditors, it shall be lawful for the Commissioner, without previous notice to the contractor, or to the Official or other Assignee or Assignees of his insolvent estate, or to the trustee or trustees under the assignment, to take the works out of the hands of the contractor, and of the assignees or trustees of his estate, and to recontract with any other person or persons to proceed with and complete the same, upon such terms, stipulations, and conditions as shall be deemed expedient, using all the then remaining materials, implements, and plant that may be required to complete the work.

16. Payments to be made at least once a month, at the rate of _____ per cent., the remainder to be paid after the Road Superintendent and overseer shall have certified that the whole of the works have been completed to their entire satisfaction; and the obtaining of such a certificate shall be a condition precedent to the contractor having any claim or cause of action in respect of any work done or materials provided, to the payments from time to time to be made hereunder, or to the final payment upon completion of the contract.

17. All moneys due on account of contract will be paid to the contractor himself, or to his credit at such bank as he may request, and in no other way; and the contractor shall not assign over any of the moneys payable under this contract to any other persons by deed of assignment, letter, or order, to the Commissioner or Superintendent. The contractor for each and every breach of this condition shall pay to the Commissioner for Roads the sum of five pounds, to be deducted on face of pay-sheet from amount due to contractor.

18. The contractor to attend constantly on the work, or employ a properly authorized agent to represent him, any order to whom will be considered as given to the contractor himself.

19. In case of any defective description or ambiguity in the specification, or in memoranda of contracts, the explanation given by the Commissioner shall be final and binding on the contractor; the measurements to be made according to the actual dimensions, notwithstanding any general or local custom to the contrary.

20. The cuttings and culverts to be completed, and the ballast or metal ready for spreading in the time specified for each contract.

21. If, after the completion of this contract and approval of the work by the Road Superintendent, it shall be discovered that officer has been wilfully deceived, and his approval obtained by fraudulent or improper means, or by the concealment of inferior work or material, and that the work has not been faithfully done according to specification and general conditions, the Road Superintendent shall have power to employ men, horses, and carts, and purchase materials necessary to complete the work in accordance with the specification, and the Commissioner shall be at liberty to deduct the cost of the same from any sum or sums due to the contractor on this or any other contract under him.

No. 9.

Mr. T. & A. M'Dermott to Mr. Road-Superintendent Fraser.

Dear Sir,

Orange, July 30, 1884.

We should feel obliged if you would kindly inform us if the money due to Mr. T. Hayes is being withheld by the Department in consequence of the accident to McCallum; if so we cannot see the justice of it, as we have supplied Hayes with cash and goods to enable him to carry out the work, and we would thank you to kindly urge upon the Department to order the amount due to Hayes to be paid forthwith.

We are, &c.,

T. & A. M'DERMOTT.

The above refers to task 23 N, clearing in Nymagee-street, Hayes & M'Fadyen, contractors. The work has been finished, and a voucher (81) forwarded for £41 on account, which has not yet been paid. McCallum had his leg fractured during the progress of the work through a tree having fallen on him—papers 84-6299. Hayes & M'Fadyen made out an order for the payment of all moneys to the credit of T. & A. M'Dermott, which was forwarded a few days since to head office.—R. A. FRASER, 1/8/84.

The Commissioner, B.C. Inform we must withhold money pending decision.—W.C.B., 2/8/84. Mr. Fraser, B.C., 2/8/84. If McCallum intends taking action he should do so at once and settle the question, that moneys might be paid the contractor, who will not be able to pay his men if it is not soon paid.—R.A.F., 9/8/84. The Commissioner, B.C. MR. FLYNN. We must pay.—W.C.B., 11/8/84. Mr. Carroll, 11/8/84.—P.H.F. I shall pay the cheque to-morrow.—O.C., 12/8/84. Paid Mr. Fraser's credit this morning. Mr. Fraser, B.C. 13/8/84. Advice received.—R.A.F., 18/8/84. Paid.—R.A.F., 29/8/84.

No. 10.

The Crown Solicitor *re* J. L. McCallum's claim for compensation.

Crown Solicitor's Office, Sydney, 1 August, 1884.

I HAVE the honor to return herewith the minute of date 28th July last, of the Commissioner for Main Roads, respecting a claim made by J. L. McCallum, and to state that the Department has no legal right to hold over money due to Hayes & M'Fadyen, the contractors, to the amount of £50, to prevent loss to the Government, and that a liability to them, Hayes & M'Fadyen, to the extent of the money so retained, will be incurred thereby.

As suggested by the Commissioner, by the general conditions of contract, contractors are held liable for safety of the public in case they neglect to take certain precautions against damage specified in the 4th general condition, but the accident in this case does not appear to have arisen from the neglect of any of the precautions mentioned in that condition.

I am inclined to think that the setting fire to the tree was not an act that can fairly be said to have been contemplated by the terms of the contract (unless there is a provision for burning off trees in the specification of which I am not informed), and that therefore the act of the contractors complained of is not one for which the Government is liable, but whether this be so or not there can be no doubt but that the Government have no right to retain money payable to the contractors, as an indemnity against the claim now made.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

Roads, B.C., 5/8/84.—J.R. Re-submit with specification.—W.C.B., 5/8/84. Specification for this task retained by Mr. Fraser.—P.H.F., 6/8/84. Telegraph for it.—W.C.B. Telegram sent, re-submit, 7/8/84. Specification herewith, 14/8/84. Attach copy of clearing clause* for reference when another application is made pay contractor in accord with Commissioner's opinion.—W.C.B., 14/8/84.

* The clearing to be full width of the street; all trees, stumps, roots, rocks, or boulders within the street shall be thoroughly grubbed out to a depth of 12 inches below the natural surface; all the holes to be left open for inspection by the Road Superintendent, after which they shall be filled in with ballast, or approved clean gravel, well rammed. All trees, brushwood, stumps, or roots to be completely consumed by fire. Any trees or large boughs that overhang the clearing, or whose fall would cause obstruction on the road, are to be cut down and removed. Any fences injured during the execution of the work to be immediately repaired at the contractor's cost.

£41 for Hayes & M'Fadyen was paid to Mr. Fraser's credit on 13th inst.—O.C., 18/8. Submitted to Commissioner, 18/8/84.

No. 11.

Mr. J. L. McCallum to The Secretary for Public Works.

Dear Sir,

Hospital, Dubbo, 21 October, 1884.

It is now nearly five months since I got my thigh fractured at Nyngan by a burning tree falling on me in the main street, which will render me more or less of a cripple for life, and I will not be fit for work this side of Christmas. Full details of the case were transmitted to you officially by myself and also by my solicitors, Messrs. Shorter, Fitzgerald, & Asher, but the matter has never yet been attended to by your Department, and as I will be shortly leaving the Hospital and am anxious to pay the latter before doing so, and also other expenses, I take the liberty of writing you to solicit your influence in getting a settlement expedited. I only ask for justice from you tempered by a humane leaning towards the weaker side which is mine. I was perfectly sober when the accident happened, and tried to avoid the tree, but was caught by a limb. It seems monstrous that a person can be injured by a falling tree in the Government township of Nyngan, and not obtain compensation. The Government may evade liability by some legal quibble, but they can never escape moral liability. To facilitate a settlement I would take, to avoid litigation, a very moderate sum, and in fact were you properly informed on all points I would leave the matter of compensation entirely in your own hands, as I stated in my letter of 16th July, addressed to you officially. I would be content with £250 made up as follows:—

| | |
|--|-------------|
| Medical fees, medicines, nursing, and outlay | £45 |
| Loss of salary | 80 |
| Compensation for permanent injury | 125 |
| | <u>£250</u> |

And I feel sure you will agree with me that the amount is as moderate as any claim ever made on your Department.

My view of the matter is that Hayes and McFadyen, the contractors, were only working contractors, whom the Chief Justice decided two or three months ago, were only servants and consequently they were only Government servants, for whom you are officially liable, but you have a claim on them for negligence, and I of course look to you for compensation.

Very moderate compensation would be more acceptable to me now than much larger compensation some months hence.

I would feel deeply obliged if you would cause your officers to take up my case at once and thus enable you to decide the matter, and I sincerely hope your decision will be favorable to me, as if not there will be a miscarriage of justice. It is upwards of four months now since the case was first placed before you officially, long enough, I respectfully submit, to admit of a settlement, but I presume your long illness, from which I hope you have fully recovered, would account for the delay. I am able to go about on crutches and it will be a considerable time before I can dispense with them.

Trusting you will cause a communication to be sent to Messrs. Shorter, Fitzgerald, and Asher solicitors, Dubbo, as early as convenient,

I have, &c.

JOHN L. MCCALLUM.

P.S.—Unless I get compensation at once I will be compelled to go to work prematurely, and still further permanently weaken my leg. Whereas I wish to go to Sydney to consult a first-class surgeon, to see if my leg can be improved, though it can never be cured, but I cannot move for want of means.—J. L. McC.

Acknowledge,

Acknowledge, and let me have any information there is in this office.—F.A.W., 24/10/84. Acknowledged, 24/10/84. Roads, B.C., 25/20/84.—J.R. Previous papers,—W.C.B., 27/10/84.

This is doubtless a hard case, but the Crown Solicitor's letter will show that the liability is the contractor's. They have gone from the locality, and given an order for some one to receive their money. Dealing with this case must be done with care as it would form a very inconvenient precedent.—W.C.B., 28/10/84. Under Secretary, B.C.

P.W.O., 29/10/84. Submitted, 29/10/84.—J.R. What does Mr. Bennett recommend? As the contractors appear to be liable are we to refer McCallum to them for redress?—J.R. B.C., 4/11/84. I think so.—W.C.B., 4/11/84. Under Secretary, B.C. Inform accordingly.—F.A.W., 6/11/84. Roads B.C., 7/11/84.—J.R.

No. 12.

The Under Secretary for Public Works to Mr. J. L. McCallum.

Sir,

6 November, 1884.

In reply to your letter of the 21st ultimo, claiming compensation for injuries alleged to have been received through the falling of a tree in the township of Nyngan, I am directed to inform you that the Government cannot recognise your claim, but I am to refer you to Messrs. Hayes and McFadyen, who were the contractors for the work which is said to have occasioned the injury referred to.

I have, &c.

JOHN RAE.

No. 13.

The Commissioner for Roads to Mr. J. L. McCallum.

Sir,

Department of Roads and Bridges, Sydney, 17 December, 1884.

Referring to the claim made by you for compensation for injuries received by the falling of a burning tree at Nyngan, I have to inform you that the Crown Solicitor has reported that the contractor, and not the Crown, is liable in the matter; and as the final payment to the contractor is about to be made you are so informed in order that you may take any legal steps you think necessary, intimation of which should be sent to this office at once, as the money when payable cannot legally be detained.

I am, &c.

WILLIAM C. BENNETT,

Commissioner and Engineer for Roads.

No. 14.

Memo. by Commissioner for Roads.

Department of Roads and Bridges, Sydney, 5 January, 1885.

HAS McFadyen & Co.'s money been paid *re* Nyngan accident?

Yes, the money has been paid.—O.C., 5/1/85. Mr. Carroll,—Note that McC.'s solicitor called this day; also date of letter to McCallum advising (17/12/84), and date of payment (29/8/84). Noted.—O.C., 5/1/85.

No. 15.

Messrs. Shorter, Fitzgerald, & Asher to The Commissioner for Roads.

Sir,

Gladstone Chambers, 90, Pitt-street, Sydney, 13 January, 1885.

We have the honor to request that all moneys, to the extent of £200 at least, which may be due, or accruing due, by your Department to Messrs. Hayes & McFadyen, contractors, of Nyngan, be detained, pending the obtaining of the necessary attachment order, in the matter of a claim against them by one John L. McCallum, who was injured through their negligence, during the performance by them of a contract for clearing a road under your Department at Nyngan.

We have, &c.,

SHORTER, FITZGERALD, & ASHER.

Mr. Carroll,—We cannot withhold on this only.—W.C.B., 14/1/85.

No. 16.

Mr. J. L. McCallum to The Secretary for Public Works.

Sir,

51, Market-street, Sydney, 31 May, 1886.

I have the honor to lay before you certain information relative to my claim for compensation for injuries sustained by me through the falling of a tree, set fire to by Hayes & McFadyen, while clearing ground in Nymagee-street, Nyngan, in June, 1884. On the motion of Mr. Abigail, M.L.A., you laid, on the 4th of this month, on the table of the Assembly copy of contract, report by Fraser, the Road Inspector, a minute by Mr. Commissioner Bennett, and the copy of the letter of an eye-witness, Mr. Ed. Barker.

I thought that these would have been sufficient to have enabled a Select Committee to deal with my claim, and they would have been had it not been for the gross deception used towards me by Fraser. (I write of him as he wrote of me.)

On the day when Fraser made his inquiry into the cause of my accident he, uninvited, called on me. I was then lying helpless in bed, with my fractured thigh encased in plaster of Paris, and my condition might well inspire humane feelings in the breast of a savage. Fraser expressed the deepest sympathy

sympathy with me, and he said also that he hoped I would get heavy damages from the contractor, Hayes (McFadyen had retired from the contract before its execution), when I at once told him that I did not recognize the contractor at all in the matter, but looked to Government for compensation. I also asked him if he did not think I had a claim on Government, when he replied, "I cannot say." I also told him, as a matter of fact, that Hayes was penniless, and it was absurd to ask me to look to him for compensation. I also told him that I was then employed as bookkeeper to Croaker & Co., and had previously honourably filled higher situations, and had a salary at one time equivalent to £1,000 per annum, and that I considered my life and limbs as valuable as those of any man in the Colony. I further asked him to go to Croaker & Co.'s store, and he would there see Mr. E. Barker, the eye-witness, who would give him all particulars, and he would also find a man called Wm. Barber (an ex-railway employé), who had been working for two months at the Nyngan Bridge contract, then recently completed by Hayes and McFadyen, and that the said Wm. Barber would tell him that he had been in vain trying for several weeks to get his wages from Hayes, and when in great distress he came to me, and about a fortnight before my accident I got him employment in the store of my own employers. Now, after Fraser's expressions of sympathy with me, and after I had given him the foregoing information, who could have thought that he would have written the report he forwarded to the head of his Department? It is only valuable as proving that the trees were set fire to by Hayes—all the rest is merely a repetition of his friend and protegé, Hayes', slanders, who not very long afterwards was arrested, publicly tried, and heavily fined for being drunk and disorderly in the streets of Nyngan. Fraser states that I was willing to accept £50 from the contractor as compensation, which is a downright invention of Hayes. Fraser was also brutal enough to report that he had heard on the date of his report that I was then at work, but he must have known that that averment was a physical impossibility.

I have thus shown you the cruel and heartless action of Fraser, who misrepresented my case, and succeeded in poisoning the mind of his superior officer against me. I subsequently wrote at great length to the Hon. the Minister for Works, but could get no other reply than a reference to the contractor for compensation. I then entrusted my case to Messrs. Shorter and Fitzgerald, solicitors, of Dubbo and Sydney. They found out that Hayes was not only penniless but in debt to the extent of £900. In consequence of my solicitors' representations the engineer who supervised Fraser, who resides, I believe, at Bathurst, made an inquiry into the merits of my claim, and promised personally to Mr. Fitzgerald to report favorably on my behalf to the Hon. the Minister for Works, as advised in a letter I received from Mr. Fitzgerald, dated 19th January, 1885. The Hon. F. A. Wright must then have dealt with my case, the result being that my claim was rejected. Now I am in a position to prove that the then Minister of Works, the Hon. F. A. Wright, could not deal with my case impartially, for the reasons fully set forth in my letter, marked No. 2,* of this date and herewith enclosed.

* Not received.

Believing you to be a lover of justice, I have the honor to ask you to do an unfortunate man a favour, by moving to-morrow that all the papers, reports, minutes, and correspondence connected in any way with my claim be laid on the table of the Assembly and afterwards printed. It is a very important matter to the public, whether a man of forty-five, and in perfect health, can be struck down in the main street of a Government township, through the gross neglect of a Government Roads Inspector, in allowing fire to be applied to the trees, and in letting a contract to Hayes and McFadyen, whom he knew perfectly well were unable to pay any damages, if incurred, and he (the sufferer) get no compensation.

During the course of my career I have had the honor of conducting correspondence with several Government departments in different countries and in several languages, but I never experienced the insolence and the extreme discourtesy of the Under Secretary of Works. I would be sorry to compare myself, in point of the accomplishments or the manners of a gentleman, with him. I noticed also that Mr. Comr. Bennett, in his minute, travels beyond his province, and endeavours to prejudice the Crown solicitors against my claim. As I happen to know a good deal about the knavery of the Roads Department I am not surprised at his action, but I believe the public will soon know something of what a Roads Inspector can do with the approbation of his superior; I can prove what I say.

I should like this letter printed along with my other letters. It will act as a counterpoise to the letters of Messrs. Rae, Bennett, and Frazer.

I have, &c.,
JOHN LIVINGSTONE McCALLUM.

P.S.—I need hardly say I have only criticized the gentlemen named in your Department in their official capacity. I scorn to condescend to the meanness of Fraser, and criticize their private habits.—J. L. McC.

P.S.—As I am a total stranger to you I may add that I am an accountant by profession, and have been in the employ of several of the first firms in N. S. W. in that capacity, and am at present bookkeeper to a most respectable firm in town, and all of whom can, and if necessary would, testify to my integrity, veracity, and industry.—J. L. McC.

The original of this paper only received in Roads Office this day. Copies sent to Messrs. Narden and Frazer. Reply will be sent on to attach to these papers.—W.C.B., 22/6/86.

1885-6.

NEW SOUTH WALES.

THIRTY-FIRST ANNUAL REPORT

OF THE

POSTMASTER-GENERAL,

ON THE DEPARTMENTS UNDER HIS MINISTERIAL CONTROL,

BEING THAT FOR THE YEAR

1885.

Presented to Parliament by Command.

SYDNEY: THOMAS RICHARDS, GOVERNMENT PRINTER.

1886.

[4s.]

471—A.

[1,258 copies—Approximate Cost of Printing (labour and material), £286 17s. 9d.]

THE POSTMASTER-GENERAL TO HIS EXCELLENCY THE GOVERNOR.

ANNUAL REPORT FOR THE YEAR 1885, ON THE POST OFFICE, MONEY ORDER, GOVERNMENT SAVINGS' BANK, AND ELECTRIC TELEGRAPH DEPARTMENTS.

MY LORD,

I have the honor to transmit to your Excellency the Thirty-first Annual Report on the Departments under my Ministerial control.

COMBINED REVENUE AND EXPENDITURE.

| | <i>Revenue.</i> | | | 1884. | | 1885. | |
|--|---------------------|----------------|-------------|----------|----------------|-------------|--|
| Post Office | £ | 289,192 | 3 11 | £ | 316,171 | 12 11 | |
| Electric Telegraph Department | | 146,386 | 8 2 | | 155,073 | 10 3 | |
| Money Order and Government Savings' Bank Department— | | | | | | | |
| Commission on Money Orders | | 12,794 | 0 0 | | 14,243 | 5 6 | |
| Interest on Investments | | 47,495 | 15 10 | | 53,630 | 9 8 | |
| Total | £ | 495,868 | 7 11 | £ | 539,118 | 18 4 | |
| | | | | | | | |
| | <i>Expenditure.</i> | | | 1884. | | 1885. | |
| Post Office | £ | 351,253 | 11 9 | £ | 375,964 | 17 6 | |
| Electric Telegraph Department | | 171,433 | 14 8 | | 181,448 | 5 2 | |
| Money Order and Government Savings Bank Department— | | | | | | | |
| Salaries and Contingencies | | 15,440 | 6 6 | | 16,203 | 2 9 | |
| Interest added to Depositors' Accounts | | 43,198 | 2 6 | | 49,193 | 6 8 | |
| Total | £ | 581,325 | 15 5 | £ | 622,809 | 12 1 | |

The above are the particulars of expenditure out of the votes of Parliament directly at my disposal, except in the case of the Government Savings' Bank item of "Interest added to Depositors' Accounts," which is specially provided for out of the interest accruing from investment of funds on the same account.

The following are the items of expenditure paid from votes under the control of other Ministers :—

| | 1884. | | 1885. | | | |
|--|----------|---------------|------------|----------|---------------|------------|

| Advertising in newspapers | | 967 | 15 10 | | 706 | 3 1 |
| Total | £ | 35,350 | 0 3 | £ | 39,596 | 3 8 |

The interest on the cost of construction of Electric Telegraph lines is estimated at £25,666, and the interest on the cost of buildings owned by the Government, and used as Post and Telegraph Offices in various parts of the Colony, is estimated at £13,342, which will make the total expenditure of the Departments under my control £701,413 15s. 9d.

UNIVERSAL

* These items do not include the proportions chargeable against the Electric Telegraph and Money Order and Government Savings Bank Departments, of the salaries of officials in charge of combined Post and Telegraph Offices, the full amount of which salaries are included above in the expenditure of the Post Office Department. Apportioning the cost of salaries, the Electric Telegraph expenditure would be £187,332 11s. 4d., the Money Order and Government Savings Bank expenditure, £17,619 9s. 11d. (exclusive of interest added to depositors' accounts); and the expenditure of the Post Office Department, £368,614 4s. 2d.

UNIVERSAL POSTAL UNION.

In the last Annual Report it was stated that it had been arranged that Buxton Forman, Esq., one of the leading officials of the London Post Office, who had been selected to represent other interests at the Postal Congress intended to be held at Lisbon, should also act for the Colony of New South Wales.

In continuation of this subject, I now give the following despatch from the Agent-General, London, dated 26th June, 1885, with enclosures, indicating the result of Mr. Forman's mission :—

The Agent-General to The Colonial Secretary.

Sir,

5, Westminster Chambers, Westminster, S.W., 26 June, 1885.

Referring to former correspondence on the subject of the "Postal Union Congress, Lisbon," I have the honor to forward for your information copy of a communication addressed to me by the Colonial Office, with certain documents therein having reference to Mr. Buxton Forman's visit to Lisbon as representative of the Colony of New South Wales at the beforementioned Congress.

You will observe that Lord Derby proposes that the Agents-General should meet Mr. Buxton Forman in conference for the purpose of considering the question of the entry of the Australian Colonies into the Universal Postal Union.

Arrangements are now being made for the meeting, as suggested by Lord Derby. So soon as we have deliberated I will report to you. I shall, however, refrain from taking any definite action, pending the receipt of such instructions in regard to the matter as you may desire to give.

I have, &c.,
SAUL SAMUEL.

[Enclosure.]

The Colonial Office, London, to The Agent-General for New South Wales.

Sir,

Colonial Office, Downing-street, 22 June, 1885.

I am directed by the Earl of Derby to inform you that the Postmaster-General proposes that the Agents-General for the Australian Colonies should meet Mr. Buxton Forman, who represented New South Wales, South Australia, and Western Australia at the recent Postal Union Congress at Lisbon, for the purpose of considering the question of the entry of the Australian Colonies into the Universal Postal Union.

2. You will observe from the letter from the General Post Office of the 23rd of May (copy enclosed), that the most favourable time for their entry is considered to be between the present date and the 1st of February next.

3. I am therefore to inquire whether you will be prepared to attend such a Conference.

4. I am further to enclose for your information printed copies of Mr. Forman's report in the capacity of representative of New South Wales, South Australia, and Western Australia, and of Lord Derby's telegram, referred to in the Post Office letter.

I am, &c.,
EDWARD WINGFIELD.

The General Post Office, London, to the Colonial Office.

Sir,

General Post Office, London, 23 May, 1885.

With reference to the letter from this Department, of the 18th of February last, enclosing, by direction of the Postmaster-General, a copy of Mr. Blackwood's memorandum from Lisbon on the subject of the terms upon which the Australian Colonies might be admitted to the Universal Postal Union, Mr. Shaw-Lefevre now instructs me to acquaint you, for the information of the Earl of Derby, that the Congress of Lisbon decided to confirm the recommendations of the Committee as detailed in the memorandum referred to.

I am to enclose a copy of the report addressed to the Postmaster-General by the delegates appointed to attend the Congress on behalf of Great Britain; and I am to request that you will be so good as to direct Lord Derby's attention to the 23rd and 24th paragraphs of this Report as bearing upon the present question, pointing out, moreover, that the additional Acts signed at Lisbon (copies annexed) import no change of principle whatever into the Union pact.

At the same time I am to forward for his Lordship's information a copy of a separate report which the Postmaster-General has received from Mr. Buxton Forman, whom, at Lord Derby's request, Mr. Shaw-Lefevre instructed to act as the representative of New South Wales, South Australia, and Western Australia at the Congress in question.

On receipt of the information telegraphed from the Colonial Office to the Post Office on the 19th of February, the British delegates informed the Congress that Lord Derby had undertaken to recommend the Governments of the several Australian Colonies to accept the terms offered to them by the Congress.

It was ascertained beyond a doubt that a single vote for the group of colonies in question was the utmost that would be conceded; but, acting upon Lord Derby's suggestion, the delegates obtained from the Congress the concession that the vote should still be awarded in the event of only a portion of these Colonies (not less than three) deciding to join the Union.

The final Protocol to the Additional Act, signed at Lisbon on the 21st of March last, fixes the 1st of February, 1886, as the date upon which the option of adhering to that Act shall expire. It is scarcely to be doubted that, even after that date, the entry of the Australian Colonies would be admitted upon the understanding come to at the Congress of Lisbon, namely, that the Colonies should be guaranteed against any change in the transit rates payable and the surtaxes leviable under the Convention of Paris until after the Congress to be held at Vienna in 1891, and that the Australian Colonies should be entitled to an independent vote in the affairs of the Union.

Mr. Shaw-Lefevre is nevertheless of opinion that any time during the interval between the present date and the 1st of February next will be a highly favourable time for the adherence of the Colonies in question to the Union, seeing that the very considerable difficulties which stood in the way of a separate vote being accorded to them have for the present been surmounted, and that, up to that date, the adherence can certainly be effected without any further discussion whatever; whereas, after that date, it is possible that, upon technical grounds, the application might have to be submitted afresh to the various Administrations of the Postal Union, and new obstacles might arise.

Having regard to the length of time necessarily occupied in any exchange of views with the Governments of Australia, Mr. Shaw-Lefevre wishes to suggest for Lord Derby's consideration the question whether it would not be desirable for the London Agents-General of the several Colonies concerned to confer at once upon the subject. If this suggestion be adopted, the Agents-General will doubtless wish Mr. Forman to take part in their discussions; and, on learning that such is the desire of Lord Derby, the Postmaster-General will instruct Mr. Forman accordingly.

I am, &c.,
C. H. B. PATEY.

Copy of Telegram sent from the Colonial Office, London, to the General Post Office on the 19th of February, 1885.

LORD DERBY thinks that it rests with the Colonies to decide, and there is no time to consult them; but if the Congress accepts the views of the Committee his Lordship will recommend them to the Colonies. Lord Derby suggests for consideration that British Delegates should not press the question of separate votes further than to ascertain clearly that the sense of the Congress is opposed to it, but they should endeavour to obtain that the single vote will be given to such Colonies as join the Union, provided they are two at least, although all should not join.

Report

Report of the Representative of New South Wales, South Australia, and Western Australia, at the Lisbon Congress of the Universal Postal Union.

Sir,

London, 19 May, 1885.

In pursuance of instructions which I received from you before proceeding to Lisbon as one of the British Delegates to the recent Postal Union Congress, I acted as representative of the Colonies of New South Wales, South Australia, and Western Australia. Victoria and Tasmania were represented by Mr. Cameron Corbett, and Queensland by Mr. Garrick and Mr. Hemmant, New Zealand being unrepresented. These gentlemen and myself arranged to act in concert; and we availed ourselves of an opportunity which Mr. Blackwood, as President of the First Committee (dealing with the main Convention of the Union), obtained for us to get an early hearing, in order that the representatives of Victoria and Queensland might not be unnecessarily detained at Lisbon. The proceedings of the Committee are detailed in the accompanying Report, printed at Lisbon.

At the request of my colleagues I included Victoria, Queensland, and Tasmania in a statement which I made to the First Committee on the 5th of February in support of the demand made by the Colonies in applying for admission to the Union.

That demand, as you are aware, was:—

(1) That the rates of payment for sea transit and the surtaxes fixed by the Convention of Paris should not be reduced at all events until after the next quinquennial Congress to that of Lisbon; and

(2) That each Colony should have a separate voice in the affairs of the Union.

The first of these conditions met with no great opposition, but the second was received with energetic protests from several Delegates; and the Committee, unable to come at once to a decision, appointed a sub-committee to endeavour to come to an understanding with the Colonial representatives. The delegations named to form the sub-committee were those of Germany, Austria-Hungary, France, Great Britain, Italy, the United States of America, and Russia.

Neither the representatives of Victoria, Queensland, and Tasmania, nor myself had any authority to arrange a compromise, and I was consequently obliged to adopt a very unyielding attitude towards the sub-committee. Eventually they voted unanimously in favour of the maintenance of the *status quo*, as regards transit rates and surtaxes, negated by six votes to one (that of Great Britain), the proposal to give to each Australian Colony a separate voice, and decided by six votes to one to award to all Australia one collective voice on entry into the Union. It was with evident and genuine reluctance that this one voice was conceded, notwithstanding the anxiety of the Union generally that the Australian Colonies should join; and when the recommendations of the sub-committee were laid before Committee No. 1, on the 7th February, the same feeling was to be discerned. Nevertheless, there was a frank and generous recognition of the peculiar position occupied by the Australian Colonies among modern communities, and also of the fact that a concession was necessary and proper, the only question being as to the amount of the concession; and the Committee decided to adopt the recommendations of the sub-committee.

The understanding thus arrived at was that, subject to the approval of the Congress, the Australian Colonies should be offered a single voice and a guarantee that the transit rates and the sur-taxes should remain unchanged until after the next quinquennial Congress; and this understanding was eventually confirmed by the Congress, although, as far as the rates and surtaxes are concerned, the confirmation was scarcely necessary, inasmuch as the Congress decided, in view of the strong opposition of Great Britain, not to make any changes in the transit rates and surtaxes beyond the suppression of a practically disused surtax for letters subject to the sea transit rate of 5 francs per kilogramme. But before the question of the Australian Colonies came under review at the Congress an attempt was made, (on the 21st February,) to treat as one question the entry of Australia, that of the Cape Colony, and Natal, and the demand of Great Britain for a revision of votes in favour of those British Colonies which are already in the Postal Union. The conjunction of the three questions I opposed successfully, but the Committee insisted on making the award of an additional vote for the British Colonies generally, contingent upon the entry of the Cape and Natal into the Union, and in refusing the demand of the Cape for separate representation.

I mention these facts in order to show the great importance which the administrations of the Union attach to a single voice in its affairs; and here it is right to recall that British India, like the Mother country, has to content itself with one vote, notwithstanding the vastness of its area, population, and commerce, and the complexity and variety of its institutions; while for the Dominion of Canada a single vote was obtained in 1878 only by the Mother country relinquishing the vote which had been attributed to her for the British Colonies generally, and now that circumstances have changed, the most that Great Britain can hope to obtain for all her Colonies, exclusive of Canada and Australasia, is a single vote. This being the case, there is no longer any ground for hoping that a separate vote for each Australian Colony will ever be conceded; and so far as making conditions is concerned, there is no longer any object for those Colonies to attain by postponing their entry, it can scarcely be doubted that, sooner, or later, the Union will be completed by the adhesion of these important Colonies, and the present opportunity seems to me to be as favourable as any that is likely ever to present itself.

I have, &c.,

To the Right Hon. G. J. Shaw-Lefevre, M.P., H.M. Postmaster-General.

H. BUXTON FORMAN.

As regards Sir Saul Samuel's allusion to the meeting that was proposed to be held between the Agents-General for the Colonies and Mr. Buxton Forman, for the purpose of considering the question of the Australian Colonies entering the Postal Union, I have to state that no communication has yet reached this Department intimating the result of the deliberations on the subject, and I am therefore unable to say whether there is any immediate prospect of the Australian Colonies joining the Universal Postal Union.

A copy of the Universal Postal Union Convention of Paris, as modified by the additional Act of Lisbon, together with the detailed regulations for the execution of the Convention similarly modified, will Appendix A. be found in the Appendix.

NEW POSTAL ACT.

For some years the desirableness of introducing a new Postal Act has been felt, and a draft Bill has been prepared, which will be submitted to Parliament at an early date.

PARCEL POST.

Some consideration has been given to the subject of the establishment of a parcel post. So far as the organization of a regular parcel post within the Colony of New South Wales is concerned, it is questionable if this can be effected until there has been legislation upon the subject. The present postal law, however, does permit of the Postmaster-General entering into arrangements with Foreign countries in respect to matters affecting the Post Office, and I have therefore been able, through the Agent-General in England, to make an arrangement for the establishment of a parcels post between London and Sydney, the advantages to be extended to all places on the railway lines of this Colony. The parcels will be conveyed by the steamers of the Peninsular and Oriental and the Orient lines. It is proposed to charge the public at the rate of 1s. per pound—the minimum charge to be 2s. The postage rate of 1s. will be divided as follows:—4d. per lb. to the steam companies for carriage, 3d. per lb. to the Imperial Post Office, and 5d. per lb. to this Colony. The service is to commence at an early date. As this arrangement has only just been concluded, I am unable to make any further allusion to the subject in this Report.

SPECIAL

SPECIAL SERVICE REGULATIONS FOR POSTAL AND TELEGRAPHIC OFFICIALS.

In consequence of the Civil Service Act of 1884 excluding a large number of officials employed in the Postal and Telegraphic Departments from classification under the General Division provided for in section 3, it became necessary to frame special rules and regulations, setting forth, in conformity with the provisions of the 7th section of the Act, the conditions of employment in the departments controlled by the Postmaster-General. Accordingly His Excellency the Governor, with the advice of the Executive Council, on the 3rd July, 1885, issued a code of rules and regulations which were applicable to telegraph messengers, mail-boys, switchboard attendants, letter-carriers, stampers and sorters, letter-sorters, mail-guards, line repairers, postal assistants, operators, telegraph masters, and official postmasters. These regulations provide for the mode of admission, examination, promotion, classification, and salaries under which persons employed in the postal and telegraphic services are engaged and agree to serve.

The Departmental Board that was appointed to frame these special regulations, in submitting them for the approval of the Postmaster-General, stated:—"In our investigation into the status and remuneration of such officers as official postmasters, we find that the salaries attached to these offices in some cases appear to be much higher than was originally the intention in apportioning the remuneration. This has resulted from the fact that in settling the fixed remuneration of these officials it was not contemplated that the commission allowed them on the Money Order and Savings' Bank transactions would amount to anything like the sum that experience has shown to be the result; and it is obvious that if these commissions be continued, as the business of the Departments increases, so will the emolument to the postmasters continue to increase, while it is also evident in some cases that the increase of work does not fall solely on the postmaster, but on the staff of the office generally, who should in all justice—under the present system—participate in the increase of remuneration as well as the postmaster. This, however, is not the case. In one instance we find that a postmaster gets as much as £518 a year, in addition to quarters and other allowances, with every prospect of increasing in a few years to a very much larger sum.

"We are of opinion that the time has arrived when the salaries of all these officials should be definitely fixed, and in order to bring this about we have to suggest a very radical change in two respects: 1st. The abolition of commission on money order and savings' bank transactions, and postage stamp sales, at all official post-offices; and to make a classification of offices apportioning the salary for each officer with some regard to what the work of the office is really worth. 2nd. We think that a large saving of time can be effected by one Department—say the Post Office—paying the whole of the salaries, being recouped by the other Departments in certain proportions, by an annual or other payment. We would suggest that, in the case of combined offices, the Post Office Department should pay four-ninths, the Telegraph Department four-ninths, and the Money Order Office and Government Savings' Bank Department one-ninth. In the case of non-amalgamated offices the proportions to be: Post Office Department should pay eight-ninths, and Money Order Office and Government Savings' Bank Department, one-ninth.

"The Postmaster-General's votes for salaries will of course be larger than heretofore, but there will be a large sum saved in the shape of commissions.

"We submit the following schedule for the classification of official postmasters, telegraph station-masters, assistants to postmasters, and telegraph operators:—

| | | | | | | |
|---------------------------|-----|-----|-----|-----|-----|----------------|
| 4th class, minimum salary | ... | ... | ... | ... | ... | £100 per annum |
| „ „ maximum | „ | ... | ... | ... | ... | 170 „ |
| 3rd „ minimum | „ | ... | ... | ... | ... | 180 „ |
| „ „ maximum | „ | ... | ... | ... | ... | 240 „ |
| 2nd „ minimum | „ | ... | ... | ... | ... | 250 „ |
| „ „ maximum | „ | ... | ... | ... | ... | 310 „ |
| 1st „ minimum | „ | ... | ... | ... | ... | 320 „ |
| „ „ maximum | „ | ... | ... | ... | ... | 400 „ |

with a £10 increase per annum in each case up to the maximum of the class, subject, of course, to good conduct, &c.

"All appointments under £100 a year should be considered as temporary appointments, subject to classification only when the officers reach £100, the minimum of the lowest class.

"All offices throughout the Colony will be classed under one of the provisions of the above schedule, and the remuneration of the postmaster, telegraph master, or assistant, as the case may be, shall not rise above the maximum of that class. When a vacancy occurs in any of the classes, the officer promoted from another class to it shall enter at the minimum salary, and rise by £10 annual increases to the maximum of his

his grade, where he will remain until a suitable vacancy may occur in some other class, or until the classification of his own office may be raised. We have provided for an annual increase of £10 a year to all of these officers throughout the classes. This, we think, will afford a reasonable encouragement to the officers employed, and do away with a large amount of work, which the head office at present has, in dealing with applications for increase of salaries.

“As regards the officers of lower grade, we have endeavoured to fix a scale of remuneration in such a way as to give reasonable encouragement to the officials employed, as well as to protect the public interest, in regard to the value of the work which these officials perform.

“It is a matter of regret to us that we have not had more time at our disposal, so as to enable us to frame a more complete code of regulations than that which we herewith submit for approval; but as it has been intimated to us that the Civil Service Board desire that these regulations shall anticipate the classification of the Civil Service proper which they are about to issue, we desired to avoid any delay.

“We would suggest, however, that, in view of the importance of having a complete code of regulations, the present Board shall have the opportunity some few months hence of submitting a revised code, which would embrace regulations for leave of absence, &c., and this plan would, moreover, in the meantime, afford a chance of seeing how the proposed code affects individual and other interests.”

I. POST OFFICE DEPARTMENT.

INLAND SERVICE.

THE new postal routes opened during the year 1885, as shown in the annexed return, amounted to 944 miles, viz. :—

| Postal Line. | No of times per week. | Postal Line. | No. of times per week. |
|--|-----------------------|--|------------------------|
| <i>In the Western Country.</i> | | <i>In the Southern Country—continued.</i> | |
| From Bourke Railway Station to Post Office | six | From Silverton to Purnamoota | two |
| „ Byrock to Brewarrina, via Tarcoon ... | one | „ Whitton to Mount Elliott | two |
| „ Cobar to Necarbo | one | „ Young Railway Station to Post Office..... | six |
| „ Mandurama to Galley Swamp | one | <i>In the Northern Country.</i> | |
| „ Molong Railway Station to Post Office .. | six | From Aberdeen to Brushy Hill | two |
| „ Mountain Well Hotel to Yathong | one | „ Cooranbong to Doree | two |
| „ Nymagee to Cobar, via Priory and Shearlegs | one | „ Grafton to Fernmount, via Corinda | two |
| „ Nyngan to Nymagee, by surveyed road ... | three | „ Manilla to Bendemeer | one |
| „ Tarcoon to Gongolgon | one | „ Newport to Barrenjoey | two |
| „ Warne to Boomey | three | „ Seaham to Eagleton | three |
| <i>In the Southern Country.</i> | | „ Shanahan's (on the Narrabri and Cryan Mail line) to Pian Creek) | one |
| From Bethunga to Ironbong | one | „ Tooloom to Acacia Creek | one |
| „ Braidwood to Farringdon | one | „ Ulmarra to Upper Coldstream | two |
| „ Bredbo to Ballalaba | one | „ Wallsend to Winding Creek..... | three |
| „ Broughton's Creek to Woodhill | three | „ Woy Woy to Mullet Creek | three |
| „ Clifton to Otford | six | <i>In the Suburbs of the Metropolis.</i> | |
| „ Junee Junction to The Reefs | two | From Hurstville to Peakhurst .. | six |
| „ Marengo to Douglass Gap | one | „ Kogarah to Sandringham (re-established) | six |
| „ Numba to Comerong | three | „ Ryde to North Ryde | six |
| „ Rye Park to Five-mile Creek | one | | |
| „ Sebastopol to Temora | one | | |

The postal routes abolished, amounting to 691 miles, are shown in the following return :—

| Postal Line | No of times per week | Postal Line | No of times per week. |
|--|----------------------|---|-----------------------|
| <i>Western Roads</i> | | <i>Southern Roads—continued.</i> | |
| Between Byrock and Gongolgon | two | Between Merimbula and Candelo .. | one |
| „ Byrock and Bourke | four | „ Murrumburrah and Young, via Ridge Road | three |
| „ Cobar and Sandy Creek | two | „ Murrumburrah and Young, via Wombat | seven |
| „ Cundumbul and Baker's Swamp | two | „ Old Junee and The Reefs | two |
| „ Gurlambone Railway Station and Post Office .. | twelve | „ Wagga Wagga and Coolaman..... | one |
| „ Gongolgon and Brewarrina... .. | two | „ Young and Wombat | six |
| „ Hermitage Plains and Nymagee ... | three | <i>Northern Roads.</i> | |
| „ Ironbarks and Boomey | three | Between Bingera and Upper Bingera .. | one |
| „ Lowther and Off Flat | two | „ Nana Creek and Fernmount | two |
| „ Mountain Well Hotel and Gilgunnia | one | „ Newport and Gosford | two |
| „ St. Alban's and Laguna | one | „ Pilliga and Yarraldool | one |
| „ Wellington and Neurea | two | „ Seaham and Stewartfield .. | three |
| <i>Southern Roads.</i> | | „ Walcha and Glen Morrison | one |
| Between Aruah and Broken Dam | one | „ Walcha and Orundumbi | one |
| „ Liverpool and Hinchinbrook | six | „ Wee Wee and Pian Creek | one |

Increased accommodation on existing lines was afforded as follows:—

| Postal Line. | No. of times per week. | | Postal Line. | No. of times per week. | |
|---|------------------------|-------|--|------------------------|--------|
| | From | To | | From | To |
| <i>Western Roads.</i> | | | <i>Southern Roads—continued.</i> | | |
| Between Byrock and Brewarrina | one | three | Between Rankin's Springs and Wallandry | one | two |
| „ Mulgoa and Penrith..... | six | nine | „ Upper Gundaroo and Gunning | six | seven |
| „ Rydal and Mitchell..... | three | six | „ Urana and Boree Creek. | one | two |
| <i>Southern Roads.</i> | | | <i>Northern Roads.</i> | | |
| Between Balranald and Wentworth..... | two | three | Between Attunga and Attunga Springs | one | two |
| „ Bega and Candelo..... | four | six | „ Blandford and Timor... | one | two |
| „ Boro and Mayfield | one | two | „ Bowraville and Argent's Hill | one | two |
| „ Coonong Railway Station and Urana..... | two | three | „ Gosford and Kincumber | one | three |
| „ Darlington Railway Station and Darlington Point | six | seven | „ Limeburners' Creek and Hawke's Nest | one | two |
| „ Hoskieu's Town and Foxlow..... | two | three | „ Millie and Mogil Mogil | one | two |
| „ Jereelderie Railway Station and Post Office... | three | six | „ Narrabri and Moree..... | four | six |
| „ North Berry Jerry and Mimosa West | one | two | <i>Suburban Roads.</i> | | |
| | | | Between Bexley and Rockdale... | six | twelve |

The communication existing on the following lines was decreased:—

| Postal Line. | No. of times per week. | | Postal Line. | No. of times per week. | |
|-------------------------------------|------------------------|-------|-------------------------------------|------------------------|-----|
| | From | To | | From | To |
| <i>Western Roads.</i> | | | <i>Northern Roads.</i> | | |
| Between Hillston and Mount Hope | two | one | Between Bulahdelah and Hawke's Nest | two | one |
| „ Nyngan and Hermitage Plains | four | three | „ Taree and Tinonee | seven | six |
| <i>Southern Roads.</i> | | | „ Taree and Wingham | seven | six |
| Between Marulan and Bungonia.. | seven | six | | | |

The extent of postal route traversed in the Colony on the 31st December, 1885, was 26,683 miles, as compared with 26,430 miles traversed in 1884:—

| | 1884. | 1885. |
|---------------------|---------------|---------------|
| On horseback | 13,444 miles. | 13,150 miles. |
| By coach | 11,302 „ | 11,736 „ |
| By railway | 1,662 „ | 1,775 „ |
| By tramway | 22 „ | 22 „ |

The extension of mail route by railway during 1885 was as follows:—

| | |
|----------------------|------------|
| Tarago to Bungendore | 20 miles. |
| Harden to Young | 21 „ |
| Byrock to Bourke | 48 „ |
| Orange to Molong | 24 „ |
| | 113 miles. |

The number of miles travelled in the year 1885 was 6,621,996, being an increase of 112,550 on the mileage of the previous year.

The number of Post Offices established was 43, viz. :—

| | | |
|-------------|-------------------------|---------------------|
| Aliceton | Doughboy Hollow | North Tumbulgum |
| Baan Baa | Douglas Gap | Peakhurst |
| Bald Nob | Eagleton | Punkalla |
| Berrigan | Eureka | Purnamoota |
| Botany Road | Fairfield | Rosewood |
| Bourbah | Gocup | St. Ives (Rosedale) |
| Brushy Hill | Gore Hill | Stonehenge |
| Bulgo | Graman | Tuggranong |
| Bumble | Lawson | Upper Coldstream |
| Canley Vale | Leighwood | Winding Creek |
| Colinton | Merrylands | Wingello |
| Comerong | Minto | Woodhill |
| Coolabah | Mitchell (Sunny Corner) | Yarra |
| Day Dream | Mullet Creek | |
| Demondrille | North Ryde | |

The number of Post Offices re-established was 2, viz. :—

Moorwatha

Wandandian

The number of Post Offices discontinued was 15, viz. :—

| | | |
|----------------|----------------|-------------------|
| Annandale | Hinchinbook | Off Flat |
| Barney Springs | Kelly's Plains | Redhead |
| Concord | Meroe | Thackaringa Mines |
| Graham | Mutton's Falls | Tooleybuc |
| Havilah | Nyrang | Upper Bingera |

It was found desirable to change the designations of the following Post Offices, viz. :—

| | |
|-------------------------------|-----------------------------------|
| Beaconsfield to Concord | Inverella to Eversleigh |
| Bulgo to Oxford | Mitchell's Creek to West Mitchell |
| Clarence River Heads to Yamba | Rocky Mouth to Maclean |
| Dight's Forest to Jindera | |

In the Appendix will be found a list of the 1,115 Post Offices in the Colony on the 31st December, Appendix D, 1885.

171 changes of Postmasters occurred during the year.

In the Appendix is given a return of buildings for the transaction of the Postal, Money Order, Appendix B, Savings Bank, and Telegraph business possessed by the Government, as well as of the places where premises are rented or otherwise provided for the purpose. Government buildings at the following places were completed and occupied during 1885, viz. :—

| | | |
|-----------|--------------|----------------|
| Byrock | Marulan | Paterson |
| Cargo | Muswellbrook | Uralla |
| Cobar | Nimitybelle | William-street |
| Emmaville | Paddington | |

At Edgecliff a building purchased by the Government was fitted up for Postal and Telegraphic purposes.

Receiving offices were established at the following places, viz. :—

| | | |
|----------------------------|--------------|------------------|
| Ben Bullen | Gol Gol | Newport |
| Ben Lomond Railway Station | Ironbong | Porter's Retreat |
| Blackman's Point | Kerr's Creek | Sandringham |
| Borambil | Lallarook | Stony Crossing |
| Demondrille | Monica Vale | Tichborne |
| Farringdon | Mount Druitt | Wanstead |
| Five-mile Creek | Mumbil | Warrumbungul |
| Galley Swamp | Munmurra | |
| Gingerra Station | Myalla | |

The names of the Receiving Offices at Newport and Tombong were changed to Doree and Wright's respectively.

The Receiving Offices at the undermentioned places were discontinued, viz. :—

| | | |
|-------------|------------|-------------|
| Mangopla | The Albert | Wangoola |
| Sandy Creek | The Bluff | Yarragundry |
| Severn | Waddai | Y. Water |

The Receiving Offices at the following places were converted into Post Offices :—

| | | |
|-------------|-----------------|------------|
| Aliceton | Doughboy Hollow | Punkalla |
| Bald Nob | Eureka | Rosewood |
| Berrigan | Gore Hill | Tuggranong |
| Botany Road | Graman | Wandandian |
| Bumble | Lawson | Wingello |
| Coolabah | Leighwood | Yarra |
| Demondrille | Minto | |

In the Appendix will be found a list of the Receiving Offices in existence at the close of the Appendix C, year, showing the number to be 202.

During the year 1885 ten iron pillar letter-receivers were erected in different parts of the Colony, and two were removed to other places. Forty-eight small iron letter-receivers were placed, eight were removed, and five withdrawn. One iron newspaper-receiver was removed to another locality, and one wooden letter-box was withdrawn.

On the 31st December the number of iron letter-receivers erected in the Colony (both large and small) was 435; the number of other kinds of receiving boxes, 20; and the number of newspaper-receivers, 15.

At Bathurst, Deniliquin, Eskbank, Glen Innes, Grafton, Hexham, Lithgow, Marrickville, Newtown, Orange, Parramatta, Petersham, Redfern, Richmond Road, and St. Leonard's, the letter-receivers are cleared by special messengers, who are respectively paid an annual sum for the performance of this work. At other places this duty is fulfilled by persons regularly attached to the staff of the Department.

The number of licenses for the sale of postage stamps issued in 1885 to persons other than post masters or receiving-office-keepers was 147. In the Appendix is given a list of the persons holding these licenses throughout the Colony.

On the 31st December the number of locked private letter-boxes let at the General Post Office was 934, besides 57 allotted to Public Departments, for which no fees are paid. The system is now in operation at the following offices, namely :—

| | | |
|-------------|--------------|---------------|
| Adelong | Glen Innes | Silverton |
| Albury | Goulburn | Singleton |
| Armidale | Grafton | Temora |
| Balranald | Gunnedah | Tenterfield |
| Bathurst | Hay | Uralla |
| Bega | Haymarket | Wagga Wagga |
| Bourke | Jereelderie | Walgett |
| Braidwood | King-street | Wentworth |
| Casino | Mudgee | West Maitland |
| Cobar | Muswellbrook | Wilcannia |
| Coonamble | Narrabri | Young |
| Cootamundra | Newcastle | |
| Dubbo | Parramatta | |

It is gratifying to find that the system of letting private boxes, on payment of a moderate fee, is being more largely availed of by the public in Sydney, and that it is also being rapidly extended to the country townships. So far as the city is concerned, one of the chief advantages of this system over the system of delivering by letter-carrier is, that merchants and other business men can, by sending to the Post Office, obtain their letters immediately they are sorted, instead of waiting till the letter-carrier on whose beat they are located completes all the ramifications of his walk. Persons who happen to be near the end of a carrier's beat can thus, by sending to either the General Post Office, or one of the Branch Offices, save at the least one hour of valuable time. There is, moreover, an important increase to the revenue from this system, and I anticipate that when the extension of the General Post Office premises is completed, and the Department is able to provide a much larger amount of accommodation in connection with these private boxes, an important addition to the revenue will be derived.

Six additional letter-carriers were appointed during the year 1885, and twenty were transferred from the temporary to the permanent staff. There were, at the end of the year, 172 letter-carriers, distributed throughout the Colony as follows :—

| | | | | | | | | |
|--------------------|-----|-----|-----|--------------------|-----|-----|-----|---|
| Sydney and Suburbs | ... | ... | 119 | Liverpool | ... | ... | ... | 1 |

Under

Under special arrangements a house-to-house delivery of correspondence is also afforded in the following localities, viz. :—

| | | |
|-------------|---------------|-----------------|
| Anvil Creek | Granville | North Ryde |
| Bega | Grenfell | Onebygamba |
| Blayney | Homebush | Penrith |
| Botany | Hunter's Hill | Queanbeyan |
| Braidwood | Kiama | Raymond Terrace |
| Burwood | Lismore | Richmond |
| Camden | Lithgow | Silverton |
| Casino | Macdonaldtown | South Grafton |
| Concord | Minmi | Springwood |
| Cooma | Moama | Tenterfield |
| Cootamundra | Molong | The Junction |
| Cowra | Mudgee | Watson's Bay |
| Croydon | Muswellbrook | Wellington |
| Dungog | Narrandera | West Tamworth |
| Gladesville | New Lambton | Yass. |

The number of persons employed in connection with the Postal Department for the year 1885 was as follows :—

| | |
|--|---|
| Postmaster-General 1 | Stampers and sorters 38 |
| Secretary 1 | Letter-carriers 172 |
| Chief Clerk of the Post Office 1 | Mail-boys 28 |
| Superintendent, Mail Branch 1 | Messengers, porters, &c. 33 |
| Accountant 1 | Detective 1 |
| Cashier 1 | Postmasters 1,115 |
| Postal Inspector for Missing Letter and Irregularity Branch 1 | Relieving officer 1 |
| Postal Inspectors 4 | Postal assistants 271 |
| Assistant Superintendent, Mail Branch ... 1 | Clearing receivers, delivering letters, &c. 118 |
| Senior clerks 3 | Receiving office keepers 202 |
| Clerks 85 | |
| Temporary clerks 14 | Mail contractors 564 |
| Probationary clerks 11 | |
| Letter-sorters 16 | Total 2,719 |
| Mail-guards 35 | |

Since the Honorable James Norton, M.L.C., retired from the position of Postmaster-General, on the 6th October, 1885, the Department has been administered as follows :—

From 7th October to 21st December, 1885, by the Honorable John See, M.L.A.

From 22nd December, 1885, to 25th February, 1886, by the Honorable Daniel O'Connor, M.L.A.

From the 26th February, 1886, by myself.

On the 20th August Mrs. Catherine Chape retired from the office of postmistress at Balmain under the provisions of the Civil Service Act of 1884. The following retirements also took place during the year, a gratuity equal to one month's pay for each year of service being allowed in each case :—

H. L. Alexander, postal assistant at Singleton.

D. Lynch, stamper and sorter.

A. Matchett and R. Armstrong, letter carriers.

W. Cummings and P. M'Kenna, messengers.

Eight deaths occurred, viz. :—A. Moran, post and telegraph master at Minmi ; J. Richards and J. O'Dwyer, mail-guards ; T. S. L. R. Vogan, stamper and sorter ; T. Cambridge, W. Curtis, and S. Child, letter-carriers, and T. C. Trotter, gatekeeper. Mail-guard O'Dwyer, an excellent officer, was killed in the railway accident at Cootamundra in January, 1885, and another mail-guard (W. Stone) is reported to be so seriously injured that he is still unfit for duty.

Forty-four resignations of officers on the regular staff took place during the year ; the services of two officials being no longer required were dispensed with, and one officer was transferred to another Department.

The removals from the Service numbered thirty. One of these, a postal assistant, received a sentence of two years and ten months imprisonment for embezzlement; another, one of two years for stealing money from a letter; and two letter-carriers each a like term for stealing letters. The remainder were dismissed for the following offences:—

Four postmasters and a postal assistant for irregularities in their accounts.

Five letter-carriers and a window-cleaner for intemperance.

A postmaster, four letter carriers, and a mail-boy for absence without leave.

Two mail-boys for furious riding

A Letter-carrier for tampering with a letter, and another for irregular delivery and detention of letters

A mail-boy for theft, and another for neglecting to clear letter receivers

A letter-carrier and two mail-boys for other misconduct.

The postal inspectors travelled over and inspected 18,792 miles of mail route, and visited 264 post-offices.

FOREIGN SERVICE.

The performance by the Pacific Mail Steamship Company of the Mail service between Sydney and San Francisco, during the year 1885, is shown in the following returns —

* Departure postponed from 29th to 30th January, owing to late arrival of Victorian Mails, caused by Railway accident near Cootamundra

† Departure postponed from 23rd to 25th April, owing to Seamen's strike

Average time occupied in the conveyance of mails to and from Sydney and London, *via* San Francisco:—

London to Sydney 43½ days.
Sydney to London 42½ "

In the last Annual Report it was pointed out under what circumstances the Colony of New South Wales withdrew from the contract with the Pacific Mail Steamship Company for the service between Sydney and San Francisco, and it was explained how New Zealand undertook to continue the contract up to November, 1885, and to convey the mails of this Colony for a subsidy at the rate of £7,000 a year—New South Wales retaining postages, and the steamers still coming on to Sydney

In view of the termination of the contract between New Zealand and the Pacific Mail Steamship Company, the Postmaster General of New Zealand opened negotiations with the Postmaster General of New South Wales, which resulted in a joint arrangement being entered into between New Zealand, New South Wales, and the Union Steamship Company, under which—subject to the approval of Parliament—a three years'

years' service from the 21st November, 1885, between Sydney, Auckland, and Honolulu was to be performed by the Union Company, and between Honolulu and San Francisco by steamers of the Oceanic Company, which were to wait at Honolulu, if necessary, twenty-four hours without demurrage; the time of voyage was not to exceed twenty-five days between Sydney and San Francisco; New South Wales was to pay £10,000 per annum out of the total contract subsidy of £30,000 per annum and one-third of the bonuses for extra speed; and to receive half the contributions from other Australasian Colonies, one-third of the penalties for late arrivals chargeable to contractors, and one-third of any subsidy which might be obtained from the United States.

The only public exception taken at the time to this service was the proposed transshipment of mails and passengers at Honolulu, and to meet this objection the contractors determined, as a temporary measure, to run their boats right through without a break at Honolulu.

Up to the time I took office the approval of Parliament to this contract had not been obtained, nor has the pressure of other business yet enabled this to be done, although the service was and is still being carried on by the contractors. Since I have been in office a modification has been arranged, also subject to Parliamentary sanction, under which the contractors, for an extra payment of £7,000 a year—making their total subsidy £37,000—agree to permanently do the service right through from Sydney to San Francisco without a break at Honolulu. Of the extra subsidy the Colony of New South Wales is to contribute one-third. As the papers giving full particulars of the negotiations concerning this contract, and also in regard to the withdrawal of New South Wales from the Pacific Mail Company's contract, have been laid before Parliament and printed, it is not necessary for me in this report to allude further to the subject except to mention that the first mail under the new contract left London on the 5th November and arrived at Sydney on the 17th December, being brought on from San Francisco by the "Alameda." The first mail from Sydney was despatched on the 4th December *per* the "Mararoa," and was delivered in London on the 15th January, 1886.

The following are the Returns of the Mail Service performed by the Orient Steam Navigation Company during the year 1885.

Received.

Average time occupied in the conveyance of mails to and from London and Sydney by these vessels :—

| | |
|-------------------------|------------------------|
| London to Sydney | 37 $\frac{1}{2}$ days. |
| Sydney to London | 38 $\frac{1}{2}$ „ |

In view of the termination, in February, 1888, of the Peninsular and Oriental Company's contract with the Victorian Government, and considering the satisfactory performance of the alternate fortnightly service to this Colony by the Orient Steam Navigation Company, it was deemed wise, subject to the approval of Parliament, to extend the contract with the Orient Company, so as to make it run out concurrently with the contract for the Peninsular and Oriental service. The following correspondence will show the nature of the arrangement made :—

The Manager, Orient Company, to The Secretary, General Post Office, Sydney.

Sir, Orient Line of Steamers, Sydney, 13 June, 1885.

I now beg to put in the form of a letter the substance of what I said to you at our recent interview.

The existing Postal Contract between your Government and my Company will expire on 30th November, 1886.

That contract was regarded at the time it was arranged as of a tentative character, and its duration was accordingly fixed for a shorter period than is usual in such cases.

I venture to think that the experiment has proved successful, but the records of your Department will show particularly how far the service has been appreciated by the public.

The period of eighteen months which the contract has still to run is short enough for maturing measures for the satisfactory development of the service thereafter, and before entering upon such measures it is important that my Company should have an understanding with your Government.

In view of the foregoing, I would respectfully submit that the time is now opportune for making arrangements for the future of a permanent character ; and I beg to inquire, accordingly, whether the Honorable the Postmaster-General will be prepared to explain, at an early date, the views of the Government as to a renewal of the contract with my Company for a lengthened period.

I have, &c.,

G. SKELTON YUILL,
Manager in Australia.

The Secretary, General Post Office, Sydney, to The Manager, Orient Company.

Sir, General Post Office, Sydney, 20 June, 1885.

Referring to your letter of the 13th instant, and interviews with the Postmaster-General, on the subject of the renewal of your contract for the conveyance of mails, I am directed to inform you that the whole question of future ocean mail services is now engaging the careful attention of the Government.

In the meantime, and with a view to clear the way for future negotiations, the Government propose submitting to Parliament a resolution that the present contract with your Company be extended to the period when the Peninsular and Oriental Company's contract with the Government of Victoria will expire, about February, 1888. If continued beyond that time to be terminable on six months' notice.

I have, &c.,

S. H. LAMBTON,
Secretary.

The Manager, Orient Company, to The Secretary, General Post Office, Sydney.

Sir, Orient Line of Steamers, Sydney, 22 June, 1885.

I have the honor to acknowledge receipt of your letter of 20th instant, informing me that the whole question of the future ocean mail service is now engaging the attention of the Government, but that in the meantime, and with a view to clear the way to future negotiations, the Government propose to submit to Parliament a resolution that the present contract with the Orient Company be extended to at least February, 1888, when the P. and O. Company's contract with the Government of Victoria will expire, and if continued beyond that period to be terminable by six months' notice.

It is not directly stated in your letter, but I infer from its tenor that the intention is that the contract should not expire in February, 1888, except on six months' previous notice. I should be glad to have your confirmation of this.

I beg to tender my thanks to the Honorable the Postmaster-General for the above information, and would ask the further favour of his giving me whatever indication he can, when the opportune time arrives, of the intentions of the Government bearing upon the more permanent settlement of the question.

I have, &c.,

G. SKELTON YUILL,
Manager in Australia.

The Secretary, General Post Office, Sydney, to The Manager, Orient Company, Sydney.

Sir, General Post Office, Sydney, 30 June, 1885.

In reply to your letter dated the 22nd instant, inquiring, in connection with the proposal to submit a resolution to Parliament for the extension of the Orient Mail Contract till February, 1888, and if continued beyond that period to be terminable by six months' notice, whether it is intended that the contract shall *not* expire in February, 1888, except on six months' previous notice, I am directed to inform you that the Postmaster-General sees no objection to give the notice asked for whether the Government decide to terminate the contract in February, 1888, or at any subsequent date.

I have, &c.,

S. H. LAMBTON,
Secretary.

The

The Manager, Orient Company, to The Secretary, General Post Office, Sydney.

Sir,

Orient Line of Steamers, Sydney, 1 July, 1885.

I have the honor to acknowledge receipt of your letter, 85/B. 7,051 of 30th ultimo, regarding the notice to be given of the termination of the Mail Contract between my Company and your Government, and to thank you for the information therein contained.

I have, &c.,

(For G. SKELTON YUILL,
Manager in Australia),
THOS. W. PUGH.

| London to Sydney | | 39 $\frac{7}{8}$ days. |
| Sydney to London | | 41 $\frac{3}{8}$ " |

The average time occupied in the conveyance of mails to and from Sydney and London by the Pacific Mail Steamship, the Orient, and the Peninsular and Oriental Steam Navigation Companies, during 1885, was as follows :—

| | | |
|---------------------|--------|------------------------|
| London to Sydney... | | 39 $\frac{1}{2}$ days. |
| Sydney to London... | | 40 $\frac{1}{2}$ " |

During the past year the subject of a future Ocean Mail Service between the Mother Country and Australia, *via* Suez, came under consideration, and the visit of the Honorable R. C. Baker (of South Australia) to Victoria and this Colony led to the following joint agreement, dated 21 August, 1885, being arrived at between the Colonies of New South Wales, Victoria, and South Australia :—

MEMORANDUM of agreement made between the Colonies of New South Wales, Victoria, South Australia, Tasmania, Queensland, Western Australia, and New Zealand.

It is agreed as follows :—

1. This agreement is primarily entered into by the three Colonies first-named ; and unless all three of such Colonies sign or agree to the same it shall not be considered binding on any one or more of such Colonies who have signed or agreed hereto.

2. As soon as the three first-named Colonies shall have assented hereto the other Colonies before-mentioned shall be invited to become parties hereto.

3. The Colony of New South Wales shall invite the Colonies of Queensland and New Zealand to become parties hereto ; the Colony of Victoria shall invite the Colony of Tasmania to become a party hereto ; and the Colony of South Australia shall invite the Colony of Western Australia to become a party hereto.

4. This agreement is entered into as a preliminary to a joint answer being sent by the Colonies to the telegram of Lord Derby, of the 4th February, 1885, to the Governors of the various Colonies *re* postal matters, and in order to secure joint and concerted action on the part of the Colonies in reference to the postal matters referred to in such telegram.

5. As soon as the first three Colonies named have assented hereto a telegram shall be sent to the British Government, in answer to the said telegram of the 4th February, suggesting the following arrangements between Great Britain and the Colonies on the termination of the present agreement between Great Britain and the Peninsular and Oriental Steamship Company :—

First—Great Britain to invite tenders on behalf of herself and the contracting Colonies for a mail service or mail services to be performed by British ships.

Second—Tenders to be called—

(a) For a weekly service.

(b) For a fortnightly service, to alternate with another fortnightly service, so as to secure a weekly service.

Third—Such service or services to be from Brindisi, Naples, or some other port in Europe, to be named by the tenderers, and approved of by the other contracting parties, to Sydney, *via* King George's Sound, Adelaide, and Melbourne.

Fourth—The tenders (whether confined to any particular companies or open) to be called for separate and distinct from any other service.

Fifth—Tenders to be invited for services from London to the Semaphore, Adelaide, and *vice versa*, in twenty-nine days, in thirty-one days, and in thirty-three days.

Sixth—The mail matter of any Colony desiring it to be landed at Adelaide, and forwarded by rail to Melbourne, Sydney, Brisbane, *et cetera* ; 10d. per lb. for letters and 1d. per lb. for other mail matter to be paid to each forwarding Colony ; South Australia to guarantee that there shall not be delay of more than six hours at Adelaide, and, if necessary, to employ special trains. South Australia and Victoria to arrange as to specials between Adelaide and Melbourne, and Victoria and New South Wales between Melbourne and Sydney.

Seventh—The mail steamers to continue on to Melbourne and Sydney.

Eighth—The tenders to include the local transit rates across Egypt, but the tenderers may carry mails by what route they think best, if they carry them in the specified time.

Ninth—All mail matter to be tendered
for at $\left\{ \begin{array}{l} \text{per lb. of letters.} \\ \text{per lb. of other matter.} \end{array} \right\}$ amount to be given by tenderers.

Tenth—Penalties of £4 per hour for non-arrival in time, and bonuses of same amount for arrival before time (between port of departure in Europe and the Semaphore, Adelaide).

Eleventh—Great Britain and the contracting Colonies to send by the contracting steamers all mail matter not specially directed to be sent by particular route.

Twelfth—Great Britain to retain all her own postages, and pay cost of transit through to destination of all mail matter, including premiums on voyages from Great Britain. The contracting Colonies to do the same in connection with the trips from the Colonies to Great Britain.

Thirteenth—If any other Colony, not a party hereto, sends mail matter by contracting steamers it shall be carried at the same rates as for contracting Colonies, and on the same terms, including share of premiums and penalties.

Fourteenth—Premiums on mail matter despatched from the Colonies by any steamer to be paid by Colonies sending letters by such steamer in proportion to letters carried, and accounts to be adjusted quarterly.

Fifteenth—In the event of the contracting Colonies joining the Postal Union, any loss which may accrue in consequence of being obliged to carry mail matter for Union Countries at Union rates to be paid one-half by Great Britain and the other half by the contracting Colonies, in the proportion of weight of letters carried for such Colonies—taking an average of three months.

Sixteenth—No contract to be accepted without the consent of the three first-named Colonies.

Seventeenth—The tenders to be for five years.

6. It is also agreed that the contracting Colonies shall urge upon Great Britain the desirability of taking all possible steps to reduce the exorbitant rates now paid for the land transit of the Australian mails across Italy and France, namely 16 f. 50 c. per kilo of letters, *et cetera*.

7. This agreement is made subject to ratification by the respective Parliaments of the Colonies parties hereto.—Dated this 21st day of August, 1885.

JAMES NORTON,
Postmaster-General, New South Wales.

JAMES CAMPBELL,
Postmaster-General, Victoria.

JOHN A. COCKBURN,
Minister of Education, Controlling Postal Department, South Australia.

The Honorable Mr. Baker has since visited England, and the Imperial Government consented to co-operate with the Colonies in regard to calling for tenders for a weekly mail service between England and Australia, *via* Suez, on the basis of the foregoing agreement, but I am not yet able to report further upon the subject. The papers relating to the matter up to the present stage have already been laid before Parliament.

The

The following returns show the number of letters, packets, and newspapers despatched and received by the mail packets on the respective routes, *via* Galle and Melbourne, *via* San Francisco, *via* Torres Straits, *via* the Orient Line, and *via* the Compagnie des Messageries Maritimes.

| Year. | Route. | Despatched. | | | | | | Received. | | | | | |

| Net cost to the Colony | | | | | | 3,747 | 7 | 4 |
| The estimated net cost for 1884 was | | | | | | | | |

The following statement shows the net cost per pound weight of New South Wales mail matter conveyed to and from this Colony by the "Pacific," "Orient," and "Peninsular and Oriental" Mail Services, respectively, during the year 1885:—

| | | |
|--------------------------------|------------------|------------------------|
| Pacific | net cost per lb. | 1 $\frac{5}{8}$ pence. |
| Orient | " " | 12 $\frac{3}{4}$ " |
| Peninsular and Oriental | " " | 5 $\frac{9}{10}$ " |

In March the rates of postage chargeable on Intercolonial correspondence were made applicable to correspondence forwarded from New South Wales to those portions of New Guinea which are under British protection.

From 1st April the postage on letters for Spain and Portugal, *via* Italy, was reduced from 11d. to 9d. per $\frac{1}{2}$ ounce, and from the same date the collection of 1s. 1d. per half ounce on unpaid letters from those countries received in the mails from Italy was authorized.

The postage on letters forwarded to St. Helena, *via* the United Kingdom, was, in June, reduced from 1s. 5d. to 11d. per half ounce.

The Kingdom of Siam, having entered the Postal Union, on the 1st July, 1885, authority was obtained to levy the following amended rates of postage on mail matter despatched to that country, *via* Torres Straits or Colombo, viz:—

| | |
|--|-----|
| Letters per $\frac{1}{2}$ ounce | 6d. |
| Newspapers, each | 1d. |
| Packets, not exceeding 1 ounce | 1d. |
| " " 2 ounces | 2d. |
| Every additional 2 ounces | 2d. |

LETTERS,

LETTERS, NEWSPAPERS, PACKETS, AND POST CARDS, POSTED THROUGHOUT THE COLONY.

The following is a return of the estimated number of Letters, Newspapers, Packets and Post-cards, posted in the Colony during 1885, as compared with the number posted in the preceding year :—

| | 1884. | 1885. |
|--|------------|------------|
| LETTERS. | | |
| Posted for delivery within the Colony..... | 37,289,800 | 34,023,000 |
| „ Australian Colonies and New Zealand..... | 1,631,400 | 1,750,300 |
| „ Foreign despatch..... | 723,500 | 793,300 |
| Total..... | 39,644,700 | 36,566,600 |
| NEWSPAPERS. | | |
| Posted for delivery within the Colony..... | 21,373,900 | 21,579,500 |
| „ Australian Colonies and New Zealand..... | 1,434,900 | 1,410,600 |
| „ Foreign despatch..... | 584,100 | 703,300 |
| Total..... | 23,392,900 | 23,693,400 |
| PACKETS. | | |
| Posted for delivery within the Colony..... | 2,705,900 | 2,894,200 |
| „ Australian Colonies and New Zealand..... | 38,800 | 175,300 |
| „ Foreign despatch..... | 47,000 | 92,900 |
| Total..... | 2,791,700 | 3,162,400 |
| Total number of Post-cards posted..... | 296,300 | 341,000 |

On several occasions in reports of previous years my predecessors have found it necessary to mention the difficulties which prevent an accurate or even a reliable estimate being made of the number of letters, newspapers, packets, and post-cards posted throughout the Colony, and at various times the officers of the Department have devised methods with a view of obtaining this information with as much exactitude as possible. Of course the only method of arriving at an absolutely correct result would be to count the whole of these articles posted; but to do this would so greatly delay the delivery and despatch of mails that it would be imprudent to make the attempt. For some years special efforts have been made to count the correspondence posted during one month in each quarter, and on the result of this count to calculate the returns for the whole year; but this plan was found to be very unreliable, inasmuch as if any extraordinary occurrence gave rise to a sudden increase in the correspondence during that month, then its result affected the returns for the whole year in a most misleading manner.

Last year a plan similar to that adopted in the London Post Office was tried, namely, that of weighing the correspondence at the head office and in some of the principal country post-offices. The above returns are largely based upon this new method, and in reference thereto the Assistant Superintendent of the Mail Branch reports as follows :—

“In accordance with instructions, the letters and packets posted at this Office during the months of June and September were weighed, and I now attach the returns.

“From frequent tests the average number of letters and packets per pound was found to be, viz. :—

| | |
|----------------------|----|
| “Town letters | 65 |
| “Country do. | 55 |
| “Packets | 10 |

“These returns, as compared with those made out under the old system of counting, show a decrease in the number of letters, but a large increase in the number of packets; and this is accounted for from the fact that in commencing the new system every care was taken to separate the correspondence and weigh it under the proper heading.”

The Superintendent himself adds to the Assistant's report the following remarks :—

“In order to test this new system of knowing the number of letters posted, by weighing in lieu of counting as heretofore, two reliable clerks were specially appointed to this duty, and I have every confidence in the returns sent in.”

Notwithstanding the reports which have been given, I greatly fear that the returns are still unreliable; and therefore, whilst not impugning the work of the officers, but merely recognizing the difficulties which surround any attempt to obtain an accurate result, I give the figures in the above return for what they are worth. But, after all, the most reliable indication of the actual increase of the Department is to be found in its increasing revenue, and in the fact that the manipulation of the mails by officials has resulted in a general expression of opinion that the mail matter of all descriptions posted has largely increased in quantity during the past year.

DEAD

DEAD LETTER BRANCH.

| Number of ordinary Letters (except those containing articles of value) returned to the writers as unclaimed. | | | | | | Number of registered letters returned as unclaimed. | Number of letters unregistered but containing articles of value returned as unclaimed. | Number of Letters returned to the following places as unclaimed. | | | | |
|--|---|--|---|--|---------|---|--|--|-----------------|------------------|--------|--|
| Year. | Originally addressed to places within the Colony. | Originally addressed to the neighbouring Colonies. | Originally addressed to the United Kingdom. | Originally addressed to other Countries. | Total. | | | Neighbouring Colonies. | United Kingdom. | Other Countries. | Total. | Number of letters returned as unstamped or insufficiently addressed. |
| 1884 ... | 187,860 | 14,829 | 2,656 | 937 | 206,282 | 2,277 | 1,407 | 21,364 | 11,746 | 2,763 | 35,873 | 18,768 |
| 1885 ... | 207,807 | 18,171 | 2,629 | 646 | 229,253 | 3,096 | 1,564 | 18,975 | 9,765 | 2,703 | 31,443 | 19,714 |
| Increase. | 19,947 | 3,342 | | | 22,971 | 819 | 157 | | | | | 946 |
| Decrease | | | 27 | 291 | | | | 2,389 | 1,981 | 60 | 4,430 | |

Of the registered letters mentioned in the above return 2,340 originated in New South Wales, and on being opened, previous to return to the writers, were found to contain, besides correspondence and valuable enclosures, £1,876 17s. 11d. in coin, notes, and cheques. The remaining 756 were from places outside the Colony, and returned unopened as follows:—187 to the Colonies, 373 to London, and 196 to other countries.

In 1,564 unregistered letters were found valuable enclosures representing £22,355 1s. 9d. This amount included coin, bank notes, cheques, drafts, stamps, money orders, and promissory-notes.

Out of about 11,000 letters and packets passed on to the Dead Letter Office imperfectly addressed, the addresses of two-thirds were rectified and the letters forwarded, and the remainder were returned to the writers. In addition to the foregoing, 667 Chinese letters imperfectly addressed were forwarded to the intended addresses through the assistance of the Chinese Interpreter employed by the Department.

