Lambton Colliery.—About 400 men, &c., are employed in this mine in the day-time, and about 80,000 cubic feet of air per minute is available for the several districts. The face workings are divided into ten districts, and the number of men in each is in keeping with the provisions of the Act. The Act in other respects is complied with.

Burwood Colliery.—About 300 men, &c., are employed in this mine on the day-shift, and the total quantity of air entering the mine per minute is about 80,000 cubic feet. The number of districts, and the number of men in each district, are according to the Act. The provisions of the Act are complied with in other respects also.

Stockton Colliery.—About 280 men, &c., are employed in this mine during the day-time, and the total quantity of air entering the mine per minute is about 100,000 cubic feet. During the six months a new ventilating furnace has been erected, and the ventilation throughout the workings has been considerably increased. The furnace shaft has also been lined with brick for some distance up from the bottom, which is a great improvement. The face workings are divided into separate and distinct districts, and in none of the districts are there more men than the Act allows. The provisions of the Act are also carried out in other respects.

Wickham

Wickham and Bullock Island Colliery.—About 200 men, &c., are employed in this mine during the day-time, and supplied with about 60,000 cubic feet of air per minute in three separate and distinct currents, and preparations are being made for another distinct current of air in the dip workings. The ventilation has been greatly improved in this mine during the six months by the erection of a large ventilating fan, which is giving good results. The provisions of the Act are complied with in other respects also.

Brown's Colliery.—About 200 men, &c., are employed in this mine on the day shift. The total quantity of air introduced into the mine per minute is about 50,000 cubic feet. The face districts are according to the Act, and the provisions of the Act in other respect are complied with.

Duckenfield Colliery.—About 170 men, &c., are employed in this colliery, and the total quantity of air circulating in the mine per minute is about 48,000 cubic feet. The number of districts and number of men in each district are according to the Act. The Act is also carried out in every other respect.

Hetton Colliery.—About 80 men, &c., are employed in this colliery during the day-time. For this number the ventilation is only barely in keeping with the provisions of the Act at the present time. However, improvements are being effected, and the second opening to the day or surface is being sunk as quickly as possible. The provisions of the Act are fully complied with in other respects.

South Waratah Colliery.—About 100 men, &c., are employed in this mine during the day-time, and supplied with about 18,000 cubic feet of air per minute in two separate and distinct currents. The Act is also complied with in other respects.

Great Northern Colliery.—There are about 160 men, &c., employed in this mine, and supplied with about 16,000 cubic feet of air per minute in three separate and distinct currents. Another shaft is being sunk for ventilating purposes. The provisions of the Act are complied with.

Maryville Colliery.—Only about 40 men, &c., are employed in this mine at the present time. The ventilation is up to the requirements of the Act, and the provisions of the Act are otherwise complied with.

Linwood Colliery.—About 48 men, &c., are employed in this mine during the day. The ventilation is satisfactory, and the Act complied with in other respects also.

Clay Cross Colliery.—About 16 men, &c., are employed in this mine during the day. The ventilation is satisfactory, and the Act complied with in other respects also.

East Waratah Colliery.—Only about 8 men, &c., are employed in this mine at present. The ventilation is satisfactory, and the Act complied with in other respects also.

Ferndale Colliery.—About 85 men, &c., employed in this mine during the day. The ventilation is up to the requirements of the Act, and the provisions of the Act complied with in other respects.

New Lambton C Pit.—About 70 men, &c., are employed in this mine, and are supplied with about 26,000 cubic feet of air per minute in three separate currents. In the adit in connection with this colliery about 55 men, &c., are employed, and supplied with about 14,000 cubic feet of air per minute. The Act is also complied with in other respects.

West Burwood Colliery.—About 10 men, &c., are employed in this mine during the day. The provisions of the Act are complied with.

Hillside, Burwood.—Only about 6 men, &c., are employed in this mine in the day-time. The Act is complied with.

New Duckenfield Colliery.—There are about 26 men, &c., employed in the two mines in connection with this colliery. The ventilation is good, and the requirements of the Act carried out.

Old Waratah.—There are about 12 men, &c., employed in the two tunnels. The ventilation is good. No cause for complaint.

Goose Colliery.—About 7 men, &c., are employed in this mine. The ventilation is good, and the Act complied with.

Hillend Colliery.—Only a few men occasionally employed. The Act is complied with.

Pride of Ferndale Colliery.—About 9 men, &c., are employed in this mine. The ventilation is satisfactory, and the Act complied with.

Brookstown Colliery.—There are only 9 men, &c., employed in this mine. The ventilation is satisfactory, and the Act complied with.

Summerhill Colliery.—This mine has been opened out during the six months. Four men, &c., are employed, and everything is satisfactory.

West Wallsend Colliery.—About 71 men, &c., are employed in this colliery during the day-time, and supplied with about 25,000 cubic feet of air per minute in two separate and distinct currents. The provisions of the Act are also complied with in other respects.

Monkwearmouth Colliery.—The main shaft in connection with this colliery is now being sunk. About 30 men are employed in and about the shaft. Everything is in good order, and the provisions of the Act observed.

Young Wallsend Colliery.—About 30 men are employed in and about this new winning. The main shaft is now down a considerable depth, and everything in and around the shaft is most satisfactory, and the provisions of the Act strictly complied with.

Durham Colliery, Redhead.—The main shaft at this colliery has been sunk to the Borehole seam of coal, and the work of opening out has been commenced, and about 10 men are at present employed. The provisions of the Act are complied with.

South Wallsend (late Lymnington) Colliery.—The shaft is at the present time being unwatered for the purpose of further sinking. In the adit in connection with this colliery 10 men, &c., are employed. The ventilation is satisfactory, and the Act complied with.

Teralba Colliery.—Sinking operations are being carried out at this new winning. There are about 30 men employed in connection with the shaft. No cause of complaint.

Northumberland Colliery.—Sinking operations at this colliery are for the present suspended, and a diamond-drill bore is being put down for the purpose of testing the property. About 14 men are employed, as it is deemed necessary to keep the water down on account of the timber lining in the shaft. The provisions of the Act are complied with.

Rathluba Colliery.—There are only 6 men employed in this mine. The ventilation is good, and the Act complied with.

Thornleigh Colliery.—There are 9 men employed in this mine. The ventilation is satisfactory. No cause of complaint.

Bloomfield Colliery.—Only 4 men are employed underground at this colliery. The ventilation is good, and the Act complied with.

Sunderland Colliery.—Only 2 men employed at this colliery. The ventilation is satisfactory, and the provisions of the Act complied with.

Bulli Colliery.—Prospecting operations have been carried on during the past six months, and three small shafts have been sunk to a seam of coal. All work is at present suspended.

Richmond Vale Colliery.—This new winning is situated about 9 miles south-east from East Maitland. Sinking operations are carried on day and night, and about 15 men are employed in connection therewith. No cause of complaint.

South Greta Colliery.—There are about 40 men employed in the coal tunnel. The cannel seam is being opened up, and will shortly be at work. The ventilation is satisfactory, and the Act complied with.

Anvil Creek Colliery.—There are only 9 men at present employed in this mine. No cause of complaint.

Greta Colliery.—In this colliery about 230 men, &c., employed on the day shift. The total quantity of air introduced into the mine per minute is about 50,000 cubic feet. None of the districts are overcrowded. A Guibal fan is being erected in connection with this colliery for the purpose of improving the ventilation. The requirements of the Act are complied with.

Leconfield Colliery.—A new colliery is being opened out on the Leconfield Estate. There are about 10 men at present employed underground, and everything is satisfactory.

Ellesmere Colliery.—About 28 men, &c., employed in this mine. The ventilation is satisfactory, and the Act complied with in every respect.

New Park Colliery.—There are 25 men employed underground at this colliery. The ventilation is good, and the Act complied with.

Elliott's Colliery.—Only 1 man and boy employed in this mine. The Act is complied with.

Rosedale Colliery.—There are 8 men, &c., employed in this mine. The ventilation is satisfactory, and the Act complied with.

Dulwich Colliery.—A new colliery is being opened out on the Dulwich Estate, in the Singleton district. There are 4 men employed underground. The ventilation is good, and the provisions of the Act complied with.

Gladstone Colliery, near Gunnedah.—This mine has been under inspection during the past six months. About 7 men are employed. The ventilation is good, and the Act fully carried out.

Springfield Colliery.—This mine is also situated near Gunnedah, and has been under inspection during the past six months. Only a few men at present employed; everything satisfactory.

Black Jack.—This colliery is now being opened out, and about 5 persons are employed. The provisions of the Act are observed.

Centennial Colliery, Curlewis.—Prospecting operations for coal have been carried on in connection with this colliery for some time past. Only a few persons are employed. No cause for complaint.

Great Northern Shale and Oil Company's Mine.—This mine is situated at Doughboy Hollow, near Murrurundi, and has been under inspection during the past six months. About 4 men have been employed. The ventilation is satisfactory, and the provisions of the Act fully observed.

Accidents in Mines.

The accidents investigated by us in the Northern District during the six months ending 31st December, 1888, are thirty-four in number. Of this number, nineteen were fully reported on at the time, and fifteen were found to be of a minor character, and full reports were not written thereon.

Of the nineteen accidents in the annexed tabulated list two proved fatal—one being by a fall of stone (roof), and the other by the ignition of fire-damp.

The majority of the non-fatal accidents were caused by falls of coal, but none of them were of a very serious nature.

The first of the fatal accidents happened to a deputy named Joseph Willis by a fall of roof (stone) in the Wallsend Colliery on 7th September. On the day of the accident the District Coroner, G. C. Martin, Esq., held an inquest on the body of deceased, which inquest was also continued on the following day. Inspector Bates was present at the inquest each day and heard all the evidence, and fully agrees with the verdict of "accidental death," as returned by the jury on that occasion.

The second fatal accident happened to a sinker named Thomas Jones, by the ignition of a quantity of fire-damp, in the South Wallsend sinking pit, on 28th November last. The injuries in this case did not prove fatal at the time, but the poor sufferer lingered for fourteen days after receiving the accident, and expired on the 12th December last. On the 14th of same month the District Coroner held an inquest on the body of deceased. Inspector Dixon attended the inquest and heard all the evidence, and fully agrees with the verdict of "accidental death," as returned by the jury.

The first of the non-fatal accidents happened to a miner named James Jukes, by a fall of coal in the Lambton Colliery, on 2nd July, and resulted in rather severe injuries to hips.

The second was a fracture of collar-bone to a miner named Frank Derry, by a fall of coal in the South Greta Colliery, on 13th July last.

The third resulted in very serious burns to face, arms, and body of a miner named Edward Robson, by an explosion of powder in the A. A. Co.'s No. 2 pit, on 16th July last.

The fourth was a severe fracture of the left leg, to a miner named James Milburne, by a fall of coal in the Wallsend Co.'s Colliery, on 26th July last.

The fifth happened to a miner named Thomas Smith, by a fall of roof (stone) in the Burwood Colliery, on 8th August, and resulted in fracture of right leg.

The sixth resulted in fracture of left thigh and very severe wounds about head and face, to a miner named Thomas Sutton, by a fall of roof (stone) in the Newcastle Co.'s Colliery, on 18th August.

The seventh happened to a miner named James Bolan, by a fall of coal in the A. A. Co.'s Hamilton pit, on the 21st August, by which injuries to left ankle and back were sustained.

The eighth was a leg fracture to a wheeler named William Richards, by slipping on a rail in the main tunnel, South Greta Colliery, on 7th November last.

The ninth happened to a miner named Henry Toll by a fall of coal in the Hetton Colliery on 28th November, and resulted in injury to hips.

The tenth was caused by the ignition of a quantity of fire-damp in the South Wallsend sinking pit on 28th November, and resulted in very severe burns to head, face, neck, and body, also arms and hands, to a sinker named Daniel Dawsey. A sinker named John Minchie was also severely burnt at the same time in the same shaft.

The

The twelfth happened to a miner name Josiah Hammond, by a fall of coal in the Burwood Colliery, on the 3rd December last, and resulted in fracture of left leg.

The thirteenth was caused by the falling of a scaffold in the Richmond Vale Colliery sinking pit on 4th December last. Three sinkers named Archibald Gray, Alex. Stanton, and Thomas Taylor were working on the scaffold when it fell. Gray sustained fracture of arm, Stanton a severe scalp wound, and Taylor fracture of both legs and injury to head.

The sixteenth happened to a miner named William Haase, by a fall of coal in the Newcastle Co.'s Colliery on 22nd December, and resulted in amputation of right arm close to the shoulder.

The seventeenth and last non-fatal accident happened to a miner named Samuel Hamilton, by a fall of coal in the Duckenfield Colliery on the 22nd December. The injuries in this case were very severe, being fracture of the left collar-bone and so severe a fracture of right leg as to necessitate amputation above the knee.

The usual tabulated list of accidents is hereto appended.

We have, &c.,
JOHN DIXON,
THOS. L. BATES,
Inspectors of Collieries.

TABULATED LIST of fatal and non-fatal Accidents in the Northern Collieries of New South Wales, investigated by the Inspectors of Collieries during the half-year ending 31st December, 1888.

The Half-yearly Report of the Inspector of Collieries on the state of the various Collieries in the Southern and Western Districts of the Colony of New South Wales, and accidents therein, for the half-year ending 31st December, 1888.

The Examiner of Coal Fields,— Wollongong, 6 February, 1889.

Sir,

In compliance with the requirements of clause 26 in the Coal Mines Regulation Act 1876, I have the honor to transmit to you this my six-monthly report on the state of the various collieries for the half-year ending 31st December, 1888.

The total number of collieries under inspection in the Southern and Western Districts during the last six months is thirty-six. Four new collieries have been added to the number during the last six months, viz., Cullen Bullen Colliery (near Wallerawang), Massey and Sheperd's Mine (near Cullen Bullen), Holt's Prospecting Mine (near Wallerawang), Woonona Colliery (near Bulli), making in all 36 collieries.

Western District	18 coal mines and 2 shale mines.	
Berrima ,,	2 coal mines and 1 shale mine.	
Southern ,,	13 coal mines.	
	33	3 = 36 collieries.

PRESENT STATE OF MINES.

Western District.

Rawden Colliery.—About 28 men are employed underground. The colliery is worked in two shifts, about 14 men being on each shift, and served with 7,800 cubic feet of air per minute. The intake and return air-ways in good order. The Act in all respects complied with.

Carlo's Gap Colliery.—During the last six months only 2 men have been employed underground, getting a few tons of coals weekly. The ventilating current is about 1,000 cubic feet of air per minute. The Act in other respects complied with.

Vale

Vale Colliery.—About 36 men have been employed underground, and served with about 4,500 cubic feet of air per minute. The ventilating current is produced by a steam jet in the upcast side of No. 1 shaft. The new air-shaft is down about 100 feet, and is expected to reach the workings of the No. 1 pit in about three months. Preparations are also being made to build a large ventilating furnace. The shaft and furnace, when completed, will produce a great current of ventilation throughout the colliery. The Act in other matters complied with.

Eskbank Pit.—An average of about 65 men and horses have been employed underground, and served with 22,000 cubic feet of air per minute in one current. During the last six months the "tail-rope system" of haulage has been introduced underground, and is a great improvement upon the former system, viz., the haulage being done by horses. The intake and return airways, travelling road, and second way to the day have been kept in good order. The Act in all respects complied with.

Eskbank Old Tunnel.—About 6 men are employed underground, and served with about 8,000 cubic feet of air per minute. The Act in other respects complied with.

Lithgow Valley Colliery.—An average of 60 men and horses have been employed during the last six months, the same being served with about 21,000 cubic feet of air per minute in two separate splits. The intake and return airways, travelling road, and second way to the day have been kept in excellent order. The Act in all respects complied with.

Hermitage Colliery.—About 6 men employed underground, and served with about 18,000 cubic feet of air per minute. The colliery is in a healthy condition throughout. The Act in all respects complied with.

Oakey Park Colliery.—During the last six months little or no work has been done underground. The surface arrangements are completed, but the Company is waiting on the Government to pass a Bill to enable them to construct a tramway from the pit to the Government Railway. Meanwhile about 8 men are employed underground driving the two main headings, and are served with about 4,000 cubic feet of air per minute. The Act in all respects complied with.

Zig-Zag Colliery.—An average of 50 men has been employed underground, and served with about 18,000 cubic feet of air per minute in one current. The ventilating current is well sustained throughout the workings. The intake and return airways in good order. The Act complied with.

Vale of Clwydd Colliery.—About 50 men have been employed underground, and served with about 12,000 cubic feet of air per minute. During the last six months heavy falls of roof have occurred on the western side of the colliery, but the men were withdrawn, and are now working in the eastern division of the mine. The Act in other respects complied with.

Main Camp Colliery.—An average of 12 men are employed underground, and supplied with about 19,000 cubic feet of air per minute. The intake and return airways and second way to the day are kept in good order. The Act in all respects complied with.

New South Wales Shale Mines.—About 43 men are employed underground, and served with 14,000 cubic feet of air per minute. Hartley, New Tunnel.—This tunnel has been lately opened in order to reclaim a portion of shale supposed to have been left in the old abandoned workings; 12 men are employed, and served with 4,000 cubic feet of air per minute.

Katoomba Colliery.—About 50 men have been employed during the last six months, and served with about 8,000 cubic feet of air per minute. The colliery is fairly ventilated throughout, and the Act complied with.

Katoomba Shale Mines.—Are situated about 2¼ miles from the Katoomba Colliery. About 30 men are employed driving adits proving the thickness and quality of shale. Nos. 3 and 4 adits are opened out on the longwall system, and a good current of air is passing along the faces. About 1,400 tons of shale has been worked out of the several adits. The mode of haulage from the mines to the top of the Katoomba Colliery incline is by means of a pendant wire tramway, which spans gullies and deep ravines. Over 2 miles has been constructed, at a cost of about £11,000.

Shepherd & Massey's Colliery, near Cullen Bullen, situated about 9 miles west from Wallerawang.—Two adits are driven into the mountain. No. 1 is 10 feet wide, 6 feet high, and is driven in a distance of 50 yards. About 5 yards from the face of the drive an air-shaft has been put down in the No. 1 back heading. The seam which is opened out in the No. 1 adit is, in my opinion, what is known as the 12-feet seam. About 6 feet of the bottom portion of the seam is a bright hard coal, and judging from its appearance should be a good marketable coal for house-fire, steam, and gas-making purposes.

Cullen Bullen Colliery.—This is a new colliery opened out in the 17-feet seam in the parish of Cullen Bullen, county of Roxburgh, about 10 miles west from Wallerawang, No. 1 adit is opened out on a spur of the mountain and driven in a distance of 120 yards. About 6 feet of the bottom portion appears to be good marketable coal. An air-shaft has been sunk and connected with the south heading. About 10 men are employed underground, and served with about 6,000 cubic feet of air. Several gangs of men are busily engaged making the tramway, which is to be connected with the Mudgee railway. The Act complied with.

Retort Coal Mine (Hartley Vale).—About 4 men employed, and served with 5,000 cubic feet of air per minute. Travelling road and second way to the day in good order. The Act complied with.

Cooerwull Mine.—One man employed. A good current of air is passing through the tunnel. The Act complied with.

Irondale Colliery.—About 5 men are employed underground, and served with 7,000 cubic feet of air per minute. The Act complied with.

Berrima District.

Great Southern Colliery (late Berrima).—An average of 10 men has been employed during the last six months, and served with 10,000 cubic feet of air per minute. The intake and return airways in good order. The Act complied with.

Mittagong Colliery.—An average of 30 men is employed underground, and served with 14,000 cubic feet of air per minute. The Act complied with.

Australian Kerosene Oil Company Shale Mines, Joadja.—About 60 men are employed underground, and supplied with about 15,000 cubic feet of air per minute. The workings are the longwall system, and the ventilation well sustained round the working faces.

Southern

Southern District.

Metropolitan Coal Company.—About 10 men are employed underground, and supplied with 3,000 cubic feet of air per minute. The mode of ventilation is by one of "Gracie's Patent Fans," worked by an engine on the surface, and conducted down the shaft and into the headings by 10½-inch diameter pipes. A new air-shaft is being sunk about 10 chains from No. 1 pit, 16 feet in diameter, sunk to a depth of 150 feet, and expected to reach the seam at a depth of 1,000 feet from the surface. All the ordinary precautions are being taken to ensure safety. The Act in all respects complied with.

Mount Kembla Colliery.—About 200 men and horses are employed underground, and served with 33,000 cubic feet of air per minute in four splits. The ventilation in fair condition throughout the colliery. None of the districts were worked with more men than that prescribed by the Act. The Act in other respects complied with.

Osborne Wallsend Colliery.—About 140 men and horses are employed underground, and served with 35,000 cubic feet of air per minute, in three separate splits. During the last six months the return air-ways have been shortened by means of air-crossings. The Act in all matters complied with.

Mount Pleasant Colliery.—About 112 men and horses employed, and served with 26,000 cubic feet of air. The roof in some divisions is very jointy and bad, but the bords, as a rule, are exceptionally well timbered. The Act in all respects complied with.

Southern Colliery (near Kembla).—10 men are employed underground, and served with about 5,000 cubic feet of air per minute. The surface arrangements and jetty are being pushed on vigorously. The manager intends to have coals in the market in three months. The Act in all respects complied with.

Coal Cliff Colliery.—About 90 men and horses are employed underground, and served with about 18,000 cubic feet of air per minute in two separate splits. The currents are well sustained throughout the workings. Intake and return airways and second way to the day in good order. The Act in other matters complied with.

South Bulli Colliery.—About 57 men are employed underground, and served with 14,000 cubic feet of air per minute, in three separate splits. Intake and return airways in good order. The Act in other matters complied with.

Bulli Colliery.—About 90 men and boys are employed underground, and served with about 40,000 cubic feet of air per minute, in three separate splits. The miners in the Hill-end district are working with locked safety-lamps. The Act in all respects complied with.

North Illawarra Colliery—No. 2 Tunnel.—About 240 men and horses employed underground, and supplied with about 63,000 cubic feet of air per minute, in seven separate splits. The several currents are conducted by each one having an air-crossing and a regulating door on the return, so that no doors are required on the main roads, which is an advantage over the many interruptions of trap-doors.

Broker's Nose Colliery.—3 men are employed underground. The surface arrangements will soon be completed for the output of coal.

Woonona Old Tunnel.—About 6 men are employed underground driving a main heading to connect with the old workings. Several gangs of men are working on the tram-line, but it will be about three months before the surface arrangements are completed.

Biggar's Prospecting Mines (near Dapto) *and Wiley's* (near Kembla).—Little or no work has been done during the last six months.

No. 1 *North Illawarra Tunnel.*—6 men employed underground, and served with 6,000 cubic feet of air per minute. The Act in all respects complied with.

Accidents in Mines.

During the last six months I have investigated four separate accidents, two of which were fatal, and two non-fatal. The first fatal accident happened to Charles Harper, Manager of the Metropolitan Coal Company's colliery on the 4th of August, by the tackling slipping off the wire rope, whilst he was in the act of removing a boiler. An inquest was held on the day following the accident on the body of deceased by the District Coroner, C. F. Smith, Esq., at the Company's colliery office. I was present at the inquest, and fully agree with the verdict of "accidental death," as returned by the jury.

The second fatal accident happened to a lad named Robert Kenning, on the 4th of October, at Osborne Wallsend Colliery, by an empty set of skips getting "a-main" on the underground incline, one of the skips ran over him and killed him on the spot. On the day following the accident the District Coroner held an inquest on the body of deceased. I attended the inquest and heard all the evidence, and fully agree with the verdict of "accidental death."

The first non-fatal accident, on July 27th, to a lad named Thomas Fuller, employed to grease waggons at Osborne Wallsend Colliery; had his leg broken by falling before an empty waggon. The second non-fatal accident happened at the Osborne Wallsend Colliery on October 4th, to a horse-driver named Thomas Blake; leg broken by slipping off the buffer of a waggon.

I have also examined a few other accidents which were not of a serious nature, and are not included in this report. The usual tabulated list of accidents is hereto appended.

I have, &c,

JAMES ROWAN,

Inspector of Collieries.

Tabulated List of fatal and non-fatal Accidents in the Southern and Western Districts of New South Wales Collieries, investigated by the Inspector of Collieries during the half-year ending 31 December, 1888.

GEOLOGICAL SURVEY OF NEW SOUTH WALES.

Report of Progress for 1888 by the Geological Surveyor in charge.

Sir,

I have the honor to submit the following report of progress of the Geological Survey for the year 1888.

During the year various parts of the Colony have been examined by the Geological Surveyors. Many localities were inspected in dealing with the applications for aid out of the Prospecting Vote. As a member of the Prospecting Board, I accompanied the Under Secretary for Mines to Mudgee, Appletree Flat, Gulgong, Meroo, Two-mile Flat, Hargraves, Tambaroora, Hill End, Pyramul, and Windeyer. Also, with Mr. Slee, Inspector of Mines, I visited the Sunny Corner, Turon, Bathurst, Crookwell, Taralga, Bungonia, Captain's Flat, Michelago, Bredbo, and Kiandra mining districts. I inspected and reported upon certain coal lands near the Fitzroy Falls, and the syenite quarries on the Gib, between Bowral and Mittagong. (*See Appendix No.* 1.)

Besides the ordinary duties of the office, much of my time, and that of my staff, has been occupied in connection with the arrangements which the Department of Mines was requested by the Exhibition Commissioners to make for the display of the mineral resources of New South Wales at the Adelaide, Melbourne, and other Exhibitions. (*Vide the Report of the Curator, Appendix No.* 5.)

By direction of the Minister for Mines, I proceeded to Queensland and inspected the Mount Morgan Gold-mine, near Rockhampton, with the object of ascertaining if similar deposits are likely to be found in New South Wales.

The auriferous deposit consists chiefly of siliceous iron ore. It forms the summit of Mount Morgan, which occupies a surface area of about one and a half acres. It is evidently a geyser deposit, as was first pointed out by Mr. R. L. Jack, F.G.S., Government Geologist of Queensland, in his official report in 1884, and has resulted from the action of thermal mineral water holding gold, iron, manganese, &c., in solution, issuing from fissures in the metamorphic siliceous rocks of which the mount is composed. These altered rocks have iron pyrites more or less disseminated through their mass, and are traversed by porphyritic and kaolin dykes. There are several similar deposits in different parts of the Mount within a width of half a mile. One which is likely to become of considerable importance has been cut through in the Freehold Tunnel; another, in which, however, only a small amount of gold has hitherto been proved, occurs at Callan's Nob. The surrounding formation is shales and sandstones of Lower Carboniferous age which have been much metamorphosed by the intrusion of igneous rocks.

Similar Carboniferous formations occur in New South Wales, forming a considerable portion of the eastern and western slopes of the Dividing Range north of the Hunter River; and it is not improbable that, as this country has been subject to intrusions of igneous rocks, auriferous geyser deposits, like that of Mount Morgan, may exist. Their surface indications would be siliceous ironstones, and they could be readily prospected by finely pulverizing the stone and washing it in the ordinary way in a tin dish, when the gold, being in a free state, would be at once seen. The occurrence of gold which has been deposited from solution has for many years been known in this Colony, at Brown's Creek, Barraba, &c., but the auriferous rocks in these places are not geyser deposits. At Mount Morgan the gold-bearing stone is quarried bodily from about the summit of the Mount, and sent down for treatment at the dry-crushing and chlorination works. The ore is richer in some places than in others; but for convenience of treatment the rich and poor qualities of ore are mixed together, so as to produce a yield of about 5 ounces of gold per ton. Mr. Wesley Hall, the able manager, states that half an ounce to the ton will pay working expenses, and leave a good profit. A fuller description of this remarkable mine will be given in my report for the Records of the Geological Survey.

My report on the syenitic granite quarries between Mittagong and Bowral, on the Great Southern Railway line, is given in Appendix 1.

Mr. T. W. E. David, Geological Surveyor, has been unable to complete his map of the Maitland District, as his services were urgently required for other work. His progress report forms Appendix No. 2. He has examined and reported upon the southerly extension of the Newcastle Coal-measures, and the probable depth at which the seams of coal occur in them, in the vicinity of the Great Northern Railway line from Teralba, at the north-western end of Lake Macquarie, to Gosford. (*See Appendix No.* 2 *B.*) He also traced out the extension of the West Maitland Coal-measures in a southerly direction, from Homeville towards Richmond Vale, and thence westerly to Deep Creek; his report thereon forms Appendix 4. Mr. David witnessed the diamond-drill operations during the boring of the seams of coal at Hexham Island, and examined the Carboniferous formation at Seaham; he also reported on the new discovery of cobalt ore at Carcoar (*see Appendix No.* 2, *G*), and commenced an examination of the coal formations in the Port Stephens District, with the view of reporting as to the advisability of boring for coal.

It is gratifying to know that the coal seam, which was first made known through Mr. David's geological survey, near West Maitland is now being opened by three coal-mining companies, from whose operations the Government may soon derive a considerable revenue, apart from the rent of the land.

In connection with the Prospecting Board, Mr. David inspected certain claims in the following gold-fields:—Gundagai, Adelong, Tumut, Tumbarumba, Tarcutta, Junee, Temora, Barmedman, Cowabbie, Shoalhaven River, Sofala, Sally's Flat, Albury, Wood's Flat, Canowindra, Scrubby Rush, Wangoola, Mittagong, Trunkey, Rockley, and Burraga.

Mr. W. Anderson, Geological Surveyor, has inspected and reported on the Bingera and Barraba Gold-fields (*Appendix No.* 3 *A.*); the Molong District (*Appendix No.* 3 *B.*); the Coal Measures at Spicer's Creek and Ballimore, near Dubbo (*Appendix No.* 3 *C*); the remarkable Pleistocene deposits containing fossil bones, at Myall Creek, near Bingera (*vide Report in Records of Geological Survey, Part II*); the important discovery of fossil fish in the Hawkesbury formation at Talbragar, in Mudgee District (*vide Report in Records of Geological Survey, Part II*); and certain lands for alienation near Gunning and Tumut.

Mr.

Mr. Anderson also assisted the Prospecting Board in dealing with the applications for aid in the Nundle, Hanging Rock, Bowling Alley Point, Moonbi, Uralla, Tia Reef, Armidale, Booralong, Eversleigh, Herbert Park, Warm Corner, Hillgrove, Gyra, Glen Innes, and Vegetable Creek mining districts.

Mr. Robert Etheridge, junior, Palæontologist, in his progress report (*see Appendix No.* 4), refers to the important work that he has been engaged upon. His Monograph of the Permo-Carboniferous fossils of New South Wales is in hand. His work on the Invertebrate Fauna of the Hawkesbury-Wianamatta Series, forming No. 1 of the Palæontological Memoirs of the Survey, has been published; and, under his editorship, Memoir No. 2 has also been issued from the Government Printing Office; this is a valuable work by Baron von Etingshausen, of Gratz, on the Tertiary Flora of Australia. The works of Dr. Ottoker Feistmantel, on the Palæozoic and Mesozoic Flora of Australia, and of Professor de Koninck on the Devonian and Carboniferous Fauna, will shortly be issued.

Amongst the various collections examined, Mr. Etheridge has determined a Selachian fish-spine, found by Mr. Geological-Surveyor Anderson in the Siluro-Devonian limestone of Wellington; Upper Silurian fossils, from between Cobar and Nymagee, sent by Rev. J. Milne-Curran; bones of the extinct gigantic struthius bird, Dromornis, found by Mr. Cotter, on the Paroo. In conjunction with Mr. David, Mr. Etheridge has been conducting important ethno-geological investigations. Their first paper, on the discovery of human remains at Long Bay, near Botany, is published in Part I of the records of the Geological Survey.

From the report (*Appendix No.* 5) by the Curator of the Mining and Geological Museum, Mr. J. E. Carne, it will be seen that much important work has been done. At the request of the New South Wales Exhibition Commission that this Department should prepare and arrange for the display of collections representative of the mineral resources and geology of the Colony at the Melbourne Centennial Exhibition, Mr. Carne was deputed to carry out the work. He deserves great praise for the efficient manner in which he accomplished it; also for similar duties in connection with the Adelaide Jubilee the Sydney Agricultural Society's, and the Sydney Centennial Exhibitions. Mr. Carne has written a descriptive paper on the mineral collections exhibited at Melbourne, which will be published in Part II of the Geological Records. This paper will be found useful for reference, as it contains information relating to the formations and localities in which the different minerals occur.

During the year the Mining and Geological Museum has received numerous additions from both the officers of the Geological Survey and from private contributors. (*See Appendix No.* 5 A.) Many of these donations comprise exhibits from the Adelaide and Melbourne Exhibitions.

The department is now in possession of splendid mineral and geological collections, and I would urge that museum accommodation for their display be provided as soon as possible, for this important means of promoting the great and increasing mining industry of the Colony is at present lost to the public. Many additions have been made to the library, including useful works of reference upon mining, geology, and palæontology. (*See Appendix No.* 5 B.)

The number of mineral samples submitted during the year to the Department for examination and report amounted to 5,245, as against 2,222 received in 1887. In consequence of this large increase, which, of course, entailed an increase in the correspondence with the persons seeking the information, Mr. G. A. Stonier, Assistant Geological Surveyor, was instructed to do duty for Mr. Carne, who was for a considerable portion of the year engaged upon the work connected with the Exhibition.

In dealing with this large number of samples for assay or analysis the resources of the small laboratory of this office were quite overtaxed; and though Mr. Mingaye, the Assayer and Analyst, did his utmost with the means at his disposal, he was quite unable to meet the increased amount of work, which involved 10,123 separate assays, besides 86 analyses of coals, water, &c. It was therefore necessary to give him an assistant analyst, Mr. White, F.C.S., being appointed to the position, and to provide the larger laboratory at present occupied, which has been well fitted up under Mr. Mingaye's supervision. Mr. Mingaye's progress report (*see Appendix No.* 6) states in detail the important work carried out in the laboratory.

During the year improvements have been made in the Jenolan, Wombeyan, Wellington, and Yarrangobilly caves for the protection of the natural objects therein, and for the safety and convenience of visitors. These are referred to in the progress report of Mr. W. S. Leigh, the Superintendent of Caves (*see Appendix No.* 7). The number of visitors to the caves in 1888 was—at Jenolan, 1,829; Wombeyan, 400; Wellington, 1,679; and at Yarrangobilly, 200.

Mr. A. H. Tayler has efficiently carried out his clerical duties; and during the Curator's absence at the Adelaide Exhibition he ably assisted in determining the mineral samples submitted to the Department for examination.

Mr. Charles Cullen, the Geological Collector, has succeeded in procuring large and valuable collections of fossil remains of extinct animals from the Pleistocene deposits at Myall Creek, and of fossil fish and plant remains from the Hawkesbury formation on the Talbragar River. He also collected from the Carboniferous formations in the Illawarra and Shoalhaven Districts.

It is with deep sorrow that I have to record the death of Mr. H. T. Wilkinson, J.P., clerk and draftsman of this office. He was a very able officer, and had been connected with the Department since its commencement. As Visiting Magistrate for the Government, he paid quarterly visits to Lord Howe Island, and on the occasion of his first visit, in 1882, he made a geological sketch-map and report on the Island, which were published in that year. On behalf of His Excellency the Governor, he proceeded to Norfolk Island as Commissioner in reference to the proposed transfer of the Island to the Government of New South Wales. In November last, at the request of the Hon. the Minister for Justice, Mr. Wilkinson was deputed to act as City Coroner. He continued to perform his official duties until the morning of the day of his death, 31st December.

APPENDIX No. 1.

On the Syenitic Granite Quarries, " Gib Rock," Bowral.

Geological Survey Branch, Department of Mines, Sydney, 29 December, 1888.

MEMORANDUM.—Since reporting upon the quality of the sample of syenitic granite from the " Gib " hill, near Bowral, submitted by Mr. McCourt, M.P., I have inspected the quarry whence the sample was taken, and also the other quarries which have been opened up on the same hill. The stone has been

 worked

worked chiefly in three places. Very little actual quarrying or excavation has as yet been carried on, for the large solid masses lying loose upon the surface have afforded good material ready to hand for cutting up. The largest quantity of this stone hitherto supplied for building purposes in Sydney, &c., has been raised from the property of the New South Wales Trachyte Stone Quarrying Co., formerly belonging to Mr. Charker, of Bowral. The quarry is situated on the south-western side of the "Gib," where the slope of the hill rises abruptly for about 150 feet covered with large boulder-like masses of fine-grained granite, one of which measured 15 feet in diameter, while here and there the rock *in situ* crops out. In one place a sloping face of rock 75 feet high and 80 feet wide is exposed. It is intersected by nearly vertical and horizontal joint-fissures, which divide the rock into solid masses from 10 to 30 feet high, and from 30 to 50 feet wide—that is, compact blocks of stone of those dimensions could be obtained. The occurrence of these natural fissures will prove of advantage, as they will enable excavations upon a large scale to be made in a regular manner.

Besides the joints which cross each other nearly at right angles, there are others which intersect them obliquely. The stone, which is generally of a finely-crystalline even texture, occasionally contains small patches, sometimes cavernous, and veins of the same material coarsely crystallised. The latter, at first sight, might be mistaken for lines of weakness in the stone, but they are not really such, for the larger crystals are so interblended with those of the finely-crystallised rock as not to affect its compactness.

The stone cleaves with a straight clean fracture in any direction when skilfully struck, and consequently may be readily shaped into rectangular blocks of all sizes down to cubes for street-paving.

At present the stone has to be carted about three-quarters of a mile to the Bowral Railway Station for transit to Sydney or elsewhere; but the quarry is so favourably situated as regards elevation that a self-acting inclined tramway, about 600 yards in length, might be easily constructed to the Great Southern Railway Line. No doubt this will become a work of necessity when quarrying operations are carried out on an extensive scale.

About 30 chains from the Company's quarry, and on the south-east point of the "Gib," Mr. T. Loveridge has commenced to open a quarry on the property of Mr. Angus, where the rock stands out prominently as a large rounded mass, about 300 feet long and over 50 feet high.

It is traversed by three different sets of joint-fissures, one dipping east at 50°, another S. 10° E. at 80°, and the other is vertical, and strikes N.N.E. These joints in places intersect the mass at such distances apart that solid blocks of stone 40 feet long and 10 feet high could be cut out. It cleaves well into rectangular blocks, and is similar in quality to that already described, though rather paler in colour.

An inclined tramway could also, without difficulty, be constructed from this quarry to the main railway line.

On the west side of the "Gib," on the slopes towards Mittagong, the same kind of rock has been quarried by Messrs. Amos Bros. and others, where it occurs in large blocks, some 30 feet in length, lying scattered about the base of the hill, which rises almost precipitously for about 250 feet in huge exposed masses. It forms the north-western point of the same great body of irruptive rock that has been opened in the above-mentioned quarries; so that this excellent stone occurs in unlimited quantity.

When its durability and other important qualities become more widely known there will be an increasing demand for it, especially for the construction of works subject to severe exposure, such as piers and retaining-walls in sea-water; also for kerbing, door-steps, pillars, &c.

I am informed that the stone can be delivered in Sydney at less cost than the Melbourne bluestone.

C. S. WILKINSON,
Geological Surveyor-in-charge.

The Under Secretary.

APPENDIX No. 2

Progress Report for 1888 by Geological Surveyor T. W. E. David.

Sir, Sydney, 30th April, 1889.

I have the honor to report as follows with regard to the work done by me during 1888:—

From the beginning of January until February 22nd, I was engaged in office work, chiefly in compiling my Maitland field-notes and preparing my geological map of the Maitland District. I append a memorandum, *Appendix No.* 2A, showing the relative positions of the coal-seams at Leconfield, near Greta. From February the 22nd to the 26th, and from March 12th to the 16th, I was engaged in an examination of the Coal-measures and their overlying rocks from Teralba, at the head of Lake Macquarie, as far south as Gosford, with a view to determine the extension of the Northern Coal-field in this direction, and the probable depth of the upper coal-seams. My report thereon forms *Appendix No.* 2B. On March 28th I proceeded to Liverpool and made a section of the diamond-drill core on the Moorbank Estate. From April 30th to May 5th, and May 10th to May 13th, and May 18th to May 25th, I was engaged in the Maitland District in tracing the extension of the Greta Coal-measures in a southerly direction from Homeville, near West Maitland, towards Richmond Vale, and thence westerly to Deep Creek. My report on this forms *Appendix No.* 2C. From May 30th to June 21st, with your authority, I accompanied the Under Secretary when visiting the mining districts of Gundagai, Adelong, Tumut, Tumberumba, Tarcutta, Junee, Barmedman, Temora, Cowabbee, Yass, Dalton, and Gunning, as an acting member of the Prospecting Board, and in conjunction with him reported on a large number of applications. From July the 6th to July the 8th, I was engaged in reporting on the Coal-measures at Hill Top, near Mittagong. (*See Appendix No.* 2D.) From July 23rd to July 26th, according to instructions, I was engaged in travelling to and from Hexham Island, and being present there during the boring through with the diamond drill of the Tomago thick seam. (*See Appendix No.* 2E.) On July 27th and 29th. I was engaged at Albury with the Under Secretary dealing with applications in connection with the Prospecting Vote. On August 7th and 8th, I proceeded to Woodford to witness the boring through of a seam of coal. From August 10th to 13th, I was again engaged at Albury with the Under Secretary for Mines, dealing with Prospecting Vote applications. On August 15th to 19th, I was engaged at Port Stephens, reporting as to the advisability of boring for coal in certain localities. My report was made verbally at the time, but my written report will be furnished as soon as my general examination of that district is completed, as I am still under instructions to deal with two similar applications in the same locality. From August 22nd to the 26th, I was employed in examining the strata near Seaham, in relation to an application from Mr. Baas for the selection of a suitable site to bore for coal

coal with the Government diamond drill. My report thereon has been furnished. (*Appendix No.* 2 F.) From September 3rd to September 7th, I was engaged in a further geological examination of the Port Stephens District. From September 7th to September 11th, I was engaged in reporting on the new discovery of cobalt ore at Carcoar. My report thereon forms *Appendix No.* 2 G. From September 14th till September 19th, in company with the Under Secretary, I reported on applications for aid out of the Prospecting Vote at Wood's Flat, Canowindra, Cowra, Scrubby Rush, and Wangoola. From September 26th to October 17th, I was absent on leave. From November 16th to November 19th, I accompanied the Under Secretary to Mittagong and the Shoalhaven River, and reported with him on applications relating to the Prospecting Vote; and from December 3rd to December 10th was engaged by myself on similar work at Trunkey, Rockley, and Burraga. The rest of the time during the year I was employed in official work at the Geological Survey Office in Sydney, with the exception of six days in December, when I was again absent on leave.

I have, &c.,

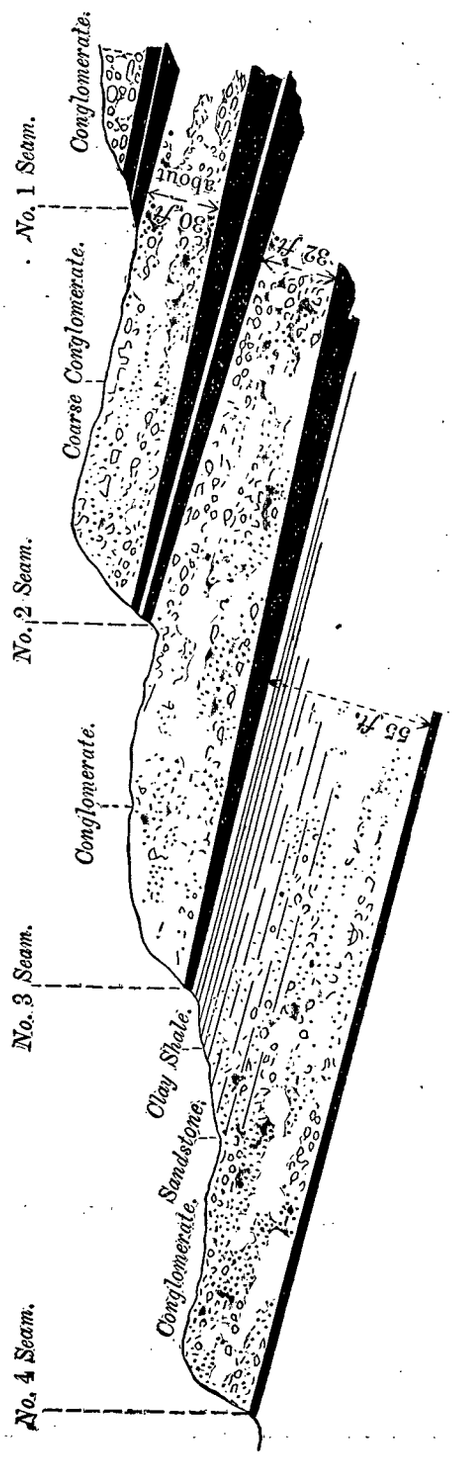
T. W. EDGEWORTH DAVID,
Geological Surveyor.

The Geological Surveyor-in-charge.

APPENDIX No. 2A.

February 18, 1888.

MEMORANDUM.—With reference to the coal-fields at Leconfield, near Branxton, the outcrops of four seams have been proved at a point about ½ a mile southerly from Leconfield House, occurring in the following manner:—



All

All these seams were much perished at the outcrop, as is usual with the Greta seams, the perishing extending back from the outcrop towards the dip of the coal for over 150 feet. At the time of my inspection three of the tunnels had not been sufficiently far advanced to penetrate the solid coal in the seams, beyond the soft perished coal near the outcrop, so that the sections measured by me show less coal than actually exists in the seams.

No. 1 Seam.

ft.	in.	Soft clayey sandstone and shale.
0	2	Perished *coal.*
0	0½	Clay shale
0	3	Perished *coal.*
0	0½	Clay shale.
0	2½	Perished *coal.*
0	0½	Brown clay.
0	3	Perished *coal.*
0	6½	Stony white fire-clay.
0	7	Perished *coal.*
Total ... 2	1½	

[Correct Section of this seam from diamond-drill bore is published in the Annual Report for 1885, p. 156, as follows :—

ft.	in.	
1	10½	*Coal.*
0	1½	Band.
1	3	*Coal.*
0	1½	Band.
1	1	*Coal.*
0	0½	Band.
1	6	*Coal.*
Total *coal*... 5	8½	]

About 30 feet below the No. 1 seam is the No. 2 or main seam. At the time my measurement was taken at the end of the tunnel the tunnel had been driven 165 feet on the seam, following its dip approximately from the outcrop. The whole seam, with the exception of the top, had made into solid coal at this point. The following is the section :—

ft.	in.	
		Roof, fine conglomerate.
1	9	Perished *coal.*
0	1½	Clayey *coal.*
0	11	Clay shale.
0	11	*Coal* (a trifle softer than underlying coal through perishing).
0	0–0½	Intermittent clay band.
5	9	*Coal*, very hard, clean, bituminous coal, of good quality.
Total coal 8	5	

About 32 feet below this is the No. 3 seam. At about 113 feet from the outcrop this seam showed a thickness of 1 foot 9 inches of coal, but the upper part of the seam was still perished, so the above cannot be considered to be the full thickness of the seam.

About 55 feet below the No. 3 seam is the No. 4 seam, which at 80 feet from the outcrop showed a thickness of 8 *inches* of partly-perished coal. This seam will, therefore, be somewhat thicker when followed 100 feet further in the direction of its dip, when the perished coal will make into solid coal.

I have, &c.

T. W. E. DAVID.

The Geological Surveyor-in-charge.

APPENDIX No. 2 B.

Progress report on the southerly extension of part of the Great Northern Coal-field towards the Hawkesbury River.

Sir, Geological Survey Branch, Department of Mines, Sydney, 23 March, 1888.

In accordance with your instructions, I have made a preliminary examination of the Coal-measures and their associated rocks between Teralba and Gosford, along the Great Northern Railway line, and have the honor to report as follows, on the country between Dora and Wyong Creeks. The country between these two creeks consists of low undulating hills of sandstone and conglomerate, and shallow sandy valleys and swamps. Some of the low-lying alluvial ground has been selected for and is devoted to agricultural purposes. The sandstone country is at present useless except for coal-mining. The country is moderately timbered and partly covered with scrub. As seen in the railway cuttings, the country between Dora and Wyong Creeks consists chiefly of soft fine-grained sandstones, purplish-red and pale greenish-grey shales and conglomerates. From Dora Creek to Wyong the general dip is south-westerly, varying from S.S.E. to N.N.W.; the general amount of dip is from $1°\frac{1}{2}$ to $2°\frac{1}{2}$, though from the 63 miles 65 chains to the 63 miles 54 chains, as marked on the railway, the dip is 10°. Small faults occur at intervals, as shown on the accompanying plan, but on the whole the strata appear to be free from heavy faults.

Basalt dykes from 1 ft. to 18 ft. in thickness occur between the 66 and 68 railway mile-marks at the places shown on the plan. One diamond-drill bore for coal has been made at Dora Creek, and two on Mr. Alison's property; near Wallarah and Wyong Creeks respectively.

**Dora Creek bore.*—This bore was put down to a depth of 475 ft. 10 in., and at a depth of 372½ ft. struck the following seam of coal :—

ft.	in.	
		Roof, chert, stone and shale.
4	1½	Coal.
0	2	Band.
2	0	Coal.
Total 6	3½	

Assuming the specific gravity of this coal to be 1·32, and taking the thickness of coal as 6 ft., and allowing one-third for waste in getting, faults, &c., and one-fourth of the remainder as small coal, the yield per acre, in round numbers, would be 4,800 tons of large coal and 1,600 tons of small coal. This bore is upon the property of Sir Edward Strickland.

† *Alison's Wallarah Bore.*—The distance from Dora Creek to Alison's No. 1 bore, near Wallarah Creek, is about 8¼ miles, bearing about S. 17° E.

This bore is situated about 70 chains easterly from the 68-mile mark on the Great Northern Railway. The

*See Annual Report of Department of Mines for 1883, p. 186. † See Annual Report of Department of Mines for 1882, p. 129.

The following three seams of coal were struck in this bore:—

535 ft. *Coal*, 5 ft. thick.
641 ft. *Coal and bands*, 8 ft. thick.
778 ft. *Coal and bands*, 12 ft. thick.

The Government Examiner of Coal-fields, Mr. J. Mackenzie, F.G.S., states that he did not see these seams bored through, but examined the cores in the core-boxes, and considered the coal in the top and bottom seam of excellent quality. He states also that the bottom seam when struck gave off gas which rose to the top of the borehole, and I was lately told the same by a local resident, who said that he had seen the gas burning at the mouth of the borehole.

The cores from these bores were exhibited at the Garden Palace Exhibition Building, and you inform me that the coal in the bottom seam was a bituminous coal of good quality.

These cores were unfortunately destroyed by the fire which burned the Garden Palace in 1882.

* *Alison's Wyong Bore.*—Alison's No. 2 bore, near Wyong, is situated 2 miles south-west from the Wallarah bore, and is about 10 chains distant from the railway line, opposite the 66 miles 30 chains mile-mark.

The following two seams were struck in this borehole:—

Depth from surface. ft.	in.	
787	6½	*Coal seam* (3 feet thick).
892	2½	*Coal seam* (4 feet 10½ inches thick).

This seam was composed as follows:—

ft.	in.	
2	4½	*Coal.*
1	1½	Band of sandstone.
0	4½	*Coal.*
0	0½	Band.
0	11½	*Coal.*
4	10½	

Mr. Mackenzie states that he witnessed the boring through of these seams.

Summary of Alison's bores.—The Wyong bore is the southernmost point to which the coal has actually been proved in the Northern Coal-field.

The surface at the Wallarah bore is about 29 feet above the sea, and that of the Wyong bore 66 feet, which, on the assumption that no faults intervene, gives the seam a dip of about 113 feet per mile in a south-westerly direction.

Mr. Alison's bores have therefore proved the existence of three seams of coal, the top seam from 3 to 5 feet thick, the middle seam from 4 feet 10½ inches to 8 feet thick, and the bottom seam 12 feet thick.

The cores from these seams, as already stated, were lost in the Garden Palace fire. Mr. Mackenzie, however, is of opinion that the bottom, 12-feet seam, contained about 10 feet of workable coal of good quality. According to this estimate of the thickness of workable coal in the seam, viz., 10 feet, this seam should yield, after allowing one-third for waste in getting, faults, &c., and one-quarter of the remainder for small coal, about 8,000 tons of large coal and 2,660 tons of small coal per acre. The top seam in the Wallarah bore, as stated in the official report above quoted, is 5 feet thick, and the same seam is 3 feet thick at the Wyong bore. Taking the mean thickness of this seam as 4 feet, and the specific gravity of the coal as 1·32, and allowing one-third for waste in getting, faults, &c., and one-fourth of the remainder for small coal, the yield per acre, in round numbers, would be 3,200 tons of large and 1,060 tons of small coal.

The middle seam in the Wallarah bore is evidently unworkable, owing to the number of bands in it.

Adjoining Mr. Alison's property on the north, close to his Wallarah bore, Mr. W. Elsdon and Mr. A. S. Robertson have leased a large area of ground on both sides of and adjoining the Great Northern Railway.

From my geological examination of this country, I am of opinion that the seams proved in the Wallarah bore will underlie the greater part, if not all, of the area now under consideration; but as it has been proved in many places in this coal-field that where coarse conglomerate overlies the coal there is a possibility of contemporaneous erosion having caused a "wash away" of the coal, it would be unsafe to assert positively that the three seams proved at the Wallarah bore underlie the whole of this area. The bottom thick seam (12-feet seam) is, however, less liable to have been locally eroded in this way than the two upper seams, because it is protected from the conglomerate at Wallarah by a thickness of from 40 to 49 feet of chert.

Besides the coal already proved to exist under this area, several of the seams near Newcastle, or their equivalents, including the Wallsend (Borehole) seam, probably underlie this country, but at what depth cannot be stated, even approximately, until the completion of the geological survey now in progress. The Wallsend seam, near Newcastle, has been found to vary so much in quality and thickness that it is impossible from a mere surface examination of the country to say whether or not this seam would be workable at any given point in an unproved area like the present. This question can only be settled by boring with the diamond drill, or by sinking shafts. As the seams between Dora and Wyong Creeks are lying very flat, they could be worked inexpensively, and sufficient timber exists on the ground for all mining purposes.

I have, &c.,

T. W. E. DAVID,
Geological Surveyor.

The Geological Surveyor-in-charge.

APPENDIX No. 2C.

PROGRESS Report on the extension of the Greta Coal-measures from the Homeville Colliery, near West Maitland, to Deep Creek, near Bishop's Bridge, 8½ miles south-west of West Maitland.

Sir,

Department of Mines, 29 May, 1888.

In the course of my survey of the Maitland District, I have geologically examined the country between the Homeville Colliery and Deep Creek, with a view to mapping the line of outcrop of the Greta coal-seams. As already pointed out by yourself, an immense anticline exists between Homeville, near West Maitland, and Greta.

This anticline lies for the greater part on the south side of the Great Northern Railway, and dies out in a southerly direction. The

* See Annual Report of Department of Mines for 1882, pp. 102 and 130.

The Greta Coal-measures were once continuous over the area now occupied by the anticline, but in the course of long periods of geological time have been completely denuded off its summit, and the whole anticline has been worn down to a tolerably uniform level, so that the present outcrop of the Greta Coal-measures forms, as it were, a contour line around the area formerly occupied by the dome of the anticline. The height of this contour line above the sea varies from a few feet to about 200 feet. Above that level the Greta Coal-measures have been denuded, while below they are intact. As the anticline dies out in a southerly direction from the Great Northern Railway, between Greta and Homeville, the line of outcrop of the Greta Coal-measures between these two places has the shape of a horse-shoe. The plan accompanying this Progress Report shows the approximate line of outcrop of the Greta coal-seams along the eastern half of the horse-shoe from Homeville to Deep Creek, a distance of 11 miles. At Homeville the Greta Coal-measures are capped by a bed of fine conglomerate 50 feet thick, and the coal-bearing portion of the series consists of the following coal-seams and rocks, in descending order:—

	ft.	in.	
"Top seam,"	5	7	*Coal*, chiefly cannel, much thinned in places by contemporaneous erosion.
	0	7–10	Clay shale, passing into fireclay next to underlying seam.
"Fireclay seam."	0	5	*Coal*, hard, bituminous. }
	0	7	Clay shale. } Coal in this seam varies from 1 ft. to 3½ ft. thick.
	2	0	*Coal*, hard, bituminous. }
	7–9	0	Clay shale, with fireclay immediately underlying Fireclay Seam.
"Cannel seam"...	0	8	*Coal*, dull, semi-cannel.
	0	0¼	Clayey coal.
	0	6	*Coal*, soft dull black, pyritous.
	0	7½	*Coal*, bright black, bituminous.
	3	6	*Coal*, cannel
	0	6	Coaly shale.
	3	0	Fireclay.
	1	3	*Coal*, hard, bituminous.
	49	0	Conglomerate. chiefly with a little hard shale.
"Bottom seam" ...	3	9	*Coal*, hard, bituminous, with an intermittent clay band ¼ to 1 in. thick at about 4 in. from top of seam.
	2	9	Sandy shale, overlying conglomerate.

At Font Hill, 30 chains south of the Homeville tunnels, the same seams have been proved at a shaft near Mr. Peter Green's house; and on the authority of Mr. J. Mackenzie, F.G.S., the Examiner of Coal-fields, the seams there are stated to be thicker than at Homeville.

From Font Hill I have traced the outcrop of these seams in a southerly direction through the portion shown on the parish of Heddon, county of Northumberland, as Hungerford's 2,000 acres, through G. Hawker's 100 acres, Clift's 640 acres, and Garven's 640 acres, to the boundary of the Government reserve for coal-mining, a total distance from the railway line of over 5½ miles.

For the last 4 miles of this distance the easterly dip is steep, varying from 24° to 40° (1 in 2 to 1 in 1¼) which will materially increase the cost of winning the coal in this area. From the south-west corner of Garven's 640 acres the dip lessens in a sou'-sou'-west direction as it passes through the prospecting areas of Messrs. Adams, Taylor, Trenchard, and Wilkinson. Near the south-east corner of Adams and others 640 acres the dip is 12°. A very sharp bend takes place here, the outcrop swinging round first to the south-west then to the west, the Coal-measures being faulted down to the north, at the middle of the bend, the fault having a throw probably of about 200 feet.

This change of strike is attended by a further lessening of the dip. From here the strike changes slightly to west-north-west, which course it maintains for a distance of 3 miles. The outcrops of the seams pass from here through Messrs. Hebblewhite's 640 and 600 acres of leasehold, and their 640 acres of freehold.

The thick Greta seam has lately been proved by Messrs. Hebblewhite, at a depth of 27 feet, in a bore near the north-west corner of their 600 acres, and also at a depth of 60 feet in a shaft in their 640-acre freehold. The seam outcrops in a waterhole about 15 chains nor'-nor'-west of the shaft.

From this point the Greta Coal-measures strike west-north-west for 1½ miles to Deep Creek, the place where I first reported the occurrence of the Greta seam in August, 1886. The thick seam of coal which here lies at the top of the Greta Coal-measures was measured by me in a shaft sunk by Messrs. Gardiner, Smith, and others, as follows:—

	ft.	in.		ft.	in.	
	5	0	Alluvial sandy soil. } From information.			
	5	0	Soft conglomerate. }			
Roof	4	7	Dark grey, pebbly, carbonaceous sandstone.			
				1	1	*Coal*, hard, bituminous.
				2	0	*Coal*, pyritous.
	5	11	*Coal*, hard, bituminous, rather pyritous.	0	10	*Coal*, rather pyritous.
				2	0	*Coal*, clean, like top coal with 1½ of cannel coal.
	1	8	Coal and bands, not workable.			
	2	1	*Coal*, clean, hard, bituminous.			
	0	0½	Band, brown clay.			
	1	8⅝	*Coal*, clean, hard, bituminous.			
	0	0⅛	Band, brown clay.			
	2	0	*Coal*, clean, hard, bituminous.			
	13	5	Total thickness of coal-seam.			

The influx of water from the seam into the shaft was so strong that it was found impossible with the rude appliances available to bale it down to within less than 2 feet of the bottom of the seam.

The seam was described to me as being 14½ feet thick, but my measurements make it 13½ feet, though it is possible for the reasons above given that my measurements are a foot short.

Summary.—The above facts prove,—(1) that the Greta Coal-measures are continuous from Homeville at least as far as Deep Creek, and (2) that the four upper seams at Homeville unite in a southerly direction so as to form a single seam about 14 feet thick at Deep Creek.

At Homeville and Font Hill the dip, though rather high (1 in 3½), is not so steep as to add very materially to the cost of working the coal. From Font Hill in a southerly direction as far as the south-west corner of Garven's 640 acres the dip gradually increases from 30° to 40°, then lessens again towards the point where the sudden bend takes place to the west. In consequence of the increase of dip between Homeville and Garven's the cost of working the coal here will be materially increased. From

From Garven's, however, towards the bend the gradual lessening of the dip should admit of the coal in this area being as easily worked as the Homeville coal.

Beyond the bend where the westerly and west-north-west strike commences, the dip is as low as 1 in 12 at Hebblewhite's and from 1 in 18 to 1 in 25 at Deep Creek, a total distance of 3½ miles; and from my measurements in the field I have ascertained that this low angle of dip extends for at least a mile to the south of Deep Creek.

It is evident therefore that in this locality there is a large area of coal lying nearly flat. In fact in no other part of New South Wales with which I am acquainted do the Greta Coal-measures so nearly approach the horizontal. It should be possible therefore within this area of low dip, as far as working expenses are concerned, to exploit the coal at a comparatively very cheap rate.

The greater part of this country is well supplied with good timber for props and all other mining purposes.

Quality of the Coal.—The following is an analysis of the coal in the lower half of the seam at Deep Creek, the sample having been selected by myself and analysed by the Government Analyst.

Hygroscopic moisture	2·35
Volatile hydrocarbons	40·79
Fixed carbon	52·76
Ash	4·10
	100·00
Specific gravity	1·243
Coke	56·86 per cent.
Sulphur in coal	·83

From the very hard nature of the coal it is well adapted for shipment, and it is useful for steam, gas, and household purposes.

Probable yield per acre.—From the facts already stated, it is evident that the yield of coal per acre will be higher at Deep Creek than it is at Homeville. At Homeville the bottom seam, in the area north of the Great Northern Railway, has an average thickness of about 3 feet 5 inches, the thickness varying from 2 feet 9 inches to 4 feet 8 inches. Taking the specific gravity of the coal as 1·270, the seam contains, after allowing one-third for waste in getting, rolls, &c., about 2,892 tons of large coal and 964 tons of small coal per acre.

The lower cannel seam at Homeville, with an average thickness of 4 feet, would yield, after making the same allowances, 3,753 tons of large coal and 1,251 tons of small per acre. The two seams above this at Homeville vary so much in thickness that it is impossible to even approximate the quantity of coal contained in them.

At Homeville, therefore, the total yield per acre from the bottom seam and the cannel seam should be 6,645 tons of large and 2,215 tons of small coal.

At Deep Creek, taking the thickness of workable coal as 11½ feet, and the specific gravity as 1,243, and making the same allowances, the yield should be about 8,700 tons of large coal and 2,900 tons of small coal per acre.

The unproved Greta Coal-measures between Homeville and Deep Creek may be assumed provisionally to yield an intermediate quantity between the above estimates.

Prospecting.—In prospecting the unproved area between Homeville and the point where the great bend takes place in the Greta Coal-measures care should be taken not to commence operations far to the east of the outcrops of the seams, as, owing to the steepness of their dip, they descend to great depths within a comparatively short distance, and besides the angle of slope increases in an easterly direction towards the dip of the coal.

These precautions are obviously of less consequence in those areas where the dip of the seams more nearly approaches the horizontal.

I have, &c.,
T. W. E. DAVID,
Geological Surveyor.

The Geological Surveyor-in-charge.

APPENDIX No. 2D.

Report on the coal-measures near Hilltop, between Mittagong and Picton, South-western Coal-field.

Sir, Department of Mines, 23 October, 1888.

In accordance with your instructions herewith, I have the honor to report on a part of the South-western Coal-field, near Hilltop.

This report has been compiled from—

1. Your report upon the Coal-measures near Mittagong. Annual Report of the Department of Mines, 1882, pp. 141–143.
2. Report on the Diamond-drill Bore at the Fitzroy Iron-mine, Mittagong, by Mr. W. Anderson, Geological Surveyor. Annual Report of the Department of Mines, 1887, pp. 159–160.
3. Sections furnished by the Superintendent of Drills on the bores near Colo Gate. Annual Report of the Department of Mines, 1884, pp. 171–178, and Annual Report of the Department of Mines for 1885, p. 160.
4. Description of the seams of coal in the South-western District, by J. Mackenzie, F.G.S., Examiner of Coal-fields. Mineral Products of New South Wales, &c., 1887, pp. 170–173.
5. My own observations at the tunnels at the junction of Rocky Waterholes and Iron ("Running Water") Creeks, about 5 miles westerly from the Hilltop Railway Station.

The country in this neighbourhood consists of a plateau of sandstone belonging to the Hawkesbury series, eroded by the Nattai River and its tributaries into narrow ravines from ¼ mile to ½ mile wide, the beds of the watercourses being from 800 feet to 1,000 feet below the general level of the plateau. The Coal-measures crop out at the base of the precipices forming the sides of these ravines, and the outcrop of the principal seam can be traced at intervals from Bundanoon, on the south, to Picton Lakes, on the north, a distance of about 35 miles.

The

The section measured by me in the tunnels, cliff faces, and hill slopes, at the junction of the Rocky Waterholes and Iron Creeks, is as follows:—

Height above sea-level. ft. in.	Total. ft. in.	ft. in.	Details.
2,022 0 to 1,522 0	500 0	500 0	Chiefly glistening white sandstone, whitish grey towards base of beds, and rendered conglomeratic and gritty by pebbles and angular fragments of quartz.
1,522 0 to 1,372 0	650 0	150 0	Sandy shales, whitish grey micaceous in thin beds.
1,372 0 to 1,322 0	700 0	50 0	Sandstone, massive, and slightly gritty, with intercalated bed of clay-shale 1 foot thick, and thin layers of small pebbles of red, green, and black jasper and concretions of clay ironstone.
322 0 to 362 0	760 0	60 0	Chiefly fine shaly sandstone and laminated sandy shales, the latter weathering a pale purplish grey, with a little hard flaggy sandstone, and a few miniature seams of coal near the base of these beds, which are strongly ripple-marked.
262 0 to 256 9	765 3	5 3	Coal-seam, probably the equivalent of the kerosene shale seam at Joadja Creek.
		1 3	Coal, splint and bituminous, rather dirty.
		0 11	Band of coaly shale, hard black splintery.
		1 8	Band of black coaly shale, mixed with a little hard splintery black shale.
		0 5	Hard, splintery, black shale, with mother of coal all through it.
		1 10	Hard, black, splintery shale, with conchoidal fracture, just like that of kerosene shale; contains vertebraria, glossopteris leaves, and abundant sporangiæ, or spore cases. This is probably the equivalent of the kerosene shale at Joadja Creek.
	767 9	2 0	Shale, grey, siliceous, and carbonaceous.
		1 0	Chert.
		3 0	Shale, grey, crumbling, with pebbles.
		1 0	Sandstone, fine-grained, hard.
		1 0	Coal, splint.
		11 0	Shale, black, stony, with bands of splint coal.
		1 9	Trachyte, decomposed, yellowish grey.
		0 6	Coal.
		2 0	Shale, black, stony.
		0 6	Trachyte, slightly cellular.
225 6	796 6	5 0	Stony, black shales.
		0 6	Coal, clayey splint. } Analysis A.
		0 6	Coal, heavy splint. }
		0 9	Coal, splint and bituminous. (Analysis B.)
		0 2	Band white clay.
		0 3½	Coal, bituminous, soft, dirty.
		0 1½	Coal, dirty and splint.
		1 1½	Coal, splint, rather stony. (Analysis C.)
		0 0¼	Band brown clay.
		0 7	Coal, splint, rather heavy.
		1 3	Coal, splint and bituminous. (Analysis D.)
		1 2	Coal splint. }
		0 0¼	Clayey coal. } Analysis E.
		0 5	Coal, hard splint. }
1,218 7	803 5	0 1	Coal, stony; total thickness of seams 6 ft. 11 in. } Seam, 6 ft. 11 in.
	873 5	70 0	Strata, undescribed, the upper portion thin bedded cherty shales.
	875 5	6 0	Coal-seam containing numerous bands, and resting on coarse pebble conglomerate. [This part of the section, as described in your report, occurs at a place 3½ miles S.S.E. of Iron Creek, on the property of Messrs. Campbell, Mitchell, Fraser Martin, M.P., and others.]

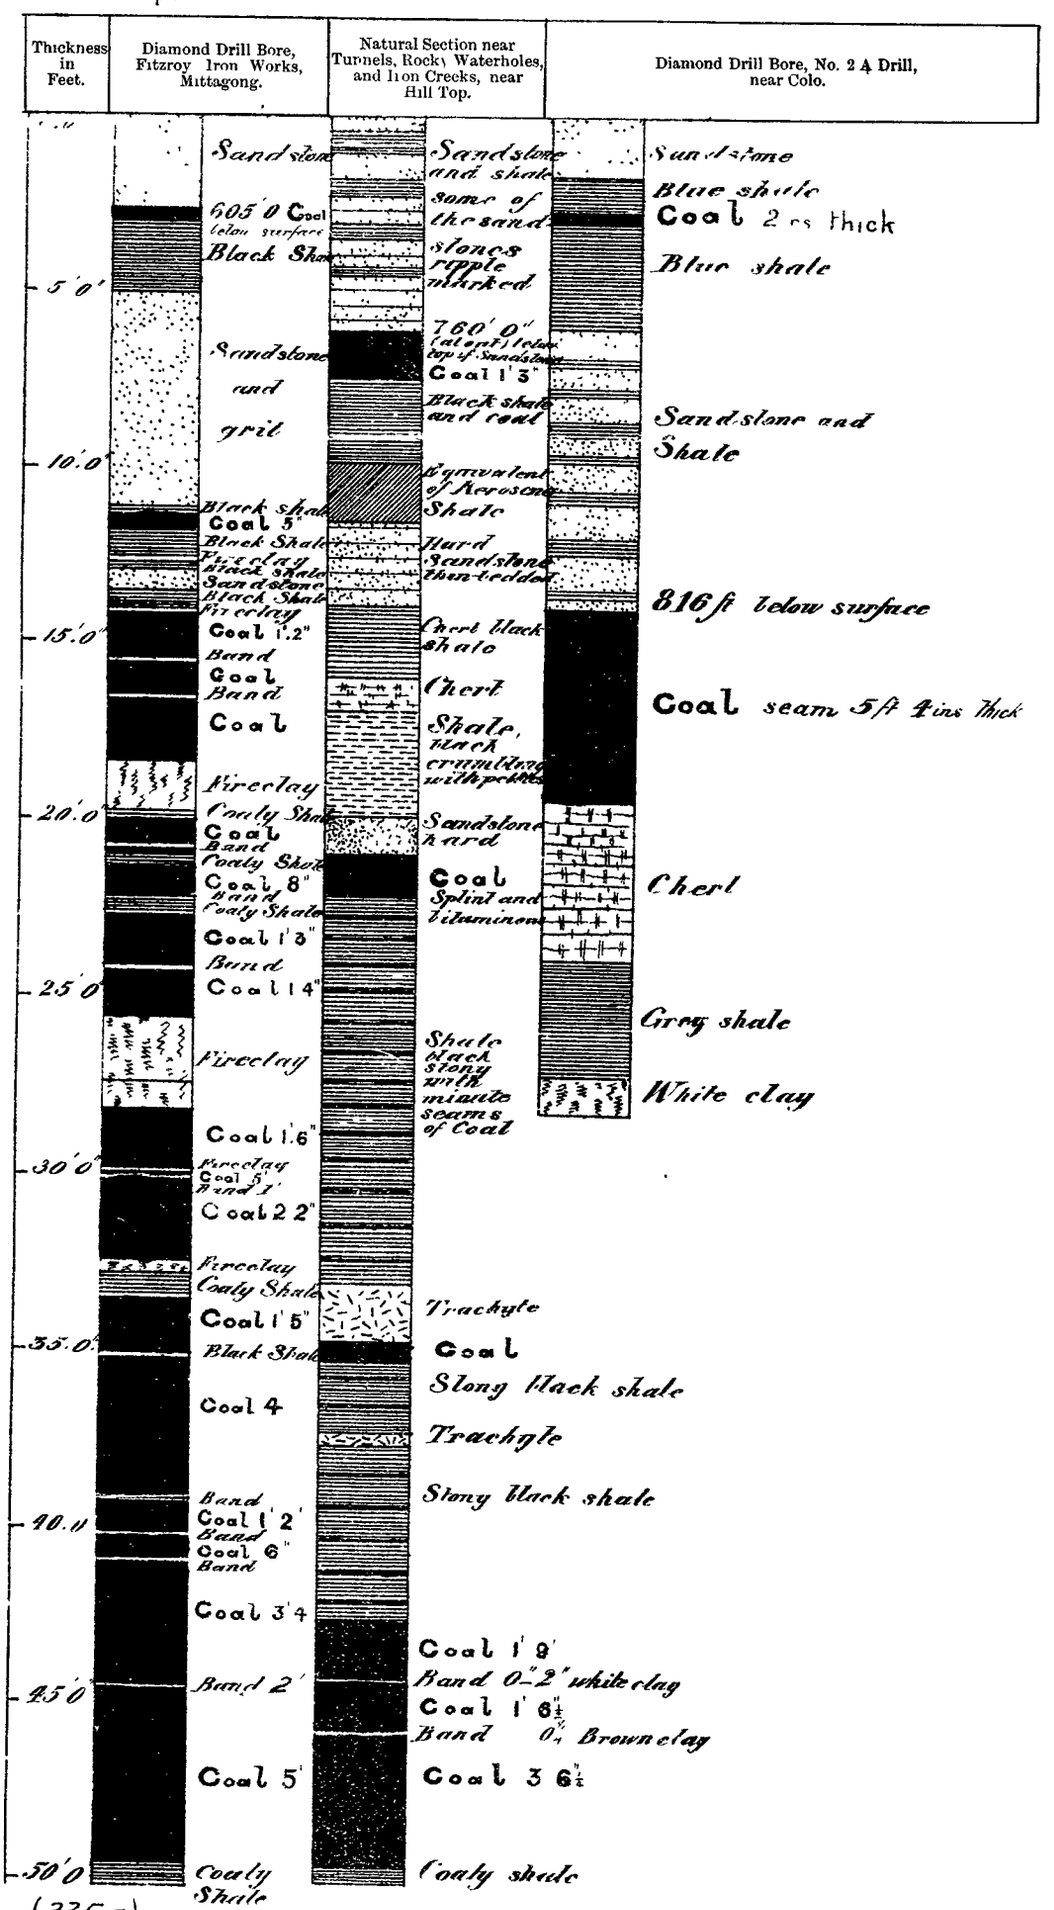
Proximate analyses of the samples taken by me to represent the portions of the seam marked A, B, C, D, and E have been made by Mr. J. C. A. Mingaye, F.C.S., with the following results:—

Mark.	Moisture.	Volatile Hydro-carbon.	Fixed carbon.	Ash.	Sulphur.	Sp. gr.	Coke.	Colour of ash.
A	1·56	27·47	47·75	23·22	·73	1·592	70·97	Light grey.
B	1·18	26·20	45·29	27·33	·73	1·474	72·62	,,
C	1·03	24·52	38·50	35·95	·56	1·572	74·45	,,
D	1·66	28·14	54·80	15·40	·86	1·497	70·20	,,
E	1·51	25·74	50·75	22·00	·50	1·408	72·75	Dirty white.

These analyses prove the coal at this particular spot to be unworkable. A comparison, however, of the natural section at the junction of the Rocky Waterholes and Iron Creeks with the sections furnished by the cores from the bores at Colo and at the Fitzroy iron-mine shows that the main seam in the first section is identical with the seams of good coal 8 ft. 11 in. thick, proved at the Fitzroy iron-mine, near Mittagong, and with the 5 ft. 4 in. seam, struck in the A diamond-drill bore, at Colo Vale, near Mittagong.

The positions of these sections, and the relations of the strata and seams proved in them to one another, are shown on the accompanying plan and sections.

COMPARATIVE SECTIONS showing the variation in the thickness and character of the main seam in the South-western Coal-field, between Mittagong and the neighbourhood of Hill Top :—



(335.z.)

PHOTO-LITHOGRAPHED AT THE GOVT. PRINTING OFFICE, SYDNEY NEW SOUTH WALES.

It appears doubtful whether the "A" bore completely pierced the main seam, so that its full thickness may not have been proved at this locality. In the two other bores at Colo the coal in the seams was found to have been completely destroyed by intrusive dykes of trachyte; and in your report on the Mittagong Coal-measures you describe localities on the Nattai River where the coal has been similarly destroyed by the intrusive rock, or converted into anthracite, while within a few chains distance of the damaged area the coal is good and unaltered.

The conclusion to be drawn from this evidence is, that the coal in the main seam will be found to vary very much in thickness and quality, not only from original differences in the thicknesses and qualities of the layers of coal at the time of its formation, but also from the varying extent, in different localities, to which the coal has been affected by the intrusive rock of subsequent origin.

The greatest alteration and destruction of the coal has probably taken place in those areas where the intrusive rock makes a strong outcrop at the surface, as at the Gib Rock, but it is also evident that the coal has been considerably affected for some distance away from such visible dyke-masses by the intrusion of flat sheets of trachyte, which have forced their way along the bedding planes of the coal-seam, without bursting up through the overlying Hawkesbury sandstone, so that the absence of disturbance in the latter formation is not always a certain guarantee that the coal-seams underlying such areas have not been damaged by these flat intrusive sheets.

The general absence, however, of intrusive dykes between Colo and Picton, and again between Hill Top and the junction of the Rocky Waterholes and Iron Creeks, favours the supposition that those areas of the Coal-measures which lie to the east and north-east of the junction of these creeks will be found to have been much less affected by the intrusive rock than they are at the junction. The Coal-measures have been tested by the diamond-drill bore near the Colo gates to a depth of over 300 feet below the main (middle) seam, and, as already stated, three seams of coal underlie this area. In places, however, through the thinning out of the intermediate strata, the upper seams become united to the main seam, and the lower 6-feet seam of coal and bands become split up into a number of thin seams.

The middle or main seam is therefore the one most to be depended upon for future mining operations. Not even an approximate estimate can be formed of the yield per acre of this seam, as it is impossible to calculate the extent of the damaged as compared with the undamaged areas.

Assuming, however, that the coal in the main seam, where it is unaffected by the intrusive rock, is of a character similar to that described by Mr. Geological-Surveyor Anderson from the bore near the Fitzroy Iron-works, its specific gravity would be about 1·38, so that, after deducting one-third of the coal for waste in getting, faults, rolls, &c., and assuming that one-quarter of the remainder would be small coal, the seam would yield for every yard in thickness, in round numbers, 2,500 tons of large coal and 800 tons of small coal per acre.

As regards quality, it is evident that the coal varies extremely. At the tunnels on Rocky Waterholes and Iron Creeks the analyses above quoted show that, with the exception of about 1 foot 3 inches of coal, the rest of the seam is unworkable, but at the bore near the Fitzroy Iron-mines (the nearest point to the Hill Top neighbourhood from which samples of coal, not damaged by dykes, have been analysed) there are 8 feet 8 inches of workable coal, and it may reasonably be assumed that there are considerable areas near Hill Top, where the coal will be found to be of equally good quality.

The mean of two analyses made by the Government Assayer from samples selected by Mr. Anderson to represent this 8 feet 8 inches of coal gives the following average composition of the main seam at the Fitzroy Iron-mine :—

Moisture	1·37	
Volatile hyrdrocarbon	25·43	
Fixed carbon	60·04	Coke, 73·20
Ash	13·16	
Total	100·00	
Sulphur in coal	0·62 per cent.	
Specific gravity of coal	1·361	

Such a coal would be useful for steam, blacksmith, and household purposes; and there is every probability that patches of equally good coal will be found in some of the areas not damaged by the trachyte between the Nattai River and the Southern Railway, from Colo to Picton, and areas lying still further to the east and north-east.

Timber.—This country is timbered with stringy-bark, bloodwood, and a little mountain ash and banksia. The stringy-bark and bloodwood trees are from 30 to 40 feet high, and from 1 foot to 1½ foot in diameter, on the average, though considerably larger in places. This timber, though not very abundant, would probably supply all the requirements of coal-mining for a considerable period.

Owing to the disturbed nature of the Coal-measures at their outcrops in this neighbourhood, the dip is found to vary considerably in direction and amount.

At Hill Top platform, however, where the strata seems tolerably free from disturbance, the dip varies in direction from N.E. to E.N.E., and the amount of dip from 2° to 3°.

According to your aneroid observations, the main seam dips from its point of outcrop at Mitchell's tunnel, in portion 75, parish of Colo, towards the bore at Colo gates, which bears easterly about 230 chains distant, at the rate of about 30 feet per mile.

The general dip between Colo and Picton will therefore probably be in a north-easterly direction at a comparatively low angle—about 120 feet per mile. This small amount of dip is obviously advantageous for the economic working of the coal.

I have, &c.,

The Geological Surveyor-in-charge.

T. W. EDGEWORTH DAVID.

APPENDIX No. 2E.

Preliminary Report on Government Diamond-drill Bore for Coal, Hexham Island, near Newcastle.

Sir, Rockhampton, Queensland, 5 October, 1888.

In accordance with your instructions, I proceeded to Hexham on 23rd July, and was present on the 24th and 25th following at the boring through of the seam of coal described in the accompanying section as having been struck at a depth of 512 feet. I also measured the cores in the core-boxes, and from them compiled the section. On

On the 16th August I revisited Hexham Island and completed the section of the core, the boring meanwhile having been continued from 520 feet to 702 feet 4 inches. The thickness of the coal-seams below a depth of 517 feet 4 inches are given on the authority of Mr. Wright, the manager for the North Stockton Coal Company, on whose property the bore is situated.

Owing to the coal in these seams having been much burnt by intrusive sheets of dolerite, which were first met with at 599 feet 4 inches, very little solid coal core was obtained below that depth. The following is a generalized section of the strata and coal-seams passed through in this bore:—

TOTAL DETAILS.

Ft.	in.		Ft.	in.		
79	4	.....	79	4	.....	Alluvial, sandy clay and running sand.
109	5	.....	30	1	.....	Sandstone chiefly, passing downwards into mudstone and clay shale.

697	1	.....	4	7	.....	COAL, burnt by dolerite.
702	4	.....	5	3	.....	*Dolerite.*
Total ...			702	4		

The sheets of dolerite described above are evidently offshoots from a dyke, which must exist in close proximity to the borehole, though of course not visible at the surface of the ground, owing to the thickness of the alluvial deposits, which here cover the Coal-measures.

It is improbable that this dyke will have damaged the coal-seams in its vicinity to any appreciable extent, though its occurrence here has seriously interfered with the obtaining of accurate information from the bore as regards the thickness and qualities of the coal-seams.

As, however, there is little difficulty in correlating the seams proved in this bore with those struck in the Kilcoy bore and the Tomago pit, it is certain that these Tomago seams underlie Hexham Island at the respective depths mentioned in my section.

The exact relation of the Hexham Island seams to those of Woodford (otherwise known as "Thornton" or "Alnwick"), and the bearing of the evidence obtained from the Hexham Island bore, taken in conjunction with that supplied by the Dempsey Island bore, as to the probable depth of the East Maitland Coal-measures below the Borehole seam, in the Newcastle Coal-measures, will be referred to by me in a subsequent more detailed report.

The dip of the coal-seams at Hexham Island is about S. 32 degrees W. at 1 in 18.

My thanks are due for some of the above information to Mr. Wright, the manager for the North Stockton Coal Company, and to Mr. Stenaker, the engineer in charge of the drill.

I have, &c.,

T. W. EDGEWORTH DAVID,

Geological Surveyor.

The Geological Surveyor-in-charge.

APPENDIX No. 2F.

Sir, Geological Survey Branch, Department of Mines, 28 August, 1888.

In accordance with your instructions, I have inspected the land shown on tracing herewith, the property of Mr. Baas, between Seaham and Clarencetown, on the Williams River. I found the formation to consist of (1) rocks of igneous origin, such as quartz-porphyries and volcanic conglomerates, and (2) shales of sedimentary origin.

As regards the advisability of employing the Government diamond drill to bore for coal in these rocks, this being the object for which Mr. Baas wished his property geologically examined, I am of opinion that it would be useless to bore in the igneous rocks. The shales, however, as was evident from the number of fossil plants contained in them, belong to a formation older than the productive Coal-measures, the "Lepidodendron and Rhacopteris series." This

This series of rocks, near Stroud, in this Colony, contains thin seams of coal of no value.

The possibility of proving the existence on this property of a workable seam of coal by means of the diamond drill are so remote that I would certainly advise Mr. Baas not to incur the expense. If, however, he should decide to test the shales by boring the most suitable site appeared to me to be the one already chosen by Mr. Baas, and marked with a red dot on the accompanying tracing. Another favourable site would be at a point along the south boundary of this property, about 15 chains easterly from its intersection with the Stroud road. The latter spot has the advantage of being near a swamp, where an abundant supply of fresh water is obtainable. I have, &c.,

T. W. EDGEWORTH DAVID.

The Under Secretary.

APPENDIX No. 2G.

Report on the occurrence of the recently-discovered Cobalt Ore at Carcoar.

Sir, Department of Mines, Sydney, 19 December, 1888.

In accordance with verbal instructions given me by the Under Secretary for Mines, I have inspected the cobalt reef lately discovered on the property of Mr. J. A. M'Killop, near Carcoar. The spot where the cobalt ore was first discovered is situated on top of a hill, ¾ mile south-easterly from the Carcoar railway station. The discovery was made accidentally by a miner when trenching to intersect the continuation of a neighbouring copper reef. The formation here consists of a greenish-black crystalline rock, which may provisionally be termed diorite, though, probably, when it has been further examined in transparent microscopic sections, it will be found more nearly allied to the hypersthene gabbros, or to teschenite. This diorite occupies all the area tinted green on the accompanying plan, and most of the intervening uncoloured area, immediately to the north-west of the cobalt vein. Next, on the south-east of this mass of diorite, comes a belt of greenish chloritic slate, then the cobalt vein, consisting of a succession of bunches of nearly pure cobaltiferous mispickel; then, further to the south-east, brownish-grey clay slate, with a dyke of whitish-grey felsite outwardly resembling opaque quartz; then a considerable mass of clay slate similar to that on the north-west side of the felsite dyke.

The sections seen in the railway cuttings show clearly the relations to one another of the diorite, slate, and felsite.

The slate is the oldest formation which has been intruded by the boss of diorite, and subsequently both slate and diorite have been intersected by dykes of whitish-grey felsite. The cleavage of the slates dips in direction from 10° to 30° E. of S. The diorite meets the slate near the cobalt reef in portions 1 and 2, parish of Shaw, along a line nearly parallel with the cobalt reef, and is traversed by a few quartz reefs, one of which contains copper pyrites and iron pyrites, and has been worked for copper, and another of which is said to contain a little gold. These reefs strike towards the cobalt reef at an oblique angle. The diorite boss, close to its junction with the slate, throws off a narrow dyke, which penetrates the slate, and runs parallel for some distance with the contact line of the two formations. The bunches of cobalt ore occur partly in this dyke and partly in the slate, at its sides at the north-east end of the reef, while towards its south-west end the bunches are entirely in the slate. The felsite dykes are from a few feet to 18 feet wide, and strike in various directions, but chiefly in a north-east and north-west direction.

The most important of these dykes is the one which runs parallel to the cobalt reef on the south-east side of it, at a distance of 40 yards.

This dyke is about 18 feet wide.

The relations of these formations to one another, and the occurrence of the bunches of cobalt ore, are shown on the plan accompanying this report.

The vein, as far as at present proved, consists of a succession of lens-shaped bunches, of which three had been discovered up to the time of my inspection. These three bunches lie in the same straight line, and their longest axes also lie parallel to the same line, which is itself almost exactly parallel with the junction line of the slate with the diorite and with the strike of the large felsite dyke to the south-east of the vein.

The first bunch consisted of strings of small bunches ranged along three lines, which met at the point shown in the sketch plan. The bearings of these three lines were, respectively, E. 30° N., E.S.E., and S. 10° E. This bunch commenced close to the surface at its north-east end, and dipped slightly to the south-west at the rate of about 1 in 6. The whole bunch was worked out at a depth of about 5 feet from the surface, below which level scarcely the least trace of it remained.

The smaller individual bunches consisted of irregular shaped, more or less, spherical masses of cobaltiferous mispickel and molybdenite, which merge gradually into the country rock. Some of these masses weighed over 1 cwt., and in all about 5 tons of ore were won from this bunch.

The second bunch is a single mass, 9 feet long, 2½ feet wide at the centre, and tapering off rapidly at both ends, where it ceases suddenly in the chlorite slate. The longest axis of this bunch strikes N. 33° E. The ore here is massive cobaltiferous mispickel, which, as in the first bunch, merges gradually into the country rock. The downward vertical extent of this bunch had not been proved at the time of my visit. The second bunch bears S. 35° W. from the first, and is 35 chains distant. Bearing S. 35° W. from the second bunch is the third bunch, also enclosed in chlorite slate.

Its width is at least 1 foot, but its length had not been proved.

Three bunches have, therefore, been discovered, the last being nearly half a mile distant from the first.

Owing to the ore in the bunches being of about the same degree of hardness as the enclosing rock, they do not make any visible outcrop at the surface, such as a quartz reef does, and a great deal of trenching will consequently be necessary in order to discover the intermediate bunches, which, no doubt, exist.

Ore.—The ore in these bunches consists of glaucodot (a variety of cobaltiferous mispickel), erythrine (cobalt bloom), molybdenite, and thin films of an apple-green to dark-green mineral, which has been determined by Mr. J. C. H. Mingaye, F.C.S., the Government Assayer and Analyst, to be annabergite (arseniate of nickel).

Scarcely any molybdenite was met with in the No. 2 and No. 3 bunches, which were almost wholly composed of massive granular-crystalline glaucodot, with small isolated crystals of the same mineral intermixed with the chlorite hornblende and felspar of the gangue.

Glaucodot.—

Glaucodot.—The following are two analyses of this mineral from Carcoar, made by Mr. J. C. H. Mingaye:—

No. 3,542, from No. 1 Bunch.

Analysis.

Moisture	·120
Metallic arsenic	51·810
,, cobalt	10·447
,, nickel	·590
,, iron	11·860
,, manganese	Nil.
,, calcium	Nil.
Magnesium	1·480
Gold	trace.
Silver	,,
Sulphur	1·520
(Insol. in acids) gangue	22·078
	99·905
Specific gravity of ore	5·430

Sample from No. 2 Bunch, No. 4,367.

Analysis.

Moisture	2·180
Metallic arsenic	29·010
,, cobalt	13·830*
,, nickel	·390
,, iron	15·78
Alumina	trace.
Manganese	Nil.
Calcium	·71
Magnesium	·22
Sulphur	11·24
Gangue	26·31
	99·66

Traces of gold; no silver; trace of copper and antimony.

I have the honor to report that a qualitative analysis has been made of a green-coloured substance which accompanied the mineral worked, No. 4,637, with the result that nickel, arsenic, and a trace of cobalt were found present. The bulk of this mineral consists of mispickel containing cobalt, and a small percentage of nickel; also much gangue. The stone was much decomposed in places, and the green colour was visible where the decomposition had taken place. From results obtained, I am of opinion that this green mineral is nickel bloom.

J. C. H. MINGAYE, F.C.S.,
Government Assayer and Analyst.

These analyses, as well as the crystalline form and perfect basal cleavage of the mineral, prove it to be glaucodot.

The actual amount of cobalt oxide in the ore was, in No. 1 sample about 14·69, and in No. 2 sample, 19·45 per cent. In the former case over 22 per cent. of gangue was present, and in the latter, 26 per cent. The total amount of cobalt oxide in this mineral, the pure glaucodot, when quite freed from the gangue, would be, in the first case, nearly 19 per cent., and in the second case, over 26 per cent.

The other minerals, with the exception of the annabergite, have already been described, as regards their physical characters, in my previous report, dated 15th August, 1888. The anabergite (nickel bloom) is not present in sufficient quantity to be of any commercial importance.

Summary.—This deposit of cobalt appears to me to have been formed in a line of fissure, which for some distance followed the line of junction of the diorite with the slate, and was probably directly due to the intrusion of the diorite, being formed either by the thrust of its upheaval, or by the contraction consequent upon the cooling of the mass of igneous rock. Towards its north-east end this fissure was partly filled by a dyke of fine-grained diorite, closely resembling the chlorite slate, which it has penetrated. The cobalt ore was then concentrated into the irregular hollows along this line of fissure by some process of segregation, for its intimate admixture with the dyke rock is difficult of explanation on any other hypothesis, and in the case of No. 2 and No. 3 bunches, by a similar process, accompanied, apparently, by a slight transportation of the mineral in solution into the hollows now occupied by the bunches, as in these two last cases the gradual merging of the mineral into the country rock is less apparent than in the first.

The occurrence of cobalt in the form of Kupfermanganerz† at the Coombing Copper Mine, bearing W. 40° S. from the present bunches, 2 miles distant, proves that this metal is somewhat widely distributed in the Carcoar District.

The bunches will probably dip in a south-easterly direction, conforming to the dip of the cleavage of the slate rock.

Notwithstanding the bunchy nature of this deposit, the richness and size of the bunches will fully justify the outlay of some capital upon its future development.

The ore is exceptionally rich in cobalt, at least four times as rich as the cobaltiferous manganese ores hitherto worked for cobalt in New South Wales, and when picked some of it would be worth at least £20 per ton.

My thanks are due to Mr. J. A. M'Killop, of Carcoar, the owner of the cobalt-ore deposit, for much information and assistance.

I have, &c.,
T. W. EDGEWORTH DAVID,
Geological Surveyor.

The Geological Surveyor-in-charge.

APPENDIX No. 3.

Sir, Geological Survey Department of Mines, Sydney, 26 February, 1889.

I have the honor to furnish you with a Progress Report of the work on which I have been engaged during the past year (1888).

In the early part of January I visited Gunning in connection with the alienation of certain lands.

My annual leave of absence extended from 31st January to 20th February.

On 12th March I left Sydney for Bingera, and remained in that neighbourhood till 20th April, when I proceeded to Barraba. During that time I visited the Pleistocene ossiferous deposits near Myall Creek, which were being excavated for the Palæontological collection of the survey, and from which a very large and interesting collection of the bones of our large Pleistocene vertebrates have since been obtained. The full report has been published in Part II, vol. I, of the Records of the Geological Survey. I also examined numerous mining localities in the neighbourhoods of Bingera and Barraba, and these examinations are embodied in my general report on those districts. (*Appendix No.* 3 A.) I returned to Sydney from Barraba on May 2nd, and, until the beginning of June, I was engaged in office work and the writing of the above reports.

On 4th June I travelled *via* Mudgee to Gulgong, where I was engaged till 7th June with business connected with the Prospecting Vote.

On 5th July I left Sydney for Molong, and reported generally on the district north and west of that place, returning to Sydney on 9th July. (My report forms Appendix No. 3 B.)

On 2nd August I left town for Tamworth, and thereafter, as a member of the Prospecting Board, visited the following places in the Northern District:—Nundle, Hanging Rock, Bowling Alley Point, Moonbi, Uralla, Boro Creek, Walcha, Glen Morrison, Tia Reef, Armidale, Boorolong, Eversleigh, Herbert Park, Warm Corner, Hillgrove, Gyra, Glen Innes, and Vegetable Creek, returning to Sydney on the 13th September.

On 9th October I proceeded, *via* Gundagai, to Tumut, where I was engaged in connection with the alienation of certain lands until 13th October, when I returned to Sydney.

On 22nd October I left Sydney for Dubbo, and was engaged until the 29th making a cursory examination of the Coal-measures of Ballimore and Spicer's Creek. My report thereon forms Appendix No. 3 C.

Leaving Sydney on 30th November, I proceeded *via* Mudgee, and joined you at Gulgong next day, and while in this district, as a member of the Prospecting Board, I visited the following places:—Reedy Creek, Denison Town, Home Rule, Merindie, and Capertee, and dealt with numerous applications from these places for aid out of the Prospecting Vote, and returned to Sydney on 16th December.

While in the Mudgee District I visited, in company with Mr. Arthur Lowe, of Wilbertree, a locality near the Talbragar River where an important discovery of fossil fish had recently been made. This place is at Boyce's selection, No. 14, parish of Bligh, county of Bligh. The fish remains were discovered along with a set of plants, which occur in loose blocks of ferruginous shale, which lie scattered over the surface of the ground above the outcrop of the beds, which are not themselves visible. These shales probably form a lenticular patch in the Hawkesbury sandstone, which here overlies a set of coal-bearing strata, and where undenuded covers a large portion of the country, chiefly as horizontally-bedded and extensive outliers. A very large collection of these fish remains has since been obtained for examination and description, and they will no doubt form a most interesting addition to the Palæontology of the Hawkesbury-Wianamatta formation. A short notice of these fish-bearing shales has been published in the Records of the Geological Survey, Part II, vol. I.

I have, &c.,

The Geological Surveyor-in-charge. ——————— WILLIAM ANDERSON.

APPENDIX No. 3 A.

The Geology of the Bingera and Barraba Gold-field.

Sir, Department of Mines, Geological Survey Board, Sydney, 24 May, 1888.

In accordance with your instructions, I have made a general examination of the geological features of the country between Bingera and Barraba, in the counties of Murchison and Darling, and visited various mining localities in the neighbourhood of these townships which you requested me to report upon particularly. I have now the honor to furnish you with my report.

The sedimentary rocks of this area consist of a series of clay shales, sandstones, quartzites, and limestones. They are highly altered, being much indurated and minutely jointed. To the west of Barraba they lie mostly horizontally, with a few slight wavy flexures, while around Bingera, and in the neighbourhood of the serpentine belt, they stand nearly vertically, or with a decided dip. From their petrological characters, and the occurrence of Lepidodendron in the shales near Bingera, they probably belong to the Devonian period. To the east of Bingera, however, we come upon a much more highly-altered and contorted series of rocks, which will probably be found to be of Silurian age. In all these sedimentary rocks there are abundance of quartz veins and reefs, which of course occur in greatest numbers in the localities where the rocks have undergone most alteration and contortion, and in the neighbourhood of intruded volcanic rocks. Many of these quartz reefs are auriferous, and are at present being worked.

Tertiary basalt occur in various parts of the district, forming isolated tablelands of considerable extent. It is present covering the diamondiferous drift with their overlying pipeclays a few miles to the west of Bingera, and also on the Bald Nob some half dozen miles up the Gwydir River. It occurs also covering Tertiary pipeclays and drift on the hills to the east of Coorangra Creek, which flows northwards to the Gwydir River, from near Upper Bingera. It forms the summit of Bell's Mountain, 6 miles to the north of Barraba, a plateau which extends to the east and west of the road for some miles, along the boundary between the counties of Murchison and Darling. It is also found in numerous other isolated positions. As these basalt ranges with their underlying pipeclays, represent the old Tertiary valleys, we can reasonably expect to find that under some portions of them at least we should get the old river channels with their pebbly wash containing gold and precious stones. The first two localities above mentioned have been more or less prospected, but very little attention has been paid to the latter two. If the Cope's Creek and Bingera diamond drifts are part of the same Tertiary river course, it is probable that one of these basalt ranges which crosses the country between these two places forms the connecting

link between them. My examination of the country was not, however, minute enough to warrant my drawing a decided conclusion as to which of the last two mentioned basalt ranges formed the connection. However, we have evidence in the presence of characteristic Tertiary boulders and pebbles in the Pleistocene alluvial deposits which form Bingera Flat that a portion of a Tertiary lead must have undergone denudation within the drainage area of this valley. The probability is that this Tertiary lead must have crossed the valley of Bingera Creek on the north side of the watershed, between that creek and Cobbedah Creek; and, so far as we know at present, it is quite possible that the Coorangra Creek basalt may form the connection. At any rate, the drift under these two runs of basalt at Coorangra Creek and Bell's Mountain ought to be thoroughly prospected for gold and precious stones.

The Devonian series of rocks in this district is intersected from near Manilla to within 3 miles of Bingera by a nearly continuous belt of serpentine, which varies from over 2 miles to a few hundred yards in width. It varies much in character. It is in some places uniformly compact, but generally it has been much crushed, and is now a finely-jointed slickensided rock-mass, throughout which occur numerous very hard kernels and nodules of a compact rock with a light-brown base, having black lustrous porphyritic crystals of *bastite* (?), an altered pyroxene, scattered plentifully through it. In various places dykes of hard volcanic rock have been intruded through the serpentine, which is itself probably a highly-altered volcanic rock—a *peridotite*.

Large quantities of gold have been obtained in immediate connection with this belt of serpentine along its whole extent. This occurred both in reefs traversing the serpentine itself or occupying a position on the line of junction of that rock and the slate, and also as alluvial gold in certain areas draining off the serpentine.

Following out your instructions, conveyed to me by telegram, I visited the following localities in the neighbourhood of Bingera, having received a list of these from the Secretary of the Progress Committee.

Spring Creek.—At the head of Spring Gully, about 3 miles to the S.E. of Bingera, two parties are at present engaged working a quartz reef. Salter and Neal's party have sunk on the reef, and driven a short way on the underlay. The reef dips at a low angle, a little to the north of east. It averages about a foot in thickness, and traverses the hardened and much-jointed Devonian slate. Since my visit I have heard that Neal and party have had 7 tons 3 cwt. 1 qr. of quartz crushed at the battery in Bingera, and it yielded 10 oz. 1 dwt., there having been a considerable amount of gold picked from the stone before it was sent to the battery. A short distance to the south, along its outcrop, Redding and party have opened on the quartz reef, which is here on the line of junction between the serpentine and the slate. A shaft has been sunk to catch the reef on its underlay. It passes through 34 feet of slate, and for the next 6 feet alternating quartz and slate, until at 40 feet the serpentine foot-wall was struck. Good prospects were got from this shaft by hand-crushing. From the outcrop of the reef a drive was put in, following the serpentine foot-wall for 100 feet, passing 15 feet beyond the bottom of the 40-feet shaft. The quartz reef in the drive varies from 2 feet to 5 feet in thickness, but the gold is more or less confined to the immediate proximity of the foot-wall, and indeed the serpentine foot-wall itself carries fine free gold in patches. The Doctor's reef, lying a few hundred yards to the north of this reef, has had a considerable amount of work done on it, as its surfacing was rather rich. It averages over 1 foot in width, and consists of hard pyritous quartz with calcite, dipping to the west and traversing the slate. The free gold has no doubt been freed from the pyrites by decomposition, as it occurs chiefly in small hollows in the quartz containing the ferruginous matter, the decomposition product of the iron pyrites. An assay of quartz from this reef gave a return of 25 oz. 9 dwt. 14 gr. of gold per ton, and 10 oz. 9 dwt. of silver per ton, showing that there is a considerable amount of fine free gold in the stone.

Spring Gully is the northern limit of the serpentine belt, the reefs occupying the line of junction between it and the slates, or occurring in the immediate neighbourhood of that junction. In the reefs I have mentioned above the gold is of a patchy character, and confined locally to certain portions of the reef. Although, in the case of Redding's reef, if the serpentinous footwall continues to carry payable gold, as well as a layer of quartz in immediate relation to the footwall, as is at present the case, the prospects are rather encouraging.

Bobby Whitlow.—This valley, through which flows a creek of the same name, a tributary of Myall Creek, lies a few miles to the north-east of Bingera. The alluvial deposits here have proved very rich, and numerous reefs traversing the nearly vertical Silurian slates have been more or less opened up. I visited the following reefs:—

The Mountain Maid consists of quartz and calcite leaders in pyritous slate. It outcrops on a spur to the left of Surveyor's Gully. Considerable work has been done in sinking shafts on this reef. Five tons of picked stone averaged 1½ oz. to the ton.

The Lady Mary, some distance higher up the Bobby Whitlow Creek, consists of a thin leader of pyritous quartz, traversing bluish-coloured Silurian slate. Not far from this is the Maid of Ashford, formed by a small leader of quartz, with epidote, and one of calcite, which unite lower down. Free gold can be seen in the calcite, but not in the quartz. They dip N.E. These quartz reefs in Bobby Whitlow Valley are of small size, indeed, the whole body of Silurian slate is seamed with small leaders and veins of quartz, many of which are auriferous, but there are no indications of permanency about them. Most of the gold which has been got in the Pleistocene alluvial deposits of the valley of this creek has no doubt been derived locally from the leaders and gold-bearing veins of quartz, although some of it, from its well water-worn appearance, must have travelled some distance. A good deal of fossicking is still carried on in the Pleistocene alluvial in various parts of the valley. The most extensive alluvial working is at a portion of the valley called Mud-holes. Here the Pleistocene alluvium is being sluiced by means of a water-race, which has been cut for a considerable distance, but the scarcity of water greatly retards operations. Although here this Pleistocene alluvium is somewhat limited in extent, the prospects obtained are fairly good.

Upper Bingera lies in a south-easterly direction, distant about 16 miles from Lower Bingera. Some years ago the alluvial deposits and reefs in the Upper Bingera gold-field comprised the valley through which the road from Lower Bingera passes, together with the hills enclosing the head of it, and lying to the north-west of the old township of Upper Bingera. This valley has been excavated in the serpentine belt, which at this point is about a mile wide, while all the reefs that have been worked occur in that rock. At present there is very little work done in the neighbourhood of this once rich area. A few miners are still fossicking in the gullies draining off the serpentine hills, while some desultory

desultory work is being carried on by a few parties in sinking on reefs. About a couple of miles down the valley from the township, where it is contracted into a somewhat narrow gorge by the close proximity of two steeply sloping serpentine ridges, preparations are being made to work the alluvial deposits which are still untouched in this narrow part of the valley.

The chief mine in which work was lately carried on is called the Ballarat Reef, which occurs on portions 32, 59, and 24, parish of Hall. In former days exceptionally rich patches were got when this was first opened up, and it is the endeavour of the present owners, by sinking deeper, to strike others of these rich patches. This so-called reef is of a rather peculiar character. The line along which it has been worked lies north-west and south-east, and large numbers of shafts and tunnels have been excavated in connection with it. It is not a reef in the true acceptation of that term, although true leaders of auriferous quartz have been met with, and have given rich returns. It is a narrow strip of dark-coloured ferruginous much-jointed and slickensided serpentinous rock occurring in the centre of the serpentine area. This narrow strip of crushed rock occurs for a considerable distance along a north-west and south-east line. It is of a schistose character;—its component minerals have been forced by enormous pressure to take a wavy lenticular form. To the east of this is the true serpentine, while immediately to the west of it there is a very hard light-coloured rock, which, on examination under the microscope, proves to be a wholly crystalline rock of the diorite type, and is undoubtedly of an intrusive character. The intrusion of this rock into the serpentine may have been the cause of the great crushing which the serpentinous rock has undergone. Consequent upon the crushing to which this rock has been subjected, innumerable minute cracks were opened in it, which were subsequently filled with quartz, sometimes auriferous, forming small leaders, which are never of any extent or thickness. In course of time, by the denudation of the crushed serpentinous rock, with its included auriferous veins and the ready percolation of water downwards, along its numberless joints, much of the gold liberated from the decomposed quartz-veins was taken up in solution by the percolating water and carried downwards by it; and wherever there has been a horizontal or slightly inclined joint of any extent, the gold has been redeposited on that joint face. The consequence of this has been that, besides the rich yield obtained from the auriferous leaders of quartz, there have been numerous large patches of free gold obtained wherever one of these more or less horizontal joints was struck. Iron pyrites is present in these rocks, and it is probable that originally some of the gold was in combination with this mineral. Below the water-level, to which they have attained in the present workings, iron pyrites is very abundant, and probably carries much of the gold unreleased by decomposition.

It will be seen from what has been stated above that the occurrence of these patches of free gold is quite arbitrary, and there is no defined line or direction to act as a guide in searching for them, except the general fact that they will only be found in the narrow belt of crushed and much-jointed serpentinous rock, where that has contained auriferous leaders, and it is as likely these will occur in the unprospected portions of the crushed rock between the surface and the lowest depths of the present workings as that they will be found at still lower depths. Quartz leaders will be found to be abundant in this strip of crushed rock, and, in all likelihood, numbers of them will be auriferous, but they will be of small size. Below the water-level much of the gold is probably confined to the iron pyrites.

Coorangra Flat.—This flat occupies the upper reaches of the Gouron Gouron Creek, one of the southern tributaries of the Gwydir River. It lies some few miles to the north-east of Upper Bingera, and is of considerable extent. Numberless shafts have been sunk all over the flat, but the depth necessary to reach the wash could not be obtained because of the wetness of the ground. At its upper end there is at present being worked with good results about 5 feet of coarse pebbly wash, consisting of well-rounded and angular pebbles, evidently a Pleistocene redistribution of a Tertiary lead. There is little doubt that this wash covers a large portion of the flat which has as yet been wholly unprospected, this being due to the fact that the presence of water had always prevented individual miners from sinking to a workable depth. The probability is that, if properly prospected, the drift in this flat would be found payably workable.

Many of the hills on the eastern side of the Gouron Gouron Creek are capped with Tertiary basalt, while others consist entirely of sand and fine drift, which, in some places, must be over 60 feet thick, while in the few shafts which have been sunk in the immediate neighbourhood of the basalt, pipeclays and lignite with fossil leaves occur. It is due to the denudations of portions of this Tertiary lead that we find the Tertiary boulders in the Pleistocene redistribution on Coorangra Flat. Four shafts at different points have been sunk on the Tertiary deposits, but in none of them was the drift successfully reached and prospected, because of the amount of water present, so that as yet it is altogether unknown whether or not gold or diamonds are present in it.

All Nations Reefs.—This reef outcrops on a rising ground ¼ of a mile to the south of Lower Bingera. It traverses slate, and has a general north and south strike. It was first opened about twenty years ago, and the original series of shafts put down on its outcrops can still be seen. Its dip is nearly vertical for 30 feet, when it changes to the east. On this dip the reef was followed for a short distance, when it was found to resume its vertical position. A shaft was put down from the surface to catch the reef at this point by Goldrig and party, who sunk it on the reef 65 feet. The present party began operations in this shaft at that depth, and are now down a little over 100 feet. It is about 3 feet in thickness, and contains free gold in a fine state of division, besides a large amount of auriferous pyrites. A battery has recently been erected in the town to carry on the crushings from this reef. The bulk assays of the reef are as follows:—A mixed sample of the whole reef gave a return from the Mint of 17½ dwt. to the ton. Four tons treated at Park and Lacey's gave 15 dwt. of free gold to the ton, and half an ounce from the pyrites to the ton. If the free gold continues at this rate uniformly through the stone, this reef will in all probability pay for its extraction by crushing, but the pyrites will require special treatment, and it is very likely that below the water-level the gold will be chiefly in the pyrites.

The Wet Flat, on which the township of Lower Bingera is situated, still remains unprospected, owing to the presence of so much water. Lately Wearne and party have sunk two shafts some distance to the north-east of the All Nations Reef; one is down 63 feet, and the other 68 feet; both bottomed on slate rock. Drives from these shafts prove the presence of a small channel of drift, consisting chiefly of slate pebbles with quartz and decomposed basalt boulders, much of which has come from the denudation of a Tertiary lead higher up the valley. Operations were reported to have been stopped owing to the influx of water into the drives. There is not the least doubt that there is on this flat deep ground which formed the main drainage channel for the valley, and in which there is every prospect of obtaining payable gold whenever the water can be overcome.

I made an examination of the following places in the neighbourhood of Barraba :—

Manilla River.—From opposite the mouth of Connor's Creek, for 14 miles up the river on its southern camp, isolated hillocks of Pleistocene gravel occur, which consist of sand with well-rounded and angular pebbles of quartz, jasperoid rock, slate, and blocks of ferruginous cemented gravel, resting upon the much-jointed and nearly horizontal Devonian slates. A few specks of scaly gold can be got almost anywhere in this drift. At many places the present stream has cut through this gravel deposit, which, no doubt, represents the course, or at any rate the undenuded bends of the Pleistocene course of the river. The probability is that some portions of this drift may be locally rich, but it would require a great deal of prospecting to prove this.

Woods Reef is a small township lying about 8 miles to the east of Barraba. The track from Barraba for the first 2 miles passes over Devonian slates, then on Broadbeck's and Douglas' selections over a basaltic plateau, an outlier of the Bell's Mountain Tertiary basalt, and then over more highly contorted and altered slates as far as Ironbark Creek, where we come upon the serpentine, the bed of the creek being at this spot on the western line of junction with the slate. The serpentine is here about $1\frac{1}{2}$ miles broad, and Woods Reef is situated on it. Mining has been carried on in this neighbourhood for a considerable time. The chief mine at present worked is the Addison Reef. It occurs on a quartzite ridge in the immediate vicinity of the eastern junction of the serpentine with the slate rock. It is a saddle-shaped quartz reef, the forkings of which dip to the north-east and south-west, respectively. The easterly branch gave out in a short distance, but the westerly, which dips at an angle of about 40 degrees, has been followed for over 100 feet. A 65-feet shaft has been sunk not far from the outcrop, to catch the reef on the underlay. From the bottom of this the westerly branch of the reef has been followed to a depth of 110 ft. The reef divides into two, the smaller portion passing off to the west at a low angle, while the larger portion continues downwards in a nearly vertical direction. The last crushing of quartz taken from the present workings at 110 ft. gave a return of half an ounce to the ton. The average yield of stone taken from between the bottom of the 65-ft. shaft and the present workings at 110 ft. was about 6 dwt. to the ton.

Some distance to the south of this occurs what is called the Young Garryowen reef, which is a bed of ferruginous pyritous quartzite interbedded with the decomposed slate-rocks. The superficial portion of the quartzite, in which the pyrites was decomposed, returned 7 dwt of gold to the ton. Below the water-level the gold will be wholly confined to the pyrites, and the expense of treatment would preclude the possibility of working it payably.

Paling Yard Creek.—Considerable quantities of gold have been obtained in the Pleistocene alluvial of this creek near its source, north of the old Paling Yard Station, in the north-west corner of the parish of Tiabundie. There are still a few miners working on the creek. Here the serpentine belt is only about 100 yards wide, and in connection with it there are dyke-like masses of a hard crystalline rock, containing a large amount of pyrites, which was probably the origin of at least some of the alluvial gold. About half a mile to the south-east of the old Paling Yard Station is an outcrop of chromic iron ore. It occurs on the western line of junction of the serpentine with the slate, and contains gold, but not in payable quantity.

Ti-tree Creek.—These diggings lie about 9 miles in a southerly direction from Barraba. The alluvial in this creek was very rich, and there are yet a few miners working here, though near the source of the creek it is pretty well worked out. On the water-shed between Ti-tree Creek and Aberdeen Gully is the Pioneer Reef. It consists of calcite with arsenical and iron pyrites, and averages about 1 ft. in thickness. It strikes north-west and south-east, and dips to the north-east at a high angle, traversing bluish-coloured pyritous slate.