Of 135 packets containing articles of clothing, merchandise, &c., received with the addresses torn off, postage refused, &c., 13 only were applied for and delivered.

Of the unstamped letters, 2,242, which could not be returned to the writers through insufficient addresses and not being signed, were delivered to the addressees by means of the printed notices provided by the Department for that purpose.

152 letters, posted without addresses, five of which contained valuable enclosures, were returned to the writers.

Twenty letters and five packets bearing obscene addresses were destroyed.

About $\frac{1}{11}$ per cent. of the total number of letters posted in the Colony during 1885 were unclaimed.

In order to meet the wishes of a large number of business men, who suffered great inconvenience from the retention by the Postal Department during the lengthy period prescribed by law of unclaimed letters forwarded by them, His Excellency the Governor, with the advice of the Executive Council, in January, 1885, approved of such letters being readdressed and charged with the usual redirection fee on delivery, provided they were posted with the following endorsement:—

“If not delivered or claimed within fourteen days, readdress to
(name of sender may be given here.)”

The number of letters, &c., delivered by the letter-carriers attached to the head office during the years 1884 and 1885 was as follows:—

| | 1884. | 1885. |
|-----------------------------|-----------|-----------|
| Unregistered letters | 6,953,353 | 7,815,910 |
| Registered letters | 58,694 | 66,661 |
| Books | 49,137 | 55,041 |
| Newspapers | 1,012,163 | 1,066,183 |

As an illustration of the increase in the business of the Department which the practice of exchanging cards of greeting at the Christmas season creates, the following return showing the number of letters delivered by the City and Suburban letter-carriers on the 17th and 18th, as compared with the number delivered on the 24th and 25th December, will be of interest:—

| | | |
|-------------------|--------|---------|
| 17 December... .. | 25,584 | |
| 18 „ | 28,274 | |
| | | 53,858 |
| 24 „ | 60,744 | |
| 25 „ | 50,942 | |
| | | 111,686 |
| Increase | 57,828 | |

The amount of correspondence despatched from the Head Office, in closed mails, at the same period, was also very largely increased.

REGISTRATION

REGISTRATION BRANCH.

The number of registered letters which passed through the General Post Office in 1885 was 354,912, against 321,447 in 1884, giving an increase of 33,465.

NUMBER OF MAILS RECEIVED AND DESPATCHED.

The following Return shows the number of Mails received at and despatched from the General Post Office during the years 1884 and 1885 :—

| Year. | Received. | | Despatched. | | Total number of Mails which passed through the office. |
|----------------|-----------|----------|-------------|----------|--|
| | Inland. | Foreign. | Inland. | Foreign. | |
| 1884..... | 117,862 | 13,055 | 107,050 | 8,140 | 246,107 |
| 1885..... | 121,640 | 13,875 | 124,881 | 8,803 | 269,199 |
| Increase | 3,778 | 820 | 17,831 | 663 | 23,092 |

The number of written communications received from the public during 1885, intimating changes of address, or requesting letters, &c., to be forwarded, was 18,316, against 18,257 in 1884.

The number of communications addressed to the Department, relating to the extension and improvement of the Service, to irregularities connected with the performance of mail contracts, and to the transit of letters, &c., through the post, and recorded in the year 1885, was 32,013, against 33,515 in 1884.

From the 1st August the Registration Branch was closed at 8 p.m., as it was found that very little business was transacted after that hour.

REVENUE AND EXPENDITURE.

The following Statement shows the Revenue and Expenditure for the Year 1885.

| REVENUE. | | | EXPENDITURE. | | | | | | |
|---|---------|-------|--------------|-------|---|---------|-------|----------|-------|
| | £ | s. d. | £ | s. d. | | £ | s. d. | £ | s. d. |
| Sale of postage stamps | 315,770 | 0 10 | | | Salaries* | | | 123,039 | 1 2 |
| Fees for private boxes | 2,270 | 14 1 | | | Less amount chargeable to Electric Telegraph Department, as per foot-note | 5,934 | 6 2 | | |
| Postage on unpaid letters | 4,115 | 7 0 | | | Less amount chargeable to Money Order Office, as per foot-note.. | 1,416 | 7 2 | 7,350 | 13 4 |
| Miscellaneous receipts | 1,098 | 5 9 | | | | | | 115,688 | 7 10 |

* Since the 1st October, 1885, the Post Office Department has, under regulations made in conformity with section 7 of the Civil Service Act, paid the full salaries of officers in charge of amalgamated post and telegraph offices, who were, previous to that date, remunerated partly by salaries from the Post Office and Telegraph Departments, and partly by commissions on the sale of postage stamps and for the transaction of Money Order Office and Government Savings Bank business, but since the 1st October, 1885, the commissions referred to were discontinued to the officers mentioned, their salaries being so increased as to compensate them for the loss of such commissions. It was then arranged that when an amalgamated office transacted Money Order Office and Government Savings Bank business, the Money Order Department should be debited with one-ninth and the Telegraph and Post Office Departments with four-ninths each of the salary of the officer in charge of such office, and also, that when an amalgamated office did not transact Money Order Office and Government Savings Bank business, the Telegraph Department should be debited with four-ninths, and the Post Office Department with five-ninths, of the salary of the officer in charge of such office.

£1,416 7s. 2d., and £5,934 6s. 2d., are the amounts with which the Money Order and Telegraph Departments respectively should be debited under the arrangement referred to, showing the sum of £115,688 7s. 10d. to be charged to the Post Office Department, under the heading of Salaries for the year 1885.

† Comprising the cost of fuel, light, rent, repairs, furniture, forage, carts, horses, uniforms, stamps and seals, receivers, travelling and relieving expenses, overtime, sorting English mails, extra clerical aid, servants' wages for cleaning General Post Office, and incidental expenses.

The items under the head of expenditure are confined to the amounts actually paid from the votes of Parliament, directly at the disposal of the Postmaster-General.

The following Return shows the number, description, and value of Postage Stamps issued at the General Post Office during the years 1884 and 1885 :—

| | | £18 | 0 0 |

A new form of one penny "O S" Postage Stamp (*i.e.* for use by Public Departments only) for envelopes and cards only was introduced in May. The following is a description of the new Stamp:—Profile of Queen Victoria to left on plain tinted groundwork, enclosed in oval band, containing "New South Wales Postage" over head and "One Penny" under, with the letters O.S. in top and bottom corners; the whole enclosed in a border of three lines. Oblong Stamp, red.

On the introduction of the system of prepayment of telegrams by postage stamps, on the 1st October, 1885, it was deemed necessary to provide stamps of a higher denomination than those previously in use, and, accordingly, authority was obtained for the issue of a ten-shilling and a one-pound stamp. Authority was also given for the issue of a new five-shilling stamp of the following description:—Profile of Queen Victoria to left with diadem on tinted background, enclosed in circle, containing the words "New South Wales" above and "Stamp Duty" underneath in white letters on oblong figured field, with "5s." at top and "Five Shillings" at bottom; the whole enclosed by border lines attached to centre at sides. The word "Postage" in black erased letters printed over "Stamp Duty." Color, centre and border lines violet, with green diaper field.

The "ten shilling" and "one pound" stamps, referred to above, are of a similar description, with the exception that the former has a scroll and the latter a carmine field.

In the year 1885 the average cost per mile of the Inland Mail Conveyance was about 5½d., against 5¼d., the price per mile paid in the year 1884. The particulars as to the Mail Contracts for the Conveyance of Inland Mails will be found in the Appendix.

COMPLAINTS.

In previous reports allusion has been made to some of the difficulties that attend the prompt delivery of inadequately addressed correspondence, and on the present occasion I deem it right to offer the following observations on this subject.

Persons have complained of delay in the delivery of letters that formerly arrived in due course. The letters bear such an address as "Mr. —, George-street," or "Mr. —, Circular Quay," and at first it would seem strange that after being duly delivered for some months they should subsequently suffer delay. To understand this, however, it is necessary to know that in a large Department like the Post Office, where so many letter-carriers are employed, it might happen that the regular carrier, who is familiar with the person's residence or office, is absent owing to sickness or some other cause. Indeed, as many as eleven carriers have at one time been absent from the Sydney beats alone, and their places have had to be filled by the employment of all the emergency carriers, and even by newly-appointed persons. These temporary carriers may be comparatively strange to the beats, and as—to follow up the illustration given—three carriers deliver at the Circular Quay, and no less than six in George-street, letters vaguely addressed may pass through the hands of several carriers before reaching the proper one and so suffer delay in delivery.

Some persons insist that it is the duty of the Post Office to promptly correct erroneous addresses without any delay to the letters. For example, complaint has been made that a letter addressed in error (say) to Bathurst-street instead of Liverpool-street, was not promptly delivered at the *correct* address, because the latter appeared in the Sydney Directory. Where it is possible, Directories are consulted, but the time and energy of the Department are devoted, and rightly too, to the speedy despatch and delivery of letters *as addressed*. It should be observed that there are in the Head Office officials whose occupation is analogous to that of the "blind clerks" in the London Office, and they do cause a large number of imperfectly addressed letters to reach their owners.

My main object in making the foregoing remarks is to ensure prompt delivery of correspondence by urging greater care on the part of the public in addressing letters, &c. Not merely the name of the street should be given correctly, but also the number or name of the house.

And, speaking of irregularly-posted letters, it may be mentioned that persons, especially those in business, and who are well known, have complained of what appears to them to be the absurd practice of returning to the senders letters which are posted unstamped, instead of sending them on and charging the deficiency, or even double the deficiency, to the addressees. The postal law does not permit of the course suggested being taken in the case of Colonial letters, but it allows this to be done with regard to places beyond the Colony by arrangement with the proper authorities. To meet what appeared to be the wishes of the public in this respect, an arrangement was some years since entered into between this Department and the London Post Office, whereby letters, even if wholly unstamped, might be sent to their destination and the postage, with a further rate as a fine, charged on delivery.

Such a measure, however, is looked upon not as a progressive but a retrogressive one. Some thirty years ago the prepayment of postage was optional, and consequently the Post Office, especially on St. Valentine's Day, was made the medium of conveying a large mass of anonymous matter of a scurrilous or obscene description, which the senders did not hesitate to put into the post, knowing that the Department was bound to carry it perhaps hundreds of miles, and, at any rate, offer it to the addressees, who in most cases refused it.

A case of such a kind occurred only a few days since. A letter addressed to a well known firm in this city was posted in England unstamped, and it was, in pursuance of the arrangement mentioned, sent on and charged with the postage, 6d., and another 6d. by way of fine, and the addressee, on paying the shilling and opening his letter, found it to be an anonymous one of the most obscene character.

Other objections exist to the optional prepayment of postage upon letters, one being the necessity for keeping accounts, and the postage stamp system was specially devised to avoid accounts as much as possible with the double object of protecting the revenue, as it is impossible to keep an effectual check upon charged letters, and to enable the sorting to be more rapidly done than was possible when unpaid letters had to be weighed, and postage marked upon them and debited to the various Postmasters.

Persons complaining of the delay or loss of letters, &c., generally assume that the Post Office is in fault. It hardly ever seems to strike them that the blame may rest with themselves or with their correspondents. Scarcely a week passes without some irregularity where the Post Office has been charged with carelessness, being cleared up in this way. Either the correspondent had neglected to post, or had entrusted the posting to somebody else, who had failed to execute the trust, or the sender himself had mislaid the letter; whilst mistakes made by senders in addressing letters to wrong numbers, wrong streets, and even wrong towns, are a fruitful source of complaint. In illustration of how blame is wrongfully thrown upon the Post Office,

Office, I will mention a case which was only recently investigated. A gentleman in Sydney complained that he sent an unregistered letter containing a cheque to a person, which, at the expiration of seven days, had not reached its address. Inquiries were promptly made, without any result, except that the postmaster stated that all letters for the addressee in question had been duly delivered to him whenever he called for them. Shortly afterwards, the complainant again wrote, intimating that the missing letter (enclosing the cheque) had been received by the addressee, and he added—"It was lying, so we are informed, in the Post Office," thus insinuating that the Post Office was to blame. Upon this the local postmaster was of course again referred to, when it transpired that the letter was found, not at the Post Office, but on the counter of the addressee's shop, where it had evidently been misplaced after delivery by the Post Office. And, moreover, when the postmaster interviewed the addressee the latter averred that he never told the complainant that the letter was, as above stated, "lying at the Post Office." Yet, up to the time the letter in question was found, its non-receipt would no doubt be alluded to in conversation as an instance of "the gross mismanagement of the Postal Department."

Of course the Post Office is not infallible; mistakes will occur, and letters are occasionally lost through the dishonesty of employes; but proof of the great want of care shown by persons addressing even important letters can be found in the fact (as mentioned in another portion of this report) that unclaimed letters—*i.e.*, letters so imperfectly addressed that the Department was unable to deliver them to the owners—containing cash and valuables amounting to £24,231 19s. 8d., passed through the Dead Letter Office during last year, whilst the total number of unclaimed letters was about 243,000, notwithstanding the efforts of the Department, by advertising in the Gazette (a copy of which advertisement is placed outside every Post Office in the Colony) and otherwise to find the addressees.

The locked box system, no doubt an excellent one, and much appreciated by the public, has one great disadvantage, and it is, that the most careful clerks, sorting in a hurry (and as a rule sorting must be done in a hurry) may inadvertently place a letter in the wrong box. The mistake so made is irremediable, as the owner of the box may have emptied it the minute after the letter has been missorted, and it rests with him whether to return the misdelivered letter or not. Certainly the box-holders as a rule are of that class of persons who would, and do, return the letters thus delivered in error, but in most cases the missorting and the misdelivering involve a delay of at least one post, which is doubtless annoying to the addressees, who may not understand the liability to error and delay from the cause described.

II.—MONEY ORDER DEPARTMENT.

A direct interchange of Money Orders has been established between this Colony and the following places, namely:—

Ceylon, Mauritius, and the Straits Settlements.

An agreement has also been completed with the London Post Office authorities by which Money Orders can be issued in this Colony, and made payable at any country with which the London office transacts Money Order business. Money Orders issued under this agreement are first advised to London, from thence they are readvised to the paying country, a small charge being deducted from the amount of the new order, by way of commission, on the following scale, namely:—

| | £ | s. | d. | ... | ... | ... | £ | s. | d. | s. | d. | |
|------------------------|---|----|----|-----|-----|-----------|-----|-----|-------------|-----|----|---|
| For sums not exceeding | 2 | 0 | 0 | ... | ... | ... | ... | ... | a charge of | 0 | 3 | |
| For sums exceeding | 2 | 0 | 0 | but | not | exceeding | 5 | 0 | 0 | do. | 0 | 6 |
| Do | 5 | 0 | 0 | do | | | 7 | 0 | 0 | do. | 0 | 9 |
| Do | 7 | 0 | 0 | do | | | 10 | 0 | 0 | do. | 1 | 0 |

No single order to exceed £10. The commission chargeable in this Colony is at the same rate as on orders drawn on the United Kingdom.

The following are the British and Foreign countries included in the arrangement, namely:—

| | | | |
|--------------------|--------------------|--------------|---------------|
| Antigua | Dutch East Indies | Italy | Sierra Leone |
| Bahamas | Egypt | Jamaica | St. Helena |
| Barbadoes | Falkland Islands | Lagos | St. Kitts |
| Belgium | Gambia | Montserrat | St. Lucia |
| Bermuda | German Empire | Natal | St. Vincent |
| British Guiana | Gold Coast | Nevis | Sweden |
| Cyprus | Grenada | North Borneo | Switzerland |
| Danish West Indies | Holland | Norway | Tobago |
| Denmark | Honduras (British) | Portugal | Trinidad |
| Dominica | Iceland | Seychelles | Turks Islands |

During

During the year Money Order Offices were established in this Colony at—

| | | | |
|------------|-----------|------------|---------------|
| Canterbury | Gunbar | Newbridge | Spring Hill |
| Carrathool | Luddenham | Riverstone | West Mitchell |
| Coolaman | | | |

And the offices at Collie, Dalmorton, Maryland, and Wagra were discontinued.

The number of Money Order Offices in the Colony on 31st December, 1885, was 427.

The number of orders issued during the year was 337,856, amounting to £1,169,569 5s. 10d., against 305,883, amounting to £1,068,068 5s. 3d., for 1884, the difference showing an increase for the year 1885 of 31,973 in the number and £101,501 0s. 7d. in the amount.

The number of orders paid was 298,082, amounting to £997,960 19s. 1d., against 270,678, amounting to £921,904 6s. 7d. for 1884, being an increase of 17,404 in the number and £76,056 12s. 6d. in the amount for 1885.

The amount of Revenue received as commission on Money Orders was £14,243 5s. 6d., being £1,449 5s. 6d. in excess of the amount received in 1884.

The following comparative return will show the various countries where the Money Orders issued in New South Wales were made payable :—

| Issued in New South Wales and payable | Issued in 1884. | | Issued in 1885. | | Increase in 1885. | | Decrease in 1885. | |

III.—GOVERNMENT SAVINGS' BANK DEPARTMENT.

The Savings' Bank system has been extended to the following places, namely :—

| | | |
|----------------|--------------|-------------|
| Canowindra | Hartley Vale | Moama |
| Cudal | Hawke's Nest | Mitchell |
| Cundletown | Katoomba | Spring Vale |
| Dight's Forest | | |

The Banks at O'Connell, St. Alban's, South Bowenfells, and the Shipping offices, Sydney and Newcastle, were discontinued.

The number of deposits received during the year was 170,750, and the amount £1,152,583 0s. 8d., being an increase of 14,172 in the number and £118,881 17s. 3d. in the amount on the business in the year 1884.

The withdrawals for the year were 75,600, for £1,020,813 12s. 1d., being 4,068 in number, and £51,326 9s. 1d. in amount, greater than the previous year.

The deposits, together with the interest added, increased the balance at the credit of depositors from £1,290,931 6s. 8d. in 1884 to £1,471,894 1s. 11d. on 31st December, 1885.

The amount of interest at 4 per cent. added to depositors' accounts was £49,193 6s. 8d.

The average amount of each deposit was £6 15s. 0½d., and of each withdrawal, £13 10s. 0½d. The average amount at the credit of each depositor's account at the close of the year was £25 11s. 7½d.

The following return will show the annual progress of the Government Savings' Bank system, from 1st September, 1871, to 31st December, 1885 :—

| Year. | Number of deposits. | Interest added to Depositors' Accounts. | Amount of Deposits | Number of Withdrawals. | Amount of Withdrawals. | Balance at Credit of Depositors. |
|------------------------|---------------------|---|--------------------|------------------------|------------------------|----------------------------------|
| | | £ s. d. | £ s. d. | | £ s. d. | £ s. d. |
| 1871..... | 2,103 | 52 5 4 | 15,730 5 0 | 205 | 1,555 17 5 | 14,226 12 11 |
| 1872 | 8,415 | 1,633 6 3 | 93,533 16 4 | 2,058 | 28,450 7 11 | 80,943 7 7 |
| 1873 | 15,000 | 5,033 3 8 | 184,817 19 2 | 3,694 | 64,724 13 0 | 206,069 17 5 |
| 1874 | 25,186 | 9,372 6 9 | 232,522 7 1 | 7,530 | 144,851 8 4 | 303,113 2 11 |
| 1875 | 34,043 | 12,067 18 3 | 268,079 3 8 | 11,497 | 228,831 1 11 | 354,429 2 11 |
| 1876 | 38,592 | 13,364 5 1 | 285,039 12 0 | 14,694 | 251,535 8 3 | 401,297 11 9 |
| 1877..... | 47,948 | 15,413 13 2 | 329,273 11 6 | 17,871 | 278,532 5 7 | 467,452 10 10 |
| 1878..... | 59,932 | 16,999 18 2 | 360,704 10 2 | 22,594 | 365,132 1 9 | 480,024 17 5 |

| 1881..... | 98,270 | 27,511 1 5 | 833,191 2 2 | 35,159 | 475,696 19 9 | 971,501 6 10 |
| 1882..... | 121,868 | 39,063 18 4 | 891,199 12 7 | 43,443 | 743,310 14 5 | 1,158,454 3 4 |
| 1883..... | 147,627 | 40,334 14 6 | 922,803 14 5 | 59,475 | 938,073 8 6 | 1,183,519 3 9 |
| 1884..... | 156,578 | 43,198 2 6 | 1,033,701 3 5 | 71,532 | 969,487 3 0 | 1,290,931 6 8 |
| 1885..... | 170,750 | 49,193 6 8 | 1,152,583 0 8 | 75,600 | 1,020,813 12 1 | 1,471,894 1 11 |
| Total to 31 Dec., 1885 | 1,070,158 | 309,873 4 11 | 7,454,730 11 3 | 428,306 | 6,292,709 14 3 | |

The following return will show the increase in the business of the Government Savings' Bank for the year 1885, compared with the transactions of the year 1884 :—

| Year. | Number of Government Savings' Banks in the Colony. | Number of Accounts opened. | Number of Accounts closed. | Number of Accounts remaining open on 31st Dec. | Total Deposits, including interest. | | Total Withdrawals. | | Balance at credit of Depositors on 31st Dec. |
|-----------|--|----------------------------|----------------------------|--|-------------------------------------|--------------------------|--------------------|----------------------------|--|
| | | | | | Number. | Amount. | Number. | Amount. | |
| 1885 ... | 274 | 29,135 | 22,986 | 57,538 | 170,750 | £ s. d. 1,201,776 7 4 | 75,600 | £ s. d. 1,020,813 12 11 | £ s. d. 1,471,894 1 11 |
| 1884 ... | 269 | 27,449 | 21,771 | 51,399 | 156,578 | 1,076,899 5 11 | 71,532 | 969,487 3 0 | 1,290,931 6 8 |
| Increase. | 5 | 1,686 | 1,215 | 6,139 | 14,172 | 124,877 1 5 | 4,068 | 51,326 9 1 | 180,962 15 3 |

Appendix G.
Appendix H.

A detailed return showing the business transacted at each branch in the Colony will be found in the Appendix, as also a statement of the Liabilities and Assets, with the Auditor-General's certificate thereon.

The expenditure of the Money Order and Government Savings' Bank Department for salaries was £7,963 16s. 8d. ; for contingencies, £8,239 6s. 1d. ; total, £16,203 2s. 9d.

The number of persons employed in connection with the Money Order and Government Savings' Bank Department is as follows :—

| | | |
|----------------------------------|---------------------------------|-----------------|
| 1 Superintendent and Controller. | 2 Assistant Tellers. | 8 Probationers. |
| 1 Chief Clerk and Examiner. | 5 Money Order Ledger-keepers. | 1 Storekeeper. |
| 1 Teller. | 5 Savings' Bank Ledger-keepers. | 3 Messengers. |
| 1 Examiner. | 18 Clerks. | 1 Housekeeper. |
| 3 Assistant Examiners. | | |
| Total | ... | 50 |

A

A great number of applications have been received for the extension of both the Money Order system and the Government Savings' Bank system to various parts of the Colony; but owing to the limited accommodation at the Head Office, Sydney, it has been found impossible to accede to these requests. In the course of a few months, however, when the Superintendent of the Money Order Office and Controller of the Government Savings' Bank will have taken up his new quarters in the extension of the General Post Office, these applications will be brought under consideration, and it may therefore be anticipated that both of these systems will be largely extended before long.

IV.—ELECTRIC TELEGRAPH DEPARTMENT.

The following return shows the extent of the Electric Telegraph Lines and the number of Stations in the Colony on the 31st December, 1885; also the Revenue and Expenditure of the Department for the year 1885 (including receipts and expenditure on account of the Telephone system) as compared with similar information for 1884 :—

| Year | Extent of Electric Telegraph wire in actual use | Number of Stations. | Number of Messages transmitted during the year. | Revenue | Expenditure (exclusive of interest on cost of construction of lines) |
|--------------------|---|---------------------|---|--------------|--|
| | Miles chns. lns. | | | £ s. d. | £ s. d. |
| 1884 | 18,681 11 54 | 394 | 2,334,052 | 146,386 8 2 | 171,433 14 8 * |
| 1885 | 19,864 54 33 | 404 | 2,625,992 | 155,073 10 3 | 181,448 5 2 † |
| Increase | 1,183 42 79 | 10 | 291,940 | 8,687 2 1 | 10,014 10 6 |

* This includes £12,617 1s 4d for British-Australian Cable Subsidy, and £2,500 for New Zealand Cable Subsidy

† This includes £13,069 13s 11d for British-Australian Cable Subsidy, and £2,500 for New Zealand Cable Subsidy.

The Lines of Electric Telegraph completed and dismantled during the year 1885 were the following :—

| Name of Line | Dismantled | New Line | Additional Wire. | Cost of Construction. |
|---|--------------------|--------------------|--------------------|-----------------------|
| | Miles chains links | Miles chains links | Miles chains links | £ s. d. |
| Booligal to Wilcannia | 58 13 33 | 193 44 80 | | 8,797 0 4 |
| Armidale to Mother of Ducks and Glen Innes... (Line) | 116 26 66 | 63 48 0 | 202 41 80 | 6,298 13 10 |
| Bega to Nimitybelle (Wire) | 42 64 0 | 42 64 0 | 0 26 0 | 1,519 18 8 |
| Ballina to Brunswick River Heads | 32 42 38 | 32 42 38 | | 1,302 18 4 |
| Goodooga to Angledool | 14 0 0 | 14 0 0 | 18 0 0 | 740 5 0 |
| Goulburn to Bungendore | 43 0 0 | 43 0 0 | 43 0 0 | 2,322 14 10 |
| Bateman's Bay to Mogo | | | 7 0 0 | 60 3 9 |
| Byrock to Bourke | | 48 40 0 | 48 40 0 | 2,586 6 11 |
| Signal Station, Richmond River, to Ballina | | 2 7 0 | 1 0 0 | 119 2 5 |
| Casino to Lismore and Coraki | | 15 0 0 | 20 0 0 | 658 15 0 |
| Cootamundra to Gundagai | | 33 51 20 | 33 51 20 | 1,936 8 11 |
| Howlong to Walbundrie | | 21 42 0 | 1 64 0 | 852 11 10 |
| Menindie to Silverton | | 82 0 0 | 5 0 0 | 4,903 19 4 |
| Orange to Molong | | 23 0 0 | 24 40 0 | 1,287 16 10 |
| Piper's Flat to Mitchell | | 7 0 0 | 7 40 0 | 371 19 6 |
| Pelican Flat to Pilot Station, Lake Macquarie... | | 2 6 40 | 0 9 60 | 113 18 2 |
| Singleton to Tamworth and West Tamworth | | | 143 40 0 | 1,982 14 1 |
| Murrumburrah to Young | | 18 19 20 | 23 59 20 | 1,145 9 5 |
| Brunswick River to Tweed River | | 4 32 0 | | 194 6 0 |
| Albury to Wodonga Bridge | | | 2 20 0 | 27 14 2 |
| City Extensions (Telegraph and Telephone) | | 6 39 0 | 122 15 0 | 2,986 10 1 |
| No. of miles dismantled (line) | 58 13 33 | | | |
| No. of miles dismantled (wire) | 116 26 66 | | | |
| No. of miles of line erected during the year | | 653 35 98 | | |
| Less dismantled | | 58 13 33 | | |
| | | 595 22 65 | | |
| No. of miles of additional wire erected during the year | | | 704 46 80 | |
| Less dismantled | | | 116 26 66 | |
| | | | 588 20 14 | |
| No. of miles of wire erected during the year | | | 1,183 42 79 | |
| Cost of construction for year ending 31st December, 1885 | | | | 40,209 7 5 |
| The total cost of the whole extent of Electric Telegraph communication in the Colony on 31st December, 1885, 19,864 miles 54 chains 33 links, was | | | | 641,669 0 7 |

Stations were opened during the year at the following places :—

| | |
|------------|-------------|
| Angledool | Guyra |
| Broadwater | Mitchell |
| Bowraville | Mogo |
| Canterbury | Silverton |
| Emu Plains | Walbundrie. |

The lines in course of construction during the year 1885, and the estimated length thereof are shown in the following Return :—

| Name of Line. | Estimated Distance. | |
|-------------------------------------|---------------------|------------------|
| | New Line. | Additional Wire. |
| | m. chs. lks. | m. ch. lks. |
| Murrurundi to Doughboy Hollow | 8 0 0 | 52 0 0 |
| Glen Innes to Tenterfield | 60 0 0 | 60 0 0 |
| Louth to Wanaaring | 77 0 0 | |
| Bathurst to Dubbo..... | | 133 0 0 |
| Port Macquarie to Wauchope | 8 0 0 | 5 0 0 |
| | 153 0 0 | 250 0 0 |

The Staff attached to the Electric Telegraph Department for the year 1885 was as follows, viz. :—

| | | |
|-----------------------------|------------------------------|----------------------------------|
| 1 Superintendent. | 2 Receiving Clerks. | 2 Battery-men. |
| 1 Assistant Superintendent. | 1 Mechanician. | 1 Stableman. |
| 1 Accountant. | 7 Instrument Fitters. | 1 Office-keeper. |
| 1 Manager. | 5 Inspectors. | 1 Manager (Telephones.) |
| 1 Assistant Manager. | 325 Station-masters. | 1 Overseer (do.) |
| 1 Continental Clerk. | 297 Operators. | 4 Assistant Overseers (do.) |
| 1 Cable Clerk. | 41 Line Repairers. | 1 Line Overseer. |
| 1 Ledger-keeper. | 3 Messengers' Overseers. | 11 Switch-board Attendants (do.) |
| 1 Cashier. | 348 Messengers. | 1 Batteryman. |
| 1 Telegraph Instructor. | 1 Clerk in charge of Stores. | 3 Engineers (Electric Lights.) |
| 11 Clerks. | 3 Clerks in Stores. | 4 Assistants do. |
| 19 Booking Clerks. | | |
| | Total | 1,103 |

The following amended Regulation regarding the Telephone system was brought into operation on January 1, 1885 :—“ Each subscriber will be required to pay, *in advance*, a maintenance fee of five pounds (£5) per annum for lines not exceeding 1 mile in length, and for lines over 1 mile in length, five pounds (£5) per annum for the first mile, and two pounds ten shillings (£2 10s.) per annum for each additional mile or fraction thereof.”

From the 2nd March the regulation regarding cipher messages, which were previously charged 50 per cent. above the ordinary rates, was so amended as to allow of such messages being transmitted at the ordinary rates, provided proper names or plain dictionary words are used, and that the length of each word does not exceed ten letters.

The system of pre-payment of telegrams by postage stamps was introduced on the 1st October, but being found to be open to the serious objection that it possessed absolutely no check upon the collections of country Station-masters, besides being otherwise objectionable, it was abolished, and the cash system reverted to on the 1st April, 1886.

Communication by cable between Australia and India was maintained without interruption during the year 1885, but one or other of the cables was unworkable from 17th June to 4th August, from 30th August to 25th September, and from 25th December to 18th January, 1886. Only one interruption occurred on the land line across the Australian Continent to Port Darwin. This was owing to the breaking of the wire near Giles' Well, north of Daly Waters, and lasted from 3:30 p.m. on 2nd December until 4:15 p.m. on the following day.

Appendix I.

The Superintendent of Telegraphs (Mr. E. C. Cracknell) attended an International Conference held at Berlin in August, 1885. I append a Report I have received from him on the subject.

I have the honor to be,

My Lord,

Your Lordship's most obedient servant,

F. B. SUTOR,

Postmaster-General.

General Post Office, Sydney, 21st July, 1886.

APPENDIX A.

UNIVERSAL POSTAL UNION.

Convention of Paris (1 June, 1878) as modified by the Additional Act of Lisbon (21 March, 1885), together with the Detailed Regulations for the Execution of the Convention similarly modified.

NOTE.

The General Postal Union was founded at Berne under a Treaty signed in that City on the 9th of October, 1874, with the following title and preamble :—

Treaty concerning the formation of a General Postal Union, concluded between Germany, Austro-Hungary, Belgium, Denmark, Egypt, Spain, the United States of America, France, Great Britain, Greece, Italy, Luxemburg, Norway, the Netherlands, Portugal, Roumania, Russia, Servia, Sweden, Switzerland, and Turkey.

The undersigned, plenipotentiaries of the Governments of the abovenamed countries, have by common consent, and subject to ratification, agreed upon the following Convention.

In 1876 British India and the French Colonies were admitted to the Union under an agreement signed at Berne on the 27th of January in that year by delegates from Germany, Austria, Hungary, Belgium, Egypt, Spain, France, the French Colonies, Great Britain, India, Italy, the Netherlands, and Sweden and Norway. In 1878, at a Congress held in Paris, the Union was further developed, and became the "Universal Postal Union." Other Countries and Colonies beyond sea were admitted; the Berne Treaty was largely altered; and, in its new form, the Union Convention was signed at Paris on the 1st of June, 1878, with the following title and preamble :—

Universal Postal Union concluded between Germany, the Argentine Republic, Austro-Hungary, Belgium, Brazil, Denmark and the Danish Colonies, Egypt, Spain and the Spanish Colonies, the United States of North America, France and the French Colonies, Great Britain and certain British Colonies, British India, Canada, Greece, Italy, Japan, Luxemburg, Mexico, Montenegro, Norway, the Netherlands and the Netherland Colonies, Peru, Persia, Portugal and the Portuguese Colonies, Roumania, Russia, Servia, Salvador, Sweden, Switzerland, and Turkey.

Convention.

The undersigned, plenipotentiaries of the Governments of the abovenamed countries, being assembled in Congress at Paris, by virtue of Article XVIII of the Treaty constituting the General Postal Union, concluded at Berne on the 9th of October, 1874, have by common consent and subject to ratification, revised the said Treaty in conformity with the following stipulations.

At a third Congress, held at Lisbon in 1885, the Convention of Paris was in its turn revised; and on the 21st of March in that year an Additional Act to the Convention was signed, with the following title and preamble :—

Additional Act of Lisbon to the Convention of the 1st of June, 1878, concluded between Germany, the United States of America, the Argentine Republic, Austro-Hungary, Belgium, Bolivia, Brazil, Bulgaria, Chili, the United States of Colombia, the Republic of Costa Rica, Denmark and the Danish Colonies, the Dominican Republic, Egypt, Ecuador, Spain and the Spanish Colonies, France and the French Colonies, Great Britain and certain British Colonies, Canada, British India, Greece, Guatemala, the Republic of Hayti, the Kingdom of Hawaii, the Republic of Honduras, Italy, Japan, the Republic of Liberia, Luxemburg, Mexico, Montenegro, Nicaragua, Paraguay, the Netherlands and the Netherland Colonies, Peru, Persia, Portugal and the Portuguese Colonies, Roumania, Russia, Salvador, Servia, the Kingdom of Siam, Sweden and Norway, Switzerland, Turkey, Uruguay and the United States of Venezuela.

The undersigned, plenipotentiaries of the Governments of the countries specified above, assembled in Congress at Lisbon,

In virtue of Article XIX of the Convention concluded at Paris on the 1st of June, 1878,

Have, by common consent, and subject to ratification, resolved upon the following Additional Act.

The present reprint embodies so much of the Convention of Paris as remains unchanged, together with all the revisions and additions agreed to at Lisbon and there signed in the form of an Additional Act. The whole of the abovementioned documents, as signed, were in the French language. The following translation and that of the foregoing headings and preamble have been added in London.

UNIVERSAL POSTAL UNION.—CONVENTION OF PARIS (1 JUNE, 1878) AS MODIFIED BY THE ADDITIONAL ACT OF LISBON (21 MARCH, 1885).

Article I.

The countries between which the present Convention is concluded, as well as those which may adhere to it hereafter, form under the title of *Universal Postal Union*, a single postal territory for the reciprocal exchange of correspondence between their Post Offices.

Article II.

The stipulations of this Convention extend to letters, post-cards, both single and with reply paid, printed papers of every kind, commercial papers and samples of merchandise, originating in one of the countries of the Union and intended for another of those countries. They also apply, as far as regards transit within the Union, to the exchange by post of the articles above mentioned between the countries of the Union and countries foreign to the Union, whenever the services of two of the contracting parties at least are used for that exchange.

All the contracting countries are not bound to issue cards with reply paid, but they assume the obligation of returning the reply halves of cards received from other countries of the Union.

Article III.

The Postal Administrations of neighbouring countries or countries able to correspond directly with each other, without availing themselves of the services of a third administration, determine, by common consent, the conditions of the conveyance of the mails which they exchange across the frontier, or from one frontier to the other.

In the absence of any contrary arrangement, the direct sea conveyance between two countries by means of packets or vessels depending upon one of them shall be considered as a third service; and this conveyance, as well as any performed between two offices of the same country, by the intermediary of sea or territorial services maintained by another country, is regulated by the stipulations of the following Article.

Article IV.

The right of transit is guaranteed throughout the entire territory of the Union.

Consequently, the several Postal Administrations of the Union may send reciprocally through the intermediary of one or of several of them, either closed mails or correspondence *à découvert*, according to the wants of the traffic and the requirements of the postal service.

The correspondence exchanged, whether *à découvert* or in closed mails, between two Administrations of the Union, by means of the services of one or of several other Administrations of the Union, is subject to the following transit charges, to be paid to each of the countries traversed, or whose services participate in the conveyance, viz. :—

1. For territorial transits, 2 francs per kilogramme of letters or post cards, and 25 centimes per kilogramme of other articles.
2. For sea transits, 15 francs per kilogramme of letters or post cards, and 1 franc per kilogramme of other articles.

It is, however, understood,—

1. That in all cases where the transit is already gratuitous at present, or subject to more advantageous conditions, such state of things is maintained, except in the case provided for in paragraph 3 following.
2. That in all cases where the sea transit rate is fixed at present at 5 francs per kilogramme of letters or post cards, and at 50 centimes per kilogramme of other articles, those rates are maintained.
3. That every sea transit not exceeding 300 nautical miles is gratuitous if the Administration concerned is already entitled on account of mails or correspondence benefiting by this transit, to the remuneration applicable to territorial transit; in the contrary case, payment is made at the rate of 2 francs per kilogramme of letters and 25 centimes per kilogramme of other articles.

4. That, in the case of sea conveyance effected by two or more Administrations, the rates payable for the entire transit cannot exceed 15 francs per kilogramme of letters or post cards, and 1 franc per kilogramme of other articles; the rates in question are, in such case, shared between those Administrations in proportion to the distances traversed, without prejudice to other arrangements between the parties interested.
5. That the rates specified in the present Article do not apply either to conveyance by means of services depending upon Administrations foreign to the Union, or to conveyance within the Union by means of extraordinary services specially established or maintained by one Administration in the interest or at the request of one or several other Administrations. The conditions of these two categories of conveyance are regulated by mutual consent between the Administrations concerned.

The expenses of transit are borne by the administration of the country of origin.

The general accounting for those charges takes place on the basis of statements prepared every three years, during a period of twenty-eight days, to be determined on in the Detailed Regulations referred to in Article XIV hereafter.

Correspondence between Postal Administrations, the reply halves of double post cards, returned to the country of origin, articles redirected or missent, undelivered articles, acknowledgments of delivery, post office money orders or advices of the issue of orders, and all other documents relative to the postal service, are exempt from all charges for territorial or sea transit.

Article V.

The rates of postage for the conveyance of postal articles throughout the entire extent of the Union, including their delivery at the residence of the addressees in the countries of the Union where a delivery is or shall be organized, are fixed as follows :—

1. For letters, 25 centimes in case of prepayment, and double that amount in the contrary case, for each letter and for every weight of 15 grammes or fraction of 15 grammes.
2. For post cards, 10 centimes for single cards or for each of the two halves of cards with reply paid.
3. For printed papers of every kind, commercial papers, and samples of merchandise, 5 centimes for each article or packet bearing a particular address and for every weight of 50 grammes or fraction of 50 grammes, provided that such article or packet does not contain any letter or manuscript note having the character of actual and personal correspondence, and that it be made up in such a manner as to admit of its being easily examined.

The charge on commercial papers cannot be less than 25 centimes per packet, and the charge on patterns or samples cannot be less than 10 centimes per packet.

In addition to the rates, and the minima fixed by the preceding paragraphs, there may be levied,

1. For every article subject to the sea transit rates of 15 francs per kilogramme of letters or post cards and 1 franc per kilogramme of other articles, a surcharge which may not exceed 25 centimes per single rate for letters, 5 centimes per post card, and 5 centimes per 50 grammes or fraction of 50 grammes for other articles.
2. For every article conveyed by means of services maintained by Administrations foreign to the Union, or of extraordinary services in the Union, giving rise to special expenses, a surcharge in proportion to those expenses.

In case of insufficient prepayment, correspondence of every kind is liable to a charge equal to double the amount of the deficiency, to be paid by the addressees.*

There shall not be forwarded :—

1. Articles other than letters which are not prepaid at least partly, or which do not fulfil the conditions required above in order to pass at the reduced rate.
2. Articles of a nature likely to stain or injure the correspondence.
3. Packets of samples of merchandise which have a saleable valuable, or which exceed 250 grammes in weight, or measure more than 20 centimetres in length, 10 in breadth, and 5 in depth.
4. Lastly, packets of commercial papers and printed papers of every kind, the weight of which exceeds 2 kilogrammes, or which measure in any one direction more than 45 centimetres.

Article V bis.

The sender of a letter or other article can have it withdrawn from the post or have its address altered, so long as such article has not been delivered to the addressee.

The request for such withdrawal is sent by post or by telegraph at the expense of the sender, who must pay as follows :—

1. For every request by post, the amount payable for a registered single letter.
2. For every request by telegraph, the charge for a telegram according to the ordinary tariff.

The stipulations of this article are not obligatory for countries in which the legislation does not permit the sender to dispose of an article in its course through the post.

Article VI.

The articles specified in Article V may be registered.

Every registered article is liable, at the charge of the sender,—

1. To the ordinary prepaid rate of postage on the article, according to its nature.
2. To a fixed registration fee of 25 centimes at most in European States, and of 50 centimes at most in other countries, including a receipt given to the sender.

The sender of a registered article may obtain an acknowledgment of the delivery of such article, by paying in advance a fixed fee of 25 centimes at most.

Article VI bis.

In case of the loss of a registered article, and except in cases beyond control, the sender, or, at the request of the sender, the addressee is entitled to an indemnity of 50 francs.

The obligation of paying the indemnity rests with the Administration to which the despatching office is subordinate. To that Administration is reserved a remedy against the Administration responsible, that is to say, against the Administration on the territory or in the service of which the loss took place.

Until the contrary be proved, the responsibility rests with the Administration which, having received the article without making any observation, cannot establish the delivery to the addressee or the regular transfer to the following Administration, as the case may be.

The payment of the indemnity by the despatching office ought to take place as soon as possible, and at the latest within a year of the date of the application. The responsible office is bound to refund to the despatching office without delay the amount of the indemnity paid by the latter.

It is understood that the application for an indemnity is only entertained if made within a year of the posting of the registered article; after this term the applicant has no right to any indemnity.

If the loss occurred in course of conveyance between the exchanging offices of two adjacent countries, without its being possible to ascertain on which of the two territories the loss took place, the two Administrations concerned bear each a half of the loss.

The Administrations cease to be responsible for registered articles for which the owners have given a receipt on delivery.

As a temporary measure, the Administrations of countries beyond Europe, whose legislation is actually opposed to the principle of responsibility, are permitted to postpone the application of the preceding clause until the time when they shall have obtained by legislative enactment authority to subscribe to it. Up to that time the other Administrations of the Union are not bound to pay an indemnity for the loss, in their respective services, of registered articles addressed to or originating in the said countries.

Article

* The Lisbon Congress decided to regard this article as meaning that in all cases of non-prepayment, as of insufficient prepayment, the whole deficit should be doubled, whether such deficit be in the fundamental rate or in the surcharge.

Article VII.

Those countries of the Union which have not the franc for their monetary unit fix their charges at the equivalents, in their respective currencies, of the rates determined by the foregoing Articles V and VI. Such countries have the option of rounding the fractions in conformity with the table inserted in the detailed regulations mentioned in Article XIV of the present Convention.

Article VIII

Prepayment of postage on every description of article can be effected only by means of postage stamps valid in the country of origin for the correspondence of private individuals.

Official correspondence relative to the postal service, and exchanged between postal administrations, is alone exempted from this obligation, and from all liability to charge.

Article IX

Each Administration keeps the whole of the sums which it collects by virtue of the foregoing Articles V, VI, VII, and VIII. Consequently, there is no necessity under this head for any accounts between the several Administrations of the Union.

Neither the senders nor the addressees of letters and other postal packets can be called upon to pay, either in the country of origin or in that of destination, any tax or postal duty other than those contemplated by the Articles above mentioned.

Article IX *bis*

At the request of the sender, all classes of correspondence are sent to the addresses by a special messenger immediately on arrival in those countries of the Union which consent to undertake this service in their reciprocal relations.

Such correspondence, which is called "express," is subject to a special charge for delivery, this charge is fixed at 30 centimes, and must be fully paid in advance by the sender, in addition to the ordinary postage. It belongs to the Administration of the country of origin.

When an article is destined for a place where there is no post office, the Postal Administration of the country of destination can levy an additional charge, up to the amount of the price fixed for delivery by express in its inland service, less the fixed charge paid by the sender, or its equivalent in the money of the country which levies this additional charge.

"Express" letters, &c upon which the total amount of the charges payable in advance has not been prepaid are delivered by the ordinary means.

Article X

No supplementary postage is charged for the redirection of postal packets within the Union.

Undelivered correspondence does not when returned give rise to the repayment of the transit charges due to intermediary Administrations for the previous conveyance of such correspondence.

Article XI

It is forbidden to the public to send by post—

- 1 Letters or packets containing pieces of money
- 2 Any packets whatever containing articles liable to Customs duty
- 3 Gold or silver bullion, precious stones, jewellery, or other precious articles, but only in case their insertion or transmission is forbidden by the legislation of the countries concerned.

In case a packet falling under one of these prohibitions be delivered by one Administration of the Union to another Administration of the Union, the latter proceeds according to the manner and forms prescribed by its internal laws or regulations.

The right is, moreover, reserved to the Government of every country of the Union to refuse to convey over its territory, or to deliver, articles passing at reduced rates, in regard to which the laws, ordinances, or decrees which regulate the conditions of their publication or circulation in that country have not been complied with, or correspondence of any kind bearing obviously inscriptions forbidden by the legal enactments or regulations in force in the same country.

Article XII

The Offices of the Union which have relations with countries beyond the Union admit all the other Offices to take advantage of these relations for the exchange of correspondence with the said countries.

The correspondence exchanged *a découvert* between a country of the Union and a country foreign to the Union, through the intermediary of another country of the Union, is treated, as regards the conveyance beyond the limits of the Union, in conformity with the conventions, arrangements, or special provisions governing the postal relations between the latter country and the country foreign to the Union.

The rates chargeable on the correspondence in question consist of two distinct elements, *viz*,

- 1 The Union rate fixed by Articles V, VI, and VII of the present Convention.
- 2 A rate for the conveyance beyond the limits of the Union.

The first of these rates is assigned,—

- a* For correspondence originating in the Union and addressed to foreign countries, to the despatching office in case of prepayment, and to the office of exchange in case of non prepayment,
- b* For correspondence originating in foreign countries and addressed to the Union, to the office of exchange in case of prepayment, and to the office of destination in case of non prepayment.

The second of these rates is, in every case, assigned to the office of exchange.

With regard to the expenses of transit within the Union, the correspondence originating in or addressed to a foreign country is assimilated to that from or for the country of the Union which maintains relations with the country foreign to the Union, unless such relations imply obligatory and partial prepayment, in which case the said Union country has the right to the territorial transit rates fixed by Article IV preceding.

The general accounting for the postage chargeable for the conveyance beyond the limits of the Union takes place on the basis of statements, which are prepared at the same time as the statements drawn up by virtue of Article IV preceding, for the calculation of the charges for transit within the Union.

As regards the correspondence exchanged in *closed mails* between a country of the Union and a country foreign to the Union, through the intermediary of another country of the Union, the transit thereof is subject,

Within the limits of the Union, to the rates fixed by Article IV of the present Convention,

Beyond the limits of the Union, to the conditions resulting from the special arrangements concluded or to be concluded for that purpose between the Administrations concerned.

Article XIII

The exchange of letters of declared value, the post office money order system, the parcel post system, the collection of bills of exchange, &c, the system of certificates of identity, &c, form the subject of special arrangements between the various countries or groups of countries composing the Union.

Article XIV

The Postal Administrations of the various countries composing the Union are competent to draw up, by common consent, in the form of Detailed Regulations, all the measures of order and detail which are judged necessary.

The several Administrations may, moreover, make amongst themselves the necessary arrangements on the subject of questions which do not concern the Union generally, provided that those arrangements do not derogate from the present Convention.

The Administrations concerned are, however, permitted to come to mutual arrangements for the adoption of lower rates of postage within a radius of 30 kilometres.

Article

Article XV.

The present Convention does not involve alteration in the legislation of any country as regards anything which is not provided for by the stipulations contained in this Convention.

It does not restrict the right of the contracting parties to maintain and to conclude treaties, as well as to maintain and establish more restricted Unions, with a view to the improvement of postal relations.

Article XVI.

Under the name of the *International Bureau of the Universal Postal Union*, is maintained a central office, which is conducted under the supervision of the Swiss Postal Administration, and the expenses of which are borne by all the Offices of the Union.

This Office is charged with the duty of collecting, collating, publishing, and distributing information of every kind which concerns the international postal service; of giving, at the request of the parties concerned, an opinion upon questions in dispute; of making known proposals for modifying the acts of the Congress; of notifying alterations adopted; and, in general, of taking up such studies and labours as may be confided to it in the interest of the Postal Union.

Article XVII.

In case of disagreement between two or more members of the Union as to the interpretation of the present Convention or as to the responsibility of an Administration in case of the loss of a registered article, the question in dispute is decided by arbitration. To that end, each of the Administrations concerned chooses another member of the Union not directly interested in the matter.

The decision of the arbitrators is given by an absolute majority of votes.

In case of an equality of votes the arbitrators choose, with the view of settling the difference, another Administration equally uninterested in the question in dispute.

The stipulations of the present Article apply equally to all the agreements concluded in virtue of Article XIII, of the Convention of the 1st June 1878, modified by Article I, section IX, of the present Additional Act.

Article XVIII.

Countries which have not taken part in the present Convention are admitted to adhere to it upon their demand.

This adhesion is notified diplomatically to the Government of the Swiss Confederation, and by that Government to all the countries of the Union.

It implies, as a matter of course, accession to all the clauses and admission to all the advantages stipulated by the present Convention.

It devolves upon the Government of the Swiss Confederation to determine, by common consent with the Government of the country concerned, the share to be contributed by the Administration of this latter country towards the expenses of the International Bureau, and, if necessary, the rates to be levied by that Administration in conformity with Article VII preceding.

Article XIX.

Congresses of plenipotentiaries of the contracting countries, or simple administrative Conferences, according to the importance of the questions to be solved, are held, when a demand for them is made or approved by two-thirds, at least, of the Governments or Administrations, as the case may be.

A Congress shall, however, be held at least once in five years.

Each country may be represented either by one or by several delegates, or by the delegation of another country. But it is understood that the delegate or delegates of one country can be charged with the representation of two countries only, including the country they represent.

In the deliberations each country has one vote only.

Each Congress settles the place of meeting of the next Congress.

For Conferences, the Administrations settle the places of meeting on the proposal of the International Bureau.

Article XX.

In the interval which elapses between the meetings, any Postal Administration of a country of the Union has the right to address to the other Administrations belonging to it, through the intermediary of the International Bureau, proposals concerning the business of the Union. But, in order to come into force, those proposals must obtain—

1. Unanimity of votes, if they involve any modification of the stipulations of the present Article or the foregoing Articles II, III, IV, V, V *bis*, VI, VI *bis*, IX, and IX *bis*.
2. Two thirds of the votes, if they involve a modification of the stipulations of the Convention other than those of Articles II, III, IV, V, V *bis*, VI, VI *bis*, IX, IX *bis*, and XX.
3. A simple absolute majority, if they affect the interpretation of the stipulations of the Convention, except the case of dispute contemplated by the foregoing Article XVII.

Resolutions duly adopted are sanctioned in the first two cases by a diplomatic declaration, which the Government of the Swiss Confederation is charged with the duty of preparing and transmitting to all the Governments of the contracting countries, and in the third case by a simple notification from the International Bureau to all the Administrations of the Union.

Article XXI.

The following are considered as forming, for the application of Articles XVI, XIX, and XX preceding, a single country or administration, as the case may be :—

1. The Empire of British India.
2. The Dominion of Canada.
3. The whole of the Danish Colonies.
4. The whole of the Spanish Colonies.
5. The whole of the French Colonies.
6. The whole of the Netherland Colonies.
7. The whole of the Portuguese Colonies.

Article XXII.

The present Convention shall come into operation on the 1st of April, 1879, and shall remain in vigour during an indefinite period; but each contracting party has the right of withdrawing from the Union by means of a notice given, one year in advance, by its Government to the Government of the Swiss Confederation.

Article XXIII.

After the date on which the present Convention takes effect, all the stipulations of the Treaties, Conventions, Agreements, or other Acts previously concluded between the various countries or Administrations, in so far as those stipulations are not in accordance with the terms of the present Convention, are abrogated, without prejudice to the rights reserved by Article XV above.

The present Convention shall be ratified as soon as possible. The acts of ratification shall be exchanged at Paris.

In faith of which the plenipotentiaries of the abovenamed countries have signed the present Convention at Paris, the first of June, one thousand eight hundred and seventy-eight. The

The whole of the changes made at the Lisbon Congress of 1885 in the text of the Convention of Paris, and embodied in the present reprint, form the substance of Article I of the Additional Act of Lisbon. That Act consists of two Articles only. The following is the second —

Article II

1. The present Additional Act shall come into force on the 1st of April, 1886, and shall have the same duration as the Convention concluded at Paris on the 1st of June, 1878.

2. It shall be ratified as soon as possible. The acts of ratification shall be exchanged at Lisbon.

In faith of which the plenipotentiaries of the countries enumerated above have signed the present Additional Act at Lisbon on the 21st of March, 1885.

The Final Protocols having reference to the Treaty of Berne, the Convention of Paris, and the Additional Act of Lisbon, are as follows. The original document as signed was in each case in the French language,—the English version having been added in London.

Treaty of Berne—Final Protocol

The undersigned, plenipotentiaries of the Governments of those countries which have signed this day the Treaty concerning the formation of a general Postal Union, have agreed as follows —

In case the French Government, which has demanded that the protocol be kept open for it, and which consequently figures among the contracting parties to the Treaty without having yet adhered thereto, should not decide to sign it, this Treaty shall be none the less definitive and binding for all the other contracting parties, whose representatives have signed it this day.

In faith of which the undermentioned plenipotentiaries have drawn up the present final protocol, which shall have the same force and value as if the provisions which it contains were inserted in the Treaty itself, and they have signed it in a copy which shall remain in the archives of the Government of the Swiss Confederation, and of which a copy shall be handed to each party.

Berne, 9 October, 1874

[Here follow the signatures of the Delegates of the Governments of Germany, Austro-Hungary, Belgium, Denmark, Egypt, Spain, the United States of America, Great Britain, Greece, Italy, Luxemburg, Norway, the Netherlands, Portugal, Roumania, Russia, Servia, Sweden, Switzerland, and Turkey.]

Convention of Paris—Final Protocol.

The undersigned, plenipotentiaries of the Governments of the countries which have this day signed the Convention of Paris, have agreed as follows —

I. Persia, which forms part of the Union, being unrepresented, will nevertheless be allowed to sign the Convention hereafter, provided that country confirms its adhesion by a diplomatic act with the Swiss Government, before the 1st of April, 1879.

II. The countries foreign to the Union, which have deferred their adhesion or which have not yet come to a decision, shall enter the Union on fulfilling the conditions specified in Article XVIII of the Convention.

III. In case one or other of the Contracting Parties should not ratify the Convention, this Convention shall nevertheless be binding on the parties to it.

IV. The various British Colonies, other than Canada and British India, which are parties to the Convention, are Ceylon, the Straits Settlements, Labuan, Hong Kong, Mauritius and dependencies, Bermuda, British Guiana, Jamaica, and Trinidad.

In faith of which the undermentioned plenipotentiaries have drawn up the present final protocol, which shall have the same force and value as if the stipulations which it contains were inserted in the Convention itself; and they have signed it on a single copy, which shall be deposited in the archives of the French Government, and a copy of which shall be delivered to each party.

Paris, 1 June, 1878.

[Here follow the signatures of the Delegates of the Governments of Germany, the Argentine Republic, Austria, Hungary, Belgium, Brazil, Denmark and the Danish Colonies, Egypt, Spain and the Spanish Colonies, the United States of America, France, the French Colonies, Great Britain and certain British Colonies, British India, Canada, Greece, Italy, Japan, Luxemburg, Mexico, Montenegro, Norway, the Netherlands and Netherland Colonies, Peru, Portugal and the Portuguese Colonies, Roumania, Russia, Salvador, Servia, Sweden, Switzerland, and Turkey.]

Additional Act at Lisbon—Final Protocol.

At the moment of proceeding to sign the Conventions settled by the Universal Postal Congress of Lisbon, the undermentioned plenipotentiaries have agreed as follows:—

I. Peru, Salvador, Servia, and Turkey, which form part of the Postal Union, not having been represented at the Congress, the protocol remains open for them to adhere to the Conventions which have been concluded by it, or only to one or other of them. This is equally the case in regard to the Republic of Costa Rica, whose representative is not present at the sitting during which the Acts will be signed.

II. The British Colonies of Australia and the British Colonies of the Cape and Natal shall be admitted to adhere to those Conventions, or to one or other of them, and the protocol remains open to them for that purpose.

III. The protocol remains open in favour of the countries whose representatives have signed to-day the principal Convention alone, or only a certain number of the Conventions settled by the Congress, in order to allow them to adhere to the other Conventions signed this day, or to one or other of them.

IV. The adhesions contemplated in the foregoing Articles I, II, and III must be notified to the Portuguese Government by the respective Governments, in diplomatic form. The term accorded for that notification will expire on the 1st of February, 1886.

V. The representatives of the countries which have not hitherto adhered to one or other of the undermentioned Conventions, viz.:—

The Convention of the 1st of June, 1878.

The agreement, dated the 1st of June, 1878, concerning the exchange of letters with declared value.

The agreement of the 4th of June, 1878, concerning the exchange of postal money orders.

The Convention of the 3rd November, 1880, concerning the exchange of postal parcels without declaration of value, having been admitted to participate in the Additional Acts, modifying and completing those Conventions and agreements, their signature at the foot of one or other of such Additional Acts implies on their part, subject to ratification, adhesion in the name of their respective countries to the Convention or agreement to which such Additional Act relates, from the date on which the latter comes into force.

VI. In case one or more of the contracting parties to the postal Conventions signed to-day at Lisbon shall not ratify one or other of those Conventions, that Convention shall be none the less valid for the States which shall have ratified it.

In faith of which the undermentioned plenipotentiaries have drawn up the present final protocol, which shall have the same force and value as if its provisions were inserted in the text itself of the Conventions to which it relates; and they have signed it on a single copy, which shall remain in the archives of the Portuguese Government, and of which a copy shall be handed to each party.

Lisbon, twenty-first March, one thousand eight hundred and eighty-five.

[Here follow the signatures of the Delegates of the Governments of Germany, the United States of America, the Argentine Republic, Austria, Hungary, Belgium, Bolivia, Brazil, Bulgaria, Chili, the United States of Colombia, Denmark and the Danish Colonies, the Dominican Republic, Egypt, Ecuador, Spain and the Spanish Colonies, France, the French Colonies, Great Britain and certain British Colonies, Canada, British India, Greece, Guatemala, the Republic of Hayti, the Kingdom of Hawaii, the Republic of Honduras, Italy, Japan, the Republic of Liberia, Luxemburg, Mexico, Montenegro, Nicaragua, Paraguay, the Netherlands and Netherland Colonies, Persia, Portugal, the Portuguese Colonies, Roumania, Russia, the Kingdom of Siam, Sweden, Norway, Switzerland, Uruguay, and Venezuela.]

DETAILED REGULATIONS.

The Detailed Regulations for the execution of the Treaty of Berne are signed by the Delegates who signed the Treaty itself: the preamble is as follows:—

The undersigned, having regard to Article XIII of the Treaty of the 9th October, 1874, concerning the formation of a General Postal Union, have, in the name of their respective offices, by common consent, agreed upon the following measures for ensuring the execution of the said Treaty.

The Delegates who signed the Convention of Paris also signed the Detailed Regulations for its execution, which bear accordingly a title enumerating the countries represented, and open with the following preamble:—

The undersigned, having regard to Article XIV of the Convention concluded at Paris on the 1st June, 1878, for the revision of the fundamental pact of the General Postal Union, have, in the name of their respective Administrations, by common consent, agreed upon the following measures for ensuring the execution of the said Convention.

The revisions and additions which the Lisbon Congress agreed to make in the abovenamed Detailed Regulations are embodied in an Additional Act signed by all the Delegates who signed the Additional Act to the Convention, and headed accordingly with a title enumerating the States represented, and with the following preamble:—

The Undersigned, having regard to Article XXXIV of the Detailed Regulations for the execution of the Convention of the 1st of June, 1878, have agreed, in the name of their respective Administrations, to import into those Regulations the following changes, which shall take effect from the 1st of April 1886.

The Detailed Regulations and Additional Act thereto, as signed, were in the French language only. The translation has been added in London.

UNIVERSAL POSTAL UNION.—DETAILED REGULATIONS FOR THE EXECUTION OF THE CONVENTION, SIGNED AT PARIS ON THE 1ST OF JUNE, 1878, AND MODIFIED AT LISBON BY THE ADDITIONAL ACT SIGNED ON THE 21ST OF MARCH, 1885.

1. Route of the Correspondence.

1. Each Administration is bound to forward, by the most rapid routes at its disposal for its own mails, the closed mails and the correspondence *à découvert* which are delivered to it by another Administration,

2. Administrations which avail themselves of the option to levy supplementary charges, as representing the extraordinary expenses pertaining to certain routes, are free not to forward by those routes when there may exist other means of communication, any insufficiently paid correspondence for which the employment of the said routes has not been expressly prescribed by the senders.

II. Exchange in Closed Mails.

1. The exchange of correspondence in closed mails between the Administrations of the Union is regulated by common consent between the Administrations concerned, and according to the necessities of the service.

2. If an exchange of correspondence takes place through the medium of one or of several other countries, due notice must be given to the post offices of those countries.

3. It is, moreover, obligatory, in this latter case, to make up closed mails in all cases in which the amount of the correspondence is such as to hinder the work of an intermediate Administration, according to the declaration of that Administration,

4 In case of alteration in a service of closed mails established between two Administrations through the medium of one or several other countries, the Administration which has originated the alteration gives notice thereof to the Administrations of the countries through the medium of which this exchange is maintained.

III Extraordinary Services

The extraordinary services of the Union giving rise to special charges, the fixing of which is reserved by the last paragraph of Article IV of the Convention for arrangement between the Administrations concerned, are exclusively—

- 1 Those which are maintained for the accelerated conveyance by land of the Indian Mail.
- 2 That which the Post Office of the United States of America maintains upon its territory for the conveyance of closed mails between the Atlantic Ocean and the Pacific Ocean
3. That which is established for the conveyance of mails by railway between Colon and Panama

IV Fixing the Rates of Postage

1 In execution of Article VII of the Convention, the Administrations of the countries of the Union which have not the franc as monetary unit, levy their rates of postage according to the following equivalents

| Countries of the Union | 25 centimes | 10 centimes | 5 centimes |
|--|------------------------|-----------------------|------------------------|
| Germany | 20 pfennig | 10 pfennig | 5 pfennig |

2 In case of alteration in the monetary system of any one of the countries above mentioned, the Administration of that country must come to an understanding with the Swiss Post Office in order to modify the above equivalents, it devolves upon this latter Administration to notify the change to all the other offices of the Union through the medium of the International Bureau.

3 Any Administration, if it deems it necessary, may have recourse to the understanding contemplated by the preceding paragraph in case of an important modification in the value of its money

4 The monetary fractions resulting either from the complement of the charge applicable to insufficiently paid correspondence, or from the combination of the Union charges with the foreign charges or with the surcharges contemplated by Article V of the Convention, may be rounded by the offices which levy the payments. But the sum to be added on this account must, in no case, exceed the value of one twentieth of a franc (5 centimes)

V – Correspondence with countries foreign to the Union

Offices of the Union which have relations with countries foreign to the Union furnish to the other offices of the Union a table according to the pattern C annexed to the present regulations, and indicating, with the conditions of transmission, the rates due for the conveyance beyond the Union of correspondence addressed to, or originating in, the countries aforesaid. In the case provided for by the 10th paragraph of Article XII of the Convention, there may be added 5 centimes per single rate of letters and 2 centimes per single rate of other articles.

2. In conformity with Article XII of the Convention there is levied, in addition to the foreign rates indicated in the table C :—

1. By the office of the Union which despatches paid correspondence for abroad, the rates of prepayment respectively applicable to correspondence of the same nature for the final country of the Union.
2. By the office of the Union to which is addressed unpaid or insufficiently paid correspondence originating abroad, as follows :—
 - a. For letters, the rate applicable to unpaid letters originating in the country of the Union, which serves as the intermediary.
 - b. For other articles, a charge equal to the prepaid rate on similar articles which are addressed from the Union country of destination to the Union country serving as the intermediary.

VI.—Application of the Stamps.

1. Correspondence despatched from countries of the Union is impressed with a stamp indicating the place or origin and the date of posting.
2. Correspondence originating in countries foreign to the Union is also marked, by the office of the Union which has received it, with a stamp indicating the point and date of entry into the service of that office.
3. Unpaid or insufficiently paid correspondence is, in addition, impressed with the stamp "T" (tax to be paid), the application of which devolves upon the office of the country of origin in cases of correspondence originating in the Union, and upon the office of the country of entry in cases of correspondence originating in countries foreign to the Union.
4. Registered articles must bear a label or the impression of a stamp reproducing conspicuously the capital letter R in Roman letters, each office having for the rest the option of adding to the letter R any special mark which it may find convenient (the name of the office or country of origin, the number of the letter, &c.)
5. The stamps or marks, the employment of which is prescribed by the present Article, are placed on the address side of the letter or packet.
- 5 bis. Articles to be sent by express are impressed with a stamp bearing in large letters the word "Express." The Administrations are, however, authorised to replace that stamp by a printed label, or by a written inscription underlined with a coloured pencil.
6. Every article of correspondence which does not bear the stamp "T" is considered as paid and treated accordingly, unless there be an obvious error.

VII.—Indication of the number of Rates and of the Amount of the Foreign Charges.

1. When a letter or other article of correspondence is liable, by reason of its weight, to more than a single rate of postage, the office of origin, or of entry into the Union, as the case may be, indicates in the upper left-hand corner of the address, in ordinary figures, the number of rates paid, or to be paid.
2. This regulation is not obligatory in the case of correspondence fully prepaid.
3. The foreign charges due, by virtue of Article XII of the Convention, and of Article V of the present regulations, for transit beyond the Union of correspondence addressed to or originating in countries foreign to the union, are indicated at the lower left-hand corner of the address of each article, as follows :—
 1. By the office of the country of origin, in red figures, in case of correspondence regularly prepaid originating in the Union.
 2. By the office of entry into the Union, in blue figures, in case of correspondence originating abroad, to be taxed by the Union office of destination.

VIII.—Insufficient Prepayment.

1. When an article is insufficiently prepaid by means of postage stamps, the despatching office indicates, in black figures, placed by the side of the postage stamps, the amount of the deficiency, expressing it in francs and centimes.
2. According to this indication, the office of exchange of the country of destination taxes the article with double the deficiency ascertained.
3. In case use be made of postage stamps not available for prepayment, no account is taken of them. This circumstance is indicated by the figure naught (0) placed by the side of the postage stamps.

IX.—Letter Bills.

1. The letter bills which accompany the mails exchanged between two Administrations of the Union are in conformity with the pattern A appended to the present regulations.
In case of exchanges by sea which, although periodical and regular, are not daily or on fixed days, the despatching offices must number their letter bills in an annual series for each office of origin and for each office of destination, mentioning, as far as possible, in the letter bill, the name of the Packet or vessel which carries the mail.
2. The registered correspondence is entered in Table No. I of the letter bill, with the following details : the name of the office of origin, the name of the addressee, and the place of destination, or simply the name of the office of origin and the number given to the article at that office.
Articles to be sent by express are entered numerically in Table I of the letter bill.
Acknowledgments of delivery relating to registered articles entered in Table I of the letter bill are mentioned by means of the letters A.R. placed opposite the entries of the article in question, in the observation column of that table.
Acknowledgments of delivery are in conformity with or analogous to the pattern A bis annexed. They must be drawn up in French or must bear a sublineary translation in that language.
Acknowledgments of delivery when returned are entered in the abovenamed table, either individually or collectively, according as they are more or less numerous.
3. When the number of registered articles usually sent from one office of exchange to another requires it, a special and separate list may be used to take the place of Table No. I of the letter bill.
4. In Table No. II are to be entered, with such details as the table requires, the closed mails contained by the direct mail to which the letter bill relates.
5. The number of separate packets or bags composing each despatch for a single destination is indicated in the right-hand top corner of the letter bill.
6. When it is deemed necessary for certain exchanges to make new tables or headings of the letter bill, the necessary steps may be taken after an understanding between the post offices concerned.
7. When an office of exchange has no correspondence to forward to a corresponding office, it must, nevertheless, make up in the usual form a mail which is composed simply of the letter bill.
8. In the case of closed mails sent by one Administration to another, to be conveyed by means of private ships, the number of letters and other articles is indicated in the letter bill or on the address of the mails.

X.—Registered Articles.

1. Registered articles, the acknowledgments of delivery relating to them, express letters, &c., and, if there be one, the special list contemplated in paragraph 3 of Article IX, are made up in a separate packet, which is to be suitably enclosed and sealed so as to preserve the contents.
2. This packet, attached to the letter bill, is placed in the centre of the mail.
3. The presence in the mail of a packet of registered articles, of which the description is given upon the special list mentioned in paragraph 1 above, is to be announced by the application at the head of the letter bill, either of a special entry or of the registration label or stamp in use in the country of origin.
4. It is understood that the mode of tying up and forwarding registered articles, prescribed by paragraphs 1 and 2 above, applies only to ordinary exchanges. For important exchanges it is for the offices concerned to prescribe by common consent special arrangements, subject in the one case as in the other to exceptional measures to be taken by the heads of the offices of exchange, when they have to insure the transmission of registered articles which, from their nature, their form, or their size, would not be capable of being enclosed in the principal mail.

5. Acknowledgments of delivery when returned are placed in an envelope by the office delivering the registered articles to which those acknowledgments relate. These envelopes, bearing the inscription "Returned acknowledgment of delivery: Post Office of . . . Country . . ." are submitted to the formalities of registration and despatched for their destination like ordinary registered articles.

XI.—Indemnity for the Loss of a registered Article.

When the indemnity due for the loss of a registered article has been paid by one Administration, on behalf of another Administration which is responsible for the loss, the latter is bound to repay the amount within three months after receiving notice of the payment. This repayment is effected either by means of a postal money order or a draft, or in specie current in the country to which payment is due.

XII.—Making up the Mails.

1. As a general rule the articles of which the mails consist must be classified and tied up according to the nature of the correspondence, the prepaid correspondence being separated from the unpaid and insufficiently prepaid.

2. Every mail, after having been tied with string, is enclosed in strong paper sufficient in quantity to prevent damage to the contents, then tied again with string on the outside, and sealed with wax, or fastened by means of a gummed paper label bearing an impression of the seal of the office. The mail is furnished with a printed address bearing, in small characters, the name of the despatching office and in larger characters the name of the office of destination: "from . . . for . . ."

3. If the bulk of the mail requires it, it is enclosed in a bag properly fastened, sealed, and labelled.

4. The bags must be returned empty to the despatching office by the next mail, in the absence of other arrangements between the corresponding offices.

XIII.—Verification of the Mails.

1. The office of exchange which receives a mail ascertains, in the first place, whether the entries in the letter bill and on the registered letter list, if there be one, are correct.

If it detects errors or omissions, it immediately makes the necessary corrections on the letter bills or lists, taking care to strike out the erroneous entries with a pen, in such a manner as to admit of the original entries being deciphered.

3. These corrections are made by two officers. Except in the case of an obvious error, they are accepted in preference to the original statement.

4. A note of verification, in conformity with the pattern B hereto annexed, is prepared by the receiving office, and sent without delay, officially registered, to the despatching office.

5. The latter, after examination, returns it with any observations to which it may give rise.

6. In case of the failure of a mail, of a registered article, of the letter bill, or of the special list, the fact is immediately reported, in such form as may be desired, by two officers of the receiving office, and signified to the despatching office by means of the note of verification. If needful, the latter office may also be advised thereof by telegram, at the expense of the Administration which sends the telegram.

7. In case the receiving office shall not have forwarded by the first mail to the despatching office a note of verification, reporting errors or irregularities of any kind, the absence of that document is to be regarded as evidence of the due receipt of the mail and of its contents, until proof to the contrary.

XIV.—Registered Articles.—Address.—Conditions as to form and manner of fastening.

1. Correspondence addressed to initials or in pencil is not admitted to registration.

No special conditions as to form or fastening are prescribed for registered articles. Each office has the right to apply to such correspondence the regulations in force in its inland service.

XV.—Post Cards.

1. Post cards must be sent unenclosed. The front is reserved for the address, but the sender may add there his own name and address by means of a stamp, autograph stamp, or any method of printing.

2. Post cards must not exceed the following dimensions:—Length, 14 centimetres; width, 9 centimetres.

3. As far as possible, post cards issued specially for circulation in the Postal Union must bear in front, in the French language, or with a sublineary translation in that language, the following superscription:—

Post Card.—Universal Postal Union.

(Side reserved for the address.)

4. The postage stamp representing prepayment figures in one of the top corners of the front, as should also any supplementary stamp which may be added.

5. Except stamps for prepayment, it is forbidden to join or attach to post cards any article whatsoever.

6. As a general rule, post cards with reply prepaid must bear in front the printed superscription, on the first half, "Post card with reply paid"; on the second half, "Reply post card." Each of the two halves must, moreover, fulfil the other conditions laid down for single post cards; one half is doubled over the other, and they must not be closed up in any manner whatsoever.

7. The sender of a post card with reply paid may write his name and address on the front of the "Reply" half.

The "Reply" half can only be sent to the country in which it originates; in the contrary case it is not forwarded.

8. Post cards, both single and with reply paid, emanating from private industry, are admitted to international circulation, if agreeable to the laws of the country of origin, and if they be in conformity with the post cards issued by the post office of that country, at all events in regard to size and the substance of the paper.

XVI.—Commercial Papers.

1. The following are considered as commercial papers, and allowed to pass as such at the reduced postage specified in Article V of the Convention:—All papers or documents written or drawn wholly or partly by hand which have not the character of an *actual and personal correspondence*, such as papers of legal procedure, deeds of all kinds drawn up by public functionaries, way-bills or bills of lading, invoices, the various documents of insurance companies, copies or extracts of deeds under private seal, written on stamped or unstamped paper, scores or sheets of manuscript music, manuscripts of works or of newspapers forwarded separately, &c.

2. Commercial papers must be forwarded in wrappers or in open envelopes.

XVII.—Printed Papers of every kind.

1. The following are considered as printed papers and allowed to pass as such at the reduced postage sanctioned by Article V of the Convention, viz.: newspapers and periodical works, books, stitched or bound, pamphlets, sheets of music, visiting cards, address cards, proofs of printing, with or without the manuscripts relating thereto, papers impressed with points in relief for the use of the blind, engravings, photographs, pictures, drawings, plans, maps, catalogues, prospectuses, announcements, and notices of various kinds, printed, engraved, lithographed or autographed, and in general, all impressions or copies obtained upon paper, parchment, or cardboard, by means of printing, lithography, autography, or any other mechanical process easy to recognise, except the copying press.

The mechanical processes called chromography, polygraphy, hectography, papyrography, velocigraphy, &c., are considered as easy to recognise; but in order to pass at the reduced postage reproductions obtained by means of these processes must be brought to the post office counter, and must number at least twenty copies, precisely identical.

2. Stamps for prepayment, whether obliterated or not, and all printed articles constituting the sign of a monetary value, are excluded from transmission at the reduced postage.

3. The character of *actual and personal correspondence* cannot be ascribed to the following, viz. :—

- 1 To the signature of the sender or to the designation of his name or of his social standing, of his rank, of the place of origin, and of the date of despatch
 - 2 To a dedication or mark of respect offered by the author
 - 3 To marks or signs simply intended to call attention to passages in a text
 - 4 To prices added or altered by hand in stock and share lists, prices current and market reports, catalogues, prospectuses and various notices
 - 5 To offers of or orders for books, sent by means of a printed text in which the books offered or ordered are indicated by hand, either by striking out or underlining the titles.
 - 6 To invoices and accounts sent with printed matter and relating thereto.
 - 7 To printed matter bearing corrections of typographical errors.
 8. Lastly, to annotations or corrections made upon proofs of printing or musical compositions, and relating to the text or to the making up of the work.
4. Printed papers must be either placed in wrappers upon rollers, between boards, in covers open at one side or at both ends, or in unclosed envelopes, or simply folded in such a manner as not to conceal the nature of the packet, or lastly, tied by a string easy to unfasten.
5. Address cards, and all printed matter of the form and substance of an unfolded card, may be forwarded without wrapper, envelope, fastening, or fold. Cards bearing the inscription "Post card" are not allowed to go at the rate for printed matter.

XVIII.—Patterns.

1. Samples of merchandise are only allowed to pass at the reduced postage which is allotted to them by Article V of the Convention, under the following conditions

2. They must be placed in bags, boxes, or open envelopes, in such a manner as to admit of easy inspection.
3. They must possess no saleable value, nor bear any writing beyond the name or the social position of the sender, the address of the addressee, a manufacturer's or trade mark, numbers, prices, and indications relative to weight or size, or to the quantity to be disposed of.

XIX.—Articles grouped together.

It is permitted to enclose in the same packet samples of merchandise, printed matter, and commercial papers, but subject to the following conditions .—

1. That each article taken singly shall not exceed the limits which are applicable to it as regards weight and size.
2. That the total weight must not exceed two kilogrammes per packet.
3. That the minimum charge shall be 25 centimes when the packet contains commercial papers, and 10 centimes when it consists of printed matter and samples.

XX.—Redirected Correspondence.

1. In execution of Article X of the Convention, and subject to the exceptions specified in paragraph 2 of the present article, correspondence of every kind circulating in the Union, addressed to persons who have changed their residence, is treated by the delivering office as if it had been addressed directly from the place of origin to the place of the new destination.

2. With regard to inland letters or packets of one country of the Union, which enter, in consequence of redirection, into the service of another country of the Union, the following rules are observed .—

1. Articles unpaid or insufficiently paid for their first transmission are treated as international correspondence, and subjected by the delivering office to the charge applicable to articles of the same nature addressed directly from the country of origin to the country in which the addressee may be.
2. Articles regularly prepaid for their first transmission, and on which the complementary postage pertaining to the further transmission has not been paid before their second despatch, are subjected, according to their nature, by the delivering office to a charge equal to the difference between the amount of postage already prepaid and that which would have been chargeable if the articles had been originally despatched to the new destination. The amount of this difference must be expressed in francs and centimes by the side of the stamps by the redirecting office.

In both cases the charges contemplated above remain to be defrayed by the addressees, even if, owing to successive redirections, the articles should return to the country of origin.

2 *bis*. When correspondence originally addressed from one part to another of a country of the Union, and prepaid in money, is redirected to another country, the redirecting office must indicate on each article the amount of the postage levied in money.

3. Mis-sent correspondence of all kinds is reforwarded without delay, by the quickest route, to its destination.

4. Correspondence of all kinds, ordinary or registered, which, being wrongly or insufficiently addressed, is returned to the senders in order that they may rectify or complete the address, is not, when reposted with the direction rectified or completed, regarded as redirected correspondence, but as being really fresh correspondence; and it is consequently liable to a fresh postage.

XXI.—Undelivered Correspondence.

1. Correspondence of all kinds which is not delivered, from whatever cause, must be returned, as soon as possible after the period for keeping it required by the laws of the country of destination, and at the latest at the expiration of six months, through the medium of the respective offices of exchange and in a special bundle labelled "*Rebuts*."

2. Nevertheless, undelivered registered correspondence is returned to the office of exchange of the country of origin, as if it were registered correspondence addressed to that country, except that opposite the nominal entry in Table No. I of the letter bill, or in the separate list, the word "*Rebuts*" is entered in the column of observations by the returning office.

3. As an exception, two corresponding offices may by mutual consent adopt a different mode of returning undelivered correspondence, and may also dispense with reciprocally retaining certain printed papers considered as deprived of value.

XXII.—Statistics of Transit Charges.

1. The statistics to be taken once every three years, in execution of Articles IV and XII of the Convention, for the settlement, as well of the expenses of transit within the Union as of the payments relating to conveyance beyond the limits of the Union, are prepared according to the stipulations of the following articles, during the first twenty-eight days of the month of May or of November, alternately, of the second year in each group of three years, to take effect retrospectively from the first year.

2. The statistics of May, 1885, will regulate the payments to be made from the 1st of January of that year till the end of March, 1886. The statistics of November, 1887, shall form the basis of payment from the 1st of April, 1886, till the end of 1888. The statistics of May, 1890, shall apply to the years 1889, 1890, and 1891; and so on.

3. If during the period to which the statistics apply a country having important relations should enter the Union, the countries of the Union whose situation, with regard to the payment of transit rates, might be modified in consequence of this circumstance, have the option of demanding special statistics relating exclusively to the countries which have lately entered.

XXIII.—Correspondence à découvert.

1. The office serving as the medium for the transmission of correspondence exchanged *à découvert*, either between two countries of the Union, or between a country of the Union and a country foreign to it, prepares beforehand for each of its correspondents of the Union, a table according to the pattern D annexed to the present regulations, in which it indicates, distinguishing, if needful, the different routes of transmission, the rates of payment by weight due to it for the conveyance within the Union of the two categories of correspondence by means of the services at its disposal, as well as the rates of payment by weight to be allowed by the office itself to other offices of the Union for the further conveyance of the said correspondence within the Union. If necessary, it communicates in due time with the offices of the countries to be traversed, as to the route which the correspondence shall take, and as to the rates to be paid upon it.

1 *bis*. When several routes to which different transit charges are applicable are available for the transmission on correspondence to one and the same country, the office of origin pays the transit office according to a single rate based upon the average of the several transit rates.

2. A duplicate of the Table D is forwarded by the said office to the exchange office interested, and serves as the basis of a special account to be established between them with reference to the intermediate conveyance of the correspondence in question. This account is prepared by the office which receives the correspondence, and is submitted to the examination of the despatching office.

3. The despatching office prepares, according to the particulars given in the Form D furnished by its correspondent, tables in conformity with the pattern E hereto annexed, intended to show, for each mail, the charges for intermediate conveyance within the Union of the correspondence, without distinction of origin, sent in the mail for transmission by the intermediary of the said corresponding office. With this view the despatching office of exchange enters in Table No. 1 of a form E, which it sends with its despatch, the total weight, according to its nature, of the correspondence of this class, which it delivers *à découvert* to the corresponding office of exchange; and the latter, after verification, accepts such correspondence, and sends it to its destination, mixed with its own correspondence in respect of which the charges, if any, for further conveyance, are the same.

4. As regards the charges for conveyance beyond the limits of the Union of correspondence addressed to or originating in countries foreign to the Union, they are calculated according to the particulars given in the Table C mentioned in Article V of the present regulations, and entered in a lump sum in the Form E, as follows:—

In Table No. II in the case of paid correspondence for abroad (expense at the charge of the despatching office of the Union).

In Table No. III in the case of unpaid correspondence coming from abroad, and of redirected or undelivered correspondence marked with foreign charges to be refunded (expense at the charge of the Union office of destination).

5. Any error in the statement of the office of exchange which has despatched the Table E is immediately communicated to that office by means of a note of verification, notwithstanding the correction made in the table itself.

6. If there be no correspondence liable to a charge for intermediate or foreign conveyance, the Table E is not prepared, and the despatching office enters at the head of the letter bill the words "No Table E." In case of the erroneous omission of this table the irregularity is equally reported, by means of a note of verification, to the office in fault, and must be immediately repaired by this latter.

XXIV.—Closed Mails.

1. Correspondence exchanged in closed mails between two offices of the Union, or between one office of the Union and an office foreign to the Union, across the territory or by means of the services of one or more other offices, forms the subject of a statement in conformity with specimen F annexed to the present regulations, which is prepared according to the following stipulations.

2. As regards mails from one country of the Union to another country of the Union, the despatching office of exchange enters in the letter bill for the receiving office of exchange the net weight of letters and post cards, and that of other articles, without distinguishing the origin or destination of the correspondence. These entries are verified by the receiving office, which prepares, at the end of the statistical period, the statement above mentioned, in as many copies as there are offices interested, including that of the place of despatch.

3. In the four days which follow the closing of the statistical operations, the statements F are transmitted by the offices of exchange which have prepared them to the offices of exchange of the Administration indebted, in order to be accepted by them. The latter, after accepting these statements, send them to the central Administration to which they are subordinate, and on which falls the duty of distributing them amongst the offices concerned.

4. As regards closed mails exchanged between a country of the Union and a country foreign to the Union, by the medium of one or of several offices of the Union, the conveyance is effected in both directions at the charge of the said Union country, and the offices of exchange of that country themselves prepare, for each mail despatched or received, a statement F, which they send to the office of departure or entry; this latter prepares at the end of the statistical period a general statement, in as many copies as there are offices concerned, including itself and the office of the Union which has to pay. One copy of this statement is sent to the indebted office and one to each of the offices which have participated in the conveyance of the mails.

5. After each statistical period, those Administrations which have despatched transit mails send a list of such mails to the several Administrations whose services they have used.

6. The mere warehousing, at a port, of closed mails brought by one Packet and intended to go on by another does not involve payment of territorial transit charges to the post office of the place where the mails are warehoused.

XXV.—Account of Transit Charges.

1. The Tables E and F are incorporated in a special account, in which is shown, in francs and centimes, the annual amount of transit payment accruing to each office, by multiplying the totals by 13. In case the multiplier does not correspond with the periodicity of the service, the Administrations concerned shall arrange for the adoption of another multiplier. The duty of preparing this account devolves upon the office to which payment is due, which transmits it to the indebted office.

2. The payment which results from balancing the reciprocal accounts between two offices is made in hard cash (francs) by the indebted office to the office to which payment is due, by means of bills drawn upon the capital, or upon some commercial centre in the country to which this latter office belongs.

3. The preparation, transmission, and payment of the accounts of the transit charges pertaining to a particular year must be effected with as little delay as possible, and at the latest before the expiration of the first six months of the following year. In any case, if the office which has sent the account has not received in that interval any notes of correction, that account is considered as duly accepted. This stipulation applies equally to uncontested observations made by one office on the accounts furnished by another. When this term of six months has passed, the amounts due from one office to another office are subject to interest at the rate of five per cent. per annum, dating from the day of the expiration of the said term.

The payments of transit charges for the first year in each triennial period, and at need for the second year, are made provisionally at the end of such year, on the basis of the previous statistics, subject to an eventual adjustment of the accounts in accordance with the results of the new statistics.

4. Nevertheless, the option is reserved to the offices concerned, to make by common consent other arrangements than those which are set forth in the present article.

XXVI.—Exceptions in the matter of Weights.

As an exceptional measure, it is agreed that the States which, in consequence of their internal regulations, are unable to adopt the decimal metrical system of weight, have the right to substitute for it the ounce avoirdupois (28·3465 grammes), by assimilating a half ounce to 13 grammes, and two ounces to 50 grammes, and to raise, if needful, the limit of the single rate of postage of newspapers to four ounces; but under the express condition that, in the latter case, the postage on newspapers be not less than 10 centimes, and that an entire rate of postage be charged for each copy of the newspaper, even though several newspapers be included in the same packet.

XXVII.—Applications for ordinary Articles which have failed to reach their destination.

1. Every application respecting an ordinary article of correspondence which has failed to reach its destination gives rise to the following procedure.

2. A form similar to the pattern G annexed hereto is handed to the applicant, who is requested to fill up as exactly as possible the portion which concerns him.

3. The office at which the application originates transmits the form direct to the corresponding office. It is transmitted officially without any written communication.

4. The corresponding office causes the form to be handed to the addressee or sender, as the case may be, with the request that particulars on the subject may be furnished.

5. With these particulars added, the form is sent back officially to the office which prepared it.

6. When the application proves to be well founded, it is transmitted to the central Administration in order to serve as a basis for further investigations.

7. In the absence of any agreement to the contrary, the form is drawn up in French or bears a French translation.

8. Any Administration can require, by notification addressed to the International Bureau, that the exchange of applications, as far as such Administration is concerned, shall be effected through the medium of the central Administrations, or of an office specially designated.

XXVII *bis*.—Withdrawal of Correspondence and Correction of Addresses.

1. For requests to withdraw correspondence or to correct addresses, the sender must use a form in accordance with pattern H annexed to the present Regulations. In handing this application to the post office, the sender of the letter must establish his identity. The Administration of the country of origin assumes the responsibility in regard to identity; and, after its establishment, the course is as follows :—

1. If the request is meant to be sent by post, the form, together with a perfect fac-simile of the letter to be looked for, is despatched in a registered letter direct to the office of destination.
2. If the request is to be made by telegraph, the form is handed over to the telegraph service, which is entrusted with the transmission of its terms to the office of destination.

2. On receipt of the Form H, or of the telegram taking its place, the office of destination searches for the correspondence in question, and takes the necessary action on the request.

If, however, the case be one of an alteration of address requested by telegraph, the office of destination only retains the letter, and awaits the arrival of the necessary fac-simile before complying with the request.

If the search is fruitless, or if the article has already been delivered to the addressee, or if the request by telegraph is not explicit enough to admit of the article indicated being recognised with certainty, the fact is at once communicated to the office of origin, which informs the applicant accordingly.

3. In the absence of any understanding to the contrary, Form H is drawn up in French, or bears a sublineary translation in that language; and, in case the telegraph is used, the telegram is sent in French.

4. Any Administration can require, by notification addressed to the International Bureau, that the exchange of applications, as far as such Administration is concerned, shall be effected through the medium of the central Administrations, or of an office specially named.

XXVIII.—Division of the Expenses of the International Bureau.

1. The ordinary expenses of the International Bureau must not exceed the sum of 100,000 francs annually, irrespective of the special expenses to which the meeting of a Congress or of a Conference gives rise.

2. The Postal Administration of the Swiss Post Office supervises the expenses of the International Bureau, makes the necessary advances, and prepares the annual account, which is communicated to all the other Administrations.

3. For the apportionment of the expenses, the countries of the Union are divided into seven classes, each contributing in the proportion of a certain number of units, viz. :—

| Class. | Units. |
|-----------|--------|
| 1st | 25 |
| 2nd | 20 |
| 3rd | 15 |
| 4th | 10 |
| 5th | 5 |
| 6th | 3 |
| 7th | 1 |

4. These co-efficients are multiplied by the number of countries of each class, and the total of the products thus obtained furnishes the number of units by which the whole expense is to be divided. The quotient gives the amount of the unit of expense.

5. The countries of the Union are classified as follows, in view of the division of the expenses :—

1st class : Germany, Austro-Hungary, United States of America, France, Great Britain, British India, the whole of the other British Colonies except Canada, Italy, Russia, Turkey.

2nd class : Spain.

3rd class : Belgium, Brazil, Canada, Egypt, Japan, Netherlands, Roumania, Sweden, Spanish Colonies or Provinces beyond sea, French Colonies, Netherland East Indies.

4th class : Denmark, Norway, Portugal, Switzerland, Portuguese Colonies.

5th class : Argentine Republic, Bulgaria, Chili, United States of Columbia, Greece, Mexico, Peru, Servia.

6th class : Bolivia, Costa Rica, Dominican Republic, Ecuador, Guatemala, Hayti, Republic of Honduras, Luxemburg, Nicaragua, Paraguay, Persia, Salvador, Kingdom of Siam, Uruguay, Venezuela, Danish Colonies, Colony of Curacao (or Netherland West Indies), Colony of Surinam (or Dutch Guiana).

7th class : Hawaii, Liberia, Montenegro.

XXIX.—Communications to be addressed to the International Bureau.

1. The International Bureau serves as the medium for regular and general notifications which concern the international relations.

2. The offices forming the Union must communicate to each other specially by the medium of the International Bureau :—

1. The particulars of the surcharges which they levy by virtue of Article V of the Convention, in addition to the Union rate, whether for sea postage, or for expenses of extraordinary conveyance, as well as a list of the countries in relation to which these surcharges are levied, and, if needful, the designation of the routes giving rise to the surcharges.

2. The collection of their postage stamps in triplicate.

3. Lastly, the Table C, the preparation of which is prescribed by Article V of the Regulations.

3. Every modification adopted hereafter, in regard to one or other of the five points above mentioned, must be notified without delay in the same manner.

4. The International Bureau equally receives from all the Administrations of the Union two copies of all the documents which they publish, as well relating to the inland service as to the international service.

5. Moreover, each Administration transmits in the first half of each year, to the International Bureau, a complete series of statistical details relating to the preceding year, in the form of tables filled up according to the directions of the International Bureau, which distributes with this object forms duly prepared.

6. Correspondence addressed by the Administrations of the Union to the International Bureau, and *vice versa*, is assimilated, as regards freedom from postage, to the correspondence exchanged between the Administrations.

XXIX *bis*.—General Statistics.

1. Every Administration sends to the International Bureau, at the end of the month of July in each year, as complete a series as possible of statistical returns relating to the preceding year, arranged in tables in conformity with or analogous to the patterns I, K, and L annexed.

2. Those services in which each transaction is recorded are dealt with in periodical statements based upon the entries made.

3. All other transactions are counted during one week at least for daily exchanges, and during four weeks for exchanges other than daily, each Administration having the option of counting separately the correspondence belonging to each category.

4. To each Administration is reserved the right of counting the correspondence at those periods in which the postal business approaches most nearly to the average.

5. To the International Bureau is entrusted the duty of printing and distributing the statistical forms to be filled up by each Administration, and of furnishing to any Administration on application all necessary information as to the rules to be followed, in order to ensure, as far as possible, uniformity of practice in taking the statistics.

XXX.

XXX.—Duties of the International Bureau.

1. The International Bureau prepares general statistics for each year.
2. It publishes, by the aid of the documents which are put at its disposal, a special journal in the German, English, and French languages.
3. All the documents published by the International Bureau are distributed to the Administrations of the Union, in the proportion of the number of contributing units assigned to each by Article XXVIII preceding.
4. Any additional copies and documents which may be applied for by these Administrations are paid for separately at prime cost.
5. The International Bureau must, moreover, hold itself always at the disposal of the members of the Union for the purpose of furnishing them with any special information they may require upon questions relating to the international postal service.
6. The International Bureau makes known demands for the modification or interpretation of the stipulations which regulate the Union. It notifies the results of each application, and no modification or resolution adopted is binding until two months at least after its notification.
7. In questions to be settled by general consent, or by the majority of the Administrations of the Union, those whose replies have not been received within six months from the date of the Circular of the International Bureau submitting the question, are considered as not voting.
8. The International Bureau prepares the business to be submitted to approaching Congresses or Conferences. It undertakes the necessary copying and printing, the editing and distribution of amendments, minutes of proceedings, and other information.
9. The Director of the International Bureau attends the sittings of the Congresses or Conferences, and takes part in the discussions, but without the power of voting.
10. An annual report is issued under his superintendence, and is communicated to all the Administrations of the Union.
11. The official language of the International Bureau is the French language.

XXXI.—Language.

1. The letter bills, tables, statements, and other forms used by the Administration of the Union in their reciprocal relations must, as a general rule, be drawn up in the French language, unless the Administrations concerned arrange otherwise by direct agreement.
2. As regards official correspondence, the present state of things is maintained, unless any other arrangement should subsequently be agreed upon by common consent between the Administrations concerned.

XXXII.—Jurisdiction of the Union.

The following are considered as belonging to the Universal Postal Union :

1. The Island of Heligoland, as assimilated to Germany, from a postal point of view.
2. The principality of Lichtenstein, as subordinate to the Postal Administration of Austria.
3. Iceland and the Faroe Islands, as forming part of Denmark.
4. The Balearic Isles, the Canary Islands, and the Spanish possessions on the Northern Coast of Africa, as forming part of Spain; the Republic of Andorra, and the postal establishments of Spain upon the West Coast of Morocco, as subordinate to the Postal Administration of Spain.
5. Algeria, as forming part of France; the principality of Monaco and the French Post Offices established at Tunis, Tangiers (Morocco), and Shanghai (China), as subordinate to the Postal Administration of France; Cambodia and Tonquin as assimilated, so far as regards the postal service, to the French Colony of Cochin China.
6. Gibraltar, as subordinate to the Postal Administration of Great Britain, as well as the postal agency which that Administration maintains at Tangiers (Morocco).
7. The post offices which the Administration of the English Colony of Hong Kong maintains at Hoihow (Kiung-Schow), Canton, Swatow, Amoy, Foo-Chow, Ningpo, Shanghai, and Hankow (China).
8. The Indian postal establishments of Aden, Muscat, the Persian Gulf, Guadur, and Mandalay, as subordinate to the Postal Administration of British India.
9. The Republic of St. Marino and the Italian offices of Tunis and Tripoli in Barbary, as subordinate to the Postal Administration of Italy.
10. The post offices which the Japanese Administration has established at Shanghai (China), Fusanpo, Genzanshin, and Jinsen (Corea).
11. Maderia and the Azores, as forming part of Portugal.
12. The Grand Duchy of Finland, as forming an integral part of the Empire of Russia.

XXXIII.

In the interval which elapses between the meetings, the Postal Administration of every country of the Union has the right of addressing to the other participating Administrations, through the medium of the International Bureau, proposals for modifying the present regulations. But, to become binding, those proposals must obtain—

1. Unanimity of votes, if they relate to the modification of the stipulations of Articles III, IV, V, XI, XXVI, XXXIII, and XXXIV.
2. Two-thirds of the votes, if they relate to the modification of the stipulations of Articles I, II, VIII, X, XIII, XIV, XV, XVI, XVII, XVIII, XIX, XX, XXII, XXIII, XXIV, XXV, XXVII, XXVII *bis*, XXIX *bis*, XXXI, and XXXII.
3. Simply an absolute majority, if they relate to the modification of stipulations other than those above indicated, or to the interpretation of the various stipulations of the Regulations.

Resolutions adopted in due form are made binding by a simple notification of the International Bureau to all the Administrations of the Union.

XXXIV.—Duration of the Regulations.

The present regulations shall be put into execution on the day on which the Convention of the 1st June, 1878, comes into force. They shall have the same duration as that Convention, unless they should be renewed by common consent between the parties concerned.

Done at Paris, the 1st of June, 1878.

The Additional Act of Lisbon, modifying the Regulations, is dated thus—

Done at Lisbon, the twenty-first of March, one thousand eight hundred and eighty-five.

The Postal revenue in the above return only includes the amount actually collected by each Postmaster. In many townships there are licensed vendors of postage stamps, and the sales by them, of course, affect the amount that would otherwise be accounted for by the Postmaster in each case.

LIST of Stamp-sellers on the 31st December, 1885.

| Name. | Residence | Date of Appointment | Name. | Residence. | Date of Appointment. |

F. W. HILL, Controller,
Money Order and Government Savings' Bank Department,
Sydney, 23rd February, 1886

DANIEL O'CONNOR,
Postmaster-General.

I certify that the foregoing Statement of all Deposits received and paid from 1st January to 31st December, 1885, has been examined and found to correspond with the Books and Accounts of the Government Savings' Bank.

EDWARD A RENNIE,
Auditor-General.

I.

REPORT of the Superintendent of Telegraphs relative to the International Telegraphic Conference held at Berlin in 1885.

I LEFT London for Berlin on the 7th August, 1885, to be present at the opening of the International Telegraphic Conference held in that city on the 10th of same month. The first meeting was held on the latter date, which was merely formal, to arrange the details of working, hours of attendance, &c.

At the following meeting two committees were formed, one for the revision of the General Regulations for the internal working of the whole telegraph service throughout the world, and the other for re-adjusting the tariff of charges.

Germany proposed a universal tariff for the whole of Europe, but this was considered too general, and met with very little response from the larger states, as their revenue from telegraphs would in many cases have been seriously affected. A modified German proposal was then submitted, which was ultimately carried.

I was invited with Mr. Murray Smith and Mr. Todd to meet the representatives of the cable companies, on several occasions, to discuss and arrange the proposed reduction of rates to Australia, which at first was agreed, subject to certain conditions, to be a reduction of 2s 6d per word for the public and from 6s 5d to 2s 8d reduction to the Press, but these preliminary arrangements were afterwards found to be impracticable in consequence of India objecting to reduce her transit rates over a land line from Bombay to Madras, of some 650 miles, India insisting on a transit rate of 7d per word.

The rates ultimately determined upon were, for public messages to Adelaide 8s 8d per word, and for the Press 2s 8d per word, which was a reduction of 20 per cent to the public; but as the Colonies are not in accord as to an extension of the term by six and a quarter years, for the present subsidy of £32,400 per annum, the reduction to the public instead of being 8s. to Adelaide will be only reduced, from 1st July next, by 1s 4d per word, and 2s 8d per word for the Press; this I do not consider a concession on the part of the companies worthy of consideration.

The Conference continued their deliberations until the 17th September, when the resolutions were signed by the delegates. The new rules, regulations, and tariffs were confirmed, and translations have now reached the Colonies, which will come into operation on the 1st July next.

I forward herewith a copy of the International Telegraph Convention with Berlin Revision of Service Regulations, and Tariffs, 1885.

E C CRACKNELL,
27/5/86.

INTERNATIONAL TELEGRAPH CONVENTION WITH BERLIN REVISION OF SERVICE REGULATIONS AND TARIFFS, 1885.

[Translated by Alfred Brasher, Director of Traffic, Indo European Government Telegraph Department—By permission of the Right Honourable the Secretary of State for India in Council.]

Annexures to the St. Petersburg Convention.—Berlin Revision.

International Convention.

Art. 1.

The High Contracting Parties recognise the right of all persons to correspond by means of the international telegraphs.

Art. 2.

They undertake to adopt all necessary measures to insure the secrecy of messages, and their prompt despatch.

Art. 3.

They, however, declare that they accept no responsibility on account of the service of the international telegraphs.

Art. 4.

Each Government undertakes to devote to the international telegraph service special wires, in sufficient number to insure a rapid transmission of telegrams.

These wires shall be established and worked in the best manner that experience in the service has made known.

Art. 5.

Telegrams are classed in three categories :—

1st. Government Telegrams : those which emanate from the Chief of the State, Ministers, Commanders-in-Chief of Land or Sea Forces, and Diplomatic or Consular Agents of the Contracting Governments ; also the replies to such telegrams.

2nd. Service Telegrams : those which emanate from the Telegraph Administrations of the Contracting States, and which relate either to the service of the international telegraphs or to objects of public interest agreed upon between the said Administrations.

3rd. Private Telegrams.

In transmission, Government telegrams take precedence of other telegrams.

Art. 6.

Government and service telegrams may be forwarded on all occasions in secret language.

Private telegrams in secret language may be exchanged between two States which admit that mode of correspondence. States which do not admit private telegrams in secret language to emanate from, or terminate at, their offices, will allow them to pass in transit, unless the service be suspended, as defined in Art. 8.

Art. 7.

The High Contracting Parties reserve to themselves the power to stop the transmission of any private telegram which may appear dangerous to the security of the State, or which may be contrary to the laws of the country, to public order, or decency.

Art. 8.

Each Government also reserves to itself the power to interrupt the system of the international telegraphs for an indefinite period, if it judges it necessary, either generally, or only upon certain lines and for certain kinds of messages, upon condition that it immediately advises each of the other Contracting Governments.

Art. 9.

The High Contracting Parties engage to enable every sender to profit by the different arrangements agreed upon between the Telegraph Administrations of the Contracting States, for the purpose of giving additional guarantees and facilities for the transmission and delivery of messages.

They also undertake to enable him to profit by the arrangements made and notified by any one of the other States, for the employment of special means of transmission or delivery.

Art. 10.

The High Contracting Parties declare their adoption of the following bases for the formation of International Tariffs:—

The charge for all messages exchanged, by the same route, between the offices of any two of the Contracting States, shall be uniform. In applying this principle, however, a State may be subdivided in Europe into two large territorial divisions, but not more.

The rate of charge is laid down from State to State, under agreement between the terminal Governments and the intermediate Governments.

The charges composing the tariffs applicable to the messages exchanged between the Contracting States may, at any time, be modified by a common agreement.

The franc is the monetary unit employed in the composition of international tariffs.

Art. 11.

Telegrams relating to the international telegraph service of the Contracting States are transmitted free over all the lines of the said States.

Art. 12.

The High Contracting Parties reciprocally owe each other account of the charges which they respectively collect.

Art. 13.

The stipulations of the present Convention are completed by Service Regulations, the provisions of which may be, at any time, modified by common accord by the Administrations of the Contracting States.

Art. 14.

A central office, placed under the superior authority of the chief Administration of one of the Contracting Governments, designated for that purpose in the Service Regulations, is appointed to collect, arrange, and publish information of all kinds relating to international telegraphy, to circulate requests for modifications of tariffs and Service Regulations, to give notice of the changes adopted, and generally to study all subjects, and execute all work entrusted to it in the interest of international telegraphy.

The expenses incurred in working this office are supported by all the Administrations of the Contracting States.

Art. 15.

The Tariffs and Service Regulations provided for by Articles 10 and 13 are annexed to the present Convention. They possess the same value, and come into operation at the same time as the Convention.

They will be subjected to revisions, at which all the States which have taken part in them, will have the right to be represented.

With this object, Administrative Conferences will take place periodically, each Conference fixing the time and place of the next meeting.

Art 16.

These Conferences are composed of delegates representing the Administrations of the Contracting States.

In the deliberations, each Administration has a right to one vote, provided always that when there are different Administrations of the same Government, a request to this effect shall have been made through the diplomatic channel to the Government of the country in which the Conference is to take place, before the date fixed for its opening, and also that each of the different Administrations has a special and distinct representative.

The revisions resulting from the deliberations of the Conferences can only come into operation after they have been approved by all the Governments of the Contracting States.

ART. 17.

The High Contracting Parties reserve to themselves respectively the right to make separately, among themselves, particular arrangements of every kind in matters of service which do not interest the generality of the States.

ART. 18.

States which have not taken part in the present Convention will be admitted to adhere to it on their request.

This adhesion will be notified through the diplomatic channel to the Contracting State in which the last Conference was held, and by that State to all the others.

It will convey, with full right, accession to all the clauses and admission to all the advantages stipulated by the present Convention.

ART. 19.

Telegraphic relations with non-adhering States or private Companies, are regulated, in the general interest of the progressive development of communication by the Service Regulations provided for by Article 13 of the present Convention.

ART. 20.

The present Convention will be put into execution from 1st January, 1876, new style, and will remain in force for an indefinite period, or until the lapse of one year from the date of its renunciation.

A renunciation made by any State only affects that State. The Convention remains in force for the other Contracting Parties.

ART. 21, and last.

The present Convention will be ratified and the ratifications exchanged at St. Petersburg with as little delay as possible.

Done at St. Petersburg, the $\frac{1}{2}$ July, 1875.

INTERNATIONAL SERVICE REGULATIONS ANNEXED TO THE TELEGRAPH CONVENTION OF ST. PETERSBURG.—
BERLIN REVISION.

Article 13 of the Convention.

The stipulations of the present Convention are completed by Service Regulations, the provisions of which may be, at any time, modified by common accord by the Administrations of the Contracting States.

1. *International System.*

Article 4 of the Convention.

Each Government undertakes to devote to the international telegraph service special wires, in sufficient number to insure a rapid transmission of telegrams.

These wires shall be established and worked in the best manner that experience in the service has made known.

I.

1. Offices between which the exchange of traffic is continuous or very active, are, as far as possible, connected by direct wires of at least 0.197 in. in diameter, if of iron; if not of iron, they must be equivalent in solidity and electrical conductivity. The service of these wires, relieved from the work of intermediate offices, is as a rule devoted to traffic between the two offices named as their extreme points.

2. The wires may be taken from this special service in case of derangement of the lines, but they should be returned to it as soon as the derangement ceases.

3. The Telegraph Administrations indicate one or more intermediate offices, on each wire, which are obliged to receive messages in transit, when direct transmission between the two terminal offices is impossible.

II.

1. The Administrations co-operate, within the limits of their respective spheres of action, for the protection of the international wires and submarine cables; they combine their arrangements so that the best results may be obtained from each wire.

2. The Departmental heads of the sections next to the frontiers, communicate with each other direct to insure, as far as they are concerned, the execution of these arrangements.

III.

The Morse and Hughes instruments remain concurrently adopted for the service of the international wires, until a new understanding is effected respecting the introduction of other instruments.

IV.

1. Between important towns of the Contracting States, the service is, as far as possible, permanent, day and night, without interruption.

2. Ordinary offices performing full day duty, are open to the public, at least from 8 a.m. to 9 p.m.

3. The hours during which offices of limited duty are kept open, are fixed by the respective Administrations of the Contracting States. Each State is at liberty to arrange that offices of full day duty shall perform only limited duty on Sundays. It communicates this arrangement to the International Office, which notifies it to the other Administrations.

4. Offices at which the duty is not permanent cannot be closed before transmitting all their international telegrams to an office at which the duty is permanent.

5. Between two offices of different States, communicating by a direct wire, the signal for closing is given by the office belonging to the State whose capital is situated the most to the west.

6. This rule applies to the closing of the diaries, and to the division of the watches, in offices performing permanent duty.

7. The same time is kept by all the offices of each State; this is generally the mean time of the capital of the State

V.

In documents used in the international service, the following notations are adopted to designate the telegraph offices:—

N. Office performing permanent duty (day and night).

N.

— Office performing day duty prolonged to midnight.

2.

C. Office performing full day duty.

L. Office performing limited day duty (*i.e.*, open during a number of hours less than the offices performing full day duty).

F. Railway telegraph office open for private messages.

P. Office of a private company.

S. Semaphore station.

E. Office open during the stay of the Court only.

B. Office open during the bathing season only.

H. Office open during the winter season only.

L.

— Office performing full duty during the bathing season, and limited duty during the rest of the year.

B.C.

L.

— Office performing full duty during the winter, and limited the rest of the year.

H.C.

* Office closed.

} These notations can be combined with those preceding.

2 *General Traffic Arrangements.*

Article 1 of the Convention.

The High Contracting Parties recognise the right of all persons to correspond by means of the international telegraphs

Article 2 of the Convention.

They undertake to adopt all necessary measures to insure the secrecy of messages, and their prompt despatch.

Article 3 of the Convention.

They, however, declare that they accept no responsibility on account of the service of the international telegraphs.

Article 5 of the Convention.

Telegrams are classed in three categories :—

1st. Government Telegrams : those which emanate from the Chief of the State, Ministers, Commanders-in-Chief of Land or Sea Forces, and Diplomatic or Consular Agents of the Contracting Governments ; also the replies to such telegrams.

2nd. Service Telegrams : those which emanate from the Telegraph Administrations of the Contracting States, and which relate either to the service of the international telegraphs or to objects of public interest agreed upon between the said Administrations.

3rd. Private Telegrams.

In transmission, Government telegrams take precedence of other telegrams.

Article 7 of the Convention.

The High Contracting Parties reserve to themselves the power to stop the transmission of any private telegram which may appear dangerous to the security of the State, or which may be contrary to the laws of the country, to public order or decency.

Article 8 of the Convention.

Each Government also reserves to itself the power to interrupt the system of the international telegraphs for an indefinite period, if it judges it necessary, either generally, or only upon certain lines and for certain kinds of messages, upon condition of its immediately advising each of the other Contracting Governments.

3. *Manner of Writing and Acceptance of Telegrams.*

Article 6 of the Convention.

Government and service telegrams may be forwarded on all occasions in secret language.

Private telegrams in secret language may be exchanged between two States which admit that mode of correspondence. States which do not admit private telegrams in secret language to emanate from, or terminate at, their offices, will allow them to pass in transit unless the service be suspended, as defined in Art. 8.

VI.

1. Telegrams may be written in plain language, in preconcerted language, or in cipher.

2. The body of telegrams in preconcerted language, or in cipher, may contain one or more passages in plain language. In this case, the passages in preconcerted language or in cipher should be placed between parentheses, separating them from the parts in plain language which precede or follow.

VII.

1. Telegrams in plain language must offer an intelligible sense in any one of the languages used in the territories of the Contracting States, or in Latin.

2. Each Administration designates, amongst the languages used in the territories of the State to which it belongs, those which it considers suitable for international telegraphic correspondence in plain language.

3. Service telegrams are written in French, unless the Administrations concerned have arranged for the use of another language.

4. This rule applies to the instructions in the preamble, and to service notices which accompany the transmission of messages, as also to the cases provided for in paragraphs 5 and 6 of Regulation X.

VIII.

1. By preconcerted language is understood the employment of words which, while presenting in the case of each an intrinsic sense, do not form phrases intelligible to the Administrations engaged in transmission.

2. These words are extracted from vocabularies admitted for international messages in preconcerted language.

3. Telegrams in preconcerted language must contain only words of ten characters at most, belonging to the English, French, German, Italian, Dutch, Portuguese, Spanish and Latin languages. Each telegram may contain words taken from all the abovementioned languages.

4. Proper names cannot be employed in the composition of codes. They are only admitted in telegrams in preconcerted language, with their signification in plain language.

5. The original sending office can demand the production of the vocabulary, for the purpose of controlling the execution of the preceding regulations, and verifying the authenticity of the words employed.

IX.

1. The following are considered as telegrams in cipher :—

a. Those which are composed of figures or of letters having a secret meaning.

b. Those which contain either any series or groups of figures or letters, the meaning of which may not be understood by the original sending office, or words, names, or collections of letters, not fulfilling the conditions required for plain language (Regulation VII), or preconcerted language (Regulation VIII).

2. The part in cipher must be composed exclusively of letters of the alphabet, or exclusively of Arabic figures.

3. Extra-European Administrations are authorized to decline to admit upon their lines private telegrams containing letters which have a secret meaning.

X.

1. The telegram to be transmitted should be legibly written in characters which have their equivalents in the official table of telegraph signals (Regulation XI), and which are in use in the country where the telegram is presented.

2. The body of the message should be preceded by the address, which may be written in a preconcerted or abbreviated form. But the faculty accorded to a receiver to have a telegram thus addressed delivered to him must depend upon an arrangement made between such receiver and the telegraph office. Every address must contain at least two words, the first representing the address of the receiver, the second indicating the name of the terminal telegraph office.

3. Each of the contracting Administrations has the power to accept or refuse an originating telegram without $\frac{\text{text}}{\text{body}}$; but the transit and delivery at destination of such telegrams is obligatory upon all Administrations.

4. The signature may be similarly abbreviated or omitted. When it forms one of the words to be transmitted, it should be placed after the body of the message. When it is omitted, the last word of the message takes its place in indicating the telegram in official communications relating to it.

5. The sender should write on the form, immediately before the address, his instructions relative to delivery at destination, prepayment of reply, acknowledgment of receipt, to its being an urgent or collated telegram, to its being a telegram to follow, to be delivered open, &c.

6. These instructions may be written in the abbreviated form adopted for the official instructions between the offices. In this case they are placed between parentheses, and each instruction is counted as one word only. When they are expressed in ordinary language, they should be written in French.

7. Every interlineation, reference, erasure, or alteration, must be authorised by the sender of the telegram or by his representative.

XI.

132

XI.

The characters available for the composition of telegrams are as follows :—

Letters.

A, B, C, D, E, É, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z.

Figures.

1, 2, 3, 4, 5, 6, 7, 8, 9, 0.

Punctuation and other Signs.

Full stop (.), comma (,), semicolon (;), colon (:), note of interrogation (?), note of exclamation (!), apostrophe ('), hyphen (-), parenthesis (), inverted commas ("), bar of division (/), underline.

Official Codes.

Urgent private telegram, D; paid service, ST; reply paid, RP; reply paid urgent, RPD; ^{collated} telegram, TC; _{repeated} acknowledgment of receipt, CR; telegram to follow, FS; post paid, PP; post registered, PR.; express paid, XP.; estafette paid, EP; telegram delivered open, RO.

By the Morse Instrument only.

The letters : Ä, A, or Á, N, Ö, Ü.

By the Hughes Instrument only.

The signs : cross (+), double hyphen (=)

XII.

1. The address should contain all the particulars necessary to insure the delivery of the telegram at its destination. With the exception of personal names, these particulars should be written in French, or in the language of the country to which the telegram is addressed.
2. The address of private telegrams should always be such that delivery to the receiver can be effected without difficulty, or the necessity of making inquiries.
3. For large towns, it should comprise the name of the street and the number; or, in default of these particulars, the name of the profession of the receiver, or similar information.
4. For small towns even, the name of the receiver ought, if possible, to be accompanied by information sufficient to guide the delivering office, in case of any alteration of the proper name.
5. The name of the terminal country is essential whenever doubt is possible as to the direction to be given to the telegram.
6. Telegrams containing addresses which are not in accordance with the conditions of the preceding paragraphs, should nevertheless be transmitted.
7. In all cases, the sender supports the consequence of insufficiency of address.

XIII.

1. Government telegrams should bear the seal or stamp of the authority that sends them. This formality is not exacted when the authenticity of the telegram can give rise to no doubt.
2. The right to return a reply as a Government telegram is recognised on production of the original Government telegram.
3. Telegrams from Consular Agents who are engaged in commerce, are not considered as Government telegrams, except when they are addressed to an official personage, and when they relate to official affairs. Telegrams which do not fulfil the last-named conditions are not, however, refused by the sending office, but the latter immediately reports them to the central Administration.

XIV.

1. In service telegrams the signature is not transmitted; these telegrams are addressed in the following form :—
Paris from St. Petersburg.
Director-General to Director-General.
2. In service notices exchanged between the offices relative to contingencies of transmission, the service is sent with a number only, and without address or signature.

XV.

1. The sender of a private telegram is bound to prove his identity, when requested to do so by the sending office.
2. He has, on his side, the power of including in his telegram the legalisation of his signature. He may have the legalisation transmitted either as written, or by the formula : "*Signature legalised by . . .*"
3. The office satisfies itself that the legalisation is genuine. Except when the signature is known to it, the office cannot regard it as authentic unless it is accompanied by the seal or stamp of the legalising authority. In all other cases, it must refuse to accept or transmit the legalisation.
4. The legalisation, as transmitted, enters in the number of words charged for. It is placed after the signature of the telegram.

4. Tariffs.

Article 10 of the Convention.

The High Contracting Parties declare their adoption of the following bases for the formation of international tariffs :
The charge for all messages exchanged by the same route, between the offices of any two of the Contracting States, shall be uniform. In applying this principle, however, a State may be subdivided in Europe into two large territorial divisions, but not more.
The rate of charge is laid down from State to State, under agreement between the terminal Governments and the intermediate Governments.
The charges composing the tariffs applicable to the messages exchanged between the Contracting States may, any time, be modified by a common agreement.
The franc is the monetary unit employed in the composition of international tariffs.

Article 11 of the Convention.

Telegrams relating to the international telegraph service of the Contracting States are transmitted free over lines of the said States.

XVI.

The tariff for the telegraphic transmission of international traffic is composed of :—

- a. The terminal rates of the original and final Administrations.
- b. The transit rates of intermediate Administrations, if any.

XVII.

The rate is fixed per word pure and simple; each Administration may, however, collect the rate in the form most convenient to it, but under the conditions set forth in Regulation XXI.

XVIII.

1. For European traffic, one and the same elementary terminal rate only, and one and the same elementary transit rate only, are adopted for all the States.
2. The elementary terminal rate is fixed at ten centimes.

133

3. The elementary transit rate is fixed at eight centimes.
4. These two elementary rates are reduced respectively to six centimes and a half and to four centimes for the following States :—Belgium, Bosnia-Herzegovina, Bulgaria, Denmark, Greece, Luxemburg, Montenegro, the Netherlands, Portugal, Roumania, Servia, and Switzerland.*
5. Other States of the European system possess equally the power to reduce their terminal rates for all or a portion of their traffic.
6. Nevertheless, Russia and Turkey, owing to the exceptional conditions which affect the establishment and maintenance of their lines, have the power to apply higher terminal and transit rates than the elementary rates above mentioned.
7. A special transit rate may be fixed, in each particular case, for transmission by submarine cables.

XIX.

1. The tariff to be collected for traffic between two countries is, on all occasions and by all routes, the tariff of the existing route which, by the normal application of the elementary rates, produces the lowest figure, subject to the exceptions which may arise from the application of clause 7 of the preceding Regulation.
2. Table A, annexed to the present Regulations, sets forth the tariff from country to country, in accordance with the above stipulations and the declarations accepted by the Conference.

XX.

For extra-European traffic, the tariff is fixed in conformity with table B, also annexed to the present Regulations.

XXI.

1. The charges collected under Regulations XVI to XX, may be rounded, by an increase or decrease, either after application of the normal rates per word fixed in accordance with the tables annexed to the present Regulations, or by an increase or decrease of those normal rates, to suit the monetary or other convenience of the original country.
2. Alterations made in execution of the preceding paragraph apply only to the charges collected by the original office, and in no way affect the division of the rates due to the other Administrations concerned. They must be so regulated that the difference between the rate collected for a telegram of fifteen words and the exact rate, calculated in conformity with the tables, by means of the equivalents in the following paragraph, shall not exceed one-fifteenth of the latter rate.
3. The following are the maximum amounts collected for a franc :—

| | |
|---|---|
| In Germany, 0·85 of a mark. | In Japan, 0·24 silver yen. |
| In Austria and Hungary, 50 kreuzers (Austrian value). | In Montenegro, 50 kreuzers (Austrian value). |
| In Bosnia-Herzegovina, 50 kreuzers (Austrian value). | In Norway, 0·80 of a krone. |
| In Bulgaria, 1 lei. | In the Netherlands and Dutch East Indies, 0·50 of a florin. |
| In Cochinchina, ·22 of a piaster. | In Persia, 26 schahis. |
| In Denmark, 0·80 of a krone. | In Portugal, 200 reis. |
| In Egypt, 3 piasters 34 paras, tariff money. | In Roumania, 1 lei. |
| In Spain, 1 peseta. | In Russia, 0·25 of a metallic rouble. |
| In Great Britain, 10d. | In Servia, 1 dinar. |
| In Greece, 1·20 drachma, or 1·08 new drachma. | In Siam, 3 fuangs. |
| In British India, 0·53 of a rupee. | In Sweden, 0·80 of a krone. |
| In Italy, 1 lira. | In Turkey, 4 piasters, 13 paras, 1 aspre medjidies, |
4. Payment may be demanded at metallic value.

XXII.

1. Alterations of the rate or bases of application of the tariffs which may be agreed upon between interested States, by virtue of paragraph 4 of Article 10 and of Article 17 of the Convention, should have for object and effect, not the creation of competition in charges between existing routes, but, on the contrary, the opening of as many routes as possible to the public at equal charges; and the necessary combinations should be so made that the terminal rates of the first and final Administrations remain equal, no matter what route is followed.
2. No new charge, no modification of either a general or partial character affecting the tariffs, shall come into operation before the lapse of, at least, fifteen days after its notification by the International Office, the date of notification not included.

XXIII.

1. Telegraph Administrations and offices adopt all necessary measures to diminish, as much as possible, the number and length of service telegrams, to which the privilege of free transmission is accorded by Article 11 of the Convention.
2. Information not of an emergent nature is asked for or given through the post, by prepaid letters.

XXIV.

1. Every rectifying or completing telegram, and every communication exchanged between two telegraph offices, at the request of a sender or receiver, respecting a telegram already transmitted, or in course of transmission, is a service telegram charged for at ordinary rates.
2. The sender or receiver of any telegram may, within an interval of seventy-two hours, following departure or arrival, as the case may be, request the correction of any words which may appear to him to be doubtful. The following sums must be deposited :—

- (a) If the request is made by the sender, the price of a telegram containing the number of words to be repeated, and the price of a reply if he desires one.
- (b) If the request is made by the receiver—1st. the price of a telegram conveying it; 2nd. the price of a telegram for the reply.

3. Telegrams sent in the case provided for under the letter *b*, in the preceding paragraph, are expressed in the following form :—

“Calcutta from London ST (*paid service*), RP4 (*the figure 4 comprises the number of words to be repeated, say 3 plus one word for the name of the receiver of the telegram to be corrected*), twenty-six (*date of telegram to be corrected*), BROWN (*receiver's name*). Repeat first, fourth, ninth (*words of the body of the original telegram to be corrected*).”
Or else: “Repeat word (or . . . words) after”

The reply takes the following form :—“London from Calcutta ST (*paid service*), BROWN (*receiver's name*), albatross, scrutiny, commune (*the three words of the original telegram, the repetition of which is asked for*).”

4. These telegrams rank with service telegrams and bear the prefix ST.

5. Charges collected for rectifying telegrams are refunded if the original telegram was a $\frac{\text{collated}}{\text{repeated}}$ telegram, and the repetition shows that the word or words repeated were incorrectly rendered in the original. In a case in which some of the words were correctly rendered in the original telegram and some incorrectly, the portion of the charges, corresponding to the number of words employed, in the application and reply, to obtain the repetition of the words correctly rendered in the original telegram, is not refunded.

6. The refund of the charges for rectifying telegrams relating to non-collated telegrams, is optional with the Administration which sends the requests for rectification.

7. No refund is due on account of the original telegram which caused the request for rectification.

8. When the words which have to be repeated are written in a doubtful manner, the original office sends after the repetition a service notice advising the delivery office of the circumstance and requesting that the immediate refund be deferred.

9. Charges collected for rectifying telegrams and for replies to them, remain entirely in the hands of the Administration which collected them, and are not entered in the international accounts.

XXV.

XXV.

1 When a sender, availing himself of the power accorded to him by Regulation XLII, indicates a circuitous route, he must pay the sum of the normal transit rates, calculated in accordance with Reg XVIII, and the tables specified in Regs XIX and XX above

2 The indication of the route written by the sender is transmitted in the preamble, as an official instruction, and is not charged for

3 The Administrations of the Contracting States undertake to avoid, as far as possible changes of rates arising from interruption of submarine cables

5 Counting Words.

XXVI

1 All that the sender writes in his telegram, to be transmitted, is included in reckoning the cost, except as stated in paragraph 9 of the following Regulation, and in paragraph 2 of Regulation XXV

2 Words, numbers, or signs added by the office, in the interest of the service, are not charged for.

3 The name of the original sending station, and the date, hour, and minute of the deposit of the message, are officially written on the copy delivered to the receiver

4 The sender can insert these particulars, wholly, or in part, in the body of his telegram In which case they enter in the number of words charged for.

XXVII.

1. The maximum length of a word is fixed at fifteen characters, according to the Morse alphabet; any excess up to fifteen additional characters, is counted as a word

2 For extra European traffic, the maximum is fixed at ten characters

3 Nevertheless, in both the European and the extra European systems, but only in the address, the name of the delivery office and the name of the country in which the telegram has to be delivered are counted respectively as one word only, no matter how many characters are employed, on condition that these proper names are written as they appear in the official nomenclature of the International Office

4 Words joined by a hyphen are counted as so many separate words

5 Words separated by an apostrophe are counted as so many separate words

6 Combinations or alterations of words contrary to the usage of the language are not admitted Nevertheless, proper names of towns and persons, names of places, boulevards, streets, &c, the names of ships, and numbers written at length, are counted for the number of words employed by the sender to express them

7 Numbers expressed in figures are counted at the rate of five figures to a word, plus one word for any excess The same rule applies in counting groups of letters For extra European traffic, the number of words to which a group of figures or letters corresponds, is obtained by dividing the figures by three, and adding if necessary a word for the remainder

8 Every separate character, whether letter or figure, is counted as a word The same applies to an underline

9 Signs of punctuation, hyphens, apostrophes, inverted commas, parentheses, fresh paragraphs, are not counted. On extra European lines the transmission of these signs is not obligatory

10 Decimal points and commas used in the formation of numbers and bars of division, are each counted as a figure.

11. Letters added to figures to form ordinal numbers are each counted as a figure

12 The counting of the original sending office is decisive as regards the number of words both in transmission and in the international accounts Nevertheless, when the telegram is expressed in the language of the delivery office and contains combinations of words contrary to the usage of such language, the latter office has the power of recovering from the receiver the amount of insufficient charge, which remains in the hands of the final Administration When this power is exercised, the telegram is not delivered to the receiver until the supplementary charge is paid The sender is informed by a service notice, in case the payment is refused

XXVIII

The following examples determine the interpretation of the rules to be followed in counting words, subject to the exception provided for in § 3 of the preceding regulation —

| [Equivalents] | Description of Traffic | | [Equivalents] | Description of Traffic | |
|-----------------------------------|------------------------|----------------|---|------------------------|----------------|
| | European | Extra European | | European | Extra European |
| Responsibility (14 characters) | 1 word | 2 words | 10 pounds 10 shillings | 4 words | 4 words. |
| Kriegsgeschichten (15 characters) | 1 " | 2 " | 10s 10d | 2 " | 3 " |
| Institutionality (19 characters) | 2 " | 2 " | 10s 10d | 2 " | 3 " |
| A til | 3 " | 3 " | Rs 793,8 | 3 " | 3 " |
| Today (without hyphen) . | 1 " | 1 " | 11 R 10 | 3 " | 3 " |
| That's to say | 4 " | 4 " | 11, 10 | 1 " | 2 " |
| Weston Super-Mare | 3 " | 3 " | The 17th | 2 " | 3 " |
| Westonsupermare (15 characters) | 1 " | 2 " | The 1529th | 3 " | 3 " |
| Newyork | 1 " | 1 " | 44/2 | 1 " | 2 " |
| New-York | 2 " | 2 " | 44/ | 1 " | 1 " |
| Frankfort on Mam | 3 " | 3 " | 2% | 1 " | 2 " |
| Frankfort a/M | 2 " | 2 " | 2 p% | 3 " | 3 " |
| Frankfortman | 1 " | 2 " | Eight /10 | 2 " | 2 " |
| Rio de Janeiro | 3 " | 3 " | 5/twelfths | 2 " | 2 " |

| Rue delapaix | 1 " | 2 " | M (") | 2 " | 2 " |
| Princeofwales (ship) | 1 " | 2 " | M (") | 2 " | 2 " |
| 44½ (5 figures and signs) | 1 " | 2 " | C, H F 45 (") | 4 " | 4 " |
| 444½ (6 " " ") | 2 " | 2 " | The matter is urgent; leave at once (7 words and 2 underlines)† | 9 " | 9 " |
| 444,5 (5 " " ") | 1 " | 2 " | | | |
| 444,56(6 " " ") | 2 " | 2 " | | | |

XXIX.

* Telegraph instruments cannot reproduce such expressions as 30*, 30 × 6 (sign of multiplication) &c Senders should be requested to substitute the meaning, at length, as "15 multiplied by 6 &c

† The signal for an underline is transmitted before and after each word of passage to be underlined

135

XXIX

In telegrams containing preconcerted language or cipher language, the plain words are counted in conformity with paragraphs 1 to 6 of Regulation XXVII. Words in preconcerted language are counted according to the rules laid down in paragraph 3 of Regulation VIII. Groups of figures or letters and words, names, or collections of letters, not admissible in plain or preconcerted language, are counted according to the rules laid down in paragraphs 7 to 11 of Regulation XXVII.

6. *Payment of Charges.*

XXX.

1. Charges for messages are prepaid, except as provided for in the following cases, *i.e.*, the supplementary charge for messages to follow (Reg. LVI, § 6), the charge for express (Reg. LX, § 1), and the charge for semaphoric telegrams (Reg. LXII, § 6), which are collected by the delivery office.

2. The sender of an international telegram has the right to request a receipt for it, showing the amount paid.

3. The sending office is entitled to charge and retain a booking fee for this service within the limits of a quarter of a franc.

4. In every case where charges have to be collected on arrival, the telegram is only given over to the addressee upon payment of the amount due.

5. If the charges to be collected by the delivering office are not recovered, the loss is borne by that office, except where special agreements have been concluded in conformity with Art. 17 of the Convention, and except also in the cases provided for by Regulations LVI and LXII hereafter, for the retransmission of telegrams to follow and for semaphoric telegrams.

6. Telegraph Administrations take, however, as far as possible, the necessary measures in order that charges due on delivery which are not paid by the addressee, be recovered from the sender. When such recovery is effected the department which effects it credits the department interested with the amount.

XXXI.

1. Insufficient charges collected in error, and charges or expenses not recovered from the addressee in consequence of his refusing to pay them, or of its being impossible to find him, should be completed by the sender.

2. On the other hand, charges erroneously collected in excess are returned. No return, however, is made on account of an excess of stamps used by the sender unless he applies for it.

7. *Transmission of Telegrams.*a. *Signals.*

XXXII.

The following tables show the signals employed in working the Morse and Hughes instruments.

A. *Morse Signals.*

Length of signals and spacing.

1. A bar is equal to 3 dots.
2. The space between the signals which form the same letter is equal to 1 dot.
3. The space between two letters is equal to 3 dots.
4. The space between two words is equal to 5 dots.

B.—Hughes Signals.

Letters.

A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z.

Figures.

1, 2, 3, 4, 5, 6, 7, 8, 9, 0.

Punctuation and other signs.

Full stop, comma, semicolon, colon, note of interrogation, note of exclamation, apostrophe, cross +, hyphen, accented é, bar of division /, double hyphen =, parenthesis left (, parenthesis right), &, inverted commas “.”

The space between two numbers is marked by two blanks. In transmitting and collating a fractional number which is not a decimal, the whole number must be separated by a blank from the numerator of the vulgar fraction which follows. (Example : 1 3/4, and not 13/4.

Words and sentences underlined are preceded and followed by two hyphens. (Example : — — — — *without delay* — — — —), and are underlined by hand by the receiving clerk.

| Estafette paid | | EP. |
| Telegram delivered open | | RO. |

To call or answer a station : give blank and N alternately.

To adjust the synchronism and to ask with that object for a continued repetition of the same signal : give blank, I, and T, as many times as may be necessary.

To request or facilitate the adjustment of the electro-magnet : give blank, I, N, and T, repeated as many times as necessary.

To give wait : give A T T, followed by the probable duration of the wait.

To indicate an error : give two or three N's without any sign of punctuation.

To interrupt transmission : give two or three letters of any kind with sufficient space between them.

Accents upon the letter E are made by hand with a pen or pencil at the end of the words (with or without s) when they are essential to the sense. (Ex. “*Achète achète*”). In the latter case, the sending clerk repeats the word after the signature, and shows the accented E in it between two blanks, in order to impress it upon the attention of the receiving office. For ä, ö, and ü,—ae, oe, and ue are signalled.

b. Order of Transmission.

XXXIII.

1. The transmission of telegrams takes place in the following order :—

- a. Government telegrams.
- b. Service
- c. Urgent private “
- d. Non-urgent private telegrams.

2. Every office which receives by an international wire a telegram presented as a Government or service telegram, retransmits it as such.

3. Service notices emanating from the different offices and relating to contingencies of transmission, circulate throughout the international system in the same manner as service telegrams.

XXXIV.

1. A telegram commenced cannot be interrupted to give place to a communication of superior rank, except in case of absolute emergency.

2. Telegrams of the same rank are transmitted by the original sending offices in the order of their deposit by the senders, and by the intermediate offices in the order of their reception.

3. At intermediate offices, local telegrams and transit telegrams which have to be sent by the same wires, are placed together and transmitted without distinction, according to the time received at the office.

4. Between two offices in direct communication, telegrams of the same rank are transmitted in alternate order.

5. This rule, and that in paragraph 1 of Regulation XXXIII may, however, be departed from in the interest of quickness of transmission, on lines where the traffic is continuous, or which are worked by special instruments.

XXXV.

1. On the Morse instrument, Government telegrams, service telegrams, and urgent private telegrams are not counted in the alternate order of transmission.

2. The transmission of telegrams by the Hughes instrument is effected by alternate series. The heads of the two offices in communication fix the number of telegrams, of whatsoever class they may be, constituting each series. In doing this they take account of the length of the telegrams and exigencies of service. No series may, however, comprise more than ten telegrams. Telegrams of the same series are considered as forming a single transmission, which should not be interrupted, except in case of great emergency. As a general rule, any telegram of two hundred words or upwards is considered as forming an entire series. This mode of transmission may be applied in signalling by the Morse instrument on important lines where the work is continuous ; but in this case a series must not comprise more than five telegrams, and any telegram containing one hundred words or upwards is considered as forming a series.

3. The office which has transmitted a series has a right to continue if on finishing the series it comes upon a Government or service telegram, or an urgent private telegram which possesses the right of priority, unless the office which has just received, has already commenced to transmit in its turn.

4. By either instrument, when the transmission of a telegram or of a series is finished, the office which has received, transmits in its turn, if it has a telegram; if not, the other continues. If there is nothing further to transmit on either side, the two offices give each other reciprocally the signal *Zero*.

c. Mode of Proceeding.
XXXVI.

1. All correspondence between two offices commences by the call signal, or the code of the office called.
2. The office called must reply immediately, giving its code [name], and if it is prevented from receiving, adding the signal for wait, followed by a figure indicating in minutes, the probable duration of the wait. If the probable duration exceeds ten minutes, a reason should be given.

3. No office called has the power of refusing to receive any telegrams offered, no matter what their destination may be. In case, however, of obvious error, the sending office is bound to rectify it immediately it is pointed out by a service notice from the receiving office.

4. Nor must any telegram be refused or delayed on account of the official instructions not being regular. It must be received, and then if necessary a service notice must be forwarded to the original sending office requesting the rectification, in conformity with Regulation LXXVI hereafter.

XXXVII.

1. When the office which has just called receives, without further signal, the code of the office which replies, it transmits in the following order the official instructions, constituting the preamble of the telegram:—

- a. Description of telegram, by means of one of the letters S, A, D, when it is a Government telegram, a service telegram, or an urgent private telegram.
- b. Name of office of destination.*
- c. Name of the original sending office, preceded by the word *from*. [Example: *Paris from Brussels*.]†
- d. Number of the telegram.
- e. Number of words.

(In cipher telegrams this is done as follows:—

- 1st, the total number of words chargeable;
- 2nd, the number of words in ordinary language;
- 3rd, if requisite, the number of groups of figures or of letters.)

f. Time of deposit of telegram, (by three numbers, date, hour, and minute, with $\frac{A.M.}{m}$ or $\frac{P.M.}{s}$ added.

In signalling by the Morse instrument, the notices a.m. or p.m. as well as the date, may be omitted, when there can be no doubt respecting them.

In transmitting by the Hughes instrument, the date is signalled in the form of a fraction, the numerator indicating the day and the denominator the month.

- g. Route to be followed (when the sender has specified it in writing in his telegram) (Regulation XXV, § 2, and XLII, § 5);
- h. Any instructions which the sender is not bound to include in the paid portion of his message, such as: duplicate, &c. (Reg. XLIV, § 7); charges to be collected (Reg. LVI, § 8) . . . addresses (Reg. LVIII, § 3); semaphoric telegram (Reg. LXII, §§ 5 and 6).

The instructions indicated by the letters b, d, and f, are not obligatory on extra-European lines.

2. After the preamble above specified, follow in succession, the sender's instructions, when necessary, between parenthesis (Reg. X, § 6), the address, the body of the telegram, and the signature.

3. In telegrams transmitted by the Morse instrument, the sign for separation (— — — — —) is placed between the preamble and the address, between the address and the body, and between the body and the signature—the whole terminating by the signal of "end of transmission" (— — — — —).

4. In telegrams transmitted by the Hughes instrument, a double hyphen (==) is employed to separate the preamble from the address, the address from the body, and the body from the signature—and each telegram is terminated by a (+).

5. Instructions expressed in the official codes are also preceded and followed by the signal (=) on the Hughes instrument, and by the signal (— — — — —) on the Morse instrument.

6. If the sending clerk perceives that he has made an error, he should stop, give the signal for error, repeat the last word sent correctly, and continue from there the corrected transmission.

7. In the same manner, if the receiving clerk receives a word he cannot make out, he should interrupt the sending clerk by the same signal, and repeat the last word understood, followed by a note of interrogation. The sending clerk then continues the transmission from that word, doing his utmost to render his signals as plain as possible.

8. With the exception of the cases determined upon by the different Administrations in concert, it is forbidden to employ any abbreviation whatsoever in transmitting the contents of a telegram, or to modify the contents in any way whatsoever. Every telegram should be transmitted as the sender has written it, following his copy.

d. Receipt and Official Repetitions.
XXXVIII.

Immediately after transmission, the clerk who has received compares, in the case of each telegram, the number of words it contains with the number announced, and acknowledges the receipt of the telegram, or of the telegrams constituting a series. The acknowledgment of receipt is given in the following form: *R . . .* (*number of telegrams received, specifying the first and last number of the series*). Example: *R 10 157 980*.

XXXIX.

1. In case of a difference in the number of words, he informs the sending clerk of it. If the latter finds he simply made an error in the number announced, he replies *right*, and at the same time gives the correct number.—Example: "18 *right*." If not, he repeats the first letter of each word until he comes to the passage omitted, which is then inserted.

2. When the difference does not arise from an error in transmission, the rectification of the number announced can only be effected by an agreement between the original sending office and the office in correspondence with it. In the absence of such agreement, the number of words announced by the original sending office is admitted.

XL.

1. For the protection of their responsibility, signal clerks are entitled to give or demand the repetition in part or in full of telegrams they have forwarded or received. On the Morse instrument the repetition is made by the clerk who has received, and on the Hughes instrument by the clerk who has forwarded, at the end of the telegram or series. On the Morse instrument, the clerk who gives the repetition must, if there is any correction, reproduce the words or numbers corrected. In case of omission, this second repetition is exacted by the clerk who transmitted. Government telegrams in secret language (figures or letters) must be officially repeated from beginning to end by the receiving office, the same as is done in the case of collated telegrams.

2. When repetition is made of numbers followed by fractions, or of fractions whose numerator consists of two or more figures, the numerator must, in order to avoid confusion, be sent back at length in the form of a word. Thus $\frac{1}{10}$ must be repeated *one 16* to distinguish it from $\frac{1}{6}$, and $\frac{13}{4}$ must be repeated *thirteen 4* to distinguish it from $\frac{1}{4}$. 3.

* When the telegram is for a place where there is no telegraph office, the preamble does not specify such place, but the terminal telegraph office by the agency of which the telegram has to be dispatched to its destination, or sent by post.
† The country or geographical situation of the original sending office should be added, 1st, when there is another office of the same name. 2nd, when its opening has not been published by the International Office.

3. Under no pretext can this repetition be delayed or interrupted. When the verification is completed, the office which has received gives to the sending office the signal of *receipt finished*, followed, in the case of a series, by the number of telegrams received.

XXI.

1. Rectifications relative to telegrams of a series previously transmitted, are effected by service notices addressed to the delivering offices. These services state the names and addresses of the receivers.
2. Requests for information relating to a previous series are also made by service notices.
3. Should it happen, in consequence of an interruption, or from any other cause whatsoever, that the repetition cannot be received, this circumstance does not prevent the delivery of the telegram to the addressee, subject to notifying to him the subsequent rectification when necessary.

e. Routes to be followed.

XXII.

1. If the sender does not prescribe the route to be followed, each of the Administrations from which the routes diverge remains judge of the direction by which to forward the telegram.
2. If, on the contrary, the sender has prescribed the route to be followed, the respective Administrations are bound to conform to his instructions, unless the route indicated be interrupted, or transmission by it would seem to involve serious delay, in which cases no complaint can be entertained.
3. The different routes by which telegrams may be transmitted are indicated by concise directions, agreed upon in concert by the Administrations interested.
4. If a sender requests that his message be forwarded by telegraph to a particular office which he specifies, and thence by post to destination, the offices are required to carry out his instructions.
5. The sender who wishes to prescribe the route to be followed must himself write the corresponding direction in the margin of his message. This direction is transmitted in the preamble (Regulation XXV, § 2, and XXXVII, § 1 g), but not beyond the point where it ceases to be of use.

f. Interruptions. Transmission in duplicate.

XXIII.

1. When an interruption to the regular means of communication occurs during the transmission of a telegram, the office beyond which the interruption exists immediately sends the telegram by post (official registered letter or by express messenger), or by any more rapid means of transport available, as for example by an indirect telegraph route (Regulation LXXV, § 4). The postal charges are supported by the office which thus despatches the telegram. The cover containing it should have the word *telegram* written on the outside.
2. An office which has recourse to any other means of despatch than the telegraph, addresses the telegram, according to circumstance, either to the nearest telegraph office able to continue its transmission, to the terminal office, or to the receiver direct, if the address is within the limits of the State which thus sends on the telegram. As soon as communication is re-established, the telegram is transmitted afresh by telegraph, unless its receipt has been previously acknowledged, or unless, in consequence of exceptional pressure, its re-transmission would be manifestly injurious to the general traffic.
3. Telegrams for extra-European countries are not sent on by a more expensive route unless the sender has deposited the corresponding charge.

XXIV.

1. Telegrams which for any reason whatever are sent to a telegraph office by post, are accompanied by a numbered abstract. At the same time, the office which sends them gives notice of their despatch to the office addressed by means of a service telegram stating the number of telegrams sent and the time of their departure, provided the state of the lines permits of its doing so.
2. Upon the arrival of the packet, the office addressed ascertains that the number of telegrams announced has duly arrived; in which case it acknowledges their receipt upon the abstract, and immediately returns it to the sending office. It repeats this acknowledgment as soon as communication by telegraph is re-established, by a service in the following form:—
Received 63 messages, as advised in abstract No. . . . of 30th March.
3. The rules in the preceding paragraph must be equally observed by an office which receives a number of telegrams by post without any notice relating to them.
4. When a packet of telegrams announced does not arrive, the sending office must be immediately advised of it. The latter can, according to circumstances, send afresh by post, or transmit the telegrams by telegraph, provided later telegrams are not made to suffer.
5. The office which transmits by telegraph, telegrams already forwarded by post, informs the office to which they were directed, by a service notice expressed in the following form:—
Berlin from Goerlitz. Telegrams Nos. . . . of abstract No. . . . re-transmitted in duplicate.
6. When, in the case provided for in Regulation XLIII, a telegram is sent direct to the receiver, it is accompanied by a notice of the interruption of the lines.
7. When for any reason whatsoever a telegram already despatched by any other means, as by post, or another wire, is transmitted afresh by telegraph, this re-transmission in duplicate should be made clear by an official instruction in the preamble, thus:
Duplicate. Already forwarded to . . . (name of office) the . . . (date) by wire No. . . . (or) via . . . (or) by post.

g. Stoppage of Messages—Control.

XLV.

1. Any sender can, by proving his identity, stop, if in time, the transmission of a telegram deposited by him.
2. When the sender withdraws or stops his telegram before transmission has been commenced, the charges are returned to him, less a fixed sum of 5d., the fee of the sending office.
3. If the telegram is already transmitted, the sender's only means of requesting it to be cancelled is by a telegram, for which he must pay. This telegram is, if practicable, transmitted in succession to the different offices to which the original telegram was transmitted, until it rejoins the latter. If the sender has paid for a reply by telegraph, the office which cancels the telegram advises the sending office of it. If no reply has been paid for, it communicates the information by an unpaid letter. The sending office returns to the sender the charges for his first telegram and cancelling telegram, belonging to the distance not traversed.

XLVI.

1. The power reserved under Article 7 of the Convention of stopping the transmission of any private telegram which may appear dangerous to the security of the State, or which may be contrary to the laws of the country, to public order or decency, should only be made use of on condition of immediately advising the Administration to which the original sending office belongs.
2. This control is exercised by the terminal or intermediate offices, subject to recourse to the Central Administration, which decides without appeal.
3. The transmission of Government telegrams takes place by right. Telegraph offices have no control to exercise over them.

8. Delivery.

XLVII.

1. Telegrams may be addressed either to the place of residence of the receiver, or *poste restante*, or telegraph *restant*.
2. They are delivered or sent to their destination, in the order of their reception or priority.
3. Telegrams addressed to the place of residence, within the delivery limits of the telegraph office, are at once taken their address.

- 4. Telegrams which have to be deposited poste restante, are immediately posted by the terminal office. If telegrams bear the instruction "post," they are posted as prepaid letters, without charge to sender or receiver, If they bear the instruction "post registered" or "(P.R.)," they are posted as registered letters, having in this case to pay a maximum fee of 50 centimes, belonging to the original Administration
- 5. Telegrams addressed to passengers of a vessel touching at a port, are delivered, if possible, before their disembarkation.

XLVIII.

- 1. A telegram taken to the place of residence may be delivered either to the receiver, the adult members of his family, to his employes, lodgers, or landlord, or to the porter of the hotel or house ; unless the receiver has designated in writing a special person, or the sender has requested that the message be delivered into the hands of the addressee only. The sender may also request that the telegram be delivered open. The latter mode of delivery is not, however, obligatory upon Administrations which declare their non-acceptance of it.
- 2. The two latter requests are inserted before the address of the telegram and reproduced in the direction of the message by the delivery office, which gives its messenger the necessary orders for their observance.
- 3. When a telegram cannot be delivered, the delivery office forwards to the sending office a service notice indicating the cause of non-delivery, in the following form :—
No. . . of the (date and address exactly as received) unknown, refused, not arrived, left, &c.
- 4. The sending office verifies the correctness of the address, and if it has been erroneously transmitted, rectifies it immediately by a service notice in the following form : *No. . . of (date) for (corrected address), first transmission incorrect.*
- 5. If not, it, if possible, advises the sender, each Administration being entitled to charge for such communication a fee not exceeding 5d. The sender can only complete, rectify, or confirm, the address by a prepaid telegram.
- 6. If, in consequence of inexactitude or insufficiency of address, of absence, or refusal of the addressee, any express charges are not recovered at destination, the amount of them is specified in the service, in order that the sender may be requested to pay them. If not defrayed by the sender, the delivery office supports the loss arising from their non-payment.
- 7. If the door is not opened at the address given, or if the messenger finds no one who will consent to take in the telegram for the receiver, notice is left at the address given, and the telegram is brought back to the office, to be delivered to the receiver upon his application.
- 8. When the telegram is addressed ^{bureau restant-}_{office waiting,} it is only delivered to the receiver, or to a person duly appointed by him.
- 9. In the cases provided for by paragraphs 7 and 8 of the present Regulation, any telegram which is not claimed by the end of six weeks, is destroyed.

9. Special Telegrams.

Article 9 of the Convention.

The High Contracting Parties engage to enable every sender to profit by the different arrangements agreed upon between the Telegraph Administrations of the Contracting States, for the purpose of giving additional guarantees and facilities for the transmission and delivery of messages.
They also undertake to enable him to profit by the arrangements made and notified by any one of the other States, for the employment of special means of transmission or delivery.

a Urgent Private Telegrams.

XLIX.

- 1. The sender of a private telegram may obtain priority of transmission by writing the word *urgent* or "(D)" before the address, and by paying three times the charge for an ordinary telegram of the same length for the same transit.
- 2. Urgent private telegrams have precedence of other private telegrams, and their priority amongst themselves is regulated according to the conditions stated in paragraph 2, Regulation XXXIV.
- 3. The rules in the preceding paragraphs are not obligatory upon Administrations which declare their inability to apply them, either to a portion, or to the whole of the telegrams passing by their lines.
- 4. Administrations which only accept urgent telegrams in transit, should admit them either on wires where transmission is direct across their territory or in their transmitting offices, between telegrams from the same country and for the same destination. The transit rates due to them are tripled as for the other portions of the journey.

b. Prepaid Replies.

L.

- 1. Any sender can prepay the reply which he requests his correspondent to return ; but the prepayment cannot exceed the tariff of a telegram, of whatever kind it may be, of thirty words for the same transit, unless it be to obtain the repetition of a telegram previously transmitted in conformity with Regulation XXIV.
- 2. When the sender does not specify the number of words for which he prepays a reply, charge is made for an ordinary telegram of ten words, transmitted by the same route.
- 3. When he wishes to specify the number of words, the sender must complete the instruction of "Reply paid" or "(RP)," by inserting the number of words, and pay the corresponding amount, within the limits authorised by paragraph 1 of the present Regulation.
- 4. If the sender of a multiple telegram wishes to prepay the replies which he requests the receivers to return, he must write the notice "Reply paid" or "(RP)" before the address of each receiver whose reply he prepays.
- 5. If a sender wishes to prepay an urgent reply, he must write before the address the notice "Reply paid urgent" or "(RPD)," and the charge made is for an urgent telegram of ten words by the same route. The sender may, if he wishes, complete his notice by specifying the number of words prepaid for the reply, and pay the corresponding amount within the limit of paragraph 1.

LI.