A series of shafts have been sunk on the outcrop of the reef, the deepest of which is down 140 ft., while the others have been sunk to 30 ft., 40 ft., 41 ft., and 132 ft., respectively. At the bottom of the 140-ft. shaft the reef has been driven upon to the south-east, while at the 132-ft. level there is a 45-ft. drive to the north-west. In the former drive the reef is 15 in. thick, and in the latter 7 in. Traces of gold have been got all the way from the surface to the 140-ft. level, while some parts of the reef were very rich locally. The following are some of the crushings from the reef:—Two tons from the 50-ft. level crushed at the Mint gave 5 oz. to the ton, while from the same level 140 lb. of stone returned 58 oz. Six tons from the same level were crushed at the Crow Mountain Battery, and returned 1 oz. 5 dwt. to the ton. Six tons from the 140-ft. level gave 1 oz. 12 dwt. to the ton. This reef seems to be of a persistent character, and has a fair average yield, although the occurrence of rich gold in it is of a patchy nature.

Taking the district around Barraba as a whole, I think that prospectors ought to confine their attention to the neighbourhood of the serpentine belt and the basalt-capped ridges, together with the valleys draining off these. The geological structure in the former position is favourable to the presence of metalliferous reefs and lodes, because the serpentine is in all probability an altered peridotite (an olivine enstatite rock) of volcanic origin, which, in its unaltered condition, has been intruded among the slates, and has caused their contortion and alteration; consequently along their lines of junction, and in the crushed and contorted slates in the neighbourhood of that junction, cavities have been formed, which were subsequently filled with quartz, calcite, or metalliferous lodestuffs.

In the case of basalt-capped ridges the occurrence of auriferous drifts may be expected, because they represent the old valleys and low-lying grounds, which in the Tertiary times were flooded with basaltic lavas. But, in fact, from a geological point of view, there is every reason to suppose that the whole country from Tamworth northwards to beyond Bingera is favourable to the occurrence of auriferous and argentiferous reefs and lodes.

In conclusion, I beg to record my thanks to the numerous gentlemen, both in Bingera and Barraba, who so kindly afforded me every assistance and information during my examination of the district.

I have, &c.,

WILLIAM ANDERSON.

The Geological Surveyor-in-charge. Geological Surveyor.

APPENDIX

APPENDIX No. 3 B.

Sir, Department of Mines, Geological Survey Board, Sydney, 12 July, 1888.

In accordance with the instructions I received from the Under Secretary, I have visited the country immediately to the north of Molong, and have now the honor to furnish you with my report thereon.

The country under examination includes portions of the three counties, Gordon, Wellington, and Ashburham, about the junction of the Bell River with Molong and Nora Creeks. It is of a hilly character, and consists of altered Silurian slates, sandstones, conglomerates, and limestones, with numerous varieties of volcanic rocks. One of the chief geological features of the district is the great development of the limestones, whose outcrops, in many cases, cover a considerable extent of country. They occur in lenticular beds, which are interbedded with the other sedimentary strata, and contain numerous fossils. In connection with many of them occur extensive outcrops of iron ore and gossan, some of which contain gold and silver, but which have never been prospected to any extent. The general strike of the sedimentary rocks, as is shown by the outcrop of the various beds of limestone, is in a north-easterly and south-westerly direction. To the south and south-east of Molong a considerable area is occupied by pink-coloured granite, while intrusive diorite and felsite occur near Larras Lake station. At Spring Creek, parish of Eurimbula, county Gordon, intrusive basaltic rocks occur.

The remains of Tertiary basaltic lavas, covering river drift, form extensive ranges of hills in some parts of the district. These drifts have never been thoroughly prospected, and judging from the auriferous character of the rocks from which they have been derived, they are, I think, deposits to which prospectors ought to direct their attention.

In the upper portion of the valley of Nora Creek a Tertiary drift occurs, in which a few shafts have been sunk, but no systematic work has been done to prospect this deposit, although good gold is reported to have been got here, and in the alluvial at the head of Burrawong Creek.

On the watershed between the sources of these two creeks is Delaney's Dyke, which is a garnetiferous rock containing gold and copper. It is worked by the Delaney Dyke Gold-mining Company. It traverses the Silurian slates near their junction with pink-coloured granite. The strike is nearly north and south, and the dip is to the east at a high angle. Numerous shafts have been sunk on the outcrop, the deepest of which is down about 65 feet. At the 40-feet level the lode has been driven upon to the north for 35 feet, and here it averages 10 feet in thickness. At the 55-feet level the lode averages 23 feet from footwall to hanging wall, including a thin horse of dark flakey slickensided slate much stained with the carbonates of copper, and which when crushed returns good gold. The lode consists of garnetiferous lodestuff containing free gold with the carbonates of copper. The gold is generally very fine, but visible specks are not unfrequently to be seen. At the southern end of the lode, at the deepest level, it is very rich in copper carbonates. A crushing of 40 cartloads from this lode returned 41 oz. of gold and 25 oz. of silver. The lode has every appearance of being permanent in depth, and the only drawback at present is the want of water to carry on the crushing, which is done by an eleven-headed stamper battery, situated on the neighbouring creek.

Mullingin Reef outcrops near the northern fence of Mr. Lee's 1,120-acre block, at the junction of the Weandre Creek with the Bell River, parish of Three Rivers, county of Wellington. It is a quartz reef containing arsenical and iron pyrites. It has an east and west strike, and dips south 5° east at a high angle. At its outcrop it is a foot thick, and continues to a depth of 60 feet at the same uniform thickness. It traverses decomposed slates of different degrees of hardness, the hanging wall being soft clay slate, and the footwall a very hard chloritic slate. For 34 feet the shaft is vertical, and then follows the reef to the depth of 60 feet, where they are at present working. At the bottom of this shaft the reef has pinched out towards the west, but in a small drive to the east it is still about a foot thick. From this part of the reef I took a sample for assay, which returned neither gold nor silver. Two assays were, however, made of the quartz from the shaft, and both gave a little over 3 ounces of gold to the ton and a trace of silver. The country rock in the neighbourhood of this reef has undergone great disturbance, and this, I think, would discourage the idea of finding well-defined reefs of large size, but nevertheless it is probable that small reefs may frequently occur. In the next block to the north the outcrop of a fairly large quartz reef can be followed, running nearly north and south for a considerable distance, but it is not, so far as has been ascertained, payably workable. The probability is that Mr. Lees's Mullingin Reef is a branch coming from the larger reef, or that it is the continuation of that large reef whose strike at this point has turned to the west instead of continuing to the north. This, however, can only be proved by following the Mullingin Reef to its junction with the other.

Numerous other reefs occur about here, which have not, however, been tested or opened up. They generally show arsenical and iron pyrites and the carbonates of copper—in fact, copper, in one form or another, seems to be present in almost all the reefs of this district.

In the neighbourhood of Mullingin Reefs there are large tracts of country covered by Tertiary basalt, which in many instances overlies Tertiary river drifts. These have never been prospected to any extent. Some holes have been sunk for a few feet in depth along the outcrop of the drift, which, however, has never been followed into the deepest ground. There is little doubt that in this locality numbers of those isolated basalt-capped ridges will be found to contain payable auriferous drift when thoroughly prospected.

On Spring Creek, near its junction with the Bell River, in the parish of Eurimbula, county of Gordon, large pieces of native copper were found some years ago on the surface. A few thin quartz leaders with calcite showing the carbonates and grey sulphide of copper, and assaying 43 per cent of copper, were sunk upon, till they gave out at no great depth. In the immediate neighbourhood the rocks are more or less copper-stained along their joints. They consist of sedimentary Silurian rocks through which eruptive basaltic rocks have been intruded, the line of junction between them being just at this point where the native copper was found. It is probable that a rich copper lode may exist near this spot, and, if so, it no doubt will be found to occupy a position in the immediate neighbourhood of the junction between the sedimentary and intrusive rocks. On Reedy Creek, a tributary of the Bell River, a few miles to the south of Spring Creek, in the parish of Eurimbula, county Gordon, is an immense outcrop of ferruginous gossan and iron ore. It occurs in connection with a bed of limestone, and can be traced for miles in a northerly direction, following the outcrop of the limestone. In some parts it contains a few water-worn pebbles of quartz. Two samples for assay I took about a quarter of a mile apart gave no return of either silver or gold.

At Little Copper Hill, on the western side of the Wellington Road, about 2 miles north of Molong, an outcrop of iron ore and gossan occurs in connection with a bed of limestone. This outcrop of gossan

was

was opened up some forty years ago for the purpose of working the copper it contained, but this did not prove of sufficient richness to pay. It has, however, been proved by assay to contain silver, and I think it might be worth while to prospect it for that metal.

In many parts of the world, and particularly in the western parts of the United States of America, rich silver and lead mines have long been worked in limestones. These ore deposits occur especially where the limestones are connected with eruptive rocks, but not only are they found along the junctions of the limestones with the eruptive rocks, but owing to the easy solubility of limestone, large irregular cavities have been dissolved out along the joints by water percolating through the rock, and these are often found to have been refilled by the deposition in them of metalliferous ores. In this country no attention has ever been paid to the prospecting for metals in limestone, and as yet our Palæozoic limestones are virgin ground to the prospector. I believe that if, not only in this district but in other parts of the Colony, the limestones, especially where connected with eruptive rocks, were carefully examined and prospected, some rich mineral finds would be the result.

In conclusion, I would state that this district presents many geological features which are favourable to the development of metalliferous lodes and reefs, and to the occurrence of gold; for not only are there large tracts of country covered with Tertiary river drifts, which in many places are probably auriferous, but the whole country is formed of highly inclined and tilted Silurian rocks, which locally have been much disturbed by the intrusion among them of volcanic rocks, and in these disturbed areas are to be found the reefs and metalliferous lodes, which have been formed in the cracks and fissures left in the strata by the movements and great pressure to which they have been subjected. I would, however, call special attention to the limestones, which are so largely developed in this district, and particularly to those portions of them which are in any way connected with eruptive rocks, as being probably ore-bearing strata.

I have to express my thanks for the kind assistance afforded me by Mr. Lee of Larras Lake during the examination of this country.

I have, &c.,

WILLIAM ANDERSON,

The Geological Surveyor-in-charge. Geological Surveyor.

APPENDIX No. 3 C.

Sir, Geological Survey, Department of Mines, Sydney November. 1888.

In accordance with your instructions, I have inspected a portion of the North-western or Talbragar River Coal-field, in the neighbourhood of Spicer's Creek and the Talbragar River, to the east of Dubbo. I have now the honor to furnish you with a report thereon.

From Dubbo eastward to Spicer's Creek the country consists superficially of a coarse sandstone and conglomerate, which is covered locally by patches of Tertiary basalt, in some places overlying auriferous Tertiary drift. This grit and conglomerate, known as the Dubbo or Ballimore sandstone, lies horizontally, and shows false bedding. In a few positions lenticular beds of thin-bedded shales, of no great extent, occur in it. It presents all the characters of the Hawkesbury sandstones of the Blue Mountains, and there is little doubt that it is an outlier of that formation. Natural sections of the coal-bearing beds which underlie it are of rare occurrence in the district. It is only in certain positions in the creeks and watercourses, where the denuding action of these has worn through the sandstone and so exposed a small portion of the underlying beds, that they can be seen. The sandstone is, however, so easily disintegrated that such quantities of the loosened sand are swept into the watercourses that they become partially filled up with it, and any sections that may have been exposed by denudation are wholly obscured. The sandstone is of no great thickness, although it varies considerably in different positions, so that the coal-bearing strata can be struck generally over the district at a comparatively shallow depth. Sections showing the relations between the coal-bearing strata and the overlying sandstone occur on the northern bank of the Talbragar River at Ballimore Hill, for about a mile and a half up the river, and also in the north-western corner of the parish of Ballimore, about 2 miles above Gillies' accommodation house. On the north-eastern slope of Ballimore Hill, about 100 feet of these coal-bearing beds are seen cropping out below the Dubbo or Hawkesbury sandstone, while in the creek to the north of the hill about 100 feet more of the beds are exposed. At the top of the hill the Hawkesbury sandstone is seen to rest on the underlying coal strata with a slight unconformity, which, however, at this point is hardly appreciable, the dip of the latter beds being not more than 2° or 3° in a southerly direction. The uppermost portion of the coal-bearing beds in this section consist of thin-bedded sandstone and light-coloured shales, with interstratified beds of ironstone, while below these are a series of thin shales, fireclays, and bituminous coals, none of which exceed a few inches in thickness. A portion of these thin coal-seams constituted what was formerly known as the Ballimore coal-seam, but although they are fairly good bituminous coals, the thinness of the individual seams, and the frequent occurrence of interstratified white bands, render the seams on this horizon, in this neighbourhood, of no commercial value, although it is quite possible that some of them may unite to form a workable seam in another part of the field. Altogether there are about 200 feet of the coal-bearing beds exposed in section in the vicinity of Ballimore Hill.

Two diamond-drill bores have been put down in the neighbourhood of Ballimore Hill. No. 1 bore was situated about a mile up the river from the hill. It is close to the northern bank of the river, and was commenced among the thin coals which occur about 100 feet below the Hawkesbury sandstone on Ballimore Hill. This bore attained a depth of 794 ft. 6 in. At 526 ft. a seam of coal was struck, which was 5 ft. 3 in. in thickness, with an inch band about a foot from its upper surface At 550 ft. artesian mineral water was tapped; and the only other coal-seam that was struck was at 653 ft., but proved only to be 11 inches thick. The presence of the artesian water prevented the 5 ft. 3 in. seam from being worked in the neighbourhood of the bore. No. 2 bore was situated about 60 chains in a northerly direction from No. 1 bore on the creek. After the surface alluvium it first passed through a set of beds identical with those occurring immediately below the Hawkesbury sandstone on Ballimore Hill, which were followed by the same series of thin coal-seams. The total depth bored was 1,101 ft. 4 in., but after passing through the thin coals at 200 ft. no other coal-seam is reported to have been met with At about 600 ft. a few thin coaly layers were passed through, which no doubt represented the 5 ft. 3 in. coal-seam met with in No. 1 bore, the horizon being approximately the same in both cases. The fact that this 5 ft. 3 in. coal-seam appears to have totally disappeared in so short a distance may possibly be due merely to a local thinning of the bed. As shown by both these bores, there is in this series of coal-bearing strata a great prevalence of interstratified beds of conglomerate, the presence of which is against the uniform persistence of the coal-seams over a large area.

(335—2 E)

PHOTO-LITHOGRAPHED AT THE GOVT. PRINTING OFFICE, SYDNEY, NEW SOUTH WALES.

Two miles up the river from Gillies' accommodation house, the section on the northern branch of the river consists of the same series of thin coal-seams and light-coloured shales, showing that over a considerable area the dip of the beds is hardly appreciable.

In the bed of Spicer's Creek, a few hundred yards north of the spot where the Dubbo and Wellington track crosses the creek, about 28 miles from Dubbo, a bed of coal crops out, at a point where the Hawkesbury sandstone has been removed by the creek. On the west bank, about a chain from this place, a shaft has been sunk to a depth of about 30 ft. After passing through the alluvium, sandstone and light fireclay shales containing plant remains, chiefly rootlets and Glossopteris leaflets, the same coal-seam was struck at 25 ft. It is reported to be about 4 ft. in thickness, with an inch band near the top of it. The coal is partly bituminous and partly a splint coal, containing small kernels and streaks of very pure and fine-grained fireclay, the presence of which will materially affect the percentage of ash in specimens analysed. The following are analyses of two samples of this coal. No. 1 was taken out of the shaft, and No. 2 from the heap at the mouth of the shaft:—

	No. 1.		No. 2.	
Specific gravity	1·430		1·479	
Volatile hydrocarbons ...	23·61		23·05	
Fixed carbons	52·28	72·88	54·65	73·35
Ash	20·60		18·70	
Sulphur	0·42		0·576	
Moisture	3·09		3·60	

The colour of the ash in both samples is greyish. It is not a caking coal. The high percentage of ash would prevent its use for domestic purposes in localities where a better coal could be procured, but still it might have a local value for household purposes. It does not burn very readily, and when used for smelting purposes a certain amount of wood has to be used along with it. As all the analyses and trials have been made from samples of this coal taken from near the surface, where the percentage of volatile hydrocarbons has no doubt been lowered by the percolation of surface water, the results are probably, to a certain extent, not so good as they would be if the samples had been taken from a considerable depth. To prove the thickness and quality of this coal-seam it would be necessary to sink a shaft some distance away from the present one on the line of dip of the seam. The probability is that if the shaft is sunk on the same flat as the present one the coal-seam will be struck at less than 50 ft. Away from the creek the country rises gradually, and consequently the further from the creek the thicker will the overlying Hawkesbury sandstone be, because the denuding action of the waters of the creek were more active, and wore deeper into the sandstones near the creek than towards the watershed.

What relation the coal-seam at Spicer's Creek bears to the coal-seams seen in section and occurring in the bores at Ballimore Hill we have at present no means of determining conclusively, as there are no sections visible between these two places. Judging, however, from the slight dip of the beds generally, and the fact that along the course of the Talbragar River, on the line of strike for a distance of 7 miles, most of the sections present some portion of a series of thin coals which are undoubtedly on the same horizon, and have in every case a uniform relation to the overlying Hawkesbury sandstone, it seems to be probable that the Spicer's Creek coal-seam may possibly be the representative of that which was struck at 526 ft. in No. 1 bore. It is, however, probable that there will not be below the Spicer's Creek coal-seam nearly the same thickness of coal-bearing strata that has been proved by boring to exist in the neighbourhood of Ballimore Hill, because within a mile to the southward of the outcrop of the coal at Spicer's Creek the older Palæozoic rocks outcrop on the surface and represent the edge of the basin in which the coal-bearing strata had been laid down, unless, perhaps, they have been brought into position by faulting, of which I noticed no evidence.

The great prevalence of interstratified conglomerates and the thin-bedded character of the whole series point to the fact that during the deposition of the various beds there was a rapid alternation in the movements for elevation and subsidence, in the character of the sediment, and in the direction of the currents from which it was deposited. It is evident from the few sections of the series which have been obtained that the area of the individual coal-seams is somewhat circumscribed, that is to say, that each coal-seam will be only locally persistent laterally, and will not persist with a uniform thickness over a large area. The total thickness of the coal-bearing strata in the neighbourhood of Dubbo has not yet been ascertained. The thickness proved by the deepest bore was a little over 1,100 feet, but at that depth the bore was still in the Coal-measures. It is of the utmost importance, both to the inhabitants of the Western District and to the Railway Department, that a knowledge be obtained by boring of the whole thickness of the coal-bearing strata in this the north-western or Talbragar River Coal-field, because such a knowledge would settle the question whether or not there are in these Coal-measures workable seams of coal, which if opened up, could be utilised for smelting, railway, and other purposes, in the Western District, at a much smaller cost to the consumers than is at present the case, when all the coal that is used has to be conveyed from the Lithgow and Newcastle coal-fields. It is therefore now almost a necessity that this the furthest western extension of our Coal-measures should be thoroughly proved. The bores that have already been put down in the district have been, for one reason and another, abandoned without satisfactorily testing the real thickness of the series of coal-bearing rocks that exist in the neighbourhood and pass under Dubbo, and consequently the presence or absence of workable coal-seams, with the exception of the 5 ft. 3 in. seam struck at 526 feet in No. 1 bore, has yet to be proved.

I have, &c.,
WILLIAM ANDERSON,
Geological Surveyor.

The Geological Surveyor-in-charge.

APPENDIX No. 4.

Annual Report of the Palæontologist, 1888.

Sir,

I herewith have the honor to hand you a progress report of work performed by me during 1888.

In continuation of the Monograph of the "Permo-Carboniferous Fossils of New South Wales," I beg to refer to a suggestion made in the progress report for 1887—that the first part of this publication should be deferred pending the acquisition of additional material from localities not then represented. I am now glad to say that through the exertions of the collector, Mr. C. Cullen, valuable additions to the

Echinodermata from Nowra and corals from Shoalhaven have been made. Under this heading may be mentioned the loan of a remarkably fine *Cyathocrinus*, the largest I ever saw, from Mount Vincent, made by the Maitland Scientific Society; and a fine *Palæaster*, from the Ravensfield quarries, by Mr. T. Browne, of West Maitland. I now purpose completing this first part as soon as possible. It should, however, be understood that, leaving out of consideration the time necessary for the elucidation of such complicated structures as corals, a publication of this nature is always more or less interrupted by current work of a miscellaneous character.

Of the Palæontological section of the "Memoirs of the Geological Survey of New South Wales" the two first appeared during the past year, viz :—

No. I.—The Invertebrate Fauna of the Hawkesbury-Wianamatta Series, &c. By R. Etheridge, junr.
No. II.—Contributions to the Tertiary Flora of Australia. By Baron von Ettingshausen.

In the first I endeavoured to give a concise history of the invertebrate animal remains found in the large series of rocks overlying the productive Upper Coal-measures of New South Wales. In the second, which simply passed through my hands editorially, descriptions of the Tertiary Flora of this continent are given, translated from the original memoirs in German. Many valuable conclusions as to the origin of the bygone and present floras of Australia will be found in this work. It is hoped that during the present year at least two other complete memoirs will appear, viz. :—The Palæozoic and Mesozoic Flora, by Dr. O. Feistmantel; and a translation of the late Professor De Koninck's "Recherches sur les Fossiles Paléozoiques de la Nouvelle Galles du Sud," the preparation of both for the press being well in hand.

The sorting and transfer of the collection, mentioned in the last Annual Report, has been steadily carried on, and only about one-third now remains to be placed; this will be completed on the reception of the new trays, now under order. Those classes recently transferred consist of the Silurian corals, Polyzoa, and Cephalopoda, the whole of the Permo-Carboniferous, except the univalves, and a part of the bivalves having been so dealt with. Other subsidiary lots have also been sorted and placed, such as Post Tertiary bones from Wellington Caves, Lord Howe Island, &c.

Amongst the more important Miscellaneous Determinations made during 1888 may be mentioned the following:—

A Selachian fish-spine, discovered by Mr. Geological-Surveyor Anderson, in the Siluro-Devonian limestone of the Wellington caves, making a welcome addition to the scanty vertebrate remains hitherto known from that horizon; a small collection of Upper Tertiary shells from near Adelaide, South Australia; and Permo-Carboniferous mollusca, from near Hobart, Tasmania, presented by Mr. Anderson. Further, a very interesting set of specimens from the Joagla Falls, Styx Creek, near Armidale, collected by the latter, and proving the existence of rocks of Permo-carboniferous age in that district. (*See Appendix No.* 4 F.)

Post Tertiary shells from Olsen's Caves, Queensland, presented by Dr. J. C. Cox.

Permo-Carboniferous Brachiopoda, presented by Mr. J. H. Maiden, Curator of the Technological Museum.

An excellent example of *Cycadopteris scolopendrina*, Ratte, obtained by Mr. G. A. Stonier, Field Assistant, at Alexandria. This specimen enables me to confirm Mr. Ratte's description[1] of the fossil, and its reference to the above genus.[2]

Post Tertiary shells, collected and presented by Mr. Theodore Bevan, at the Aird Hills, Douglas River, British New Guinea, during his fifth exploring expedition. (*See Appendix No.* 4A)

A fine collection of plants and marine fossils from the Permo-Carboniferous rocks of the Wollongong and Shoalhaven Districts, made by the collector, Mr. Charles Cullen. These have already been referred to, but amongst the remainder may be mentioned examples of the plant *Noeggerathiopsis*, which confirm the structure of *N. spathulata* given by Professor J. D. Dana,[3] wherein the leaves occur as a cluster growing together, in a verticillate manner, a fact in the structure of this genus which seems to have been overlooked by most authors.

Upper Silurian limestone with typical fossils. From between Cobar and Nymagee, by the Rev. J. Milne-Curran. In last year's Annual Report reference is made[4] to the first discovery of the fossiliferous deposit, the additional specimens which have come to hand in every way confirming the former determinations. (*See Appendix No.* 4 *D.*)

A very interesting coral from the Lower Palæozoic rocks of the Yass District, presented by Mr. R. A. Barber, which I have described as *Lonsdaleia* (*Spongophyllum*) *bipartita*.[5]

The museum has been enriched by the presentation of Permo-Carboniferous mollusca from Somerton and Pallal, and Ravensfield, near Maitland, by Messrs. D. A. Porter and J. Browne, respectively; several good samples of *Lepidodendron* from Goonoo Goonoo, and Devonian corals from Tamworth, by the former. Amongst the last named are examples of an hitherto unrecognized genus in New South Wales, *Diphyphyllum*, which I hope to describe shortly.

A collection of Post Tertiary bird and marsupial bones from the Paroo River, south-central Queensland, presented by Mr. A. S. Cotter. Amongst these are the mutilated tibia and fibula of Owen's extinct and rare struthious bird, *Dromornis*, and a portion of a tibia of an Emu, lately described by Mr. C. W. de Vis as *Dromaius patricius*,[6] thus showing the co-existence of that bird with the *Dromornis*. A description of these remains is now in the press.[7]

Mesozoic plants from the Ipswich coal-basin, Queensland, presented by yourself. These fill up a gap in our museum, whilst several forms not hitherto known to me from that area are represented.

Glossopteris and other Coal-Measure plants from Iron Creek, near Mittagong, obtained by Mr. Geological-Surveyor David, B.A. Some of the *Glossopteris* are interesting in that they show traces of fructification.

In continuation of the examination of the diatomaceous earths of New South Wales,[8] Diatomite has been examined from Lismore, Tweed River, near Cudgen, Richmond River, and the Dubbo District, *See Appendix* 4 *E.* A clay from a coast coal-seam, south of Pelican Creek, Lake Macquarie, was found to be devoid of organisms (*See Appendix No.* 4 *B.*); and a similar result occurred in connection with a Tertiary clay from Kiandra. (*See Appendix No.* 4 *C.*)

[8] Annual Report, Department of Mines, New South Wales, for 1887 [1888], p. 165.

I have been favoured by Mr. R. A. F. Murray, Government Geologist for Victoria, with samples of diatomaceous earths from that province. Amongst other interesting results, the curious fact has presented itself that, with one exception, the diatoms of the one colony are quite different from those of the other. Difference in age of the deposits may perhaps account for this.

In the early part of the year I accompanied Mr. Geological-Surveyor David to inspect the bore through the Hawkesbury-Wianamatta beds, at the Moore-bank Estate, near Liverpool.

Conjointly with the same officer, important ethno-geological investigations have been carried on in the immediate neighbourhood of Sydney. Examinations of aboriginal burying-places, rock-shelters, and kitchen-middens have been made at Long Bay, near Botany, and at North Harbour, Port Jackson. A number of interesting facts were obtained and remains and implements collected.[1] This line of investigation cannot be too strongly recommended, and it is hoped that opportunities will be afforded for their continuation. As a contribution to this study I visited aboriginal rock shelters on George's River and Harris Creek, in company with Dr. J. C. Cox.[2]

In connection with the late International Centennial Exhibition at Melbourne, I put together and forwarded a collection of Eocene and other Tertiary plants.

The departmental library has engaged much of my attention, with the view of assisting to render it as practically useful as possible. Through a wider distribution of the departmental publications the number of books has been largely increased.

I have, in conclusion, to express my appreciation of the lapidary's (Mr. Chas. Merton) exertions in assisting me in much difficult and minute work.

I have, &c.,

R. ETHERIDGE, Junr.,
Palæontologist.

APPENDIX No. 4 A.

Miscellaneous Contributions to the Palæontology of Australasia.

No. 7.—Report on semi-fossil Fluviatile Shells brought by Mr. T. Bevan from the Aird Hills, Douglas River, British New Guinea.

The shells procured at the summit of a trachyte hill, called Aird Hill, are referable to three species, two univalves and one bivalve. They are:—

1. *Melania clavus*, Lamarck.—Represented by several specimens. It has previously been obtained at New Ireland, the Philipines, and is recorded by Mr. J. Brazier from the Solomon Islands also.
2. *Neritina gagates*, Lamarck.—This species comprises more than two-thirds the entire parcel, and is present in several varieties. It is a characteristic New Guinea species, and was obtained by Mr. Brazier in the Katau River.
3. *Cyrena* sp.—Several valves, which Mr. Brazier, who was kind enough to examine these shells, in company with the writer, is unable to precisely refer to any known species from New Guinea. It is nearest to *Cyrena nitida*, Desh., and is perhaps only a variety of it. The latter shell has hitherto been known from Borneo.

The shells were in a kind of silty mud or mould, which on dissolution in water failed to reveal any trace of Foraminifera, or other low organisms. The general mass seems to be composed of the minutest fragments of shell. The specimens do not in any way possess the aspect of fossils, the Neritinæ retaining their original surface gloss. It would be very hazardous to suggest any theory of upheaval from the position of these shells, unless strong corroborative evidence is forthcoming as to the thickness, extent, and general position of the deposit containing them.

R.E., j., 4/2/88.

APPENDIX No. 4B.

Miscellaneous Contributions to the Palæontology of Australasia.

No. 8.—Report on a sample of clay from above a coal-seam on the coast, at least 6 miles south of Pelican Flat, Lake Macquarie, New South Wales.

This sample of clay appears to have been taken from near the outcrop of the bed, judging from the manner in which it is laminated and otherwise traversed by filaments and layers of low plant life, probably Cryptogamic. After treatment of a portion with hydrochloric acid, the residue was examined and found to be destitute of the remains of organic life, other than small particles of the vegetable matter just mentioned.

R.E., 22/3/88.

APPENDIX No. 4C.

Miscellaneous Contributions to the Palæontology of Australasia.

No. 9.—Report on a sample of Tertiary Clay from Kiandra, New South Wales.

This clay from the Tertiary lignite deposit at Kiandra is of a greyish-brown colour, very fine in texture, and slightly arenaceous.

It was prepared and carefully examined for Diatomaceæ, but without the presence of any frustules being detected.

R.E., 8/5/88.

APPENDIX No. 4D.

Miscellaneous Contributions to the Palæontology of Australasia.

No. 10.—Report on Fossils forwarded by the Rev. J. Milne Curran, from a new locality in the Cobar District, New South Wales.

The fossils forwarded by Mr. Curran are in an exceedingly fine-grained sandstone, much stained with oxide of iron.

Only two species are represented—a *Rhynchonella*, and fragments of what appears to be an *Orthis* or *Strophomena*. The *Rhynchonella* is of great interest, as I am quite unable to distinguish it from *R. Wilsoni* (J. Sowerby), a characteristic Upper Silurian shell, except in the lesser number and coarser nature of the ornamenting ribs. In this character, however, it accords exceedingly well with a variety of this species termed *Davidsoni*, by Prof. M'Coy, from the Wenlock limestone.

The specimens are from 30 miles north-west of Cobar.

R.E., 8/5/88.

APPENDIX

[1] Records Geol. Survey, N. S. Wales, 1889, I, pt. 1, p. 9, and pt. 2 (*in lit.*) [2] *Ibid.* pt. 2 (*in lit.*)

APPENDIX No. 4E.

Miscellaneous Contributions to the Palæontology of Australasia.

No. 11.—Further Preliminary Examinations of *Diatomite* (Diatomaceous Earth) from New South Wales localities.

(*a.*) *Lismore District* (Mr. C. S. Wilkinson).—The remains of Diatomaceæ in this deposit are very much broken up, but few complete frustules being present. The form is probably identical with that already recorded from previous localities, viz., *Melosira*, but the frustules, instead of being barrel-shaped and short, are cylindrical and generally much longer. A few sponge spicules are also present.

(*b.*) *Tweed River*, near *Cudgen* (Mr. Munro, 15/3/88).—A very rich bed, containing both a large quantity of comminuted frustules and entire segments. In this case it is the short barrel-shaped frustle which predominates, and for the sake of distinction it may be well to temporarily know this as *Melosira a*; and the former, or cylindrical frustule common in the Lismore sample, as *Melosira b*. In the present Tweed River earth the frustules are exceedingly well preserved.

(*c.*) *Richmond River* (Mr. Munro, 15/3/88).—In the present sample from the Richmond River deposit the frustules, *Melosira b*, predominates to a very large extent, and they are of a greater length than I have otherwise seen them. The deposit is not particularly rich. A few sponge spicules have been observed.

(*d.*) *Dubbo District.*—The exact locality of this specimen is not known, but possibly it may be from the Warrumbungle Mountains. Both forms of *Melosira a* and *b* are present, and both equally plentiful. Spicules were not seen.

The examination of the New South Wales Diatomaceous Deposits, although at present only prosecuted in a preliminary manner, conclusively proves that a certain horizon, or perhaps more than one horizon, is well marked geologically by the constant presence of these frustules which I have referred to *Melosira*. So much is the case, and so marked is the form, that it will probably be necessary in the future to apply a distinctive name to it.

R.E., 15/5/88.

The Government Geologist.

APPENDIX No. 4F.

Contributions to the Palæontology of Australasia.

Geological Survey Branch, Sydney, 18 September, 1888.

No. 12.—Report on Specimens collected by Mr. W. Anderson, Geological Surveyor, at Joagla Falls Warm Corner, 50 miles north-west of Armidale, New England, New South Wales.

During the recent tour of inspection of the Prospecting Board, consisting of Messrs. W. H. J. Slee, Inspector of Mines, and Mr. W. Anderson, in the New England District, the latter obtained some fossil mollusca from a boulder at the Joagla Falls, Styx or Oaky Creek, county Clarke.

The limestone is of a dark-blue colour, crystalline, coarse-grained, and to some extent brecciated.

The fossils are of Permo-Carboniferous age, and represent either the Lower or Upper Marine Series. In the first place there is a large Aviculopecten, of which several fragments and one or two badly-preserved but almost entire valves are present. Allowing for the indifferent condition of the specimens, these may perhaps be referred to *Aviculopecten Illawarensis*, Morris. With these are associated numerous fragments of *Spirifera*, and some traces of *Fenestella*. Of the former genus there would seem to be two species, *Spirifera Tasmaniensis*, Morris, and a second unrecognizable form.

Mr. Anderson states that from the contour of the surrounding country the boulder could not have travelled far, and therefore it may be legitimately concluded that one or other of the marine portions of our Permo-Carboniferous series is developed within the drainage area of the watercourse previously referred to.

R. ETHERIDGE, Junior,
Palæontologist.

The Geological Surveyor-in-charge.

APPENDIX No. 5.

Sir, Department of Mines, Sydney.

I have the honor to make the following report for the year 1888; and to furnish herewith an analytical statement of assays and analyses made in the Departmental Laboratory during the same period; together with lists of donations to the Mining and Geological Museum and Library.

Exhibitions.

The great amount of Exhibition work devolving upon the Department during the year necessitated a large encroachment upon my time, as the following notes will reveal.

The Adelaide Jubilee International Exhibition was, after a very successful currency, brought to a close on the 7th January. The New South Wales Mining Court, as pointed out in my last report, was acknowledged to be one of the features of the Exhibition, a reputation it maintained to the end. The mineral section of the Colony's exhibits comprised eighty-one entries, but it should be mentioned that the whole of the large and varied general collections of the Minister for Mines and of Professor Liversidge appeared but as two entries.

The exhibits represented by the above entries received fifty-nine awards, viz., 16 first, 31 second, and 12 third class awards. Of these the Minister for Mines received 13 first-class awards for minerals, metals, and fossils; one for publications, maps, and sections; and five first and one second class awards for Forestry Exhibits.

The Council of the Centennial Agricultural Show having specially requested that the mineral and forestry exhibits of the Department should be transferred from Adelaide to Moore Park, Sydney, I was instructed to leave for Adelaide on the 29th December, 1887, to arrange for, and carry out the transference. As the Centennial Show opened on the 24th January, the time was very limited for such an undertaking, but the Executive Commissioner and his officers having rendered every possible assistance, the necessary exhibits were packed and despatched in sufficient time to enable me to rearrange them by the date mentioned. About 2,500 square feet of space were occupied by the above exhibits in the pavilion erected on the show-ground. Considerable interest was manifested in them during the time they remained on view.

At

At the close of the show these exhibits were removed to the store which had been obtained by the New South Wales Commission for receiving exhibits for the Melbourne Centennial Exhibition, to be opened on the 1st August; the balance of the mineral exhibits from Adelaide were also forwarded to it.

A considerable proportion of the mining exhibits were, however, shortly afterwards removed and rearranged in the Centennial Universal Exhibition, which opened in the Prince Alfred Park building on the 14th March, and remained open until the 14th May.

About 2,000 square feet of space were thus occupied during its currency. From this Exhibition they were again removed to the Melbourne Commission store, and prepared for transmission to the Melbourne Exhibition.

In addition to the large departmental collections thus secured for display at the latter, the private exhibits at Adelaide were packed and taken charge of by the Department for the same purpose. Great exertions were made to increase the number of exhibits, by securing additions to those which were already in hand, and fresh ones from newly-discovered or previously unrepresented deposits. Extensive correspondence was opened up with those interested in our mineral resources, and personal interviews sought were practicable. Every step was taken to secure a representation which would bring the mineral wealth of the Colony prominently before the visitors to the Exhibition, and to give effect to the wishes of the New South Wales Commission expressed in the following resolution conveyed to the Honorable the Minister for Mines by their President on the 28th July, 1887:—"That the Honorable the Minister for Mines be invited to authorize the officers of his Department to prepare, at the cost of the Commission, an exhibit that will fully exemplify the mineral resources of the Colony, and also to take charge of the exhibits furnished by private persons in the same classes, and to arrange for their display."

The efforts thus made resulted in a Mineral Court occupying a space but little short of 12,000 square feet of space, and out of a total of 236 entries in this section 43 were by the Minister for Mines, and 140 obtained through his instrumentality, leaving 53 entered in the ordinary way.

Many of the entries comprised exhibits in bulk weighing several tons each, the great desire being to secure exhibits which would impart a massive appearance to the Court and impress visitors with the extent as well as the richness and variety of the mineral resources of the Colony.

Having been instructed to carry out the work of arrangement, I visited the Exhibition building about a month prior to the general commencement of work, and drew out a plan of arrangement suited to the space set apart by the Executive Commissioner as a Mineral Court, which, meeting with approval, I was instructed to carry out; for this purpose I left for Melbourne on the 29th June. Work was begun on the 1st July, and continued vigorously at the rate of fourteen hours per day until near the opening day, when the night was still further encroached upon. At the opening (August 1st), though not quite completed, the Court presented a very good appearance, and evoked very generous congratulations from the Press and public alike.

Mr. Ford, who had remained in Sydney to supervise the packing and shipping of the mining exhibits, arrived shortly before the opening. Upon my departure, about the middle of August, he was placed in charge of the Mineral Court, a position to which he had been appointed by the Executive Commissioner, and one which he filled with great credit.

As the Exhibition closed on the 26th January, 1889, I venture to complete my notice of it.

The Executive Commissioner, R. Burdett Smith, Esq., J.P., in his thirteenth report, in summarizing the awards, states:—"But it is in Jury Section 50—Minerals and Mining—that in the matter of awards the exhibitors and exhibits of this Colony appear in special prominence. In silver and silver ores, and coal, the great majority of the awards fall to the share of New South Wales, and in gold and copper first-class honors have been obtained."

One hundred and seventeen awards were obtained in the mineral section of the New South Wales exhibits, viz., 50 first orders of merit, 30 second, 3 third, and 23 fourth.

The exhibits receiving the honor of special distinction, in addition to first order of merit, were—the collective exhibits of the Minister for Mines; the Australian Kerosene Oil and Mineral Company's exhibit of petroleum oil cannel coal (kerosene shale), and products; Professor Liversidge's general collection of minerals; Messrs. Hassall and Dowel, Ms.P., collection of tin ores, gem-stones, &c.; Broken Hill Proprietary Silver-mining Company's trophy and exhibit of silver ores; the Gypsy Girl Silver-mining Company's silver ore; the New Year Silver-mining Company's silver ores; the Barrier Range Mine Managers' Association's collection of silver ores; the Baker's Creek Gold-mining Company's gold-bearing quartz; and R. Saunders' massive exhibit of sandstone from Pyrmont.

Assays and Analyses.

During the year prospectors and others interested in mining largely availed themselves of the aid afforded by the Department in assaying, free of cost, samples from new or unworked deposits within the Colony.

The samples selected for treatment in the Laboratory considerably more than doubled the number for the previous year, being 5,245, against 2,222 in 1887.

In addition to the above, numerous samples were reported on verbally or in writing after inspection or simple tests.

The 5,245 samples sent to the Laboratory were submitted to 10,123 tests for single metals, and 86 analyses (of coal, shale, water, and miscellaneous substances). Particulars of the work thus performed will be found in the accompanying analytical statement, prepared for insertion in the Under Secretary's Report, under the heads of the various metals, &c., also in Mr. Mingaye's report. (*See Appendix No.* 6.)

The correspondence in connection with the above work has been very great; but, owing to precedence being given it, the results of assays have in all cases received speedy dispatch.

Mining and Geological Museum.

From the list of donations (*Appendix No.* 5A) accompanying this report, it will be apparent that the Department of Mines has been placed under great obligations to the mining community, and especially to those of it who took part as exhibitors in the Adelaide and Melbourne Exhibitions. The donations at the former were exhibited at the latter, so that at its close, out of a total of 196 private exhibits in the New South Wales Mineral Court, 112 were presented to the Mining and Geological Museum, either wholly or in part; whilst many of the balance not being suitable were not sought for. It

It would be invidious to specially mention any of the exhibits thus presented, though many of them are of exceptional value. The obligation thus imposed upon the Department cannot be met by mere acknowledgment. The aim and object of the donors is to assist in building up a Mining and Geological Museum which shall serve as a permanent exhibition of the mineral resources of the Colony.

In anticipation of the requirements and economical furnishing of such an institution, advantage was taken of the opportunities afforded by the representation of the Colony at the Colonial and Indian and Melbourne Exhibitions to secure suitable show-cases, after they had served the primary purpose for which they were constructed, and thus, at one cost to the country, continue their usefulness indefinitely. In this way 168 show-cases were obtained from the Commissions appointed to represent New South Wales at the above Exhibitions, and they are now available, in addition to the fifty-five already in use in the temporary structure at present serving as a Mining and Geological Museum.

In view, therefore, of the large number of valuable exhibits and show-cases accumulated since the destruction of the former Museum in the Garden Palace fire, the urgent necessity for a proper building in which to display them is very apparent, not alone on account of the educational nor yet of the wider international advantages of keeping alive the interest awakened at recent Exhibitions in the great undeveloped resources of the Colony, great though these advantages be; but also on the score of economy in public expenditure, for which reason alone this building should be at once begun. At the present time, in addition to the portion of rent borne by the inadequate structure in use as a Museum, and the interest on the cost of erection, the country is paying at the rate of £325 per annum for storage room, which, at 4 per cent., represents a capital of over £8,000, an expenditure in which is no profit, as the exhibits thus stored are entirely hidden from the public. At about one-fourth of the capital thus represented, and at a corresponding reduction of rent, the Mining and Geological Museum could be placed on a fair footing and in a fair way of serving the purposes for which it is intended.

In addition to the donations recorded, the Museum has been enriched by a splendid collection of bones of extinct animals, obtained by the collector, Mr. Charles Cullen, from Myall Creek, near Bingera. This unique collection has, as yet, remained unopened, room for its display not being available.

Library.

During the year the donations to the Library have greatly increased (*See Appendix No.* 5B), the total number of volumes registered to date being 2,364. Increased shelving has been provided, which necessitated a rearrangement of the books; but, owing to press of other work, the complete numbering and indexing has not yet been carried out. A considerable number of publications have been bound at the Government Printing Office during the year, which was necessary for uniformity and preservation.

I desire to express my acknowledgment of the great assistance rendered me in the performance of my duties in connection with the representation of the Colony at the Melbourne Exhibition by Mr. M. W. Lewis, Clerk of Works, East Maitland, in the preparation and description from practical observation of a collection of building stones from the Hunter River District; and by Mr. Herbert Winchester, of the Coal-fields Office, Newcastle, who, under the Examiner of Coal-fields' direction, supervised the preparation and despatch of the coal exhibits from the Northern Coal-field.

My best thanks are due to Mr. T. Ford, the officer in charge of the Mineral Courts at the several Exhibitions mentioned, for the able and ready assistance at all times rendered me.

During my absence on such work, Mr. G. A. Stonier, Geological Assistant, took charge of the examination of specimens for assay and the correspondence in connection therewith.

The performance of the duties of my assistant, Mr. Whittel, has been characterized by steady application and increasing usefulness; whilst those of the general assistant, Malcolm Morrison, have been performed with ready willingness.

I have, &c.,

JOSEPH E. CARNE,
Curator.

APPENDIX 5A.

DONATIONS to the Mining and Geological Museum during 1888.

Donor.	Donation.	Locality.
Albion Tin-Mining Company.	Lode tin ore	Albion Tin Mine, Barrier Range.
Mr. T. H. Alcock	Galena	The Hazlewood Mine, Tasmania.
Mr. W. Anschau	Tripolite (infusorial earth)	Richmond River District.
Captain Armstrong	Kaolin	Near Rookwood.
Mr. W. Ashcroft	Scheelite with a little copper	The Cordillera Mine, Tuena.
Australian Kerosene Oil and Mineral Company.	Petroleum oil cannel coal (kerosene shale).	Company's Mine at Joadja Creek.
Messrs. Bailey and Miles	Pyritous lodestuff	Bailey and Miles' reef, Mt. Domedary.
Back Creek Silver & Gold-mining Company.	Block of ore from 40-ft. level, No. 2 shaft	Back Creek silver and gold mine.
Baker's Creek Gold-mining Company.	Quartz lodestuff, showing gold freely	Baker's Creek, Hillgrove, near Armidale.
Bakewell Bros.	Shale and ground shale	Beulah Brick-works, Macdonald Town.
Mr. J. Badge	Blue and green carbonates of copper	Great Barrier copper and silver mine, Silverton.
Mr. E. W. Bathurst	Diamondiferous drift and associated gems	Round Mount diamond mine, parish of Aconite, Auburn Vale, near Inverell.
Mr. J. B. Beauregard	Collection of silver ores	Lewis Ponds, near Orange.
Mr. J. Beavis	Rhodonite and tephroite	Manilla.
Mr. S. L. Bensusan	Rich lode tin ore	Dalcoath Tin-mine, Glen Creek, New England.
Mr. T. Bevan	Post-Tertiary shells	Aird Hills, New Guinea.
Mr. Bingle	Bituminous coal	A new seam 1 mile N.E. from Mt. Jellore, county of Camden.
Messrs. J. R. Bingle & Co.	Antimony ore (oxide)	Ford's Creek, near Gulgong.
Mr. L. Bishop	Sandstone	Muree Quarry, Raymond Terrace.
Mr. J. H. Blatchford	Auriferous quartz	Snob's Reef, Braidwood.
Do	Geological specimens	Sugarloaf Mountain, Clyde Road, near Braidwood.
Mr. R. Breckenridge	Iron ores	Messrs. Breckenridge and Watson's Estate, Port Stephens.

APPENDIX 5A—*continued*

Donor	Donation	Locality.
Mr. W. Bridle	Silver ore	Yarrangobilly Silver-mine, Tumut District.
Mr. S. Bridgement	Quartz showing free gold	Araluen.
Broken Hill, Block 14, Silver-mining Company	Silver ores	Company's Mine, Broken Hill.
Broken Hill Junction Silver-mining Company	Silver-lead ores	Broken Hill Junction Mine, Barrier Range.
Broken Hill Proprietary Company	Silver-lead ores	Broken Hill, Barrier Range.
Mr. T. Browne	Building stone	Singleton Quarry.
Mr. H G. Brown .	Quartz with pyrites, galena, and zinc-blende	Meadow Flat, near Rydal West.
Mr. J. Burgess	Quartz showing free gold .	Burgess' Reef, Yeoval.
Mr. J. Campbell	Pyrites and zinc-blende in haplitic granite	Six miles from Yalwal
Mr. M. W Carr	Tin ore	Red Cross Tin-mine, Emmaville, Vegetable Creek, New England.
Mr C. A. Chesney	Auriferous lodestuff	Chesney's Lease, near Cobar
Mr W. C. Cleghorn	Felspar	Near Uralla.
Mr. G Cochrane	Fireclay .	North Willoughby.
Mr T. Colls, M P.	Heavy spar (sulphate of barium)	Humewood, 5 miles from Yass.
Commodore Silver-mining Company.	Silver ore	Commodore Silver-mine, Captain's Flat.
Mr. Corcoran	Stream tin .	Furracabad, near Glen Innes.
Do	Lode tin .	12 miles from Glen Innes
Cordillera Hill Silver-mining and Smelting Company	Silver, lead, and copper ores	Cordillera Hill Silver-mine, Peelwood
Cosmopolitan Extended Tin-mining Company	Tin ores	Company's Mine, Barrier Range.
Do do	do	do do
Mr. T. Cotterill	Schistose talc .	Between Caloola and Cowflat.
Mr. H. H. Cooke, M P.	Quartz with arsenical and copper pyrites	Dayspring Reef, Parkes.
Mr H. Copeland, M.P	Orthis, Gasteropod fragments. Naticopsis, and Bellerophon	Isis, Murrurundi.
Dr J C Cox .	Stalagmite with Helix and Pupina .	Olsen's Caves, Queensland.
Mr. T. Cragie	Sulphide of antimony and topaz	Cragie's Prospecting area, 14 miles west from Bingera
Do ..	Chrome iron . . .	4 miles from junction of the Gwydir and Horton Rivers, Bingera.
Do	Concretionary iron ore	Bingera.
Mr. Crommelin	Iron pyrites with vivianite	Grenfell.
Mr. W. A. Cunee	Glossopteris, brown boghead mineral, and semi-bituminous coal.	15 miles from Thirlmere,
Mr. H Dawson	Gold in slate	Flyer's Creek, 14 miles from Cooma.
Mr. P. Davis	Bituminous coal	The Mittagong Coal Company's Colliery, Natti River, 4 miles from Mittagong.
Mr. J. H. Decent	Clay ironstone	Leaton Grove, Auburn Park, near Bankstown.
Mr. A. Delaney	Bismuth ore	Gumble Flat.
Do	Tin and copper ore	Gumble Mine.
Mr A DeMestre	Alum earth and crude alum	Berrung, Nowra.
Mr. A. Dewhurst	Coal and Shale	Prior's property, parish of Black Jack, county Pottinger, near Doughboy Hollow.
Mr. J. Dunshea	Pipeclay	2 miles from Cudal.
Mr. H. T. Edwards	Coralline marble	Bibbenluke, near Bombala.
Messrs. T. Edwards and party	Auriferous quartz .	Near Locksley.
Mr J B. Engelen	Soapstone, asbestos, and slate	Gundagai.
Mr. G. S. Evans	Limestone, slightly argillaceous, containing Pentamerus	Walli, 15 miles from Cowra.
Mr. C Featherstonhaugh	Pyritous quartz .	Near the junction of the Macquarie and Turon Rivers
Do do	Crystallized cerussite	Near Lewis Ponds.
Mr. F. A. Ficinus	Silver ore	Maiden-head Station, Reedy Creek, Queensland Border, New England
Mr H. S Fry	Basalt with augite and olivine	Bulli Pass
Mr. C. L Garland, M P	Silver-lead ores	Captain's Flat, near Molonglo, and Peelwood.
Mr J. A Gegg	Concretionary iron ore	Windellama
Mr J. H. Goodlet	Sphærosiderite	Brick Quarry, Granville.
Mr. J. G. Griffin	Silver, gold, and copper-bearing lodestuff	Eyrie South Mines, Wiseman's Creek, near Brewongle
Do	Zeolites	Collingwood, near Melbourne, Victoria.
Mr. W. J. Gregory, J P	Granite	Green Hills, Berrigan.
Mr J. R. Grant	Prehnite and calcite in basalt	South Kembla.
Mr. A. Gray, Consul for Sweden.	Auriferous quartz and quartzite	Mount Gray
Mr. Gutherie	Devonian marine fossils	Ilford
Gypsy Girl Silver-Mining Company	Two tons of silver ore	Company's Mine, Barrier Range.
Mr. M J. Hammond	Cobalt ore	Bungonia
Mr. Hamlyn	Volcanic dust	Krakatoa volcanic eruptions.
Messrs. A Harber & Co.	Shale, ground shale, and fossils (fish and plants)	St Peters.
Messrs Hassall & Dowel, Ms.P.	Stream tin and gem-stones .. .	Oban, New England.
Mr J. S. Hawthorne	Garnets	Silverton.
Mrs. C G Haydon	Fossil-wood and concretionary ironstone	Oaky Creek, Barraba.
Mr Hebblewhite	Marine Carboniferous fossils .	Between Deep Creek and Farley.
Do	Wood opal	Orange.
Homeward Bound Gold-mining Co.	Auriferous quartz	Company's Mine, Yalwal, Shoalhaven.
Mr T W. Horton	Auriferous quartz and felspathic lodestuff, with blue and green carbonates of copper	Sawpit Gully, Fairfield, New England.
Do	Auriferous quartz	Mount Carrington, New England.

APPENDIX 5A– *continued.*

Donor	Donation	Locality
Mr T. W Horton	Silver ore	Rivertree, New England
Do	Galena, with a little copper pyrites and zinc blende, in ferruginous quartz and felspathic lodestuff	The Great Red Rock Gold and Silver Mine, Fairfield, New England
Do	Auriferous lodestuff	do do do
Do	Auriferous granite	Big Hill, Surface Hill, and from 1st Claim, Timbaria
Mr. J. K Hume	Ottelia praetermita	A creek between Rockwood and Mount Gilead, about 6 miles from Campbelltown
Mr. E. Irby	Silver ore	Pye's Creek
Mr. T. Jones, M P.	Kaolin	Shaking Bog, near Tumut.
Mr. T Jones	Scheelite	Cobar
Mr R Jones	Chalcedony, agates, stalactites, &c.	Springsure, Queensland
Do	Re deposited gold	A reef 3 miles south of Gulgong
Messrs Jones Bros	Brown iron ore	Gunning Consols Mine
Katoomba Coal and Shale Mining Co	Coal and boghead mineral	Company's Mines, Katoomba.
Mr J E Kelly	Tin and copper ore	Gumble Mine, near Molong
Do	Auriferous lodestuff	Delaney's Dyke Gold mine, near Molong
Do	Aboriginal's tomahawk	Dilga West
Messrs Kennedy and Bateman	Tin ore	Eight miles north west of Tenterfield
Mr J Larkin	Calcite (cone in cone)	Property of Mr J M Antill, Jarvisfield, Picton
Laurium Silver mining Co	Silver ore	Company's Mine, Thackaringa, Barrier Range.
Mr N Leoni	Quartz and mispickel	Junction of the Wombat and Candoin Creeks
Mr F Liebentritt	Plant remains	Near Druitt Town
Mr J B Lillicrap	Tin ore	New England
Mr Lindberg	Copper ore	Wellington
Mr J Lockhart	Ferruginous breccia quartz in slate, and containing a little pyrites	Cochrane's Reef, Warrall Creek
Rev J G Love	Contorted slate	Mount Dromedary
Mr Lowe	Fossil fish	Twelve miles south of Demsontown
Mr E Lipton	Hematite	Bargo, near Picton
Mr J H Maiden	Spirifera (4 specimens)	Shoalhaven Bridge and Camberarra.
Mr J. O M Manly	Copper ore and fluor spar	Woolgarlo, near Yass
Do	Copper ore	Six miles west of Binalong
Do	Quartz with galena, zinc blende, and pyrites.	Eight miles north east of Yass
Do	Galena	Haidwicke, near Yass
Do	Pyritous veinstone, with veins of calcite.	Greeves, near Yass
Do	Altered ferruginous claystone	do
Mr. G Martin	Silver ores	Pye's Creek, Webb's Consols Mine, Severn River, and Walsh's Claim, adjoining Webb's Consols
Do	Cellular, siliceous, and felspathic lodestuff	Bathurst and Company's Portion, 6 miles north-west from Deepwater Railway Station
Mascotte Gold and Silver Mining Company	Quartz and felspathic lodestuff, with zinc blende and pyrites	Company's Mine, Drake, New England
Mr J S Melville	Star antimony, smelted from New South Wales antimony ores, and three samples of type metal manufactured from same	
Do	Graphite	Underclift, New England
Do	Jasper, stibnite, and copper ore	Fairfield
Mr R Moore	Cellular quartz and brown iron ore, and specimens of gypsum	Ilford, near Mudgee
Mr J Morgan	Silver lead ores	Christmas eve Mine, Purnamoota, Barrier Range
Mount Biliagoe Prospecting Syndicate	Gold and silver bearing ore	North Billagoe Prospecting Syndicate's Mine, Cobar
Mount Costigan lead and Silver Mining Co	Silver ore	Mount Costigan Lead and Silver Mine, Tuena
Mount Euriowie Tin mining Co	Tin ore	Company's Mine, Barrier Range
Mount Euriowie West Tin-mining Co	Lode tin ore	Company's Mine, Barrier Range
Mount Gray Gold mining Syndicate	Auriferous lodestuff	Mount Gray Gold mine, Grove Creek, near Abercrombie Caves
Mount Stewart Silver mining Company	Silver ore	Company's Mine, Denison Town, Mudgee District.
Mr C S M'Glew	Lode tin ore, rhodonite, and tin bearing tourmaline	Giant's Den, Bendemeer
Mr J M'Namara	Silver ore and auriferous quartz	Silver King Mine, Purnamoota, Barrier Range.
Mr H W Newman	Metallic antimony in calcite, and calcite with needle antimony ore	New Reform Gold mine, Lucknow.
New Lewis Ponds Gold and Silver Mining Company	Gold and silver ores	Company's Mine, near Orange
New South Wales Shale and Oil Company	A full section taken from the petroleum oil cannel coal seam (bog head mineral)	Company's Mine, Hartley, near Mount Victoria
New Year Silver mining Co	Silver ore and show case	Company's Mine, Barrier Range
Mr L Nicholson	Quartz with tourmaline, and quartz with iron pyrites and a little calcite	Braidwood District
One tree Cordillera Silver mining Co	Silver ore	Company's Mine, near Tuena
Pinnacles Tribute Silver mining Company	Silver ore	Company's Mine, Barrier Range
Mr. W H Puddicombe	Fluor spar and tin ore	8 miles from Ottery Lode, Glen Creek, near Emmaville
Messrs F J E Rae and party	Copper ore	Apsley, 3 miles south of Wellington
Mr Ranft	Porous felstone with quartz and free gold	Pile's Claim, Back Creek, 12 miles from Warne
Mr. T L Richardson	Copper ore	Gunlambone Copper mine, West Bogan

APPENDIX 5A—*continued.*

Donor.	Donation.	Locality.
Mr. W. W. Richardson ...	Gold and silver ore.....	Carrington Mine, and Jerrara Creek Silver-mine, near Goulburn.
Mr. A. M. N. Rose	Auriferous lodestuff	Cooma District.
Mr. R. W. B. Rose	Auriferous lodestuff	Upper Boloco.
Dr. A. Ross, M.P.	Pipeclay	J. Black's farm, Norah, 3 miles from Molong.
Mr. J. S. Rutherford	Hydraulic limestone and briquette.....	The Island of Whangarei.
Mr. J. Scully	Fossil-wood and secondary iron pyrites ...	Gulgong.
Mr. J. C. B. P. Seaver, M.P.	Silver ore	Maritoto Mine, New Zealand.
Mr. E. Stack.....	Ironstone concretion	North Willoughby.
Mr. Steel	Infusorial earth	Richmond River.
Dr. Storer	Cinnabar	Kilkivan, Queensland.
Mr. H. Tarrant.....	Bismuth ore	Near Bowen, Queensland.
Prof. R. Tate.....	Glaciated rock-surface	Black Point, St. Vincent's Gulf, South Australia.
The Malacca Diamond and Tin-mining Company.	Tin and diamondiferous wash, &c.	Company's property, Auburn Vale, Inverell.
The Princess Midas Gold-mining Company.	Auriferous quartz and copper ore	Company's Mine, Purnamoota, Barrier Range.
The Secretary, Castlerag Proprietary Silver-mining Company.	Quartz with galena and cerussite	Castlerag, near Deepwater, New England.
The Terrible Dick Silver-mining Company.	Silver-lead ores	Company's Mine, Barrier Range.
The White Rock Proprietary Silver-mining Company.	Silver ore.....	Company's Mine, Fairfield, Drake.
Torrington Tin-mining Company.	Tin ores	Company's Mine, Mole Tableland, New England.
Mr. T. Travathan.....	Steatite	Golden Crown Reef, Yalwal.
Umberumberka Silver-mining Company.	Silver-lead ores, showing native silver freely	Company's Mine, Barrier Range.
Vanderbilt Silver-mining Company.	Silver ore	Company's Mine, Captain's Flat.
Hon. E. Vickery, M.L.C.	Native bismuth, bismuth in quartz and granite, molybdenite and wolfram.	Kingsgate Bismuth Mine, near Glen Innes.
Victory Tin-mining Company.	Tin ore	Company's Mine, Barrier Range.
Mr. T. Waddell, M.P.....	Copper ore	New Burra Burra Copper-mine.
Mr. T. Waterhouse, M.A.	Fossil wood and leaves	Jubilee Claim, Rocky River.
Webb's Consols Silver-mining Company.	Silver ore	Company's Mine, near Emmaville, New England.
Webb's Silver-mining Company.	Silver ores	Company's Mine, Little Plant Creek, near Emmaville.
Mr. G. W. West	Silver ore, showing native silver	White Rock Silver-mine, Fairfield, Drake.
Wheal Australia Tin-mining Company.	Lode and alluvial tin ore	Company's Mine, parish Herbert, county Gough.
Wheal Victoria Tin-mining Company.	Lode and alluvial tin ore	Company's Mine, parish Herbert, county Gough, between Cope's Creek and the Mackintyre River.
Mr. F. Wheeler	Pipeclay and white shale	One mile from Riverstone Railway Station.
Mr. Wilshire, P.M.....	Gem and iron sand	Berrima.
Mr. W. H. Wilson	Jasper with veins of quartz, and auriferous lodestuff.	Bald Hills, Chesney's Lease, and Billygoe, Cobar District.
Mr. C. Wooller.....	Ferruginous quartz with a little pyrites ...	Wooller and Main's Bonanza King Mine, Undercliff Run, Wilson's Downfall, New England.
Do.	Graphite, topaz, tourmaline, quartz crystals, clear quartz, and quartz with graphite.	Undercliff Station, Wilson's Downfall, New England.
Messrs. C. Wooller, T. Pike, and J. Erskine.	Graphite	do. do. do.
Young Wallsend Coal-mining Company.	Coal ore obtained from a bore on Company's property.	Parish of Teralba, near Newcastle.
Zig-zag Coal-mining Company.	Block of coal	Company's Mine, Lithgow Valley.

APPENDIX No. 6.

Report to the Geological Surveyor-in-charge respecting Analyses and Assays of Minerals, Waters, &c., received in the Laboratory during the year 1888.

Department of Mines, Geological Survey Branch, Laboratory, Sydney, 21 February, 1889.

Sir,

I have the honor to furnish you with the following report respecting the various analyses, assays, &c., performed in the laboratory connected with the Geological Survey Branch during the year 1888:—

Owing to the large increase of mineral analyses, waters, assays, &c., over previous years, it was found necessary to apply for larger and more suitable accommodation, the present laboratory being much too small and totally unsuitable for such work.

At your suggestion larger premises were acquired, they being situated over the Ordnance Stores Department, Lower George-street.

These premises have been fitted up under my supervision, and are divided into as follows:—

Office and scales-room, including library.

Analytical Laboratory.—This room is fitted up with all the latest appliances necessary to carry out the various analyses required, it being connected with both gas and water.

Assaying and Furnace Room.—This room contains two large air coke furnaces, built on the same designs as those in use at the Royal School of Mines, London; also, two of Fletcher's large gas fusion furnaces, of which I cannot speak too highly, they being found capable of performing all that is claimed for them. The cupellation is performed in two of Fletcher's gas muffle furnaces, one large and one small being in continuous use. These also answer the purpose well, they being much cleaner than coke furnaces, and more readily regulated.

The laboratory is thoroughly stocked with apparatus, pure reagents, fluxes, &c., and is capable of turning out double the work if required, the whole establishment being connected with gas-lights should it be necessary at any time to carry on work at night.

The crushing and sampling of the various minerals sent for analyses and assay are performed in a room set apart from both the laboratories, thus doing away with much dust and dirt.

The ores are mostly crushed on two flat iron plates set in solid brickwork, with wooden sides, the pulverizing being performed by means of flat square hammers. These answer the purpose well, and this method of sampling is in my opinion one of the best, as large quantities of ore can be broken down and crushed in a short space of time, and the plates after each operation thoroughly cleaned.

On my application and your recommendation that an assistant be appointed who was thoroughly up in the analyses of minerals and the treatment of various ores, the appointment was offered to and accepted by Mr. H. P. White, F.C.S., that gentleman starting his duties on the 30th July, 1888.

5,245 numbered samples were received during the year for analyses and assay, they being all completed early in 1889.

10,123 assays for various metals were made, and 86 proximate and ultimate analyses of minerals, waters, &c. In addition to these analyses, many of the samples were submitted to a qualitative analysis with the view of ascertaining the composition of various minerals, &c., and a large amount of assays, &c., checked.

The following shows the increase of work from the year 1883 to 1888.

Year 1883	242 samples.	Year 1886	1,807 samples.
,, 1884	664 ,,	,, 1887	2,222 ,,
,, 1885	1,428 ,,	,, 1888	5,245 ,,

The following assays were made during the year :—

ANTIMONY.—Six samples.
BISMUTH.—Twelve samples.
COPPER.—Fifty-nine.
COBALT.—Six samples were assayed for cobalt, and in all cases the nickel estimated. These ores were manganese wads.
CHROMIUM.—One sample.
IRON.—Seven samples.
LEAD.—Twenty-eight samples.
MANGANESE.—Three samples.
NICKEL.—Seven samples.
TIN.—Thirty-nine samples.
TUNGSTEN.—One sample assayed for the percentage of tungstic acid.
TELLURIUM.—Three samples assayed for the percentage of tellurium, this element being combined with bismuth as tetradymite and montanite. Many qualitative analyses were made of the bismuth ores of the Colony, with the result that some were found to yield small quantities of tellurium.
URANIUM.—Two samples of iron ore were examined for the presence of uranium, and in neither case was that element found present.
ZINC.—One sample tested for zinc. This mineral was found to be a silicate of zinc, and from its description is probably willemite. I believe this is the first time this ore of zinc has been discovered in this Colony.
GOLD.—4,976 samples were assayed for gold.
SILVER.—4,973 samples were assayed for silver.

Particulars of these analyses will be found stated in the report of the Under Secretary for Mines, 1888.

The work performed in the laboratory this year has been exceptionally heavy, as will be seen on comparing it with that turned out for all previous years, a large amount of this no doubt being due to the silver boom at Broken Hill, Sunny Corner, Mount Costigan, and various other localities which have sprung up into existence during the last few years.

I think I may venture to point out the usefulness of the work performed, especially as far as the assaying of prospecting samples are concerned, as to my knowledge it has been the means of opening up many districts, which would have laid dormant for many years to come if the ground had not been thoroughly tested by assays made of samples taken from various parts of the lodes. In proof of this statement I may point out the Lewis Ponds District, Tuena District, &c., as also to the valuable find of cobalt ore near Carcoar, which Mr. T. W. E. David, Geological Surveyor of the Department, first identified and reported on, analyses and assays being made of various samples. This is a valuable discovery as hitherto the only supply of cobalt obtained in this Colony was from the manganese wads, yielding a poor percentage of cobalt, not in many cases sufficient in quantity to be profitably extracted. I do not think it is necessary for me to report more fully on the work performed in the laboratory, as the large increase and the amount of work shown in this report speaks for itself.

In concluding, I have to acknowledge the ready assistance given to me by the assistant, Mr. H. P. White, F.C.S., in conducting many of the various analyses, without whose help it would have been impossible to have carried them all out in time. I would further acknowledge the steady working capacity at all times displayed by the second assistant, Mr. A. H. Neilson, as also the others employed in the laboratory.

I have, &c.,
JOHN C. H. MINGAYE, F.C.S.
Analyst and Assayer.

The Geological Surveyor-in-charge.

APPENDIX No. 7.

Sir, Department of Mines, Geological Survey Branch, January, 1889.

I have the honor to submit the following progress report on the caves of New South Wales for the year 1888.

Since my appointment to my present position, eight months ago, I have had opportunities, when visiting the different caves on matters relating to their improvement and management, of noting the great and growing interest taken in these subterranean stores of nature's wonders. This is especially noticeable when some new cave or branch of an existing cave has been discovered and becomes known ; then follows what might be termed a "rush" of the district people to view the new wonders, which, having been locked up for ages, are suddenly thrown open to the gaze of man. Later on visitors from the metropolis and other places outside the district also find time to undertake a visit of exploration.

As is usually the case at all places of public resort, the caves are most crowded with visitors during holiday times, and at these particular seasons they form one of the principal attractions to the pleasure-seekers of the respective districts in which they are situated, the annual picnic to the caves in fact having become quite an institution. In addition to the local visitors, tourists from the other colonies and different parts of the world are to be met at the principal caves the whole year round.

The

The great majority of visitors approve of and express themselves well pleased with the precautions taken by the Government for the preservation of the caves and with the works already carried out for their improvement; but regret is often expressed at the acts of vandalism perpetrated at some of the caves when first discovered, and before they were brought under Government control and supervision.

During the past year the following were the principal discoveries of new caves, viz., at Jenolan, a small but very pretty branch of the Elder Cave (*See Appendix* A), and at Wombeyan, a separate series of spacious lofty and beautiful caves (*See Appendix* B). This latter discovery was the means of bringing the Wombeyan Caves into great prominence. In fact, for grandeur and the pureness and variety of the stalactitic formations they rival any other known caves in the Colony. A new cave was also discovered near Araluen; but this not yet having been explored, as it is full of water, no report on same can be made.

Following are particulars showing number of visitors, improvements, &c., at the different caves for the year 1888, viz.:—

Jenolan Caves.

Number of visitors, 1,829, being an increase on the number for the previous year. A new accommodation house, capable of accommodating about thirty visitors, has been completed, yet during the summer months both this and the old house are occasionally uncomfortably crowded. On this account the erection of another building will soon become a matter of necessity. The owner of the existing buildings and lessee of the ground, Mr. J. Wilson, cave-keeper, has notified his intention of carrying out this work at an early date.

Great improvements have been carried out at these caves in the way of making the outside surroundings attractive to visitors. Plantations and walks have been tastefully laid out and suitable trees, shrubs, and flowers planted. Altogether, it is intended to make the cave surroundings as attractive and pleasing to the eye as possible, in order that visitors, when not engaged exploring the caves, will be able to pass their time pleasantly in viewing the scenery and vegetation around. The improvements at the bathing-hole have been greatly appreciated, and consequently taken advantage of by the visitors. Everything that can be done up to the present in the way of improving the interior of the caves has been carried out. The result is that access to the different caves is now comparatively easy and cases of accident very rare. It is intended to put up a cottage for the engine-driver and new stables during the current year; and also to complete the erection of turbine on the creek, for driving the electric light, in place of the present engine, which work has been unavoidably held over on account of more urgent and necessary works having been carried out in the meantime which exhausted the available funds.

Wombeyan Caves.

Until quite recently, these caves did not attract much attention outside the district; but since the new discovery of the splendid caves lately reported on (*See Appendix* B.) great interest in them has suddenly sprung up. This is at once apparent on reference being made to the visitors' book, when it is noticed that latterly parties have arrived from almost all quarters and in much larger numbers since these discoveries than in any like period for years back.

The number of visitors for 1888 is about 400, being an increase of about 100 on the year 1887.

The principal improvements necessary for enabling visitors to explore the new caves with comparative ease and safety have already been carried out. A tender has been conditionally accepted for the erection of an accommodation house, and the work will probably be proceeded with without delay.

The old caves are both extensive and remarkable, and the surroundings of the whole very picturesque and pretty. Other general and necessary improvements at these caves will, I hope, be carried out in due course.

Wellington Caves.

Taking into consideration the grandeur of the Jenolan and Wombeyan Caves and their respective visitors' lists, the number of visitors to the Wellington Caves, 1,679, which do not compare with those named for beauty, is remarkable. This is, perhaps, accounted for by their proximity to the town of Wellington, and the fact that "the caves" are the principal resort for picnic and other parties from all quarters of this district. The visitors for 1888 numbered 600 more than those for the previous year.

Being within 5 miles of Wellington, an accommodation house is not required. A cottage for the keeper has recently been erected, and an open shelter-shed for the use of visitors is now in course of erection.

These caves are chiefly remarkable for the number of fossil bones found buried in them, some rare specimens of which have been unearthed by the keeper, who, when not otherwise engaged with visitors, is employed in the collection of them for the Geological and Australian Museums.

Yarrangobilly Caves.

These caves, situated in the coldest district of New South Wales, are mostly visited during the warmer months, the number for last season being about 200. They are remarkable as regards their extent and the massiveness of the various formations therein. Romantically situated on the Yarrangobilly River, the immense archway or entrance to the caves, and the limestone bluffs standing out in bold relief, together with the wild vegetation around, combine to form a most imposing and picturesque scene.

An accommodation and keeper's cottage having just been erected, it is expected there will be a large increase in the number of visitors this season, a great number of people having signified their intention of visiting the caves when accommodation was provided for them.

Abercrombie Caves.

The principal feature of these caves, as far as yet known, is the immense natural archway hollowed out of the limestone, the total length of which is 650 feet, and the average width 130 feet. The roof and sides are covered with fine stalactites of various lengths and colours of every shade. A variety of remarkable and pretty views are produced by these, especially when viewed from different points on the elevated terraces

terraces or platforms which project from the sides and run longitudinally for some distance through the arch. A number of caves can be entered from the archway, these mostly present the appearance of winding fissures, which can be traversed in some instances a great distance. Others, a little more spacious, are also met with, the floor of which consist of a thick bed of detritus. No pure stalactitic formations are found in them, they being very dirty, and present the appearance of having been inhabited by bats and wombats for ages.

On account of the gradual destruction of the stalactites in the archway by visitors, a temporary keeper, at a small salary, has been appointed to protect them as far as possible. By this means it is expected the whole will be preserved in their present and still interesting state.

The keepers of the different caves seem peculiarly well fitted for the positions they hold, and great credit is due to them both for their care and attention to visitors, and also for the interest taken by them in the work of exploration at their respective stations. This is especially the case at Jenolan and Wombeyan Caves, where the operations in this respect, carried out by Mr. J. Wilson and Mr. M. Chalker respectively, have been attended with great success; and thus the desires of the enthusiastic visitor to traverse still further these natural inroads into the earth's interior are constantly being gratified.

I have, &c.,

W. S. LEIGH,

Superintendent of Caves.

APPENDIX No. 7A.

Sir, Department of Mines, Geological Survey Branch, 11 June, 1888.

I have the honor to submit the following report on the new cave recently discovered by Mr. J. Wilson, Keeper, at Jenolan Caves:—

The cave is situated at the extreme end of the Elder Cave, the entrance being reached from this point by an almost vertical descent of about 20 feet over fallen rocks. To the casual observer there would certainly appear to be no outlet beyond this, as you are brought face to face with an immense overhanging rock, which runs up perpendicularly to a height of 30 feet, the front of which is covered with a crystal formation, from which depend a number of narrow shawls, giving it a very pretty appearance. The base of the projecting rock, which is about 18 inches above the ground, is literally covered with stalactites, and these, reaching to within a few inches of the floor of the cave, form a guard of thickly-studded spikes, and completely shut out from view the small aperture beyond, which, after minute examination and some rough work, proved to be the entrance or mouth of a new cave. After the removal of a number of the stalactites, the interior was gained by crawling underneath the overhanging rock a distance of 5 or 6 feet. The cave consists of a long narrow passage, having a total length of about 90 feet and an average width of 4 feet, and may be divided into two parts, as follows:—

The first part, *i.e.*, for a distance of about 50 feet from the entrance, has the appearance of an arched tunnel on a winding inclined plane, the incline being continuous and at an angle of about 45°. The ascent is made over a crystallized rocky formation, which forms the floor of the cave. The sides are well studded with stalactites, which gradually diminish in length as they approach the centre of the roof; stalagmites are not so numerous. To stand upright in this part of the cave, except in one or two places, is out of the question, as the height to the centre of the roof does not average more than 3 feet, and at two points the passage narrows to such an extent that only small openings are left, just sufficiently large to admit of an ordinary-sized man forcing his way through.

The second part of the cave is gained by making a straight drop of about 10 feet from the top of the incline or end of first part. Here the visitor finds himself in a lofty passage, about 40 feet in length and 4 feet in width; and in this small area nature has formed one of the prettiest caves of the whole group. It is really a varied collection of the finest specimens found in the other principal caves. In it are grouped grand stalactites and stalagmites of various lengths and shapes. Columns in clusters, over 10 feet in height, and shawls, rivalling in beauty those formed in the Imperial Cave, but of a different shape, in that they are not flat, but rather of a gouge-shaped section and pointed, are grouped in great variety; in some cases stalactites form the centre of shawls, giving them a rare appearance. Like those of the Music-hall in the Lucas Cave, the stalactites and shawls in this cave, when struck, give out various notes, and from their great number different peals could be rung at the same time, and almost any note sounded. A bed of crystals, having a wonderful combination, similar to the Fairies Retreat in the Imperial, is also found in a cavity on the left-hand side below the level of the floor. A feature of this cave is the remarkable whiteness and transparency of the different formations. To see this cave by the aid of the magnesium light would well repay the visitor for the trouble experienced in reaching it. To open up the cave thoroughly would mean a great expense, and also the destruction of a number of the prettiest specimens; in its present state it is easier to explore than some parts of the Elder Cave, through which a person must first pass before arriving at the new cave. Also, as the Elder Cave is noted for its difficult passages and small openings, the rough exploring of which a large percentage of the visitors enjoy, the new cave is only just in keeping with the rest of the Elder Cave, and the visitor who goes through the Elder thoroughly will not mind the little extra exertion attendant on visiting the new cave. I would therefore suggest that for the time being it be left in its present state, *i.e.*, with openings just sufficiently large to admit one person at a time.

Small cave adjoining.—A few yards to the left, and on the same level as the entrance to the new cave referred to, is a small opening in the rock just large enough to enable one to force the body through. This proved to be the mouth of another cave, but of much smaller dimensions, being only about 25 feet long by 12 feet wide, and 2 feet in height to the centre of the roof, which is arched. The bed of the cave is of the same crystal rock formation. All the formations are in miniature compared with the other cave. It has innumerable small stalactites studding the whole of the roof, all of which appear very clear and fresh and in the course of formation. Small columns are ranged all round the sides, and there are a few in the centre, but none of them being more than 1½ inches in diameter, a number of miniature shawls, similiar in appearance to those of the Imperial Caves, are also found. On the left-hand side, and near the entrance, is a very pretty coral-like bed, with numerous basins and other formations. Above this bed, and in the immediate vicinity, the stalactites assume a very peculiar and altogether different form to the rest; instead of being pointed, each is tipped with a lime crystal, perfectly shaped, and glittering like a diamond, and

and this being about twice the width of the stalactite, has the appearance of having been stuck on the end of it. This cave can only be seen to advantage by one person at a time, and in a recumbent position, with the head only inside the cave. In this way the whole can be seen at a glance. By the aid of the magnesium light a very pretty effect would be produced, especially when directed on the coral-bed.

I have, &c.,

W. S. LEIGH,

The Geological Surveyor-in-charge. Superintendent of Caves.

APPENDIX No. 7 B.

Sir, Department of Mines, Geological Survey Branch, 7 September, 1888.

I have the honor to report, as requested, on the new cave recently discovered by Mr. M. Chalker at the Wombeyan Caves, near Goulburn.

The entrance, a round opening about 2 feet in diameter (which it is proposed to enlarge), is situated on the face of a rather steep hill, and is about 200 yards north-west of the mouth of the old cave, and 500 yards from proposed site of the cave-house. After passing through the entrance into the new cave, a perpendicular descent of 25 feet is made, and then a further descent for a like distance on an incline, the passage progressively increasing in size the lower you descend until the bottom is reached, when it opens out into a large chamber about 50 feet by 30 feet, and averaging 10 feet in height. This chamber contains a fine collection of stalactites and columns, &c., and may be termed the "Hall," as the small caves radiate from it in three different directions.

The first branch to the right of the entrance runs about due north about 100 yards in a zigzag line on a comparatively level floor, and averages about 10 feet in width and 12 feet in height. The floor for 20 or 30 feet from the entrance is remarkably pretty in its formation, resembling a stream of crystals overflowing from a large basin, the stream below the main basin being composed of innumerable miniature basins in terraces, each basin being filled with a pure white coral-like formation. Other parts of the floor are covered with spherical stalagmites resembling snowballs. The stalactites in this, as also in the other branches, are grouped more regularly than is usually the case, as they run in almost parallel lines across the limestone roof. These, as well as the other formations, are remarkable for their snowy whiteness and transparency, the only exception being an occasional nest of stalactites resembling terra-cotta in appearance, and so lending a pleasing variety of colour. A very singular feature here is a large column of stalactites having small stalactites, varying in size from the thickness of a needle to half an inch in diameter, projecting at all angles round its base, the whole resembling very much the trunk of a tree with the young shoots sprouting up all round.

The middle branch cave, by far the largest, consists of a chain of chambers, ranging from the size of a small cabin to that of a lofty cathedral. These are formed by immense rocks falling and wedging themselves together in all shapes, which necessitates the making of a number of steep ascents and descents. The chambers are well filled with all the prettiest formations met with in other caves. An instance is also observable of a large column formed by a number of stalactites having been naturally broken across at a point about half-way between the floor and the roof, the broken surfaces being separated from one another by a space of about 2 inches, so that the upper part of the column remains suspended from the roof.

A further extension of this cave was discovered during my inspection, and I may safely say it is the crowning discovery as yet in the whole cave, being a roomy chamber at the extreme end (as far as yet known) of this branch, the floor of which might appropriately be named the "Crystal Lakes," the so-called lakes being a large number of pure white and transparent basins formed into a succession of terraces, each basin being partly filled with minute crystals having the exact appearance of water, the illusion only being discovered by touch. To see this formation alone would repay the visitor for the trouble experienced in reaching it.

The third branch to the left of the last described is comparatively small, and consists of a narrow winding passage, at the end of which is an almost circular chamber, being the main part of the branch. It contains a good collection of stalactites and stalagmites, and also some fine coral-like beds, the floor being of a crystallized dripstone. Fossilized bone deposits are found in some parts of the cave, a few specimens of which I brought down for examination. The roots of the kurrajong tree growing 50 feet overhead appear through the roof of the cave, and seem to take root again below the floor, some of them having a thick crusting of lime. This cave in some respects resembles very much the Imperial and Lucas caves at Jenolan, the former in the fineness, transparency, and delicacy of its stalactitic structures, and the latter in some of its spacious and lofty chambers; and I may safely add that some of its formations, a proper description of which it would be difficult to give, if seen by the aid of magnesium wire or other such light, would be proved to be quite equal to some of the best found at the far-famed Jenolan Caves.

I may add that this discovery cannot be over-estimated, and it adds immensely to the interest of the Wombeyan Caves for those desirous of studying the wonderful and beautiful phenomena of the ancient subterraneous river channels hollowed out of the massive marble limestone.

In conclusion, I may state that as time and circumstances permit further explorations will be carried out, it being my firm belief that other large chambers exist connected with this cave.

Recommendations with regard to improvements and opening up of the newly-found caves are submitted on another paper.

I have, &c.,

W. S. LEIGH,

The Geological Surveyor-in-charge. Superintendent of Caves.

SUPERINTENDENT OF DRILLS' REPORT.

Superintendent of Drills to The Under Secretary for Mines, reporting on the working of the Diamond-drills and Water-augers for the year 1888.

Sir, Department of Mines, Diamond-drill Branch, Sydney.

In submitting my annual report on the working of the Diamond-drills and Water-augers for the year 1888 I do myself the honor to attach to said report the following appendices:—

Diamond-drills.

Appendix A.—Return showing the locality, strata, depth bored, percentage of core extracted, value of diamonds used during the year, and rate per foot, exclusive of office salaries, store wages, and rent; also Superintendent of Drills' travelling expenses.

Appendix B.—Summary of diamond-drills, showing the number of feet bored, total working cost to the Department, average cost per foot, and amounts receivable for the year 1888.

Appendix C, *Nos.* 1 *to* 14.—Sections of borings during the year 1888.

Appendix D.—Return showing the expenditure of Clarence Siding bore, without office expenditure.

Appendix E.—Return showing the total expenditure of Clarence Siding bore, including office salaries, &c., &c.

Water-augers.

Appendix F.—Return showing the locality, depth bored, and rate per foot, exclusive of office salaries, store wages, and rent; also Superintendent of Drills' travelling expenses.

Appendix G.—Summary of water-augers, showing the number of feet bored, total working cost to the Department, and average cost per foot during the year 1888.

Appendix H, *Nos.* 1 *to* 6.—Sections of borings during the year 1888.

Appendix I.—Map of New South Wales, showing positions of wells and bores, as published last year, with additions.

Appendix J.—Index to wells and bores.

Appendix K.—Balance-sheet for diamond-drills.

Appendix L.—Balance-sheet for water-augers.

During the year the diamond-drill work has proceeded more satisfactorily than in any previous years, since diamond-drills were purchased and worked by the Government of New South Wales. This has been partly due to the better class of engineers and men employed at the drills. Several of the older ones who had been on the drill work for some time were discharged by me, principally through their inattention and carelessness, thereby hindering others from doing a fair day's work; others were discharged for neglecting work through drink.

Several important bores have been put down during the year, viz., No. 11 drill, at Broken Hill, was down at the end of the year 1,122 feet; No. 10 drill, 1,101 feet 4 inches; No. 4 drill, at Woodford, 1,656 feet 6 inches; Woodford (second bore), 685 feet 1 inch; Lochend (Cockle's Creek), 864 feet 9 inches. A bore was completed at Snake Creek 997 feet 6 inches, at Hexham Island 702 feet, and at Joadja 365 feet 1 inch; and No. 2 bore at the same place was 382 feet in depth. Hence it will be seen that boring has reached a greater average depth during the year than in any previous years, with the same number of drills at work, the size of bore being not less than 3 inches. Six diamond-drills were in the field at the end of the year, viz., No. A, at Joadja (Mittagong); No. 3 drill, Lochend (Newcastle District); No. 4 drill, Woodford (Blue Mountains); No. 8 drill, Fassifern, near Lake Macquarie; No. 11 drill, Broken Hill; and No. 13 drill, Ash Island. No. 7 drill was, during part of the year, employed at Clarence siding, and brought into the Drill stores.

The total depth bored by diamond-drill during the year is 8,292 feet 3 inches, or 5,194 feet 10 inches more than in the year 1887.

The average cost per foot of boring, exclusive of office salaries, store wages, and rent, also of Superintendent's travelling expenses, is 8s. 11¾d., or 9s. 1¼d. less than during the year 1887.

The total working, or field cost, exclusive of office salaries, store wages, and rent, also of Superintendent's travelling expenses, amounts to £3,724 9s. 10d; and the total earnings during the year amounts to £8,067 19s 11d.; but the total cost, inclusive of all office salaries and all other expenditure in connection with the Diamond-drill Branch, amounts to £4,564 8s. 2d., or at the rate of 11s. per foot.

The loss of wear and tear of diamonds in the bore-hole, and the cost of diamonds at per foot bored, has been less than during the year 1887. In the year 1887 the loss and wear and tear of diamonds at per foot amounted to 1s. 6$\frac{1}{16}$d., but during the year 1888 the loss was 1s. 0$\frac{5}{16}$d, or 6$\frac{3}{16}$d. less per foot than in 1887.

Percentage of core saved during the year is 83·32 per cent., against 64·0 per cent. during 1887, or an increase in the percentage of core saved of 19·32 per cent.

After deducting 5 per cent for wear and tear of diamond-drill plant, there is still a profit remaining showing that the working of the Government diamond-drills is no loss to the State, but on the contrary, that while they are worked without loss they confer an immense benefit to the whole community, by their assistance in the development of the extensive mineral resources of our rich Colony.

Results would have been still better financially had it not been for the expenditure sustained through losing the core-barrel at Clarence Siding, and the attempts to recover the same.

The clerks of the Diamond-drill Branch, Messrs. J. S. M'Neil, R. Dalrymple, and D. M'Culloch, and the storekeeper, Mr. J. S. Leigh, have greatly assisted me in the object aimed at, namely, by simplifying all work in connection with the Diamond-drill Branch, to make it more practical and effective, reducing expenditure and increasing the earnings of the diamond-drills.

A heavy extra addition has been added during the year to the work of the Diamond-drill Branch, inasmuch as the whole of the clerical work in connection with the Prospecting Vote has been transferred to this Branch, and entrusted to Mr. D. M'Culloch, who, with his usual energy, performed his duties very satisfactorily.

satisfactorily. Through Mr. M'Culloch not being able to pay so much attention to the clerical work in connection with the drills, a great deal of extra work has been thrown on and performed by Mr. J. S. M'Neil, the Chief Clerk of the Branch, who also deserves especial credit, in conjunction with Mr. M'Culloch.

In conclusion, I beg to state, that although the Diamond-drill Branch has been self-supporting, the rates charged to the public for the use of drills has been gradually lowered ever since the supervision of said drills was placed under my charge, and I hope to be able to recommend in the near future still more favourable conditions for those who use the drills than have been obtained hitherto.

Water-augers.

In the year 1887 I proceeded from Bourke to Wanaaring and Milparinka for the purpose of selecting bore sites for artesian water, so as to connect the important district of Mount Browne, and even as far as Cooper's Creek, with the Bourke railway, by a permanent water supply. The whole of this district both east and west of the Paroo, stretching towards Cooper's Creek, is of Cretaceous formation; hence there is almost a certainty that artesian water will be obtained. The Government of New South Wales have led the way, and to the Department of Mines is due the credit of having proved by practical results that artesian water in unlimited quantities can be obtained by boring in the Cretaceous formation; and I am glad to note that advantage of such information has been taken, obtained at the Mines Department, by Mr. Longhead, the Canadian Water-borer, Mr. Barton, and others, who have, since such information was obtained by them, been successful in artesian water-boring. The first bore marked out by me at the 101½ mile, about 11½ miles from Wanaaring, east of the Paroo, has been successful, inasmuch as at the depth of 851 feet artesian water was tapped, and at 965 feet the water increased, flowing over the surface at the rate of 22,464 gallons per day. Section of bore was given in last year's report. Eight new sites were marked out by me between Wanaaring and Milparinka, viz., 15 miles from Milparinka, 30 miles, 46 miles, 61 miles, 76 miles, 91 miles, 160 miles, and 121 miles. The latter site is 17 miles west of Wanaaring. Boring operations were commenced during the year on three of the sites west of the Paroo, viz., the 121 mile, 106 mile, and 91 mile from Milparinka. Owing to the severe drought, and in consequence of the great scarcity of water and grass, the boring at the 91 mile had to be temporarily abandoned, but should the drought break up it is intended to recommence operations.

The 106-mile bore was at the end of the year 655 feet in depth, and had passed through several hard layers of quartzite and limestone. Water of fair quality was tapped at the 126-feet level, but supply was small. I expect artesian water to be tapped at the depth of about 1,000 to 1,100 feet.

The 121-mile bore had reached the depth of 502 feet at the end of the year. A small supply of fresh water was tapped at the depth of 81 feet. This boring has been very hard, and progress has been greatly retarded through the severe drought. In the face of this the price at per foot bored during this year is lower than that during the year 1887.

The Tiffin and Wright and Edwards boring machines or water-augers are very slow in deep and hard boring in comparison to the Canadian wooden rods boring plants, which were introduced into New South Wales by Canadians during late years. Hence I recommended, and which recommendation was approved of, that boring, with the exception of the three bores now in progress on the Wanaaring-Milparinka route, should be done by contract with the Canadian plants, which, although not cheaper at the rate of per foot than the boring done by wages work under my supervision, will be performed in shorter time.

A bore was also started in the Cretaceous formation about 3½ miles north of Tibooburra, for the purpose of a supply of artesian water, several wells having been sunk in the granite and slate formations in the immediate vicinity of Tibooburra without beneficial results. The bore was commenced about half-a-mile north of Scott's well, near a stock route. Fresh water was tapped at a depth of 150 feet, which rose to 108 feet from the surface. At 233 feet from surface the supply increased very considerably, but as the water supply for the inhabitants of Tibooburra, including the Works Department well, failed during the recent severe drought, it was thought best to discontinue boring, and hand over the bore to the Public Watering-places Branch, for the purpose of supplying the public with water, which has proved a great boon not only to the inhabitants of those districts, but others who travelled through—in fact, it being about the only water available man and beast had to depend upon in that particular part to tide them over a severe and protracted drought.

No. 2 bore was started 300 yards north of No. 1 bore; but as the people of Tibooburra had now a good supply of water it was decided to temporarily move the plant to Milparinka, for the purpose, if possible, of obtaining artesian water there.

It will be seen by Appendix F that the cost per foot of boring, without carriage, is 19s. 4d., but with carriage it is £2 3s. 2⅓d. per foot. This great item of carriage was caused through the plant having to be brought by teams from Hay to Tibooburra, fully 500 miles, at a cost of £407. Had it not been for this heavy item of carriage, the cost per foot of the whole boring with water-augers would have been very considerably reduced.

Total number of feet bored, 1,962, or 604 feet 10 inches less than during the year 1887. This is due to the hard strata met with at the Wanaaring road and the severe drought.

Total cost of boring, at per foot, inclusive of carriage, but exclusive of office salaries, £1 4s. 4¼d.; but inclusive of all office salaries and all expenditure to the Government, is £1 7s. 6⅓d., or 5s. 2⅞d. more than in the year 1887. This increase is caused, as already stated, by the high carriage in bringing the boring plant from Hay to Tibooburra, and the loss of time sustained in supplying the public with water at Tibooburra, before the bore was handed over to the Public Watering-places Branch.

The cost of boring on the Wanaaring to Milparinka road, exclusive of carriage and office expenditure, was 16s. 7½d. per foot, or 8s. 2¼d. per foot less than in 1887; but including office and all other expenditure, it was £1 4s. 7½d. per foot.

I have, &c.,

W. H. J. SLEE, F.G.S.,
Superintendent of Drills.

EXPENDITURE in connection with the recovering of Core-barrel at Clarence Siding, inclusive of all office salaries, store wages, &c.

No. of drill.	Locality.	Wages.	Carriage.		Travelling expenses.	Repairs.	Diamonds used.	Stores issued.	Fuel, water, and sundries.	Proportion of balance of general account.	Proportion of balance of general stores issued.	Office salaries.	Store wages.	Rent.	Superintendent of Drills' travelling expenses.	Total	Remarks.
			Railway.	Other.													
		£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	
7	Clarence Siding....	398 12 0	8 13 8	1 8 8	4 10 3	13 16 0	86 19 3	28 18 2	13 3 0	47 17 8	1 8 1	83 4 10	32 13 3	22 5 3	4 3 9	747 13 11	

The boring operations at Clarence Siding have been a great trouble and anxiety to me. As the core-barrel had several times been lost by the late engineer Goodare, I discharged him and put engineer Symons in charge for the purpose of discovering the lost core-barrel. Several obstructions, such as long and short bolts and short lengths of rods (no doubt put in by some person unknown) were brought to the surface; but finding the expenditure to be too much, I recommended the withdrawal of the drill, which was done.

J.

WELLS.

Nature of surrounding country.	Strata.	Remarks.
N., granite ridges; E. S., and W., ridges and plain.	Black soil, granite, rotten slaty bottom.	This well is only used in time of drought.
Forest, plain, and ridges, chiefly white gum timber.	Black soil, rotten granite and pipe-clay.	Water stands 5′ from the top in wet seasons.
N., barren ridges; E. and W., do.; S., forest and ridge.	Top brown soil, then basalt to bottom	
. . . . .	... .	In a wet season overflows.
Black soil plains and open forest country.	Black soil 15′, basalt 6′.	
Undulating, ridges running into rocky mountains.	Black alluvial soil, pipeclay, and slate rock.	The well is believed to be down to the level of river water. The water is hard, but used for household purposes.
Low ranges, with creeks running to river.	Soft slaty rock..	Sunk on a low ridge, believed to be down to level of river water; used for household purposes.
Salt bush plains, lignum, S. side ...	. . ..	Salt at 80′; got much better as we went deeper; last spring struck almost fresh, 100′ open shaft, 89′ bore, 3½″ diameter.
,, ,, ...	Gypsum, sandstone, and clay .	Salt at 50′; improved slightly when bored; open shaft 100′, bore 62′.
Salt and cotton bush, dark clayey soil.	Alluvial	Selection of site for well a matter of chance in some parts of Riverina. Good stock water is obtained at a depth of 100′ to 130′; in other parts two wells within 1 mile of each other salt water was obtained; midway between another shaft was put down and good water obtained.
,, ,, .. .	,,	
Broken plains	Alluvial, 120′ pipeclay and drift 30′..	This well is in a sandy box swamp, and gives one of the best supplies in the district; other shafts have been tried in the Mulga country and failed to strike water; two of them sunk 220′.
S., mallee and porcupine grass; W., N., and E., black oak.	Loamy soil 15′, drift sand 55′.	
Pine ridges, mallee, porcupine grass, and saltbush.	... .	This well is covered by the Murray water when in flood.
Red sandy soil or clay on saltbush plains. Red sandy soil in belar or oak scrub Red sandhills in mallee .. .. Red clayey soil in box flats .. .. .. White clay flats, with box timber	. . . .	One well on Gall Gall, C, we pumped for a considerable time in the summer, hoping the water would improve, but it did not do so. Have several soakage wells, with good stock water, all at shallow depths of not more than 20′, all sunk in the beds of dry creeks where the flood waters back up, and all within 5 miles of the river; the supply is not good, and are only made useful by making large chambers and drives at bottom of shaft.
Salt and cotton bush, light scrub, and undulating.	Hard clay, with gravel 100′, alluvial 80′, pipeclay and mica 30′, soft sandstone rock and clay 70′.	Open shaft 200′, bore 80′. This well is to be sunk to full depth of bore, when the supply is expected to increase. A Tiffen borer was used.
Sandhills and oak ridges, like decomposed limestone.	Pipeclay and drift	A good many trial shafts have been sunk on this run, salt water being struck in drift under 100′ in all of them.
Open salt and cotton bush plains, with oak clumps, &c.	Alluvial 82′, fine drift 18′	Have sunk fifty trial shafts on different parts of run, from 80′ to 100′; salt water struck in all; unfit for use.
Open saltbush plains, with oak ridges, &c.	Clay throughout	50,000 gallons per day have been obtained, but the supply seems practically inexhaustible; slightly brackish.
.. ,, ,,	Alluvial 20′, fine drift 58′.....	Cool, cloudy weather seems to increase the supply.
Sandstone ridges; red clay flats; mulga pine; beefwood.	Alluvial gravel, cement and sandstone rock.	There is a 30′ drive in this well.
Pine sandhill; mulga and belar ridges	Gravel and cement 100′, sandstone 60′ cement and blue clay 40′.	,, ,, ,,
Loamy flats, rocky ridge, and malee sandhills.	Loam, clay, and cement 167′, drift 8′	8 miles from this well a trial shaft was sunk 188′; no water struck; half-a-mile from the above well a shaft 6′ x 3′ was sunk to a depth of 96′, then a bore 130=226′, no water being struck; boring still going on.
Box flats and pine sandhills.... ..	Alluvial 100′, sandstone flags 70′, water in blue clay.	
Red clay flats and pine sandhills ...	Cement and sandstone.	
Open mulga, with ridges of malee ...	Hard sandstone 69′, chalk 1′, hard sandstone 70′.	The sandstone rock in this well required to be blasted; it is intended to put a drive in this well to increase the supply.
Ironstone rises; box flats; mulga; &c.	Alluvial pipeclay, cement, and sandstone rock.	
Red flats and pine sandhills	Pipeclay and cement, hard sandstone.	
Undulating	Blue slate	This well was sunk before present owners bought station. There are two long drives at bottom, not required for use.
Undulating barren and box flats and ironstone rises.	Cement and hard sandstone, water in sandstone.	
Undulating ridges; volcanic hills . .	Red clay 3′, red sandy drift 4′, coarse red drift 6′, red clay 7′, white sandy rock 10′, pipeclay 3′, white sandy rock 12′, fireclay 4′, white sandy rock, with occasional thin strata of fire and pipe clay 51′.	This well is not yet finished.
... .	Hard sandstone, rock, cement, quartz, and gravel.	
. ...	Quartz, gravel, and hard sandstone..	A shaft put down here would make 6,000 gallons per day
. ...	Hard slate, quartz, and hard rock, &c.	
... .	Pipeclay and cement	This well is in the bed of Tiltagoona Creek.
. . . .	....	Government well condemned as being unfit for stock. A well half-a-mile to the N.W., good water, supposed to be soakage.
Cottonbush, mulga rises, and sandstone hills.	Pipeclay, cement, and layers of drift	This well has never been used for stock purposes, owing to a 10,000-yard tank full of water in the vicinity.
Undulating, red, volcanic hills and mulga.	.....	Not required to be used.
Sandy pine ridges, then open box flats	Sand	
Buthar and pine timbers, small clear patches of saltbush.	White loose sand	This well was cleared out in the dry time, and it watered the whole of the stock on the place in the summer of 1881 and 1882.

Number of Well.	County.	Parish	Name of Run.	Depth of Well.	Size of Well.	Water struck at feet from surface.	Water stands at feet from surface.	Yield per day in gallons.	Quality.	Height above sea.

Nature of surrounding country.	Strata.	Remarks.
Open, red and black soil	Sand	This well is a simple sand-pocket, surrounded by clay, and catches the drainage of the adjacent hard ground; the supply is always limited, and if sunk too far salt water is struck.
		Fifteen bores by machinery on various portions of this station struck water in each of the first sand-drifts met with; further attempts at finding fresh water abandoned.
Very level, loamy soil		The only fresh-water wells here are small sand wells, no springs being tapped; would do for household purposes, or (say) 1,000 sheep.
	Sand	There are nine sandy wells, with only a limited supply of splendid clear fresh water; not sufficient to water any large number of stock; might be made available by having a receiving tank kept full for use in troughing; they are soon pumped dry, and take a considerable time to fill again; they are all in sand hollows, and fresh water is indicated by gum-trees growing in vicinity; if sunk too deep a clay bottom is struck, and continued through that for any distance salt water would be struck.
Belar and saltbush plains, loamy and sandy soil.		
Sandy basins, box, coolabar, &c.		
,, ,,		
Pine scrub and box flats		
Same		
Sandy soil, pine scrub, and saltbush		
Red soil, N.W. plains; S.E. pine ridges.	Drift sand.	
Red soil, ridges, pine and coolabar		There is a vein of country running from the Moonio River down to the lower Narran Lake, between the Narran and Barwon Rivers; it consists of sandy basins and low pine ridges, where water can be obtained at various depths from 20′ to 40′, in some places salt, in others fresh; on a portion of Llamillo Run there are two wells 30′ apart, one fresh wholesome water, the other barely fit for consumption; the supply influenced by the rainfall.
	Granite	Pumped with an Althouse windmill; waters 20,000 sheep.
	,,	Pumped 1,500 gallons per hour; mill and pump never without water.
	Slate	Boring being continued, a Wright and Edwards' machine being used.
		Rises 26′ above surface in tube.
	Sandstone 40′, clay 24, clay and sand 130′,	Water also struck at 22′, 60′, 64′ 6″, 66′, and 69′, all salt.
	Sandstone 20′ 9″, clay 39′ 3″, clay, sand, and drift 138′.	Salt water struck at 12′ and 24′. Fresh water at 31′, 32′ 6″, 45′, 53′, and 55′. Salt water struck at 198′, hard sandstone and conglomerate, and rose to 38′ very quickly.
	Clays 20′, mud and drift, 43′, clays 20′, sandstone, 31′.	Salt water struck at 20′; a large supply. Fresh water at 80′, rose 21′ over surface,
	Clay and sand 82′, sandstone 105′, shale, granite, pebbles, rock, &c., 14′	Fresh water struck at 80′, 100′ rose 8′ over surface, 80 gallons per hour; 107′, rose 8′ over surface; 122′ 6″ over surface, 600 gallons per hour; 192′ rose 10′ over surface.
		Salt water struck at 110′, rose to within 23′ of surface; 349′, brackish, rose 3′ over surface; 427′, fresh water, rose to 3′ 3″ over surface.
	Clay and gravel.	
	Clay and sandy loam 20′, drift 5′.	Large supply.
	Sandy loam and clay 20′, drift 3′.	
	Clay, sand, and gravel.	
	Clay and gravel 57′, rock 3′.	
	Sand and gravel	Very good water.
	Loam, clay, gravel, and boulders.	
	Sand, clay, and gravel.	
	Clay, drift, and clay	Large supply.
	Sand and gravel, clay and rock	Water tapped at 32′, and at 70′; large supply.
		Plentiful supply.
	Clay, sand, and drift	Salt water at 80′; brackish, 142′; fresh, 174.
	,, ,, ,,	Salt water at 80′; brackish, 141′; fresh, 164.
		150 gallons per day, after striking the water expected to increase to 1,000 gallons.
		Strong supply. Coal struck at 184′.
Black soil, flat	Soil 18′, rock 60′	Short supply.
	Red soil 77′, 5′ sand	Water in sand inexhaustible.
Level plain	Soil 34′, sand 1′ 8′, marl 45′ 4″	Water in gravel good. At 80′ kangaroo bones and bivalve shells.
	Pipeclay at surface. Unknown.	Overflowed once in consequence of ringbarking.
	Black soil 40′, stones, &c., 10′, red soil 30′, cement 5′, gravel, &c., 51′.	
Open plain	Loam, 45′, drift, 15′.	Good water.
,,	Black soil, 12′, clay and gravel, 16′, sand, 12′.	Water abundant.
Ironbark country	Black soil, 65′, sand, 5′	Supply excellent.
Black soil	Black soil, 7′, rotten rock, 64′	Excellent and good supply. Came through fissure in rock.
		Water supply in sand abundant.
		Bore, 75′ 10″ at bottom of shaft—Cobar Copper Mine. Water in slate.
	Shale, conglomerate, sandstone and coal seams.	
	Turf, sandy clay, gravelly clay, loose and compact sand and chalk.	Water struck at 47′; small supply; 116 ft. larger supply; at 153′ abundant supply, all fresh.

APPENDIX J—*continued.*

INDEX to Wells and Bores—*continued.*

No.	Locality.	District	Strata	Remarks.
200	Youngarrina Springs.	Albert	..	Well 6 ft. deep; estimated 800 to 1,000 gals. good water per diem.
201	M'Crae's Well, Baongum-yarra.	,,		Well 27 ft. deep; 8 or 9 ft. in rock; good supply for stock; too brackish for domestic purposes.
202	Buckley's Well, Yantabulla	,,	Bottom on sandy drift	Well 40 ft. deep; water fairly good, but slightly impregnated with soda; daily yield about 150 gallons.
203	Rudder's Well, Warroo Station.	,,		Well 20 ft. deep; water rose 10 ft.; very salt.
204	Tyngamie Spring	,,		Well 40 ,, excellent water; estimated at about 10,000 gallons per diem.
205	Brindingabba, Moolort Block.	,,		Well 94 ft. deep; watered 12,000 sheep through drought; excellent quality.
206	,, ,,	,,		Well 120 ft. deep; water excellent; rose 90 ft. in shaft.
207	Kilfera, on Kilfera Block	,,		Well 150 ,, supply 100 gals per diem; good water.
208	Kenmare Block	,,		Well 38 ,, bore 197 ft.; water salt.
209	,,	,,		Well 35 ,, water very salt; very bitter; no supply.
210	Kilfera Block	,,		Well 100 ,, said to contain powerful mineral poison.
211	Polygonum Hut	Darling		On road Booligal to Wilcannia.
212	Barringan Well	Albert		On the "Border Run."
213	Wanganilla	Murrumbidgee		On South Wanganella Block.
214	Pretty Pine	,,		Lower Denilquin Run.
215	Beefwood Well, on "The Wells" Block	County Yungnulgra, Albert District.		
216	New Well, on Block Byjerk South, Paroo River	County Landsborough, Albert District		
217	Well	County Yungnulgra, Albert District.	Coolawundy	Well 157 ft. deep; good water.
218	Well, Block Germono East	County Yungnulgra	Coparto	Well 50 ,, water rises to 20 ft
219	Junction Well, Germano East	Albert		Well 80 ,, good water rises to 50 of surface.
220	Danbery Well, Danbery North Block	,,		Good stock-water
221	Minamithtoo Well, Dil koorba North Block.			300 ft. deep; good water rose to 65 ft. from surface.
222	Parkungi Block	Albert		298 ,, good water rose to 80 ft. from surface.
223	Well		Poolamacca	236 ,, good water.
224	Thackaringa Well	Albert		236 ,, ,,

1889.

NEW SOUTH WALES.

CHURCH AND SCHOOL LANDS.

(REGULATIONS FOR THE ISSUE OF GOLD MINING AND MINERAL LEASES.)

Presented to Parliament in pursuance of the provisions of the Church and School Lands Mining Acts of 1888 and 1889.

Department of Public Instruction,
Church and Schools Land Office,
Sydney, 8th October, 1889.

REGULATIONS RELATING TO GOLD-MINING LEASES IN THE CHURCH AND SCHOOL ESTATE.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to make the following Regulations relating to gold-mining leases, in the Church and School Estate, in pursuance of the powers conferred by the Church and School Lands Mining Acts of 1888 and 1889.

J. H. CARRUTHERS,
Minister of Public Instruction.

To whom Authority to Prospect may be given.

1. The Minister may grant to any holder of a miner's right or mineral license, or to any number of persons conjointly, each being the holder of a miner's right or mineral license, an authority, in the form of the schedule hereto numbered 1, to enter upon and search for gold in any leased or unleased Church and School land other than land already held under lease for mining for gold or other minerals. Provided always that in the event of two or more applications being received at the same time for authority to prospect the same land, priority of application shall be determined by lot as provided in Regulation 6. The holder of an authority shall within seven days after the date thereof define the boundaries of the land to be prospected, by erecting at each corner of the land referred to in such authority posts 3 inches in diameter and projecting not less than 3 feet above the surface. Each such post shall be set in an ⌊ trench 6 feet long and 9 inches deep, which shall indicate the general direction of the boundary and one of such corners, or a tree adjacent thereto shall have a board or metal plate affixed, having legibly written thereon: "Held under prospecting authority by [*name to be inserted*]."

Protection to works to be provided.

2. The holder of a prospecting authority will be required to protect all shafts and dangerous places, and works sunk, made, or occasioned by or in his behalf, by fencing off or filling in all such shafts or workings prior to abandoning them and before commencing any further mining operations under such authority.

In carrying out the objects of such authority all works must be conducted so as to prevent any damage to the lessee other than shall be unavoidable, and the Minister may, on non-fulfilment of these conditions, declare such authority as cancelled.

Fee to accompany Application for Prospecting Authority. Area, &c., to be defined.

3. The fee to accompany each application for a Prospecting Authority, or for any renewal thereof, shall be at the rate of 5s. for any area not exceeding 5 acres; 10s. for any area exceeding 5 acres and not exceeding 10 acres; and 20s. for any area exceeding 10 acres and not exceeding 25 acres; and such applications must describe the locality and area upon which it is proposed to prospect.

Duration of Prospecting Authority

4. The period for which a prospecting authority shall be in force shall not exceed three calendar months, commencing from the date of issue. Prior to its expiration, the holder thereof must either obtain a renewal of such, which may, at the discretion of the Minister, be granted for a further period of three months on production of satisfactory evidence that prospecting operations have been carried on in a *bonâ fide* manner, or that, from some sufficient cause, applicant has been unable to prospect. Otherwise an application for a lease of the whole or any part of the land specified therein must be lodged in the manner hereinafter described. And in case of any failure or neglect by the holder of the aforesaid authority to comply with these regulations the Minister may declare all claim to the land void, and such land shall after the expiration of three clear days from the date of voidance be available to any other applicant.

Application for Renewal of Authorities.

5. All applications for authorities under the provisions of the Church and School Lands Mining Act of 1888, shall, if renewed by the applicant within thirty days after the passing of the Church and School Lands Mining Act of 1889, be dealt with as if such application had been lodged immediately after the passing of such Act, and shall in every respect be subject to all the conditions thereof. During such thirty days, but no longer, the land described or covered by any application shall be reserved from lease or other disposition.

Priority of Application for Authority, how dealt with.

6. In the event of more than one application being made for the same land, or any part thereof, whether by renewed application made within the thirty days, or subsequently by applications lodged at the same time, it shall be determined by lot in the following manner which of such applications shall take precedence. And for the purpose of determining as aforesaid by lot the order of priority of several applications for the

same land, the Officer in Charge of Church and School Lands shall write on tickets, of equal size, the names of the several applicants which shall be placed (by the applicants should they desire to do so) in a box to be supplied to the Officer in Charge of Church and School Lands for the purpose, and that officer shall without looking into such box, and in the presence of all the applicants, or such of them as shall choose to be present, draw one ticket from the box, and the application which shall take precedence shall be that of the applicant whose name shall be on the ticket so drawn; and the remaining applications may then be withdrawn and the deposits made therewith returned to the respective applicants, or the remaining tickets may be drawn out in rotation, and in that case the order of priority as between such remaining applications, shall be in accordance with the order in which the remaining tickets shall severally have been drawn out of the box. And the Officer in Charge shall thereupon note upon each such application the order of priority as aforesaid, and shall forward such application or such applications as shall not be withdrawn to the Minister of Public Instruction. If the first in order of such applications be granted, the other applications for the same land shall be deemed to be refused, and the fees deposited will be refunded to the depositors; but in the event of the first in order of such applications being refused on any ground that would not necessarily be a ground of objection to the next or any other of such applications, then such other applications shall be considered and dealt with in the order determined as aforesaid, until one of such applications shall be granted, or the whole of them refused.

Transfer of Prospecting Authority.

7. The Minister may, upon the application of the holder or holders of a prospecting authority, sanction or authorize the transfer of such authority to any person or persons, who shall thereupon be held responsible for the due fulfilment of the conditions thereof during the remainder of the term for which the authority has been granted: Provided that such transfer shall be in form of schedule hereto numbered 1A.

Governor may alter classification.

8. Upon production of satisfactory proof of the discovery of gold in any land specified in any prospecting authority, the Governor may alter the classification of any lands so as to include the same in the class of land suitable for mining operations.

Applicant for gold-mining lease must be holder of Authority.

9. No application for a gold-mining lease of any Church and School land that has not already been classified as land suitable for mining operations will be entertained unless the applicant shall be the holder or the transferee of an authority under these Regulations; and the miner's right or mineral license held by each applicant must be lodged with the application, or a statutory declaration made to the effect that he or they are the holder or holders of a miner's right or mineral license, and that such have been produced to the Justice of the Peace before whom said declaration is made.

Area of leased land.

10. The extent of the area in a lease shall not exceed 25 acres, nor be less than 1 acre: Provided always that should such minimum area not be available a lease may be granted for a less area, but in no case shall the rent be less than twenty shillings.

Dimensions of land.

11. In taking up land containing quartz veins or lodes, or in which quartz-veins or lodes will be chiefly worked, the length along the line of the vein or lode shall not exceed three times the width of said area. In taking up other land the maximum length shall not exceed twice the maximum width.

Mode of taking possession.