- 1. At the place of destination, the delivery office remits to the receiver an order which entitles him to send free of charge, within the limits of the amount prepaid, a telegram to any destination whatever. This order remains in force for six weeks only, counting from its date ; after which, it is considered to have lapsed, and the amount prepaid remains to the credit of the delivery office.
- 2. When the receiver does not make use of the order, the money deposited for the reply is never refunded in the case of European traffic, whilst it may be in the case of extra-European traffic.
- 3. In the latter case, the receiver must, before the expiration of the limit of six weeks fixed by paragraph 1 of the present Regulation, return the order to the office which delivered it, accompanied by a request for the amount to be reimbursed to the sender.
- 4. The same course is then followed as in ordinary refunds.
- 5. If the receiver refuses the order for the reply, the delivery office immediately informs the sender of it by a service notice, which takes the place of the reply.
- 6. The service notice is forwarded, as a private telegram, in the following form :—
Reply to No. of the receiver has refused.

7. When the telegram cannot be delivered as soon as it arrives, from circumstances provided for in paragraph 3 Regulation XLVIII, a service notice is transmitted in the form prescribed by that paragraph.

8. If there is no rectification, the official reply is forwarded in the same form as above specified, at the end of eight days or before the lapse of that time, when the endeavours made to find the receiver have proved unavailing.

LII.

140

LII.

1. The provisions of the two preceding Regulations are not compulsory upon extra-European Administrations which declare their inability to apply them.
2. In dealing with these Administrations, the money deposited for the reply is placed to the credit of the delivery office, which adopts such means as it considers suitable to enable the receiver to avail himself of it.

c. Repeated
Collated Telegrams.

LIII.

1. The sender of any telegram may request that it be collated, in which case he writes before the address the notice "Repetition" or "(TC)," and the different offices employed in its transmission repeat it to each other integrally.
2. Whatever instrument is used, the repetition is given by the office which receives, and immediately after the transmission of the telegram to be collated.
3. The charge for collating is equal to a quarter of the charge for an ordinary telegram of the same length for the same transit.

d. Acknowledgments of Receipt.

LIV.

1. The sender of any telegram may request that a notice of the time at which it is handed to the receiver be transmitted to him by telegraph immediately after its delivery. He inserts before the address the notice "Acknowledgment of receipt" or "(CR)."
2. The charge for an acknowledgment of receipt is equal to that of an ordinary telegram of ten words by the same route.

LV.

1. An Acknowledgment of receipt is announced by the abbreviation "(CR)" and transmitted in the following form:—

(CR.) *Paris from Berne. Telegram No.delivered to.....(address of receiver) the.....*
(*date, hour and minute*), (*or reason of non-delivery*).

2. Acknowledgments of receipt have an official No. from the office which sends them. They take precedence of private telegrams.

3. In the case provided for in paragraph 3, Regulation XLVIII, the acknowledgment of receipt is preceded by the service notice required by that paragraph. The acknowledgment of receipt is then despatched, either after the delivery of the telegram, if that has become possible, or after a lapse of twenty-four hours, if delivery has not been effected.

e. Telegrams to follow.

LVI.

1. Any sender may request, by inserting the notice "To follow" or "(FS)" before the address, that the terminal office shall cause his telegram to follow the receiver within the limits of Europe.

2. When a telegram bears the notice *faire suivre* to follow or "(FS)" without further instructions, the terminal office, after presenting it at the address given, retransmits it immediately, if requisite, to the new address supplied at the residence of the receiver. This new address is inserted in the telegram after the first one.

3. If no new address be supplied, it keeps the telegram in the office, observing the provisions of paragraphs 3 and 7 of Reg. XLVIII. If the telegram is retransmitted, and the second office cannot find the receiver at the new address, the telegram is retained by that office.

4. If the notice *faire suivre* to follow or "(FS)" is accompanied by successive addresses, the telegram is successively transmitted to each, until the last, if necessary; and the last office treats it in accordance with the regulations of the preceding paragraph.

5. The original contents of the telegram to follow should be transmitted in full to the successive delivery offices, and reproduced in the copy addressed to the receiver; but in the preamble, each office reproduces, as place of destination (Reg. XXXVII, § 1, letter b), only that of the first address to which the telegram has still to be sent.

6. The international charge to be prepaid by the sender for telegrams to follow, is simply the charge calculated to the first terminal office, all the addresses entering in the number of words charged for. The supplementary charges are obtained from the receiver. In the case provided for in paragraph 2 the charge for the new transmission is arrived at by adding the total number of words forming the original message to the number contained in the new address.

7. The charges to be obtained from the receiver for additional transmissions, calculated from the first terminal office indicated in the address, should, at each retransmission, be officially notified in the preamble.

8. This notification is given in the following form: *Charges to be collected.....s.....d.* If the extra transmissions take place within the limits of the State to which the terminal office belongs, the supplementary charges to be collected from the receiver are calculated, for each retransmission, according to the internal tariff of the State. If the retransmissions take place beyond these limits, the supplementary charges are ascertained by treating each international retransmission as a separate telegram. The tariff for each retransmission is the tariff applicable to traffic exchanged between the State which retransmits and that to which the telegram is retransmitted.

9. If the charges for retransmission are not recovered by the delivery office, the Administration to which the latter belongs is reimbursed the amount of the charges due to the Administrations by a reimbursement draft.

LVII.

1. Any person, on furnishing proof of identity, can request that telegrams which may arrive at a telegraph office to be delivered to him, within the delivery radius of that office, be retransmitted to him in accordance with the conditions of the preceding Regulation, to the address which he supplies.

2. Requests for retransmission should be made in writing.

3. Each Administration reserves to itself the power of retransmitting, when necessary, in accordance with the information given at the residence of the receiver, telegrams respecting which no special instructions have been otherwise furnished.

f. Multiple Telegrams.

LVIII.

1. A multiple telegram may be addressed either to several persons in the same place, or to one person at several residences in the same place.

2. A telegram addressed to several persons, or to one person at several residences in the same place, with or without further despatch by post, is charged for as a single telegram; but a copying fee of 5d. per telegram not exceeding 100 words, is charged for each destination after the first. Beyond 100 words, the copying fee is increased by 5d. for every additional, or fractional part of, 100 words. In calculating this fee, all the words in the body of the message, the signature, and the address are counted, each copy being treated separately.

3. In transmitting a telegram addressed to the same place or to different places served by the same office, either to several receivers or to the same receiver at several residences, with or without further despatch by post or express, the number of addresses must be stated in the preamble.

4. In the first case provided for by paragraph 1 of the present Regulation, each copy of the telegram should bear only its own address, unless the sender has requested the contrary. This request should be entered in the address, and consequently be included in the number of words charged for.

g. Telegrams to places beyond the International System.

LIX.

1. Telegrams addressed to places beyond the international telegraph lines, may, according to the sender's request, be despatched to destination by express or by post. Their despatch by express can, however, only be requested when they are for States which, in conformity with Article 9 of the Convention, have organized a mode of transport for the delivery of telegrams more rapid than the post, and have notified to the other States the arrangements made to that effect.

2. The address of telegrams to be conveyed beyond the telegraph lines is written in the following form : *Express* (or *post*) *M. Müller Johannisthal, Berlin*; the name of the terminal telegraph office being written last.

LX.

1. The expense of transport beyond the telegraph offices, by quicker means than the post, in States where such service is organised, is obtained from the receiver.

2. The sender, however, of a telegram requesting an acknowledgment of receipt, can prepay this transport by depositing a sum for the purpose, to be fixed by the sending office, subject to after adjustment. The acknowledgment of receipt states the amount expended.

3. The only exception to this rule is for transport beyond terminal offices on extra-European lines, the cost of which has been fixed and notified by the terminal Administration. In this case, the cost is collected by the sending office, and no acknowledgment of receipt or subsequent adjustment is required.

4. In every case provided for by the preceding paragraphs 2 and 3, the words *Express paid* or "(XP)" *Estafette paid* or "(EP)" are written before the address and charged for. Subject to the exception provided for in § 3 these notices include an acknowledgment of receipt, without the necessity of adding the instruction "(C.R.)."

LXI.

1. The terminal office has a right to employ the post —

a. In the absence of directions in the telegram as to the means of transport to be employed ;

b. When the means indicated differ from the mode adopted and notified by the terminal State, in conformity with Article 9 of the Convention.

c. When there is a claim to be made for portorage against a receiver who has previously refused to pay such charges. In the latter case the telegram may be deposited in the box, as an unpaid letter.

2. In every case the employment of the post is obligatory upon the terminal office, when no more rapid means is available.

3. Telegrams of all kinds which have to be sent to their destination by post, are handed to the Post Office by the terminal office, without any charge being made to the sender, or to the receiver, except in the three following cases :—

4. Telegrams which have to be posted as registered letters: for these a maximum charge of 5d. is made, which remains to the credit of the original administration.

5. Messages which have to be sent by sea. For these a varying charge is collected by the sending office. The amount of this charge is fixed by the Administration which undertakes the despatch, and is notified to all the others.

6. Telegrams transmitted to a telegraph office situated near a frontier, in order to be forwarded by post over the neighbouring territory. These are deposited in the box as unpaid letters, and the postage is charged to the receiver.

7. If, however, there is a serious interruption to the telegraphic communication crossing the frontier, Regulation XLIII is to be acted upon.

8. When a telegram, to be forwarded as a registered letter, cannot immediately be registered, it is, in order to take advantage of a postal departure, first posted as an ordinary letter; and a duplicate is addressed as a registered letter as soon as possible.

h. Semaphoric Telegrams.

LXII.

1. Semaphoric telegrams are telegrams exchanged with ships at sea by the medium of semaphores established or to be established on the coasts of any of the Contracting States.

2. They should be written either in the language of the country in which is situated the semaphore station which has to signal them, or in signals of the universal commercial code. In the latter case they are considered as cipher telegrams.

3. When they are for ships at sea, the address should contain, in addition to the ordinary direction, the name or official number of the vessel and its nationality.

4. In the case of Government semaphoric telegrams signalled from a ship at sea, the seal is replaced by the distinctive sign of command. The name of the vessel should be given.

5. Every semaphoric telegram must contain the official instruction *semaphoric* in the preamble.

6. The charge for telegrams exchanged with ships at sea, by the medium of semaphores, is fixed at one shilling and eight pence per telegram. This charge is added to the cost of its transmission by the electric telegraph, calculated according to the ordinary rules. The total is collected from the sender for telegrams addressed to ships at sea, and from the receiver for telegrams signalled from ships at sea (Regulation XXX, § 1). In the latter case, the instruction, *s. d. to be collected*, should be inserted in the preamble. If it cannot be collected, the terminal Administration is paid the amount of charges due by means of a reimbursement draft.

LXIII.

1. Telegrams from a ship at sea are transmitted to their destination in signals of the commercial code, when the ship requests it.

2. When the ship does not request it, they are translated into ordinary language by the chief of the semaphore station and transmitted to destination.

3. Telegrams which it has been impossible to signal from semaphore stations to the ships to which they are addressed within thirty days of the date of their original deposit (date of deposit not included) are considered as dead letters.

4. In case the ship to which a semaphoric telegram is addressed does not arrive within the term of twenty-eight days, the semaphore station forwards a service notice to the sender on the morning of the twenty-ninth day. The sender has the power, on paying for an ordinary aerial telegram of ten words, to request the retention of his telegram for another thirty days, and so on. If this request is not made, the telegram is treated as a dead letter on the thirtieth day.

i. General Regulations applicable to Special Telegrams.

LXIV.

In applying the preceding Regulations, the facilities given to the public for urgent telegrams, prepaid replies, repeated telegrams, acknowledgments of receipt, telegrams to follow, multiple telegrams, and telegrams to be forwarded beyond the lines may be combined, the instructions in §§ 5 and 6 of Regulation X being duly observed.

10. Service Telegrams.

Article 5 of the Convention.

Telegrams are classed in three categories :—

1st. Government Telegrams : those which, &c.

2nd. Service Telegrams : those which emanate from the Telegraph Administrations of the contracting States, and which relate either to the service of the international telegraphs or to objects of public interest agreed upon between the said Administrations.

Article 11 of the Convention.

Telegrams relating to the international telegraph service of the Contracting States are transmitted free over all the lines of the said States.

LXV.

LXV.

1. Services are divided into service telegrams, properly so called, the form of which is given in paragraph 1, Regulation XIV, and service notices, which are treated of in § 2 of the same Regulation.
2. Service telegrams should be limited to cases of an urgent character (Reg. XXIII).
3. They may be forwarded in secret language on all occasions (Article 6 of the Convention), and should as a general rule be expressed in French (Reg. VII, § 3).

LXVI.

1. Service notices are exchanged from office to office whenever the contingencies of transmission necessitate it, especially when the service instructions of a telegram already transmitted are irregular (Reg. XXXVI, § 4), when rectifications or instructions are necessary relating to telegrams of a series already transmitted (Reg. XLI, §§ 1 and 2), when telegrams have been forwarded by post to a telegraph office in consequence of interruption of the telegraph lines (Reg. XLIV), when a telegram cannot be delivered to the receiver (Reg. XLVIII), when a ship to which a semaphoric telegram is addressed has not arrived within the limit of twenty-eight days (Reg. LXIII, § 4).
2. A service notice relating to a telegram previously transmitted is sent, if practicable, by the same route as that followed by the original telegram. The service should contain all the information necessary to facilitate the search for the original telegram, such as the date of the latter, its address and signature.
3. If any transit office has all the necessary information to reply to a service notice or to act upon it, it does so, in order to avoid needless retransmission.

11. *Telephonic Service.*

LXVII.

1. International telephonic communication may be established, as the want arises, by the Administrations of the Contracting States, either by the construction of special wires or the appropriation of already existing wires to that service.
2. In the absence of special arrangements between the said Administrations, the wires are led into a central office of each Administration, and may by that means, be connected either with the telephone offices open to the public, with private houses, counting houses, workshops, &c.
3. The Administrations agree as to the choice of instruments and details of working; they also fix, by common accord, the rate to be allotted to each of the telephonic lines.
4. The unit adopted, both for the collection of the charges and the duration of the communication, is a conversation of five minutes.
5. The use of the telephone follows the order of the applications. Not more than two consecutive conversations of five minutes each can be accorded to the same speakers, except when no other application is made either before or during such two conversations.

12. *Records.*

LXVIII.

1. The originals of telegrams and documents relating to them, retained by the Administrations, are preserved during at least six months, counting from their date, with all necessary precautions to secure their secrecy.
2. This delay is extended to eighteen months in the case of extra-European telegrams.

LXIX.

1. The originals or copies of telegrams can only be communicated to the sender or to the receiver, after proof of his identity, or to the authorised representative of either of them.
2. The sender and receiver of a telegram or their authorised representatives have a right to be furnished with certified true copies of that telegram, or of the copy delivered at destination, if the latter has been preserved by the terminal Administration. This right lapses after the expiration of the time fixed for preserving the records.
3. A fixed charge of 5d. is made for every copy delivered in conformity with the present Regulation, if the telegram does not exceed one hundred words. Beyond one hundred words, the charge is 5d. for each hundred, or fraction of a hundred words.
4. Telegraph Administrations are not obliged to produce or give copies of the telegrams above-mentioned, unless the senders, the receivers, or their authorised representatives, furnish the necessary information to enable the telegrams to be found to which their requests refer.

13. *Refunds.*

LXX.

1. The Administration which received the charges, makes the following refunds to the sender, after reclaiming, when necessary, from the other Administrations :—
 - a. The full cost of every telegram which has experienced serious delay, or failed to reach its destination, through the fault of the telegraph service.
 - b. The full cost of every collated telegram which has manifestly been unable to fulfil its object, in consequence of errors made in its transmission.
 - c. In extra-European traffic, the cost of every word omitted in the transmission of an ordinary telegram, through the fault of the telegraph service. This rule, however, is not applicable when the receiver has discovered the omission and had it rectified under Regulation XXIV, §§ 1 and 2.
2. In case of interruption of a submarine line, the sender of every telegram has a right to the refund of the portion of the charge belonging to the distance not traversed, deduction being made, if necessary, of the expense incurred in sending the telegram by any other mode of transport.
3. These rules do not apply to telegrams transmitted by the lines of a non-adhering Administration, which would not, on its side, make similar refunds.
4. In the cases provided for in the preceding paragraphs, the refund rules only apply to the tariff of the actual telegrams lost, delayed, or mutilated, including any supplementary charges collected, and to the charges for telegrams specified in Reg. XXIV. They do not apply to the cost of other messages necessitated or rendered useless by the loss, delay, or mutilation.

LXXI.

1. Every claim for refund should be made, under penalty of rejection, within two months of the date of the telegram. This period is extended to six months for extra-European telegrams.
2. Every claim should be made to the original sending Administration, and be supported by documentary evidence—*i.e.*, in case of non-delivery, by a written statement from the terminal office or addressee; and in case of mutilation or delay, by the copy of the telegram actually delivered. The claim may, however, be presented by the addressee to the terminal Administration, which decides whether it can deal with it, or whether it should be forwarded to the sending Administration.
3. When a claim is admitted to be well founded by the Administrations interested, the refund is made by the original sending Administration.
4. If the sender does not reside in the country where he deposited his telegram for transmission, he can have his claim forwarded to the original sending Administration through the medium of another Administration. In this case the latter is, if requisite, deputed to make the refund.
5. Claims transferred from Administration to Administration are accompanied by the originals, copies, or extracts of all letters or papers which relate to them. A precis of these papers should be given in French when they are not written in that language, or in a language understood by all the Administrations interested.
6. A complaint is not transferred from Administration to Administration :—
 - a. When the matter complained of does not constitute a claim for refund.
 - b. When it refers to a telegram which, not being in accordance with the reglementary conditions prescribed for observance by the public with regard to composition, language, legible writing, address, instructions for transport beyond the lines, &c., has been accepted for transmission at the sender's risk.

LXXII.

143

LXXII.

1. In the case of every telegram not delivered at its destination, the reimbursement is supported by the Administrations on the lines of which the irregularities were made that prevented the telegram from reaching the receiver.

2. If a complaint of non-delivery is rejected, the delivery of the telegram should be proved by a receipt, or by a declaration from the terminal Administration.

3. In case of delay, the claim for reimbursement is absolute if the telegram did not reach its destination sooner than it would have done by post, or when the delay exceeds forty-eight hours for a telegram in Europe, or 144 hours for a telegram proceeding beyond the limits of Europe.

4. The integral return of the charge is effected at the expense of the Administrations which caused the delay, and is supported in proportion to the delay on the lines of each of them.

5. In case of mutilation of a collated telegram, the first Administration specifies the errors which prevented the telegram from fulfilling its object, and the contributive shares of the different Administrations are regulated according to the number of errors thus specified, a word omitted or added counting for an error.

6. The contributive share for the alteration of a word mutilated successively on the lines of several Administrations, is supported by the first of the Administrations in fault.

7. Errors or omissions are chargeable :—

a. Against the two offices : when words, numbers, or characters, having been omitted or added, the receiving office fails to verify the number of words ; when paid $\frac{\text{collation}}{\text{repetition}}$ is omitted or incompletely performed ; when

by the Hughes instrument, defective working takes place and is not remedied.

b. Against the receiving office : when it omits to act upon a rectification made to its repetition by the sending office ; when in case an official repetition is sent, it fails to correct the first transmission in accordance with it.

c. Against the sending office : in all other cases.

8. In case of a partial refund on account of a telegram with one or more copies, the total charge received is divided by the number of copies, and the quotient represents the amount of refund for each copy, the telegram itself entering in the calculation as one copy.

9. When the office which is responsible for an error or omission cannot be ascertained, in consequence of the absence or insufficiency of documentary proof, the Administration which fails to furnish the proof is chargeable with the refund.

10. When a claim has been presented and put in circulation within the limits of time fixed by paragraph 1, Reg. LXXI, and the result has not been notified within the period fixed by Reg. LXVIII for the preservation of the records, the Administration which originally received the claim, refunds the charge applied for, and the reimbursement is debited against the Administration which delayed the investigation of the claim.

11. For extra-European traffic, the reimbursement is supported by the different Government Administrations or private companies over the lines of which the telegram was transmitted, each Administration giving up its share of the charge.

LXXIII.

1. When a telegram is stopped, under Articles 7 and 8 of the Convention, the charge made for its transmission is returned to the sender, if he claims it, and the refund is supported by the Administration which stopped the telegram.

2. If, however, that Administration has, in conformity with Article 8, given notice of its non-acceptance of a particular description of telegrams, the refund of the charges of any telegrams of such description which may be subsequently stopped, should be supported by the original sending Administration from the date the notice reached it.

14. Accounts.

Article 12 of the Convention.

The High Contracting Parties reciprocally owe each other account of the charges which they respectively collect.

LXXIV.

1. The franc is the monetary unit employed in the preparation of international accounts.

2. Each State credits the next State with the full tariff of all the telegrams it transmits to it, calculated from the frontier of the two States to destination.

3. But the contrary is the case when a State transfers a semaphoric telegram received from the sea, or when it retransmits a telegram to follow (*faire suivre*). It then debits the next State with the charge of the semaphoric telegram from its starting point, or the telegram to follow from the point of its first retransmission, to the common frontier of the two States. (Regulations LVI §§ 6 to 9, and LXII § 6)

4. Terminal charges may be settled direct between terminal States, after an understanding has been effected between such States and the intermediate States.

5. Charges may, by common agreement, be settled according to the number of telegrams which cross the frontier, without taking into account the number of words and accessory dues. In this case, the proportions of the next State, and of each of the following States, if any, are determined by means of averages agreed to by those concerned. (Regulation LXXVI, § 3)

6. When Regulation LXXXVII, is applied, the contracting Administration in direct relation with a non-adhering line is deputed to regulate the accounts between such line and the Contracting Administrations to which it serves as an intermedium for transmission.

LXXV.

1. Charges for copies or transport beyond the lines, belong to the State which delivered the copies or effected the transport.

2. The normal charges for prepaid replies and acknowledgments of receipt are placed to the credit of the terminal Administration, either in the accounts or in the calculation of the averages referred to in paragraph 5 of the preceding Regulation. Nevertheless, when the charge deposited for a reply is refunded, in accordance with paragraphs 2, 3, and 4, of Reg. LI, the normal charge is deducted from the next monthly account of the sending Administration which made the refund.

3. Replies and acknowledgments of receipt are treated in transmission and in the accounts, the same as ordinary telegrams.

4. In European traffic when a telegram in course of transmission quits the route for which its tariff was calculated, the charge collected for its transit is divided, from the point where the normal route was left, among the Administrations employed in its transmission, in the proportion of their normal transit rates. In the case of traffic between adjoining countries following a circuitous route, the original Administration pays the normal transit rates in the absence of special arrangements.

5. In extra-European traffic, when a telegram, of whatever kind, is transmitted by a different route from that which regulated its cost, the difference of rate is borne by the Administration which diverted the telegram, subject to recourse to any other Administration which may have caused the change of route.

LXXVI.

1. The charge which serves as the basis for division between the States and, when necessary, for the calculation of the averages mentioned in paragraph 5 of Regulation LXXIV, is that which results from the proper application of the tariffs fixed between the interested States, without taking account of errors in charging which may have occurred.

2. But the number of words announced by the sending office serves as the basis for the application of the charge, except in the case where, owing to an error in transmission, it may have been rectified by common accord between the original sending office and the transmitting office.

3. To determine the average rates, a complete monthly account is prepared, exhibiting each telegram separately, with its extra charges of whatsoever nature (Reg. LXXV). The total of the charges, calculated for each State for the entire

entire month, is divided by the number of telegrams; the quotient represents the mean rate applicable to each telegram in subsequent accounts until a revision is made. This revision, unless under exceptional circumstances, should not be made before the lapse of a year.

LXXVII.

1. The reciprocal adjustment of accounts takes place at the end of each month
2. The deductions and establishment of the balance take place at the end of each quarter
3. The balance, thus established, is paid in actual francs of gold to the State which is creditor, unless the two Administrations concerned have arranged for the use of another money.
4. The cost of making the remittance is defrayed by the Administration which has to receive it

LXXVIII

1. The exchange of the monthly accounts takes place within a quarter of a year of the month to which they relate.
2. The revision of the accounts takes place within six months from the date on which they are sent. This is the maximum delay. The Administration which does not receive any correction within that time, has full right to consider the accounts admitted. This regulation is also applicable to the observations made by one Administration on the accounts sent in by another.
3. The monthly accounts are admitted without revision, when the difference between the totals arrived at by the two Administrations interested does not exceed 1% of the debit of the Administration whose accounts are questioned. Should a revision have been commenced, it should be stopped, if an exchange of observations between the Administrations interested shows that the difference which led to the revision is within the limits of 1%.
4. No claim is admitted in the accounts respecting European telegrams which are more than six months old, or respecting extra-European telegrams which are more than eighteen months old.

15. *Reservations*

Article 17 of the Convention.

The High Contracting Parties reserve to themselves respectively the right to make separately, among themselves, particular arrangements of every kind in matters of service which do not interest the generality of the States.

LXXIX

The details of service to which the reservation provided for in Article 17 of the Convention applies, are especially:

- The establishment of tariffs from State to State
- The adjustment of accounts
- The adoption of special instruments or vocabularies between certain points and in certain defined cases.
- The application of the system of telegraph stamps
- The transmission of money orders by telegraph
- The collection of charges on telegrams at their destination.
- The delivery of telegrams at destination.
- The power of transmitting at reduced rates messages for the Press, at fixed hours and on specified conditions, without injury to the general service, or of letting for that purpose special lines on payment of rent
- The extension of the right of franking to service telegrams which relate to meteorology or any other objects of public interest.

16 *International Office—Reciprocal Communications*

Article 14 of the Convention

A central office, placed under the superior authority of the chief Administration of one of the Contracting Governments, designated for that purpose in the Service Regulations, is appointed to collect, arrange, and publish information of all kinds relating to international telegraphy, to circulate requests for modifications of tariffs and service regulations, to give notice of the changes adopted, and generally to study all subjects and execute all work entrusted to it in the interests of international telegraphy.

The expenses incurred in working this office are supported by all the Administrations of the Contracting States.

LXXX

1. The central office provided for by Article 14 of the Convention receives the title of International Office of the Telegraph Administrations
2. The chief Administration of the Swiss Confederation is deputed to organise the International Office according to the conditions defined in the following Regulations LXXXI to LXXXIII

LXXXI.

1. The joint expenses of the International Office of the Telegraph Administrations should not exceed the sum of £2,800 per annum, not including special expenses caused by an International Conference. This sum may be subsequently increased by the consent of all the contracting parties
2. The Administration entrusted, under Article 14 of the Convention, with the direction of the International Office, controls the expenses, makes the necessary advances, and prepares the annual accounts, which are communicated to all the other Administrations interested.
3. For the division of the expenses the contracting or adhering States are divided into six classes, each contributing in the proportion of a certain number of parts, *z c.*

| | |
|------------|-----------|
| 1st Class, | 25 parts. |
| 2nd | 20 " |
| 3rd | 15 " |
| 4th | 10 " |
| 5th | 5 " |
| 6th | 3 " |

4. These coefficients are multiplied by the number of States of each class, and the sum of the products thus obtained shows the number of parts by which the total expense is to be divided. The quotient represents the value of a part
5. For the contribution of expenses the Administrations of the Contracting States are divided, as follows, into the six classes mentioned in the preceding paragraph
 - 1st class Germany, Brazil, France, Great Britain, British India, Italy, Russia, Turkey.
 - 2nd class Austria, Spain, Hungary
 - 3rd class Belgium, Netherlands, Dutch East Indies, Norway, Roumania, Sweden.
 - 4th class South Australia, Cape of Good Hope, Denmark, Egypt, Japan, New South Wales, New Zealand, Switzerland, Tasmania, Victoria
 - 5th class Bosnia-Herzegovina, Bulgaria, Cochin China, Greece, Portugal, Senegal, Serbia, Siam, Tunisia.
 - 6th class Luxemburg, Montenegro, Natal, Persia.

LXXXII

1. The Administrations of the Contracting States forward to each other reciprocally all documents relating to their internal administration, and communicate to each other every improvement which they may introduce.
2. As a general rule, the International Office serves as the medium for these communications
3. The said Administrations send by post, by prepaid letter, to the International Office notice of all measures relative to the composition and alterations of tariffs, both internal and international, to the opening of new lines and the closing of existing lines, so far as they affect the international service; also, to the opening and closing of offices, and to alterations in the hours of duty. The printed or written documents on the subject issued by the Administrations are forwarded to the International Office either at the date of their issue or on the first of the ensuing month at latest.
- 4.

4. In addition to this, the said Administration send to that office, by telegraph, notices of all interruptions and restorations of communication affecting international traffic.

5. They prepare as completely as possible, and send to the International Office so as to arrive at the commencement of each year, statistical tables, showing the amount and movement of traffic, the situation of the lines, the number of offices, instruments, &c. These statistics are made up in the manner indicated by the International Office, which distributes forms fully prepared for the purpose.

6. They send also to that office two copies of the different publications which they issue.

7. The International Office, moreover, receives information respecting all experiments instituted by each Administration in the different branches of the service.

LXXXIII.

1. The International Office arranges and publishes the tariffs. It duly communicates to the Administrations all particulars relating to them, especially those mentioned in paragraph 3 of the preceding Regulation. When the communications are of an urgent nature, the International Office transmits them by telegraph, especially in the cases provided for by paragraph 4 of the same Regulation. In notifications relating to changes of tariffs, it forwards its communications in such a form as will admit of the changes being at once inserted in the columns of the tables of rates annexed to the Convention.

2. The International Office prepares tables of general statistics.

3. It edits, by the aid of the documents placed at its disposal, a telegraph journal in the French language.

4. It prepares, publishes, and periodically revises an official telegraph map.

5. It should, moreover, keep itself at all times at the disposal of the Administrations of the Contracting States, in order to furnish them with every kind of special information affecting international telegraphy which they may require.

6. The documents printed by the International Office are distributed to the Administrations of the Contracting States, in the proportion of the number of their contributive shares, as defined in Regulation LXXXI. Any additional copies required by the Administrations are charged for separately at cost price. This also applies to copies applied for by private companies.

7. The number of copies to be thus supplied should be decided upon once for all, until further notice; and sufficient time should be given to the International Office to arrange for printing the number of copies required.

8. The International Office circulates, when so instructed by one or more Administrations interested, requests for modifications in the Tariffs and Service Regulations provided for by articles 10 and 13 of the Convention. After obtaining the unanimous consent of the Administrations concerned, and when necessary the concurrence of any other Administration interested, it duly notifies the changes adopted. It is required moreover to notify all changes of Tariffs and Service Regulations, whatever form may be followed for their adoption. Such notification will not be acted upon until after a lapse of at least two months in the case of modifications in the Regulations, and of at least fifteen days in the case of the changes of tariffs, and in case of any dispute, not until the point in question be settled.

9. In questions to be resolved by the assent of the Contracting Administrations, those which fail to cause their replies to arrive within the maximum delay of four months are considered as assenting.

10. The International Office prepares the materials for the Telegraph Conferences. It attends to the editing, printing, and distribution of the amendments, minutes, copies and other papers.

11. The Director of that office assists at the sittings of the Conference, and takes part in the discussions, without a vote.

12. The International Office makes an annual report upon its management, which is communicated to all the Administrations of the Contracting States.

13. The management of the said office is also submitted to the approval of the Conferences provided for by article 15 of the Convention.

17. Conferences.

Article 15 of the Convention.

The Tariffs and Service Regulations provided for by Articles 10 and 13 are annexed to the present Convention. They possess the same value and come into operation at the same time as the Convention.

They will be subjected to revisions, at which all the States which have taken part in them will have the right to be represented.

With this object, Administrative Conferences will take place periodically; each Conference fixing the time and place of the next meeting.

Article 16 of the Convention.

These Conferences are composed of delegates representing the Administrations of the Contracting States.

In the deliberations, each Administration has a right to one vote, provided always that when there are different Administrations of the same Government, a request to this effect shall have been made through the diplomatic channel to the Government of the country in which the Conference is to take place, before the date fixed for its opening, and also that each of the different Administrations has a special and distinct representative.

The revisions resulting from the deliberations of the Conferences can only come into operation after they have been approved by all the Governments of the Contracting States.

LXXXIV.

The period fixed for the meeting of the Conferences provided for by paragraph 3, Article 15 of the Convention, is made earlier, should ten at least of the Contracting States request it.

18. Adhesions. Relations with non-adhering Lines.

Article 18 of the Convention.

States which have not taken part in the present Convention will be admitted to adhere to it on their request.

This adhesion will be notified through the diplomatic channel to the Contracting State in which the last Conference was held, and by that State to all the others.

It will convey, with full right, accession to all the clauses and admission to all the advantages stipulated by the present Convention.

Article 19 of the Convention.

Telegraphic relations with non-adhering States or private Companies are regulated, in the general interest of the progressive development of communication, by the Service Regulations provided for by Article 13 of the present Convention.

LXXXV.

1. In the case of adhesions provided for by Article 18 of the Convention, the Administrations of the Contracting States may refuse the benefit of their conventional tariffs to Administrations which may request to adhere, without on their own part conforming their tariffs to those of the States interested.

2. Administrations which possess, out of Europe, lines for which they have adhered to the Convention, state which of the two systems, European or extra-European, they intend to apply to them. This statement is implied by the inscription in the tariff tables, or is notified subsequently through the medium of the International Office.

LXXXVI.

1. Private Telegraph Companies, which work within the limits of one or more of the Contracting States and participate in the international service, are considered in relation to that service, as forming an integral portion of the telegraph system of those States.

2. Other private Telegraph Companies are admitted to the advantages stipulated in the Convention and present Service Regulations, on their acceding to all their obligatory clauses, and on the notification of the State which granted them the concession or authority to work. This notification takes place in conformity with the second paragraph of Article 18 of the Convention.

3. This accession should be imposed upon Companies whose lines link two or more of the Contracting States together, to the extent that they may be bound by their Articles of concession, to submit themselves, in this respect, to the obligations prescribed by the State which granted the concession.

4. Private Telegraph Companies which may apply to any one of the Contracting States for authorisation to connect their cables with the system of such State, shall only obtain it upon a formal engagement to submit the amount of their tariffs for the approval of the State according to the concession, and not to apply any change either in the Tariffs or Service Regulations except on a notification from the International Office, which shall only be operative after the expiration of time specified in para. 8, Reg. LXXXIII. This stipulation may be departed from in favour of Companies which may find themselves in competition with others not subjected to the same formalities.

5. The reserve which forms the object of paragraph 1 of the preceding Regulation is also applicable to the above-mentioned private Companies.

LXXXVII.

1. When telegraphic relations are opened with non-adhering States, or with private enterprises which have not acceded to the obligatory provisions of the present Regulations, these provisions are invariably applied to their traffic in that portion of its transit which takes place in the territory of the contracting or adhering States.

2. The Administrations interested fix the rate to be applied to that portion of its transit. This rate, determined within the limits of Regs. XIX and XX, is added to that of the non-participating lines.

Thus agreed to at Berlin, the 17th of September, 1885, by the undersigned delegates, in conformity with Articles 15 and 16 of the Convention of St. Petersburg, to come into force the 1st July, 1886.

OBSERVATIONS.

1. In this table alphabetical order has been followed. A distinctive column has been given to each service in cases where the rates are not exclusively those of the country to which the service belongs.

2. The rates between Turkey and neighbouring States have not been fixed. The rates of the London Revision will remain in force for their traffic until new figures shall have been agreed upon.

3. This table does not affect special arrangements concluded between certain States.

TABLE B—EXTRA-EUROPEAN SYSTEM.

Rates fixed for the formation of extra European tariffs, in execution of Art XX of Service Regulations.

Terminal and Transit Rates per word

| Names of States | Description of Traffic | Terminal Rates in francs | Transit Rates in francs | Remarks | |
|---|---|-----------------------------|-----------------------------|--|---|
| GERMANY | 1st For messages exchanged by the Trieste cable between Great Britain, Belgium, and Luxemburg on the one side and Aden, South Africa, and Egypt on the other | Fr ^s Cts 0 15 | Fr ^s Cts 0 15 | | |
| | 2nd For all other messages | 0 225 | 0 225 | | |

| | Rate of the Malta-Tripoli cable for all messages | | | 0 60 | |

Uniform tariff for messages between Europe and India.

The charges for messages between Europe (except Turkey and Russia) and India are fixed uniformly at the following figures :

| | West of Chittagong. | East of Chittagong. |
|--|---------------------|---------------------|
| | Frs. Cts. | Frs. Cts. |
| a. Via Turkey .. | 5 00 | 5 25 |
| b. Via Russia .. | 5 00 | 5 25 |
| c. Via the Eastern Telegraph Company's route (including Russia and Turkey in Europe) | | |

These charges are divided as follows :—

Via Turkey.

| | For messages to or from— | | | Observation. |
|--------------------|--------------------------|---------------------------------------|----------------------------------|---|
| | India. | Countries beyond India, by land line. | Countries beyond India by cable. | |
| | Frs. Cts. | Frs. Cts. | Frs. Cts. | The uniform tariff for messages via Turkey not having been fixed before the close of the Conference, its division cannot be set forth in this table. The rates will be subsequently notified by the International Office. |
| Europe | | | | |
| Turkey | | | | |
| Persian Gulf | | | | |
| India | | | | |

Via Russia.

| | For messages to or from— | | | |
|--------------------|--------------------------|---------------------------------------|-----------------------------------|--|
| | India. | Countries beyond India, by land-line. | Countries beyond India, by cable. | |
| | Frs. Cts. | Frs. Cts. | Frs. Cts. | |

| Persia | 0 940 | 0 940 | 0 705 | |
| Persian Gulf | 1 455 | 1 455 | 1 090 | |
| India | 0 575 | 0 750 | 0 750 | |
| | 5 000 | 5 175 | 4 250 | |

By Eastern Company's Route.

| | For messages to or from— | | | |
|-----------------------------|--------------------------|---------------------------------------|--|--|
| | India. | Countries beyond India, by land line. | Countries beyond India, by cable of Eastern Extension Company. | |
| | Frs. Cts. | Frs. Cts. | Frs. Cts. | |
| Europe and Eastern Company. | 4 425 | 4 425 | 3 500 | |
| India | 0 575 | 0 750 | 0 750 | |
| | 5 000 | 5 175 | 4 250 | |

In settling with adjoining Administrations, the European States deduct or receive the exact rates apportioned to them in Table B, extra-European System. The difference more or less which may exist between the sum thus apportioned and the figure entered above as constituting the general rate for Europe is placed to the account of the extra-European Administrations.

Thus agreed to, in Berlin, 17th September, 1885, by the undersigned delegates, in conformity with Articles 15 and 16 of the St. Petersburg Convention, to enter into force the 1st of July, 1886.

(Here follow the signatures entered on page 146.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MAIL COMMUNICATION BETWEEN NEW SOUTH WALES AND
THE UNITED KINGDOM *VIA* SUEZ.

PAPERS RELATING TO THE EXTENSION OF THE CONTRACT WITH THE ORIENT STEAM NAVIGATION COMPANY TO FEBRUARY, 1886.)

Ordered by the Legislative Assembly to be printed, 24 November, 1885.

The Manager, Orient Company, to The Secretary, General Post Office, Sydney.

Sir,

Orient Line of Steamers, Sydney, 13 June, 1885.

I now beg to put in the form of a letter the substance of what I said to you at our recent interview.

The existing Postal Contract between your Government and my Company will expire on 30th November, 1886.

That contract was regarded at the time it was arranged as of a tentative character, and its duration was accordingly fixed for a shorter period than is usual in such cases.

I venture to think that the experiment has proved successful, but the records of your Department will show particularly how far the service has been appreciated by the public.

The period of eighteen months which the contract has still to run is short enough for maturing measures for the satisfactory development of the service thereafter, and before entering upon such measures it is important that my Company should have an understanding with your Government.

In view of the foregoing, I would respectfully submit that the time is now opportune for making arrangements for the future of a permanent character; and I beg to inquire, accordingly, whether the Honorable the Postmaster-General will be prepared to explain, at an early date, the views of the Government as to a renewal of the contract with my Company for a lengthened period.

I have, &c.,

G. SKELTON YUILL,

Manager in Australia.

Submitted,—S.H.L., 15/6/85.

The Secretary, General Post Office, Sydney, to the Manager, Orient Company.

Sir,

General Post Office, Sydney, 20 June, 1885.

Referring to your letter of the 13th instant, and interviews with the Postmaster-General, on the subject of the renewal of your contract for the conveyance of mails, I am directed to inform you that the whole question of future ocean mail services is now engaging the careful attention of the Government.

In the meantime, and with a view to clear the way for future negotiations, the Government propose submitting to Parliament a resolution that the present contract with your Company be extended to the period when the Peninsular and Oriental Company's contract with the Government of Victoria will expire, about February, 1888. If continued beyond that time, to be terminable on six months' notice.

I have, &c.,

S. H. LAMBTON,

Secretary.

The Manager, Orient Company, to The Secretary, General Post Office, Sydney.

Sir,

Orient Line of Steamers, Sydney, 22 June, 1885.

I have the honor to acknowledge receipt of your letter of 20th instant, informing me that the whole question of the future ocean mail service is now engaging the attention of the Government, but that in the meantime, and with a view to clear the way to future negotiations, the Government propose to submit to Parliament a resolution that the present contract with the Orient Company be extended to at least February, 1888, when the P. and O. Company's contract with the Government of Victoria will expire, and if continued beyond that period to be terminable by six months' notice.

It is not directly stated in your letter, but I infer from its tenor, that the intention is that the contract should not expire in February, 1888, except on six months' previous notice. I should be glad to have your confirmation of this.

I beg to tender my thanks to the Honorable the Postmaster-General for the above information, and would ask the further favour of his giving me whatever indication he can, when the opportune time arrives, of the intentions of the Government bearing upon the more permanent settlement of the question.

I have, &c.,

G. SKELTON YULL,
Manager in Australia.

Submitted.—S.H.L., 25/6/85. I see no objection to give the notice asked for.—J.N., 25/6/85.

The Secretary, General Post Office, Sydney, to The Manager, Orient Company, Sydney.

Sir,

General Post Office, Sydney, 30 June, 1885.

In reply to your letter dated the 22nd instant, inquiring, in connection with the proposal to submit a resolution to Parliament for the extension of the Orient Mail Contract till February, 1888, and if continued beyond that period to be terminable by six months' notice, whether it is intended that the contract shall *not* expire in February, 1888, except on six months' previous notice, I am directed to inform you that the Postmaster-General sees no objection to give the notice asked for whether the Government decide to terminate the contract in February, 1888, or at any subsequent date.

I have, &c.,

S. H. LAMBTON,
Secretary.

The Manager, Orient Company, to The Secretary, General Post Office, Sydney.

Sir,

Orient Line of Steamers, Sydney, 1 July, 1885.

I have the honor to acknowledge receipt of your letter, 85/B. 7,051 of 30th ultimo, regarding the notice to be given of the termination of the Mail Contract between my Company and your Government, and to thank you for the information therein contained.

I have, &c.,

(For G. SKELTON YULL,
Manager in Australia),

THOS. W. PUGH.

1885-6.

No. 1.

The Agent-General to The Colonial Secretary.

Mail Service.

Sir,

5, Westminster Chambers, Westminster, S.W., 30 July, 1884.

I have the honor to forward, for your information and consideration, copy of a letter addressed 28th July, /84. to me by the Colonial Office, covering a communication from the Treasury having reference to the arrangements to be made in connection with the Postal Service to the Colonies at the termination of the existing Peninsular and Oriental contract in 1888; and I should be glad to be favoured, at the earliest moment, with the views of your Government, in order that I may place them before the Secretary of State for the Colonies.

I have informed Lord Derby that I would prefer expressing no opinion regarding the question until I know the views of my Government, and that I will address his Lordship so soon as I am in receipt of your reply to this communication.

I have, &c.,

SAUL SAMUEL.

The Postmaster-General.—A.S., 6/9/84.
Sept., /84.

The Secretary to the Post Office.—C.W., B.C., 8

[Enclosure.]

Sir,

Colonial Office, Downing-street, 28 July, 1884.

The Lords Commissioners of the Treasury have drawn the attention of the Earl of Derby to the question of the Eastern Mail Service with a view to the arrangements to be made upon the expiration of the present contract with the Peninsular and Oriental Steamship Company.

2. That contract, I am to observe, will terminate on the 31st January, 1888, if two years' notice be given; and, although this date is comparatively remote, the Lords Commissioners of the Treasury, in concurrence with the Postmaster-General, are of opinion that the variety of the interests involved, as well as the inherent difficulties of the question, make its consideration desirable thus far in advance of the date when practical steps will have to be taken; and they have suggested that notice of the termination of the existing contract should be given, and that the subject in the meantime should be thoroughly investigated in all its bearings, paying due regard to all the different interests concerned.

3. The enclosed extract from a report by the Postmaster-General indicates the most important of the questions which would have to be considered; but before taking any steps in the matter Lord Derby would be glad to be favoured with an expression of your views generally on the subject.

You will probably be in a position fully to explain the views of your Government at the proper time respecting any details which may come in course of discussion.

I am, &c.,

R. H. MEADE.

Extract from Postmaster-General's Report to the Treasury, dated 30 May, 1884.

* * * * *

1. In view of the marked development in the steam-shipping trade to India and the Australian Colonies within the last few years, would it be possible to avoid giving a subsidy to any particular company by placing the mail service to the East on a footing similar to that on which the mail service to the United States will be placed under the new plan about to be brought into operation in September next, *i.e.*, of taking up the most efficient vessels available from time to time and paying only for the weight of the correspondence actually carried.

If such an arrangement were practicable it might be found that a great saving would result, and also that the countries interested would have a more frequent mail service. Moreover, if subsidies could be dispensed with, the great advantage would be secured of abolishing the evil inseparably associated with all subsidies, namely, that by favouring one company they curtail the benefit of free competition.

2. Would time be saved in carrying mails to China if they were landed at Bombay and taken by railway from Bombay to Calcutta, whence it is presumed frequent opportunities offer for conveying them to their destination by lines of steamers already existing?

3. The arrangements now made for the apportionment of the cost of the packet service between England, India, Ceylon, the Straits Settlements, and Hongkong seem to require revision; and this is especially the case with regard to the apportionment of the postage on the correspondence exchanged between England and the Australian Colonies. * * * *

No. 2.

The Chief Secretary, South Australia, to The Colonial Secretary, New South Wales.

Sir,

Chief Secretary's Office, Adelaide, 21 January, 1885.

I have the honor to transmit for your information draft of a despatch proposed to be sent by this Government to the Right Honorable the Secretary of State for the Colonies, in answer to his of 28th July last, on the subject of ocean postal arrangements between the United Kingdom and the Colonies.

It is of the utmost importance that the Colonies of New South Wales, Victoria, and South Australia should act in complete concert regarding this matter, and accordingly my colleague, the Minister of Justice and Education, the controlling Minister of the Postal Department of this Colony, will in all probability visit Sydney and Melbourne at an early date, with the view of a mutual understanding being arrived at respecting the matter, in order that a similar despatch (if agreed upon) may be sent to the Secretary of State by your Government and that of Victoria.

I have, &c.,

JOHN COLTON.

The Postmaster-General.—W.B.D.
February, 1885.

The Secretary to the Post Office.—C.W., B.C., 6

[Enclosure.]

In answer to your despatch of July 28th, 1884, and enclosure therein, addressed to the Agent-General for South Australia, I have the honor, on behalf of this Government, to inform you:—

1. That in their opinion the time has not yet arrived, nor on the expiration of the present contract with the P. and O. Steamship Company (January 31st, 1888) will it have arrived, when the Colonies can altogether dispense with subsidies to ocean steamship companies, and rely on the means suggested by the Postmaster-General of Great Britain in his report to the Treasury, dated May 30th, 1884, to ensure the due carriage of mails.

2. This Government, however, entirely coincide with the Postmaster-General in the opinion that all payments for the carriage of mails should take the form of payment by weight of the correspondence actually carried.

3. They further think that in any new arrangements to come into force on the expiration of the existing contracts with the P. and O. Company it should be mutually agreed to that in respect of mails between the Colonies and the United Kingdom each country should pay the through cost of transit to destination on all mails it despatches, and retain the whole of its postage, so as to obviate the necessity for complicated accounts between the postal departments. With regard to correspondence with other countries, the Colonies would in like manner pay the through cost of all the mails they despatch, and be paid such proportion of the union sea transit rate on outward mails as may accrue to the section of the service for which they may be responsible.

4. As joint action between the Imperial Government and the Colonies is necessary to ensure an economical but really efficient weekly mail service, fitting in wholly or in part with the India and China mails, it is urged that the Home Government should at an early date state what section of the service they are prepared to undertake, and take such steps as they may think necessary to secure the adoption of a general scheme which will best meet the requirements of the United Kingdom and the Colonies.

5. I have the honor to call your attention to the charge of 16 francs 50 centimes per kilogramme for carriage of letters through France and Italy, and to respectfully ask that action may be taken by the British Post Office Department to secure a reduction of these charges.

6. It is intended to suggest to and urge upon the Governments of the other Colonies the advisability of united action, in order to obtain the most efficient service and the best possible terms from the steamship companies.

No. 3.

No. 3.

Report by the Secretary to the Post Office, New South Wales.

It would perhaps be desirable to reply to the Agent-General's despatch of 30th July last as soon as possible.

The question seeming to be one of policy, I offered no remarks on the despatch, but the Postmaster-General has asked for my views on the matter before dealing with it.

The Australasian Colonies are at present connected with the rest of the world by no fewer than five lines of mail contract steamers (for particulars of lines see attached paper), besides several other lines of fast steamers not under contract. The competition is likely to be still greater as time goes on.

In January, 1888, when the P. and O. Company's contract can be terminated, I think the time will have arrived when subsidies (though possibly not contracts) might fairly cease, and the steamers carrying Australasian mails be paid so much per lb. for the correspondence carried, with an extra sum by way of bonus, these being the principles on which the present contract with the Orient Company is based. If the Australasian Colonies could be induced to concur in such a system a uniform rate of payment could be determined on, and, in case of fast passages, the bonus or premium might, in lieu of being wholly paid as at present by one (*i.e.*, the contracting) Colony, be shared by each Colony whose mails were carried by the particular steamer earning the bonus.

Under the new arrangement for carriage of British mails to America the Imperial Government it appears selects the most efficient steamers. The Colonies on the one hand, and Great Britain on the other, might do the same, the only difficulty that would probably arise would be that, as the choice would of course not be in all cases a unanimous one, the premium for fast passages would have to be sometimes borne by one or two Colonies only. For instance, if the Torres Straits line still continued running without subsidy it is likely that Queensland would be the only colony using it, and, of course, would have to pay all the agreed-on bonuses for the quick passages. There is a line of steamers running to New Zealand *via* Hobart which would probably be used by Tasmania only, and in which case the bonus would be borne only by that colony. But this is perhaps a detail which will not need to be gone into at the present stage.

In the last sentence of the extract from the Report of the Postmaster-General of Great Britain a suggestion is made as to the reapportionment of the postage on correspondence exchanged between England and the Colonies. Now, it seems to me that if such an arrangement as I have indicated, namely, the abolition of all subsidies, and the payment of a poundage rate on correspondence, with bonus for quick passages, could be agreed to by *all* the Australasian Colonies, and also by Great Britain, the simplest course to adopt with regard to postages would be for the despatching country or colony to retain the whole of its own collections, and pay the whole cost of transit of the mails to destination, including the bonuses for the quick passages.

S.H.L., 29/1/85.

| Company. | Subsidy. | By whom paid. |

No. 4.

Circular Telegram from The Right Honorable the Secretary of State for the Colonies to The Australian Governors.

[Received 4th February.]

HER Majesty's Government have under consideration mail service. Would be glad to know—1st. At expiration of existing arrangements, in the year 1888, for conveyance of Eastern mail, would Colonial Governments join in conveying and providing transport of mails from Brindisi and other Continental ports to Australia, and *vice versa*, or would they prefer, as at present, to arrange for conveyance of our mails to and from point on China line, to be determined, short of above-mentioned port. 2nd. If you agree to join general contract, will you agree to share loss, if any, sustained by conveyance on basis already existing as regards India—this country paying half the amount, Colonies dividing remainder according to their share in correspondence with and distance conveyed. 3rd. Would Colony join single contract, if obtainable on advantageous terms, to enter Eastern service, Australia, China, India, or do you prefer to divide service into two or more contracts, providing, as at present, weekly service at least?

The Colonial Secretary.—A.L., 6/12/85.

The Secretary to Post Office.—C.W., B.C., 9/2/85.

No. 5.

The Agent-General to The Colonial Secretary.

Sir,

5, Westminster Chambers, Westminster, S.W., 23 January, 1885.

In continuation of my letter of the 30th July last, No. 84-264 4673, on the subject of the arrangements to be made in connection with the Postal Service to the Colonies at the termination of the existing Peninsular and Oriental Company's contract in 1888, I have now the honor to forward for your information copy of a letter received by me from the Secretary of State for the Colonies, inviting me to meet a Committee at the Colonial Office on the 19th instant, to discuss *confidentially* the question of combining in one contract the whole Eastern Mail Service after the present contracts expire.

12 Jan, 1885.

I

I accordingly attended the Committee at the appointed time, the following gentlemen, with others, being present:—Mr. G. C. Barrington, of the Treasury, in the Chair; Mr. John Bramston, of the Colonial Office; Mr. E. H. Rea, of the Post Office; Sir Arthur Blyth, K.C.M.G.; Mr. R. Murray Smith, C.M.G.; and Mr. J. F. Garrick.

The Agents-General stated that any opinion they expressed was simply founded upon their own views, as they had received no instructions in regard to the matter, which must be dealt with by the respective Colonial Governments.

It was arranged that Mr. Barrington and Mr. Rea should formulate a proposal to be submitted by the Agents-General to their respective Governments. So soon as this reaches me I will transmit it for your consideration.

I have, &c.,

SAUL SAMUEL.

The Postmaster-General.—W.B.D.
1885. Read.—J.N., 4/5/85.

The Secretary to the Post Office.—C.W., B.C., 7 March,

[Enclosure.]

Colonial Office to Agent-General.

Sir,

Referring to the letter from this Department of the 28th July last, relating to the mail service, I am directed by the Earl of Derby to ask whether it would be convenient to you to meet the Committee here at their next sitting on Monday next at 3.30 p.m., and discuss confidentially the question of combining in one contract the whole Eastern Mail Service after the present contracts expire.

Downing-street, 12 January, 1885.

I am, &c.,

ROBERT G. W. HERBERT.

No. 6.

The Secretary to the Post Office to The Principal Under Secretary.

Sir,

General Post Office, 29 June, 1885.

With reference to the cablegram of the Right Honorable the Secretary of State for the Colonies, dated 4th February last, inviting an expression of opinion as to the future Ocean Mail Service arrangements between Australia and the United Kingdom, I am directed to request that you will be so good as to move the Honorable the Colonial Secretary to cause a reply to the following effect to be sent, namely,—That it is the opinion of this Government that the principles which govern the present mail agreement between this Colony and the Orient Company—as indicated in the letter of its Managing Director in Australia to the Postmaster-General, Sydney, dated 3rd August, 1883 (copy of which is enclosed)—should underlie all future ocean mail contracts; and that it has been determined by this Colony to submit a resolution to Parliament for the extension of the present contract agreement with the Orient Steam Navigation Company, so that it shall terminate concurrently with the mail contract between the Victorian Government and the Peninsular and Oriental Steam Navigation Company in January, 1888.

Further, that negotiations are about to be opened with the Victorian Government with a view of arranging, if possible, for a joint contract with the Peninsular and Oriental and the Orient Steam Navigation Companies for a weekly mail service between Australia and the mother country on a similar basis to that upon which the existing contract between New South Wales and the Orient Company, before alluded to, was founded; such new contract to be for a period of nine or ten years—subject to a periodical review every three years as to the normal time for delivery of the mails, as the pivot on which the bonus and fines should depend, so that the Colonies may have some control in keeping the contractors up to the advancing development of ocean steaming.

It might be mentioned that this Government has further proposed to the Government of Victoria that the Government of South Australia—and, indeed, that all the Australian Colonies—might be invited to join in such a contract.

I have, &c.,

S. H. LAMBTON.

[Enclosure—See papers ordered by the Legislative Assembly to be printed, on 9th October, 1883.]

No. 7.

The Secretary to the Post Office to The Principal Under Secretary.

Sir,

General Post Office, Sydney, 29 June, 1885.

I am directed to request that you will be so good as to move the Honorable the Colonial Secretary to cause a communication to be addressed to the Government of Victoria to the following effect, namely:—That in view of—

1. The cablegram of the Right Honorable the Secretary of State for the Colonies, dated 4th February last, inviting an expression of opinion on the part of the Australasian Colonies in regard to the arrangements for future Ocean Mail Services.
2. The termination of the contract between the Government of Victoria and the Peninsular and Oriental Steam Navigation Company in January, 1888.
3. The termination in November, 1886, of the agreement between the Government of New South Wales and the Orient Steam Navigation Company for conveyance of mails between this Colony and England,—

it has been determined by the Government of this Colony to submit a resolution to Parliament for the extension of the present contract with the Orient Company, so as to terminate it concurrently with the contract between the Victorian Government and the Peninsular and Oriental Company.

That in further view of the foregoing facts it is considered desirable that the Victorian and South Australian, as well as the other Australian Governments, should be invited to co-operate with New South Wales in making joint arrangements with the Peninsular and Oriental and the Orient Steam Navigation Companies for a weekly mail service between Australia and the mother country, to take effect in the year 1888, on terms based on like principles to those which govern the existing contract between New South Wales and the Orient Company—which principles are indicated in the letter from the Manager in Australia of the Orient Steam Navigation Company to the Postmaster-General of New South Wales, dated 23rd August, 1883, copy of which is enclosed.

That

That it is further considered, that these two companies having served the Colonies well during many years should not be subjected to the annoyance of competition being invited. The proposed arrangements are very different from that of a direct postal subsidy, and it should not be lost sight of that these companies have been constantly building fast and expensive boats for the purpose of giving us a better service than they were bound to do by the strict letter of their contracts.

It is suggested that these companies might receive a nine or ten years contract, subject to a periodical review every three years as to the normal time for the delivery of mails, as the pivot on which the bonus and fines depend, so that the Colonies may have some means of keeping the contractors up to the advancing development of ocean steaming.

It might be intimated to the Government of Victoria that, in reply to the cablegram from the Secretary of State for the Colonies before alluded to, it is intended to inform the Secretary of State that in the opinion of the Government of this Colony the principles which govern the present contract between the Orient Company and New South Wales should underlie all future contracts for ocean mail services between Australia and the mother country, and that we are now in communication with the Government of Victoria on the question of a future mail service, in which the colonies of New South Wales and Victoria, and possibly the other Australian Colonies, might join.

I have, &c.,
S. H. LAMBTON.

[Enclosure—See papers ordered by Legislative Assembly to be printed, on the 9th October, 1883.]

Submitted that letter be addressed accordingly to the Premier of Victoria.—30 June, /85. Let letter be prepared accordingly.—A.S., 1/7/85. Premier of Victoria, 2nd July, /85.

No. 8.

Minute for His Excellency the Governor.

WITH regard to the telegram of 4th February last, received by His Excellency from the Principal Secretary of State for the Colonies, inviting an expression of opinion as to the future Ocean Mail Service arrangements between Australia and the United Kingdom, I am now in a position to place on record the conclusion to which His Excellency's Ministers have come on the subject.

It is considered that the principles which govern the present mail agreement between this Colony and the Orient Company, as indicated in the letter of its Managing Director in Australia to the Postmaster-General, Sydney, dated 23rd August, 1883 (copy of which is attached), should underlie all future mail contracts; and it is proposed to submit a resolution to Parliament for the extension of the present contract agreement with the Orient Steam Navigation Company, so that it shall terminate concurrently with the mail contract between the Victorian Government and the Peninsular and Oriental Steam Navigation Company in January, 1888.

Negotiations are about to be opened with the Victorian Government, with a view of arranging, if possible, for a joint contract with the Peninsular and Oriental and the Orient Steam Navigation Companies, for a weekly mail service between Australia and the mother country, on a similar basis to that upon which the existing contract between New South Wales and the Orient Company, before alluded to, was founded; such new contract to be for a period of nine or ten years, subject to a periodical review every three years as to the normal time for delivery of the mails, as the pivot on which the bonus and fines should depend, so that the Colonies may have some control in keeping the contractors up to the advancing development of ocean steaming.

It has been proposed to the Government of Victoria that the Government of South Australia, and, indeed, that all the Australian Colonies, might be invited to join in such a contract.

Colonial Secretary's Office, 3 July, 1885.

ALEX. STUART.

No. 12.

Memo. of the Secretary to the Post Office.

IN February, 1885, the Honorable R. C. Baker, then Minister of Justice and Education of South Australia, visited Melbourne and Sydney with the view of arranging for joint action by Australian Colonies in regard to future mail service *via* Suez. After a lengthy consideration of the matter, and a second visit in July, 1885, to Melbourne and Sydney by Mr. Baker (who was then specially commissioned by the South Australian Government to attend to this matter, he being no longer a member of the South Australian Government) the terms of a joint agreement were drafted. Mr. Baker then (*i.e.*, in July, 1885) proceeded to England, it was understood, to aid the South Australian Agent-General there in furthering this proposal. Subsequently this agreement was modified by the Governments of the respective Colonies of New South Wales, Victoria, and South Australia, and an agreement, dated 21st August, 1885, was signed on behalf of these Colonies.

No. 13.

Memorandum of Agreement.

MEMORANDUM of agreement made between the Colonies of New South Wales, Victoria, South Australia, Tasmania, Queensland, Western Australia, and New Zealand.

It is agreed as follows :—

1. This agreement is primarily entered into by the three Colonies first-named; and unless all three of such Colonies sign or agree to the same it shall not be considered binding on any one or more of such Colonies who have signed or agreed hereto.

2. As soon as the three first-named Colonies shall have assented hereto the other Colonies before-mentioned shall be invited to become parties hereto.

3. The Colony of New South Wales shall invite the Colonies of Queensland and New Zealand to become parties hereto; the Colony of Victoria shall invite the Colony of Tasmania to become a party hereto; and the Colony of South Australia shall invite the Colony of Western Australia to become a party hereto.

4. This agreement is entered into as a preliminary to a joint answer being sent by the Colonies to the telegram of Lord Derby, of the 4th February, 1885, to the Governors of the various Colonies *re* postal matters, and in order to secure joint and concerted action on the part of the Colonies in reference to the postal matters referred to in such telegram.

5. As soon as the first three Colonies named have assented hereto a telegram shall be sent to the British Government, in answer to the said telegram of the 4th February, suggesting the following arrangements between Great Britain and the Colonies on the termination of the present agreement between Great Britain and the Peninsular and Oriental Steamship Company :—

First—Great Britain to invite tenders on behalf of herself and the contracting Colonies for a mail service or mail services to be performed by British ships.

Second—Tenders to be called—

(a) For a weekly service.

(b) For a fortnightly service, to alternate with another fortnightly service, so as to secure a weekly service.

Third—Such service or services to be from Brindisi, Naples, or some other port in Europe, to be named by the tenderers, and approved of by the other contracting parties, to Sydney, *via* King George's Sound, Adelaide, and Melbourne.

Fourth—The tenders (whether confined to any particular companies or open) to be called for separate and distinct from any other service.

Fifth—Tenders to be invited for services from London to the Semaphore, Adelaide, and *vice versa*, in twenty-nine days, in thirty-one days, and in thirty-three days.

Sixth—

Sixth—The mail matter of any Colony desiring it to be landed at Adelaide, and forwarded by rail to Melbourne, Sydney, Brisbane, *et cetera*; 10d. per lb. for letters and 1d. per lb. for other mail matter to be paid to each forwarding Colony; South Australia to guarantee that there shall not be delay of more than six hours at Adelaide, and, if necessary, to employ special trains. South Australia and Victoria to arrange as to specials between Adelaide and Melbourne, and Victoria and New South Wales between Melbourne and Sydney.

Seventh—The mail steamers to continue on to Melbourne and Sydney.

Eighth—The tenders to include the local transit rates across Egypt, but the tenderers may carry mails by what route they think best, if they carry them in the specified time.

Ninth—All mail matter to be tendered
for at $\left\{ \begin{array}{l} \text{per lb. of letters.} \\ \text{per lb. of other matter.} \end{array} \right\}$ amount to be given by tenderers.

Tenth—Penalties of £4 per hour for non-arrival in time, and bonuses of same amount for arrival before time (between port of departure in Europe and the Semaphore, Adelaide).

Eleventh—Great Britain and the contracting Colonies to send by the contracting steamers all mail matter not specially directed to be sent by particular route.

Twelfth—Great Britain to retain all her own postages, and pay cost of transit, through to destination of all mail matter, including premiums on voyages from Great Britain. The contracting Colonies to do the same in connection with the trips from the Colonies to Great Britain.

Thirteenth—If any other Colony, not a party hereto, sends mail matter by contracting steamers it shall be carried at the same rates as for contracting Colonies, and on the same terms, including share of premiums and penalties.

Fourteenth—Premiums on mail matter despatched from the Colonies by any steamer to be paid by Colonies sending letters by such steamer in proportion to letters carried, and accounts to be adjusted quarterly.

Fifteenth—In the event of the contracting Colonies joining the Postal Union, any loss which may accrue in consequence of being obliged to carry mail matter for Union Countries at Union rates to be paid one-half by Great Britain and the other half by the contracting Colonies, in the proportion of weight of letters carried for such Colonies—taking an average of three months.

Sixteenth—No contract to be accepted without the consent of the three first-named Colonies.

Seventeenth—The tenders to be for five years.

6. It is also agreed that the contracting Colonies shall urge upon Great Britain the desirability of taking all possible steps to reduce the exorbitant rates now paid for the land transit of the Australian mails across Italy and France, namely 16 f. 50 c. per kilo of letters, *et cetera*.

7. This agreement is made subject to ratification by the respective Parliaments of the Colonies parties hereto.—Dated this 21st day of August, 1885.

JAMES NORTON,

Postmaster-General, New South Wales.

JAMES CAMPBELL,

Postmaster-General, Victoria.

JOHN A. COCKBURN,

Minister of Education, Controlling Postal Department, South Australia.

No. 14.

Joint Telegram to The Right Honorable the Secretary of State for the Colonies.

OCEAN Mail Services, New South Wales, Victoria, South Australia agree to following, and invite other Colonies :—England to invite tenders on behalf herself and Colonies, for weekly service, also for fortnightly service, by different companies, to alternate so as to give weekly service. Colonies prefer service by two companies distinct from other services. Brindisi, Naples, or other approved port, to Western Australia, Adelaide, Melbourne, Sydney. Mails, if required, to be landed Adelaide. Tenders to be for twenty-nine, thirty-one, and thirty-three days to Adelaide. Mail matter to be tendered for at so much per pound for letters and so much other matter, including Egyptian rates. Penalties and premiums four pounds hour. England and Colonies to send all mail matter not otherwise marked. Contract five years. England retain her postages, and pay cost of transit including premiums on outward mails; Colonies same homewards. Should Colonies join Union, England to pay half loss, Colonies half.

Governor, New South Wales.

Governor, Victoria.

Governor, South Australia.

(For date see No. 16.)

No. 15.

The Right Honorable the Secretary of State for the Colonies to His Excellency the Governor, New South Wales.

My Lord,

Downing-street, 4 August, 1885.

Referring to your telegram of the 4th ultimo on the subject of the Mail Service, and to my reply of the 23rd ultimo, I have the honor to inform you that Her Majesty's Government will immediately give notice to the Peninsula and Oriental Steamship Company to discontinue the present service at the conclusion of their contract, and are prepared to call for tenders for the services to India and China.

The tenders are to be sent in by the 31st March, 1886.

I would remind you that on the last occasion it was made a subject of complaint that the Peninsula and Oriental Co., having already obtained the Imperial contract, were enabled to place the Colonies at a disadvantage in negotiating their contracts, and I give you this early information of the proceedings of Her Majesty's Government in order to obviate any similar cause of complaint on this occasion; and I would point out that it may be of advantage to the Colonies to arrange that the tenders for their services should be sent in not later than the date fixed by the Home Government for sending in the tenders for the India and China Services.

I have, &c.,

FRED. STANLEY.

Col. Sec. for the Postmaster-Genl. I request to be favoured with a reply which I may forward to the Sec. of State.—A.L., 30/9/85. The Postmaster-General.—P.A.J., 12/10/85. The Secretary to the Post Office, B.C., 12 Oct., /85.—C.W.

This despatch does not, I think, require any immediate action. A joint telegram from New South Wales, Victoria, and South Australia has recently been prepared for transmission to the Secretary of State proposing the terms on which these three Colonies, and possibly others, could join with Great Britain in a combined Mail Service between Australasia and the mother country. The matter might rest until we have a reply to this telegram.—S.H.L., 19/10/85.

Approved. The Col. Sec., 19/10/85.—J.S. The Principal Under Secretary, B.C., 19/10/85.—S.H.L. His Excellency.—P.A.J., 22/10/85. Seen.—A.L., 23/10/85.

The Colonial Secretary, New South Wales, to The Colonial Secretary, Queensland.

Sir,

Colonial Secretary's Office, Sydney, 2 September, 1885.

I have the honor, at the instance of my colleague the Postmaster-General, to transmit to you copies of an agreement which has been entered into by the colonies of New South Wales, Victoria, and South Australia, concerning future Ocean Mail Services, and to request that you will be so good as to bring such agreement under the consideration of your Government with a view to the Colony of Queensland becoming a party thereto.

I have, &c.,

[Enclosure—See No. 13.]

ALEX. STUART.

Similar letter addressed to the Hon. the Premier of New Zealand, Wellington.

No. 18.

The Premier, New Zealand, to The Colonial Secretary, New South Wales.

Sir,

New Zealand, Premier's Office, Wellington, 12 October, 1885.

I have the honor to inform you that this Government has had under consideration your letter of the 2nd ultimo, with enclosed copy of the agreement entered into by the Colonies of New South Wales, Victoria, and South Australia, concerning future Ocean Mail Services.

We acknowledge the courtesy and consideration of your Government and the other contracting parties in offering to New Zealand to join them as one of the contractors, but this Colony proposes to send and receive its mails by other routes, and the use it would therefore make of the Suez route would be so small that we do not think it advisable to recommend to Parliament that New Zealand should join in the contract. We shall, however, be content to become responsible under the thirteenth clause of the agreement, but not to the conditions imposed by the eleventh clause.

I have, &c.,

ROBERT STOUT.

The Hon. R. C. Baker to The Postmaster-General, New South Wales.

Sir, 13, Albemarle-street, London, 30 December, 1885.

I have the honor to inform you that the Imperial Government have agreed to the scheme for the distribution of postages between Great Britain and the Australian Colonies; and to the proposal to call for tenders for the carriage of mail matter, on the terms and in the manner set forth in the agreement lately entered into between the Colonies of New South Wales, Victoria, and South Australia.

Enclosed is a copy of a letter from the Postmaster-General of Great Britain, bearing date the 29th day of December instant.
I remain, &c.,

R. C. BAKER.

N.B.—Since writing the above the conditions of tendering have been sent to me.

[Enclosure.]

The London Post Office to The Hon. R. C. Baker.

Sir, General Post Office, London, 29 December, 1885.

I am directed by the Postmaster-General to acknowledge the receipt of your letter of the 23rd instant, on the subject of the Australian Mail Service, and to inform you, in reply, that, acceding to the wishes of the Australian Colonies, as expressed in the Agreement which you forwarded to the Colonial Office on the 20th of October last, Her Majesty's Government have arranged to call for tenders for an Australian Mail Service, on the conditions proposed in that Agreement.

Conditions of tender have been drawn up, and are now under the consideration of the Treasury; and the Postmaster-General has forwarded to that Board a copy of your letter asking that the conditions, before being finally settled, may be submitted to you for approval on behalf of the contracting Colonies.
I am, &c.,

C. H. B. PATEY.

1885-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

FUTURE MAIL COMMUNICATION BETWEEN GREAT BRITAIN
AND AUSTRALIA, *VIA* SUEZ.
(FURTHER CORRESPONDENCE).

Ordered by the Legislative Assembly to be printed, 21 April, 1886.

SCHEDULE.

No. 1.

The Hon. R. C. Baker, London, to The Postmaster-General of New South Wales.

Re Australian Postal Union.

Sir, 27, Ashley-place, Victoria-street, London, S.W., 21 February, 1886.

I have the honor to enclose herewith—

1. Copy of letter from myself to Mr. Blackwood, dated 12th January, 1886.
2. Same to same, dated 18th January, 1886.
3. Copy of letter from Mr. Blackwood to myself, dated 1st February, 1886.
4. Copy of advertisement calling for tenders.
5. Copy of conditions of tendering.

By which you will see that the whole matter has been concluded satisfactorily, all the demands of the Colonies having been attended to.

The advertisement does not confine the tendering to British ships, and although it is hardly possible that the tender of any Foreign Company would be accepted, the fact that they are not expressly excluded may tend to moderate the demands of the British Companies, and if a lower tender from a Foreign Company is not accepted the extra subsidy, payable by the Colonies, will be known, and may be looked upon as a contribution towards the preservation of the integrity of the Empire.

The Post Office authorities state that they have never issued any advertisement expressly excluding Foreign competition.

The time for receipt of tenders is the 30th April next, and as I leave England in the middle of May, and as the Postmaster-General has to report upon the tenders to the Treasury, who have to again investigate them from a financial point of view, it is certain that no recommendation as to the acceptance, or otherwise, of any tender will be made by the British authorities until after my departure, and I have now to ask that your Government will be pleased to relieve me from and after that date from the further conduct of this affair and send such instructions to your Agent-General, or otherwise arrange as they may think best.

I will, however, in the meantime press upon the British authorities the advisability of taking the action asked for in clause 6 of the agreement between the Colonies, viz. :—Securing the reduction of the exorbitant charges made by the French and Italian Governments for the territorial transit of the mails to Brindisi and Naples, and there are grounds for anticipating some measure of success.

Thanking you for the confidence your Government has reposed in me, and hoping that the negotiation carried on and the arrangement made with the British Government are such as will meet with your approval.

I have, &c.,

R. C. BAKER.

N.B.—It is matter for regret that Queensland has not joined the other Colonies, as you will see by the contract your Government agreed to invite their co-operation, and it was because of this arrangement that Sir Saul Samuel, with the concurrence of Mr. Garrick, sent the telegram of the 12th January, to which no reply has yet been received. It is evident that the *certainty* of obtaining the correspondence from the Southern portion of that Colony would induce tenderers to quote a lower rate per lb., and it is hardly fair that Queensland should, by inaction, force the other Colonies to pay an increased subsidy and then claim advantages under any contract which may be made, equal in all respects to those of the contracting Colonies. If a favourable reply is received from Queensland before 30th April, please telegraph at once, and advertisement calling for tenders can be altered.

R. C. B.

[Enclosure No. 1.]

The Hon. R. C. Baker to The Hon. S. A. Blackwood.

Sir,

27, Ashley-place, S.W., 12 January, 1886.

I have the honor to return copy of conditions of tendering for the Australian Mail Service, transmitted to me in yours of 31st December, 1885.

After consultation with the Agents-General of the Colonies of New South Wales, Victoria, and South Australia, and with the permanent head of the Post Office of South Australia (Mr. C. Todd, C.M.G.), I have the honor to suggest the following alterations and modifications:—1st. Provision should be made for the carriage of matter sent by parcels post, as it is almost a certainty that if not before 1st February, 1888, at all events during the continuance of the contract a parcel post will be established between Great Britain and the Australian Colonies; this could be done either by fixing in the conditions the rate per lb. (say 2d. ?) which shall be charged by the contractors, or asking them to tender at per lb. for the carriage of such matter; the former alternative appears to me the best, as the latter would make the tendering too complicated. I am aware that the agreement between the Colonies is silent on this point, but that is only because it was overlooked.

2nd. The clause in the advertisement defining the mail matter which the contractor will be entitled to carry should, I venture to submit, run as follows:—"The correspondence to and from New South Wales, Victoria, South Australia, and Western Australia, will (unless specially superscribed to be sent by any particular route) be forwarded by the mail steamers employed under this contract, the other Colonies of Australasia will be invited to send their correspondence by such mail steamers, but correspondence to New Zealand will only be sent when specially so superscribed."

The Agent-General of South Australia, at my request, sent the following telegram to his Government:—"Have Western Australia, Tasmania, and Queensland joined postal contract. Telegraph reply. More Colonies agree, send all postages, lower the tenders." A reply was yesterday received as follows:—"Western Australia joins, Tasmania undecided." The Colonial Office will, I understand, authorise the insertion of Western Australia amongst the Colonies who agree to send and receive all postages by contracting steamers.

The Government of New South Wales is in communication with the Government of Queensland as to the position Queensland will take, and a telegram to the Agent-General, Sir Saul Samuel, is expected daily; on this point more definite information may be sent to you shortly.

3rd. The rate the contractors will have to pay for land transit across Egypt should be definitely fixed, as the fewer elements of uncertainty in the conditions of tendering the greater the probability of favourable tenders. Union rates would, I submit, be fair, and about what is paid by the British Post Office under their special agreement.

4th. As the contracting Colonies possess Parliamentary Institutions, and their respective Ministers will have to lay the contract before their respective Parliaments, I should be obliged if an official intimation were given that the contract will not be laid before the House of Commons until it has been legally ratified by the contracting Colonies, New South Wales and South Australia.

5th. There are other suggestions, not perhaps of much importance, made by notes in the margin of the conditions, which I have now the honor to return.

I remain, &c.,
R. C. BAKER.

[Enclosure No. 2.]

The Hon. R. C. Baker to The Hon. S. A. Blackwood.

Sir,

27, Ashley-place, Victoria-street, London, S.W., 18 January, 1886.

In pursuance of the agreement arrived at at an interview to-day, I have the honor to again address you on the subject of the call for tenders for the Australian mails.

The arguments advanced by Mr. Rea and yourself in reference to the parcels post question, viz.:—

- 1st. That the call for tenders is from Brindisi or some other European port, and that parcels would not be sent by that route.
- 2nd. That there is no necessity for great speed in the transmission of parcels.
- 3rd. That it would sometimes be desirable to send the parcels by other than the contracting steamers, have convinced me that your conclusion to omit all reference to a parcels post in the call for tenders is right.

I understand that you agree with all the other alterations suggested in my letter of 12th instant, and will modify the conditions accordingly.

Enclosed you will find those various suggestions alluded to in the 5th paragraph of such letter, modified as agreed between us, and it can be understood that the present enclosure is substituted for the condition of tendering returned in same of the 12th instant.

As your usual form of advertisement does not expressly confine the tenders to British ships, it may perhaps be as well to adhere to the usual form and defer any discussion on the point until after the tenders have been received. I do not think however that unless extraordinary circumstances should arise there is any probability of the Australian Colonies altering their expressed intention.

I remain, &c.,
R. C. BAKER.

[Enclosure No. 3.]

The Hon. E. H. Rea to The Hon. R. C. Baker.

Sir,

General Post Office, London, 1 February, 1886.

Referring to your letters of the 12th and 18th of last month, I am directed by the Postmaster-General to transmit to you some copies of the advertisement issued by this Department inviting tenders for the conveyance of Australian mails, and also some printed copies of the conditions of contract which have been drawn up for this service.

You will observe that clauses 4, 6, and 19 of the conditions of contract have been altered in accordance with your suggestion, and that clause 31 has been extended in such a manner as to show that the contract will not be binding until it has been approved of by a resolution of the House of Commons, and by the Legislatures of New South Wales, Victoria, and South Australia. The

The word "British" has been struck out of the original draft advertisement, thus leaving persons tendering free to offer vessels of any nationality for the service; and Western Australia has been inserted as one of the Colonies to and from which the correspondence will be forwarded by the mail steamers employed under the contract.

Finally, the latest date for sending in tenders has been fixed for the 30th April next.

I am, &c.,
EDW. H. REA.

[Enclosure No. 4.]

(Royal Arms.)

Contract for the conveyance of Australian mails.

General Post Office, London, 1 February, 1886.

NOTICE is hereby given that on Friday, the 30th of April, 1886, the Postmaster-General will be ready to receive tenders from such persons as may be willing to enter into a contract for the performance of either of the following services by steam-vessels:—

1. A weekly service from Brindisi or Naples (Italy), or some other port in Europe, to be selected by the contractor subject to the approval of the Postmaster-General, to Adelaide (Semaphore), calling at King George's Sound; and back from Adelaide (Semaphore) to Brindisi or Naples, or other selected port in Europe, calling at King George's Sound. The mail packets to continue the voyage from Adelaide to Melbourne and Sydney, and *vice versa*, with or without mails on board.
2. A fortnightly service, to alternate with another fortnightly service, from Brindisi or Naples (Italy), or some other port in Europe, to be selected by the contractor subject to the approval of the Postmaster-General, to Adelaide (Semaphore), calling at King George's Sound; and back from Adelaide (Semaphore) to Brindisi or Naples, or other selected port in Europe, calling at King George's Sound. The mail packets to continue the voyage from Adelaide to Melbourne and Sydney, and *vice versa*, with or without mails on board.

The Service to be separate and distinct from any other Mail Service.

No contract will be entered into for a period exceeding five years.

Payment will be made on the net weight of correspondence carried.

The correspondence to and from New South Wales, Victoria, South Australia, and Western Australia will (unless specially superscribed to be sent by any particular route) be forwarded by the mail steamers employed under this contract. The other Colonies of Australia will be invited to receive and send their correspondence by such mail steamers, but correspondence to and from New Zealand will only be sent when specially so superscribed.

The Postmaster-General thinks it well to state that the average weekly weight of letters and other mail matter carried during the past year by the packets conveying the mails between Suez and Melbourne has been as follows:—

| | Outward Mails. | | Homeward Mails. | |
|--------------------------|----------------|--------------------|-----------------|--------------------|
| | Letters. | Other Mail matter. | Letters. | Other Mail matter. |
| | lbs. | lbs. | lbs. | lbs. |
| New South Wales | 415 | 4,894 | 315 | 2,421 |
| Victoria | 378 | 5,163 | 325 | 3,404 |
| South Australia | 129 | 1,920 | 111 | 792 |
| Western Australia | 20 | 399 | 17 | 107 |
| Tasmania | 39 | 799 | 35 | 291 |
| Queensland | 136 | 2,013 | 84 | 634 |
| New Zealand | 31 | 395 | 7 | 7 |
| Total... .. | 1,148 | 15,583 | 894 | 7,656 |

Printed forms of tender may be obtained on application, personal or written, at the Secretary's Office, General Post Office, London.

Every tender must be addressed to the Secretary of the Post Office, and must bear in the left-hand corner of the envelope, the words "Tender for the Conveyance of Australian Mails."

No tender will be received after 1 o'clock on the day above mentioned.

Enclosure No. 5.

*Tender for conveying Her Majesty's Mails between Brindisi, Naples, or some other port in Europe, and Adelaide (Semaphore), via King George's Sound.**

Sir,

We hereby offer to convey Her Majesty's mails on the conditions marked "A," by steam-vessels of adequate power, between the Port of \ddagger and the Port of Adelaide. The mails to be conveyed between the Port of \ddagger and the Port of Adelaide (Semaphore) in 628 hours.

1st. Once a week, for a payment of \pounds per lb. net weight of letters and post cards, and per lb. net weight of other mail matter. 2nd.

\ddagger Here state the port in Europe it is proposed to depart from and arrive at.

* All tenders must be addressed to the Secretary of the Post Office, with the words, "Tender for the conveyance of Australian Mails" in the left-hand corner of the envelope. Other things equal, a preference will be given to a tender made upon this printed form and in exact accordance therewith. Even, however, when this form is used, the parties tendering may, in a separate letter, to be forwarded with the tender, suggest for consideration any alteration in the conditions or other otherwise. The Postmaster-General does not engage, irrespective of other considerations, to accept the lowest tender, nor does he engage to accept any tender.

2nd. Once a fortnight, to alternate with another fortnightly service, for a payment of per lb. net weight of letters and post cards, and per lb. net weight of other mail matter.

The above payments to cover the local transit rates across Egypt should we elect to send the mails by Railway through Egypt instead of through the Suez Canal.

† Here state what abatement would be made if the number of hours allowed for the voyage were increased to 676 or 724 hours.

†

We agree to be subject to the deductions specified in the sixth condition.

We propose as our sureties, in the penalty of £20,000, Mr. of and Mr. of and we refer you to as persons of whom enquiry can be made as to the responsibility of such sureties.

We agree to commence the service on the 1st of February, 1888, and, should such service not be commenced on such day, or on the first day thereafter which the Postmaster-General may fix as the day of sailing, we agree to pay to Her Majesty the sum of one hundred pounds for every day from that time until the said service shall be begun by us; but so that the whole amount of deductions for such failure shall not exceed £20,000.

And we agree to execute a formal contract for the performance of the said service, to be drawn up by the Solicitor to the Post Office, and to be in accordance with the said conditions marked "A."

We are, Sir,

Your obedient Servants,

(Signature)

(Address)

The Secretary of the Post Office.

CONDITIONS REFERRED TO AS MARKED A.

1. The contractors to convey, during the continuance of the contract, Her Majesty's mails each way between and King George's Sound and Adelaide (Semaphore), and, if required, also to and from Melbourne and Sydney, and *vice versa*. The mail steamers in any case to continue the voyage on to Melbourne and Sydney, whether with or without mails on board, and to commence the return voyage at Sydney, calling at Melbourne.

2. The service to be separate and distinct from any other mail service.

3. The mails must be conveyed from to Adelaide (Semaphore) and from Adelaide (Semaphore) to in 628 hours, including the call at King George's Sound, for the purpose of landing and embarking mails.

4. All mail matter to be tendered for at a rate per pound net weight of letters and post cards, and at a rate per pound net weight of other matter, including newspapers, book packets, patterns, &c., at an amount to be stated by the persons tendering. The tenders thus made are to include the cost of the local transit through Egypt, should the contractors elect to send the mails by railway across the Isthmus of Suez. As, however, the contractors themselves could not undertake this land portion of the service on their own account, payment for such transit would be made by the British Post Office under arrangements with the Egyptian Post Office, and would be recovered from the contractors; but in no case would a charge be made in excess of the Postal Union rates, amounting to two francs per kilogramme of letters and post cards, and twenty-five centimes per kilogramme of other articles.

5. Under the term "Her Majesty's Mails," are to be comprehended all boxes, bags, or packets of letters, newspapers, books, printed papers, and all other articles transmissible by the post, without regard either to the place to which they may be addressed or to that in which they may have originated; also all empty bags, empty boxes, and other stores and articles used or to be used in carrying on the Post Office Service, which shall be sent by or to or from any Post Office to or from which any mails are to be conveyed, but for which latter no payment shall be made.

6. A sum of two hundred and fifty pounds to be forfeited on each occasion when the contractors fail in providing a vessel, in accordance with their contract, ready to put to sea at the appointed time, or when such a vessel shall not actually put to sea and proceed on her voyage at the appointed time, and a further sum of fifty pounds to be forfeited for every day's failure in providing such a vessel after such appointed time; but so that these deductions shall not in the aggregate exceed the freight for mails payable for such voyage, plus the sum of one thousand pounds. The contractors also to be subject to forfeit the sum of four pounds per hour for every complete hour consumed on any voyage beyond the number of hours allowed for the voyage, such forfeitures to be made from whatever cause the delay may arise; but so that the total amount of the forfeiture for delay on any one voyage shall never exceed the freight for mails payable for such voyage.

7. The payment by the contractors of any sum by way of forfeiture or otherwise shall in no way prejudice the right of the Postmaster-General to treat the failure to provide a proper vessel at the appointed time, or to perform a voyage at or within the appointed period, as a breach of the Contract.

8. The contractors to supply, during the continuance of the contract, and to the satisfaction of the Postmaster-General, a sufficient number of steam-vessels of adequate power, and in all respects suited for the performance of the service within the time stipulated in the tender.

9. The vessels to be always supplied with all necessary and proper machinery, engines, apparel, furniture, stores, tackle, boats, fuel, lamps, oil, tallow, provisions, anchors, cables, fire-pumps, and other proper means for extinguishing fire, lightning conductors, charts, chronometers, proper nautical instruments, and whatever else may be necessary for equipping the said vessels, and rendering them constantly efficient for the service to be performed. The vessels to be manned by legally qualified and competent officers, and by a sufficient crew of engineers, able seamen, and other men, and with a competent surgeon.

10. If the Postmaster-General shall consider any of the vessels unfit for the conveyance of mails, he may require the contractors to show cause why such vessel should not be withdrawn from the service, and unless within six weeks after such requisition the contractors shall show cause to the contrary to the satisfaction of the Postmaster-General, he may at any time after the expiration of the said period declare such vessel to be unfit for the conveyance of mails, and after such declaration shall have been made it shall not

not be lawful for the contractors to employ such vessel in the performance of the contract. In order to determine whether the Postmaster-General shall be justified in declaring any vessel unfit for the conveyance of mails, or whether the contractors shall be able to show cause to the contrary, a special examination shall be made of the hull and machinery of any such vessel by such person or persons as may be selected for that purpose by the Postmaster-General.

11. The equipments, officers, engineers, and crew of each vessel, when such vessel is in any British port, shall be subject at all times to the inspection of the Postmaster-General, or of such other person or persons as he shall at any time or times authorise to make such inspection.

12. The days and hours of departure from the Ports of and Adelaide to be fixed by the Postmaster-General, and to be subject to alteration by him from time to time on a notice to the contractors of three months. The Postmaster-General also to have power, by an order to the Commander, to delay the departure of any vessel from any port for a period not exceeding twenty-four hours.

13. The contractors to provide, to the satisfaction of the Postmaster-General, a separate and convenient place of deposit for the mails on board each vessel.

14. The contractors and all commanding and other officers of the vessels which may be employed in the performance of the contract, and all agents, seamen, and servants of the contractors, shall, at all times during the continuance of the contract, punctually attend to the orders of the Postmaster-General as to the mode, time, and place of embarking and disembarking mails.

15. The commander shall take charge of the mails, and be responsible for their due receipt and delivery. He shall also make the usual Post Office declaration, and furnish such journal, returns, and other information, and perform such other services, as the Postmaster-General may from time to time require.

16. Except such letters as are not required by law to pass through the Post Office, the contractors not to receive, or permit to be received, for conveyance on board any of the vessels employed under the contract, any letters other than those contained in Her Majesty's mails. No mails must be conveyed on behalf of any Colony or Foreign Country without permission of the Postmaster-General; and the whole postage of every mail shall, under all circumstances, be at his disposal.

17. The contractors not to convey in any of the vessels, employed under this contract, any nitro-glycerine or any other article which shall have been legally declared specially dangerous.

18. Every vessel which may have started, or which should have started, before the termination of the contract, must complete its voyage in like manner as if the contract remained in force, but the contractors shall not be entitled to any further payment by reason thereof.

19. The Postmaster-General to be free to delegate from time to time any of his powers to such persons as he may choose.

20. The contractors to make any arrangements which may be required relative to Quarantine.

21. Except where otherwise specified, none of the duties enumerated in the foregoing conditions to give the contractors any claim to remuneration beyond the general subsidy.

22. Every sum of money forfeited by the contractors, to be considered as stipulated or ascertained or liquidated damages, and to be payable whether any damage shall or shall not have been sustained by reason of the breach for which the penalty may be levied. The amount to be deducted by the Postmaster-General out of any moneys then payable, or which may thereafter become payable, to the contractors; or, at his discretion, the payment thereof may be enforced, with full costs of suit.

23. The contract to continue in force for five years.

24. Subject to deductions for forfeitures or otherwise, payments to be made quarterly at the General Post Office out of moneys to be provided by Parliament.

25. All notices which the Postmaster-General or any of his officers or agents are authorised to give, either to be delivered to the Commander of any vessel of the contractors or to any officer or agent of the contractors in charge of any such vessel, or to be left at the office or last known place of business of the contractors.

26. The contractors not to assign, underlet, or dispose of the contract, or any part thereof, without the consent, in writing, of the Postmaster-General.

27. In case of the breach of the 26th condition, or in case of a great or habitual breach of the contract of any other kind, the Postmaster-General to have power, and that without previous notice, to terminate the contract; such termination not to give the contractors any claim to compensation.

28. In pursuance of the provisions of the Act 22 Geo. 3, c. 45, no Member of the House of Commons to be admitted to any share of the contract, or to any benefit arising therefrom.

29. For the due fulfilment of the contract, the contractors to enter into a bond, with two responsible sureties, to be named in their tenders, in the penalty of £20,000. Such penalty to be considered and recoverable as liquidated damages.

30. Any arbitration pursuant to the contract shall conform to the provisions of the Common Law Procedure Act, 1854, or any statutory modification thereof.

31. The contract will not be binding until it has been approved of by a resolution of the House of Commons, and by the Legislatures of New South Wales, Victoria, and South Australia.

No. 2.

Telegram from Premier of Queensland to Premier of New South Wales.

5 April, 1886.

REFERRING to your telegram of 27th March as to mail contract, this Government will be prepared to join the contracting Colonies on condition as to what mail matter shall be sent by contract steamers practically the same as those now existing. With respect to the letters to be sent by P. & O. and Orient steamers, provision will however have to be made for carriage of mails overland from Sydney to Border similar to that made in contract with respect to carriage through South Australia, and we are disposed to think that the proposed charges of tenpence per pound by each Colony, amounting to two shillings and sixpence altogether is high and might be reduced. Letter follows.

S. W. GRIFFITH.

Submitted.—R.S., 6/4/86. Acknowledge receipt.—P.A.J., 6/4/86. Done.—R.S., 6/4/86.
For my hon. colleague the Postmaster-General.—P.A.J., 6/4/86. The Secretary, General Post Office.—
G.E., 8/4/86. It

It is important that the London Post Office, as well as any intending tenderers, should know as long as possible before the 30th instant (the date for receipt of tenders) what Colonies are likely to join in the new service and to what extent they will use it. This telegram from Queensland does not afford very much information on these points, but I take it that what is meant is that they will use the new service whenever it is found to be advantageous to them in regard to alternating with their own service, and that they will probably use it to about the same extent as they now use the P. & O. and Orient line. The Agent-General might be so informed by wire.—S.H.L., 9/4/86. Approved.—F.B.S., 14/4/86.

No. 3.

The Secretary to the Post Office, Sydney, to The Principal Under Secretary, Sydney.

Sir,

General Post Office, Sydney, 15 April, 1886.

With reference to the matter of future mail communication between Great Britain and Australia *via* Suez, I am directed to enclose herewith a cablegram addressed to the Agent-General to the effect that the Colony of Queensland will probably use the proposed new service to the same extent as it now does the Peninsular and Oriental and Orient lines, and to request that you will be good enough to move the Colonial Secretary to cause the same to be transmitted to Sir Saul Samuel.

I have, &c.,

S. H. LAMBTON.

Prepare cable. Cablegram to Agent-General, 17/4/86. The Secretary to the Post Office.—C.W., P.U.S., B.C., 17 April, 1886.

Copy of Cablegram.

Understood Queensland will use proposed ocean mail service about same extent as it now does Orient and Peninsular lines. Inform Post Office.

No. 4.

The Right Honorable the Secretary of State for the Colonies to His Excellency
the Governor of New South Wales.

N. S. Wales.

(No. 21.)

My Lord,

Downing-street, 12 February, 1886.

With reference to previous correspondence respecting the arrangements for the Australian Mail Service, I have the honor to transmit to you, for the information of your Lordship's Government, copies of the advertisement, issued by the General Post Office, calling for tenders for the Australian Mail Service, and of the form of tender referred to in the advertisement.

The new Service is to commence on the 1st February, 1888, and your Government will no doubt see the importance of taking up the consideration of the matter with as little delay as possible, so as to give the contractors, whose tender is accepted, full time for making their preparations, and this will especially be the case if the contractor or one of the contractors should be some company or person other than the Peninsular and Oriental Co. or the Orient Steam Navigation Co. As soon as possible after the 30th April, the day fixed as the last day on which tenders can be received, I will inform you by telegraph of the amount of the payments named in the tenders and of the name of the tenderer whose offer is recommended for acceptance.

The conditions, annexed to the blank form of tender enclosed, have been framed so as to form the basis of the contract which would be entered into, if any tender is accepted; and I would suggest that your Government may perhaps think it desirable, in order that the contract may be completed in sufficient time to enable the successful contractor to provide the requisite steamer, to submit these conditions to the Colonial Legislature with a resolution approving them, and authorising the Government or the Agent-General of the Colony, alone or in conjunction with the Agents-General of the two other Colonies, whose concurrence in the contract is necessary, to approve, on behalf of the Colony, a formal contract embodying these conditions as they now stand, or with such reasonable modifications in them as Her Majesty's Government may be willing to accept in case any such modification should be suggested in the manner authorised in the foot-note to the form of tender.

It might also expedite the conclusion of the matter if your Ministers were able to obtain from the Legislative authority to agree with Her Majesty's Government upon the tender to be accepted, for much delay would be caused if the necessary resolutions are not passed in the Session of the present year.

I have, &c.,

GRANVILLE.

NOTE.—The enclosures herein referred to are the same as those forwarded by Mr. Baker and marked Nos. 4 and 5.

Colonial Secretary, for the Government.—C., 13/4/86. The Postmaster-General.—G.R.D., 16/4/86. The Secretary to the Post Office.—C.W., P.U.S., B.C., 16 April, 1886.

No. 5.

Telegram from Deputy Postmaster-General, Melbourne, to Secretary to Post
Office, Sydney.

21 April, 1886.

No definite answer has been received from Tasmania *re* Baker agreement, a second communication urging adhesion to it has been sent, and reply daily expected.

MAIL COMMUNICATION BETWEEN GREAT BRITAIN
AND AUSTRALIA, *VIA* SUEZ.

(MESSAGE No. 20.)

Ordered by the Legislative Assembly to be printed, 4 May, 1886.

CARRINGTON,

Governor.

Message No. 20.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends, for the consideration of the Legislative Assembly, the expediency of making provision to meet the requisite expenses in connection with "the agreement dated 21st August, 1885, made between the respective Postmasters General of the Colonies of New South Wales, Victoria, and South Australia, providing mail communication between Great Britain and Australia, *via* Suez, on the termination of the existing mail contracts with the Orient Steam Navigation Company and the Peninsular and Oriental Steam Navigation Company in January, 1888."

Government House,

Sydney, 4th May, 1886.

1885-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MAIL SERVICE BETWEEN SYDNEY AND SAN FRANCISCO.

(NEW MAIL CONTRACT BETWEEN COLONIES OF NEW SOUTH WALES AND NEW ZEALAND.)

Ordered by the Legislative Assembly to be printed, 24 November, 1885.

MAIL SERVICE BETWEEN SYDNEY AND SAN FRANCISCO.

No. 1.

Messrs. Gilchrist, Watt, & Co. to The Postmaster-General.

Sir,

Sydney, 1 June, 1885.

We are requested by the contractors for the San Francisco Mail Service to ascertain from you the views of the Government as to the renewal of the contract on its termination in November next, and whether you prefer to make an independent contract for a line direct San Francisco to Sydney, or, as hitherto, in conjunction with New Zealand.

All our correspondence on these matters was conducted with this Government until your notice of withdrawal in August last, and this Government acted on behalf of both Governments; hence we address ourselves in the first instance to you, and desire an early reply, to guide us as to making a proposition to New Zealand, and of what nature.

We have, &c.,

GILCHRIST, WATT, & CO.,

General Agents for the Contractors, San Francisco Mail Service.

Submitted.—S.H.L., 3/6/85. Inform that the whole question of mail services with Great Britain and Europe is now being considered by the Government, and that until some determination has been arrived at it will not be possible to give any definite reply to Messrs. G., W., & Co.'s communication.—J.N., 4/6/85.

No. 2.

The Secretary to Post Office, Sydney, to Messrs. Gilchrist, Watt, & Co.

Sir,

6 June, 1885.

I am directed by the Postmaster-General to acknowledge the receipt of your letter of the 1st instant, inquiring as to the renewal of the contract with the Pacific Mail Steamship Company for the conveyance of mails *via* San Francisco, and, in reply, to inform you that the whole question of mail services with Great Britain and Europe is now being considered by the Government, and until some determination has been arrived at it is not possible to give any definite reply to your communication.

I have, &c.,

S. H. LAMBTON.

No. 3.

The Secretary, General Post Office, Wellington, N.Z., to The Secretary, General Post Office, Sydney.

Sir,

General Post Office, Wellington, 6 August, 1885.

In connection with the advertising for tenders for the renewal of the San Francisco Mail Service, I have taken the liberty of informing the tenderers that the particulars and conditions may be seen at your office.

May I ask you, therefore, to be so good as to give effect to this by distributing the forms when applied for. Ten copies have been forwarded you.

I have, &c.,

W. GRAY,

Secretary.

I see no objection to this.—J.N.

New Zealand and San Francisco Mail Service.

PARTICULARS AND CONDITIONS.

THE Postmaster-General of New Zealand is prepared to receive tenders for the conveyance of mails between San Francisco and New Zealand, with the Port of Auckland as the terminus, once each way in every four weeks, with a branch service between Auckland and such port in Australia as may hereafter be agreed upon, for a period not exceeding three years from the commencement of the service.

The mails to be carried will be all such mails as the Postmaster-General may from time to time require the contractors to carry to and from such Australian port, Auckland, and San Francisco, the intermediate port of Honolulu in the Sandwich Islands, and any other place.

The service between Auckland and San Francisco may be performed by not less than two vessels, each being a good, substantial, and efficient screw steam-vessel of the first class, and fully equal to Class 100, A1, Lloyd's Register, and of not less than 2,500 gross registered tonnage, propelled by first-rate engines of adequate power, and having spar-decks, and large capacity for passengers and cargo, and ample ventilation for passing through tropical latitudes; and each vessel will be required to be under the command of a competent captain, having ample experience in the command of screw steam-vessels.

The service between San Francisco and Auckland to be performed in eighteen days or 432 hours each way. The branch service between Auckland and Australia to be performed in five days, or such lesser time as the Postmaster-General may appoint, and by such vessels, other than the vessels employed between San Francisco and Auckland, as may from time to time be approved by the Postmaster-General.

Separate tenders for a nineteen days' (456 hours') service between San Francisco and Auckland may also be sent in.

The vessels to be employed between Auckland and San Francisco and in the branch service are to be furnished with all necessary machinery, tackle, &c., and to be subject to the approval of the Postmaster-General before being employed.

The Postmaster-General is to have full power to inspect the vessels employed between San Francisco and Auckland, and in the branch service, their officers and crew, and to suspend the use of any vessel which may not be considered satisfactory, or to prevent the employment of any officer, engineer, or crew appearing to him to be ineligible.

The

The one twenty-sixth part of the subsidy will be paid by the Postmaster-General on the completion of the conveyance of each mail in accordance with the contract, and will be paid at Wellington.

If any vessel shall not be at the port of departure from time to time in due time, and ready to perform the service, a sum of £250, and a further sum of £50 per day, is to be paid by the contractors, to, or may be deducted by, the Postmaster-General as liquidated and ascertained damages; but he may remit or reduce these sums if satisfied that the default shall have arisen from causes over which the contractors had no control.

A bonus of £5 will be paid by the Postmaster-General for the delivery of the mails at Auckland or San Francisco, as the case may be, for every hour before the contract time, and a penalty of £4 an hour will be deducted for late delivery.

All subsidies obtained from other countries than Great Britain and her Colonies, or any of the Polynesian Islands, except the Hawaii Islands, for the conveyance of mails, are to belong to the contractors, if made under arrangements approved by the Postmaster-General.

The vessels must be provided with safe and convenient places of deposit for the mails, rendered vermin-proof, with locks, keys, and secure fastenings.

The contractors will have to provide the necessary lights and accommodation for sorting and making up the mails on board, with a separate and convenient room on the spar-deck for the purpose, rendering any assistance required for conveying the mails between the mail-room and the sorting-room.

The Postmaster-General is to be at liberty to intrust the custody of the mails to the master or commander of the vessel; and, in case of the officer in charge of the mails being absent, the master or commander is to take them in charge; and the contractors are to be responsible for the receipt, safe custody, and delivery of the mails.

All directions of the officers in charge of the mails are to be attended to so far as the same are reasonable and consistent with the safety of the vessel. The contractors are to have no claim for postage. A suitable first-class accommodation for a Mail Officer or Agent, and one assistant for the Postmaster-General, with a properly-fitted state-room for their exclusive use, is to be provided on board the vessels, and such officers or agents and assistants are to be victualled by the contractors as chief-cabin passengers without charge; and, during the time a vessel may stay at any port except Auckland or San Francisco, such officers, agents, and assistants are to be allowed to remain on board, and are to be victualled by the contractors.

The contractors are not to pay light, pilotage, tonnage, or harbour dues at Auckland.

The contract, or any part thereof, is not to be assigned or underlet without the consent in writing of the Postmaster-General. If the contract be assigned or underlet, or if there be a great or habitual non-performance or non-observance of the contract, and the Postmaster-General shall be of opinion that the contractors are not *bona fide* carrying out the contract, he is to be at liberty to determine it without previous notice, with liberty, nevertheless, to the contractors to have submitted to arbitration the question whether or not there was such a great or habitual non-performance or non-observance of the contract as to justify such determination; but the Postmaster-General is to incur no liability in case the determination be not upheld.

The Postmaster-General may except from any such determination any voyage or voyages, and the same shall be completed, and vessels *en route* are, notwithstanding the determination, to complete their voyage; and in these cases the contract is to be considered as terminated when the mails required to be carried, or then being carried, shall have been delivered.

The contractors are to bind themselves to pay to the Postmaster-General the sum of £20,000 by way of liquidated damages in case they shall fail to commence the service, or, having commenced it, shall wilfully refuse or neglect to carry on the same.

The contractors shall, within twenty-one days after notification in writing of the acceptance of the tender, execute a contract under seal with the Postmaster-General embodying the tender and these conditions, or in such other form as the Postmaster-General may decide, and, if required, enter, with two sureties, to be approved by the Postmaster-General, into a joint and several bond in the sum of £20,000.

Any disputes which may arise between the Postmaster-General and the contractors are to be subject to reference.

Tenders are to be made only in the accompanying printed form, and attached to these particulars and conditions, and are to be delivered at the General Post Office, Wellington, on or before Monday, the 7th of September, 1885, sealed up and indorsed "Tender for San Francisco Mail Service," and addressed to the Postmaster-General of New Zealand, Wellington, New Zealand.

The Postmaster-General does not bind himself to accept the lowest or any tender.

FORM OF TENDER.

To the Postmaster-General of New Zealand.

Sir,

I hereby offer to convey mails between San Francisco and Auckland, with a branch service to and from an Australian port and Auckland, once in every four weeks, during a period of three years from the date of commencement of the service, on or about the 18th day of November, 1885, and to provide for the service between Auckland and San Francisco at least two ships of the description above mentioned, and such other ships for the branch service, and under and according to the provisions, conditions, and stipulations contained in the advertisement and conditions of contract above referred to, for the sum of £ , say per annum, and payable by the Postmaster-General of New Zealand in respect to each separate mail, but to be subject to deductions as above mentioned in respect to each mail not conveyed within the contract time; and, in case you accept this tender, I undertake and agree forthwith to execute a contract, and further undertake and agree, upon the like request, to execute, together with two sureties, to be approved by you, a bond according to the form above mentioned.

Dated this day of , 18

Names, tonnage, and horse-power of the vessels to be employed between Auckland and an Australian port :—

No. 4.

Messrs. Gilchrist, Watt, & Co. to The Postmaster-General.

Sir,

Sydney, 14 August, 1885.

Referring to our letter of the 1st June, we beg to draw your attention to the tenders recently called for in Wellington, as follows :—

Deliverable at Wellington 7th September. Four-weekly service (eighteen days) between San Francisco, Honolulu, and Auckland—branch service (five days) to an Australian port to be hereafter designated.

Tenders have only been called for in New Zealand and Australia—not in England or America.

You will note the terminus is at Auckland, with a branch to an Australian port not named.

We would like much to have an indication of the views of this Government as to the future of the San Francisco contract, so that if you are prepared to take it up as a direct line, Sydney, Honolulu, possibly

possibly Fiji, and San Francisco, we may advise the Pacific Mail Steamship Company in time to prevent their binding themselves to New Zealand, or arranging other employment for the steamers now engaged in the service.

We have, &c.,

GILCHRIST, WATT, & CO.,

General Agents for the Contractors,
San Francisco Mail Service.

No. 5.

The Secretary to Post Office, Sydney, to The Secretary, Post Office, Wellington, N. Z.

Sir,

21 August, 1885.

I have the honor to acknowledge receipt of your letter of the 6th instant, forwarding ten (10) copies of the particulars and conditions of the renewal of the San Francisco Mail Service Contract, by your Colony, and requesting that they may be distributed to the tenderers who may apply for them at this office, and in reply to inform you that your request will be complied with by this Department.

I have, &c.,

S. H. LAMBTON.

No. 6.

Telegram from Postmaster-General, Wellington, N. Z., to Postmaster-General, Sydney.

Wellington, 29 August, 1885.

'FRISCO. service. Shall now be glad to hear from you that your Cabinet agree to contribute £7,000 a year towards cost proposed new service; have sent you copies conditions of contract, and you will see advertisements calling for tenders in Sydney papers.

JULIUS VOGEL,

Postmaster-General.

No. 7.

Telegram from Postmaster-General, Sydney, to Postmaster-General, Wellington, N. Z.

1 September, 1885.

My Cabinet will gladly consider question of contributing to 'Frisco service terminating here, but are not likely to contribute seven thousand to service terminating New Zealand and carried here by branch line.

JAMES NORTON,

Postmaster-General.

No. 8.

Messrs. Gilchrist, Watt, & Co. to The Colonial Secretary.

Sir,

Sydney, 9 September, 1885.

Referring to our letters of the 1st June and 14th August to the Postmaster-General, on the approaching termination of the San Francisco contract, and to your verbal communication of to-day, our advices from the owner of the "Australia" and "Zealandia" authorized us to negotiate for a service Sydney to San Francisco, *via* Honolulu, once each calendar month, for £25,000 per annum; but some time having elapsed since this offer, we would now require to get his sanction before making a contract.

If you are disposed to entertain this favourably, we will ask his sanction by telegraph.

We are anxious to get your answer as speedily as possible, as we have reason to believe another Steam Company is now negotiating to purchase or charter these two steamers for the purpose of undertaking the service now called for by New Zealand; for if the steamers were withdrawn it would involve considerable delay before other steamers could be placed on the line, and it is exceedingly improbable that any other Company could undertake the service on terms so favourable as those which the present contractors are willing to accept, in consequence of their steamers being on the station and being admirably adapted for the work.

If it is the wish of the Government that a tender should also be made for the service by way of Auckland, carrying the New Zealand mails, this would necessitate the employment of a third boat, and would cost more money. Probably in that case any subsidy paid by New Zealand might be arranged to divide equally betwixt New South Wales and the contractors; the same should be the case if the steamer be required to call at Fiji and there pick up the New Zealand mails.

We have, &c.,

GILCHRIST, WATT, & CO.

The Postmaster-General.—A.S. 26/9/85. The Secretary to the Post Office, B.C., 28 Sept., 1885.—C.W.

The Colonial Secretary may be asked to inform Messrs. Gilchrist, Watt, & Co., that this Government has agreed to join with New Zealand in a Mail Service between Sydney and San Francisco, subject to the approval of Parliament, and is therefore not now in a position to negotiate with the Pacific Mail Company for the performance of such a service.—J.N., 7/10/85.

The Principal Under Secretary, B.C., 14/10/85.—S.H.L.
Gilchrist, Watt, & Co. should be informed of this.—C.W., 17/10/85.

It is necessary that Messrs.
Approved.—G.R.D.

Wellington, 11 September, 1885.

'FRISCO Service. If we make Sydney terminus, will you pay fourteen thousand pounds (£14,000), receiving half contribution other Colonies? Twenty-five days Sydney; other details subject your approval. Please reply to-morrow, as Parliament prorogues early next week.

JULIUS VOGEL,
P.M.G.

No. 10.

Telegram from Postmaster-General, Wellington, N.Z., to Postmaster-General, Sydney.

Wellington, 14 September, 1885.

SERVICE, Sydney, Auckland, 'Frisco with Sydney terminus will cost much more than I anticipated. Thought when last wiring you obtain it for thirty thousand, now least price seems forty, and if we arrange it should have to ask you pay fourteen thousand and leave us whole of payments from other Colonies. We are not, however, favourable to this arrangement; we prefer another proposal, Sydney, Auckland, Honolulu, there connecting with fine steamers of Spreckles Bros., known as Oceanic Coy., which run steamers twice monthly between Honolulu and Francisco. Representative of Coy. here making arrangements with Union Coy. and Pearce's agents. We are decidedly favourable to this, as it is cheaper, and we think mail service will be better, as contractors' influence will obtain railway facilities; the cost is thirty thousand, not exceed twenty-five days; service Sydney, 'Frisco, Sydney terminus. Boat proceed from there Auckland, Honolulu, and back; Oceanic boats wait Honolulu, 'Frisco, twenty-four hours without demurrage, cost thirty thousand, contractors keeping any payments from America, Honolulu. We will recommend to our Parliament if you will contribute nine thousand, leaving us payments from other Colonies. Please reply quickly.

JULIUS VOGEL,
Postmaster-General.

Wellington, 17 September, 1885.

'FRISCO Service. You will greatly oblige the Government by an answer early to-day, as Parliament is within a few hours proroguing.

JULIUS VOGEL,
Postmaster-General.

No. 12.

Messrs. Gilchrist, Watt, & Co., to The Colonial Secretary.

Sir,

Sydney, 17 September, 1885.

Referring to our negotiations for the renewal of the San Francisco Service, on behalf of the Pacific Mail Steamship Coy., we think it only right to request that no contract should be entered into without giving that Company the opportunity of tendering for the service with Sydney as the terminus.

Their intimate knowledge of the trade made them decline to tender for a service terminating at Auckland; and as we see from the Press that New Zealand is about to arrange for a service terminating at Sydney, it is only right that they should have the opportunity of tendering if they wish to do so.

The Pacific Mail Steamship Co. consider they have reason to complain of the treatment they have experienced in the contract now expiring, and we trust you will see that a second injustice at the hands of New Zealand is not done them.

We have, &c.,

GILCHRIST, WATT, & CO.,
General Agents, Pacific Mail Steamship Co.

P.S.—We write you thus because we learn by wire that the Agents of the Pacific Mail Company at Auckland have entered a protest with New Zealand on behalf of the Pacific Mail Company against any contract being entered into in which they are deprived of the opportunity of tendering.

Seen.—A.S. The Secretary to the Post Office, B.C., 12 Oct., 85.—C.W.

No. 17.

Telegram from Postmaster-General, Wellington, N.Z., to Postmaster-General, Sydney.

22 September, 1885.

YOUR telegrams received *re* 'Frisco; venture ask you reconsider matter. Connection at Honolulu will mean contract in which Union Company, Mr. Pearce, and Oceanic Company, chiefly owned by Messrs. Spreckles Brothers all interested; suitable arrangements will be made for transshipping mails, passengers, and cargo at Honolulu. Oceanic Company runs fortnightly steamers between Honolulu, 'Frisco; they have two vessels, each 3,000 tons and 3,000 horse power, capable high speed, splendidly fitted for passengers, modern improvements, built 1883, superior anything hitherto on 'Frisco line. Our mail agent has reported very favourably on them. We think also Spreckles' influence secure us facilities from Railway Companies, and additional speed, which English Companies quite unable command. The route would be Sydney, Auckland, Honolulu, 'Frisco, and back. Spreckles would do Honolulu, 'Frisco, and Union Company, and Pearce Honolulu, Auckland, Sydney; time not exceed twenty and twenty-five days, Auckland and Sydney respectively, but shall try obtain half day concession. Contract for three years. You will have by far the greater advantage from this service, and we will accept £7,000 from you, you paying and receiving third bonuses and penalties, and leaving us contributions other Colonies. Great importance. Reply quickly. Spreckles' agent has to return, besides many arrangements require to be made to take up service.

JULIUS VOGEL.

No. 18.

Telegram from Postmaster-General, Sydney, to Postmaster-General, Wellington, N.Z.

23 September, 1885.

AFTER careful reconsideration this Government is willing, subject to approval of Parliament, to join in service between Sydney and 'Frisco *via* Auckland and Honolulu for £7,000 per annum, but requires to see proposed contract and to be furnished with full particulars of steamers and arrangements.

JAMES NORTON,
Postmaster-General.

No. 19.

Telegram from Postmaster-General, Sydney, to Postmaster-General, Wellington, N.Z.

23 September, 1885.

As this Colony must be party to contract for 'Frisco service, and you ask us to bear and receive one-third bonuses and penalties, would it not be simpler for this Colony to pay ten thousand, being one-third of contract, and receive the postages of the other Australian Colonies? Being thus joint contractors, we would be able to remit pilotage and dock dues as under former contract.

JAMES NORTON,
Postmaster-General.

No. 20.

Telegram from Postmaster-General, Wellington, N.Z., to Postmaster-General, Sydney.

24 September, 1885.

AM I to understand that your telegram of yesterday refers to service proposed with break at Honolulu, and that you include third share bonuses and premiums? Will you also bring at once before Parliament, subject of course to your approving contract and steamers. I am waiting enter into particulars of contract with intending contractors until I hear positively from you. When we go into details I shall advise and consult you.

JULIUS VOGEL.

Telegram from Postmaster-General, Wellington, N.Z., to Postmaster-General, Sydney.

Wellington, 25 September, 1885.

YOUR telegram yesterday received. There are practical difficulties making you party to contract because of time; I will make going to Sydney contingent on your arranging with us, we can then enter into sub-contract with you based on contract. If you prefer paying ten thousand and receiving half colonial contributions, and paying and receiving half bonuses and penalties, I am willing otherwise, seven thousand, and third premiums and penalties, we taking all from other Colonies dock and light dues understood to be free in either case, have cabled Postmaster-General, United States, urgently asking special contribution, four thousand yearly in addition to payment American mail, matter which contractors receive. If, which I doubt, four thousand be granted, will divide equally between you, contractors, and ourselves. I understand you approve connection at Honolulu. Please reply whole subject.

JULIUS VOGEL.

Telegram from Postmaster-General, Sydney, to Postmaster-General, Wellington, N.Z.

25 September, 1885.

WE see no practical difficulty in being made party to contract, which is what we understood you offered. We want direct control over contractors. So far as our part of service is concerned, we never remit dues except to vessels under contract to us. We prefer to pay ten thousand and pay and receive one-third bonuses and penalties, receiving not half but all contributions of other Australian Colonies, which probably will not amount to the extra three thousand. We do not object to change of vessels at Honolulu, provided contract and our payment cover entire service Sydney to 'Frisco. We will submit question to Parliament, which we expect will approve.

Wellington, 26 September, 1885.

To meet your wishes will frame contract to make you party to it; must however ask you let us fix date departure London Sydney to alternate with direct service. You are misinformed amount other Colonies contributions for years not below five now about six thousand, and, as Union Company, Pearce and Spreckles can push trade, American correspondence sure increase. You must choose between ten thousand and half contributions, or seven thousand, and we keeping the whole in either case, you paying and receiving one-third bonuses, penalties. Please reply.

28 September, 1885.

'FRISCO Service.—We understand your proposition to be as follows:—Contract between New Zealand, New South Wales, Union Company, Pearce and Oceanic Company, for three years' service between Sydney, Auckland, Honolulu, without break, by Union Company or Pearce's boats; thence between Honolulu and 'Frisco by Oceanic Company's boats, which will wait at Honolulu, if necessary, twenty-four hours without demurrage. Time not to exceed twenty-five days between Sydney and 'Frisco. New South Wales to pay £10,000 per annum, and one-third bonuses for extra speed; and to receive half contributions from other Australian Colonies, one-third penalties chargeable to contractors, and one-third of any subsidy which may be obtained from United States. New South Wales to remit to contract boats all dock and other dues, as in case of late Pacific contract. Proper provision to be made in contract for suitable boats and conveniences for transshipment as mentioned in your telegrams; you to prepare contract and submit it to us for approval. You may fix time-table. On receipt of your reply confirming above, we will submit matter for approval of Parliament.

JAMES NORTON.

Telegram from Postmaster-General, Wellington, N.Z., to Postmaster-General, Sydney.

Wellington, 29 September, 1885.

YOUR telegram correct, excepting that we are only to divide the £4,000 from United States, indicated by the telegrams, of which I sent you copies; other subsidies, if any, obtainable from States contractors. Very desirable, if possible, you should avoid publishing cablegram on the two points relating to twenty-five days' service and demurrage, as we are trying to make voyage twenty-four and half days and to obtain forty-eight hours free of demurrage at 'Frisco and Honolulu. If known you are contented with less, contractors will not grant. The contract will be made between two Postmasters-General and contractors; we shall all sign and then send to you. There will be clause making contract inoperative without your signature, and declaring that if there are any points with which you are not satisfied they shall be subject to reconsideration. Hope you will get Parliamentary sanction at once. I calculate net cost of service, exclusive penalties and bonuses, will be about £16,000 to us, and to you about £6,000; this, of course, exclusive of postages you and we will receive in our own Colonies and from England.

I ATTACH copy of clause *re* your signature and approval your Parliament; the contract is with Union Company, who sub-contract with Oceanic; option open to Pearce to come in until Friday; if he refuse latter vessels will be employed, time twenty-five days, bonuses not to exceed thirty-six hours and detention

detention Honolulu thirty-six hours free demurrage; beyond that until mails ready, £5 an hour. Reply if you approve clause as follows:—"This contract shall not be operative but wholly void unless the Postmaster of New South Wales shall execute it within twenty days after the date first hereinbefore written; and it is hereby expressly agreed that if there are matters in the said contract with which the said Postmaster-General is dissatisfied or which he desires to be reconsidered, the same shall be open to reconsideration and he may execute the contract, subject to its reconsideration. If the Postmaster-General of New South Wales shall avail himself of this provision, the Postmaster-General of New Zealand shall be deemed equally entitled to reconsider the same matters, and his execution of these presents shall be deemed to have been made, subject to this reservation if such reconsideration is required, then it shall take place in such manner as may be mutually agreed to between the Postmasters-General and the contractors; and it is further approved that the execution of this contract by the Postmaster-General of New South Wales shall be subject to the condition that he adopts the contract, subject to its being ratified by the Parliament of New South Wales during its next succeeding session, but that until the ratification is refused the said Postmaster-General shall continue to perform this contract on his part, including payments for any voyage commenced at the time of such refusal by the said Parliament."

JULIUS VOGEL.

I see no objection to proposed clause or to the terms mentioned in the first part of the telegram. Forward to Colonial Secretary.—J.N., 7/10/85.

No. 33.

Minute for Executive Council.

General Post Office, Sydney, 7 October, 1885.

THE authority of His Excellency the Governor and the Executive Council is requested to enable the Postmaster-General to enter into a contract, jointly with New Zealand, with the owners of steamships of not less tonnage than those employed in the late contract with the Pacific Mail Company, for a line of mail communication between Sydney and San Francisco *via* Auckland and Honolulu, with liberty to change steamers at the latter port, Sydney being the terminal port on this side; this Colony to contribute one-third of the contract amount, or £10,000 per annum, and be entitled to receive in reduction thereof one-half the contribution or postage rates from the other Australian Colonies and one-third of any contribution made by the Postmaster-General of the United States.

It is understood that the contract is with the Union Steamship Company of New Zealand, who sub-contract with the Oceanic Company, and possibly with Mr. Pearce, who is interested in the steamships "Zealandia" and "Australia." The time to be twenty-five days between San Francisco and Sydney, with bonuses to be paid for time gained, not exceeding thirty-six hours, at £5 an hour; detention at Honolulu thirty-six hours, free of demurrage; beyond that until mails ready, £5 an hour allowed.

The contract to contain a clause to the following effect:—"This contract shall not be operative but wholly void unless the Postmaster-General of New South Wales shall execute it within twenty days after the date first hereinbefore written; and it is hereby expressly agreed that if there are matters in the said contract with which the said Postmaster-General is dissatisfied or which he desires to be reconsidered the same shall be open to reconsideration, and he may execute the contract subject to its reconsideration. If the Postmaster-General of New South Wales shall avail himself of this provision the Postmaster-General of New Zealand shall be deemed equally entitled to reconsider the same matters, and his execution of these presents shall be deemed to have been made subject to this reservation. If such reconsideration is required then it shall take place in such manner as may be mutually agreed to between the Postmasters-General and the contractors; and it is further approved that the execution of this contract by the Postmaster-General of New South Wales shall be subject to the condition that he adopts the contract subject to its being ratified by the Parliament of New South Wales during its next succeeding session, but that until the ratification is refused the said Postmaster-General shall continue to perform this contract on his part, including payments for any voyage commenced at the time of such refusal by the said Parliament."

JOHN SEE.

The Executive Council having carefully considered the terms of the proposed agreement for a line of mail communication between Sydney and San Francisco, *via* Auckland and Honolulu, approve of the same, and advise that authority be granted to enter into a contract upon the terms herein specified.

ALEX. C. BUDGE,

Clerk of the Council.

Min. 85-38, 20/10/85. Approved.—A.L., 20/10/85. Confirmed, 27/10/85. Place with papers.—S.H.L., 31/10/85.

The following Notice of Motion was submitted with above Minute for Executive Council.

General Post Office, Sydney, 2 October, 1885.

Legislative Assembly.—Notice of Motion.—Friday, 2 October, 1885.

Government Business—Notice of Motion:—

1. SIR ALEXANDER STUART to move, That this House will, to-morrow, resolve itself into a Committee of the Whole to consider the following Resolutions:—

(1.) That this House approves of a contract being entered into, jointly with New Zealand, with the owners of steamships of not less tonnage than those employed in the late contract with the Pacific Mail Company, for a line of mail communication between Sydney and San Francisco *via* Auckland and Honolulu, with liberty to change steamers at the latter port, Sydney being the terminal port on this side.

(2.) That for such service this Colony do contribute one-third of the contract amount, or £10,000 per annum, and be entitled to receive in reduction thereof one-half the contribution or postage rates from the other Australian Colonies, and one-third of any contribution made by the Postmaster-General of the United States.

(3.) That the foregoing Resolutions be communicated by Address to His Excellency the Governor.

No. 34.

The Secretary, General Post Office, Wellington, N.Z., to The Secretary, General Post Office, Sydney.

Sir,

General Post Office, Wellington, 10 October, 1885.

I am directed by the Postmaster-General to forward you three copies of the proposed contract for the San Francisco Mail Service, which has been agreed to by the contracting Company, and was signed yesterday by Sir Julius Vogel. The Union Company will execute early next week, and so soon as their seal has been affixed the contract will be forwarded to you for ratification and execution by your Postmaster-General.

I also enclose half a dozen copies of the approved time-table, and would add that it has now been definitely arranged that Mr. Pearce is to come in, and that his boats the "Australia" and "Zealandia" are to be employed to carry out that part of the service between Sydney and Honolulu. The boats to be employed between Honolulu and San Francisco are the "Alameda" and the "Mariposa," owned by the Oceanic Steamship Company, in every way suitable for the service. They are vessels of 3,000 tons, capable of attaining a speed of 16 knots an hour, and fitted with all modern improvements.

I have, &c.,
W. GRAY,
Secretary.

P.S.—Should there be any points in the contract requiring explanation, Sir Julius Vogel would be glad if your Postmaster-General would at once communicate by cable.—W.G.

No. 35.

The Secretary to General Post Office to The Crown Solicitor.

Sir,

General Post Office, Sydney, 22 October, 1885.

I am to state that the facts related in the contract are correct, and to request that you will be so good as to advise the Postmaster-General whether there is any legal objection to the phraseology of the document,

Mr. See will be glad if you will give this matter your early attention.

I have, &c.,
S. H. LAMBTON.

No. 36.

The Secretary, General Post Office, to The Crown Solicitor.

Sir,

28 October, 1885.

Referring to my letter of the 22nd instant, forwarding you a copy of the proposed agreement between the Postmaster-General of New Zealand, the Postmaster-General of New South Wales, and the Union Steamship Company of New Zealand, I am directed by the Postmaster-General to state that it is exceedingly necessary that this contract should be very binding in regard to Sydney being one of the terminal points of the service, and that the steamer leaving Sydney shall proceed right through to Honolulu *via* Auckland, and the steamer leaving Honolulu in each case shall come right on to Sydney *via* Auckland without any transshipment into a second steamer.

In perusing the agreement in question, therefore, will you be kind enough to bear this point in mind.

I have, &c.,
S. H. LAMBTON.

No. 37.

The Secretary, General Post Office, Wellington, N.Z., to The Secretary, General Post Office, Sydney.

Sir,

General Post Office, Wellington, 12 October, 1885.

By the "Hauroto" on Saturday I forwarded you copies of the new San Francisco contract as signed by the Postmaster-General of this Colony. I now forward you in triplicate the contract executed by the Union Steamship Company as well, for the purpose of having it signed by the Postmaster-General of New South Wales.

You will observe that the name of the Postmaster-General of your Colony has been left blank. This somewhat unusual course had to be followed in consequence of it having been assumed that Mr. Norton had resigned and his successor had not been officially announced. You will no doubt see fit to communicate by telegraph should there be any points in the contract requiring elucidation.

I have, &c.,
W. GRAY,
Secretary.

This contract has been carefully examined, and appears to be in terms of the arrangement agreed to. A copy was sent to the Crown Solicitor for revision on the 22nd ult., but has not yet been returned. On inquiry of him I learn that he is awaiting the Attorney-General's opinion as to whether the contract fully provided for the steamer which leaves Sydney going through to Honolulu, and for that which leaves Honolulu coming through to Sydney. As the time stipulated in the contract within which the Postmaster-General of New South Wales is to execute it is presumed to expire to-day, and as the 46th clause provides for the Postmaster-General of New South Wales executing subject to reconsideration of any matters with which he is dissatisfied, the document is submitted herewith.—S.H.L., 3/11/85.

Telegram from Postmaster-General, Sydney, to Postmaster-General, Wellington, N.Z.

28 October, 1885.

Re 'Frisco service. Is Pearce in the contract?

JOHN SEE,
Postmaster-General.

No. 40.

Telegram from Postmaster-General, Wellington, N.Z., to Postmaster-General, Sydney.

THE Union is to work Pearce's boats, under sub-arrangements of which I am not cognizant. Believe they have settled terms between them on basis Union acting as Pearce's agents. We have primarily to look to Union Co.

JULIUS VOGEL.

No. 41.

The Chamber of Commerce to The Postmaster-General.

Sir,

Sydney, 30 October, 1885.

Referring to the deputation from this Chamber to you this morning, relative to proposed contract for mails *via* San Francisco, I have now the honor to hand you copy of the resolutions adopted at a meeting of the Chamber held at 11:30 this morning (the copy furnished you at time of deputation being a rough one hurriedly written at the meeting before alluded to).

I have, &c.,

HENRY CHAS. MITCHELL.

1st. It having been reported that the Government of New South Wales has entered into an agreement with the Government of New Zealand to pay a certain sum annually towards the cost of a Pacific Mail Service from Sydney, *via* Auckland to Honolulu, by the Union Steamship Company of New Zealand, to be continued thence to San Francisco by an American Company, this Chamber expresses its strong disapproval of such a service, involving as it does the transhipment of mails and the consequent risk of delay.

2nd. That the Chamber further disapproves of any subsidy being paid towards a mail service for which tenders have not been called in the most public manner.

3rd. That whilst it may be fairly argued that the time has arrived for the abolition of all steam postal subsidies, it would be good policy on the part of the Government, if no satisfactory arrangement can be made with New Zealand, to pay a liberal subsidy for an independent service direct from Sydney to San Francisco.

No. 42.

Report from *S. M. Herald*, *re* Deputation from Chamber of Commerce.[Extract from the *Sydney Morning Herald* of the 31st October, 1885.]

THE SAN FRANCISCO MAIL SERVICE—DEPUTATION FROM THE CHAMBER OF COMMERCE.

YESTERDAY a deputation from the Chamber of Commerce, consisting of Mr. W. Murray (Chairman), Mr. W. M'Millan (Vice-chairman), Messrs. Gotthelf, W. A. Cottee, G. Prosser, W. Bell, G. Toser, J. Burns, J. H. Story, and Mitchell (Secretary), had an interview with the Hon. Postmaster-General in reference to the San Francisco Mail Service.

Mr. W. G. Murray thanked the Minister for giving them so early an opportunity of meeting him, and he was thankful they had in Mr. See a business man to meet in regard to this matter. He desired to state that the Chamber of Commerce, on the 21st September last, passed the following resolution:—"That this Chamber is of opinion that the San Francisco service should be continued, with Sydney as the terminal port, provided that the Government arrange it at a reasonable cost." Since then they had been informed through the public Press of what had been done in the matter, and it seemed to some members of the Chamber of Commerce that the arrangements made did not meet the requirements of the public or the wishes of the Chamber. The matter had been considered by the Chamber at two or three meetings, and at a meeting held that morning resolutions were discussed and adopted as follows:—"1. It having been reported that the Government of New South Wales has entered into an agreement with the Government of New Zealand to pay a certain sum annually towards the cost of a Pacific Mail Service from Sydney *via* Auckland to Honolulu by the Union Steamship Company of New Zealand, to be continued thence to San Francisco by an American Company, this Chamber expresses its strong disapproval of such a service, involving as it does the transhipment of mails and the consequent risk of delay. 2. That the Chamber further disapproves

disapproves of any subsidy being paid towards a mail service, for which tenders have not been called in the most public manner. 3. That, whilst it may be fairly argued that the time has arrived for the abolition of all steam postal subsidies, it would be good policy on the part of the Government, if no satisfactory arrangement can be made with New Zealand to pay a liberal subsidy for an independent service direct from Sydney to San Francisco." He looked upon the mails as the only excuse for a subsidy at all, for passengers and cargo could pay their own way.

Mr. M'Millan said these resolutions were more of a suggestive character than anything else, indicating the general feeling of the commercial community, more particularly with regard to a breach in the service. They desired to avoid the idea that they wished to take up any antagonistic or anti-federal position with regard to New Zealand, but they thought any arrangement that might be made should be of a thoroughly mutual character, and that there should be full publicity with regard to calling for tenders. Those, they thought, were the lines that should have been adopted, instead of being carried on secretly, and bursting upon the Sydney public in the manner in which it had. They felt that the service between Sydney, Auckland, and San Francisco should be continued, but it appeared that the New Zealand people had made a hard and fast contract, while our agreement was subject to the approval of Parliament. They thought that if the New Zealand Government had absolutely committed themselves to the break at Honolulu, it might be advisable for this Government to consider the carrying out of a direct service either straight to San Francisco, or by way of Auckland. The break would be a very serious difficulty and obstruction to the business between this Colony and America, which had been growing so greatly of late years. He did not see where there could be any ultimate economy in having a break. If the steamers of the Oceanic Company were not good enough to be put upon this line, they were not good enough to go from America to Honolulu. The Chamber of Commerce felt, with regard to mails, cargo, and the comfort of passengers, it would be a great calamity if the break at Honolulu were insisted upon. If it could be carried out, they believed that a moderate subsidy would enable them to have a direct service for themselves. If the Government agreed that there should be a service without a break, they decidedly said it could not be done in conjunction with the New Zealand Government.

Mr. Prosser thought it rather strange when one steamer more would be sufficient for the direct service, that they could not have that extra steamer, and have the benefit of the direct service.

Mr. Gotthelf referred to the inconvenience and loss likely to arise from the transshipment of cargo, and he pointed out that passengers would be unable to ensure getting berths when they changed at Honolulu from one steamer to the other.

Mr. See said they were no doubt all aware that the negotiations for the proposed contract were carried out by Mr. Norton before his accession to office. However, he had made himself acquainted with the details of what had been done by his predecessor, and he had had all the telegrams prepared which had passed on the subject between Sir Julius Vogel and the late Postmaster-General, and from these, which have already been published, he quoted largely to the deputation. It then only remained for him to say that he thought he was bound to carry out the intentions of the late Postmaster-General, though the Parliament might refuse to ratify what the late Government had done. They were in this position,—that unless they agreed to this they would have no service at all. He reminded them that Sydney was to be the terminus of the service; and, with regard to the passenger accommodation, one-fourth would always be reserved absolutely in the Oceanic Company, and they had agreed to reserve more if necessary. The steamers they proposed to perform the service with between Sydney and Honolulu were the "Zealandia" and the "Australia." Then it was proposed on the line from Honolulu to San Francisco to have steamers of 3,000 tons, with expansion gear; and they were supposed to travel 16 knots an hour. Every facility would be afforded at Honolulu for the transshipment of mails and passengers, and thirty-six hours would be allowed there. He desired also to point out that New Zealand was always a great attraction for travellers; and to have a direct service, not touching at New Zealand, would take a great many passengers from us; and further, it was a question whether we should not be acting in opposition to those federal principles which we should all like to see carried out. With regard to the cost of the services, the net cost to the Colony of the service as proposed would be only £1,300, as against £17,000 for a direct service. There were, of course, questions that Parliament would have to consider. He had endeavoured to place the deputation in possession of all the details of what had taken place up to the time of his taking office, and he felt that he was in duty bound to carry out the arrangements commenced by his predecessor, subject, of course, to the approval of Parliament. With regard to what had been said in reference to damage to cargo, he informed them that the Company coming here would be liable to us, and whatever grievance we had we should look to that Company to make it good. It was quite optional for our Parliament to cancel this contract, and it was optional for New Zealand to carry it on, but in the event of our having a direct line we should have two competing lines to America. If the service was found not to be a good one, it was quite competent for Parliament to refuse to ratify it; if it was a good one, it was better for us to have this service. He had every confidence in the Union Company fulfilling everything they had undertaken to do.

No. 43.

The Crown Solicitor to The Secretary, General Post Office.

Sir,

Crown Solicitor's Office, Sydney, 3 November, 1885.

I have the honor to return herewith the printed copy of the proposed contract for the San Francisco Mail Service, and to state that I have submitted same for the perusal of the Honorable the Attorney-General, who states that he thinks the marginal alteration in paragraph 5 will be advisable to place the question of terminal port and transshipping beyond all doubt.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

Prepare telegram to New Zealand informing that Postmaster-General has signed the contract, mentioning alteration.—S.H.L., 4/11/85. Telegram sent, 4/11/85.—JAs. D.

SAN FRANCISCO MAIL SERVICE.

CONTRACT between the Postmaster-General of New Zealand, the Postmaster-General of New South Wales, and the Union Steamship Company of New Zealand (Limited).

ARTICLES of agreement made and entered into this ninth day of October, one thousand eight hundred and eighty-five, between the Honorable Sir Julius Vogel, K.C.M.G., the Postmaster-General of the Colony of New Zealand, as such Postmaster-General, and acting for and on behalf of the Government of the said Colony, of the first part; the Postmaster-General of the Colony of New South Wales for the time being, as such Postmaster-General, and acting for and on behalf of the Government of the said Colony, of the second part; and the Union Steamship Company of New Zealand (Limited), of Dunedin, in the Colony of New Zealand, hereinafter designated "the contractors," of the third part: Witness that the contractors do for themselves, their successors, and assigns (so far as the covenants and agreements hereinafter contained are to be observed and performed by the contractors), hereby covenant with the Postmaster-General of the Colony of New Zealand and his successors, and with the Postmaster-General of the Colony of New South Wales and his successors, and also as a separate covenant with each of the Postmasters-General and his successors: And the Postmaster-General of the Colony of New Zealand and the Postmaster-General of the Colony of New South Wales do and each of them doth, for and on behalf of himself respectively as such Postmaster-General, and his successors respectively, and the Government of the Colony for which he is now respectively the Postmaster-General (but so far only as the covenants and agreements hereinafter contained are to be observed or performed by or are applicable to the Government of the said Colonies respectively), hereby covenant with the contractors and their successors in manner following, that is to say:—

1. In the construction of these presents the following words and expressions shall mean and include (unless such meaning shall be inconsistent with the context) as follows:—

"Postmaster-General of New Zealand" means the Postmaster-General for the time being of that Colony:

"Postmaster-General of New South Wales" means the Postmaster-General for the time being of that Colony:

"Postmasters-General" means the Postmaster-General for the time being of New Zealand and the Postmaster-General for the time being of New South Wales:

"Contractors" includes the successors and assigns of the contractors:

"Mails" includes all boxes, bags, or packets of letters, newspapers, books, or printed papers, patterns, and all other articles transmissible by post, without regard either to the place to which they may be addressed or to that in which they may have originated; also all empty bags, empty boxes, and other stores and articles used or to be used in carrying on the Post Office service:

"Mail" means the aggregate of mails transmitted at any one time by any of the vessels for the time being employed in the mail service under this contract: and

"Hours" means hours calculated according to Greenwich time.

2. The contractors shall from time to time, and at all times hereafter, during a period of three years, computed from the twenty-first day of November, one thousand eight hundred and eighty-five, unless previously terminated in pursuance of the provision in that behalf hereinafter contained, convey all Her Majesty's mails which, and all other mails of whatever country or place which, the Postmasters-General or either of them shall at any time and from time to time require the contractors to convey, from and to the following ports, that is to say, Sydney, Auckland, Honolulu, San Francisco, and any port or ports intermediate between Sydney and San Francisco at which the steam-vessels hereinafter mentioned may call as hereinafter mentioned, or any of such ports, and within the respective times and in manner hereinafter provided for; and, so long as the whole or any part of the services hereby agreed to be performed ought to be performed in pursuance of this contract, shall and will provide and keep seaworthy and in complete repair and readiness for such purpose a sufficient number of and not less than four good, substantial, and efficient screw steam-vessels of the first class, and fully equal to class 100 A1 Lloyd's Register, and of not less gross register tonnage than two thousand five hundred tons each, constructed of iron, and propelled by first-rate engines of adequate power for the performance of the voyages, within the times hereinafter specified, and having spar decks, and large capacity for passengers and cargo, and ample ventilation for passing through tropical latitudes.

Of the vessels to be so provided, two vessels shall be employed between San Francisco and Honolulu, and two vessels between Honolulu, Auckland, and Sydney. One half of the passenger accommodation afforded by each vessel running between San Francisco and Honolulu is to be reserved for and appropriated to passengers to and from Auckland and Sydney; and one half of the passenger accommodation afforded by each vessel running between Honolulu, Auckland, and Sydney is to be reserved for and appropriated to passengers to and from each of the said Colonies respectively: Provided that, should any of the four screw steam-vessels aforesaid become disabled through tempestuous weather or by reason of accident beyond the control of the contractors, then it shall be lawful for the contractors to provide and equip a screw steam-vessel or vessels as substitute or substitutes, capable of performing the voyage within the time specified, and any substitute vessel shall not be of any less gross tonnage than 2,500 tons: Provided further that in any special case, and with the written consent of the Postmasters-General, a vessel of less than 2,500 tons gross register may be used as such substitute vessel as aforesaid, and every such vessel shall be subject to the terms and conditions of this contract for or in respect of any voyage as aforesaid so far as such terms and conditions are applicable.

3. The steam-vessels to be employed under this contract shall be always furnished with all necessary and proper machinery, engines, apparel, furniture, stores, tackle, boats, fuel, lamps, oil, tallow, provisions, anchors, cables, fire-pumps and other proper means for extinguishing fire, lightning-conductors, charts, chronometers, nautical instruments, and whatsoever else may be necessary for equipping the said vessels and rendering them constantly efficient for the performance of the voyages within the times hereinafter specified and for the service hereby agreed to be performed, and also manned and provided with competent and legally-qualified officers, the master or commander having ample experience in command of screw steam-vessels, and with a sufficient number of efficient engineers, and a sufficient crew of able seamen and other men, and with a competent surgeon, to be in all respects, as to vessels, engines, equipments, and capacity, subject in the first instance, and from time to time and at all times afterwards, to the approval of the Postmasters-General or of such other person or persons as they shall jointly or severally at any time or times or from time to time authorize to inspect and examine the same; and no vessel shall be employed or used for the purposes of this contract until approved as aforesaid. Every vessel used for the purposes of this contract other than those now or lately used in the existing San Francisco mail service, known as the "Zealandia" and "Australia," shall be fitted with refrigerators or ice-chambers, in which fish ova or other natural productions may be carried or conveyed, and such refrigerators shall be fitted with all necessary appliances and machinery for working and keeping the same effective:

Provided nevertheless, and it is hereby declared, that the contractors, so long as they shall convey the mails within the times and in the manner hereinafter provided, shall not be required to keep more than four vessels actually engaged in conveying the mails, and furnished with stores, fuel, and provisions, and manned and provided with officers, engineers, crew, and a surgeon as hereinbefore provided for.

4. The Postmasters-General, or either of them, shall have full power whenever and as often as they or he may deem it requisite, by any of their or his qualified officers or agents, to inspect the officers, engineers, and crew of all or any of the vessels employed or to be employed in the performance of this contract, and to survey all or any of such vessels, and the hulls thereof, and the engines, machinery, furniture, tackle, apparel, stores, and equipments of every such vessel; and any defect or deficiency that may be discovered on any such survey shall be forthwith repaired or supplied by the contractors. And for the purposes aforesaid the said vessel shall (if necessary) be opened in their hulls whenever the said officers or agents may so require; and if any such vessel or any part thereof, or any engines, machinery, furniture, tackle, apparel, boats, stores, or equipments, shall on any such survey be declared by any such officers or agents unseaworthy or not adapted to the service hereby agreed to be performed, or any such officers, engineers, or crew shall be so declared ineligible, every vessel which shall be disapproved of, or in which such deficiency or defect shall appear, shall be deemed insufficient for any service hereby agreed to be performed, and shall not be again employed in the conveyance of mails until such defect or deficiency has been repaired or supplied to the satisfaction of the Postmasters-General or officer requiring the same; and any of such officers, engineers, or crew declared ineligible shall not be employed in the said service.

5. The mails shall be conveyed thirteen times in each year between San Francisco, Auckland, and Sydney, by way of Honolulu, and at the same rate between Sydney, Auckland, and San Francisco, by way of Honolulu, *without transshipment except at Honolulu*;* and the vessels respectively employed to convey the mails shall leave the said ports of Sydney, Auckland, Honolulu, and San Francisco on the days and at the times to be from time to time appointed for the purpose by the Postmaster-General

* NOTE.—The portions of clause 5 which are printed in italics are those proposed by the Postmaster-General of New South Wales, and referred to in the attestation clause as the alterations marked in red ink.

Postmaster-General of New Zealand, who shall allow a sufficient time at the ports of Auckland and Honolulu for the delivery and receipt of mails, and the embarkation or landing of passengers and cargo, *Sydney being the terminal port for all such voyages.** The said vessels, on each voyage between San Francisco, Honolulu, Auckland, and Sydney, and between Sydney, Auckland, Honolulu, and San Francisco, shall call, if required by the Postmasters-General but not otherwise, off the Navigator Islands, for the purpose of landing and receiving mails, and, with the consent in writing of the Postmasters-General, between Sydney and San Francisco: Provided that, if any vessel shall be required as aforesaid to call off the Navigator Islands, and be detained for the purpose of receiving or delivering mails exceeding one hour, then such additional time beyond such hour shall be added to the duration of the voyage.

6. The contractors, at their own expense, shall deliver and take the mails to and from the steamers at Honolulu and to and from the shore at convenient places, to be from time to time appointed by the Postmasters-General respectively, in the respective ports from and to which the mails are to be conveyed; and also shall convey the same and the officers having charge of them to and from such steamers and to and from the shore as may be necessary, in suitable boats, furnished with suitable coverings for the mails, and properly equipped and manned; and shall from time to time convey the officers or agents of the Postmasters-General respectively to and from such steamers and to and from the shore at any of the said ports, as often as may be necessary in the execution of their duties respectively, in the event of a suitable boat not being conveniently obtainable from the shore for the purpose.

7. If either of the said Postmasters-General or their respective officers or agents shall at any time deem it requisite for the public service that any vessel should be delayed beyond the appointed time of departure, it shall be lawful for either of the Postmasters-General or such officers or agents to order such delay, not exceeding thirty-six hours at San Francisco or Honolulu, and not exceeding twenty-four hours at either Sydney or Auckland, free of charge for demurrage, by letter addressed to and delivered to the commander of the vessel or the person acting as such, or left for him at the office of the contractors in the port or on board the vessel, three hours at least before the hour appointed for departure.

And in order to insure the due carrying of the mails to and from San Francisco and Honolulu, the contractors, without any such notice, shall delay the departure of any vessels (if necessary), at San Francisco and Honolulu respectively, six days, to await the arrival of the mails from London for Australia and New Zealand, and six days at Honolulu, for the arrival there of the mails from Sydney and Auckland for London. For such detention at San Francisco, but not at Honolulu, demurrage at the rate of five pounds an hour shall be paid the contractors; such days to be reckoned from the due date of the arrival of the said mails respectively, but for the first thirty-six hours there shall be no payment for demurrage. The Postmaster-General of New Zealand shall also be at liberty from time to time to postpone the times of departure of the said vessels from the port of Auckland for a longer period than twenty-four hours, with the consent of the Postmaster-General of New South Wales, but not otherwise; but for every hour over such twenty-four hours demurrage at the rate of five pounds an hour shall be paid.

8. If from any cause whatsoever, at any time or times hereafter, one of the vessels aforesaid shall not be at the ports of San Francisco, Honolulu, Auckland, and Sydney respectively, ready to put to sea in due time to perform the services hereby contracted to be performed, the contractors shall pay as liquidated damages to the Postmaster-General in respect of every mail that shall be delayed by reason of any such default as aforesaid the sum of two hundred pounds, and the further sum of fifty pounds for every successive twenty-four hours which shall elapse between the time at which the mail shall be appointed to leave the port and the time at which the vessel conveying the same shall leave the port, whether such vessel shall be one of those aforesaid or any other vessel which the Postmasters-General shall think fit to employ or to sanction being employed for the purpose: Provided that the Postmasters-General shall have power to remit or reduce any of the sums payable, as in this clause mentioned, if they shall be satisfied that any such default as aforesaid was attributable to causes over which the contractors had no control: Provided also that the maximum amount to be paid by the contractors under this clause in respect of such defaults for any one voyage shall not exceed one thousand pounds.

9. The mails shall be safely conveyed from San Francisco to Sydney within six hundred hours, and from Sydney to San Francisco within a like period, and from San Francisco to Auckland within four hundred and eighty hours, and from Auckland to San Francisco within a like period; the times aforesaid to be calculated from the times appointed for the departure of the mail respectively, unless any vessel shall be delayed in consequence of the mail not being ready for embarkation in due time either at San Francisco or at Sydney or at Auckland, in which case the time shall be calculated from the time of the mail being ready for delivery at the port where the delay shall take place.

In case of the loss of any of the mails by wreck of any mail-vessel or otherwise, the contractors shall with all possible despatch, at their own cost, do all such acts and take all such measures as may be reasonably done and taken to recover the mails so lost; and the contractors shall be liable for all damage or injury to any of the mails, from whatever cause the same may arise or happen, except fire, the act of God, or the Queen's enemies.

10. The payment of all the services mentioned in this contract shall be thirty thousand pounds per annum, less the deduction next hereinafter mentioned, viz.: the Postmaster-General of the United States has agreed by cablegram to pay (in excess of present payments for the carriage of the United States mails) four thousand pounds towards the services herein provided unless Congress forbids, and, if such payment shall be made, two-thirds of the said sum of four thousand pounds shall be deducted from the total payment of thirty thousand pounds.

The contractors shall collect the said four thousand pounds, and account as aforesaid to the Postmasters-General for two-thirds of that sum, which two-thirds shall be equally divided between the Postmasters-General, and the contractors shall be entitled to retain the other third. If the Postmaster-General of the United States is prevented by Congress from paying the four thousand pounds, then the Postmasters-General shall make up the payment to the thirty thousand pounds aforesaid, in the proportion of twenty thousand pounds by the Postmaster-General of New Zealand to ten thousand pounds by the Postmaster-General of New South Wales.

11. Of the total sum payable under this contract, ten thousand pounds shall be paid by the Postmaster-General of New South Wales, and twenty thousand pounds shall be paid by the Postmaster-General of New Zealand; but from such payments there shall be deducted by each of the Postmasters-General respectively an amount equal to one-third of the four thousand pounds agreed to be paid by the Postmaster-General of the United States as aforesaid.

12. The contractors on account of each voyage shall pay to the Postmasters-General as a penalty four pounds for every hour in excess of the number of hours mentioned in clause 9, occupied by such voyage; and any such penalty may be deducted by the Postmasters-General from any payments due to the contractors: Provided that the Postmasters-General may remit any of the penalties which in their joint opinion should not be enforced.

13. For each and every mail which the contractors shall deliver at Sydney from San Francisco, or shall deliver at San Francisco from Sydney, before the expiration of the time appointed in clause 9, they shall be paid by the Postmasters-General the sum of five pounds by way of bonus for every complete hour saved; but no bonus for any voyage between San Francisco and Sydney and Sydney and San Francisco respectively shall be paid for any period in excess of thirty-six hours saved.