12. Prior to making application for a gold-mining lease the intending applicant or applicants, or some one of them, or some person or persons duly authorized on his or their behalf, shall make a conspicuous mark upon a tree at or near to each angle of the land for which he or they intends or intend to apply, and shall cut trenches 6 feet long and 9 inches deep, which shall respectively indicate the general direction of the boundary-lines, or shall erect at or as near as possible to each angle of such land a post 3 inches in diameter, projecting above the surface not less than 3 feet, and each such post shall be set in an L trench, 6 feet long and 9 inches deep, and some one of the trees or posts aforesaid shall be deemed the datum tree or post, and the person taking possession shall affix to such datum tree or post a board or metal plate having legibly written or painted thereon the words, "Applied for for gold-mining lease by [*name to be inserted*]," and such posts and boards or plates shall be kept erected, and the words and name aforesaid shall be kept legible till survey of the area shall be made, as hereinafter provided: Provided always that if the nature of the ground is such as to render the erection of posts or the cutting of trenches impracticable or extremely difficult, some other effective mode of marking the boundaries may be adopted; but if it shall appear to the Minister of Public Instruction that the trees have not been marked or the posts have not been erected, or the trenches have not been cut, or that the boards or plates aforesaid have not been affixed, when they might and should have been, it shall be lawful for the Minister of Public Instruction to refuse to receive or entertain the application for such land: Provided further that nothing contained in this regulation shall be deemed or construed to confer upon any applicant for a lease who shall not have deposited the first year's rent, deed, and survey fee as provided in the 14th Regulation, any right to any possession in respect of the land applied for.

Time of making and form of application.

13. Every application for a lease must be made during the currency of a prospecting authority as provided by the 4th regulation: except in cases where the land applied for has already been classified as land suitable for mining operations, in which case application for a lease must be made within ten days and not less than three days after marking out the land by the person or persons by or for whom possession shall have been taken as aforesaid. But every such application shall be in the form in the Schedule hereto numbered 2, and shall contain as full and accurate a description as can be given of the extent and position of the land applied for, and of the position of the datum post or tree in relation to some fixed point or well-defined marked tree. If letters are used for the purpose of marking any tree or other object referred to, they must be conspicuously marked. And every such application shall state the term for which the lease is applied for and when the applicant or applicants proposes or propose to commence work upon or in connection with the land applied for, and the number of miners to be employed upon the said land at the various stages of the mine works. And every such application shall be dealt with according to the reasonableness of the proposals relating to the time of commencing to work and the number of men to be employed, and the Minister of Public Instruction shall judge of the reasonableness of such proposals; and if in his opinion the time fixed for commencing to work is not sufficiently early, or that the number of men proposed to be employed is too small, he may refuse to entertain such application; and thereupon the money deposited as hereinafter provided with or in respect of such application, or the unexpended balance of such money shall be returned to the persons by whom such money shall have been deposited; and the decision of the Minister of Public Instruction shall in all such cases be final and conclusive upon all parties.

Mode of making application and receipt for rent and fees.

14. Every application as aforesaid shall be made to the Officer in Charge of Church and School lands, and therewith shall be deposited twenty shillings for each and every acre and fractional part of an acre applied for, and a further sum sufficient to cover cost of making survey of said land in accordance with the scale of charges contained in Schedule hereto numbered 3, together with one pound for deed fee, five shillings for stamp fee; and a receipt for such sums shall be issued by the aforesaid officer or any officer acting on his behalf in the form in Schedule hereto numbered 4.

Application not entertained unless deposit be sent.

15. The Minister of Public Instruction may refuse to entertain any application for a lease if the applicant or applicants, or depositor or depositors, shall have failed to lodge therewith the deposits specified in regulation number 14, and if the Minister of Public Instruction shall so refuse, or shall for any of the reasons aforesaid refuse to entertain any such application, such application shall thereupon become and be void, and the possession of the applicant or applicants shall thereupon cease and determine.

Determination of question of priority.

16. In the event of more than one application being made for the same land or any part thereof, the application which shall have been first lodged with the Officer in Charge of Church and School lands in manner aforesaid, shall be considered and dealt with under the provisions hereinbefore contained; unless it can be shown in evidence by statutory declaration that prior possession has been taken, in which case the Minister shall call for such investigation and reports as he may deem necessary, and the person establishing priority of possession shall be deemed the first applicant for the land, but if possession of the land shall have been taken by two or more persons at the same time, then it shall be determined by lot in manner hereinafter provided for, which of such applications shall take precedence.

Priority determined by lot.

17. For the purpose of determining as aforesaid by lot the order of priority of several applications for the same land, the Officer in Charge of Church and School lands shall write on tickets of equal size the names of the several applicants, which shall be placed (by the applicants should they desire to do so) in a box to be supplied to the Officer in Charge of Church and School lands for the purpose; and that officer shall, without looking into such box, and in the presence of all the applicants, or such of them as shall choose to be present, draw one ticket from the box, and the application which shall take

precedence shall be that of theapplicant whose name shall be on the ticket so drawn, and the remaining applications may then be withdrawn and the deposits made therewith returned to the respective applicants, or the remaining tickets may be drawn out in rotation, and in that case the order of priority as between such remaining applications shall be in accordance with the order in which the remaining tickets shall severally have been drawn out of the box. And the officer in charge shall thereupon note upon each such application the order of priority as aforesaid and shall forward such applications, or such applications as shall not be withdrawn, to the Minister of Public Instruction. If the first in order of such applications be granted, the other applications for the same land shall be deemed to be refused, and the rents and deed fees (and if survey of the land as hereinafter provided shall not have been made, the survey fees also), deposited as aforesaid, will be refunded to the depositors; but in the event of the first in order of such applications being refused on any ground that would not necessarily be a ground of objection to next or any other of such applications, then such other applications shall be considered and dealt with in the order determined as aforesaid, until such one of such applications shall be granted or the whole of them refused.

Copies and extracts may be made of reports, &c.

18. Any person shall upon application and payment of the respective fees specified in the Schedule hereto numbered 5, be furnished with a copy of the surveyor's report and plan of any land so applied for.

Governor may grant or refuse application.

19. If the Minister on receipt of the application, plan, and report from the surveyor, be of opinion that a lease for the land applied for should not be issued, he shall then submit the application to the Governor with such recommendation as he may think fit to make in the matter, and the Governor, with the advice of the Executive Council, after considering the application and recommendation of the Minister, and all the circumstances connected with such application may grant or refuse such application: Provided always that before or at the time of granting any such application, it shall be lawful for the Governor with the advice aforesaid to alter or modify such application in any manner that he may think fit, and to determine whether the whole or any part of the land therein applied for shall be included in the lease.

Land protected pending application for lease.

20. Pending any application for a gold-mining lease, it shall not be lawful for any person other than the applicant or applicants therefor or some person or persons legally entitled thereto, to enter upon, take possession of or occupy, or to mark out as a prospecting area, or to include within the boundaries of any prospecting area, the land applied for, or any part thereof; and no such entry, possession, occupancy, or marking shall confer any right or title to the said land.

Pendency of application.

21. The pendency of an application shall begin from the marking out of the land by the applicant or his agent, and shall continue until the applicant makes default in proceeding with his application in accordance with these Regulations, or until the Minister shall refuse to entertain such application, or until the Governor with the advice aforesaid, shall grant or refuse the same. But no application shall be recognised or considered as pending, the applicant for which shall not have made the deposits required and specified in 14th Regulation.

Land held under prospecting authority may be worked pending application.

22. The applicant or applicants for the conversion of a claim or any part of such claim held under a prospecting authority may, at his or their risk, work the land under said authority pending the granting or refusing of the application.

Governor's decision notified in *Gazette*.

23. As soon as possible after the Governor, with the advice aforesaid, shall have decided to refuse or grant any such application as aforesaid, notice of such refusal, or of the intention to grant a lease, shall be published in the *Government Gazette*. If the Governor, with the advice aforesaid, shall refuse to grant the lease, the application therefor shall be deemed to be abandoned, and such abandonment shall take effect from the date of the publication of the notice of such refusal in the said *Gazette*.

Form of lease.

24. If the Governor, with the advice aforesaid, shall determine to grant a lease of land applied for, or any part thereof, a lease shall be prepared in duplicate in the form in the Schedule hereto numbered 6, or as near thereto as the circumstances will permit, having regard to special requirements in certain cases, and shall contain the covenants, conditions, reservations, and exceptions, set forth in the said Schedule, and in these Regulations, and such others as the Governor, with the advice aforesaid, may, if he think fit, in certain cases direct, and every such lease shall bear date of the day of execution thereof by the Governor.

Execution and delivery of lease.

25. Forthwith after the execution as aforesaid by the Governor, the lease in duplicate shall be forwarded to some duly authorized officer for delivery to the applicants, and notice in the form of the Schedule hereto numbered 7 shall be sent to the applicant requiring him or his attorney, constituted as hereinafter provided, to execute and take delivery of such lease; and upon execution of the lease in duplicate, one of such forms shall, after being stamped, be delivered to the applicant or his attorney, and the other shall at once be returned to the Minister, provided always that the notice last aforesaid may be sent by post or otherwise to the address given by the applicant in his application.

Applicant, &c., may appoint attorney. Attorney may execute lease.

26. Any applicant or other person who may, by reason of absence or otherwise be unable personally to comply with the requirements of these regulations, may comply therewith by an attorney, constituted by the execution of a power of attorney, in the form of the Schedule, hereto numbered 8, or to the like effect; and every attorney so constituted shall, before being permitted to execute any lease, or sign any transfer of mortgage, be required to deposit such power of attorney or a certified copy thereof, with the officer in charge of Church and School lands.

Lease, if not executed, may be cancelled. Special permission may be given to execute lease.

27. If any successful applicant for a lease shall for a period of twenty-eight days after being called upon in the manner prescribed in the 25th regulation, fail to attend by himself or his attorney to execute and receive the lease granted to him, he shall forfeit all right, title, and interest, in and to the land referred to in such lease, and to the possession thereof, and shall also forfeit all moneys paid or deposited with his application and the lease shall be forthwith returned to the Minister for cancellation: Provided always that it shall be lawful for the Minister, in cases in which he shall be satisfied that the failure on the part of the successful applicant aforesaid to execute and receive the lease was due or caused by circumstances over which such applicant had no control, and that such applicant was in nowise blamable for such failure, to permit such applicant at any time within thirty days after the lease shall have been returned as aforesaid to execute and take delivery of such lease, but if such lease shall not be executed by the applicant within the thirty days aforesaid, such lease shall be absolutely cancelled.

Rent, and payment of.

28. The rent reserved under any gold-mining lease shall be twenty shillings per acre, payable annually in advance, the first payment to be made with the application, which payment shall cover the rent reserved under such lease for one year from the granting thereof; and thereafter the rent for each ensuing year shall be paid in advance to the Colonial Treasurer in Sydney, and in default of any such payment the lease may be forfeited.

Providing for Royalty.

29. On every lease issued for mining for gold the royalty reserved in respect thereof shall be one pound per centum of the value of the gold raised from the demised land.

Record of quantity of gold raised to be kept—Penalty if not so recorded.

30. At the expiration of each year or within one month thereafter, a statement shall be furnished to the Minister under the hand of the lessee or some one of them, or of the Manager of the mine setting out the quantity and value of the gold raised from the demised land, and the accuracy of every such statement shall be verified by the statutory declaration of the person making it. And the lessee, or lessees, or Manager of the mine shall keep a proper book in which he or they shall enter the quantity of gold raised each day from the demised land; and the value of such gold shall also be entered from time to time as soon as known; and such book shall at all times be open to the inspection of such officer as the Minister may authorise for the purpose. And it is further provided that if the lessee or lessees shall fail to pay the royalty reserved under his or their lease within thirty days after such shall have become due, although no formal demand shall have been made therefor, or shall fail to keep a proper record of the quantity and value of the gold raised, or shall refuse to allow such record to be inspected by any officer authorised by the Minister for that purpose, or shall fail to observe and perform the other conditions and covenants of his or their lease, the Governor may thereupon or at any time thereafter cancel such lease, and on publication in the *Gazette* of such cancellation the lease shall be absolutely void.

Duration, termination, and renewal of leases.

31. A lease for gold-mining purposes may be granted for any term not exceeding fifteen years, and during such term the holder of any such lease, and the executors, administrators, and assigns of such holder shall be entitled at any time, with the consent of the Governor, to surrender such lease. And it shall be lawful for the Governor, in the name and on behalf of Her Majesty, to grant to any such person as aforesaid a lease for any

term not exceeding fifteen years of the whole or any part of the land demised by such surrendered lease. And any such lease may, with such consent, be renewed for any period not exceeding fifteen years.

Mode of applying for renewal of lease, &c.

32. Applicants for a lease of the whole or any part of the land demised by a lease which shall have been surrendered as aforesaid shall proceed in the manner hereinbefore prescribed to take possession of such land and to make application therefor. But holders of leases who shall desire to obtain a renewal of the lease of the land demised to them may make application in writing addressed to the Minister of Public Instruction for such renewal; and if it shall appear to the Minister, after due consideration and inquiry, to be expedient, he shall recommend the Governor to grant such renewal, subject to the surrender of the lease previously granted; and provided all boundary-marks shall have been properly maintained it shall not (unless the Minister of Public Instruction in certain cases think otherwise) be necessary for the purpose of obtaining such renewal to retake possession or to resurvey the land. Provided always that every lease so renewed shall be subject to such conditions and provisions, including any increase of rent or royalty, as the Governor may determine.

Lessees may determine lease on notice.

33. Lessees may at any time determine their leases by giving the Minister of Public Instruction three months' notice of their desire to do so, but no rent shall in any case be refunded.

Registration of lease.

34. Every gold-mining lease or sub-lease, and every transfer, assignment, mortgage, or encumbrance thereof, or of any part or parts of the premises therein, shall be registered in such office in the City of Sydney, in or in connection with the Department of Public Instruction, as the Minister of Public Instruction shall from time to time appoint, and the officer for the time being appointed to make such registration shall be entitled to demand therefor such fees, and such only, as are prescribed in the Schedule hereto numbered 5; and the fees so received shall be applied as provided for in the Principal Act; and it shall be the duty of the officer appointed as last aforesaid to make registration of every gold-mining lease which shall have been granted, executed, and issued as aforesaid, of every sub-lease, transfer, assignment, mortgage, or encumbrance, sanctioned or authorized by the Minister, and of every assignment affected by operation of law; and such registration shall be made in such book or books and in such form as the Minister shall from time to time direct; and all such books shall be open during office hours, to be inspected on payment of the fee prescribed in the Schedule hereto numbered 5; and the officer aforesaid, shall afford every facility for such inspection, and shall supply copies of or extracts from entries in such books, and tracings of plans, on payment of the fees prescribed as aforesaid; but shall not permit any person other than an officer or clerk in the Department to make any such copy, extract, or tracing.

Transfers, &c., must be sanctioned and registered.

35. No transfer or assignment of any land demised as aforesaid, or of any interest therein (except an assignment by operation of law) and no sub-lease of any such land, or any part thereof, shall be valid or be recognised unless made with or under the license, sanction, or authority of the Minister of Public Instruction, and registered in the office, referred to in the preceding regulation. In the event of any lessee or any person having a legal interest in any land demised as aforesaid, desiring to transfer or assign such land or any interest therein, or in the event of any lessee desiring to sub-let such land or any part thereof, he shall make application in writing to the Minister of Public Instruction for such license, sanction, or authority, and upon such application, if made by the person who appears by the register aforesaid to be legally entitled to the lease of the land, or to the interest therein, as the case may be, it shall be lawful for the Minister of Public Instruction, if he think fit, to grant such license, sanction, or authority. And with every such application for a license or authority to transfer or assign, the applicant shall forward an instrument in the form of the Schedule hereto numbered 9, under the hands of the parties to the transfer or assignment; and the Minister of Public Instruction shall, if he grant such license, sanction, or authority, notify the same upon the face of the instrument. And every application for permission to sub-let shall state clearly whether it is proposed to sub-let the whole or only a portion, and if so, what portion of the land demised; and shall set out fully and distinctly the purpose for which it is proposed to sub-let such demised land or portion thereof, and the several terms, conditions, and restrictions to which such sub-lease shall be subject; and if the Minister shall see fit to license, sanction, or authorise such sub-lease, he shall place a minute to that effect upon such application; but before placing such minute upon the application, he may require such additions, alterations, or modifications to be made as he shall think fit. No application to license to transfer, assign, or sub-let shall be entertained, unless accompanied by the registration fee therefor prescribed in the Schedule hereto numbered 5; but in the event of such application being refused, the fee forwarded therewith shall be returned. Provided always that no such license, sanction, or authority, shall be required in the case of any assignment made by any person in whom the right to sell or assign is vested by operation of law, but nevertheless every assignment by such person shall be registered as aforesaid.

Amalgamation.

36. In cases where it can be shown to the satisfaction of the Minister of Public Instruction that adjoining leases can be more effectually worked together than separately, and that the owners of other leases will not be prejudicially affected by the amalgamation of such leases, the Minister may, on the application of the lessees, and payment of the fee specified in schedule 5, authorize the amalgamation of such leases, and thereupon such leases shall become one lease, and the number of men to be employed shall in no case be less than half the aggregate number required under the leases so amalgamated. And failure to employ the required number of men shall render the title thereto forfeited.

Power to declare application or lease void.

37. The Governor shall have power at any time during the progress of any application, and before the execution of the lease to declare by writing under his hand, that the application (describing it) is abandoned, and after the lease has been executed by him, and before its execution by the lessee, that such lease is void, and after such lease shall have been executed by the Governor and the lessee, on the breach by the lessee of any covenant or condition of the lease, the Governor may direct that such lease be cancelled. If the Governor shall declare any such application abandoned, or lease void, or any lease which has been issued, void or forfeited, or direct that any such lease be cancelled, the Minister of Public Instruction, or officer in charge, shall forthwith publish a notice in the *Government Gazette* to that effect, describing accurately the application or lease referred to, and such notice in the *Gazette* shall be conclusive evidence in all Courts throughout the Colony of such declaration having been made, and thereupon the land shall become and be open, as it would have been if such application had not been made, or if such lease had not been executed.

Suspension of work.

38. The registered holder, or majority of the registered holders, of any lease which shall have been registered in terms of the 34th Regulation may at any time, upon satisfying the Minister of Public Instruction by statutory declaration that any of the following causes for suspension of work actually exist—viz., (1) that the demised land and mine are unworkable from any cause; (2) that the registered holder or holders require to be absent, for some sufficient cause, from the locality of the demised land, or are unable, by reason of sickness or other sufficient cause, to work in such land and mine; (3) that the supply of water is insufficient to allow the working of the said land and mine to be properly carried on—obtain from the Minister aforesaid an order in writing permitting the holder or holders of such land to suspend work upon and in connection with such demised land for any period not exceeding six months, and may, on payment of the fee prescribed therefor in the Schedule hereto numbered 5, and delivery to him of the order aforesaid, require the officer referred to in the 34th regulation to register such permission as aforesaid.

Water Rights.

Definition.

39. A water-right shall include and mean the right to collect, store, divert, and convey water from any source, for mining purposes, in the manner hereinafter provided.

Classes of water-rights.

40. Water-rights shall be of four kinds, namely:—

1. "Stream water-rights," for water to be used in the bed of a stream, or diverted therefrom for use elsewhere.
2. Spring, lagoon, or swamp water-rights.
3. Watershed or storm water-rights.
4. Motive-power water-rights.

Sluice-heads—how measured.

41. Any miner diverting or using water shall use a gauge or measurement to be called a sluice-head, of the following dimensions:—A box sluice-head shall be a volume of water 1 inch by 12 inches; a ground sluice-head shall be a volume of water 3 inches by 12 inches, and shall be gauged in the following manner:—An open box, 6 feet in length, and 12 inches in width, with a scale of inches marked on the inner side at the

lower end, shall be placed as near as practicable at the head of the race—having a fall or inclination not exceeding 6 inches in the entire length of it; and the gauge of water as above specified shall be taken at the mouth of the box where the water is discharged. When the length of the race shall exceed one mile, the width of the box may be increased half an inch for each mile.

Limitation of water-right.

42. The quantity of water to which any miner shall be entitled under one water-right shall not exceed four ground sluice-heads, except under storm-water or watershed rights, when he shall be entitled to all water collected by him. Provided that no storm or watershed race shall be constructed above any similar existing race nearer than one quarter of a mile thereto.

Priority of water-rights.

43. The priority of water-rights derived from a common source shall be determined by the date of registration; and in case of the water supply being insufficient, the person last registered shall forego his rights during such insufficiency of water as against the person previously registered, and so on in rotation as the supply diminishes. Provided that in all rivers and creeks from which water is diverted for mining purposes there shall at all times be left running at least one ground sluice-head of water for general use if required.

Water—motive power.

44. Any miner shall be entitled to divert water from any stream or natural source to be used as a motive-power, provided that such water shall not be required for gold-washing purposes.

Water—when right thereto ceases.

45. The right to any water under any water-right shall terminate whenever the water shall be discharged into any natural stream or watercourse after being used.

Union of water-rights.

46. Where it is found that increased facility would be given in working claims and a waste of water prevented by the running of two or more water-rights through one race, the same shall be allowed, provided that all such rights shall follow in rotation and have precedence according to priority of registration.

Dams and reservoirs, &c.

47. Any person desirous of constructing a dam or reservoir shall make application to the Minister in the form in Schedule hereto numbered 12, and such application shall describe the site and area of the land, and therewith must be deposited the sum of 10s. for each and every acre applied for, together with survey fee, as provided in schedule hereto numbered 3. And the boundaries of such shall be defined by the erection of posts not less than 3 inches in diameter and showing at least 3 feet above the surface at each angle.

A copy of such application shall be conspicuously posted by the applicant upon one of such posts of the site or area applied for.

If at the end of fourteen clear days no objections shall have been lodged with the Officer in Charge of Church and School Lands, the application will be dealt with if unobjectionable.

Water for domestic use.

48. The Minister may set apart or withhold for domestic purposes any water-hole, spring, well or abandoned reservoir upon receipt of an application in writing signed by not less than twelve persons holding prospecting authorities or leases; and no person shall use for gold-washing purposes, or waste, or by any means defile the water so withheld.

Water-races.

Mode of application, dimensions, and rent therefor.

49. Every application for permission to cut and construct a water-race must fully describe the source from which it is proposed to take the water and the approximate length and dimensions of such race and with every such application shall be lodged the first year's rent and survey fee. The width allowed for every such race shall be 10 feet on each side of such race, but where the cutting exceeds 10 feet in depth or a tunnel is constructed, the width for such shall be 20 feet on each side thereof, and the width allowed for tressels for fluming shall be at the discretion of the Minister. And the rent reserved therefor shall not be less than 5s., per annum for every mile or fractional part thereof, payable annually in advance and the cost of survey at the rate for lineal measurement stated in schedule hereto numbered 3. Provided always that any extension or deviation thereof may be granted on application and payment of the fees hereinbefore provided. Every such race or extension or deviation thereof, if the application therefor be approved by the Minister of Public Instruction, shall be registered in the Church and School Lands Office upon the applicant or applicants therefor signing a contract in the form in Schedule hereto numbered 10, and his Excellency the Governor, on the recommendation of the Minister may for any breach of such contract or the non-payment of rent for a period of twenty-eight days after such shall have become due, although no formal demand shall have been made therefor, cancel such contract, which cancellation will be notified in the *Government Gazette*, and all moneys paid thereon shall become forfeited. Provided further that in the event of any application for a water-race being refused, all moneys deposited therewith, after deducting for any expenses incurred in obtaining reports, &c., shall be refunded.

Races through other claims.

50. Any miner shall be entitled to cut and construct a race through any claim or under, over, or across any other race, provided that such race shall be cut or constructed in such a manner as not to injure the claim or race across which it is cut or constructed.

Bridging roads, &c.

51. Wherever any race crosses any road or public footway, the owner of such race shall construct and keep in repair a good and substantial bridge over the same of the following dimensions:—

If over a road.....12 feet in width
If over a footway..... 6 „ „ „

Races, dams, &c., to be kept in repair.

52. No holder of a water-right shall allow the water thereby secured to him to run to waste, and in the event of any race, dam, or reservoir being out of repair, or being in an insecure condition, or the water being allowed to run to waste, the Minister, on complaint being made to him, may make such order as may be necessary to prevent waste of water or public injury.

Registration.

53. All water-rights, races, dams, or reservoirs, shares therein or any transfer of the same shall be registered with the officer-in-charge of Church and School Lands.

Machine sites may be allowed.

54. No application for a machine site will be entertained unless a prospecting authority under these regulations be first had and obtained; the first year's rent and survey fee to be lodged with application. The area thereof shall in no case exceed 3 acres, nor shall the rent be less than twenty shillings per acre, payable annually in advance. The applicants for such site will be required to enter into and sign a contract in the form in Schedule numbered 11, which shall be registered in the Church and School Lands Office. Provided always that, in the event of any breach thereof, or the non-payment of rent for a period of twenty-eight days after such shall have become due, although no formal demand shall have been made therefor, the Governor on the recommendation of the Minister may cancel such contract, and the cancellation thereof shall be notified in the *Government Gazette*, and all moneys paid thereon shall become forfeited. Provided further that in the event of any application for a machine site being refused, all moneys deposited therewith, after deducting for any expenses incurred in obtaining reports, &c., shall be refunded.

SCHEDULE No. 1.

Gold-mining (Prospecting Authority).

No.

£ : :

Date 18 .

Authority for Prospecting and Mining for on Church and School Lands.

Issued to of
under the provisions of the Church and School Lands Mining Act of 1888, and subject to Regulations prescribed thereunder, to be in force for three months only from this date.

SCHEDULE
Describing land over which this authority shall be exercised.

Area.	County.	Parish.	Description.

Officer in Charge.

The following conditions are to be observed in connection with this authority:—

Within seven days from the date of issue, the holder of this authority will be required to mark out the land described herein by placing posts at each corner thereof, three inches in diameter, and projecting not less than three feet above the surface, each of which must be set in trenches six feet long by

nine inches deep, to indicate the general direction of the boundaries. One of these posts, or a tree adjacent, must have a board or metal plate affixed thereto, with the words, "Held under Prospecting Authority by" [*name to be inserted*] legibly written thereon.

All shafts and dangerous places occasioned by or on behalf of the holder of this authority will be required to be protected, either by filling in or fencing off any such workings prior to abandoning them, and before commencing any further mining operations under this authority; and all works must be conducted in such a manner as to prevent any avoidable damage to the lessee; and the Minister may, on non-fulfilment of these conditions, declare such authority as cancelled.

Prior to the expiration of this authority, either an application for a lease of the whole or any part of the land must be made, or the holder may apply for a renewal of such authority, which may be granted at the discretion of the Minister for a further period of three months; but in no case will more than one renewal be allowed.

SCHEDULE No. 1*a*.

CHURCH AND SCHOOL LANDS.

Transfer of authority to prospect for over an *area of* acre. *County of* *Parish of*

("*I*" or "*We*") being registered as the holder of prospecting authority No. issued under the sanction of the Minister of Public Instruction to and dated the day of 188 , and numbered in Register do hereby transfer to

all my right, title, and interest in and to the prospecting authority aforesaid and the said

do hereby accept transfer of the right, title, and interest of the said in and to the prospecting authority aforesaid, subject to the provisions and conditions of the "Church and School Lands Mining Act of 1888," and hereby agree to be bound by all and singular the terms, conditions, covenants, provisoes, restrictions, and reservations contained in the said prospecting authority.

IN WITNESS whereof we have hereunto subscribed our respective names this day of 188 .

Witness to Signature.	Transferror.	Transferee.

I, hereby sanction and authorize the transfer of the interest of in the abovenamed prospecting authority to

Dated at this day of 18 .

(Signature)

I have this day of 18 , registered the above transferee as the holder of prospecting authority No.

Officer in Charge of Church and School Lands.

SCHEDULE 2.

CHURCH AND SCHOOL LANDS—GOLD-MINING LEASE REGULATIONS.

Application for Gold-mining Lease.

To the Honorable (*Place*)
The Minister of Public Instruction, (*Date*)
Sydney.

SIR,

("*I*" *or* "*We*") hereby make application for a gold-mining lease of that piece or parcel of land situated
County of parish of
containing of which took possession on the
day of under authority dated
for the purpose of mining thereon and therein for gold, for a period of years, by [*state how angles are marked*] at each angle thereof. The datum [*tree, post, or other mark*] is distant in a direction from

forward herewith ["*The sum of,*"] being the first year's rent in advance of the said land, and ["*The sum of,*"] to cover the cost of survey and deed fee. And hereby request that survey may forthwith be made of the said piece or parcel of land.

hereby acknowledge that this application is made upon the distinct understanding and condition that if shall abandon or fail to proceed with it, or if it is refused, the Minister of Public Instruction for the time being may deduct from the sum of [*Here insert the sum deposited as rent in advance*] deposited as aforesaid any cost to which in his opinion the Estate may have been put in or about or in respect of this application: and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted shall and will commence mining operations upon or in connection with the demised land within from and after the granting thereof, and shall and will employ upon such land not less than men during the first of the term thereby created, and not less than men during the remainder of such term. And shall and will at any time when called upon in terms of the Regulations relating to gold-mining leases on Church and School lands, to do so, execute, and take delivery of such lease, or failing therein for a period of twenty-eight days, after being so called upon shall and will forfeit the said sum of [*Here insert the sum deposited as rent in advance*] and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

have the honor to be,
Sir,
Your most obedient servant,

Signature of applicant, or of each applicant.

[*Name in full, and address of each applicant.*]

This application was received by me this day of 188 , at the hour of o'clock on the noon, and is numbered

Signature.
Officer in Charge.

NOTE.—In dealing with this application, the number of men proposed to be employed, and the time proposed for commencing operations, will be taken into consideration. And if (taking into account all the circumstances of the case) such proposals do not appear to the Minister of Public Instruction to be reasonable, he may refuse to entertain the application, and thereupon such application will become and be void.

SCHEDULE 3.

Scale of fees for Survey.

Areas of Portions in Acres.	Amount for separate portions. £ s. d.
Less than 1 acre	1 0 0
1 acre and less than 5 acres	1 10 0
5 acres and less than 10 acres	2 0 0
10 acres and less than 20 acres	3 0 0
20 acres and up to 25 acres	3 10 0
Lineal measurements to be paid for at the rate of £1 10s. per mile.	

SCHEDULE 4.

Receipt for Rent, Survey and Deed Fee.

Church and School Lands Office,
Sydney,

Received from this day of 18 the sum of pounds shillings and pence, being the first year's rent in advance, survey and deed fee for acres of land at applied for by the undermentioned applicant under the Regulations for gold-mining on Church and School lands.

SCHEDULE No. 6.

Form of Gold Mining Lease.

THIS INDENTURE—made the day of , in the year of our Lord one thousand eight hundred and , between Her Most Gracious Majesty Queen Victoria, of the one part, and

(hereinafter called the lessee) of the other part—Witnesseth: —That in consideration of the sum of paid by the said lessee on the day of 18 , and of the rents hereinafter reserved, and of the covenants and provisoes hereinafter contained, Her Majesty doth by these presents grant and demise unto the lessee , h executors, administrators, and transferees, all that piece or parcel of land, containing by admeasurement , and more particularly described and delineated in the Schedule hereto, or in the plan hereunto annexed and numbered , and all those mines, veins, seams, or deposits of gold in, on, and under the said land (hereinafter called the said mine); together with all and singular the shafts, levels, drifts, works, ways, fixtures, erections, liberties, easements, advantages, and appurtenances which are now or at any time during the term hereby granted may be held, occupied, or enjoyed therewith, for the purposes of mining on the said land for gold, and also with full power for the said lessee , h executors, administrators, and transferees, and his and their agents and workmen (including contractors, tributors, and so forth), to dig, sink, drive, make, and use excavations, pits, shafts, levels, tunnels, watercourses, and other works necessary for winning and raising the gold in, on, or under the said land; and to take and appropriate the same during the term hereby granted; and to make and construct on the said land races, drains, dams, reservoirs, roads, and tramways, and also to erect on the said land all buildings, engines, furnaces, pumps, machinery, and appliances necessary for the purpose of winning and obtaining the gold in, on, or under the said land, and for effectually carrying on the works, of the said mine; and also to erect on the said land such offices, cottages, and dwelling-houses for the use of the agents, workmen, and persons employed in the said mine and works, as the said lessee , h executors, administrators, and transferees shall think proper: To hold the said land, mine, and premises, with the appurtenances (subject nevertheless to such rights and interests as may be lawfully subsisting therein at the date of these presents) unto the said lessee , h executors, administrators, and transferees, from the date hereof, for the term of years, next ensuing, for the purpose of mining therein or thereon for gold, and working or winning the said gold, and for no other purpose,—yielding and paying therefor unto Her Majesty, Her Heirs, and Successors, yearly, and every year during the said term, the yearly rent of in advance, the first year's rent having been paid as aforesaid, on the day of the next payment shall be made to the Colonial Treasurer, in Sydney, on the day of next; and thereafter, on the day of in each and every year, the yearly rent aforesaid shall be paid to the Colonial Treasurer aforesaid, clear of all rates, taxes, and assessments to which the said land, mine, and premises are now, or at any time during the said term, may be subject or liable: Provided always, and it is hereby agreed, that if the said yearly rent shall be in arrear for thirty days after the same shall have become payable, whether such rent shall have been legally demanded or not, any officer appointed or authorized thereto by the Minister of Public Instruction may, by himself or his agent, enter upon the said land, and seize and distrain all gold, and all rock, earth, or other matter containing gold actually got and raised from the said mine; and all machinery, apparatus, tools, waggons, carts, carriages, engines, plant, and all other goods, chattels, and effects whatsoever in, upon, and about the said land and premises; and every distress thus made may take away, sell, and dispose of as in cases of distress for rent reserved in common leases; and out of the moneys arising thereby retain so much as shall be sufficient to satisfy the said arrears, and which shall at the time of such sale be unpaid; and all expenses incurred by him or them in or in respect of such seizure, distraint, removal, and sale; and if there be any surplus such officer shall pay the same to the said lessee , h executors, administrators, or transferees; and the acceptance or receipt of rent by or on behalf of Her Majesty, after breach of any covenant hereinafter contained, shall not be or be deemed a waiver of the right of Her Majesty, or of the Minister of Public Instruction, or other officer on behalf of Her Majesty, to enforce observance of such covenant. And the said lessee do hereby, for h sel , h heirs, executors, administrators, and transferees, covenant with Her Majesty, Her Heirs and Successors, in manner following, that is to say:—

1. That the said lessee , h executors, administrators, and transferees shall and will during the said term pay unto Her Majesty, Her Heirs and Successors, the rent hereby reserved, at the times and places hereinbefore appointed for payment thereof, clear of all deductions, and shall further pay as royalty the sum of one pound per centum per annum of the value of the gold raised from the demised land.

2. And shall and will after the expiration of from the date of delivery hereof, upon and during all lawful working days, except when prevented by inevitable accident, or during the execution of repairs, make, construct, and work the said land, mine, and premises in the best and most effectual manner, and to the best advantage, without interruption; and shall and will diligently explore and search for gold in, on, and under the said land, mine, and premises.

3. And shall and will, after the expiration of the said , employ in the construction of the works, or in mining operations on or under the said lands, during the first month of the said term, and during the usual hours of labour able and competent workmen and miners at the least, and during the remainder of the said term, and during the usual hours of labour, shall and will employ as aforesaid, not less than such workmen and miners, unless prevented by inevitable accident, or during the execution of repairs. Provided that the lessee, or if there be more than one lessee each lessee who shall work as aforesaid, shall count as and be deemed for the purposes of these presents to be a workman or miner employed as aforesaid.

4. And shall and will during the said term, effectually drain the said mine, and pump all water likely to cause injury thereto, or which would prevent or interfere with the working thereof, and if the said mine shall be affected, or be liable to be affected by the same flow or body of water as any other mine or mines contiguous thereto, shall and will, if and whenever requested so to do, contribute with the lessee or lessees, or owner or owners of such other mines, a reasonable proportion of the machinery and labour necessary to free and keep such mine or mines free from water to a workable extent; or if the said mine shall be kept free from water to a workable extent, either wholly or partially by means of the machinery and labour of a contiguous mine or mines, or by reason of any works constructed or money expended by the lessee or lessees, or owner or owners, of such contiguous mine or mines—then shall and will pay to such lessee or lessees, owner or owners, as aforesaid, a reasonable proportion of the cost of such machinery, labour, or works, or a reasonable proportion of the money so expended, and the Minister of Public Instruction for the time being, may, if, and whenever he shall think fit, depute some efficient person who shall have access to and inspection of all such mines, to determine when the said mine is so freed or kept wholly or partially free from water, and what are the reasonable proportions of such expenses aforesaid, and to whom and when the same are to be paid,—such decision to be final and conclusive on all parties.

5. And shall and will make such provision for the disposal of the detritus, dirt, waste, or refuse of the said mine that the same shall not be an inconvenience, nuisance, or obstruction to any roadway, river, creek, or private, Church and School, or Crown Lands, or shall not in any manner occasion any public or private damage or inconvenience.

6. And shall and will erect, and keep erected, during the said term, a post, painted white, or where it is impracticable to erect posts, shall and will erect, make, or establish some other approved boundary marks, at each angle of the said land, and at such points along the boundary-lines as shall be necessary, so as plainly and accurately to define the boundary-lines and angles of the said land; and in case posts shall be erected, each such post shall be fixed firmly in the ground, and shal project above the surface thereof not less than three feet.

7. And shall and will, as often as required so to do during the term, make and deliver to the Minister of Public Instruction for the time being, or any officer appointed or instructed to collect, obtain, or receive the same, all such true and proper plans and sections, returns, and statistics of the workings and operations of the said mine, made up to the last day of the preceding month (the truth and accuracy of which shall be verified by the statutory declaration of the lessee for the time being, or the manager, or other officer having the charge, control, and direction of the works of the said mine) as the Minister of Public Instruction shall from time to time direct. And shall and will, whenever required by the Minister of Public Instruction so to do, deliver to any officer appointed or instructed as aforesaid, samples of the alluvium or vein stuff found in or upon such mine and land.

8. And shall and will at the expiration of each year, or within one month thereafter, furnish a statement to the Minister under the hand of the lessee or someone of them, or of the manager of the mine, setting out the quantity and value of the gold raised from the demised land; and the accuracy of every such statement shall be verified by the statutory declaration of the person making it; and the lessee or lessees or manager of the mine shall keep a proper book in which shall be entered the quantity of gold raised each day from the demised land, and the value of such gold shall be entered from time to time as soon as known, and such book shall at all times be open to the inspection of such officer, as the Minister may authorize for the purpose.

9. And shall and will, during the said term, make proper and reasonable compensation to the occupier or occupiers, lessee or lessees from the Church and School Estate of any adjoining land in respect of any damage which may be sustained by him or them, by reason of the working of the said mine, or the carrying on of the works thereof or connected therewith, such compensation to be determined by the Minister of Public Instruction, or by some person authorised by him so to do.

10. And shall and will permit any mining surveyor, or other person duly authorised in that behalf, with all proper or necessary assistants, at all reasonable times, during the said term, quietly to enter into and upon the said land, mine, and premises, to survey and examine the state and condition thereof; and for the purposes aforesaid, to descend all pits and shafts, and to enter into and use all adits, levels, galleries, drives, and excavations, and to use all roads, ways, engines, ropes, machinery, gear, appliances, materials, labour, and other things in or on the said land and mine, which shall be by him deemed necessary, without making any compensation for the same, so nevertheless that in so doing no unnecessary interference is caused with the carrying on of the said mining works.

11. And further, shall and will at all times during the said term keep and preserve the said mine and premises from all avoidable injury or damage, and also the levels, drifts, shafts, watercourses, roads, ways, works, erections, and fixtures therein and thereon in good repair and condition, except such of the matters and things last aforesaid as shall from time to time be considered by a Mining Surveyor or other proper officer authorised by the Minister of Public Instruction to inspect and report upon such matters and things to be unnecessary for the proper working of the said mine or any contiguous mine, and in such state and condition shall and will at the end or sooner determination of the said term deliver peaceable possession thereof, and of all and singular the premises hereby demised to Her Majesty, Her Heirs and Successors, or to the officer authorised to receive possession thereof. Nevertheless the Minister of Public Instruction may, if he think fit, permit the lessee , h executors, administrators, and transferees, within such time as he shall fix after possession shall have been received as aforesaid to enter upon the said land, and to remove therefrom such machinery, plant, and apparatus as shall have been erected and fixed upon such land, and such earth, rock, stone, quartz, clay, sand, or soil containing gold as shall have been won from and raised to the surface of such mine.

12. And shall not nor will use or occupy, or permit to be used or occupied, the said land, or any part thereof for other than mining purposes, or for pasturage, or as sites for dwellings, or garden ground for the persons employed in, on, or about the said mine.

13. And shall not nor will transfer, underlet, or part with possession of the said land, mine, and premises, or any part thereof, or mortgage, charge, or encumber the same, without the license first had and obtained of the Minister of Public Instruction for the time being: Provided always that no such license shall be necessary in cases where, by operation of law or otherwise, a sale of the said land, mine, and premises, or any part or parts thereof, is made by any person or persons entitled to sell the same for the benefit of the creditors or a creditor of the lessee or h transferees, or in cases where the lessee or h transferees desire to let the said mine and premises, or any part thereof, to be worked on tribute.

14. And shall not nor will close up or obstruct any adit or adits to or from any contiguous mine or mines, whereby fresh air is admitted or ventilation promoted.

15. And shall not nor will plead acceptance of rent by or on behalf of Her Majesty as a waiver of the right of Her Majesty, or of the Minister of Public Instruction, or other officer on behalf of Her Majesty, to enforce observance of the covenants herein contained, or of the right of the Governor, with the advice of the Executive Council, to declare these presents void for breach of any such covenant: Provided always and it is hereby agreed and declared in manner following:—

16. That it shall be lawful for Her Majesty, Her Heirs, Successors and assigns, without compensation to the lessee, to make and use in, on, or under the said land any levels, drifts, leads, shafts, watercourses, adits, roads, ways, and passages for freeing and keeping free any other lands or mines from water, or for conveying water to any other lands or mines for mining purposes, or for supplying any other mines with fresh air, or for effectually working any other mines, or for any public purpose whatsoever, and to cut, dig, and remove all timber, stone, gravel, and other materials in or upon the said land which may be required for any public purpose, causing as little damage, obstruction, or interference as possible to or with the said mine and the works thereof.

17. And if the lessee , h executors, administrators, or transferees shall prove to the satisfaction of the Minister of Public Instruction that the said mine is unworkable from any cause whatsoever, or that the lessee , h executors, administrators, or transferees, require to be absent for some sufficient cause from the locality of the said land and mine, or is or are unable, by reason of sickness or other sufficient cause, to work in such land or mine, or that the supply of water is insufficient to allow the working of the said land, mine, and premises to be profitably carried on, and shall obtain from such Minister permission to suspend work therein or thereon h may in such manner as may be prescribed by any Regulations in that behalf relating to gold-mining leases register such land, mine, and premises for suspension of work therein or thereon, for any period not exceeding six months, and may during such period discontinue work without incurring in respect thereto any forfeiture or penalty for breach of any covenant herein contained.

18. And, lastly, that if the lessee , h executors, administrators, or transferees shall at any time during the said term fail to use such land *bona fide* for the purpose for which it has been demised, or if and whenever the said rent or royalty shall be in arrear for thirty days after the time appointed for payment thereof, whether the same shall have been legally demanded or not, or if and whenever there shall be a breach of or non-compliance with the covenants and provisoes herein contained by the lessee , h executors, administrators, or transferees, and the lessee , h executors, administrators, or transferees shall not have obtained from the Minister of Public Instruction permission to suspend work as aforesaid, in case the breach shall have been for the non-compliance with the covenants for the employment of workmen or miners, or for the working of the mine, the Governor, with the advice of the Executive Council, who alone and finally shall judge and determine the matter upon the evidence or reports submitted by the Minister of Public Instruction for the time being, may (notwithstanding the acceptance of rent of the demised land after such failure, breach, or non-compliance shall have happened or been committed), declare these presents void, and upon publication in the *Government Gazette* of notice of such declaration, all the right, title, and interest of the leseee , h executors, administrators, and transferees, under these presents shall cease and determine both at law and in equity, and the production of a copy of the *Government Gazette* containing a notice, purporting to be signed by the Minister of Public Instruction, declaring the lease void, shall be conclusive evidence in all Courts whatsoever in the Colony of New South Wales of a breach of or non-compliance with the covenants and provisoes herein contained sufficient to authorize and sustain such declaration having been lawfully made, and that the interest created hereunder has been lawfully determined; and thereupon, it shall be lawful for Her Majesty, Her Heirs and Successors, or her or their agents or officers, or for any bailiff or other person duly authorised thereto, or for any holder of a Prospecting Authority, who has the permission of the Minister of Public Instruction for the time being, without any previous demand whatsoever, to enter forthwith into and upon the said land and premises hereby granted, and the same to repossess and enjoy as fully and effectually to all intents and purposes as if these premises had not been made, and the said lessee , h executors, administrators, and transferees, to expel and remove without any legal process, and as effectually as the Sheriff might do in case judgment in ejectment had been obtained and a writ of *habere facias possessionem* had been issued on such judgment; and in case of such entry and any legal proceeding taken in respect thereof, the defendant or defendants in any such proceeding may plead leave and license in bar thereof; and these presents shall be conclusive evidence of such leave and license by the lessee , h executors, administrators, and transferees, or other the person or persons, plaintiff or plaintiffs, in such proceedings, for such entry or other matters complained of in such proceedings.

In Witness whereof, His Excellency the Right Honorable Charles Robert, Baron Carrington, a Member of Her Majesty's Most Honourable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, hath, on behalf of Her Majesty the Queen, caused the Seal of the said Colony to be affixed to this Grant, and also set his Hand, at Government House, Sydney, in the said Colony, the day and year first above written, and the lessee ha also set h hand and seal the day of 18 .

Department of Public Instruction,
Church and School Lands Office,
Sydney, 8th October, 1889.

REGULATIONS RELATING TO MINERAL LEASES IN THE CHURCH AND SCHOOL ESTATE.

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to make the following Regulations relating to Mineral Leases in the Church and School Estate, in pursuance of the powers conferred by the Church and School Lands Mining Acts of 1888 and 1889.

J. H. CARRUTHERS,
Minister of Public Instruction.

To whom Authority to Prospect may be given.

1. The Minister may grant to any holder of a miner's right or mineral license, or to any number of persons conjointly, each being the holder of a miner's right or mineral license, an authority, in the form of the Schedule hereto, numbered 1, to enter upon and search for any mineral other than gold in any leased or unleased Church and School land other than land already held under lease for mining for gold or other minerals. Provided always that in the event of two or more applications being received at the same time for authority to prospect the same land, priority of application shall be determined by lot as provided in Regulation 6. The holder of an authority shall, within seven days after the date thereof, define the boundaries of the land to be prospected, by erecting, at each corner of the land referred to in such authority, posts 3 inches in diameter, and projecting not less than 3 feet above the surface. Each such post shall be set in an ⌊ trench, 6 feet long and 9 inches deep, which shall indicate the general direction of the boundary, and one of such corners, or a tree adjacent thereto, shall have a board or metal plate affixed, having legibly written thereon: "Held under prospecting authority by [*name to be inserted*]."

Protection to works to be provided.

2. The holder of a prospecting authority will be required to protect all shafts and dangerous places and works sunk, made, or occasioned by or in his behalf, by fencing off or filling in all such shafts or workings prior to abandoning them and before commencing any further mining operations under such authority.

In carrying out the objects of such authority, all works must be conducted so as to prevent any damage to the lessee other than shall be unavoidable, and the Minister may, on non-fulfilment of these conditions, declare such authority as cancelled.

Fee to accompany Application for Prospecting Authority.—Area, &c., to be defined.

3. The fee to accompany each application for a prospecting authority, or for any renewal thereof, shall be, for minerals other than coal or shale, at the rate of 5s. for any area not exceeding 20 acres, 10s. for any area exceeding 20 acres and not exceeding 40 acres, and 20s. for any area exceeding 40 acres and not exceeding 80 acres, and for coal or shale shall be 50s. for any area not exceeding 320 acres, and 100s. for any area exceeding 320 acres and not exceeding 640 acres Every application must describe the locality and area upon which it is proposed to prospect.

Duration of Prospecting Authority.

4. The period for which a prospecting authority for minerals other than coal or shale shall be in force shall not exceed three calendar months, and for coal or shale six calendar months, commencing from the date of issue. Prior to its expiration, the holder thereof must either obtain a renewal of such, which may, at the discretion of the Minister, be granted for similar periods on production of satisfactory evidence that prospecting operations have been carried on in a *bonâ fide* manner, or that, from some sufficient cause, applicant has been unable to prospect. Otherwise an application for a lease of the whole or any part of the land specified therein must be lodged in the manner hereinafter described. And in case of any failure or neglect by the holder of the aforesaid authority to comply with these regulations, the Minister may declare all claim to the land void, and such land shall, after the expiration of three clear days from the date of voidance, be available to any other applicant.

Application for renewal of Authorities.

5. All applications for authorities under the provisions of the Church and School Lands Mining Act of 1888, shall, if renewed by the applicant within thirty days after the passing of the Church and Schools Lands Mining Act of 1889, be dealt with as if such application had been lodged immediately after the passing of such Act, and shall in every respect be subject to all the conditions thereof. During such thirty days, but no longer, the land described or covered by any application shall be reserved from lease or other disposition.

Priority of application for Authority, how dealt with.

6. In the event of more than one application being made for the same land, or any part thereof, whether by renewed application made within the thirty days, or subsequently by applications lodged at the same time, it shall be determined by lot

in the following manner which of such applications shall take precedence. And for the purpose of determining as aforesaid by lot the order of priority of several applications for the same land, the Officer in Charge of Church and School Lands shall write on tickets, of equal size, the names of the several applicants, which shall be placed (by the applicants should they desire to do so) in a box to be supplied to the Officer in Charge of Church and School Lands for the purpose, and that officer shall, without looking into such box, and in the presence of all the applicants, or such of them as shall choose to be present, draw one ticket from the box, and the application which shall take precedence shall be that of the applicant whose name shall be on the ticket so drawn; and the remaining applications may then be withdrawn and the deposits made therewith returned to the respective applicants, or the remaining tickets may be drawn out in rotation, and in that case the order of priority as between such remaining applications shall be in accordance with the order in which the remaining tickets shall severally have been drawn out of the box. And the Officer in Charge shall thereupon note upon each such application the order of priority as aforesaid, and shall forward such application or such applications as shall not be withdrawn to the Minister of Public Instruction. If the first in order of such applications be granted, the other applications for the same land shall be deemed to be refused, and the fees deposited will be refunded to the depositors; but in the event of the first in order of such applications being refused on any ground that would not necessarily be a ground of objection to the next or any other of such applications, then such other applications shall be considered and dealt with in the order determined as aforesaid, until one of such applications shall be granted, or the whole of them refused.

Transfer of Prospecting Authority.

7. The Minister may, upon the application of the holder or holders of a prospecting authority, sanction or authorize the transfer of such authority to any person or persons, who shall thereupon be held responsible for the due fulfilment of the conditions thereof during the remainder of the term for which the authority has been granted: Provided that such transfer shall be in form of Schedule hereto numbered 1A.

Governor may alter classification.

8. Upon production of satisfactory proof of the discovery of any mineral in any land specified in any prospecting authority, the Governor may alter the classification of any lands so as to include the same in the class of land suitable for mining operations.

Applicant for mineral lease must be holder of Authority.

9. No application for a mineral lease of any Church and School Land that has not already been classified as land suitable for mining operations will be entertained unless the applicant shall be the holder or the transferee of an authority under these Regulations; and the miner's right or mineral license held by each applicant must be lodged with the application, or a statutory declaration made to the effect that he or they are the holder or holders of a miner's right or mineral license, and that such have been produced to the Justice of the Peace before whom said declaration is made.

Extent of mineral lot and form of measurement.

10. The area of any mineral lease shall not exceed 640 acres, and (unless specially authorized by the Minister) shall not be less than 40 acres for coal-mining lots, and shall not exceed 80 acres, nor (unless specially authorized by the Minister) be less than 20 acres for other minerals. All mineral lots shall be measured in the form of a square, except in cases in which the Minister may authorize a departure from that form.

Mode of taking possession.

11. Prior to making application for a mineral lease, the intending applicant or applicants, or some one of them, or some person or persons duly authorized on his or their behalf, shall make a conspicuous mark upon a tree at or near to each angle of the land for which he or they intends or intend to apply, and shall cut trenches 6 feet long and 9 inches deep, which shall respectively indicate the general direction of the boundary-lines, or shall erect at or as near as possible to each angle of such land a post 3 inches in diameter, projecting above the surface not less than 3 feet, and each such post shall be set in an L trench, 6 feet long and 9 inches deep, and some one of the trees or posts aforesaid shall be deemed the datum tree or post, and the person taking possession shall affix to such datum tree or post a board or metal plate having legibly written or painted thereon the words "Applied for for a mineral lease by [*name to be inserted*];" and such posts and boards or plates shall be kept erected, and the words and name aforesaid shall be kept legible till survey of the area shall be made, as hereinafter provided: Provided always that if the nature of the ground is such as to render the erection of posts or the cutting of trenches impracticable or extremely difficult, some other effective mode of marking the boundaries may be adopted; but if it shall appear to the Minister of Public Instruction that the trees have not been marked or the posts have not been erected, or the trenches have not been cut, or that the boards or plates aforesaid have not been affixed, when they might and should have been, it shall be lawful for the Minister of Public Instruction to refuse to receive or entertain the application for such land: Provided further that nothing contained in this Regulation shall be deemed or construed to confer upon any applicant for a lease who shall not have deposited the first year's rent, deed, and survey fee as provided in the 12th Regulation, any right to any possession in respect of the land applied for.

Time of making and form of application.

12. Every application for a lease must be made during the currency of a prospecting authority, as provided by the 4th regulation: except in cases where the land applied for has already been classified as land suitable for mining operations, in which case application for a lease must be made within ten days and not less than three days after marking out the land by the person or persons by or for whom possession shall have been taken as aforesaid. But every such application shall be in the form in the Schedule hereto numbered 2, and shall contain as full and accurate a description as can be given of the extent and position of the land applied for, and of the position of the datum post or tree in relation to some fixed point or well defined marked tree. If letters are used for the purpose of marking any tree or other object referred to they must be conspicuously marked. And every such application shall state the term for which the lease is applied for and when the applicant or applicants proposes or propose to commence work upon or in connection with the land applied for, and the number of miners to be employed upon the said land at the various stages of the mine works. And every such application shall be dealt with according to the reasonableness of the proposals relating to the time of commencing to work and the number of men to be employed, and the Minister of Public Instruction shall judge of the reasonableness of such proposals; and if in his opinion the time fixed for commencing to work is not sufficiently early, or that the number of men proposed to be employed is too small, he may refuse to entertain such application; and thereupon the money deposited as hereinafter provided with or in respect of such application, or the unexpended balance of such money, shall be returned to the persons by whom such money shall have been deposited; and the decision of the Minister of Public Instruction shall in all such cases be final and conclusive upon all parties.

Mode of making application and receipt for rent and fees.

13. Every application as aforesaid shall be made to the officer in charge of Church and School lands, and therewith shall be deposited five shillings for each and every acre and fractional part of an acre applied for, and a further sum sufficient to cover cost of making survey of said land in accordance with the scale of charges contained in Schedule hereto numbered 3, together with one pound for deed fee and five shillings for stamp fee; and a receipt for such sums shall be issued by the aforesaid officer, or any officer acting on his behalf, in the form in Schedule hereto numbered 4.

Application not entertained unless deposit be sent.

14. The Minister of Public Instruction may refuse to entertain any application for a lease if the applicant or applicants, or depositor or depositors, shall have failed to lodge therewith the deposits specified in Regulation number 11, and if the Minister of Public Instruction shall so refuse, or shall for any of the reasons aforesaid refuse to entertain any such application, such application shall thereupon become and be void, and the possession of the applicant or applicants shall thereupon cease and determine.

Determination of question of priority.

15. In the event of more than one application being made for the same land or any part thereof, the application which shall have been first lodged with the officer in charge of Church and School lands in manner aforesaid shall be considered and dealt with under the provisions hereinbefore contained, unless it can be shown in evidence by statutory declaration that prior possession has been taken, in which case the Minister shall call for such investigation and reports as he may deem necessary, and the person establishing priority of possession shall be deemed the first applicant for the land, but if possession of the land shall have been taken by two or more persons at the same time, then it shall be determined by lot, in manner hereinafter provided for, which of such applications shall take precedence.

Priority determined by lot when not established by possession.

16. For the purpose of determining as aforesaid by lot the order of priority of several applications for the same land, the officer in charge of Church and School lands shall write on tickets of equal size the names of the several applicants, which shall be placed (by the applicants should they desire to do so) in a box to be supplied to the officer in charge of Church and School lands for the purpose; and that officer shall, without looking into such box, and in the presence of all the applicants, or such of them as shall choose to be present, draw one ticket from the box, and the application which shall take precedence shall be that of the applicant whose name shall be on the ticket so drawn, and the remaining applications may then be withdrawn and the deposits made therewith returned to the respective applicants, or the remaining tickets may be drawn

out in rotation, and in that case the order of priority as between such remaining applications shall be in accordance with the order in which the remaining tickets shall severally have been drawn out of the box. And the officer in charge shall thereupon note upon each such application the order of priority as aforesaid and shall forward such applications, or such applications as shall not be withdrawn, to the Minister of Public Instruction. If the first in order of such applications be granted, the other applications for the same land shall be deemed to be refused, and the rents and deed fees (and if survey of the land as hereinafter provided shall not have been made, the survey fees also), deposited as aforesaid, will be refunded to depositors; but in the event of the first in order of such applications being refused on any ground that would not necessarily be a ground of objection to next or any other of such applications, then such other applications shall be considered and dealt with in the order determined as aforesaid, until such one of such applications shall be granted or the whole of them refused.

Copies and extracts may be made of reports, &c.

17. Any person shall, upon application and payment of the respective fees specified in the Schedule hereto numbered 5, be furnished with a copy of the surveyor's report and plan of any land so applied for.

Governor may grant or refuse application.

18. If the Minister, on receipt of the application, plan, and report from the surveyor, be of opinion that a lease of the land applied for should not be issued, he shall then submit the application to the Governor, with such recommendation as he may think fit to make in the matter, and the Governor, with the advice of the Executive Council, after considering the application and recommendation of the Minister, and all the circumstances connected with such application may grant or refuse such application: Provided always that before or at the time of granting any such application, it shall be lawful for the Governor, with the advice aforesaid, to alter or modify such application in any manner that he may think fit, and to determine whether the whole or any part of the land therein applied for shall be included in the lease.

Land protected pending application for lease.

19. Pending any application for a mineral lease, it shall not be lawful for any person other than the applicant or applicants therefor or some person or persons legally entitled thereto, to enter upon, take possession of, or occupy, or to mark out as a prospecting area, or to include within the boundaries of any prospecting area, the land applied for, or any part thereof; and no such entry, possession, occupancy, or marking shall confer any right or title to the said land.

Pendency of application.

20. The pendency of an application shall begin from the marking out of the land by the applicant or his agent, and shall continue until the applicant makes default in proceeding with his application in accordance with these Regulations, or until the Minister shall refuse to entertain such application, or until the Governor, with the advice aforesaid, shall grant or refuse the same. But no application shall be recognized or considered as pending, the applicant for which shall not have made the deposits required and specified in 11th Regulation.

Land held under prospecting authority may be worked pending application.

21. The applicant or applicants for the conversion of a claim or any part of such claim held under a prospecting authority may, at his or their risk, work the land under said authority pending the granting or refusing of the application.

Governor's decision notified in *Gazette*.

22. As soon as possible after the Governor, with the advice aforesaid, shall have decided to refuse or grant any such application as aforesaid, notice of such refusal, or of the intention to grant a lease, shall be published in the *Government Gazette*. If the Governor, with the advice aforesaid, shall refuse to grant the lease, the application therefor shall be deemed to be abandoned, and such abandonment shall take effect from the date of the publication of the notice of such refusal in the said *Gazette*.

Form of lease.

23. If the Governor, with the advice aforesaid, shall determine to grant a lease of land applied for, or any part thereof, a lease shall be prepared in duplicate in the form in the Schedule hereto numbered 6, or as near thereto as the circumstances will permit, having regard to special requirements in certain cases, and shall contain the covenants, conditions, reservations, and exceptions, set forth in the said Schedule, and in these Regulations, and such others as the Governor, with the advice aforesaid, may, if he think fit, in certain cases direct, and every such lease shall bear date of the day of execution thereof by the Governor.

Execution and delivery of lease.

24. Forthwith, after the execution as aforesaid by the Governor, the lease in duplicate shall be forwarded to some duly authorized officer for delivery to the applicants, and notice in the form of the Schedule hereto numered 7 shall be sent to the applicant, requiring him or his attorney, constituted as hereinafter provided, to execute and take delivery of such lease; and upon execution of the lease in duplicate, one of such forms, after being stamped, shall be delivered to the applicant or his attorney, and the other shall at once be returned to the Minister: Provided always that the notice last aforesaid may be sent by post or otherwise to the address given by the applicant in his application.

Applicant, &c., may appoint attorney.—Attorney may execute lease.

25. Any applicant or other person who may, by reason of absence or otherwise be unable personally to comply with the requirements of these Regulations, may comply therewith by an attorney, constituted by the execution of a power of attorney, in the form of the Schedule hereto numbered 8, or to the like effect; and every attorney so constituted shall, before being permitted to execute any lease, or sign any transfer of mortgage, be required to deposit such power of attorney or a certified copy thereof, with the officer in charge of Church and School lands.

Lease, if not executed, may be cancelled.—Special permission may be given to execute lease.

26. If any successful applicant for a lease shall for a period of twenty-eight days after being called upon in the manner prescribed in the 24th Regulation, fail to attend by himself or his attorney to execute and receive the lease granted to him, he shall forfeit all right, title, and interest, in and to the land referred to in such lease, and to the possession thereof, and shall also forfeit all moneys paid or deposited with his application, and the lease shall be forthwith returned to the Minister for cancellation: Provided always that it shall be lawful for the Minister, in cases in which he shall be satisfied that the failure on the part of the successful applicant aforesaid to execute and receive the lease was due to or caused by circumstances over which such applicant had no control, and that such applicant was in nowise blamable for such failure, to permit such applicant at any time within thirty days after the lease shall have been returned as aforesaid to execute and take delivery of such lease, but if such lease shall not be executed by the applicant within the thirty days aforesaid, such lease shall be absolutely cancelled.

Rent, and payment of.

27. The rent reserved under any mineral lease shall be five shillings per acre, payable annually in advance, the first payment to be made with the application, which payment shall cover the rent reserved under such lease for one year from the granting thereof; and thereafter the rent for each ensuing year shall be paid in advance to the Colonial Treasurer in Sydney, and in default of any such payment the lease may be forfeited.

Providing for Royalty.

28. On every lease issued for mining for any specified minerals other than coal or shale the royalty reserved shall be 5s. per centum of the value at the mine, and for coal or shale 6d. per ton. Provided that if the royalty in respect of the coal or shale raised during any one year exceeds the rent paid for such year, the amount paid as rent may be deducted from the sum payable as royalty. But if the royalty as aforesaid in any one year amounts to less than the rent paid for such year, the lessee shall not for such year be required to pay royalty.

Record of quantity of mineral raised to be kept—Penalty if not so recorded.

29. At the expiration of each year or within one month thereafter a statement shall be furnished to the Minister under the hand of the lessee or some one of them, or of the Manager of the mine setting out the quantity and value of the mineral raised from the demised land, and the accuracy of every such statement shall be verified by the statutory declaration of the person making it. And the lessee, or lessees, or Manager of the mine shall keep a proper book in which he or they shall enter the quantity of mineral raised each day from the demised land; and the value of such mineral shall also be entered from time to time as soon as known; and such book shall at all times be open to the inspection of such officer as the Minister may authorise for the purpose. And it is further provided that if the lessee or lessees shall fail to pay the royalty reserved under his or their lease within thirty days after such shall have become due, although no formal demand shall have been made therefor, or shall fail to keep a proper record of the quantity and value of the mineral raised, or shall refuse to allow such record to be inspected by any officer authorised by the Minister for that purpose, or shall fail to observe and perform the other conditions and covenants of his or their lease, the Governor may thereupon or at any time thereafter cancel such lease, and on publication in the *Gazette* of such cancellation the lease shall be absolutely void.

Expenditure by lessees.

30. Lessees shall, within the first three years of their lease, expend at the rate of five pounds sterling per acre upon the land demised, and, in the application to be made as aforesaid, shall state how he or they purpose to expend such sum, and

when such expenditure shall commence: Provided always that it shall be at the discretion of the Minister to sanction a reduction in the amount of expenditure should sufficient cause for so doing be clearly shown; and it is further provided that, for the purposes of these Regulations, and any lease granted under these conditions, lessees shall be deemed to have complied to employ a given number of miners or workmen, if they, the lessees, to a number equal to the given number, work upon the demised land.

Duration, termination, and renewal of leases,

31. A lease for mining for minerals other than gold may be granted for any term not exceeding twenty years, and during such term the holder of any such lease, and the executors, administrators, and assigns of such holder shall be entitled at any time, with the consent of the Governor, to surrender such lease. And it shall be lawful for the Governor, in the name and on behalf of Her Majesty, to grant to any such person as aforesaid a lease for any term not exceeding twenty years of the whole or any part of the land demised by such surrendered lease. And any such lease may, with such consent, be renewed for any period not exceeding twenty years.

Mode of applying for renewal of lease, &c.

32. Applicants for a lease of the whole or any part of the land demised by a lease which shall have been surrendered as aforesaid shall proceed in the manner hereinbefore prescribed to take possession of such land and to make application therefor. But holders of leases who shall desire to obtain a renewal of the lease of the land demised to them may make application in writing addressed to the Minister of Public Instruction for such renewal; and if it shall appear to the Minister, after due consideration and inquiry, to be expedient, he shall recommend the Governor to grant such renewal, subject to the surrender of the lease previously granted; and provided all boundary-marks shall have been properly maintained it shall not (unless the Minister in certain cases think otherwise) be necessary for the purpose of obtaining such renewal to retake possession or to resurvey the land. Provided always that every lease so renewed shall be subject to such conditions and provisions, including any increase of rent or royalty, as the Governor may determine.

Lessees may determine lease on notice.

33. Lessees may at any time determine their leases by giving the Minister of Public Instruction three months' notice of their desire to do so, but no rent shall in any case be refunded.

Registration of lease.

34. Every mineral lease or sub-lease, and every transfer, assignment, mortgage, or encumbrance thereof, or of any part or parts of the premises therein, shall be registered in such office in the City of Sydney, in or in connection with the Department of Public Instruction, as the Minister of Public Instruction shall from time to time appoint, and the officer for the time being appointed to make such registration shall be entitled to demand therefor such fees, and such only, as are prescribed in the Schedule hereto numbered 5; and the fees so received shall be applied as provided for in the Principal Act; and it shall be the duty of the officer appointed as last aforesaid to make registration of every mineral lease which shall have been granted, executed, and issued as aforesaid, of every sub-lease, transfer, assignment, mortgage, or encumbrance, sanctioned or authorized by the Minister, and of every assignment affected by operation of law; and such registration shall be made in such book or books and in such form as the Minister shall from time to time direct; and all such books shall be open during office hours, to be inspected on payment of the fee prescribed in the Schedule hereto numbered 5; and the officer aforesaid shall afford every facility for such inspection, and shall supply copies of or extracts from entries in such books, and tracings of plans, on payment of the fees prescribed as aforesaid; but shall not permit any person other than an officer or clerk in the Department to make any such copy, extract, or tracing.

Transfers, &c., must be sanctioned and registered.

35. No transfer or assignment of any land demised as aforesaid, or of any interest therein (except an assignment by operation of law), and no sub-lease of any such land, or any part thereof, shall be valid or be recognized unless made with or under the license, sanction, or authority of the Minister of Public Instruction, and registered by the officer, referred to in the preceding regulation. In the event of any lessee or any person having a legal interest in any land demised as aforesaid, desiring to transfer or assign such land or any interest therein, or in the event of any lessee desiring to sub-let such land or any part thereof, he shall make application in writing to the Minister for such license, sanction, or authority, and upon such application, if made by the person who appears by the register aforesaid to be legally entitled to the lease of the land, or to the interest therein, as the case may be, it shall be lawful for the Minister, if he thinks fit, to grant such license, sanction, or authority. And with every such application for a license or authority to transfer or assign, the applicant shall forward an instrument in the form of the Schedule hereto numbered 9, under the hands of the parties to the transfer or assignment; and the Minister shall, if he grant such license, sanction, or authority, notify the same upon the face of the instrument. And every application for permission to sub-let shall state clearly whether it is proposed to sub-let the whole or only a portion, and if so, what portion of the land demised; and shall set out fully and distinctly the purpose for which it is proposed to sub-let such demised land or portion thereof, and the several terms, conditions, and restrictions to which such sub-lease shall be subject; and if the Minister shall see fit to license, sanction, or authorize such sub-lease, he shall place a minute to that effect upon such application; but before placing such minute upon the application, he may require such additions, alterations, or modifications to be made as he shall think fit. No application to license to transfer, assign, or sub-let shall be entertained unless accompanied by the registration fee therefor prescribed in the Schedule hereto numbered 5; but in the event of such application being refused, the fee forwarded therewith shall be returned. Provided always that no such license, sanction, or authority, shall be required in the case of any assignment made by any person in whom the right to sell or assign is vested by operation of law, but nevertheless every assignment by such person shall be registered as aforesaid.

Amalgamation.

36. In cases where it can be shown to the satisfaction of the Minister of Public Instruction that adjoining leases can be more effectually worked together than separately, and that the owners of other leases will not be prejudicially affected by the amalgamation of such leases, the Minister may, on the application of the lessees, and payment of the fee specified in schedule 5, authorize the amalgamation of such leases, and thereupon such leases shall become one lease, and the number of men to be employed shall in no case be less than half the aggregate number required under the leases so amalgamated. And failure to employ the required number of men shall render the title thereto forfeited.

Lessee to give notice of intention to work additional metals or minerals.

37. The Minister of Public Instruction upon receipt of notice from the holder of a mineral lease of his desire to mine for any mineral or metal other than that named in the lease, may grant to such person license or authority to mine in and win from the land demised as aforesaid such other mineral or metal named in such notice, upon and subject to such terms, conditions, and limitations as he may see fit in each case to impose; and every such license or authority shall be in the form in the Schedule hereto numbered 10, but with such additions, alterations, or modifications thereto or therein as the Minister may in each case see fit to make.

Power to declare application or lease void.

38. The Governor shall have power at any time during the progress of any application, and before the execution of the lease to declare by writing under his hand, that the application (describing it) is abandoned, and after the lease has been executed by him, and before its execution by the lessee, that such lease is void, and after such lease shall have been executed by the Governor, and the lessee, on the breach by the lessee of any covenant or condition of the lease, the Governor may direct that such lease be cancelled. If the Governor shall declare any such application abandoned, or lease void, or any lease which has been issued, void or forfeited, or direct that any such lease be cancelled, the Minister of Public Instruction, or officer in charge, shall forthwith publish a notice in the *Government Gazette* to that effect, describing accurately the application or lease referred to, and such notice in the *Gazette* shall be conclusive evidence in all Courts throughout the Colony of such declaration having been made, and thereupon the land shall become and be open, as it would have been if such application had not been made, or if such lease had not been executed.

Suspension of work.

39. The registered holder, or majority of the registered holders, of any lease which shall have been registered in terms of the 34th Regulation may at any time, upon satisfying the Minister of Public Instruction by statutory declaration that any of the following causes for suspension of work actually exist—viz., (1) that the demised land and mine are unworkable from any cause; (2) that the registered holder or holders require to be absent, for some sufficient cause, from the locality of the demised land, or are unable, by reason of sickness or other sufficient cause, to work in such land and mine; (3) that the supply of water is insufficient to allow the working of the said land and mine to be properly carried on—obtain from the Minister aforesaid an order in writing permitting the holder or holders of such land to suspend work upon and in connection with such demised land for any period not exceeding six months, and may, on payment of the fee prescribed therefor in the Schedule hereto numbered 5, and delivery to him of the order aforesaid, require the officer referred to in the 34th Regulation to register such permission as aforesaid.

SCHEDULE No. 1.
(Prospecting Authority.)

No.
£ : :

Date 18 .

Authority for Prospecting and Mining for on Church and School Lands.

Issued to of
under the provisions of the Church and School Lands Mining Act of 1888, and subject to Regulations prescribed thereunder, to be in force for three months only from this date.

SCHEDULE.
Describing land over which this authority shall be exercised.

Area.	County.	Parish.	Description.

Officer-in-Charge.

The following conditions are to be observed in connection with this authority:—

Within seven days from the date of issue, the holder of this authority will be required to mark out the land described herein by placing posts at each corner thereof, three inches in diameter, and projecting not less than three feet above the surface, each of which must be set in trenches six feet long by nine inches deep, to indicate the general direction of the boundaries. One of these posts, or a tree adjacent, must have a board or metal plate affixed thereto, with the words, "Held under Prospecting Authority by [*name to be inserted*]," legibly written thereon.

All shafts and dangerous places occasioned by or on behalf of the holder of this authority will be required to be protected, either by filling in or fencing off any such workings prior to abandoning them, and before commencing any further mining operations under this authority; and all works must be conducted in such a manner as to prevent any avoidable damage to the lessee; and the Minister may, on non-fulfilment of these conditions, declare such authority as cancelled.

Prior to the expiration of this authority, either an application for a lease of the whole or any part of the land must be made, or the holder may apply for a renewal of such authority, which may be granted at the discretion of the Minister for a further period of three months; but in no case will more than one renewal be allowed.

SCHEDULE No. 1*a*.

CHURCH AND SCHOOL LANDS.

Transfer of authority to prospect for over an area of acre. County of Parish of

("*I*" or "*We*") being registered as the holder of prospecting authority No. issued under the sanction of the Minister of Public Instruction to and dated the day of 18 , and numbered in Register do hereby transfer to

all my right, title, and interest in and to the prospecting authority aforesaid and the said

do hereby accept transfer of the right, title, and interest of the said in and to the prospecting authority aforesaid, subject to the provisions and conditions of the "Church and School Lands Mining Act of 1888," and hereby agree to be bound by all and singular the terms, conditions, covenants, provisoes, restrictions, and reservations contained in the said prospecting authority.

IN WITNESS whereof we have hereunto subscribed our respective names this day of 18 .

Witness to signature.	Transferror.	Transferee.

I, hereby sanction and authorize the transfer of the interest of in the abovenamed prospecting authority to

Dated at this day of 18 .

(Signature)

I have this day of 18 , registered the above transferee as the holder of prospecting authority No.

Officer in charge of Church and School Lands.

SCHEDULE 2.

CHURCH AND SCHOOL LANDS—MINERAL LEASE REGULATIONS.

Application for Mineral Lease.

To the Honorable (*Place*)
The Minister of Public Instruction, (*Date*)
Sydney.

SIR,

("*I*" or "*We*") hereby make application for a mineral lease of that piece or parcel of land situated County of parish of containing of which took possession on the day of under authority dated for the purpose of mining thereon and therein for for a period of years, by [*state how angles are marked*] at each angle thereof. The datum [*tree, post, or other mark*] is distant in a direction from

forward herewith ["*The sum of,*" "] being the first year's rent in advance of the said land, and ["*The sum of,*" "] to cover the cost of survey and deed fee. And hereby request that survey may forthwith be made of the said piece or parcel of land.

hereby acknowledge that this application is made upon the distinct understanding and condition that if shall abandon or fail to proceed with it, or if it is refused, the Minister of Public Instruction for the time being may deduct from the sum of [*Here insert the sum deposited as rent in advance*] deposited as aforesaid any cost to which in his opinion the Estate may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted shall and will commence mining operations upon or in connection with the demised land within from and after the granting thereof, and shall and will employ upon such land not less than men during the first of the term thereby created, and not less than men during the remainder of such term. And shall and will at any time when called upon in terms of the Regulations relating to mineral leases on Church and School lands, to do so, execute, and take delivery of such lease, or failing therein for a period af twenty-eight days, after being so called upon shall and will forfeit the said sum of [*Here insert the sum deposited as rent in advance*] and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

have the honor to be,
Sir,
Your most obedient servant,

Signature of applicant, or of each applicant.
[*Name in full, and address of each applicant.*]

This application was received by me this day of 18 , at the hour of o'clock on the noon, and is numbered

Signature.

Officer-in-charge.

NOTE.—In dealing with this application, the number of men proposed to be employed, and the time proposed for commencing operations, will be taken into consideration. And if (taking into account all the circumstances of the case) such proposals do not appear to the Minister of Public Instruction to be reasonable, he may refuse to entertain the application, and thereupon such application will become and be void

SCHEDULE No 6.

Form of Mineral Lease.

THIS INDENTURE—made the day of , in the year of our Lord one thousand eight hundred and , between Her Most Gracious Majesty Queen Victoria, of the one part, and

(hereinafter called the lessee) of the other part—Witnesseth:—That in consideration of the sum of paid by the said lessee on the day of 18 , and of the rents hereinafter reserved, and of the covenants and provisoes hereinafter contained, Her Majesty doth by these presents grant and demise unto the lessee , h executors, administrators, and transferees, all that piece or parcel of land, containing by admeasurement , and more particularly described and delineated in the Schedule hereto, or in the plan hereunto annexed and numbered , except the surface of that portion thereof bounded by lines coloured red, containing acres, more or less, and all those mines, veins, seams, or deposits of [the mineral or metal proposed to be worked] in, on, and under the said land (hereinafter called the said mine); together with all and singular the shafts, levels, drifts, works, ways, fixtures, erections, liberties, easements, advantages, and appurtenances which are now or at any time during the term hereby granted may be held, occupied, or enjoyed therewith, for the purposes of mining upon and under the said land for , and also with full power for the said lessee , h executors, administrators, and transferees, and his and their agents and workmen (including contractors, tributors, and so forth), to dig, sink, drive, make, and use excavations, pits, shafts, levels, tunnels, water-courses, and other works necessary for winning and raising the in, on, or under the said land; and to take and appropriate the same during the term hereby granted; and to make and construct on the said land races, drains, dams, reservoirs, roads, and tramways, and also to erect on the said land all buildings, engines, furnaces, pumps, machinery, and appliances necessary for the purpose of winning and obtaining the in, on, or under the said land, and for effectually carrying on the works of the said mine; and also to erect on the said land such offices, cottages, and dwelling-houses for the use of the agents, workmen, and persons employed in the said mine and works, as the said lessee , h executors, administrators, and transferees shall think proper: To hold the said land, mine, and premises, with the appurtenances (subject nevertheless to the reservation or exception of that portion of the surface of the said land shown on the plan aforesaid, bounded by the lines coloured red, and to such rights and interests as may be lawfully subsisting therein at the date of these presents) unto the said lessee , h executors, administrators, and transferees, from the date hereof, for the term of years, and days next ensuing, for the purpose of mining therein or thereon for , working or winning the said , and for no other purpose,—yielding and paying therefor unto Her Majesty, Her Heirs and Successors, yearly, and every year during the said term, the yearly rent of in advance, the first year's rent having been paid as aforesaid, on the day of the next payment being the rent of the said land for month and days at the rate of fivepence per acre per month, from the day of to the thirty-first day of December, 18 , shall be made to the Colonial Treasurer, in Sydney, on or before the thirtieth day of November, 18 ; and thereafter, on or before the thirtieth day of November in each and every year, the yearly rent aforesaid (being the rent of the land hereby demised for the year commencing the first day of January next after each such payment) shall be paid to the Colonial Treasurer aforesaid, clear of all rates, taxes, and assessments to which the said land, mine, and premises are now, or at any time during the said term, may be subject or liable: Provided always, and it is hereby agreed, that if the said yearly rent shall be in arrear for thirty days after the same shall have become payable, whether such rent shall have been legally demanded or not, any officer appointed or authorized thereto by the Minister of Public Instruction may, by himself or his agent, enter upon the said land, and seize and distrain all minerals, metals, and ores actually got and raised from the said mine; and all machinery, apparatus, tools, waggons, carts, carriages, engines, plant, and all other goods, chattels, and effects whatsoever in, upon, and about the said land and premises; and every distress thus made may take away, sell, and dispose of as in cases of distress for rent reserved in common leases; and out of the moneys arising thereby retain so much as shall be sufficient to satisfy the said arrears, and which shall at the time of such sale be unpaid; and all expenses incurred by him or them in or in respect of such seizure, distraint, removal, and sale; and if there be any surplus such officer shall pay the same to the said lessee , h executors, administrators, or transferees; and the acceptance or receipt of rent by or on behalf of Her Majesty, after breach of any covenant hereinafter contained, shall not be or be deemed a waiver of the right of Her Majesty, or of the Minister of Public Instruction, or other officer on behalf of Her Majesty, to enforce observance of such covenant. And if the said lessee , h executors, administrators, or transferees, shall mine for or win from the said land, mine, and premises, any gold, or any earth, rock, stone, quartz, clay, sand, gravel, or soil containing gold, or any mineral or metal with which gold is associated or combined, without the express sanction first had and obtained of the Minister of Public Instruction for the time being, the Governor, with the advice of the Executive Council, may declare these presents void, and thereupon all the right, title, and interest of the lessee ; h executors, administrators, and transferees under these presents shall cease and determine both at law and in equity. And the said lessee do hereby, for h sel , h heirs, executors, administrators, and transferees, covenant with Her Majesty, Her Heirs and Successors, in manner following, that is to say:—

1. That the said lessee , h executors, administrators, and transferees, shall and will during the said term pay unto Her Majesty, Her Heirs and Successors, the rent hereby reserved, at the times and places hereinbefore appointed for payment thereof, clear of all deductions; and shall further pay as royalty the sum of

2. And shall and will upon and during all lawful working days, except when prevented by inevitable accident, or during the execution of repairs, make, construct, and work the said land, mine, and premises in the best and most effectual manner, and to the best advantage, without interruption; and shall and will diligently explore and search for in, on, and under the said land, mine, and premises.

3. And shall and will on and from the day of next, employ in the construction of the works, or in mining operations on or under the said land, during the first three years of the said term, and during the usual hours of labour able and competent workmen and miners at the least; and during the remainder of the said term, and during the usual hours of labour, shall and will employ as aforesaid, not less than such workmen and miners, unless prevented by inevitable accident, or during the execution of repairs, so that within the first three years of the term hereby created there shall be expended upon the said land, mine, and premises, such a sum of money as shall be equal to pounds sterling upon each and every acre hereby demised: Provided that the lessee, or if there be more than one lessee, each lessee who shall work as aforesaid, shall count as and be deemed for the purposes of these presents to be a workman or miner employed as aforesaid.

4. And shall and will during the said term, effectually drain the said mine, and pump all water likely to cause injury thereto, or which would prevent or interfere with the working thereof, and if the said mine shall be affected, or be liable to be affected by the same flow or body of water as any other mine or mines contiguous thereto, shall and will, if and whenever requested so to do, contribute with the lessee or lessees, or owner or owners of such other mines, a reasonable proportion of the machinery and labour necessary to free and keep such mine or mines free from water to a workable extent; or if the said mine shall be kept free from water to a workable extent, either wholly or partially by means of the machinery and labour of a contiguous mine or mines, or by reason of any works constructed or money expended by the lessee or lessees, or owner or owners, of such contiguous mine or mines—then shall and will pay to such lessee or lessees, owner or owners, as aforesaid, a reasonable proportion of the cost of such machinery, labour, or works, or a

reasonable proportion of the money so expended, and the Minister of Public Instruction for the time being, may, if, and whenever he shall think fit, depute some efficient person who shall have access to and inspection of all such mines, to determine when the said mine is so freed or kept wholly or partially free from water, and what are the reasonable proportions of such expenses aforesaid, and to whom and when the same are to be paid,—such decision to be final and conclusive on all parties.

5. And shall and will make such provision for the disposal of the detritus, dirt, waste, or refuse of the said mine that the same shall not be an inconvenience, nuisance, or obstruction to any roadway, river, creek, or private, or Crown, or Church and School lands, or shall not in any manner occasion any public or private damage or inconvenience.

6. And shall and will erect, and keep erected, during the said term, a post painted white, at each angle of the said land, and at such points along the boundary-lines as shall be necessary so as plainly and accurately to define the boundary-lines and angles of the said land; and each such post shall be fixed firmly in the ground, and shall project above the surface thereof, not less than three feet.

7. And shall and will, as often as required so to do during the term, make and deliver to the Minister of Public Instruction for the time being, or any officer appointed or instructed to collect, obtain, or receive the same, all such true and proper plans and sections, returns, and statistics of the workings and operations of the said mine, made up to the last day of the preceding month (the truth and accuracy of which shall be verified by the statutory declaration of the lessee for the time being, or the manager or other officer having the charge, control, and direction of the works of the said mine) as the Minister of Public Instruction shall from time to time direct. And shall and will, whenever required by the Minister of Public Instruction so to do, deliver to any officer appointed or instructed as aforesaid, samples of the minerals, metals, and ores, or any of them, found in or upon such mine and land.

8. And shall and will at the expiration of each year, or within one month thereafter, furnish a statement to the Minister under the hand of the lessee or some one of them, or of the Manager of the mine, setting out the quantity and value of the mineral raised from the demised land; and the accuracy of every such statement shall be verified by the statutory declaration of the person making it; and the lessee, or lessees, or Manager of the mine shall keep a proper book in which shall be entered the quantity of mineral raised each day from the demised land, and the value of such mineral shall be entered from time to time as soon as known, and such book shall at all times be open to the inspection of such officer as the Minister may authorise for the purpose.

9. And shall and will, during the said term, make proper and reasonable compensation to the occupier or occupiers, lessee or lessees from the Church and School Estate of any adjoining land in respect of any damage which may be sustained by him or them, by reason of the working of the said mine, or the carrying on of the works thereof or connected therewith, such compensation to be determined by the Minister of Public Instruction, or by some person authorized by him so to do.

10. And shall and will permit any mining surveyor, or other person duly authorized in that behalf, with all proper or necessary assistants, at all reasonable times, during the said term, quietly to enter into and upon the said land, mine, and premises, to survey and examine the state and condition thereof, and for the purposes aforesaid, to descend all pits and shafts, and to enter into and use all adits, levels, galleries, drives, and excavations, and to use all roads, ways, engines, ropes, machinery, gear, appliances, materials, labour, and other things in or on the said land and mine, which shall be by him deemed necessary, without making any compensation for the same, so nevertheless that in so doing no unnecessary interference is caused with the carrying on of the said mining works.

11. And further, shall and will at all times during the said term keep and preserve the said mine and premises from all avoidable injury or damage, and also the levels, drifts, shafts, water-courses, roads, ways, works, erections, and fixtures therein and thereon in good repair and condition, except such of the matters and things last aforesaid as shall from time to time be considered by a mining surveyor or other proper officer authorized by the Minister of Public Instruction to inspect and report upon such matters and things to be unnecessary for the proper working of the said mine or any contiguous mine, and in such state and condition shall and will at the end or sooner determination of the said term deliver peaceable possession thereof, and of all and singular the premises hereby demised to Her Majesty, Her Heirs and Successors, or to the officer authorized to receive possession thereof. Nevertheless the Minister of Public Instruction may, if he think fit, permit the lessee , h executors, administrators, and transferees, within six months after possession shall have been received as aforesaid, to enter upon the said land, and to remove therefrom such machinery, plant, and apparatus as shall have been erected and fixed upon such land, and such earth, rock, ore, mineral, or metal as shall have been won from and raised to the surface of such mine.

12. And shall not nor will use or occupy, or permit to be used or occupied, the said land, or any part thereof, for other than mining purposes, or for pasturage, or as sites for dwellings, or garden ground for the persons employed in, on, or about the said mine,

13. And shall not nor will mine in or upon the said mine, land, and premises, for any mineral, metal, or ore other than without the express sanction of the Minister of Public Instruction.

14. And shall not nor will transfer, underlet, or part with possession of the said land, mine, and premises, or any part thereof, or mortgage, charge, or encumber the same, without the license first had and obtained of the Minister of Public Instruction for the time being. Provided always that no such license shall be necessary in cases where, by operation of law or otherwise, a sale of the said land, mine, and premises, or any part or parts thereof, is made by any person or persons entitled to sell the same for the benefit of the creditors or a creditor of the lessee or h transferees, or in cases where the lessee or h transferees desire to let the said mine and premises, or any part thereof, to be worked on tribute.

15. And shall not nor will close up or obstruct any adit or adits to or from any contiguous mine or mines, whereby fresh air is admitted or ventilation promoted.

16. And shall not nor will plead acceptance of rent by or on behalf of Her Majesty as a waiver of the right of Her Majesty, or of the Minister of Public Instruction, or other officer on behalf of Her Majesty, to enforce observance of the covenants herein contained, or of the right of the Governor, with the advice of the Executive Council, to declare these presents void for breach of any such covenant. Provided always and it is hereby agreed and declared in manner following:—

17. That it shall be lawful for Her Majesty, Her Heirs, Successors, and Assigns, to make and use in, on, or under the said land, any levels, drifts, leads, shafts, water-courses, adits, roads, ways, and passages for freeing and keeping free any other lands or mines from water, or for conveying water to any other lands or mines for mining purposes, or for supplying any other mines with fresh air, or for effectually working any other mines, or for any public purpose whatsoever, causing as little damage, obstruction, or interference as possible to or with the said mine and the works thereof. And if, at any time during the term hereby created, any part or parts of the land hereby demised, or any part or parts of the surface thereof, shall be required for the purpose of any township, village, railway, road, canal, water-course, reservoir, or for any other public purpose, it shall be lawful for the Governor for the time being, with the advice of the Executive Council, on giving three months' notice of his intention so to do, to cause to be set out the part or parts of the said land, or of the surface thereof, which shall be so required; and as soon as the same shall be so set out, such part or parts of the said land, or of the surface thereof, shall cease to be included in the land hereby demised, and the lessee , h executors, administrators, or transferees, shall not be entitled to any abatement of rent, or any compensation whatever in respect thereof.

18. And if the lessee , h executors, administrators, or transferees, shall prove to the satisfaction of the Minister of Public Instruction for the time being that the said mine is unworkable from any cause whatsoever, or that the lessee , h executors, administrators, or transferees, is or are unable, by reason of sickness or other sufficient cause, to work in such land or mine, or that the supply of water is insufficient to allow the working of the said land, mine, and premises, to be profitably carried on, the said Minister of Public Instruction may grant permission to suspend work therein or thereon, for any period not exceeding six months, without the lessee , h executors, administrators, or transferees, incurring in respect thereto any forfeiture or penalty for breach of any covenant herein contained.

19. And, lastly, that if the lessee , h executors, administrators, or transferees, shall at any time during the said term fail to use such land *bonâ fide* for the purpose for which it has been demised, or if and whenever the said rent or royalty shall be in arrear for days after the time appointed for payment thereof, whether the same shall been legally demanded or not, or if and whenever there shall be a breach of or non-compliance with the covenants and provisoes herein contained by the lessee , h executors, administrators, or transferees, and the lessee , h executors, administrators, or transferees, shall not have obtained from the Minister of Public Instruction for the time being permission to suspend work as aforesaid, in case the breach shall have been for non-compliance with the covenants for the employment of workmen or miners, or for the working of the mine, the Governor, with the advice of the Executive Council, who alone and finally shall judge and determine the matter upon the evidence or reports submitted by the Minister of Public Instruction for the time being, may declare these presents void; and upon publication in the *Government Gazette* of notice of such declaration, all the right, title, and interest of the lessee , h executors, administrators, and transferees, under these presents shall cease and determine both at law and in equity; and the production of a copy of the *Government Gazette* containing a notice, purporting to be signed by the

Minister of Public Instruction, declaring the lease void, shal be conclusive evidence in all Courts whatsoever in the Colony of New South Wales, of a breach of or non-compliance with the covenants and provisoes herein contained sufficient to authorize and sustain such declaration having been lawfully made, and that the interest created hereunder has been lawfully determined; and thereupon it shall be lawful for Her Majesty, Her Heirs, and Successors, or Her or their agents or officers, or for any bailiff or other person duly authorized thereto, or for any holder of a prospecting authority, who has the permission of the Minister of Public Instruction for the time being, without any previous demand whatsoever, to enter forthwith into and upon the said land and premises hereby granted, and the same to repossess and enjoy as fully and effectually to all intents and purposes as if these premises had not been made, and the said lessee , h executors, administrators, and transferees, to expel and remove, without any legal process, and as effectually as the Sheriff might do in case judgment in ejectment had been obtained and a writ of *habere facias possessionem* had been issued on such judgment; and in case of such entry and any legal proceeding taken in respect thereof, the defendant or defendants in any such proceeding may plead leave and license in bar thereof; and these presents shall be conclusive evidence of such leave and license by the lessee , h executors, administrators, and transferees, or other the person or persons, plaintiff or plaintiffs in such proceedings, for such entry or other matters complained of in such proceedings.

In witness whereof, His Excellency the Right Honorable CHARLES ROBERT, BARON CARRINGTON, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and St. George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, hath, on behalf of Her Majesty the Queen, caused the Seal of the said Colony to be affixed to this Grant, and also set his Hand, at Government House, Sydney, in the said Colony, the day and year first above written, and the lessee ha also set h hand and seal the day of 18 .

NEW SOUTH WALES.

MINING.

FURTHER CORRESPONDENCE RESPECTING CANCELLATION OF GOLD LEASES NOS. 650 AND 661, HUNTER AND MACLEAY; ALSO, APPLICATION FOR SAME LAND BY J. ABIGAIL AND ANOTHER AND T. A. PAULSON AND OTHERS.)

Ordered by the Legislative Assembly to be printed, 1 *March*, 1889.

[*Laid upon the Table of the Honorable the Legislative Assembly of New South Wales by the Secretary for Mines, further correspondence, reports, and minutes in connection with the cancellation of gold leases Nos.* 650 *and* 661, *Hunter and Macleay Mining District; also, subsequent applications for the same land. In continuance of Returns ordered to be printed* 21*st December*, 1888, *and* 8*th January*, 1889.]

F. Abigail, Esq., M.P., to The Secretary for Mines.

Sir, Department of Mines, Sydney, 17 January, 1889.

I have the honor to direct your attention to certain allegations that have been made about a certain gold-lease claim known as the Mountain Maid. It has been said and repeated over and over again by some people, that I, while acting as Secretary for Mines, improperly and corruptly used my position for the benefit of one of the applicants because he was my brother, and gave him a lease which could not and would not have been given if the names had been different. I desire to point out that if these statements have any foundation in truth it must prove one of two things—that I either ruthlessly discarded the reports of the proper officer of the Department in this case, or else they, the officers, lent themselves to an improper transaction to please me. In either case a very gross wrong would have been done. Now, knowing as I do, that there is not one word of truth in these charges, that in fact the case was dealt with in exactly the same way that I have dealt with the thousands of cases that came before me during the last two years, without any thought as to the names of the applicants, and wishing to relieve the Department from a charge which, if true, would sap the foundation of the public confidence in a Department which is dealing with the vast mineral lands of the Colony, and believing you would not for party or political reasons or purposes lend yourself to any action which is not founded on truth, I ask that you will cause a full inquiry to be made into the facts of this case, so that the truth may be known, and if any are guilty of wrongdoing they should be pointed out to the public. Asking your early attention and reply.

I have, &c.,
F. ABIGAIL.

Submitted to Under Secretary for report.—J.M.C., 17/1/89.

The Under Secretary for Mines to J. McElhone, Esq., M.P.

Sir, Department of Mines, Sydney, 14 January, 1889.

I have the honor to invite your attention to my letter of the 12th ultimo, referring to Mr. John M'Cracken's complaint against the conduct of the Warden at Bingera, Mr. C. Lawson, and requesting that you would be good enough to call at this office and see the papers relating to the matter.

I have, &c.,
HARRIE WOOD,
Under Secretary.

I have no wish to see the papers referred to. The person wrote me making certain statements. I sent the letter to the Minister for Mines. After the action of the Mines Department in the case of Mr. Abigail's brother, I doubt if the public can place any confidence in the officers and Head of the Department.—J. McELHONE, Sydney, 16/1/89. Mr. H. Wood, Under Secretary, Mines.

It would perhaps be well for the Under Secretary to apply to Mr. De Courcy Browne asking him to be good enough to furnish the *précis* he read last night *re* Mountain Maid in Parliament, and when it is received Mr. Wood should prepare a report in reply to it for presentation to Parliament. It would assist this work if the Under Secretary read Mr. Browne's speech in *Hansard*.—F.A., 17/1/89.

Ask Mr. De Courcy Browne, M.P., to favour me with a copy of the *précis*.—H.W., 17/1/89. Asked.—18/1/89.

Report of the Under Secretary for Mines to the Honorable the Minister for Mines.

Upon the complaints respecting the non-observance of the labour conditions of gold lease No. 650, known as the Curreki Mine, and gold lease No. 661, known as the Mountain Maid Mine, both in the Coolongolook Division of the Hunter and Macleay Mining District.

Sir, 19 January, 1889.

Pursuant to your instruction of the 17th instant upon the letter of the late Minister for Mines, I have the honor to submit the following report:—

Curreki Mine.

Under date 8th November, 1887, Mr. Henry Tagg, of Coolongolook, complained of the non-observance of the labour conditions of the lease (No. 650) known as the Curreki Claim.

Upon this complaint the lessees, Messrs. Dickson, Cooper, and Paulson, were, in the usual manner, called upon to show cause why said lease should not be cancelled for non-observance of the conditions thereof.

Under date 5th December, 1887, Mr. Paulson, one of the lessees, complained that the labour conditions of gold leases Nos. 650 and 661 were not being observed, and asked that they be cancelled.

He was thereupon informed that action was being taken on a prior complaint.

No cause was shown, and consequently, after ascertaining from the Warden that work had not been resumed on lease No. 650, it was in due course cancelled. Owing to representations made chiefly by the Warden, that Mr. Paulson had been victimised and kept idle by his co-lessees beforehand notice was sent to him, and he retook possession of the land formerly comprised in the cancelled lease No. 650 (the Curreki Mine), and in due course lodged application No. 182 for a lease of that land. Messrs. James Hassall, Thomas H. Jones, Paul Paulson, and Alfred S. Paulson were joined with Mr. T. A. Paulson in this application.

In July, 1888, Mrs. C. J. Kirchner wrote asking that action upon the above application might be delayed to enable Mr. Kirchner to establish his right to an interest therein. In consequence of this letter action was stayed as requested, but in October, finding no steps had apparently been taken by Mr. Kirchner, a letter was written to Mrs. Kirchner informing her that unless steps were taken at once the application would be dealt with, and accordingly, after waiting a reasonable time, action was resumed, and the application No. 182 is now ready for approval.

Mountain Maid Mine.

On the 23rd April, 1888, Messrs. Wm. Jennings and John Perry wrote stating they had applied for 10 acres of land at Coolongolook, held by Messrs Paulson and party, and which had not been worked for two years, and referring to Paulson and party having locked up some 50 acres, which, if thrown open, would give employment to a number of miners.

Upon this, Mr. Abigail, who was always strongly opposed to the locking up of mining lands, directed an immediate inquiry. The reply obtained from the Warden was that the statement of Messrs. Perry and Jennings was untrue. Upon further reference to the Warden, it was stated by him that no complaint had been made by Messrs. Perry and Jennings of the non-working of leases at Coolongolook.

On the 7th May, 1888, Mr. Paulson wrote asking what had been done respecting the cancellation of gold-mining lease No. 661, and on the 18th of the same month Messrs. Jennings and Perry sent in a complaint of non-work upon the same lease.

On the 21st May, 1888, the lessees were called upon to show cause why gold lease No. 661 (the Mountain Maid Mine) should not be cancelled for non-observance of conditions. Neither of the lessees showed cause, but Mr. Kirchner, who claimed an interest in the lease, sent in a letter which was regarded as an admission of non-work. Thereupon the Warden was asked to report whether work had been resumed on gold lease No. 661. In reply the Warden forwarded two telegrams from the Warden's Clerk at Coolongolook, in which he, referring to an entirely different piece of ground, stated it was held by Shaw and party, and that over 100 tons of quartz had been raised. Upon discovering this error, I again requested the report previously asked for, and, owing to the loss of time occasioned by the error, marked it very urgent. Upon receipt of a report that work had not been resumed thereon it was decided that the lease 661 be cancelled. It was subsequently cancelled in due course, and the cancellation was published in the *Government Gazette* on the 20th July, 1888.

On the 31st May, 1888, Messrs. Jennings and Perry wrote urging that Mr. Paulson was not entitled to beforehand notice, and that such notice should be given to them as the only *bonâ fide* complainants. Thereupon the Minister noted that the letter should receive serious consideration before giving any beforehand notice. The effect of this was, I think, that no beforehand notice was sent to either of the complainants (it is possible, though I have no recollection of it, that notice was given verbally to one or both parties), but on the 21st July, 1888, Messrs. Perry and Jennings took possession of the land formerly comprised in cancelled lease No. 661 at 1 o'clock in the morning, and at 8 o'clock on the morning of the same day Messrs. Paul and Alfred Paulson took possession of the same. The Messrs. Paulson lodged their application No. 187 on the 24th July, 1888, at 12 o'clock noon; Messrs. Perry and Jennings lodged their application No. 188 on the same day at a quarter to 3 o'clock in the afternoon. Messrs. Perry and Jennings being the first in possession after the title under Gold Lease 661 had been cancelled they would be regarded as the persons whose application would be dealt with, and that of the Messrs. Paulson would be refused; but as both applications had been lodged before the time prescribed by the Regulations I recommended that both be refused, and that as Messrs. Jennings and Perry were first in possession they should receive beforehand notice. This recommendation was approved by the Minister.

On the 10th of August, Messrs. Hassall, Jones, and T. A. Paulson lodged an application, No. 189, for the same land, and as the applications 187 and 188 were then pending, I recommended that it also be refused. This was approved by the Minister.

Before sending these applications to the Executive Council for refusal, inquiry was made, as is usual in similar cases, whether any other applications had been lodged for the same land, and finding there were no further applications, Nos. 187, 188, and 189 were, in due course, refused, and the refusal was gazetted on the 20th September, 1888. I believe beforehand notice was given, in accordance with my recommendation, to Messrs. Jennings and Perry. This is in accordance with the usual practice in similar cases.

On

On the 21st September, 1888, Messrs. Abigail and Perry took possession of the land at 2 o'clock, in the afternoon, and on the 29th September lodged their application, No. 190, to lease the land. I was informed, I think, by Mr. Perry, that Mr. James Abigail had taken the place of Mr. Jennings for some reason connected with Mr. Jennings' private affairs.

Messrs. Hassall, Jones, and Paulson having lodged an objection to application No. 190, on the ground that they claimed the land under application No. 189, I suggested to the Warden to advise them to withdraw their objection, because application No. 189 having been refused before Messrs. Abigail and Perry took possession, their objection could not be sustained, and if an inquiry were held they would probably lose the £5 deposited with their objection. Mr. Paulson having refused to withdraw, the inquiry was held, and evidence was given showing that the objectors relied upon their title under application No. 189, which, as before stated, had been refused. Upon receipt of the Warden's report forwarding the evidence, I recommended that as application 189 had been refused before Messrs. Abigail and Perry took possession, application No. 190 be allowed to go on, that the objectors be informed of the ground of refusal of application No. 189, and that the objectors' deposit, or so much of it as the Warden might award, be applied towards payment of the costs incurred by the applicants. Action upon application No. 190 was expedited because I understood the applicants were anxious to commence work, and because it had been represented that the locality, which is a promising one, was in a languishing state owing to so much of the land having been locked up.

In conclusion, I beg leave to state that I do not know of any particulars in regard to these leases and applications in which the action differs from the action in similar cases without regard to the persons interested, except so far as beforehand notice was given to Mr. Paulson concerning the cancellation of lease No. 650 (the Curreki mine) instead of to the first complainant. In regard to this, if I may be permitted to say so, the late Minister was perhaps unduly influenced by representations made in favour of Mr. Paulson, and I understand the late Minister's minute, dated 1st June, 1888, on printed paper (28), page 7, of the return ordered to be printed on the 21st December, 1888, to admit so much.

I have, &c.,
HARRIE WOOD.

T. De Courcy Browne, Esq., M.P., to The Under Secretary for Mines.

Dear Sir, Beresford Chambers, 52, Castlereagh-street, Sydney, 21 January, 1889.

As your letter of the 18th January, asking for a *précis* of the Mountain Maid case, has no office number, please state if this *précis* is to be a record of the Department, as, if not, I decline to send it. Mr. Abigail has asked for a special inquiry, and I am willing to furnish my *précis* as part of the case, so that the record of the inquiry will be complete.

Sorry for troubling you; but as the whole blame of the case has been thrown by Mr. Abigail upon "his officers," I desire to act carefully in dealing with him.

Yours faithfully,
T. DE C. BROWNE

Inform that the *précis* was asked for officially, and will be a record of the Department.—H.W., 22/1/89. Informed, 23/1/89.

T. De Courcy Browne, Esq., M.P., to The Under Secretary for Mines.

Sir, Beresford Chambers, 52, Castlereagh-street, Sydney, 24 January, 1889.

In reply to your letter, dated 18th January, asking me to favour you with a copy of the *précis* relating to the lease known as the "Mountain Maid" read by me "in the course of debate in the Legislative Assembly on the 16th instant," I beg to herewith furnish the copy as requested.

I have, &c.,
T. F. DE COURCY BROWNE.

[*Enclosure.*]

Précis.

The "Mountain Maid" lease was formerly a 10-acre lease, G.L. 661, at Coolongolook, County Gloucester, portion 75, and held by Paulson and party.

A considerable quantity of work appears to have been done on the leased area.

It was reported for non-working by Paulson and by Perry and Jennings, and for this cause was ultimately gazetted forfeited on the 20th July, 1888, on the regular Gazette day, Friday.

On page 3 of the Parliamentry paper appears a minute on exhibit 7, in which the Minister orders that beforehand notice be sent to T. A. Paulson of the forfeiture of G.L. 661. This instruction was not obeyed, which is very suspicious, especially in view of *Minister's minute* on exhibit 38.

This minute has no reference to the lease referred to in the minute on exhibit 7.

On the 21st July, the forfeited lease was repegged by Perry at 1 a.m., and by Paulson at 8 a.m., Perry's application being No. 188, and Paulson's 187.

As Bulladelah is the nearest telegraph station to Coolongolook—19 miles distant,—it is curious how Perry should have been on the land at 1 a.m., one hour after the land could be lawfully reoccupied. He evidently had beforehand information as to when the lease would be gazetted, and was in the locality waiting for midnight to repeg—a leak evidently in the Department.

On the 24th July both Perry and Paulson lodged their lease applications. No. 187—Paulson—at noon, and Perry—188—at 2·45 p.m.

As the three days required by the Leasing Regulations (Nos. 3 and 48) had not elapsed—though seventy-two hours had—there was no alternative but to refuse the two applications. This was done.

The Minister's minute had reference to lease 650, the "Curreki." This minute bears date 18/1/88, whereas the holders of lease 661 the "Mountain Maid" were not called upon to show cause till the 21st May, 1888.

Beforehand notice was given to T. A. Paulson as to 650.

I cannot find that beforehand notice was given to either party. But complaint having been lodged by Perry and Jennings as well as by T. A. Paulson, there would have been no great irregularity in giving beforehand notice to Perry and Jennings, seeing that it had been represented that Paulson being one of the offending lessees was not entitled to beforehand notice.

Application 187 was by Paul Paulson and Alfred Paulson.

Application 188 was by John Perry and Wm. Jennings.

The

The refusal of 187 and 188 was confirmed by the Executive Council on 4th September, 1888, but not gazetted till the 20th September, a delay which was premeditated, and for a special purpose, as follows :—On the 10 August, 1888 a third application to lease the land of the late G.L. 661 was made in the names of Hassall and Party—No. 189. As there were already two lease applications on the land the third one—No. 189—had to be refused, as the land was not available.

The refusal of this—the third application—was confirmed by the Executive Council on the 19th September, and, extraordinary to state, was, with 187 and 188 (which had passed the Executive Council fifteen days previously), gazetted refused on the following day—a speedy action, very suspicious in itself.

This is in accordance with the usual practice in such cases.

There is nothing suspicious nor irregular in this, because if applications 187 and 188 had been gazetted refused while 189 was pending other applications would probably have been lodged which could not have been granted on account of the pendancy of 189, and therefore to prevent confusion and avoid unnecessary labour all such applications are gazetted at the same time.

The motive for holding over the gazetting of the refusal of 187 and 188 is now very clear, and the Minister must have been cognizant of the reason. The motive was that if 187 and 188 were gazetted without 189 that Perry's show to get the land was wiped out; but gazetting the three—187, 188, and 189—together all titles were wiped out, and Perry could be given an advantage in obtaining repossession by gazetting on an off day, by a special supplement. By page 14 of the papers [*Exhibit B*] this dodge was actually resorted to with a successful result, as Perry took possession of the land again on the afternoon of the 21st September.

There is nothing improper in this motive. I had recommended beforehand notice to Perry and Jennings, because they were the first to take possession after lease 661 had been cancelled. I certainly was not actuated by any feeling of friendship to either Perry or Jennings.

If application 189 had not been cleared away at the same time as 187 and 188, the beforehand notice would have been a farce.

There are numerous precedents for publishing such notices in a supplementary *Gazette*. Such supplements can be obtained from the Government Printer on the day of publication.

As I know full well that these special supplements are not issued separately to subscribers, but are included in the Tuesday's and Friday's regular Gazettes, I am sure that Perry, through J. W. Abigail, who is with him in the lease application of 21st September, got irregular information as to the *Gazette* notice of 20 September, and was on hand at Bulladelah probably to benefit by it.

This is the first time that James Abigail appears in connection with the transaction. I do not know when he came first to the Department with Perry, but I think it was just before the application 190 was lodged, and so far as I can remember Perry then informed me James Abigail had taken the place of Wm. Jennings, and gave as a reason that Jennings' private affairs prevented his proceeding further in the matter.

Perry and Abigail no doubt got the beforehand notice that was to have been given to Perry and Jennings.

This was due to the fact that the Minister had promised one night to lay the papers on the Table of the House on the next afternoon, and consequently the papers were prepared in a great hurry, and no time was allowed for revision.

The whole matter is so surrounded with suspicion, so strong as to leave hardly a doubt in my mind that J. W. Abigail was afforded or obtained information in the Department in a manner not available to the general public.

The slovenly manner in which the papers of the case have been presented, adds to the doubts surrounding the cases; Nos. 187 and 188 are mixed up in a censurable way with 182 and 190, requiring special knowledge of the routine of lease applications to unravel the story of the "Mountain Maid."

Perry and Abigail's application No. 190 was made on the 29th September with suspicious celerity, not characteristic of this branch. The application is bustled through by the Chief Mining Surveyor [*See* exhibit 10, page 15 of the papers], and a lease prepared inside of two months from the date of application, a quickness without a parallel. Now this special treatment of the application must have been the result of exceptional instructions, verbal possibly, as under the peculiar circumstances of this case, the Minister would hardly be indiscreet enough to minute his wishes on the papers.

Altogether this Mountain Maid case is a discreditable one, and the attempt to cast the blame on the officers of the Department is cowardly and contemptible. I hold them beyond suspicion, as in my thirteen years business with the Department I can solemnly state that the business of leases has been most loyally adhered to by the subordinates of the Department. I make no charges against Mr. Abigail, but the peculiarities of the case are such as to cover him with suspicion. If he is blameless, then he is unfortunate in having such a brother. DE C. B.

In submitting these papers which refer to the Mountain Maid and Curreki leases I invite the Minister's attention to the marginal notes on the *précis* submitted by Mr. De Courcy Browne, M.P.,—H.W., 4/2/89.

T. De Courcy Browne, Esq., M.P., to The Secretary for Mines.

Sir, 52, Castlereagh-street, 20 February, 1889.

In the hurry of copying my *précis* of the "Mountain Maid" gold lease case furnished you by request, I find there is one very important point omitted, and which I now supply.

On reference to paper No. 39 on page 9 of the Parliamentary Return you will find the minute of the Executive Council, recommending the cancellation of G.L. 661—*i.e.*, the Mountain Maid lease. The minute was approved on the 17th July, 1888, but not confirmed till the 23rd July, 1888, yet a *Gazette* notice is issued [*see Paper No.* 40] on the 20th July, cancelling the lease, or three days before the lease is cancelled by the Governor and Executive Council. This peculiar haste is repugnant to Reg. 46, relating to gold-mining leases, and requires an explicit explanation as to why the ordinary practice of the Department was ignored, and why the action of such a high tribunal as the Executive Council was anticipated by the Minister for Mines.

I have, &c.,

T. F. DE COURCY BROWNE.

Place with other papers.—J.M.C., 20/2/89.

Report

Report by The Under Secretary for Mines.

Report on the *précis* forwarded by Mr. De Courcy Browne, respecting the Mountain Maid Mine at Coolongolook.

FROM the fact that gold lease, 650 (the Curreki) and 661 (the Mountain Maid) were both held by Paulson and party, and Paulson's complaint referred to, both the papers have not been kept separate, and consequently persons outside the Department have been to some extent confused in regard to the action taken. Thus Mr. De Courcy Browne supposes the Minister's minute, exhibit 7, Parliamentary Papers, refers to lease 661, whereas it refers to lease 650, and he states the Minister's order was not obeyed, whereas in point of fact it was obeyed, and the beforehand notice was given to Mr. Paulson.

As regards lease 661 Mr. Paulson was the first to complain of non-work, and if he had not been a lessee he would probably have received beforehand notice in the usual course, but on the 31st May, 1888, Messrs. Jennings and Perry urged, that although Paulson was the first to complain he was in fact complaining of his own default and therefore was not entitled to beforehand notice, that they Jennings a nd Perry being the only *bonâ fide* complaints were entitled to such notice. Upon this the Minister (Mr. Abigail) wrote the following minute. "This should receive serious consideration before allowing a ny of the first applications any right in connection with this case." I cannot find that beforehand n otice was given to Perry and Jennings, but it is possible that it may have been. At any rate such a p roceeding would have been quite consistent with the Bill introduced by Mr. Abigail.

It appears that the papers were withdrawn from the Executive Council after the cancellation of gold lease 661 had been approved, but before the approval had been confirmed, and that the cancellation was gazetted before confirmation. This has been done in other cases where the matter has appeared to the Minister an urgent one. The urgency in this case was, I think, that Perry and Jennings represented they were at great expenses awaiting cancellation of the lease.

There is nothing suspicious about the keeping back of the *Gazette* notice respecting applications 187 and 188, till 189 was ready to be gazetted. This is the usual practice, so that all applications pending for the same parcel of land may be cleared away at the same time, thereby preventing confusion.

When recommending the refusal of applications 187 and 188, I recommended that beforehand notice be given to Perry and Jennings, and such notice would have been useless. 189 were cleared away. My reason for making that recommendation was that they, Perry and Jennings, were first in possession of the land after lease 661 had been cancelled. I certainly was not actuated by any feeling of friendship for either Perry or Jennings.

There are numerous precedents for publishing notice of refusal in a Supplement to the *Gazette*. Such Supplements are obtainable at the Government Printing Office on the day of publication, and it would be quite possible for the information to be telegraphed to Bulladelah in time for a person to reach Coolongolook by midnight.