14. The sums payable to the contractors under this contract shall be in full satisfaction for all services rendered in the conveyance, receipt, and delivery of all Her Majesty's mails which, and all other mails which, may be conveyed under this contract from, to, and at all or any of the ports aforesaid, or otherwise, and shall be payable at the respective Treasuries in the places appointed for payment, to an agent to be appointed by the contractors at each of those places to receive the same respectively immediately after the due delivery of each mail in each Colony, or the advice by cablegram from San Francisco, or by the return mail from thence, of the due delivery of the mail there shall be received, as the case may be: Provided always that the provisions hereinbefore contained for payment for the conveyance of mails otherwise than within the time stipulated for in clause 9 of these presents shall not be deemed or construed to relieve the contractors from liability for default in the due performance of the stipulations contained in the same clause, or to disentitle the Postmasters-General to determine this contract under clause 25 of these presents on account of any such default, it being hereby expressly agreed that the performance of the service hereby contracted to be performed within the times mentioned in clause 9 of these presents shall be deemed and held to be the essence of this contract.

15. The Colonies of New South Wales and New Zealand, or either of them, shall be entitled to retain to their or its own use respectively any subsidy or payment allowed to them or either of them by the Government of the United Kingdom of Great Britain and Ireland, and to retain and divide between them equally any subsidy or payment which may be agreed to be paid by any other Australasian Colony or dependency, or any of the Polynesian Islands, for the conveyance of mails over the aforesaid routes, after deducting any payments made or expenses (if any) incurred by the Postmasters-General or either of them for the conveying mails to or from any or either of the ports or places hereinbefore appointed for the receipt or

* NOTE.—The portions of clause 5 which are printed in italics are those proposed by the Postmaster-General of New South Wales, and referred to in the attestation clause as the alterations marked in red ink.

or delivery of mails. The contractors shall be entitled to the benefit of and to receive any subsidies or payments which the contractors may be able to induce any Government other than as aforesaid to agree to pay for the conveyance of mails over the aforesaid routes, after deducting any payments made or expenses (if any) incurred by the Postmasters-General or either of them for the conveying mails to and from any and either of the ports or places aforesaid, provided the arrangements for the services in respect of any such subsidy shall be approved by the Postmasters-General: Provided that nothing in this clause contained shall be deemed to affect the payments which may be made by the United States under clause 10.

16. The contractors shall provide, to the satisfaction of the Postmasters-General, or either of them, on board all steam-vessels employed under this contract, proper, safe, and convenient places of deposit for the mails, with locks, keys, and secure fastenings; and every such place of deposit shall be rendered and kept vermin-proof.

17. The contractors shall also provide, to the satisfaction of the Postmasters-General or either of them, all necessary and suitable accommodation, including lights, for the purpose of sorting and making up the mails on board the several vessels employed under this contract, and, on being required to do so by the Postmasters-General or either of them, shall at their own cost erect or set apart in each of the said vessels on the spar deck a separate and convenient room for such purposes; and all such furniture, lamps, fittings, and other conveniences shall be from time to time cleaned and kept in repair, and the oil for the lamps supplied, by the servants of and at the cost of the contractors. The master or commander of each of the said vessels shall also, if required, provide assistance for conveying the mails between the mail-room and the sorting-room, and also render such other assistance as may from time to time be needed, without charge.

18. If the Postmasters-General, or either of them, shall think fit to entrust the charge and custody of the mails, or his respective mail, to the master or commander of any vessel to be employed under this contract, and in all cases where the officer or other person appointed to have charge of the mail shall be absent to the knowledge of the master or commander of such vessel, such master or commander shall, without any charge, take due care of, and the contractors shall be responsible for, the receipt, safe custody, and delivery of the said mail at the several appointed places on the shore in the respective ports, as part of the services hereby contracted to be rendered. The master or commander shall also make the usual Post Office declaration, and furnish such journal returns and other information, and perform such other services, as the Postmasters-General or either of them, or their or either of their officers, shall from time to time reasonably require.

19. The contractors and all commanding and other officers in charge of the vessels employed under this contract shall at all times punctually attend to the orders and directions of the Postmasters-General or either of them, their or either of their officers or agents, as to the mode, time, and place of landing, transshipping, delivering, and receiving the mails, subject to the special provisions herein contained, and so far as such orders and directions are reasonable and consistent with the safety of the vessels.

20. The contractors shall have no claim to any postage nor to any sum on account thereof for mails carried in any vessel employed in the service under this contract, or on account of any services rendered, except as herein specially provided to be paid, and excepting such payments as the United States may make for carriage of mails in excess of the four thousand pounds mentioned in clause 10.

21. The contractors shall provide suitable first-class accommodation, including a cabin or state-room, for the exclusive use of a mail officer or agent for each of the Postmasters-General and for one assistant for such Postmasters-General or either of them on board each of the vessels employed under this contract, who shall be at liberty to use such accommodation as may be required for the performance of their duties; and such officers or agents and assistant shall be victualled by the contractors as chief-cabin passengers, without charge either for their passages or victualling; and whilst the vessel stays at any port excepting the ports of Sydney and San Francisco, to or from which the mails are conveyed, such officers, agents, and assistants shall be allowed to remain on board and shall be victualled as aforesaid.

22. Every such mail officer or agent and assistant shall be recognized and treated by the contractors, their officers and agents, as the agents of the Postmasters-General respectively, or Postmaster-General, by whom he may have been appointed, as the case may be, and as having full authority in all cases to require a due and strict performance of this contract: Provided that no such agent, officer, or assistant shall have power to control or interfere with any master, commander, or officer in the performance of his duty; and every such agent, officer, and assistant shall be subject to all general orders issued by the master or commander for the good order, health, and comfort of the passengers and crew and the safety of the vessels.

23. During the continuance of this contract, and so long as the same shall be faithfully carried out by the contractors, no charge for pilotage, tonnage, light-house, or harbour dues shall be made in New South Wales for any of the steam-vessels employed in carrying out this contract; and the contractors shall be at liberty to use once in every four weeks, for five days at a time, the Fitzroy Dry Dock at Sydney, if not leased or otherwise occupied, and also the workshops there, on payment only of the expenses of and attending such use; and no charge for light-house dues or tonnage, or other harbour dues, as defined by "The Harbours Act, 1878," or any Act amending the same or read therewith, shall be made at Auckland in respect of any of the steam-vessels employed in carrying out this contract.

24. This contract, or any part thereof, shall not be assigned or underlet or disposed of by the contractors without the joint consent, in writing, of the Postmasters-General first obtained for such purpose: Provided that, for the performance of that portion of this contract which provides for the conveyance and delivery of mails between Honolulu and San Francisco and San Francisco and Honolulu, the contractors are hereby empowered (without any such consent as aforesaid) to underlet such performance to a Company incorporated under the laws of the State of California, and known as "The Oceanic Steamship Company" of San Francisco; but such underletting shall not be deemed to affect the liability of the contractors for the due performance of the entire services provided for by this contract.

25. In case this contract, or any part thereof, shall be assigned, underlet, or otherwise disposed of by the contractors otherwise than with such consent as last aforesaid, or in case of any great or habitual non-performance or non-observance of this contract, or of any of the covenants, matters, or things herein contained; and on the part of the contractors, their officers, agents, or servants, or any of them, to be observed or performed, and whether there be or be not any penalty or sum of money payable by the contractors for any such non-observance or non-performance, it shall be lawful for the Postmasters-General, if they shall be of opinion that the contractors are not *bona fide* carrying out the provisions herein contained, and they shall so think fit (notwithstanding there may or may not have been any former non-observance or non-performance of this contract), by writing under their hands, to determine this contract, without any previous notice to the contractors or their agents; and the contractors shall not be entitled to any compensation in respect of such determination, and such determination shall not deprive the Postmasters-General of any rights or remedies to which they would otherwise be entitled by reason of any non-observance or non-performance of any of the provisions herein contained.

26. The Postmasters-General, or either of them, may, if they or he think fit, except from any such determination any voyage or voyages; and if any vessel or vessels should have started before the determination of this contract, or before the masters or commanders thereof could have received the news of such determination, or should after the determination start with a mail on any voyage or voyages so excepted as aforesaid, the voyage or voyages shall be continued and performed, and the mails be delivered and received, as if this contract had remained in force with regard to any such vessels; and with respect to such vessels this contract shall be considered as having terminated only when such vessels shall have reached their port or place of destination, and the mails carried by them shall have been delivered.

27. All notices or directions which are hereby authorized to be given to the contractors, their officers, servants, or agents, may be delivered to the master or commander of any of the said vessels, or other officer or agent of the contractors in the charge or management of any vessel employed in the performance of this contract on board such vessel, or left for the contractors on board such vessel, or at either of the offices or houses of business at Sydney or Dunedin of the contractors or their agents, and any notices or directions so given or left shall be binding on the contractors: Provided that any notice of the determination of this contract shall be given to the contractors, or left for them at their last known office or place of business in Sydney or Dunedin, as the Postmasters-General may think fit.

28. It shall be lawful for the Postmasters-General, or either of them, by writing under their respective hands, at any time, and from time to time, to delegate all or any of the powers, whether joint or several, vested in them or him respectively by virtue of this contract of such person or persons as they or he may think fit.

29. If the contractors shall fail to commence the performance of the services hereby contracted to be by them performed according to the provisions hereof, or, having commenced the same, shall refuse or wilfully neglect to carry on the same according to the true intent and meaning of these presents, they shall forfeit and pay to the said Postmasters-General the sum of seven thousand five hundred pounds, to be divided between the Postmasters-General in the proportion of two-thirds to the Postmaster-General of New Zealand and one-third to the Postmaster-General of New South Wales, and such sum shall be received as liquidated damages, and not as a penalty.

30. All and every the sums of money hereby stipulated to be paid by the contractors shall be considered as liquidated or ascertained damages, whether any damage or loss shall have or shall not have been sustained, and may be set off by the Postmaster-General, or either of them, against any moneys payable to the contractors under or by virtue of these presents, or may be enforced by both or either of the Postmasters-General as a debt due, with full costs of suit, at their or his discretion: Provided always that the payment by the contractors of any sums of money for any neglect or default in the observance or performance of the covenants or agreements herein contained shall not in any manner prejudice the rights of the Postmasters-General, or either of them, to treat such defaults as a non-observance or non-performance of this contract on the part of the contractors.

31. If any dispute, question, difference, or controversy shall arise between the Postmasters-General or their respective Governments and the contractors touching these presents or any clause or thing herein contained, or the construction thereof, or any matter in any way connected with these presents or the operation hereof, or the rights, duties, or liabilities of the said Governments respectively, or of the contractors, in connection with the premises, then and in every or any such case the matter in difference shall be referred to arbitration in manner hereinafter mentioned, and the award of the arbitrator or the arbitrators or the umpire appointed as hereinafter mentioned, as the case may be, shall be binding and conclusive in every respect.

32. Unless the Postmasters-General and the contractors shall concur in the appointment of a single arbitrator, each party, on the request of the other party, shall nominate and appoint an arbitrator, to whom such dispute, question, difference, or controversy shall be referred; and every appointment of an arbitrator shall be made on the part of the Postmasters-General under their hands, and on the part of the contractors under their corporate seal; and such appointment shall be made in duplicate, and be delivered, one part to the other party and the other part to the arbitrator on the part of the party by whom the same shall be made; and after any such appointment shall have been made neither party shall have power to revoke the same without the consent of the other, nor shall the death of either party operate as a revocation; and if for the space of fourteen days after any such dispute shall have arisen, and after a request in writing in which shall be stated the matters required to be referred to arbitration shall have been served upon the Postmasters-General respectively, or given to the contractors, or left for them at their last known office or place of business in Sydney, or Dunedin, as the case may be, by the one party or the other party, to appoint an arbitrator, such last-mentioned party fail to appoint an arbitrator, then, upon such failure, the party making the request, and having appointed an arbitrator, may appoint such arbitrator to act on behalf of both parties; and such arbitrator may proceed to hear and determine the matters which shall be in dispute, and in such case the award or determination of such single arbitrator shall be final.

33. If, before the matters so referred shall be determined, any arbitrator appointed by either party die or become incapable, the party by whom such arbitrator was appointed, his successors in office, or successors or assigns, may nominate and appoint in writing some other person to act in his place; and, if for the space of fourteen days after notice in writing from the other party for that purpose he fail to do so, the remaining or other arbitrator may proceed *ex parte*, and every arbitrator so to be substituted as aforesaid shall have the same powers and authorities as were vested in the former arbitrator at the time of such his death or disability as aforesaid.

34. Where more than one arbitrator shall have been appointed, such arbitrators shall, before they enter upon the matters referred to them, nominate and appoint by writing under their hands an umpire to decide on any such matters on which they shall differ or which shall be referred to him, and, if such umpire shall die or become incapable to act, they shall forthwith after such death or incapacity appoint another umpire in his place, and the decision of every such umpire on the matters so referred to him shall be final.

35. If in either of the cases aforesaid the said arbitrators shall refuse, or shall for fourteen days after the request of either party to such arbitration, neglect to appoint an umpire, the Governor for the time being of the Colony of New Zealand shall, on the application of either party to such arbitration, appoint an umpire, and the decision of such umpire on the matters on which the arbitrators shall differ or which shall be referred to him shall be final.

36. If, when a single arbitrator shall have been appointed or shall be proceeding *ex parte* under any of the provisions herein contained, such arbitrator shall die or become incapable to act before he shall have made his award, the matters referred to him shall be determined by arbitration in the same manner as if no such arbitrator had been appointed.

37. If, where more than one arbitrator shall have been appointed, either of the arbitrators refuse or for fourteen days neglect to act, the other arbitrator may proceed *ex parte*, and the decision of such other arbitrator shall be as effectual as if he had been the single arbitrator appointed by both parties.

38. If, where more than one arbitrator shall have been appointed, and where neither of them shall refuse or neglect to act as aforesaid, such arbitrators shall fail to make their award within three calendar months after the day on which the last of such arbitrators shall have been appointed, or within such extended time (if any) as shall have been appointed for that purpose by both such arbitrators under their hands, the matters referred to them shall be determined by the umpire to be appointed as aforesaid, and the umpire shall make his award within three calendar months after the time when his duties shall commence, or within such extended time (if any) as shall have been appointed for that purpose by the umpire under his hand.

39. The said arbitrator or arbitrators or their umpire may call for the production of any documents in the possession or power of either party which they or he may think necessary for determining the question in dispute, and may examine the parties or their witnesses on oath, and administer the oaths necessary for that purpose.

40. The cost of every such arbitration and of the award shall be in the discretion of the arbitrator, arbitrators, or umpire, who may direct to and by whom and in what manner the same or any part thereof shall be paid.

41. The arbitration shall take place and be conducted at Wellington, New Zealand; and the arbitrator or arbitrators or the umpire, as the case may be, shall deliver his or their award in writing to the Postmasters-General; and the Postmasters-General shall retain the same, and shall forthwith, on demand, at their own expense, furnish a copy thereof to the contractors, and shall at all times, on demand, produce the said award and allow the same to be inspected or examined by the contractors or any person appointed by them for that purpose.

42. This submission to arbitration may be made a rule of the Supreme Court of Judicature in England or Ireland respectively, or of any division thereof, or of the Supreme Court in any of the said Colonies, on the application of either of the Postmasters-General or the contractors.

43. Except where express provision is made to the contrary, all sums of money payable by the Postmasters-General, under or by virtue of this contract, for delivery of mails, or for demurrage, shall be so paid in the proportion of two-thirds by the Postmaster-General of New Zealand and one third by the Postmaster-General of New South Wales; and, except as aforesaid, all sums payable by or recoverable from the contractors for damages or as penalties shall be apportioned between the said Postmasters-General in the like proportion.

44. Notwithstanding anything contained in this contract, the period within which the services herein provided for shall terminate may be extended by the Postmasters-General so as to include an additional voyage from San Francisco to Sydney, and all the terms and provisions of this contract so far as applicable shall apply and extend to the said voyage.

45. In any case under the provisions of this contract, where any act or thing may be done or performed jointly by the Postmasters-General, it shall be sufficient for all purposes if any document signed or action taken by one of the said Postmasters-General purports to be so signed or taken as well on his own behalf as on behalf of the other Postmaster-General, and such document or action shall be binding and effectual as regards the contractors accordingly, who shall not have any right to require proof that each Postmaster-General is a consenting party thereto. But, as between themselves, consent to the signing of any document, or the taking of any such joint action, may be communicated by one of the Postmasters-General to the other of them in any way he may think fit.

46. The Postmaster-General of New South Wales shall execute this contract within twenty-five days after the date first hereinbefore written. And it is hereby expressly agreed that if there are matters in the said contract with which the said Postmaster-General is dissatisfied, or which he desires to be reconsidered, the same shall be open to reconsideration, and he may execute the contract subject to such reconsideration. If the Postmaster-General of New South Wales shall avail himself of this provision, the Postmaster-General of New Zealand shall be deemed equally entitled to reconsider the same matters, and his execution of these presents shall be deemed to have been made subject to this reservation.

If any such reconsideration is required, then it shall be determined in such manner as may be mutually agreed between the Postmasters-General and the contractors.

And it is further agreed that the execution of this contract by the Postmaster-General of New South Wales shall be on the condition that he executes the contract subject to its being ratified by the Parliament of New South Wales during its next succeeding session; but until such ratification is refused the said Postmaster-General shall continue to perform this contract on his part, including payments for any voyage commenced at the time of such refusal by the said Parliament.

47. Should the Postmaster-General of New South Wales decline to execute the contract, or should such ratification as aforesaid be refused, it shall be optional with the Postmaster-General of New Zealand to terminate this contract, upon his giving written notice to the contractors for that purpose, or to undertake the joint liabilities of the said Postmasters-General under this contract, subject to such modifications thereof as he and the contractors may agree.

In witness whereof the said parties to these presents of the first and second parts have hereunto set their hands and seals, and the contractors have hereunto caused their common seal to be affixed, the day and year first above written.

Signed, sealed, and delivered by the said Sir Julius Vogel, as Postmaster-
General of New Zealand, in the presence of,— } JULIUS VOGEL. (L.S.)
W. GRAY.

Signed, sealed, and delivered by John See, as Postmaster-General of New
South Wales for the time being, subject to the alterations marked
in red ink in clause five, being made a part of the contract, in } JOHN SEE. (L.S.)
the presence of,—

S. H. LAMBERTON,
Secretary, Post Office, New South Wales.

The Common Seal of the Union Steamship Company of New Zealand, } (L.S.)
Limited, was hereunto affixed in the presence of,—

GEO. McCLEAN,
JAMES MILLS,
Directors of the said Company.

No. 44.

Report from *S. M. Herald* re deputation that waited on Postmaster-General.

(Extract from *Sydney Morning Herald* of 4th November, 1885.)

THE SAN FRANCISCO MAIL SERVICE.—DEPUTATION TO THE POSTMASTER-GENERAL.

YESTERDAY morning a deputation, consisting of Mr. E. Barton, M.L.A.; Mr. S. H. Hyam, M.L.A.; Mr. J. C. Neild, M.L.A.; Messrs. W. Bradley, E. Hughes, Gillies, and Captains Broomfield, Knight, Ghest, and Turner, waited upon the Hon. John See, Postmaster-General, in reference to the San Francisco mail service.

Mr. W. Bradley said he had presided at a meeting held at the Exchange on the 30th October, when the following resolutions were agreed to:—"That the proposed mail contract to America (involving a transhipment at Honolulu) is most injurious to the interests of the mercantile and general public of this Colony." "That such interests demand that a direct and uninterrupted service from Sydney to San Francisco should be arranged for." The meeting was perfectly unanimous, and the present deputation was appointed to interview the Postmaster-General upon the subject. He had found out only the previous night that within three years 40,000 bales of wool were shipped by the late line to San Francisco, of the value of £800,000.

Mr. S. H. Hyam said that this was a matter that affected the Colony generally, and more particularly the merchants of Sydney. It would be idle for him to tell Mr. See the effect upon the cargo of transhipment at Auckland and Honolulu; it would be deteriorated very materially, and at the expense of the importers. He was not in love with the Union Company, who, from his experience, were not likely to benefit the mercantile community; and as they had failed to keep faith with individuals, were not likely to keep faith with the public at large. In supporting the establishment of a direct line, he was only echoing the feelings of all those gentlemen who had assembled at the Exchange on Friday last. He was sure that if the Postmaster-General signed the contract now before him it would not be endorsed by the public generally. He could state that there was a Company now prepared to undertake to run a direct line between Sydney and San Francisco, with fast and commodious steamers, for a subsidy of something like £20,000 or under, and he thought this Colony could well afford to carry on a line like that, the benefit of which would far more than repay the cost. He suggested that the Minister should defer signing the contract, in order that he might give due consideration to the matters brought before him by the deputation.

Mr. J. C. Neild said that this contract must necessarily come before Parliament for final approval; and it must be patent, after the expression of opinion of the Chamber of Commerce, and of the meeting from which that deputation came, that there was a strong probability that Parliament might fail to endorse the contract, and he therefore urged the Minister to pause before he assented to an arrangement which would so little commend itself to those who had given consideration to the matter. As a mail-carrying line the cost should not be a paramount consideration, because if the same principle were applied to postal matters generally we should have to be going back instead of advancing. With regard to freight, it had been stated that, for every ton of goods delivered by the San Francisco steamers at Auckland, there were nine brought to Sydney. One importer alone had paid £3,600 per annum for freight on green fruit, and it was only reasonable to suppose that the other importers would together pay a like amount, so that there would be an average of over £500 a trip on the freight of green fruit alone. If this contract was carried out, freight would have to remain a full fortnight at Honolulu, which would altogether preclude the shipment of perishable articles. Then again, there was a divided responsibility as to the delivery of goods in a damaged condition. They would not know whether they were to look to the parties who brought the goods to Honolulu, or those who brought them from Honolulu here, or those who had charge of them while they remained at Honolulu.

Captain Broomfield urged that it was the duty of New South Wales to encourage a line for passengers and the safe delivery of letters, in case of a rupture in any other part of the world. America was becoming every day more and more like ourselves. He hoped to live to see the day when America would be joined hand-in-hand with England. It was very important for us that a line should be established through a country that would always remain neutral, so that we could at all times safely convey our mails and passengers by that route. If Auckland were dropped and the steamers went direct three days could be saved, and he was in a position to endorse the statement that it could be done for £20,000 or under. Such a line, if established, would be very little expense indeed.

Captain Ghest pointed out that the transhipment of freight at Honolulu would be very objectionable, causing endless trouble and expense. A direct line would save three days between here and San Francisco;

Francisco; the time by the train across America was being decreased, and the Atlantic steamers had now made the passage in little over six days. There was no reason why we should not have a mail service by way of San Francisco in thirty-five days at the most. Tourists would not use the proposed line, in view of the transshipment at Honolulu and the uncertainty of what cabins they would be able to get. Besides, the steamers of the Oceanic Company were American-built, and were not so comfortable as those of British build.

Mr. Gillies suggested that, before the contract was signed, there should be sufficient time allowed for the shipping world to compete for this service. It could be easily done with a small subsidy from the Government.

Mr. Hughes, as a large shipper of specie—he had sent £100,000 in sovereigns by the last boat, and would send a similar amount by the next—called attention to the risk caused by the proposed transshipment at Honolulu.

Mr. E. Barton said there were two things necessary in this mail service—one was speed, and the other was the avoidance of breaches in the service. If the time could be reduced to thirty-five days, that would compare favourably with any other line, while it would ensure communication with a country which was every day becoming more intimate with this. There was apparent every day in America a tendency towards the relaxation of their fiscal policy, which would greatly increase the facilities for commercial intercourse between the two countries. It was, then, very desirable that we should secure direct postal communication with America. The service should be as direct as possible and as fast as possible, and the route should be one which in times of foreign complication would be accessible to this country.

Mr. See assured the deputation that he was very glad to see them and to hear their views. He reminded them that these negotiations were conducted before he entered office, and he felt he was bound to carry out what his predecessor had commenced, subject, of course, to the will of Parliament. It would be an act of repudiation on his part were he to refuse to sign the contract, but it would be optional for Parliament to say whether they would accept it or not. He had listened with great attention to the arguments used by the deputation, and some of the points were very good ones indeed. They must remember that the present journey was a series of breaks from San Francisco almost to London. With regard to the passenger accommodation, it was proposed by the conditions of the contract that one-half the passenger accommodation of the Oceanic steamers should be reserved entirely for passengers from Australia and New Zealand, and there was a further provision that more accommodation should be reserved if required. At the same time you booked your berth to Honolulu you booked by the Oceanic line on to San Francisco. He was informed that the Oceanic Company's steamers were very fine boats indeed. He recapitulated the circumstances attendant upon the Californian mail service until the time of the present contract. He assured the deputation that the steamers would only remain twenty-four hours in Auckland, unless by the concurrence of the Government of New South Wales, while they would remain twelve or fourteen days in Sydney, which was the terminal port; and for this we paid £10,000, while New Zealand paid £20,000, so that we only paid one-third of the subsidy, although, as the deputation had stated, nine-tenths of the cargo came here. With regard to the transshipment of goods at Honolulu, there was a stringent provision that all perishable goods were to be shipped at once by the steamer taking the mails. He admitted the advantages of the direct service, but the last estimate submitted to the Government was for £25,000. Any service to be successful must be by way of New Zealand, for the sake of passengers, unless there was some difficulty on the part of New Zealand to prevent it. The service now proposed would only cost this Colony £1,300 net, as against the £20,000 spoken of by the deputation for a direct service. He considered that the gentlemen present, as well as the other deputation, had done their duty in bringing their views before him and before the country, and he was thankful for information from gentlemen of such large experience. He was sorry that, under the circumstances, he could not comply with the request of the deputation to defer the matter, as far as the Government was concerned.

4 November, 1885.

HAVE signed 'Frisco contract, subject to insertion of words "without transshipment except at Honolulu" after word Honolulu, line 3 of clause 5, and insertion of words "Sydney being terminal port for all such voyages" after word cargo, in line 7 of same clause. I return to you two parts by post, retaining one for use here.

JOHN SEE,

Postmaster-General.

No. 46.

The Secretary, General Post Office, Sydney, to The Secretary, General Post Office, Wellington, N.Z.

Sir,

4 November, 1885.

With reference to the cablegram sent to-day by the Postmaster-General of this Colony to Sir Julius Vogel, I am directed to forward to you two parts of the contract agreement between New South Wales, New Zealand, and the Union Steamship Company, duly executed—the third part having been detained here for the use of this Department.

I have, &c.,

S. H. LAMBTON.

No. 47.

Telegram from Postmaster-General, Wellington, N.Z., to Postmaster-General, Sydney.

6 November, 1885.

'FRISCO contract. Union Company written formal letter approving alterations you desire. I also concur. Cable received "Almeda" comes right through, San Francisco to Auckland and Sydney. I have telegraphed

telegraphed Postmaster-General, Washington, as follows :—"Almeda" starts new postal contract from 'Frisco ; send all mails by her, Postmaster-General, New Zealand, and desirable you should send similar cablegram, it will be courteous to do so, for United States is virtually party to contract.

JULIUS VOGEL.

7 November, 1885.

"ALMEDA" starts new postal contract from 'Frisco on 21st November. Send all mails by her.

POSTMASTER-GENERAL,

Sydney.

No. 49.

(The Secretary, General Post Office, Wellington, N.Z., to The Secretary, General Post Office, Sydney.

Sir,

General Post Office, Wellington, 26 October, 1885.

As the steamers "Alameda" and "Mariposa" are comparatively unknown in the Colonies, I have been directed to forward you the following particulars gathered from the List of Merchant Vessels of the United States for 1884, published by the United States Treasury, and also from the reports furnished by one of our mail agents. Both of the steamers were built in 1883; they are stated to be of 3,158 tons gross, 1,959 net, and the engines of 3,000 horse-power nominal. The steamers are fitted with the electric light. Each is capable of accommodating 100 saloon passengers, and accommodation is said to be very superior. The cabins are large and elegantly appointed, the berths being fitted with spring mattresses and other modern improvements. Each steamer has a social hall on the upper deck, and it is stated that the saloon accommodation arrangements are similar to those on the "Wairarapa" and "Manapouri." The saloon cabins are on the upper and lower decks, as in the case of the "Australia" and "Zealandia." The nominal speed of the steamers is between 15 and 16 knots. The steamers run between Honolulu and San Francisco regularly in seven days. This is at a speed of 12.5 knots an hour, and they accomplish the distance with ease. The steamers were specially built for the trade they are now engaged in, that is, between San Francisco and Honolulu, and they are in every way suited to carry out that part of the mail service in which it is intended they shall be employed. By the return of the "Zealandia" further particulars, and also drawings of the "Alameda" and "Mariposa," will be received, and copies will be sent you at the earliest opportunity.

I have, &c.,

W. GRAY,

Secretary.

No. 1.

Cablegram from Postmaster-General of New Zealand to Postmaster-General of New South Wales.

4 February, 1886.

UNION Company are willing to alter 'Frisco Contract to permanently do service without break at Honolulu for additional seven thousand pounds yearly. We think break at Honolulu not unsatisfactory, but we will be willing to alter it in deference to what are understood to be the wishes in Sydney. We will pay one-half the seven thousand pounds, or if you think we ought to do so, we will pay the same proportion as for rest of contract money, namely—two-thirds. Very desirable definitely settled matter.

JULIUS VOGEL.

No. 2.

Cablegram from Postmaster-General of New South Wales to Postmaster-General of New Zealand.

23 March, 1886.

THIS Government will pay one-third of sum required by Union Company for carrying on 'Frisco Service without break, as stated in your telegram of February 4th, provided total to be paid by both Colonies does not exceed seven thousand pounds yearly. Think Company may take a lower sum. This arrangement to be subject to approval of Parliament; will submit resolution as soon as I hear from you. Excuse delay in replying to you, change of Government and my illness cause.

F. B. SUTTON.

No. 3.

Cablegram from Postmaster-General of New Zealand to Postmaster-General of New South Wales.

26 March, 1886.

UNION Company will not take less than seven thousand. Have agreed with them for that sum, beginning with voyage "Mariposa" on way from San Francisco, and including "Alameda's" present voyage. We pay two-thirds, you one-third; agreement subject to approval your Parliament.

JULIUS VOGEL.

PACIFIC MAIL SERVICE.

No. 1.

The Postmaster-General to Messrs. Gilchrist, Watt, & Co.

Gentlemen,

General Post Office, Sydney, 28 August, 1884.

With reference to the provision in the Pacific Mail Steam-ship Company's contract for the conveyance of mails between Sydney and San Francisco—that the contractors will endeavour to obtain from the Government of the United States or from other sources a contribution on account of the amounts payable under the contract equal to one-third of the total amount of the subsidy payable for such service, and providing further that, in the event of the contractors not succeeding in obtaining such contribution, it shall be lawful for the Postmaster-General of the Colony of New South Wales to withdraw from the agreement at the end of twelve calendar months from the 29th November, 1883, on giving three months' previous notice of his desire to do so—I have to state that, as no intimation has reached this Department of the contractors having succeeded in obtaining any such contribution as aforesaid, I hereby give the stipulated three months' notice of withdrawal of the Colony of New South Wales from the contract in question.

Will you be good enough to acknowledge the receipt of this letter.

I have, &c.,

JAMES NORTON.

No. 2.

Copy of the clause of the Contract alluded to by the Postmaster-General, in his letter dated 28th August, 1884, to Messrs. Gilchrist, Watt, & Co., and of the Resolutions adopted by Parliament, in April, 1883, in regard thereto.

Copy of clause of Contract :—

15. The contractors will endeavour to obtain from the Government of the United States or from other sources a contribution on account of the amounts payable under this contract for carrying the said mails from Sydney to San Francisco and from San Francisco to Sydney and from Auckland to San Francisco and from San Francisco to Auckland equal to one-third of the total amount of the moneys payable hereunder for such services. And it is hereby expressly agreed that if any such contribution shall be obtained as aforesaid the same shall be applied and go in reduction of the payments agreed to be made under this contract and that as between the Postmaster-General of New South Wales and the Postmaster-General of New Zealand such reduction shall be divided equally between them in respect of the payments agreed to be made under this contract. And it is hereby also expressly declared and agreed between the several parties hereto that if the contractors shall not succeed in obtaining such contribution as aforesaid it shall be lawful for the Postmaster-General of the Colony of New South Wales to withdraw from this agreement at the end of twelve calendar months from the said twenty-ninth day of November one thousand eight hundred and eighty-three on giving three months previous notice to the contractors of his desire so to do and that the service of such notice upon the contractors shall be deemed and taken to have been sufficiently made if the same is left with the agents for the time being of the said contractors in New South Wales. Provided that immediately upon such notice being served on the contractors as aforesaid they shall cause a copy thereof to be forwarded to the Postmaster-General of New Zealand for his information.

Copy of Resolutions :—

(1.) That, subject to the Imperial Government agreeing to continue to convey the mails to San Francisco as heretofore, the contract between the Colonies of New South Wales and New Zealand with the Pacific Mail Company be extended for a period not exceeding two years from the expiry of the present contract in November next, at an annual subsidy not exceeding £50,000, of which the portion falling upon this Colony shall not exceed £18,750, and subject to the following conditions, viz. :—

That it shall be optional for this Colony to withdraw from such extended contract at the end of twelve months, on giving three months' previous notice, in the event of the Pacific Mail Company not having obtained from the United States Government, or from other sources, a contribution equal to one-third of the total annual subsidy for such extended contract, and in diminution of the contribution payable by the contracting Colonies respectively.

That the service shall be performed with the acceleration upon the present contract time of at least twenty-four hours on each voyage to and from Sydney and San Francisco during the first year, and during the second year at least forty-eight hours, subject to the same terms, conditions, premiums, and penalties as heretofore; with this exception—that the Company be relieved from keeping a fourth steamer, but that such shall not absolve them from the penalties for any failure.

(2.) That the foregoing Resolutions be transmitted by Address to His Excellency the Governor.

No. 3.

Messrs. Gilchrist, Watt, & Co., to The Postmaster-General, Sydney.

Sir,

Sydney, 28 August, 1884.

We have the honor to acknowledge receipt of your letter, No. B 84-9,519, of this date, giving three months' notice of your withdrawal from the Pacific Mail Contract.

We regret to receive this intimation, but hope some arrangement may be come to before November as will result in the continuation of the service.

We have, &c.,

GILCHRIST, WATT, & CO.,
General Agents, Pacific Mail Steamship Co. of New York.

No. 4.

No. 4.

Memorial from the Chamber of Commerce of San Francisco to the Colonial Secretary, Sydney.

Sir,

San Francisco, 2 August, 1884.

I have the honor to send you herewith a memorial addressed by this Chamber to the Government of New South Wales, with reference to the continuance of Ocean Mail Service with this country; and would respectfully request that you transmit the memorial to Parliament at the first opportunity.

Very respectfully, &c.,

D. J. STAPLES,

First Vice-President.

Submitted, 1/9/84. The Postmaster-General.—A.S., 2/9/84. The Secretary to the Post Office. B.C., 2 Sept., '84.—C.W.

The Chamber of Commerce of San Francisco.

July 24th, 1884.

To the Honorable the Legislative Council and Legislative Assembly of New South Wales, in Parliament assembled.

The Chamber of Commerce of San Francisco desires respectfully to express its earnest wish that the present Mail Steamship Service with New South Wales may be permanently continued, for the mutual benefit of the communities interested.

This Chamber is well aware that your Government has done more than its share in this respect, and it has been a source of regret to us that the laws of the United States have not permitted special contracts to be made for the carriage of ocean mails. The law has been so changed, however, that such contracts are permissible in the future; and in this view of the case, we can consistently urge the Government of New South Wales to continue the service until the Congress of the United States meets, in December next, when every possible influence will be used to second your efforts on behalf of this important Ocean Mail Service, of so great mutual benefit to the Colony of New South Wales and the Pacific Coast of the United States.

With much respect, and confident of the co-operation of your honorable body,

THE CHAMBER OF COMMERCE OF SAN FRANCISCO.

D. J. Staples, First Vice-President.

Andrew Welch, Second Vice-President.

W. L. Merry, Trustee.

Jacob S. Saber, "

J. N. Knowles, "

A. P. Elfelt, "

H. L. E. Meyer, "

C. L. Taylor, "

A. Crawford, "

J. J. McKinnon, "

G. W. McNear, "

Eugene de Sablo, "

Attest—Morris Marcus, Secretary.

Minute of the Postmaster-General, Sydney, on the Memorial forwarded to the Colonial Secretary by the Chamber of Commerce of San Francisco.

I WOULD suggest that a reply be forwarded to Mr. Staples informing him that, before the receipt of his letter, the Postmaster-General of New South Wales, pursuant to a power contained in the existing mail service contract with the Pacific Mail Company, had given notice of withdrawal from that contract, on the ground that the Company had failed to obtain from the American Government a contribution of one-third of the £50,000 stipulated to be paid yearly by the Colonies of New South Wales and New Zealand, and that it may perhaps be now impossible to continue or renew the service now being carried on, till the end of November. Regret the necessity which has arisen for discontinuing a service which has for many years been the means of fostering the growth of friendly intercourse and commercial relations between New South Wales and the United States of America.

Inform that the document forwarded for presentation to Parliament was unfortunately in such a form that it could not be presented to either Chamber.—J.N., 15/10/84.

The Principal Under-Secretary.—S.H.L., B.C., 16/10/84. Mr. Staples might be informed in terms of the Postmaster-General's minute.—C.W., 20/10/84. Approved.—W.B.D., 23.

No. 5.

The Secretary to the Post Office, Sydney, to The Principal Under Secretary.

Sir,

General Post Office, Sydney, 3 September, 1884.

It having been considered expedient to address a letter to Messrs. Gilchrist, Watt, & Co., General Agents for the Pacific Mail Steamship Company of New York, giving three months' notice of the intention of the Postmaster-General of this Colony to withdraw from the San Francisco Mail Contract, I am directed to enclose herewith a copy thereof, as well as a copy of the acknowledgment received from Messrs. Gilchrist, Watt, & Co., and to request that you will be so good as to move the Colonial Secretary to forward the same for the information of the Agent-General.

I am to add that it would be as well to ask Sir Saul Samuel to advise the London Post Office as to the position of this matter, so that the Office may be prepared to receive any instructions that may hereafter be issued in regard to this mail service.

I have, &c.,

S. H. LAMBTON.

No. 6.

No. 7.

Cablegram from Postmaster-General, Sydney, to Postmaster-General, Wellington, N.Z.

6 September, 1884.

I HAVE given the requisite notice of our withdrawal, on 29th November next, from 'Frisco contract, but this will not prevent me considering any proposal from contractors.

JAMES NORTON.
Postmaster-General.

No. 8.

The Secretary to the Post Office, Sydney, to The Secretary to the Post Office,
Wellington, N.Z.

Sir,

General Post Office, Sydney, 8 September, 1884.

I am directed to enclose herewith, for the information of your Department, a copy of a letter addressed by the Postmaster-General to Messrs. Gilchrist, Watt, & Coy., General Agents for the Pacific Mail Steamship Company of New York, giving three months' notice of this Colony's withdrawal from the San Francisco contract, as well as a copy of the acknowledgment received from Messrs. Gilchrist, Watt, & Coy.

I have, &c.,
S. H. LAMBTON,
Secretary.

No. 9.

The Secretary to the Post Office, Sydney, to the Secretary to the Post Office,
Wellington, N.Z.

10 September, 1884.

REFERRING to telegram of 6th inst, to Sir Julius Vogel,—Mr. Norton now desires to point out that our published time-table expires with the arrivals at Sydney, 24th October, and 'Frisco, 5th November. We having notified withdrawal do not consider necessary to issue another table for our last two trips, namely, from 'Frisco, 25th October; Sydney, 6th November. You may, however, think fit to issue one in your interest, and to instruct London Office accordingly.

No. 10.

Messrs. Gilchrist, Watt, & Co. to The Postmaster-General, Sydney.

Sir,

Sydney, 11 September, 1884.

We have the honor to inform you that we are in receipt of a cablegram from the Pacific Mail Steamship Company, New York, requesting us to ascertain from you if the New South Wales Government are willing to pay £13,000 for the unexpired portion of the New Zealand Mail Contract, that is from November, 1884, to November, 1885.

Present annual subsidy for twenty-six trips:—

| | | | | | | |
|--------------------|-----|-----|-----|-----|-----|----------------|
| New South Wales... | ... | ... | ... | ... | ... | £18,750 |
| New Zealand | ... | ... | ... | ... | ... | 31,250 |
| | | | | | | <u>£50,000</u> |

£13,000 would be equal to a reduction of £5,750 from the above £18,750.

We will be glad to receive a reply at your convenience, to enable us to cable the Head Office, New York.

We have, &c.,

GILCHRIST, WATT, & CO.,

General Agents,

Pacific Mail S.s. Coy. of New York.

Submitted (two papers)—S.H.L., 13/9/84.

No. 11.

Messrs. Gilchrist, Watt, & Co. to The Postmaster-General, Sydney.

Sir,

Sydney, 12 September, 1884.

Our London Office cable us to ascertain what reduction in subsidy would secure the renewal of the Californian Mail Service for three years from November next.

They think for a three years service contractors might be induced to accept £42,000 subsidy instead of the present £50,000, being equal to a reduction of £8,000 per annum.

We will be pleased to learn your views on the matter, and what prospect there is of the above proposal being carried out.

We have, &c.,

GILCHRIST, WATT, & CO.,

General Agents,

Pacific Mail S.S. Coy., New York.

No. 12.

Minute of the Postmaster-General.

San Francisco Mail Service.

THE contract with the Pacific Mail Company was made for two years from 29th November, 1883, at £18,750 per annum, but was terminable by New South Wales at end of first year, if the Company could not obtain from the American Government a subsidy of one-third (£6,250).

I have given notice to terminate the contract, and the Company now asks whether we will agree to continue it to the end of the two years if our liability is reduced to £13,000.

This would make a difference in our favour of £5,750, being only £500 less than the stipulated one-third, and it is almost certain that next year America will come to some definite arrangement with respect to contributing to the cost of this service.

I

I think we should agree to the Company's proposition, especially as the Peninsular and Oriental Service to Melbourne is terminable at the end of the year 1888, on notice to be given in 1886, and during or before that year it is probable that some general arrangement will be come to between the Australasian Colonies and Great Britain with respect to the principle on which all the Australian services should be carried out.

It is advisable to continue the service if possible, with the view of encouraging and extending our commercial relations with America, and it might become a necessity to us in the not improbable event of a general European war, or of the spread of cholera or other such disease.

J.N.

15/9/84.

Cabinet approves, if the contribution from New South Wales cannot be reduced by one-third.—
A.S., 15/9/84.

No. 13.

Minute of Secretary to the Post Office.

Report upon offer from Pacific Mail Company of reduced subsidy.

I SUBMIT a statement prepared by the Accountant of this Office showing how the Department would be affected by the acceptance of the offer now made by the Pacific Mail Company, as compared with its position if the Company had succeeded in obtaining contributions from the United States, or other sources, in terms of the 15th clause of the contract.

This statement shows that, by accepting the offer just made, and continuing the service for another year from 29th November, we should give up £2,583 6s. 8d.

The contractors appear to assume that the New Zealand Government is willing to forego its right to one-half of the abatement—a right which it may fairly be assumed it possesses, as the 15th clause before referred to provides that contractors shall endeavour to obtain foreign contributions to the extent of one-third of the whole subsidy of £50,000 a year payable by the two Colonies, and that this one-third shall be divided equally between them.

S.H.L.

18/9/84.

MEMORANDUM showing the effect to this Colony of the proposal to reduce the subsidy payable by New South Wales to the Pacific Mail Steamship Company from £18,750 to £13,000 per annum, as compared with the provisions of clause 15 of the Contract of the 3rd June last:—

| | <i>Contract.</i> | | | £ s. d. | | | £ s. d. | | |
|---|--------------------------|-----|-----|---------|----|---|---------|---|---|
| Present annual subsidy | ... | ... | ... | 18,750 | 0 | 0 | | | |
| Deduct one-sixth of £50,000, being the N. S. Wales proportion of reduction provided under clause 15 of the contract of the 3rd June, 1884 | ... | ... | ... | 8,333 | 6 | 8 | | | |
| | | | | <hr/> | | | | | |
| Subsidy provided by contract | ... | ... | ... | 10,416 | 13 | 4 | | | |
| Reduction | ... | ... | ... | | | | 8,333 | 6 | 8 |
| | | | | <hr/> | | | | | |
| | <i>Present proposal.</i> | | | | | | | | |
| Present annual subsidy payable by New South Wales | ... | ... | ... | 18,750 | 0 | 0 | | | |
| Proposed reduced subsidy | ... | ... | ... | 13,000 | 0 | 0 | | | |
| Reduction | ... | ... | ... | | | | 5,750 | 0 | 0 |
| | | | | <hr/> | | | | | |
| Difference between present proposal and stipulation of contract, and in favour of the latter | ... | ... | ... | | | | 2,583 | 6 | 8 |
| | | | | <hr/> | | | | | |

W.L.C.

17/9/84.

No. 14.

Minute of the Postmaster-General.

San Francisco Mail Service.

I FIND that a mistake was made in my former minute as to the contribution which the Company was to obtain from the American Government, or rather the distribution of same between New South Wales and New Zealand.

The whole subsidy was £50,000, of which New Zealand paid £31,249 9s. 11d., and New South Wales £18,750 0s. 2d. (or a little more than one-third of the entire subsidy).

New South Wales was authorized to terminate the contract at the end of the first year if the Company did not obtain a subsidy from the American Government or other sources of one-third of the entire subsidy (or £16,666 10s.), and if this could be obtained, one-half (amounting to £8,333 5s.), not one-third as before stated, was to be allowed by way of set-off against the New South Wales portion of the subsidy.

The Company now offers to reduce our liability to £13,000, being £2,583 5s. less than the half which we should have obtained if the American Government had agreed to contribute one-third of the whole subsidy.

Formerly America allowed us something on account of our own and English mails carried through her territory, but this allowance has been discontinued.

This sum amounted to £8,000, and was divided equally between New South Wales and New Zealand.

The Company has always received certain allowances for mails despatched from Canada and America (during year ended June 1883 the amount the Company received was over £2,500), and perhaps the Company ought to allow the contracting Colonies the benefit of this allowance.

J.N., 23/9/84.

No. 15.

No. 15.

The Principal Under Secretary to The Secretary to the Post Office.

Sir,

Colonial Secretary's Office, Sydney, 22 September, 1884.

In reply to your letter of the 3rd instant, I am directed by the Colonial Secretary to state, for the information of the Postmaster-General, that the Agent-General for this Colony has been duly communicated with regarding the withdrawal of the Colony from the San Francisco Mail Contract.

I have, &c.,

CRITCHETT WALKER,
Principal Under-Secretary.

Read.—S.H.L., 24/9/84.

No. 16.

The Secretary to the Post Office to Messrs. Gilchrist, Watt, & Co.

Gentlemen,

General Post Office, Sydney, 27 September, 1884.

I am directed to state that, after very careful consideration by himself and the Cabinet, the Postmaster-General is now able to communicate with you on the subject of the Pacific Mail Contract and the question mentioned in your letter of the 11th instant, whether the New South Wales Government is willing to pay £13,000 for the continuance of the service from March, 1884, till November, 1885.

You are aware that the subsidy agreed to be paid by New South Wales and New Zealand for the performance of this service amounted to £50,000, of which New Zealand was to pay £31,249 9s. 11d., and New South Wales £18,750 0s. 2d. (or a little more than one-third of the entire subsidy), a few shillings of the £50,000 being lost in apportioning the subsidy between the different trips to be performed by the Company's vessels.

The contract, as you are also aware, contains a stipulation that New South Wales might withdraw from it at the end of the first year, on giving the notice which has been lately given to you, unless the Company could procure from the American Government, or from other sources, a contribution of one-third of the whole subsidy; and it was provided that if that contribution could be obtained, the same should be divided *equally* between New South Wales and New Zealand.

The amount, therefore, by which the liability of this Colony would have been reduced if this contribution could have been obtained, would have been £8,333 6s. 8d.; but the Company now offers to reduce our liability by the sum of £5,750 0s. 2d. only, being £2,583 6s. 6d. less than the saving which this Colony would have made if the American contribution could have been obtained.

I am here to point out that, in the case of subsidized mail services, it is unusual for the subsidizing country to allow the contractors to receive from any source any further remuneration than the subsidy agreed upon; but that in the case of the Pacific Mail Company (apparently through some inadvertence or misapprehension) the Company has been allowed to receive from the American Government, on account of mails despatched from Canada and America by this line, certain annual allowances, which the Postmaster-General finds during the year ending June, 1883, amounted to upwards of £2,500, and that being the last date up to which Mr. Norton has obtained full information, it is possible that they may now be receiving even larger sums.

The New South Wales Government regrets that the Company has not succeeded in obtaining from America the expected contribution, because it is anxious to promote friendly and commercial relations with that great country, but it is not prepared to put an end to all further negotiations because the proposed contribution, or rather allowance, now comes from the Company and not from the American Government as stipulated for.

It is thought, however, that the Colony is entitled to some further reduction in the cost of the San Francisco Service than that now offered through you for the consideration of the Government.

The Postmaster-General will therefore be glad if you can see your way to submit some more favourable proposition than that already made; and in the event of the same being what he has every reason to expect it will be, Mr. Norton will be prepared to recommend it for acceptance by his colleagues, who are not at all likely to dissent from whatever may appear to him to be reasonable.

I have, &c.,

S. H. LAMBTON,
Secretary.

No. 17.

Messrs. Gilchrist, Watt, & Co., to The Postmaster-General, Sydney.

Sir,

Sydney, 30 September, 1884.

We have the honor to acknowledge receipt of your letter, B 84, of 27th instant, in reply to ours of 11th September, and thank you for the consideration you have kindly given the matter of the Californian Mail Service.

On receipt of your communication we at once advised the Pacific Mail Steamship Company of New York, and urged them to make a further reduction, and thus endeavour to meet your views as far as possible.

We have cable reply, and are now in a position to reduce the amount by £1,250, that is, to ask you to pay £11,750 instead of £13,000, for the unexpired portion of the New Zealand Mail Contract from November, 1884, to November, 1885, and trust this offer will meet with your approval and acceptance.

We would like to communicate your decision as soon as possible to the New Zealand Government, who we presume will not put any difficulties in the way.

We have, &c.,
GILCHRIST, WATT, & CO.,
General Agents, Pacific Mail S.S. Co.

Submitted.—JAS. D., 1/10/84.

No. 18.

The Secretary to the Post Office to Messrs. Gilchrist, Watt, & Co.

Gentlemen,

General Post Office, Sydney, 4 October, 1884.

I have the honor, by direction of the Postmaster-General, to acknowledge the receipt of your letter of the 30th September last, agreeing, on behalf of the Pacific Mail Steamship Company, to reduce the subsidy payable by this Colony to the Company on account of the San Francisco Mail Service to the sum of eleven thousand seven hundred and fifty pounds sterling (£11,750) for the second year of the contract.

I am directed by the Postmaster-General to inform you that he will advise the acceptance of your offer, and the withdrawal of the notice to terminate the contract, which was given on the 28th August last, on the understanding that you or the Company will make all necessary arrangements with the Colony of New Zealand.

I have, &c.,

JAS. DALGARNO,

(For Secretary).

No. 19.

Messrs. Gilchrist, Watt, & Co., to The Postmaster-General, Sydney.

Sir,

Sydney, 6 October, 1884.

We have the honor to acknowledge receipt of your letter, B. 84-11,376 of 4th instant, and are pleased to learn that you approve of a continuance of the Californian Mail Service for another year from November next, on a subsidy from New South Wales of £11,750 per annum.

We will be glad to receive notification from you of your acceptance of the offer, so that we may be in a position to make any arrangements that may be necessary with the New Zealand Government, and with whom we are now in communication.

It would be very desirable if the new time-table for the mails for the twelve months after November could be prepared in time to forward by outgoing mail on the 9th instant, and we trust you may be able to arrange this.

We will be much obliged if you will kindly send us two copies of the present contract, and a few copies of the new time-table when ready.

We have, &c.,

GILCHRIST, WATT, & CO.

Genl. Agents for the Contrs., San Francisco Mail Service.

I presume Messrs. Gilchrist, Watt, & Co. may be informed at once that their offer is accepted, subject to the concurrence of New Zealand. As to the time-table, so far as we are concerned, it might be continued on the present basis—subject of course to the twenty-four hours acceleration between Sydney and San Francisco, as provided in the contract. The matter of time-table might, however, be entirely left in the hands of the New Zealand Post Office—as that Colony will pay so much larger subsidy than ourselves, and as I apprehend that under the new arrangement we should make use of the service mainly for correspondence between America and this Colony.—S.H.L., 8/10/84.

Approved.—J.N., 9/10/84.

No. 20.

The Secretary to the Post Office, Sydney, to Messrs. Gilchrist, Watt, & Co.

Gentlemen,

General Post Office, Sydney, 10 October, 1884.

I am directed to state, in reply to your letter of the 6th instant, that your offer to accept from this Colony a subsidy of £11,750 for the continuance of the San Francisco Mail Service for another year has been accepted, subject to the concurrence of New Zealand, which it is understood you will endeavour to obtain.

As regards the time-table, the Postmaster-General is of opinion that, so far as this Colony is concerned, it might be continued on the present basis, subject of course to the twenty-four hours acceleration for the forthcoming year between Sydney and San Francisco, as provided for in the contract; but Mr. Norton is willing to leave the matter of the arrangement of time-table entirely in the hands of the New Zealand Post Office.

No. 23.

No. 23.

Telegram from Postmaster-General, Wellington, N.Z., to Postmaster-General, Sydney.

Wellington, 13 October, 1884.

'FRISCO contract. We decidedly object to your arranging with contractors. You have withdrawn from the contract, and it is with us you must arrange. Contractors cannot arrange with you; clause 43 of our Post Office Act, 1881, prevents them. We will be willing for the sum you name paid to us to carry your mails if steamers still go to and leave Sydney. It strikes us as unfriendly that you should have thought it right to try and get your subsidy reduced, leaving us full burden.

JULIUS VOGEL.

No. 24.

Telegram from Postmaster-General, Sydney, to Postmaster-General, Wellington, N.Z.

Sydney, 14 October, 1884.

'FRISCO service. You evidently misunderstand our position. After giving notice to terminate contract, Company spontaneously offered to carry out service for second year at reduced rate, and I accepted offer on understanding that they would arrange with you.

JAMES NORTON.

No. 25.

Messrs. Gilchrist, Watt, & Co., to The Postmaster-General, Sydney.

Sir,

Sydney, 8 November, 1884.

We have the honor to inform you that we have been in communication with the Honorable the Postmaster-General of New Zealand, and have tried hard to obtain his consent to your cancelling your withdrawal notice, but regret to say without success. The only condition on which New Zealand will give her consent is provided she be allowed by the contractors the same reduction in subsidy as New South Wales, viz., £7,000, and this they are utterly unable to comply with.

Seeing that the contractors cannot get any allowance from the United States Government until after April, 1885, and that therefore five months in the second year must pass before they begin to reap any such benefit, they suggest that under the circumstances, and for the sake of preserving the harmony and good-will hitherto existing between the two Colonies, New South Wales should agree to divide the allowance of £7,000 with New Zealand.

The contractors regret they cannot, without further positive loss to themselves, make any further concession, and hope you will give this proposal your most favourable consideration. In the event of your agreeing to do so, we will endeavour to obtain New Zealand's consent to such an arrangement.

We have, &c.,

GILCHRIST, WATT, & CO.,

General Agents for Pacific Mail S.S. Co.,

New York.

Inform Messrs. G.W. & Co. that I am not aware of any want of harmony between N.Z. and N.S.W., and that I cannot recommend the division of the proposed reduction of £7,000 between N.Z. and N.S.W.—J.N., 17/11/84.

No. 26.

The Secretary, General Post Office, Sydney, to Messrs. Gilchrist, Watt, & Co.

Gentlemen,

General Post Office, Sydney, 19 November, 1884.

With reference to your communication of the 8th instant, intimating the result of your negotiations to obtain the concurrence of the Postmaster-General of New Zealand to the withdrawal of the notice of the intention of the Government of this Colony to terminate the San Francisco mail contract, which was given by the Postmaster-General on the 28th August last, in accordance with the provisions of the contract, Mr. Norton desires me to inform you that he is not aware of any want of harmony between this Colony and New Zealand, and cannot recommend that the allowance of £7,000—by which you proposed our liability should be reduced—be divided with New Zealand, as suggested by you.

I have, &c.,

S. H. LAMBTON.

No. 35.

Minute of the Postmaster-General addressed to His Excellency the Governor and the Executive Council.

Recommending that the offer of the New Zealand Government to convey New South Wales mails between Sydney and San Francisco be accepted.

General Post Office, Sydney, 13 December, 1884.

WITH reference to the resolutions (copy herewith) adopted by Parliament in April, 1883, in regard to the renewal of the contract with the Pacific Mail Steamship Company, the contractors not having obtained the contribution alluded to in the first condition attached to such resolutions, it was deemed advisable to give notice on the 28th August last of the withdrawal of this Colony from the contract.

Subsequent negotiations having resulted in an offer being made by the New Zealand Government to convey New South Wales mails between Sydney, Auckland, and San Francisco during another year, *i.e.*, from the 29th November, 1884, to the 29th November, 1885, for the sum of seven thousand pounds (£7,000), I recommend that the offer be accepted.

JAMES NORTON.

The Executive Council advise, under the circumstances herein set forth, that the offer of the New Zealand Government herein specified to carry New South Wales mails between Sydney and San Francisco be accepted.

A. C. BUDGE,

Clerk of the Council.

Minute, 84/57, 23/12/84. Approved.—A.L., 23/12/84. Confirmed, 30/12/84. Submitted with minute for Executive Council, 13 December, 1884.

RESOLUTIONS

RESOLUTIONS adopted by Parliament in April, 1883, in regard to the renewal of the contract with the Pacific Mail Steamship Company.

- (1.) That subject to the Imperial Government agreeing to continue to convey the mails to San Francisco as heretofore, the contract between the Colonies of New South Wales and New Zealand with the Pacific Mail Company be extended for a period not exceeding two years from the expiry of the present contract in November next, at an annual subsidy not exceeding £50,000, of which the portion falling upon this Colony shall not exceed £18,750, and subject to the following conditions, viz. :—
- That it shall be optional for this Colony to withdraw from such extended contract at the end of twelve months, on giving three months' previous notice, in the event of the Pacific Mail Company not having obtained from the United States Government, or from other sources, a contribution equal to one-third of the total annual subsidy for such extended contract, and in diminution of the contribution payable by the contracting Colonies respectively.
- That the service shall be performed with the acceleration upon the present contract time of at least twenty-four hours on each voyage to and from Sydney and San Francisco during the first year, and during the second year at least forty-eight hours, subject to the same terms, conditions, premiums, and penalties as heretofore; with this exception—that the Company be relieved from keeping a fourth steamer, but that such shall not absolve them from the penalties for any failure.
- (2.) That the foregoing resolutions be transmitted by address to His Excellency the Governor.

No. 36.

Telegram from Postmaster-General, Sydney, to Postmasters-General, Melbourne, Adelaide, Hobart, Perth (W.A.), and Brisbane.

5 December, 1884.

New South Wales having withdrawn from the San Francisco mail contract, I have to request that you will in future account direct to New Zealand Post Office for the carriage of your mails by this route, to take effect with despatch of packet from Sydney on the 4th instant and despatch from San Francisco on 20th instant.

JAMES NORTON.

No. 37.

Messrs. Gilchrist, Watt, & Co. to The Postmaster-General, Sydney.
California Mail Contract.

Sir,

Sydney, 14 March, 1885.

Referring to your notice of withdrawal from the contract, and the fact that you have since then continued to receive and despatch the San Francisco mails by our steamers without having, up to the present time, paid us any subsidy thereon, we now enclose statements of account made up for such services, on the basis of £11,750 per annum, being the sum agreed to between us, subject to New Zealand Government giving their consent, but which the latter withholds, and request that you will be good enough to authorize the due payment of same.

The contractors cannot understand on what ground New Zealand expects that they will continue to carry the mails to Sydney and allow *her* to receive the pay from New South Wales therefor. Their obligations to New Zealand are fulfilled, as they understand the contract, at Auckland; and if New Zealand is to reap the benefit of the carriage of the mails between Auckland and Sydney, they will most reluctantly be compelled to decline to handle the Sydney mails at all, for they certainly do not propose to perform that service without being paid for it.

They of course have no desire whatever to be forced into taking this action, but shall assuredly do so if the present arrangement between the two Colonies is persisted in. New York Counsel's opinion is very clear that contractors would be fully justified in declining the Sydney mails, provided contractors properly perform their duty to New Zealand by the carriage of *her* mails under the terms of the contract; that contractors may continue or discontinue their trips from Auckland to Sydney at their own pleasure; that the contractors are at liberty to enter into any new contract with New South Wales, and that that Colony is at liberty to enter into such contract with them, provided the strict and proper performance of this present contract with New Zealand is not interfered with thereby; that whatever compensation New South Wales may pay will inure to the benefit of the Pacific Mail Steamship Company, and that New Zealand will not be entitled to any portion thereof; and that New Zealand has no legal claim for the reduction of the amount stipulated to be paid by *her* by the contract now in force.

The Pacific Mail Steamship Company still hope that they will receive justice and fair treatment, though they consider the present action of the two Governments is a very poor return for the prompt and satisfactory manner in which the contractors have performed their part of the contract.

We trust you will kindly give this very important matter your favourable consideration, and requesting the favour of a reply at your earliest convenience.

We have, &c.,

GILCHRIST, WATT, & CO.

No. 38.

Minute of the Postmaster-General.

THIS Colony having withdrawn from her contract with the Pacific Mail Company, as she was entitled to do under clause 15, New Zealand offered to convey our mails by the Pacific Company's ships, still under contract with her, for the sum of £7,000 during the last year of the contract; and this offer having been accepted we have continued to forward our mails, though in reduced quantity, and are liable to pay to New Zealand the stipulated amount. I cannot compel the company to carry our mails, and in the event of the company's refusing to do so, can only look to New Zealand to carry out the contract agreed to by her. It is immaterial to this Colony whether we pay New Zealand or the company for carrying our mails, but

but it is evidently useless for us to make any contract with the company without the consent of New Zealand, as that Colony has the power of taking out of any vessel under contract with her all mails shipped without her consent. As we now pay New Zealand for all our mails carried by the company I cannot of course sanction any payments to the company.—J.N., 18/3/85.

Inform accordingly.—J.N., 19/3/85.

No. 39.

The Secretary to the Post Office to Messrs. Gilchrist, Watt, & Co.

Gentlemen,

General Post Office, Sydney, 19 March, 1885.

With reference to your communication of the 14th instant, respecting the conveyance of New South Wales mails by the Pacific Mail Steamship Company's vessels since the withdrawal of this Colony from the San Francisco mail contract, I am directed by the Postmaster-General to inform you that an offer was received from the Postmaster-General of New Zealand to convey by the Pacific Mail Steamships under contract to the Government of that Colony mails to and from New South Wales for the sum of £7,000, during the last year of the contract, and accepted. In pursuance of that arrangement this Department has continued to forward and receive mails—although a more limited quantity by way of San Francisco—and is liable for payment of the stipulated amount to New Zealand, and in the event of the Company declining to receive the mails must only look to the Government of that Colony to fulfil the agreement.

As regards payment for the carriage of these mails, it would be quite immaterial to this Colony whether it were made to the Company or the New Zealand Government, but I am to point out that it would evidently be useless to enter into any contract with the Company without the consent of the New Zealand Government, as mails shipped in any vessels under contract to that Colony, without such consent, could be taken out of such vessels at New Zealand.

In conclusion, I am to state that as payment is now made to the New Zealand Government for all mails conveyed by the Pacific Mail Steamships Mr. Norton cannot sanction any payment to the Company.

I have, &c.,

S. H. LAMBTON,

Secretary.

No. 40.

Messrs. Gilchrist, Watt, & Co. to The Postmaster-General, Sydney.

Sir,

Sydney, 25 March, 1885.

We beg to give you notice on behalf of the contractors for the California Mail Service that we protest against the New South Wales mails being put on board California mail steamers unless we are paid the subsidy, £11,750, you agreed to pay us.

We particularly protest against any mail for Auckland, San Francisco, London, or elsewhere, being put on board the outward-bound California mail steamer "Australia," sailing hence to-morrow, without your paying us for the carriage and conveyance of same, to which we are justly and equitably entitled.

We have, &c.,

GILCHRIST, WATT, & CO.

I have drafted letter in reply to this. Embody all necessary particulars in telegram to P.M.G., New Zealand.—J.N., 25/3/85.

No. 41.

The Postmaster-General, Sydney, to Messrs. Gilchrist, Watt, & Co.

Gentlemen,

General Post Office, Sydney, 25 March, 1885.

I have to acknowledge the receipt of your letter of this day's date, protesting against the New South Wales mails being put on board California mail steamers, particularly the "Australia," sailing hence to-morrow, unless you are paid the subsidy of £11,750, and to inquire whether you intend to refuse to carry the mail advertised to be despatched by the "Australia."

If this be the case, I am compelled to inform you that under the postal laws of this Colony I am entitled to place on board any outward-bound vessel any mails which I may think fit to forward, paying a gratuity of one penny for each letter.

As you have thought proper to defer your last communication to so late a period for the apparent purpose of placing my Department under a serious difficulty, in consequence of our having advertised the despatch of a mail by the "Australia" to-morrow, I shall have no alternative but to take advantage of the provision of our law, which I have pointed out.

I may inform you that your action in this matter has entirely destroyed the strong sympathy which I have hitherto felt for your Company under the very difficult circumstances under which it was unexpectedly placed by our withdrawal from the existing contract.

I have, &c.,

JAMES NORTON,

Postmaster-General.

No. 42.

Messrs. Gilchrist, Watt, & Co. to The Postmaster-General, Sydney.

Sir,

Sydney, 25 March, 1885.

We have the honor to acknowledge receipt of your letter (885-3450) of even date, and in reply beg to inform you that we never intended to refuse to carry the mail advertised to be despatched by the "Australia" to-morrow, neither was our last communication sent to you for the apparent purpose of placing your Department under a serious difficulty in consequence of your having advertised the despatch of a mail by the "Australia."

On the contrary, we simply protest against your compelling us to carry a mail free of subsidy, and though we protest against your putting any mails on board we will not refuse to carry such as you may be pleased to put on board.

You

13

You have evidently misunderstood the meaning of our notice of protest, and we trust you will do us the justice to admit we had no intention whatever of putting your Department in a false position, or in any difficulty, or to any inconvenience, and we further hope that the strong sympathy which you have always felt towards our Company will still continue to be enjoyed by us.

We have, &c.,
GILCHRIST, WATT, & CO.

No. 43.

Minute of the Postmaster-General.

INFORM Gilchrist, Watt, & Co. that we have noted the contents of the above letter, and that I propose to place a mail on board the "Australia" as usual pursuant to the arrangement made with the Postmaster-General, New Zealand. Point out that my offer to pay £11,750 for the remaining year of the contract was only made subject to the concurrence of New Zealand, which they failed to obtain, and that New Zealand having objected to my making any contract with you, I had no other course left open to me than to accept the offer of New Zealand to convey mails by means of the Company's vessels and to pay therefor as in the case of non-contracting colonies. J.N., 26/3/85.

No. 44.

The Secretary to the Post Office to Messrs. Gilchrist, Watt, & Co.

Gentlemen,

General Post Office, Sydney, 26 March, 1885.

I am directed to inform you that the Postmaster-General has noted the contents of your letter of yesterday's date, and that it is proposed to place a mail on board the "Australia" as usual, pursuant to the arrangement made with the Postmaster-General, New Zealand.

I am to point out that Mr. Norton's offer to pay £11,750 for the remaining year of the contract was only made subject to the concurrence of New Zealand, which you failed to obtain, and that New Zealand having objected to the Postmaster-General of this Colony making any contract with you, Mr. Norton had no other course left open to him but to accept the offer of New Zealand to convey mails by means of the Company's vessels, and to pay therefor as in the case of non-contracting colonies.

I have, &c.,
S. H. LAMBTON,
Secretary.

No. 45.

Telegram from Postmaster-General of Sydney to The Postmaster-General, Wellington, N.Z.

27 March, 1885.

On fourteenth, Gilchrist, Watt demanded subsidy of eleven thousand seven fifty per annum as we still used service, and their obligations to you fulfilled at Auckland. If continued they will decline Sydney mails. I replied that we having withdrawn and accepted your offer to convey our mails we would rely on you to carry out agreement. Gilchrist on twenty-fifth protested against taking mails per "Australia" unless paid. I asked whether they intended to refuse, as if so I purposed, under our Act, placing mails on board and paying prescribed gratuity of penny per letter. They replied, did not intend to refuse mails but simply protested. Copy of correspondence will be sent you. I shall be glad to hear your views.

JAMES NORTON.

The Secretary to the Post Office, Sydney, to The Secretary to the Post Office, Wellington, N.Z.

Sir,

General Post Office, 28 March, 1885.

With reference to the concluding paragraph of the cablegram of yesterday's date from the Postmaster-General of this Colony to the Postmaster-General of New Zealand respecting the transmission of New South Wales mails by the Pacific Mail Steamship Company's vessels since the withdrawal of this Colony from the contract, I am directed to forward herewith a copy of the correspondence that has taken place between Messrs. Gilchrist, Watt, & Co., the General Agents for the Contractors, and this Department on the subject.

I have, &c.,
S. H. LAMBTON,
Secretary.

[Enclosure: copies of correspondence already printed herein.]

No. 47.

The Postmaster-General, Wellington, N.Z., to The Postmaster-General, Sydney.

30 March, 1885.

Re Gilchrist, Watt's letter. Of course am unable to judge of what your obligations are to the Company, especially as they ask a sum from you not specified in contract, but our view is that ceasing to be a contractor you are one of the Colonies for which under contract we have a right to call on contractors to carry mails.

R. STOUT,
(For Postmaster-General.)

Seen by P.M.G.—S.H.L., 30/3/85. Bring forward about a week before next 'Frisco mail leaves.—S.H.L., 31/3/85. No reply has yet been received from New Zealand to our letter of 28th ultimo, and perhaps no further action need be taken until such reply comes to hand.—S.H.L., 17/4/85. Approved.—J.N., 20/4/85.

No. 48.

New Zealand Post and Telegraph Department,

Sir,

General Post Office, Wellington, 24 April, 1885.

I have the honor to acknowledge the receipt of your letter of the 28th ultimo, B. 85-3,466, covering copy of the correspondence exchanged between Messrs. Gilchrist, Watt, & Co., and your Department, on the subject of the transmission of the New South Wales mails by the Pacific Mail Steamship Company's steamers since the withdrawal of your Colony from the San Francisco Mail Service Contract. I am to thank you for the correspondence, which has been perused by the Postmaster-General.

I enclose copy of Mr. Norton's telegram of the 27th ultimo, together with the reply thereto sent by Hon. Mr. Stout on the 30th.

I have, &c.,

W. GRAY,
Secretary.

[Enclosure: copy of telegrams; see Nos. 45 and 47.]

Submitted.—S.H.L., 4/5/85. Read.—J.N., 4/5/85.

No. 49.

Messrs. Gilchrist, Watt, & Co. to The Postmaster-General, Sydney.

Sir,

Sydney, 1 July, 1885.

We are now making an appeal to New Zealand to release New South Wales from her agreement to pay New Zealand for carrying her mails, and allow her to pay to the contractors who do the work the sum of £11,750 agreed on in October last; and in the event of her consenting to do so, we presume New South Wales will then carry out her agreement with the contractors, which New Zealand has hitherto interposed to prevent.

We have, &c.,

GILCHRIST, WATT, & CO.

It will be seen from a statement by the Accountant, submitted herewith, that by the existing arrangements under which we pay £7,000 to New Zealand—retaining our own postages and Imperial credits—the estimated net cost of the San Francisco Service for the current year is only at the rate of about £500 per annum.

If we were to rejoin the contract, as Messrs. Gilchrist, Watt, & Co. propose, on the same terms as formerly—to take effect retrospectively from the date of our withdrawal—the estimated loss would be at the rate of £5,150 a year, though, apparently, there should not be a great difference between paying New Zealand £7,000 and giving up our claim to half the postages of the other Colonies, and paying £11,750 to the contractors—retaining our half of the postages referred to.

Prior to the taking of the Orient contract, our half share of the postages in question amounted to about £3,000 a year; but since the Orient contract was entered into, the other Australian Colonies appear to have made less use of the San Francisco service, and it is estimated that for the current year the half share of the postage from those colonies would not exceed £2,100 a year; and it will moreover be remembered that, in addition to the £11,750, we had, whilst in the contract, to pay half the premiums earned by the Company, and should of course have to do so again if we rejoined.

In 1883, half of these premiums amounted to £2,561; but allowing for the accelerated speed provided for during the remainder of the contract, the half of the premiums to be earned by the Company for the current year, as will be seen by the Accountant's statement, is only estimated at £2,000.—S.H.L., 7/7/85.

No. 50.

Messrs. Gilchrist, Watt, & Co. to The Colonial Secretary.

Sir,

Sydney, 22 July, 1885.

When we telegraphed to the Pacific Mail Steamship Company, in December last, that New South Wales would not in future pay them any subsidy for conveyance of the mails to and from San Francisco, but would, under pressure of a local Act of New Zealand, pay New Zealand for the work done by the Pacific Mail Steamship Company, they replied, on 10th December:—

“Cannot concede right Sydney withdraw this late hour. Will continue service, expecting justice both New Zealand Sydney, according terms agreed.”

On 3rd June, 1885, we wrote appealing to the sense of justice of New Zealand, and asking the Postmaster-General to release New South Wales from her engagement, made in compliance with New Zealand telegram of 3rd December, and expressing our confidence that on this being done New South Wales would pay the contractors the sum agreed. To this we have no reply; and to an intimation from New York that the Pacific Mail Steamship Company claims the right to submit the matter to arbitration, New Zealand has replied:—

“This Colony is fulfilling in terms of its contract with Pacific Mail Steamship Company, and there is therefore nothing about which to arbitrate.”

Pending an appeal to the sense of justice of New Zealand and to New South Wales, on which the Pacific Mail Steamship Company rely, we have taken no further steps towards arbitration.

We now appeal to you as a party to the contract to endeavour to secure to the contractors what they consider is justly due to them, and we do so with confidence, because your Government arranged the renewal contract in which you yourself took a leading part, and in the resolutions passed through our Assembly in April, 1883; and in these resolutions you and the Parliament had the interests of New Zealand in view as much as those of New South Wales.

The object of the resolutions was threefold:—

- 1st. A willingness to have for one year the greater proportion of the burden (which, it was supposed, would fall on New Zealand as it had fallen on New South Wales) than the relative value of the service warranted.
- 2nd. To obtain on behalf of *both Colonies* a contribution from America in relief of their subsidy.
- 3rd. Failing such contribution being obtained, to re-adjust the subsidy of New South Wales in fairer proportion to the relative value of the service.

New Zealand might if she had chosen made a like stipulation; but the Postmaster-General, in his report for 1883, after quoting at length the New South Wales clause 15 of contract, says, “No such power was sought for by New Zealand.”

Your second object was so far attained that Congress, in June, 1884, repealed the Act which compelled foreign-going steamers to carry letters at a nominal rate, and placed a sum of money at the disposal of the Postmaster-General of the United States for distribution among steamers bearing mails.

This was not to come into operation until early in April, when the new Government would be in office; and in the report of the Pacific Mail Steamship Company to their shareholders of 27th May, they say the Postmaster-General has \$400,000 at his disposal under this Act, but he had not yet been able to adjust any of the various claims, but they hoped to obtain their fair share, which would be in proportion to the mail matter carried.

This will be considerable as regards New Zealand, but trifling as regards New South Wales, owing to the altered postal arrangements of the two Colonies; but whatever arrangement may be made will not be confined to the present contract, but to any future service; the arrangement, therefore, aided by the New South Wales conditions (in which New Zealand took no part), will permanently benefit New Zealand in a far greater degree than New South Wales.

We need hardly point out to you the very false position in which New South Wales stands in this matter in the eyes of America and England.

New Zealand pays all she agreed to pay under the contract, while New South Wales continues to receive all the benefits of the contract, and then not pay the contractors anything for it. Very few will understand that New South Wales is coerced to pay New Zealand what she had agreed to pay the contractors, and that New Zealand applies the money to reduce her own contribution to the subsidy.

Surely New Zealand will not allow New South Wales to continue in this false position when the matter is clearly understood; for be it remembered all this difficulty has arisen in consequence of a change in the New Zealand Ministry occurring at the very time when it was necessary New South Wales should give her notice, thereby disturbing negotiations at a critical time.

If New Zealand will not do the contractors justice, we are very confident New South Wales will, if you ask Parliament to vote the money; but we would be sorry to see this course rendered necessary, as it would possibly prevent any future co-operation of the two Colonies in similar matters.

The time is drawing very near when the necessary notice to passengers holding lay-over and return tickets must be inserted, unless the contract is to be renewed; and we will be glad to see this question settled and removed from the way of resuming negotiations for a continued service, or for a direct service to this Colony alone, same as New Zealand has lately been in treaty for betwixt New Zealand and San Francisco.

We have, &c.,

GILCHRIST, WATT, & CO.,
General Agents for the Contractors, San Francisco Mail Service.

MEMO. of the present position of claims of the Pacific Mail Steamship Company in respect of contract, furnished by Messrs. Gilchrist, Watt, & Co.

Marginal notes by the Secretary to the Post Office marked "S.H.L.," and by the Postmaster-General marked "J.N."

1. Early in 1883 the question of renewal of contract came to be considered, and negotiations took place with the result that—

2. The Pacific Mail Steamship Company agreed to accept £52,500 for the service to and from Auckland, Sydney, and San Francisco—£32,500 to be paid by New Zealand, and £20,000 by New South Wales.

3. The New Zealand Legislature accordingly authorized the Government to renew the contract for a period not exceeding three years, for £32,500.

4. New South Wales succeeded in obtaining a concession of £2,500 on the sum named, which she shared equally with New Zealand, reducing the contributions to £31,250 and £18,750 respectively.

5. In April, 1883, the New South Wales Parliament accordingly authorized the Government to renew the contract for a period not exceeding two years, for £18,750 per annum. New South Wales to have the option, however, at the end of the first year to withdraw, unless a contribution equal to one-third of the entire subsidy were received from America or other sources, such contribution to be divided equally betwixt New Zealand and New South Wales. This condition in favour of New South Wales was duly communicated by New South Wales to New Zealand, and consented to by the latter.

The Postmaster-General of New Zealand, in his report of 1883, after quoting clause 15 of the contract, remarks, "No such power was sought for by New Zealand."

6. In September, 1883, New South Wales prepared a fresh contract containing this condition (clause 15 of the contract), and submitted to the Sydney agents of the Pacific Mail S. S. Company, and they proposed an addition to clause 15, as follows:—

Should the Government of New South Wales withdraw from the contract, as before provided, then it shall be optional with the contractors to continue to convey the New Zealand mails alone for such subsidy as may be arranged, terminating the contract at Auckland, but with permission to come on to a port in New South Wales, or to withdraw from the contract altogether.

New South Wales reserved the clause for the consideration of New Zealand, whom alone it concerned; the draft contract was then submitted to New Zealand. This proviso for the protection of the contractors was struck out by New Zealand, and the proviso as it now stands substituted. The contract so amended was approved by New Zealand and ultimately forwarded to New York, where it was signed by the contractors (the Pacific Mail Steamship Company), on the 3rd June, 1884.

7. By the contract New Zealand agreed to pay the sum of £31,250 for delivery of the mails at Auckland (clause 11), and to pay immediately on the due delivery of such mail (clause 13); thus the service, so far as New Zealand was concerned (and the contract money only paid for this and no more), began and ended on delivery at Auckland. New Zealand further agreed that New South Wales should pay £18,750 for the service Sydney to San Francisco, calling at Auckland, subject to the reduction or the option reserved by her for the second year.

A comparison of the reports of the Postmasters-General of New Zealand and New South Wales of 1883, the latest which we have received, show that while New South Wales lost £22,276 in that year, New Zealand made a profit of £2,192 9s. 3d. by the contract, excluding the cost of coastal service for the purpose of comparison, as Sydney accounts contain no corresponding debit for cost of distribution of mails on arrival at Sydney.

8. New Zealand made no stipulation on her own behalf for reduction or withdrawal, nor was it necessary, as, in the event of contribution by America, she would receive her full share of the stipulation made by New South Wales, and the contract was yielding her a profit; she had no desire to risk the lapsing of the contract altogether, as would probably have been the case had both Colonies insisted on the option of withdrawal or reduction; had she made such a claim, the addition proposed by the contractors' Sydney agents to clause 15 would have been insisted on, in justice to and for the protection of the contractors.

9. The Pacific Mail Steamship Company therefore considered that the total reduction they might be called upon to make would not exceed proportion of the one-third subsidy, say £8,333 13s. 4d., to New South Wales, and they preferred to take the risk of this for one year rather than disturb the harmonious co-operation of the two Colonies or allow the contract to lapse.

10. The Pacific Mail Steamship Company having refrained from stipulating for the power of abandoning the contract at the end of the first year, because New Zealand had not claimed a similar power to New South Wales, submit that New Zealand was excluded during the remainder of the contract from claiming from the contractors directly any concession on the amount she had agreed to pay, or from seeking indirectly to obtain such a concession at the cost of the contractors.

11. The Pacific Mail Steamship Company were perfectly aware that there were good reasons for the different courses pursued by the two Colonies, as, independently of the financial result of the line to New Zealand, the line had become valueless to New South Wales as a means of communication with Europe, from the establishment of five different mail services every four weeks, while to New Zealand the value of the route was very great (see the Postmaster-General of New Zealand's report of 1883, and repeated speeches in New Zealand *Hansard*.)

And by the Company's representatives in Sydney.—S.H.L.

12. The contract, when signed in New York, was forwarded to New Zealand by the Pacific Mail Steamship Company, with a request to their agents to ascertain the wishes of the Colonies in regard to the continuation of the service till November, 1885 (see New York telegram, 23rd June, 1884).

13. As regards New Zealand, Mr. Consul Gamble, the Company's Agent at Auckland, in accordance with instructions, advised the Sydney Agents, on the 2nd July, 1884, as follows:—

"I referred the matter to the Secretary of the Post Office Department, Wellington, and was able to send you, on the 30th ultimo, the following despatch:—'Have just received copy mail contract. Mail contract renewed by New Zealand to Nov., 1885, expects New South Wales will do the same.'"

"The new contract has been approved by this Government, and does not leave any option to the Colony of New Zealand nor the Pacific Mail S. S. Company about carrying on the service. It must run until the end of November, 1885."

This was duly telegraphed to New York.

14. No expression of opinion was received from New South Wales until early in August, when a telegram was sent to New York by the Sydney Agents, the result of a communication with the Postmaster-General, Sydney—

"New South Wales Government expects definite substantial subsidy, probably £16,000"—

being about one-third subsidy referred to in clause 15 of the contract.

15. This concession would have benefited New Zealand equally with New South Wales, and was a friendly attempt on the part of New South Wales to obtain for New Zealand a concession she had not asked for herself (as in the previous case of the concession obtained by New South Wales of £2,500); but it will be noted that such a demand was not warranted by the contract, the evident intent being that the Pacific Mail Steamship Company should receive the full contract money, £50,000, from the Colonies and America, or from the two Colonies, subject only to such reductions as New South Wales, by virtue of clause 15, might be able to induce the contractors to allow her should America not contribute.

16. Before answering this suggestion of New South Wales, the Pacific Mail Company considered it due to New Zealand, as the largest contributor to the subsidy, and in consequence of the conference narrated by Mr. Creighton, 27th April, 1883 (New Zealand Parliamentary paper, 3), to ascertain and consult her wishes should New South Wales give notice; accordingly, on the 8th August, a telegram was sent to the Postmaster-General, Wellington, asking—

"Will New Zealand continue Frisco Mail Service until November, 1885, and on what terms if New South Wales withdraws next November?"—

to which no reply was received.

Again, on the 22nd August, another telegram was sent to the Postmaster-General, Wellington, as follows:—

"Advise us what your Government will pay for direct service ending Auckland"—

to which no reply has been received.

The message was repeated to the Pacific Mail Company's Agents at Wellington, with a request that they should ascertain the wishes of the Government.

On the 28th August the following reply was received from the Agents (but none from the Postmaster-General to either message):—

"No Ministry formed yet. Some time must lapse before anything authoritative ascertainable. Department assumes contractors must continue New Zealand service end November, 1885, for her present subsidy, even if Sydney ceases."

17. 29th August was the day when New South Wales had to give the notice under clause 15 (or forfeit her right to do so), and she did so on the 25th, in order to preserve her vantage ground in negotiating for a reduction. Prior to this, the Pacific Mail Steamship Company could undoubtedly have arranged with New South Wales, but they let the time go by in courteously waiting an indication of the wishes of New Zealand, whose delay in reply is sufficiently explained by above telegram of 28th August. Even if the Pacific Mail S. S. Company by this delay lost the right to negotiate with New South Wales, should New Zealand in justice to the contractors press against them a delay in arranging under the circumstances named, and aid the notice of *desire to withdraw* as the expected concession from America had not been obtained, put an end to the right to negotiate for a reduction in the subsidy from *other sources*.

The contractors did not consider it did, nor did New South Wales, and to this day New South Wales grants to the contractors all the privileges conceded by clause 25, and, in her telegram of 6th September to New Zealand, advising that she had given notice, the Postmaster-General expressly states this—*"This will not prevent me considering any proposal from contractors."* And no dissent was expressed by New Zealand until 13th October, after New South Wales had advised that she had arranged with the contractors, subject to the concurrence of New Zealand.

A careful perusal of clause 15, and of the proviso as to notice, at once conveys the idea that the notice of *desire to withdraw* does not necessarily imply withdrawal, but that the desire to withdraw might be met by a concession *from other sources*.

It did. See below.—J.N.

The right of withdrawal is absolute. The question of concession from other sources falls to the ground by N.S.W. withdrawing.—J.N.

We cannot refer to the proviso which was struck out.

* This cannot be assumed.—J.N.

This is a matter between the contractors and their agents.—J.N.

Do J.N.

Do J.N.

The contractors knew of the possibility of withdrawal by N.S.W., and should have instructed their Agents how to act in event of receiving notice of withdrawal.—J.N.

This is probably correct, but nothing hinges upon it.—J.N.

Other sources cannot refer to the contractors.—J.N.

This is quite correct.—J.N.

*Messrs. G. W. & Co. omit the following very important words—"which it is understood you will endeavour to obtain."—S.H.L.

These statements are not quite correct.—I know nothing of any claim on contractors by N.Z. for £7,000. N.Z. took up the position that we had withdrawn from contract, and therefore must arrange with them as to the terms on which we could use the service, the £7,000 being the amount subsequently agreed upon.—S.H.L.

† The increase is very problematical; the quicker service of the Orient Company inducing correspondents to write by that line.—J.N.

Former?—J.N.

The proviso, seeing it was inserted in lieu of an express proviso for the protection of the contractors, must mean that the notice of a desire to withdraw **shall not be conclusive* until the contractors have recognized it by acting on the proviso, which seems designed to leave the matter open for negotiations.

The proviso was to be acted upon by the contractors, who were entitled to exercise their own discretion in a matter so important, and not by their agents. Notice to the contractors may be left with the agents, but the *contractors* are to send copy, &c.

When agents are intended to act, they are specially empowered, as in clauses Nos. 13, 33, &c.

The proviso is not "intimation of the notice of withdrawal shall be given," but "a copy of the notice shall be sent." To make this possible, this notice must first be sent to the contractors in New York, and a copy then sent by them to the Postmaster-General of New Zealand *for his information*, which would entail a lapse of three months ere copy of the notice would reach him, long before which the Pacific Mail S.S. Company had arranged to the satisfaction of New South Wales, so that she no longer had a *desire to withdraw*, and the Postmaster-General of New Zealand had, very soon after the notice was given, viz., on 6th September, received the information from the Postmaster-General of New South Wales.

The proviso was substituted for a provision intended to guard the contractors from being compelled to carry on the service for one portion only of the subsidy.

New Zealand was by no means desirous to allow the contract to come to an end, and was desirous to retain the co-operation of New South Wales in maintaining the contract.

May we not fairly look upon the proviso as a door purposely left open by New Zealand and the contractors (as it indeed proved to be) for the return of New South Wales to the contract.

The Pacific Mail S.S. Company were advised, when New South Wales gave notice of her desire to withdraw, and that, for the reasons stated, no indication of the wishes of New Zealand, in the event of her withdrawal, could be obtained, except that she expected the contract to continue as before, and the contractors then resumed negotiations with New South Wales, suspended while trying to elicit the wishes of New Zealand, in order to induce her to continue in the contract, by a concession from *other sources*, i.e., made by the contractors themselves.

They first offered £5,750, which was declined. On 29th September the Sydney Agents received from Wellington Agents of the Pacific Mail S.S. Company a letter, under date 19th September, thirteen days after the telegram from the Postmaster-General, Sydney, to the Postmaster-General, Wellington, advising his having given the stipulated notice, but plainly intimating his intention of still negotiating with the contractors, from which the following is an extract:—

"Referring to our letter of the 28th ultimo, we have now received definite information from the Postmaster-General's Department confirming what was stated in our letter and telegram, that the Government hold that the Company has to continue the New Zealand service at the same subsidy, until it expires in November, 1885, notwithstanding the withdrawal of New South Wales":

which confirmed the contractors in their opinion that the Postmaster-General of New Zealand concurred in this interpretation of the contract, and that New Zealand only cared that the service should, as regards New Zealand, be carried on efficiently, and that so long as no additional burden was thereby thrown on New Zealand, and that the contractors were perfectly at liberty to arrange with New South Wales for her remaining in the contract, and so avoid the heavy loss her final withdrawal would have caused.

On 30th September, after receipt of the letter referred to, the contractors, by their Sydney Agents, agreed to increase the concessions to New South Wales to £7,000 (something less than she would have received had America contributed one-third); and as they had cause to think this would be acceptable to New South Wales, they wrote on the 2nd October (the first opportunity) to the Wellington Agents requesting them to call on the Postmaster-General and tell him how the negotiations stood and ask his concurrence, which in view of what had passed they never for a moment doubted would be obtained.

On the 10th October the proposal was finally accepted by New South Wales, made with the courtesy usual in official communication, subject to the concurrence of New Zealand* and advised to the Postmaster-General of New Zealand, when for the first time New Zealand expressed her dissent from New South Wales returning to the contract, although no burden of any kind was thereby thrown on New Zealand, and £7,000 was claimed from the contractors as the price of New Zealand's *consent*.

The contractors looking upon this demand as contrary to the whole spirit and true intent of the renewed contract, having abstained from reserving to themselves the right of abandoning a contract which for the New Zealand subsidy alone or the subsidy reduced by concessions to both Colonies must be a very unprofitable one, declined to make the concession demanded, and New Zealand thenceforward assumed the exclusive control of the contract, declined to allow Sydney mails to be carried unless New South Wales would pay to New Zealand £7,000, and make over to her the share of payment made by the other Colonies for using the line, amounting in 1883 to £3,459, and by this time from the natural increase in correspondence probably £4,000† or more, thus making together nearly the sum which New South Wales had agreed to pay the contractors, viz., £11,750.

The

The contractors submit that, however New Zealand might have refused consent to allow New South Wales to resume the premier position in the contract which she had hitherto done, and thus secure the control and the premier position in the contract to herself, she could not in justice refuse consent to the contractors receiving the subsidy which she herself had agreed should be paid for the work done, although reduced under clause fifteen, to which she (New Zealand) was a consenting party.

She could not in common fairness refuse this.—J.N.

New Zealand was enabled to coerce New South Wales by the threatened application of a local Act (see telegrams of 13th October and 3rd December).

The contractors submit that the application of this Act to deprive them of the payment which New Zealand agreed they should receive from New South Wales, although reduced in amount, for doing the work, is unjust as towards the contractors, and that the Act is only made applicable by the course taken by New Zealand herself, in declining to allow New South Wales to contribute to the subsidy payable under the contract by both Colonies, as she had been in the habit of doing, and which had been previously recognized by New Zealand as a compliance with the Act.

American Counsel contend further that the threatened application of the Act implying the power to remove *by force* from an American steamer the sealed mails of the United States would be a violation of international law.

This may be right.—J.N.

The contract distinctly limits the power of each of the Postmasters-General of the two Colonies, "so far only as the covenants and agreements hereinafter contained are to be observed as performed by or are applicable to the Governments of the said Colonies respectively," see preamble and throughout the contract.

If, therefore, New South Wales had absolutely withdrawn from the contract, the duty of the contractors ceased at Auckland (clause 11), when immediately on arrival of the mail the money was payable at the Treasury (clause 13), and the steamers might have remained at Auckland had the contractors chosen, or gone to Melbourne or Sydney or wherever else it would pay them to go, until the due date of starting again from Auckland; but the Postmaster-General of New Zealand, by his instructions to the Sydney agents of the contractors, under date 15th January, to the Postmaster-General of Sydney, of same date, to the Secretary of the Post Office, London, of December 15th, and to the Postmaster-General of Victoria and the other Colonies of the 15th December, instructing them to pay New Zealand the sums they had been in the habit of paying New South Wales, and by retaining to her own use contrary to the terms of the contract the one-half of such sums, and by other acts, has exercised the rights of both Governments for which New Zealand agreed by contract that the contractors would be paid £50,000; and as "mutuality is the very essence of a contract," in thus taking on herself all the rights of both Governments, claiming and receiving the profits accruing from work done by the contractors (the Pacific Mail S.S. Company), submit that in justice she has assumed the duties and liabilities of both Governments towards the contractors.

The contract made no provision whatever for what is to be done in the event of New South Wales withdrawing—*evidently such an event was never anticipated*—although the draft contract was a matter of such careful consideration by New Zealand and New South Wales.

Why not? If not anticipated, it would not have been provided for in the contract.—S.H.L.

New Zealand by the mere withdrawal of New South Wales acquired no new rights than she previously possessed, but she has assumed and exercised the rights of both Governments, with the full knowledge of the payments (she had by the contract herself agreed) to be made for the double rights so claimed and exercised.

The contractors have continued the service according to their telegram of 10th December,—"*Cannot concede right Sydney withdraw this late hour; will continue service—expecting justice both New Zealand Sydney according terms agreed.*"

No concession was necessary. Sydney had right to withdraw, and exercised it.—J.N.

The contractors do not claim the full payment of £18,750 which in the absence of any arrangement with New South Wales would have been payable to them, but in justice they limit their claim on New Zealand to the sum they had agreed to accept from New South Wales for the second year, viz., £11,750, nearly the whole of which New Zealand is now, to the prejudice and loss of the contractors, receiving, say £7,000 from New South Wales and about £4,000 from the other Colonies, for work done by the contractors, and retaining it in reduction of the share of the subsidy she had agreed to pay to the contractors, although New Zealand equally with New South Wales had covenanted with the Pacific Mail S.S. Coy., that they should be paid for carrying the New South Wales mails from and to Sydney and San Francisco, as well as for carrying them to and from Auckland and San Francisco, and when arranging for the renewal of the contract "no such power of reduction or withdrawal as New South Wales stipulated for had been sought by New Zealand."

No. 51.

Minute of Colonial Secretary.

THE agents of the Pacific Mail Company have sent me a letter, dated July 22nd, and setting forth certain grievances under which the Company considers it has a right to some relief. Will my honorable colleague the Postmaster-General kindly have the letter and accompanying memorandum of claims investigated or verified and returned, when I will be glad to confer with him on the subject.

23 July, 1885.

No. 52.

Minute of Secretary to the Post Office, Sydney.

IF the Postmaster-General wishes it, I will deal exhaustively with Mr. Watt's various statements, which, however, contain some inaccuracies—the most material of which I have noted in pencil on the margin of his communication.

It is not clear, however, what purpose would be served by doing this, nor is it by any means clear what Mr. Watt's object is in writing. He can hardly expect us to pay the Company the £11,750, as well as pay New Zealand the £7,000, and the consideration of any proposal for us to pay the former amount must, I apprehend, be preceded by an offer from New Zealand to forego the latter.

The facts of the case are simple, and can be briefly stated. Finding that the San Francisco Service was no longer an absolute necessity to this Colony, and the contractors not having obtained the stipulated contribution of one-third of the total subsidy from other sources, the Government, whilst prepared, as was subsequently shown, to pay a fair amount for the maintenance of communication, did not feel justified in continuing the subsidy of £18,750, and accordingly exercised its undoubted right to withdraw from the service for the final year of the contract. After our notice of withdrawal, the contractors' representative in Sydney strongly urged our continuing the service, and offered to allow £7,000 off our portion of the subsidy for the remaining year, he stating (as was understood from his remarks) that New Zealand's concurrence in this arrangement was certain. The Government accordingly accepted the offer, subject to the concurrence of New Zealand, which the contractors were to endeavour to obtain.

New Zealand did not concur; and on the refusal being notified to this Department negotiations were opened with New Zealand as to the terms on which any American or other mail matter to and from this Colony would be conveyed; the result of these negotiations being that we agreed to pay the sum of £7,000, New Zealand retaining the whole of the postages from other Colonies, instead of half as formerly, we retaining our own postages.

To pay the Company £11,750, as well as pay New Zealand £7,000, would make the service even a more expensive one than formerly, as, whilst *in the contract*, we received one-half of the postages from other Colonies, such half amounting at that time to about £3,000 a year. When parties to the contract we had moreover to pay our share of the premiums earned by the Company, and, it is presumed, that were we, with the concurrence of New Zealand, to pay the Company the £11,750, we should be considered as being again in the contract, and be required again to pay our share of premiums, amounting to about £2,500.

S.H.L.,
27/7/85.

No. 53.

Minute of Postmaster-General, Sydney.

THE object of Messrs. Gilchrist, Watt, and Company in submitting their lengthy memorandum (unsigned and undated) is not apparent on the face of the document.

There are in it some misstatements of no great importance, and a little special pleading.

The contract was a joint one for two years, entered into by New Zealand so far as her mail service was concerned, and by New South Wales so far as affected herself.

New South Wales withdrew, as she had an unquestionable right to do, at the end of the first year, because the United States would not contribute anything towards the service, and after such withdrawal she was out of the contract finally and for ever. The Company might perhaps thereupon have ceased running its vessels beyond New Zealand, but it would not suit it to do this, because (as I understand) the amount of freight and passage-money received by the Company from New South Wales was nearly four times as much as that received from New Zealand. Therefore the vessels still came to Sydney, and the Company proposed to carry our mails for £11,750, to which I agreed, subject to its obtaining the consent of New Zealand. This, however, Sir Julius Vogel refused to give, and complained that our Government had treated him very badly (how I do not know), and threatened that if mails were put on board the Company's vessels he would take them out and land them in New Zealand, which he claimed to have a right to do under some New Zealand statute; but he offered to carry our mails in the Company's vessels for £7,000. I therefore continued to forward the mails as heretofore, for the Company made no objection to carry them. It however afterwards made some demur, but on my pointing out that I had a right, under our Postal Act, to place mails on board any vessel leaving the port, continued to receive and carry them as before.

New South Wales thus by the payment of £7,000 per annum receives all the benefit which she received originally for £18,750, and which she afterwards agreed to pay for at the reduced rate of £11,750. We, however, lose certain contributions amounting to between £3,000 and £4,000 which we used to obtain from other Colonies, and which New Zealand now receives from them.

New South Wales has thus been benefited by this action of New Zealand, but the Company has been compelled to perform for £31,250 the same services which it agreed to perform for £50,000, while at the same time New Zealand, after taking into account the £7,000 received from New South Wales, actually makes a profit out of the service.

The

The New Zealand Parliament has now voted £30,000 for a new service, and tenders have been invited for a four-weekly service of eighteen days between San Francisco and Honolulu and Auckland, and a branch service to an Australian port to be hereafter designated, that is to say, Sydney, if we behave ourselves properly, but otherwise Melbourne.

It is very doubtful whether the Company can afford to undertake the work for the amount voted, but it would be quite willing to make such a contract with us, leaving out New Zealand, for £25,000, towards the payment of which we should probably be able to collect postages to the extent of nearly one half.

In considering this question, it might be advantageous to consider at the same time whether it would not be expedient sooner or later to arrange for a service to Port Moodie, to connect with a railway passing entirely through British territory. Mr. Watt states that this railway being farther north than the present American line must be frequently snowed up; but Mr. Carson Woods, who is very warm on the subject, states that the snow difficulty is entirely imaginary, and that the line is one of the best appointed lines in the world.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

CABLE COMMUNICATION BETWEEN AUSTRALIA AND GREAT BRITAIN.

(REPORT OF SUPERINTENDENT, ELECTRIC TELEGRAPHS, ON REDUCTION OF RATES FOR CABLEGRAMS AND DUPLICATION OF SUBMARINE CABLES.)

Ordered by the Legislative Assembly to be printed, 21 April, 1886.

I HAVE carefully considered the proposals made by the Eastern and Eastern Extension Companies for a reduction in cable rates between Great Britain and the Australian Colonies, and have the honor to submit the following report:—

At the Telegraph Conference held at Berlin in August and September, 1885, it was decided, subject to the removal of some slight difficulties, such as a reduction of the transit rates through India, to make a reduction of 2s. per word on cable messages for the public, and 3s. 9d. per word reduction to the Press, also a proportionate rate for the Government, which would have made the rates, from the 1st July next, 8s. 8d. per word to the public and 2s. 8d. per word for the Press, which would have been satisfactory to all concerned; but, in consequence of India refusing to reduce from 7d. to 5d. per word, which even then would be double her own local rate for the conveyance of messages a distance of 650 miles, this was not carried out; and the Eastern Extension Company have from time to time made new proposals to the Colonies, which have been more or less impracticable.

The last proposition appears to me to be the only feasible one they have made—*i.e.*, if the payment of the present subsidy of £32,400 per annum (New South Wales proportion being £12,617) be extended for a period of 6½ years, they will reduce the rates for public messages to 8s. per word to Adelaide—this would be about 25 per cent. on the present tariff—to secure which I think the contributing Colonies, Victoria, New South Wales, South Australia, and Western Australia, should accept.

There are several proposals for duplicate cables, but they are vague and unsatisfactory. Sir Julius Vogel suggests a cable from Queensland to England, by what route he does not say; another from Perth to Ceylon, and another *via* Mauritius, Natal, and the Cape. Every one of these lines would run into the Eastern Company's systems; for instance, if a line were taken from Cape York or Normanton to Java, Singapore, or Manilla, the whole of the business would be conducted from there by the Eastern and Eastern Extension Companies; and even if it were extended to Hongkong and Shanghai, the messages would be carried from there by the Great Northern Company through Russia, which has a joint purse agreement with the Eastern Company, so the public would fare no better.

A cable from Perth to Ceylon, 3,500 miles, would be a very long lead, and would require an expensive cable, with enormous copper conductivity, to work at anything like speed, and no object would be gained, as the line would only work into the Eastern or Indo-European cables *via* the Persian Gulf, which also work on the joint purse system with the Great Northern, so again the Australian traffic would be entirely at the mercy of the existing Companies.

A line from Western Australia to Mauritius and the Cape is almost too ridiculous to be spoken of, and, even if carried out, the business would share the same fate, as the Eastern Company have the lines on the East Coast of Africa, from the Cape to Natal, Mozambique, Zanzibar, and Aden, also the new line on the West Coast, which, I believe, is to be extended to join the Brazilian cables either at Pernambuco or St. Vincent, so that there is no prospect for an opposition duplication to the existing cables by either of these routes, unless an entirely through course to England could be selected; even then Egypt could not grant a land line from the Red Sea to the Mediterranean, as she receives a subsidy of £7,000 per annum from the Cable Company for exclusive right of transit through that territory.

The only possible way out of the difficulty would be to construct a series of cables from New Zealand to San Francisco or Vancouver's Island. This would necessarily be very expensive and very risky, as the whole of the sections would terminate on coral reefs, which are most destructive to cables. The first section would be from New Zealand to Levuka, Fiji, a distance of 1,239 knots, with an unsurveyed depth of water; the next section would be to Apia, Samoa, 680 knots, also coral formation; thence to Honolulu, 2,404 knots, the only landing being through coral reefs; from Honolulu to San Francisco, 2,197 knots.

The only soundings throughout the route are a few taken by the United States frigate "Tuscarora," which in some places were over 5 miles in depth, so that a cable for these seas must necessarily be an expensive one (and the price quoted in the Agent-General's letter, dated 29th January, 1886, would be quite under my estimates), as it would be impossible to pick up a starved cable in such depths, considering that it would not support its own weight in water while being hauled to the surface.

The cost of this line would be £2,000,000 sterling.

The expenses per annum for working this line properly would be—

| | |
|---|----------|
| Five stations, at £2,000 each | £10,000 |
| Two cable steamers, crew, coal, and repairs | 20,000 |
| Sinking fund for renewals and replacing cables within twenty years, at per annum, say | 80,000 |
| Interest on capital, at 5 per cent. per annum | 100,000 |
| | £210,000 |

Taking 300,000 words per annum as the probable traffic, at 5s. per word to San Francisco, and 2s. from San Francisco to London, or 7s. per word, and including the cable to New Zealand, making 7s. 6d. per word from Australia to England, 300,000 words at 5s. = £75,000, which would not be sufficient to provide a sinking fund for renewals, without heavy Government subsidies from the Colonies.

Vide Appendix
marked A.

Take the probable traffic at 400,000 words per annum, at 5s. per word to San Francisco, £100,000, which is not sufficient to cover working expenses and renewals.

I believe Mr. Audley Coote's proposal at one time was to convey messages from Australia to London for 5s. per word, *via* San Francisco; this would leave 3s. per word for the Pacific cables, and allow 2s. for transit from San Francisco to London.

The whole traffic for the year 1885 from and to Australia was 556,660 words, which at 3s. per word would give a return of only £83,499 per annum, which would not provide sufficient for renewals and replacing cables in twenty years.

The routes suggested by Sir Julius Vogel are scarcely worth further analysis; but to show how impracticable they are, even as regards tariffs, and how impossible it would be to reduce the rates by adopting either of them, I will quote the rates now charged from the terminals of these proposed cables.

A cable from Queensland would have to connect with the Eastern Extension Company's system either at Manilla or Singapore.

The present rate per word.

| | s. | d. | |
|--|----|----|-----------|
| Manilla to London | 10 | 0 | per word. |
| Singapore to London... .. | 6 | 5 | " |
| or if extended to Shanghai to connect the Great Northern lines, through Siberia, the rate from Shanghai is | 8 | 4 | " |
| From Queensland to Point de Galle—the rate from Point de Galle to London | 4 | 10 | " |
| From Queensland to Java—Batavia to London | 6 | 10 | " |
| From Perth to Ceylon—Ceylon to London... .. | 4 | 10 | " |
| Western Australia to Mauritius, thence to Natal—Tariff, Natal to London | 8 | 9 | " |
| and even if this line were extended along the west coast of Africa to Pernambuco—Pernambuco to London | 9 | 0 | " |
| St. Vincent to London | 4 | 0 | " |

So that if these lines were constructed as proposed by Sir Julius Vogel there could be no possible reduction in rates on the Australian business.

I am sure the public will be better served by accepting the proposal for an extension of the subsidy, than by paying a syndicate a large sum annually for procuring nothing more than the Colonial Governments interested can secure by negotiating direct with the Cable Companies, with the additional advantage that they (the Governments) can raise the money necessary at a less rate than the syndicates; but I do not advise this Government to undertake the working or management of any submarine cable, neither would the gentlemen offering their services take any risk or responsibility after they have raised the money, laid the cables, and taken their proportion of the profits.

This Colony is now paying an annual subsidy of £12,617 for cables, which will extend over a period of thirteen and three-quarter years yet to run, and I do not consider that it is necessary or wise to increase our expenditure in that direction—the Colonies are very well served; and, without very considerable additional subsidies, as I have already shown, no sweeping reduction of rates can be secured. If the non-contributing Colonies, New Zealand and Queensland, are so anxious for new routes and new cables, why do they not take up the offers of the syndicates themselves?

Queensland has been offered a duplicate cable from Normanton to the Roper, free of expense and without extra tariff, and South Australia, I have been informed, is willing to construct a land line to connect the Roper River with Port Darwin, so that a complete duplication of the international system would be ensured; but, for some unexplained reason, the Government of the former Colony has refused this gift, which would cost the Company £70,000, although their cablegrams would come to them direct, instead of going round by Adelaide and Sydney, which must cause them very great inconvenience and delay, and debars the southern Colonies the advantage they would otherwise gain by having an alternative route in the event of interruptions on the overland line to Port Darwin. I am sure that this matter could not have been seriously considered by the Queensland Government, or they would have allowed the end of a cable to be landed on their shores in the Gulf of Carpentaria, for the benefit of their own commerce and that of their neighbours.

I quite concur in the Agent-General's remarks, in his despatch dated 29th January, 1886, *re* the extension of the term for the payment of the subsidy, and do not consider that any better course can be adopted to ensure the maximum reduction in rates at the minimum expense to the Colony. We are now bound

bound to an annual subsidy for thirteen and three-quarter years, and we should certainly not increase our liabilities by encouraging syndicates to undertake new works, with doubtful results, and which are not absolutely required.

In reference to the Agent-General's despatch, dated 12th February last, I do not think the reduction of 1s. 4d. per word to the public from 1st July is worth consideration, as it will be too small a concession to make any visible increase in the number of words sent, and will not be appreciated by the mercantile community.

It is also clear that the whole of the Colonies will not agree to contribute anything to the duplication subsidy on the Darwin-Singapore cables, Queensland and New Zealand having already refused to join.

As regards the 2s. 8d. per word for the Press, which is to take effect at once, if the Colonies agree that the non-contributing Colonies should share in the concession, there can be no objection to this, as neither Queensland nor New Zealand get their Press messages direct; they are either compiled in Sydney or Melbourne.

Sydney, New South Wales, 31/3/86.

E. C. CRACKNELL,
Superintendent, Electric Telegraphs.

1885-6.

NEW SOUTH WALES.

ELECTRIC TELEGRAPHS.

(AMENDED RULES AND REGULATIONS.)

Presented to Parliament, pursuant to Act 20 Vic. No. 41, sec. 6.

General Post Office,
Sydney, 4th January, 1886.

IN accordance with the provisions of the 6th section of the Electric Telegraph Act, His Excellency the Governor, with the advice of the Executive Council, has approved of the following amended Rules and Regulations for the observance of Officers and others engaged in conducting and working the Lines of Electric Telegraph in New South Wales.

DANIEL O'CONNOR.

EACH Station-master or Operator in charge of an Office will be held responsible for the efficient performance of the several duties, in conformity with the following Regulations:—

2. Every Officer and Messenger must be in attendance not later than 8.30 A.M., or he will be fined for every fifteen (15) minutes he is absent after this time.

3. No contention for circuit to be tolerated, nor will any Operator be allowed to break circuit when any two Stations are communicating, unless intelligence of the utmost importance is to be transmitted, when the signal S will be given, and circuit immediately allowed the station so signalling; but any Operator signalling S without having urgent business to transmit will be fined for interrupting the business of the Line.

4. Calling—The call for the Station required must be given three times, followed by the signature of the Station calling. No Station will be called more than twelve times, after which it will be passed, as not in attendance, and noted in the Line Journal.

5. Great care must be exercised in making use of the abbreviation signal "L," or "wait," not to allow the key to remain "open" on that or any other ground, for at farthest a longer period than *half-a-minute*. This rule it is expected will be strictly adhered to, in order to avoid retarding business on the Line.

6. Officers are requested to observe the utmost civility towards each other. Quarrelling, obscene language, or asperity of temper is strictly prohibited. Complaints of this nature to be forwarded by post to Superintendent, with tape, time, and date.

7. The utmost celerity must be used in the transmission and receipt of Messages; also, the delivery of the same. All Messages to be carefully acknowledged by Receiver, stating number of each lot received. Conciseness must be observed in all communications passing between Operators, and every effort used to economise time. No gossiping or idle conversation will be tolerated during business hours.

8. The greatest care must be used to ensure correctness of all Messages passing through the instrument. Marks, quotation of prices, should be sent both in letters and in figures, and the Operator receiving must transfer the Message in his own handwriting.

9. The attention of Officers is particularly directed to the Telegraph Act, clause No. 9:—"Every Officer, Clerk, or other person employed in working any Line, who shall divulge the contents or substance of any private or secret despatch, message, or other communication, transmitted or intended to be transmitted by any such Line, shall, on conviction before any two Justices, be liable for every such offence to a fine not exceeding one hundred pounds (£100), or be imprisoned, with or without hard labour, for any period not exceeding six (6) months," and all Officers upon entering the service must make a statutory declaration in terms of Appendix "A."

10. Station-masters, during business hours, to watch their instruments closely, and to be in constant attendance, and ready at any moment to answer their call. Should circuit cease for more than ten minutes, the Station-master's duty is to report the same to Stations on the other side of him, to test and examine all Office connections (see fig. 1), and, in thirty minutes, to send out the Line Repairer, with instructions to examine the Line with care, to remove all scrub, cobwebs, or any other impediment to its efficient working—not merely to repair the break, but to perform all necessary details as he returns, after giving circuit.

11. Daniels' local batteries to be properly cleaned and renewed every Monday morning. Main batteries to be made up afresh, according to directions in Appendix "B." The battery can be renewed by cutting out five cells at the time with a piece of gutta-percha wire, and can be done without interrupting the Line for a moment.

12. All Office connections to be kept bright and clean, and all joints in wire to be well *soldered*. All these connections should, when possible, be in sight, so that any fault can be detected at a glance. The batteries for two or more wires must be separated as much as possible, and insulated from the ground.

13. As considerable delay has occurred to cross messages, received in Sydney, at 8 p.m., for Stations on Lines not in the same circuit, it will be necessary for all Station-masters to remain in their Offices till 8.15 p.m., so that all business can be transmitted the same night, and no Station will be considered closed until Sydney has received the signal S.F.N., and replied by the signal G.N., Sy.

14. No person is to be allowed access to the instruments, or to be admitted into the Telegraph Offices, who is not actually on telegraph duty, without the special permission of the Superintendent of Telegraphs. Inattention to this rule will insure the dismissal of the officer disregarding it.

15. Time signals to be sent from the Chief Office, Sydney, daily (Sundays excepted), at 1 p.m., when all country stations will carefully adjust their office clocks to agree with the time signal.

16. All telegrams with obliterated stamps attached and statement of business properly checked and certified by Station-master, to be posted at the close of each day to Continental Clerk, Chief Telegraph Office, Sydney. Cash collections for International Cablegrams are to be remitted (when practicable), by bank draft, or money order in favour of Superintendent of Telegraphs as early as possible.

17. Application for stamps must be made to the Superintendent, accompanied by bank draft, money order, or other remittance in full for quantity required. Such application to be made in time so that the stamps may be received before reserve is exhausted.

STAMP SYSTEM.

1. The charges on telegrams are to be prepaid by stamps, and the public will be required to affix them to the message form just as they are required to affix them to letters. No "collect" messages will be accepted unless in answer to a "reply paid" or press.

2. Stamps are to be sold by the officers who may receive the telegrams, and are to be cancelled with an obliterating stamp. Combined offices will use their P.O. date stamp for this purpose.

3. The telegrams are to be numbered consecutively when received for despatch.

4. All telegrams are to be entered when received on the Daily Statement, which statement, signed by the officer in charge, and the original telegrams, are to be forwarded to the Continental Clerk, Chief Office, at the close of each day's business.

5. In cases of prepaid messages, the issuing station must be advised of the amount deposited, thus: "Reply paid, 1s." Such reply must not exceed the amount deposited unless the deficiency is paid by the person sending the reply.

6. In cases of telegrams payable on delivery, the original telegrams are also to be forwarded, as a check on the receiving office, but the value in stamps is to be affixed by the office collecting the charge to a message form, with a reference to the original message, thus:—

"COLLECT MESSAGE."

"Brown, Goulburn, to Jones, Wagga Wagga, 1s."

In large offices such collect messages may be entered on a Daily Statement, headed "Collect Messages," and the total value in stamps affixed to the statement.

7. Telegrams, after transmission, are to be initialled by the Operator and returned to the Receiving Clerk, who will examine them to see that the despatch has been noted and tick them off with his list.

In small offices where there may be no officers whose special duty it may be to receive telegrams, the Station-masters (or officers in charge) are enjoined to exercise great care in the despatch of telegrams. In every instance the Operator despatching a telegram must initial the form, and the officer in charge will be held personally responsible for its despatch.

8. Telegrams will be available for inspection by the sender or receiver, or a copy thereof made during a period of two years from the date of transmission, on payment of a search fee of 2s. 6d.

Station-masters (or officers in charge) are to forward requests for production, &c., of such telegrams to the Chief Office, with a reference to the date of transmission, and the name and address of the sender.

All business to be entered in station-book as hitherto.

DUTIES OF LINE REPAIRERS.

There is no division of the service more important than the proper inspection and repair of the Line. Unless thoroughly restored when out of repair, defective working will necessarily result, which may take months to discover; and no Line Repairer should be retained a day in the service if found careless in the performance of his duties and inattentive to the instructions for his guidance. Line Repairers should possess a knowledge of the science of electric currents, conductors, non-conductors, &c., to enable them to detect a fault which otherwise might escape them; but, as a rule, nothing should be in contact with the line, whether conductor or non-conductor, which can by any possibility convey the current to the earth, either directly or by touching the poles; pieces of string, rag, kite-tails, and paper, which are perfectly harmless in dry weather will, during rain, convey so much of the cur-

rent to earth that it will seriously interfere with the effective working of the telegraph; in addition to this the wire should never be allowed to touch a pole, nor a broken insulator to remain unrepaired. The duties of Line Repairers may be summed up under the following heads:—

1st.—To maintain a continuous metallic conductor.

2nd.—To remove from the wire all foreign conductors, whether metallic or otherwise.

3rd.—To preserve thorough insulation of the wire.

4th.—To secure the permanency of poles, and to have them replaced before an actual interruption occurs.

INSTRUCTIONS TO LINE REPAIRERS.

Line Repairers will be under the immediate direction of the Station-master, who will instruct them when to inspect their sections and to perform other necessary work on the Line.

Each Line Repairer in receipt of forage allowance will keep a suitable horse, for the speedy inspection of the Line. He will also keep his saddle-bags, furnished with the following tools, always in readiness: Blocks complete, stirrups for climbing, hand-vice, pliers, files, binding wire, main wire, splicer, tomahawk with belt, small hammer, few nails, spare insulators, pins, and any other little matter he may find requisite for the particular requirements of his section.

On receipt of the order from the Station-master to start, not a moment must be lost, and a speed not less than from 6 to 7 miles an hour should be maintained till the cause of interruption is discovered; a temporary joint then should be made with as little delay as possible, and the Repairer will then continue to the end of his section. On his return he must thoroughly and faithfully put the Line in complete working order, by replacing broken insulators, lifting those which are resting on the poles, cutting down the underwood and scrub, tightening the wires where too great a deflection, and removing all impediments likely to carry off the current or in any way interfere with the perfect working of the Line. On his return, he will report to the Station-master, for the information of the Superintendent.

Previous to despatching a Line Repairer to effect repairs the officer in charge of the station must first make a special examination of all the wires, batteries, instruments, metallic contacts, &c., within his office, and thoroughly test the same for insulation and continuity, or for a fault of any description. Neglect of this precaution will render him liable for the amount of the lineman's expenses, in the event or the fault subsequently appearing to have been within the precincts of the station. It is, therefore, to be clearly understood that in any instance where an officer in charge of a station may, through neglect or oversight in failing to thoroughly examine and test all the connections, earth contacts, &c., in his office, at the time of an apparent interruption to the communication, cause expenditure to be incurred by the Department through despatching a Line Repairer along the line, the officer guilty of such negligence or oversight will be held fully responsible for all expenses on account of the same, and the amount will be deducted from the first payment next thereafter made to him for salary.

Reports of interruption to any portion of the communication are to be forwarded by telegraph to the Superintendent by officers in charge of stations adjacent to and on both sides of the break; where necessary, detailed reports with reference to the cause of interruption or delay in effecting repairs, conveying full information on the subject generally, are to be conveyed by post to the Superintendent.

In cases where an interruption may have been occasioned through carelessness or wilful negligence on the part of any one, it will be the duty of the officer in charge of the section immediately to notify the police.

INSTRUCTIONS FOR MAKING JOINTS.

Should the wire be broken between two poles in such a manner that it cannot be tightened sufficiently, it should be lifted off two or more poles on either side of the break and pulled up as tight as possible with the tackle; when the ends are brought together the end of the fall should be made fast, the hand-vice screwed diagonally on the two ends of the wire, which must be brought close together and parallel to each other; one end is then taken and bent at right angles to the line—the splicer is then applied, the end of the wire being fixed into a hole for that purpose, and a twisted joint is then made, care being taken that the twists or turns are close together (See fig 2.) One end being finished, the hand-vice is placed in the opposite direction, and the other end is twisted in the same manner. The ends are then filed and broken off, the blocks slacked out, and the joint is finished, and all that remains is to replace the line on the poles. It is better to brighten the wire a little before making this kind of joint. When two or more wires are on the same poles the wire should be strained extra tight.

INSTRUCTIONS FOR FIXING WIRES IN HOLLOWES.

It frequently happens that the insulators and pins are lifted from the poles and brackets when the poles are placed in hollows, or where the surface is uneven. This can be overcome by splitting the pin, say an inch at the top and bottom, and inserting a small wedge, say three-quarters of an inch; the insulators should then be driven on with a little cement; the wedge is then driven home; the split part of the pin is thereby expanded, and the insulator is firmly secured. The same plan answers very well for keeping the pins in the brackets and tops of the poles.

Care must also be taken when two or more wires are arranged on the same poles, that they are both of equal tension, and not less than a foot apart. If in any place they are so loose that by any chance they can be made to touch each other, they must be tightened. All rusty or imperfect joints must be cut out and perfect twisted ones made in their stead.

All leading-in wires should be brought neatly into a station, and in parallel lines, and all joints properly soldered and carried quite free from walls. In fact the wires, although coated with gutta-percha, should touch nothing but an insulated body, as the surface of the gutta-percha when wet is a conductor. In addition to the foregoing it will also be the duty of Line Repairers when not actually engaged inspecting the Lines, to assist the Station-master in the office, to renew the Batteries, and where no messengers are provided, to keep the Office in Order, and deliver Messages.

An Inspector from the Chief Office will at intervals visit portions of Lines not found to work satisfactorily, and if faults are discovered which are due to the negligence of the Repairers on that particular section, the expenses of such special inspection will be charged to the Officer or Officers entrusted with its supervision.

MESSENGERS.

Care must be taken to ascertain that the Messengers employed perform their several duties in a trustworthy and satisfactory manner; and in the event of repeated carelessness or inattention, a report of the circumstances to be at once forwarded to the Superintendent for immediate action, as so much depends upon the faithfulness and activity of Messengers, in connection with the business of the Telegraph, that any dereliction of duty on their part is apt to bring discredit upon the whole.

Messengers are not, under any circumstances, to collect charges on a telegram, unless the amount to be collected may first have been plainly written on the envelope, and initialled by the despatching clerk; no more than the amount so written is to be collected, nor are messengers to alter or make additions to endorsements on telegrams entrusted to them for delivery. Entries of the particulars relating to such expenditure and collection are to be made in the delivery books.

GENERAL RULES.

Lightning arresters must be frequently examined, particularly during the summer season (between the months of October and March inclusively) in each year. The discharge plates should be kept evenly adjusted, the space between the "earthplate" to be no wider than will allow of a piece of thin writing paper being passed freely through.

Old zinc, copper, and "copper deposit" must be preserved, and when a quantity of about 50 lbs. weight may have accumulated it is to be forwarded to the Chief Office, Sydney.

At stations where two or more operators are engaged, the meal hours must be so arranged that no more than half the force of the office shall be absent therefrom at any one time.

Managers and Operators in charge of offices are not to allow blank "receiving forms" or "telegram envelopes" to be removed from or taken out of the office under any pretence whatever. The only blank forms to be issued from the office for the use of the public are the ordinary "transmission forms."

Managers, Operators in charge of offices, and others engaged in the department are requested to become familiar with these instructions and rules, and to observe them strictly; marked or repeated disregard thereof will certainly result in the removal of the person so offending from this service.

It is hoped that every manager, assistant, operator, book-keeper, receiving clerk, lineman, messenger, or other servant of this department will perceive the necessity for united and cordial action in the performance of all the duties devolving upon him as the active agent of a responsible and confidential branch of the Public Service, and that every exertion should be used by them in their respective capacities for its general advancement.

INSTRUCTIONS FOR CHARGING AND MAINTAINING SULPHATE OF COPPER LOCAL BATTERY.

Amalgamate the zincs. Place the porous cup in copper cell, zinc in porous cup. Fill the little cell attached to the copper with sulphate of copper (or blue vitriol) not pounded. Fill porous cups with hot water to within half an inch of top,

and the outer cell to within an inch of top of porous cup; then add ten drops of sulphuric acid to water in outer cell, and as the sulphate of copper dissolves put in fresh. As soon as the solution is saturated with the sulphate (i.e., will not dissolve any more sulphate) the battery will work; but if it is slow or weak, pour ten drops sulphuric acid into porous cups, but this is not to be done unless absolutely necessary.

In making up batteries no vitriol solution or blue salt is to be allowed to get into the porous cup; if the vitriol solution should rise so as to threaten such a result, draw off enough to prevent it. To form connection in the battery, screw the brass clamp attached to the copper of one battery to the zinc of the next, and do not let the brass touch anything but the zinc. The third zinc has an independent screw-clamp to fasten it. To renew the battery when weak, wash the porous cups out clean, scrape off the thick scales adhering to the zincs, thoroughly wash them, and replace the porous cups and zincs filled, as before, with clean water mixed with some of the old solution (the upper half being retained for this purpose).

After the first charge use neither acid nor mercury.

Keep the porous cells quite clear of the sides of the copper cylinder and as much as possible in the centre, otherwise the former will soon be destroyed by the copper depositing on them. Since only that part of the zinc plate that dips in the solution needs brushing, keep the other part of the plate dry.

APPENDIX A.

ELECTRIC TELEGRAPH DECLARATION, 20 VICTORIA No. 41,
SEC. IX.

I, _____, do solemnly and sincerely declare that I will not willingly or knowingly divulge the contents or substance of any private or secret despatch, message, or other communication, transmitted or intended to be transmitted by any line of Telegraph; and I shall adhere to the rules and regulations now or hereafter to be in force relating to the Electric Telegraph Department, or any regulation made in pursuance of the Electric Telegraph Act.

Declared before me, one of Her Majesty's Justices of the Peace, in and for the

day of _____

APPENDIX B.

Instructions for charging and maintaining the main Meidinger battery:—

Place the zinc in outer glass cell and the copper or lead plate in the small inner cup. Make a solution of magnesia sulphate of the strength of two and a half inner cupsfull of the salt to five outer cellsfull of water. Fill each cell with this solution to such a height, that when the balloon, which is to be filled with copper sulphate crystals, is placed in position, the liquid in each cell will reach to about 1 inch from the top. This battery should be renewed at least every three months. Five cells should then be cut out at a time, the zincs cleaned, the coppers stripped of deposited copper, and the balloons refilled with copper sulphate. Fresh solution having been added, the cells can be restored to their places. If any of the zincs are much corroded new ones should be substituted.

Cautions.—The clamps, brasses, screws of all batteries must be kept thoroughly dry. They will remain bright and clean if handled carefully, but when requisite they must be scraped and brightened. Do not allow any pieces of metal, or any kind of salt, or any other acid than sulphuric, to get into the solution. Do not put up the battery where it will be exposed to the fumes of Grove's battery or nitric acid.

Keep the battery stand and everything connected with it thoroughly clean and dry; re-varnish the wood-work when necessary. Do not allow salt deposit to collect on the zinc plates, outer cell, or battery stand.

REGULATIONS.—NEW SOUTH WALES DEPARTMENT.

1. Messages must be written with ink in a clear and legible manner on the forms provided for that purpose, and must bear a proper date and address, the signature of the sender in each case being required in authentication of the Message, and as subscribing to the conditions imposed. All figures must be written in words.

2. The charges on telegrams are to be prepaid by stamps, and the public will be required to affix them to the message form just as they are required to affix them to letters. No "Collect" messages will be accepted unless in answer to a "reply paid" or press. Stamps are to be sold by the officers who may receive the telegrams. No charge will be made for date, address, or signature of the message.

3. Messages will be delivered free within one mile of the office; over that distance portorage or cab-hire will be charged, and boat-hire on messages to be delivered on ship-board. Telegrams requiring to be delivered by special messenger will only be accepted subject to the Department being able to procure such messenger; and in all cases telegrams will be forwarded at the sender's risk.

4. Where an immediate reply to a message is required, the sender of such message is requested to append the words "Reply by Telegraph."

5. Messages can be transmitted in cypher at the ordinary rate of charges.

6. In order to provide against mistakes in the transmission of messages by the electric telegraph, every message of consequence ought to be REPEATED by being sent back from the station at which it is to be received to the station from which it is originally sent. Half the usual price for transmission will be charged for repeating the message. The Government will not be responsible for mistakes in the transmission of un-repeated messages, from whatever cause they may arise; nor will the Government be responsible for mistakes in the transmission of a repeated message, nor for any delay in the transmission or delivery, nor for non-transmission or non-delivery of any message, whether repeated or un-repeated, to any extent above £5.

7. Except in cases of emergency, illness, &c., or messages on the service of the state, messages will be transmitted in the order in which they are received; and all messages will be held strictly confidential.

8. If from any circumstances a message is not sent within a reasonable time sufficient to destroy the value of the despatch, the clerk is instructed to give the person sending the message information of the fact, with the reason of the delay; it will then be optional with the person to withdraw such message, and receive back the amount paid.

9. Telegrams will be available for inspection by the sender or receiver, or a copy thereof made, during a period of two years from the date of transmission, on payment of a search fee of 2s. 6d.

10. Messages will be kept in the strict charge of the Superintendent for the space of TWO YEARS, after which they will be burned in the presence of the Superintendent or other authorized officer.

11. Offices will be kept open for the transmission of messages from 9 a. m. to 8 p. m., Sundays excepted.

12. Inquiries respecting messages cannot be entertained unless copies are produced.

PUBLIC HOLIDAYS.

The Electric Telegraph Offices throughout the colony, on Public Holidays, are OPEN from 9 a. m. to 10 a. m., and between the hours of 6 p. m. and 8 p. m., except offices marked thus †, which are only open from 9 to 10 a. m.

Messages cannot be received for Stations marked thus * when the Stationmasters are absent in the performance of their line-repairing duties

Messages for Stations described as "Railway Telegraph Stations" (*R.T.S.*) can only be accepted subject to possible delay consequent upon the absence of officers on other duties, or other causes.

Offices are open for the transaction of business from 9 a.m. till 8 p.m., except those marked † which close at 6 p.m., and those marked ‡ which close at 10 p.m.

1885-6.

NEW SOUTH WALES.

ELECTRIC TELEGRAPHS.

(PREPAYMENT OF TELEGRAMS BY POSTAGE STAMPS.)

Presented to Parliament, pursuant to Act 20 Vict. No. 41, sec. 6.

General Post Office, 30 September, 1885.

In accordance with the provisions of the 6th section of the Electric Telegraph Act, His Excellency the Governor, with the advice of the Executive Council, has approved of the following regulations in regard to the prepayment of telegrams by postage stamps, viz. :—

1. The charges on telegrams *are to be prepaid by stamps*, and the public will be required to affix them to the message form just as they are required to affix them to letters. No "collect" messages will be accepted unless in answer to a "reply paid" or Press.

2. Stamps are to be sold by the officers who may receive the telegrams, and are to be cancelled with an obliterating stamp. Combined offices will use their Post Office date stamp for this purpose.

3. The telegrams are to be numbered *consecutively* when received for despatch.

4. All telegrams are to be entered when received on the Daily Statement, which statement, signed by the officer in charge, and the *original telegrams* are to be forwarded to the Continental Clerk, Chief Office, *at the close of each day's business*.

5. In cases of prepaid messages the issuing station must be advised of the amount deposited thus: "Reply paid, 1s." Such reply must not exceed the amount deposited unless the deficiency is paid by the person sending the reply.

6. In cases of telegrams payable on delivery, the original telegrams are also to be forwarded, as a check on the receiving office, but the value in stamps is to be affixed by the office collecting the charge to a message form, with a reference to the original message, thus :—

"COLLECT MESSAGE."

"Brown, Goulburn, to Jones, Wagga Wagga, 1s."

In large offices such collect messages may be entered on a Daily Statement, headed "Collect Messages," and the total value in stamps *affixed to the statement*.

7. Telegrams, after transmission, are to be initialled by the operator and returned to the receiving clerk, who will examine them to see that the despatch has been noted and tick them off with his list.

In small offices where there may be no officers whose special duty it may be to receive telegrams, the station-masters (or officers in charge) are enjoined to exercise great care in the despatch of telegrams. In every instance the operator despatching a telegram must initial the form, and the officer in charge will be held personally responsible for its despatch.

8. Telegrams will be available for inspection by the sender or receiver, or a copy thereof made during a period of two years from the date of transmission, on payment of a search fee of 2s. 6d.

Station-masters (or officers in charge) are to forward requests for production, &c., of such telegrams to the chief office, with a reference to the date of transmission, and the name and address of the sender.

To date from the 1st October next.

JAMES NORTON,
Postmaster-General.

1885-6.

NEW SOUTH WALES.

ELECTRIC TELEGRAPHS.

(PREPAYMENT OF TELEGRAMS BY CASH.)

Presented to Parliament, pursuant to Act 20 Vict. No. 41, sec. 6.

General Post Office, Sydney, 3 March, 1886.

In accordance with the provisions of the 6th section of the Electric Telegraph Act, His Excellency the Governor, with the advice of the Executive Council, has approved of the system of prepayment of Telegrams by postage stamps being abolished and of the cash system being reverted to,—to date from the 1st April next.

F. B. SUTTON.

1885-6.

NEW SOUTH WALES.

ELECTRIC TELEGRAPHS.

(REGULATION REGARDING "COLLECT" TELEGRAMS.)

Presented to Parliament, pursuant to Act 20 Vic. No. 41, sec. 6.

General Post Office,
Sydney, 12 April, 1886.

IN accordance with the provisions of the 6th section of the Electric Telegraph Act, His Excellency the Governor, with the advice of the Executive Council, has approved of the following Regulation in regard to "Collect" Telegrams,—to date from the 1st May next.

Payment of charges in advance will be required, except for replies to interrogatory messages on which the sender has written "Reply paid here."

In cases of emergency or distress, however, persons may be allowed to send messages to be paid for by the receiver.

The senders of "Collect" Telegrams will be required to guarantee the charge in case of non-payment by the addressees.

No charge will be made for the date, address, or signature on any telegram lodged for transmission within the Colonies.

F. B. SUTTON.

1885-6.

NEW SOUTH WALES.

ELECTRIC TELEGRAPHS.

(REDUCTION IN RATES BETWEEN NARRABRI AND NARRABRI RAILWAY STATION AND BETWEEN NEW SOUTH WALES BORDER TELEGRAPH STATIONS AND VICTORIA.)

Presented to Parliament, pursuant to Act 20 Vic. No. 41, sec. 6.

General Post Office, Sydney, 11th January, 1886.

It is hereby notified, for general information, that in accordance with the provisions of the 6th section of the Electric Telegraph Act, 20 Victoria, No. 41, His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the charge for transmission of Telegraphic Messages between Narrabri and Narrabri Railway Station being reduced from one shilling (1s.) to sixpence (6d.) for ten words and under, the charge for every additional word to remain as at present, viz., 1d.—to date from the 1st instant.

DANIEL O'CONNOR.

General Post Office, Sydney, 15th January, 1886.

In accordance with the provisions of the 6th section of the Electric Telegraph Act, His Excellency the Governor, with the advice of the Executive Council, has approved of a charge of one shilling (1s.) for the first ten words and one penny (1d.) for each additional word being levied on telegrams transmitted from New South Wales Stations on the Victorian Border to any part of Victoria—the Victorian Government having agreed to the same arrangement as regards telegrams passing between Border Stations in that Colony and New South Wales,—to date from the 1st instant.

The Border Stations in each Colony are as under :—

In New South Wales.

Albury.
Corowa.
Euston.
Howlong.
Moama.
Mulwala.
Tocumwall.
Wentworth.

In Victoria.

Echuca.
Koondrook.
Swan Hill.
Wahgunyah.
Wodonga.
Yarrawonga.

DANIEL O'CONNOR.

IRON COLUMNS FOR TELEGRAPH LINES.

No. 1.

The Superintendent of Telegraphs to the Secretary to the Post Office.

I BEG to submit, for the information of the Postmaster-General, a drawing of an improved method arranged by me, for supporting telegraph and telephone wires in thickly populated towns, to take the place of the overhead wires now in use; the plan is to erect suitable cast-iron standards, supporting an ornamental cast-iron frieze, behind which cables will be suspended on racks to receive them; at the intersections of the streets the cables can be supported from steel wires, on the suspension-bridge principle, or can be carried underground in split iron pipes, the cables being protected by vulcanized tubing. The occupiers of houses and shops can, if they think proper, roof over the footway to form verandahs, but the roofing should be of a uniform pattern and approved of by the City Architect.

The estimated cost for the ironwork, and the erection of same, will be £4,600 per mile, and £575 per mile for each cable containing 50 wires.

I would recommend that a trial of the contrivance be made between the General Post Office and the Railway Station, on the west side of George-street and along Pitt-street, from the Sydney Exchange to the Railway Station.

E. C. CRACKNELL.

23/10/83.

Minute of the Postmaster-General.

The proposal above contained, has to-day engaged the consideration of the Government, and in view of the present and future difficulties occasioned by the increase of telegraph and telephone wires, it is thought that the plan proposed by Mr. Cracknell should have a trial; the wires at the intersection of streets not to go overhead, but under the roadway. As the matter is one of experiment, it can be tried in George-street first. The Corporation to be written to, and their consent to be obtained, in the first instance.—W.J.T., 24/10/83.

No. 2.

The Secretary to The Post Office to The Town Clerk, Sydney.

Sir,

31 October, 1883.

I am directed by the Postmaster-General to request that you will bring under the notice of the Worshipful the Mayor the enclosed copy of a suggestion made by the Superintendent of Telegraphs—with accompanying sketch and specimen of cable—with the view of obtaining an early consent to a trial of the plan proposed for supporting telegraph and telephone wires in this city. 3 enclosures.

Mr. Trickett thinks that, in view of the present and future difficulties occasioned by the increase in the number of these wires, an experiment might be made by fixing the wires between this office and the Railway Station, Redfern, on the west side of George-street; the wires at the intersections of streets not to go overhead, but to be carried under the roadway.

I am to request that the sketch may be returned with your reply.

I have, &c.,

S. H. LAMBTON,

Secretary.

No. 3.

The Town Clerk, Sydney, to the Secretary to the Post Office.

Sir,

Town Clerk's Office, Sydney, 20 November, 1883.

Referring to your letter of the 21st ultimo, submitting for the consideration of the City Council a design for the erection of cast-iron standards supporting an ornamental frieze, for carrying telegraph and telephone cables, on the west side of George-street, between the General Post Office and the Railway Station, Redfern, I have the honor, by direction of the Right Worshipful the Mayor, to inform you that the Council have approved of the proposed arrangement being carried out by the Government.

I have, &c.,

CHAS. H. WOOLCOTT,

Town Clerk.

Submitted.—S.H.L., 21/11/83. Seen. The next step will be to have plans and specifications prepared for the standards and subways prior to tenders being invited.—W.J.T., 22/11/83. Superintendent Telegraphs for further action, B.C., 22/11/83.—S.H.L. Plans and specification herewith. I recommend that tenders be called in accordance with the accompanying notice.—E.C.C., 12/3/84. Approved.—W.J.T., 17/3/84.

SPECIFICATION OF E. C. CRACKNELL'S DESIGN FOR CARRYING TELEGRAPH AND TELEPHONE WIRES THROUGH CITIES.

THIS specification comprises the supply of all ironwork at Sydney as herein described, for the New South Wales Government, in accordance with specification and accompanying plans.

GENERAL.

This Contract comprises the supply of cast-iron verandah fronts, with racks at the back for carrying overhead cables, which are to be erected on the west side of George-street, between Barrack and Parramatta streets.

Drawings.—There are two drawings accompanying this specification. Drawing No. 1 shows a twin post for leading the cables underground at the street corners, also single post, frieze, brackets, with a full-sized detail of arch-rack, and the top of spandril shaft. Drawing No. 2 shows a full-sized detail of the frieze, spandril shaft, hook-rack, &c. Posts.—

Posts.—Single posts are to be similar in design and equal in quality to Walter M'Farlane's, No. 115 column, as supplied from the Saracen Foundry, Glasgow.

There are to be 316 single posts, 4 inches in diameter, cast with spandril shafts and bases, as shown in drawings, which must be of the dimensions and length shown.

Provide two posts of similar design and height, but 5 inches in diameter, having bases and spandril shafts enlarged in proportion. All posts are to be good sound castings, the metal is to be not less than half an inch in thickness.

Double Posts.—There are to be (18) eighteen double posts, $4\frac{1}{2}$ inches in diameter. They are to be cast as shown in drawing No. 1, each post singly and bolted to the base, as shown in sections 4 and 5. They are to be cast with provision for fitting panels between, as shown in sections 1, 2, and 3. These panels are to be made as shown, and fitted between the posts with $\frac{1}{2}$ -inch screw bolts, spaced 8 inches from centre to centre. Provision must be made for fixing (4) four bridge racks, as shown in the accompanying sketch, in order to lead the cables down the double posts.

The pedestal or base, to be made as shown in drawing, No. 1, having a hole cast where shown in front and side with a light cover fixed by four $\frac{1}{2}$ -inch bolts; the bottom of this casting is to be flanged out, as shown, having eight $\frac{3}{4}$ inch bolts for attaching the underground pipes; these holes are to be spaced the same in each casting; there are to be eighteen complete double posts and pedestals—nine right- and nine left-hand.

Frieze or Girder.—There is to be a frieze or girder between each post as shown, consisting of cast-iron panels with wrought-iron top, and bottom attached by bolts. The cast-iron frieze must have one face, and be made as shown in drawing No. 2, having holes cast at top and bottom for bolts, which must be spaced 6 inches from centre to centre. The friezes must be in the following lengths, which are the clear openings between the spandril shafts:—

| No. | Length. | No. | Length. |
|-----|------------------|-----|------------------|
| 60 | 14 feet 8 inches | 6 | 14 feet 4 inches |
| 39 | 14 " 11 " | 6 | 13 " 9 " |
| 31 | 15 " 5 " | 6 | 14 " 2 " |
| 24 | 14 " " | 5 | 13 " " |
| 21 | 15 " 4 " | 5 | 13 " 4 " |
| 20 | 14 " 7 " | 4 | 13 " 8 " |
| 15 | 14 " 3 " | 4 | 13 " 2 " |
| 14 | 15 " 3 " | 5 | 13 " 5 " |
| 14 | 15 " 2 " | 4 | 16 " " |
| 13 | 15 " 1 " | 4 | 15 " 11 " |
| 10 | 13 " 10 " | 1 | 18 " 7 " |
| 8 | 14 " 5 " | 1 | 12 " 6 " |
| 7 | 13 " 11 " | | |

The two outer bars must be cut one inch shorter than the lengths given above, and they are to be of $2\frac{1}{2}$ -in. \times $\frac{3}{8}$ -in. bar iron, punched to suit holes in castings, and rolled perfectly straight. The upper angle-iron is to be $3\frac{1}{2}$ -in. \times $3\frac{1}{2}$ -in. \times $\frac{1}{2}$ -in., cut (8) eight inches longer than the dimensions given for the friezes, and having holes punched to suit holes in castings and front plate, so spaced as to allow the angle-iron to project 4 inches beyond the cast-iron frieze at each end. All these holes are to be of sufficient size to allow plenty of clearance for the $\frac{1}{2}$ -in. bolts. There must also be a $\frac{1}{4}$ -in. hole punched 2 inches from each end of the angle-iron. The lower bar is to be 3 ft. \times $\frac{1}{2}$ -in. bar-iron, punched as described for angle-iron, and rolled perfectly straight. The cast-iron work for each frieze is to be in three pieces, bolted together between the wrought-iron bars, as shown, with $\frac{1}{2}$ -inch cup-headed bolts, having hexagon nuts inside. The castings must be carefully joined, so that the pattern will run uniformly. The end pieces are to be prepared for fitting to the spandril shafts, as shown in drawing No. 2.

One of the girders marked thus \odot , must be cast to suit an angle in the street, as shown in sketch:—

The girder marked thus * is to be strengthened by having 4-in. \times 4-in. \times 1½-in. angle-iron, and 3½-in. \times ½-in. bar-iron, which must be punched and fitted as described for the other girders, but must be 10 inches longer than the cast-iron frieze, and project 5 inches on each end, having the large end holes punched 2½ inches from the end to suit the 5-inch posts. All friezes must be delivered bolted together, complete, as specified and shown.

Brackets.—There are to be 656 brackets, 328 right-hand and 328 left. They are to be similar in quality to Messrs. W. M'Farlane's No. 49 brackets, 1 ft. 7½ in. \times 3 ft. 1½ in., with single face, but prepared for fixing to the spandril shaft and underside of frieze, and supplied with screwbolts for same.

Terminals.—There are to be eighteen terminals similar to Messrs. W. M'Farlane's No. 329, 7½ inches high, cast or fitted to top of panel in twin or double post, and 352 similar terminals, having ends to fit into the holes at the top of the spandril shafts.

Racks.—There are to be seventy-two bridge racks, as shown in drawing No. 1, which must be made of malleable cast-iron, and provided with screw-bolts of sufficient length to attach them, as shown in sketch, for leading the cables down between the double posts.

Provide 1,000 hook-racks, as shown in drawing No. 2. These must be of malleable cast-iron, and each provided with (3) three ½-inch screw-bolts of sufficient length to pass through hook-racks and screw into angle-iron and bar of frieze.

Bolts.—Provide all necessary bolts for fixing friezes to posts, brackets, &c. Bolts for posts to have heads similar to knobs on spandril shafts, and of sufficient length for passing through, so that when this work is being erected it may be stepped by cutting off knobs and drilling holes to suit the level of the ground.

Conditions.—The whole of the cast-iron work shall be delivered on the site for erection, and shall be passed by any competent engineer who may be appointed by the Government for such duty; and he shall have power to reject any and all work that, in his opinion, is not in strict accordance with this specification; and such work or material so condemned shall be made good by the contractor, or the engineer shall have power to replace such work at the expense of the contractor.

A separate tender to be submitted for the erection of the cast-iron work, and the whole of the fittings on the west side of George-street, Sydney, from the corner of Barrack-street to the railway bridge, George-street west, to be completed and handed over to the Government in two months after the ironwork is delivered in Sydney.

No. 4.

The Superintendent of Telegraphs to The Secretary to the Post Office.

Sir,

13 March, 1884.

I have the honor to enclose herewith, for publication in the Government Gazette, a copy of notice inviting tenders from persons desirous of contracting for the supply and erection of ironwork to carry telegraph and telephone wires along George-street, and I shall be glad if you will cause the matter to receive early attention.

I have, &c.,

E. C. CRACKNELL.

[Enclosure.]

General Post Office, Sydney, 1884.

TENDERS will be received at this Office up to noon on Wednesday, the 7th day of May, 1884, from persons desirous of contracting for the supply and erection of ironwork for Telegraph lines along the west side of George-street, Sydney, from the corner of Barrack-street, to the Railway Bridge, George-street West, in accordance with the plans and specification to be seen at the office of the Superintendent of Electric Telegraphs, George-street, Sydney.

Tenders to be submitted in two parts, viz. :—

1. Supply and delivery along the route of all Ironwork and Fittings.
2. For the erection complete of all Ironwork and Fittings.

GENERAL CONDITIONS.

Payments will be made in instalments to the extent of £90 per cent. on the value of the work certified for by the officer appointed to inspect the work as having been completed, and the remaining £10 per cent. when the entire Contract is completed to the satisfaction of the Superintendent of Electric Telegraphs or other authorized officer.

At the foot of every Tender there must be a memorandum signed by the party tendering, and two approved sureties, agreeing to be responsible for the due performance of the Contract, in the event of the Tender being accepted, and undertaking in that event that they will execute and deliver within fourteen days from the usual notification of acceptance a bond to Her Majesty for securing such performance, otherwise the tender need not be taken into consideration.

Should the bond not be executed and delivered within the said term of fourteen days from date of notification of acceptance, the Government reserves the right to advertise the contract anew or to accept another tender.

The tenders to contain the names of the tenderers and their sureties and places of residence at length.

It is to be distinctly understood that the Government will not necessarily accept the lowest or any tender.

The cost of the necessary duty stamps must be borne by the contractor.

N.B.—The accepted tender will be notified in the Government Gazette, and such notice will be considered as an intimation to unsuccessful tenderers that their tenders have been declined.

Tenders to be addressed to the Secretary, General Post Office, Sydney, and endorsed "Tender for Supply or Erection of Ironwork for carrying Telegraph Wires and Cables."

MEMO.—The above was approved by P.M.G., and notice dated 18th March, 1884, was published in Government Gazette.

No. 5.

The Superintendent of Telegraphs to The Secretary to the Post Office.

Sir,

I attach amended notice for insertion in the Government Gazette, respecting supply of ironwork for carrying telegraph wires, and beg to request that the advertisement be altered accordingly.

Urgent.

E. C. CRACKNELL,

9/4/84.

Submitted.—S.H.L., 10/4/84. Approved.—W.J.T., 10/4/84.

[Enclosure.]

General Post Office, Sydney, 1884.

TENDERS will be received at this Office up to noon on Wednesday, the 7th day of May, 1884, from persons desirous of contracting for the supply and erection of ironwork for Telegraph lines along the west side of George-street, Sydney, from the corner of Barrack-street to the Railway Bridge, George-street West, in accordance with the plans and specification to be seen at the Office of the Superintendent of Electric Telegraphs, George-street, Sydney.

Tenders to be submitted in two parts, viz. :—

1. Supply and delivery along the route of all ironwork and fittings.

2. For the erection complete of all ironwork and fittings.

(The period within which the whole work can be completed must be stated.)

GENERAL CONDITIONS.

Payments will be made in instalments to the extent of £90 per cent. on the value of the work certified for by the officer appointed to inspect the work as having been completed, and the remaining £10 per cent. when the entire contract is completed to the satisfaction of the Superintendent of Electric Telegraphs or other authorized officer.

At the foot of every tender there must be a memorandum signed by the party tendering, and two approved sureties, agreeing to be responsible for the due performance of the contract, in the event of the tender being accepted, and undertaking in that event that they will execute and deliver within fourteen days from the usual notification of acceptance a bond to Her Majesty for securing such performance, otherwise the tender need not be taken into consideration.

Should the bond not be executed and delivered within the said term of fourteen days from date of notification of acceptance, the Government reserves the right to advertise the contract anew or to accept another tender.

The tenders to contain the names of the tenderers and their sureties and places of residence at length.

It is to be distinctly understood that the Government will not necessarily accept the lowest or any tender.

The cost of the necessary duty stamps must be borne by the contractor.

N.B.—The accepted tender will be notified in the Government Gazette, and such notice will be considered as an intimation to unsuccessful tenderers that their tenders have been declined.

Tenders to be addressed to the Secretary, General Post Office, Sydney, and endorsed "Tender for supply or erection of ironwork for carrying Telegraph wires and cables."

MEMO.—The above notice was dated the 15th April, and inserted in Government Gazette.

No. 6.

Mr. Leonard Goodday, Sydney, to The Superintendent of Telegraphs.

Dear Sir,

Re Telegraph Posts, &c.

4 April, 1884.

Will you kindly let me know when the tenders for the above are to be sent in, and also the time allowed for the completion of the work; and, if made in England, whether the work cannot be inspected by the Government's engineer?

And, lastly, can I take the tracing away to copy if necessary?

Yours truly,
LEONARD GOODDAY,

Engineer and Contractor.

The specification gives all the information, I think.—E.C.C., 7/4/84.
—T.S., 10/4/84.

Mr. L. Goodday informed.

No. 7.

Mr. Leonard Goodday, Sydney, to The Postmaster-General.

Dear Sir,

17 April, 1884.

Received your letter, with enclosed information re telegraph-posts, and am sorry I could not hear from you sooner, as I have now no time to communicate with my people at home.

Yours truly,

LEONARD GOODDAY.

No. 8.

The Secretary to the Post Office to The Superintendent of Telegraphs.

THE accompanying tenders (four) for the supply or erection of ironwork for carrying telegraph wires and cables are forwarded to the Superintendent of Telegraphs.—S.H.L., B.C., 7/5/84.

Place in Schedule.—E.C.C., 8/5/84. Schedule herewith.—T.S., 9/5/84.