I cannot from memory state when Mr. James Abigail first came to the Department in connection with this matter, but about the time application No. 190 was lodged his name first appeared in the papers.

There is no doubt that Perry and Abigail received the beforehand notice, that would have been given to Perry and Jennings in accordance with my recommendation on application No. 188.

It is no doubt true that the papers in this case were not prepared as carefully as they should have been, but it must be remembered that the time allowed for their preparation was very short, the order for their production having been given in the morning for the papers to be ready by the time the House met on that day; consequently, there was no time to make a proper examination before they were laid on the Table; consequently the papers omitted had to be included in a Supplementury Return.

H.W., 22/2/89.

Result of Inquiry.

Result of inquiry made by the Honorable the Minister of Mines, at the request of Francis Abigail, Esq., M.P., *re* the cancellation of gold leases, No. 650, known as the "Curreki Mine," and No. 661, known as the "Mountain Maid Claim," Curreki Mine, Block No. 650.

HAVING been requested by Mr. Francis Abigail, M.P., late Minister of Mines, to cause an inquiry to be made into the circumstances in connection with the issue of a gold-mining lease to Messrs. James Abigail and John Perry, I at once complied with the request, and instructed the Under Secretary of Mines to furnish me with a full report of the whole case. Having read that report, and having also fully considered all the other papers relating to the case, there seems to me to have been some confusion in consequence of the two cases known as the "Curreki" and "Mountain Maid" gold-mining claims being mixed up and owned by the same proprietary, viz., Messrs. Dickson, Dickson, Paulson, and party. From my own personal inquiries and study of the whole of the papers, I find the case to be as follows:—"On the 8th of November, 1887, Mr. H. Tagg complained that Dickson, Dickson, Paulson, and party had not complied with the labour conditions of their leases" [*see Exhibit No.* 1 *Parliamentary Papers*], and requested "that the lease should be cancelled, and that he (Tagg), being the first informant, should receive the usual "beforehand notice." On the 27th February following, more than three months having elapsed, Mr. Tagg again wrote referring to his previous complaint, and requesting a reply. [*See Exhibit No.* 12.] This letter is minuted by the Under Secretary of Mines, requesting the Warden to hasten his report, and inform Mr. Tagg that the matter was still under consideration. On the 13th March following, Mr. Tagg was informed by the Under Secretary of Mines that his complaint was still under consideration. From this point the papers do not disclose that any further communication was made to Mr. Tagg, nor did he receive any "beforehand notice" in respect to the cancellation of lease No. 650, which was confirmed by the Executive Council on the 17th April, 1888. [*See Exhibit No.* 16.] The next informant against Messrs. Dickson, Dickson, Paulson, and party, for non-compliance with the labour conditions respecting the Curreki Mine was a Mr. E. Easterbrook, who lodged a written complaint on the 11th November, 1887, three days later than that lodged by Mr. Tagg. [*See Exhibit, Parliamentary Papers, No.* 2.] This gentleman's communication appears to have been ignored by the Minister altogether, as no reference is made to it in any of the papers. The next person to lodge a complaint against the non-fulfilment of the labour conditions on this gold lease No. 650, the Curreki claim, was Mr. T. A. Paulson, one of the lessees, who asked "that the lease which had been issued to himself and others should be cancelled, and that he, being the informant, should receive the 'beforehand notice,' which would enable him to obtain

a new lease, issued to himself alone, and for his own personal benefit." This application, it will be noticed, was made nearly one month later than those of Mr. Tagg and Mr. Easterbrook, viz., the 5th December, 1887 [*See Exhibit No.* 3], and the minute shows the regular course was adopted on Paulson's complaint, viz., to inform Paulson "that the matter was being dealt with on prior complaints." On the 23rd December, 1887, Messrs. Dickson, Dickson, Paulson, and party were called upon to show why this lease No. 650 should not be cancelled. [*See Exhibits Nos.* 4 *and* 5.] On the same date, 23rd December, 1887, Mr. Warden Fawcett wrote to the Under Secretary for Mines, urging "that in the event of the lease being cancelled, Mr. Paulson, one of the then lessees of the claim, should have timely information given to him, to enable him to release the claim. [*See Exhibit No.* 6."] The Under Secretary replied, that "in the event of the lease being cancelled the beforehand notice should be given to the first complainant, Mr. Henry Tagg." On the 28th December, 1887, a Mr. W. Kirchner wrote to the Under Secretary for Mines, claiming to be one of the lessees of the claim, and requesting information. [*See Exhibit No.* 7.] The writer was informed, with the approval of the Minister, "that the lease would most likely be refused for non-compliance with the labour conditions." On the 31st December, 1887, the Under Secretary of Mines replied to Mr. T. A. Paulson's letter of the 3rd December, 1887, stating "that action was being taken on a prior complaint" (presumably that of Mr. Henry Tagg). [*See Exhibit No.* 8.] On the 18th January, 1888, notwithstanding that Mr. Warden Fawcett had been informed on the previous 23rd December, 1887, that "in the event of the lease being cancelled beforehand, notice should be given to Henry Tagg, the Minister (Mr. Abigail) minuted that "Mr. Paulson, one of the lessees complained against, should receive 'the beforehand notice.'" The fullest inquiries then following fully establish the fact "that the lessees of this claim had not complied with the requirements of the law in respect to the employment of labour." On the 21st March following, the Minister approved of the lease being cancelled, which was confirmed by the Executive Council on the 17th April, 1888. [*See Exhibit No.* 16.] On the 19th April, 1888, two days before the cancellation of the lease was to be gazetted [*see Exhibit No.* 17], the "beforehand notice" was sent to Mr. T. A. Paulson, who was thus enabled to regain possession of the claim. Taking into consideration all the foregoing circumstances, I am clearly of opinion that what has been done over the matter submitted to me for decision by Mr. Abigail was most improperly done, and that it was a maladministration of the Mining Act. There cannot be the slightest doubt that the only person entitled to the "beforehand notice" was the first complainant, Henry Tagg, and that T. A. Paulson was not entitled to the lease which has been issued to him. Whatever induced the Minister to ignore the *bonâ fide* complaint of Henry Tagg, which complaint had from first to last been fully recognized by the Under Secretary for Mines, and to accept that of Mr. T. A. Paulson, who was complaining against himself and party, I cannot imagine, nor do the papers in the Mines Department show.

J. M. CHANTER.

Result of Inquiry.

Result of Inquiry made by the Honorable the Minister of Mines, at the request of Francis Abigail, Esq., M.P., *re* the cancellation of Gold Leases No. 650, known as the "Curreki Mine," and No. 661, known as the "Mountain Maid Claim."

MOUNTAIN MAID CLAIM, BLOCK NO. 661.

ON the 5th of December, 1887, Mr. T. A. Paulson, one of the lessees of the above claim complained "that the labour conditions were not being complied with, and that his co-lessees by their action were preventing the work being carried on." He furthermore requested that the lease should be cancelled and that he should receive the beforehand notice to enable him to obtain a new lease of the claim, when he promised to faithfully comply with the labour conditions. He was informed that the matter was being dealt with on a prior complaint [*see Exhibit No.* 3], but I am of opinion that this prior complaint referred to another lease, viz., No. 650, and not No. 661, the "Mountain Maid." On the 23rd of April, 1888, Messrs. W. Jennings and John Perry lodged a complaint with the Minister for Mines against the lessees of gold lease No. 661, known as the "Mountain Maid" claim, alleging that the lessees had not complied with the labour conditions. [*See Exhibit No.* 18, *Parliamentary Papers.*] Upon receipt of this letter the Minister asked for a careful inquiry and report. The case was submitted to Mr. Warden Fawcett for report, who reported upon the 13th of May, 1888, stating "that the statements made by Messrs. Perry and Jennings were untrue, and he saw no necessity for an inquiry being held." Two days later the Minister wrote a Minute stating that Perry and Jennings had lodged a complaint for non-fulfilment of labour conditions upon a lease at Curreki, some time previously, and, as it adjoined the "Mountain Maid" claim, he asked "what had been done." This minute seems peculiar, for I find the Minister had himself, on the 3rd day of April, previously recommended His Excellency the Governor and the Executive Council to cancel the said lease. As a matter of fact he knew that it had been approved by His Excellency the Governor on the 10th day of the previous month, and confirmed by the Executive Council seven days later. Furthermore, that on the 19th day of March, 1888, he had approved of a "beforehand notice" being give to Mr. T. A. Paulson (who is the first complainant as regards the "Mountain Maid" lease No. 661.) A similar "beforehand notice" having enabled him on a previous occasion to reobtain possession of claim No. 650, known as the "Curreki Claim." Acting under instructions, the Under Secretary on the 15th of May, 1888, again requested Mr. Warden Fawcett to furnish a report as to the non-compliance with labour conditions on the "Mountain Maid" claim. Here some confusion occurred for some time, as the various communications which passed between the Under Secretary and Warden's Clerk show clearly that the latter had misunderstood his instructions and was forwarding reports that had reference to other leases, entirely distinct from the "Mountain Maid" lease. This error was not rectified until the 5th of July, 1888, when the Under Secretary again wrote to the Warden, informing him that his report was required upon the "Mountain Maid" lease No. 661. The Warden replied the following day, reporting that the labour conditions were not being complied with, whereon the Under Secretary recommended the cancellation of the lease which was approved by the Minister three days later, viz., the 9th of July, 1888. On the 20th of the same month a *Gazette* notice was issued cancelling the lease. Messrs. Jennings and Perry appear to have been very persistent, as from their letter to the Minister, dated the 23rd of April, 1888, up to date of cancellation of the lease, several communications passed between them and the Minister, and it is a very noticeable fact that nearly all these communications bear a minute of the Minister urging matters

forward—

forward—whereas the like attention does not appear to have been paid to those sent by the first informant, Mr. Paulson. That gentleman asserts in his letter to the Minister, dated the 7th of May, 1888, "that the Minister had promised that in the event of the lease being cancelled, he—Paulson—should receive the beforehand notice." A minute of the Minister, dated the 1st of June, 1888, apparently shows strong bias in favour of Jennings and Perry,—wherein the Minister states "he is not at all satisfied with the recommendation of the Warden, which recommendation was in Paulson's favour." It has already been shown in the Warden's report "that his recommendation in Paulson's favour applied to both leases (blocks Nos. 650 and 661.") The Minister entirely approved this recommendation when Tagg and Easterbrook had to be put on one side in favour of Paulson respecting lease No. 650—although, as regards Tagg, the responsible officer of the Department had recommended all through that he should receive the "beforehand notice." What induced the Minister to disregard the Warden's recommendation and favour the application of Jennings and Perry the papers do not disclose, and the reasons, if there were any, were apparently only known to the Minister (Mr. Abigail) himself. Jennings and Perry were not entitled to any special consideration, as their complaint of non-work was not made to the Minister for a period of nearly four months later than that lodged by Paulson, who asserts that the Minister promised him "the beforehand notice." If the reasons adduced by the Warden were considered sufficient to justify the Minister in ordering the beforehand notice to be given to Paulson, in respect of the Curreki lease No. 650, to which he was not entitled, Messrs. Tagg and Easterbrook having been prior informants, the same reasons should have had still greater weight in respect to the "Mountain Maid" claim (block No. 661) as in this case. Paulson was the only one entitled to receive this notice. The lease having been cancelled as hereinbefore mentioned, on the 20th of July, fresh applications were lodged, as follows:—No. 187, by Paul Paulson and Alfred Paulson, who took possession of the land on the 21st of July, 1888; No. 188, by John Perry and William Jennings, who also took possession of the land on the 21st of July, 1888; No. 189, by James Hassall, Thomas A. Jones, and T. A. Paulson, who took possession of the land on the 4th of August, 1888. Applications Nos. 187 and 188 were refused in consequence of having been lodged before the expiration of three days. Perry and Jennings (applicants No. 188) appear at that time to have obtained information from some quarter which enabled them to take possession of the land at 1 o'clock a.m., a few hours after the *Gazette* notice was issued in Sydney; whereas applicants for No. 187 did not appear to possess this information, for they did not take possession of the land until 8 o'clock a.m., or seven hours later. How this information was obtained the papers do not disclose, but a minute of the Minister, dated the 28th of August, 1888, approved of applicants No. 188, Perry and Jennings, receiving "beforehand notice," on the ground of "priority of possession." Applicants for No. 189, Hassall and others, who took possession on the 4th of August, 1888, were refused the lease also, on the ground "that the land was not available at date of taking possession." It does appear strange that, as Paulson and others and Perry and Jennings, who had lodged applications before the three days had expired, which was in consequence refused, should have the refusal delayed in order to make the application No. 189 also invalid. This was evidently done, for although these applications were dated 24th of July, 1888, the Minister did not recommend His Excellency the Governor and the Executive Council to refuse the applications until the 20th August, 1888, and the *Gazette* notice refusing the application was not issued until the 20th September, 1888, which stated that the whole of the applications, Nos. 187, 188, and 189, were refused. It is quite clear that Perry by some means obtained information of the Minister's intention to issue the *Gazette* notice notifying the refusal of applications Nos. 187, 188, and 189, on the 20th September, 1888, for at 2 o'clock in the afternoon on the following day, the 21st September, 1888, Perry is found on the land, which is near Bulladelah, in the Stroud District—a considerable distance from Sydney—repegging the claim. How this information was obtained the papers do not disclose. It must have been given by some person verbally, thereby carrying out the expressed wishes of the Minister, who, in his minute of the 20th August, 1888, approved of Mr. Perry receiving the "beforehand notice." Joined with Mr. Perry in this very application, which is numbered 190, is Mr. James Abigail, referred to in Mr. Francis Abigail's letter to me. Mr. James Abigail's name did not appear previously, and the reasons for Mr. Jennings withdrawing and his place being filled by Mr. James Abigail are not disclosed in any of the papers in the Department, and, consequently, they are not known to me.

Having now to give a decision on the whole matter, as requested by Mr. Francis Abigail in his letter of the 17th January last, I am constrained to say that, as the records of the Mines Department show, that "no official beforehand notice" to Perry was given, as he was not entitled to receive one, it is clear that the information must have been verbally given by someone having an interest in assisting Perry and James Abigail to obtain the lease. In my opinion, Perry and James Abigail were not entitled to the lease in question. Paulson was clearly entitled to it.

J. M. CHANTER.

EXHIBITS.

EXHIBIT 1.

Mr. H. Tagg to The Under Secretary for Mines.

Sir, Coolongolook, 8 November, 1887.

I have the honor to bring under your notice the fact that the gold-mining lease, No. 22, gold lease 80, 10 acres, in favour of Dickson, Dickson, Paulson, and party, and known as the Curreki Claim at Coolongolook, county of Gloucester, has been held for several years, and next to no work has been done on it.

They have had several extensions of time granted them on various pretexts, and the last extension of three months, and which will shortly expire, was for the erection of machinery, but no steps whatever have been taken to get any up or on the ground.

No efforts have been made during the long time they have held this ground to keep the water out, and no work whatever is being done at present on the claim.

I beg further to inform you that it was altogether owing to the holders of the above claim allowing their shafts to remain full of water which flooded me, and at last compelled me to abandon the adjoining claim No. 21, and held and worked by me.

I have the very highest opinion of the line of reef, and more especially the 10 acres, as it is on rich payable stone.

I believe it is the intention of the present leaseholders to allow the lease to be cancelled, and then to re-peg it out, thus shutting up and allowing this valuable property to lie idle.

Being the first to advise you to above effect, I beg to ask you to favour me with instructions how to proceed to be put in possession of the abovementioned ground.

Craving for the favour of a reply,—

I have, &c.,
HENRY TAGG.

EXHIBIT 2.

Mr. E. Easterbrook to The Under Secretary for Mines.

Sir, Cape Hawke, 11 November, 1887.

I have the honor to bring to your notice of Dickson and Paulson party not carrying out their labour conditions, No. 22, gold lease 80, Curreki Claim, Coolongolook, county of Gloucester. My object is to put my own shaft deeper, which is 70 feet deep. I cannot go deeper until they work their claim. I am certain it is a good line of reef. I have had three years' trial at it; but they swamp me out whenever I attempt to commence work.

I am, &c.,
EDWARD EASTERBROOK,
Working Miner.

EXHIBIT 3.

Mr. T. A. Paulson to The Under Secretary for Mines.

Sir, Coolongolook, 5 December, 1887.

I wish to apply for cancellation of gold lease 650, portion 22, situated at Coolongolook, county of Gloucester, parish of Tellaree, held by myself and Dickson; also lease No. 661, portion gold lease 75, situated at Coolongolook, county of Gloucester, parish of Tellaree, taken out by Paulson, T. Jones, and C. Jones. Out of the last twelve months the party has kept me and my two sons idle, with the exception of four months; and one gentleman in Sydney, who holds four shares, owes £80, and I cannot get a shilling from him. I hereby pray that you will cause these two abovementioned leases to be cancelled for nonpayment of rent, as I and my party are quite willing to pay rent, erect machinery, and work the two mines; and if such leases should be cancelled, I hope you will give me due notice, as all my labour and money for this last eight years lay in these two mines, and not on any occasion have I been the cause of the mines being suspended from labour, although I had to carry it through for the rest of the shareholders.

I have, &c.,
T. A. PAULSON.

May probably be informed that the matter is being dealt with on prior complaint.—E.F., 29/12/87. Inform.—G.E.H. (*pro* U.S.), 29/12/87.

EXHIBIT 4.

Notice to Messrs. A. F. Dickson and J. Dickson, jun., and T. A. Paulson.

Department of Mines, Sydney, 23 December, 1887.

YOU are hereby called upon to show cause, within thirty days, why gold lease No. 650 (H and M), delivered 12th December, 1884, under which you are lessees, should not be cancelled for non-observance of the conditions thereby imposed.

HARRIE WOOD,
Under Secretary for Mines.

I, ROBERT QUAYLE, of Bullahdelah, a first-class constable, do hereby certify that I have served upon the within-named Arthur F. Dickson, Joseph Dickson, jun., and T. A. Paulson the notice herein, by delivering to Joseph Dickson, jun. (personal), A. F. Dickson, by delivering it to his father at Bullahdelah, a true copy thereof, and T. A. Paulson by registered letter.

ROBERT QUAYLE,
Constable.

Bullahdelah, 4th January, 1888.

EXHIBIT 5.

Notice to Mr. A. H. Cooper.

Sir, Department of Mines, Sydney, 23 December, 1887.

You are hereby called upon to show cause, within thirty days, why gold lease, No. 650 (H. and M.), delivered 12th December, 1884, under which you are one of the lessees, should not be cancelled for non-observance of the conditions thereby imposed.

HARRIE WOOD,
Under Secretary for Mines.

EXHIBIT 6.

Mr. Warden Fawcett to The Under Secretary for Mines.

Sir, Bullahdelah, 23 December, 1887.

I take the liberty of saying that Mr. T. A. Paulson is a most respectable man, and I consider he has been victimised by his partners; he is willing to work, but kept idle by them. If the claims Curreki and Mountain Maid got into his hands good work would be made. As to Kerr's complaint about these claims, it comes with a bad grace from a man who will not work on his own. From something I have heard I think it probable that the complaint against Conway and Kerr's claim is to get rid of the drones. I hope if the leases of Curreki and Mountain Maid should be cancelled that Paulson may get timely information. With best wishes for the new year,—

I have, &c.,
CHARLES H. FAWCETT.

Inform Mr. Warden Fawcett that the complaint was made by Henry Tagg, and consequently beforehand notice must be sent to him in case the lease be cancelled.—H.W., 3/1/88. Warden informed by memo.

EXHIBIT

EXHIBIT 7.

Mr. W. Kirchner to The Under Secretary for Mines.

Sir, G.P.O., Box No. 960, Sydney, 28 December, 1887.

With reference to my conversation with you this morning, relating to the leases noted below, I have to advise you that although my name does not appear as one of the registered lessees of these mines, yet I really own a third share in them, both as appears by legal documents drawn up by Mr. T. Marshall, solicitor, which I can produce to you if necessary. As these mines have cost me a very large sum of money, I now beg to respectfully request that you will keep me informed of what is passing between your Department and the parties mentioned below, as at present I am kept quite in the dark as to what is going on, and can get no information from the parties who are up the country, although I am quite prepared to pay my share of the working expenses so as to keep the mine afloat.

I have, &c.,
W. KIRCHNER.

EXHIBIT 8.

The Under Secretary for Mines to Mr. T. A. Paulson.

Sir, Department of Mines, Sydney, 31 December, 1887.

Referring to your letter of the 5th instant, in which you apply for a cancellation of gold lease No. 650, in the names of Dickson and yourself, and also of lease No. 661, held by Paulson and P. Jones, I have the honor to inform you that action has been taken in the matter on a prior complaint.

I have, &c.,
HARRIE WOOD,
Under Secretary.

EXHIBIT 12.

Mr. H. Tagg to The Under Secretary for Mines.

Sir, Coolongolook, 27 February, 1888.

I beg to recall to your attention my memo. of or about the 9th November, 1887, laying before you the reasons why the gold-mining lease No. 21, known as the Curreki, at Coolongolook, county of Gloucester, should be cancelled, and begging at the same time that you would favour me with early information of the cancellation. I now have the honor to inform you that the time allowed the present holders of the ground as the extension of non-labour for the erection of machinery has expired, and that no work whatever has been done on the ground. Begging that you will favour me with advice as to how I am to proceed,—

I have, &c.,
HENRY TAGG.

Request Warden to expedite his report and inform the writer the matter is still under consideration.—H.W., 6/3/88.

EXHIBIT 16.

Minute for The Governor and Executive Council.

Recommending the cancellation of a certain gold-mining lease.

Department of Mines, Sydney, 3 April, 1888.

IT is recommended to His Excellency the Governor and the Executive Council that the gold-mining lease of Crown lands specified in the annexed schedule be cancelled, the lessees having failed to fulfil the labour conditions contained therein.

FRANCIS ABIGAIL.

The Executive Council advise that the course herein recommended be approved.—A. C. BUDGE, Clerk of the Council. Min. 88/14, 10/4/88. Approved.—CARRINGTON, 10/4/88. Confirmed, 17/4/88.

SCHEDULE ALLUDED TO.

Hunter and Macleay Mining District.

No. 650; name, A. F. Dickson and others; portion No. 22; locality, county Gloucester, parish Teleraree; 10 acres; Bullahdelah, 142.

EXHIBIT 17.

The Under Secretary for Mines to T. A. Paulson, Esq.

Sir, Department of Mines, Sydney, 19 April, 1888.

I am directed by the Secretary for Mines to inform you that the gold-mining lease noted in the margin, will be cancelled for non-fulfilment of the labour conditions contained therein. H. and M. 650.

If you desire to lease the land, you may, after the notification of cancellation, which will appear in the *Government Gazette* of 22nd April, 1888, take possession after 12 o'clock at night of that day, and apply, in accordance with the regulations.

I have, &c.,
G. E. HERRING
(For the Under Secretary for Mines).

Sydney: Charles Potter, Government Printer.—1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MINING.

(MINERAL LEASES, COUNTY OF GOUGH, PARISH OF HIGHLAND HOME.)

Ordered by the Legislative Assembly to be printed, 27 *August*, 1889.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 22nd May, 1889, That there be laid upon the Table of this House,—

"Copies of mineral leases Nos. 1,815, 1,816, 1,817, also 3,237, of land in "the county of Gough, parish of Highland Home; also all applications for "the conversion of the same, or any of them, into mineral conditional "purchases, copies of all transfers, or applications for transfers, of the same, "and of all reports, plans, and papers relating to the same."

(*Mr. J. P. Abbott.*)

Mineral Conditional Purchase Applications.

Application for Conditional Purchase.

C. [Alienation Act, sections 13, 14, and 19.]

District of Tenterfield. No. 60 of 1884.

Application by James Henry Graney, now a minor, for the conditional purchase, without competition, of 60 acres unimproved Crown land.

Received by me, with a deposit of £30, this 31st day of July, 1884, at 10 o'clock,—

J. H. TOMPSON,
Agent for the Sale of Crown Lands at Tenterfield.

Sir, 31 July, 1884.

I am desirous of purchasing, without competition, under the Crown Lands Alienation Act of 1861, the portion of unimproved Crown land hereunder described, containing 60 acres; and I herewith tender the sum of £30, being a deposit at the rate of 10s. per acre on the area for which I apply.

I am, &c.,
JAMES H. GRANEY,
Emmaville.

To the Agent for the Sale of Crown Lands at Tenterfield.

Description.

County of Gough, parish of Highland Home, 60 acres, being the land held under mineral leases 1,815, 1,816, 1,817.

The Surveyor-General to The Under Secretary for Lands.

Mineral conditional purchase 84–60, Tenterfield, parish of Highland Home, county Gough.

1 May, 1885.

IT is submitted for the consideration of the Secretary for Lands that the Mines Department should be requested to say what portions in the county of Gough are or have been held under mineral leases 1,815, 1,816, and 1,817, and how the applications for these stood at date of this conditional purchase, viz., 31st July, 1884; also whether any part of the land applied for under the conditional purchase is embraced in any other applications; if so, the state of such mineral lease applications when approved of, in whose name, and whether still correct, and if otherwise, the date of cancellation. Appendix A, B

Conditional Purchase.—Revenue Refunded.

(C.P. No. 84-60; C.S. No. 85-4,943 Cor.)

Sir, Department of Lands, Conditional Sales Division, Sydney, 30 July, 1885.

Tenterfield; Evan Prosser; date of selection 31st July, 1884; 60 acres; deposit, £30.

I have to inform you that the conditional purchase noted in the margin being void, as at date of application the area applied for was held under mineral leases 1,815, 1,816, and 1,817 by W. W. Richardson and G. Hardie, you will be good enough to refund to the selector the sum of £30, being the deposit money paid thereon.

2. I am to add that a receipt form for the disposal of the money has been forwarded to the applicant, with instructions to fill up same and transmit it to the Treasury.

I have, &c.,
CHARLES OLIVER,
Under Secretary.

Messrs. Shepherd and Crossman to The Under Secretary for Lands.

Evan Prosser's Conditional Purchase at Tenterfield.

Sydney, 7 August, 1885.

Sir,

We beg to acknowledge, with thanks, the receipt of your favour of the 5th instant informing us that the cancellation of this conditional purchase had been revoked, and that the purchase stands in E. Prosser's name as before.

We herewith return to you the refund voucher.

We have, &c.,
SHEPHERD AND CROSSMAN.

[*Enclosure.*]

[Special Payments Form No. 2.]

NEW SOUTH WALES.

Conditional Purchase.—Revenue refunded.

Dr. to Evan Prosser. Department of Lands, Sydney, 30 July, 1885.

	Amount to be refunded
	£ s. d.
For the following refund, viz.:—C.S. No. 85-4,943 Cor.; C.P. No. 84-60. Land Office at Tenterfield; date of selection, 31st day of July, 1884; deposit paid on 60 acres. Selection void, as at date of application the area applied for was held under mineral leases 1,815, 1,816, and 1,817 by W. W. Richardson and G. Hardie	.....
Deposit to be refunded on 60 acres.....£	30 0 0

Messrs. Shepherd and Crossman to The Under Secretary for Lands.

Sir, Sydney, 4 August, 1885.

In reply to your letter of the 30th July, informing us that conditional purchase 84-60, Tenterfield, conditionally purchased by J. H. Graney, was void, as the land at the date of the application was held under mineral leases 1,815, 1,816, and 1,817, by W. W. Richardson and G. Hardie, we shall esteem it a favour if you will have the same reinstated without delay, to avoid the possibility of the land being "jumped," as the land was purchased by Mr. Prosser on behalf of a company for a large sum, and several thousand pounds have already been expended on machinery and otherwise.

We find on application at the Mines Office that the mineral leases 1,815, 1,816, and 1,817 were transferred by W. W. Richardson and G. Hardie to J. H. Graney on the 16th June, 1884, and the application for conditional purchase was made by J. H. Graney at Tenterfield on the 31st July, 1884.

We have, &c.,

SHEPHERD AND CROSSMAN.

Charting Branch.—Ed.B., 22/1/86. Noted in Charting Branch. District Surveyor informed. Form F to Mr. L.-S. Holmes this day, directing survey of portions 173 and 174, Highland Home. Conditional Sales Branch to await survey.—Jn. J. Callachor, 17/2/86. Mr. Landers,—Has surveyor reported.—C.W.P., 5/7/86. No reply.—W.T.L., 9/7/86. Records Mr. Landers,—Any reply yet.—J.P.M., 15/11/86. Reply by C.S. 86-33,987 Dep.—W.T.L., 23/11/86.

Messrs. Shepherd and Crossman to The Secretary for Lands.

Sir, 177, Pitt-street, Sydney, 4 August, 1885.

In reference to the voidance of conditional purchase by J. H. Graney, 84-60, Tenterfield, applied for 31st July, 1884, we must urge upon you to immediately recall the revocation of this conditional purchase, and prevent the possibility of this valuable property (which has been purchased *bona fide* by a number of gentlemen who have expended large sums and actually erected valuable machinery on the faith of the communications received from the Lands Department) being jumped, as we have reason to suspect that there is a movement afoot in the matter.

Mr. Prosser purchased from the Butler's Tin-mining Company, in liquidation, by George Hardie, the official liquidator of the company, the Butler's tin-mine, and after application to Mr. Hardie's solicitor (Mr. W. J. Fergusson), for particulars of title, we made application at the Lands Office as to the validity of the conditional purchase, and were answered as follows :—"Conditional purchase 84-60, county of Gough, parish of Highland Home, stands good in the conditional purchase registers, and is now in the name of Butler's Tin-mining Company."

The purchase was completed so far back as the 31st of March, and thereupon extensive expenditure for the rapid development of the mine was at once proceeded with.

On the 13th July last Mr. Prosser received a notice from the Under Secretary for Lands stating that conditional purchase as therein set out, namely :—Tenterfield—Butler's Tin-mining Company ; 60 acres ; 31st July, 1884—was, on the 8th July, registered in the books of the Lands Department as transferred to him. Thereupon a company was formed of a number of gentlemen engaged in mining enterprises in this Colony, who purchased the property, and are now actually engaged in the permanent development thereof, as before mentioned. We may add that not the slightest notification of any alleged imperfections was received by us until yesterday, 3rd August, when we received from your Department a formal notice of voidance of this conditional purchase upon the technical ground that the land was at the date of the application for conditional purchase held under mineral leases by Messrs. W. W. Richardson and G. Hardie, who were the trustees of the Butler's Tin Company ; but, as a matter of fact, Messrs. Richardson and Hardie transferred these leases to J. H. Graney on the 16th June, 1884, and thereafter, on the 31st July, 1884, Graney made the conditional purchase now in question.

Subsequently Graney transferred the conditional purchase to the Butler's Tin-mining Company, who, by the liquidator, as before mentioned, transferred to Mr. Prosser.

Therefore we respectfully beg that the revocation will be recalled, otherwise persons may be induced to jump this valuable property, and so cause injury to the shareholders as regards the value of their shares, interfere with the further development of the property, and promote expensive litigation.

We have, &c.,

SHEPHERD AND CROSSMAN.

Graney's mineral conditional purchase, dated 31st July, 1884, at which date the land was held under mineral leases 1,815, 1,816, and 1,817, which stood in the names of W. W. Richardson and G. Hardie, who transferred them to Graney on the 16th June, 1884, according to their letter, but the transfer was not approved by the Secretary for Mines until the 1st August, 1884, being one day subsequently to the date of conditional purchase, and consequently the conditional purchase was declared void.

Application for revocation of cancellation submitted on the ground that the interests involved are very large, and that the selector should not suffer from the delay in dealing with the transfer of the mineral leases by the Department of Mines.—F.H.W., 5/8/85.

Submitted.—C.O., 5/8/85. I think that the voidance may be reversed, as there is no conflicting claim.—J.S.F., 5/8/85. Telegram to Land Agent Aleene, care of Shepherd and Crossman, agent and Treasury voidance conditional purchase 84-60 reversed 5/8/85. Mr. Cope ; then Charting Branch ; then as to return of voucher. Noted, 13/8/85. Charting Branch, 13/8/85.

The Under Secretary for Lands to The Under Secretary for Finance and Trade.

(C.P. 84–60 ; C.S. 85–5,214 Cor.)

Sir, Department of Lands, Sydney, 5 August, 1885.

I am directed to inform you that the voidance of the conditional purchase noted in the margin has been revoked, and the purchase stands now in applicant's name, as before.

Tenterfield ; 60 acres ; 31 July, 1884. J. H. Graney, now E. Prosser.

I have, &c.,

F. H. WILSON

Sir, Department of Lands, Sydney, 5 August, 1885.

Tenterfield; 60 acres; 31 July, 1884. J. H. Graney, now E. Prosser.

I am directed to inform you that the voidance of the conditional purchase noted in the margin has been revoked, and the purchase stands now in applicant's name, as before.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

Telegram from The Under Secretary for Lands to The Land Agent, Tenterfield.

5 August, 1885.

VOIDANCE conditional purchase, James Harry Graney, 84-60, 31st July, 1884, 60 acres, reversed.

The Surveyor-General to The Under Secretary for Lands.

Mineral Conditional Purchase 84-60, Tenterfield, parish of Highland Home, county Gough.

C.S. 85-5,214 Cor. herewith; 85-5,328 Cor.

IN this case mineral conditional purchase 84-60, Tenterfield, was declared void in accordance with Ministerial approval (dated 16/7/85), on papers 85-4,943 Sur. On 4th August, 1885, Messrs. Shepherd and Crossman, solicitors, wrote, strongly protesting against the voidance, which was revoked by approval (5/8/85) on C.S. 55-5,214 Cor.

The ground taken up by the solicitors was that the conditional purchase had been voided "on the technical ground that the land was, at the date of the application for the conditional purchase, held under mineral leases by Messrs. W. W. Richardson and G. Hardie (the conditional purchase being in the name of J. H. Graney), who, as a matter of fact, transferred these leases to J. H. Graney, on the 16th June, 1884," the conditional purchase being dated 31st July, 1884.

This point was held to be a good one, "as the selector should not suffer from the delay by the Department of Mines," and the voidance was revoked.

But the objection most fatal to the conditional purchase as described would seem to have been overlooked, viz., that the portions applied for (being 173, 174, and 176) "are not conterminous, portion 175 intervening between 174 and 176, forming areas the selection of which is contrary to law (*vide* C.S. 85-4,943 and tracing).

This would appear to be insuperable so far as the whole 60 acres are concerned, for the described area could not be measured in any unobjectionable form; but it may be pointed out that, now that the objection resulting from the priority of date of the conditional purchase to that of the transfer of the mineral leases is removed, there is apparently nothing to urge against the conditional purchase of the 40 acres embraced by portions 173 and 174.

It is therefore submitted whether the cancellation of the voidance of mineral conditional purchase 84-60, Tenterfield, should be reversed, and the conditional purchase again declared void, or whether the applicant should be allowed the 40 acres embraced by portions 173 and 174, taking refund on 20 acres, with the option of refund on the whole.

ROBT. D. FITZGERALD
25 August, 1885. (For Surveyor-General).

The latter suggestion is approved.—J.S.F., 7/9/85. Evan Prosser, care of Shepherd and Crossman, with refund order, Agent and Treasury, area conditional purchase 84-60 reduced, 17th November, 1885; Mr. Cope then. Noted, 25/11/85. Records, 25/11/85. *Vide* action on 85-5,227 Cor.—JNO. J.C., 17/2/86.

The Under Secretary for Lands to Mr. Evan Prosser.

(C.P. 84-60; C.S. 85-5,979 Sur.)

Sir, Department of Lands, Sydney, 17 November, 1885.

Selected by J. H. Graney.

With reference to your conditional purchase at Tenterfield, on the 31st July, 1884, I am directed to inform you that the area of the portion selected having been found to be only 40 acres, instead of 60 acres, as stated in your application, your are entitled to a refund of £10, being the amount of deposit on the 20 extra acres paid in excess.

Enclosed is a form which, on being filled up and forwarded to the Treasury, with the authority signed by you, will enable that Department at once to refund the amount.

Memorandum of Instructions.

(Papers No. 86-146 Cor.)

Surveyor-General's Office, Sydney, 17 February, 1886.

Subject.

Mr. Licensed-Surveyor Holmes is requested at his early convenience to measure, if unobjectionable according to regulations, the land embraced by portions 173 and 174, parish Highland Home, county Gough, held under mineral leases 1,815 and 1,816.

The land is granted in satisfaction of mineral conditional purchase 84-60, Tenterfield, James H. Graney, in accordance with Ministerial decision on C.S. 85-5,979 Sur. The original application runs 60 acres, being the land held under mineral leases 1,815, 1,816, and 1,817, and it was decided to allow that held under 1,815 and 1,816, viz., portions 173 and 174, which the applicant has agreed to accept.

All old marks and numbers not necessary in survey to be obliterated.

Tracing herewith.

JNO. J. CALLACHOR
(For Surveyor-General).

Mr. Licensed-Surveyor Holmes (*per* Mr. D.-S. Finley).

Reply.

Returned with my letter to the District Surveyor, dated 26th September, 1886, No. 11.

H. C. HOLMES,
Licensed Surveyor.

District Survey Office Instruction No. 86-25 forwarded to Mr. Licensed-Surveyor Holmes.

T. E.
(For the District Surveyor).
22 February, 1886.

Mr. Licensed-Surveyor H. C. Holmes to The Surveyor-General.

(No. 86-11.) Conditional Purchase, Tenterfield.

Sir, Yarraford, 26 September, 1886.

I have the honor to transmit herewith the plan* of one portion of land containing 40½ acres, numbered 9, in the parish of Highland Home, in the county of Gough, conditionally purchased by James Graney under the 19th section of the Crown Lands Alienation Act, measured by me on 4th and 5th August, 1886, in accordance with instructions No. 86-25, dated 22nd February, 1886, issued by the District Surveyor. *Appendix C.

The applicant was not present at the survey.

I did not observe that any expenditure had been made on the above-mentioned portion in connection with mining, as is required by the 19th section of the Crown Lands Alienation Act of 1861. There were marks of prospecting, but I think they were made prior to the date of mineral conditional purchase.

I have, &c.,
HENRY C. HOLMES,
Licensed Surveyor.

One

One tracing retained for use in the District Survey Office.—E.H.B., 30/9/86. Forwarded to the Surveyor-General, 21st October, 1886.—F. G. FINLEY, District Surveyor. Survey approved and dealt with in Charting Branch.—J. F. GOGGIN, 24/1/87. Tracing for Conditional Purchase Inspector herewith.—R. SHELTON, 24/1/86. Description prepared.—R.U., 4/3/87. Cat. No. noted, 3/5/87.

Description.

Mineral Conditional Purchase 84–60, Tenterfield.

40 acres 2 roods, county of Gough, parish of Highland Home, portion 9. Commencing on the north-eastern side of a road 1 chain wide, at a point bearing north 20 degrees east, and distant 1 chain from the northern corner of portion 175 of 20 acres; and bounded thence on the south-west by that road bearing south 70 degrees east 30 chains 36 links; on the south-east by a line bearing north 20 degrees east 13 chains 37 links; on the north-east by the south-western boundary of portion 172 of 20 acres bearing north 70 degrees west 30 chains 36 links; and on the north-west by a line bearing south 20 degrees west 13 chains 37 links, to the point of commencement.

Examined.—R.U., 4th March, 1887.

Mr. V. Coghlan to The Under Secretary for Lands.

Tenterfield, M.C.P. 84-60, 60 acres, now 40 acres; E. Prosser.

Sir, 19, Macquarie-place, Sydney, 7 December, 1886.

I have the honor to enclose a declaration as to the value of the improvements on the mineral conditional purchase noted in the margin, and on behalf of the selector I would respectfully request its verification with the least possible delay, as my client desires to convert the land into freehold as early as practicable.

I have, &c.,
VINCENT COGHLAN
(Agent for E. PROSSER).

Survey Branch, for urgent action in connection with the enclosed plan.—W.H.C., 14/12/86. For charting urgently.—R. SHELTON, 30/12/86. Mr. Fry,—Catalogue this case and forward to District Office in view of recent circular.—J. J. FINN, 10/1/87. Mr. Fry,—Let action be completed at once, as the adjoining original belongs to Mines, so cannot be sent to District Survey Office, and the case is a simple one.—R. SHELTON, 17/1/87.

The area allowed in satisfaction of mineral conditional purchase 84–60 (Tenterfield), enclosed for 60 acres, viz., 40 acres, is found by survey to be 40 acres 2 roods, it is therefore recommended that the question as to the extra area of 2 roods be considered on payment of balance.—J. F. GOGGIN (for Surveyor-General), 24/1/87.

For approval.—F.H.W. (*pro* S.F.), 26/3/87. Approved.—T.G., 29/3/87.

Alienee and agent informed conditional purchase 84–60, area increased to pay 5s., 3/5/89. In three months. Noted, 3/5/87. Ch. Branch, 4/5/87. No further action in Charting Branch; *vide* 86–33,987 Dep. enclosed.—J.W.N. (*pro* J.T.K.), 19/5/87.

[*Enclosure.*]

F.

Declaration of Conditional Purchaser for Mining Purposes.

I, EVAN PROSSER, of Darling Point, Sydney, do solemnly and sincerely declare that I am the lawful owner, by conditional purchase, of the land hereunder described, and that an expenditure equal to £2 per acre for the area of the land has been made on mining operations other than gold-mining on the land, and since the selection on 31st July, 1884. And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

Description.

County of Gough, parish of Highland Home, 40 acres, being part of conditional mining purchase No. 60 of 1884, in the district of Tenterfield.

Taken and declared at Sydney, this 7th day of December, 1886, before me,—
A. E. HEMSLEY,
Commissioner for Affidavits.

E. PROSSER.

Examined and entered in Conditional Purchase Register.—C.C., 14/12/86. H.R., 14/12/86.

The Under Secretary for Lands to The Land Agent, Tenterfield.

(C.S. No. 87-7,710 Cor.; C.P. No. 84–60).

Transferred to E. Prosser.

Sir, Department of Lands, Conditional Sales Division, Sydney, 3 May, 1887.

I am directed to inform you that the area of the portion conditionally purchased by J. H. Graney on the 31st July, 1884, having been found on measurement to be 40½ acres, instead of 40 acres, as previously intimated, he has been requested to pay over to you at once the sum of 5s., being the amount of deposit due on the 2 extra roods.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

The

The Under Secretary for Lands to Mr. E. Prosser.

(C.S. No. 87-7,710 Cor. ; C.P. 84-60.)

Sir, Department of Lands, Conditional Sales Branch, Sydney, 3 May, 1887.

I am directed to inform you that the area of the portion conditionally purchased by J. H. Graney at Tenterfield on the 31st July, 1884, has been found on measurement to be 40½ acres, instead of 40 acres, as stated in previous intimation, and to request that you will therefore be good enough to pay over at once to the Land Agent at that place the sum of 5s., being the amount of deposit due on the two extra roods. Transferred to E. Prosser.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

The Under Secretary for Lands to The Chairman, Local Land Board, Armidale.

(C.S. 86-7,710 Cor.)

District of Tenterfield ; name of applicant, James H. Graney, now E. Prosser; area, 40½ acres; date, 31st July, 1884.

Section 19 of the Alienation Act of 1861. (25 Vic. No. 1.)

DECLARATION upon the above-described mineral conditional purchase requires verification. All available papers in connection with it are therefore referred to the Chairman of the Local Land Board, Armidale, with a view to the necessary instructions being issued to the Inspector of Conditional Purchases at an early date.

If the report, when furnished by the Inspector, shows that the improvements are not sufficient to satisfy the requirements of the law, or that they have not been effected *bona fide* for mining operations, as contemplated by the 19th section of the Alienation Act of 1861, an investigation by the Local Land Board may be instituted, subject to the provisions of the 20th section of the Crown Lands Act of 1884.—W.H.C., 27/5/87.

The above recommendation approved by the Minister for Lands ; *vide* 87-18,500 Dep.
F. H. W.
(For the Under Secretary),
4/6/87

Noted, 6/6/87. Records, 10/6/87. Local Land Board Office, Armidale. Instruction to Inspector, No. 87-243. Tracing to Inspector Wisdom, 29/6/87.

Declaration of Conditional Purchaser for Mining Purposes.

I, EVAN PROSSER, of Sydney, do solemnly and sincerely declare that I am the lawful owner, by conditional purchase, of the land hereunder described, and that an expenditure equal to £2 per acre for the area of the land has been made on mining operations other than gold-mining on the land, and since the selection on 31st July, 1884. And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled " An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

Description.

County of Gough, parish of Highland Home, 40 acres 2 roods, being (part of) conditional mining purchase No. 84-60 of 1884, in the district of Tenterfield.

Taken and declared, at ———, this 13th day of December, 1887, before me,— EVAN PROSSER.
G. W. W. WADDELL, J.P.

Examined and entered.—T.S., 20/1/88. Instalment £4 1s. credited at Treasury, 18/12/87.

Mr. W. H. Capper to The Assistant Under Secretary.

I, in company with Mr. Pope and Mr. Coghlan, waited upon the Under Secretary for Mines, as desired by you, in connection with the enclosed case.

Without, however, going into the details of the case, I desired him to state, for your information, and before a reply was sent to his communication of the 5th instant, whether the particulars given in memo. of 27th May, 1885, upon 85-3,399 Sur., were absolutely correct.

The Under Secretary for Mines, after perusing certain documents handed to him by a clerk—I presume they were leases—stated that the information was not perfectly correct, and would indicate the discrepancy in pencil. This was done, as will be seen from the addition to the memo. by the letters M.L. in pencil.

W.H.C., 14/3/88.

In view of the facts now disclosed by the papers, it is evident that the mineral conditional purchase represents the land shown on tracing* "A," appended, as M.L. 173, M.L. 174, and M.L. 176, and not portions 173, 174, and 176 ; and therefore that the memorandum written by an officer of the Mines Department on 27th May, 1885, on papers 85-3,399 C.S. Survey, is incorrect. * Appendix D.

Submitted that, in terms of 50 Vic. 21, section 6, the Minister is satisfied that the lessees, or person other than applicant, had at date of conditional purchase (or have now) ceased to hold any interest in the mineral lease, the conversion of which into a mineral conditional purchase was applied for by conditional purchase 84-60. Further submitted, that the steps necessary to restore the purchase to the area originally claimed be taken, and that the Mines Department be informed that the correct position of the mineral conditional purchase is that indicated on the tracing "A" as M.L. 174 (20 acres), M.L. 173 (20 acres), and M.L. 176 (20 acres), parish of Highland Home, county of Gough.—S.F., 14/4/88.

Memo.:

8

Memo. by Chief Mining Surveyor.

26 March, 1888.

It having been represented that mineral conditional purchase 84-60, parish of Highland Home, county of Gough (J. Graney, 40 acres), is incorrectly located on the official map of the Department of Lands, I recommend that the Under Secretary for Lands be asked to state whether the accompanying tracing, taken from the parish map, shows the correct position of the mineral conditional purchase in question.
The Under Secretary for Mines. E.F.P.

Approved.—H.W., 29/3/88.

Messrs. Brett and Coghlan to The Under Secretary for Lands.

Sir, 19, Macquarie-place, Sydney, 27 March, 1888.

Tenterfield; C.P. 84-60; E. Prosser; 86-7,710 Cor.; L.L.B., Armidale, 15/6/87.

We have the honor to ask that you will cause the papers in the case noted in the margin to be returned to Sydney with all possible despatch, as dispute as to possession of the land (upon which a sum of about £8,000 has been expended) has arisen, and cannot be settled without a reference to the papers asked for.

We have, &c.,
BRETT AND COGHLAN.

86-7,710 Cor., Land Board, Armidale, 15/6/87. Ask the Chairman to return the papers by to-day's post.—S.F., 27/3/88.

Telegram from The Under Secretary for Lands to The Chairman, Local Land Board, Armidale.

Sydney, 27 March, 1888.

PLEASE return by to-day's post papers 7,710 of 1886 correspondence, E. Prosser's conditional purchase 60 of 1884, Tenterfield, to you 10th June last.

STEPHEN FREEMAN
(For the Under Secretary).

Mr. Inspector Wisdom to The Chairman, Local Land Board, Armidale.

Report respecting the selection of J. Grancy, made at Tenterfield on 31st July, 1884.

Sir, Glen Innes.

C.P. 84-60; section 19, portion 9.

I have the honor to report that I visited and inspected the above-described conditional purchase on the 28th March, 1888, and that I found the selector then resident upon selection.

The land, which consists of forest ridges, and comprises 40½ acres, is occupied and used by ———— ————and the selector, who follows the avocation of ————, had at the time of my visit made the improvements hereunder particularly described, the value of which I estimate at the sums respectively stated, viz.:—Shafts and excavations, £200.

From the appearance of the land, and the circumstances stated in the following remarks, I am of opinion that the selector has been continuously resident upon the selection.

Remarks:—

Every indication of *bona fide* mining.

I have, &c.,
J. B. WISDOM,
Inspector of Conditional Purchases.

The papers in this case having been returned to the Department on 27th March, 1888, this report is forwarded to place with them.—S. BLYTHE, Chairman, Armidale, 21/4/88. Place with papers upon return from Mines Department.—F.B.S., 15/5/88.

The Under Secretary for Mines to The Under Secretary for Lands.

Sir, Department of Mines, Sydney, 5 April, 1888.

It having been represented that mineral conditional purchase 84-60 of 40 acres of land in the parish of Highland Home, county of Gough, is incorrectly located on the official map of the Lands Department, I have the honor to request that you will be good enough to state if the accompanying tracing shows the correct position of the conditional purchase in question.

I have, &c.,
HARRIE WOOD,
Under Secretary.

Messrs. Brett and Coghlan to The Under Secretary for Lands.

Sir, 19, Macquarie-place, Sydney, 6 April, 1888.

Tenterfield; M.C.P. 84-60. E. Prosser.

With reference to the conditional purchase noted in the margin, we beg to submit for your attention the following facts, and beg that in view of the great importance of the interests involved, as well as to prevent litigation, that you may be pleased to cause the earliest possible attention to be given to it:—

On the 31st July, 1884, the land now under correspondence was applied for by Mr. J. H. Graney (a surveyor), who, in applying for same, described it as formerly being mineral leases 1,815, 1,816, and 1,817, and as containing an area of 60 acres. This land was subsequently purchased and transferred by our client, Mr. E. Prosser, and money in mining operations and machinery was expended on the ground to the value of about £8,000. Some time ago, and since the selection, however, the land applied for and operated on by our client was granted under mineral lease to one Bailey, who has served notice upon our clients to remove their machinery. This our clients have not done up to this, nor can they consider they are compelled to do,—

1st.

1st. Because we contend that the original selector applied for the land formerly held under mineral leases 1,815, 1,816, and 1,817, which is identical with the land now in his possession, and on which the large sum of money stated has been expended.

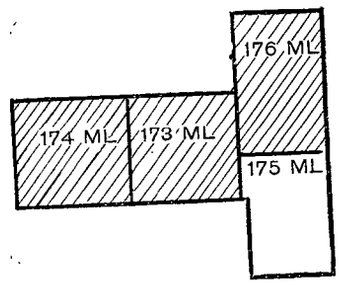
2nd. Because they submit that the duplication of Nos. 173, 174, and 176 led to the error, and that the land applied for by the original selector is not that shown on the parish map as granted him, but is nearly 2½ miles distant in a north-east direction.

3rd. That as a proof, if any further is required, of the land selected, it will be seen that the land allotted could not have been intended to have been asked for by anyone having the most remote idea of how land could be taken up under one application, as our client's transfer, or from his professional knowledge, must undoubtedly have had more than ordinary acquaintance with.

4th. To show that the land applied for was not that granted, and, as explained in the previous paragraph (3), we beg to enclose two rough sketches, 1 being the land applied for, and that marked 2 as granted. It will be seen from these that the plan marked 1 must have been the land applied for, as that shown in 2 would not have been asked for under one application by the most ignorant selector in the country, much less by a surveyor, who would at once know that having made an application for three portions of land, one of which did not adjoin the other two, he was bound not to get the latter, which, as a matter of fact, if 2 was intended as the application, your Department have already voided the portion No. 176 on sketch 2. In conclusion, we submit the whole error has been led up to by the duplication of the numbers 173, 174, and 176, and we trust, under all the circumstances of the case, you will make our client's original application for an area of 60 acres good, and issue to him, with the least possible delay, a certificate of conformity.

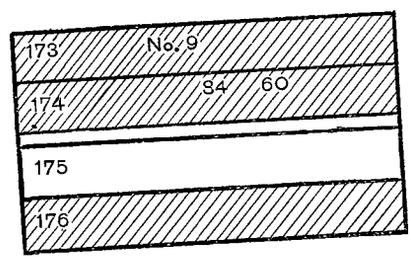
We have, &c.,
BRETT AND COGHLAN,
Agents for E. PROSSER.

[*Enclosure.*]



No. 1.

THE above shows the land applied for by Graney by red hatched lines, and which has had a large sum of money expende on it, and is now in the possession of E. Prosser; attention is called to the similarity of numbers, and to the fact that portions Nos. 173, 174, and 176 do in this case adjoin, whereas in sketch No. 2 they do not.



No. 2.

The above rough sketch shows by hatched lines the land which the Department have recognized as that applied for by J. H. Graney, and it is pointed out how unlikely it is that a surveyor would apply for 60 acres under one application in the manner shown by hatched lines on the portions 173, 174, and 176.

The Chief Mining Surveyor to The Under Secretary for Mines.

Sir, Mines Department, Sydney, 14 April, 1888.

At your request, I have this morning seen Mr. Freeman, Assistant Under Secretary for Lands, in reference to the error which has apparently been made in locating Mr. Graney's mineral conditional purchase (84–60), in the parish of Highland House, and which error may result in the granting of two titles to the same land.

I pointed out to Mr. Freeman that it appeared strange that as Mr. Graney's application for mineral conditional purchase was for 60 acres he had made no inquiry or protest when the mineral conditional purchase was granted as for 40½ acres only, and had any such inquiry been made it must have resulted in the discovery of the error.

I urged upon Mr. Freeman that while there was even a possibility that Graney's present claim was not made in good faith, or until we were in a position to understand the circumstance above referred to, it might be as well to be as reticent as possible, rather than to give information which might prejudice the Government.

In reply, Mr. Freeman stated that he could not agree with your view of the case, as stated by me, and that as an injustice had evidently been done to the mineral conditional purchaser (through an error

in

in information supplied to "Lands" by this Department) he was of opinion that there should be no concealment or withholding of information whatever, and that the error should be rectified as soon as possible by placing the mineral conditional purchaser in possession of blocks mineral lease 173, mineral lease 174, and mineral lease 176.

I have, &c.,
EDWARD PITTMAN,
Chief Mining Surveyor.

Very urgent. As this is a matter possibly involving serious consequences, I shall be glad if the Under Secretary for Lands will be good enough to move the Minister for Lands not to deal with this case till Mr. Abigail returns and has had an opportunity to see the papers.—H.W., B.C., 16/4/88.

As Graney had transferred his interest in the mineral conditional purchase to the person before any intimation was made from this Department that the purchase was in any way questioned, it would not seem that that person can be blamed for not disputing what now proves to have been erroneous action on the part of the administration, and, so far as I can see, there is no occasion for delay in recognizing the title of the mineral conditional purchase holders, the case being apparently clear and beyond a doubt. As, however, the Under Secretary for Mines points out that the Minister for Mines is absent, the matter may perhaps be held over until he returns and has an opportunity of perusing the papers.—S.F., 18/4/88.

Yes.—C.O., 19/4/88. The Minister for Mines having now returned, these papers are forwarded for his perusal, as desired.—S.F. (for U.S.), B.C., 23/4/88. The Under Secretary for Mines.

Memorandum by the Under Secretary for Mines.

On the 31st July, 1884, James H. Graney applied for a conditional purchase, under the 19th section of the Crown Lands Alienation Act 1861, of 60 acres of land, in the parish of Highland Home, county of Gough, held under leases 1,815, 1,816, and 1,817.

On the 1st May, 1885, the Lands Department sent a memo. to the Mines Department asking what portions in the county of Gough are or have been held under mineral leases 1,815, 1,816, and 1,817, and how the applications for these stood on the 31st July, 1884, &c. This memo. was dealt with by the Registrar of the Mining Department, who stated in reply that portion 173 mineral lease 1,815, portion 174 mineral lease 1,816, and portion 176 mineral lease 1,817, lessee, James H. Graney. Delivered rent paid 29th October, 1884. At the date of conditional purchase, viz., 31st July, 1884, these leases stood in the names of W. W. Richardson and G. Hardie. The transfer to Graney was approved on 1st August, 1884. Leases are now in course of cancellation for non-observance of labour conditions; this reply is dated 27th May, 1885, and the Registrar then referred the paper to the Chief Mining Surveyor without saying for what purpose it was so referred. The Chief Mining Surveyor marked it to the Chief Draftsman, who returned it marked noted 6th June, 1885. In the Registrar's room the following was then added:—"Mineral leases 1,815, 1,816, and 1,817 now cancelled, 2nd June, 1885." The paper was then, on the 9th June, 1885, returned to the Lands Department.

On the 16th July, 1885, the application to conditionally purchase was declared void because the portions 173, 174, and 176 were not conterminous, and at the date of the conditional purchase the leases stood in the names of W. W. Richardson and G. Hardie, and were in course of cancellation.

On the 4th August, 1885, Messrs. Shepherd and Crossman asked to have the voidance recalled, and in this letter they stated Graney had transferred the conditional purchase to the Butler's Tin-mining Company, who, by the liquidator, transferred to Mr. Prosser, and that the transfer of the leases to J. H. Graney was made on the 16th June, 1884. Thereupon the Minister for Lands, on the 5th August, 1885, decided that the voidance be reversed, and the alienees were so informed.

On the 7th September, 1885, the Minister for Lands again decided that as portion 176 was separated from 173 and 174 the applicant should be allowed the 40 acres embraced by portions 173 and 174, taking refund on 20 acres, with the option of a refund on the whole. Mr. Prosser was so informed on 17th November, 1885.

On the 9th January, 1886, Messrs. Shepherd and Crossman wrote stating they were instructed by Mr. Evan Prosser to accept the mineral conditional purchase of 40 acres, being lots 173 and 174, Tenterfield, offered in the letter from the Lands Department of the 17th November, 1885, with a refund of the deposit of £10 on the remaining 20 acres. Thereupon instructions were issued to survey portions 173 and 174, parish of Highland Home, and the two portions were measured as one portion, No. 9, containing 40½ acres, on the 4th and 5th August, 1886.

On the 7th December, 1886, Mr. Prosser made declaration as to expenditure upon the 40 acres, and on the 13th December, 1887, another declaration was made as to the required expenditure on 40 acres 2 roods, being part of conditional mineral purchase 84-60 of 1884. The declaration was sent on the 4th June, 1887, and forwarded to the Local Land Board for verification.

On the 10th December, 1887, Messrs. Brett and Coghlan wrote to the Mining Department, stating that they understood a Mr. Bailey had applied to lease the 40 acres comprised in conditional purchase 84-60, E. Prosser, to which the following reply was sent on the 15th December, 1887:—

Gentlemen, Department of Mines, Sydney, 15 December, 1887.

Referring to your letter of the 10th instant, in which you protest against the application of Mr. David Bailey for a mineral lease of 40 acres of land, in the parish of Highland Home, being granted, as you understand the land so applied for embraces the mineral conditional purchase No. 84-60, Tenterfield, by E. Prosser, I have the honor to inform you that the portions of land which have been leased do not embrace a conditional purchase. Two other portions bearing the same numbers, without the letters M.L., are embraced in the purchase before mentioned.

I have, &c.,
HARRIE WOOD,
Under Secretary.

Messrs. Brett and Coghlan, 19, Macquarie-place.

This was the first intimation received by the Mining Department, and as no further communication was received from Mr. Prosser it was supposed the explanation was satisfactory, and it was not till the 27th March, 1888, when Messrs. Brett and Coghlan asked the Under Secretary for Lands to cause the papers to be returned to Sydney, as there was a dispute concerning the land, that any suspicion of an error was raised. The papers were returned accordingly, and on the 6th April, 1888, Mr. Prosser for the first time questioned the action taken upon his mineral conditional purchase application 84-60, and in this letter clearly points out how the error occurred, as though he was in the possession of all the facts.

There

There can be no doubt that a mistake was made in the portion numbers in this Department, and if the conditional purchaser had obtained the quantity of land applied for, viz., 60 acres, it is conceivable that he would not have detected the error; but when he was told that the 60 acres had to be cut down to 40 acres, because one of the portions was separated from the other two by reason of an intervening portion, while he must have known that the three portions held under leases 1,815, 1,816, and 1,817 adjoined, it is inconceivable that he would concur in the reduction of the area and accept the smaller area without question. He, however, not only did this, but all through the voiding and reversing of the voidance of conditional purchase he never once raised any question, nor hinted at any error, but quietly accepted the 40 acres, and received back his deposit upon the other 20 acres. And further, when, after survey, it was found that portions 173 and 174 together comprised 40½ acres, instead of 40 acres, he at once acquiesced and made an amended declaration. It is also worthy of notice that though in August, 1885, Mr. Prosser's solicitors state that several thousand pounds have been expended upon the land in machinery and otherwise, the surveyor in his report, dated 26th September, 1886, states that he did not observe that any expenditure had been made on the land in connection with mining, as required by the 19th section of the Crown Lands Alienation Act of 1861. Now, the adverse title was not made by Bailey till the 18th July, 1887, when he applied to lease portions M.L. 173 and M.L. 174, and the lease was not granted till 8th November, 1887, so that up to this last-named date the error could easily have been corrected, and had any question been raised before the lease issued to Mr. Bailey it would not have been issued, and the error would no doubt have been rectified. I, therefore, venture to submit that the conditional purchaser, by his acquiescence, extending over a period of nearly two years, has contributed largely to any wrong that may have been done to him—that he has in fact slept upon his rights while an adverse title has been created, and that he is not now entitled to the consideration which he might fairly have claimed had he exercised or asserted his rights earlier. And I would submit that he should be allowed to stand upon the title he has accepted till he has cleared away the adverse title of Mr. Bailey. In this way the whole case will be brought before the proper tribunal, and the decision of the Court will be obtained upon a full consideration of the relative merits of the parties, and if any claim for compensation should be set up on either side against the Crown it may be made to rest upon rights established and recognized by the Court.

H.W., 27/4/88.

Approved.—F.A., 4/5/88. The Under Secretary for Lands.—G.E.H. (for the Under Secretary), B.C., 4/5/88.

Beyond a doubt the land applied for originally is that now claimed by Graney's successor. In the face of this, and of the fact that the error in location of the conditional purchase was entirely brought about by the mistaken action of the Government Department, it would seem to be both inequitable and contrary to law to attempt to dispute the conditional purchase title. Submitted, therefore, that the minute of 14th April, 1888, on office memorandum covering paper 88–14,248 Dept., be approved.—S.F., 9/5/88.

Approved.—F.G., 9/5/88. Under Secretary for Mines informed, 9/5/88. Brett and Coghlan informed, 14/5/88.

The Under Secretary for Lands to The Under Secretary for Mines.

Sir, Department of Lands, Sydney, 9 May, 1888.

Referring to your blank-cover communication of the 4th instant, respecting the mineral conditional purchase noted in the margin, I am directed by the Secretary for Lands to inform you that the correct position of the mineral conditional purchase in question is that as applied for under mineral lease 174 (20 acres), mineral lease 173 (20 acres), and mineral lease 176 (20 acres), parish of Highland Home, county of Gough.

Tenterfield, M.C.P. 84-60, 31 July, 1884; 60 acres; J. H. Graney.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

Papers 88-7,255 forwarded to Lands Department 5th instant.—G.E.H., 10/5/88. The Lands Department may be asked why this letter is sent, and is it intended to disregard the request made by me.—F.A., 10/5/88. The Under Secretary for Lands.—H.W., B.C., 10/5/88. Submitted.—S.F., 16/5/88.

The request of the Mines was, in effect, that, instead of sending on the conditional purchaser's claim, in accordance with the ascertained facts of the case, I should let the matter stand over until a Court of law should have considered the individual claims or titles. This is entirely opposed to the practice of the Department, and, in my opinion, a weak and embarrassing mode of action. Independent of this, there is no surety that the case will ever go into a Court, and, if it did, the rights of either claimant will not be weakened by the action now decided upon by me. The letter of the 9th instant should certainly have conveyed my decision more fully.—T.G., 16/5/88.

The original of this document, with minutes thereon up to to-day's date, has now been forwarded to the Under Secretary for Mines.—W.H.C., 16/5/88. End of March.—W.H.C., 21/5/88.

The Under Secretary for Lands to Messrs. Brett and Coghlan.

Gentlemen, Department of Lands, Sydney, 14 May, 1888.

Referring to the mineral conditional purchase quoted in the margin hereof, I am directed to inform you that the Secretary for Lands, having had the matter of location of the purchase under consideration, has determined that the lands represented thereby are portions mineral lease 173, mineral lease 174, and mineral lease 176, of 20 acres each, parish of Highland Home, county of Gough, and not portions 173 and 174.

Tenterfield, M.C.P. 84-60; J. H. Graney, now E. Prosser

I am further to add, in terms of section 6 of the Act 50 Victoria No. 21, that Mr. Secretary Garrett is satisfied that the lessees of mineral leases 1,815, 1,816, and 1,817, other than James H. Graney, ceased to hold any interest in such leases at the time Mr. Graney applied for the conversion thereof into this mineral conditional purchase. As on a previous occasion, owing to misapprehensions, the conditional purchaser was informed that the area of the holding had been reduced to 40½ acres, and refund was accordingly

accordingly made, it will now be necessary for the present holder to repay forthwith to the Treasury or local Land Agent the sum of £9 15s., as deposit upon the 19½ acres added, at 10s. per acre, together with instalments of 2s. per acre, which fell due on the 21st September last, also that which fell due during the first quarter of the current year. I have, &c.,

(For the Under Secretary).

Messrs. Brett and Coghlan to The Under Secretary for Lands.

Sir, 19, Macquarie-place, Sydney, 26 May, 1888.

Tenterfield, M.C.P. 84-60, E. Prosser, 60 acres.

We have the honor to enclose the declaration of Mr. E. Prosser as to the expenditure in mining operations on the conditional purchase noted in the margin.

As it is of importance that a certificate of conformity should be speedily issued for this selection, may we ask you, under the circumstances, to cause an early inspection to be made.

We are, &c.,
BRETT AND COGHLAN.

Mr. Capper.—S.F., 26/5/88.

[*Enclosure.*]

Declaration of Conditional Purchaser for Mining Purposes.

I, EVAN PROSSER, of Sydney, do solemnly and sincerely declare that I am the lawful owner, by conditional purchase, of the land hereunder described, and that an expenditure equal to £2 per acre for the area of the land has been made on mining operations other than gold-mining on the land, and since the selection on 31st July, 1884; and I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

Description.

County of Gough, parish of Highland Home, 60 acres, being part of conditional mining purchase No. 60 of 1884, in the district of Tenterfield.

Taken and declared, at Sydney, this 23rd day of May, 1888, before me,—
J. G GRIFFIN, J.P.

E. PROSSER.

Examined and entered.—C.C., 29/5/88.

Messrs. Brett and Coghlan to The Under Secretary for Lands.

Sir, 19, Macquarie-place, Sydney, 13 June, 1888.

Tenterfield, C.P. 84-60, E. Prosser, 60 acres.

We have the honor to ask for the speedy issue of a certificate of conformity for the conditional purchase noted in the margin. Our object in asking for urgent action is to enable us to prevent a man named Bailey, to whom a lease over the ground was granted in error by the Department of Mines, from continuing working and removing mineral from the property, which we respectfully submit is shown beyond dispute by the papers to belong to our client. As the expenditure required by law is shown by the documents in your Department to have been made, perhaps, under the circumstances, you may be able to see your way to make the case special.

We have, &c,
BRETT AND COGHLAN.

Submittted as to request for certificate.—S.F., 26/6/88. Certificates may issue if conditions required by law have been satisfactorily performed. Inform Mines.—T.G., 26/6/88.

The Secretary for Lands to The Secretary for Mines.

Dear Sir, Department of Lands, Sydney, 26 June, 1888.

With reference to Graney's (now Prosser's) mineral conditional purchase, Tenterfield, subject to satisfactory proof of the fulfilment of the conditions required by law, I have directed the certificates the party is entitled to to be issued.

Yours, &c.,
THOMAS GARRETT.

This is in opposition to the recommendation of the Minister for Mines, and will, no doubt, lead to a claim for compensation.—H.W., 27/6/88. Under the circumstances, it must be met when it arises.—F.A., 28/6/88.

Office Memorandum.

88-3,021 Cor.

J. Graney's (now E. Prosser's) Mineral Conditional Purchase, 84-60, Tenterfield.

AFTER informing Mines Department, as directed by the Minister, 26/6/88, the case may be forwarded to Miscellaneous Charting Branch to note, and then to the Chairman for inspection of the mineral conditional purchase as now located. Mr. Wisdom's report herewith, being on portion 9 of 40½ acres, erroneously supposed to be the land applied for by mineral conditional purchase 84-60.

88-16,889 Dep.

F.B.S., 27/6/88.
W.H.C., 27/6/88.

The Assistant Under Secretary. Submitted.—S.F., 27/6/88. Approved.—T.G., 29/6/88. The Under Secretary for Mines informed, 4/7/88. Misc. Chart Branch.—J.P.M., 5/7/88. Mr. Skinner, —The necessary alterations have been effected in Charting Branch, and District Surveyor informed.—R.M., 25/7/88. C. S. Branch.

The

13

The Under Secretary for Lands to The Under Secretary for Mines.

Sir, Department of Lands, Sydney, 4 July, 1888.

Referring to the mineral conditional purchase noted below, I have the honor to inform you that the Secretary for Lands has decided that the certificates may issue if the conditions required by law have been satisfactorily carried out.

I have, &c.,
STEPHEN FREEMAN
(For the Under Secretary).

Description.

Tenterfield; M.C.P. 84–60; 31st July, 1884; 60 acres; parish Highland Home, county Gough; J. H. Graney, now E. Prosser.

As I have already stated, I venture to think that, as the conditional purchaser contributed to the wrong of which he complains, he should be left to his remedy, without assistance from the Crown to make good his title. The trouble in the Milburn Creek case arose through an attempt to improve the position of one of the parties.—H.W., 5/7/88. Submitted.

Approved.—F.A., 12/7/88. Resubmitted for any further action necessary.—E.R., 12/10/88.

I am not aware of any further action that can be taken by this Department. It has been pointed out that the action proposed to be taken by the Lands Department appears likely to lead to consequences similar to those in the Milburn Creek compensation case, and reasons have been adduced why the action proposed should not be taken.—H.W., 19/10/88. Submitted.

I hope this case may be reconsidered by the Lands Minister, as I fear serious consequences if it be carried out as indicated by the Department of Lands. We can do no more than point this out.—F.A., 20/10/88. The Under Secretary for Lands, B.C., 20/10/88.—G.E.H. (for U.S.)

The Under Secretary for Mines to The Under Secretary for Lands.

Sir, Department of Mines, Sydney, 13 July, 1888.

With reference to your letter of the 4th instant, stating that the Secretary for Lands has decided that the certificate may issue in respect to the mineral conditional purchase noted below, if the conditions required by law have been satisfactorily carried out, I have the honor, by direction of the Secretary for Mines, to point out that, as the conditional purchaser contributed to the wrong of which he complains, it is thought that he should be left to his remedy, without assistance from the Crown to make good his title, more especially as the trouble in the Milburn Creek case arose through an attempt to improve the position of one of the parties.

I have, &c.,
HARRIE WOOD,
Under Secretary.

Description.

Tenterfield; M.C.P. 84–60; 31st July, 1884; 60 acres; parish Highland Home, county Gough; J. H. Graney, now E. Prosser.

Messrs. Brett and Coghlan to The Under Secretary for Lands.

Sir, 19, Macquarie-place, Sydney, 26 July, 1888.

With reference to the conditional purchase noted in the margin, we have the honor to request that you will cause urgent action to be taken with the view of having it speedily inspected and reported on, in order that our client may be able to obtain a certificate of his having complied with the conditions required by law. We are in receipt of a letter from him to-day, in which the following passage occurs:—

Tenterfield; M.C.P. 84–60; E. Prosser; 88-3,021 Cor.; Charting Branch, 6/7/88.

"We are anxiously waiting for the official letter from the Lands Department giving us a title to Butler's mine, which you promised to get. It has been a very heavy loss to us this mistake of the Mines Department, as we had to stop negotiations with English capitalists."

Under these circumstances we trust you may see your way to make this request of ours special.

We have, &c.,
BRETT AND COGHLAN,
Agents for E. PROSSER.

Messrs. Brett and Coghlan to The Under Secretary for Lands.

Sir, 19, Macquarie-place, Sydney, 11 September, 1888.

With reference to the conditional purchase noted in the margin, we have the honor to ask that you will be pleased to cause our request for the urgent issue of a certificate of conformity to receive early attention, as it is of the greatest importance to our client to obtain this document.

Tenterfield, M.C.P. 84-60, E. Prosser. Cor. 88-3,811.

We have, &c.,
BRETT AND COGHLAN,
Agents for E. PROSSER.

Papers 88-3,811 Cor. urgently required. Will Banks please obtain.—W.H.C., 12/9/88. Banks to search.—S.F., 13/9/88. I have made a search for 88-3,811 Cor., and cannot find them.—F.B., 15/9/88. Returned to Records for a further search.—W.H.C., 15/9/88. It has been ascertained from the writers that the papers are with Sir Henry Parkes.—J.P.M., 13/12/88. Mr. Capper. The papers have since been returned. Please quote papers and the date upon which they were sent to the Land Board.—W.H.C., 15/1/89. 88-3,811 Cor., B.C., Land Board, Armidale, 9/1/89.—E.J.P. (*pro* J.P.M.), 19/1/89. End of February. Then as to the return of the previous papers in the case.—W.H.C., 19/2/89. Not yet returned.—E.J.P. (*pro* J.P.M.), 1/3/89. End of March.—W.H.C., 8/3/89.

Memo.

Memo.

Tenterfield; M.C.P. 84-60; 60 acres; 31st July, 1884; Jas. H. Graney.

THE enclosed papers, referring to mineral conditional purchase 84-60, particularized in the margin, are now forwarded to the Chairman of the Armidale Land Board for action, as approved by Mr. Secretary Garrett on 29th June last (cover 88-3,021c).

The Chairman, Local Land Board, Armidale.

F.H.W. (for the Under Secretary).

B.C., 9/1/89., Department of Lands, Sydney. Special.—A.W.C.

Messrs. Brett and Coghlan to The Under Secretary for Lands.

Sir, 19, Macquarie-place, Sydney, 11 January, 1889.

Tenterfield; M.C.P. 84-60; E. Prosser; 60 acres. Cor. 88-3,811, Land Board, Armidale.

With reference to the conditional purchase noted in the margin,—as we have already had the honor to point out, a man named Bailey, who obtained a lease from the Department of Mines (through an oversight) of this land, is on the ground and working and removing minerals from it; and as the case, owing to various causes, has lain in abeyance, we beg respectfully to ask that if you can see your way to do so you will cause an inspection of the improvements to be made at the earliest possible moment.

We have, &c.,

BRETT AND COGHLAN,
Agents for E. PROSSER.

The papers in the case in question were forwarded to the Chairman of the Armidale Board for early inspection. The agents may be so informed, and this letter also forwarded to the Chairman, to be placed with the previous papers, and with a view to the necessary local action being expedited.—W.H.C., 11/1/89.

Inform, as suggested.—W.H., 11/1/89. Brett and Coghlan.—T.D., 12/1/89. The Chairman, Local Land Board, Armidale.—F.H.W. (for the Under Secretary), B.C., 12/1/89. Let me see the papers in this case.—F.G.F. Mr. Makin.

The Under Secretary for Lands to Messrs. Brett and Coghlan.

Gentlemen, Department of Lands, Sydney, 12 January, 1889.

Tenterfield; M.C.P., 84-60; E. Prosssr.

Referring to your letter of 11th instant, I have the honor to inform you that the papers relating to the conditional purchase noted in the margin have been referred to the Local Land Board at Armidale, to whom your communication has been forwarded, with a view to necessary local action being expedited.

I have, &c.,

F. H. WILSON
(For the Under Secretary).

Mr. District-Surveyor Finley to Mr. Surveyor Chapman.

Sir, District Survey Office, Armidale, 20 February, 1889.

I have the honor to request that you will at once proceed to carry out a resurvey of the mineral leases shown by blue tint on the accompanying tracing, and number the same in one portion as No. 8.

This survey will be in satisfaction of mineral conditional purchase No. 84-60 of 60 acres, James H. Graney, now Evan Prosser.

The usual plan and report will be necessary.

This case has been standing over for a number of years, and the survey is most urgently required.

You will therefore be good enough to consider this a special case, and proceed to complete the work at once.

I have, &c.,

F. G. FINLEY,
District Surveyor.

Returned to Mr. District-Surveyor Finley with my plan and letter dated 11th March, 89-24.—A. W. CHAPMAN, Surveyor.

NOTE.—Mr. Licensed-Surveyor H. C. Holmes previously measured portion 9 of 40 acres in satisfaction of the mineral conditional purchase, but it is now found that the mineral conditional purchase was erroneously located by the Department.

Mr. Inspector Wisdom to The Chairman, Local Land Board, Armidale.

Report respecting the selection of J. H. Graney, now E. Prosser, made at Tenterfield on the 31st July, 1884. (C.P. 84-60; section 19; portions 173, 174, 176.)

Sir, Glen Innes, 7 March, 1889.

I have the honor to report that I visited and inspected the above-described conditional purchase on the 25th February, 1889, and that I found the selector then resident upon selection.

The land, which consists of forest ridges and comprises 60 acres, is occupied and used by ——— ———, and the selector, who follows the avocation of ———, had, at the time of my visit, made the improvements hereunder particularly described, the value of which I estimate at the sums respectively stated, viz.:—

	£	s.	d.
Huts	30	0	0
Shafts, drives, and excavations	1,000	0	0
	£1,030	0	0

From the appearance of the land and the circumstances stated in the following remarks, I am of opinion that the selector has been continuously resident upon the selection.

Remarks:—

Bonâ fide mining operations.

I have, &c.,

J. B. WISDOM,
Inspector of Conditional Purchases.

In

In this case the requirements of the law have been fully carried out, and the case may now be considered complete.—F. G. FINLEY, Acting Chairman, 13/3/89. Declaration on mineral conditional purchase 84–60 is now submitted for approval, the necessary expenditure in mining operations having been made.—W.H.C., 19/3/89. Then Mines papers may be returned to that Department.—F.B.S. The Under Secretary. For approval.—S.F., 19/3/89. Approved.—J.N.B., 20/3/89. Final certificate on mineral conditional purchase 84-60 sent to Evan Prosser, care of Brett and Coghlan, 27/3/89. Records to remove papers. 88–15,605 Dep. and enclosures removed therefrom.—E.J.P. (*per* J.P.M.), 7/4/89.

Mr. Surveyor Chapman to Mr. District-Surveyor Finley.

(No. 89–24.)

Sir,

Glen Innes, 11 March, 1889.

In accordance with your instructions dated 20th February, 89–12, I have the honor to forward herewith a plan* of portion numbered 8, containing 60 acres, in the parish of Highland Home, county of Gough. *Appendix E.

By my instructions the land surveyed appears to be in satisfaction of mineral conditional purchase 84–60, James H. Graney, now Evan Prosser; but, on the ground, I was informed that the land was held by Kennedy Hill in virtue of a mineral lease. Kennedy Hill was in occupation of the land at the date of my survey, and had eight men employed working the mine.

I have shown on my plan the positions of extensive works and mining, and from what I could gather on the ground, the engine-shed, ten-stamper tailing-boxes, and complete machinery for crushing, also tramway and huts, were erected by Bensusan. Kennedy Hill, who was working the mine, had increased the length of the adit 20 feet, and was still working at it. He had also sunk a shaft 40 feet, and had sunk 40 feet of the shaft shown 160 feet deep. The remaining shafts were sunk by Bensusan.

The area of the mineral leases 173, 174, and 176 I found to be half an acre deficient in area, and I altered the eastern boundary of portion 8 to make the area 60 acres. The numbers and boundaries of mineral leases 173, 174, and 176, which do not form part of portion 8, I obliterated.

I have, &c.,

A. W. CHAPMAN.

D.S.O. 89–12, plan and tracing herewith. Mr. Biden,—This case should be dealt with at once.—T. ELWIN, 19/3/89. Examined and charted.—E. H. BIDEN, 1/4/89.

Forwarded to the Under Secretary for Lands. The survey includes the three mineral leases, Nos. 173, 174, and 176, now held under mineral conditional purchase 84–60, by James H. Graney. (*Vide* papers C.S. 89–11,910 herewith.) I have had the survey effected in view of the fact that the mineral lease measurements were not made for alienation, and the portion required renumbering as of the parish. The papers in the case (C.S. 89–11,910) are attached.—F. G. FINLEY, District Surveyor, 17/5/89.

Charting Branch, 23/5/89.

The Under Secretary for Lands to Mr. E. Prosser.

Sir,

Department of Lands, Sydney, 27 March, 1889.

The declaration made by you, at Sydney, on the 23rd May, 1888, with reference to the conditional purchase described at foot hereof, having been furnished, and it having been reported that an instalment of the balance of purchase money has been duly paid, I am now directed by the Minister for Lands to notify to you that he is satisfied, after due inquiry, that the conditions as to mining expenditure prescribed by the 19th clause of the Crown Lands Alienation Act of 1861 have been completed in respect of the said conditional purchase.

The deed of grant may be obtained at any time hereafter by payment of the balance of the purchase money, with the interest, if any, then due; but should such payment be deferred, an instalment at the rate of two shillings per acre must be paid between the 1st January and 31st March in each year until the balance, inclusive of interest as prescribed by law, shall have been duly paid, otherwise the selection will be forfeited.

I have, &c.,

STEPHEN FREEMAN,
Under Secretary.

Conditional purchase No. 84–60, section 19; district, Tenterfield; date, 31st July, 1884; county, Gough; parish, Highland Home; No. of portion, 9; area, 60 acres; original applicant, James Harry Graney; present holder, Evan Prosser.

Mineral Leases Nos. 1,815, 1,816, 1,817, and 3,237, Parish of Highland Home, County of Gough.

Application.

Application No 615, at Vegetable Creek, for a Mineral Lease.

1. By whom application was received.—G. H. Gower, Warden's Clerk.
2. At what place.—Vegetable Creek.
3. Date and hour when received.—14th January, 1882, at 12 o'clock.
4. Receipt for 1st year's rent.—Date, 14th January, 1882.
5. To whom receipt was issued.—Thomas Butler, John Smith, Andrew Smith.
6. Date when notice to survey was sent to Surveyor.—12th July, 1882.
7. Date when report and plan were received from the Surveyor.—21st December, 1882.
8. Names of objectors, and dates on which they lodged their objections.—None.
9. Is the time proposed for commencing work reasonable? Yes.
10. Is the number of men proposed to be employed reasonable? Yes.

G. MARTIN,
Warden.

Notice of Application and Deposit.

Mineral Lease Regulations.—Schedule 6.

Sir, Vegetable Creek, 14 January, 1882.

We have the honor to inform you than we have this day deposited with Mr. Warden's Clerk Gower, at Vegetable Creek, the sum of £5, being the first year's rent in advance of 20 acres of land at parish Highland Home, county Gough, for the purpose of mining for tin-ore, and the sum of £4, being the fees for the survey of the said land. The number of our application is 615.

We have, &c.,
THOMAS BUTLER.
JOHN SMITH.
ANDY SMITH.
his
THOMAS x BUTLER.
mark.

The Under Secretary for Mines, Sydney.

Form of Application.

Mineral Lease Regulations.—Schedule 2.

To the Honorable the Secretary for Mines, Sydney,— Vegetable Creek, 14 January, 1882.

Sir,

We hereby make application for a mineral lease of that piece or parcel of land situated in parish Highland Home, county Gough, containing 20 acres, of which we took possession on the 9th day of January, at the hour of 8 o'clock in the forenoon, for the purpose of mining thereon and therein for tin-ore for a period of twenty years, by posts, notices, and L trenches at each angle thereof. The datum point is distant about 3 miles in an easterly direction from Alexr. Steame's gully crossing-place, Gulf Road.

Notice of our having made this application will be given in accordance with the regulations in that behalf. We also hand herewith a receipt for £5, being the first year's rent in advance of the said land, and the sum of £4 to cover the cost of the survey.

We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary for Mines for the time being may deduct from the sum of £9 deposited as aforesaid any cost to which, in his opinion, the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted we shall and will commence mining operations upon or in connection with the demised land within one month from and after the granting thereof, and shall and will employ upon such land not less that two men during the first year of the term thereby created, and not less than four men during the remainder of such term. And shall and will at any time when called upon, in terms of the regulations relating to mineral leases, to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days, after being so called upon, we shall and will forfeit the said sum of £9, and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

We have, &c.
THOS. BUTLER.
JOHN SMITH.
ANDY SMITH.
his
THOMAS x BUTLER.
mark.

This application was received by me this 14th day of January, 1882, at the hour of 12 o'clock noon, and is numbered 615.

GEORGE H. GOWER.

Form

17

Form of Notice to make Survey.

Sir, Mining Registrar's Office, Vegetable Creek, 1882.

An application for a mining tenement, particulars as per margin, having been lodged in this office, I request you will be good enough to survey, in accordance with the regulations relating to mineral leases, the area so applied for, and furnish me at your earliest convenience with a plan and report.

Your attention is particularly directed to regulations relating to mineral leases, &c.

I have, &c.,

WM. E. HENRY,

Warden's Clerk.

No. of application, 615, parish Highland Home, county Gough, 20 acres; names and addresses of applicants, Thomas Butler, John Smith, and A. Smith.

H. B. Sullivan, Mining Surveyor, Vegetable Creek.

Description.

Parish Highland Home, county Gough. The datum point is distant about 3 miles in an easterly direction from A. Steame's gully crossing-place, Gully Road.

Mr. Mining-Surveyor Sullivan to The Chief Mining Surveyor.

Tin Lease Reef.

Sir, Tent Hill, 20 December, 1882.

See lease diagram.

I have the honor to transmit herewith the plan of one portion of land, containing 20 acres, numbered mineral lease 173, in the parish of Highland Heme, county of Gough, and applied for by Butler and Co. under the Mining Act of 1874.

The applicants were working this land at time of survey, and had put down a shaft 25 feet, the reef being very rich in tin.

I have, &c.,

H. B. SULLIVAN.

Mining District, New England; applicant's locality, parish of Highland Home, county of Gough.
Application No. 82–615, at Vegetable Creek.

Description:—

Twenty acres, county of Gough, parish of Highland Home; portion mineral lease, 173. Commencing at a point bearing north 29 degrees west 4 chains 50 links from the south-west corner of portion mineral lease 175; and bounded thence on the north-east by part of the south-west boundary of that portion and a line bearing north 29 degrees west 14 chains 15 links; on the north-west by a line bearing south 61 degrees west 14 chains 14 links; on the south-west by a line bearing south 29 degrees east 14 chains 15 links; and on the south-east by a line bearing north 61 degrees east 14 chains 14 links, to the point of commencement.

Examined.—W.S.C.

Indenture.

Application No. 1,815.

THIS indenture, made the eighth day of November, in the year of our Lord one thousand eight hundred and eighty-three, between Her Most Gracious Majesty Queen Victoria, of the one part, and Thomas Butler, John Smith, and Andrew Smith (hereinafter called the lessees) of the other part, witnesseth:—That in consideration of the sum of five pounds paid by the said lessees on the fourteenth day of January, 1882, and of the rents hereinafter reserved, and of the covenants and provisoes hereinafter contained, Her Majesty doth by these presents grant and demise unto the lessees, their executors, administrators, and transferees, all that piece or parcel of land containing by admeasurement twenty acres, and more particularly described and delineated in the Schedule hereto, or in the plan heréunto annexed, and numbered M.L. 173, all those mines, veins, seams, or deposits of [the mineral or metal proposed to be worked] in, on, and under the said lands (hereinafter called the said mine), together with all and singular the shafts, levels, drifts, works, ways, fixtures, erections, liberties, easements, advantages, and appurtenances which are now or at any time during the term hereby granted may be held, occupied, or enjoyed therewith, for the purpose of mining upon and under the said land for tin, and also with full power for the said lessees, their executors, administrators, and transferees, and his and their agents and workmen (including contractors, tributors, and so forth), to dig, sink, drive, make, and use excavations, pits, shafts, levels, tunnels, watercourses, and other works necessary for winning and raising the tin in, on, or under the said land, and to take and appropriate the same during the term hereby granted, and to make and construct on the said land, races, drains, dams, reservoirs, roads, and tramways, and also to erect on the said land all buildings, engines, furnaces, pumps, machinery, and appliances necessary for the purpose of winning and obtaining the tin in, on, or under the said land, and for effectually carrying on the works of the said mine, and also to erect on the said land such offices, cottages, and dwelling-houses, for the use of the agents, workmen, and persons employed in the said mine and works, as the said lessees, their executors, administrators, and transferees shall think proper: To hold the said land, mine, and premises, with the appurtenances (subject nevertheless to the reservation or exception of that portion of the surface of the said land shown on the plan aforesaid, bounded by the lines coloured red, and to such rights and interests as may be lawfully subsisting therein at the date of these presents), unto the said lessees, their executors, administrators, and transferees, from the date hereof, for the term of nineteen years and sixty-three days next ensuing, for the purpose of mining therein or thereon, for working or winning the said tin, and for no other purpose,—yielding and paying therefor unto Her Majesty, her heirs and successors, yearly and every year during the said term, the yearly rent of five pounds in advance, the first year's rent having been paid as aforesaid on the fourteenth day of January, 1882, the next payment being the rent of the said land for two months and two days, at the rate of fivepence per acre per month, from

the

the thirtieth day of October to the thirty-first day of December, 1884, shall be made to the Colonial Treasurer in Sydney, on or before the thirtieth day of November, 1883, and thereafter on or before the thirtieth day of November in each and every year, the yearly rent aforesaid (being the rent of the land hereby demised for the year commencing the first day of January next after each such payment) shall be paid to the Colonial Treasurer aforesaid, clear of all rates, taxes, and assessments to which the said land, mine, and premises are now, or at any time during the said term may be, subject or liable: Provided always, and it is hereby agreed, that if the said yearly rent shall be in arrear for thirty days after the same shall have become payable, whether such rent shall have been legally demanded or not, any officer appointed or authorized thereto by the Secretary for Mines may, by himself or his agent, enter upon the said land, and seize and distrain all minerals, metals, and ores actually got and raised from the said mine, and all machinery, apparatus, tools, waggons, carts, carriages, engines, plant, and all other goods, chattels, and effects whatsoever in, upon, and about the said land and premises, and every distress thus made may take away, sell, and dispose of as in cases of distress for rent reserved in common leases; and out of the moneys arising thereby retain so much as shall be sufficient to satisfy the said arrears, and which shall at the time of such sale be unpaid, and all expenses incurred by him or them in or in respect of such seizure, distraint, removal, and sale; and if there be any surplus such officer shall pay the same to the said lessees, their executors, administrators, or transferees; and the acceptance or receipt of rent by or on behalf of Her Majesty, after breach of any covenant hereinafter contained, shall not be or be deemed a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of such covenant. And if the said lessees, their executors, administrators, or transferees, shall mine for or win from the said land, mine, and premises, any gold, or any earth, rock, stone, quartz, clay, sand, gravel, or soil containing gold, or any mineral or metal with which gold is associated or combined, without the express sanction first had and obtained of the Secretary for Mines for the time being, the Governor, with the advice of the Executive Council, may declare these presents void, and thereupon all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity. And the said lessees do hereby, for themselves, their heirs, executors, administrators, and transferees, covenant with Her Majesty, her heirs and successors, in manner following, that is to say:—

1. That the said lessees, their executors, administrators, and transferees, shall and will during the said term pay unto Her Majesty, her heirs and successors, the rent hereby reserved, at the times and places hereinbefore appointed for payment thereof, clear of all deductions.

2. And shall and will, after the expiration of one month from the date of delivery hereof, upon and during all lawful working days, except when prevented by inevitable accident or during the execution of repairs, make, construct, and work the said land, mine, and premises in the best and most effectual manner, and to the best advantage, without interruption; and shall and will diligently explore and search for tin in, on, and under the said land, mine, and premises.

3. And shall and will, after the expiration of the said month, employ in the construction of the works, or in mining operations on or under the said land, during the first year of the said term, and during the usual hours of labour, two able and competent workmen and miners at the least; and during the remainder of the said term, and during the usual hours of labour, shall and will employ as aforesaid not less than four such workmen and miners, unless prevented by inevitable accident, or during the execution of repairs, so that within the first three years of the term hereby created there shall be expended upon the said land, mine, and premises such a sum of money as shall be equal to five pounds sterling upon each and every acre hereby demised: Provided that the lessee, or if there be more than one lessee, each lessee who shall work as aforesaid, shall count as and be deemed for the purposes of these presents to be a workman or miner employed as aforesaid.

4. And shall and will during the said term effectually drain the said mine, and pump all water likely to cause injury thereto, or which would prevent or interfere with the working thereof; and if the said mine shall be affected, or be liable to be affected, by the same flow or body of water as any other mine or mines contiguous thereto, shall and will, if and whenever requested so to do, contribute, with the lessee or lessees or owner or owners of such other mines, a reasonable proportion of the machinery and labour necessary to free and keep such mine or mines free from water to a workable extent; or if the said mine shall be kept free from water to a workable extent either wholly or partially by means of the machinery and labour of a contiguous mine or mines, or by reason of any works constructed or money expended by the lessee or lessees, owner or owners, of such contiguous mine or mines,—then shall and will pay to such lessee or lessees, owner or owners, as aforesaid, a reasonable proportion of the cost of such machinery, labour, or works, or a reasonable proportion of the money so expended; and the Secretary for Mines for the time being may, if and whenever he shall think fit, depute some efficient person, who shall have access to and inspection of all such mines, to determine when the said mine is so freed or kept wholly or partially free from water, and what are the reasonable proportions of such expenses aforesaid, and to whom and when the same are to be paid—such decision to be final and conclusive on all parties.

5. And shall and will make such provision for the disposal of the detritus, dirt, waste, or refuse of the said mine that the same shall not be an inconvenience, nuisance, or obstruction to any roadway, river, creek, or private or Crown lands, or shall not in any manner occasion any public or private damage or inconvenience.

6. And shall and will erect, and keep erected, during the said term, a post, painted white, at each angle of the said land, and at such points along the boundary-lines as shall be necessary, so as plainly and accurately to define the boundary-lines and angles of the said land; and each such post shall be fixed firmly in the ground, and shall project above the surface thereof not less than three feet.

7. And shall and will, as often as required so to do during the term, make and deliver to the Secretary for Mines for the time being, or any officer appointed or instructed to collect, obtain, or receive the same, all such true and proper plans and sections, returns, and statistics of the workings and operations of the said mine, made up to the last day of the preceding month (the truth and accuracy of which shall be verified by the statutory declaration of the lessee for the time being, or the manager or other officer having

having the charge, control, and direction of the works of the said mine), as the Secretary for Mines shall from time to time direct. And shall and will, whenever required by the Secretary for Mines so to do, deliver to any officer appointed or instructed as aforesaid samples of the minerals, metals, and ores, or any of them, found in or upon such mine and land.

8. And shall and will during the said term make proper and reasonable compensation to the occupier or occupiers, lessee or lessees from the Crown, of any adjoining land in respect of any damage which may be sustained by him or them, by reason of the working of the said mine, or the carrying on of the works thereof or connected therewith, such compensation to be determined by the Secretary for Mines, or by some person authorized by him so to do.

9. And shall and will permit any mining surveyor, or other person duly authorized in that behalf, with all proper or necessary assistants, at all reasonable times, during the said term, quietly to enter into and upon the said land, mine, and premises, to survey and examine the state and condition thereof, and for the purposes aforesaid, to descend all pits and shafts, and to enter into and use all adits, levels, galleries, drives, and excavations, and to use all roads, ways, engines, ropes, machinery, gear, appliances, materials, labour, and other things in or on the said land and mine, which shall be by him deemed necessary, without making any compensation for the same, so nevertheless that in so doing no unnecessary interference is caused with the carrying on of the said mining works.

10. And further, shall and will at all times during the said term keep and preserve the said mine and premises from all avoidable injury or damage, and also the levels, drifts, shafts, watercourses, roads, ways, works, erections, and fixtures therein and thereon in good repair and condition, except such of the matters and things last aforesaid as shall from time to time be considered by a mining surveyor or other proper officer authorized by the Secretary for Mines to inspect and report upon such matters and things to be unnecessary for the proper working of the said mine or any contiguous mine, and in such state and condition shall and will at the end or sooner determination of the said term deliver peaceable possession thereof, and of all and singular the premises hereby demised to Her Majesty, her heirs and successors, or to the Warden or other officer authorized to receive possession thereof. Nevertheless the Secretary for Mines may, if he think fit, permit the lessees, their executors, administrators, and transferees, within six months after possession shall have been received as aforesaid, to enter upon the said land, and to remove therefrom such machinery, plant, and apparatus as shall have been erected and fixed upon such land, and such earth, rock, ore, mineral, or metal as shall have been won from and raised to the surface of such mine.

11. And shall not nor will use or occupy, or permit to be used or occupied, the said land, or any part thereof, for other than mining purposes, or for pasturage, or as sites for dwellings, or garden ground for the persons employed in, on, or about the said mine.

12. And shall not nor will mine in or upon the said mine, land, and premises, for any mineral, metal, or ore other than tin without the express sanction of the Secretary for Mines.

13. And shall not nor will transfer, underlet, or part with possession of the said land, mine, and premises, or any part thereof, or mortgage, charge, or encumber the same, without the license first had and obtained of the Secretary for Mines for the time being: Provided always that no such license shall be necessary in cases where, by operation of law or otherwise, a sale of the said land, mine, and premises, or any part or parts thereof, is made by any person or persons entitled to sell the same for the benefit of the creditors or a creditor of the lessees or their transferees, or in cases where the lessees or their transferees desire to let the said mine and premises, or any part thereof, to be worked on tribute.

14. And shall not nor will close up or obstruct any adit or adits to or from any contiguous mine or mines whereby fresh air is admitted or ventilation promoted.

15. And shall not nor will plead acceptance of rent by or on behalf of Her Majesty as a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of the covenants herein contained, or of the right of the Governor, with the advice of the Executive Council, to declare these presents void for breach of any such covenant: Provided always and it is hereby agreed and declared in manner following:—

16. That it shall be lawful for Her Majesty, her heirs, successors, and assigns, to make and use in, on, or under the said land, any levels, drifts, leads, shafts, watercourses, adits, roads, ways, and passages for freeing and keeping free any other lands or mines from water, or for conveying water to any other lands or mines for mining purposes, or for supplying any other mines with fresh air, or for effectually working any other mines, or for any public purpose whatsoever, causing as little damage, obstruction, or interference as possible to or with the said mine and the works thereof. And if, at any time during the term hereby created, any part or parts of the land hereby demised, or any part or parts of the surface thereof, shall be required for the purpose of any township, village, railway, road, canal, watercourse, reservoir, or for any other public purpose, it shall be lawful for the Governor for the time being, with the advice of the Executive Council, on giving three months' notice of his intention so to do, to cause to be set out the part or parts of the said land, or of the surface thereof, which shall be so required; and as soon as the same shall be so set out, such part or parts of the said land, or of the surface thereof, shall cease to be included in the land hereby demised, and the lessees, their executors, administrators, or transferees shall not be entitled to any abatement of rent or any compensation whatever in respect thereof.

17. And if the lessees, their executors, administrators, or transferees shall prove to the satisfaction of the Secretary for Mines for the time being that the said mine is unworkable from any cause whatsoever, or that the lessees, their executors, administrators, or transferees is or are unable, by reason of sickness or other sufficient cause, to work in such land or mine, or that the supply of water is insufficient to allow the working of the said land, mine, and premises to be profitably carried on, the said Secretary for Mines may grant permission to suspend work therein or thereon for any period not exceeding six months, without the lessees, their executors, administrators, or transferees incurring in respect thereto any forfeiture or penalty for breach of any covenant herein contained.

18. And, lastly, that if the lessees, their executors, administrators, or transferees shall at any time during the said term fail to use such land *bona fide* for the purpose for which it has been demised, or if and whenever the said rent shall be in arrear for thirty days after the time appointed for payment thereof, whether

whether the same shall have been legally demanded or not, or if and whenever there shall be a breach of or non-compliance with the covenants and provisoes herein contained by the lessees, their executors, administrators, or transferees, and the lessees, their executors, administrators, or transferees shall not have obtained from the Secretary for Mines for the time being permission to suspend work as aforesaid, in case the breach shall have been for non-compliance with the covenants for the employment of workmen or miners, or for the working of the mine, the Governor, with the advice of the Executive Council, who alone and finally shall judge and determine the matter upon the evidence or reports submitted by the Secretary for Mines for the time being, may declare these presents void; and upon publication in the *Government Gazette* of notice of such declaration, all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity; and the production of a copy of the *Government Gazette* containing a notice, purporting to be signed by the Secretary for Mines, declaring the lease void shall be conclusive evidence in all Courts whatsoever in the Colony of New South Wales of a breach of or non-compliance with the covenants and provisoes herein contained sufficient to authorize and sustain such declaration having been lawfully made, and that the interest created hereunder has been lawfully determined; and thereupon it shall be lawful for Her Majesty, her heirs and successors, or her or their agents or officers, or for any bailiff or other person duly authorized thereto, or for any holder of a mineral license, who has the permission of the Secretary for Mines for the time being, without any previous demand whatsoever, to enter forthwith into and upon the said land and premises hereby granted, and the same to repossess and enjoy as fully and effectually to all intents and purposes as if these premises had not been made, and the said lessees, their executors, administrators, and transferees, to expel and remove, without any legal process, and as effectually as the Sheriff might do in case judgment in ejectment had been obtained and a writ of *habere facias possessionem* had been issued on such judgment; and in case of such entry and any legal proceeding taken in respect thereof, the defendant or defendants in any such proceeding may plead leave and license in bar thereof; and these presents shall be conclusive evidence of such leave and license by the lessees, their executors, administrators, and transferees, or other the person or persons, plaintiff or plaintiffs in such proceedings, for such entry or other matters complained of in such proceedings.

In witness whereof, His Excellency the Right Honorable Charles Robert, Baron Carrington, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, hath, on behalf of Her Majesty the Queen, caused the Seal of the said Colony to be affixed to this grant, and also set his hand, at Government House, Sydney, in the said Colony, the day and year first above written, and the lessees have also set their hands and seals the twelfth day of November, 1883.

AUGUSTUS LOFTUS.

KNOW ALL MEN BY THESE PRESENTS,

That we, Thomas Butler, John Smith, and Andrew Smith, of Vegetable Creek, do hereby make, nominate, constitute, and appoint, and in our place or stead put William John Fergusson, of Sydney, to be our true and lawful attorney for us, and in our names, and as our act and deed, to sign, seal, and take delivery of the mineral lease for which we, on the 14th day of January, 1882, made application (No. 615 at Vegetable Creek), under the provisions of the Mining Act, 1874, and the regulations made thereunder, and which has been or shall be granted and issued by the Governor, and for us and in our names to enter into all such covenants and agreements as we shall be required to enter into in and by the said lease, and generally for us and in our names to do, execute, and perform all such other acts, deeds, and things as may be necessary or may be required to be done, executed, or performed in and about the application for and execution of such lease; and we do hereby ratify and confirm all and whatsoever the said William John Fergusson shall lawfully do or cause to be done in or about the premises by virtue of this power.

In witness whereof, we have hereunto set our hands and seals this 21st day of August, 1883.

Registrar.

Notice of Application and Deposit.

Mineral Lease Regulations.—Schedule 6.

Sir, Vegetable Creek, 24 March, 1882.

We have the honor to inform you that we have this day deposited with the Warden's Clerk at Vegetable Creek the sum of £5, being the first year's rent in advance of 20 acres of land at parish of Highland Home, county Gough, for the purpose of mining for tin ore, and the sum of £4, being the fees for survey of the said land. The number of our application is 655.

We have, &c.,
JAMES BUTLER.
THOMAS M'GUINESS.

The Under Secretary for Mines, Sydney.

Form of Application.

Mineral Lease Regulations.—Schedule 2.

To the Honorable the Secretary for Mines, Sydney,— Vegetable Creek, 24 March, 1882.

Sir,

We hereby make application for a mineral lease of that piece or parcel of land situated parish of Highland Home, county Gough, containing 20 acres, of which we took possession on the 16th day of March, at the hour of 10 o'clock in the forenoon, for the purpose of mining thereon and therein for tin ore for a period of twenty years, by posts, notices, and L trenches at each angle thereof. The datum point is adjoining west of Butler's lode.

Notice of our having made this application will be given in accordance with the regulations in that behalf. We also hand herewith a receipt for the sum of £5, being the first year's rent in advance of the said land, and the sum of £4 to cover the cost of survey.

We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary for Mines for the time being may deduct from the sum of £9 deposited as aforesaid any cost to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted, we shall and will commence mining operations upon or in connection with the demised land within one month from and after the granting thereof, and shall and will employ upon such land not less than two men during the first year of the term thereby created, and not less than four men during the remainder of such term. And shall and will, at any time when called upon in terms of the regulations relating to mineral leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days after being so called upon, we shall and will forfeit the said sum of £9, and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

We have, &c.,
JAMES BUTLER,
THOMAS M'GUINESS,
Vegetable Creek.

This application was received by me this 24th day of March, 1882, at the hour of 12 o'clock noon, and is numbered 655.

G. H. GOWER,
Warden's Clerk.

Notice

Notice to make Survey.

Sir, Vegetable Creek, 7 July, 1882.

An application for a mineral lease, particulars as per margin, having been lodged in this office, I request you will be good enough to survey, in accordance with the regulations relating to mineral leases, the area so applied for, and furnish me at your earliest convenience with a plan and report.

Your attention is particularly directed to regulations for mineral leases numbered respectively 2, 3, 12, 13, and 14, or to the regulations relating to gold-mining leases numbered respectively 1, 2, 3, 4, 5, 14, and 15.

No. of application, 655; locality, parish of Highland Home, county of Gough; area, 20 acres; names and addresses of applicants, P. M'Guiness and James Butler.

I have, &c.,
W. E. HENRY,
Warden's Clerk.

H. B. Sullivan, Mining Surveyor, Vegetable Creek.

Description.

Parish of Highland Home, county of Gough; the datum point is adjoining the west of Butler's lode.

Mr. Mining-Surveyor Sullivan to The Chief Mining Surveyor.

Sir, Tent Hill, 20 December, 1882.

I have the honor to transmit herewith the plan of one portion of land containing 20 acres, numbered M.L. 174, in the parish of Highland Home, county of Gough, and applied for by M'Guiness and Co. under the Mining Act of 1874.

See lease diagram.

I have, &c.,
H. B. SULLIVAN.

Mining District, New England; applicants' locality, parish Highland Home, county Gough; application, No. 82–655, at Vegetable Creek.

Description.

20 acres, county of Gough, parish of Highland Home, portion M.L. 174. Commencing at the south-west corner of portion No. 173; and bounded thence on the north-east by the south-west boundary of that portion bearing north 29 degrees west 14 chains and 15 links; on the north-west by a line bearing south 61 degrees west 14 chains and 14 links; on the south-west by a line bearing south 29 degrees east 14 chains and 15 links; and on the south-east by a line bearing north 61 degrees east 14 chains and 14 links, to the point of commencement.

Examined.—W.S.C.

Indenture.

Application No. 1,816.

THIS indenture, made the eighth day of November, in the year of our Lord one thousand eight hundred and eighty-three, between Her Most Gracious Majesty Queen Victoria, of the one part, and James Butler and Thomas M'Guiness, of Vegetable Creek, in the Colony of New South Wales (hereinafter called the lessees), of the other part, witnesseth:—That in consideration of the sum of five pounds, paid by the said lessees on the twenty-fourth day of March, 1882, and of the rents hereinafter reserved, and of the covenants and provisoes hereinafter contained, Her Majesty doth by these presents grant and demise unto the lessees, their executors, administrators, and transferees, all that piece or parcel of land, containing by admeasurement twenty acres, and more particularly described and delineated in the Schedule hereto, or in the plan hereunto annexed, and numbered M.L. 174, and all those mines, veins, seams, or deposits of [the mineral or metal proposed to be worked] in, on, and under the said land (hereinafter called the said mine), together with all and singular the shafts, levels, drifts, works, ways, fixtures, erections, liberties, easements, advantages, and appurtenances which are now or at any time during the term hereby granted may be held, occupied, or enjoyed therewith, for the purpose of mining upon and under the said land for tin, and also with full power for the said lessees, their executors, administrators, and transferees, and his and their agents and workmen (including contractors, tributors, and so forth), to dig, sink, drive, make, and use excavations, pits, shafts, levels, tunnels, watercourses, and other works necessary for winning and raising the tin in, on, or under the said land, and to take and appropriate the same during the term hereby granted, and to make and construct on the said land, races, drains, dams, reservoirs, roads, and tramways, and also to erect on the said land all buildings, engines, furnaces, pumps, machinery, and appliances necessary for the purpose of winning and obtaining the tin in, on, or under the said land, and for effectually carrying on the works of the said mine, and also to erect on the said land such offices, cottages, and dwelling-houses, for the use of the agents, workmen, and persons employed in the said mine and works, as the said lessees, their executors, administrators, and transferees shall think proper: To hold the said land, mine, and premises, with the appurtenances (subject nevertheless to the reservation or exception of that portion of the surface of the said land shown on the plan aforesaid, bounded by the lines coloured red, and to such rights and interests as may be lawfully subsisting therein at the date of these presents), unto the said lessees, their executors, administrators, and transferees, from the date hereof, for the term of nineteen years and sixty-three days next ensuing, for the purpose of mining therein or thereon, for working or winning the said tin, and for no other purpose,—Yielding and paying therefor unto Her Majesty, her heirs and successors, yearly and every year during the said term, the yearly rent of five pounds in advance, the first year's rent having been paid as aforesaid on the twenty-fourth day of March, 1882, the next payment being the rent of the said land for two months and two days, at the rate of fivepence per acre per month, from the thirtieth day of ————, to the thirty-first day of December, 1884, shall be made to the Colonial Treasurer in Sydney, on or before the thirtieth day of November, 1883, and thereafter on or before the thirtieth day of November in each and every year, the yearly rent aforesaid (being the rent of the land hereby demised for the year commencing the first day of January next after each such payment) shall be paid to the Colonial Treasurer aforesaid, clear of all rates, taxes, and assessments to which the said land, mine, and premises are now, or at any time during the said term may be, subject or liable: Provided always, and it is hereby agreed that if the said yearly rent shall be in arrear for thirty days after the same shall have become payable, whether such rent shall have been legally demanded or not, any officer appointed or authorized thereto by the Secretary for Mines may, by himself or his agent, enter upon the said land, and seize and distrain all minerals, metals, and

and ores actually got and raised from the said mine, and all machinery, apparatus, tools, waggons, carts, carriages, engines, plant, and all other goods, chattels, and effects whatsoever in, upon, and about the said land and premises, and every distress thus made may take away, sell, and dispose of as in cases of distress for rent reserved in common leases; and out of the moneys arising thereby retain so much as shall be sufficient to satisfy the said arrears, and which shall at the time of such sale be unpaid, and all expenses incurred by him or them in or in respect of such seizure, distraint, removal, and sale; and if there be any surplus such officer shall pay the same to the said lessees, their executors, administrators, or transferees; and the acceptance or receipt of rent by or on behalf of Her Majesty, after breach of any covenant hereinafter contained, shall not be or be deemed a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of such covenant. And if the said lessees, their executors, administrators, or transferees, shall mine for or win from the said land, mine, and premises, any gold, or any earth, rock, stone, quartz, clay, sand, gravel, or soil containing gold, or any mineral or metal with which gold is associated or combined, without the express sanction first had and obtained of the Secretary for Mines for the time being, the Governor, with the advice of the Executive Council, may declare these presents void, and thereupon all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity. And the said lessees do hereby, for themselves, their heirs, executors, administrators, and transferees, covenant with Her Majesty, her heirs and successors, in manner following, that is to say:—

1. That the said lessees, their executors, administrators, and transferees, shall and will during the the said term pay unto Her Majesty, her heirs and successors, the rent hereby reserved, at the times and places hereinbefore appointed for payment thereof, clear of all deductions.

2. And shall and will after the expiration of one month from the date of delivery hereof, upon and during all lawful working days, except when prevented by inevitable accident or during the execution of repairs, make, construct, and work the said land, mine, and premises in the best and most effectual manner, and to the best advantage, without interruption; and shall and will diligently explore and search for tin in, on, and under the said land, mine, and premises.

3. And shall and will after the expiration of the said one month employ in the construction of the works, or in mining operations on or under the said land, during the first year of the said term, and during the usual hours of labour, two able and competent workmen and miners at the least; and during the remainder of the said term, and during the usual hours of labour, shall and will employ as aforesaid not less than four such workmen and miners, unless prevented by inevitable accident, or during the execution of repairs, so that within the first three years of the term hereby created there shall be expended upon the said land, mine, and premises, such a sum of money as shall be equal to five pounds sterling upon each and every acre hereby demised: Provided that the lessee, or if there be more than one lessee, each lessee who shall work as aforesaid, shall count as and be deemed for the purposes of these presents to be a workman or miner employed as aforesaid.

4. And shall and will during the said term effectually drain the said mine, and pump all water likely to cause injury thereto, or which would prevent or interfere with the working thereof; and if the said mine shall be affected, or be liable to be affected, by the same flow or body of water as any other mine or mines contiguous thereto, shall and will, if and whenever requested so to do, contribute with the lessee or lessees or owner or owners of such other mines a reasonable proportion of the machinery and labour necessary to free and keep such mine or mines free from water to a workable extent; or if the said mine shall be kept free from water to a workable extent, either wholly or partially by means of the machinery and labour of a contiguous mine or mines, or by reason of any works constructed or money expended by the lessee or lessees, owner or owners of such contiguous mine or mines—then shall and will pay to such lessee or lessees, owner or owners, as aforesaid, a reasonable proportion of the cost of such machinery, labour, or works, or a reasonable proportion of the money so expended; and the Secretary for Mines for the time being may, if and whenever he shall think fit, depute some efficient person who shall have access to and inspection of all such mines, to determine when the said mine is so freed or kept wholly or partially free from water, and what are the reasonable proportions of such expenses aforesaid, and to whom and when the same are to paid—such decision to be final and conclusive on all parties.

5. And shall and will make such provision for the disposal of the detritus, dirt, waste, or refuse of the said mine that the same shall not be an inconvenience, nuisance, or obstruction to any roadway, river, creek, or private or Crown lands, or shall not in any manner occasion any public or private damage or inconvenience.

6. And shall and will erect, and keep erected, during the said term, a post, painted white, at each angle of the said land, and at such points along the boundary-lines as shall be necessary, so as plainly and accurately to define the boundary-lines and angles of the said land; and each such post shall be fixed firmly in the ground, and shall project above the surface thereof not less than three feet.

7. And shall and will, as often as required so to do during the term, make and deliver to the Secretary for Mines for the time being, or any officer appointed or instructed to collect, obtain, or receive the same, all such true and proper plans and sections, returns, and statistics of the workings and operations of the said mine, made up to the last day of the preceding month (the truth and accuracy of which shall be verified by the statutory declaration of the lessee for the time being, or the manager or other officer having the charge, control, and direction of the works of the said mine), as the Secretary for Mines shall from time to time direct. And shall and will, whenever required by the Secretary for Mines so to do, deliver to any officer appointed or instructed as aforesaid samples of the minerals, metals, and ores, or any of them, found in or upon such mine and land.

8. And shall and will during the said term make proper and reasonable compensation to the occupier or occupiers, lessee or lessees from the Crown, of any adjoining land in respect of any damage which may be sustained by him or them by reason of the working of the said mine, or the carrying on of the works thereof or connected therewith, such compensation to be determined by the Secretary for Mines, or by some person authorized by him so to do.

9. And shall and will permit any mining surveyor, or other person duly authorized in that behalf, with all proper or necessary assistants, at all reasonable times, during the said term, quietly to enter into and upon the said land, mine, and premises, to survey and examine the state and condition thereof, and for the purposes aforesaid to descend all pits and shafts, and to enter into and use all adits, levels, galleries,

galleries, drives, and excavations, and to use all roads, ways, engines, ropes, machinery, gear, appliances, materials, labour, and other things in or on the said land and mine which shall be by him deemed necessary, without making any compensation for the same, so nevertheless that in so doing no unnecessary interference is caused with the carrying on of the said mining works.

10. And further, shall and will at all times during the said term keep and preserve the said mine and premises from all avoidable injury or damage, and also the levels, drifts, shafts, watercourses, roads, ways, works, erections, and fixtures therein and thereon in good repair and condition, except such of the matters and things last aforesaid as shall from time to time be considered by a mining surveyor or other proper officer authorized by the Secretary for Mines to inspect and report upon such matters and things to be unnecessary for the proper working of the said mine or any contiguous mine, and in such state and condition shall and will at the end or sooner determination of the said term deliver peaceable possession thereof, and of all and singular the premises hereby demised to Her Majesty, her heirs and successors, or to the Warden or other officer authorized to receive possession thereof. Nevertheless the Secretary for Mines may, if he think fit, permit the lessees, their executors, administrators, and transferees, within six months after possession shall have been received as aforesaid, to enter upon the said land, and to remove therefrom such machinery, plant, and apparatus as shall have been erected and fixed upon such land, and such earth, rock, ore, mineral, or metal as shall have been won from and raised to the surface of such mine.

11. And shall not nor will use or occupy, or permit to be used or occupied, the said land, or any part thereof, for other than mining purposes, or for pasturage, or as sites for dwellings, or garden ground, for the persons employed in, on, or about the said mine.

12. And shall not nor will mine in or upon the said mine, land, and premises for any mineral, metal, or ore other than tin without the express sanction of the Secretary for Mines.

13. And shall not nor will transfer, underlet, or part with possession of the said land, mine, and premises, or any part thereof, or mortgage, charge, or encumber the same, without the license first had and obtained of the Secretary for Mines for the time being: Provided always that no such license shall be necessary in cases where, by operation of law or otherwise, a sale of the said land, mine, and premises, or any part or parts thereof, is made by any person or persons entitled to sell the same for the benefit of the creditors or a creditor of the lessees or their transferees, or in cases where the lessees or their transferees desire to let the said mine and premises, or any part thereof, to be worked on tribute.

14. And shall not nor will close up or obstruct any adit or adits to or from any contiguous mine or mines whereby fresh air is admitted or ventilation promoted.

15. And shall not nor will plead acceptance of rent by or on behalf of Her Majesty as a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of the covenants herein contained, or of the right of the Governor, with the advice of the Executive Council, to declare these presents void for breach of any such covenant: Provided always and it is hereby agreed and declared in manner following:—

16. That it shall be lawful for Her Majesty, her heirs, successors, and assigns to make and use in, on, or under the said land, any levels, drifts, leads, shafts, watercourses, adits, roads, ways, and passages for freeing and keeping free any other lands or mines from water, or for conveying water to any other lands or mines for mining purposes, or for supplying any other mines with fresh air, or for effectually working any other mines, or for any public purpose whatsoever, causing as little damage, obstruction, or interference as possible to or with the said mine and the works thereof. And if, at any time during the term hereby created, any part or parts of the land hereby demised, or any part or parts of the surface thereof, shall be required for the purpose of any township, village, railway, road, canal, watercourse, reservoir, or for any other public purpose, it shall be lawful for the Governor for the time being, with the advice of the Executive Council, on giving three months' notice of his intention so to do, to cause to be set out the part or parts of the said land, or of the surface thereof, which shall be so required; and as soon as the same shall be so set out such part or parts of the said land, or of the surface thereof, shall cease to be included in the land hereby demised, and the lessees, their executors, administrators, or transferees shall not be entitled to any abatement of rent, or any compensation whatever in respect thereof.

17. And if the lessees, their executors, administrators, or transferees shall prove to the satisfaction of the Secretary for Mines for the time being that the said mine is unworkable from any cause whatsoever, or that the lessees, their executors, administrators, or transferees is or are unable, by reason of sickness or other sufficient cause, to work in such land or mine, or that the supply of water is insufficient to allow the working of the said land, mine, and premises to be profitably carried on, the said Secretary for Mines may grant permission to suspend work therein or thereon, for any period not exceeding six months, without the lessees, their executors, administrators, or transferees incurring in respect thereto any forfeiture or penalty for breach of any covenant herein contained.

18. And, lastly, that if the lessees, their executors, administrators, or transferees shall at any time during the said term fail to use such land *bona fide* for the purpose for which it has been demised, or if and whenever the said rent shall be in arrear for thirty days after the time appointed for payment thereof, whether the same shall have been legally demanded or not, or if and whenever there shall be a breach of or non-compliance with the covenants and provisoes herein contained by the lessees, their executors, administrators, or transferees, and the lessees, their executors, administrators, or transferees shall not have obtained from the Secretary for Mines for the time being permission to suspend work as aforesaid, in case the breach shall have been for non-compliance with the covenants for the employment of workmen or miners, or for the working of the mine, the Governor, with the advice of the Executive Council, who alone and finally shall judge and determine the matter upon the evidence or reports submitted by the Secretary for Mines for the time being, may declare these presents void; and upon publication in the *Government Gazette* of notice of such declaration, all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity; and the production of a copy of the *Government Gazette* containing a notice, purporting to be signed by the Secretary for Mines, declaring the lease void, shall be conclusive evidence in all Courts whatsoever in the Colony of New South Wales of a breach of or non-compliance with the covenants and provisoes herein contained sufficient to authorize and sustain such declaration having been lawfully made, and that the interest created hereunder has been lawfully determined; and thereupon it shall be lawful for Her Majesty, her heirs and successors, or her or their agents or officers, or for any

bailiff or other person duly authorized thereto, or for any holder of a mineral lease, who has the permission of the Secretary for Mines for the time being, without any previous demand whatsoever, to enter forthwith into and upon the said land and premises hereby granted, and the same to repossess and enjoy as fully and effectually to all intents and purposes as if these premises had not been made, and the said lessees, their executors, administrators, and transferees, to expel and remove, without any legal process, and as effectually as the Sheriff might do in case judgment in ejectment had been obtained and a writ of *habere facias possessionem* had been issued on such judgment; and in case of such entry and any legal proceeding taken in respect thereof, the defendant or defendants in any such proceeding may plead leave and license in bar thereof; and these presents shall be conclusive evidence of such leave and license by the lessees, their executors, administrators, and transferees, or other the person or persons, plaintiff or plaintiffs, in such proceedings, for such entry or other matters complained of in such proceedings.

In witness whereof, His Excellency the Right Honorable CHARLES ROBERT, BARON CARRINGTON, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, hath, on behalf of Her Majesty the Queen, caused the Seal of the said Colony to be affixed to this grant, and also set his hand, at Government House, Sydney, in the said Colony, the day and year first above written, and the lessees have also set their hands and seals the twelfth day of November, 1883.

AUGUSTUS LOFTUS.
J. P. ABBOTT.

Transfer of Mineral Lease.

Mineral Lease Regulations—Schedule 13.

WE, Thomas M'Guiness and James Butler, being registered as the lessees of all that mineral lot demised by a certain mineral lease granted by Her Majesty the Queen to Thomas M'Guiness and James Butler, and dated the 8th day of November, 1883, and numbered in the Register 1,816, in consideration of the sum of £800 paid to us by the transferees, the receipt of which sum we hereby acknowledge, do hereby transfer to William Wright Richardson and George Hardie all our right, title, and interest in and to the mineral lot demised as aforesaid. And we do hereby accept transfer of the right, title, and interest of the said Thomas M'Guiness and James Butler in and to the demised land aforesaid, subject to the provisions of the Mining Act, 1874, and the regulations made thereunder; and we hereby agree to be bound by all and singular the terms, conditions, covenants, provisoes, restrictions, and reservations contained in the said lease.

In witness whereof we have hereunto subscribed our respective names, this 24th day of November, 1883.

Registrar.

Application.

Application No. 844 at Emmaville for a Mineral Lease.

1. By whom application was received? Warden's Clerk.
2. At what place? Emmaville.
3. Date and hour when received? 17th November, 1882, 10 a.m.
4. Receipt for 1st year's rent, No. 802; date? 17th November, 1882.
5. To whom receipt was issued? Thomas M'Guiness.
6. Date when notice to survey was sent to surveyor? 17th November, 1882.
12. Is the time proposed for commencing work reasonable? Yes.
13. Is the number of men proposed to be employed reasonable? Yes.

G. MARTIN,
Warden.

Notice of Application and Deposit.

Mineral Lease Regulations—Schedule 6.

Sir, Emmaville, 17 November, 1882.

We have the honor to inform you that we have this day deposited with Warden's Clerk at Emmaville the sum of £5, being the first year's rent in advance of 20 acres of land at parish of Highland Home, county of Gough, for the purpose of mining for tin ore, and the sum of £4, being the fees for survey of the said land. The number of our application is 844.

We have, &c.,
THOMAS M'GUINESS & CO.

Form of Application.

Mineral Lease Regulations—Schedule 2.

To the Honorable the Secretary for Mines, Sydney,— Emmaville, 17 November, 1882.

Sir,

We hereby make application for a mineral lease of that piece or parcel of land, situated parish of Highland Home, county Gough, at the head of Alexander Stanes Creek, containing 20 acres, of which we took possession on the 9th day of November, at the hour of 11 o'clock in the forenoon, for the purpose of mining thereon and therein for tin ore in lode for a period of twenty years, by posts, notices, and L trenches at each angle thereof. The datum point is the north-west corner of newly-surveyed block 175, and the land is bounded from thence by lines east, north, west, and south.

Notice of our intention to make this application has been given in accordance with the regulations in that behalf, and there were no persons in occupation of the land applied for. We also hand herewith £5, being the first year's rent in advance of the said land, and the sum of £4 to cover the cost of survey. We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary for Mines for the time being may deduct from the sum of £9 deposited as aforesaid any cost to which in his opinion the Crown may have

have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted we shall and will commence mining operations upon or in connection with the demised land within six months from and after the granting thereof, and shall and will employ upon such land not less than two men during the first year of the term thereby created, and not less than four men during the remainder of such term. And shall and will at any time when called upon in terms of the regulations relating to mineral leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days after being so called upon, we shall and will forfeit the said sum of £9, and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

We have, &c.,
THOMAS M'GUINESS,
THOMAS FRANCIS,
THOMAS BUTLER, and
JOHN CAREY.

This application was received by me this 17th day of November, 1882, at the hour of 10 o'clock in the forenoon, and is numbered 844.

W. E. HENRY,
Warden's Clerk.

Form of Notice to make Survey.

Mining Board Regulations—Schedule 4.
(*See Regulation* 151.)

Sir,

Emmaville, 17 November, 1882.

No. of application, 844; parish Highland Home, county Gough; area, 20 acres; T. M'Guiness, T. Francis, and Thomas Butler.

An application for a mineral lease, particulars as per margin, having been lodged in this office, I request you will be good enough to survey, in accordance with the regulations relating to mineral leases, the area so applied for, and furnish me at your earliest convenience with a plan and report.

Your attention is particularly directed to the regulations for mineral leases numbered respectively 2, 3, 12, 13, and 14, or to the regulations relating to gold leases numbered respectively 1, 2, 3, 4, 5, 14 and 15.

I have, &c.,
WM. E. HENRY,
Warden's Clerk.

H. B. Sullivan, Mining Surveyor, Tent Hill.

Mr. Mining-Surveyor H. B. Sullivan to The Chief Mining Surveyor.

Tin Lease Reef.

Sir,

Tent Hill, 20 December, 1882.

See lease diagram.

I have the honor to transmit herewith the plan of one portion of land containing 20 acres, numbered M.L. 176, in the parish of Highland Home, county of Gough, and applied for by M'Guiness & Co., under the Mining Act of 1874.

I have, &c.,
H. B. SULLIVAN.

Mining District, New England; applicant's locality, parish Highland Home, county Gough; application No. 82-844, at Emmaville.

Description.

20 acres, county of Gough, parish of Highland Home, portion M.L. 176. Commencing at the north-east corner of portion No. M.L. 175; and bounded thence on the north-east by a line bearing north 29 degrees west 14 chains and 15 links; on the north-west by a line bearing south 61 degrees west 14 chains and 14 links; on the south-west by a line and part of the north-east boundary of portion M.L. 173, bearing south 29 degrees east 14 chains and 15 links; and on the south-east by the north-west boundary of portion M.L. 175, bearing north 61 degrees east 14 chains and 14 links, to the point of commencement.

Examined.—W.S.C.

Indenture.

Application No. 1,817.

THIS indenture, made the eighth day of November, in the year of our Lord one thousand eight hundred and eighty-three, between Her Most Gracious Majesty Queen Victoria, of the one part, and Thomas M'Guiness, Thomas Francis, Thomas Butler, and John Carey, all of Emmaville, in the Colony of New South Wales (hereinafter called the lessees), of the other part, witnesseth:—That in consideration of the sum of five pounds paid by the said lessees on the seventeenth day of November, 1882, and of the rents hereinafter reserved, and of the covenants and provisoes hereinafter contained, Her Majesty doth by these presents grant and demise unto the lessees, their executors, administrators, and transferees, all that piece or parcel of land, containing by admeasurement twenty acres, and more particularly described and delineated in the schedule hereto, or in the plan hereunto annexed, and numbered M.L. 176, and all those mines, veins, seams, or deposits of [the mineral or metal proposed to be worked] in, on, and under the said land (hereinafter called the said mine), together with all and singular the shafts, levels, drifts, works, ways, fixtures, erections, liberties, easements, advantages, and appurtenances which are now or at any time during the term hereby granted may be held, occupied, or enjoyed therewith, for the purpose of mining upon and under the said land for tin, and also with full power for the said lessees, their executors, administrators, and transferees, and his and their agents and workmen (including contractors, tributors, and so forth), to dig, sink, drive, make, and use excavations, pits, shafts, levels, tunnels, water-courses, and other works necessary for winning and raising the tin in, on, or under the said land, and to take and appropriate the same during the term hereby granted, and to make and construct on the said land,

land, races, drains, dams, reservoirs, roads, and tramways, and also to erect on the said land all buildings, engines, furnaces, pumps, machinery, and appliances necessary for the purpose of winning and obtaining the tin in, on, or under the said land, and for effectually carrying on the works of the said mine, and also to erect on the said land such offices, cottages, and dwelling-houses, for the use of the agents, workmen, and persons employed in the said mine and works, as the said lessees, their executors, administrators, and transferees shall think proper: To hold the said land, mine, and premises, with the appurtenances (subject nevertheless to the reservation or exception of that portion of the surface of the said land shown on the plan aforesaid, bounded by the lines coloured red, and to such rights and interests as may be lawfully subsisting therein at the date of these presents), unto the said lessees, their executors, administrators, and transferees, from the date hereof, for the term of nineteen years and sixty-three days next ensuing, for the purpose of mining therein or thereon, for working or winning the said tin, and for no other purpose,—yielding and paying therefor unto Her Majesty, her heirs and successors, yearly and every year during the said term, the yearly rent of five pounds in advance, the first year's rent having been paid as aforesaid on the seventeenth day of November, 1882, the next payment being the rent of the said land for two months and two days, at the rate of fivepence per acre per month, from the thirtieth day of October to the 31st day of December, 1884, shall be made to the Colonial Treasurer in Sydney, on or before the thirtieth day of November, 1883, and thereafter on or before the thirtieth day of November in each and every year, the yearly rent aforesaid (being the rent of the land hereby demised for the year commencing the first day of January next after each such payment) shall be paid to the Colonial Treasurer aforesaid, clear of all rates, taxes, and assessments to which the said land, mine, and premises are now, or at any time during the said term may be, subject or liable: Provided always, and it is hereby agreed that if the said yearly rent shall be in arrear for thirty days after the same shall have become payable, whether such rent shall have been legally demanded or not, any officer appointed or authorized thereto by the Secretary for Mines may, by himself or his agent, enter upon the said land, and seize and distrain all minerals, metals, and ores actually got and raised from the said mine, and all machinery, apparatus, tools, waggons, carts, carriages, engines, plant, and all other goods, chattels, and effects whatsoever in, upon, and about the said land and premises, and every distress thus made may take away, sell, and dispose of as in cases of distress for rent reserved in common leases; and out of the moneys arising thereby retain so much as shall be sufficient to satisfy the said arrears, and which shall at the time of such sale be unpaid, and all expenses incurred by him or them in or in respect of such seizure, distraint, removal, and sale; and if there be any surplus such officer shall pay the same to the said lessees, their executors, administrators, or transferees; and the acceptance or receipt of rent by or on behalf of Her Majesty, after breach of any covenant hereinafter contained, shall not be or be deemed a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of such covenant. And if the said lessees, their executors, administrators, or transferees, shall mine for or win from the said land, mine, and premises, any gold, or any earth, rock, stone, quartz, clay, sand, gravel, or soil containing gold, or any mineral or metal with which gold is associated or combined, without the express sanction first had and obtained of the Secretary for Mines for the time being, the Governor, with the advice of the Executive Council, may declare these presents void, and thereupon all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity. And the said lessees do hereby, for themselves, their heirs, executors, administrators, and transferees, covenant with Her Majesty, her heirs and successors, in manner following, that is to say:—

1. That the said lessees, their executors, administrators, and transferees, shall and will during the said term pay unto Her Majesty, her heirs and successors, the rent hereby reserved, at the times and places hereinbefore appointed for payment thereof, clear of all deductions.

2. And shall and will, after the expiration of six months from the date of delivery hereof, upon and during all lawful working days, except when prevented by inevitable accident or during the execution of repairs, make, construct, and work the said land, mine, and premises in the best and most effectual manner, and to the best advantage, without interruption; and shall and will diligently explore and search for tin in, on, and under the said land, mine, and premises.

3. And shall and will, after the expiration of the said six months, employ in the construction of the works, or in mining operations on or under the said land, during the first year of the said term, and during the usual hours of labour, two able and competent workmen and miners at the least; and during the remainder of the said term, and during the usual hours of labour, shall and will employ as aforesaid not less than four such workmen and miners, unless prevented by inevitable accident, or during the execution of repairs, so that within the first three years of the term hereby created there shall be expended upon the said land, mine, and premises, such a sum of money as shall be equal to five pounds sterling upon each and every acre hereby demised: Provided that the lessee, or if there be more than one lessee, each lessee who shall work as aforesaid, shall count as and be deemed for the purposes of these presents to be a workman or miner employed as aforesaid.

4. And shall and will during the said term effectually drain the said mine, and pump all water likely to cause injury thereto, or which would prevent or interfere with the working thereof; and if the said mine shall be affected, or be liable to be affected, by the same flow or body of water as any other mine or mines contiguous thereto, shall and will, if and whenever requested so to do, contribute with the lessee or lessees or owner or owners of such other mines, a reasonable proportion of the machinery and labour necessary to free and keep such mine or mines free from water to a workable extent; or if the said mine shall be kept free from water to a workable extent either wholly or partially by means of the machinery and labour of a contiguous mine or mines, or by reason of any works constructed or money expended by the lessee or lessees, owner or owners, of such contiguous mine or mines,—then shall and will pay to such lessee or lessees, owner or owners, as aforesaid, a reasonable proportion of the cost of such machinery, labour, or works, or a reasonable proportion of the money so expended; and the Secretary for Mines for the time being may, if and whenever he shall think fit, depute some efficient person who shall have access to and inspection of all such mines, to determine when the said mine is so freed or kept wholly or partially free from water, and what are the reasonable proportions of such expenses aforesaid, and to whom and when the same are to be paid,—such decision to be final and conclusive on all parties.

5. And shall and will make such provision for the disposal of the detritus, dirt, waste, or refuse of the said mine that the same shall not be an inconvenience, nuisance, or obstruction to any roadway, river, creek, or private or Crown lands, or shall not in any manner occasion any public or private damage or inconvenience.

6. And shall and will erect, and keep erected, during the said term, a post, painted white, at each angle of the said land, and at such points along the boundary-lines as shall be necessary, so as plainly and accurately to define the boundary-lines and angles of the said land; and each such post shall be fixed firmly in the ground, and shall project above the surface thereof not less than three feet.

7. And shall and will, as often as required so to do during the term, make and deliver to the Secretary for Mines for the time being, or any officer appointed or instructed to collect, obtain, or receive the same, all such true and proper plans and sections, returns, and statistics of the workings and operations of the said mine, made up to the last day of the preceding month (the truth and accuracy of which shall be verified by the statutory declaration of the lessee for the time being, or the manager or other officer having the charge, control, and direction of the works of the said mine), as the Secretary for Mines shall from time to time direct. And shall and will, whenever required by the Secretary for Mines so to do, deliver to any officer appointed or instructed as aforesaid samples of the minerals, metals, and ores, or any of them, found in or upon such mine and land.

8. And shall and will during the said term make proper and reasonable compensation to the occupier or occupiers, lessee or lessees from the Crown, of any adjoining land in respect of any damage which may be sustained by him or them by reason of the working of the said mine, or the carrying on of the works thereof or connected therewith, such compensation to be determined by the Secretary for Mines, or by some person authorized by him so to do.

9. And shall and will permit any mining surveyor, or other person duly authorized in that behalf, with all proper or necessary assistants, at all reasonable times, during the said term, quietly to enter into and upon the said land, mine, and premises, to survey and examine the state and condition thereof, and for the purposes aforesaid, to descend all pits and shafts, and to enter into and use all adits, levels, galleries, drives, and excavations, and to use all roads, ways, engines, ropes, machinery, gear, appliances, materials, labour, and other things in or on the said land and mine which shall be by him deemed necessary, without making any compensation for the same, so nevertheless that in so doing no unnecessary interference is caused with the carrying on of the said mining works.

10. And further, shall and will at all times during the said term keep and preserve the said mine and premises from all avoidable injury or damage, and also the levels, drifts, shafts, watercourses, roads, ways, works, erections, and fixtures therein and thereon in good repair and condition, except such of the matters and things last aforesaid as shall from time to time be considered by a mining surveyor or other proper officer authorized by the Secretary for Mines to inspect and report upon such matters and things to be unnecessary for the proper working of the said mine or any contiguous mine, and in such state and condition shall and will at the end or sooner determination of the said term deliver peaceable possession thereof, and of all and singular the premises hereby demised to Her Majesty, her heirs and successor, or to the Warden or other officer authorized to receive possession thereof. Nevertheless the Secretary for Mines may, if he think fit, permit the lessees, their executors, administrators, and transferees, within six months after possession shall have been received as aforesaid, to enter upon the said land, and to remove therefrom such machinery, plant, and apparatus as shall have been erected and fixed upon such land, and such earth, rock, ore, mineral, or metal as shall have been won from and raised to the surface of such mine.

11. And shall not nor will use or occupy, or permit to be used or occupied, the said land, or any part thereof, for other than mining purposes, or for pasturage, or as sites for dwellings, or garden ground for the persons employed in, on, or about the said mine.

12. And shall not nor will mine in or upon the said mine, land, and premises, for any mineral, metal, or ore other than tin, without the express sanction of the Secretary for Mines.

13. And shall not nor will transfer, underlet, or part with possession of the said land, mine, and premises, or any part thereof, or mortgage, charge, or encumber the same, without the license first had and obtained of the Secretary for Mines for the time being: Provided always that no such license shall be necessary in cases where, by operation of law or otherwise, a sale of the said land, mine, and premises, or any part or parts thereof, is made by any person or persons entitled to sell the same for the benefit of the creditors or a creditor of the lessees or their transferees, or in cases where the lessees or their transferees desire to let the said mine and premises, or any part thereof, to be worked on tribute.

14. And shall not nor will close up or obstruct any adit or adits to or from any contiguous mine or mines whereby fresh air is admitted or ventilation promoted.

15. And shall not nor will plead acceptance of rent by or on behalf of Her Majesty as a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of the covenants herein contained, or of the right of the Governor, with the advice of the Executive Council, to declare these presents void for breach of any such covenant: Provided always and it is hereby agreed and declared in manner following:—

16. That it shall be lawful for Her Majesty, her heirs, successors, and assigns, to make and use in, on, or under the said land, any levels, drifts, leads, shafts, watercourses, adits, roads, ways, and passages for freeing and keeping free any other lands or mines from water, or for conveying water to any other lands or mines for mining purposes, or for supplying any other mines with fresh air, or for effectually working any other mines, or for any public purpose whatsoever, causing as little damage, obstruction, or interference as possible to or with the said mine and the works thereof. And if, at any time during the term hereby created, any part or parts of the land hereby demised, or any part or parts of the surface thereof, shall be required for the purpose of any township, village, railway, road, canal, watercourse, reservoir, or for any other public purpose, it shall be lawful for the Governor for the time being, with the advice of the Executive Council, on giving three months' notice of his intention so to do, to cause to be set out the part or parts of the said land, or of the surface thereof, which shall be so required; and as soon as the same shall be so set out, such part or parts of the said land, or of the surface thereof, shall cease to be included in the land hereby demised, and the lessees, their executors, administrators, or transferees shall not be entitled to any abatement of rent, or any compensation whatever in respect thereof.

17. And if the lessees, their executors, administrators, or transferees shall prove to the satisfaction of the Secretary for Mines for the time being that the said mine is unworkable from any cause whatsoever, or that the lessees, their executors, administrators, or transferees is or are unable, by reason of sickness or other sufficient cause, to work in such land or mine, or that the supply of water is insufficient to allow the working of the said land, mine, and premises to be profitably carried on, the said Secretary for Mines may grant permission to suspend work therein or thereon, for any period not exceeding six months, without the lessees, their executors, administrators, or transferees incurring in respect thereto any forfeiture or penalty for breach of any covenant herein contained.

18. And, lastly, that if the lessees, their executors, administrators, or transferees shall at any time during the said term fail to use such land *bona fide* for the purpose for which it has been demised, or if and whenever the said rent shall be in arrear for thirty days after the time appointed for payment thereof, whether the same shall have been legally demanded or not, or if and whenever there shall be a breach of or non-compliance with the covenants and provisoes herein contained by the lessees, their executors, administrators, or transferees, and the lessees, their executors, administrators, or transferees shall not have obtained from the Secretary for Mines for the time being permission to suspend work as aforesaid, in case the breach shall have been for non-compliance with the covenants for the employment of workmen or miners, or for the working of the mine, the Governor, with the advice of the Executive Council, who alone and finally shall judge and determine the matter upon the evidence or reports submitted by the Secretary for Mines for the time being, may declare these presents void; and upon publication in the *Government Gazette* of notice of such declaration, all the right, title, and interest of the lessees, their executors, administrators, and transferees under these presents shall cease and determine both at law and in equity; and the production of a copy of the *Government Gazette* containing a notice, purporting to be signed by the Secretary for Mines, declaring the lease void shall be conclusive evidence in all Courts whatsoever in the Colony of New South Wales of a breach of or non-compliance with the covenants and provisoes herein contained sufficient to authorize and sustain such declaration having been lawfully made, and that the interest created hereunder has been lawfully determined; and thereupon it shall be lawful for Her Majesty, her heirs and successors, or her or their agents or officers, or for any bailiff or other person duly authorized thereto, or for any holder of a mineral license, who has the permission of the Secretary for Mines for the time being, without any previous demand whatsoever, to enter forthwith into and upon the said land and premises hereby granted, and the same to repossess and enjoy as fully and effectually to all intents and purposes as if these premises had not been made, and the said lessees, their executors, administrators, and transferees, to expel and remove, without any legal process, and as effectually as the Sheriff might do in case judgment in ejectment had been obtained and a writ of *habere facias possessionem* had been issued on such judgment; and in case of such entry and any legal proceeding taken in respect thereof, the defendant or defendants in any such proceeding may plead leave and license in bar thereof; and these presents shall be conclusive evidence of such leave and license by the lessees, their executors, administrators, and transferees, or other the person or persons, plaintiff or plaintiffs in such proceedings, for such entry or other matters complained of in such proceedings.

In witness whereof, His Excellency the Right Honorable Charles Robert, Baron Carrington, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, hath, on behalf of Her Majesty the Queen, caused the Seal of the said Colony to be affixed to this grant, and also set his hand, at Government House, Sydney, in the said Colony, the day and year first above written, and the lessees have also set their hands and seals, the twelfth day of November, 1883.

AUGUSTUS LOFTUS.
J. P. ABBOTT.

Memos.

Department of Mines—New England Mining District.

APPLICATION Nos. 615, 655, Vegetable Creek, 844, Emmaville, for mineral leases, submitted herewith for the consideration of the Honorable the Minister for Mines.

The plans and descriptions have been checked.

No objections appear to have been made.

The number of men proposed to be employed appears reasonable.

The time for commencing work appears to be reasonable.

Applications Nos. 615, 655, Vegetable Creek, 844, Emmaville, New England Mining District, approved of.

Minute of the Executive Council, 18/10/83.

J. P. ABBOTT.

Application.

Application No. 1,476, at Emmaville Reserve, for a Mineral Lease.

1. By whom application was received? The Warden's Clerk.
2. At what place? Emmaville.
3. Date and hour when received? 19th July, 1887, 3·30 p.m.
4. Receipt for first year's rent? Date—19th July, 1887.

12. Is the time proposed for commencing work reasonable? Yes.
13. Is the number of men proposed to be employed reasonable? Yes.

G. MARTIN,
Warden.

Applicant has complied with conditions as to time of lodging application.

Notice of Application and Deposit.

Mineral Lease Regulations—Schedule 6.

Sir,

Emmaville, 19 July, 1887.

I have the honor to inform you that I have this day deposited with the Warden's Clerk at Emmaville the sum of £5, being the first year's rent in advance of 40 acres of land at county Gough, parish Highland Home, portions M.L. 173 and M.L. 174, for the purpose of mining for tin. The number of my application is 1,476.

I have, &c.,

The Under Secretary for Mines, Sydney.

DAVID BAILEY.

Form of Application.

Mineral Lease Regulations—Schedule 2.

To the Honorable the Secretary for Mines, Sydney,—

Emmaville, 19 July, 1887.

Sir,

I hereby make application for a mineral lease of that piece or parcel of land situated county Gough, parish Highland Home, portions M.L. 173 and M.L. 174, containing 40 acres, of which I took possession on the 18th day of July, for the purpose of mining thereon and therein for tin, for a period of twenty years, by posting notices and cutting L trenches at each angle thereof. The datum point is at the south-east corner of portion 173. I do not require any of the surface.

Notice of my having made this application will be given in accordance with the regulations in that behalf. There was no person in occupation of the land. I also hand herewith the sum of £5, being the first year's rent in advance of the said land.

I hereby acknowledge that this application is made upon the distinct understanding and condition that if I shall abandon or fail to proceed with it, or if it is refused, the Secretary for Mines for the time being may deduct from the sum of £5 deposited as aforesaid any cost to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be

granted

granted, I shall and will commence mining operations upon or in connection with the demised land within one month from and after the granting thereof, and shall and will employ upon such land not less than four men during the first three years of the term thereby created, and not less than six men during the remainder of such term. And shall and will at any time when called upon in terms of the regulations relating to mineral leases to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days, after being so called upon, I shall and will forfeit the said sum of £5, and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

I have, &c.,
DAVID BAILEY,
Emmaville.

This application was received by me this 19th day of July, 1887, at the hour of 3·30 o'clock in the afternoon, and is numbered 1,476.

JOHN M. SHEAHAN,
Warden's Clerk.

Questions to be answered by Applicants to Lease.

When receiving an application to lease land for mining purposes, the Warden, Warden's Clerk, or an agent, as the case may be, shall require the applicant or applicants, or his or their agent, to answer the following questions, and shall take down such answers in writing. The statement, when complete, to be read over to and signed by the person furnishing the answers :—

3. What was the date and hour of the day when you took possession of the land referred to in application No. 1,476? 18th July, 1887.
4. Did you take possession by erecting posts and cutting trenches at each angle of the land? Yes.
5. What was the diameter of the posts? Three inches.
6. How high did they project above the surface when fixed in the ground? Three feet.
7. What was the length of each arm of each trench—and what was the depth of each trench? Six feet long, 9 inches deep.
9. At which angle of the land is the datum post fixed? South-east corner of portion 173.
10. Did you affix a board or metal plate to the datum post? Metal plate with schedule "A" attached.
11. What was written or painted on each board or plate? Mineral lease application, by David Bailey.
12. Where did you post the notices, schedule 1? Warden's Office, Emmaville, and Post Office, Torrington.
13. When did you post such notices? 19th July, 1887.

I, David Bailey, declare that the foregoing questions have been answered by me truthfully in every particular, and the answers thereto have been read over to me and are correctly taken down in writing.

DAVID BAILEY.

Witness to signature, John M. Sheahan.

G. M. L. Matheson, Esq., M.P., to The Secretary for Mines.

Sir, Sydney, 10 September, 1887.

One of my constituents, Mr. D. Bailey, writes asking me to request that you will push on the issue of the leases for two blocks he applied for at Emmaville. He refers to them as mineral leases 173, 174, but I rather think these are the portion numbers, and that parish is Highland Home, county Gough. They may be known in your Department as M. 1,317, 1,318.

I would like to be informed they have been approved of, and that the leases will be ready shortly.

I am, &c.,
GEORGE M. L. MATHESON.

Memo.

Department of Mines—New England Mining District.

Application No. (Emmaville) 1,476, for a mineral lease, submitted herewith for the consideration of the Honorable the Minister for Mines.

The plans and description have been checked.

No objections appear to have been made.

The number of men proposed to be employed appears reasonable.

The time for commencing work appears to be reasonable. Application No. (Emmaville) 1,476, New England Mining District, approved of.

Minute of the Executive Council.

F.A.

Indenture.

Application No. 3,237.

This indenture, made the eighth day of November, in the year of our Lord one thousand eight hundred and eighty-seven, between Her Most Gracious Majesty Queen Victoria, of the one part, and David Bailey, of Emmaville, in the Colony of New South Wales (hereinafter called the lessee), of the other part, witnesseth :—That in consideration of the sum of ten pounds paid by the said lessee on the nineteenth day of July, 1887, and of the rents hereinafter reserved, and of the covenants and provisoes hereinafter contained, Her Majesty doth by these presents grant and demise unto the lessee, his executors, administrators, and transferees, all that piece or parcel of land containing by admeasurement forty acres, and more particularly described and delineated in the schedule hereto, or in the plan hereunto annexed, and numbered M.L. 173, M.L. 174, and all those mines, veins, seams, or deposits of [the mineral or metal proposed to be worked] in, on, and under the said land (hereinafter called the said mine), together with all

all and singular the shafts, levels, drifts, works, ways, fixtures, erections, liberties, easements, advantages, and appurtenances which are now or at any time during the term hereby granted may be held, occupied, or enjoyed therewith, for the purpose of mining upon and under the said land for tin, and also with full power for the said lessee, his executors, administrators, and transferees, and his and their agents and workmen (including contractors, tributors, and so forth), to dig, sink, drive, make, and use excavations, pits, shafts, levels, tunnels, watercourses, and other works necessary for winning and raising the tin in, on, or under the said land, and to take and appropriate the same during the term hereby granted, and to make and construct on the said land, races, drains, dams, reservoirs, roads, and tramways, and also to erect on the said land all buildings, engines, furnaces, pumps, machinery, and appliances necessary for the purpose of winning and obtaining the tin in, on, or under the said land, and for effectually carrying on the works of the said mine, and also to erect on the said land such offices, cottages, and dwelling-houses, for the use of the agents, workmen, and persons employed in the said mine and works, as the said lessee, his executors, administrators, and transferees shall think proper: To hold the said land, mine, and premises, with the appurtenances (subject nevertheless to the reservation or exception of that portion of the surface of the said land shown on the plan aforesaid, bounded by the lines coloured red, and to such rights and interests as may be lawfully subsisting therein at the date of these presents), unto the said lessee, his executors, administrators, and transferees, from the date hereof, for the term of nineteen years next ensuing, for the purpose of mining therein or thereon, for working or winning the said tin, and for no other purpose,—yielding and paying therefor unto Her Majesty, her heirs and successors, yearly and every year during the said term, the yearly rent of ten pounds in advance, the first year's rent having been paid as aforesaid on the nineteenth day of July, 1887, the next payment being the rent of the said land for one month and twenty-three days, at the rate of fivepence per acre per month, from the eighth day of November to the thirty-first day of December, 1888, shall be made to the Colonial Treasurer in Sydney on or before the thirtieth day of November, 1887; and thereafter, on or before the thirtieth day of November in each and every year, the yearly rent aforesaid (being the rent of the land hereby demised for the year commencing the first day of January next after each such payment) shall be paid to the Colonial Treasurer aforesaid, clear of all rates, taxes, and assessments to which the said land, mine, and premises are now, or at any time during the said term may be, subject or liable: Provided always, and it is hereby agreed that if the said yearly rent shall be in arrear for thirty days after the same shall have become payable, whether such rent shall have been legally demanded or not, any officer appointed or authorized thereto by the Secretary for Mines may, by himself or his agent, enter upon the said land, and seize and distrain all minerals, metals, and ores actually got and raised from the said mine, and all machinery, apparatus, tools, waggons, carts, carriages, engines, plant, and all other goods, chattels, and effects whatsoever in, upon, and about the said land and premises, and every distress thus made may take away, sell, and dispose of as in cases of distress for rent reserved in common leases; and out of the moneys arising thereby retain so much as shall be sufficient to satisfy the said arrears, and which shall at the time of such sale be unpaid, and all expenses incurred by him or them in or in respect of such seizure, distraint, removal, and sale; and if there be any surplus such officer shall pay the same to the said lessee, his executors, administrators, or transferees; and the acceptance or receipt of rent by or on behalf of Her Majesty, after breach of any covenant hereinafter contained, shall not be or be deemed a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of such covenant. And if the said lessee, his executors, administrators, or transferees, shall mine for or win from the said land, mine, and premises, any gold, or any earth, rock, stone, quartz, clay, sand, gravel, or soil containing gold, or any mineral or metal with which gold is associated or combined, without the express sanction first had and obtained of the Secretary for Mines for the time being, the Governor, with the advice of the Executive Council, may declare these presents void, and thereupon all the right, title, and interest of the lessee, his executors, administrators, and transferees under these presents shall cease and determine both at law and in equity. And the said lessee doth hereby, for himself, his heirs, executors, administrators, and transferees, covenant with Her Majesty, her heirs and successors, in manner following, that is to say:—

1. That the said lessee, his executors, administrators, and transferees, shall and will during the said term pay unto Her Majesty, her heirs and successors, the rent hereby reserved, at the times and places hereinbefore appointed for payment thereof, clear of all deductions.

2. And shall and will upon and during all lawful working days, except when prevented by inevitable accident or during the execution of repairs, make, construct, and work the said land, mine, and premises in the best and most effectual manner, and to the best advantage, without interruption; and shall and will diligently explore and search for tin in, on, and under the said land, mine, and premises.

3. And shall and will on and from the seventh day of December next employ in the construction of the works, or in mining operations on or under the said land, during the first three years of the said term, and during the usual hours of labour, four able and competent workmen and miners at the least; and during the remainder of the said term, and during the usual hours of labour, shall and will employ as aforesaid not less than six such workmen and miners, unless prevented by inevitable accident, or during the execution of repairs, so that within the first three years of the term hereby created there shall be expended upon the said land, mine, and premises, such a sum of money as shall be equal to five pounds sterling upon each and every acre hereby demised: Provided that the lessee, or if there be more than one lessee, each lessee who shall work as aforesaid, shall count as and be deemed for the purposes of these presents to be a workman or miner employed as aforesaid.

4. And shall and will during the said term effectually drain the said mine, and pump all water likely to cause injury thereto, or which would prevent or interfere with the working thereof; and if the said mine shall be affected, or be liable to be affected, by the same flow or body of water as any other mine or mines contiguous thereto, shall and will, if and whenever requested so to do, contribute with the lessee or lessees or owner or owners of such other mines a reasonable proportion of the machinery and labour necessary to free and keep such mine or mines free from water to a workable extent; or if the said mine shall be kept free from water to a workable extent either wholly or partially by means of the machinery and labour of a contiguous mine or mines, or by reason of any works constructed or money expended by the lessee or lessees, owner or owners, of such contiguous mine or mines,—then shall and will pay to such lessee or lessees, owner or owners, as aforesaid, a reasonable proportion of the cost of such machinery, labour, or works, or a reasonable proportion of the money so expended; and the Secretary

for

for Mines for the time being may, if and whenever he shall think fit, depute some efficient person who shall have access to and inspection of all such mines, to determine when the said mine is so freed or kept wholly or partially free from water, and what are the reasonable proportions of such expenses aforesaid, and to whom and when the same are to be paid—such decision to be final and conclusive on all parties.

5. And shall and will make such provision for the disposal of the detritus, dirt, waste, or refuse of the said mine that the same shall not be an inconvenience, nuisance, or obstruction to any roadway, river, creek, or private or Crown lands, or shall not in any manner occasion any public or private damage or inconvenience.

6. And shall and will erect, and keep erected, during the said term, a post, painted white, at each angle of the said land, and at such points along the boundary-lines as shall be necessary, so as plainly and accurately to define the boundary lines and angles of the said land; and each such post shall be fixed firmly in the ground, and shall project above the surface thereof not less than three feet.

7. And shall and will, as often as required so to do during the term, make and deliver to the Secretary for Mines for the time being, or any officer appointed or instructed to collect, obtain, or receive the same, all such true and proper plans and sections, returns, and statistics of the workings and operations of the said mine, made up to the last day of the preceding month (the truth and accuracy of which shall be verified by the statutory declaration of the lessee for the time being, or the manager or other officer having the charge, control, and direction of the works of the said mine), as the Secretary for Mines shall from time to time direct. And shall and will, whenever required by the Secretary for Mines so to do, deliver to any officer appointed or instructed as aforesaid samples of the minerals, metals, and ores, or any of them, found in or upon such mine and land.

8. And shall and will during the said term make proper and reasonable compensation to the occupier or occupiers, lessee or lessees from the Crown, of any adjoining land in respect of any damage which may be sustained by him or them, by reason of the working of the said mine, or the carrying on of the works thereof or connected therewith, such compensation to be determined by the Secretary for Mines, or by some person authorized by him so to do.

9. And shall and will permit any mining surveyor, or other person duly authorized in that behalf, with all proper or necessary assistants, at all reasonable times, during the said term, quietly to enter into and upon the said land, mine, and premises, to survey and examine the state and condition thereof, and, for the purposes aforesaid, to descend all pits and shafts, and to enter into and use all adits, levels, galleries, drives, and excavations, and to use all roads, ways, engines, ropes, machinery, gear, appliances, materials, labour, and other things in or on the said land and mine, which shall be by him deemed necessary, without making any compensation for the same, so nevertheless that in so doing no unnecessary interference is caused with the carrying on of the said mining works.

10. And further, shall and will at all times during the said term keep and preserve the said mine and premises from all avoidable injury or damage, and also the levels, drifts, shafts, watercourses, roads, ways, works, erections, and fixtures therein and thereon in good repair and condition, except such of the matters and things last aforesaid as shall from time to time be considered by a mining surveyor or other proper officer authorized by the Secretary for Mines to inspect and report upon such matters and things to be unnecessary for the proper working of the said mine or any contiguous mine, and in such state and condition shall and will at the end or sooner determination of the said term deliver peaceable possession thereof, and of all and singular the premises hereby demised to Her Majesty, her heirs and successors, or to the Warden or other officer authorized to receive possession thereof. Nevertheless the Secretary for Mines may, if he think fit, permit the lessee, his executors, administrators, and transferees, within six months after possession shall have been received as aforesaid, to enter upon the said land, and to remove therefrom such machinery, plant, and apparatus as shall have been erected and fixed upon such land, and such earth, rock, ore, mineral, or metal as shall have been won from and raised to the surface of such mine.

11. And shall not nor will use or occupy, or permit to be used or occupied, the said land, or any part thereof, for other than mining purposes, or for pasturage, or as sites for dwellings, or garden ground for the persons employed in, on, or about the said mine.

12. And shall not nor will mine in or upon the said mine, land, and premises, for any mineral, metal, or ore other than tin without the express sanction of the Secretary for Mines.

13. And shall not nor will transfer, underlet, or part with possession of the said land, mine, and premises, or any part thereof, or mortgage, charge, or encumber the same, without the license first had and obtained of the Secretary for Mines for the time being: Provided always that no such license shall be necessary in cases where, by operation of law or otherwise, a sale of the said land, mine, and premises, or any part or parts thereof, is made by any person or persons entitled to sell the same for the benefit of the creditors or a creditor of the lessee or his transferees, or in cases where the lessee or his transferees desire to let the said mine and premises, or any part thereof, to be worked on tribute.

14. And shall not nor will close up or obstruct any adit or adits to or from any contiguous mine or mines, whereby fresh air is admitted or ventilation promoted.

15. And shall not nor will plead acceptance of rent by or on behalf of Her Majesty as a waiver of the right of Her Majesty, or of the Secretary for Mines, or other officer on behalf of Her Majesty, to enforce observance of the covenants herein contained, or of the right of the Governor, with the advice of the Executive Council, to declare these presents void for breach of any such covenant: Provided always and it is hereby agreed and declared in manner following:—

16. That it shall be lawful for Her Majesty, her heirs, successors, and assigns, to make and use in, on, or under the said land, any levels, drifts, leads, shafts, watercourses, adits, roads, ways, and passages for freeing and keeping free any other lands or mines from water, or for conveying water to any other lands or mines for mining purposes, or for supplying any other mines with fresh air, or for effectually working any other mines, or for any public purpose whatsoever, causing as little damage, obstruction, or interference as possible to or with the said mine and the works thereof. And if, at any time during the term hereby created, any part or parts of the land hereby demised, or any part or parts of the surface thereof, shall be required for the purpose of any township, village, railway, road, canal, watercourse, reservoir, or for any other public purpose, it shall be lawful for the Governor for the time being, with the advice of the Executive Council, on giving three months' notice of his intention so to do, to cause to be set out the part or parts of the said land, or of the surface thereof, which shall be so required; and as soon as the same shall be so set out, such part or parts of the said land, or of the surface thereof, shall cease

cease to be included in the land hereby demised, and the lessee, his executors, administrators, or transferees shall not be entitled to any abatement of rent, or any compensation whatever in respect thereof.

17. And if the lessee, his executors, administrators, or transferees shall prove to the satisfaction of the Secretary for Mines for the time being that the said mine is unworkable from any cause whatsoever, or that the lessee, his executors, administrators, or transferees is or are unable, by reason of sickness or other sufficient cause, to work in such land or mine, or that the supply of water is insufficient to allow the working of the said land, mine, and premises to be profitably carried on, the said Secretary for Mines may grant permission to suspend work therein or thereon, for any period not exceeding six months, without the lessee, his executors, administrators, or transferees incurring in respect thereto any forfeiture or penalty for breach of any covenant herein contained.

18. And, lastly, that if the lessee, his executors, administrators, or transferees shall at any time during the said term fail to use such land *bonâ fide* for the purpose for which it has been demised, or if and whenever the said rent shall be in arrear for thirty days after the time appointed for payment thereof, whether the same shall have been legally demanded or not, or if and whenever there shall be a breach of or non-compliance with the covenants and provisoes herein contained by the lessee, his executors, administrators, or transferees, and the lessee, his executors, administrators, or transferees shall not have obtained from the Secretary for Mines for the time being permission to suspend work as aforesaid, in case the breach shall have been for non-compliance with the covenants for the employment of workmen or miners, or for the working of the mine, the Governor, with the advice of the Executive Council, who alone and finally shall judge and determine the matter upon the evidence or reports submitted by the Secretary for Mines for the time being may declare these presents void; and upon publication in the *Government Gazette* of notice of such declaration, all the right, title, and interest of the lessee, his executors, administrators, and transferees under these presents shall cease and determine both at law and in equity; and the production of a copy of the *Government Gazette* containing a notice, purporting to be signed by the Secretary for Mines, declaring the lease void, shall be conclusive evidence in all Courts whatsoever in the Colony of New South Wales, of a breach of or non-compliance with the covenants and provisoes herein contained sufficient to authorize and sustain such declaration having been lawfully made, and that the interest created hereunder has been lawfully determined; and thereupon it shall be lawful for Her Majesty, her heirs and successors, or her or their agents or officers, or for any bailiff or other person duly authorized thereto, or for any holder of a mineral license, who has the permission of the Secretary for Mines for the time being, without any previous demand whatsoever, to enter forthwith into and upon the said land and premises hereby granted, and the same to repossess and enjoy as fully and effectually to all intents and purposes as if these premises had not been made, and the said lessee, his executors, administrators, and transferees, to expel and remove, without any legal process, and as effectually as the Sheriff might do in case judgment in ejectment had been obtained and a writ of *habere facias possessionem* had been issued on such judgment; and in case of such entry and any legal proceeding taken in respect thereof, the defendant or defendants in any such proceeding may plead leave and license in bar thereof; and these presents shall be conclusive evidence of such leave and license by the lessee, his executors, administrators, and transferees, or other the person or persons, plaintiff or plaintiffs in such proceedings, for such entry or other matters complained of in such proceedings.

In witness whereof, His Excellency the Right Honorable Charles Robert, Baron Carrington, a Member of Her Majesty's Most Honorable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, hath, on behalf of Her Majesty the Queen, caused the Seal of the said Colony to be affixed to this grant, and also set his hand, at Government House, Sydney, in the said Colony, the day and year first above written, and the lessee has also set his hand and seal the seventeenth day of November, 1887.

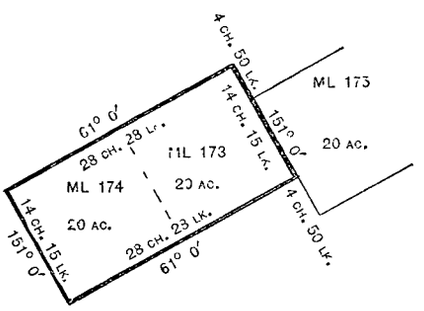
CARRINGTON.

Signed, sealed, and delivered by the within-named David Bailey, in the presence of,— JOHN M. SHEAHAN, W.C.

FRANCIS ABIGAIL.
DAVID BAILEY.

Plan.

Parish of Highland Home, county of Gough. Within reserve 837 B, notified 3rd November, 1884.



Scale, 20 chains to an inch.

Registered in the Department of Mines, at Sydney, this second day of December, A.D. 1887, at the hour of four o'clock in the afternoon, and numbered in the Register 3,237.

EDWARD FARR,
Registrar.

Messrs.

Messrs. Brett and Coghlan to The Under Secretary for Mines.

Sir, 19, Macquarie-place, Sydney, 10 December, 1887.

We understand that a Mr. David Bailey has applied for a mineral lease of 40 acres, in the parish of Highland Home, county Gough, viz., mineral leases 173 and 174, and said application embraces the mineral conditional purchase Tenterfield, C.P. 84–60, E. Prosser.

Under these circumstances we beg respectfully to protest against the granting of the application in question.

We have, &c.,
BRETT AND COGHLAN,
Agents for the Selector.

The portions which have been leased do not embrace a M.C.P. Two other portions bearing the same numbers, without the letters M.L., are embraced in M.C.P. 84–60, J. Graney.—E.F.P., 13/12/87.

Inform.—H.W., 14/12/87.

The Under Secretary for Mines to Messrs. Brett and Coghlan.

Gentlemen, Department of Mines, Sydney, 15 December, 1887.

Referring to your letter of the 10th instant, in which you protest against the application of Mr. David Bailey for a mineral lease of 40 acres of land in the parish of Highland Home being granted, as you understand the land so applied for embraces the mineral conditional purchase No. 84–60, Tenterfield, by E. Prosser, I have the honor to inform you that the portions of land which have been leased do not embrace a conditional purchase. Two other portions bearing the same numbers, without the letters M.L., are embraced in the purchase before mentioned.

I have, &c.,
HARRIE WOOD,
Under Secretary.

Transfer of Mineral Lease.

Mineral Lease Regulations—Schedule 13.

I, DAVID BAILEY, of Emmaville, being registered as the lessee of all those mineral lots demised by a certain mineral lease granted by Her Majesty the Queen to me, and dated the 8th day of November, 1887, and numbered in the Register 3,237, in consideration of the sum of £200 paid to me by the transferee, the receipt of which sum I hereby acknowledge, I do hereby transfer to Kennedy Hill, of Emmaville, all my right, title, and interest in and to the mineral lots demised as aforesaid. And I do hereby accept transfer of the right, title, and interest of the said Kennedy Hill in and to the demised land aforesaid, subject to the provisions of the Mining Act, 1874, and the regulations made thereunder; and I hereby agree to be bound by all and singular the terms, conditions, covenants, provisoes, restrictions, and reservations contained in the said lease.

In witness whereof we have hereunto subscribed our respective names, this 24th day of January, 1888,—

David Bailey, transferror; Kennedy Hill, transferree.

I, Francis Abigail, hereby sanction and authorize the transfer of the interest of David Bailey in the abovenamed lease to Kennedy Hill.

Dated at Sydney, this 10th day of March, 1888.

FRANCIS ABIGAIL.

I have this 10th day of March, 1888, at the hour of 11 o'clock in the forenoon, registered the abovenamed transferee as the holder of the mineral lease No. 3,237.

EDWARD FARR,
Registrar.

Messrs. Brett and Coghlan to The Under Secretary for Mines.

Sir, 19, Macquarie-place, Sydney, 13 April, 1888.

We have the honor to ask for a sketch showing the position of the leases noted below; also copies of descriptions of same. As this is a matter of urgency, may we ask to have our request specially dealt with.

We have, &c.,
BRETT AND COGHLAN,
Agents for E. PROSSER.

Tenterfield, M.Ls. 1,815, 1,816, 1,817; parish Highland Home, county Gough. If possible, supply tracing on usual terms.—H.W., 16/4/88. Lithograph herewith showing portions referred to tinted blue.—W.S.C., 19/4/88.

Mr. K. Hill to The Under Secretary for Mines.

Sir, Emmaville, 8 May, 1889.

On account of pending litigation regarding the issue of a lease to me by your Department for portions mineral lease 173 and mineral lease 174, parish Highland Home, county Gough, I have the honor to request that you will be good enough to grant a suspension of labour on those blocks until the matter of the validity of title has been settled.

I have, &c.,
KENNEDY HILL.

Under the circumstances permission may be granted to suspend work for two months.—H.W., 8/5/89. Submitted. Approved.—S.S., 8/5/89.

The

The Under Secretary for Mines to Mr. K. Hill.

Sir, Department of Mines, Sydney, 13 May, 1889.

Referring to your letter of the 8th instant, applying for suspension of labour on portions 173 and 174, in the parish of Highland Home, county of Gough, I have the honor to inform you that the Secretary for Mines has been pleased to grant suspension for a period of two months.

I have, &c.,
GERARD E. HERRING
(For the Under Secretary).

The Under Secretary for Mines to Mr. Warden Martin.

Sir, Department of Mines, Sydney, 14 May, 1889.

I have the honor to inform you that the Secretary for Mines has been pleased to grant suspension of the labour conditions of mineral lease 3,237, portions 173 and 174, in the parish of Highland Home, county of Gough, to Kennedy Hill, for a period of two months.

I have, &c.,
HARRIE WOOD,
Under Secretary.

MINING.

No. 1.

Application by Alfred James Hack.

Crown Lands Act of 1884—(Part III, section 47).

[C. P. No. 91 of 1887.]

Application for Conditional Purchase.

Eastern Division, Land District of Armidale—Alfred James Hack; area, 40 acres.

Armidale, 21 July, 1887.

I HEREBY apply for 40 acres of Crown lands, as conditional purchase, 47th clause, non-resident, and I tender the sum of £8, being a deposit of 4s. per acre thereon. A description of the land applied for is on the back hereof, and the prescribed declaration is attached hereto. The land applied for is not improved.

The Land Agent at Armidale.

Received, subject to land being available, and applicant duly cautioned.

L. S. GORDON,
Crown Lands Agent.

21 July, 1887.

Description.

Eastern Division county of Sandon, parish of Metz or Cooney, , 40 acres: Commencing at the south-east corner of 113, and bounded thence by lines west; thence northerly by falls; thence east to the creek, and by it southerly to point of commencement, being measured portion No. 113 (voided mineral conditional purchase of J. Moore).

A. J. HACK,
21 July, 1887.

Applicant's name in full is Alfred James Hack.

L. S. GORDON, C.L.A.

This is the application marked A referred to in the annexed declaration of Alfred James Hack, made before me, at Armidale, this 21st July, 1887,—

LAMBERT S. GORDON,
Commissioner for Affidavits.

This application (together with the deposit of £8) was lodged with me by Alfred James Hack this 21st day of July, 1887, at 56 minutes past 10 of the clock forenoon.

LAMBERT S. GORDON,
Land Agent at Armidale.

No. 2.

Declaration by Alfred James Hack.

Crown Lands Act of 1884—(Part III, sections 24, 26, 42, and 47).

[C. P. No. 91 of 1887.]

Declaration by Applicant for a Conditional Purchase to accompany application.

I, ALFRED JAMES HACK, of Commissioner's Water, farmer, do hereby solemnly declare and affirm that I am the applicant for the conditional purchase, as described in the application hereto annexed and marked A, and that the several answers to the questions in the schedule hereto are true and correct. And I make this solemn declaration as to the several matters aforesaid, according to the law in this behalf made, and subject to the punishment by law provided for any wilfully false statement in any such declaration.

A. J. HACK.

Made before me at Armidale, this 21st day of July, 1887,—

LAMBERT S. GORDON, Commissioner for Affidavits.

SCHEDULE.

The answers to the following questions must be fully and accurately given.

1. What is your name? Alfred James Hack.
2. What is your age? 31.
3. State year and date of birth? 31st July, 1855.
4. Are you married, single, or a widower? Married.
5. Where have you resided for the past two years? Commissioner's Water. And have you during that period borne any name or names other than your present names—and if so, what? No.
6. Have you been in the employment of any person during the last two years—if so, state of whom? No.
7. Do you intend using the land now applied for solely for your own use and benefit? Yes.
8. Have you entered into any agreement, or arrangement, by which any person other than yourself can acquire any interest in the land you apply for? No.
9. Is there any understanding between you and any person in reference to the land applied for that will tend to defeat or evade the provisions of the Crown Lands Act of 1884? No.
10. Are you under any obligation that will prevent you from fulfilling the law in regard to the land you apply for? No.
11. Do you hold any land from the Crown requiring residence at the present time? No.
12. Do you hold any conditional purchases or conditional leases; if so, state the Land District in which they are situated, and the respective dates of taking up the same? No.
13. Do you already hold a conditional purchase, without conditions of residence, under the Crown Lands Act of 1884? No.
14. Have you at any time made any conditional purchase of any kind under the Crown Lands Act of 1884, or any of the repealed Acts? No.

15. If you hold conditional purchases, are they mortgaged or encumbered in any way; and if so, to whom? No.
16. Do you understand the conditions of residence and fencing required by the Crown Lands Act of 1884? Yes.

Give your address and post town. Armidale.

A. J. HACK,
Armidale.

Signature of attesting witness,—LAMBERT S. GORDON,
Commissioner for Affidavits.

No. 3.

The Under Secretary for Mines to The Under Secretary for Lands.

Sir, Department of Mines, Sydney, 15 August, 1887.

I have the honor to ask whether an application has been made by Mr. A. J. Hack for a conditional purchase of 40 acres of land in the parish of Cooney, county of Sandon, portion 113, as said land is said to be auriferous.

I have, &c.,
HARRIE WOOD,
Under Secretary.

Reply in the affirmative, and inform that this letter will be forwarded to the Chairman of the Armidale Board.—W.H.C., 15/8/82. F.H.W. (for the Under Secretary), 15/8/87. Under Secretary for Mines informed.—19/8/87. The Chairman, Local Land Board, Armidale.—F.H.W. (for the Under Secretary), B.C., 19/8/87. Referred to the District Surveyor for report, in connection with A. J. Hack's application for conditional purchase, 87-91, Armidale.—H. T. MAKIN, Clerk-in-charge, 22/8/87.

No. 4.

The Under Secretary for Lands to The Under Secretary for Mines.

Sir, Department of Lands, Sydney, 19 August, 1887.

In reply to your letter of the 15th instant, I have the honor to inform you that an application has been made by Mr. A. J. Hack, for a conditional purchase of the land noted in the margin, C.P. 87-91, Armidale.

Portion No. 113. 40 acres, parish of Cooney, county of Sandon.

I am directed to add that the letter under reply has been forwarded to the Chairman of the Local Land Board at Armidale.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

No. 5.

The Under Secretary for Mines to The Under Secretary for Lands.

Sir, Department of Mines, Sydney, 26 August, 1887.

Referring to conditional purchase application 87-91, at Armidale, by Frederick Hack, for 40 acres of land, portion 113, parish of Cooney, county of Sandon, I am directed by the Secretary for Mines to request that you will be good enough to move the Secretary for Lands to disallow such conditional purchase, as there is reason to believe that the land is auriferous, and a portion of it has been applied for under a gold lease.

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 6.

Mr. District-Surveyor Finley to The Chairman, Land Board, Armidale.

Armidale Land District.

Papers enclosed: C.P. application, 87-91, and diagram; also C.S. 87-28,806.

REPORT of the District Surveyor upon original conditional purchase, under Section 47, No. 87-91 for 40 acres, in the parish of Cooney, county Sandon, applied for by Alfred James Hack.—D.S.O., 87-167.

The measured portion herein applied for is shown by pink tint on the enclosed diagram. As far as can be ascertained in the absence of the plan, it is vacant and available for conditional purchase.

With regard to the enclosed letter from the Under Secretary for Mines, it may be stated that the land is not within a gold-field.

F. G. FINLEY, D.S.,
30/8/87.

Referred to Minister for Lands under 14th section, sub-section 7.—S. BLYTHE, Chairman, 1/9/87.

[*Enclosure.*]

Land District of Armidale.
(Crown Lands Act of 1884, section 47, C.P. No. 91, of 1887.)

EXTRACT from an application for conditional purchase, lodged with the Land Agent on the 21st day of July, 1887, at 56 minutes past 10 of the clock forenoon, by Alfred James Hack, Armidale. Deposit paid, £8.

Description.

Eastern Division, county of Sandon, parish of Metz or Cooney, 40 acres: Commencing at the south-east corner of 113; and bounded thence by lines west; thence northerly by fall; thence east to the creek, and by it southerly to point of commencement, being measured portion No. 113 (void mineral conditional purchase of J. Moore.)

Examined.—H. T. MAKIN. Referred to the District-Surveyor for report.—Land Board Office, Armidale, 23th July, 1887.—SYDNEY BLYTHE, Chairman.

Received subject to land being available, and applicant duly cautioned.—L. S. GORDON, Crown Land Agent, 21/7/87.

No. 7.

No. 7.

Caption to Depositions of Witnesses.

Crown Lands Act of 1884—(Part II, section 14, sub-section 1).

New South Wales, Armidale, } to wit. }

THE examination of Francis George Finley, of Armidale, in the Colony of New South Wales, District Surveyor; Alfred James Hack, of Armidale, selector; Edward Thorne, of Hillgrove, miner; Edward McNamara, of Hillgrove, miner; and Christopher Allingham, of Hillgrove, miner, in the said Colony.

WHEREAS it hath been alleged that certain valuable auriferous deposits exist on the land applied for by Alfred James Hack, as a conditional purchase on 21st July, 1887, No. 87–91, in county of Sandon, parish Metz or Cooney, and it hath been found necessary to investigate the said matter on oath, the depositions of the several witnesses are appended hereto.

THIS witness, being duly sworn, on oath, states:—My name is *Francis George Finley*, District Surveyor, Armidale Land Board District; I know the portion of land described in Alfred James Hack's application, conditional purchase, 87–91, and I furnished the report, dated 30th August, 1887. At the date of application for this land, and also at the date of my report so far as I knew, the land was open to conditional purchase; my attention, however, has since been directed to the *Government Gazette*, of Tuesday, 30th August, wherein I see proclamation of an extension to the Guyra River Gold-field; I have traced this description out on the maps, and I find that the gold-field which is not open to conditional purchase, embraces the land applied for by Alfred James Hack.

F. G. FINLEY.

Sworn at Armidale, this 1st day of September, 1887, before us,— } SYDNEY BLYTHE, J.P., Chairman. C. E. SMITH, P.M.

THIS witness being duly sworn, states:—My name is *Alfred James Hack*; I am the applicant for 40 acres of land under the 47th section, being portion 113, county Sandon, parish Metz, applied for on 21st July, 1887, and on that date this land was not included in any gold-field reserve not open to conditional purchase; I believe since I took up the land there has been a narrow seam of auriferous quartz found on it, but at the time I applied for it I did not know there was gold on it, although it had been prospected, and no gold found on it; I may add that if this conditional purchase is confirmed, I may use it as a business site; there is a number of men working there at the bottom of the falls.

A. J. HACK.

Sworn at Armidale, this 1st day of September, 1887, before us,— } SYDNEY BLYTHE, J.P., Chairman. C. E. SMITH, P.M.

THIS witness, being duly sworn, on oath, states:—My name is *Edward Thorne*; I am a miner, living at Hillgrove; I know portion 113, of 40 acres; I know two boundaries; and this is the land Mr. Hack applied for; there are three distinct reefs running through it, two of which are auriferous; I am certain they contain payable gold; I found the reef the week before I pegged it out; I pegged it out on the 28th July, 1887; I then made application for a lease; I did not know Mr. Hack had applied for it when I pegged it out; I think the application of Thorne and party was on the 8th August, 1887, not the 28th July.

By Mr. Hack: I was not cautioned that if I prospected that land I was prospecting it for somebody else; it is unusual for a miner after finding a reef to allow it to lie for a week before pegging it out, but I was not on wages at the time.

EDWARD THORNE.

Sworn at Armidale, this 1st day of September, 1887, before us,— } SYDNEY BLYTHE, J.P., Chairman. C. E. SMITH, P.M.

THIS witness, being duly sworn, on oath, states:—My name is *Edward McNamara*; I am a miner; I am a partner with Thorne; I know the ground applied for by Mr. Hack; I did not know that he had applied for the 40 acres until such time that we had found payable gold; we found payable gold on the 29th July; Hack, after that, served us with a notice, saying it was his ground, and we still kept possession, and kept on working; there are three gold-bearing reefs, but whether two are payable I do not know, but one of them is; these three gold-bearing reefs are all on the land.

EDWARD McNAMARA.

Sworn at Armidale, this 1st day of September, 1887, before us,— } SYDNEY BLYTHE, J.P., Chairman. C. E. SMITH, P.M.

THIS witness, being duly sworn, on oath states:—My name is *Christopher Allingham*.

By Mr. Hack: I am a miner; in conversation I heard some one say to Thorne, "Mind you are not prospecting for other people;" it was after I saw in the paper that you had selected that portion.

C. ALLINGHAM.

Sworn at Armidale, this 1st day of September, 1887, before us,— } SYDNEY BLYTHE, J.P., Chairman. C. E. SMITH, P.M.

This closed the evidence.—S. BLYTHE, Chairman.

No. 8.

The Chairman, Land Board, Armidale, to The Under Secretary for Lands.

Crown Lands Act of 1884—(Part II, section 14, sub-section 7).

Reference by Local Land Board to Minister.

New South Wales, Armidale, } to wit. }

WHEREAS, on the 1st day of September, 1887, a case, wherein Alfred James Hack lodged an application at the Crown Lands Office, Armidale, on the 21st July, 1887, for a conditional purchase of 40 acres, in county of Sandon, parish of Metz or Cooney, and it being alleged that the said land contains valuable auriferous deposits, and since date of application has been proclaimed within a gold-field reserve (*Vide Gazette* No.

No. 489, page 5744, of 30th August, 1887), and the said matter came on for decision or adjudication before the Local Land Board, at Armidale, and the said Board having taken evidence, do now, instead of adjudicating further or deciding thereon, refer the case to the Honorable the Minister for Lands for decision.

Given under my hand, this 5th day of September, 1887, at Armidale,—

SYDNEY BLYTHE,
Chairman.

Submitted.—F.H.W., 26/9/87. C.O.

From the evidence there can be no doubt that the ground was open to conditional purchase at date of application, and has been since reserved as part of a gold-field. There can also be no doubt that it has been, since it was applied for, proved to be auriferous, but not by the applicant for the conditional purchase. Under this state of facts, I must confirm the conditional purchase. It will be for the miners, if they think fit, to apply to have permission to dig and search for gold, and then, on application, the conditional purchase may be resumed. The conditional purchaser should be informed of his position at time of Board carrying out this decision.—T.G., 12/11/87.

Enter in Precedent Book.—F.H.W., 14/11/87. Mr. Capper and Mr. Wilmot. Entered in Precedent Book.—W.E.T., 19/11/87. Entered.—G.W., 22/11/17. The Chairman, Local Land Board, Armidale.—F.H.W. (for the Under Secretary), B.C., 8/12/87. Confirmed. Applicant and Land Agent informed.

No. 9.

Mr. Warden Smith to The Under Secretary for Lands.

Armidale, C.P. 87-91, 47 sec. 21 July, 1887. A. J. Hack. 40 acres, county Sandon, parish Cooney, portion 113.

Armidale. Gold lease application, No. 1,328, 8 August, 1887, E. Hume. E. McNamara, and others. 10 acres, county Sandon, Baker's Creek, Hillgroove Falls.

Sir,

Warden's Office, Armidale, 22 October, 1887.

I have the honor to request that you will cause to be laid before the Honorable the Minister for Lands, as soon as possible, the papers in the case of A. J. Hack's application for a conditional purchase, particulars whereof are noted in the margin. My reason for making this request is, that an application for a gold-mining lease for 10 acres, by Edward Thorne and party, has been lodged here, which includes a portion of the land applied for by Hack, and until the Minister's confirmation or otherwise of Hack's application is known, I am unable to deal with Thorne and party's gold-lease application, against which Mr. Hack has lodged objection.

I have, &c.,

C. E. SMITH,
Warden.

No. 10.

The Under Secretary for Mines to The Under Secretary for Lands.

Sir,

Department of Mines, Sydney, 29th October, 1887.

I have the honor to invite your attention to my letter of the 26th August last, relative to conditional purchase application, 87-91, at Armidale, by Frederick Hack, for portion 113 of 40 acres, in the parish of Cooney, county of Sandon, in which, by direction of the Secretary for Mines, you were asked to be good enough to move the Secretary for Lands to disallow such conditional purchase, as there is reason to believe that the land is auriferous, and a portion of it has been applied for under a gold lease.

I have, &c.,

GERRARD E. HERRING
(For the Under Secretary).

[Urgent.] See decision on 87-32,529 D.—J.P.M., 22/11/87. See Ministerial decision on 87-32,529 C.S. Dep. herewith. Submitted that a circular be prepared and forwarded to Chairmen of Boards, quoting the same, for their information and guidance.—G.W., 23/11/87. The Assistant Under Secretary. Approved.—S.F., 23/11/87.

No. 11.

Mr. A. Argles to J. Inglis, Esq., M.P.

My dear Sir,

I drop you a few lines to inform you that A. J. Hack is still trying to get his conditional purchase on the gold-fields, kindly got proclaimed for the miners. So, yesterday, Mr. A. J. Hack tried to get an injunction to stop the miners working on block 113, parish of Metz, county of Cooney; and the miners own you have done a great thing for them. So, dear Mr. Inglis, would you kindly see Mr. Thomas Garrett, Minister for Lands, and state the case to him, and this is the same ground that I wrote you a letter about before. I also sent in a petition to the Minister for Mines, so, Mr. Inglis, you will do all you can for me and all the miners of Hillgrove Falls, and please will you see Mr. T. Garrett at once, as we want it done before the Land Board sit in Armidale, as we do not know what their little game is.

I hope you are enjoying good health.

I am, &c.,

ALFRED ARGLES
(Nephew to old General Argles, of India).

We have great trouble with more ground, but we will get it yet. I hope, of course, you know I am one of the tributers.—A.A.

Dear Garrett,—Kindly look into this, and oblige. Do what is right for the miners if you can.—J.I.

No. 12.

The Under Secretary for Land to The Under Secretary for Mines.

Sir, Department of Lands, Sydney, 15 December, 1887.

With reference to your letter of the 29th October last, No. 87–10,588, requesting that conditional purchase, No. 87–91, Armidale, by Frederick Hack, may be disallowed, as the land is believed to be auriferous, I have the honor to forward herewith copy of the decision given by the Minister for Lands in connection with the matter. Circular No. 87-58. Chairman.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

[*Enclosure.*]

Circular, No. 87-58.

Sir, Department of Lands, Sydney, 30 November, 1887.

A question having arisen as to whether Local Land Board should confirm applications for the conditional purchase of lands supposed to be auriferous, and which had been included in proclaimed gold-fields subsequently to the applications being received, but prior to the cases coming on for confirmation, I am directed to forward, for your information and guidance, a copy of a decision by Mr. Secretary Garrett on the point raised.

I have, &c.,
STEPHEN FREEMAN
(For the Under Secretary).

The Chairman, Local Land Board.

Copy referred to.

FROM the evidence, there can be no doubt that the ground was open to conditional purchase at date of application, and has been since reserved as part of a gold-field. There can also be no doubt that it has been, since it was applied for, proved to be auriferous, but not by the applicant for the conditional purchase. Under this state of facts I must confirm the conditional purchase. It will be for the miners, if they think fit, to apply to have permission to dig and search for gold, and then, on application, the conditional purchase may be resumed. The conditional purchaser should be informed of his position at time of Board carrying out this decision.

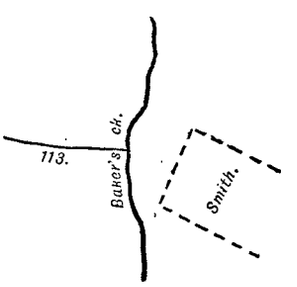
Memo. from Mr. District-Surveyor Finley to Mr. Surveyor Hogarth.

17 December, 1887.

WILL Mr. Hogarth be good enough to run a connection from north-east corner of portion 113, Cooney, to the south corner of Smith's 15-acre gold lease.

F. G. FINLEY,
District Surveyor.



Mr. D.-S. Finley,—The accompanying tracing, showing the desired connection is forwarded herewith.—HENRY HOGARTH, Surveyor. Armidale, 21/12/87. Very urgent.

No. 14.

Thorne and Party to The Land Board, Armidale.

Gentlemen, Armidale, 21 December, 1887.

We, the undersigned (Thorne and party), humbly beg you will not approve of Mr. A. J. Hack's selection, as we were on the ground working under our miners' rights before A. J. Hack applied for it, and we applied for a gold lease a few days after, not knowing of Mr. Hack doing so. One of the party acquainted Mr. Gordon about the matter, and wanted to lodge the objection to Hack, and Mr. Gordon told Mr. Gray that he thought the objection not necessary as it was on a water reserve, and old mineral conditional purchase, and they were working on their miners' rights, and I must state that the said land was proclaimed a gold-field, 30th August, 1887, a few days before the inquiry was held in the Warden's Court, at Armidale, and we have had the land surveyed, and have been working the land ever since. We first pegged it out, and have spent in labour and machinery the sum of £306, and there are three other gold leases applied for and surveyed on the same block, 113, and we, hoping you will consider the matter for the benefit of the mining community,

We are, &c.,
THORNE AND PARTY,
Hillgrove Mines.

[*Enclosure.*]

To the Minister for Lands,— Hillgrove Mines, 20 December, 1887.

Sir,

We, the undersigned miners of Hillgrove, humbly petition you not to grant the application of Mr. A. J. Hack, for portion of No. 113, 40 acres, on the following grounds: The said land being gazetted a gold-field (see *Government Gazette* 30 August, 1887); and if such is granted it will be a great injustice to the mining community, as the ground is totally unfit for any other purpose than that of mining; and as a large amount of money and labour has been expended, and gold lease applied for and surveyed on such application, we trust you will seriously consider the matter.

WM. B. NEALES, mining manager, Hillgrove.
SAMUEL NEWALL, miner, Hillgrove.
R. THOMPSON, miner, Hillgrove.

[Here follow 108 other signatures.]

The papers in this case were recently dealt with. Please state where they are. Immediate.—C.O., 28/12/87.

No. 15.

No. 15.

Thorne and party to The Chairman, Land Board, Armidale.

Sir, Armidale, 22 December, 1887.

At the request of the petitioners, I hand you enclosed petition, which I trust will have a good effect.

Yours, &c.,
THORNE AND PARTY,
Hillgrove Mines.

[*Enclosure.*]

To the Land Board, Armidale,— Hillgrove Mines, 20 December, 1887.

Gentlemen,

We, the undersigned miners of Hillgrove, humbly petition you not to grant the application of Mr. A. J. Hack, for portion No. 113, 40 acres, as a conditional purchase, on the following grounds :—The said land being gazetted a gold-field (see *Government Gazette*, 30th August, 1887); and if such is granted it will be a great injustice to the mining community, as the ground is totally unfit for any other purpose than that of mining, and as a large amount of money and labour has been expended in gold-mining, lease applied for and surveyed on such application, we trust you will seriously consider the matter.

WM. B. NEALES, mining manager, Hillgrove.
SAMUEL NEWALL, miner, Hillgrove.
R. THOMPSON, miner, Hillgrove.

[Here follow 112 other signatures.]

No. 16.

Mr. A. Argles to The Land Board, Armidale.

Gentlemen, Neutral Bay, 24 December, 1887.

I humbly beg you will consider the granting of A. J. Hack's selection, 40 acres, on block 113, old mineral conditional purchase, as there are four different places gold has been found, and gold leases applied for and surveyed; and Brereton and Smith applied for a lease, which takes a portion of 113, 40 acres, and was applied for two months before Hack put in his peg, and Thorne and party were working under their miners' rights before Hack applied, which I can swear, and I can get 100 miners to prove same, and I must remind you the Act says a man cannot take less than 40 acres; so when Brereton and party take their portion off with his claim, there cannot be 40 acres, as the block 113 was surveyed to one Moore as a 40-acre mineral conditional purchase. So, gentlemen, I humbly hope you will seriously consider the matter, as, if granted, it will be a great injustice to the miners, and will be the downfall of the Hillgrove mines, as all the reefs run right into this, and will stop the miners from getting wood, and allowing the principal 40 acres to be shut up, and the Government to receive only £40 per year, and no labour to comply with.

Whereas if for mining it will bring in hundreds of pounds to the revenue; and I must state this ground was proclaimed a gold-field on the 30th August, 1887, and before the inquiry was held in the Warden's Court in Armidale. As I must ask you gentlemen not to close the mining up in this valuable district, as I am a mining expert, and I must speak well of Hillgrove Falls mines, and it will become a big place, and begging you will not stop the mining industry.

I have, &c.,
ALFRED ARGLES,
Hillgrove Falls Mines, Armidale.

We interview the Minister for Lands to-morrow, with petition signed.

No. 17.

Mr. W. Gray to The Secretary for Lands.

Sir, Hillgrove Mines, 24 December, 1887.

I beg your humble services. I wish to draw your notice to portion of land situated at Hillgrove Falls, in the parish of Metz, county of Sandon, portion 113, has been applied for by A. J. Hack as a conditional purchase in July. There was one gold lease taken up on the portion in April last, and there are three more since July. I beg, sir, to bring before your notice that this block of land is not fit for anything but mining purposes, as you could not stand on the surface, some places being perpendicular, and by granting this as a selection it would be a loss to the Government of £40 a year. There are 22 acres taken on it now, and if cancelled there will be 23 more taken on that portion. I myself will be one. There would be a great population here if it is not granted.

I have, &c.,
WILLIAM GRAY.

No. 18.

Mr. District-Surveyor Finley to The Chairman, Land Board, Armidale.

(No. 87–34). A. J. Hack's Conditional Purchase, 87–91, 21st July, 1887.

Sir, District Survey Office, Armidale, 27 December, 1887.

Plan showing conflicting applications. Plan showing encroachments. Memo. and tracing showing Mr. Surveyor Hogarth's connection survey

Since forwarding you my report dated 30th August, 1887, No. 167, on the above conditional purchase, for preliminary hearing at your Court of 1st September, 1887, several circumstances have arisen, which present apparent objections to the immediate confirmation of the conditional purchase, and I now have the honor to draw your attention to them.

A. J. Hack's application was lodged on the 21st July, 1887, but there was an application by Brereton and Smith for an 8-acre gold lease, No. 166, of prior date, in existence, viz., of the 30th April, 1887. Hack's conditional purchase encroached on this lease. There is also an application by Thorne & Co. for a 10-acre gold lease, No. 169, which encroaches on Hack's conditional purchase, but it is of a later

later date, viz., 8th August, 1887. Those two gold leases conflicted, and I believe the dispute has been before the Warden, who had recommended certain boundaries. There is still a third conflicting claim to the land by Hanlon & Co. for a 4-acre gold lease, but this is also of more recent date than the conditional purchase, viz., 22nd September, 1887.

At the time of application Hack's conditional purchase was a measured portion, No. 113, of 40 acres.

All the gold leases which encroach on, or conflict with, conditional purchase, have only recently been surveyed, and at the date of my first report to you it was impossible to locate them, nor was their position known, so that no mention was made of them. In fact, after survey it could not be done until a surveyor was sent from this Department to define the relative positions of the leases and the conditional purchase.

From the foregoing it is clear that the only claim which can stand against Hack's conditional purchase, is gold lease No. 166, Brereton and Smith. This lease is of prior date; all other leases are of more recent date. The area excised from Hack's conditional purchase is clearly shown on the accompanying plan, as also are all other encroachments. According to the boundaries claimed by Brereton and Smith, and as surveyed to him, the extent of the encroachment is about 32 perches, but according to the recommendation by the Warden, consequent on dispute between Brereton and Smith and Thorne & Co., the encroachment is only about 8 perches, a very small area.

In either case the surplus area in the portion will admit of the encroachment and still leave a residue of 40 acres.

The following questions arise:—

1. Will not a subdivision of portion 113 be necessary, and Hack called upon to pay a subdivision fee in terms of the 55th section of the Act?

2. Or does the fact of the land being a measured portion of 40 acres, and there being only a residue of such portion, invalidate Hack's claim, or can the adjustment suggested in question 1 be made in terms of the 58th section of the Act?

I have, &c.,
F. G. FINLEY,
District Surveyor.

No. 18A.

Telegram from The Under Secretary for Lands to The Chairman, Land Board, Armidale.

Sydney, 28 December, 1887.

PLEASE return at once for further perusal papers 87-32,529, Departmental, *re* A. J. Hack's conditional purchase, 87-91, Armidale, portion 113 of 40 acres, sent you 9th instant. Any action in matter should in meantime be suspended.

CHARLES OLIVER,
Under Secretary.

No. 19.

Mr. R. Burchess to The Chairman, Land Board, Armidale.

Dear Sir, Hillgrove, 28 December, 1887.

Concerning this block of land, No. 113, situated on Baker's Creek, Hillgrove Falls, there is now another lease taken up on it and paid for. The land is fit for no other purpose but mining purposes, and it would be a sacrifice to allow any one to select it, as it is a very valuable portion of land; if it was selected it would be hundreds out of the Government's pocket, as well as the miner. There is already two leases taken up on it. I myself intend to take up another portion of it if it is not granted to Hack. Brereton and party have got a portion of it, and Smith and party have got a portion of it, and Thorne and party have got a portion of it, and Dewar and party have got 10 acres of it, and there are several more waiting to take up land on it should it be thrown out, as that is the wish of all the men at Hillgrove Falls that it should be thrown out. On the 30th of August it appeared in the *Gazette*, 20 square miles thrown into a gold-field. The portion that Brereton took up was taken up in May, some two months before Hack applied. As far as grazing purposes goes, it is no use at all, and to fence it in is impossible.

Yours, &c.,
RICHARD BURCHESS.

No. 20.

H. W. Forster, Esq., to The Secretary for Lands.

Re Hack's application for 40 acres, conditional purchase, Thorne and party; application for 10 acres, gold-mining lease.

Sir, 167, York-street, 28 December, 1887.

Following my interview with you this morning, I now, as requested, write you the facts of the above application.

On the 20th July last Mr. Hack applied for a conditional purchase of 40 acres, at Hillgrove Falls. Previously to Hack's application Thorne and Gray, of the party of Thorne and party, were in possession of the ground, for which they applied for a gold-mining lease, by virtue of their miners' rights.

On the 29th July last, Thorne and party gave notice of intention to apply for a 10-acre gold-mining lease (they having at that time proved the ground to contain a payable gold-bearing reef), and in the terms of the Mining Act, on the 8th August following, Thorne and party applied for their said lease, and paid the requisite amount. Since that time Thorne and party have expended on the ground upwards of £300 in making a drive of 45 feet and a shaft of 32 feet deep, and also in erecting plant for quartz-crushing purposes. Thorne and party have, up to the present, obtained some 23 oz. of gold from the mine, and have now at grass about 25 tons of quartz ready for crushing.

On the 20th of April, previously to Hack's application, Brereton and party took up a gold-mining lease of 8 acres, which 8 acres was formed by cutting off a portion of the land since applied for by Hack.

The

The land applied for by Hack was originally a 40-acre mineral conditional purchase known as block 113, and the portion taken by Brereton reduces the land applied for by Hack below 40 acres (*see* section 24 of 48 Victoria 18). The land applied for is situated within the Eastern Division, and sub-section 1 of section 47 of the said Act, both of which sections say that no area shall be less than 40 acres.

The 40 acres applied for by Hack was on the 30th day of August last past proclaimed a gold-field and gazetted as such on that date; therefore, as the land had not up to that time nor since been alienated from the Crown to Hack, his claim for a conditional purchase cannot be sustained.

My clients, Thorne and party, claim a right to this 10 acres by virtue of their miners' rights and virtue of their application for a gold-mining lease on Crown lands. (*See* Interpretation of Crown Lands, section 2, of the Mining, 37 Victoria, No. 13, which states "All lands, &c., which have not been granted *in fee*, or lawfully contracted to be so granted;" also, section 39, 46 Victoria, No. 7, which says that land open to lease and of which possession shall have been taken shall be deemed to be held under promise of lease and to be exempt from sale, &c. *See* also sub-sections 6 and 8 of section 21 of Crown Lands Act, 48 Victoria, No. 18.)

I have personally viewed the land applied for by Hack, and can unhesitatingly say the land, on account of its precipitous and rocky nature, is totally unsuited for a *bonâ fide* selection.

Being informed that Hack's application is to be heard before the Local Land Board, at Armidale, on the 29th December instant, I have hurriedly prepared the foregoing facts for your perusal, in order to prevent this application being granted and an injustice done to my clients, who are, I submit, on the facts stated, legally entitled to their gold-mining lease, as applied for.

Having every confidence that you will see my clients justly dealt with,

I have, &c.,
H. W. FORSTER,
Solicitor.

Telegraph to the Chairman, and request that the papers may be returned for further perusal, and intimate that any action in the matter should, in the meantime, be suspended.—C.O., 28/12/87. Telegram sent, 28/12/87.

No. 21.

Telegram from The Under Secretary for Lands to The Chairman, Land Board, Armidale.

Sydney, 28 September, 1887.

PLEASE return at once, for further perusal, papers 32,529 of 87, Departmental, *re* A. J. Hack's conditional purchase application 91 of 87, Armidale, portion 113, of 40 acres, to you 9th instant. Any action in meantime should be suspended.

CHARLES OLIVER,
Under Secretary for Lands.

No. 22.

Telegram from the Chairman, Land Board Armidale, to The Under Secretary for Lands.

29 December, 1887.

IN reply to your telegram, received yesterday evening, Hack's case was set down for consideration to-day, but withdrawn, and the papers forwarded by post this day.

SYDNEY BLYTHE,
Chairman, Local Land Board.

No. 23.

The Chairman, Land Board, Armidale, to The Under Secretary for Lands.

Sir, Local Land Board Office, Armidale, 29 December, 1887.

C.P. 87-91, parish Cooney, county Sandon, Armidale, Alfred James Hack, 40 acres.

In obedience to your telegram of yesterday, I do myself the honor to forward herewith all papers in connection with the case named in the margin. This matter was set down for consideration by the Board for this day, but withdrawn, as stated in my telegram. Several letters which were received by the Board in this connection will be found with the papers, all strongly protesting against the confirmation of Hack's application.

I have, &c.,
SYDNEY BLYTHE,
Chairman.

Submitted.—C.O., 4/1/88.

From the facts as now set out in the District Surveyor's report, and which were not before me when I gave the decision on 32,529, it is clear that application is open to objection on two grounds, that part of the area was in occupation for mining purposes when it was applied for by Hack as a condititonal purchase, and that, if the area of the gold lease applied for prior to date of Hack's application is deducted, there will not then be 40 acres available in the portion. The case should be referred back to the Board for reconsideration as to the above two grounds of objection.—T.G., 4/1/88.

The Chairman, Armidale.—C.O., B.C., 4/1/88.

No. 24.

Mr. A. Harlow to The Chairman, Land Board, Armidale.

Sir, Armidale, 29 December, 1887.

I object to the granting of a selection on block 113 to Mr. Hack on the ground that it is auriferous, that there are several parties applying for gold leases on it, and others intending to apply as soon as it is settled if it can be proved that the ground is gold bearing, and it is not fit for grazing purposes.

I have, &c.,
A. HARLOW.

No. 25.

No. 25.

Mr. P. Dewar to The Chairman, Land Board, Armidale.

Sir, Armidale, 29 December, 1887.

I strongly object to the granting of a selection to Mr. Hack, on block 113, on the ground that it is auriferous, and I and party have applied for a gold lease on it, and there are several parties waiting to see how the case goes. It will be a valuable piece of ground for mining purposes, and it is not fit for grazing purposes. I shall be in the Court, and if any evidence should be required I shall be ready to state what I know about it. I can prove it to be auriferous, having some of the stone with me.

I have, &c.,
PETER DEWAR.

No. 26.

Mr. W. Black to The Secretary for Lands.

Respected Sir, Hillgrove Mines, December, 1887.

I humbly beg to ask you as a favour not to sanction Mr. A. J. Hack's application for a freehold lease of block 113, in the parish of Metz, county of Sandon. My reason, kind Sir, is—Firstly, it would benefit the Government fourfold a year if kept as a mining lease, whereas, if granted as a freehold, the yearly rental would not amount to as much as a mineral lease. I further beg to bring to your notice that the locality is not suited as a freehold, as its gradient being so steep it is as much as a man can do to stand on the surface, being nearly a perpendicular. I further wish to tell you, Sir, that a portion of this block (113) was taken up in April last as a mining lease, and since then (in July) Mr. A. J. Hack has applied for the above block as a freehold. I therefore beg of you, kind Sir, to consider the matter, and humbly begging of you not to grant the freehold lease, as the Government will derive very little benefit if let as a freehold. I further beg to inform you, Sir, that I, together with others, will take a lease of the block as a mining lease on conditions it is not granted as a freehold.

Trusting, kind Sir, you will carefully consider the matter, both for the benefit of the Government and the working miners,

I have, &c.,
WALTER BLACK.

Referred to the District Surveyor at Armidale as to how the land was applied for and for what purpose.—C.O., B.C., 4/2/88. *Vide* papers, C.S., 87-59,278. Forwarded to Head Office by Local Land Board on 30th January, 1888.—F. G. FINLEY, District Surveyor, 7/2/88.

This case has been under consideration, both by the Honorable the Minister and the Local Land Board for some time. The whole of the papers in the case were forwarded to Sydney by the Local Land Board on the 30th January, 1888. The land was applied for as a conditional purchase by A. J. Hack on 21st July as conditional purchase 87-91, but I would suggest that this paper be attached to the papers in the case.—F. G. FINLEY, District Surveyor, 7/2/88.

No. 27.

Statutory Declaration by W. H. Gray.

I, WILLIAM HENRY GRAY, of Hillgrove Falls, near Armidale, in the Colony of New South Wales, miner, do hereby solemnly and sincerely declare as follows:—That I, and Edward Thorne, for ourselves and party, did, on Saturday, the 16th day of July last past, peg out five men's ground, on the line of reef at Gara Falls, and went into possession thereof, and have continued in such possession to this date, and I and Edward Thorne, for ourselves and party, are the holders of miners' rights, and were the holders of miners' rights at the time of taking such possession, and marking out the five men's ground on the 16th day of July last, as aforesaid. We have worked the ground, and have been until very recently in the undisturbed possession thereof. The five men's ground above mentioned is alleged to be selected as a mineral conditional purchase by one A. J. Hack on the 20th day of July last. The five men's ground pegged out as aforesaid was taken up for Edward Thorne, Richard Golden, Thomas Smith, William Leslie, and myself, all the holders of miners' rights, and such ground is within the proclamation gold-field Hillgrove Falls. And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled, "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Subscribed and declared at Armidale, this 3rd day of January, 1888, before me,— } WILLIAM HENRY GRAY.

A. M. SIMPSON,
A Commissioner for Affidavits and Notary Public, Armidale.

Forwarded to the Chairman, at Armidale, in connection with previous papers.—C.O., B.C., 5/1/88.

Mr. J. McNamara to The Secretary for Lands.

A. J. Hack's conditional purchase, Armidale.

Dear Sir, Waltham Buildings, Bond-street, Sydney, 3 January, 1888.

I have been instructed to act in this matter, but have not yet had an opportunity of perusing the papers.

I shall, therefore, be obliged if you would postpone dealing with the matter until I have had an opportunity of perusing the papers, say until Tuesday next.

Yours faithfully,
M. J. McNAMARA.

P.S.—Kindly let me know that you will hold matter over till I see the papers.

No. 29.

Telegram from the Clerk-in-charge, Armidale, to The Under Secretary for Lands.

Armidale, 7 January, 1888.

Re Hack's application for conditional purchase, 87–91, Armidale, Chairman desires to know if it will be necessary for Brereton and others to be notified to appear at Court, and if you will please have all papers connected with Brereton and Thorne and party's application for mining leases on same land forwarded to this office at once, as the case is for hearing on 20th instant.

H. T. MAKIN,
Clerk-in-charge, Local Land Board, Armidale.

Brereton and others should be summoned to give evidence. The Department of Mines will be asked to forward papers.—C.O., 7/1/88. Wire, 7/1/88. Under Secretary for Mines to forward papers, 9/1/88.

No. 30.

Telegram from the Under Secretary for Lands to The Chairman, Land Board, Armidale.

7 January, 1888.

In reply your to-day's wire, Brereton and others should be summoned to give evidence, Department of Mines will be asked to forward papers.

H. CURRY
(For the Under Secretary).

No. 31.

The Chairman, Land Board, Inverell, to The Clerk-in-charge, Armidale.

9 January, 1888.

I think it will only be necessary to summon Brereton and party, as from report of District Surveyor, the applications from others were subsequent to the date of Hack's. By all means notify Mr. Hogarth to attend.

SYDNEY BLYTHE,
Chairman, Local Land Board.

No. 32.

Summons of Witness.

Crown Lands Act of 1884—(Part II, section 14, sub-sections 2 and 9).

New South Wales, Armidale, } to wit. }

To Henry Hogarth, Licensed Surveyor, of Armidale.

Whereas in a certain matter wherein Alfred James Hack applied on the 21st July, 1887, for a conditional purchase of 40 acres, in the county of Sandon, parish of Metz or Cooney, part of which it is alleged was under mining lease to Smith and Brereton at date of the said A. J. Hack's application, it hath been made to appear that you are likely to give material evidence touching the said matter. These are, therefore, in Her Majesty's name, to command you to be, and appear on Friday, the twentieth day of January instant, at ten of the clock in the forenoon, at the Court-house at Armidale, and then and there give such evidence, and testify to what you may know concerning the matter, and produce all books, papers, deeds, and documents, which may be in your possession or under your control, having any reference to the matter under investigation, and so attend from day to day till the said matter be disposed of.

Given under my hand at Armidale, this 9th day of January, 1888,—

C. E. SMITH, P.M.,
Member of the Local Land Board.

Original summons of witness handed this day by me to Mrs. Hogarth for Mr. Hogarth.

C. BECKINGHAM,
9th January, 1888.

No. 33.

Summons of Witness.

Crown Lands Act of 1884—(Part II, section 14, sub-sections 2 and 9).

New South Wales, Armidale, } to wit. }

To George Smith and William Gordon Brereton, of Hillgrove, trading as Smith and Party.

Whereas in a certain matter wherein Alfred James Hack applied on the 21st July, 1887, for a conditional purchase of 40 acres, in the county of Sandon, parish of Metz or Cooney, part of which it is alleged was under mining lease to you at date of the said A. J. Hack's application, it hath been made to appear that you are likely to give material evidence touching the said matter. These are, therefore, in Her Majesty's name, to command you to be, and appear on Friday, the twentieth day of January instant, at ten of the clock in the forenoon, at the Court-house at Armidale, and then and there give such evidence, and testify to

to what you may know concerning the matter, and produce all books, papers, deeds, and documents, which may be in your possession or under your control, having any reference to the matter under investigation, and so attend from day to day till the said matter be disposed of.

Given under my hand at Armidale, this 9th day of January, 1888,—

C. E. SMITH, P.M.,
Member of the Local Land Board.

Summons served this day on Mr. Brereton, who accepted same on behalf of himself and George Smith.

JOS. H. HEALEY,
9th January, 1888.

No. 34.

The Under Secretary for Lands to The Under Secretary for Mines.

Sir, Department of Lands, Sydney, 9 January, 1888.

With reference to the conditional purchase noted in the margin, which will be dealt with by the Local Land Board on the 20th instant, I have the honor to request that you will be so good as to forward to the office, with a view to being referred to the Chairman, by the date above mentioned, all papers relating to the application by Messrs. Brereton and party and Thorne and party for mineral leases on the land in question.

[Very urgent.]

Armidale, C.P. 87-91, parish Metz or Cooney, county Sandon; Mr. Hack.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

The papers may be supplied.—H.W., 10/1/88. The other papers in this case have been forwarded to the Warden for production in Court.—G.E.H. (for the Under Secretary), 13/1/88. May now be forwarded to the Chairman of the Armidale Board, as desired by telegram of the 7th instant.—W.H.C.—17/1/88. Yes.—F.H.W. (for the Under Secretary), 17/1/88.

No. 35.

Office Memorandum.

The enclosed papers referring to the conditional purchase, quoted in the margin are forwarded to the Chairman of the Local Land Board, Armidale, as desired by his telegram of 7th instant.

88-1,907 D. C.P. 87-91, Armidale. A. J. Hack

F.H.W.
(For the Under Secretary), B.C., 17/1/88.

The enclosed papers are now returned to the Department, together with all others relating to the case.—SYDNEY BLYTHE, Chairman, B.C., 27/1/88. To the Under Secretary for Lands, Sydney.

No. 35A.

Caption to Depositions of Witnesses.

Crown Lands Act of 1884—(Part II, section 14, sub-section 1).

New South Wales, }
to wit. }

THE examination of William Gordon Brereton, of Hillgrove, in the Colony of New South Wales, miner; Edward Thorne, of Hillgrove, miner; William Gray, of Hillgrove, miner; Henry Hogarth, of Armidale, Government Surveyor; John Griffin Martyn, of Armidale, Licensed Surveyor; Walter Warner, of Armidale, Licensed Surveyor; and George Smith, of Hillgrove, miner, in the said Colony.

WHEREAS it hath been alleged that a part of the area contained within the conditional purchase application named in the margin, was in occupation for mining purposes, when it was applied for as a conditional purchase, and that if the area so held for mining purposes, prior to the date of Hack's application be deducted from the area applied for, there would not be 40 acres available within the measured portion as applied for by Hack, and it hath been found necessary to investigate the said matter on oath, the depositions of the several witnesses are appended hereto.

C.P. 87-91. Parish Cooney, county Sandon, Armidale. Alfred Jas. Hack; 40 acres; 21 July, 1887.

THIS witness, being duly sworn, on oath, states:—My name is *William Gordon Brereton*; I am one of the partners in Brereton and party, who made application for a gold-mining lease No. 1,323, in the county of Sandon, parish of Cooney; our party were in occupation on the 30th April, 1887, for mining purposes of that land, which has since been measured to us as a gold-lease; that broken blue line on tracing now shown to me (marked A) indicates the dividing line between our party and Thorne and Company; I observe that that broken blue line slightly encroaches on the measured portion No. 113, and it is in my knowledge that that portion has been applied for by A. J. Hack as a conditional purchase; I have heard the letter, dated 7th January instant, addressed to the Minister for Mines read; that letter is signed by me for myself and partner, and in that letter we desire that the portion of our lease which encroaches on portion 113 may be excused therefrom; to that letter we have had no reply; we still desire that that small portion of our lease which encroaches on portion 113 may be excused from such lease; we were in occupation of the land described on 30th April, 1887, for mining purposes, by virtue of an application (marked B) lodged by us and bearing that date; that application gives a description of the land, a portion of which, on measurement, was found to encroach on portion No. 113, and we are still in occupation of the same land.

By Mr. M'Donald, J.P., solicitor: We paid for this lease on the 30th April, 1887, and we pegged it out eight or ten days before, and since the time we took possession, we have done a lot of work on this lease, and we have not done any work on the encroachment on portion 113; our starting point was in a south-westerly direction 3 or 4 chains from a tree marked 113.

By Mr. Forster, solicitor: In my original application, the firm blue line on tracing marked A indicates our southern boundary. That line would be a much greater encroachment on portion 113 than the line we have agreed upon with Thorne and party, and that was one of the boundary lines which we applied for as a gold-mining lease; at the time I applied for that land, I understood it was Crown lands; I was told it was a forfeited block (portion 113); we may have broken some

stones

stones on that portion of our lease which was included in measured portion 113; I did not sign a petition against the application of A. J. Hack; I was never asked to do so; I have seen a letter (read to me by the Board) signed by me on behalf of myself and party, made by me on my own free will and accord, and without the consent of my partner; my reason for not consulting George Smith, whose name appears appended to the letter dated 7th January, 1888, was that Smith has ceased to be a partner in this lease, and will transfer to my son his share whenever the lease is granted; this agreement to transfer was made a couple of months ago, but only signed this year; I think it was signed after the date of the letter referred to; I think the date was the 13th January, 1888.

By Mr. M'Donald, solicitor: I had the consent of my son to act for him; there was money paid a couple of months previous to the letter, but no written agreement drawn up.

Sworn at Armidale, this 20th day of January, 1888, before us,— W. G. BRERETON.

SYDNEY BLYTHE, J.P., Chairman.
C. E. SMITH, P.M.
B. A. MOSES, J.P.

Mr. Brereton, recalled by desire of Mr. Forster, solicitor:—We agreed to accept this modification of our southern boundary line, as shown by broken blue line on tracing "A," in the month of December last.

Sworn at Armidale, this 20th day of January, 1888, before us,— W. G. BRERETON.

SYDNEY BLYTHE, J.P., Chairman.
C. E. SMITH, P.M.
B. A. MOSES, J.P.

By Mr. Forster, solicitor: This witness, being duly sworn, on oath, states as follows:—My name is *Edward Thorne*; I am a gold-miner; I hold a gold-miner's right; I had a gold-miner's right last year, 1887; I see plan marked "A" and the portion No. 169 gold lease marked Thorne and company; that is the land applied for by us as a gold-mining lease; Gray was my partner at the time; previously to my making application for this land as a gold lease, I had possession of it by virtue of my miner's right; we were on the ground before the 16th July, 1887, and we pegged it out on the 16th July, 1887; by virtue of the miners' rights we pegged it out on the 16th; we pegged out five men's ground; it was on the reef, and the reef is inside portion 113; I know the boundary of portion 113; I daresay the reef is 2 or 3 chains south of the northern boundary of portion 113, that is, south of the north-east corner of portion 113 at the creek.

By Mr. M'Donald, solicitor: I and Gray pegged out five men's ground on the west line on the reef; that would be about 300 feet long and about 200 feet wide; the five men's name were Thorne, Gray, Leslie, Golding, Emerson; their Christian names are—Edward Thorne, William Gray, William Leslie, Richard Golding, and David Emerson; none of them were on the ground, with the exception of myself and Gray; they all went on the ground at different times; I have been mining for some years, and I cannot say that I do know the mining regulations here; I suppose there has to be a man to every claim; I mean a man to every 60 feet; there was not a man working on every 60 feet; there were only two of us working on the land at the time we took possession of it by virtue of our miners' rights; within three days after we pegged it out, the three other men I have mentioned went to work on it, so that there were five of us working it within three days; they were prospectieg only for an hour or two on the third day; I was working continuously myself from the 16th on the lease; Gray also worked continuously from the time of pegging out; Golding used to come down two or three times a week; this is between the time we pegged it out and our application for the lease; he used to prospect when he came down; I mean he used to be napping stones when he came down; I am aware that Golding lived in Armidale at that time; Leslie did not work on the land from the 16th; Leslie did not work at all on the ground; Leslie never went there at all, and did not have a man to represent him; Emerson worked on the land within the three days; he continued to work on the ground; I went to Hillgrove 8th July; I started to work for Brereton on that day, but not on this land, and I worked a fortnight for Brereton; it was not after I left Brereton that that land was pegged out; I was in Brereton's employ when I pegged it out; I did my eight hours a day with him, and Gray was employed the same time as I was; I marked out the ground on the 29th July, 1887, for a gold lease of 10 acres, and took possession on that date; I, Michael McNamara, and Edward McNamara marked it out; Mr. Argles and Mr. Edwards were the other two partners; these were the only persons interested in the lease; Leslie, Golding, and Emerson had no interest in the application for the lease; we had a falling out the same day as we pegged out; I swear that it was pegged out twice; we did not peg out the same land in our application for lease as we had pegged out under our miners' rights, but that pegged out under miners' rights was so included in the land applied for as a gold lease; the five men's ground was pegged out about the middle of the 10-acre lease; I gave evidence in the Warden's Court in dispute between myself and Brereton; in giving evidence at that inquiry, I did not say anything about my pegging out under my miner's right; I know that all my mates had miners' rights at the time I pegged it out.

By Mr. Forster, solicitor: At the time I gave evidence with regard to the boundaries between myself and Brereton and party, it was with reference to the boundaries of mining leases only, and the ground pegged out by virtue of miners' rights was not in question; the work I did on the ground at the time was in search of gold; I found quartz about that place about a week before we found the reef.

By the Board: I only know the north-east corner of portion 113, the one on the creek; I can swear distinctly that the ground that we pegged out, as stated by the virtue of our miners' rights, was within the boundaries of measured portion 113, and it was on the 16th July I pegged it out; I could only see one tree blazed on the northern line of portion 113, and it might be 2 or 3 chains or 4 chains west from that, and it was to the south of that blazed tree that we were working under our miners' rights; I think the ground we first occupied ran close alongside the blazed tree mentioned.

Sworn at Armidale, this 20th day of January, 1888, before us,— E. THORNE.

SYDNEY BLYTHE, J.P., Chairman,
C. E. SMITH, P.M.,
B. A. MOSES, J.P.

Examined by Mr. Forster, solicitor: This witness, being duly sworn, on oath, states:—My names is *William Gray*; I am a gold-miner, and hold a miner's right, and held one in the year 1887; I am a partner with Thorne; I know block 113; I know the northern corner of block 113 on the creek; we took up originally by virtue of my miner's right on the 16th July, 1887; we took up about 300 feet by 200 feet; the greater part of the ground I took up on that occasion is south of the northern portion 113; looking at the tracing marked "A" nearly all the ground would be in it; the name of the parties that took up this ground were W. Gray, Edward Thorne, David Emerson, William Leslie, and R. Golding; those pegs were never shifted, and we pegged out the ground again for a gold-mining lease of 10 acres; in that 10 acres pegged out was included the five men's ground; we prospected the ground for a reef; at the time I pegged out the five men's ground I was working for Mr. Brereton, and worked eight hours a day, and used to work on our ground before we went to work for Brereton, and after we had finished our work for him; I see plan marked "A," and see block marked 169, and that shows an encroachment on portion 113; I also see a dotted blue line, that is our present line, and the one agreed upon as our boundary and Brereton's, and that also was an encroachment on portion 113; I do not think the present line between our lease and Brereton's is above a chain from the creek; we made application for this lease 29th July, and paid for same on the 8th August, 1887; nobody interfered with us while we had this land marked out.

By Mr. M'Donald, solicitor: I have not got my miner's right with me; I took it out about the first of the year; I helped to peg out the ground with Thorne on the 16th July, 1887; it was about 12 or 1 o'clock in the day; I pegged it out on a Saturday, but I cannot say the correct time; some of my mates went on to the ground after we pegged it out; Golding was there, and sometimes came out for a week at a time; Golding was there nearly every day prospecting on the ground between the 16th and 29th of July; Emerson was camped there, and was working on the ground between the dates mentioned; Leslie was not on the ground when we pegged it out; he has been on the ground, but I could not say between

the 16th and 29th of July; Thorne and I have been working the ground sometimes before 7 o'clock in the morning; I knocked off working for Brereton somewhere about the 18th July; we were on the ground long before the 16th July; I cannot state the exact time I left off work for Brereton.

By Mr. Forster, solicitor: Our datum post is inside portion 113 somewhere about a chain.

Sworn at Armidale, this 20th day of January, 1888, before us,— WILLIAM GRAY.

SYDNEY BLYTHE, J.P., Chairman.
C. E. SMITH, P.M.
B. A. MOSES, J.P.

[This closed evidence with regard to the first ground as contained in the Minister's minutes.]

By the Board: This deponent, being duly sworn, on oath, states:—My name is *Henry Hogarth*, Government surveyor, residing in Armidale; under instructions I visited portion 113, applied for by A. J. Hack as a conditional purchase on 21st July, 1887; my duties out there were merely to make a connection between Smith's gold lease and the north-east corner of portion 113; the tracing now shown me, marked "D," is the one prepared; according to the tracing it would encroach on portion 113, but I am not prepared to say that is the correct position of Brereton's lease; I looked at the tracing marked "A"; assuming that the blue dotted line on that plan is the correct one, there would be an encroachment on measured portion No. 113; I made that encroachment by scale measurement 10 perches; I have not actually measured it; assuming that were taken out of portion 113, I am not in a position to state whether or no there would be still left 40 acres within that portion; I could not state this without an actual survey.

By Mr. Forster, solicitor: Assuming the firm blue line to be correct, the boundary there would be a greater encroachment than by the blue broken line; by scale measurement there would be 36 perches; the area of five men's ground would be 1 acre 1 rood 16 perches, and assuming that portion 113 is 40 acres, it would be considerably less than 40 acres if that area were deducted; I did not survey this block.

By the Board: Assuming the area to be pegged out as quartz claims, five men would be entitled to a considerably greater area than that stated by Mr. Forster, and would, in fact, exceed 2 acres 32 perches, that being the allowance for four men.

Sworn at Armidale, this 20th day of January, 1888, before us,— HENRY HOGARTH.

SYDNEY BLYTHE, J.P., Chairman.
C. E. SMITH, P.M.
B. A. MOSES, J.P.

By Mr. M'Donald, solicitor: This witness, who being duly sworn, on oath, states:—My name is *John Griffin Martyn*, licensed surveyor, in Armidale; some years ago I made a survey of portion 113, in parish Cooney; I made the survey in the last week in January, 1882; it was a portion of 40 acres; the actual measurement is 40 acres 2 roods and 24 perches; I have not been on the ground since for the purpose of measuring any encroachment as shown on plan marked "A"; I have refreshed my memory by my field book with regard to the above fact.

By Mr. Forster, solicitor: Assuming five men's land were taken out of the land, 300 x 200 feet, it would be 1 acre 1 rood 16 perches; if that area were taken out there would not be 40 acres in measured portion 113.

By Mr. M'Donald, solicitor: I am quite sure that there would be 1 acre 1 rood and 16 perches to be deducted from area.

By the Board: It is usual on frontage blocks to omit the roods and perches in writing the area on the plan.

Sworn at Armidale, this 20th day of January, 1888, before us,— JOHN G. MARTYN.

SYDNEY BLYTHE, J.P., Chairman.
C. E. SMITH, P.M.
B. A. MOSES, J.P.

Examined by Mr. M'Donald, solicitor: This witness, being duly sworn, on oath, states:—My name is *Walter Warner*; I am a licensed surveyor in this district; I made a survey of an encroachment on portion 113, parish Cooney, this morning; I surveyed the encroachment shown by dotted blue line on tracing marked "A"; the encroachment on portion 113 is between 11 and 12 perches; that is the exact measurement; I did not survey the encroachment shown by firm line; I only surveyed that shown by dotted blue line; I calculated the encroachment shown by firm blue line is slightly over a quarter of an acre, and I made that calculation on the ground.

By Mr. Forster, solicitor: The boundary peg of Brereton was found by me; I found the corner pegs of portion 113; I did not survey block 113; I heard Mr. Martyn and Mr. Hogarth giving their evidence; assuming that a block of 300 x 200 feet were taken out of block 113 apart from the encroachment there would be 1 acre 1 rood and 16 perches in reduction of area.

Sworn at Armidale, this 20th day of September, 1888, before us,— WALTER WARNER.

SYDNEY BLYTHE, J.P., Chairman.
C. E. SMITH, P.M.
B. A. MOSES, J.P.

W. G. Brereton, recalled by Mr. M'Donald, solicitor: Gray left off working for me on the 28th July, 1887, and Thorne on the 26th; they had been working for me a little over a fortnight; they worked from half-past 7 to 5 at night, with an hour for their dinner; all I know is that they pegged on to our ground and outside of portion 113 altogether, and they might have pegged inside altogether.

By Mr. Forster, solicitor: They just worked eight and a half hours; there was a little wet weather during the time they worked for me; Thorne worked only for about an hour the first day he worked for me; I made the note of the payment in my book on the 26th July, 1887; they told me they were going to leave, as they had found some ground; I did not make a note of this.

Sworn at Armidale, this 20th day of January, 1888, before us,— W. G. BRERETON.

SYDNEY BLYTHE, J.P., Chairman.
C. E. SMITH, P.M.
B. A. MOSES, J.P.

Examined by Mr. M'Donald, solicitor: This deponent, being duly sworn, on oath, states:—My name is *Charles Leonard Badham*; I was Mining Registrar during last year, and up to January this year, and have made search to the best of my ability of the rights issued by me; the only miner's right in the name of Golding is the one issued on 5th October last year, and in the name of James Golden; this man sometimes went by the name of Purchase, at least I believe this is the same person; I do not see any record of a miners' right in the name of Richard Golding; a miner's right taken out in any Warden's Court is available for any part of the Colony, and would not be recorded by me, excepting where application was made for a lease when I required to be satisfied that anyone signing the application should hold a miner's right.