Schedule of Tenders.

| | Tenderers. | Price complete. | | | Remarks. |
|-------|-----------------------------|-----------------|----|----|---|
| | | £ | s. | d. | |
| 1 ... | D. & W. Robertson | 4,000 | 0 | 0 | To be of M'Farlane's castings, or any other high-class maker; delivered within twelve months. |
| 2 ... | Hudson Bros., Limited | 4,953 | 0 | 0 | According to specification; no period stated. |
| 3 ... | James Dunn & Co. | 5,750 | 0 | 0 | M'Farlane's castings. |
| 4 ... | John Sutton & Sons | 4,990 | 0 | 0 | Other manufacturers'. |
| | | 8,500 | 0 | 0 | Supply and erection; no period stated. |

Messrs.

Messrs. D. & W. Robertson to The Secretary to the Post Office.

Sir, Central Exchange Buildings, York-street, Sydney, 7 May, 1884.
We have the honor to tender for the ironwork for supporting telegraph lines, as per specifications and conditions, for the slump sum of £4,000 (four thousand pounds stg.); delivered in about twelve months from date of order; made in England either by M'Farlane, Saracen Foundry's Coalbrookdale Iron Co., or other high-class makers.
Yours truly,
D. & W. ROBERTSON.

Messrs. Hudson Bros. (Limited) to The Secretary to the Post Office.

Sir, Redfern Works, Sydney, 7 May, 1884.
I hereby propose to supply the whole of the ironwork (delivered along the route on which it is to be erected) required for the telegraph and telephone wires, according to the true intent and meaning of the plans and specifications, and to the satisfaction of the engineer appointed to inspect same, for the sum of four thousand nine hundred and fifty-three pounds (£4,953).
I have, &c.,
For HUDSON BROS. (Ltd.),
HENRY HUDSON,
Managing Director.

I HEREBY propose as sureties for the due completion of the work—S. W. Gray, Esq., of Edgecliffe Road; W. A. Hutchinson, Esq., Balmain.
For HUDSON BROS (Limited),
HENRY HUDSON,
Managing Director.

Messrs. J. Dunn & Co. to The Secretary to the Post Office.

5 & 6, Custom-house Buildings, Circular Quay, Sydney, 7 May, 1884.
Tender for the supply of the Ironwork required for the construction and erection of a verandah in George-street.
WE hereby offer and undertake to supply the cast-iron, wrought-iron, and bolts required for the telegraph verandah, all in accordance with the plans and specifications, delivered on site, for the slump sum of five thousand seven hundred and fifty pounds sterling (say £5,750).
This price is for M'Farlane's castings; but if we have the option of supplying the castings of any other maker, the price would be considerably reduced. We would supply all the ironwork, as above mentioned, to plans and specifications, delivered on the site for the slump sum of four thousand nine hundred and ninety pounds sterling (say, £4,990).
We name as our sureties—Alex. Kethel, Market Wharf, and John Taylor, Sussex-street.
Delivery of one-fourth within four months, the whole within six months.

JAMES DUNN & CO.

Messrs. J. Sutton & Sons to The Secretary to the Post Office.

Dear Sir, Phoenix Foundry, Hay-street, Sydney, 7 May, 1884.
We, the undersigned, do hereby offer or agree to supply and erect ironwork for telegraph lines along the west side of George-street, Sydney, from the corner of Barrack-street to the Railway bridge, George-street West, in accordance with the plans and specification to be seen at the office of the Superintendent of Electric Telegraphs.
Supplying and erection of all the ironwork required for the above, according to plans and specification, for the sum of eight thousand five hundred pounds sterling (£8,500).

We remain, &c.,
JOHN SUTTON & SONS,
Engineers and ironfounders.

Minute of Tender Board.

WE recommend that Messrs. D. & W. Robertson's tender be accepted, it being the lowest, provided that M'Farlane's castings be alone supplied, and the time to be eight months.

E. C. CRACKNELL.
F. W. HILL.
S. H. LAMBTON.
9/5/84.

Approved, 14/5/84.—J.N.

No. 9.

The Superintendent of Telegraphs to The Crown Solicitor.

Sir, 16 May, 1884.
I have the honor to inform you that Messrs. D. & W. Robertson's tender for supply of ironwork for carrying telegraph wires along George-street, has been accepted, and they have been referred to you for the purpose of signing the necessary bond for the due observance of their contract.
Their tender and a copy of the specification are attached.
For supply of the whole of the ironwork, £4,000.
Penal sum, £400.

I have, &c.,
E. C. CRACKNELL.

No. 10.

The Superintendent of Telegraphs to the Secretary to the Post Office.

Sir, 16 May, 1884.
I have the honor to enclose herewith a copy of notice for insertion in the Government Gazette, giving the particulars as to the successful tenderer for the supply of ironwork for carrying the telegraph wires along George street.

I have, &c.,
P. B. WALKER,
pro Superintendent of Telegraphs.

[Enclosure.]

General Post Office, Sydney, 1884.
It is hereby notified, for public information, that the tender of Messrs. D. & W. Robertson, for the supply of Ironwork to carry Telegraph Wires along George-street, at £4,000 for the whole, has been accepted.
To be delivered within twelve months from date.

Is

Is the wording of the notice "to be delivered" correct? Should it not be "to be completed?"—S.H.L., 19/5/84. This is for supply and delivery only, *vide* schedule of tenders attached.—P.B.W., 20/5/84. Notice signed by P.M.-G., and attached for publication in Gazette, 23/5/84. Superintendent of Telegraphs, B.C., 23/5/84.—S.H.L.

No. 11.

The Superintendent of Telegraphs to Messrs. D. & W. Robertson, Sydney.

Gentlemen,

22 May, 1884.

I have to inform you that the Postmaster-General has approved of the acceptance of your tender for ironwork, M'Farlane's castings, to carry telegraph wires along George-street, as per plans and specification, for the sum of four thousand pounds sterling (£4,000), to be delivered as required within (8) months, and I therefore beg to refer you to the Crown Solicitor for the purpose of signing the necessary bond for the due observance of your contract.

I have, &c.,

E. C. CRACKNELL.

No. 12.

The Superintendent of Telegraphs to Messrs. D. & W. Robertson, Sydney.

Gentlemen,

12 June, 1884.

In reference to your contract for supply of ironwork to the Government to carry telegraph wires in this city, I have the honor to inform you that the castings must be of Macfarlane's manufacture only, and be approved by the Agent-General for New South Wales before being shipped.

I have, &c.,

E. C. CRACKNELL.

No. 13.

Messrs. D. & W. Robertson, Sydney, to The Superintendent of Telegraphs.

Dear Sir,

Order for Telegraph Material.

13 June, 1884.

We have the honor to acknowledge receipt of yours of 12th instant, relative to above, and in reply beg to say that we are quite aware M'Farlane's castings only are to be supplied against this contract.

We notice in acceptance of tender you have reduced the time for delivery to eight months. This is rather too short, we think; but we will do our best to get M'Farlane to be up to time with delivery, although we feel confident they will want a longer time, and trust if they do so due allowance will be made us in extended time.

We have, &c.,

D. & W. ROBERTSON.

Read. No further notice need be taken of this.—E.C.C., 16/6/84.

No. 14.

The Crown Solicitor, Sydney, to The Superintendent of Telegraphs.

Sir,

24 June, 1884.

I have the honor to return herewith the tender and other papers relating to Messrs. D. & W. Robertson's contract for supply of ironwork for telegraph lines, George-street, and to state that the bond herein cannot be prepared until the names of the sureties are furnished.

I have, &c.,

J. WILLIAMS.

No. 15.

Messrs. D. & W. Robertson, Sydney, to The Superintendent of Telegraphs.

Dear Sir,

Central Exchange Buildings, York-street, Sydney, 25 June, 1884.

We beg to propose our sureties as under for contract for Ironwork:—

- (1) Alexander Dean, builder, Elizabeth-street.
- (2) A. R. Miller, accountant, York-street.

Yours truly,

D. & W. ROBERTSON.

No. 16.

Messrs. D. & W. Robertson, Sydney, to The Postmaster General.

Sir,

Central Exchange Buildings, York-street, Sydney, 15 June, 1884.

We have the honour to advise you that we have advice from England by cable, that the ironwork for carrying telegraph wires has been placed with M'Farlane & Co., Saracen Foundry, as per your letter of 12th June, and we will do our best to facilitate delivery.

We beg to bring under your notice the fact, that, in tendering for this contract at the price, £4,000, we kept to ourselves the option of several makers, which was allowed us by the specification against which all tendered; but that subsequently, after our tender had been accepted, we received notification, that we must supply this ironwork of M'Farlane's manufacture only.

We

We now find that, in consequence of being so bound, we have had to pay in England an advance of £500 above what we would have had to do had we been able to bring other makers into competition with the original manufacturers. Under these circumstances, we think the Government should give us an advance on our contract price, as we have been asked to do more than we stipulated for, or was required from the other tenderers who had the specification to go upon—that they could get it made by any good manufacturer, and not therefore have to pay any price which might be asked,—the makers, in this case knowing we were bound to their manufacture only.

As we also notice, from communication of 12th June, that it is to be inspected by the Agent-General, we hope there will be no objections to paying us this £4,500 in London, against B.L. and other shipping documents being handed over after inspection. Trusting to be favoured by your favourable reply.

We have, &c.,
D. & W. ROBERTSON.

Submitted.—S.H.L., 17/7/84.

Minute of the Postmaster-General.

The specification and advertisement for tenders do not stipulate for M'Farlane & Co.'s ironwork, and I suppose that Robertson's tender does not mention the name of this firm. (The tender is not with the papers), but a letter from Robertson, of 13th June, admits that the castings are to be M'Farlane's. Robertsons, therefore, can have no claim to the £500 extra now asked for, though they were apparently unaware of the higher price they would have to pay M'Farlane & Co.—J.N., 21/7/84.

M'Farlane & Co.'s name ought to have been inserted in the specification and advertisement, if it was necessary to have their work in preference to that of others.—J.N., 21/7/84. B.C., 21/7/84.—S.H.L.

No. 17.

The Superintendent of Telegraphs to The Secretary to the Post Office.

MESSRS. D. & W. ROBERTSON have signed the bond for the supply of McFarlane's castings, and as they made no objection at the time their tender was accepted, they have no claim against the Government.

I insisted on M'Farlane's work, as it is the most reliable, and will give no trouble on arrival.

Messrs. D. & W. Robertson ask that payment may be made in London for these castings. I see no objection to this, and when they are passed the Agent-General might be directed to pay the amount, which will save them exchange.

E. C. CRACKNELL,
1/9/84.

Submitted.—S.H.L., 2/9/84. Approved.—J.N., 9/9/84.

No. 18.

The Crown Solicitor to The Superintendent of Telegraphs.

Sir,

25 August, 1884.

In compliance with the instructions contained in your letter (number as in margin), I have prepared, and forward herewith, the bond for supply of ironwork for carrying telegraph wires along George-street, Sydney, duly signed by the contractors and sureties, and stamped.

16 May, 1884.
No., nil.
Messrs. D. & W.
Robertson.

The tender and all other papers herein are returned herewith.

I have, &c.,
J. WILLIAMS.

Know all men by these presents, that we, William Fleming Robertson, of London, England, and James Stewart Robertson, of Sydney, in the Colony of New South Wales, carrying on business together under the style and firm of "D. & W. Robertson," Alexander Ross Miller, of Paddington, in the Colony aforesaid, accountant, and Alexander Dean, of Sydney, in the Colony aforesaid, builder, are jointly and severally held and firmly bound unto Her most gracious Majesty Queen Victoria in the penal sum of four hundred pounds sterling, to be paid to Her said Majesty, her heirs or successors, for which payment, well and truly to be made, we bind ourselves, and each of us, our and every of our heirs, executors, and administrators, jointly and severally, firmly by these presents.

Sealed with our seals. Dated the eighteenth day of August, in the year of our Lord one thousand eight hundred and eighty-four.

Whereas the above-bounden William Fleming Robertson and James Stewart Robertson made the tender hereunto annexed, under the terms and conditions of a notice dated the fifteenth day of April now last past, and published in the New South Wales Government Gazette of the eighteenth day of April last past (of which notice a copy, signed by the said William Fleming Robertson, James Stewart Robertson, Alexander Ross Miller, and Alexander Dean, is also hereunto annexed) to find, provide, deliver, and supply all the ironwork for telegraph lines along the west side of George-street, Sydney, aforesaid, from the corner of Barrack-street to the Railway Bridge, George-street West, Sydney aforesaid, McFarlane's castings to be supplied in accordance in all things with the general conditions hereunto annexed marked "A," and for the price or sum of four thousand pounds, and to complete and deliver the whole of the said works within twelve months from the date of acceptance of the said tender: And whereas the above-bounden Alexander Ross Miller and Alexander Dean have severally offered to become and be bound to Her Majesty, her heirs and successors, for the due performance and fulfilment of the said tender within the time mentioned in that behalf, according to the terms and conditions of the said notice: And whereas the said tender has been duly accepted by the Postmaster-General on behalf of the Government of the said Colony, on condition that this bond should be entered into by them the said William Fleming Robertson, James Stewart Robertson, Alexander Ross Miller, and Alexander Dean:

Now the condition of the above-written bond and obligation is such, that if the said William Fleming Robertson and James Stewart Robertson do and shall well and truly perform and fulfil the said tender, and the contract arising out of such tender, and the acceptance thereof as aforesaid, and all and every the terms, conditions, and stipulations thereof, within the time hereinbefore in that behalf mentioned, then this obligation will be void and of none effect; otherwise to remain in full force and virtue.

No. 19.

Messrs. D. & W. Robertson, Sydney, to The Postmaster-General.

Dear Sir, Central Exchange Buildings, Sydney, 5 September, 1884.
 Referring to our letter of 15th July, we shall be pleased to hear whether the Government intend to pay us in London for the columns and verandah material for telegraph wires. The material will soon be ready for shipment, and we should esteem it a favour by your informing us on the matter above referred to.

Yours respectfully,
 D. & W. ROBERTSON.

Referred to Supt. Telegraphs.—S.H.L., 6/9/84.

I have already reported on the matter. When the castings are passed here, the amount could be paid in London by the Agent-General, who could be directed by telegraph by the Treasury to do so. Will the Secretary inform Messrs. D. & W. Robertson?—E.C.C., 10/9/84.

Prepare draft letters to Robertson & Co. and the Treasury.—JAS. D., 10/9/84.

No. 20.

The Secretary to the Post Office to Messrs. D. and W. Robertson, Sydney.

Gentlemen, 13 September, 1884.

With reference to your letter of the 15th July last, stating that, in tendering for the supply and erection of ironwork for telegraph lines along the west side of George-street, Sydney, at £4,000, you kept to yourselves the option of several makers allowed you by the specification; but subsequently, after your tender had been accepted, you received notification that you must supply ironwork of M'Farlane's manufacture only, and in consequence of being so bound you have had to pay in England an extra sum of £500, and requesting therefore that an advance may be allowed you; also referring to your letter dated the 5th instant, inquiring whether the Government intend to pay you in London for the telegraph material in question, I am directed to point out that the letter from the Telegraph Department of the 22nd May, accepting your tender, distinctly stated that M'Farlane's castings should be used. It appears you were again informed by the Superintendent of Telegraphs on the 12th June, "that castings must be of M'Farlane's manufacture only," and you replied on the following day as under:—

"Order for Telegraph Material.—We have the honor to acknowledge receipt of yours of the 12th instant relative to above, and in reply beg to say that we are quite aware M'Farlane's castings only are to be supplied against the contract."

I am to call attention to the fact that you signed the bond for M'Farlane's castings, and to state that under these circumstances the Postmaster-General is unable to entertain your application for an increased payment.

With regard to your request that payment for the material may be made in London, I am to inform you that the Agent-General will be instructed by cablegram to pay your London firm immediately after the castings have been passed at Sydney.

I have, &c.,
 S. H. LAMBTON.

No. 21.

The Secretary to the Post Office to The Under Secretary for Finance and Trade.

Sir, 13 September, 1884.

I am directed to inform you that the tender of Messrs. D. & W. Robertson was accepted in May last, for the supply of ironwork, M'Farlane's castings, to carry telegraph wires along George-street from Barrack-street to the Railway Bridge for the sum of £4,000; and in accordance with a request from the tenderers, it has since been decided that payment shall be made to them in London, through the Agent-General, as soon as the castings are passed at Sydney. I am therefore to request that you will be so good as to cause the sum of £4,000, from the vote of £100,000 for the extension of telegraph lines generally, to be placed at Sir Saul Samuel's disposal; so that he may be able to promptly pay the amount when he is advised by cablegram that he may do so. The Postmaster-General will be glad if you will advise this department when you have taken this action.

I have, &c.,
 S. H. LAMBTON.

Minute of the Colonial Treasurer.

I SHOULD be glad if my hon. colleague would adhere strictly to the terms of the tender, which I understand was for payment to be made here on delivery and approval. We have funds in London, but the proposal of Messrs. Robertson in other contracts of a similar nature and for a similar concession was declined by the Secretary for Public Works at my suggestion.

Besides, any departure from the strict wording of the tender may lead to questions being asked and adverse criticism, that preference has been given to one tenderer which was not formally announced to others.—G.R.D., 22/9/84.

The Secretary, General Post Office.—G.E., B.C., 22/9/84. Superintendent Telegraphs, for former papers.—S.H.L., B.C., 24/9/84. Papers herewith. I suppose that the Hon. the Treasurer's minute must be considered final.—E.C.C., 25/9/84. Before submitting this matter to the P.M.-G., I think it would be as well if Mr. Cracknell would state whether the Treasurer has been correctly informed, that Messrs. Robertson tendered on the understanding that payment was to be made in Sydney. I can see nothing to this effect amongst the papers herewith.—S.H.L., 26/9/84.

11

No. 22.

The Superintendent of Telegraphs to The Secretary to General Post Office.

30 September, 1884.

It is usual to pay amounts due to Contractors at the place where the contract is made and the goods approved of or finally passed after inspection, unless a special arrangement is stipulated. In this case the contract was accepted in the usual way, and no concession was asked for until the 15th July, and again on the 5th instant.

I cannot see by the accompanying letter to the Treasury, dated 13th September, that anything was said about payment in Sydney. The question is, that by paying the amount in London it will save Messrs. D. & W. Robertson exchange; but as the Treasurer does not approve of this, there is no alternative but to pay here, except it be pointed out that Messrs. Robertson have been informed that there is no objection to their request being complied with.

E. C. CRACKNELL.

Submitted copy of letter from the Department to D. & W. Robertson, attached.—JAS.D., 3/10/84.
(NOTE—See letter to Messrs. D. & W. Robertson, dated 13/9/84. Is it as the Treasurer supposes a condition of tender that payment will be made in Sydney? If so, please submit such condition.—S.H.L. Mr. Cracknell. There is no such condition, and there never has been that I am aware of; if contracts are accepted here, as I have already pointed out, they are paid for here on delivery.—E.C.C., 6/10/84. Submitted.—S.H.L., 9/10/84.

Minute of the Postmaster-General.

MESSRS. Robertson's contract contains no provision that payment of the moneys payable to them is to be made in Sydney; but as the contract was made in Sydney, and the goods were to be supplied here, then Messrs. Robertson could not enforce payment except in New South Wales.

The tender of these gentlemen was nearly £1,000 lower than that of any other tender, and there can be no reasonable doubt that their price was fixed at £4,000 on the assumption that M'Farlane's work could be obtained at the same price as the work of other high-class makers; but they now state that they have had to pay M'Farlane £500 more than they would have had to pay other makers; and the fact that Dunn & Co. tendered at the rate of £5,750 for supplying M'Farlane's work, and only £4,990 for the same work if obtained from any other manufacturer, satisfies me that their statement is correct. The Colony has therefore benefited at Messrs. Robertson's expense to the extent of at least £500.

Under these circumstances I sanctioned the payment of the contract price in London, and Contractors were written to to that effect. It will cost the Government little if anything to make the payment in London instead of in Sydney, but will save something to the Contractors.

I trust therefore that my honorable colleague the Colonial Treasurer will be able to see his way to arrange for the payment for the £4,000 in London.

J.N.,
13/10/84.

The Under Secretary for Finance and Trade, B.C., 14/10/84.—S.H.L.

Minute to the Colonial Treasurer.

As my hon. colleague has promised that payment be made in London, and that such promise is a pledge of the Government, the payment may be so made, but it will be more convenient in future not to depart from actual terms of contract, or to make any stipulations for payment outside the Colony without reference to the Treasury. In this instance Messrs. Robertson benefit to the extent of $3\frac{1}{2}$ per cent. at least.

I observe in copy of Mr. Lambton's letter to Robertson & Co., that he informs those gentlemen that the Agent-General will be called to pay certain money on certain conditions. This power to cable the Agent-General to pay in London is of no value except issued from the Treasury.

G.R.D.,
15/10/84.

The Secretary, General Post Office, 17/10/84.—G.E.

Submitted. Papers might now be referred to Superintendent of Telegraphs for information and future guidance. It may be as well to inform Messrs. Robertson that the promised cablegram to the Agent-General can only be transmitted by the Treasury, and at their (D.W.R. & Co.'s) expense.—S.H.L., 20/10/84. Approved, J.N., 30/10/84. The Superintendent of Telegraphs, B.C., 5/11/84.—S.H.L. Read.—P.B.W., 6/11/84.

No. 23.

The Secretary to the Post Office to Messrs. D. & W. Robertson, Sydney.

Gentlemen,

3 November, 1884.

Adverting to the last paragraph of my letter dated the 13th Sept., stating with regard to payment for certain telegraph material that "the Agent-General will be instructed by cablegram to pay your London firm immediately after the castings have been passed in Sydney." I am directed to add, that it is found that the cablegram in question can only be transmitted by the Treasury Department, and it will have to be sent at your expense.

I have, &c.,
J. DALGARNO,
For Secretary.

Central Exchange Buildings, York-street, Sydney, 4 Nov., 1884.
Re Cast Iron Work.

Dear Sir,

We beg to enclose you letter received from our London firm from the Saracen Foundry, from which you will see that the whole will likely be shipped by the end of December. The intention being to ship it by the October, November, and December vessels from Glasgow.

Yours truly,
D. & W. ROBERTSON.

[Enclosure.]

To Messrs. D. and W. Robertson, London,

Telephone Verandah.

Gentlemen,

Saracen Foundry, Glasgow, 20 Sept., 1884.

In reply to your valued inquiry of 17th concerning delivery of this work, we reckon all going well, being able to ship about the half of the work by the 25th October, certainly sufficient to warrant you making arrangements for the vessel you refer to as sailing then. The remainder we calculate upon for the beginning of December.

We are, &c.,
WALTER M'FARLANE & CO.,

No. 25.

Messrs. D. & W. Robertson, Sydney, to The Superintendent of Telegraphs.

Dear Sir,

Central Exchange Buildings, Sydney, 28 Nov., 1884

Enclosed are press copies of letters from M'Farlane & Co., which explain themselves. Our people are doing all they can to push the work on.

Yours truly,
D. & W. ROBERTSON.

[Enclosures.]

To Messrs. D. & W. Robertson, London.

Telephone Verandah.

Gentlemen,

Glasgow, 9 October, 1884.

With regret we must inform you that our promise of 20th ultimo cannot possibly be adhered to. What of the columns are ready will be of little service without the frieze, and with this work we cannot proceed until the engineer has been satisfied. Mr. How advises us of his coming here immediately his inspector reports upon a complete bay of the work being ready in accordance with suggestions of theirs we are following. We expect the inspector here to-morrow, but until the inspection is completed so as to let us work continuously, no progress towards delivery can be effected. We shall not fail to advise you of what can be ready by date already mentioned.

We are, &c.,
WALTER M'FARLANE & CO.

To Messrs. D and W. Robertson, London.

Telephone Verandah.

Gentlemen,

Glasgow, 16 October, 1884.

We are just in possession of instructions from Mr. Bradshaw, the local inspector appointed for this work, which cancel all promises of delivery already given. Already we have said that we are pushing forward the single columns; but the main portion of the work lies with the double columns, for without them your Sydney friends could do nothing to the erection at site. We are now required to have ready another set of double columns against the chief inspector's visit, and until the first set of these columns is finally satisfactory, all progress with this part of the work is debarred. Mr. How does not name any day for his coming, but of course his coming could serve no end before we are ready, when we will advise him. Our desire is to have you informed of our position.

We are, &c.,
WALTER M'FARLANE & CO.

No. 26.

Messrs. D. & W. Robertson, Sydney, to The Superintendent of Telegraphs.

Dear Sir,

Sydney, 7 January, 1885.

We beg to advise that we have advice from England, that about 120 tons of the iron-work for verandah, has been shipped by "Derwent," now about 30 days out, and the balance of this contract is being proceeded with with all despatch.

We have, &c.,
D. & W. ROBERTSON.

Read. Mr. Rutherford to see.—E.C.C., 12/1/85.

Dear Sir,

Telephone Verandah.

Sydney, 13 May, 1885.

Enclosed we beg to hand you certificate of inspection from New South Wales Government Inspecting Engineer, in London, for above castings of M'Farlane's manufacture, which we trust you will find in order.

Yours, faithfully,

D. & W. ROBERTSON.

[Enclosure.]

[Enclosure.]

Messrs. D. & W. Robertson, London.

2 Queen Square Place, Westminster, S.W., December 11, 1884.

Dear Sirs,

I have received further particulars respecting the work at M'Farlane's as follows :—
 "I was at M'Farlane's works yesterday, and found nearly all the casting for the 'Telephone Verandah' finished; 397 lengths of friezes are packed. The double posts and their fittings of panels are the only parts that are behind hand. I am going there again on Friday the 12th to inspect them, and I do not see why all M'Farlane's work should not be finished and shipped by the 20th."

You will therefore perceive there is every probability of their being ready by the time you require, and I think it would be well to instruct them to ship so soon as the several parts have passed our inspection.

Yours truly,
 J. D. BALDRY.

No. 32.

Messrs. D. & W. Robertson, Sydney, to The Acting Superintendent of Telegraphs.

Dear Sir,

Sydney, 21 May, 1885.

Referring to ours of the 2nd, we shall be glad to know if the Agent-General has been instructed by cable to pay the £3,000 therein referred to to our London Office.

If instructions have not yet been sent, we would be greatly obliged if you would give the necessary instructions, as our London people want some money this week.

Yours faithfully,
 D. & W. ROBERTSON.

The certificate furnished is not sufficient, and it will be necessary to obtain one from a competent engineer before the ironwork is taken over.—P.B.W., 21/5/85.

No. 33.

The Acting Superintendent of Telegraphs to The Secretary to the Post Office.

23 May, 1885.

I HAVE to report for the information of the Postmaster General that the ironwork for carrying telegraph and telephone wires along George-street, for which Messrs. D. and W. Robertson are the contractors, has arrived, and Messrs. Robertson have applied for a sum of £3,000 to be paid to them on account of their contract, submitting a certificate from the New South Wales Government Inspecting Engineer in London as to the manufacture of the iron; but I do not consider this sufficient, and as the recorded papers referring to the acceptance of the tender were handed to Mr. Cracknell, some time previous to his departure for Europe, and cannot now be found, I am unable to state what arrangements were entered into in regard to the inspection of this material.

As it is necessary that an Engineer should be employed for the purpose of checking and certifying to the completeness of the ironwork to hand, I would suggest that Mr. Moriarty (the Engineer-in-Chief for Harbours and Rivers) be requested to nominate an officer of his Department for this purpose, and that the amount asked for by the contractors be not paid over until such certificate is furnished. I have made temporary arrangements for storage of the material, and as there is likely to be some considerable difficulty experienced with the shop proprietors *en route*, in respect to existing verandahs, I deem it desirable to postpone the erection of the ironwork until Mr. Cracknell's return, as it is a matter which he himself understands, and there is no need to hurry on the work. Messrs. Robertson ask that the £3,000 on account of their contract be cabled to London; but, as this would lead to expense, and I cannot find the papers showing what arrangements were made for payment, I am unable to furnish any information in respect thereto. I would, however, point out that the specification for Messrs. D. and W. Robertson's contract provides for the supply and delivery of the ironwork and fittings along the route, which has not yet been carried out; but I think if a satisfactory certificate is received from the Engineer appointed to inspect the material, the amount asked for, £3,000, might be paid, and the balance retained until the contract so far as delivery is concerned is completed.

Copies of letters addressed to Messrs. Robertson together with specification are attached. Also tracings and manuscript copy specification.

P. B. WALKER.

Submitted.—S.H.L., 23/5/85.

Minute of the Postmaster-General.

Approved. Inform Messrs. Robertson that the £3,000 (or a less sum if less should be found payable under their contract) will be paid in Sydney as soon as we have obtained a certificate of the engineer appointed to inspect the material, Messrs. Robertson undertaking to deliver the material along the line, as stipulated by the specification, and to make such delivery at such time as we may arrange. It had better be ascertained from the Treasury whether there will be any difficulty (which I do not apprehend) as to making this payment.—J.N., 5/6/85.

No. 34.

The Secretary to the Post Office to The Under Secretary for Finance and Trade.

Sir,

6 June, 1885.

I am directed to inform you that an urgent request has been made by Messrs. D. & W. Robertson for payment of a sum of £3,000, on account of their contract, for iron-work just arrived in Sydney, intended for carrying telegraph and telephone wires along George-street; and to request that you will be so good as to move the Colonial Treasurer to authorize the payment of the amount from the balance of £100,000 for the extensions of telegraph lines generally (which now stands at £13,000), as the amount is urgently required, and the items for other works will not exhaust the vote during the current year.

I have, &c.,

S. H. LAMBTON.

No. 35.

No. 35.

The Secretary to the Post Office to The Under Secretary for Public Works.

Sir,

6 June, 1885.

I am directed to inform you that the ironwork for carrying telegraph and telephone wires along George-street, for which a tender of Messrs. D. & W. Robertson was accepted some time ago, has now arrived in Sydney, and the Acting Superintendent of Telegraphs has recommended that an engineer should be employed to check and certify to the completeness of the ironwork in question.

I am, therefore, to state that the Postmaster-General will be glad if you will move the Honorable the Minister for Works to cause Mr. Moriarty to appoint some officer, as proposed, and if the latter will wait upon Mr. Walker, the Acting Superintendent of Telegraphs, all necessary particulars to enable him to inspect and report upon ironwork will be furnished.

I have, &c.,

S. H. LAMBTON.

No. 36.

Messrs. D. & W. Robertson, Sydney, to The Acting Superintendent of Telegraphs.

Dear Sir,

Central Exchange Buildings, York-street, Sydney, 4 June, 1886.

The "Barrenman" from Glasgow, with the balance of telephone verandah material, has now arrived, and we will deliver the material to the Telegraph Store as soon as it is landed.

Yours faithfully,

Storekeeper to attend to this.—P.B.W., 4/6/85.

D. & W. ROBERTSON.

No. 37.

Messrs. D. and W. Robertson, Sydney, to The Acting Superintendent of Telegraphs.

Dear Sir,

6 June, 1885.

We herewith enclose, according to your request, original specification of goods for your Department ex "Barrenman."

Yours truly,

D. & W. ROBERTSON.

Shipping Memorandum from Walter M'Farlane & Co., Saracen Foundry, Possil Park, Glasgow.

14 January, 1885.

PARTICULARS of nine boxes, &c., marked DWR within diamond, Sydney, consigned to Sydney, per vessel "Barrenman," on account of Messrs. D. & W. Robertson, merchants, 31 Lombard-street, London, E.C. :-

No. 38.

Messrs. D. & W. Robertson, Sydney, to The Acting Superintendent of Telegraphs.
Telephone Verandah Material.

Dear Sir,

Sydney, 30 June, 1885.

Referring to our letters of 2nd, and 21st May, and 6th June. As columns, &c., per "Barrenman" have now been delivered, and the whole material for above contract completed, we beg respectfully to request that you will give the Treasury Department instructions to cable the Agent-General to pay our London office the full amount of contract price, viz., £4,000, instead of £3,000 as we formerly requested on account.

If any castings require to be replaced on account of being damaged, we bind ourselves to do so free of cost to your Department.

We trust the abovenamed sum will be cabled this week, as our London House require the money, and it will simplify matters to cable the full amount in one sum.

We have, &c.,

D. & W. ROBERTSON.

There is nothing in the agreement, that I can see, which provides for the payment of the money in London, and as the ironwork has not yet been passed by the Engineer, I am unable to make any payment on account until it is. The specification also provides for the delivery of material along George-street, and until this is done, the full amount of the contract cannot be paid.—P.B.W., 1/7/85.

No. 39.

The Acting Superintendent of Telegraphs to Messrs. D. & W. Robertson, Sydney.

Gentlemen,

1 July, 1885.

In acknowledging the receipt of your communication of the 30th ultimo, in reference to Ironworks for conveying telegraph wires along George-street, and requesting payment in London of the whole amount of contract, £4,000, I have the honour to inform you that the material has not yet been passed

19

passed by the Government Engineer, and I am unable to make any payment at present. I have also to remind you that the specification provides for delivery of the Ironwork along the line of route; but that portion of the contract has not been carried out, and until it is so completed, the full amount cannot be passed for payment.

I have, &c.,

P. B. WALKER.

No. 40.

Mr. James Orr, Sydney, to The Acting Superintendent of Telegraphs.

Sir,

21 July, 1885.

With reference to the Ironwork for carrying Telephone and Telegraph Wires recently imported by Messrs. D. & W. Robertson for the Telegraph Department, I have the honour to submit the following:—

Three of the double column bases cracked, and all of them (18 in number) cast so rough on the bottom bolt-flanges, that they had to be chipped.

Two single columns broken. Fifty-four single columns had each one, and four had each two ornamental knobs broken off on the upper back of spandril shaft.

Racks for carrying the cables too long, which necessitated $\frac{1}{4}$ of an inch being cut off the bottoms of 213.

Eighteen double-post panels, terminals had to be secured with wrought-iron rectangular washers. All this work, excepting one single column, has been satisfactorily rectified by the contractors.

The whole of the material has been delivered, and the work carried out in conformity with the plans and specification, excepting the annexed list of pieces condemned on account of being broken and otherwise damaged, and must be replaced by the contractors at their own expense; and I would suggest that a sum of two hundred pounds (£200) be withheld from the amount to be paid them until the remainder of the material is complete, and the whole delivered along the line of route.

I have, &c.,

JAMES ORR.

P.S.—I have to mention that two single columns, 4-inch diameter, were accidentally broken during the operation of stacking. These will require to be re-ordered at the expense of the Department.

List of Pieces condemned.

3 R.H. panels, length 4' 2 $\frac{3}{8}$ " for 14 feet 3-inch bays.

1 " " " 5' 2" " 15 " 4 " "

1 " " " 3' 7 $\frac{1}{16}$ " " 13 " 8 " "1 " " " 3' 4 $\frac{1}{16}$ " " 13 " 5 " "1 L.H. " " 5' 2 $\frac{1}{2}$ " " 14 " 11 " "

12 Centre, " " 5' 0" " " " "

3 R.H. brackets

1 L.H. " "

1 Top panel for double column B5.—This panel must be cast $\frac{1}{4}$ of an inch wider on the left-hand side, and the holes should not be bored until it is being fitted in place.

1 Terminal for double column, top panel A2.

One single column 4 inches diameter, thirty counter-sunk set screws, similar to those already supplied for securing panels to double columns, with same pitch of thread, but $\frac{1}{16}$ diameter.—J.O., 21/7/85.

No. 41.

The Acting Superintendent of Telegraphs to Messrs. D. & W. Robertson, Sydney.

Gentlemen,

27 July, 1885.

In reference to your contract for supply and delivery, along the route, of ironwork for carrying telegraph and telephone wires along George-street, I have to inform you that the whole of the material has been inspected by the Government engineer, and, with the exception of the pieces named in enclosed list, has been found in good order; and in accordance with the specification I shall be glad if you will furnish me with a guarantee for supply of the condemned pieces, when I shall recommend the payment of £3,500, the balance of £500 to be held by the Government until the castings are delivered as specified.

I have, &c.

P. B. WALKER.

Note.—See No. 40 for list of pieces condemned.

No. 42.

The Acting Superintendent of Telegraphs to The Secretary to the Post Office.

29 July, 1885.

MR. ORR, the engineer appointed by the Harbours and Rivers Department, has reported upon the ironwork for telephone lines along George-street, and the defects he pointed out have been rectified with the exception of about £20 worth of iron pieces, which Messrs. D. & W. Robertson agree to replace by ordering fresh pieces from the manufacturers at home. Mr. Orr thinks that £200 will cover all expenses of laying out along that street. I would therefore advise that £3,700 be paid at once, and the balance of contract, £300, can be retained until work is completed.

P.B.W.

Approved.—

Approved.—J.N., 30/7/85. B.C., 30/7/85.—S.H.L. Accountant to see about getting this money paid.—P.B.W., 31/7/85.

On inquiry at the Treasury I find that it will be necessary for a similar letter to be written to that of 6th June, advising that the former letter be cancelled, and a sum of £3,700 be paid to the firm of Messrs. D. & W. Robertson, in London, in terms of Secretary's letter of 3rd November, 1884. The cost of sending the money to be charged against Messrs. Robertson, and deducted from the balance of contract (£300) in hand.—P.B.W., 3/8/85. The Secretary to the Post Office, B.C.

No. 43.

Messrs. D. & W. Robertson, Sydney, to The Acting Superintendent of Telegraphs.

Dear Sir,

29 July, 1885.

As requested, we have pleasure in handing you copies of letters received from the Post Office Department in connection with payment in London of proceeds of contracts for supply of Telegraph material.

Yours truly,

D. & W. ROBERTSON,

Per A. R. MILLAR.

Note.—For copies referred to, see letters from the Secretary to the Post Office to Messrs. D. & W. Robertson, dated 13th September and 3rd November, 1884.

No. 44.

Messrs. D. & W. Robertson, Sydney, to The Acting Superintendent of Telegraphs.

Dear Sir,

29 July, 1885.

We beg to acknowledge receipt of your letter of 27th July. We will order the material you specify (value £15 from England) without delay, and will herewith guarantee that they will fit when they arrive.

We note that you only propose to cable £3,500 to England. We would respectfully point out that the value of the cartage of the material from where it now is to the site it is to be erected on would only be a matter of another £20.

As we have already had a loss of interest by not receiving payment on delivery of this ironwork, we would respectfully point out that if a sum which would more nearly approximate the value of the material were retained, it would be fairer to us under the circumstances of the case, and we trust you will kindly agree to a larger sum than that proposed being paid us.

This contract was taken very fine, and we did not anticipate that we would be called upon to lie out of such a sum of money as proposed.

We have, &c.,

D. & W. ROBERTSON.

P.S.—A quantity of the centre panels referred to are now ready for inspection, having been rectified. They were slightly rusty. Please ask Inspector to call.—D. & W.R.

£3,700 recommended and approved by Postmaster-General.—P.B.W., 4/8/85. This has been paid. Put with other papers.—P.B.W., 8/8/85.

No. 45.

Messrs. D. & W. Robertson, Sydney, to The Postmaster-General.

Dear Sir,

Central Exchange Buildings, Sydney, 3 August, 1885.

Referring to our interview with you and Mr. Dalgarno to-day, regarding the payment of £3,700 or more in London, as per your letter of the 13th September, No. 84/10,386, and 3rd November, 84/11,408, in which you agree to pay us for ironwork in England, we beg to say that we will take payment in Sydney, provided that the 2½ per cent. that we will have to pay for cabling it home ourselves is added to the voucher here. In the present case this would amount to £92 10s.

Your letter of 3rd November distinctly says that the cost of the cablegram will be debited to us if the money is remitted to England, and this we are quite agreeable to, so that there appears to be no obstacle whatever to have this money transmitted to London. We would respectfully remind you that we have been kept out of this £4,000 for over three months, since it was delivered according to contract; and having arranged with our London Firm to get this money there, we hope the matter can be arranged without further delay.

We have seen the Treasury about the matter, and they have no objection whatever to cable the money for us, *being part of our contract* with you when it was accepted and tendered for, as we, after acceptance, were restricted to supply the goods of one manufacturer, whereas the specification left it optional.

Yours truly,

D. & W. ROBERTSON.

Urgent.—Acting Superintendent of Telegraphs. B.C., 4/8/85.—S.H.L.

Mr. S. H. Lambton to the Postmaster-General.

My dear Sir,

Sydney, 5 August, 1885.

The contractors (D. & W. Robertson) still press for payment of the £3,700 to be paid in London, and are willing to pay the cost of a message to the Agent-General.

We have twice promised (see letters) this should be done, and I am informed that the Treasury has no objection. Please see Mr. Walker's minute of 3rd instant.

I send the case to you as Mr. Robertson has called several times, and I forgot to mention this to you this morning.

Yours faithfully,

S. H. LAMBTON.

Approved.—J.N., 5/8/85. Acting Superintendent of Telegraphs, for information, B.C., 6/8/85.—S.H.L. Read. Accountant to note.—P.B.W., 6/8/85. Noted.—C.S.G., 10/8/85.

21

No. 46.

The Secretary to the Post Office to The Under Secretary for Finance and Trade.

Sir,

6 August, 1885.

Referring to my letter of the 6th June last, concerning a request made by Messrs. D. & W. Robertson for payment of a sum of £300, on account of their contract for £4,000 for ironwork, which has arrived in Sydney, intended for carrying telephone and telegraph wires along George-street, and asking that you would be good enough to move the Colonial Treasurer to authorize payment of the amount from the balance of £100,000 for the extension of telegraph lines generally, as the money was urgently required, I am directed to state that, it having since been arranged to examine the material by Mr. Orr, an engineer appointed specially by the Harbours and Rivers Department, a report has been received that, with the exception of about £25 worth of iron pieces, which Messrs. Robertson agree to replace by ordering fresh pieces from the manufacturers at home, Mr. Orr thinks that £200 will cover all expenses of laying out along the street.

On the recommendation of the Acting Superintendent of Telegraphs, the Postmaster-General has approved of the sum of £3,700 being paid at once, and the balance, £300, will be retained until the work is completed.

I am to request, therefore, that you will now be good enough to move the Treasurer to cause a cablegram to be sent to the Agent-general, instructing him to pay this sum of £3,700 to the firm of Messrs. D. & W. Robertson in London, the cost of sending the money to be charged against these gentlemen, and deducted from the balance of the contract, £300, before referred to.

I have, &c.,
S. H. LAMBTON.

No. 47.

The Under Secretary for Finance and Trade to the Secretary to the Post Office.

Sir,

12 August, 1885.

I am directed by the Minister acting for the Colonial Treasurer to acknowledge receipt of your letter of 6th instant, B 85/6,403, and to inform you that, in terms of the request made therein, a sum of £3,700 has been remitted to the Agent-General by cable, for payment to Messrs. D. & W. Robertson in London.

The cost of remitting the money is as follows, namely:—

| | |
|--|-----------------|
| Exchange on £3,700, at 35s. per cent., being current rate for sight draft on London..... | £64 15 0 |
| Cablegram | 11 4 0 |
| Total charge against Messrs. D. & W. Robertson..... | <u>£75 19 0</u> |

I have &c.,
G. EAGAR.

Referred to Acting Superintendent of Telegraphs. Messrs. Robertson will no doubt object to pay the £64 15s. 0d.

Our letter to Treasury was not so clear as it should have been. It is in strict accord with Mr. Walker's minute of 3rd inst., on which it was written, but, as will be remembered, held over until the Postmaster-General had again approved of payment being made in London, the Treasury having previously refused to do this. On such approval being obtained, the letter of 3rd was merely re-dated 6th and sent on; but it is evident that the word "money" in last sentence should have been "telegram."—S.H.L., 13/8/85.

When I wrote my minute of 3/8/85, I was not aware of the existence of the Secretary's letter to Messrs. D. & W. Robertson in reference to the cablegram home. It would appear that the intention was merely to charge for the cable, and, as Mr. Lambton points out, the word "money" should have been "telegram." I do not, however, think that there will be any difficulty in reference to the exchange, as we have agreed to remit the money by telegram, and, no doubt, the Treasury will write it off as against Messrs. D. & W. Robertson, if instructed in terms of the agreement as to payment in London.—P.B.W., 13/8/85.

Draft letter to Treasury accordingly.—S.H.L., 20/8/85. The Acting Superintendent of Telegraphs. B.C., 21/8/85.—S.H.L. Read.—P.B.W., 22/8/85.

No. 48.

The Secretary to the Post Office to the Under Secretary, for Finance and Trade.

Sir,

20 August, 1885.

With reference to your letter of the 12th instant, informing me that the sum of £3,700 had been remitted to the Agent-General by cable, for payment to Messrs. D. & W. Robertson in London, and that the expense of remitting the money was £54 15s. 0d., cost of draft, and £11 4s. 0d., cost of cablegram, I am directed to request that, as the Postmaster-General had in this case specially promised that the money should be paid in London, you will be good enough to arrange that Messrs. Robertson shall only be charged for the cost of the cablegram, namely, £11 4s. 0d.

I have, &c.,
S. H. LAMBTON.

No. 49.

No. 49.

Mr. Humphreys, Sydney, to The Superintendent of Telegraphs.

Dear Sir,

19 January, 1886.

In reference to the erection of the verandah for carrying out your system of telegraph and telephone wires, I have estimated the quantity of special and other pipe castings that may be required, as follows:—The special castings for jointing on to main street-corner columns will weigh about 15 tons, &c.; these can be made in the Colony at 18s. per cwt., delivered on the several sites required, viz.:—King, Market, Druitt, Bathurst, Liverpool, Goulburn, Hay, and Engine streets. The crossing from George street to Redfern Station, if such has to be carried underground, will require about 10 tons extra piping, besides terminal column on station platform. This is a detail which will have to be considered during the progress of erection. I propose to use 12-inch cast-iron spigot and faucet pipes to cross all streets between the special casting on end of columns; these can be obtained and landed on site for erection at £7 per ton, and there will be about 30 tons required. Some of the columns (3) have been broken, and portions of the frieze will require repairing. Yet, taking the whole of the shipment, I consider they have been landed in fair order.

In reference to my charge for plans, specifications, and superintending the erection, I am willing to charge a lump sum of £300 for such work. I shall be glad, previous to commencing the work, to have an interview with the foreman under whose orders the necessary works are to be carried out, and shall be glad at any time to meet you and confer as to the several details that may be required.

I am, &c.,

WM. HUMPHREYS.

No. 50.

The Superintendent of Telegraphs to The Secretary to the Post Office.

19 January, 1886.

THE ironwork for the telephone verandah having arrived during my absence from the Colony, and is now ready for erection along George-street, I have to request authority for the same to be placed in position by the Sydney line-repairing gang, and as this is a matter requiring the supervision and constant attention of a skilled engineer, that Mr. A. Humphreys be entrusted with the erection of the work, and that he be paid the sum of £300 for this purpose.

The Sydney Municipal Council should be informed of the intention of the Government to erect this ironwork, and their co-operation and assistance requested. Notice should also be given to the shopkeepers, who have already erected verandahs, that it will be necessary for the Government to remove the same and erect a uniform verandah front instead, but where the present verandahs are roofed over a similar roof will be placed in position.

Iron tubes will be placed under the street-crossings for the cables, which work will be performed without interfering more than necessary with the street traffic. The total expense will amount to not more than £1,500, including supervision, as the existing galvanized iron will be available for the new roofing where required.

This work can be carried out and made compulsory if necessary, under the 4th clause of the Electric Telegraph Act, 20 Vict. No. 41.

This will be an immense public convenience, and a great improvement to the appearance of the city, and will remove the present unsightly, overhead wires which are so much in the way of firemen, builders, and others, who have to use ladders in front of the buildings.

The whole system has already been approved of by the Government and the City Corporation, and it only remains now to carry it out.

Submitted.—S.H.L., 20/1/86.

The Superintendent of Telegraphs to Messrs. D. & W. Robertson, Sydney.

Gentlemen,

22 February, 1886.

I have the honor to inform you that the ironwork for carrying the telegraph wires along George-street is now ready for delivery, and, as the Department can make arrangements for laying it down on the route as required, I have to request that you will allow the Government to do this, as the delivery of the material can be made with greater expedition at a cost of about £26. The balance due to you after deducting the abovenamed amount can be paid immediately after completion of delivery.

I shall be glad if you will advise me as early as possible whether my request is acceded to.

I have, &c.,

E. C. CRACKNELL.

No. 55.

Messrs. D. & W. Robertson, Sydney, to The Superintendent of Telegraphs.

Central Exchange Buildings, York-street, Sydney, 22 February, 1886.

Telephone Verandah Material.

Dear Sir,

We have the honor to acknowledge receipt of yours of even date regarding delivery of above. In reply, we would respectfully submit, that when this material arrived we intimated to your Department that we were then prepared to deliver the material, in accordance with the specification; but were instructed that, as the work was not to be then proceeded with, we had to deliver at Russell's Wharf; and, in terms of contract, we consider in all fairness, we had completed our portion of the contract. We paid 3s. per ton on 206 tons for carting it to its present site; it would not have cost us a penny more to deliver it along the track in George-street.

From the facts that have already been communicated to you regarding the manner M'Farlane & Company treated us over this order, knowing that you bound us to their manufacture, and the contract having been a very unprofitable one on that account, we are sure you have only to have this matter put before you, when you will see that, as far as our delivery is concerned, we have fulfilled the contract.

With reference to the £300 kept off our account, we should feel exceedingly obliged by your passing this on for payment, as we have been kept out of the money a very long time, and the small pieces to replace are only valued at £10; the latter are in the "King Malcolm," 64 days out. We guarantee that they will fit when delivered, or you can deduct the value till delivered.

We have, &c.,

Pro. D. & W. ROBERTSON,

A. R. MILLER.

Mr. Gregory will please look into this matter, and let me know whether this statement is correct.
—E.C.C., 23/2/86. Accountant.

No. 56.

The Superintendent of Telegraphs to The Secretary to the Post Office.

23 February, 1886.

THE material for the telegraph and telephone verandah, to be erected along George-street, arrived in Sydney in May last, and was delivered by the contractors (Messrs. D. & W. Robertson) at the Department's premises, Russell's Wharf, the contract stating that it was to be delivered along the line. As, however, the Department was not prepared to accept delivery as specified, it now remains a question whether the contractors should be called upon to deliver the material, or whether it should be done by the Department, I now submit the case for the decision of the Postmaster-General. It is only a matter of £26, and I think that, as the contractors have already delivered the material to our store, we cannot enforce delivery along George-street.

I have, &c.,

E. C. CRACKNELL.

No. 60.

Circular letter from The Superintendent of Telegraphs to the Property Owners and
Others,—George-street, Sydney.

Sir,

The erection, along the west side of George-street, of a cast-iron verandah front on iron columns, of an ornamental pattern, for carrying the telegraph wires, renders it necessary that all obstructions in the shape of awnings and gas-lamps be removed as the work proceeds. I beg, therefore, to inform you that the awnings or verandahs will be removed by the Department, and where a roof exists it will be re-erected, all gas-lamps, of course, being attended to by the proprietors as required; and I have to request that you will cause the same to be seen to without delay, so that the work of erecting the verandah front will not be interfered with.

Enclosed is a copy of the fourth section of the Telegraph Act for your information.

I have, &c.,
E. C. CRACKNELL.

Section IV, Electric Telegraph Act.

4. It shall be lawful for such Superintending Officer to cause to be set up or laid down and maintained any works necessary for the purposes of this Act upon or under and through any land whatsoever or any shore of the sea or any road or water and to break excavate and remove any soil to any extent and depth required for placing or removing such works Provided that every wire or cord crossing any road or water above the surface shall be at least eighteen feet from such surface and that the free use of any such land shore road or water shall not be obstructed more than is absolutely necessary for some purpose of this Act.

No. 61.

Mr. R. Rutherford, Telegraph Inspector, Sydney, to The Superintendent of Telegraphs.

Sir,

25 March, 1886.

I have the honor to bring under notice the danger the iron columns would be subjected to, if erected on the outer face of the kerbing. If any dray, or vehicle of any description, should come in sudden contact with one of them, it would be most undoubtedly broken; and from the extra strain thrown on those columns adjacent to it, there is no doubt but that at least a half-dozen on either side would be broken also, or otherwise seriously damaged.

By placing the columns on the outer face of the kerbing, it will interfere with the watercourse and the formation of the street, as the holes have to be put down from 4 ft. 6in. to 5 ft.; neither can they be put down so securely as they are in the manner now adopted, If

If 7 inches from the face of the kerbing cannot be granted, perhaps 3 or 4 inches may be obtained, which would be a great support and security to the columns. The whole of the column would then stand inside the kerbing, and what the footpath lost would be gained by the roadway, and greater security would be afforded to the public from the lesser liability to accident.

I may here state that some weeks ago I saw a dray come in contact with the column of a verandah in King-street, which it broke, and the whole structure fell to the ground. Should such an accident occur in a busy thoroughfare like George-street, the consequences would be most serious, and very probably fatal.

Trusting that some concessions may be made in the interests of the public safety,

I have, &c.,

R. RUTHERFORD.

Read.—E.C.C., 26/3/86.

No. 62.

Messrs. Robertson, Fisher, & Ralfe, Sydney, to The Postmaster-General.

Sir,

Pitt-st., Sydney, 26 March, 1886.

We are instructed by the Australian Joint Stock Bank to inform you that they object to the ironwork erection which has been placed in front of the buildings for the purpose of carrying the telegraph wires, which the Bank allege has the effect of cutting up the design of the Bank, and completely destroying the *tout ensemble* of the structure, and we are requested to say that the Bank protest strongly against what they consider an eyesore and a disfigurement to their property; and they have also desired us to draw your attention to the matter, they entertaining very great doubts as to whether the Electric Telegraph Department have obtained from you authority to erect the same, or that anyone can legally grant permission to the Electric Telegraph Department to so disfigure the city.

We have, &c.,

ROBERTSON, FISHER, & RALFE.

Submitted.—S.H.L., 29/3/86. Supt. of Telegraphs for report. Under what authority was the work alluded to erected in the streets.—F.B.S., 30/3/86. Supt. of Telegraphs, B.C., 31/3/86.—S.H.L., per J.D.

No. 63.

The General Manager of the Australian Joint Stock Bank, Sydney, to The Postmaster-General.

Sir,

The Australian Joint Stock Bank, Sydney, 16 April, 1886.

I have the honor to call your attention to a letter dated 26th March last, addressed to you by this Bank's solicitors, Messrs. Robertson, Fisher, & Ralfe, on the subject of the iron pillars and lattice-work erected by the Government in front of the Bank premises, corner of George and King streets, and to remind you of a conversation which the chairman, the Hon. J. B. Rundle, M.L.C., had with you recently, when you promised to look into the matter. I am to mention that the Bank has had the opinion of Mr. Darley, Q.C., respecting the erection of the iron pillars and lattice-work, and he states that such erection is quite illegal. The Bank, however, has no desire to take any extreme measures, and it is hoped you will see your way to have the unsightly erection in question removed with as little delay as possible.

The Bank contemplates the extension of the present handsome building along the whole of the frontage, 146 feet, in George-street, and you will readily understand why the removal of the iron pillars and lattice-work is desired by the Bank.

I have, &c.,

F. ADAMS.

Supt. of Telegraphs for report.—F.B.S., 17/4/86. B.C., 17/4/86.—S.H.L.

Minute of the Attorney-General.

I SEE no reason for questioning the Department's right to carry out these works. Sections 4 and 5 clearly give the power to do so. While regretting that any annoyance should be caused to the Bank proprietors, I must advise, as a matter of law, that no notice should be taken of their protest.—J.H.W., 3/5/86.

A copy of the opinion of the A.-G. should now be forwarded to the manager of the A.J.S. Bank, who should also be informed that the ironwork for carrying the street-wires has become a public necessity, and must be erected as originally designed.—E.C.C., 6/5/86.

The Secretary to the Post Office,—Inform as suggested.—F.B.S., 7/5/86.

No. 64.

The Secretary to the Post Office to the General Manager, Australian Joint Stock Bank, Sydney.

Sir,

10 May, 1886.

Adverting to your letter of the 16th ultimo, drawing attention to the communication dated 26th March last, from Messrs. Robertson, Fisher, and Ralfe, on the subject of the erection, in front of the Australian Joint Stock premises, George and King streets, of iron pillars and lattice-work for telegraph purposes, I am directed by the Postmaster-General to inform you that the papers in the case were referred to the Attorney-General who advises as follows:—

“ I

" I see no reason for questioning the Department's right to carry out these works. Sections 4 and 5 (20 Victoria No. 41) clearly give the power to do so. While regretting that any annoyance should be caused to the Bank proprietors, I must advise, as a matter of law, that no notice should be taken of their protest."

I am further to state that the Superintendent of Telegraphs reports that the ironwork for carrying the street-wires, referred to, has become a public necessity and must be erected as originally designed.

I have, &c.,
S. H. LAMBTON.

No. 65.

The Town Clerk, Sydney, to The Superintendent of Telegraphs.

Sir, 29 March, 1886.

I have the honor, by direction by the Right Worshipful the Mayor, to inform you that during the erection of the new telegraph posts along the west side of George-street, and the consequent removal of several awning posts, the bluestone kerbing has been left with gaps which will require to be immediately repaired, and I beg to inquire whether you will instruct your contractor to effect the repairs or leave them to be carried out by the corporation at the cost of your Department.

I have, &c.,
CHAS. A. WOOLCOTT.

Mr. Rutherford to see me about this.—E.C.C., 30/3/86.

Stone kerbing required, where awning post has been removed, from between King and Market-streets.

| | | | | | | | | | ft. in. |
|-------|---|-----|-----|-----|-----|-----|-----|-----|---------|

Sir,

The verandahs and other fittings here mentioned will require to be removed for the erection of ironwork for cables in about ten days.

R. RUTHERFORD,

3/5/86.

Let these people be notified in the usual way to-day.—E.C.C., 4/5/86.

NOTE.—For copy of notice see No. 60.

No. 73.

No. 73.

Minute of The Secretary to the Post Office.

MR. ABIGAIL, M.P., and a number of persons in business on Brickfield Hill, wish to point out to the Postmaster-General the great hardship they will experience by the removal of their awnings, some of which have been erected quite recently and at great expense, and many of which include signboards stating their names and the nature of their business. What is desired now is that the Government shall re-erect these signboards on the new telegraph-posts, either placing them over or below the frieze.

Mr. Abigail purposes seeing the Postmaster-General in the matter; in the meantime, perhaps, Mr. Cracknell's report should be obtained.—S.H.L., 3/5/86.

No. 74.

Mr. F. Abigail, M.P., Sydney, to The Postmaster-General.

Sir,

6 May, 1886.

I have just received notice that my verandah is to be removed to enable the Department to erect the new telegraph arrangements, and on behalf of others as well as self I beg to ask, Is the Department going to place the names of the shopkeepers on the frieze facing the street? I point out this has been done by Mr. Bar, Haymarket Arcade, where the frieze is somewhat like that being erected by the Department, and it looks very nice. It is under a narrow strip of glass, and does not mar the effect of the friezework.

I would further point out that Mr. Darley has given an opinion that the action in this case is illegal, and that being so the Department should do all they can to prevent any litigation. I may say, so important is this question of the name being placed on the front that, unless some arrangements are made by the Department to have it done, the question of the right of the Government will be tested by law. This is not made by way of threat, but only to keep you informed of what is likely to be done.

Awaiting your reply,

I have, &c.,

F. ABIGAIL.

The Superintendent of Telegraphs for report. It seems to me that the best way would be to allow the names of tradesmen to be painted on boards suspended from the frieze.—F.B.S., 6/5/86. Superintendent Electric Telegraphs, B.C., 7/5/86.—S.H.L. per J.D.

I have seen Mr. Abigail and he agrees with me that the best place to put the signboards is below the frieze.—F.B.S., 7/5/86. Superintendent Telegraphs, B.C., 14/5/86.—S.H.L., per J.D.

No. 75.

The Superintendent of Telegraphs to Mr. W. Humphreys, Sydney.

Sir,

18 May, 1886.

A number of the shopkeepers in George-street are desirous of affixing signboards to the iron frieze, and I have therefore to request that you will be good enough to furnish me with a sketch of the best mode of suspending such boards to secure uniformity.

I have, &c.,

E. C. CRACKNELL.

No. 76.

Mr. Edward Hordern, Sydney, to The Superintendent of Telegraphs.

Dear Sir,

5 May, 1886.

Re removing of balconies on west side of George-street. The verandahs in front of properties belonging to me I have only just had new galvanized sheets of iron erected, and naturally I resent their being removed. They are curved down from shop fronts to fascia boards; and if you would give permission that the galvanized sheets remain with the iron fronts that you are erecting, you would oblige

Yours respectfully,

EDWARD HORDERN.

P.S.—Are the sheets of iron when taken—does your contractor claim them, or do we?—

E.H.

No. 77.

The Superintendent of Telegraphs to Mr. Edward Hordern, Sydney.

Sir,

5 May, 1886.

In reply to your memorandum of this date, I have the honor to inform you that the Government will re-erect any roof removed to admit of the iron columns being placed in position. In cases where the iron is useless, of course the owners of the premises are allowed to take possession of it.

I have, &c.,

E. C. CRACKNELL.

No. 78.

No. 78.

Mr. Robert Guy, Sydney, to The Superintendent of Telegraphs.

Sir, 128 Victoria-street, Sydney, 7 May, 1886.
I am advised that your action in demolishing the awnings along the west side of George-street in this city without the consent of the owners of same is entirely illegal. I therefore give you notice not to interfere with the awnings fronting my property, 585 and 587 George-street.

I have, &c.,
ROBERT GUY.

I would like to have the opinion of the Crown Solicitor as to the proper course to adopt in reference to this notice.—E. C. CRACKNELL, 10/5/86.

No. 79.

Mr. Robert Guy, Sydney, to The Postmaster General.

Hon. Sir, 128 Victoria-street, Sydney, 7 May, 1886.
I am advised that the action of Mr. Cracknell in demolishing our street-awnings along the west side of George-street without consulting the wishes of the owners of same is entirely "illegal." I have therefore respectfully to request that you will at once exercise your power to put a stop to these most arbitrary, cruel, and unwarrantable proceedings.

The Hon. the Colonial Secretary has suggested that I should bring this matter under your notice, with a view to same being considered by the Cabinet at its next meeting.

I have, &c.,
ROBERT GUY.

128 Victoria-street, Sydney, 7 May, 1886.

Notice—To whom it may concern.

I HEREBY give you notice not to molest or interfere in any way with the awnings fronting my property, 585 and 587 George-street, as it is my intention to take legal proceedings against anyone so offending.

ROBERT GUY.

Submitted.—S.H.L., 11/5/86. Supt. of Telegraphs, for report.—F.B.S. 13/5/86. B.C., 14/5/86.—S.H.L.

To Mr. Rutherford, Telegraph Department,—

2 June, 1886.

I, THE undersigned, on behalf of Mr. Guy, give you permission to remove the awning of No. 585 and 587 George-street.

JAMES WEIR.

Read.—E.C.C., 7/6/86.

No. 80.

Mrs. M. J. Austin, Enfield, to The Superintendent of Telegraphs.

Dear Sir, Austinlee, Enfield, 10 May, 1886.
My tenants residing in Nos. 797, 799, 801, and 803, George-street, have been to me regarding the frieze which the Government are about to erect in front of these shops. Some time ago I erected an expensive awning suited to their requirements, and now they tell me this is to be pulled down to make way for the frieze; but their complaint is this: The frieze you have erected all along George-street is so high that it will be far above where the present awning goes into the walls, and they do not see how the top is to be arranged. I called at your office to-day, but you were not in; and I now write to put this matter before you so that it may be considered, and shall feel greatly obliged to you if you will inquire into it before the frieze is commenced at the buildings referred to above. You will no doubt notice that very few of the buildings down near the Railway Station are as high as those up town.

Trusting to your kind attention to this matter,

I remain, &c.,
M. J. AUSTIN.

No. 81.

The Superintendent of Telegraphs to Mrs. M. J. Austin, Enfield.

Madam, 14 May, 1886.
I have the honor to acknowledge the receipt of your communication of the 10th instant, referring to the removal of awnings in front of your premises, George-street, to enable the Government to erect the iron columns and frieze for carrying telegraph wires, and beg to inform you that the matter has been referred to the superintending officer for report.

I have, &c.,
E. C. CRACKNELL.

No. 82.

No. 82.

Mr. R. Rutherford, Telegraph Inspector, Sydney, to The Superintendent of
Telegraphs.

Sir,

10 June, 1886.

Referring to Mrs. Austin's verandahs, I have seen these, and there is no doubt that the new verandah system would cross the windows of the second story of the buildings; but if there be any objection to that, our work can be carried over the present awnings without any alterations to them.

I have, &c.,

R. RUTHERFORD.

Mr. Scott, 81 Pitt-street, informed on Mrs. Austin's behalf.—W.W., 12/6/86.

No. 83.

No. 86.

Mr. Chas. Binnie, Sydney, to The Superintendent of Telegraphs.

Dear Sir,

276, George-street, 7 June, 1886.

A few lines to ask if, as head of the above Department, you can show cause why I should not take proceedings against you for wilfully disfiguring the ornamental stone fronts of buildings Nos. 543 and 541, George-street.

Not only have holes been pierced in the stonework for the supports for the awning, but, through carelessness, one has been pierced in the cornice, for which there was no requirement.

I remain, &c.,

CHAS. BINNIE.

No. 87.

The Superintendent of Telegraphs to Mr. Chas. Binnie, Sydney.

Sir,

10 June, 1886.

In acknowledging the receipt of your communication of the 7th instant, complaining of the disfigurement of the stone fronts of your premises, Nos. 541 and 543, George-street, through holes being pierced in same for the awning supports in connection with the iron frieze for carrying the telegraph wires, and requesting that cause should be shown why proceedings should not be taken against the Government for damages, I have the honor to inform you that, under the 5th section of the Electric Telegraph Act, the Department is empowered to cause any wires to be supported by affixing or annexing the same to any building in any city or other place in the Colony; and, therefore, you have no case against the Government.

I have, &c.,

E. C. CRACKNELL.

No. 88.

Mr. Chas. Binnie, Sydney, to The Superintendent of Telegraphs.

Dear Sir,

276, George-street, 14 June, 1886.

In reply to yours of the 10th instant, I am sorry to state that you have not answered the question of my former letter.

You refer me to the 5th section of the Act, which deals with the power of the Department to erect supports for the wires; but this is not the point, as the damage done to the property in question is by the supports for the awning—not the wires.

Your Act in regard to the awnings gives you power to pull down all awnings within the line of work and to erect in their place others according to regulations; but it does not empower you to disfigure or destroy private property.

Awaiting your pleasure,

I remain, &c.,

CHAS. BINNIE.

No. 89.

The Superintendent of Telegraphs to Mr. Chas. Binnie, Sydney.

Sir,

16 June, 1886.

In acknowledging the receipt of your communication of the 14th instant, in reply to mine of the 10th idem, respecting the erection of supports for frieze to carry telegraph-lines along George-street, I have the honor to inform you that the Electric Telegraph Act provides for wires being supported by affixing supports to any building whatsoever; and I am therefore unable to recognise any claim you may deem yourself to have against the Government.

I have, &c.,

E. C. CRACKNELL.

1885-6.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

MR. METCALFE, ENGINEER IN THE ELECTRIC TELEGRAPH
DEPARTMENT.
(DISMISSAL OF.)

Ordered by the Legislative Assembly to be printed, 19 August, 1886.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 7th July, 1886, That there be laid upon the Table of this House,—
“Copies of all minutes, letters, papers, and other documents in connection
“with the appointment, suspension, and dismissal of Mr. Metcalfe, Engineer
“in the Electric Telegraph Department.”

(Mr. Garrard.)

No. 1.

The Superintendent of Electric Telegraphs to The Secretary, General Post Office.

31 January, 1884.

I BEG to recommend for the approval of the Postmaster-General that Mr. J. Metcalfe, who has been in charge of the electric lights with wages of £3 per week, be appointed Engineer-in-charge of Parliament House Light and the Electric Lights of this Department generally, with a salary of £208 per annum.

Provision is made on the 1884 Estimates to meet the expenditure.

To date from the 1st instant.

E. C. CRACKNELL.

Submitted.—S.H.L., 1/2/84.

2

No. 2.

Minute of Postmaster-General.

Is Metcalfe thoroughly competent to perform the duties, and is not the proposed pay, £208 per annum, very high?

2 February, 1884.

W.J.T.

No. 3.

The Superintendent of Telegraphs to The Secretary General Post Office.

METCALFE is the best man we have for the general supervision of the electric lights, and quite competent for the position. He will only be on the same rate as the Engineer for the Circular Quay Lights, and I do not think it is too high.

5 February, 1884.

E.C.C.

Approved.—W.J.T., 6/2/84.

No. 4.

The Superintendent of Telegraphs to The Secretary General Post Office.

I BEG to recommend, for the approval of the Postmaster-General, that the salary of Mr. J. Metcalfe, engineer, Electric Light Branch of this Department, be increased from £208 to £221 per annum for the year 1884, and from £221 to £226 per annum for 1885.

2 March, 1886.

These amounts are voted on the Estimates, and Mr. Metcalfe, who is a very deserving officer, is entitled to the increases.

E. C. CRACKNELL.

Submitted.—S.H.L., 4/3/86.

No. 5.

Minute of Postmaster-General.

WHY are these increases now being recommended after so long a lapse of time.

10 March, 1886.

F.B.S.

No. 6.

Minute of Superintendent of Telegraphs to Secretary, General Post Office.

THE amounts proposed to be paid are voted for the years named. I cannot say why Mr. Metcalfe's salary has not been paid as voted. He cannot be paid without the Minister's authority.

9 April, 1886.

E. C. CRACKNELL.

Increase may be paid.—F.B.S., 27/5/86.

No. 7.

The Town Clerk, Sydney, to The Secretary General Post Office.

Sir,

Town Clerk's Office, Sydney, 10 June, 1886.

I have the honor, by direction of the Right Worshipful the Mayor, to state that the City Council have determined upon illuminating and otherwise decorating the Town Hall on the 21st instant, in celebration of the commencement of the fiftieth year of Her Majesty's reign, and as it is proposed to use electric lighting on the occasion, I am desired by His Worship respectfully to apply to the Postmaster-General for his assistance by allowing the Superintendent of Telegraphs to co-operate with the Council in carrying out all necessary arrangements, and that the use of such electric apparatus as can be conveniently spared by the Department may be placed at the service of the Council.

I have, &c.,

CHAS. H. WOOLCOTT,
Town Clerk.

The Superintendent of Telegraphs for report.—S.H.L., 10/6/86.

No. 8.

The Superintendent of Telegraphs to The Secretary General Post Office.

WE can spare three dynamo machines and six arc lamps if the Postmaster-General approves.

11 June, 1886.

E.C.C.

No. 9.

Minute of Postmaster-General.

APPROVED, and the Superintendent of Telegraphs may give what assistance he can.

16 June, 1886.

F.B.S.

No. 10.

3

No. 10.

Memorandum from Superintendent of Telegraphs to Mr. J. Metcalfe.

Sydney, 14 June, 1886.

YOU will have quite enough to do to get the outside work and the tower ready in time. I have arranged to have the inside-work done entirely by Mr. Kingsbury's firm, and you had better leave that part with them.

No. 11.

The Superintendent of Telegraphs to Mr. J. Metcalfe.

Sydney, 17 June, 1886.

I HAVE to inform you that, in consequence of your insubordinate conduct, I have decided to suspend you from duty, and your case will be brought under the notice of the Postmaster-General, with a view to your removal from the Service.

You will be good enough to hand over at once any papers or documents you may have in your possession belonging to the Department.

E. C. CRACKNELL.

No. 12.

The Superintendent of Telegraphs to The Secretary General Post Office.

17 June, 1886.

I BEG to bring under the notice of the Postmaster-General the conduct of Mr. J. Metcalfe, Engineer Electric Light Branch of this Department, who has refused to obey my instructions in respect to some work he was directed to carry out at the Town Hall, and has been very insubordinate to myself when being spoken to on the subject.

I have suspended him, and now recommend that he be called upon to show cause why he should not be dismissed the Service.

E. C. CRACKNELL.

Submitted.—JAS. D., 18/6/86. Approved.—F.B.S., 18/6/86.

No. 13.

Memorandum of Superintendent of Telegraphs.

18 June, 1886.

ARRANGEMENTS have been made for carrying out this work. J. Metcalfe, who has charge of the Electric Light Stores, refused to carry out my instructions to look after the outside work, such as fixing the dynamos, running leads, and placing the arc lamps in position; has been called upon to show cause why he should not be dismissed for insubordination.

E. C. CRACKNELL.

No. 14.

The Superintendent of Telegraphs to Mr. J. Metcalfe.

Sydney, 21 June, 1886.

WITH reference to my letter of the 17th instant, advising you of your suspension from duty in consequence of your misconduct, I have now to request that you will be good enough to furnish me with an explanation of your conduct, and that you will show cause why you should not be dismissed the Service.

E. C. CRACKNELL.

No. 15.

Mr. J. Metcalfe to The Superintendent of Telegraphs.

Sir,

Sydney, 23 June, 1886.

In reply to your memo. of the 21st instant, I beg to state that I do not consider I have been guilty of any misconduct, as I am not aware that I have done anything to either disgrace myself or the Service; what I did was simply to resent the interference of Mr. Kingsbury, which I am sorry to say I have put up with too long.

I was told, previous to this occurring, by his brother, that you had asked him, Mr. Kingsbury, to take charge of this work at the Town Hall, also of the decorations; and had you told me of this arrangement in the first place I should most certainly have objected to go near the work, and would have explained to you my reason for so doing, which would have saved this misunderstanding.

You are well aware that I applied to you for a removal both before and after you left, and after your return from Europe; this I did so that I might get away from his annoyance, which at times was almost unbearable, especially after I found fault with his work at Parliament House, and refused to certify to his vouchers for the same. But what led directly to this was his coming to the Town Hall and interfering, in fact stopping the men in their work after they had been ordered to work under my instructions. I am not aware who or what Mr. Kingsbury is, but this I know, he appears to do as he likes; for instance, in this case you told our men distinctly that the brackets I had fixed in front of the building were to remain, but he said he would take them down, and did so in spite of your orders to the contrary.

Yours, &c.,

J. METCALFE.

The Superintendent of Telegraphs to Mr. J. Metcalfe.

Sydney, 1 July, 1886.
 I HAVE to inform you that you will be paid salary up to the 30th ultimo, from which date it will be discontinued; and at the same time I have to request that you will at once forward your resignation.
 E. C. CRACKNELL.

No. 17.

Mr. J. Metcalfe to The Superintendent of Telegraphs.

Sir, 2 July, 1886.
 In reply to your memo. dated July 1st, I beg respectfully to refer you to my memo. dated June 23rd, in which I have shown cause against my removal from the Service. I herewith return you the above-mentioned memo. of the 23rd ultimo, as it was returned to me without any reply attached.
 I remain, &c.,
 J. METCALFE.

No. 18.

The Superintendent of Telegraphs to The Secretary, General Post Office.

THE Postmaster-General having acceded to the request of the City Council to afford all the assistance which could be given by the Electric Telegraph Department in illuminating the Town Hall with the electric light, I immediately issued instructions to the engineer-in-charge of the Electric Light Branch to at once proceed with the work. He, however, stated that as he had very little time to spare it would be impossible for him to give the necessary attention which such an elaborate installation required. I, feeling that there might be some reason for this, had a personal interview with the Town Clerk, and suggested that under the circumstances, Messrs. H. H. Kingsbury & Co. had better be entrusted with the portion of the work inside the vestibule to be paid for by the City Council. The Town Clerk agreed to the proposal, and Mr. Kingsbury was at once employed. Instructions were issued to Mr. Metcalfe that he was to attend to the outside work, and that the remainder would be carried out by Mr. Kingsbury. Mr. Metcalfe immediately afterwards came to me in a very boisterous manner, and stated that if Mr. Kingsbury was to have anything to do with the arrangement he declined to do anything in connection with the work, or assist in any way, and marched himself off. I drew his attention to the fact that this was an act of insubordination, and that such conduct could not be countenanced, whereupon he behaved himself in a most insubordinate manner, and I deemed it my duty to recommend his suspension, and brought the matter under the notice of the Postmaster-General, with a view to his removal from the Service. Mr. Metcalfe is not appointed by the Executive Council, and, as he has failed to give any satisfactory reason for his conduct, I recommend that his dismissal be confirmed.
 2/7/86.

E. C. CRACKNELL.

Approved.—F.B.S., 2/7/86.

No. 19.

The Superintendent of Telegraphs to Mr. J. Metcalfe.

Sydney, 2 July, 1886.
 I HAVE to inform you that in consequence of your insubordinate conduct, and your refusal to obey instructions given by the head of the Department in connection with the electric lighting of the Town Hall, the Postmaster-General has directed that you be dismissed the Service.

E. C. CRACKNELL.

W. J. M.