Sworn at Armidale, this 20th day of January, 1888, before us,— CHARLES L. BEDHAM.

SYDNEY BLYTHE, J.P., Chairman.
C. E. SMITH, P.M.
B. A. MOSES, J.P.

This

This witness, being duly sworn, on oath, states :—My name is *George Smith* ; I am a miner out at Hillgrove ; I know Thorne and Gray, the applicants for 10-acre lease ; I have seen them on their ground ; I saw them about the 25th July ; I did not see them previous to that ; I was in Sydney ; I could see that they had been working there previous to the 26th July.

Sworn at Armidale, this 20th day of January, 1888, before us,— GEORGE SMITH.

SYDNEY BLYTHE, J.P., Chairman.
C. E. SMITH, M.P.

No. 36.

Decision of the Board.

Crown Lands Act of 1881—(Part II, section 14, sub-section, 4).

New South Wales, Armidale, to wit.

C.P. 87-91, parish Cooney, county Sandon, Armidale. Alfred Jas. Hack 40 acres. 21st July, 1887.

WHEREAS, on the 20th day of January, 1888, it became a matter for investigation before us whether, prior to the date of application for the conditional purchase named on the margin, a part of the area so applied for was not in occupation for mining purposes ; and whether, if the area so occupied for mining purposes be deducted from that applied for as a conditional purchase by Hack, the latter would not be thereby reduced to a less area than 40 acres ; and having taken evidence, and inquired into the said matter, we find that a part of the area so applied for as a conditional purchase was, prior to the date of such application, in occupation for mining purposes, and that, if the area so occupied for mining purposes be deducted from the area applied for as a conditional purchase, there will not be an area of 40 acres left to satisfy such application. We beg, therefore, to recommend that the application of Hack for 40 acres be disallowed, there not appearing to us to have been that area available at the date of Hack's application.

Given under our hands, at the Office of the Local Land Board, at Armidale, in the Colony of New South Wales, this 20th day of January, 1888,—

SYDNEY BLYTHE, J.P., Chairman.
B. A. MOSES, JP., } Members.

Submitted.—C.O., 7/2/88. Disallowed.—T.G., 7/2/88.

No. 37.

Messrs. Abbott and Allen to The Secretary for Lands.

Re Thorne and Party's Gold-mining lease application 17,002, Hillgrove—A. J. Hack's objection.

Sir, Wentworth Court, Sydney, 30th January, 1888.

Our client, Mr. Hack, informs us that an inquiry was held before the Land Board at Armidale hereon, on the 20th instant, and that the evidence then taken was to be submitted to you for your decision.

Mr. Hack states that, at a previous inquiry in August last, certain evidence was given in his behalf, which, if brought forward, would directly nullify the effect of some of the evidence taken at the last inquiry, but that such evidence cannot be found, and upon inquiry at the Department of Mines we can learn nothing of it.

We have the honor, therefore, to request that you will be pleased to cause an inquiry to be made as to the existence of such evidence, and, if discovered, that we may be furnished with a copy thereof.

We have, &c.,
ABBOTT AND ALLEN.

No. 38.

Messrs. Abbott and Allen to The Secretary for Lands.

Re Thorpe and Party's Gold-mining lease application, 17,002—A. J. Hack's objection.

Sir, Wentworth Court, Sydney, 2 February, 1883.

Referring to our letter of the 30th ultimo hereon, when we alluded to an inquiry held before the Local Land Board, on the 30th January last, also that certain evidence taken at a prior inquiry, on the 24th August last, bearing very strongly on the subject, could not be found, we now have the honor to forward a copy of statutory declaration by Christopher Allingham, one of the witnesses at the last-mentioned inquiry, and to repeat our urgent request that you will be pleased to cause that evidence to be produced, and a copy sent to us, feeling certain that, upon reading and weighing the whole evidence, your decision will be in favour of our client, Mr. A. J. Hack, the objector.

We have, &c.,
ABBOTT AND ALLEN.

[*Enclosure.*]

STATUTORY DECLARATION.

I, CHRISTOPHER ALLINGHAM, of Hillgrove Falls, near Armidale, in the Colony of New South Wales, miner, do hereby solemnly and sincerely declare as follows :—

1. On or about the 24th day of August last, I gave evidence in the Warden's Court at Armidale, at the hearing of the objection made by Alfred James Hack against an application by Edward Thorne and party for a gold lease at Hillgrove Falls aforesaid. My evidence on that occasion was taken down by the Warden's Clerk in writing, and after he had finished doing so I signed my name to the depositions.
2. On the same occasion, I heard evidence given in like manner by Alfred James Hack, Edward Thorne, and Edward McNamara, witnesses in the matter then before the Court, and saw them, as I believe, severally sign their depositions.

3.

3. On the 26th day of July last, I was on portion No. 113, in the parish of Metz or Cooney, and on leaving the said portion I met the said Edward McNamara, a man named Edwards, and Edward Thorne. The said Edward Thorne was then going on the said portion 113. He had a pick in his hand, and the said Edward McNamara said to him (Thorne), "Take care you are not prospecting for other people." Thorne replied, "Oh, I'll chance that," and proceeded on to the said land.
4. I was upon the said portion No. 113 almost every day between the 21st and the 26th days of July last, searching and prospecting on the eastern half of the said portion, and I am positive that there were no pegs on the said land marking out five men's ground, as alleged by the said Edward Thorne and one William Gray, the mate of the said Edward Thorne.

And I make this solemn declaration conscientiously believing the same to be true and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled, "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oath and Affidavits."

Subscribed and declared at Armidale, this 23rd day of January, 1888, before me,— C. ALLINGHAM.

A. RICHARDSON, J.P.

No. 39.

Mr. A. J. Hack to The Secretary for Lands.

The No. 1 Sydney Coffee Palace Hotel Company, 391, 393, and 395, George-street,

Sir, Sydney, 11 February, 1888.

I beg to request that you will allow further evidence to be taken before the Local Land Board at Armidale, *re* my application for a conditional purchase of 40 acres, made at Armidale on the 21st July, 1887.

The evidence I propose to produce, is to the effect that Thorne and party were not in possession of the said land previous to my application.

I would respectfully ask you to cause a search to be made for the depositions taken at Armidale before the Warden, on or about 24th August, 1887, these papers not having been forwarded to you, and upon my making application for a copy of same in the Warden's office, no trace of them could be found, and no record of their having been sent to Sydney. These papers, if found, would clearly show that I was the first applicant for the land.

I have, &c.,

A. J. HACK.

It is presumed inquiry may be made in the Mines Department for the depositions referred to.—W.H.C., 16/2/88. The depositions referred to were returned to the Warden (C. E. Smith) on the 12th ultimo. The Mines Department will obtain them (or copies) by wire, if required.—H.P., 16/2/88. The Assistant Under Secretary.—W.H.C., 17/2/88.

I understood Mr. Secretary Garrett to say that he made no promise to Mr. Hack about this case, beyond consenting to taking no further action in the matter, pending the receipt of a letter from that gentleman. If Mr. Hack's request be complied with, it will be a reopening of the case by what is virtually a side wind. Submitted as to what is to be done.—S.F., 17/2/88.

Mr. Freeman is quite right. I can see no good purpose to be gained by reopening the case.—T.G., 22/2/88. A. J. Hack informed, 23/2/88. May those Hack's case papers be returned to the Chairman of the Armidale Board?—W.H.C., 14/3/88. The Chairman, Armidale.—S.F., B.C., 14/3/88.

No. 39A.

The Under Secretary for Lands to Mr. A. J. Hack.

Sir, Department of Lands, Sydney, 23 February, 1888.

Referring to your letter of the 11th instant, respecting your conditional purchase noted in the margin, which was the subject of inquiry by the Local Land Board at Armidale, on the 20th January, 1888, I am directed to inform you that, under the report of the Board referred to, the Secretary for Lands has decided that the conditional purchase in question be disallowed, and that the case cannot be reopened.

Armidale, C.P., 87-91; 40 acres; 21st July, 1887; A. J. Hack.

I have, &c.,

F. H. WILSON

(For the Under Secretary).

O.H.M.S.

Advertised Unclaimed.

MR. A. J. HACK,

Sydney Coffee Palace Hotel Co.,

391, 393, 395, George-street,

Sydney.

Returned from 1 Coffee Palace.

Returned letter from No. 1 Coffee Palace by M. DAVIN.

Department of Lands,
Sydney, 23/2/88.

No. 40.

Mr. A. J. Hack to The Secretary for Lands.

Sir, Armidale, 6 March, 1888.

I have the honor to hand you, under separate cover herewith, seven statutory declarations by George Phillips, Neil O'Donnell, James Elliott, Christopher Allingham, William Harlow, Robert Brown, and Peter Daly, proving that the gold-mining lease applied for by Messrs. Thorne and party on the 29th July

July last (and embracing part of measured portion No. 113, parish of Cooney, Hillgrove Falls) was not in their occupation, pegged, or marked by them at the time sworn to by them before the Land Board here upon the inquiry held by the Board respecting our conflicting claims to the land.

Upon the 21st July last I made application at the local Lands Office to conditionally purchase the said measured portion 113 under the 47th section of the Crown Lands Act of 1884, and it was not until the 29th July, eight days subsequently to my application, that Thorne and party applied for the land as a gold-mining lease. In the first instance it was decided that my application for the land as additional conditional purchase was good, but upon representations subsequently made by Thorne and party to the Department, an inquiry was directed to be made by the Land Board here as to whether the land had been in occupation for gold-mining purposes by Messrs. Thorne and party prior to the date of my application for it.

Upon the hearing of that inquiry Messrs. Thorne and Gray (of Thorne and party) swore that they were in occupation of the land prior to my application, viz., on the 16th July, and that they had pegged it and held it under their miners' rights, but I entirely disbelieve this statement, as on several occasions, before the Warden and Local Land Board, when the whole matter of pegging was gone fully into (at which I was present), they never once mentioned any pegging out or possession previous to that of the 29th July last.

The declarants are persons who have been living in the immediate neighbourhood of the land for a considerable time past, and are well acquainted with the land and locality. At the inquiry I was taken completely by surprise by Thorne and party's evidence, or I should then have tendered the evidence contained in the declarations I forward herewith. I would most respectfully submit that upon the evidence which I have forwarded, it may be decided that Messrs. Thorne and party were not in occupation of this land until some eight days after my application, and I respectfully desire that my application may be finally confirmed and possession of the land given me as speedily as may conveniently be done, as I am suffering considerable loss and inconvenience through not being able to complete contracts entered into by me upon the decision given by you in my favour in the first instance.

I am, &c.,

A. J. HACK.

T.G., 17/3/88. May be forwarded to the Chairman of the Armidale Board, to be placed with the previous papers on the case.—W.H.C., 22/3/88. Yes.—F.H.W. (for the Under Secretary), 22/3/88. The Chairman, Local Land Board, Armidale.—F.H.W. (for the Under Secretary), B.C., 22/3/88. May be placed with other papers in the case.—S. BLYTHE, Chairman, 27/3/88.

[*Enclosures.*]

STATUTORY DECLARATION.

I, GEORGE PHILLIPS, of Hillgrove, near Armidale, in the Colony of New South Wales, miner, do hereby solemnly and sincerely declare as follows:—

1. That I have followed the occupation of mining for some years, and am well acquainted with mining work in all its branches.
2. I know portion No. 113, containing 40 acres, in the county of Sandon and parish of Cooney, applied for as a conditional purchase by one, A. J. Hack, in July last past.
3. I was on the said portion on the 4th day of August last past, and saw four men working thereon, whom I knew to be Edward McNamarra, Michael McNamarra, Alfred Argles, and Edward Thorne.
4. From the appearance of the ground and the quantity of mining work done by these men thereon at the said date, they could not have been working for more than three days, at the utmost.

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled, "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Subscribed and declared at Armidale, this 3rd day of March, 1888, before me,— GEORGE PHILLIPS.

GEO. ALLINGHAM, J.P.

STATUTORY DECLARATION.

I, NEIL O'DONNELL, of Hillgrove, in the Colony of New South Wales, miner, do hereby solemnly and sincerely declare as follows:—

1. I know portion No. 113, containing 40 acres, in the parish of Cooney and county of Sandon, taken up as a conditional purchase by A. J. Hack, on the 21st day of July last.
2. I was frequently on the said portion both immediately before and after the said 21st day of July, and I am certain that at that date there were no pegs of any description denoting occupation of the said land for mining purposes, nor were there any such, nor any work done thereon for some days after the aforesaid date.
3. I was on the said portion about the 30th July, and saw two men, one named W. Gray, and one whose proper name I do not know, at work thereon. From the appearance of the ground, and the quantity of work visible, these men could not have been working for more than a few hours. On this date I saw mining pegs distinctly visible on the land.

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Subscribed and declared at Armidale, this 3rd day of March, 1888, before me,— NEIL O'DONNELL.

JAMES M'LEAN, J.P.

STATUTORY DECLARATION.

I, JAMES ELLIOTT, of Hillgrove, in the Colony of New South Wales, miner, do hereby solemnly and sincerely declare as follows:—

1. I know portion No. 113, containing 40 acres, in the parish of Cooney and county of Sandon, taken up as a conditional purchase by A. J. Hack, on the 21st day of July last.
2. I was frequently on the said portion, both immediately before and after the said 21st day of July, and I am certain that at that date there were no pegs of any description denoting occupation of the said land for mining purposes, nor were there any such, nor any work done thereon for some days after the aforesaid date.

And

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Subscribed and declared at Armidale, this 3rd day of March, 1888, before me,— JAMES ELLIOTT.

JAMES M'LEAN, J.P.

STATUTORY DECLARATION.

I, CHRISTOPHER ALLINGHAM, of Hillgrove, near Armidale, in the Colony of New South Wales, miner, do hereby solemnly and sincerely declare as follows :—

1. That I know portion No. 113, containing 40 acres, in the county of Sandon and parish of Cooney, applied for as a conditional purchase by one A. J. Hack, on July last.
2. I was on the said portion on the 22nd day of July, and also on the 26th day of July, and on neither of these occasions did I see any mining pegs on the said portion, nor any of the usual indications of the said land, or a part thereof, having been taken up for mining purposes.
3. On the last-mentioned occasion, the 26th July, I went on to the said portion for the express purpose of looking for pegs, and as before mentioned, found none.

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Subscribed and declared at Armidale, this 5th day of March, 1888, before me,— C. ALLINGHAM.

A. CROSSMAN, J.P.

STATUTORY DECLARATION.

I, WILLIAM HARLOW, of Hillgrove, near Armidale, in the Colony of New South Wales, miner, do hereby solemnly and sincerely declare as follows :—

1. I know portion No. 113, in the county of Sandon and parish of Cooney, which has been taken up as a conditional purchase by A. J. Hack, in July last past.
2. I was frequently on the said portion, both immediately before and immediately after the 21st day of July last past, being there almost daily, and I never saw any mining pegs on the said land on the said dates, and I am positive there were none such erected upon the said portion until some days after the said 21st day of July.

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Subscribed and declared at Armidale, this 5th day of March, 1888, before me, the contents having been read over and explained to him, and he appearing to understand the same,— his WILLIAM x HARLOW. mark

JAMES M'LEAN, J.P.

Witness to mark,— J. A. GLASS.

STATUTORY DECLARATION.

I, ROBERT BROWN, of Hillgrove, near Armidale, in the Colony of New South Wales, miner, do hereby solemnly and sincerely declare as follows :—

1. That I know A. J. Hack's conditional purchase of 40 acres, portion No. 113, in the county of Sandon and parish of Cooney.
2. That on the 21st day of July last past there were no claims on the said portion, and if there had been any I would have seen them, for I was over and across the land every other day.

And I make this solemn declaration conscientiously believing the same to be true and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Subscribed and declared at Armidale, this 5th day of March, 1888, before me,— ROBERT BROWN.

GEO. ALLINGHAM, J.P.

STATUTORY DECLARATION.

I, PETER DALY, of Hillgrove, in the Colony of New South Wales, miner, do hereby solemnly and sincerely declare as follows :—

1. I know portion No. 113, containing 40 acres, in the county of Sandon and parish of Cooney, applied for as a conditional purchase by A. J. Hack in July last.
2. I was on the said portion on the 28th day of July, and saw two men prospecting thereon, whom I know to be Edward and Michael McNamara. They had only commenced work, and could not have been employed for more than half-an-hour at the outside. I saw no marks or mining-pegs of any description on the said portion on this date, although I made a careful search for any such.

And I make this solemn declaration conscientiously believing the same to be true and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Subscribed and declared at Armidale, this 3rd day of March, 1888, before me,— PETER DALY.

JAMES M'LEAN, J.P.

Mr. A. J. Hack to The Secretary for Lands.

Sir, Armidale, 20 March, 1888.

In addition to the declarations I had the honor to forward to you I now forward another by William Gordon Brereton *re* my application for a conditional purchase of 40 acres, county of Sandon, parish of Cooney.

I have, &c.,
A. J. HACK.

Put with other papers and submit.—T.G., 22/3/88.

[*Enclosure.*]

STATUTORY DECLARATION.

I, WILLIAM GORDON BRERETON, of Hillgrove, near Armidale, in the Colony of New South Wales, miner, do hereby solemnly and sincerely declare as follows :—

1. That I know portion No. 113, in the county of Sandon, parish of Metz, containing 40 acres, selected by A. J. Hack on 21st July, 1887.
2. Edward Thorne, of Hillgrove aforesaid, miner, was in my employment from the 13th to 26th days of July last past, and in constant work from daylight to dark on my grant, never leaving during working hours.
3. William Gray, of Hillgrove aforesaid, miner, was in my employment from the 13th to the 28th days of July last, and likewise never leaving work during working hours.
4. I was working between 50 and 60 yards away from the place on said portion 113, where the said William Gray and Edward Thorne deposed at the Local Land Court at Armidale, on the 20th January last, that they worked on the 16th July, and I am certain that had they or any other person been at work there on that date I must have seen them. Whereas no such persons or their work was observed by me.
5. It was after the said Edward Thorne and William Gray left my employment that any claims were pegged out on the said portion No. 113, so far as I am aware, and I had every opportunity of observing, as I was working constantly in close proximity to the said block, on my gold-mining lease.

And I make this solemn declaration conscientiously believing the same to be true and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Subscribed and declared at Armidale, this 19th day of March, 1888, before me,— W. G. BRERETON.

(For the Under Secretary).

Armidale, C.P., 87-91; 40 acres; A. J. Hack.

No. 49.

The Under Secretary for Mines to The Under Secretary for Lands.

Sir, Department of Mines, Sydney, 19 June, 1888.

I have the honor, by direction of the Secretary for Mines, to request that you will be so good as to favour me with the loan of all the papers having reference to conditional purchase No. 87-91 at Armidale by A. J. Hack. I have, &c.,

GERARD E. HERRING,
(For the Under Secretary).

C.P., 87-91; Armidale; 40 acres; A. J. Hack.

The Under Secretary for Mines was informed of the decision in the case on the 18th instant, a loan of the papers is however now applied for.—W.H.C., 27/6/88. The Under Secretary for Mines.—S.F. (for the Under Secretary), B.C., 27/6/88. To be returned.—Submitted.—H.W., 27/6/88. Seen.—F.A., 28/6/88. The Under Secretary for Lands.—G.E.H. (for the Under Secretary), B.C., 28/6/88.

No. 50.

Mr. A. J. Hack to The Minister for Mines.

Sir, 144, King-street, 25 June, 1888.

I beg to protest against any gold leases other than Brereton and Smith's being issued, in respect of my 40-acre block, conditional purchase, as it has been discovered that there are fully 40 acres within my boundaries, exclusive of the said Brereton and Smith's application, of which the Lands Department is now being made cognizant, Brereton and Smith being the only parties who might reasonably be supposed to have any rights to gold leases. All other parties applied long after I was in legal possession of my said conditional purchase, and it is with a view of avoiding long and expensive legal proceedings, which I am otherwise advised to take, that I respectfully enter this protest, which I hope may take effect until the matter is finally disposed of by the Lands Department.

I have, &c.,
A. J. HACK.

This might be sent to the Lands Department for their final opinion, *re* Hack's conditional purchase.—F.A., 25/6/88. The Under Secretary for Lands.—H.W., B.C., 25/6/88.

No. 51.

Messrs. Brett and Coghlan to The Under Secretary for Lands.

Sir, 19, Macquarie-place, Sydney, 30 June, 1888.

With reference to the conditional purchase, noted in the margin, we have the honor to submit the following, with the view of showing cause why the matter of granting to Hack the 40 acres should be reconsidered.

1. We contend that the only application lodged for any part of the land in question before Hack's was that of Brereton and Smith, and if their application was satisfied there would still be an area of over 40 acres left to meet Hack's application.
2. The statement of Thorne and party that they worked continuously on the land under reference is flatly contradicted by their employer at the time (W. G. Brereton).
3. One of the party of Thorne & Co. (Golding) did not, at the time of the alleged pegging, hold a miner's right.
4. As proof of the opinion held as to the *bona fides* of Hack's selection, Brereton and Smith, the only applicants before him, are willing to withdraw from that part of their lease, which overlaps portion 113, if such action on their part would assist Hack's claim, without prejudice to them as applicants for the lease.

Armidale, C.P. 87-91, A. J. Hack; 88-24,168 Dep.

See copy of telegram herewith, marked "A." See copy of evidence of Mr. L. S. Martyn, herewith, marked "B"; also copy of report by District Surveyor Finley.

See copy of W. G. Brereton's evidence herewith, marked "C," and his declaration, marked "E."

5.

See declaration of C. Allingham herewith marked "D."

5. Thorne and Gray, at an inquiry before the Warden, stated that they did not peg the land until after they left Brereton's employ, which would be about the 28th July, 1887 (seven days after Hack applied). This evidence was taken down at the Court, and the depositions signed, but they cannot now be traced. Hack is prepared to swear to this, having been present and being under examination at the time.

The foregoing statement of facts, which we are prepared to prove, will, we trust, show the justice and the necessity of having the case reopened, when we shall be prepared to answer any objection that may be brought forward.

We have, &c.,
BRETT AND COGHLAN.

Special. Register and submit with the papers.—C.O., 4/7/88. The Under Secretary.—W.H.C., 7/7/88.

As this case may be reopened, write to the Department of Mines with reference to former correspondence on the subject, and request that any action on mineral lease applications may be stayed for the present.—C.O., 10/7/88. Immediate. Done.—10/7/88.

A.

Telegram to Henry T. Makin, Clerk-in-charge, Local Land Board.

I THINK it will only be necessary to summon Brereton and party, as from report of District Surveyor the applications from others were subsequent to the date of Hack's. By all means notifiy Mr. Hogarth to attend.

SYDNEY BLYTHE,
Chairman, Local Land Board.

B.

Examined by Mr. M'Donald, solicitor: This witness, who being duly sworn on oath, states:—My name is *John Griffin Martin*, licensed surveyor in Armidale; some years ago I made a survey of portion 113 in parish Cooney; I made the survey in the last week in January, 1882; it was a portion of 40 acres; the actual measurement is 40 acres 2 roods 24 perches; I have not been on the ground since for the purpose of measuring any encroachment, as shown on plan marked "A"; I have refreshed my memory by my field-book with regard to the above fact.

By Mr. Forster, solicitor: Assuming five men's land were taken out of the land, 300 x 200 feet, it would be 1 acre 1 rood 16 perches; if that area were taken out there would not be 40 acres in measured portion 113.

By Mr. M'Donald solicitor: I am quite sure that there would be 1 acre 1 rood and 16 perches to be deducted from area.

By the Board: It is usual on frontage blocks to omit the roods and perches in writing the area on the plan.

Sworn at Armidale, this 20th day of January, 1888, before us,— } JOHN G. MARTYN.

SYDNEY BLYTHE, J.P., Chairman.
C. E. SMITH, P.M.

A. J. Hack's conditional purchase, 87–91, 21st July, 1887.

Sir, District Survey Office, Armidale, 27 December, 1887.

Since forwarding you my report dated 30th August, 1887, No. 167, on the above conditional purchase, for preliminary hearing at your Court on the 1st September, 1887, several circumstances have arisen which present apparent objections to the immediate confirmation of the conditional purchase, and I now have the honor to draw your attention to them.

A. J. Hack's application was lodged on the 21st July, 1887, but there was an application by Brereton and Smith for an 8-acre gold lease, No. 166, of prior date, in existence, viz., of 30th April, 1887. Hack's conditional purchase encroaches on this lease. There is also an application by Thorne & Co. for a 10-acre gold lease, No. 169, which encroaches on Hack's conditional purchase, but it is of a later date, viz., 8th August, 1887. These two gold leases conflicted, and I believe the dispute has been before the Warden, who has recommended certain boundaries. There is still a third conflicting claim to the land by Hanlon & Co., for a 4-acre gold lease, but this is also of a more recent date than the conditional purchase, viz., 22nd September, 1887.

At the time of application Hack's conditional purchase was a measured portion, No. 113, of 40 acres.

All the gold leases, which encroach on, or conflict with, the conditional purchase, have only recently been surveyed, and at the date of my first report to you it was impossible to locate them, nor was their position known, so that no mention was made of them.

In fact, after survey it could not be done until a surveyor was sent from this Department to define the relative positions of the leases and the conditional purchases.

From the foregoing it is clear that the only claim which can stand against Hack's conditional purchase, is gold lease No. 166, Brereton and Smith's. This lease is of prior date, all other leases are of more recent date. The area excised from Hack's conditional purchase is clearly shown on the accompanying plan, as also are all other encroachments. According to the boundaries claimed by Brereton and Smith, and as surveyed to him. The extent of the encroachment is about 32 perches, but according to the recommendation by the Warden, consequent on dispute between Brereton and Smith and Thorne & Co., the encroachment is only about 8 perches, a very small area.

In either case the surplus area in the portion will admit of the encroachment, and still leave a residue of 40 acres.

The following questions arise:—

1. Will not a subdivision of portion 113 be necessary, and Hack called upon to pay a subdivision fee in terms of the 55th section of the Act?

2. Or does the fact of the land being a measured portion of 40 acres, and there being only a residue of such portion, invalidate Hack's claim, or can the adjustment suggested in question 1 be made in terms of the 58th section of the Act?

I have, &c.,
F. G. FINLEY,
District Surveyor.

The Chairman, Local Land Board, Armidale.

Enclosure. Plan showing conflicting applications. Plan showing encroachments. Memo. and tracing showing Mr. Surveyor Hogarth's connection survey.

C.

W. G. BRERETON *recalled by Mr. M'Donald, solicitor:* Gray left off working for me on the 28th July, 1887, and Thorne on the 26th; they have been working for me a little over a fortnight; they worked from half-past seven to five at night, with an hour for their dinner; all I know is, that they pegged on to our ground, and outside of portion 113 altogether, and they might have pegged inside altogether.

By Mr. Forster, solicitor: They just worked eight and a half hours; there was a little wet weather during the time they worked for me; Thorne worked only for about an hour the first day he worked for me; I made the note of the payment in my book on the 26th July, 1887; they told me they were going to leave, as they had found some ground; I did not make a note of this.

Sworn at Armidale, this 20th day of December, 1888, before us,— W. G. BRERETON.

SYDNEY BLYTHE, J.P., Chairman.
C. E. SMITH, P.M.

D.

STATUTORY DECLARATION.

I, CHRISTOPHER ALLINGHAM, of Hillgrove Falls, near Armidale, in the Colony of New South Wales, miner, do hereby solemnly and sincerely declare as follows:—

1. On or about the 24th day of August last, I gave evidence in the Warden's Court at Armidale, at the hearing of the objections made by Alfred James Hack against an application by Edward Thorne and party for a gold lease at Hillgrove Falls aforesaid. My evidence on that occasion was taken down by the Warden's clerk in writing, and after he had finished doing so, I signed my name to the depositions.
2. On the same occasion I heard evidence given in like manner by Alfred James Hack, Edward Thorne, and Edward McNamara, witnesses in the matter then before the Court, and saw them, as I believe, severally sign their depositions.
3. On the 26th day of July last I was on portion 113, in the parish of Metz, or Cooney, and on leaving the said portion I met the said Edward M'Namara, a man named Edwards, and Edward Thorne; the said Edward Thorne was then going on the said portion 113. He had a pick in his hand, and the said Edward McNamara said to him (Thorne), "Take care you are not prospecting for other people," Thorne replied, "Oh, I'll chance that," and proceeded on to the said land.
4. I was upon the said portion No. 113 almost every day between the 21st and the 26th days of July last, searching and prospecting on the eastern half of the said portion, and I am positive that there were no pegs on the said land marking out five men's ground, as alleged by the said Edward Thorne and one William Gray, the mate of the said Edward Thorne.

And I make this solemn declaration, conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Subscribed and declared at Armidale, this 23rd day of January, 1888, before me,— C. ALLINGHAM.

A. RICHARDSON, J.P.

E.

STATUTORY DECLARATION.

I, WILLIAM GORDON BRERETON, of Hillgrove, near Armidale, in the Colony of New South Wales, miner, do hereby solemnly and sincerely declare as follows:—

1. That I know portion No. 113 in the county Sandon, and parish of Metz, containing 40 acres, selected by A. J. Hack on 21st of July, 1887.
2. Edward Thorne of Hillgrove, aforesaid, miner, was in my employmont from the 13th to 26th days of July last past, and in constant work from daylight to dark on my ground, never leaving it during working hours.
3. William Gray, of Hillgrove, aforesaid, miner, was in my employment from the 13th to the 28th days of July last, and likewise never leaving work during working hours.
4. I was working between 50 and 60 yards away from the place on said portion 113, where the said William Gray and Edward Thorne deposed at the Local Land Court at Armidale on the 20th January last that they worked on the 16th July, and I am certain that had they or any other person been at work there on that date I must have seen them, whereas no such persons or their works was observed by me.
5. It was after the said Edward Thorne and William Gray left my employment that any claims were pegged out on the said portion 113 so far as I am aware, and I had every opportunity of observing, as I was working constantly in close proximity to the said block on my gold mining lease.

And

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled, "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of extra-judicial Oaths and Affidavits."

Subscribed and declared at Armidale, this 19th day of March, 1888, before me,— } W. G. BRERETON.

JOHN A. MACDONALD, Notary Public, Armidale.

No. 52.

Memo. by The Under Secretary for Lands.

UPON the 22nd February last it was decided that this case should not be reopened, but in view of the statements contained in the letter from Messrs. Brett and Coghlan, on behalf of Mr. Hack, it is a matter for consideration whether the further inquiry should not be granted. If the representations are well founded, the case would appear not to have been fully before the Board, and for this reason a rehearing is desirable. Against this view it could be urged that Mr. Hack should at the inquiries already held have adduced the evidence he now desires to put forward, but taking into consideration all the circumstances of the case, and the alleged great value of the land, it may be deemed prudent to grant a further inquiry. With regard however to Brereton and Smith being willing to amend their lease application, it should not be permitted, as this may be the results of an arrangement between them and Mr. Hack in order to defeat the claims of others. Should the reinquiry be granted, the result will be the same as that which followed the previous inquiry unless the further evidence it is alleged can be brought forward demands a different finding, and if this should be so, justice only will be done in the matter.

C. O., 7/7/88.

The foregoing recommendation approved.—H.P., 27/7/88. Inform the parties and Department of Mines, and then refer to the Chairman of the Local Land Board.—C.O., 27/7/88. Brett and Coghlan and Under Secretary for Mines informed, 31/7/88.

The Chairman, Local Land Board, Armidale.—F.H.W. (for the under Secretary), B.C., 31/7/88.

No. 53.

The Under Secretary for Lands to Messrs. Brett and Coghlan.

Gentlemen, Department of Lands, Sydney, 31 July, 1888.

Armidale C.P. 87-91, A. J. Hack.

Referring to your letter of the 30th ultimo, I have the honor to inform you that the papers relating to the conditional purchase noted in the margin are about to be forwarded to the Chairman of the Local Land Board for further inquiry.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

No. 54.

The Under Secretary for Lands to The Under Secretary for Mines.

Sir, Department of Lands, Sydney, 31 July, 1888.

Armidale. C.P 87-91, 40 acres. A. J. Hack.

Referring to your letter of the 19th ultimo (88-3,859), I have the honor to inform you that the papers relating to the conditional purchase noted in the margin, are about to be forwarded to the Chairman of the Local Land Board for further inquiry.

I have, &c.,
F. H. WILSON
(For the Under Secretary).

No. 55.

Mr. Mining-Surveyor Sullivan to The Chairman, Land Board, Armidale.

Sir, Camp, 17 August, 1888.

In accordance with your request, I have the honor to transmit herewith a tracing showing portion 113, parish of Metz, county of Sandon, together with all the gold leases which encroach upon it.

Trusting that my sketch may give you all the information required,

I have, &c.,
H. B. SULLIVAN,
Mining Surveyor.

No. 56.

The Chairman, Land Board, Armidale, to The Under Secretary for Lands.

Sir, Local Land Board Office, Armidale, 18 August, 1888.

I do myself the honor to return herewith all the papers in connection with the conditional purchase of A. J. Hack, 87-91, 40 acres, which were received here on 2nd instant, for a further inquiry to be instituted. I may here state such further inquiry could not have taken place since receipt of papers, owing to absence of members of the Board.

My reason for now returning the papers is that the matter may be reconsidered, in view of the tremendous conflicting interests that have arisen since the Minister for Lands gave his last decision that he would not reopen the case, although statutory declarations were forwarded that former evidence was wrong.

Having

Having understood that much of this land had been applied for as gold leases, and parties there in full work, I applied to Mr. Sullivan, mining surveyor, for a tracing of the land applied for as gold leases within the said portion, No. 113, and beg to enclose his letter covering tracing containing the names of all the applicants for leases by which it will be seen that fifteen leases are located wholly or in part on this portion.

If it is decided that the inquiry into Hack's claim to the lands should still go on, I presume it will be necessary at once to notify the same to all the applicants for lease.

I have, &c.,
SYDNEY BLYTHE,
Chairman.

Although a number of leases have been applied for, it would appear that the safest course to pursue will be to permit the further inquiry to proceed; indeed, the greater the conflict of interest the more necessity for the fullest possible inquiry.—C.O., 22/8/88.

Approved.—H.P., 30/8/88.

No. 57.

Office Memorandum.

THE enclosed papers referring to the conditional purchase quoted in the margin, are now returned to the Chairman of the Local Land Board, Armidale, whose attention is directed to the Minister's minute of yesterday's date as to a further inquiry being held regarding the land in question.

88-31,436 D. C.P., 87-91, Armidale. A. J. Hack.

F. H. W.
(For the Under Secretary.)

B.C., 31/8/88.

Notice to A. J. Hack to attend Court, Armidale, 18/12/88; posted 15/11/88.

No. 58.

Petition from the Miners of Hillgrove.

To the Honorable the Minister for Lands—

Sir,

We, the undersigned humble petitioners, being *bonâ fide* miners, do petition and pray that the conditional purchase No. 113, county of Sandon, parish of Metz, applied for by A. J. Hack, be not granted, as, in the first place, part of such land was applied for as a gold-mining lease previous to A. J. Hack's application; and, furthermore, we believe that there is not the requisite area, viz., 40 acres in the said portion to enable him to take it up as a conditional purchase; and we, your humble petitioners, as in duty bound, will ever pray.

M. McNAMARA, miner, Hillgrove.
E. McNAMARA, miner, Hillgrove.
W. H. COOPER, miner, Hillgrove.

[And 71 others.]

Memorandum attached to Petition.

WE must also state that this block 113 has all been paid for and measured for gold leases in 5 and 10-acre blocks, and some two or three blocks a good deal of money has been spent in sinking and tunnelling. This block 113 is also unfit for agricultural or grazing purposes. Trusting that you will do your best to set this matter right.

We remain, &c.,
MINERS, Hillgrove.

No. 59.

The Under Secretary for Mines to The Under Secretary for Lands.

Sir,

Department of Mines, Sydney, 11 December, 1888.

I have the honor to request that you will be good enough to state if the conditional purchase noted in the margin has been finally settled.

Armidale, C.P. 87-91 40 acres. A. J. Hack.

I have, &c.,
GERARD E. HERRING
(For the Under Secretary).

Papers 88-31,436 D, noted to L.B., Armidale, for inquiry, 31/8/88. Papers 88-37,687 D, noted to Mines, 11/10/88.—J.P.M., 17/12/88. Mr. Capper. Mr. M'Guanne,—Please give subject matter of above quoted papers.—W.H.C., 4/1/87. 88-37,686 D is a communication from the Mines Department, forwarding letter from Brett and Coghlan, withdrawing opposition to mineral lease being issued. Paper still under reference to Mines Department, under B.C., 11/10/88.—J.P.M., 5/1/88.

No. 60.

Caption to Deposition of Witnesses.

Crown Lands Act of 1884—(Part II, section 14, subsection 1).

New South Wales, } to wit. }

THE examination of Alfred James Hack, of Hillgrove, in the Colony of New South Wales, selector; John Griffin Martyn, of Armidale; Walker Warner, of Armidale; Mordaunt Alister Maclean, of Armidale; Edward Thorne, of Hillgrove; William Gray, of Hillgrove; Edward McNamara, of Hillgrove; Martin Brislane, of Hillgrove; and Michael McNamara, of Hillgrove, in the said Colony.

WHEREAS it became a matter for inquiry as to whether the land applied for by Alfred James Hack on the 21st July, 1887, at Armidale, as a conditional purchase, No. 87-91, of 40 acres, county Sandon, parish Cooney, was available at date of application, and it hath been found necessary to investigate the said matter on oath, the depositions of the several witnesses are appended hereto.

26

Crown Lands Act of 1884—(Part II, section 14, subsection 1).

Caption to Deposition of Witnesses.

New South Wales, }
to wit. }

THE examination of James William Metcalfe, of Hillgrove, in the Colony of New South Wales, miner; John Moore, of Armidale; William Gordon Brereton, of Hillgrove; Peter Dale, of Hillgrove; John James M'Neill, of Hillgrove; George Burton, of Hillgrove; Christopher Allingham, of Hillgrove; George Phillips, of Hillgrove; William Harlow, of Hillgrove; Robert Brown, of Hillgrove; Neil O'Donnell, of Hillgrove; and John Michael Sheahan, of Armidale, in the said Colony.

WHEREAS it became a matter for inquiry as to whether the land applied for by Alfred James Hack on the 21st July, 1887, at Armidale, as conditional purchase, No. 87-91, of 40 acres, county Sandon, parish Cooney, was available at date of application, and it hath been found necessary to investigate the said matter on oath, the depositions of the several witnesses are appended hereto.

[*Enclosure.*]

Local Land Board Meeting, Armidale, 18th, 19th, 21st, and 22nd December, 1888.

Case of Alfred James Hack, C.P. 87-91, 21st July, 1887, Armidale, 40 acres, 47th section, county Sandon, parish Cooney.

Members of Board:—F. G. Finley, Esq., J.P., Acting Chairman, C. E. Smith, Esq., P.M., Member.

Solicitors:—Messrs. M'Donald and Kearney appeared on behalf of A J. Hack; Messrs. Simpson and Forster appeared on behalf of Thorne and party.

Examined by Mr. M'Donald, solicitor: This deponent, being duly sworn, on oath, saith as follows:—My name is *Alfred James Hack;* I was the applicant on the 21st July, 1887, for a non-residential selection of 40 acres, county Sandon, parish Cooney; I was over the age of 21 years when I applied for the land; I paid the deposit required by law on that land before I selected it; I was on the land the day before; I examined the plans at the Lands Office and found it was open to selection; I believe there was no one in occupation the day before when I was there; I went on to the creek on the 20th July, 1887, and on to the land, and as far as I could know there was no one there; I have seen the place since several times that Thorne and party pegged out; I was at the very place on the 20th July, 1887; I know that they allege that they had, prior to that date, pegged out claims on portion 113; I saw that part of portion 113, and I am certain that no one was there; I know that to be a portion of the land they claim on portion 113; I also know portion 113 by the marked trees on the creek; I saw the marked tree that morning, and I know that the workings of Thorne and party are within the boundaries of portion 113; I did not notice any pegs belonging to any person on portion 113 on the 20th July, 1887; I went to the land with the object of taking up this land as a conditional purchase the next day, and I searched it very carefully; I went on to the ground after I heard that something had been found there; I sent Christopher Allingham to see the ground the day after I took it up; I have been on the land since the date of my application, but have not interfered with it in any way; I served Thorne and party with a notice, and protested against anyone being in occupation.

Examined by Mr. Simpson, solicitor: I have not interfered with the land in any way, except serving the notice; I know portion 113, and what it contains, and I applied for 40 acres; the description is in my application; I went over one portion of this land along the creek carefully, and I did not see any pegs; I do not know that Smith and Brereton had any pegs on portion 113 at that time; I have never heard that Smith and Brereton had pegs on portion 113; I know that Brereton and Smith's lease embraces a portion of 113; I have not measured the encroachment; I recollect a dispute between Thorne and party and Brereton; I may have been in Court or I may not; the dispute was about Brereton's southern boundary; I know nothing of the dispute of my own knowledge; I am aware that Brereton and Smith have written to the Minister for Mines to have a pre-lease excised from portion 113; looking at a plan marked "A," and the dotted line thereon, I am aware that he wanted the corner of portion excised; I took this portion of 40 acres, No. 113, as a conditional purchase on the 21st July, 1887, as a non-residential selection; this 40 acres is on a place called the Falls; I do not know the depth, but of my knowledge it is of some considerable distance; this portion extends from the top to the bottom of the Falls; I have not sworn that I took it up as a business site; I took up the land as a conditional purchase, knowing it to be open for selection; I did not take this up for auriferous purposes; I have applied for a permit to work this after I knew that others had proved the ground to be auriferous; it was some considerable time after I made application that I applied for a permit; I think it was made about December, but I could not say, as it was made by a firm of solicitors in Sydney; before I took up this selection I had not been on the ground with any particular purpose, and had never prospected it; I have no knowledge that the ground was being prospected by Thorne and Gray; I have heard that there are several applications for lease on portion 113; I have seen marked trees on the ground, and have heard that it was surveyed for leases; I have not given the other applicants for gold lease notice except Thorne and party, but I did lodge a protest at the Mines Department against the granting of gold leases; it was not long after I made this application that I gave Thorne and party notice; I know Thorne and party's lease is surveyed, but cannot remember when.

By the Board: I know the position of the workings of Thorne and party; I am not aware that Thorne and party pegged out any portion in virtue of their miners' rights on portion 113; I was not aware when I took up the land that Brereton's lease encroached on portion 113; I know now that Brereton's lease does encroach on this portion, but cannot state the exact area.

By Mr. M'Donald, solicitor: I am aware that the encroachment of Brereton's does not reduce the area less than 40 acres; I am aware that all other applications for lease, except Brereton's, were subsequent to my application for conditional purchase; the first time I heard of Thorne and party's miners' rights claim was when the case was before the Board in January last; it was then stated by Thorne and Gray before the Land Board; I was in the Court before the Warden in August last year when their lease was dealt with, and I lodged an objection against Thorne and party's lease in August last year; on that occasion I appeared in support of my objection, and I cross-examined Thorne; on that occasion they did not mention one word about their having pegged out under miners' rights; they then swore to pegging out their lease application on the 29th July, 1887, and added that they had proved the ground to be auriferous some time before they pegged it out; I asked him if it was a usual thing for a miner who had found a payable reef to allow so long a time to elapse before pegging it out, and he said, "No, it is not usual; but I was working for Brereton at the time I found the gold."

Examined by Mr. Simpson: I did not follow the line of Brereton's lease on the 20th July, 1887, on the other side of the creek, but I looked along the line in the direction of the trench, and that went as fair as possible to the marked tree; I did not see the blazed trees.

Sworn at Armidale, this 18th day of December, 1888, before us,— } A. J. HACK.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. M'Donald: This witness, being duly sworn, on oath, states:—My name is *John Gubben Martyn;* I am a licensed surveyor residing in Armidale; I made the original survey of portion 113, parish Cooney, the land which is the subject of inquiry; I surveyed it on the 1st February, 1882; I measured the block as 40 acres; but it is a fact that the area included in the boundaries of my survey was 40 acres 3 roods and 20 perches; in frontage blocks we are allowed a margin; the roods and perches are always omitted from the plan in accordance with the regulations; that block fronted to Baker's Creek.

Cross-examined by Mr. Simpson: My survey was given as 40 acres 3 roods and 20 perches, but I called it 40 acres, as allowed in regulations; I have gone over my former calculations; I find it to be 40 acres 3 roods 20 perches, not 40 acres 2 roods 24 perches; I do not know any of the circumstances in connection with Hack's application; if five men's

ground

ground as a mineral lease were taken out of the portion 300 x 200, it would be under 40 acres; I do not know anything of an application by Brereton and Smith for a portion of this land looking at the plan A; I see Brereton and Smith's application for gold lease 166, 30th April, 1887, and that would take in a portion of 113; I cannot say how much the fixed blue or dotted blue line would embrace of portion 113.

By the Board: The area in excess is inside the portion 113, a marked tree stands on the corner of the portion, and there is no peg.

By Mr. M'Donald, solicitor: The tree stands at the north-east corner.

Sworn at Armidale, this 18th day of December, 1888, before us,— JOHN G. MARTYN.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. M'Donald: This witness, being duly sworn, on oath, states:—My name is *Walter Warner*, licensed surveyor, living in this district; I made a survey on the morning of the 20th January, 1888, upon portion 113, parish Cooney; looking at the plan A, I made a survey of the dotted blue line, which shows the encroachment of Brereton and Smith's lease application; I found the area of that encroachment to be about 12 perches; that is gold lease 166; I also estimated the encroachment shown by the firm blue line by calculation, and found it in area to be a little over a quarter of an acre; I found the tree on the corner of portion 113. 12 perches.

Cross-examined by Mr. Simpson: I did not put the chain over the firm blue line, and I did not survey the original portion 113; I did not see a peg on the corner of portion 113; it was a tree there; I do not remember seeing any pegs on portion 113; I took my line from the marked tree at the north-east corner.

By the Board: I cannot remember having seen any pegs on the ground.

Sworn at Armidale, this 18th day of December, 1888, before us,— WALTER WARNER.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. M'Donald: This deponent being duly sworn, maketh oath, and saith as follows:—My name is *Mordaunt Alister Maclean*, draftsman in the District Survey Office, Armidale, looking at the map of the parish of Cooney from the District Survey Office, Armidale, I observe portion 113 of 40 acres; on the 21st July, 1887, portion 113 was not within the Guyra River Gold-field Reserve; at that time the land appeared as open for selection; I am aware a gold-field has been gazetted on the 30th August, 1887; and portion 113 is within the boundaries of that proclamation; prior to the date of proclamation, portion 113, had been applied for as a conditional purchase by A. J. Hack.

Cross-examined by Mr. Simpson: No portion of this portion 113, prior to 30th August, 1887, formed part of a gold-field reserve or any other reserve as far as the records show.

Cross-examined by Mr. M'Donald: I am aware the land adjoined water reserve 1,393A.

Cross-examined by Mr. Simpson: It appears by this plan that portion 113 was Crown land at the date of application by Hack; a measured portion.

Sworn at Armidale, this 18th day of December, 1888, before us,— M. A. MACLEAN.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. Simpson: This witness, being duly sworn, on oath, states:—My name is *Edward Thorne*; I am a gold-miner; and I have got a miner's right, and had a miner's right for last year, 1887; I know measured portion 113, of 40 acres, county Sandon, parish Cooney; I know the marked tree at the north-east corner; I applied for a lease of portion of this portion 113, under the name of Thorne and party; I cannot remember when I pegged this out as a gold lease; I took possession under my miner's right on the 16th July, 1887, and pegged it out; Gray and I were present on that occasion; we then pegged out six men's ground; there was myself, Gray, Leslie, Golding, and Emerson; this was all there were, so there was only five men's ground; the area of the land pegged out was, I believe, 60 x 60, but I can hardly remember what we pegged out; the land we pegged out was down the falls just over the creek, a portion of it was on measured portion 113; when we pegged it out we worked it every day; the other four men did not work at the time we pegged it out; two of us worked the land on the day we pegged it out, the others worked it a day or two after we took it up; I found a reef there the same day as we pegged it out; there was more than one reef on the ground; there were two reefs; we have been in possession working this as a gold lease, and are working this up to the present time; the land we pegged out under our miners' rights was embraced entirely within the gold lease; we applied for a 10-acre gold lease; McNamara and myself pegged out the gold lease; I think both the McNamaras were there on the land at the time of pegging out the gold lease; I made the lockspits in accordance with the regulations, put pegs up.

Cross-examined by Mr. M'Donald: I do not recollect the date I pegged the gold lease, but I do recollect the date of my pegging out under my miner's right, because I noted it down at the time; Gray and I pegged it out on a Saturday between 2 and 3 o'clock in the afternoon, and we worked on it that day; I do not know the day the others worked on the land; I would not swear that they worked on it within ten days; I remember giving evidence before the Land Court in January last; I say that some of the others worked on the land; it is not true that some of the men were never on the ground at that time; they were all there at different times; I do not recollect swearing in January last that Leslie never worked on the ground or was there at all; Leslie had no interest in it after we applied for the lease; neither had Golding or Emerson; I cannot say whether these three men worked on the land; I worked on the land every day, including the 16th, and since I was in Mr. Brereton's employment at that time, and I worked for Mr. Brereton about a week after the 16th; my working hours were eight hours a day, from 7 a.m. to 3 p.m.; I could not say when I left Brereton; it might have been a week after the 16th; I will swear I worked two hours a day on the land during the time I was in Brereton's employ, and my mates worked with me sometimes; Gray and I worked regularly; that is Gray came sometimes; Gray was in Mr. Brereton's employment; I cannot say how many times Gray worked there; I cannot remember if any of the others worked there; a portion of the ground I pegged out as a quartz claim was on portion 113; the reef is on the north-east side of our 10 acres, and in pegging out we pegged out along the reef, making the reef as near as possible the centre; there would not be much of our quartz claim on portion 113; I cannot say if there was as much as half our claim on portion 113; I recollect giving evidence before the Warden in August last year, when Mr. Hack objected to our claim; I do not remember saying that we found the reef on portion 113 about a week before my pegging it out on the 29th July, 1887; we pegged it out as soon as we found it; I would not swear that I did not say in reply to Mr. Hack, "I did not peg it out sooner, because I was in the employ of Mr. Brereton"; I did not register the claim I pegged out on the 16th July with the Warden's Clerk; I have been mining for about twelve years; I have been mining in this Colony for about three years; I produce a note-book, with a note in it, that I pegged out the land on the 16th July; I made the note in my book on the 16th July; I do not know how long I have had the book; I was working on a reserve at Tilbuster before going out to Hillgrove.

Sworn at Armidale, this 18th day of December, 1888, before us,— E. THORNE.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. Simpson: This deponent being duly sworn, on oath, states:—My name is *William Gray*; I am a gold-miner, residing at Hillgrove; I hold a miner's right, and did hold one for last year, 1887; I am a partner in the firm of Thorne and party; I know block 113, county Sandon, parish Cooney; I know the north-east corner of that portion; there is a peg and a tree marked at the north-east corner; the peg represents two parties, one Thorne and party, and the other Hanlon; that is about 10 or 12 links from where the tree is marked; the corner I refer to is the corner of a gold lease,

lease, and I also know where the corner tree stands on the corner of portion 113; I know the lower portion of 113, that is near the creek; I pegged out a claim on this portion with Thorne the last witness; we pegged it out on Saturday the 16th July, 1887; nobody else was with us when we pegged it out; we pegged out five men's ground along the line of reef; looking at the plan, marked "A," all the claim was pegged out, the biggest part of it on portion 113; we pegged out about 300 feet along the line of reef by 200 feet; when we pegged it out on Saturday afternoon, we worked on it the rest of the afternoon, that is Thorne and I; the names of the five men were, Thorne, Gray, Emerson, Golding, and Leslie; after the 16th July, Thorne and I were working there every day after I had done my work for Mr. Brereton; I worked for Mr. Brereton eight hours a day, and the rest of the day, sometimes two, three, and four hours, I worked on my claim; Thorne was with me, but the other parties were not with us on all occasions; some of the others worked a little on the ground, but Thorne and I did the principal part of the work; we found the one reef on the land on the 16th July; when we pegged it out; the other reef we found about the 23rd or 24th July; that was the second reef; we applied for a lease on the 29th July; we had a disagreement with some of our party, and we applied for a 10-acre lease in the name of another party; Thorne and I were still in the lease; we took in the two McNamaras, Argles, and Edwards; this application was formed in the name of six parties, and we have been in possession ever since; looking at the plan "A," the dotted blue line represents the line between us and Brereton; Brereton then claimed the firm blue line, and claimed that firm blue line up to August, 1887, I think; that firm blue line would embrace a great deal more land of portion 113 than the broken blue line; we had notice about trespass on this land about three or four weeks after we took up this land; the notice was that we were trespassing on Mr. Hack's freehold, or something to that effect; this lease we have measured to us, and this lease embraces the whole of the land we took up under miners' rights; Golding did not do much on this ground after the 16th July; he was there several times; I knocked off work for Brereton about the 27th or 28th July, 1887; our datum post for the lease is on portion 113.

Cross-examined by Mr. M'Donald: I used to work for Mr. Brereton between 7·30 a.m. and 5 p.m.; it was dusk at 5 o'clock at that time; we had our hour for meals, and worked for eight hours; we worked with a candle on our lease; Thorne and I used to go after we had done our work for Brereton: we did not work always together; we did not knock off work always at the same time; I do not know what date Thorne left Mr. Brereton; we have worked every day on our claim, and up to the present date; I know a man named M'Neill; he was not working with us; he was working at Brereton's at the same time, and was not camped with me; I am a married man; I do not think he was camped with Thorne; we were camped close together; we were mates, and used to converse in the evenings; M'Neill asked me for a share in the land, or, in other words, asked me if I could give him a show, but he did not say where; when M'Neill came back from Armidale, on the 23rd or 24th July, I told him we had found the reef, but I cannot swear to the exact date; I cannot swear that he returned on the Monday; M'Neill never worked with me at all; Thorne was with me when I pegged out the land on the 16th July; it was in the afternoon; I gave evidence here before the Land Court in January last, and on that occasion I said that we pegged it out in the afternoon; I stuck in pegs and made trenches in assisting to peg out the land; the pegs we put in were about 3 or 4 feet high and 3 inches square; in putting in the pegs under our miners' rights we started at the nort-east corner of portion 113, about 8 or 9 links from the tree marked 113; we then went 200 feet south-westerly along the creek, and then about 300 feet north-westerly, and then across the reef again to the point of commencement; the reef is nearer the north-eastern boundary of our gold lease than the south-western boundary; we paced the distance along the creek, but did not measure it exactly; the pegs we put in to mark the ground are not there now; since it was surveyed as a lease, more than six months ago; the pegs we put in as a miner's right were there when we gave evidence before the Land Board last time, and the datum peg of the quartz claim, put in on the 16th July, is within a few links of the corner of portion 113, and was standing at the time when I gave evidence before the Land Board in January last; the datum peg for gold lease and miner's right is identical, and it was big enough for anyone to see at that date; we pegged fresh for a gold lease on the 29th July, and started from the same peg, but put in other pegs for the other corners; it is not a fact that we would not have Golding in the party for the lease application because he had not a miner's right; I was not aware that Golding had not a miner's right; we never registered our claim with the Warden's Clerk; we were prospecting it, and did not know that it was applied for as a conditional purchase; there was no gold in the first reef that we found on the 16th July, but there was gold in the one we found on the 23rd July; Emerson, Golding, and Leslie worked on the land at odd times; I will swear that Leslie worked on the ground, but I do not remember whether he worked on it while we held it under miner's right; I did not sign a petition to the Minister, asking for a refusal of Hack's conditional purchase, as there was a large amount of machinery on the land; there is some machinery on the land, but I cannot swear whether it is on the land or just off it; we have had it there since March last.

Cross-examined by Mr. Simpson: We have had the machinery on the land since about two months after we took the land up.

Cross-examined by Mr. M'Donald: I was not here when the objection of A. J. Hack, lodged against Thorne's lease, was heard before the Warden in August, 1887; when I said, in answer to you, a little while ago, M'Neill and I were talking about selections, I had one at Bathurst, I made a mistake, as we were not talking about selections.

Sworn, at Armidale, this 18th day of January, 1887, before us,— WILLIAM GRAY.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. Simpson: This witness, being duly sworn, on oath, states:—My name is *Edward McNamara*; I am a miner, residing at Hillgrove; I am one of the parties in the firm of Thorne and party, and applicants for a lease of 10 acres; I know portion 113, parish Cooney, that Hack selected, subject of this inquiry; our lease embraces some portion of this portion 113; we gave notice of intention to apply for this lease on the 29th July, 1887; before we applied for this lease we had occasion to visit the ground; I was taken there on the 25th July by Gray and Thorne; I saw that they had opened a small leader on the ground; I saw that work had been performed on the ground; they asked me over to see the reef that they (Thorne and Gray) had found, and they said they had no money to work it; I inspected the ground, and I saw the pegs myself; looking at the plan "A," I point out where there was a peg about half a chain from the tree marked 113; south of that about 300 feet I saw another peg, and north-west about 300 feet I saw another peg; I saw another peg north-east of portion 169; all this evidence about the pegs refers to the quartz claim that I saw on the 25th July; previous to the 23rd July I saw two pegs close to the creek; on the 29th July, 1887, we applied for a lease, and we have been working on the ground ever since; we had a small two-head battery there; there was a dispute between our boundary and Brereton's boundary; that is our northern boundary and Brereton's southern boundary; there was about and acre in dispute between Thorne and party and Brereton; there would be half an acre of the portion in dispute in portion 113; I got a notice from Mr. A. J. Hack, on or about the 3rd August, claiming the land; the day before I got the notice I saw Hack, and on that occasion he said, "Chaps, I do not know whether you are working on the ground claimed by me or not; if you are I certainly will have to object to you"; Hack never said anything then about his corner pegs, and I have received no notice whatever, excepting what I have already mentioned; I helped to peg out the lease on the 29th July; I am the holder of a miner's right, and held one in 1887.

Cross-examined by Mr. Kearney: I had no interest in the miners' rights until the 25th July; I worked mates with them from the 25th, share and share alike; I did not purchase a share in this; there were three parties to go out between the time they pegged out their mining tenement and my joining them; there was no transfer of this mining tenement registered to me, and I am aware that there was no registration of the mining tenement; there was no repegging on the 25th, when I joined; there were four fresh men who joined the party on the 25th, including myself; there were three to go out and four to come in, and this made a six men's claim of it; the names of the persons who came in were Michael McNamara, Alfred Argles, J. C. Edwards, and myself, and the matter remained in that position until we made our application on the 29th; there were no transfers; it was about dinner-time that I went on to the ground on the 25th, and went with Gray there and Thorne; it is the same witness as in Court; I had been prospecting about there for some months; I saw two pegs there on the 23rd, but the trenches did not seem to have been freshly done; there were not a great number of pegs in that locality; the pegs I saw represented about five men's ground; I was present when they put down the pegs to mark the 10-acre lease. We left the pegs of the quartz claim standing, and put other pegs outside for the lease; the peg near the corner tree was left; to the best of my opinion the datum peg was left there; the pegs we put in were conspicuous, and could be seen; they were of the usual height; I have seen the ground recently, and I know two of the pegs are not there; I do not know what became of them; I cannot say when I saw the two pegs there last; I never heard of them being removed; they were there after the 29th July, and after that we took no notice of them; on the 25th, when I visited the land,

land, I saw a hole that had been made by a pick and shovel; I think the hole may have been 5 feet long; it was an ordinary trench; they were prospecting at that time; this was situated under the big boulder; I have no doubt about that whatever; I have been earning my livelihood by mining for some years; I could not tell what length of time had been expended in the trench, it might have been done in a day, or it might have taken a week.

Cross-examined by Mr. Simpson: I know that Thorne and Gray had found a reef before they told me; I knew some two or three days before they came and showed it to me; they came and borrowed our mortar and showed me some stone.

Cross-examined by Mr. Kearney: I said that I worked on and off this land since the 25th July; I have not worked on it continually myself since that date, I mean some of our party have; if there had been no crushing done while the trench was being dug it could have been done in a day; there was no usual transfer, when I joined the party, of any share that I acquired in the claim; on the 23rd July I saw two pegs myself, and on the 25th I was shown the four pegs by Thorne and Gray; I did not go over the whole of the ground; on the 23rd July I knew the two pegs did not belong to Brereton, but I did not know that they belonged to Thorne and party.

Cross-examined by Mr. Simpson: The two pegs I saw on the 23rd July were two of the pegs shown to me by Thorne and Gray on the 25th July; it is all hard working ground on the side of this mountain.

Cross-examined by Mr. Kearney: There was stone there.

By the Board: Looking at the plan A, I observe portion 113; I will swear positively that three pegs shown to me by Thorne and party were on portion 113, that is, the pegs under the miners' rights.

EDWARD McNAMARA.

Sworn at Armidale, the 19th December, 1888, before us,—
F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. Simpson, recalled and resworn: This witness, being duly sworn, on oath, states:—My name is *William Gray;* I gave evidence here yesterday; I recollect the 25th July, 1887 last; I saw Edward McNamara; I took him up to my miners' rights claim; I took him there to show him that we had found a reef; I showed him the reef, and he asked me where our top pegs were; when he started to go up, I said, "You had better join us, as we are poor, and some of our partners are going out"; before the 25th July I went to borrow his mortar; it was on the 17th that I borrowed McNamara's mortar; it was on a Sunday, that was the next day after we took up the ground; I believe I showed McNamara the stone, and that was out of our reef; after that everybody knew that Thorne and party had pegged out.

Cross-examined by Mr. M'Donald: It was on Sunday, the 17th July, that I borrowed McNamara's mortar; I did not crush the stone that day; I did not show McNamara what I got out of it.

WILLIAM GRAY.

Sworn at Armidale, this 19th day of December, 1888, before us,—
F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. Simpson: This deponent, duly sworn, maketh oath, and saith as follows:—My name is *Martin Brislane;* I am a miner at Hillgrove, and I am one of the party of Hanlon and party, and we adjoin Thorne and party; I know where the marked tree of portion 113 on the creek is; I know Thorne and party's Enterprise Claim; I know Thorne and Gray; I recollect going on to the land they pegged out; I did not see them pegging out, but I saw Thorne and Gray on the 16th; it was a Saturday; I saw them bringing stone from the direction of Thorne and party's claim on that day; it was after dinner; they brought the stone to the camp and threw it down and burnt it some time after on the same day and crushed it, but I did not see what they got out of it; on the Saturday following I went to peg out some ground, and then we went to find the top pegs of Thorne and Gray's claim; we found the pegs of their claim some time after looking for them; we were then pegging out a claim on the top of their claim; I did not go round any other pegs; I have seen Thorne and Gray on their claim before the 23rd; I could not say how many times I saw them there before the 23rd.

Cross-examined by Mr. M'Donald: Our claim joins the bottom end of Thorne and party's, but I pegged out on the top end; I pegged out at the top end before I joined Hanlon and party, but did not keep it; I know that it is the 16th, because I went to work for Brereton on the 13th, and worked half a day on the 13th; there was a man named M'Neill with Brereton at the same time; he was not in the camp when they brought the stone, and knew nothing about them finding the reef until he came out from Armidale; we were all camped together; I do not know that part of Hanlon & Co.'s lease is on portion 113, except what I am told; I do not know that if Hack loses this land that I shall get a larger area of land than if he did not; I know that our lease has not been granted to us yet, and I do not know the reason why.

Cross-examined by Mr. Kearney: There was a telegram sent to the Mines Department about the sale of our claim; I did not cause a telegram to be sent as to the cause why the lease was not granted, and did not receive a reply; I heard Mr. Elliott read a telegram, and I cannot say that the telegram gave the reason why the lease was not granted.

Cross-examined by Mr. Simpson: There is no arrangement between myself and Thorne and party assuming that I would get more ground if Hack loses this land; this would make no difference in my evidence.

MARTIN BRISLANE.

Sworn at Armidale, this 19th day of December, 1888, before us,—
F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. Simpson: This witness being recalled and resworn, states:—My name is *Alfred James Hack;* I have never conditionally purchased land in New South Wales before the present application; I have never before held a selection of any kind.

By the Board: I discovered that this portion was over 40 acres subsequent to my making application for it; I did not know at the time I applied that it was over 40 acres; I took this land up as a measured portion of 40 acres; I was not aware that Brereton and party's gold-lease interfered with portion 113 when I took the land up.

Cross-examined by Mr. Simpson: I was told that the area of this portion was over 40 acres.

Cross-examined by Mr. Kearney: I went purposely on to the ground to select it.

A. J. HACK.

Sworn at Armidale, this 19th day of December, 1888, before us,—
F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. Simpson: This witness, being duly sworn, on oath, states:—My name is *Michael McNamara;* I am one of the party of Thorne and party; I hold a miner's right, and had one in 1887; I know portion 113, parish Cooney, and I know the tree at the north-east corner; in fact, I know the whole of the corners; I know Gray and Thorne, and I also know that they have a quartz-mining claim; I know it by their showing me their pegs on the 26th July, 1887; I went round the ground with them on that day; I should say the north-east peg of their claim is about half a chain from a marked tree, No. 113; that was the peg they showed me as the peg of their mining tenement; I went to the south-easterly peg, and from there to the south-westerly peg, and from there to the northerly peg, as I should term it, the north-westerly peg; the greater portion of this land stands on portion 113, and except the northerly peg, and that may have stood outside portion 113, the ground they had pegged, I should say, was 300 x 200 feet; it might be an acre and a half, but I could not say exactly; there was a dispute between Brereton's southern boundary and Thorne and party; looking at the plan "A" I see a dotted blue line; Brereton's peg stood on the corner of the dotted blue line; taking Mr. Brereton's southern line as shown by dotted blue line, it embraces a corner of portion 113; I cannot say what area; I saw Mr. Brereton's application for gold-mining lease of 8 acres, that being the southern peg of his lease; I stood at the southern peg of Brereton's lease and looked along the line of his lockspit; I saw that it embraced part of portion 113; on the 26th July, 1887, I understood I had an interest in the ground which had been preferred to me by my brother on the 25th July; on the 29th July I applied

for

for a lease of this ground, with five other parties, and I prospected on the ground that they showed me; they pegged out from the 26th to the 29th; we have machinery there; the mine is opened up; on the 26th July I had a look at the hole that Thorne and party had opened on one side of the reef; the ground looked as if it had been recently worked, and there had been quartz crushed on this reef; on the 26th July, I crushed some quartz myself out of the reef pegged out by Thorne and party, under their miner's right; the 26th was the first day that Thorne and party told me they had found the reef; from something I heard previous to the 26th, I went on to the ground to look at it.

Cross-examined by Mr. Kearney: I became interested in this land for the first time on the 26th; there was no transfer, as far as interest of the land was concerned, on the 26th July; at that time, as far as I knew, this was a quartz claim of five men; up to that date all I knew about the pegs was from hearsay; at the time I stood on Brereton's peg, and looked along the line; I knew the marked tree of portion 113; I saw the tree previous to my looking along the lockspits, and I had been prospecting for some five or six weeks previous to the 26th July; I had not seen this land pegged out prior to the 26th July, and had no connection with Thorne and party during the five or six weeks referred to; I have had a fair experience as a miner, and while I was prospecting there I might not have seen the pegs there; my object for prospecting was with the idea that I might possibly find a reef worth taking up; in the event of my finding anything, I would have looked out for pegs; I remember giving evidence here in Warden's Court on one occasion, to the best of my knowledge last year, but the date I cannot fix; in all probability I did state in the Warden's Court that we at first intended to apply for this ground under miners' rights, but changing our minds, we remarked, and applied for the land to lease; I do not remember if I stated on that occasion whether Thorne and Gray held a quartz claim; my position as regards the quartz claim is not altered from that day to this; I had not seen any quartz raised from Thorne and party's land previous to the 26th; the quartz I crushed on the 26th contained a little gold, but not much; we have erected a small water-mill, I think it is on portion 113, and a small 2-head stamper; we started to erect these in September, 1887; it is used for crushing quartz that we raised off that ground, and has not been used for any other purpose since; I am pretty certain about the position of this machinery; it stands between the two corner trees of 113 in the creek; according to the plan "A" the machinery stands on the land applied for by Hanlon & Co. as a lease; I know, for a positive fact, that it is not within the portion applied for as miners' rights; it is not in the portion applied for by us as a lease on the 29th July; I signed a petition to the Minister for Mines, asking that Hack's conditional purchase be refused, on the ground that large sums of money had been expended in machinery and working the ground.

Sworn at Armidale, the 19th day of December, 1888, before us,— MICHAEL McNAMARA.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Case postponed until Friday, the 21st instant, at 11 o'clock.

Cross-examined by Mr. Forster: This deponent, being duly sworn, on oath, states:—My name is *James William Metcalfe;* I am a miner; I know Gray and Thorne, by having seen them knocking about the Baker's Falls; I was at Morton's on the 15th July, 1887; Morton's is a half-way house between Armidale and Hillgrove; on the noon of the 16th I went down the Falls; I saw two men pegging out some ground between 2 and 3 o'clock; I said to them, "Hullo, you are pegging out a claim," and they replied, "Yes"; I asked them if they had a miner's right, and they said, "Yes, they were pegging out five men's ground"; I said, "You had better give me a show in it," and they said, "We cannot—it is too late"; there is a tree marked 113, and the peg is put about half a chain away from the tree 113, the north-east corner of the ground, the way it is laid; this land Thorne and Gray were pegging out was on the opposite side to Hillgrove and Baker's Creek Company's claim; I saw them put the peg in and cut the trenches out; I only saw one peg and trench in the lower end of the ground; the ground is a little steep.

Cross-examined by Mr. Kearney: It was only from a remark they made to me that they were pegging out five men's ground; Gray passed this remark; my memory is very good as to dates; I have got the date of 16th July noted in a book, which I do not produce; I met with an unfortunate accident on the 15th November, 1887, at Hillgrove; I may have noted the accident in my book; I was not spoken to before the 18th, not until last evening, about giving evidence here; Gray spoke to me last evening, and said to me, "What day did you come down the Falls?" and I said, "On the 16th"; when I got on the ground on the 16th, Gray and Thorne were pegging out the ground; I never said to Mr. Hack that these men were blasting on the ground; I told Mr. Hack that it was days afterwards the 16th that they were blasting; I did not go all round the ground; I saw them putting the last peg in about half a chain from tree marked 113; I cannot tell what sort of a boulder they got out, as it is so long ago; I did not take notice on the 21st or 22nd whether there was anything else near this boulder; the ground is very steep above where they put in the trench; I did not notice if they put a trench in for a reef; I might have signed a petition against Hack getting the ground, but I do not remember.

Sworn at Armidale, this 21st day of December, 1888, before us,— J. W. METCALFE.

F. G. FINLEY. J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. Forster, solicitor: This witness, being duly sworn on oath, states:—My name is *John Moore;* I am a storekeeper residing in Armidale; I know block 113, parish Cooney, Hillgrove Falls; I was an applicant with others for this block; I cannot recollect the date I selected it; I think it was after the year 1881; we applied for 40 acres; looking at plan "A" I recognize portion shown thereon in red colour as No. 113, and adjoining blocks 109 and 110; at the time we applied for this land, and we only paid for 40 acres, and the land was surveyed to us; the interest we only paid on 40 acres up to the time of its lapsing, in consequence of Mr. Speer not paying for his interest.

Sworn at Armidale, this 21st day of December, 1888, before us,— JOHN MOORE.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. Forster, resworn and recalled: This witness, being duly sworn, on oath, states:—My name is *William Gray;* I remember giving evidence referring to the pegging out of the five men's ground; they each had miners' rights; the names of the parties were Thorne, Leslie, Emerson, Golding, and myself; they showed me their miners' rights; Golding has three names which he goes by; they are Golding, Purchase, and Purdey.

Cross-examined by Mr. M'Donald: I do not know where Golding is now; I may have seen him two or three months ago; I was present at the Land Court in January last; I do not remember whether Golding was called at that Court; I do not think he gave evidence; I do not recollect Mr. Badham being called; I do not know that Golding obtained a miner's right at the office here in October, 1887; Golding showed me a miner's right in the name of Purdey or Purchase, not in the name of Golding; I was never asked if his name was Purchase or Purdey; in January last I did not say if his miner's right was in the name of Purchase or Purdey; I did not read his miner's right; he told me that his miner's right was in the name of Purdey, but he said I am better known as Golding; it was taken out at Armidale; this same man did not have an interest in another claim with me; he is not the same man that sold a cab to me; I had a buggy given over to me, but I never bought it; the man that lent me the cab is the same man as had an interest in the Enterprise claim of five men's ground.

Sworn at Armidale, this 21st day of December, 1888, before us,— WILLIAM GRAY.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. Forster, solicitor: This witness being duly resworn on oath, states:—My name is *John Griffin Martyn;* I am a licensed surveyor residing in this district; I know block 113 referred to in this case; I think it was applied for by John Moore for 40 acres under the 19th section; I surveyed this land as 40 acres; when I measured the block I knew the block contained more than 40 acres; at the time I measured I made it 40 acres 2 roods 24 perches; since

since then I have increased the area slightly; it is quite possible that surveyors may make a difference in the survey of traversing creek boundaries, and it is a discretionary matter with surveyor as to the traversing boundaries on a creek; we recognize the edge of the bed of the creek as the boundary of the portion; the fair mean high water-mark which the surveyor fixes at the time of his survey from what he sees.

Cross-examined by Mr. Kearney, solicitor: Having taken this mean I surveyed the block, and the survey has been accepted, I believe.

Sworn at Armidale, this 21st day of December, 1888, before us,— JOHN G. MARTYN.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. Kearney, solicitor: This deponent, duly sworn, on oath, states:—My name is *William Gordon Brereton;* I am a miner; I am interested in same claim at Hillgrove; I know the end of portion 113 near the creek; I have not been much on that block; I made an application for a lease, and it crosses the creek; I have been on the ground; looking at the plan "A" I pegged off gold lease 166; I think I pegged this out in April, 1887, I point out on the plan, at the north-east corner a tree marked 113; in April, 1887, there were no pegs there that I could see, only what I put in myself; I saw this land every month after this until the end of the year; I saw some pegs there, but I would not be sure whether it was in July or August; I saw lots of pegs there a month or two after I pegged out; I saw one peg in particular inside the land I pegged out, claimed by Thorne and party, up the creek about 1 chain or 1½ chain outside of block 113, and they claimed that as their datum until the surveyor came, and after that, as far as I know, they started on a new line altogether; I knew Thorne and Gray pretty well; they had been in my employ a little while; I think I only paid them once; they were only about a fortnight with me; on the 26th July I paid Thorne £4 17s. for two weeks and one hour, and on the 28th July I paid Gray £5 8s. for thirteen and a half days work; I was on the land then looking after it but not doing much work; they were generally there before I came in the morning, and I very seldom left before they finished in the evening; their working hours were from 7·30 a.m. to 5 p.m., with an hour for dinner; their day's work was for eight hours; the half hour was so they could knock off at 12 o'clock on Saturday; I have no doubt that they worked constantly whilst in my employ; they did not work on block 113, as far as I knew, while in my employ; as soon as they had done work I got on my horse and went to the top of the hill; it was in the middle of winter; it was often dark when I got on to the top of the hill; Thorne told me that he had found a piece of ground of his own, and was not going to work any more for me, and I paid him as soon as ever he told me; I paid him on the same day, but I thought it was about the 26th July; I went down on my horse on the morning; I think it was a Tuesday, and this was the first time that they told me that they had found a piece of ground; I never heard any blasting going on before the date Thorne left me; that is on portion 113; I know the position of their claim very well.

Cross-examined by Mr. Forster, solicitor: I did not put all these writings in my book at the same time; there may have been writing in my note-book on the second leaf before I wrote in lead-pencil; I never rubbed anything out; looking at plan marked "A" I encroached on portion 113 by firm blue line showing my application for gold lease made in April; I withdrew my claim as far as the firm blue line and accepted the dotted blue line by mutual agreement with Thorne and party; notwithstanding this, there was still a small encroachment on portion 113; after that I never asked for a part of the firm blue line to be excised; I wrote to the Minister asking for a part of dotted blue line to be excised, that is, a small part inside the dotted blue line; I mean the encroachment of portion 113 from my lease; I wanted a modification cutting that out of my lease; I recollect giving evidence here before the Land Court on or about the 20th January, 1888; I cannot remember the exact date; my lease has been granted to me for about 7 acres; I recollect the dispute between Thorne and party and myself before the Warden; I was in possession of the firm blue line up to the date that the surveyor came and surveyed it; I think the lease survey was made before the date of the Warden's Court; I have remarked before the Land Court and before the Warden that Thorne and party's peg was on my land; their peg was about 1 chain or 1½ chain from the marked tree 113; I saw other pegs on the other side of the tree; my peg at the top was an apple-tree stump; there was one wet day while Thorne and party worked for me; I did not make a note of this wet day; I think this was the only wet day; they do not generally work on wet days; there had been very little work done on my ground at that time; I had four men there prospecting; I was dollying in the creek very often all day long; I often would be dollying all day long from 8 o'clock to 5, except Sundays; I might have been away half-an-hour or an hour at different times; my application for lease was 8 acres, and about 7 acres has been allowed to me; the dotted blue line forms a boundary of the 7 acres.

Cross-examined by Mr. Kearney, solicitor: The loss of the acre on my gold lease does not all come out of portion 113.

Sworn at Armidale, this 21st day of December, 1888, before us,— W. G. BRERETON.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. Kearney, solicitor: This witness, being duly sworn, on oath, states:—My name is *Peter Daly;* I am a miner; I was a miner in July, 1887; I was at Hillgrove nearly all of July; I know portion 113; I was on that portion about the 27th July; I saw Michael and Edward McNamarra there; they were taking out a big rock that they said covered a reef; they had just about commenced the work; they had been working there about half-an-hour; I did not see any pegs on the ground; I went on to the land to see about pegging a piece for myself, but I did not search so diligently as I would have done had I liked the ground; I could not see any other work done on the ground, except the work at the rock; I had been mining at Hillgrove some time previous to this; I am an old miner; I fixed the time in my mind by the receipt for the purchase of a horse.

Cross-examined by Mr. Forster, solicitor: I was only on the ground once, but I looked pretty carefully over it.

By the Board: I did not know at that time that I was on portion 113, except what I was told; I did not see a tree marked 113.

Sworn at Armidale this 21st day of December, 1888, before us,— PETER DALY.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. M'Donald, solicitor: This deponent, being duly sworn, on oath, states:—My name is *John James M'Neill;* I was at Hillgrove about the commencement of July last year; I was working for Mr. Brereton at that time; I know Gray and Thorne; they came to work for Brereton after I did; they worked for Brereton during the time I worked for him; I came into Armidale on the 23rd July; it was a Saturday evening; I considered about this date when I was summoned to appear in this case; I had been working for Brereton from somewhere about the beginning of July; my family were living in Armidale when I came in to see them; I received £4 from Brereton for wages; I went back to Hillgrove on the Monday following; I had some conversation with Thorne on the Monday night, the 25th; he said to me, "I found something good on Saturday while you were away in Armidale"; he did not seem to care to show me where it was; I saw where Thorne went, it was on the opposite side of the creek to where we were camped; I went over to see the ground that Thorne was working; I went over on a Wednesday, it was the 27th; I had no other conversation with him on the Wednesday about this.

Cross-examined by Mr. Simpson, solicitor: I cannot fetch it any other date but the 23rd; Mr. Hack did not say anything to me about the date.

Sworn at Armidale this 21st day of December, 1888, before us,— J. J. M'NEILL.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. M'Donald, solicitor: This witness, being duly sworn, on oath, states:—My name is *George Burton;* I was at Hillgrove last year working for George Smith; I was mining for him; altogether I was working for eighteen months for Smith; I know Gray and Thorne; I know the place where they had a claim at Hillgrove; I know

portion

portion 113; it is close to Baker's Creek mine; it is north-west from Baker's Creek; I knew the place where Thorne and Gray's claim is before they took it up; I have split timber on that land, but I cannot state the day or date; I have seen Thorne and Gray working at their claim just after they had pegged it out, but cannot say the date; I remember seeing Hack at their claim; Hack served some of the party with a notice, they were working on the ground a week or so before that I suppose it was about a week before they pegged it out; I was splitting timber there; I saw them working on the ground I suppose between 8 a.m. and 5 p.m., ordinary working hours; I know the two McNamaras; I have seen them working there; I saw them working there the day the notice was served, and a few days before it also; there was only my mate working with me then, and there was no one on it then; I was camped close to it; I have seen Thorne and party working at a tunnel by candle-light, but not about that time; I never saw them working by candle-light before Hack served them with the notice; there was one shot fired at Thorne and Gray's after the time I saw Hack.

By the Board: I cannot remember date or month.

Sworn at Armidale, this 21st day of December, 1888, before us,— GEORGE BURTON.

F. G. FINLEY, Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. M'Donald, solicitor: This witness, being duly sworn, on oath, states:—My name is *Christopher Allingham;* I am a miner at Hillgrove; I know Hack and Thorne and Gray; I know portion 113 at Hillgrove; I remember being there on the 22nd July last year; I went there purposely; I went to see if any pegs were on the land; I made a search, but found no pegs; I was there on 26th July; on that occasion I looked over the ground, but did not search particularly; I walked across the land at the lower end; I found no marked trees there on the 22nd, nor any trenches cut, and I did not see any one on the ground; it was after dinner when I got down there; I went down there at Hack's request.

Cross-examined by Mr. Forster, solicitor: There were no pegs there that I saw; I searched carefully on the lower end of this land—at the lower end; I did not know if I should find pegs there; I went there at Hack's request; I do not think there could have been pegs there; I found tree No. 113; I believe I went up the creek from 113; I saw a peg up the hill on Brereton's ground; I mean an apple-tree stump; I am not interested in this case, but Hack is my brother-in-law.

By the Board: I found the old corner of portion 113, but I did not find any new marked trees.

Sworn at Armidale, this 21st day of December, 1888, before us,— C. ALLINGHAM.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. M'Donald, solicitor: This witness, being duly sworn, on oath, states:—My name is *George Phillips;* I am a miner at Hillgrove, and I have been a miner for some years, and during that time have had a good deal of experience in mining work; I know portion 113, parish Cooney; I know Thorne and Gray and their party; I know their mine on portion 113; I was there on the 4th August last year; I had been there before; on the 4th August I saw four men there, and also saw what work had been done; I thought that three days' work had been done by the four men there; that is what I thought.

Sworn at Armidale, this 21st day of December, 1888, before us,— GEORGE PHILLIPS.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. M'Donald, solicitor: This witness, being duly sworn, on oath, states:—My name is *William Hanlon;* I am a miner, at Hillgrove; I know a portion of ground that goes by the name of Enterprise Mine; I know where Thorne and party's claim is; I was there before they pegged it out; I remember that it was pegged out by Thorne and party; I meant to peg it out, but they were too early for me; that was somewhere about the 21st July.

By the Board: If I am not mistaken, the pegging out took place on a Friday; I never saw any pegs there; they told me I was too late to peg it; Thorne and Gray told me.

Sworn at Armidale, this 21st day of December, 1888, before us,— WM. HANLON.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. M'Donald, solicitor: This witness, being duly sworn, on oath, states:—My name is *Robert Brown;* I am a miner, at Hillgrove; I know a place called the Enterprise; I was there before Thorne and Gray had a claim; I have been off and on at Hillgrove for the past two and a half years; I was on that ground somewhere about the 18th or 20th July, 1887; I did not see anyone there then; I did not see any pegs or any markings of a claim; I was over the land two or three times, both before and since; at that time I speak of I did not notice any work done on the land; I have an interest in a claim pegged out on portion 113; I know the land; Hack's claim and part of my claim is on that portion.

Cross-examined by Mr. Forster, solicitor: I was on the land about 11 o'clock, and I was there in August last; I did not look to see if any work had been done; I went there prospecting, and not to look for pegs; I only remained about an hour on the ground.

By the Board: At the time I went there in July I knew where the corner tree of portion 113 was on the gully; I do not know which corner that is, only that it is close to the creek; I should say that corner 113 is 6 or 7 chains from the Enterprise claim.

Sworn at Armidale, this 21st day of December, 1888, before us,— ROBT. BROWN.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. M'Donald, solicitor: This witness, being duly sworn, on oath, states:—My name is *Neill O'Donnell;* I am a miner, and live at Hillgrove; I know Hack, Thorne, and Gray; I know portion 113, parish Cooney; I know where Thorne and Gray's mine, called the Enterprise claim is; I have known that ground for thirty years, and before Gray and Thorne were there; I was there about the 24th July, last year; I did not see anyone there on that occasion; I did not see any claim pegged out then; I was there about the 30th July; I am not quite sure about the day I saw Mr. Thorne there; on that day I saw them digging; there was not much work done; they had made a bit of a hole.

Sworn at Armidale, this 21st day of December, 1888, before us,— NEILL O'DONNELL.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined by Mr. M'Donald, solicitor: This deponent, being duly sworn, on oath, states:—My name is *John Michael Sheahan;* I am Mining Registrar at Armidale; I produce the book which shows the lists of miners' rights issued during 1887: I have made search in that book for a miner's right in the name of Richard Golding, or Purchase, or Purdey; I found a miner's right, issued on the 6th October, 1887, to James Golding; there has been no miner's right issued to anyone of the name of Purchase; but one was issued on the 14th January, 1887, to Henry Purdey.

Sworn at Armidale, this 21st day of December, 1888, before us,— JOHN M. SHEAHAN.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

Cross-examined

Cross-examined by M. M'Donald, solicitor : This witness being duly resworn on oath, states :—My name is *Alfred James Hack* ; I served the notice on Thorne on the 4th August, and on Alfred Argles on the 3rd; also the two McNamaras on the 4th August; the notice was warning them that I conditionally purchased the land on the 21st day of July ; I had a conversation with Metcalfe this morning, and I asked him what brought him to town, and he told me he came to town about my case ; he said, "I saw them on the 16th July" ; I said, "what were they doing there then ?" and he said "they were blasting a big rock that the reef went through" ; it was on the 9th December that I applied for a permit to search for gold.

Cross-examined by Mr. Simpson, solicitor : Up to the present time I have not expended a fraction on the land, and I have not taken possession.

Sworn at Armidale, this 21st day of December, 1888, before us,— A. J. HACK.

F. G. FINLEY, J.P., Acting Chairman.
C. E. SMITH, P.M.

This closed the evidence.

Acting Chairman.

No. 61.

Decision of the Board.

Crown Lands Act of 1884—(Part II, section 14, subsection 4.)

Decision of Local Land Board.

New South Wales, Armidale, to wit.

WHEREAS on the 18th, 19th, 21st, and 22nd days of December, 1888, it became a matter for investigation before us whether the land applied for by Alfred James Hack, on the 21st July, 1887, at Armidale, as conditional purchase No. 87-91, of 40 acres, in the county of Sandon, parish of Cooney, was available at date of application, and having taken evidence and inquired into the said matter, we decide to forward the evidence to the Honorable the Minister for Lands, for his decision under section 14, subsection 7, and beg to attach the following report, viz. :—

1. That, in the opinion of the Board, W. G. Brereton was in lawful occupation, for mining purposes, of that part of measured portion No. 113, as shown to be embraced within gold lease, No. 166, by the firm blue line on plan A, on the date of A. J. Hack's conditional purchase ; and that the said measured portion, in consequence thereof, was not open to, nor available for, conditional purchase on the 21st July, 1887, the date of A. J. Hack's application. The land had been previously measured to satisfy an application of one John Moore for a mineral conditional purchase of 40 acres, and any encroachment thereon, such as Brereton's gold lease, would reduce the area below 40 acres.
2. That, in the opinion of the Board, the evidence does not satisfactorily prove that Thorne and party were in lawful occupation, for mining purposes, of any part of measured portion No. 113, prior to the 21st July, 1887, the date of A. J. Hack's conditional purchase.

F. G. FINLEY, Acting Chairman.
C. E. SMITH, P.M., Member.

No. 62.

The Acting Chairman, Land Board, Armidale, to The Under Secretary for Lands.

Crown Lands Act of 1884—Part II, section 14, subsection 7.)

Reference by Local Land Board to Minister.

New South Wales, Armidale, to wit.

WHEREAS on the 18th, 19th, 21st, and 22nd days of December, 1888, a case wherein Alfred James Hack applied for 40 acres of land on the 21st July, 1887, at Armidale, as a conditional purchase No. 87-91, in the county of Sandon, parish of Cooney, and the said matter came on for decision or adjudication before the Local Land Board at Armidale, and the said Board having taken evidence, do now, instead of adjudicating further or deciding thereon, refer the case to the Honorable the Minister for Lands for decision.

Given under my hand, this 27th day of December, 1888, at Armidale.

F. G. FINLEY,
Acting Chairman.

No. 63.

The Acting Chairman, Land Board, Armidale, to The Under Secretary for Lands.

Sir, Local Land Board Office, Armidale, 27 December, 1888.

Herewith I have the honor to forward you the whole of the papers in the case of A. J. Hack, together with the depositions taken before the Board at the rehearing of the case, recently held in accordance with the Honorable the Minister's memorandum dated 27th July, 1888, on papers C.S. 88-29,169.

Alfred James Hack, C.P. 87-91, 21 April, 1887, 40 acres, 47 section.

Having in view the fact that the previous decisions in the case were given by the Minister, the Board has not thought it within its province to give an actual decision on the rehearing of the case. It has, however, had the advantage of a personal hearing of the evidence and observation of the witnesses, and it is thought that the Minister might wish to have an expression of opinion from the Board on the case. A short report has, therefore, been appended, which will be found on the decision paper.

I might add that the Board has given every opportunity to all parties interested in the case to produce evidence to put the case fully before the Minister.

I have, &c.,
F. G. FINLEY,
Acting Chairman.

No. 64

No. 64.

Précis of Mr. A. J. Hack's case.

Armidale Conditional Purchase 87–91, 47th section, 40 acres, portion 113, Alfred James Hack.

THE above conditional purchase, being measured portion 113 of 40 acres, was selected under the non-residential clause by A. J. Hack, on 21st July, 1887, and the land agent made the following endorsement upon the application:—"Received, subject to land being available, and applicant duly cautioned."

On 20th December following, the miners of the district petitioned against the allowance of the conditional purchase, on the grounds that the land had been gazetted a gold-field, and if the selection were allowed it would be a great injustice to the mining community; and by letter of 15th August, 1887, the Under Secretary for Mines stated that the land embraced by portion 113 was auriferous, and asked whether it had been selected by Hack. He was informed that it had been so selected, and on 19th of the same month this letter was forwarded to the Chairman, in whose hands the former papers were.

On 30th August, 1887, Mr. District-Surveyor Finley reported that the land in question was not within any gold-field. The gold-field was, however, proclaimed upon date of surveyor's report, viz., 30th August.

On the 1st September, 1887, the case came before the Land Board, who, having taken evidence, decided to refer it for the decision of the Minister, and on 12th November following, Mr. Secretary Garrett decided as follows:—"From the evidence there can be no doubt that the portion was open to conditional purchase at date of application, and has since been reserved as part of a gold-field. There can also be no doubt that it has been, since it was applied for, proved to be auriferous, but not by the applicant for the conditional purchase. Under this state of facts I must confirm the conditional purchase. It will be for the miners, if they think fit, to apply to have permission to dig and search for gold, and then, on application, the conditional purchase may be resumed. The conditional purchaser should be informed of his position at the time of Board carrying out this decision." The papers were then returned to the Chairman, and the application was accordingly confirmed.

On 27th December, 1887 (6,615 L.B.), Mr. District-Surveyor Finley made a further report, in which he drew attention to the fact that several circumstances had arisen which presented apparent objections to the immediate confirmation of the conditional purchase.

He pointed out that a number of conflicting gold leases encroached upon the portion in question, but the only claim that could stand against the conditional purchase was gold lease No. 166 by Brereton and Smith, which was of prior date to the conditional purchase, all the other leases being of subsequent date. He also pointed out that the encroachment of Brereton and Smith's gold lease, as claimed by them, was about 32 perches, but according to the Warden's recommendation, consequent on a dispute between Brereton and Smith (gold lease 166) and Thorne & Co. (gold lease 169); the encroachment was only about 8 perches; but in any case the surplus area in the portion would admit of the encroachment, and still leave a residue of 40 acres.

In view of a letter, dated 28th December, 1887 (7,311c), from Mr. W. H. Forster, solicitor, the papers were recalled from the Board, and the Chairman intimated that any action in the matter should, in the meantime, be suspended, and on the 4th January, 1888, the following minute was made by Mr. Secretary Garrett:—"From the facts as now set out in the district surveyor's report, and which were not before me when I gave the decision on 32,529, it is clear that application is open to objection on two grounds—that a part of the area was in occupation for mining purposes when it was applied for by Hack as a conditional purchase, and that if the area of the gold lease prior to date of Hack's application is deducted, there will not then be 40 acres available in the portion. The case should be referred back to the Board for consideration as to the above grounds of objection."

The papers were accordingly returned to the Chairman, and on 20th January last the Board held an inquiry, and found as follows:—"A part of the area so applied for as a conditional purchase was, prior to the date of such application, in occupation for mining purposes, and if the area so occupied for mining purposes be deducted from the area applied for as a conditional purchase, there will not be an area of 40 acres left to satisfy such application. We beg, therefore, to recommend that the application of Hack be disallowed, there not appearing to us to have been that area available at the date of Hack's application."

This recommendation was approved by Mr. Secretary Garrett on 7th February, 1888, and upon a protest by Hack (88–650 Cor.), he decided on 22nd of same month that no good purpose could be served by reopening the case. Numerous letters and statutory declarations, both in favour of and against the granting of the conditional purchase, were then received, and on the 27th July last, in view of certain statements made by Messrs. Brett and Coghlan, in their letter of 30th June last (88–3,450 Cor.), Sir Henry Parkes decided to grant a rehearing, and the papers were forwarded to the Chairman with that object.

On the 18th, 19th, 21st, and 22nd ultimo the Board held an inquiry, and decided to forward the evidence to the Minister for his decision, under section 14, sub-section 7. They, at the same time, reported that, in their opinion, Brereton was in lawful occupation for mining purposes of that part of portion 113 as shown to be embraced within gold lease 166 at date of Hack's application, and the said measured portion in consequence was not open to, nor available for, conditional purchase at date of Hack's application, and the land being a measured portion of 40 acres, any encroachment, such as Brereton's lease, would reduce the area below 40 acres. In their opinion, however, there was not sufficient evidence to prove that Thorne and party were in lawful occupation of any part of the measured portion at date of Hack's application.

From the foregoing it will be seen that the main issue of the case depends upon the correct area of portion 113, *i.e.*, whether after satisfying Brereton and Smith's gold lease 166, there were 40 acres available within the portion to satisfy the conditional purchase. Upon this point there appears to be some doubt, on account of the rugged nature of the country making exact measurement very difficult, and with a view of putting this matter more clearly before the Minister, the following extracts are made from the evidence upon that point:—

At page 9, Mr. Licensed-surveyor Martyn states:—" . . . . I surveyed portion 113 on 1st February, 1882. I measured the block as 40 acres, but it is a fact that the area included in the boundaries of my survey was 40 acres 3 roods 20 perches. In frontage blocks we are allowed a margin. The roods and perches are always omitted from the plan in accordance with the regulations. . . . . My survey was given as 40 acres 3 roods 20 perches, but I called it 40 acres, as allowed in regulations. . . . . "

At

At page 11, Mr. Licensed-surveyor Warner states:—" . . . . I made a survey on 20th January, 1888, upon portion 113, parish Cooney. Looking at the plan 'A,' I made a survey of the dotted blue line, which shows the encroachment of Brereton and Smith's lease application 166. I found the area of that encroachment to be about 12 perches. I also estimated the encroachment shown by firm blue line by calculation, and found it in area to be a little over a quarter of an acre. . . . ."

Again, at pages 58 and 59, Mr. Licensed-surveyor Martyn states:—" . . . . When I measured the block I knew it contained more than 40 acres. At the time I measured I made it 40 acres 2 roods 24 perches. Since then I have increased the area slightly. It is quite possible that surveyors may make a difference in the survey of traversing creek boundaries, and it is a discretionary matter with surveyors as to the traversing boundaries on a creek. We recognize the edge of the bed of the creek as the boundary of the portion. . . . ."

W.H.C., 4/1/89.

No. 65.

The Acting Surveyor-General to The Under Secretary for Lands.

Alteration of area of measured portion after approval of plan.

7 January, 1889.

In reply to the annexed memo., I would state that I believe measured unsold portions have been altered in respect of area after approval of plan, in minor particulars, *e.g.*, the introduction of a reserved road or exclusion of a small part for a reserve.

I am not aware of any precedent for alteration of area of an alienated portion conditionally purchased under the repealed land laws, except where an error has been disclosed, and I do not know of any such case under the existing Land Act.

In the matter of portions conditionally purchased, it has for many years been insisted on that there should be no alterations of boundaries after approval of plan (except in cases of erroneous measurement).

I may add that it was in order (partly) to meet the frequently occurring necessity for providing roads through conditionally purchased land that the 110th section was introduced into the Crown Lands Act, so as to avoid altering plans, which was seen to be objectionable, and under an opinion of Mr. Attorney-General Wisdom (*see* opposite page), it is implied that conditionally purchased land must be treated as freehold land, *i.e.*, that similar rights appertain to both classes of tenure.

E. TWYNAN.

[*Enclosure.*]

Opinion.

Prior to the passing of section 27 of the Lands Act Amendment Act, it was considered doubtful whether the Crown had the right under the Act 4 William IV No. 11 to make roads through conditionally purchased lands, and that section was introduced for the purpose of giving that right.

In my opinion the Legislature, in passing the section referred to, did not intend to alter the mode of procedure prescribed by 4 William IV No. 11, and there does not appear to me to be any sufficient reason why the same formalities should not be observed with respect to roads opened through conditionally purchased lands, as are observed with respect to roads opened through ordinary freehold property.

Office Memorandum.

Mr. Saunders,

Kindly have the area computed in the most accurate manner practicable, and give result.

W.H., 7/1/89.

Urgent. Mr. Skinner,—Do this special for me, please.—C.J.S, 7/1/89. *Vide* memo. herewith.—C.J.S., 8/1/89.

No. 67.

Memo. from The Chief Draftsman to The Assistant Under Secretary.

Lands Department, 8 January, 1889.

The area of portion 113, parish of Cooney, county of Sandon, has been carefully calculated; and accepting the position of the falls forming the west boundary of the portion as delineated by Licensed-surveyor Martyn, it has been found to contain 42 acres 1 rood 38 perches, which, under surveyor's regulations, would be called 42 acres.

It is observed, however, that Mr. Martyn has adopted, in fixing the position of the falls, the same traverse as Licensed-surveyor Manning, in the survey of portion 59 adjoining, and on Mr. Manning's plan the outline of the falls is somewhat differently shown.

Taking Mr. Manning's definition of the falls, portion 113 has been calculated to contain 41½ acres, or, according to practice, 41 acres. Portion 113 has, therefore, been under-estimated by at least 1 acre, if not by 2, the error being apparently in computing the area between the traverse and the edge of the falls.

C. J. SAUNDERS.

Armidale, C.P. 87-91, 40 acres. Portion 113, parish Cooney, county Sandon. A. J. Hack.

Sir, Department of Lands, Sydney, 11 January, 1889.

In reply to your letter of the 11th ultimo, respecting the conditional purchase noted in the margin, I have the honor to inform you that the papers in the case have this day been referred to the Chairman of the Local Land Board, to cause the boundaries of the portion applied for, viz., 113, to be modified so as to exclude so much of the gold lease (Brereton and Smith) as encroached on that portion.

I have, &c.,
F. H. WILSON,
(For the Under Secretary.)

No. 69.

Messrs. Brett and Coghlan to The Under Secretary for Lands.

Dear sir, Friday.

Enclosed is a letter which, under the circumstances of the case, I take the liberty of asking you to make special.

The Minister for Mines stated he could take no notice of verbal intimation of the action of your Department, and if at all possible, I would esteem it a great favour if you intimated action to the Mines to-day.

I have, &c.,
VINCENT COGHLAN.

[*Enclosure.*]

Armidale, C.P., 87-91. A. J. Hack.

Sir, 19 Macquarie-place, Sydney, 11 January, 1889.

We have the honor to ask that you will be pleased to notify to-day if possible, the Department of Mines, the decision in the case of the conditional purchase noted in the margin.

We have, &c.,
BRETT AND COGHLAN.

89-1,050 D., Land Board, Armidale, 11/1/89. Submitted whether this notification should be made.—W.H., 11/1/89. Inform.—S.F., 11/1/89. The Under Secretary for Mines was informed this morning, and the papers were despatched to the Chairman of the Armidale Board this afternoon.—W.H.C., 11/1/89. The Chairman of the Armidale Board.—F.H.W. (for the Under Secretary), B.C., 12/1/89. Received and placed with former papers in the case.—F.G.F., 21/1/89.

No. 70.

The Under Secretary for Lands to The Chairman, Land Board, Armidale.

89-1,050 C.S.D. C.P. 87-91, Armidale. A. J. Hack.

THE papers referring to the conditional purchase noted in the margin are forwarded to the Chairman of the Local Land Board, Armidale, with the Minister's authority to cause the boundaries of portion 113 to be modified, so as to exclude so much of gold lease 166 (Brereton and Smith) as encroaches on the portion, and to confirm the application for the balance of portion 113, if not less than 40 acres. As it is clearly shown that in reality portion 113 contains 40 acres 3 roods 22 perches, and the encroachment of the gold lease is only 12 perches, it is evident that the portion contains a sufficient area to satisfy Hack's conditional purchase, 87-91, irrespective of the gold lease.

F.H.W.,
(For the Under Secretary.)

Department of Lands, B.C., 11th January, 1889.

Under Secretary, Mines, informed, 11/1/89.

No. 71.

Memo. by The Assistant Under Secretary for Lands.

THE accompanying *précis* sets out the successive stages of action in this case, from the date of A. J. Hack's application under the 47th section of the Act to the finding of the Land Board on the 22nd ultimo, at a rehearing directed by Sir Henry Parkes, as Secretary for Lands.

The Board, after taking voluminous evidence, have remitted the case to the Minister for decision, in terms of subsection 7 of section 14, and report that so far as the supposed conflicting gold leases are concerned the conditional purchase application is anterior to all but that of W. G. Brereton. This lease overlaps the measured portion 113 applied for to the extent of about 12 perches.

The Board state as their opinion that the portion was not available for conditional purchase at the date of Hack's application, as the encroachment referred to reduced the area to less than 40 acres.

Although no explanation is afforded on this point—in respect to which there is direct evidence—the Board were probably influenced by the fact that the plan of portion 113 had been duly approved in 1884 as for 40 acres.

The evidence of the surveyor (Martyn), who executed the survey in 1882, shows, however, that the area of the portion is actually 40 acres 3 roods 20 perches, and that the excess over the 40 acres was omitted from the plan in accordance with the survey regulation. By an independent calculation in this office, the area is found to be at least 41½ acres.

The point upon which the legality of the conditional purchase application turns is, whether in view of the plan having been approved as for a survey of 40 acres in 1884, and the application lodged for that area, it can now be corrected to what is more nearly then the true area.

The approval of the plan under the Act of 1875 is apparently a formal sanction of the measurement, required to distinguish lands open to conditional purchase as measured portions from other lands open but unmeasured.

The 55th section of the present Act requires that "measured Crown lands shall, upon being conditionally purchased, be taken in portions as measured, but if the area applied for be less than a measured portion, such portion may on approval by the Local Land Board be subdivided, &c." It

It may be pointed out that the application has not yet been confirmed, and that in the case of any vacant measured portion it would be absurd to suppose that a correction of the plan, such as an alteration of the length of a boundary or of area could not be effected without a reapproval of the plan.

W.H., 9/1/89.

Submitted.

I direct the Board to cause the boundaries of portion 113 to be modified, so as to exclude so much of gold lease 166 (Brereton and Smith) as encroaches on the portion, and to confirm the application for the balance of portion 113, if not less than 40 acres. As it is clearly shown that in reality portion 113 contains 40 acres 3 roods 22 perches, and the encroachment of the gold lease is only 12 perches, it is evident to me that the portion contains a sufficient area to satisfy Hack's conditional purchase, 87–91, irrespective of the gold lease.—J.N.B., 10/1/89.

Send copy of this minute to Minister for Mines.—J.N.B., 12/1/89. Copy forwarded.—T.D., 12/1/89.

No. 72.

Memo. from The Under Secretary for Mines.

EXTRACT.

(1.) WAS the land (Hack's conditional purchase, 87–91, Armidale), within a gold-field when the selection was made?
(2.) Was it within a gold-field when the conditional purchase was confirmed?
(3.) Does the title under conditional purchase date from selection or confirmation?

H.W., 12/1/89.

Chief Draftsman.—E.T.P., 12/1/89. Urgent. (1) No; (2) Yes; (3) From date of confimation.—P.D. (*per* C.W.) The Chief Mining Surveyor.

As the action of this Department in regard to granting permits to search, or permit to remove gold, must depend upon the date of the title under the conditional purchase, perhaps the question should be asked officially.

Submitted.—H.W., 14/1/89. Approved.—F.A., 14/1/89. Under Seeretary's Land Bill.—H.W., 15/1/89. The title dates from the moment of application, but the conditional purchaser cannot take permission of ordeal with the land until confirmation.—S.F., 15/1/89. Approved.—J.N.B., 15/1/89.

No. 73.

Office Memorandum.

PAPERS of Hack's case, conditional purchase 87–91, Armidale, were forwarded to the Chairman, Armidale, 11th January, 1889, for confirmation of the application for balance of portion 113, if not less than 40 acres, after excluding so much of gold lease (166, Brereton and Smith's) as encroached upon that portion. The Under Secretary.

F.B.S., 22/1/89.

Prevent further action being taken, and send for papers.—W.J.L., 22/1/89. Telegraph to Acting Chairman to suspend action, and return the papers to this office.—W.H., 22/1/89. Urgent. In reference to previous directions to have the papers in Hack's case returned to Head Office, the Minister directs that the Chairman be requested to stay action on this case until further advised.—S.F., 23/1/89. Mr. Capper. Wire, 23/1/89. Hack's case. Mr. Secretary Lyne desires to see Mr. M. J. McNamara before a decision is given in the matter.—S.F., 23/1/89. Mr. Capper. No. 74.

W. C. Proctor, Esq., to The Honorable the Minister for Lands.

Sir, Victoria Chambers, 23 January, 1889.

I have the honor on behalf of the owners of the Enterprise Gold-mine, at Hillgrove, in the county of Sandon, and parish of Metz or Cooney, which is partly embraced in the conditional purchase of A. J. Hack, to forward to you herewith a leader from the *Armidale Chronicle* containing the facts of the case lately before the Land Board at Armidale, and commenting upon the wrongful action of Mr. Brunker, the late Minister, in upholding Hack's application, notwithstanding that it was twice decided by the Local Land Board that the conditional purchase should be disallowed, as the area was proved to be under 40 acres at the time of Hack's application. Hoping you will see the justice of reopening the case in the interest of the miners and the public.

I have, &c.,

W. C. PROCTOR.

These papers relating to the conditional purchase of A. J. Hack, Armidale, were recalled by direction of the Minister on the 23rd instant, are now submitted for instructions.—W.H., 25/1/89. S.F. Instruct District Surveyor to have another survey made by a surveyor not already employed in connection with this.—W.J.L., 1/2/89.

[*Enclosure.*]

Extract from the "Armidale Chronicle," 19th January, 1889.

HACK'S 40-ACRE CONDITIONAL PURCHASE.

THE granting by the Minister of Hack's conditional purchase of 40 acres at Hillgrove, against the recommendation of the Local Land Board, has caused considerable surprise and much adverse comment. We do not say that Hack is not entitled to the land in question, but we do say that, where such large interests are at stake, something more is required than the mere dictum of the Minister overriding the decision of the Land Board. On a previous occasion this same land was recommended

recommended by the Land Board not to be granted, and, through some mysterious influence at work, the particulars of which are probably only known to the Department itself and those immediately concerned, the matter was referred back to the Board for further consideration. The case came again before the Board a few days ago, and for a second time the land was recommended to be disallowed on the same grounds as before, viz., that the minimum area of 40 acres was not available. From the evidence adduced at the last hearing, it would appear that when Hack made his application a portion of a gold-mining lease, legally applied for by W. G. Brereton, reduced the area available to less than 40 acres. Brereton subsequently abandoned, in favour of Hack, sufficient of his lease application to allow Hack his 40 acres. It was, however, argued by Mr. Forster, who came specially from Sydney to oppose Hack's claim before the Board, that Brereton's subsequent abandonment did not avail Hack, since, on the date of his application, Brereton's application held good, thus making the area vacant less than 40 acres; also, that since then, and before Brereton's abandonment, the whole of the land claimed by Hack had been applied for by others under application for various gold-mining leases. This view of the case was sustained by the Board, who for a second time recommended that Hack's application be disallowed on account of there having been insufficient area when he applied. The Minister has now set aside the recommendation of the Board, and has granted Hack his 40 acres. As we said, we do not wish now to question the justness of Hack's claim, but we decidedly protest, in the first place, against such clauses in the Land and Mining Acts as give the Minister, or perhaps the Under Secretary, the absolute power over courts of law; and we also deprecate such arbitrary action of the Minister by which he uses the powers so wrongly vested in him in an arbitrary and unreasoning manner. It would seem as if the granting of this land to Hack were a final act before the last Ministry went out, following the advice given in the Bible, and "making friends of the mammon of unrighteousness." The land in question is said to be very valuable, and there is no knowing who have had a hand in the matter. It is also understood that a "permit to mine" has been granted to Hack. If so, this shows injudicious haste on the part of an outgoing Ministry. As Hack did not take up the ground legitimately for mining purposes, if it had to be granted to him, it should have been at once resumed and thrown open to the miners. This giving up and absolutely selling for £40 land on which the Crown should have received a yearly rent of £40, especially as it was not taken up under an Act intended for mining purposes is, to say the least, straining the law, besides parting with the Crown revenue. Of course no one can blame Hack for doing his best for himself, and he has shown extreme cleverness in thus effectually carrying through to the finish so very difficult an undertaking.

HY. COPELAND,
"New England Hotel," Armidale.

Urgent,—Inform Mr. Copeland that nothing further will be done towards granting Hack's conditional purchase at present, and that I have wired to Chairman, Land Board, to return the papers to this office.—W.J.L., 23/1/89. Wire, 23/1/89.

No. 78.

Telegram from The Under Secretary for Lands to H. Copeland, Esq.

23 January, 1889.

IN reply to your to-day's wire, I am directed by Mr. Lyne to inform you that nothing further will be done towards granting Hack conditional purchase at present. Chairman, Local Land Board, asked by wire to return papers to this office.

CHARLES OLIVER,
Under Secretary.

No. 79.

Mr. Saul Solomon to The Secretary for Lands.

Sir, "Empire Hotel," Sydney, 23 January, 1889.

I have the honor to call your attention to an attempt by certain persons to obtain from your Department approval of a conditional purchase of 40 acres, situated at Baker's Creek, Hillgrove Gold-mining District, in favour of Mr. Hack.

As a claim-holder entitled to a lease for gold-mining purposes, under application Nos. 1,344 and 1,522, in common with other claim-holders who would be affected by the proposed conditional purchase, and in the interest of public policy, I respectfully protest against the conditional purchase being granted to Mr. Hack or his nominees.

I

I enclose, for your information, copies of two letters recently received by my agent in Sydney from the Mines Department, in the first of which you will see that my claim for leases Nos. 1,344 and 1,522 is fully recognized, and the promise is made that steps will be taken to expedite the issue of the leases referred to.

Other correspondence in your office will prove that mine is not the only protest that has been made against Mr. Hack's application for the conditional purchase.

I would also point out that the gold-mining district I am referring to (Guyra) was proclaimed on 30th August, 1887. Mr. Hack's conditional purchase application was disallowed by a previous Minister for Lands on 7th February, 1888, and its approval now would, in my opinion, be illegal, but would certainly be unjust, inasmuch as it would obliterate a number of gold-mining claims which have already been accepted by the Mines Department, and upon which rent has been paid, work done, and leases officially promised.

I thank you for the attention you have already given to the matter, I relying on your further consideration.

I have, &c.,
SAUL SOLOMON.

[*Enclosures.*]

Sir,

Department of Mines, Sydney, 12 January, 1889.

Referring to your letter, dated 6th ultimo, *re* gold lease application, No. 1,344, at Armidale, I have the honor to enclose herewith a tracing of the land as surveyed, and to inform you that more land is included in the survey than is embraced by the applicant's pegs, and apparently all the land that was available.

I have, &c.,
HARRIE WOOD,
Under Secretary.

T. F. De Courcy Brown, Esq., M.P., 52 Castlereagh-street, Sydney.

Sir,

Department of Mines, Sydney, 31 October, 1888.

In reply to your letter of the 24th instant, with reference to the issue of leases under applications, Nos. 1,344 and 1,522, at Armidale (on behalf of Mr. Saul Solomon), I have the honor to inform you that steps will be taken to expedite the issue of the leases referred to.

I have, &c.,
HARRIE WOOD,
Under Secretary.

T. F. De Courcy Brown, Esq., M.P., 52 Castlereagh-street.

No. 80.

E. Ward, Esq., to The Secretary for Lands.

Sir,

Sydney, 6 February, 1889.

With reference to the petitions and protests which have already been presented to you against the confirmation of Mr. A. J. Hack's application for the conditional purchase of 40 acres of auriferous land on the Guyra gold-field (Hillgrove District) to the exclusion of a number of *bonâ fide* claim-holders whose leases have been promised and rents therefore received by the Mines Department, I have the honor to submit for your information the following particulars of the case, which I have obtained from the most careful investigation I have been enabled to make.

Mr. Hack's application is dated July 21st, 1887, and was forwarded to the District Surveyor for report on July 28th, 1887.

On the 15th August, 1887 a letter was written by the Secretary for Mines to the Secretary for Lands, asking whether such an application had been made, and stating that the land was said to be auriferous.

The Mines Department was therefore informed that such an application had been made, and the letter from the Mines Department was sent on to the Land Board.

On the 30th August, 1887, the land applied for by Hack was proclaimed a gold-field.

On the 1st September, 1887, Hack's application came before the Land Board when considerable evidence was taken. I presume this evidence will be available for your inspection, but I may mention that it was proved by the District Surveyor that the land applied for by Hack was within the gold-field proclaimed on August 30th, and Hack himself admitted that since his application was made, auriferous deposits had been found on the land. Other witnesses deposed to having pegged out gold claims on the land in July and August, and to having found payable gold.

The case was referred by the Board to the Minister for Lands on the 5th September, 1887.

The Minister at first decided to confirm Hack's application, but a letter was written by the Mines Department asking that it might be disallowed.

Numerous petitions were also presented to the Minister, and to the Land Board, protesting against Hack's application being confirmed. These are mostly dated in December, 1887. In one letter Alfred Argles asserts that Brereton and Smith applied for a lease which included portion of Hack's claim, two months before Hack pegged out, and that Thorne and party were also in occupation under their miners' rights.

On the 27th December, 1887, the District Surveyor reported the existence of Brereton and Smith's lease of 8 acres, dated 30th April, 1887, and that this encroached on the 40 acres claimed by Hack, and thereupon arose the question of the area of that claim being less than 40 acres.

I contend that the application being for a measured portion of 40 acres, and for which the applicant only paid for 40 acres, any encroachment however slight must reduce the area to less than 40 acres, and be therefore in a strictly legal sense fatal to the application for conditional purchase.

I know that it has been urged that Brereton is willing to waive so much of his claim as would adjust Hack's area to the full 40 acres, but it was forcibly pointed out by Mr. Solicitor Forster at the hearing before the Land Board that no action by Brereton, subsequent to the date of Hack's application, could validate that application to the detriment or prejudice of other existing rights. Clearly, Hack's application must stand or fall by its validity, or otherwise on the date it was made. It was a claim for 40 acres, and no more. It included a portion of ground already legally held by Brereton, which being deducted necessarily reduces the area claimed by Hack below 40 acres. This conclusion is without reference to the claims of Thorne and party, and others also encroaching on Hack's claim.

On the 28th December, 1887, Mr. Solicitor Forster on behalf of Thorne and party lodged a protest with the Minister for Lands against Hack's claim, and a telegram was despatched to the Land Board recalling all papers in the case for further consideration and ordering suspension of all action in the meantime.

On

On the 4th January, 1888, the Minister for Lands, after reperusing the papers and the District Surveyor's report, decided to refer the case back to the Land Board for reconsideration.

The case accordingly again came before the Land Board, this time on 20th January, 1888. Voluminous evidence was taken, and the Board recommended the Minister to disallow Hack's application for the conditional purchase, because they considered the portion applied for did not contain 40 acres after deducting the land in occupation for mining purposes.

The Minister for Lands, acting upon this recommendation, finally disallowed the application. I am not in possession of the exact terms of the Minister's minutes, but the papers will be in your possession.

On the 11th February, Hack applied for a rehearing, and that evidence previously taken in the Warden's Court should be produced.

On the 24th February the Minister declined to reopen the case.

On the 27th July the Colonial Secretary (Sir Henry Parkes) granted a rehearing.

The Land Board asked the Minister to reconsider this decision, in view of the conflicting interests of claim-holders which has arisen in the meantime. The Minister refused this request.

In December, 1888, the Land Board did reconsider the case, and reported that, in their opinion, Brereton was in lawful occupation for mining purposes on that part of measured portion of No. 113 embraced in gold lease No. 166 on the date of Hack's application for conditional purchase, and that the land in consequence thereof was not open to, nor available for, conditional purchase on 21st July, 1887.

For all purposes of honest administration it might be fairly supposed that this repeated decision of the Land Board would have been respected, and that the previous decision of the Minister, disallowing Hack's application, would have been upheld accordingly. But the strangest, and I should hope unprecedented, feature of this case has yet to be revealed, and I submit it proves that other influences, certainly irregular and improper, were now at work.

The final decision of the Board was not given until the end of December, 1888. The papers could hardly have been received and considered by the late Minister for Lands until after the New Year's holidays. I find that the late Ministry were defeated on the 9th January, and resigned on the 10th. But on the same day, after the registration, and, I am told, after office hours, the late Minister, whose resignation was actually in the hands of the Governor, wrote a minute overriding the repeated decisions of the Land Board, reversing the final decision of his predecessor in office, and directing the Land Board to confirm Hack's conditional purchase.

Fortunately, however, in the interests of justice and of public policy, before this direction could be quite fulfilled, a new administration was sworn in, and I have to acknowledge not merely the courtesy but the absolute fairness to all parties with which both yourself and your honorable colleague, the Minister for Mines, have promised the fullest investigation before finality in these proceedings is pronounced.

I respectfully submit, on the merely legal aspect of the matter, the Board's repeated decisions are correct, because Hack's application was for 40 acres only, and there is no doubt he included ground already legally held by other persons for mining purposes. There is, I believe, some pretence that the ground he describes measures something more than the 40 acres he applied for, which excess would swamp the deduction of Brereton's area.

But can a man be allotted what he has not applied for? Hack's application is for 40 acres, including Brereton's portion. Surely you cannot legally give other land not applied for to cover an actual deficiency in the application itself. Take the reverse of the position. You have a maximum as well as a minimum area for conditional purchases. If a man applies for the maximum area, and his application is found upon survey to cover a few perches in excess of the maximum, would that invalidate his application altogether; and if not, how can a similar defect validate that which would otherwise be invalid.

Of course I admit that is rather a question for a lawyer than a layman. I only venture to put the case to you as it occurs to me.

But, sir, I do most urgently submit for your consideration that there are other aspects of this case which should not be ignored.

1. The *bonâ fides* or otherwise of Hack's application.
2. The elements of public policy and justice.

As to the first I contend that Hack's action shows *mala fides* throughout. I have personally inspected the *locus in quo*, and can affirm as all evidence will confirm, that the 40 acres does not comprise a perch available for cultivation, or the half of a rood available for a business site. This was certainly known to Hack when he applied for the conditional purchase. It is also a fact that this almost precipitous mountain side does contain gold-bearing reefs. This was known to other persons before Hack's application (to Brereton and Smith and Thorne and party) and can it be doubted it was known to Hack himself. And what does Hack do? Why the moment he thinks his application is to be confirmed, and that he is to get the fee simple of this 40 acres for £40, he applies for permission to mine on it, the only purpose he ever wanted it for. Can it therefore be said that his application for the conditional purchase was *bonâ fide*?

Mr. Abigail, the late Minister for Mines, has within the last few days, publicly denied any complicity in these proceedings, and has stated that the conditional purchase was approved by his colleague, the late Minister for Lands, in opposition to his (Mr. Abigail's) minutes, but the records of the Mines Office will prove whether, before leaving the Ministry, Mr. Abigail sent on to the Executive Council any approval of Mr. Hack's application for permission to mine on the conditional purchase.

As to public policy and justice, I submit that if this *mala fide* claim of Mr. Hack's is to be confirmed, it gives a monopoly of 40 acres of gold-bearing country, valueless and unavailable for any other purpose than gold-mining to one man for £40, to the exclusion of *bonâ fide* claim-holders, who must at least pay to the state £40 per annum in perpetuity, and who are prepared to expend already subscribed capital in its immediate development.

You have already in your possession enclosed in Mr. Solomon's letter of last month's date, copies of letters we hold from the Mines Department, promising that steps will be taken to expedite the issue of leases for two claims Nos. 1,344 and 1,522, for which rent in advance has been received and acknowledged by the Mines Department.

Upon the faith of these official promises and receipts, a public company has been formed to work two of these claims, and the necessary capital has been subscribed and is now available, but lying idle, pending the settlement of this matter.

These claims with others will be obliterated if Hack secures his monopoly of the 40 acres.

I have addressed you at this length, not merely as a director of the Company, to which I refer, but in the interests of all associated with the Hillgrove District, and of justice.

Other testimony than mine will sustain all that I have said.

Awaiting your further consideration any reply,—

I have, &c.,
EBENEZER WARD.

P.S.—As I am now returning to Adelaide, pending your decision, may I ask that you will kindly cause any reply hereto to be addressed to me at Parliament House, Adelaide.—E.W.

The papers in Hack's case, the subject of this letter, were forwarded to the Chairman of the Armidale Board on the 6th instant, with Ministerial authority for a resurvey of the lands in question by a surveyor who has not already been employed on this case.—W.H.C., 11/2/89.

May be forwarded to Chairman to place with other papers.—W.H., 11/2/89. Urged that the survey ordered may be completed without delay.—W.J.L., 11/2/89. The Acting Chairman, Local Land Board, Armidale.—H.C. (for Under Secretary), B.C., 12/2/89. Inform.—W.H.C., 12/2/89. District Surveyor and E. Ward informed, 12/2/89.

To the Honorable the Minister for Lands, Sydney,—

The Petition of the undersigned Residents of Hillgrove and surrounding district,

SHOWETH,—

(1.) That, at a public meeting of residents of Hillgrove and others interested in the development of the mineral resources of the district, the following resolution was unanimously carried:—

(2.) That this meeting indignantly protests against the action of the Minister for Lands in Sir Henry Parkes' Government in granting A. J. Hack's conditional purchase application for 40 acres after the same having been twice refused by the Local Land Board, who had opportunities of personally inspecting the site, which renders the application absolutely valueless for *bonâ fide* purposes, besides the fact of the conditional purchase being situated in the centre of an important and rising gold-field; and that this meeting pledges itself to unite every influence to induce the Government to disallow, and grant the same land for mining purposes, as otherwise it would be a blot and stain on the Ministry, a disgrace to the country, and injustice to the mining community in general and Hillgrove in particular.

(3.) We, the said petitioners, in addition to the foregoing resolution, would respectfully submit the following facts:—

(4.) That a late Minister for Lands refused to allow the application of the said A. J. Hack. Your petitioners have good grounds for requesting that the matter be inquired into.

(5.) That, according to sworn evidence before the Land Board of Armidale, a portion of this ground was held by virtue of miners' rights previous to A. J. Hack's application for selection No. 113.

(6.) That the whole of the said 40 acres have been applied for and surveyed into fifteen blocks, which have been applied for as gold-mining leases.

(7.) In consequence of the decision of the Minister above referred to, many persons have been induced to invest in mining properties held upon the said 40 acres, thereby causing very great inconvenience and heavy losses, unless the prayer of your petitioners be granted.

(8.) That, in conclusion, your petitioners pray that you will be pleased to cause the said 40 acres of land to be disallowed, and granted for mining purposes.

Your Petitioners, as in duty bound, will ever pray.

JOHN O'NEALS, mine-manager, Hillgrove.
R. J. WEBSTER, mining agent, Sydney.
J. M'CARTHY, miner, Armidale.

Report of Deputation.

Shorthand Notes—11th February, 1889.

Deputation, introduced by Mr. Copeland, from miners of Hillgrove to protest against Hack's non-residential conditional purchase being allowed to stand good.

THE deputation represented that this was a bogus selection from the first. The land embraced a steep precipice, and was unsuitable for any other purpose than mining, and when they saw a man evading the regulations they thought that they were entitled to draw attention to it, as this selection was prejudicial to important mining interests, in support of which statement they presented a petition to the Minister, signed

signed by some 380 miners, residents at Hillgrove, which was one of the most important mining places in New South Wales. They represented some fifteen mineral leases. They advanced the following arguments against Hack being allowed to have this land :—

1. That, in the declaration which accompanied his application for the conditional purchase, Hack had to declare that the land was intended to be used for his sole use and benefit (and until the purchase was confirmed he was still an applicant), whereas it would not be difficult to prove that others were interested with him.
2. That Thorne and party pegged out the land on the 16th under miners' rights, but did not apply for the land before Hack, who tendered his application on the 18th of the month; but, under the 1st section* of the Act 46 Vic. No. 7, of the 21st November, 1882 (an Amending Act to Act 37 Vic. No. 13, Mining Act), it is stated that possession shall be taken and application made, and the land taken possession of shall be deemed to be held as under promise of lease and exempt from sale, and they contended that it would be sufficient to prove possession by the miners on the 16th to debar this land, under section 21, subsection 8, of the Crown Lands Act of 1884, from conditional purchase. With reference to the question of possession, on the 16th they desired that Thorne and party might be given an opportunity of proving this. The Land Board said they were not satisfied on the point, but Thorne and party had not had an opportunity to rebut any evidence on this head, and if necessary could furnish abundant proof of possession; in fact the statement of one of the opposition witnesses (O'Hanlon, they thought was the name) went to prove it.
3. That Hack applied for the land as 40 acres, the minimum under the 47th clause of Crown Lands Act of 1884, whereas it is now found that it was not 40 acres, but there is a difference of 2 roods. This is caused through error in surveying creek. Such being the case, they held the selection was bad, an opinion evidently shared by the District Surveyor and Acting Chairman of Land Board, by the Land Board, and Mr. Garrett. As, when the case came before the Board, they referred it to the Minister, Mr. Garrett, who decided against the conditional purchase, but during Sir Henry Parkes' administration of the Lands Department the case was reopened and sent to the Land Board, who decided that the purchase was not 40 acres and illegal. Mr. Brunker, however, overruled this holding that, under section 52 of Crown Lands Act of 1884, measured portions must be taken as measured.

On the strength of Mr. Garrett's decision above-mentioned some £1,000, or any way £100 had been spent in mining operations, which would all be lost if such decision be reversed. Failing other action, the land might be resumed under the 45th section of the Crown Lands Act of 1884.

The Minister (Mr. Lyne) said that this matter could not be decided now. The case was an intricate one, and he had not had time to carefully go into it. Mr. Proctor had waited upon him, and upon his representations he had stopped further action in the case. Mr. Brunker had directed that the conditional purchase be confirmed, and it would have been if he had not stopped it.

What they had said about the conflicting actions of this and the Mines Department was correct, and in connection with this he had arranged for a conference with the Minister for Mines on this case.

With regard to the area, one surveyor made it 40 acres, others different, and the question arose whether a survey, accepted and approved by the Department, can be touched by a Minister or anyone else, and this point he had submitted for the opinion of the Attorney-General; in his own opinion it was doubtful. In this instance the plan had been sent on by the District Surveyor and approved for 40 acres, and Hack could not know that it was not so. He had sent the papers to the Board (and that was why they were not before him) to have a survey of the land made by a surveyor who had not previously been connected with the case. If the survey could be altered he thought Hack's case was bad, as Brereton's lease would hold good. He could give them no decided answer, but they could rest assured nothing would be done in a hurry, and when anything was done he would communicate with Mr. Copeland.

The point as to Thorne and party pegging out was a comparatively new one, as it did not come out clearly in the papers. If the survey of the portion could not be altered, that settled the case. He would order the new survey to be completed without delay, and, if in doubt, afford Thorne and party an opportunity of showing that they had pegged out the land prior to Hack's selection.

WALTER D. BINGLE,

Extract from *Daily Telegraph*, 12 February, 1889.

IMPORTANT MINING CASE.—DEPUTATION TO THE MINISTER FOR LANDS.

YESTERDAY Mr. Copeland, M.P., and Mr. Proctor, solicitor, introduced to the Minister for Lands a deputation of gentlemen interested in mining at Hillgrove, in the New England District, who protested against the granting of a certain conditional purchase applied for by Mr. Hack.

Mr. Copeland explained that the selection in question was a bogus selection from the very first. The land was taken up under regulations that had no application whatever to mining. It was supposed to be taken up for the purpose of agriculture or grazing, whereas the fact was that the land was situated on a precipice as steep as the wall of a church, and could be of no earthly use other than for any minerals or gold it contained. When they saw a man attempting to evade the proper regulations under which land could be obtained for mining purposes, and resorting to other regulations, he thought that the Department was fairly entitled to look at the case with some suspicion from the very beginning. In addition to that, there was a declaration that had to be made when a conditional purchaser made a selection, to the effect that he held the land for his sole use and benefit. He thought it would not be very difficult to prove that Mr. Hack had others "in" with him in this selection, and that there were people resident in Sydney connected with the speculation. The land had been applied for under mining conditions, and it appeared that before Mr. Hack made his application one mining application had encroached upon that measured portion of 40 acres. An applicant for land for gold-mining purposes had already taken up a small portion of that land, and the argument was, therefore, that there was not the minimum of 40 acres for Mr. Hack to take up. There was considerable feeling in the district on the matter, as it was felt that there had been an attempt to evade the law by taking up a large area of valuable mining land.

Mr. Proctor said the land was originally applied for by Mr. John Moore, of Armidale, as a M.C.P., and it was surveyed as a 40-acre conditional purchase. After that the usual inquiries were made, and Mr. Moore's M.C.P. lapsed. It was then pegged out by Thorne and party on July 16, 1888, under miners' rights. On July 21, 1888, Mr. Hack applied for it as a measured portion of 40 acres. The Local Land Board held an inquiry, but gave no decision. Being doubtful, the Board referred the matter to the Minister for Lands, and Mr. Garrett decided in favour of the miners and against Mr. Hack's application. After a considerable time had elapsed, Sir Henry Parkes, temporarily occupying the position of Minister for Lands, reopened the case on being properly petitioned to do so, and sent it back to the Board, who again decided that there was not 40 acres there, as required by the Land Act provisions under which a conditional purchase could be taken up, and therefore that Mr. Hack's selection was illegal. However Mr. Brunker decided that probably, as one line of the selection was not surveyed, there was sufficient area along that line to make up the deficiency. The land had been taken up by Mr. Hack as a non-residential, selection, but for no purpose could it be used except mining, and mining was not a purpose contemplated under the non-residential clause. If the Minister for Lands would inquire into the whole subject, he would see how absurd it was to deprive so many miners and the public of the advantage of having the land in question kept open for mining purposes. The Mines Department said that the miners were entitled to the land, but at present the Lands Department said that Hack was. Several hundred miners could be employed on the land, and on the faith of Mr. Garrett's decision thousands of pounds had already been spent by different persons as purchase money for the land, and hundreds of pounds had been expended for mining purposes, and all that would be lost if Mr. Garrett's decision remained reversed.

Mr. Lyne, in reply, said the matter could not be decided now. It seemed to him to be a very intricate case. The point in reference to the applications from the miners did not seem to him to come out very clearly in the official papers, and the question of area was a very difficult matter to deal with. The surveyor who surveyed the land first now said that he was aware when he made the survey and sent it to the Department that there were more than 40 acres there, but he stated, and his plan was supposed to show, that there were only 40 acres. Some officer of the Department had run up the lines and they made the land nearly 42 acres altogether. It was a crucial point whether that survey, having been sent in a considerable time ago and accepted by the Department and approved, could now be touched legally by the Minister, or by anybody else, and on this point and on one or two others, he had submitted the matter to the Attorney-General. As far as he (Mr. Lyne) could read the law, it was very doubtful if it could be touched even if it had 10 acres more than it was supposed to have. He had instructed the district surveyor to have another survey made by a surveyor altogether independent of the case, and this would show whether there were more than 40 acres in it or not. There were two parties, as they of course knew, fighting about this land, and he had already arranged for the Minister for Mines to have a conference with him when he received the papers back from the local Board, so that there should be no further clashing between the Mines and the Lands Departments. The Mines Department was evidently acting in one direction, under the Mining Act, and the Lands Department in another, and one Department did not seem to know what the other had done. All he could say about the matter now was this:—There were several points, the principal being whether there was any power to alter a survey once approved of by the Department. The point as to previous occupation by pegging out had not been brought before him previously. Nothing would be done in a hurry, and before anything was done Mr. Copeland would know something about it, for he had been interesting himself in connection with the question, and it was such an important matter that he (Mr. Lyne) must have the Crown law officer's opinion before he took action, particularly as to whether he could touch the 40 acres or not, and if not that would settle the whole thing. If otherwise, other questions would arise, such as the pegging-out by the miners, which seemed to him a very important matter. He would order the survey to be completed without delay, and if in doubt he would give Thorne and party an opportunity of showing that they had pegged out the land before Hack's selection.

Hack's case.—Please see me in regard to newspaper report to effect that Attorney-General has been asked to advise on point as to whether a measured portion, the plan whereof has been duly approved, can be altered or amended.—S.F., 12/2/89. Mr. Capper.

I cannot trace any instruction by the Minister to obtain advice upon the point raised in Hack's case. The principal papers in the matter were forwarded to the Chairman of the Land Board, Armidale,

on

on the 6th instant, with a minute by Mr. Secretary Lyne, to the effect that a surveyor, who has not already been employed on this case, should carry out the resurvey.—W.H.C., 13/2/89. The Under Secretary.

The point raised as to the power of the Department to alter a measurement, plan whereof has been approved, is now being referred to the Attorney-General on separate paper. Place these documents with the bulk of the papers on their return.—S.F., 18/2/82.

No. 85.

Extract from *Daily Telegraph*, 13th February, 1889.

HACK'S SELECTION AT HILLGROVE.

(*To the Editor of the* Daily Telegraph).

Sir,

My attention having been called to a report in your issue of this day of a deputation which waited on the Minister for Lands concerning a selection taken up by one Hack, at Hillgrove, near Armidale, I am constrained to point out the many incorrect statements made on that occasion, and to the electioneering dodge displayed in the whole matter.

And, firstly, I would draw your attention to the fact that Hack's absolute right to this selection was recognized by the late Ministers for Lands and Mines after a very exhaustive inquiry lasting many months, and the confirmation of his selection, with a permit from the Mines Department, was actually awaiting the signature of the Executive Council, when the new Ministry, on the mere receipt of a telegram from one of their partizans (Mr. Copeland), withdrew the papers so carefully considered by their predecessors, and threw the whole matter into confusion.

It was stated by Mr. Copeland at the deputation that this was a bogus selection. This is not so. Hack selected this piece of ground in due form of law, as others had done before him when it was Crown lands open to selection and not within a gold-field.

The nature of the ground is beyond the question, as a matter of fact it was taken up by him for the timber on it, and contracts were ready to be made with him by persons in the neighbourhood for supply of same.

After the land was selected by Hack it was discovered that a small portion had been applied for by Smith and Brereton prior to his selection, but the small piece did not at all interfere with his lot, which had been surveyed by the proper authorities, and found to contain nearly 42 acres; consequently Hack withdrew any objection to these parties who have had their lease granted.

But it was stated at the deputation by Mr. Proctor that Thorne and party had gone on the land prior to Hack's selection. This statement is disposed of by the report of the Chairman of the Land Board, before whom the inquiry as to Hack's claim took place.

It was further stated that many miners were prevented from working the ground. But what are the true facts? They are these: Certain people, in the face of continual warnings, have floated companies in connection with the land, and finding that after much patient investigation the two Departments had arrived at the conclusion that Hack was perfectly in order in his selection, as the ground by all moral and legal rights belonged to him, they are trying by all and every means to escape from the consequences of their rashness, and are being assisted by some who have been unfortunately induced to put their money in these companies.

Yours, &c.,

12th February. ——— ONE WHO KNOWS.

Submitted. The papers in reference to the case are with Mr. Capper.—M.L., 13/2/89.

No. 86.

Mr. District-Surveyor Finley to Mr. Surveyor Laing.

Conditional purchase, 87–91; Armidale; A. J. Hack; 40 acres; parish of Cooney, county of Sandon.

14 February, 1889.

Replied to by my letter, dated 25/2/89, No. 16.—CHARLES W LAING.

MR. SURVEYOR C. W. LAING is requested to make a resurvey of portion 113, parish of Cooney, county of Sandon, which has been applied for by A. J. Hack under conditional purchase 87–91, Armidale, 40 acres.

It will be necessary to make a very careful resurvey of the old measured portion No. 113 of 40 acres. It will also be necessary for him to excise the portion of land known as Brereton and Smith's gold lease, 166, which encroaches upon measured portion 113. The plan should be drawn to a scale of at least 10 chains to an inch, and it should clearly show the area of portion 113, both inclusive and exclusive of Messrs. Brereton and Smith's gold lease.

I think the scale should be 4 chains to an inch.—F.G.F. 19/2/89.

The matter is very urgent, and should receive immediate attention.

F. G. FINLEY,
District Surveyor.

Memo. by The Under Secretary for Lands.

Upon a certain day in the year 1887 an application was lodged for a mineral lease under the provisions of the Mining Act of 1874. The land described in the application, besides including unmeasured land, embraced, to the extent of about one quarter of an acre, a corner of a measured portion adjoining. A few weeks subsequently an application under section 26 of the Act of 1884, 48 Victoria No. 18, was lodged for a conditional purchase of 40 acres. The land applied for and described was a measured portion, that is, the land had been measured by a Government Surveyor and the plan of such measurement had been approved, as provided in section 13 of the Lands Acts Amendment Act of 1875, 39 Victoria No. 13, as 40 acres. Upon the Local Land Board considering the application for the conditional purchase it was found that the land described was already covered to a small extent—about one quarter of an acre—by the description given in the mineral lease application previously applied for. It was, however, shown upon calculation of the lines of the measured portion, given upon the improved plan, that the area therein embraced 42 acres, which is sufficient to satisfy both the application for the mineral lease and the application for the conditional purchase. I understand the Minister for Lands to now desire advice as to whether or not the Crown Lands Act of 1884, 48 Victoria No. 18, gives him or the Land Board power to authorize a resurvey of a measured portion under such circumstances as are here stated.

The sections of the Crown Lands Act of 1884, 48 Victoria No. 18, bearing upon the question of measurement and unmeasurement are from 55th to the 60th.

S.F., 16/2/89.

Perhaps the Honorable the Attorney-General may be asked to advise.—S.F., 18/2/89. Approved.—W.J.L., 18/2/89. The Crown Solicitor.—F.H.W. (for Under Secretary), B.C, 18/2/89.

No. 89.

Memo. by The Under Secretary for Lands.

Hack's Conditional Purchase.

In connection with the above case Mr. Secretary Lyne wishes to ascertain whether holders of miners' rights who mark out claims on gold-fields, by pegging out in the usual manner, require a legal holding title thereto at once, and to the exclusion of other persons, irrespective of whether they mine continuously thereafter. Mr. Capper to inquire at Mines Department.

S.F., 18/2/89.

I waited upon the Under Secretary for Mines this morning, and after reading the above to him he answered that a good title would be made, but it would always be open to attack if subsequent default occurred.—W.H.C., 19/2/89. The Under Secretary. Put with papers.—W.J.L., 19/2/89.

No. 90.

Mr. W. E. Myring to The Under Secretary for Lands.

Sir, 98, Pitt-street, Sydney, 20 February, 1889.

With reference to Hack's conditional purchase noted in the margin, I have the honor, as agent for Thorne and party, and without prejudice to their claim as first occupiers or other considerations in their favour, to protest against one action in the case, which I would ask should be submitted to the Attorney-General for his opinion as to its legality or otherwise.

A. J. Hack's C. P. 87-91; 40 acres; Hillgrove, Armidale.

On the 20th January the Local Land Board at Armidale disallowed the application for the selection, and the Minister (Mr. Garrett) confirmed this action; but, on the 27th July, Sir Henry Parkes, acting as Minister for Lands, reopened the case.

I would respectfully submit that under whatever section the disallowance was made, the action was final (subject only to the right of appeal), and that the Colonial Secretary, Sir Henry Parkes (at the time acting Minister), had no power to reopen the case.

I make this submission with all due respect, but it appears to me a strong point in favour of my clients.

I have not copies of papers, and am not well acquainted with the sections of the Act under which the respective actions of the Board and Ministers were taken, but it seems to me that if the selection was disallowed by the Minister following a minute by the Board to the effect that the selection should be disallowed, the case was probably referred to the Board under section 14, sub-section VII, for decision by the Minister. I submit that then his finding or (in terms of the Act, as quoted) decision was final. But should the Department not recognize the Minister's decision given under the before-mentioned clause of the Act as a Ministerial decision, it must then be equivalent to a Land Board decision, and, if so, the applicant Hack should have appealed in the usual way within twenty-eight days.

Briefly, the points I would like submitted to the Attorney-General are as follows:—

1. Is the action of a Minister in disallowing a selection after it has been referred to the Board under section 14 sub-section VII, deemed a Ministerial decision; if so, is it not final, and can it be legally reopened in the Lands Department?
2. If a disallowance of a selection, as shown by the Minister, is not a Ministerial decision, does it then become equivalent to a Land Board decision; and, if so, should not the applicant Hack have appealed against same in the usual way.

I have, &c.,
W. E. MYRING.

Papers (89-346 Cor.), B.C. to Land Board, Armidale, 6/2/89. For resurvey, *vide* Minister's approval.—J.A.J. (*pro* J.P.M.), 26/2/89. The Under-Secretary.—W.H.C., 26/2/89. Inform that the case will be dealt with in the ordinary way.—W.J.L., 26/2/89. W. E. Myring informed, 8/3/89.

No. 91.

No. 91.

Messrs. McNamara and Norton to The Secretary for Lands.

Re Hack's conditional purchase.

Sir, Waltham Buildings, Bond-street, Sydney, 22 February, 1889.

Our client has drawn our attention to the deputation which waited on you on the 11th instant, relative to this conditional purchase, and we have the honor to point out that there are many inaccuracies and mis-statements in the statements made by the deputation. The land was Crown land open to conditional purchase at the time of Hack's application, and was not within a gold-field. It was proved clearly before the Land Board that there was within the boundaries of the portion in question more than sufficient to satisfy Hack's application for the 40 acres. The statement of the pegging out by Thorne and party was clearly disproved to the satisfaction of the Land Board, and the evidence shows that the pegging out as alleged by Mr. Proctor did not take place.

We would point out that the late Minister for Lands, Mr. Brunker, after carefully going into the evidence and the papers, recommended that Hack's application be confirmed, and we feel sure that your predecessor's decision will not be interfered with by you unless some facts, which were not brought under his notice, are brought before you. As you were good enough to say that before dealing with the matter that you would give our Mr. McNamara an opportunity of seeing you, we shall be glad if you will give him an early appointment, that he may go fully into the statements made by the deputation, and point out to you in what respects they are inaccurate.

We have, &c.,
McNAMARA AND NORTON.

Mr. District-Surveyor Finley to The Under Secretary for Lands.

Resurvey of portion, No. 113, parish of Cooney, county of Sandon.

Sir, District Survey Office, Armidale, 6 March, 1889.

Original plans, S. 2,354, and 2,406-1,660, and Mr. Surveyor Laing's plan forwarded under separate cover, in roll form.

In accordance with the Honorable the Minister's instructions, dated 1st February, 1889, papers C.S. 89-346, I now have the honor to forward a plan and report showing a resurvey by Mr. Surveyor C. W. Laing, of measured portion No. 113, in the parish of Cooney, county of Sandon.

Mr. Surveyor C. W. Laing has had no previous connection with this case in any way.

According to Mr. Laing's resurvey the total area of portion 113 is 41 acres 1 rood 6 perches, and the area of the portion, exclusive of Brereton and Smith's gold lease, is 41 acres and 39 perches.

Attention is drawn to the fact that the western boundary of the portion has been fixed by scale only from Mr. Licensed-Surveyor Evelyn Manning's plan of the survey of the portion adjoining, being portion 59; there being no other way of determining it, as it follows no natural feature.

The whole of the papers in this case are forwarded herewith, as also the original plans of measured portions Nos. 59 and 113, catalogued S. 2,354-1,660, and S. 2,406-1,660.

I have, &c.,
F. G. FINLEY,
District Surveyor.

[*Enclosure.*]

Resurvey.—Surveyor Charles W. Laing to the District Surveyor, transmitting plan of portion 113, parish of Cooney, county of Sandon, showing resurvey of original measurement. Plan and instructions herewith.

Sir, Armidale, 25 January, 1889.

I have the honor, in accordance with your instructions, dated 14th February, 1889, No. 4, to transmit herewith the plan of portion No. 113, parish of Cooney, county of Sandon, showing resurvey of original measurement.

Owing to the nature of the country, which is a mass of broken rocks, and very steep, I found it impossible to measure along the north or south boundary of portion 113, but traversed a connection from A to D, and checked it by triangulation from transverse line 10, with satisfactory results, then calculated the length of AD-BC.

I found all corners, and the reference to corner B should read as shown by me.

I have, &c.,
CHARLES W. LAING.

The District Surveyor, Armidale.

Forward to the Under Secretary for Lands, with my letter of this date.—F. G. FINLEY, District Surveyor, 6/3/89.

No. 93.

The Under Secretary for Lands to Mr. W. E. Myring.

Sir, Department of Lands, Sydney, 8 March, 1889.

Armidale. C.P. 87-91, 40 acres. A. J. Hack.

Referring to your letter of the 20th ultimo, on the subject of the conditional purchase, noted in the margin, I am directed by the Secretary for Lands to inform you that the case will be dealt with in the ordinary manner.

I have, &c.,
H. CURRY
(For the Under Secretary).

No. 94.

Office Memorandum.

Alfred J. Hack, Armidale.—Conditional Purchase 87-91, 47th section, 40 acres, portion 113.

Mr. Secretary Lyne, on the 1st February last (89-346 Corr.), directed as follows:—Instruct District Surveyor to have another survey made by a surveyor not already employed in connection with this.

In accordance with those instructions a resurvey has been made by Mr. Surveyor C. W. Laing, who finds that the area of portion 113 is 41 acres 1 rood 6 perches, and the area of the portion, exclusive of Brereton and Smith's gold lease, is 41 acres and 39 perches. On

On the 19th February the opinion of the Attorney-General was sought as to whether the Minister had power to order a re-survey of a measured portion, the plan of which had been approved, but as such opinion has not yet been given, the case may perhaps remain in abeyance pending its receipt.

W.H.C., 11/3/89.

The Under Secretary.

Pending the receipt of the opinion of the Attorney-General this case may stand over.—J.N.B., 12/3/89. Opinion herewith.—J.P.M. (*per* T.B.), 15/3/89. Mr. Capper. Opinion by Mr. Attorney-General Simpson now enclosed (*Vide* 89-6,898, Departmental).—W.H.C., 15/3/89. The Under Secretary. Submitted.—S.F., 16/3/89.

No. 95.

The Crown Solicitor to The Under Secretary for Lands.

Subject :—Sections 55 to 60 of the Crown Lands Act of 1884, 44 Vic. No. 18, as to the power of the Minister to resurvey land under certain circumstances.

Sir, Crown Solicitor's Office, Sydney, 14 March, 1889.

I have the honor to return herewith the papers relating to the above matter, which were forwarded to me from your department on the 20th February, 1889, and to state that I have submitted them to Mr. Attorney-General Simpson, a copy of whose advising thereon will be found upon the * other side of this letter. *See below.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor.

[*Enclosure.*]

COPY OPINION OF THE ATTORNEY-GENERAL.

I DO do not see any power given in the Land Act of 1884 either to the Minister for Lands or to the Land Board to authorize a resurvey of a *measured* portion.

Section 55 says that land upon being conditionally purchased under the Act of 1884 shall be taken in portions as measured; but if the area applied for be less than a measured portion, such portion may, on approval of the Land Board, be subdivided. But in the present case the portion applied for is *not less* than a *measured* portion, viz., 40 acres, if it is considered that the approval under the Land Acts Amendment Act, 39 Victoria No. 13, section 13, constitutes the land a measured portion *after the passing of the Lands Act of* 1884. Section 56 of that Act states that no land shall be considered to be measured until the plan shall have been approved of by the district surveyor, or an officer duly authorized in that behalf, &c.

If the approval under the *Act* 39 *Victoria No.* 13 has ceased to have any effect (and this is a question upon which I express no opinion), the 42 acres may be considered as an *unmeasured portion* under the Act of 1884; and 40 acres of it, if sufficiently described, may be selected, *excluding the land included* in the mineral lease application. If the approval under the Act of 1875 still constitutes the land as described in the plan a measured portion, I don't see any certain way out of the difficulty which has arisen; but perhaps the *best* thing to do would be for the Minister to direct a resurvey, and let the legality of the proceedings be tested by those whose interest it may be to dispute it.

G.B.S., 13/3/89.

No. 96.

The Under Secretary for Mines to The Under Secretary for Lands.

Sir, Department of Lands, Sydney, 25 March, 1889.

Referring to the matter of the conditional purchase noted in the margin, I have, by the direction of the Secretary for Mines, to request that you will be good enough to inform me as soon as possible whether further consideration has been given to the objections to such conditional purchase; and, if so, with what result.

Armidale, C.P. 87-91; 40 acres, portion 113, parish Cooney, County Sandon; A. J. Hack.

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 97.

The Under Secretary for Mines to The Under Secretary for Lands.

Sir, Department of Mines, Sydney, 30 April, 1889.

I have the honor to invite your attention to my letter of the 25th March, and to request the favour of a prompt reply.

I have, &c.,
GERARD E. HERRING
(For the Under Secretary).

Subject :—*Re* conditional purchase 87-91 at Armidale, 40 acres, portion 113, parish Cooney, county Sandon; A. J. Hack.

No. 98.

Messrs. Brett and Coghlan to The Minister for Mines.

Sir, 19, Macquarie-place, Sydney, 13 May, 1889.

Under instruction from Mr. A. J. Hack, we have the honor to request that you will cause the conditional purchase noted in the margin to be approved at the earliest moment possible, as owing to the long delay which has already taken place, our client has been unable to complete arrangements which he had entered into, and has been, and still is, suffering severe and, to him, ruinous loss. He is, and always has been, ready to comply with all the provisions of the Act.

C. P. 87-9 40 acres, Armidale, A. J. Hack

The anxiety and mental strain brought upon him by the lengthy delay occasioned by the action of interested parties is proving too much for him, and his bodily health is suffering.

Under these circumstances, and in order that justice may be done, we trust that you will at once cause the necessary certificate to issue.

We have, &c.,
BRETT AND COGHLAN.

No. 99.

No. 99.

Messrs. Abbott and Allen to The Under Secretary for Lands.

Sir, Wentworth Court, Sydney, 28 May, 1889.

I have the honor to forward to you the copy of a letter received by me from Mr. A. J. Hack, in reference to his C.P. 87–91 of 40 acres, made at Armidale, I need hardly point out to you how grossly unfair it is to Mr. Hack that this matter should be tied up in the manner in which it has been, simply because Mr. Chanter chooses to place upon the Business Paper of the Legislative Assembly a Notice of Motion which he makes no effort to have disposed of.

The interests involved in this conditional purchase are so great, and of such vital consequences to Mr. Hack, that there should be no delay in dealing with the matter one way or the other.

I would most respectfully urge that the Minister should give his decision in this case in such a way as to enable the parties to the dispute to fight out their contentions in the Supreme Court, if they think proper. The facts of the case are, I think, admitted, the points of law involved are intricate, and can only be finally decided in a satisfactory way by a Court of Justice. Under these circumstances, I would ask the Minister, without delay, to take a course which will enable all parties to have the disputes settled at the earliest possible date

I have, &c.,
ABBOTT AND ALLEN.

[*Enclosure.*]

J. P. Abbott, Esq., M.L.A., Elizabeth-street, Sydney,— Armidale, 22 May, 1889.

Sir,

I shall esteem it a favour if you could inform me if it is Mr. Chanter's intention to apply for the Select Committee to inquire into the matter of my conditional purchase. It is now so long since the time fixed for it to come before the House, and as nothing has been done, I thought that perhaps Mr. Chanter had abandoned it. Could you induce Mr. Chanter either to proceed with this matter at once or withdraw his motion, or in any way hurry my case at the Lands Department, so as to get the certificate of approval issued, as I find that I am not able to bear the heavy expenses that I am continually being put to and have been put to for the past two years over this case.

If you can further assist me in this matter you will confer a great favour on me.

Yours truly,
A. J. HACK.

MINING.

No. 1.

Messrs. G. W. H. Dry and John Charnock to The Secretary for Mines.

Sir, Belmore, Canowindra, 8 October, 1887.

We, the undersigned, lessees of gold-mining lease No. 54, comprising 2 acres, known as the old prospecting claim, situate at the Blue Jacket Reef, Belmore, near Canowindra, parish Collett, county of Ashburnham, do hereby, in accordance with the Gold-fields Mining Act, respectfully request that a suspension of work may be granted us thereon for the period of three months, for the following reason :—That the workings, now at a depth of 240 feet upon the main reef, are flooded with water for a considerable distance along the course of the workings, and within a distance of 100 feet from the surface, necessitating machinery to be obtained and employed to combat with it and enable us to clear the workings and get at the stone, which is now under water. We therefore request this protection while we obtain and erect the necessary machinery. Awaiting favour of your esteemed reply,

We, are, &c.,
G. W. H. DRY.
JOHN CHARNOCK.

N.B.—The Warden (Mr. Connolly) for the Carcoar and Bathurst district, who attends here as P.M., informs me he cannot deal with the matter, as this is in the Forbes District, and the Warden there seldom having occasion to come here necessitates our application to you.—G.W.H.D. and others.

G.L. 214, Lachlan, J. Boyd and others.—The writer should probably be informed that he must apply to the Warden of the district for suspension on the above lease.—E.F. Submitted.—17/10/87. Approved.—H.W., 18/10/87.

No. 2.

Mr. W. E. Croucher to The Secretary for Mines.

Sir, Canowindra, 12 October, 1887.

I beg to draw your attention to the following facts:—A party of three, named John Boyd, George Dry, and John Charnock, have a gold lease of 2 acres at Belmore, Canowindra. The lease has been signed by them, but they are not doing any work. I beg that you will make inquiries and have the lease cancelled for non-working and give me the privilege of taking possession of it, as I am prepared to go into it and give it a fair trial, and not let it lie idle, as the present party are doing, waiting for others to strike something. I beg to ask that there will be no delay in having it cancelled.

I have, &c.,
W. E. CROUCHER.

Referred to Mr. Warden Sharpe for report as to application for suspension by Dry and party.—E. FARR, for the Under Secretary, 5/11/87. Mr. Warden Sharpe, B.C., 5th November, 1887.

It appears from the annexed report of the Warden's Clerk at Canowindra, as also from a letter I have received from one of the shareholders, that the labour conditions have not been complied with on the lease in question. Attention is drawn to report and correspondence.—ERNEST A. E. SHARPE, Warden, B.C., 29/11/87. The Under Secretary for Mines.

As the nature of the several reports are conflicting, probably the usual course may be adopted, and the applicants for suspension be informed that they must apply to the Warden (Mr. Sharpe) in open Court for the concession they ask.—E.F., 15/12/87.

The writers may be informed that they must apply to the Warden in open Court. There is no other way of dealing with such applications. It was a waste of time to refer to the Warden.—H.W., 20/12/87.

No. 3.

Messrs. G. W. H. Dry, John Charnock, and others to The Secretary for Mines.

Sir, Canowindra, 22 October, 1887.

We respectfully invite your attention to application for registration of gold-mining lease No. 56*, on Blue Jacket Reef, Belmore, Canowindra, county Ashburnham, parish Collett, for the period of three months, pending erection and completion of plant, to enable us to get the water out of the workings, that we may drain the ground to get at the reef. The application is dated about the 15th instant. Your reply per return granting same will oblige, as we are anxious to forward the mine.

* Should be No. 54.

We are, &c.,
G. W. H. DRY,
JOHN CHARNOCK,
And Others.

How does this stand?—H.W., 24/10/87. The writers have been instructed to apply to the Warden of the district. Seen.—G.E.H. (for U.S.)

No. 4.

The Under Secretary for Mines to Messrs. G. W. H. Dry and John Charnock.

Gentlemen, Department of Mines, Sydney, 25 October, 1887.

Referring to your letter of the 8th instant, in which you apply for suspension of the labour conditions of gold-mining lease No. 214 in the Lachlan Mining District for the period of three months, I have the honor to inform you that application should be made to the Warden of the district for suspension of the labour conditions of the lease.

I have, &c.,
GERARD E. HERRING
(for the Under Secretary).

No. 5.

No. 5.

Mr. G. W. H. Dry to Mr. Warden Sharpe.

Dear Sir, Canowindra, 3 November, 1887.

We have applied to Mr. Connolly, P.M. here, who is also Warden for the Carcoar and Cowra districts, and he informs us he thinks it would be necessary for the application to be made to you. This would mean 90 miles of journey, unless you accepted a declaration from us setting forth the facts which I can forward upon receipt of reply.

Yours, &c.,
G. W. H. DRY.

Will Mr. Cook be good enough to inform me if the labour conditions have been complied with on this lease, and inquire from lessees on what grounds they ask for suspension of labour. See conditions of labour below?—ERNEST E. SHARPE, Warden, B.C., 5 November, 1887. The Warden's Clerk, Canowindra.

The labour conditions on G.L. No. 214 are :—That fourteen days after delivery two men are to be employed continuously the ordinary working hours. The lease was delivered on the 22nd June last.

No. 6.

The Warden's Clerk, Canowindra, to The Warden, Forbes.

Sir, Warden's Office, Canowindra, 13 November, 1887.

Re the attached papers, I have the honor to state for your information that Mr. Dry, one of the applicants, states that the ground on which he asks for a suspension of the labour conditions is that they wish to erect machinery to test the deep ground. Mr. Boyd, another of the applicants, does not wish for a suspension, as he wishes the ground to be worked, and states that there is no intention of erecting machinery. Mr. Charnock has not been spoken to about the matter, as he lives some distance from Canowindra. The labour conditions have not been carried out. Two men were employed for six weeks after the granting of the lease, but since that time no work of any sort has been carried on in connection with the lease.

I have, &c.,
WM. COOK,
Warden's Clerk.

No. 7.

Mr. John Boyd to Mr. Warden Sharpe.

Sir, Canowindra, 17 November, 1887.

The Warden's Clerk here called on me the other day to ask on what grounds we asked for suspension of work on our lease at Belmore, and I now beg to state that I, as one of the shareholders, was never a party to it. Dry asked me some time ago, and I told him then that I didn't want suspension of work, as we had made a start, and I would like to see it tested, and if it was no good throw it up. But it appears he took it on himself to write. Charnock didn't even sign the letter, although I believe his name appears on it. We have worked it for about six weeks ; and, on account of Dry not paying his share of working expenses, we have not worked it for about six or eight weeks, as what was done Charnock and myself had to pay for it. I would sooner see it cancelled than to be humbugged any more, as I believe it is a good claim. I would like to see it properly worked. I say if we cannot work it let somebody else do it, although it will be hard for Charnock and myself to lose it, as we have been out of pocket now.

I thought I had better drop you a line in case you might be misled.

I am, &c.,
JOHN BOYD.

No. 8.

The Under Secretary for Mines to Messrs. G. W. H. Dry, John Charnock, and another.

Gentlemen, Department of Mines, Sydney, 23 December, 1887.

Referring to your letter of the 22nd October last, in which you apply for permission to register gold-mining lease No. 56, Blue Jacket Reef, Belmore, Canowindra, for suspension from labour, I have the honor to inform you that your application should be made to the Warden in open Court.

I have, &c.,
GERARD E. HERRING
(for the Under Secretary).

No. 9.

Mr. W. Croucher to Mr. Thomas Forsyth.

Sir, Canowindra, 7 May, 1888.

Some months ago I wrote to the Minister for Mines, giving notice that the labour conditions were not being complied with on gold-lease No. 214, Canowindra, and though for months I have purposely refrained from leaving the field for fear of missing the notice of cancellation, I have come to the conclusion now that it will be necessary for me to get someone in the city to push the matter through for me. I am unable to hang about any longer; and, if you can get the notice addressed to your care, I will keep you posted with any change of address. I presume this letter will be sufficient authority for you to show to the Minister. If you can push the matter through, you will do me a great favour.

I am, &c.,
WILLIAM CROUCHER.

Send notice to Mr. Forsyth.—H.W., 14/5/88.

Minute for Executive Council.

Recommending the Cancellation of Gold-mining Lease.

Department of Mines, Sydney, 15 May, 1888.

It is recommended to His Excellency the Governor and the Executive Council that the gold-mining lease of Crown lands specified in the annexed schedule be cancelled, the lessees having failed to fulfil the labour conditions contained therein.

FRANCIS ABIGAIL.

The Executive Council advise that the recommendation herein set forth be approved, and the necessary notices issued.—Alex. C. Budge, Clerk of the Council. Minute 88/23, 22/5/88. Approved. —Carrington, 22/5/88. Confirmed, 29/5/88.

[*Enclosure.*]

Schedule alluded to.
Lachlan Mining District.

No. 214; John Boyd and others; G.L. 54; county Ashburnham, parish Collett; 2 acres; Canowindra; Application No. 14.

No. 11.

Mr. F. W. Smith to The Under Secretary for Mines.

Sir,

Belmore Mills, Canowindra, 29 May, 1888.

When I was in your office last August I called your attention to a quartz lease held by J. Boyd, J. Charnock, and G. W. H. Dry (2 acres). They have held it now for, I think, over two years (the lease was issued last June, 1887), and not more than £10 worth of work done on the lease, and that in September, 1887. The reefs are showing on the surface, so that they know where to start. I have twelve miners at work within 70 yards of them raising payable stone on the same line, and if this ground was cancelled there are any number of miners would be glad to take it to work.

How long are these men to hold it without working according to their lease? They should have been at work continuously since the 29th June, 1887.

Yours, &c.,

F. W. SMITH.

Inform that steps are being taken for cancellation of the lease on a prior complaint.—E.F., 6/6/88. Yes.—G.E.H. (for U.S.), 7/6/88.

No. 15.

A. Ross, Esq., M.D., M.P., to The Under Secretary for Mines.

Sir,

Molong, 1 August, 1888.

Herewith I enclose letters from Mr. G. W. H. Dry, of Canowindra, in which he complains of some gross injustice having taken place in regard to the Blue Jacket gold-mining lease, No. 56,* at Canowindra, in which he is interested.

*Should be No. 54.

I

I regret, too, exceedingly, of the unsatisfactory answers furnished to me on the matter by the department, and which are marked in red in Mr. Dry's letter. Let me beg of you to furnish the fullest information to Mr. Dry (by writing to him direct) explaining how the Blue Jacket Reef now stands, so that I may be relieved of the odium of having supplied false and incorrect information to Mr. Dry, as was supplied to me by the Mines Department.

The matter, it is self-evident, is serious, and I trust it will receive your immediate attention, and an answer written to Mr. Dry at once, so that he may know exactly how the case and matter stand. Let me beg of you to give the matter your prompt attention.

[*Enclosure A.*]

Mr. G. W. H. Dry to A. Ross, Esq., M.D., M.P.

Dear Sir,

Canowindra, 28 July, 1888.

I omitted in my last when referring to my lease to mention particulars for your identification, so now subjoin them :—"Gold-mining lease, No. 56,* 2 acres, Blue Jacket Reef, Belmore, near Canowindra, Lachlan District; Messrs. Boyd, Dry, and Charnock, lessees." So please don't neglect to inform me at the first intimation of its being cancelled; also of any other on the same line of reef.

*Should be No. 54.

G. W. H. DRY.

[*Enclosure B.*]

Mr. G. W. H. Dry to A. Ross, Esq., M.D., M.P.

Dear Sir,

Canowindra, 30 July, 1888.

I am informed that a notification of the cancellation of my lease on the Blue Jacket Reef, referred to in my last, has been gazetted, although I can find no one who has seen it; however, one of the original shareholders, John Boyd, with another stranger, has marked it out on the strength of it. In yours of the 4th instant you informed me that no steps had been taken to have it cancelled, hence I remained in false security. My inquiries elicit that applications for it have been made some time ago, hence the replies to your queries at the office have not been correctly given. Boyd held the deed on trust on behalf of himself, Charnock, and myself, and acts surreptitiously in obtaining a cancellation by collusion with a stranger to oust the *bona fide* shareholders (the partners therein). The term of the rental has not expired, and under the circumstances is it not possible to get this cancellation revoked. Will you look this up, as it is a perfect swindle upon myself and the other shareholders by this Boyd? I applied some time past to the Under Secretary for Mines for suspension of labour pending the erection of machinery, &c., as there was a great difference between the shareholders regarding the employment of labour required. I may mention that neither of the latter has received any notice whatever regarding any default therein.

Mr. Clyburn is a shareholder with Mr. Charnock, and unites with me in requesting that you will do your level best to upset this nefarious transaction.

G. W. H. DRY.

[*Enclosure C.*]

[Later.]

31 July, 1888.

I am informed now the term of rent due is past. If such is the case it is confirmation of Boyd the shareholder's underhandedness, as he, holding the deeds, should acquaint us of any notice received from the department referring thereto, whereas we have received no notice either from the department, as is usual, or from him, the holder of the deeds. If such is the case, could we not send the lease money to the Treasury and demand the acceptance, the department not having noticed us, as is usual and requisite. Mr. Clyburn and myself anxiously await your reply.

G. W. H. DRY.

No. 16.

Application No. 77, at Canowindra, for a Gold-mining Lease.

1. By whom application was received? The Warden's Clerk.
2. At what place? Canowindra.
3. Date and hour when received? 3rd August, 1888, at 12 noon.
4. Receipt for first year's rent, No. 75. Date—3rd August, 1888.
5. To whom receipt was issued? William Croucher.
6. Date when notice to survey was sent to surveyor?
7. Date when report and plan were received from the surveyor?
8. Names of objectors, and dates on which they lodged their objections?
9. Dates of inquiry?
10. Are the applicants holders of miners' rights? Yes.
11. Is the land applied for exempted from leasing under the 34th section of the Mining Act, 1874? No.
12. Is the time proposed for commencing work reasonable?
13. Is the number of men proposed to be employed reasonable?

Gold-mining Lease Regulations—Schedule 2—Application for Gold-mining Lease.

To the Honorable the Secretary for Mines, Sydney,—

Sir,

Canowindra, 3 August, 1888.

We hereby make application for a gold-mining lease of that piece or parcel of land situated at Blue Jacket Hill, Belmore, containing 2 acres, of which we took possession on the 30th day of July, 1888, at the hour of 12·30 o'clock in the forenoon, for the purpose of mining thereon and therein for gold, for a period of fifteen years, by erecting posts and cutting trenches at each angle thereof. The datum post is on the north-west corner of the Blue Jacket gold lease.

Notice of our intention to make this application has been given in accordance with the regulations in that behalf, and we hand herewith a list of the persons who occupy or claim a right to the land aforesaid, or any part thereof, together with such contents as we have obtained. We also hand herewith the sum of two pounds, being the first year's rent in advance of the said land, and one pound ten shillings to cover the cost of survey. And we hereby request that survey may forthwith be made of the said piece or parcel of land.

We hereby acknowledge that this application is made upon the distinct understanding and condition that if we shall abandon or fail to proceed with it, or if it is refused, the Secretary for Mines for the time being may deduct from the sum of two pounds, deposited as aforesaid, any cost to which in his opinion the Crown may have been put in or about or in respect of this application; and this application shall thereupon become and be void, and the possession aforesaid shall cease and determine. And if the lease shall be granted we shall and will commence mining operations upon or in connection with the

demised

demised land within fourteen days from and after the granting thereof, and shall and will employ upon such land not less than two men during the whole of the term thereby created, and not less than——— men during the remainder of such term. And shall and will at any time when called upon, in terms of the regulations relating to gold-mining leases, to do so, execute and take delivery of such lease, or failing therein for a period of fourteen days after being so called upon, we shall and will forfeit the said sum of two pounds and all right, title, or interest in and to the said land and the possession thereof, and the said lease shall be forthwith cancelled.

We have, &c.,
WILLIAM CROUCHER.
JOHN BOYD.
ALFRED A. GALLAGHER
(by his agent, JOHN BOYD).

Miners' Rights.

No. 22; date—1st January, 1888. William Croucher, miner, Canowindra.
No. 27; date—1st January, 1888. John Boyd, storekeeper, Canowindra.
No. 148; date—25th January, 1888. Alfred A. Gallagher, mining agent, Sydney.

This application was received by me this 3rd day of August, 1888, at the hour of 12 o'clock in the forenoon, and is numbered 77.—WILLIAM COOK, Warden's Clerk.

Questions to be answered by Applicants to Lease.

WHEN receiving an application to lease land for mining purposes, the Warden, Warden's Clerk, or an agent, as the case may be, shall require the applicant or applicants, or his or their agent, to answer the following questions, and shall take down such answers in writing. The statement, when complete, to be read over to, and signed by, the person furnishing the answers:—

1. Were you or each of you (applicants) the holder of a miner's right in force at the date of taking possession of the land referred to in application No. 77. Do you produce them? Yes.
3. What was the date and hour of the day when you took possession of the land referred to in application No. 77? 30 July, 1888, 12·30 a.m.
4. Did you take possession by erecting posts and cutting trenches at each angle of the land? Yes.
5. What was the diameter of the posts? 3 inches.
6. How high did they project above the surface when fixed in the ground? 3 feet.
7. What was the length of each arm of each trench, and what was the depth of each trench? 6 feet in length and 9 inches in depth.
9. At which angle of the land is the datum post fixed? North-east.
10. Did you affix a board or metal plate to the datum post? A board.
11. What was written or painted on each board or plate? Applied for gold-mining lease by William Croucher and party.
12. Where did you post the notices, schedule 1? Post office and Warden's office, Canowindra.
13. When did you post such notices? 30 July, 1888.
14. Did anybody claim or appear to be in possession of the land applied for, or any portion of it? No.

I, William Croucher, on behalf of self and party, declare that the foregoing questions have been answered by me truthfully in every particular, and the answers thereto have been read over to me, and are correctly taken down in writing.

Witness to signature,—
——— WILLIAM COOK, Warden's Clerk.

WILLIAM CROUCHER.

Gold-mining Lease Regulations, Schedule 6.—Notice of Application and Deposit.

Sir,

Canowindra, 3 August, 1888.

I have the honor to inform you that I have this day deposited with the Warden's Clerk at Canowindra the sum of two pounds, being the first year's rent in advance of 2 acres of land at Canowindra (Belmore), for the purpose of gold-mining, and the sum of one pound ten shillings, being the fees for survey of the said land. The number of my application is 77.

I have, &c.,
WILLIAM CROUCHER.

The Under Secretary for Mines, Sydney.

No. 17.

Mr. G. W. H. Dry to The Under Secretary for Mines.

Sir,

Canowindra, 6 August, 1888.

I have the honor to invite your attention to the collusion practised by one shareholder, and the lack of notice being forwarded to the other shareholders, whereby they are ousted from their legitimate holding, as follows:—Messrs. Boyd, Dry, and Charnock occupied a gold-mining lease of 2 acres, No. 56,* on the Blue Jacket Reef, Belmore, parish of Collett, county of Ashburnham. They worked it for some time by hired labour. A disagreement arose between the shareholders, one of whom demanded the work be let out on contract; the other, a business man, wished it continued on the weekly-wage system, which was proving a loss to the non-business shareholders. The storekeeper held the lease deed, and his name, John Boyd, being the first, received all notices, &c., that might be sent. He then enters into collusion with other men to get the lease cancelled, which is ultimately done, and marks the ground out on the 31st July, 1888, which is two days prior to the notice in *Gazette* appearing. The shareholders have never received any notification of any complaint of non-fulfilment of conditions, which is usual to forward, otherwise any person holding a lease may have it cancelled over them and not know it is done. Thinking that some underhand dealing was afoot, I requested Dr. Ross, M.P., to inquire, and he was informed that nothing was done in the matter, yet the foregoing results. Surely something is very wrong.

* Should be No. 54.

Yours, &c.,
G. W. H. DRY,

Kindly

Kindly have this matter investigated. The property is now of value, and John Boyd, the shareholder complained of, by his collusion, now holds the interest which by right should belong to his previous co-partners, Dry and Charnock, as you will see by previous memo. forwarded you through Dr. Ross. If this practice is permitted it will be a premium to dishonestly inclined persons, and destroy the integrity of the mining interests.—G.W.H.D.

The lease was cancelled for non-work. More than one complaint was lodged, and the Warden's Clerk's report was to the effect that the labour conditions had not been complied with. Mr. Dry may be so informed.—G.E.H., for U.S., 11/8/88. Submitted. Approved.—F.A., 14/8/88.

No. 18.

The Under Secretary for Mines to Mr. G. W. H. Dry.

Sir, Department of Mines, Sydney, 17 August, 1888.

Referring to your letter, dated 6th instant, *re* gold-mining lease No. 56,* on the Blue Jacket Reef, Belmore, parish Collett, county Ashburnham, I have the honor to inform you that this lease was cancelled for non-work. More than one complaint was lodged, and the Warden's Clerk's report was to the effect that the labour conditions had not been complied with.

*Should be G.L. 54.

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 19.

Mr. G. W. H. Dry to The Under Secretary for Mines.

Sir, Canowindra, 18 August, 1888.

Re gold-mining lease, 2 acres, Blue Jacket Reef, Belmore, Canowindra, Boyd and others, referred to in mine of 6th instant, I beg to inform you that the number of same should be 54, not 56, as stated therein. Boyd, the shareholder, was the custodian of the lease deed, and doubtless furnished the wrong number intentionally. The other shareholders, Charnock and Dry, as stated previously, never received any notice, either from the Mines Department or from Mr. Boyd, of any complaint or negligence tending to forfeiture, yet Boyd re-occupies the lease in his own right to oust them. Awaiting the favour of your reply,

I am, &c.,
G. W. H. DRY.

No. 20.

A. Ross, Esq., M.D., M.P., to The Secretary for Mines.

Sir, Molong, 1 September, 1888.

There is something evidently not right in the case of Mr. Dry, as his letter explains. (Letter enclosed.) The case has been for some time before your department for consideration, and I will be glad if you will cause a searching inquiry to be made. There is something wrong somewhere, otherwise Mr. Dry would not have complained in the manner he does. Give the case your usual prompt attention and consideration, and oblige. I have always found Mr. Dry a decent straightforward man.

Yours, &c.,
DR. A. ROSS.

Dr. Ross, M.P., may be informed of the circumstances under which the lease was cancelled.—H.W., 24/9/88. Submitted. Approved.—F.A., 24/9/88.

[*Enclosure.*]

Mr. G. W. H. Dry to Dr. A. Ross, M.P.

Dear Sir, Canowindra, 27 August, 1888.

Enclosed please find memo. *re* lease; and I would certainly like the Minister for Mines' attention directed to the injustice committed. As you will perceive, ground may be worked and some one interested may represent that it is not, and get it cancelled without the knowledge of the other shareholders, whom no notice of complaint is made to that they may defend their case. Under these circumstances any person could perpetrate a swindle. You will please to do your best to get the cancellation rescinded.

I am, &c.,
G. W. H. DRY.

No. 21.

The Under Secretary for Mines to A. Ross, Esq., M.D., M.P.

Sir, Department of Mines, Sydney, 6 October, 1888.

Referring to your letter of the 1st ultimo, with regard to gold-mining lease No. 56,† at Canowindra, I have the honor to inform you that the above-mentioned lease was cancelled for non-work. Not only was complaint of non-work lodged, but the Warden's Clerk's report upon a written application for permission to suspend work was to the effect that the labour conditions had not been complied with for a considerable time.

†Should be G.L. 54.

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 22.

The Chief Mining Surveyor to Mr. Mining-surveyor L. A. Curtis.

Notice to make Survey.

Sir, Department of Mines, Sydney, 23 November, 1888.

An application for a gold-mining lease, particulars as per margin, having been lodged in this office, I request you will be good enough to survey, in accordance with the regulations relating to gold-mining leases, the area so applied for, and to furnish me at your earliest convenience with a plan and report.

No. 77, Canowindra, 2 acres, applied for by W. Croucher, Canowindra, J. Boyd, Canowindra, A. A. Gallagher, Sydney.

Your

Your attention is particularly directed to the regulations for mineral leases, numbered respectively 2, 3, 12, 13, and 14, or to the regulations relating to gold-mining leases, numbered respectively 1, 2, 3, 4, 5, 14, and 15.

I have, &c.,
EDWD. F. PITTMAN,
Chief Mining Surveyor.

Copy of description of the land as given in the application:—Situated at Blue Jacket Hill, Belmore. The datum point is on the north-west corner of the Blue Jacket gold lease. Two of the applicants reside on the ground, and can point out the pegs. Date of application, 3rd August; date of possession, 30th July, 1888.

No. 23.

Mr. Mining-surveyor Curtis to The Chief Mining Surveyor.

Sir,

Orange, 29 January, 1889.

I have the honor to transmit herewith plan of one portion of land, containing 2 acres, numbered G.L. 111, in the parish of Collett, county of Ashburnham, applied for under Division 2 of the Mining Act of 1874, by William Croucher and party, and surveyed in accordance with instructions dated 23rd November, 1888, No. 88–77.

W. Croucher was present at time of survey and pointed out the pegs.

I have, &c.,
LOUIS A. CURTIS, M.S.

The portion was renumbered, because, not having any tracing, I did not know which numbers on the pegs applied to this land.

L.A.C.

[*Enclosure.*]

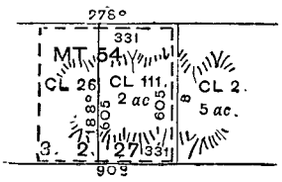
TRACING of Portion No. G.L. 111.

Parish of Collett, county of Ashburnham. Applied for under the Mining Act of 1874 by W. Croucher & Co. Forwarded to Mr. District-surveyor Crouch on the 4th day of February, 1889.

Application No. 88–77.

Within the Canowindra gold-field; proclaimed 21st March, 1879; reserved from C.P. Within the Canowindra temporary common and reserve 220 from lease; notified 12th March, 1883. Within the leasehold area of Mogong and Tilga Run. Embraced within M.T. 54, of 3 acres 2 roods 27 perches. Otherwise apparently available.

H. A. CROUCH.



Azimuth from G.L. 2.—Stakes at corners.
Date of survey, 17th January.

No. 24.

Mr. T. F. De Courcy Browne to The Secretary for Mines.

Sir,

Beresford Chambers, 52, Castlereagh-street, Sydney, 3 May, 1889.

Gold lease, 214, Lachlan; now G.L. 88–77, Canowindra.

On behalf of two of the former lessees (Dry and Charnock) of the gold lease noted in the margin, I beg to lay before you the loss and injustice they will suffer if they are deprived of the land.

Messrs. Dry and Charnock's statement to me, summarised, is as follows:—G.L. 214, Lachlan, was held by Messrs. Dry, Charnock, and Boyd. A considerable quantity of work was done on the lease. Suspension of labour was applied for, owing to heavy water necessitating the procuring and erection of steam machinery. Not receiving any reply from the department (which had not the power to grant suspension, the lease being a gold one), the kind offices of Dr. Ross, the Member for the district, were invoked, and, after inquiry at the department, informed Mr. Dry, in July, 1888, that nothing was being done in the matter, and so far the lease had not been interfered with. On the 30th July, to the surprise of Dry and Charnock, they found that the lease had been repegged by Boyd (one of the lessees), Croucher, and Gallagher. Further inquiries revealed that the lease had been cancelled for non-working.

Neither Dry nor Charnock had ever received any notice to show cause, and that if any had been sent them it was received by Boyd, who kept it secret. He also had possession of the lease. Boyd was also advised by telegraph of the date of cancellation; hence he being able to repeg the land on the night of the 30th July, and take in as partners Croucher and Gallagher.

As the cancellation of the lease was obtained by Boyd, and possession taken of it again by him, to the loss of his former partners, I think I am not making an unreasonable request if I ask that Boyd, Croucher, and Gallagher's application—No. 88–77, Canowindra—be refused, and Dry and Charnock given an opportunity to revive the old title, so that they may not be deprived of all profit for the money and labour expended by them in developing the lease, or that substantial justice may be done them in any other way pleasing the Minister.

No work has been done on the land by the new applicants.

I have, &c.,
T. F. DE COURCY BROWNE
(Agent for DRY and CHARNOCK).

Please let me have the papers.—S.S., 6/5/89.

DEPARTMENT OF MINES.

(ANNUAL REPORT OF THE STOCK AND BRANDS BRANCH.)

Presented to Parliament by Command.

To the Honorable Sydney Smith, Esq., M.P., Minister for Mines, &c., &c.

Sir,

I have the honor herewith to submit the Report of the Chief Inspector of Stock for the year 1888.

The Report shows a creditable amount of work performed by the officers of this branch.

The inspection of stock at saleyards and slaughter-yards has, no doubt, been of great public utility. It is, however, in the interest of the public health, to be regretted that all slaughter-houses and dairies are not regularly inspected.

In the matter of diseases of stock the Chief Inspector of Stock and the Government Veterinarian have rendered valuable services during the year.

In view of the recent severe drought the number of stock is, I venture to think, very satisfactory. Horses and cattle show a considerable increase upon the previous year, and the decrease in sheep is not so great as, under the circumstances, might have been expected. The cast of fat sheep is sufficient to provide for our home consumption and leave some two and a half millions for export; the cast of store sheep is good, and with a high percentage of lambs should, if the season continue favourable, bring up the number above that of any previous year.

It is worthy of note that last year the proportion of the wool clip shipped from Sydney is larger than in 1887, and that the proportion which passed through the ports of the adjoining Colonies respectively was less.

The appendices to the Report contain most valuable information.

I have, &c.,

HARRIE WOOD,

Under Secretary for Mines.

Department of Mines, 14th June, 1889.

[2,153 copies—Approximate Cost of Printing (labour and material), £21 1s. 7d.]

The

The Chief Inspector of Stock to The Under Secretary for Mines.

Sir, Department of Mines, Stock Branch, Sydney, 1st June, 1889.

On the 1st February last I submitted a Progress Report for the year ending 31st December, 1888, giving the approximate number of the horses, cattle, and sheep then in the Colony; and I have now the honor to submit for your consideration my complete Report for that year on the working of this Branch, which is as usual based very much upon Inspectors' estimates—owners still showing very little inclination to furnish data. It will be seen that the actual number of horses, cattle, and sheep in this Report exceed those in the Progress Report.

I have, &c.,
ALEX. BRUCE,
Chief Inspector of Stock.

I.—INSPECTORS AND THEIR WORK.

1. *The Inspectors.*

There are now forty-eight inspectors, having charge of sixty Sheep Districts.

2. *The Inspections made.*

The inspections made during the year were as follows:—

Of Stock	16,421
„ Reserves	4,501
„ Pounds	405
„ Noxious animals	5,471
„ Dogs	712
„ Pigs	150
Total	27,660

This would give an average of 576 inspections made by each of the forty-eight inspectors.

3. *Horses, Cattle, and Sheep inspected.*

Horses.—The number of horses inspected during the year was 77,753, by forty-seven inspectors.
Cattle.—The number of cattle inspected during the year was 926,522.
Sheep.—The number of sheep inspected during the year was 25,394,567. This is an increase of 3,373,447 on last year's inspection.

4. *Inspections at Homebush Sale-yards.*

During the year bi-weekly visits to the Homebush yards have been made by the Sydney inspector, with the view to inspecting the stock yarded. The total number of stock submitted to auction was as follows:—Cattle, 93,065 head; sheep, 1,311,030, or a weekly average of 1,790 cattle and 25,212 sheep, being an increase of 28 cattle and a decrease of 2,363 sheep on the weekly average, as compared with previous year. These inspections are called for not only for the prevention of disease but also to check stock stealing, and with that view the inspector sees that the brands and marks of the stock correspond with those in the permits or travelling statements accompanying the stock, which are collected and filed in this office for future reference, should, as it at times happens, inquiry be made with respect to stock suspected of having been stolen.

5. *Distance travelled by Inspectors during the year on duty.*

The total number of miles travelled by forty-eight inspectors was 193,392, or an average of 4,029 each per annum, being an increase of 136 miles for each inspector over that of last year.

6. *Prosecutions and Convictions.*

The prosecutions instituted during the past year were as follows:—

Under Sheep Act	177
„ Imported Stock Act	5
„ Brands Act	20
„ Pastures Act	208
„ Public Watering Places Act	9
Total	419

This shows a decrease in the prosecutions under the Pastures Acts, and is accounted for by stock-owners becoming better acquainted with the provisions of the Act and its enforcement by inspectors.

The number of convictions were:—

Under Sheep Act	157
„ Imported Stock Act	2
„ Brands Act	18
„ Pastures Act	204
„ Public Watering Places Act	7
Total	388

II.—

II.—HORSES.

1. *The Number.*

The number of horses in the Colony during the twenty-eight years previous to and including 1888 was as follows:—

Year.	No.	Year.	No.	Year.	No.
1861	251,497	1871	337,597	1881	398,577
1862	233,220	1872	304,100	1882	328,026
1863	273,389	1873	328,408	1883	326,964
1864	262,554	1874	334,462	1884	337,172
1865	284,567	1875	357,697	1885	344,697
1866	282,587	1876	366,703	1886	361,663
1867	278,437	1877	328,150	1887	390,609
1868	280,201	1878	336,468	1888	411,368
1869	280,818	1879	360,038		
1870	280,304	1880	395,984		

This shows an increase of 20,759 during the year, and is due principally to the returns being more complete.

The number of horses in each Sheep District will be found in Appendix A.

2. *The different Breeds.*

Draught.—The numbers returned under this head are—Ordinary, 116,197; thoroughbred, 19,141; total, 135,338.

Light Harness.—The number returned as ordinary is 92,516; thoroughbred, 13,495; total, 106,011.

Saddle.—The numbers of ordinary are given as 146,767; thoroughbred, 23,252; total, 170,019.

3. *Horses introduced.*

From other districts.—The number of stud horses introduced were 108, and stud mares, 374; ordinary mares, 2,089; and horses, 2,658.

From other Colonies.—The number introduced by sea was—Stud horses, 4; and ordinary horses and mares, 335.

The number introduced overland was 97 stud mares and 61 stud horses; and ordinary, 337 mares and 367 horses.

From England and other Countries.—The number introduced under this head were, 1 stud mare, 5 stud horses, and ordinary horses, 1.

4. *Horses fit for sale.*

The numbers returned as being fit for market during the coming year are 20,439 draught, 20,853 light harness, and 29,473 saddle.

Of this number it is estimated that 15,504 are suited for the India and China markets.

There were sent from five districts 605 horses to be shipped from Sydney, and from six districts 800 horses to Melbourne for foreign countries.

5. *Improvement.*

In forty-three districts the horses are said to be improving. The principal reasons given are—Introduction of superior stud horses, breeding from good mares, more attention to the rules of breeding, and better prices obtainable; and in fifteen districts there is no improvement. In two districts they are deteriorating,—the reasons given being too much light blood introduced, breeding from weedy mares for racing purposes.

6. *Diseases in Horses.*

This year has been unusually free from epizootic diseases in horses.

Horse Fever.—This equine contagious disease, which was so prevalent in the Barrier Ranges and in South Australia last year, has not been reported this year.

Australian Stringhalt.—This ailment has not appeared in the Colony during the year.

Rheumatism and Pneumonia.—Have not been reported.

Strangles.—Has during the year been of a mild character. This points to the climatic conditions exercising a powerful influence on the health of animals.

Prurigo.—The Queensland horse mange having spread into this Colony, Mr. Government Veterinarian Stanley was sent in the beginning of the year to Brisbane and the Richmond River District to inspect and report on this disease. His report will be found as Appendix B.

As he predicted, the disease disappeared on the advent of winter, and has broken out again with the summer heat in the Richmond, Clarence, and Manning River Districts.

The treatment to keep it in check amongst working horses is to wash them from head to foot once or twice a week with M'Dougal's sheep-wash, one part of dip to twenty parts of cold water, and cleanse the harness and stable at the same time. Many other anti-parasitic dressings will be found to answer the same purpose.

7. *Losses in Horses through Accidents, &c.*

The losses in horses from wire in chaff and other accidents, as reported amount to 2,207.

8. *Wild Horses.*

The number of wild horses in the Colony is estimated at 5,481, which shows a decrease on the previous year of 739.

9. *Tax on Entire Horses.*

A large majority of owners are still in favour of a special tax being placed on entires.

III.—CATTLE.

1. *Number.*

The returns of cattle in the Colony during the twenty-eight years ending 31st December, 1888, stand as follows :—

Year.	No.	Year.	No.
1861	2,271,923	1875	3,134,086
1862	2,620,383	1876	3,131,013
1863	2,032,522	1877	2,746,385
1864	1,924,119	1878	2,771,583
1865	1,961,905	1879	2,914,210
1866	1,771,809	1880	2,580,040
1867	1,728,427	1881	2,597,348
1868	1,761,411	1882	1,859,985
1869	1,795,904	1883	1,640,753
1870	2,195,096	1884	1,425,130
1871	2,014,888	1885	1,317,315
1872	2,287,660	1886	1,367,844
1873	3,794,327	1887	1,575,487
1874	2,856,699	1888	1,622,907

This shows an increase during the year of 47,420, and a decrease as compared with the year 1878 of 1,148,676.

The number of cattle in the several Sheep Districts will be found in Appendix A.

The number of cattle introduced from Queensland was 176,600, and the number sent from this Colony into that, 11,100.

2. *Different Breeds.*

Shorthorns.—The number of pure-bred and stud Shorthorns is estimated at 40,935; and ordinary 603,966; total, 644,901.

Hereford.—Pure and stud, 20,692; ordinary, 197,587; total, 218,279.

Devon.—Pure and stud, 8,042; ordinary, 54,051; total, 62,093.

Black-polled.—Pure and stud, 319; ordinary, 1,169; total, 1,488.

Ayrshire.—Pure and stud, 1,776; ordinary, 3,882; total, 5,658.

Alderneys.—Pure and stud, 431; ordinary, 449; total, 880.

Friezan Holstein.—Pure and stud. 7.

Crosses.—First crosses, 3,671; ordinary, 685,930; total, 689,601. The crosses are estimated as follows :—Shorthorn and Hereford, 226,555; Shorthorn and Devon, 71,398; Hereford and Devon, 42,332; Shorthorn and Black-polled, 2,724; Black-polled and Devon, 100; Ayrshire and Shorthorn, 4,932; Alderney and Shorthorn, 150; the balance, 341,410, being unrecognizable.

There is a comparatively large increase in the milking breeds of cattle. This arises through many of our cattle-owners in the coast districts having turned their attention to dairying instead of fattening for market; and it is believed that this change will continue and increase.

3. *Stock introduced.*

From other Districts.—Stud bulls, 202; stud cows, 343; total, 545; ordinary cattle, 65,057.

From other Colonies by Sea.—Stud bulls, 15; stud cows, 19; total, 34; ordinary cattle, 360.

Overland.—Stud bulls, 91; stud cows, 240; ordinary cattle, 105,175; total, 105,506.

From Countries outside the Australian Colonies.—Bulls, 34; cows, 13; total, 47. Of these 8 were Shorthorn; 10 Devon; 20 Hereford; 8 Black-polled; and 1 Jersey.

4. *Increase and decrease of Cattle.*

In thirty-seven districts the cattle are reported to be increasing, for which the following reasons are given :—(1.) The good season. (2.) Fewer sales, owners holding back for better prices. (3.) Increase in number of owners. (4.) Considerable numbers of store cattle have been introduced from Queensland. (5.) More owners have taken to breeding cattle, and are selling off their sheep to replace them with cattle. In the remaining districts they are decreasing on account of large sales through drought and not breeding.

5. *The "Cast" of Fat and Store Cattle.*

The estimated "cast" of fat cattle to be sent to market during the coming year is 225,333, and store cattle, 185,103. From twelve districts the fat cattle are principally sent to Melbourne; from two districts they are principally sent to Adelaide; and the remaining districts supply the markets of Sydney, Maitland, Mudgee, Bathurst, Orange, Goulburn, Tamworth, and Albury.

6. *How kept.*

The number of cattle kept wholly in paddocks is returned as 1,230,987; on open runs, 224,000; and the balance, 167,920, are depastured both ways.

7. *Improvement and deterioration.*

In thirty-five districts the cattle are said to be improving, in twenty-two districts they are stationary, and in two districts deteriorating. The principal reasons given for the improvement are—Introduction of good stud stock; more attention and care in selection; also, in culling and keeping in paddocks. The reason given for deterioration is inattention to breeding, many owners breeding from all sorts without respect to breed or quality.

8. *Their Diseases and Ailments.*

Pleuro-Pneumonia.—In thirty-two districts, on 286 runs, the cattle were reported as affected with pleuro-pneumonia; and in twenty-eight districts the cattle are reported as being free from that disease.

In thirty-one of the infected districts the disease was caused by contagion from without, principally from infected travelling stock from Queensland; in two districts supposed to be latent in herds, and in one district the cause not known.

From

From twenty-eight districts it is reported that the inoculation was successful on the whole of the 343 holdings or stations on which it was performed.

In every case the result was satisfactory, the disease leaving the herds without further loss.

The number of owners in favour of inoculation is given as 6,585; against, 651; undecided, 2,269; and 8,834 opinions not known.

The number of owners in favour of compulsory inoculation in the case of infected herds is given as 5,335; against it, 1,703; undecided, 2,315; and 8,997 opinions not known.

This shows a very large majority of owners in favour of the compulsory inoculation of all herds in which the disease appears; and it is hoped that legislation in this direction will soon be obtained.

Tuberculosis.—Although power is given under the Imported Stock Acts to deal with and destroy imported stock affected with this deadly and dangerous disease there is no law in force which empowers an inspector of stock to interfere with any of our own cattle so affected. It is true that the meat of such cattle can be seized and destroyed by inspectors of slaughter-houses, but to do this effectually all the slaughter-houses in the colony would have to be regularly inspected, and this cannot be done.

It is also the case that under the Dairies Supervision Act tuberculous milch cows can be seized and destroyed, but notwithstanding this it is currently reported by persons competent to judge that there are tuberculous cows now in the dairies in Sydney and the suburbs.

Several cases of this disease have been detected in the Homebush and Maitland sale-yards during the year, and agents have notified sellers that they will not receive cattle affected in this way at the sale-yards.

Notwithstanding this, cattle affected with the disease are still met with at the public abattoirs. They are of course condemned and destroyed. It is to be hoped that in the interests of the public health local authorities will prohibit the slaughter for food of tuberculous cattle in the country townships.

A tuberculous dairy cow arrived in the s. s. "Manapouri" from New Zealand. She was not allowed to be landed.

Cumberland Disease.—The number of cattle reported to have died from this disease is 1,216, being 565 less than last year.

Blackleg is reported to have carried off 328, being an increase of 241 on last year.

Cancer.—Cattle to the number of 1,905 are reported to have died of tubercular swellings in the throat, being an increase of 307 on last year.

Red Water.—Only 15 deaths are recorded, but the disease is very prevalent in certain localities in the coast country.

Hydatids claiming 8 victims are reported.

Ophthalmia occasionally assumes an epidemic form, and the losses are often considerable. 365 deaths are recorded from this cause.

Blaine has not been reported this year.

Noxious Plants are reported to have killed 60 cattle.

IV.—SHEEP.

1. *The number.*

The number of sheep in the Colony during the twenty-eight years ending 31st December, 1888, stands as follows:—

1861	6,119,169	1875	25,353,924
1862	6,558,896	1876	25,269,755
1863	7,169,126	1877	21,521,662
1864	9,082,463	1878	25,479,484
1865	9,650,106	1879	30,062,910
1866	11,644,593	1880	35,398,121
1867	15,066,377	1881	36,591,946
1868	16,000,090	1882	36,114,814
1869	16,848,217	1883	37,915,510
1870	16,218,825	1884	31,660,321
1871	16,766,012	1885	37,820,906
1872	17,873,696	1886	39,169,304
1873	18,990,595	1887	46,965,152
1874	22,797,416	1888	46,503,469

The number of sheep in the several Sheep Districts will be found in Appendix A.

Increase and Decrease.

This shows a decrease of 461,683, besides the usual increase in lambs, and is attributable to the severe drought from which the colony suffered. During the year about as many sheep left this Colony (231,000) for Queensland as were brought from that Colony into this (242,000).

2. *The different Breeds.*

(1.) *Merino.*

Combing.

Lambs...	9,897,372
	46,503,469

3. *Sheep introduced and imported.*

(1.) From other districts in this Colony—Stud, 14,625; ordinary, 2,114,659; total, 2,129,284.
(2.) Overland from other Colonies—Stud, 1,054; ordinary, 196,116; total, 197,170.
(3.) By sea from other Colonies—Stud, 3,285; ordinary, 692; total, 3,977.
(4.) From England and Countries and Colonies other than Australian—497; of these 456 were American Merino, 29 French Merino, and 12 English South Downs.

Out of 1,997 sheep which passed through quarantine, the total deaths reported by the district inspectors amounted to eleven rams and two ewes, and they were most probably due to confinement and want of air and water on board ship,—to exposure with wet fleeces on during long railway journeys, at an inclement season of the year,—and not to the mode in which the dipping was given. Besides the imported sheep, some 300 from the inland districts were also dipped. [*For particulars of sales see Appendix* C.]

4. *Long-woolled and cross-bred Sheep.*

Amongst the long-woolled sheep the Lincoln is said, in a large majority of the districts, to give the best returns in wool and in weight of mutton, the cross-bred sheep being second.

5. *The "Cast" of Fat and Store Sheep.*

The annual "cast" of fat sheep for the ensuing season is estimated at 4,477,239, and store sheep, 6,296,187.

6. *How Sheep are kept.*

Paddocked	44,747,383
Shepherded	1,108,774
Both ways	647,312
	46,503,469

7. *Condition of the Flocks.*

In thirty-eight districts the sheep are said to be improving; the principal reasons given being—more attention to breeding, paddocking, introduction of high-class rams and ewes, more careful classing and culling.

In fourteen districts they are said to be stationary, and in eight districts they are deteriorating. The reasons given are—effects of bad seasons, breeding from inferior ewes, bad management, and bad selection of rams.

8. *Lambing.*

The general average for the whole of the Colony of the paddocked sheep is returned by inspectors at 54½ per cent., and shepherded sheep at 39½ per cent. In eighteen districts the lambing was high, in thirty-three districts medium to fair, and in eight districts very low. The reason given for the high percentage is the favourable season and runs not overstocked, while the fair and low percentages are attributable to unfavourable season, poverty of ewes, want of feed and water, and bad season after lambing.

The paddocked sheep show a higher percentage that the shepherded sheep by 15 per cent.

The percentage for both is very low.

9. *The Clip.*

Average per sheep.

Lambs.—The number of lambs shorn in the grease was 6,053,509; the number washed, 23,756; total lambs shorn, 6,077,265.

Sheep.—The number of sheep shorn in the grease was 35,426,832; creek-washed, 416,779; and scoured, 875,280.

The average weights of the clip are estimated as follows:—

	Lambs.		Sheep.	
	lb.	oz.	lb.	oz.
Grease...	1	11	5	6⅓
Creek-washed...	1	7	3	1⅓
Scoured	.....		2	9½

Total Clip.

The total clip in the Colony for the year 1888, according to the number of sheep, would be 35,426,832 shorn in the grease, average clip, 5 lb. 6½ oz. per sheep = 191,526,310 lb.; 416,779 sheep, creek-washed, average clip, 3 lb. 1⅓ oz. per sheep = 1,285,068 lb.; 875,280 sheep scoured, average clip, 2 lb. 9½ oz. = 2,270,257 lb. Lambs—6,053,509 lambs shorn in the grease, average clip, 1 lb. 11 oz. per lamb = 10,215,296 lb.; 23,756 lambs washed, average clip per lamb, 1 lb. 7 oz. = 34,149 lb.; total clip, 205,331,080 lb.

Condition of Clip.

In twenty-two districts the clip is reported as sound and containing fair amount of yolk; in twenty-eight districts, sound, but light in yolk; and in the ten remaining districts light and unsound. On the whole the clip was clean, but in a few districts dusty, and the value of the wool was affected by grass-seed and burrs.

Exportation of Clip.

The clip grown in the Colony of New South Wales is shipped to England, America, France Germany, and other countries, from the principal ports of the three neighbouring Colonies, as well as from Sydney. The portion of our clip thus shipped from the other Colonies is often mistaken as the produce of those Colonies, more particularly for that of Victoria and South Australia.

The following is an estimate of the clip sent to Sydney, and also the proportion sent across the Borders and to Melbourne, Adelaide, and Brisbane, for the years 1887 and 1888:—

Port of Shipment.	1887.			1888.		
	Greasy.	Washed.	Total.	Greasy.	Washed.	Total.
	lb.	lb.	lb.	lb,	lb,	lb.
Sydney	132,855,099	2,983,730	135,838,829	148,681,473	3,410,500	152,091,973
Melbourne	45,922,914	1,090,073	47,012,987	38,421,221	163,327	38,584,548
Adelaide	16,054,563	.....	16,054,563	14,369,559	.. ..	14,369,559
Brisbane	330,189	18,667	348,856	269,352	15,648	285,000
	195,162,765	4,092,470	199,255,235	201,741,605	3,589,475	205,331,080

This shows an increase of 6,075,845 lb. on last year's clip, and is accounted for by a greater number of sheep having been shorn in the grease this year than in 1887.

Classing the Clip.

In thirty-one districts the clip is reported as having been well classed, and in the other districts it is not considered to have been so; the reasons being—owners do not think it pays, want of convenience, sheds not large enough to warrant expense, and the difficulty of obtaining competent woolsorters.

Wool-presses.

Wool-presses.

A great number of different kinds of presses are used ; those most in favour are Ferrier's Patent and Williams' and Robinsons' ; rack screw and pinion presses are used. There is still room for improvement in the mode of pressing, especially by small owners.

Woolpacks.

The woolpacks used are mostly Calcutta and Dundee, of various sizes, from 4 ft. 6 in. x 2 ft. 2 in. to 5 ft. 3 in., and the weight from 10 to 12 lb.

On forty-eight stations the wool is dumped before leaving.

10. *Sheep-brands and marks.*

Ear-marking.

In most districts the system of ear-marking sheep is properly carried out, and may now be said to be approved by all the Boards.

Tattoo-marking.

This system of marking is mostly used by owners of stud-sheep, not, as yet to any great extent in the case of ordinary flock sheep, but where tried it has been found to be a good preventive to sheep-stealing.

V.—DISEASES IN SHEEP.

1. *Scab.*

The flocks in this Colony and in the Colonies of Queensland, Victoria, South Australia, and Tasmania are free from scab. It exists, but to a very slight extent, in New Zealand and Western Australia, and it is hoped they will soon be declared clean. The importation of sheep into this Colony from New Zealand and Western Australia is prohibited.

2. *Anthrax—Splenic Apoplexy.*

The course indicated in my last report in regard to this fell disease was acted on, and on the arrival of M. Pasteur's representatives, Dr. Germont and M. Loir, in this colony a cablegram was sent to M. Pasteur to ascertain whether he would allow them to teach some one to be named by the Government of this Colony the cultivation and use of his "Vaccine of Anthrax." He offered to do so on certain terms, and instructed Dr. Germont and M. Loir to demonstrate its efficacy.

They did so at Junee in October last. The demonstration, which was given in the presence of a Board appointed by the Government (consisting of Mr. J. de V. Lamb, the Chairman of the Metropolitan Board ; Mr. W. Hamlet, Government Analyst ; Mr. E. Stanley, Government Veterinarian ; and myself) of delegates from the Pasture Boards of this Colony, the Chief Inspectors and Veterinarians from the other Colonies, and large numbers of owners, proved a complete success. A report of the demonstration has been published by the Board, together with valuable information in regard to the nature, symptoms, and treatment of the disease, in the form of a pamphlet which will be of great value to our stock-owners. So convincing were the experiments then carried out, and so explicit was the information given by Dr. Germont and M. Loir, that the owners present in whose flocks the disease had appeared were anxious that these gentlemen would operate on their sheep, and in the course of a few weeks about 100,000 sheep were offered for vaccination at M. Pasteur's own terms. If this large number of sheep had been vaccinated the protective powers of the vaccine would have been put to a thorough test—but in consequence of some misunderstanding between M. Pasteur's representatives and the members of the Royal Rabbit Commission, he refused to allow Dr. Germont and M. Loir to operate on the sheep, and nothing further has as yet been done in the matter. It is hoped however that some definite arrangement will be come to before the end of October, when the dangerous season will set in with the hot weather, and the stock if they are not moved from the infected country will die,—or that M. Pasteur will appoint an accredited agent in the Colonies who will deal directly with owners and vaccinate their sheep at a reasonable rate per sheep.

3. *Foot-rot.*

In fifteen districts the sheep have been more or less affected with foot-rot during the year ; the reasons given being—wet in the early part of the year, and running on low rich pasture. The principal remedies tried were careful paring, butter of antimony and bluestone, bluestone and kerosene, arsenic, arsenic and lime, blue vitriol, sulphate of copper, carbolic acid, and nitric acid—with satisfactory results.

4. *Fluke.*

In thirteen districts, especially Armidale, the sheep were affected with fluke, through depasturing on low swampy ground, unsound country, and rank pasture. The remedies used were—arsenic, salt, tar, and turps, sulphate of iron, and Liverpool salt and sulphur—with good results.

5. *Parasitic Worms.*

In twenty-two districts the sheep are reported as having been infested with worms, to an extent of (say) 8½ per cent., attributed to,—rain in the early part of year,—to being affected from previous year,—to rankness in the grass,—and to unsound country.

Of these worms the most common and most injurious to the sheep have been the tœnia (the tape-worm), the anchytostonum (the thread stomach worm), and the filaria (the lung worm).

It is during the first year, immediately after weaning, that worms are most likely to do harm ; therefore that is the time to avoid their invasion, and to adopt preventive measures, such as keeping the sheep well supplied with Liverpool salt, and drenching, where necessary, with arsenic, which has proved the most effective drench, and for which the prescription has already been published in the various country papers. Some owners have used turpentine and linseed oil successfully. Turpentine, sulphur and salt, and an infusion of tobacco, have also been tried with fair results as regards efficacy and safety.

In the month of April last circulars were forwarded to the local stock inspectors for distribution amongst the various sheep owners in their districts asking for information on this subject, more particularly with respect to the use and effect of the arsenic and other drenches on sheep infested with worms.

In all some 170 owners returned the circulars sent. Of these sixty were returned blank, while nineteen stated they had no experience in the use of drenches. For the opinions of the remaining ninety-one as expressed see tabulated statement which forms Appendix D to this Report.

VI.—PIGS.

The number of pigs in the Colony, as returned at 31st December, 1888, is 248,683, being a decrease of 15,217 as compared with the returns for the previous year.

From the other Colonies 44 have been introduced by sea.

Foreign pigs are prohibited.

Diseases in Pigs.

No disease whatever has been reported amongst pigs.

VII.—DOGS.

Twenty-two foreign dogs, *i.e.*, dogs from England, America, France, Germany, Russia, China, and Japan, and other places outside the Australasian Colonies, passed through quarantine during the year, and 660 Colonial dogs were inspected at the port of Sydney.

Diseases in Dogs.

Rabies has been very prevalent in Europe, and was only checked in London by the wholesale slaughter of stray dogs, and the confinement of others.

Pasteur's method of treatment of hydrophobia is gaining in favour, and patients from almost every part of the world are sent to his Institute for treatment.

Rigorous quarantine regulations are absolutely necessary to prevent the introduction of this disease in these Colonies.

VIII.—DISEASES IN RABBITS AND RABBIT POISONING.

As it was contemplated to introduce rabbit scab from Europe, and to cultivate and spread what was termed the Tintinalogy rabbit disease with the view to their destruction, it was deemed advisable before allowing such a course to be taken to have a reliable opinion as to whether or not these ailments if generally introduced would affect other animals. Mr. Government Veterinarian Stanley was directed to visit Adelaide and the Darling and report on these diseases, with the view to settling important points raised. His report will be found under Appendix E.

IX.—TRAVELLING STOCK.

1. *Trespass on Reserves.*

In thirty-five districts the driftways and reserves for travelling stock are reported as having been trespassed upon, more or less, by neighbouring lessees' and selectors' stock. In some instances the stripping of the reserves of pasture arises through their not being withdrawn from lease, and being used by the lessees of the run. In twenty-five districts they are reported as being entirely free from trespass. Inspectors suggest, in order to enable them to exercise proper supervision over them, that the boundaries should be properly marked. I am glad to be able to report that Mr. Brunker, the Minister for Lands, has approved of the systematic marking of the reserves, and it is hoped that this work which has been so long asked for and which is so urgently required will be soon carried out. Some of the importers also suggest fencing in the reserves and appointing caretakers.

2. *Grass on Reserves and Driftways.*

In eleven districts the inspectors report that there is not sufficient grass on the reserves and driftways in their districts to enable fat stock to reach market in good condition; in twenty-eight districts that there is only sufficient in fair to good seasons; and in twenty-one districts that, as a rule, there is sufficient grass on these reservations.

From 34 districts it is reported that sheep to the number of 8,847,418 have passed through during the year in search of grass and water. From seven districts the number of loafing sheep is given at 201,970.

3. *Ringbarking Driftways and Reserves.*

Although the feed on the driftways and reserves is not during good seasons far short of the requirements of the stock traffic, it is again urged that as the ringbarking of the driftways and reserves used by travelling stock would everywhere largely increase and improve the pasture upon them—in some cases to the extent of even 400 and 500 per cent.—that this work be undertaken. It would give employment to a large number of the men now idle, and could be carried out by contract at reasonable rates.

4. *New Roads for Travelling Stock.*

In eleven districts new roads are required for travelling stock, and in forty-eight districts no new droving roads are recommended.

5. *New Reserves for Travelling Stock.*

In eighteen districts new reserves and alterations of existing ones for travelling stock are required; in forty-two districts there are sufficient reserves.

6. *New Wells, Tanks, or Dams.*

In twenty-four districts the inspectors report that new wells, tanks, or dams should be constructed by the Government at places which they indicate.

7. *Travelling Charges for Stock.*

In thirteen districts travelling charges for stock have been collected on twenty separate occasions, the total amount collected being £1,574 1s. 1d., most of which has been refunded to date on appeal to the Boards.

8. *Laws relating to Travelling.*

In all the districts the inspectors report that the provisions of the amended Sheep Acts relating to travelling stock are working fairly well.

X.—

X.—REGISTRATION OF HORSE AND CATTLE BRANDS.

1. *Brands registered.*

The number of horse and cattle brands registered up to 31st December, 1888, was 59,366. The number of brands registered during the year 1888 was—horse brands (alone), 540; cattle brands (alone), 449; and horse and cattle brands, 1,323; making a total of 2,312, being an increase of 307 applications on the previous year.

This large increase is accounted for by the increase of settlement in the outlying portions of the Colony. The total number of registrations is larger than that of any previous year for twelve years back. There is also a large increase in the number of brands transferred, and changes of addresses recorded.

2. *Brands transferred.*

The brands recorded during the year 1888 as transferred were—horse brands, 35; cattle brands, 45; horse and cattle brands, 213; total, 293.

3. *Brands cancelled.*

The brands cancelled (horse and cattle) in 1888 were 122.

4. *Addresses changed.*

The number of addresses of owners changed in 1888 was 80.

5. *Compliance with the Act.*

In fifty-one districts the provisions relating to registration and the other requirements of the Act are reported as being duly carried out, and in the remaining nine districts fairly so.

6. *Benefits of the Act.*

The inspectors, in alluding to the benefits of the Act, report that it prevents duffing, stock-stealing, facilitates identification, assists in recovering lost stock, and otherwise is a great convenience and protection to stock-owners.

XI.—POUNDS.

1. *Number and inspection.*

There are 345 pounds in the Colony, some of which are at present closed for want of pound-keepers. The whole of the pounds are inspected periodically by the various inspectors of stock.

2. *State of Yards.*

Forty-seven of the pound-yards are reported to be old; several require renewing, being unfit for the safe custody of stock; and the remainder are said to be in a fair and good condition.

3. *Keeping and depasturing Pound stock.*

The provision made for the proper sustenance of impounded stock, according to the reports received, is satisfactory. As a rule, poundkeepers have now paddocks for the stock.

4. *Management of Pounds.*

The poundkeepers are reported to be performing their duties, upon the whole, in a satisfactory manner, and the appointment of inspectors of stock as inspectors of pounds has had a very beneficial effect.

XII.—NOXIOUS ANIMALS.

1. *The Districts in which the Pastures and Stock Protection Act is in force.*

The Act has been brought into operation in all the districts. [*See* Appendix F 1 and 2.]

2. *Receipts and Expenditure under the Act.*

The amount of assessment paid by stock-owners during the year 1887 was £32,651 13s. 8d., and the amount expended, £37,354 11s. 1d. The amount of assessment paid by stock-owners in 1888 was £24,938 4s. 6d., and the amount expended, £52,121 9s. 6d., the difference being accounted for by the subsidy granted by the Government to the Boards, and large amount to credit of some of the Boards at commencement of the year. Three districts are reported to be in debt to the amount of £1,488 5s. 5d.

In eleven districts full rates were levied, in thirty-two districts less than full rates, while in seventeen districts no rates whatever were levied.

During the year the bonuses paid by the Boards for scalps ranged as follows:—For kangaroos, from 1d. to 1s.; wallaroo, 4d. to 1s.; wallaby, from 1d. to 1s.; paddymelon, from 2d. to 6d.; hares, from 2d. to 1s.; kangaroo rats, 3d. to 6d.; native dogs, from 10s. to 80s.; pups, 2s. 6d. to 10s.; opossum, 1d.; wombats, 2s. 6d.; wild pigs, 1s.; bilbees, 2s. 6d. to 5s.; eagle-hawks, 2s. 6d. to 10s. 6d.; and emus, 3d. to 2s.

3. *Estimated number of Noxious Animals.*

The aggregate of the returns by inspectors of the estimated numbers of noxious animals in their districts shows that there are supposed to be 1,338,880 kangaroos, 3,184,700 wallabies, 31,405 native dogs, 2,044,430 hares, and 3,480 wild pigs in the Colony.

4. *Increase and Decrease.*

Kangaroos are reported to be increasing in six districts, wallabies in three districts, native dogs in seven districts, hares in twenty-six districts, and wild pigs in seven districts. In thirty-four districts kangaroos are reported to be decreasing, wallabies and native dogs in twenty-five districts, hares in two districts, wild pigs in three districts, and in the remaining districts they are said to be stationary.

5. *Number destroyed.*

The number of kangaroos destroyed during the past year was 657,319; of wallabies, 653,585; of kangaroo rats, 31,033; of paddamelons, 14,181; of wild pigs, 9,938; of hares, 167,115; of native dogs, 9,824; of eagle-hawks, 1,144.

6. *Steps taken for their destruction.*

In the majority of the districts hunting with dogs, drives, shooting, and trapping have been adopted with satisfactory results. In thirty-six districts poison has been used with fair to best results, and only from one district has it been reported as not satisfactory.

7. Amendments suggested in the Act.

It is suggested that the Amended Stock and Pastures Bill become law. That all owners of stock, irrespective of number, should be liable to an assessment, as also owners of 1 acre of land and over; that hares be included in a list of noxious animals; that the Boards be empowered to cope with the rabbit nuisance; that the Government should grant larger subsidy; that uniform rates be levied; that the rate of bonus be the same throughout the Colony; and that all returns of stock be made on the same day.

8. Losses from Tame and Native Dogs.

The losses in stock for the past year from the ravages of native dogs are estimated at 65,488 sheep, valued at £17,410; and from tame dogs, 52,332 sheep, valued at £16,638, making the loss from tame and native dogs together £34,048.

Appendix F. shows the work which has been done under the Pastures and Stock Protection Acts since they were passed, and how far the objects for which they were so have been attained.

A proposal has been made to discontinue the bonus for kangaroos; but if this is done the hunters will not kill the small kangaroos, and the number will increase rather than diminish.

XIII.—COMMONS.

1. Number and extent.

The number of permanent Commons in the Colony is 94, with an average extent of about 1,250 acres each. The number of temporary Commons is 230, with an average extent of 2,000 acres each.

2. Number of Commoners, Stock, &c.

The average number of Commoners to each Common is estimated at 99, and the average number of stock kept on each Common is 114.

In twenty districts the Commons are reported to be used for other purposes than that of grazing Commoners' stock.

XIV.—MISCELLANEOUS.

1. Artificial Grasses.

In twenty-four districts artificial grasses have been sown for pasture during the year to a small extent, in four districts to a large extent, and in remaining districts none; the most successful being lucerne, prairie, and rye.

2. Number and Division of Runs.

The number open or unenclosed runs in the Colony is 6,302; the number enclosed is 32,630; the number partially subdivided is 12,479; and the number properly subdivided is 20,311.

3. Improvements, Fencing, Dams, Tanks, and Wells.

The number of miles of fencing throughout the Colony is estimated at 1,310,420, at an average cost of (say) £43 10s. per mile, amounting to £56,996,312.

The number of dams used for stock purposes is estimated at 23,330, at an average cost of (say) £87 10s.; number of tanks, 24,741; average cost of each, £189 5s.; and the number of wells used is estimated at 3,131, at an average cost of £199 5s. 6d. each.

Cost of fencing, £56,996,312; cost of dams, £2,041,144; cost of tanks, £4,682,830; cost of wells, £623,941; making a total of £64,344,227 as representing the amount expended by way of improvements, &c.

4. Plants and Weeds.

In thirteen districts *trefoil burr* grows to a slight extent; in twenty-four districts to a large extent, and in twenty-three districts there is none reported.

In twenty-seven districts *variegated thistle* is reported to a slight extent, in fifteen to a considerable extent, and eighteen districts are reported as free from it.

In twenty-five districts *black thistle* is reported to a slight extent, in nineteen to a great extent, and sixteen districts are reported to be free from it.

In twenty-seven districts the land is reported as being slightly infested with *Bathurst burr*, in twenty-one to a large extent, and in twelve the land is not infested.

Darling pea, Roley-poley, "*Yellow Boy,*" and *Sweet briar* are reported to be growing in a few districts.

Euphorbia Drummondii.—Although this plant has been carefully experimented with, and shown so far to be non-poisonous, and put to a practical test by owners (see Mr. Stanley's report, Appendix J to Report for 1887), reports still continue to be received of its causing the death of sheep.

5. Cost of clearing Commons, Reserves, &c., of Weeds.

The cost of clearing the permanent Commons of noxious weeds throughout the Colony is estimated at £29,658; the temporary commons, £17,997; the police paddocks, £2,152; the travelling stock reserves, £126,169; and the droving roads at £70,280; amounting in all to (say) £246,556.

6. Examination of intending Applicants for appointment of Inspector.

During the past year one examination was held by the Stock Board of Examiners. The following table shows the result:—

Date of Examination.	Number of Candidates.	Names of successful Candidates.	Nature of Certificate issued.
1888.			
A i 23rd	9	J. W. Boultbee	2nd class.
		J. L. Henderson	2nd ,,
		A. H. Farrand	2nd ,,
Total	9		

It will thus be seen that nine candidates were examined, three of whom received 2nd class certificates.

7. The Stock and Pastures Bill.

This measure has not yet been brought before Parliament, but it is hoped that the Government business will at an early date in the coming session of Parliament be in such a state as to admit of its being introduced.

8. The Fresh Meat Trade.

It is satisfactory to be able to report that the arrangements for this trade are now nearly completed, and there is a good prospect of its being shortly commenced.

This will not be a day too soon, for with sheep in the Colony, and the prospect of another favourable season in 1889, it is of the highest importance to owners that the stock should be killed as near as possible to their pastures, and thus save the very serious waste and deterioration in the meat which the live stock trade entails. The best outlet for our surplus stock is in the exportation of frozen meat, and that again will never be put on a payable footing until we can place our meat in prime condition (which the fresh trade will enable us to do) in the London market. It is only courting disappointment and loss to offer inferior or wasted meat in that market.

APPENDIX A.

RETURN of Stock in the several Sheep Districts.

Districts	Year 1887.					Year 1888.				
	Acreage.	Horses.	Cattle.	Sheep.	Pigs.	Acreage.	Horses.	Cattle.	Sheep.

APPENDIX B.

Report on a Contagious Animal Skin Disease, Prurigo.

Sir, Department of Mines, Stock Branch, Sydney, 19 March, 1888.

I have the honor to report that, acting on instructions from the Hon. the Minister for Mines, I examined animals suffering with the skin disease in the neighbourhoods of Brisbane and Ipswich, then proceeded to the Richmond and Clarence River districts, where I found the disease identically the same as I had seen in Queensland.

This disease appears to have been known in the North of Queensland for several years, and to have attracted attention early in 1887, in consequence of spreading throughout that Colony; this was during the prevalence of heavy rains, and the disease disappeared with the cold weather.

Last summer it reappeared, and extended principally through the coast districts, extending into New South Wales, so that now it is more widely spread and more severe in character than was ever remembered before. It is a disease of the skin, that would be better named prurigo, meaning "to itch." The term mange is applied to another disease in horses and dogs, caused by acari, to which it bears a close resemblance.

This prurigo is characterized by an eruption of small scattered itching nodules, loss of hair from the withers, back, loins, and croup; later on the head, the mane, and tail are also involved.

It is of a contagious nature, and its progress depends very much on the surroundings and susceptibility of the animal exposed to attack. In some places not one horse escapes, in others the disease spreads slowly, and a large percentage enjoy immunity—two horses may work together, one suffers and the other escapes; one attack does not prevent a recurrence of the disease.

Cattle appear to be attacked by the same disease, but suffer less irritation; it is shown by a rising scurf and partial shedding of hair; the remaining hairs are erect from the withers to the tail, and it may extend along the neck to the head, surrounding the eyes, covering the ears with scurf, and the skin thickens with exudation, itching so much that the beast will rub against trees and make bleeding sores. Only a small percentage of the cattle I have seen are at present attacked. Fat cattle do not appear to lose flesh, and so far the disease is restricted to the skin, and the flesh is not contaminated. The only sheep I heard of being attacked were at Fessifer, in Queensland. I examined one of these sent into Brisbane for treatment, and it certainly had the appearance of suffering from the same disease, having lost most of the wool in patches, from the shoulders, back, and rump; this has been the result of rubbing, caused by itching irritation of the skin.

The sheep had been repeatedly dressed when I saw it, but the itching had not altogether subsided; 60 per cent. of the mob were said to be affected. Should this disease appear in New South Wales sheep, local quarantine and effectual dipping would be the measures to arrest it.

This disease is not caused by the horse mite, *Acari psoroptes*, but is apparently due to the presence of a vegetoid parasite, of a microscopic fungi order, which finds proper nourishment on the skin; and by rapid spore formation and growth penetrates the hair follicles and perspiratory ducts and epidemic cells. Being a foreign material it sets up irritation in the periphery nerves, interrupting and perverting the functions of the skin, exciting itching and inflammation, with an extraordinary accumulation of scurf and effete products.

The heavy rains no doubt altered the herbage, making it rank and watery, so that vegetation has not elaborated its various chemical elements to the same extent as in ordinary seasons; this food has affected the horses, depriving their blood of the salts necessary to balance the acid secretions of the sebaceous glands, and the alkaline secretions of the perspiratory glands; exposure of the skin to continued wet weather has had a detrimental effect on their constitutions, and may explain the immunity from this disease enjoyed by horses that are strictly stable-fed and sheltered; foals also rarely take the disease, although mares suffer very severely. The food in these cases is much richer in nitrogenous and saline elements than is found in squashy grasses.

The symptoms are, first, a rash extending along the neck, withers, and back, to the tail, for about 18 in. on each side of the spine (not unlike mosquito bites). The spots are the size of a threepenny-piece, the hair is slightly raised, and the little swellings can be felt by passing the hand carefully over the parts. A day or two later, on the centre of some of these a little pimple is felt and a small scab, with five or six hairs adhering; it is readily detached. The horse likes manipulation and moves his lips sympathetically. The itching is seen by a sore or two as large as a shilling on the back, where the horse has rubbed the skin sore with his teeth. Soon the hair stands erect on the withers and top of the spine, the skin begins to wrinkle, it is thickened by interstitial effusion. A large amount of scurf and loose hair accumulate, the sores (caused by horses rubbing and biting each other) extend, vesicles form and break and their secretions make horny scales, which accumulate with the cuticular debris. The hair of the mane and tail is destroyed by rubbing, the skin of both thickens and corrugates; the hair soon falls in quantities from the wither and back, in consequence of the animal rolling; in a week or two after the attack the parts are more or less bare of hair, and covered with a thick scaly scurf, with patchy sores, coated with exudation, blood, and dirt.

The progress and termination of this disease is variable. Some entirely recover without treatment; change of feed, such as stabling grass horses, has a good effect; change of season, from warm moist summer weather to cold dry winter, appears sufficient to check the development of the *parasitic fungus*; it disappears in the winter months, and may, or may not, reappear on the same horse the following year.

In its early stages and milder forms it is arrested by various applications, but when allowed to become chronic, intense pathological changes proceed; sore ears, ulcerations, and serous abscesses beneath the skin, reduce the animal's condition, and make him unserviceable. The disease is not of itself fatal, but deaths have resulted from the injudicious use of irritating poisonous applications.

To distinguish this disease from others is not easy, as it bears a remarkable resemblance to the itch or horse mange; it differs, however it being much less contagious, and it does not attack the skin in isolated patches, or extend from the margins outwards to become confluent. Recoveries are spontaneous, without treatment; and last, the insect is absent.

Exposure to sun and rain sometimes causes scald, which is something like it, but the hair is lost rapidly, as if from a blister, leaving the skin bare but sound; there is no itching, pimples, or scurvy sores; the skin is not corrugated, and the mane and tail remain intact.

Erythema is an eruptive itching skin disease, frequently seen in horses, often due to an acid condition of the excretions of the skin, originated by improper stable feeding. It occurs in isolated cases, and is not contagious.

Ringworm

Ringworm is perhaps the most familiar example of a contagious skin disease, caused by *vegetoid parasities*. It can thrive equally well on the skins of various animals and mankind. There are several diseases that are known to be caused by vegetoid organisms; they attack mankind, animals, fishes, and insects as well as vegetation.

This prurigo is distinctly contagious, the medium being probably the fungoid parasitic cells or spores. These are so minute that they readily float in the air, and are easily conveyed by one horse biting another, by the saddle-cloths, harness, brushes, &c. The ears and head become infected by an animal biting his own back, and the reason of the upper surface of the body being first infected is that the spores settle as dust and fall through between the hairs on to the skin, being more likely to fall off the sides or limbs; or may be the excretions and accumulated debris on the skin in those parts is a more suitable soil for their growth, which once established soon penetrates the orifices and fissures of the skin. Such fungoid parasities are extremely minute, measuring from 1-3000 to 1-7000 of an inch, and are rapidly reproduced by proliferating cell growth called spores, or by thread-like bodies called mycelium; these invade the skin and produce the morbid changes so disastrous to its structure. Susceptible horses show the disease about a week after contagion; in some it finds a suitable soil and makes rapid progress; in others it is altogether as slow, and it takes several months to run its course.

Prevention.—Avoid every source of infection; keep the horse in health by cleanliness and good food, and wash with soap and water, or some simple dressing that is antiparasitic, and sprinkle sulphur on the skin from time to time.

Curative remedies will consist of anti-parasitic agents that will not injure the skin, so as to leave permanent blemishes. The skin of the horse is very sensitive to the action of turpentine and the mineral caustics; these should be avoided as too irritating. In all cases cleanse the skin by thorough washing with soap and water, or soda and water, then apply agents containing sulphur, such as potassa sulphurata, one pound to 5 gallons of water, luke warm, or lime and sulphur, or hyposulphite of soda, combined with water. Powdered sulphur mixed with grease as an ointment is a good dressing; also one part sulphur iodide to ten parts of glycerine and fat. Preparations of tar, such as watery solutions of carbolic acid, known as Little's dipping mixture, and Jey's carbolic fluid, are very convenient for use. There are several other agents that may be equally useful, such as prussic acid or sulphurous acid, mixed with glycerine and water, also iodine and mercury; these require to be used cautiously. More important is the method of application than the agent that is used. The wash is to be diligently and thoroughly applied from the horse's nose to his tail; in fact it would be best to swim him in the medicated bath.

The clothing, saddles, harness, brushes, and even the stables will require fumigating with burning sulphur, or immersion in the dressing used for the horses. And as reinfection is liable to occur a repetition of the application will be required twice or thrice a week in order to effect a cure.

Constitutional treatment must not be lost sight of; change of feed, rock salt, and mineral tonics that act specially upon the skin, as antimony, arsenic, iron, &c., are most suitable. It is important to remember that one infected animal is a constant source of danger to others, so that isolation and segregation should be attended to; and although it may be almost impossible to treat unbroken horses and cattle, still it will be necessary to check if not to eradicate the disease in working animals, as we cannot foresee the disastrous extent to which the disease may reach.

I have, &c.,
EDWARD STANLEY, F.R.C.V.S.

SUGGESTIONS OF THE CHIEF INSPECTOR OF STOCK.

Mr. A. Bruce, Chief Inspector of Stock, makes the following suggestions in a minute submitted to the Minister for Mines regarding the mode of dressing horses for this ailment:—

"The most effectual mode of dressing horses for this ailment would be to dip and swim them, for in that way it would be certain that none of the infected portions of the horse would escape being dressed; and it may be when there is a large number of horses on a station to dress that dipping will be resorted to, the dip being made with a gentle smooth slope inwards, and the same slope, but well battened, outwards. It might, too, in some cases, be arranged, as horses can be readily moved from one place to another, that several neighbours would join in the construction of a dip and yards in a central position, and drive their horses there to be dipped.

Where dipping cannot be carried out the next best method of dressing would, I think, be—after saturating the infected and suspected parts of the horse well with the mixture—to put a blanket or cloth thoroughly saturated with the mixture over the infected and suspected parts of the horse for (say) 4 or 5 minutes, during which time additional mixture might be poured upon the blanket or cloth, particularly where the ailment is worst.

Supposing that a good many horses have to be dressed, that a liquid application has to be used as a cure, and that the horse is not to be dipped, he should be made to stand on a drip so constructed and sloped as to lead the mixture which drops from him into a tub (to be placed outside, in the ground at the corner of the drip nearest the boiler), to which it should be returned to be heated and used again,

To keep the horse steady (the quietest horses would otherwise plunge about) and expedite the work, a proper pen or crush of good stout round stuff should (if not already erected) be constructed over the drip, and if there were many horses to dress, the drip and pen could be made three or four panels long. This would enable both broken and unbroken horses to be quickly and safely dressed, and one drip and pen could be made to answer several owners, as suggested in regard to dipping.

In this way horses could be nearly as thoroughly dressed as if they were dipped, and with little trouble and but slight waste of mixture, and to make the dressing with the saturated cloth more effective, that might be shaped into something like the cover and hood used for racehorses, but, of course, coming only a short way down the sides."

APPENDIX C.

APPENDIX C.

The following lots of sheep, bred by the several New South Wales, Queensland, and Tasmanian owners, were disposed of at the annual stud sales held in July, 1888.

APPENDIX E.

1. *Rabbit Scab.*

Scabies cuniculi.—This disease, which was introduced from Europe by Dr. Watson, of Adelaide, is caused by acari, but is not sufficiently severe to prove fatal to any appreciable extent amongst rabbits. Cats also contracted the disease, but experiments made by him to infect sheep were unsuccessful. Mr. Stanley advised the Government not to permit the introduction of the disease into this colony, on the grounds that while it is ineffective for killing rabbits its introduction would not be entirely free from risk to other animals.

2. *Tintinallogy Disease.*

This ailment, which was attempted to be propagated by Drs. Butcher and Ellis, he reported to be of native origin, its pathology was not known, its effects were uncertain and variable, and he was not satisfied of its being communicated by contagion, or of its fatal effects on rabbits. He inoculated horses, cattle, and sheep without their showing any indication whatever of contracting the disease, and he left the inoculated animals with several others introduced to the infected enclosure from a healthy paddock for three months under the observation of the local inspector of stock, who ultimately reported that no animal had contracted the disease from the rabbits.

3. *Poisoning.*

Experiments were made at Randwick by feeding rabbits on food saturated with the juice of a poisonous bulb, said to have been received from Germany. The rabbits avoided the bulb itself, but after being fasted for forty-eight hours devoured the food, and three out of five died within 24 hours after.

The symptoms were indifference to surrounding objects, not attempting to escape from being caught, followed by paralysis of the fore extremities, convulsions, and death. Two recovered after being fed on green food. Practically the bulb is of less value than ordinary mineral poison for the purpose of rabbit destruction.

During the *post-mortem* examination of rabbits Mr. Stanley found the common bladder worm *coenurus cuniculi* and another hydatid, about the size of large shot, situated in the kidneys. He also found *coccidium oviform* in the livers of rabbits that had died from emaciation caused by these parasites.

BERRIMA PASTURES AND STOCK PROTECTION BOARD.

No. 1.

Mr. Inspector Yeo to The Chairman of the Sheep and Pastures Board, Berrima.

Moss Vale, 24 February, 1888.

Sir,

Would you be good enough to inform me if any nominations by persons eligible to be elected as directors for the Berrima sheep district, have been made to you; and, if not, would the present directors be willing to act again for the ensuing year. (Please find list of present directors names attached.)

I have, &c.,
JAMES YEO,
Inspector of Stock.

[*Enclosure.*]

SHEEP DIRECTORS.

W. J. Cordeaux, Esq., Bendooley, Berrima; M. Butler, Esq., Woodlands; D. Morrice, Esq., Ealing Forest, Sutton Forest; A. D. Badgery, Esq., Sutton Forest; E. Carter, Esq., Golden Grove, Sutton Forest.

LARGE STOCK DIRECTORS.

J. A. Badgery, Esq., Ivy Hall, Sutton Forest; W. Morrice, Esq., Browley, Moss Vale; H. E. Kater, Esq., Mount Broughton, Moss Vale.

No. 2.

The Secretary, Board of Sheep Directors, Berrima, to Mr. Inspector Yeo.

Berrima, 28 February, 1888.

Sir,

In reply to your letter of the 24th instant, to the Chairman of this Board, who is at present away, I have the honor to inform you that no nominations for the election of directors were made.

The directors who form the present Board are, I believe, quite willing to be reappointed as such for the ensuing year.

Not having had notice of the date of the election, as on previous occasions, the Chairman has I suppose forgotten about it.

I have, &c.,
P. C. CORDEAUX,
Secretary.

No. 3.

Mr. Inspector Yeo to The Chief Inspector of Stock.

Moss Vale, 1 March, 1888.

Sir,

I have the honor to inform you that I am in receipt of a letter from the secretary of the Berrima Pastures and Stock Protection Board, on behalf of the Chairman, W. J. Cordeaux, Esq., stating that no nominations of either sheep or large stock were received, consequently there was no election.

Attached I beg to submit a list of owners' names, who are willing to act, if approved of by you.

I have, &c.,
JAMES YEO,
Inspector of Stock.

[*Enclosure.*]

SHEEP DIRECTORS.

W. J. Cordeaux, Esq., Bendooley, Berrima; M. Butler, Esq., Woodlands, Berrima; D. Morrice, Esq., Ealing Forest, Sutton Forest; A. D. Badgery, Esq., Sutton Forest; C. L. Nicholson, Esq., Sutton Forest.

LARGE STOCK DIRECTORS.

J. A. Badgery, Esq., Ivy Hall, Sutton Forest; W. Morrice, Esq., Browley, Moss Vale; H. E. Kater, Esq., Mount Broughton, Moss Vale.

Mr. Inspector Yeo,—Please say why the name of C. L. Nicholson is proposed in place of Mr. Carter, last year's director.—A.B., B.C., 5/3/88. By request of Messrs. A. D. Badgery and Walter Morrice, also Mr. C. L. Nicholson stating his willingness to act if appointed.—J. YEO, 6/3/88. I beg to nominate the gentlemen herein named as sheep and large stock directors for the sheep district of Berrima.—A.B., 7/3/88. The Under Secretary for Mines. Submitted.—H.W., 8/3/88. Approved.—F.A., 9/3/88.

No. 4.

Gazette Notice, 13th March, 1888.

Department of Mines, Stock Branch, Sydney, 13 March, 1888.

DISEASES IN SHEEP ACTS AMENDMENT ACT OF 1882, AND THE PASTURES AND STOCK PROTECTION ACTS.

NOTICE is hereby given, for public information, that the undermentioned gentlemen have, on the nomination of the Chief Inspector of Stock, been appointed directors for the several sheep districts named:—

BERRIMA.

Sheep Directors.

W. J. Cordeaux, Esq., Bendooley, Berrima.
M. Butler, Esq., Woodlands, Berrima.
D. Morrice, Esq., Ealing Forest, Sutton Forest.
A. D. Badgery, Esq., Sutton Forest.
C. L. Nicholson, Esq., Sutton Forest.

Pasture Directors.

J. A. Badgery, Esq., Ivy Hall, Sutton Forest.
W. Morrice, Esq., Browley, Moss Vale.
H. E. Kater, Esq., Mount Broughton, Moss Vale.

No. 5.

No. 5.

The Chairman of the Sheep Board, Berrima, to The Secretary for Mines.

Sir, Berrima, 14 May, 1888.

I beg respectfully to draw your attention to the enclosed letter from Mr. Yeo, Inspector of Stock for this district, and also a copy of the reply to it by the secretary of our Board.

The list of directors attached to Mr. Yeo's letter composed the Board for 1887. I find by the *Government Gazette*, No. 168, of 12 March, 1888, that Mr. C. L. Nicholson's name has been substituted for Mr. E. Carter's, who was one of the oldest and most energetic members of the Board, and also one of the largest stock-owners in the district.

When no election has taken place, I, as Chairman, have always been asked to recommend names for appointment. Mr. Carter being very much annoyed that his name was taken off the list without cause, I feel it my duty to ask that an inquiry be made into the matter.

At a meeting held in Berrima, on Friday, the 11th instant, it was decided by a majority of one to remove the office of the Board to Moss Vale, caused by the alteration referred to above, which will entail considerable more expense.

I have, &c.,
W. J. CORDEAUX,
Chairman.

No. 6.

Mr. E. Carter to The Secretary for Mines.

Sir, Golden Vale, Sutton Forest, 15 May, 1888.

I desire to bring under your notice the treatment that I have received from Mr. Yeo, the Inspector of Stock, Moss Vale, who has taken it upon himself, without any cause whatever, to remove me from the Board of the Pastoral Stock Protection Act.

I may here state for your information that I am the oldest resident in this district, and my father before me was the owner of sheep in 1838, when scab was so prevalent amongst them in this district, and I had every opportunity of becoming thoroughly acquainted with the management of sheep and other stock. I may add that I am at present the largest stock-holder in the district. and have always taken great interest in all kinds of stock.

I may further add that I have been a sheep director, I believe, since the Act first passed, and have always given my best attention to the duties required of a director; and now to be removed from the Board, after so many years' service, without any cause whatever, or any complaint of my neglecting to perform the duties connected with these appointments.

I may add that I was under the impression that the power of removing a director from a Board could only be exercised by the Honorable the Minister for Mines, and the very fact of my being removed by the Stock Inspector, Mr. Yeo, has usurped a power that belonged to you only, and I pray you will take this matter into your consideration, and grant me such relief from this painful insult as you may be pleased to direct.

I have, &c.
EDWARD CARTER.

No. 7.

The Chief Inspector of Stock to The Chairman of the Board of Sheep Directors, Berrima.

Sir, Stock Branch, Department of Mines, Sydney, 16 May, 1888.

In reply to your letter of the 14th instant, I have the honor to inform you that Mr. Nicholson was appointed a sheep director for the Berrima District, instead of Mr. Carter, at the suggestion of two members of the Board.

I have, &c.,
ALEXANDER BRUCE,
Chief Inspector of Stock.

No. 8.

Mr. E. Carter to W. McCourt, Esq., M.P.

Sir, Golden Vale, Sutton Forest, 18 May, 1888.

As you are aware, I was a member of the Board of the Pastoral Stock Protection Act for the district of Berrima, which position I have held for a number of years, and I now have been removed from that position. And, as I have been informed that through some advice or complaint, which has been made to the Inspector of Stock at Moss Vale, by Mr. Walter Morrice, of Browley, and Mr. A. D. Badgery, of Sutton Forest, I would be glad if you would obtain from the Honorable the Minister for Mines a copy of the letters (if any), or the verbal statement made by the above gentlemen to the Inspector of Stock at Moss Vale, which was the cause of my being removed from the Board of Directors.

I further wish to know if any complaint has been made of my not attending to the duties, or for what reason, if any was given, for my removal, as I feel a great injustice has been done me. No notice was given to me that there was any intention of removing me from the Board, and I also wish to know by what authority or power Messrs. Morrice and Badgery were entitled to exercise in removing my name.

I hope the Honorable the Minister for Mines will see his way to restore me to the position I held.

Yours, &c.,
EDWARD CARTER.

I beg to forward these letters from Mr. Carter. It appears to me to be a case requiring a thorough investigation; by some behind-back work Mr. Carter has been removed from his position on the Board without his knowledge, and without any reason whatever being assigned for the change. I trust therefore the Minister will see that Mr. Carter is reinstated. I certainly think if any objections were taken to Mr. Carter the inspector at Moss Vale should have communicated such objections to that gentleman, in order that he might have an opportunity to reply to them.—W. McCourt.

Report the facts of this case to me as soon as possible.—F.A., 21/5/88. Mr. Yeo, for report and explanation.—A.B., 21/5/88.

No. 9.

No. 9.

Mr. Inspector Yeo to The Chief Inspector of Stock.

Sir, Stock Office, Moss Vale, 25 May, 1888.

Referring to your blank cover of the 21st instant, for report and explanation, I beg to state that I wrote to W. J. Cordeaux, Esquire, Chairman of the Berrima Pastures and Stock Board, on the 24th February, 1888, asking if any nominations of directors had been made to him for the ensuing year, and not having received a reply, on the 29th February, 1888, I made a special journey to Berrima to see Mr. Cordeaux, who was away from home; consequently I deemed it advisable to see some of the other directors on the matter; I saw Messrs. A. D. Badgery and W. Morrice, who, on the suggestion of Mr. A. D. Badgery, were, I considered at the time, both agreeable that Mr. Nicholson should be nominated in lieu of Mr. Carter, which I submitted for approval, in the absence of the Chairman. I might also mention that if it is necessary Mr. A. D. Badgery is quite willing to give his reasons in writing for recommending Mr. Nicholson in lieu of Mr. Carter.

I have, &c.,
JAMES YEO,
Inspector of Stock.

Submitted.—A.B., 26/5/88. The Under Secretary for Mines. This explanation may be supplied to Mr. McCourt, M.P., and he may be informed that if he desires it Mr. Badgery will be asked to furnish his reasons for recommending Mr. Nicholson in lieu of Mr. Carter.—H.W., 29/5/88. Submitted. Approved.—F.A., 2/6/88.

No. 10.

The Chief Inspector of Stock to The Chairman of the Pastures and Stock Board, Berrima.

Dear sir, Moss Vale, 26 May, 1888.

Having seen an advertisement in the *Scrutineer*, calling for tenders for the secretaryship of the Berrima Pastures and Stock Protection Board for the ensuing year, I most respectfully beg to offer myself as a candidate for the appointment, at the salary of £50 per annum, and supply an office for the use of the Board, free of charge. I might mention that I held a similar appointment under the Ivanhoe Pastures and Stock Protection Board for two and a half years to the satisfaction of the Board, and which appointment I resigned of my own accord, prior to my leaving the district.

Enclosed you will please find testimonials from Directors of the Ivanhoe Board, testifying to my fitness for the appointment.

I can only say should the Board do me the honor of appointing me, I shall do my utmost to give every satisfaction.

I have, &c.,
JAMES YEO.

No. 11.

Mr. W. G. Massingham to The Chairman, Pastures and Stock Board.

Sir, Alymerton, Mittagong, 31 May, 1888.

In reference to your advertisement in the *Southern Mail* of the 26th instant, *re* the secretaryship of the above Board;—if the duties are of such a nature as would admit of the work being done at my own house, and only requiring partial attendance at the office, I have the honor to tender my services in the above capacity for one year for the sum of £35, and furnish fidelity guarantee for £100.

W. G. MASSINGHAM.

No. 12.

Mr. E. Carter to W. McCourt, Esq., M.P.

Sir, Golden Vale, Sutton Forest, 2 June, 1888.

I addressed a letter to the Honorable the Minister for Mines, dated the 15th May, 1888, calling his attention to the treatment I have received from the Inspector of Stock at Moss Vale, by removing me from the Board of Sheep Directors for this district, without any just cause or reason, unless it be the action I took in reference to a letter received by the Chairman of the Board from the Inspector of Stock at Moss Vale, asking if the Board would pay half the expense of an office and furniture for Moss Vale, and this letter was brought before the Board at its next meeting for consideration, and I opposed the removing of the office to Moss Vale on the following grounds:—

Firstly,—The Stock Board had an office in Berrima, for which they paid no rent.
Secondly,—There was sufficient furniture for their requirements.
Thirdly,—The Board had no funds at the time in hand.

I thought it undesirable that the Board should go to this unnecessary expense, and my opposing this matter, I have every reason to believe, has been the cause of the action taken by Mr. Yeo, Inspector of Stock, in removing my name from the Board of Directors.

At a meeting of the Board held in Berrima, a resolution was carried by a majority of one, that the office should be removed from Berrima to Moss Vale.

The Honorable the Minister for Mines will see that by the removal of my name from the Board, and the appointment of Mr. Nicholson in my place, enabled the inspector to carry out the intentions of his letter referred to above.

Knowing that the Government was desirous of keeping down unnecessary expenditure, I considered it my duty, as a colonist, to assist them in their efforts to do so.

I remain, &c.,
EDWARD CARTER.

I beg to forward above letter together with two copies of letters, one from Mr. Carter to Mr. Morrice, and one from latter gentleman, denying that he ever recommended Mr. Carter's removal from the Board, as stated in a minute to you by the Inspector of Stock at Moss Vale. The action of the Inspector of Stock throughout this business requires thorough investigation. It seems clear that Mr. Carter has been removed from the Board without his knowledge, and without the consent of his Co-directors being obtained.—W. McCourt. The Honorable the Minister for Mines.

Let me know how this matter stands, I have an impression it was dealt with last week.—F.A., 5/6/88.

[*Enclosures.*]

My dear Mr. Morrice, Golden Vale, Sutton Forest, 2 June, 1888.

You are aware that I have been removed from the Board of sheep directors, Berrima, I have made enquiry from the Chief Inspector of Stock why I was removed, and he informed me that the Inspector at Moss Vale said it was by the request of Mr. A. D. Badgery and Mr. Walter Morrice.

I cannot believe that you made such a recommendation. Would you be kind enough to say whether you did so or not.

Yours, &c.,
EDWARD CARTER.

My dear Mr. Carter, Browley, 3 June, 1888.

In reply to yours of yesterday's date, *re* your removal from the Board of sheep directors for the District of Berrima, I can only say that I never recommended the same, and that I knew nothing of it until the meeting of the Board at Berrima.

I am, &c.,
WALTER MORRICE.

No. 13.

Minute by The Secretary for Mines.

5 June, 1888.

I have to-day seen a letter from Mr. Walter Morrice, dated 3rd June, 1888, in which he states he never recommended the removal of Mr. Carter, and that he knew nothing of it until the meeting of the Board.

This case appears a very strange one, I cannot understand why Mr. Inspector Yeo should have gone out of his way to secure the removal of Mr. Carter, who it appears has always attended to the duties of the position ever since the Board has been established.

I require a very clear report upon this matter, and an explanation from Mr. Inspector Yeo.

F.A.

Referred for Mr. Inspector Yeo's full report and explanation, more especially in regard to Mr. Morrice's contradiction of your statement that he was agreeable that Mr. Nicholson should be nominated in lieu of Mr. Carter.—A.B., B.C., 5/6/88.

No. 14.

Mr. A. D. Badgery to The Secretary for Mines.

Sir, Sutton Forest, 6 June, 1888.

I am given to understand that Mr. Carter feels hurt at his name having been omitted from the list of sheep directors for the Berrima District, and that Mr. Yeo has incurred his displeasure over the matter. I feel it but due to Mr. Yeo to say that that gentleman is not in any way to blame for Mr. Nicholson's name having been substituted for Mr. Carter's.

I met Mr. Yeo at Moss Vale, and he told me that there had been no election of members, consequently the Board was defunct, and that it was his duty to submit the names of gentlemen who would fill the appointments.

As Mr. Yeo was a perfect stranger in the district, I gave him the names of several gentlemen whom I knew would work in the interest of the public, and not study individual interest. On the same day, I told Mr. Yeo to submit the list to Mr. Walter Morrice, who has since told me that he approved of the names thereon. My sole reason for leaving Mr. Carter's name out, is that he has not worked in the interest of the public, but for his own individual benefit.

For a number of years Mr. Carter has openly stated that he did not wish the native dogs to be destroyed on his runs, and has stated as a reason for protecting native dogs that it prevented men of small means from selecting on his runs, for from the dry nature of the country, it would not pay to keep cattle on small holdings, and the dogs prevented them from keeping sheep.

During part of the last four years, I leased a block of country from Mr. A. W. Holt, it adjoined Mr. Carter's run. I paid £1,100 per annum rent, besides as much as £100 in one year as taxes under the Rabbit Diseases in Sheep, and Stock and Pastures Protection Acts.

Notwithstanding a heavy outlay for poison, steeltraps, &c., I lost over £400 worth of sheep in the time, and many of my neighbours suffered in a more or less degree. I mention their names, Thomas Loseby, M. W. Hillas, Conrad Seiler, Badgery Bros., Mr. Jamieson, and a number of smaller holders. All these parties trace their trouble and loss to the vast tract of mountainous country held by Mr. Carter, and on which the native dogs are protected.

A few weeks ago a hunter brought me some marsupial scalps, also the scalp of a native dog. He asserted that he had shot them on the outskirts of Mr. Carter's run, and although native dogs were plentiful round his camp, Mr. Carter had forbidden him to use poison. Even many miles from the head station, and where there was not a remote chance of poisoning a tame dog.

Mr. Carter will surely remember telling me only a few weeks back, that he intended to make a charge on hunters who were shooting marsupials on his run. Surely that does not look like studying the public interests. If you look at the minutes of our various meetings held at Berrima, you will see how Mr. Carter always voted.

Messrs. Carter and Cordeaux hold a long strip of country along the Wollondilly, and their interests are identical.

For

For some time it has been evident that, in a little while, the marsupials will be almost extinct. The prices paid for skins are inducing many to shoot them, therefore I feel that it is not necessary to offer large bonuses for their scalps, but rather to give a price that will secure the destruction of the native dogs entirely.

I am not now a sheepholder in this district, therefore my efforts are not in my own interest.

I have also been accused by some of the Berrima people of wishing to take everything from that town by proposing to remove the Stock Board to Moss Vale.

Well, my reasons are that Moss Vale is far more central and more convenient for the greatest number of the directors, as well as more suitable for the public. As a proof, I give you the directors' distance from Moss Vale and Berrima:—

Director.	Moss Vale.	Berrima.
Walter Morrice	1 mile	4 miles.
H. E. Kater	2 „	7 „
C. L. Nicholson	3 „	8 „
A. D. Badgery	3½ „	8½ „
W. J. Cordeaux	8 „	3 „
D. Morrice	8 „	8 „
W. Butler	8 „	3 „
J. A. Badgery	6 „	11 „

Showing a balance of 13 miles in favour of Moss Vale.

I may here mention that we have a convenient room at Moss Vale free of rent. I am quite prepared to answer any question Mr. Carter may put on the subject.

I am, &c.,
ANDREW D. BADGERY.

I think a copy of this letter should be sent to Mr. Carter with the request that he may supply any reply he wishes to make to it. There are certainly some very serious charges against him in this statement of the case.—F.A., 8/6/88.

The Chief Inspector of Stock.—B.C., 8/6/88.

No. 15.

Mr. Inspector Yeo to The Chief Inspector of Stock.

Sir, Stock Office, Moss Vale, 7 June, 1888.

With reference to your B.C. of the 5th June, 1888, for report and full explanation regarding Mr. Morrice's contradiction of my statement, I beg to state that the interview I had with Mr. A. D. Badgery, suggested—and Morrice was at Moss Vale, when Mr. Badgery suggested the names of the directors, which names I entered in my note-book. Mr. Morrice was standing by and heard the names suggested, and appeared to be quite agreeable. I might also mention that Mr. Badgery and Mr. Nicholson are both prepared to substantiate my previous statement, and Mr. Badgery further informs me that on a future occasion Mr. Morrice remarked to him that he quite approved of the names suggested.

With reference to Mr. Carter's remarks, I beg to distinctly deny that I was prejudiced against his reappointment as a director owing to the action he took *re* removing the office from Berrima to Moss Vale. It would, I consider, tend to show that after having first written and then making a special journey to Berrima to see the Chairman, who was away from home, that it was my duty to consult some of the other directors, and I should most certainly not have altered the original list if it had not been suggested by the gentlemen already named.

I have, &c.,
JAMES YEO,
Inspector of Stock.

No. 16.

The Chief Inspector of Stock to Mr. E. Carter.

Sir, Stock Branch, Department of Mines, Sydney, 12 June, 1888.

Referring to previous correspondence with regard to your name having been removed from the list of sheep directors for the Berrima District, I am directed to forward the copy of a letter which has been received from Mr. A. D. Badgery in order that you may make any remarks you may deem advisable thereon.

I have, &c.,
ALEXANDER BRUCE,
Chief Inspector of Stock.

No. 17.

Mr. E. Carter to The Secretary for Mines.

Sir, Golden Vale, Sutton Forest, 18 June, 1888.

I am in receipt of a letter from the Chief Inspector of Stock, enclosing a copy of Mr. A. D. Badgery's letter of the 6th June, in which Mr. Badgery undertakes the defence of Mr. Yeo's interest in this matter in stating that Mr. Yeo had nothing to do in substituting Mr. Nicholson's name in the place of mine.

As to what conversation took place between Mr. Yeo and Mr. Badgery I know nothing of. Mr. Badgery remarks that "Mr. Yeo was a perfect stranger in the district." If this was the case, the greater the reason it was for him (Mr. Yeo) to apply to the Chairman of the Board or the secretary, for any information that he may have required respecting the appointment of a board of sheep directors, and not to Mr. Badgery.

I have been informed that Mr. Yeo wrote to the Chairman (Mr. Cordeaux), asking him for the list of those who were acting as sheep directors, which names, I believe, were supplied to Mr. Yeo, and he (Mr. Yeo) removed my name.

I

I submit that Mr. Badgery had no right to interfere. Mr. Badgery says that Mr. Walter Morrice agreed to the removal of my name; but I hold Mr. Morrice's letter stating that he knew nothing of my removal from the Board. So much for Mr. Badgery's statement.

Mr. Badgery says his sole reason for leaving Mr. Carter's name out was that I did not work in the interests of the public, but for my own individual benefit. As the Board is composed of eight members, how was it possible for me individually to carry out anything in opposition to the other seven members, should they not consider that any motion I made was not for the benefit of the public; and I have at all times taken an active part and attended all meetings of the Board, and anything that I may have done that does not please Mr. Badgery, if he had attended at the meetings, he could have opposed any action that I took.

Mr. Badgery further says that I openly stated that I did not wish the native dogs to be killed. This I did not say; but have said if native dogs killed a few sheep, they also killed large numbers of marsupials. And as for Mr. Badgery stating that I said it prevented men of small means from selecting on my run, is perfectly untrue; and I wish to state that I never prevented my stockman or other servants from destroying native dogs, and my stockman (Hugh M'Pherson) has destroyed them and has taken the scalps to Berrima. Martin Bender, another servant in my employ, has also delivered scalps in Berrima, and my son has also destroyed them and delivered the scalps, I think, to Mr. Badgery.

With reference to Mr. Badgery paying Mr. A. Holt £1,100 a year rent for his estate in the county of Argyle I have nothing whatever to do with, but if Mr. Holt is communicated with he will tell you that when I was younger no person exerted himself more than I did to destroy the native dogs.

Mr. Badgery is aware that I gave large shooting parties, and supported thirty and forty men for three days at a time for several years, as shooters and drivers, to destroy the marsupials; and will Mr. Badgery dare to say that I gave instructions to any of these persons not to shoot native dogs?

Mr. Badgery has given the names of several gentlemen who live in the county of Argyle, and complains that they trace their troubles and loss to my not destroying the native dogs. Does Mr. Badgery expect me to leave the county of Camden and go into the county of Argyle to destroy the native dogs that may be trespassing upon the runs of these gentlemen?

This is one of Mr. Badgery's complaints why he (Mr. Badgery) removed my name from the Board of directors.

Mr. Badgery says, in his letter, that the marsupials will soon be almost extinct; but, for the Honorable the Minister's information, I may state that there are thousands of rock wallaby on the Crown lands adjoining my property, for which the Board allows 2d. per scalp, which is just the price of the cartridge, therefore they are now on the increase.

With reference to Mr. Cordeaux's interests being identical with mine, that interest must lie in the destruction of marsupials, as we are the greatest sufferers.

The trumped-up charges made by Mr. Badgery, to protect Mr. Yeo, has nothing to do with it. The question is, why did Mr. Yeo remove my name, unknown to me and the other six members of the Board, including the Chairman?

The questions are these:—

1. Why did Mr. Yeo remove my name without consulting the Chief Inspector of Stock?
2. Why does Mr. Yeo say it was at the suggestions of Mr. Walter Morrice and Mr. Badgery?
3. Mr. Morrice denies that statement made by Mr. Yeo, which Mr. Morrice has put in writing.
4. Why did Mr. Yeo make this statement, knowing that Mr. Morrice did not make the suggestion?
5. Why does Mr. Badgery say Mr. Yeo is not responsible, but that he (Mr. Badgery) removed my name?
6. Has Mr. Badgery the power, behind the back of the Board of Directors, to do this?
7. Why are these three gentlemen contradicting each other? If Mr. Yeo has made a statement that is not true, against Mr. Morrice, I think some notice should be taken of it.

I may state that I have always considered that the sum of £2, given for the scalp of a native dog, was excessive, as it leads to fraud, by dishonest persons destroying tame dogs and passing their tails and scalps for the dingo. It was only a few days ago that the Police Magistrate and I had to deal with one of these cases, in which a person named William Goodfellow was charged with obtaining money for a scalp not being one of a dingo, for which he was convicted.

Since writing the above, I have seen Mr. Walter Morrice, and he still adheres to what he stated in his letter, namely, that he never suggested the removal of my name to Mr. Yeo.

Yours, &c.,
EDWARD CARTER.

Please send the name and address of the hunter which Mr. Badgery refers to.

I think this letter proves that a most improper thing has been done by Mr. Inspector Yeo. I have not had his explanation yet.—F.A., 25/6/88.

No. 18.

The Chief Inspector of Stock to Mr. W. Morrice.

Sir, Stock Branch, Department of Mines, Sydney, 5 July, 1888.

With reference to the appointment of Mr. Nicholson, as a sheep director for the Berrima District, in the place of Mr. Carter, Mr. Inspector Yeo states, that after making a special trip to see the Chairman about the reappointments of the Board, and failing to see him, he consulted Mr. Badgery, and submitted the names suggested by him, that you were present and appeared to be quite agreeable. It is said that at a later period you told Mr. Badgery that you quite approved of the names suggested.

I am directed by the Minister for Mines to request that you will be good enough to say whether you were present, and agreed to the action that was taken.

I have, &c.,
ALEXANDER BRUCE,
Chief Inspector of Stock.

No. 19.

No. 19.

The Chairman of the Sheep Board to The Secretary for Mines.

Sir, Bendooley, Berrima, 7 July, 1888.

Having read a copy of Mr. Andrew Badgery's letter to you, 6th June, 1888, *re* Mr. Carter's name being removed as a director from the Stock Protection Board, Berrima, wherein he states that my interests are identical with his (Mr. Carter's) that he controlled the Board, that I was not acting for the public interest, and fostering the increase of native dogs, I beg respectfully to say, as to myself, that his assertions are quite uncalled for and untruthful. Having suffered more than any person in the district from dogs, both tame and wild, surely it was to my interest, as well as the public, to destroy them, having been in possession of sheep here since the year 1839 up to the present time, and I give to my neighbours strychnine, to destroy them, as they require it. Being Chairman of the Board since the Act came in force, and worked unanimously together, I feel hurt that he should have made these uncalled and untruthful assertions against me, he being comparatively a recent sheepholder and member of the Board.

I have, &c.,
WM. JNO. CORDEAUX,
Chairman.

No. 20.

Mr. E. Carter to The Chief Inspector of Stock.

Sir, Golden Vale, Sutton Forest, 28 July, 1888.

In writing to your Department some time ago, asking to be supplied with the name of the hunter who informed Mr. A. D. Badgery, while encamped upon my run, that the native dogs were howling around his camp, and that I would not allow him to destroy them, I shall be glad to obtain this information as soon as convenient.

Yours, &c.,
EDWARD CARTER.

Send copy to Mr. Badgery, and ask him for the name of the hunter. Inform Mr. Carter that we have done so.—A.B., 2/8/88.

No. 21.

The Chief Inspector of Stock to Mr. A. D. Badgery.

Sir, Stock Branch, Department of Mines, Sydney, 7 August, 1888.

Herewith I have the honor to forward the copy of a letter received from Mr. Carter, asking to be furnished with the name of the hunter who informed you that he (Mr. Carter) would not allow him to destroy the native dogs which were howling around his camp, I shall be glad if you will be good enough to supply me with the information.

I have, &c.,
ALEXANDER BRUCE,
Chief Inspector of Stock.

No. 22.

Mr. A. D. Badgery to The Chief Inspector of Stock.

Sir, Sutton Forest, 13 August, 1888.

In reply to your question as to who informed me that Mr. Carter would not allow him to use poison on his run, I beg to say it was Thomas Nye.

I infer from Mr. Carter's letter to you that he denies having protected the native dogs on his run. If such is the case, I can satisfy you on that point.

Mr. Carter appears hurt at being left off the Board of Directors, after having (as he says) served the public faithfully. All I can say is, the public should be the best judges; and at the ballot for thirty-six committee-men, to work in the interest of our Agricultural Society, Mr. Carter's name stands within two of the bottom of a list of sixty-one candidates.

Several people have come to me and reported that Mr. Carter had asked them to sign a document stating that he had always given satisfaction in the discharge of his duties as a director. It should be a valuable document.

I am, &c.,
ANDREW D. BADGERY.

Inform Mr. Carter.—A.B., 20/8/88.

No. 23.

The Chief Inspector of Stock to Mr. E. Carter.

Sir, Stock Branch, Department of Mines, Sydney, 20 August, 1888.

Referring to your letter of the 28th ultimo, I have the honor to inform you that Mr. Andrew D. Badgery has intimated that the person who informed him that you would not allow him to destroy native dogs on your run was Thomas Nye.

I have, &c.,
ALEXANDER BRUCE,
Chief Inspector of Stock.

No. 24.

Mr. E. Carter to The Chief Inspector of Stock.

Sir, Golden Vale, Sutton Forest, 1 September, 1888.

As A. D. Badgery has charged me with having used my position on the Board for my own individual benefit, will you be kind enough to inform me in what way I used my position on the Board as sheep director for my own individual benefit.

Yours, &c.,
EDWARD CARTER.

No. 25.

No. 25.

Mr. E. Carter to The Secretary for Mines.

Sir, Golden Vale, Sutton Forest, 10 September, 1888.

I hope you will pardon my again bringing under your notice my removal from the board of sheep directors, as I wish to bring under your notice the papers accompanying this letter.

Mr. Morrice's letter, denying that he suggested my name to be removed. Therefore Mr. Yeo has written an untruth, and by so doing, misled the Chief Inspector of Stock.

I also enclose a letter from Mr. Hillas (Bannaby), and Mr. Dennis O'Connor (Summer Hill), also a declaration made by Mr. Thomas Nye. I enclose this that the Honorable the Minister for Mines may see that Mr. Badgery has also said what is proved to be untrue.

I have enclosed the attendance of directors for last year, also the attendance for the two meetings this year. The Honorable the Minister will there see that the appointment of Mr. Yeo as secretary was through the action of those gentlemen, although Mr. Yeo's tender for the appointment was higher than the tender of Mr. Massingham by £15.

I have every reason to believe my name was removed from the Board by Mr. Yeo to ensure his appointment as secretary. The action of Mr. Badgery and Mr. Nicholson shows this. With all due respect I think Mr. Yeo should not be allowed to hold this appointment under the circumstances.

I am only asking that justice may be done to me; also to prevent the inspector from again taking into his own hands the removal of any member of the Board.

I now, sir, with respect leave my case in your hands.

I am, &c.,
EDWARD CARTER.

I wish to see Mr. Bruce about this matter, and he may ascertain if it is the case that Mr. Yeo has been appointed secretary to the Board.—F.A., 11/9/88. Mr. Yeo has been appointed secretary to the Pastures Board.—A.B., 11/9/88. The Under Secretary for Mines. Submitted.—H.W., 11/9/88.

It appears that the law does not give any power to undo what has been done in this case; but I desire to express my strong disapproval of the conduct of Mr. Stock-Inspector Yeo, who appears to have allowed himself to be used by others to the injury of Mr. Carter without sufficient reason, and such another case coming under my notice will result in serious consequences to him. Should an election of Board not take place next year, Mr. Carter's name is to be submitted for appointment. Inform all parties, including Mr. McCourt, M.P.—F.A., 12/9/88.

[*Enclosures.*]

My dear Mr. Carter, Browley, 3 June, 1888.

In reply to yours of yesterday's date, *re* your removal from the board of sheep directors for the District of Berrima, I can only say that I never recommended the same, and that I knew nothing of it until the meeting of the Board at Berrima.

I am, &c.,
WALTER MORRICE.

Dear sir, Bannaby, 5 August, 1888.

In reply to your letter of the 28th ultimo, I beg to say that I have not seen Mr. A. Badgery for nearly six months. In reference to my accusing you for my losses in sheep, I may tell you that I have been very fortunate in that way, for they have been comparatively small in comparison to my neighbours, who have been compelled to continually yard their sheep. I may have said that the native dogs were more numerous on your side of the river, as they come from that direction. Mr. D. O'Connor tells me he has poisoned either eight or nine dogs close to the Wollondilly and Berrima Rivers.

I am, &c.,
MALCOLM W. HILLAS.

Dear sir, Summer Hill, Bannaby, 29 August, 1888.

In reference to your note, dated 28th July, I beg to inform you that Mr. Andrew Badgery has misinformed you, for I consider it a gross libel for any person to belie me, as I have not spoken, personally, to Mr. A. B. for the last fifteen years; and in reference to your remarks that I should say that you were protecting the native dogs, and attributed my losses solely to you, this I distinctly deny, though my losses, for a poor man, are considerable, amounting from 280 to 300 sheep annually, and this I attribute to the dogs from the Camden side; but seeing the Legislature of the Colony has enacted a law authorizing every district to appoint a Stock Board, and giving each Board certain limited power to levy contributions on all stock, for the destruction of those noxious animals, that is, the marsupials and native dogs, and on these grounds I consider myself void of common sense to accuse you, or any other person of the said.

I am, &c.,
D. O'CONNOR, Junr.

I, Thomas Nye, of Sutton Forest, do solemnly and sincerely declare that Mr. Edward Carter never did, at any time, while camping on his run, hunting, prevent me from shooting or poisoning native dogs. If Mr. A. D. Badgery says that I told him that Mr. Carter would not allow me to destroy native dogs, he (Mr. A. D. Badgery) states what he knows is untrue. And I make this solemn declaration, conscientiously believing the same to be true, and in virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled, "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

THOMAS NYE.

Made and signed before me, at Moss Vale, this 23rd day of August, 1888,—

Sir,

Referring to the correspondence which has taken place with regard to Mr. E. Carter's name being omitted from the list of sheep directors at Berrima, I am directed by the Minister for Mines to inform you that the law does not give any power to alter what has been done, but that he has expressed his strong disapproval of Mr. Yeo's conduct, and directed that should no election of directors take place next year, Mr. Carter's name is to be submitted for appointment.

I have, &c.,
ALEXANDER BRUCE,
Chief Inspector of Stock.

No. 30.

Mr. Inspector Yeo to The Chief Inspector of Stock.

Stock Office, Moss Vale, 18 September, 1888.

Sir,

I have the honor to acknowledge the receipt of your letter, dated 17th September instant, and beg to note the minute written by the Honorable the Minister for Mines, with regard to Mr. Carter's name being omitted from the list submitted for appointment as sheep director for the Berrima District. Should no election of the Board take place next year, Mr. Carter's name will be submitted for appointment, according to your instructions.

I have, &c.,
JAMES YEO,
Inspector of Stock.

No. 31.

Mr. E. Carter to The Secretary for Mines.

Golden Vale, Sutton Forest, 22 September, 1888.

Sir,

In reference to the letter I received from the Chief Inspector of Stock, and dated the 17th instant, I beg to say I am not seeking reappointment to the board of sheep directors. Does the Chief Inspector of Stock think for a moment that I would accept a seat on the Board while Mr. Yeo is secretary?

Mr. Yeo having made a false statement, and he knew he was doing so when he said my removal was recommended by Mr. Walter Morrice, I would ask how can such a person report, or his letters be believed. I have given gratuitous services to the Sheep and Stock Board for many years, and now removed

removed because the inspector of the district wished to get rid of me for his own benefit, and to carry out this, he falsely stated my removal was recommended by Mr. Walter Morrice, and the voting of Mr. Nicholson on the appointment of Mr. Yeo to the office of secretary clearly shows this to be the case.

Then we have Mr. A. D. Badgery stating that I used my position on the Board for my own benefit, and also that the hunter Thomas Nye said that I would not allow him to destroy native dogs. Mr. T. Nye's declaration is before the Minister for Mines, denying that he ever made such a statement to Mr. A. D. Badgery, also other letters disproving those charges. Is Mr. Badgery to be allowed to belie me in this way, and still be allowed to retain the position on the Board of Directors?

I am only seeking for justice, as false charges are made against me.

Mr. Badgery should be called upon to prove that I used my position on the Board for my own individual benefit.

Why is the Board of Directors not called upon to report how I have used my position as a director for my own benefit?

The Chief Inspector of Stock says the law does not give any power to alter what has been done. Am I to believe there is no law to punish crime. Is not making untruthful statements a crime? a crime that no master would allow to go unpunished, neither would he keep such a person any longer in his employment.

I have, &c.,
EDWARD CARTER.

If Mr. Yeo or Mr. Badgery has said anything to damage the reputation of Mr. Carter, he has his remedy at law. I have already expressed my strong dissent at the action of Mr. Inspector Yeo in this matter. Mr. Carter may be informed to this effect.—F.A., 29/9/88.

No. 32.

The Chief Inspector of Stock to Mr. E. Carter.

Sir, Stock Branch, Department of Mines, Sydney, 2 October, 1888.

I am directed by the Minister for Mines to acknowledge the receipt of your letter of the 22nd ultimo, and to state that if Mr. Yeo or Mr. Badgery have said anything to damage your reputation, you have your remedy at law. I am to point out that Mr. Abigail has already expressed his strong dissent at the action of Mr. Inspector Yeo in this matter.

I have, &c.,
A. C. THOMSON,
Pro Chief Inspector of Stock.

No. 33.

The Chief Inspector of Stock to Mr. Inspector Yeo.

Sir, Stock Branch, Department of Mines, Sydney, 8 February, 1889.

Referring to the resolution passed by your Board on the 30th ultimo, that Moss Vale should be appointed a polling place instead of Berrima, I have now the honor to inform you that a notice will appear in the *Gazette* on Tuesday next appointing Moss Vale a polling place, and Berrima an additional polling place for the sheep district of Berrima.

It is not considered desirable to cancel the polling place at Berrima at present.

If more nominations are received than are required, it will of course be necessary for the Chairman to appoint a deputy at Berrima.

I have, &c.,
ALEXANDER BRUCE,
Chief Inspector of Stock.

P.S.—You should prepare two lists of those.

No. 34.

Mr. Inspector Yeo to The Chief Inspector of Stock.

Sir, Stock Office, Moss Vale, 9 February, 1889.

I have the honor to acknowledge your letter dated the 8th inst., and beg to note that Moss Vale has been a polling place and Berrima an additional polling place for the sheep district of Berrima. I also beg to state that your instructions will receive my attention as requested.

I have, &c.,
J. YEO,
Inspector of Stock.

[*Enclosure.*]

EXTRACT from minutes of meeting of the Berrima Pastures and Stock Protection Board, held at Moss Vale on the 30th January, 1889.

PROPOSED by Mr. A. D. Badgery, seconded by Mr. D. Morrice,—"That this Board is of opinion that, as the stock office and the office of the Pastures and Stock Protection Board has been removed to Moss Vale, that it is desirable, should there be an election of directors for the ensuing year, the polling should take place at Moss Vale instead of Berrima, as notified in the *Government Gazette*." (Carried.)

J. YEO,
Secretary.

It is recommended that Moss Vale be notified as the polling place and Berrima as an additional polling place with a Deputy Returning Officer.—A.B., 5/2/89. The Under Secretary for Mines. Submitted.—H.W., 5/2/89. Approved.—J.M.C., 7/2/89.

No. 35.

No. 35.

Gazette Notice.

Department of Mines, Stock Branch, Sydney, 12 February, 1889.

DISEASES IN SHEEP ACTS, 1866, 1878, AND 1882; PASTURE AND STOCK PROTECTION ACTS.

NOTICE is hereby given, for public information, that Moss Vale has been appointed a Polling-place, and Berrima an additional Polling-place for the sheep district of Berrima, under the abovenamed Acts.

The notice in the *Government Gazette* of the 11th ultimo, so far as it relates to the Berrima sheep district, is hereby cancelled.

JOHN MOORE CHANTER.

No. 36.

Gazette Notice.

NOTICE is hereby given, for public information, that the undermentioned gentlemen have been duly elected Directors for the sheep district of Berrima, under the "Diseases in Sheep Acts Amendment Act of 1882" and the "Pastures and Stock Protection Acts," namely:—

Name.	Run or Holding.	Post Town.
	SHEEP DIRECTORS.	
Wm. Jno. Cordeaux, Esq.	Bendooley	Berrima.
Andrew D. Badgery, Esq.	Rosewood	Sutton Forest.
David Morrice, Esq.	Ealing Forest	Sutton Forest.
John A. Badgery, Esq.	Ivy Hall	Sutton Forest.
P. H. Throsby, Esq.	The Briars	Moss Vale.
	PASTURE DIRECTORS.	
Walter Morrice, Esq.	Browley	Moss Vale.
H. E. Kater, Esq.	Mt. Broughton	Moss Vale.
Charles L. Nicholson, Esq.	Newbury	Sutton Forest.

Dated at Berrima, this 22nd day of February, 1889.

WM. JNO. CORDEAUX,
Returning Officer.

No. 37.

Mr. Inspector Yeo to The Chief Inspector of Stock.

Sir,

Stock Office, Moss Vale, 23 February, 1889.

I have the honor to forward to you, under same cover, list of names of gentlemen duly nominated as sheep and large stock directors for the Berrima sheep district, and as these were the only nominations received, the Chairman has declared them duly elected.

I have, &c.,
JAMES YEO,
Inspector of Stock.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

WATER BORES ON THE BOURKE-WANAARING ROAD.

(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 9 *April*, 1889.

[*Laid upon the Table of the Honorable the Legislative Assembly of New South Wales, in reply to a question by Mr. Waddell, dated 4th April, a Return in connection with Bores on the Bourke-Wanaaring Road.*]

RETURN *re* bores on the Bourke-Wanaaring Road, showing:—
1st.—The time taken at each bore.
2nd.—The total cost of each bore approximately.
3rd.—The estimated supply from each bore.
4th.—What steps have been taken to conserve the water at the respective bores and the cost.
5th.—Also, the number, situation, capacity, and cost of the tanks on this road.

1st.—The time taken at each bore.

No. A.—Occupied	48 days.	No. B^3.—Occupied	95 days.
No. C.— „	42 „	No. D.— „	368 „
No. B.— „	3 „	No. F.— „	155 „
No. B^1.— „	72 „	No. E.— „	485 „
No. B^2.— „	18 „	No. F (2nd). „	300 „
No. B^2 (2nd). „	12 „		

2nd.—The total cost of each bore approximately.

	£	s.	d.
Cost of No. A (approximately)	232	15	5
Cost of No. C (approximately)	203	13	6
Cost of No. B (approximately)	14	10	11
Cost of No. B^1 (approximately)	349	3	2
Cost of No. B^2 (approximately)	87	5	9
Cost of No. B^2 2nd (approximately)	58	3	10
Cost of No. B^3 (approximately)	460	13	10
Cost of No. D (approximately)	1,784	11	5
Cost of No. F (approximately)	751	13	1
Cost of No. E (approximately)	2,351	19	0
Cost of No. F, 2nd (approximately)	1,454	16	4

These costs include the making of dams, service tanks, and fencing, &c., &c.

3rd.—The estimated supply from each bore.
No. A.—Salt water only tapped.
No. C.—Salt water only tapped.
No. B.—Fresh water rose 8 feet over surface, at the rate of 1,000 gallons per day.
No. B^1.—Fresh water stood at 34 feet below surface.
No. B^2.—Fresh water rose 21 feet over surface, at the rate of 1,450 gallons per day.
No. B^2 (2nd).—Fresh water rose 21 feet over surface, at the rate of 1,450 gallons per day.
No. B^3.—Fresh water rose 10 feet over surface, at the rate of 15,000 gallons per day.
No. D.—Fresh water rose 3 feet 3 inches over surface, at the rate of 4,320 gallons per day.
No. F.—Salt water only tapped.
No. E.—Fresh water rose 20 feet over surface, at the rate of 33,000 gallons per day.
No. F (2nd).—Fresh water flowed over surface at the rate of 22,464 gallons per day.

4th.—What steps have been taken to conserve the water at the respective bores, and the cost.

At Goonery artesian bore an iron buckle-plate supply tank, 25 in. × 25 in. × 5 in., holding about 20,000 gallons, and 300 feet of steel troughing have been erected by the Department of Public Works. The cost, which includes fencing, was £440 8s. 7d.

At Tinchelooka, or 75-mile bore, owing to the drought, the survey is incomplete, and beyond a small retaining dam across the creek no improvement has been made for storing water. The sum of £254 is upon the Estimates for enlarging the dam and for fencing. No caretaker is employed.

At Cuttaburra, or 101½-mile bore, owing to the drought, the survey is not completed, and no improvements have been made. The water, which was very good on completion of the bore, has since been represented brackish, and the Department is awaiting analysis of water before making definite recommendations for further expenditure. No caretaker is employed.

5th.—Also, the number, situation, capacity, and cost of the tanks on this road.

Tanks on Bourke-Wanaaring Road.

Name.	Situation.	Cost.	Capacity.
		£ s. d.	
1. Paka or Jay Plain	18 miles from Bourke	1,380 17 4	¾ of a million gallons.
2. Kulkyne	At 90-mile peg, 15 m. from 75-m. bore, 11½ m. from 101½-m. bore	850 0 0	2½ million gallons.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

WATER BORES.

(RETURN SHOWING TENDERS FOR PUTTING DOWN, IN THE COLONY.)

Ordered by the Legislative Assembly to be printed, 27 August, 1889.

[*Laid upon the Table of the Honorable the Legislative Assembly of New South Wales, by the Secretary for Mines, a Return, in reply to a Question dated 25th June, 1889, by Mr. Hassall, M.P., showing Bores put down for water in the Colony.*]

Questions.

2. Bores put down for Water in Colony:—*Mr. Barbour*, for Mr. HASSALL, asked the SECRETARY FOR MINES,—
(1.) What were the names of the tenderers for the work of putting down twenty-five bores in search of water, as per *Gazette* notice No. 8,389, of date 20th November, 1888?
(2.) What were the prices respectively given in such tenders?
(3.) Were any of the tenders accepted, conditionally or otherwise?
(4.) If so, by whom, and at what price per foot, inclusive or exclusive of tubing?
(5.) Will he furnish a Return, giving locality and numbers of bores (if any) put down in search of water all over the Colony, carried out under supervision of Department of Mines, and the rate paid per foot, inclusive and exclusive of tubing?

Answers.

(1.) Austral American Boring Company; William S. Watkins; A. D. Carmichael; Artesian Well and Mineral Boring Company; Federal Artesian Well and Mineral Boring Company; George Proudfoot; Colonial Mineral and Water Boring Company (Limited); T. S. Parrott; Mooy Brothers.

(2.) 1. Austral American Boring Company tendered for seven bores, at the following rates:—25s. per foot for the first 1,000 feet, 27s. per foot for the next 500 feet, 30s. per foot for the next 500 feet, exclusive of tubing, etc.

2. W. S. Watkins tendered for eight bores, at the following rates:—23s. per foot for the first 500 feet, 25s. per foot for the next 500 feet, £12 10s. extra per each 100 feet from 1,000 feet to 1,500 feet, and for 10 bores at 25s. per foot up to 1,000 feet, exclusive of tubing.

3. A. D. Carmichael tendered at 22s. 6d. per foot for the first 1,000 feet, 28s. 6d. per foot for the next 500 feet, 32s. 6d. per foot for the next 500 feet, exclusive of tubing.

4. Artesian Well and Mineral Boring Company tendered for 25,000 feet boring, at the following rates:—34s. 6d. per foot for the first 1,000 feet, 46s. 6d. per foot for the next 500 feet, 60s. per foot for the next 500 feet, exclusive of tubing.

5. Federal Artesian Well and Mineral Boring Company tendered for 25,000 feet boring, at the following rates:—19s. 6d. per foot for the first 1,000 feet, 20s. per foot for the next 500 feet, 20s. per foot for the next 500 feet, exclusive of tubing.

6. George Proudfoot tendered for 25,000 feet boring, at the following rates:—32s. 6d. per foot for the first 1,000 feet, 39s. per foot for the next 500 feet, 52s. 6d. per foot for the next 500 feet, exclusive of tubing.

7. Colonial Mineral and Water Boring Company tendered for nine bores, at the following rates:—60s. per foot for the first 1,000 feet, 80s. per foot for the next 500 feet, 100s. per foot for the next 500 feet, exclusive of tubing.

8. T. S. Parrott tendered for five bores at the following rates:—68s. per foot for the first 1,000 feet, 74s. per foot for the next 500 feet, 82s. per foot for the next 500 feet. Also, for three bores at 39s. per foot for the first 1,000 feet, 45s. per foot for the next 500 feet, 53s. per foot for the next 500 feet. Also, for three bores at 36s. 6d. per foot for the first 1,000 feet, 42s. 6d. per foot for the next 500 feet, 50s. 6d. per foot for the next 500 feet. Also, for five bores at 60s. per foot for the first 1,000 feet, 66s. per foot for the next 500 feet, 74s. per foot for the next 500 feet. Also, for five bores at 63s. per foot for the first 1,000 feet, 69s. per foot for the next 500 feet, 77s. per foot for the next 500 feet. Also, for four bores at 66s. per foot for the first 1,000 feet, 72s. per foot for the next 500 feet, 80s. per foot for the next 500 feet. Also, for one bore at 58s. per foot for the first 1,000 feet, 64s. per foot for the next 500 feet, 72s. per foot for the next 500 feet. Also, for six bores, in existing Government Wells, at 74s. per foot for the first 1,000 feet, 82s. per foot for the next 500 feet, 92s. per foot for the next 500 feet. Exclusive of tubing.

9. Mooy Brothers tendered for 25,000 feet boring at 20s. per foot for the first 1,000 feet, 25s. per foot for the next 500 feet, 30s. per foot for the next 500 feet, exclusive of tubing.

(3.) Yes; Tender No. 5 was accepted conditionally, but the Tenderers have withdrawn their tender.

(4.) By the Hon. W. J. Lyne, Secretary for Lands, who was at that time administering the business in connection with Public Watering Places and Water Conservation, at the following rates, for boring:—19s. 6d. per foot for the first 1,000 feet, 20s. per foot for the next 500 feet, and 20s. per foot for the next 500 feet. For tubing:—10-in. diameter, 9s. 7d. per foot; 8-in. diameter, 6s. 6d. per foot; 6-in. diameter, 3s. 11d. per foot.

(5.) The cost of the four deepest bores sunk by this department is as under:—

Locality.	Bore.	Depth.	Cost per foot.	
			Exclusive of tubing.	Including tubing.
Wanaaring and Milparinka Road	75 mile	960 feet 0 in.	32s. $8\frac{7}{8}$d.	35s. $3\frac{1}{16}$d.
Do	$101\frac{1}{2}$ „	965 „ 10 „	24s. $4\frac{1}{3}$d.	26s. $9\frac{1}{3}$d.
Do	106 „	655 „ 1 „	21s. $7\frac{7}{9}$d.	24s. $1\frac{3}{4}$d.
Do	121 „	502 „ 10 „	17s. $8\frac{3}{4}$d.	20s. $1\frac{1}{2}$d.

Fuller details are given in the Annual Reports of the Department for years 1883, page 10; 1884, pages 12 and 221; 1885, pages 181 and 210; 1886, pages 194 and 212; 1887, pages 197 and 214; and in 1888 Report, which is in the hands of the Government Printer.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DUTIES ON IMPORTED AGRICULTURAL PRODUCTS.

(PETITION FROM FARMERS AND OTHERS IN THE WELLINGTON DISTRICT.)

Ordered by the Legislative Assembly to be printed, 26 *September*, 1889.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned farmers, storekeepers, producers, labourers, and others, directly or indirectly interested in the productions and manufactures of the Colony,—

RESPECTFULLY SHOWETH:—

1. That your Petitioners comprise a very large proportion of the settled portion of the parish of Hargraves, in the Wellington District, and have invested a large amount of capital and labour in the development of the agricultural and producing industries in the district.

2. That for some years past the agricultural and producing industries have suffered most severely owing to continued droughts, and from other causes, coupled with the fact that agricultural and other products from foreign and colonial ports, having the advantage of water carriage, are permitted to compete duty free with similar colonial products sent by rail to Sydney.

3. That unless relief be afforded to the agriculturists of New South Wales by the imposition of duties on all imported farm produce, a considerable area of agricultural land will be thrown out of tillage, and very many agricultural labourers will be thrown out of employment.

4. Your Petitioners therefore pray that your Honorable House will take these premises into your earnest consideration, and, with the view of assisting your Petitioners and promoting the welfare of the Colony, will cause measures to be passed imposing duties upon all agricultural and other products imported into New South Wales, as well as upon such manufactured articles as can be reasonably made within the Colony.

And your Petitioners, as in duty bound, will ever pray.

[*Here follow* 31 *signatures.*]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SEED-WHEAT TO DISTRESSED FARMERS.

(REGULATIONS FOR DISTRIBUTION OF.)

Ordered by the Legislative Assembly to be printed, 3 *April*, 1889.

[*LAID upon the Table of the Honorable the Legislative Assembly of New South Wales by the Secretary for Mines,—"Copies of Papers in connection with the Distribution of Seed-wheat to Farmers in Distress."*]

Sir, Department of Mines, Sydney, 29 March, 1889.

I have the honor, by direction of the Secretary for Mines, to forward you herewith a copy of a minute relating to the distribution of seed-wheat to farmers in need of it. From that minute you will gather what it is you are required to do, and in general terms how you are required to do it. It is at once assumed that in view of the distress which renders this action upon the part of the Government necessary you will have no difficulty in finding three gentlemen in any part of your district who, from disinterested motives, will be only too glad to aid you with such information and advice respecting applicants for seed-wheat as you may deem necessary to enable you to arrive at a decision or to make your recommendation upon each application within your district.

I also forward for your guidance a *pro formâ* declaration with forms attached to be kept in your office, and forms of declaration, &c., for use. You will, of course, see that the forms are filled up to suit each case dealt with. For instance, the "undertaking by the landlord not to distrain" will be required only in the case of tenant farmers.

If seed-wheat can be purchased in the district, and the applicant prefers it, you will, when forwarding your report (if it be favourable), recommend that it be purchased locally, and at what price.

If the seed-wheat has to be supplied from Sydney you will name the nearest railway station or port to the residence of the applicant, to which it may be sent, and whence the applicant will be required to remove it to his land.

If you require further information upon any point, or a further supply of forms, kindly apply at once by letter or telegram.

I have the honor to be,
Sir,
Your most obedient servant,

Under Secretary.

Esq., Police Magistrate.

Pro forma.

I,* A B of† C in the county of parish
of Land owner or Tenant Farmer, do solemnly and sincerely declare that‡
1. The land I occupy as [owner or lessee] is situate at in the county of parish
of being portion numbered
2. The area sown by me with wheat last season was acres.
3. The quantity of seed sown per acre was bushels.
4. The cost of preparing the land was £ [if the first crop, exclusive of the cost of clearing].
5. The quantity of wheat obtained from the above areas was bushels, which realized £
6. The number of acres proposed to be sown this season is , and the quantity of seed-wheat I require for the purpose is bushels.
7. That the number of acres ready for sowing is
8. That I cannot afford to purchase seed-wheat for the purpose of sowing the land referred to in paragraph 6, and that I require the Government of New South Wales to supply me with bushels of seed-wheat, or the money to purchase the same.

* Name.
† Residence and Occupation.
‡ Facts declared to be true.

And

And I make this solemn declaration, conscientiously believing the same to be true, and in virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled, "An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the Government of New South Wales, and to substitute Declarations in lieu thereof, and for the suppression of voluntary and extra-judicial Oaths and Affidavits."

Date.

Undertaking to pay for Seed-wheat.

In consideration of the Government of New South Wales complying wholly or in part with my request for a supply of seed-wheat, I of , hereby undertake and promise to pay to the Colonial Treasurer in Sydney, or such officer as he may locally appoint, on or before 1st March, 1890, the sum advanced to enable me to purchase the seed-wheat, or the value of the seed-wheat supplied to me in terms of my said declaration.

(*Signed*)

(*Witness to Signature*)

Seed-wheat to Farmers in Distress.

Department of Mines, Sydney, 27 March, 1889.

The Police Magistrate in each district to act on behalf of the Government with authority to appoint three persons in any portion of his district to report to him in accordance with rules and regulations laid down. But in all cases final decision must be with the Magistrate, for any quantity under 30 bushels to any one applicant, and such Magistrate shall alone be responsible to the Government.

If any one applicant requires more than 30 bushels, report and recommendation must be made to the Minister.

Every application for seed-wheat must be supported by a statutory declaration, setting out:—

(1.) Description of land, and whether owner or lessee.
(2.) The area sown with wheat last season.
(3.) The quantity of seed sown per acre.
(4.) The cost of preparing the land.
(5.) The quantity obtained from the area sown and the amount realized.
(6.) The number of acres to be sown this season, and quantity of seed required.
(7.) The number of acres ready for sowing.
(8.) That he cannot afford to purchase seed.

Attached to such declaration a certificate by two well-known persons that they know the applicant personally, and believe the statements in the declaration to be true.

Upon receipt of this information the Police Magistrate will cause the necessary inquiries to be made and report result to the Minister for Mines.

The person receiving seed-wheat shall sign an undertaking to repay to the Colonial Treasurer the amount advanced out of the proceeds of the first crop. The landlord to sign a guarantee that the produce grown from the seed supplied will not be distrained upon for rent to the detriment of the Government.

If wheat can be obtained in the district the money will be advanced on voucher showing the actual purchase of seed-wheat, and the Magistrate to decide in each district fair market price.

In those districts where it is impossible to obtain a sufficient supply, the Government will, on receipt of the Magistrate's recommendation, send the seed from Sydney, and care will be taken to secure the very best article.

S.S.

Undertaking by Landlord not to Distrain.

I, , of , being the owner of portion numbered , in the parish of , county of , hereby declare and promise that, in consideration of the Government of New South Wales supplying my tenant , of , with seed-wheat, or the money to purchase seed-wheat, to crop any land leased by the said from me, I will not distrain, to the detriment of the Government of New South Wales, upon the crops grown from such seed-wheat.

Seed-wheat to Distressed Farmers.

Sir, Department of Mines, Sydney, 2 April, 1889.

Under separate cover, I have the honor to forward a supply of application and other forms in connection with the distribution by the Government of seed-wheat to distressed farmers, and shall be glad to learn whether you think the supply sent is sufficient for your district.

With reference to my circular of the 29th ultimo on this subject, I am directed to point out that the gentlemen who you may select to assist you in this matter will not be paid for their services, and you may appoint three in each locality in which you think they will be required.

You should, without delay, forward to such gentlemen a supply of forms upon which application may be made. The declaration can be made before any Justice of the Peace.

I have the honor to be,

Sir,

Your obedient Servant,

Under Secretary.

Esq., Police Magistrate at

Sydney: Charles Potter, Government Printer.—1889.

NEW SOUTH WALES.

REPORT

OF THE

ROYAL COMMISSION,

APPOINTED TO INQUIRE INTO THE

INTRODUCTION OF CONTAGIOUS DISEASES AMONGST RABBITS.

Presented to Parliament by Command.

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER.

1889

[1s. 6d.] 113—a

REPORT.

To His Excellency the Right Honorable CHARLES ROBERT, BARON CARRINGTON, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, a Member of Her Majesty's Most Honorable Privy Council, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

MAY IT PLEASE YOUR EXCELLENCY,—

We, the undersigned Members of the Royal Commission appointed "To make a full and diligent inquiry as to whether or not the introduction of Contagious Diseases amongst Rabbits, by inoculation or otherwise, or the propagation of Diseases natural to Rabbits, for the purpose of destroying them, or promoting their destruction, will be accompanied or followed by danger to human health or life, or to animal life other than Rabbits, or to interfere injuriously with the profitable carrying on of the agricultural or pastoral pursuits followed by the tillers or occupants of public or private lands in our Australian Colonies; if either or any of the above means are dangerous, to what extent? if not so dangerous as to justify absolute prohibition, under what conditions and restrictions should such inoculation or propagation be permitted to be introduced and carried on, and generally to inquire into and report to us upon the several methods or means proposed or that may be proposed to the Governments of our several Colonies concerned for the purpose of checking or suppressing the Rabbit Pest in the said Colonies, and which may be referred to you by us for the purpose of inquiring into and reporting upon by you," beg to submit the following Progress Report :—

PRELIMINARY WORK.

The Commission assembled for the first time on the 16th day of April, 1888, at Sydney, representatives of the Colonies of New South Wales, Victoria, South Australia, Queensland, and Tasmania being present. Dr. MacLaurin, one of the representatives of the Colony of New South Wales, was unanimously elected President of the Commission. A general discussion ensued in which all the members took part. The Commission then met daily, with the exception of one short adjournment, until the preliminary business was completed. At the fourth meeting the representative of the Colony of New Zealand associated himself with the Commission. At the request of the Commission the representatives of M. Pasteur received permission to introduce into the Colony of New South Wales cultivations of the microbes of chicken-cholera, on condition that they would undertake to conduct no experiments therewith without the sanction of the Commission. In order to test fully and safely the various schemes proposed for the destruction of rabbits by disease, the Commission immediately took steps to obtain a suitable laboratory in which small experiments might be conducted; and also an island infested with rabbits, and an inland area similarly infested and surrounded by rabbit-proof fencing, in which experiments could be conducted on a larger scale and under normal conditions. The evidence of Henry Augustus Ellis, Esquire, M.B., was taken concerning the great mortality which had prevailed among rabbits on Tintinallogy Station, bordering on the Darling River in New South Wales, and concerning the experiments which had been conducted by Herbert Pickering Butcher, Esquire, M.R.C.S., Eng., and himself in connection with the so-called Tintinallogy disease. The Commission then proceeded to the residence of Dr. Ellis, and examined certain rabbits suffering from the so-called disease.

At

At the request of Drs. Butcher and Ellis it was resolved that all particulars submitted by them concerning this disease would be considered confidential.

In consequence of a letter from M. Pasteur's representatives, it was resolved that in accordance with the terms of the Proclamation of the Government of New South Wales, the Commission would treat as confidential the details of any method that might be examined, but not adopted for trial by the Government.

The representatives of M. Pasteur were subsequently examined concerning the condition of the cultures of the microbes of chicken-cholera, which they were about to introduce into New South Wales, and the method which they proposed to pursue in order to exterminate rabbits. They were requested to prepare a written statement in connection with the scheme of M. Pasteur, and it was arranged that facilities be granted to them for the conduct of preliminary experiments at the laboratory of the Board of Health under such precautions as Dr. MacLaurin, the President of the Commission and of the Board of Health, might prescribe. It was ordered that a supply of rabbits be obtained for purposes of experiment. A schedule of experiments was adopted by which to test the utility of chicken-cholera and of the so-called Tintinallogy disease for the destruction of rabbits. Dr. Katz, Ph.D., was appointed chief expert officer for the conduct of experiments under the direction of the Commission, and a Committee, hereinafter called the Experiment Committee, was appointed to watch the experiments on behalf of the Commission. The representatives of M. Pasteur, on April 24th, submitted their written statement, including a list of the experiments of demonstration which they proposed to make. They were then examined concerning the existing evidence in favour of M. Pasteur's scheme. On April 25th a second general discussion was held, at the close of which the order of experiments was defined, and it was resolved that the Experiment Committee should have full discretion in all matters concerning the conduct of experiments within the terms of the Commission, and in all matters regarding the progress of the inquiry, subject to the limitations already determined by the Commission. Statistics concerning the cost of rabbit destruction in New South Wales and Victoria were received, and steps were taken to obtain like information from other Colonies. On April 26th the last meeting of the first session of the Commission was held, when a memorandum was received from the Rabbit Branch of the Lands Department of New South Wales, and a minute from the Under Secretary for Lands, forwarding for consideration by the Commission all the mechanical devices, &c., which had been submitted to the Government of New South Wales in connection with rabbit destruction. It was resolved that these appliances should be placed in some suitable store where they might be inspected by members, and the further consideration of their merits was postponed. The Experiment Committee was requested to scrutinize the correspondence concerning these appliances which was then in the possession of the Hon. the Minister of Mines. It was resolved that two members of the Committee should form a quorum and the Committee was requested to elect a chairman, who should have general control over the experiments about to be adopted. The Hon. the Secretary for Lands invited the Commission to take into consideration the question of the proper width and mesh of rabbit-proof netting fencing. It was accordingly resolved that a Committee, consisting of the members representing the Colony of Victoria, with such other members as were able to attend, should take evidence in Victoria from witnesses who had practical experience in the use of rabbit-proof fencing; and this Committee was authorised to make public advertisement inviting such evidence. The Commission advised that licenses to prosecute their experiments with the so-called Tintinallogy disease might be granted to Doctors Butcher and Ellis with safety to the public health. It was then resolved that on or about May 23rd the Commission should meet in Adelaide, and investigate the action of the disease known as rabbit scab, and subsequently proceed to Silverton, and if necessary to Tintinallogy or elsewhere, to take evidence concerning the so-called Tintinallogy disease. Steps were taken to secure the presence at Silverton of Dr. Butcher, and of rabbit inspectors and others who could give evidence concerning the mortality among

rabbits

rabbits at Tintinallogy, and the Government of South Australia was invited to provide facilities for the work of the Commission in South Australia. The first session of the Commission then closed.

Appointment of Experiment Committee and equipment of Laboratory.

On the following day, April 27th, the first meeting of the Experiment Committee was held, and Dr. W. Camac Wilkinson was elected chairman. The minutes of the proceedings of this Committee are set forth in Section VI of the detailed report. At the outset great difficulty was experienced in obtaining a suitable site for a laboratory, in which the schedule of experiments adopted by the Commission could be executed. Many places were visited, which were in some respects capable of adaptation to the purpose, but some serious difficulty presented itself in every instance. It became evident that no suitable building could be obtained in any inhabited neighbourhood, without risking interruption of the experiments, on the ground of danger to the public health. Ultimately, on May 4th, after communication with the Hon. the Secretary for Lands, Rodd Island was set apart for the use of the Committee as an experimental station. The necessary plans were speedily prepared, and the works were executed with admirable expedition by the Department of the Colonial Architect of New South Wales. Mr. A. N. Pearson, one of the representatives of the Colony of Victoria, rendered most important service in connection with the designing of the station, and with the supervision of all the work. A description of the station is given in Section VIII of the detailed report, so that here it need only be said that the island is surrounded by a broad belt of water; that the general enclosure, in which animals are kept, measures nearly a quarter of an acre, with stalls and pens, an aviary, artificial burrows, &c., the whole enclosure, with every outlet from it, being protected by fly-proof gauze, the drainage being conducted into disinfecting tanks, and a furnace being provided in which dead carcasses and all infected matters may be burnt. A well-equipped laboratory is provided, with quarters for the experts and servants. All these works were completed in less than two months, and thus, at a comparatively small cost, provision was made for the experiments to be performed under the direction of the Commission; and when its work is ended, a permanent bacteriological station will remain, in which, from time to time, the communicable diseases of animals can be studied with facility.

Difficulties with M. Pasteur's Representatives.

Meanwhile, on May 8th, the Committee received a letter from Dr. Hinds, one of the representatives of M. Pasteur, stating that their preliminary experiments were completed. The list of experiments with microbes of chicken-cholera, which had been adopted by the Commission, was sent to Dr. Hinds, and he was asked to suggest any other experiments. At the meeting of the Committee on May 14th, a letter dated May 10th was read, signed by Dr. Hinds, Dr. Germont, and M. Loir, in which they stated that they were unable to accept any participation in these experiments. This letter and the correspondence which ensued will be found in the Report of the Experiment Committee forming Section VII of the detailed report. As considerable delay in the progress of experimental work was caused by this correspondence, it is necessary to show clearly the positions taken by the Commission and its Experiment Committee on the one hand, and by M. Pasteur's representatives on the other.

The Commission, at its meeting on April 24th, had adopted a definite schedule of experiments concerning chicken-cholera, which would test—(1) whether chicken-cholera would spread from infected rabbits to healthy rabbits in hutches, cages, and artificial burrows; (2) whether domestic animals could be injured by the microbes of chicken-cholera; (3) what birds are liable to chicken-cholera; (4) whether the virulence of chicken-cholera is altered when it is repeatedly communicated from rabbit to rabbit. Incidentally, it was to be tested whether birds at liberty in a large enclosure would contract chicken-cholera when rabbits were dying from that disease in the enclosure. At the same meeting, at which this schedule was adopted, the representatives

of M. Pasteur proposed to make experiments as follows:—(1) to show in the laboratory that they could kill rabbits by adding microbes to their food; (2) to show similarly that domestic animals are not affected by the addition of microbes to their food; (3) to make an experiment on an inland area of (say) 500 acres, enclosed with rabbit-proof fencing, but otherwise under natural conditions. In this experiment food containing microbes would from day to day be placed in different parts of the area. On behalf of the Commission it was explained that a laboratory would soon be ready, and that any experiments which M. Pasteur's representatives might desire would certainly be done; and it was proposed that they should associate themselves with Dr. Katz, the Chief Expert Officer of the Commission, in the conduct of their own experiments. The experiments proposed by the Commission were carefully explained, and M. Pasteur's representatives were informed that if they desired any modification of these experiments, their wishes would receive careful consideration, and also that Dr. Katz had been instructed that all work concerning chicken-cholera was to be performed in association with them. Dr. Hinds, on behalf of M. Pasteur's representatives, at once assented to these proposals. The Chairman asked if M. Pasteur's representatives would not take time to consult. They conversed shortly among themselves, and Dr. Hinds said, "We accept your proposals at once." In the course of their examination which followed, great stress was laid by members of the Commission on the necessity for proving, not merely that rabbits could be killed by administering infected food, but also that chicken-cholera would spread from infected rabbits to healthy rabbits independently of the administration of infected food.

When the Commission closed its first session, on April 26th, it was apparently understood by all parties that the laboratory experiments with chicken-cholera, including those prescribed by M. Pasteur and those directed by the Commission, would be performed as soon as the laboratory was completed. But the subsequent refusal of M. Pasteur's representatives to take any part in the tests prescribed by the Commission necessitated a tedious and disappointing correspondence. This refusal was considered by the Experiment Committee, as before stated, on May 14th.

Visit of Commission to Melbourne, Adelaide, Silverton, and Tintinallogy.

Four days later the Commission met informally, in Melbourne, to hear the statements of Dr. R. F. Hudson and Mr. A. L. Gilbert, concerning their observations during a recent visit to Tintinallogy. As it proved possible to obtain a full attendance of the Commission in Melbourne, the intended committee meeting was replaced by a one day's Session of Commission, which was held on May 21st. Ten witnesses, who held land in various parts of Victoria and New South Wales, were then examined, chiefly concerning the proper height and mesh of rabbit-proof fencing. Two of the rabbit inspectors of Victoria were also examined.

The Commission then passed into South Australia, and on May 23rd, at Adelaide, the evidence was taken of seven witnesses, including owners, lessees, and managers of large station properties, and Professor Watson, who introduced the *Sarcoptes cuniculi*, or rabbit scab. Rabbits and sheep, which had been made the subjects of experiments with this disease, were examined by the Commission. It was then resolved that with a view to economise the time of the Commission, an Executive Committee, consisting of Dr. Bancroft, Dr. Wilkinson, Mr. Dillon Bell, and Mr. Tabart, should proceed forthwith to Tintinallogy, make investigations there, and submit a written report to the Commission.

On May 26th and 28th the Commission met at Silverton and examined Dr. Butcher, of Tintinallogy, and Mr. C. W. Reid, who assisted him in his experiments; also the managers of several large station properties in the Western District of New South Wales; Mr. H. E. Vindin, the Superintending Inspector of the Rabbit Branch of the Lands Department of New South Wales, and several of his staff, and Mr. M. J. C. Tully, the Inspector of Stock for the Sheep District of Wilcannia.

During the return journey the Commission examined, at Adelaide, on May 29, Mr. C. J. Valentine, Chief Inspector of Stock, and Mr. S. G. Hübbe, the Chief Inspector under the Vermin Destruction Acts of South Australia; and also one of the members of the Pastoral Board of that Colony. At Melbourne, on June 6th, the evidence was taken of Mr. E. M. Curr, Chief Inspector of Stock for the Colony of Victoria.

Meantime the Executive Committee had visited Tintinallogy, had personally examined the infested country on that and neighbouring runs, and had taken evidence there, and at Albemarle Station and at Adelaide.

Further Negotiations with M. Pasteur's Representatives.

On June 11th the Experiment Committee again assembled at Sydney, and gave orders for the completion of the necessary works at Rodd Island. Negotiations with the representatives of M. Pasteur were actively resumed. Finally, these representatives definitely declined to conduct any experiments to test the communicability of chicken-cholera from rabbit to rabbit, or to supply microbes of the disease for experiments under the direction of the Committee, until all the experiments of demonstration prescribed by M. Pasteur had been completed, including an experiment on a large scale on some inland area, protected only by a rabbit-proof fence. At last a cablegram was despatched to M. Pasteur, asking him (1) to consent to an experiment testing the contagiousness of chicken-cholera from rabbit to rabbit; (2) to permit infected rabbits to be given to the Commission for special experiments. M. Pasteur consented to an experiment, but directed that five infected rabbits should be kept for six days with twenty healthy rabbits in an enclosure of one square metre (*i.e.*, less than $1\frac{1}{4}$ square yards), and that his representatives should wait before giving microbes of dead rabbits.

On June 16th M. Pasteur's representatives were asked whether, if this experiment was successful, they would permit further experiments under less favourable conditions, say in artificial burrows, or in a larger space, or with fewer rabbits. They said they could not. They were asked again whether they would make the experiment several times over, placing two infected rabbits with five healthy rabbits in each of six enclosures of two square metres each. They refused.

The Commission was therefore called together, and met on June 19th, 21st, and 22nd. A report was submitted by the Experiment Committee, and the correspondence and minutes of the Committee were read. It was thereupon unanimously resolved:—

"That the representatives of M. Pasteur be informed that the experiment which they propose to perform is not satisfactory to the Commission—that even if it be attended with positive results the Commission will not be able to infer that the disease will spread from rabbit to rabbit under natural conditions; that the Commission refuse to permit any broadcast dissemination of chicken-cholera microbes on any inland area until satisfactory proof shall have been given by experiments approved by the Commission—(1) that the disease is capable of spreading freely from rabbit to rabbit; (2) that the disease is innocuous to domestic animals; and that the Commission express its surprise that as M. Pasteur is seeking to obtain a reward of £25,000 for his scheme, his representatives should have absolutely declined to permit the fullest testing of its merits. The Commission will not object to the conduct of an experiment on the lines laid down by M. Pasteur, but it requests a final answer without delay—whether M. Pasteur's representatives will allow the experiments prescribed by the Commission to be conducted, and whether they will furnish rabbits suffering from chicken-cholera for the purpose of experiments under the direction of the Commission. If M. Pasteur's representatives do not assent to these conditions the Commission will report accordingly to the Government of New South Wales, and will recommend—(1) that correspondence with M. Pasteur and his representatives be suspended; (2) that the permission granted to M. Pasteur's representatives to introduce into New

New South Wales and keep in New South Wales the microbes of chicken-cholera, and to perform experiments on rabbits with a view to maintain a supply of the microbes in active state, be withdrawn; (3) that steps be taken to obtain the microbes of chicken-cholera from other sources, so that the utility of this disease for the extermination of rabbits may be tested in a satisfactory manner."

A copy of this ultimatum was sent to the representatives of M. Pasteur.

Other Schemes for the Destruction of Rabbits.

Papers by Mr. Coleman Phillips, concerning the bladder-worm in the Wairarapa district of New Zealand, were received from the Government of South Australia. This subject was afterwards made the subject of close study, as will be shown in another part of this Report.

As fears were expressed that Drs. Butcher and Ellis would lose control of the so-called Tintinallogy disease, the Commission advised that they be granted permission to employ the so-called disease among rabbits in such districts as they may desire, provided that the places in which the disease is being employed be notified to the Commission. Dr. Ellis was requested to forward to Dr. Katz, as soon as possible, fifty rabbits suffering from the so-called disease, or any less number which might be available.

A Committee appointed to examine the correspondence relating to the introduction of disease for the extermination of rabbits presented its report, which was adopted. In conformity with a recommendation in that report, it was resolved that letters be addressed to Mr. F. A. Bishop, of Sydney; M. Lanféron, of Nevers, France; M. A. Laplanche, of Fismes, France; Mr. E. D. Graham, of Cairns, North Queensland; and Mr. J. H. Richardson, of Colorado, asking for additional particulars in support of their statements. At an earlier stage the Committee had caused a message to be sent by cable to Messrs. West and Raphael, of London, through the Agent-General of New South Wales, requesting them to forward the microbe cultures which were mentioned in their letter. (*See* Appendix I.) Letters were also addressed to Professor Ribbert, of Bonn, and to Professor Loeffler, of Greifswald, asking for information concerning the diseases of rabbits recently discovered by them.

It was further resolved,—

(1.) That the Commission recommend the Governments of the respective Colonies to issue licenses to responsible persons who may desire to keep rabbits in confinement for the purpose of poison experiments.

(2.) That the Commission recommend that licenses to keep rabbits in confinement be granted by the Governments of each Colony to any competent persons who may desire to conduct pathological inquiries concerning the destruction of rabbits.

(3.) That these resolutions be transmitted to the Honorable the Secretary for Lands, and that he be requested to forward copies of them to the Governments of the other Colonies.

The Experiment Committee was authorised to subject to experiment, on the general experimental lines already laid down, any disease that might be submitted to them for examination, and that might seem worthy of investigation.

SUMMARY OF EVIDENCE.

The chief diseases which were submitted for consideration by the Commission were—

(1.) Chicken-cholera.

(2.) The so-called Tintinallogy disease.

(3.) Bladder-worm (*cœnurus*).

(4.) *Sarcoptes cuniculi* or Rabbit Scab.

The evidence concerning the usefulness of these diseases for the destruction of rabbits will now be stated as briefly as possible.

Evidence concerning Chicken Cholera.

The case in favour of the employment of the microbes of chicken-cholera as submitted by M. Pasteur and his representatives was very imperfect. It will be found stated in Appendix III, and in Section II of the detailed report, pp. 43–49. It may be summarized shortly as follows:—

M. Pasteur states that, though he had made no special study of rodents, he had often seen rabbits die in cages which had not been disinfected after fowls had succumbed to chicken-cholera in them; that he soon convinced himself that the least meal given to rabbits, after the food has been tainted with the microbes of chicken-cholera, will speedily entail the death of the rodents. At his instigation M. Loir put five rabbits in a box and fed them with infected food, and six hours later introduced three healthy rabbits into the same box. The five rabbits fed with infected food died, and also one of the three rabbits placed with them. On another occasion four rabbits were fed with infected food, and four healthy rabbits were placed with them. Within twenty-four hours the four infected rabbits were dead. Their carcasses were left in the box with the healthy rabbits. Of the healthy rabbits one was found dead on the third day, one on the fourth, one on the fifth, and one on the seventh. Tame rabbits were used in both these experiments. In all these instances it was verified, according to M. Pasteur, that death was due to the microbes of chicken-cholera. Swine, dogs, goats, sheep, rats, horses, and donkeys were fed with infected food, and not one of them became indisposed. The microbes can be grown easily in broth made of flesh, *e.g.*, the flesh of rabbits. They lose their virulence and perish at 51° Centigrade (124° Fah.); but when not exposed to the atmosphere they may be kept for years. In addition, M. Pasteur gave a short sketch of the experiment on the Pommery Estate. Here a large number of rabbits, penned up for purposes of sport in an enclosure measuring eight hectares*, were absolutely dependent for food on eight large trusses of hay† that were daily scattered about their burrows. On one day (Friday) this food was sprinkled with a fresh growth of the microbes of chicken-cholera. The food was consumed in a few minutes. On the day following the exposure of the infected food (Saturday), nineteen dead rabbits were seen outside the burrows. On Sunday no one visited the paddock. On Monday thirteen other dead rabbits were counted. The rest died in the burrows. Not a single live rabbit was seen after the day on which the fatal meal was given.

This was the sum of the evidence available prior to the arrival of M. Pasteur's representatives. These gentlemen stated before the Commission (1) that the virus was not weakened by transmission from one rabbit to another; (2) that there was no instance on record in France, within their knowledge, in which a natural epidemic of the disease among fowls had spread to rabbits; (3) that they had never heard of the epidemics among domestic fowls spreading to wild fowls; (4) that several diseases may kill rabbits, with very similar symptoms and *post-mortem* appearances; (5) that it was doubtful whether all the rabbits at Mme Pommery's Estate partook of the poisoned food, but that it was thought that the quantity exposed was not sufficient for all of them, and that therefore some must have communicated the disease to others.

The plan of spreading the disease, as proposed by the representatives of M. Pasteur, will be found on pages 45 and 46 of the detailed report.

M. Pasteur's Experiments of Demonstration.

The experimental station at Rodd Island being in readiness, and the negotiations with the representatives of M. Pasteur having advanced a stage, the experiments of demonstration prescribed by M. Pasteur were performed by M. Loir, Dr. Germont, and Dr. Hinds, between July 7th and August 4th, under the supervision of the Experiment Committee, and of Dr. Katz, the Chief Expert Officer of the Commission. It was shown that, as a rule, rabbits died speedily after eating food to which the broth-cultures of the microbes of chicken-cholera had

* A hectare is equivalent to 2 acres 1 rood 35 perches. † See Appendix No. III.

had been added, or after inoculation with such cultures; when several rabbits were fed, in some instances all died, in others some survived; but the survivors invariably succumbed after a second or third feeding. The proof that the rabbits died from chicken-cholera was not as complete as was desirable, but a strong presumptive case was established. The next experiment was that dealing with the contagiousness of the disease. Five rabbits were inoculated with about two drops each of a broth-culture of the microbe, and thereafter placed with twenty healthy rabbits in an enclosure of one square metre area (*i.e.*, 3 feet 3 inches square). They were kept under observation for a period of seven days. The five inoculated rabbits died within fourteen and a half hours; of the twenty not inoculated five died within seventy-one hours, and from that time until the conclusion of the experiment no more died. The dead rabbits were left in the little enclosure to the end, but none of them were examined so as to obtain certainty as to the cause of death. The rabbits which survived ate food from off the bodies of the dead. Of twenty-five healthy rabbits kept in a similar enclosure for the same time three died without any introduction of infection.

Subsequently, the experiment was repeated with slight variation in another enclosure of the same size. Five rabbits fed on infected food were placed among twenty healthy rabbits. One of the five, through inadvertence, was not specially marked. The rabbits were kept under observation for ten days. Within this period eleven died. Among them were three of the five to which infected food had been given. One of the five survived. The fate of the fifth could not be decided owing to the omission to mark it. So that either seven or eight of the twenty healthy rabbits died. Blood from three of the eight unmarked rabbits which died was examined microscopically, and organisms agreeing in form with those of chicken-cholera were found. In two cases out of the three so examined, blood from the dead rabbits was inoculated into living rabbits; death followed, and similar organisms were found in the blood. A control experiment on twenty-five healthy rabbits was not made.

It was next shown that a horse, a cow, a sheep, a goat, a pig, and a dog did not suffer after many meals containing large doses of broth-cultures of the microbes of chicken-cholera.

When these experiments prescribed by M. Pasteur ended on August 4th, Dr. Katz, with the permission of M. Loir, took some blood from the heart of one of the rabbits which had died after eating infected food, and from this blood successive cultures of microbes were grown, which were used in the experiments conducted on behalf of the Commission. The experiments of demonstration, carried out according to the instructions of M. Pasteur, were regarded by the Commission as unsatisfactory. But it was now possible to institute a new series of tests which would fully try the real issue.

Experiments with Chicken-cholera Microbes, conducted by Dr. Katz, on behalf of the Commission.

These experiments are fully described in Section XI of the detailed report, so that only a brief summary need be given in this place. They were carried out chiefly in order to ascertain whether chicken-cholera will spread freely from infected to healthy rabbits. In some of the experiments, infected rabbits were allowed to be with healthy rabbits in artificial burrows, or in hutches, either with wooden bottoms or wire-netting bottoms; in other experiments healthy rabbits were put in hutches or boxes in which other rabbits had died of chicken-cholera. The artificial burrows varied from 16 to 70 feet in total length of the branching passages, and were so made that they could be easily opened. According to the size of the burrows, infected and healthy rabbits were let go into them in the respective numbers of one to two, two to four, three to six. In all, eight infected rabbits were placed with sixteen healthy ones. Within twenty-five minutes all the rabbits had found their way inside the burrows. A transmission of the disease from the sick to the healthy did not occur in any instance. Of the eight infected rabbits six died outside the burrows, and two inside. In the hutch experiments, ten infected rabbits were placed with twenty uninfected in eight wooden hutches, in six of

of which one infected rabbit was placed with two uninfected, while in two hutches two infected rabbits were associated with four uninfected. Four of the twenty uninfected rabbits contracted chicken-cholera in the hutches, and died in consequence. In five separate experiments single rabbits were placed in hutches or boxes in which other rabbits had died of chicken-cholera; all of these hutches or boxes contained droppings of infected animals, but the rabbits placed in them did not in any instance contract the disease. In the course of these experiments several facts were established:—

(1.) Australian rabbits are killed in a very short time by the addition of small quantities of the microbes of chicken-cholera to their food, most of them dying in between twenty and twenty-four hours. Inoculation of cultures causes death in from seven and three-quarters to about fifteen hours. But on the other hand Dr. Katz stated in a summary report, dated November 21st, that "food material polluted with small portions of the contents of the rectum or cæcum of rabbits which succumbed to chicken-cholera (feeding) did not prove dangerous to healthy rabbits which ate it."

(2.) The stage of incubation, or latency, occupies most of the time before death, the symptoms lasting but a short time.

(3.) While chicken-cholera in fowls is a form of blood-poisoning attended with severe diarrhœa, the excreta being virulently infective, in rabbits the disease presents the characters of pure blood-poisoning, without diarrhœa or intestinal hæmorrhage. With few exceptions, the rectum or lowest portion of the bowel of rabbits dead from chicken-cholera contained ordinary fæcal balls. In one rabbit, however, the contents of the rectum were soft; a rabbit, inoculated with a small quantity of this soft matter, died from chicken-cholera; but another rabbit, fed with a larger quantity, survived. In another series of experiments, two rabbits were fed with cabbage leaves, to which had been added part of the contents of the cæcum (or the first portion of the large intestine) of a rabbit dead from chicken-cholera; in neither case was chicken-cholera developed.

(4.) So far as may be judged from one experiment, the urine of rabbits suffering from chicken-cholera is not infective.

(5.) Dr. Katz frequently observed that blood-stained liquid exuded from the nostrils of rabbits which had been lying dead for some days from chicken-cholera.

(6.) The virus of chicken-cholera preserves its infecting power for some time in putrid or putrefying matter; thus blood taken from a rabbit dead from this disease, kept for nineteen days and allowed to putrefy, caused a vigorous rabbit to die from chicken-cholera in less than seventeen hours; but after being kept for twenty-three days it failed to cause death when inoculated.

(7.) In the course of putrefaction, moisture is necessarily present. But a series of experiments were performed to ascertain whether the process of drying at ordinary temperatures would prove fatal to the microbes. Sterilized silk threads were steeped in the blood of rabbits dead from chicken-cholera or in broth-cultures of the microbes of this disease. They were then dried in a desiccator at temperatures between 64·4° and 71·15° Fahr. From time to time these threads were placed under the skins of rabbits. Those steeped in blood lost their power of inducing chicken-cholera within four days; those steeped in broth-cultures even earlier. Similar threads were placed on sandy soil in baskets protected from rain and sun, and were successively inoculated into rabbits; the thermometer ranged from 68·9° to 84·65° Fahr.; threads soaked in blood lost their virulence in twenty-four hours; those steeped in broth-cultures in less than eight hours. In a subsequent series of experiments the basket and its contents were exposed to direct sunlight on a warm December day with southerly breeze; the threads steeped in broth-cultures failed to cause chicken-cholera after two hours exposure; but those soaked in blood retained their virulence longer, one of them inducing the disease after eight hours exposure. The general conclusion is that the process of drying even at comparatively low temperatures soon destroys the virulence of the microbes.

(8.)

(8.) The virulence of chicken-cholera did not vary in any important degree when the disease was transmitted from one rabbit to another, from this to yet another, and so onwards for twenty removes from the first rabbit.

(.9) In rabbits newly dead from chicken-cholera, the blood in the heart contained comparatively few microbes, contrasting strongly in this respect with blood taken from rabbits which had been left untouched where they died for twelve, twenty-four, thirty-six or more hours. The relative abundance of the organisms some time after death impressed itself upon Dr. Katz in every instance in which a comparison was made.

(10.) No wild rabbit has manifested immunity from the disease, but one of the tame rabbits experimented upon survived after repeated feedings and inoculations with virulent matter.

(11.) The virus of chicken-cholera, administered through the digestive organs, proved fatal to two magpies, two butcher birds, and a blue jay (which are principally animal feeders), and to two wonga pigeons, one bronze wing pigeon, one rose breasted cockatoo, and two swamp quail (all of them vegetable feeders). One cockatoo, which resisted two feedings, died of chicken-cholera after inoculation. Of two laughing jackasses, one died after feeding with infected matter, but not from chicken-cholera; the other resisted two feedings, but died from the disease after inoculation. Two Maori hens (wekas) remained alive after one had been twice fed and once inoculated, and the other once fed and twice inoculated. Of six crows variously inoculated and fed with infected matter, three died of chicken-cholera and three survived. Five infected rabbits were allowed to die in an aviary containing nine fowls and twelve pigeons; their bodies remained there for periods varying from two to five weeks, and were much pecked, those which lay longest being torn into fragments, while the others were pecked open and largely devoured. One of the pigeons died of chicken-cholera within the five weeks occupied by the experiment and one fowl died of that disease shortly after the experiment terminated. Apparently the tendency of birds to contract chicken-cholera in this way is not great.

(12.) Hares are very liable to take chicken-cholera, after feeding or inoculation.

(13.) Ferrets are not liable to the disease, after either feeding or inoculation.

In the various experiments so conducted concerning chicken-cholera, it is all important to establish the fact that the microbes used were in reality those of chicken-cholera. It may, therefore, be stated (1) that the cultures were developed from the blood of a rabbit which died of chicken-cholera in the course of the experiments conducted by M. Pasteur's representatives; (2) that the course, symptoms and post-mortem appearances of the disease produced by the microbes agreed with those which characterize chicken-cholera; (3) that the blood of animals experimented upon contained microbes of characteristic form and reactions; (4) that cultures of these microbes presented typical appearances; and (5) that introduction of these cultures or of the blood of infected animals into healthy rabbits succeeded invariably in reproducing the disease.

Does Chicken-cholera Exist in Australasia?

Section XII of the detailed report contains the results of inquiries made into the question, whether chicken-cholera exists in the Australasian colonies or not. A large number of suspicious outbreaks were reported to the Commission from New South Wales, Victoria, and New Zealand. When possible, specimens of the affected fowls were obtained. Dr. Katz was able to make an examination in nine cases; in none of these could the disease be identified as fowl-cholera. So far, therefore, there is no proof that the disease exists in these colonies.

colonies, but more extended observations and experiments are necessary to determine this question. Dr. Gamaleïa, of Odessa, recently stated that he had obtained bacteria of chicken-cholera from the intestines of normal pigeons; that these bacteria had only slight virulent power, but that they acquired virulent power as against pigeons and fowls after being transmitted through susceptible animals, such as rabbits and other rodents. Several experiments made by Dr. Katz lent no confirmation to these statements.

Large Experiment with Chicken-cholera.

At this stage the Commission resolved that a larger experiment should be performed, so as to test fully, under conditions as natural as possible, whether chicken-cholera would spread from infected to healthy rabbits to such a degree as to warrant the dissemination of a disease which does spread naturally among domestic fowls, which has not been known to spread naturally among rabbits, and which has not been proved to exist among domestic fowls in these colonies.

The details of this large experiment are given in the progress report (No. III) furnished by Dr. Katz, which will be found in section XI of the detailed report, pp. 168–171. Shortly stated, the experiment was as follow:—On November 7th, a hundred rabbits were turned loose in an enclosure measuring 100 feet by 80 feet, and containing artificial burrows in all 185 feet long. These rabbits were in very poor condition. They had been caught in the dry country around Hay, N.S.W., and had suffered from partial starvation. Other rabbits from the same source were fed with cultures of the microbes of chicken-cholera and placed in the same enclosure, as follow:—Ten on November 7th, six on November 14th, and six on November 22nd. Of the twenty-two rabbits so introduced, twenty-one died before the 29th November, when the experiment terminated. Three of the twenty-one were removed after death; of these, one died from chicken-cholera, whilst two died from other causes. The remaining eighteen rabbits, according to Dr. Katz, died of chicken-cholera, and their bodies were left in the enclosure until the completion of the experiment. Of the hundred rabbits not specially fed, five died very quickly, and five other rabbits were put in their places. Between November 8th and 14th, fifty-two died; between November 15th and 22nd, seventeen died; and between November 23rd and 29th, ten died. Of the seventy-nine rabbits which so died, not one perished from chicken-cholera. All died, apparently, in consequence of the primary starvation.

The result of this experiment was unsatisfactory, owing to the great mortality which occurred among the rabbits from causes independent of chicken-cholera. The Commission therefore ordered that another experiment on a large scale should be conducted so soon as a sufficient number of strong healthy rabbits had been obtained, the experiment to be conducted strictly on the lines laid down by the Commission on October 15th.

This order was made on December 19th, 1888. Delay followed, owing to the difficulty experienced in obtaining a sufficient stock of healthy rabbits. Subsequently on January 2nd, a fire broke out at the experimental station on Rodd Island, the kitchen being destroyed, the shed and passages and main enclosure being damaged. The injury to the enclosure was not repaired till February 4th, and the kitchen was not rebuilt till an even later date. Meantime, between January 7th and 30th, one hundred and sixty-one live rabbits had been sent to the station in different consignments; but, in spite of attention to feeding and accommodation, large numbers died, only eighty-six surviving on February 4th. The second large experiment was commenced on February 12th, though the full number of rabbits required was not available till the 14th.

Second Large Experiment.

The main enclosure on the island was divided into two nearly equal divisions, separated from each other by a double fence of rabbit-netting, the space between the two fences being one yard wide. In each division there were artificial

artificial burrows and special feeding places (see diagram 9). One division, called the disease division, was stocked on February 12th with fifty rabbits, most of which looked healthy; among these five well-conditioned rabbits were at once introduced, which had been fed on cabbage leaves, sprinkled for each rabbit with two cubic centimetres of a virulent broth-culture of the microbes of chicken-cholera. At the end of a week other five rabbits, infected in the same manner, were turned loose in the enclosure, and at the end of the second week five others, similarly fed. At the end of the third week, on March 5th, the experiment terminated. All the infected rabbits died speedily. Their bodies were allowed to remain in the enclosure, with one exception. In that instance, the rabbit had been much bruised, but the microbes of chicken-cholera were found in its blood. A control rabbit which died of chicken-cholera was put in its place in the enclosure. It may be inferred with confidence that the fourteen other infected rabbits died of chicken-cholera, because other rabbits fed at the same times, in the same manner, were proved to have died of this disease, and because many of the fourteen died with characteristic symptoms, and their bodies after death showed distinctive characters. Dr. Katz has now acquired such experience that he is able to recognize the symptoms during life, and the appearance of the carcass soon after death with some degree of certainty. Though the fifteen infected rabbits so introduced died of chicken-cholera, and though their bodies were allowed to remain to the close of the experiment, only four of the fifty rabbits originally placed in the disease division died of chicken-cholera. But no less than thirty-two rabbits died during the experiment from causes independent of chicken-cholera.

At the outset of the experiment, on February 12th, thirty-eight rabbits, mostly full-grown, were placed in the other half of the enclosure, called the control division. The majority of these rabbits were not in such good condition as those in the disease division. Two died almost immediately; and, when a fresh supply of rabbits arrived two days later, the number in the control enclosure was raised to fifty. No infected rabbits were introduced. Of the fifty, twenty-nine died during the course of the experiment. Dr. Katz satisfied himself in every case that death was not due to chicken-cholera.

The great mortality among the rabbits in both enclosures from causes other than chicken-cholera is attributed by Dr. Katz, in part at least, to the oppressive state of the atmosphere and the excessive heat prevailing at intervals during the course of the experiment. Injuries sustained by the rabbits in capture and during transit from the interior must also be taken into consideration. In examining the bodies of rabbits which died during this experiment from causes other than chicken-cholera, Dr. Katz found in quite a number of cases an appearance of the entrails resembling that found by Dr. Wilkinson in rabbits examined at Albemarle *(see* Appendix VII). Such rabbits, therefore, were in anthing but a healthy state. In other rabbits the lungs were distinctly pneumonic. Before the experiment was commenced on February 12th ninety-one rabbits had died out of one hundred and ninety-one sent to the station. Even in the contagion experiments conducted by the representatives of M. Pasteur, which lasted only one week, and in which comparatively few rabbits were used, several deaths occurred from causes independent of chicken-cholera.

The details of this large experiment will be found in the Progress Report (No. V), submitted by Dr. Katz.

General conclusion concerning the Utility of Chicken-cholera for the Destruction of Rabbits.

The Commission therefore finds that while rabbits are easily killed by the addition of the microbes of chicken-cholera to their food, the disease does not spread freely from infected to healthy rabbits. The disease in rabbits differs widely in this respect from chicken-cholera as seen among fowls. In poultry-yards it is virulently infective. The inquiries conducted on behalf of the Commission furnish a satisfactory explanation of the difference. Fowls infected with chicken-cholera suffer not only from blood poisoning but also from severe diarrhœa, and the droppings have power to spread the disease. On the contrary, infected rabbits, with

with few exceptions, remain free from diarrhœa, and die of pure blood poisoning. The microbes are chiefly in their blood. If these microbes are to infect other rabbits in any number the bodies of rabbits dead from the disease must be broken up by decomposition, or by the agency of carrion birds, &c., and the microbes so set free must contaminate the food of other rabbits. If the dead bodies lie in the burrows it will be remembered that rabbits do not feed there. If they lie in the open and the microbes are set free, a temperature of 124° Fah., or the mere process of drying at a much lower temperature, will suffice to destroy their virulence. Moreover, the experiments of Dr. Katz indicated that while the microbes retain their virulence for a time when mixed with putrefying matter, there is a limit to their power of survival. Generally, therefore, it appears that the destruction of rabbits on a large scale by chicken-cholera can be obtained only by feeding the rabbits with the microbes of the disease; and, as other poisons, such as arsenic and phosphorus, to the use of which no objection can be taken, will kill rabbits to which they are administered, the Commission cannot recommend that permission be given to disseminate broadcast through Australasia a disease which has not been shown to exist in these Colonies, which in other countries prevails in disastrous epidemics among fowls, but which has never been known to prevail naturally among rabbits.

Experiment with Chicken-cholera under Natural Conditions.

It has already been made manifest that the Commission has arrived at an unfavourable conclusion concerning the practical utility of chicken-cholera for the destruction of rabbits. The Commission, in fact, does not feel justified in recommending any further expenditure by Government in testing the efficacy of this disease; but as M. Pasteur and his representatives desire that the microbes should be tried in an infested country under natural conditions, the question arises whether such experiments should be permitted. The investigations and experiments conducted by the Commission tend to prove that exaggerated notions have prevailed concerning both the probable spread of the disease from rabbit to rabbit and the contingent danger of spread from infected rabbits to birds. It has been made certain that chicken-cholera will not affect domestic animals other than birds. Even with the most susceptible animals the spread of the disease will be far less free in open country than among fowls in poultry yards. Certain wild birds, such as jackasses, crows, and cockatoos, are not so susceptible to infection as fowls or rabbits. Birds kept in an enclosure in which rabbits are dying or lying dead from chicken-cholera do not contract the disease in great numbers, though they peck freely at the carcasses. It may be urged that the experiments conducted at the station at Rodd Island, though very severe as regards the number of infected rabbits turned loose among healthy rabbits, and as regards the limited space within which diseased and healthy rabbits were penned together, do not furnish an absolute test of what would be the degree of contagion in an experiment conducted under natural conditions with natural food. The Commission, therefore, is not prepared to advise the Government of New South Wales to forbid the performance by M. Pasteur's representatives of an experiment in infested country under natural conditions, provided that such experiment be conducted on certain lines and subject to adequate precautions.

M. Pasteur's representatives, at their interview with the Commission on April 24th, 1888, spoke as follows: "We propose . . . . to make an experiment on a larger scale in a space in the country, enclosed with rabbit-proof fencing, but otherwise under natural conditions. For this purpose we would go to a station, prepare there the broth, and make a cultivation; and this we would spread on food (natural, if available; if not, an artifical food—the cheapest to be procured in the neighbourhood) where the rabbits are thickest. From day to day we would go to the different parts of the area to spread the disease. We ask for this purpose an area of not greater extent than about 500 acres, for if we are able to prove that rabbits can be poisoned under natural conditions, the only question for future consideration will be the distribution of the poison. We consider that if we practically clear the area given to us for experiments it will be a fair and good test of the efficacy and practicability of the method advocated by M. Pasteur." Such

Such an experiment would, in the opinion of the Commission, be utterly unsatisfactory, whatever might be its result.

It has already been demonstrated that the microbes of chicken-cholera are deadly to rabbits, but do not injure domestic animals, excluding birds.

If M. Pasteur is to claim a reward of £25,000 simply on killing the rabbits in an area of 500 acres, his task is an easy one. No one doubts that such an area could be cleared with ease by means of chicken-cholera. But in such a case most, if not all, of the rabbits would be poisoned with infected food. No experiment can possess any value unless it is performed under such conditions that the main agent in the destruction of the rabbits shall be the spread of infection from diseased to healthy rabbits. One or other or both of the following experiments would be satisfactory:—(1) On an area of 500 acres of infested land, enclosed by netting-fencing, to catch from time to time a number of rabbits, infect them with chicken-cholera and turn them loose in their old haunts; (2) On a generally infested area of not less than 25,000 acres similarly enclosed, to lay food infected with microbe cultures at the discretion of the experimenters. In the former case all consequent mortality would be due to contagion; and in the latter case any approach to extermination would imply either a very extensive operation of contagion, or the use of such large quantities of infected food as to reduce the entire experiment to a mere competition between the present methods of poisoning, on the one hand, and the use of infected food (considered as a direct poison), on the other. In either experiment the enclosures should contain sufficient natural food to eliminate any possibility of death from starvation. There is obvious necessity for supervision by competent inspectors, and for the observance of all possible precautions.

The Commission, however, considers that the possibility of any useful results from such experiments is so remote, that its definite judgment on M. Pasteur's scheme, as above recorded, need not longer be withheld.

M. Pasteur's Letter to the Chief-Inspector of Stock.

On the 1st October, 1888, M. Pasteur addressed a letter to Mr. Bruce, the Chief-Inspector of Stock in New South Wales. A free translation was published in the *Sydney Morning Herald*, and a copy of the published translation was forwarded to the Commission by the Under Secretary for Lands. Certain inaccuracies in the translation were calculated to cause misconception of M. Pasteur's position. The part of M. Pasteur's letter on which the Commission desires to comment, when literally translated, reads as follows*:—

"With regard to the rabbit plague, I have not confided further to any one the secret of the use on large scale of the means which I have proposed for the partial or total extermination of these rodents by the adoption of chicken cholera. It is to the Government of Sydney that I will make it known, if there be occasion. My representatives have only one thing to do, and I have sent them to do it, at the request of that Government: they have to show that I have proposed a means harmless to domestic animals, a means which kills the rabbits in twenty-four hours, after a single meal sprinkled with the microbes, and that this means is contagious, that is to say, that the rabbits which have taken the fatal meal communicate the disease and death in a notable manner to healthy rabbits, with which they are mixed, as they are in the burrows.

"How to arrange for the manufacture of the fatal ingredient, how to mix and use at a distance this ingredient with all its properties, that is my secret, about which the Commission is to see and know nothing for the present, and which I will only make known if the prize proposed on the 31st August, 1887, is awarded to me." The

* "Quant au fléau des lapins, je n'ai pas davantage confié à personne le secret de l'application en grand du moyen que j'ai proposé pour l'extermination partielle ou totale de ces rongeurs, par l'emploi du choléra des poules. C'est au Gouvernement de Sydney que je le ferai connaître, s'il y a lieu.

"Mes représentants n'ont qu'une chose à faire, et je les ai envoyés la faire, à la demande de ce Gouvernement: ils ont à démontrer que j'ai proposé un moyen inoffensif pour les animaux domestiques, moyen qui tue les lapins en vingt-quatre heures à la suite d'un seul repas souillé par le microbe, et que ce moyen est contagieux; c'est-à-dire, que les lapins qui ont pris le repas mortel, communiquent d'une manière notable la maladie et la mort à des lapins sains auxquels ils sont mêlés, comme ils le sont dans les terriers.

"Comment disposer une fabrique de l'ingrédient mortel, comment ingrédier et utiliser au loin cet ingrédient avec toutes ses propriétés, là est mon secret, sur lequel la Commission n'a rien à voir ni à savoir pour le moment, et que je ne ferai connaître que si le prix, proposé le 31 août 1887, m'est attribué."

The translation previously published implied that there was some essential secret concerning M. Pasteur's method kept back by him. From the original letter it is clear that M. Pasteur instructed his representatives to make, on a small scale, a demonstration of the efficacy and safety of his scheme; but that he retains the method of applying it on a large scale as his own secret, which he will make known only if the prize of £25,000 is awarded to him. M. Pasteur, however, seems not to understand the terms of the proclamation concerning the reward, which was offered to "any person or persons who *will make known and demonstrate* at his, or their own expense, any method or process, not previously known in the Colony, for the effectual extermination of rabbits."

According to M. Pasteur's letter, he sent his representatives to show, *inter alia*, that chicken-cholera was contagious; whereas, in point of fact, the Commission had the utmost difficulty in inducing his representatives to perform any experiment testing the contagiousness of the disease among rabbits. M. Pasteur's letter implies that he expects the reward to be adjudged him for his scheme on such proofs of its efficacy as he may determine, and before the mode of carrying it out on a large scale shall have been revealed.

Mortality among Rabbits in certain Districts.

From time to time great mortality has prevailed among rabbits in different parts of the Australasian Colonies. Thus, on the Ellenthorp property in Tasmania, about five years ago, a disease prevailed among rabbits, but not to such a degree as to exterminate them. On two other occasions disease appeared among the rabbits on two other estates in that Colony, 60 miles distant from each other, and destroyed all the rabbits. Two very recent instances of great mortality among rabbits have engaged the close attention of the Commission — namely, the so-called outbreak of disease at Tintinallogy Station, on the Darling River (N.S.W.), and the disappearance of rabbits from the Wairarapa district, in the North Island of New Zealand. Much information concerning the former will be found in this report, but no absolute conclusions can be arrived at in the absence of further experimental tests. The Commission is able to reprint an exhaustive report by Professor Thomas, of Auckland, on the causes of the mortality in the Wairarapa district.

The so-called Tintinallogy Disease.

Tintinallogy is a station on the eastern bank of the Darling River, between Menindie and Wilcannia. It includes about 380 square miles of country appraised at one sheep to 7 acres, but more heavily stocked. Rabbits were present in 1884 when the present manager went to reside there; but they increased vastly in numbers in the following years. In 1885, 5,000 rabbits were killed on this station; in 1886, 32,000; in 1887, 291,000. The maximum was in the month of September, 1887, when twenty-two men killed 56,510 rabbits. Dr. Butcher, who was resident at the station, and Dr. Ellis, of Sydney, had discussed the probability of an outbreak of disease among the swarms of rabbits, and agreed to investigate any disease which might present itself. The so-called Tintinallogy disease appeared about 1½ mile above the home station, and Dr. Butcher obtained a rabbit suffering from it at the beginning of September, 1887. He at once commenced a series of experiments to test the contagiousness of the disease, and reported the matter to the Minister of Mines. In consequence, orders came to destroy his rabbits. Proceeding to Sydney, he obtained permission to fence off with rabbit-proof netting a bend of the Darling, including about 500 acres, and to continue his experiments in this enclosure. He claims to have spread the disease through the bend, and subsequently through the Tintinallogy station by turning loose rabbits which he had infected artificially. His first attempt to infect the bend, early in November, 1887, failed, in his opinion, because he used rabbits from the back country which would not mingle with the bend rabbits. He then caught rabbits in the bend, infected them, and turned them loose in their old haunts. From that time, he says, the rabbits died in the bend. From the original centre of the outbreak, the

the disease spread in all directions, and with great fatality. Dr. Butcher turned loose infected rabbits in various parts of the run, especially in places where the natural spread seemed to be checked. In five or six months from the first appearance of the mortality among the rabbits, Tintinallogy, which was so heavily infested before, became a thinly infested country. Mr. Tully, Inspector of Stock for the sheep district of Wilcannia, was sent to Tintinallogy to report on the experiments made by Dr. Butcher concerning the transmission of the disease to stock. At his first visit early in January 1888, he saw little evidence of general mortality among the rabbits in the country which he passed through on his way to Tintinallogy. He saw no evidence of disease till his arrival within two or three miles of the home station; within this limit the rabbits were in very low condition, and he noticed carcasses lying about. In the bend he saw evidence of general mortality. At his second visit, early in February, he noticed a falling off in condition of the rabbits, which were apparently ill from some cause a much greater distance up the river, more than 9 miles from the station. There did not seem to be anything like the same number of live rabbits in the bend. Carcasses were lying about. There was still green feed along the river frontage. On his third visit, in the middle of March, there were very few rabbits left in the bend. Many dead rabbits were lying about, and the live rabbits were very weak. The river frontage was still in good condition, though dry and a little bare. The rabbits along the frontage outside the bend enclosure appeared more or less sickly, and their number had decreased amazingly. The rabbits were sickly for 20 miles up the river. He was quite satisfied that at the time of his first and second visits, the mortality could not have been due to starvation; and even at his third visit, the condition of the feed was not such that he could conclude that the mortality was due to starvation. Mr. Clarke, the Rabbit Inspector of the district, which includes Tintinallogy, Murtie, Billilla, Teraweynia and adjoining stations, stated that Tintinallogy was very heavily infested with rabbits; that the rabbits began to die in large numbers in November, 1887; that the feed was then good, and the condition of the stock good; that he had reported the decrease in the number of rabbits as 95 per cent. At Billilla and Teraweynia, on the Tintinallogy boundary, the mortality was also great. On Murtie, nearly 60 miles from Tintinallogy, the mortality was startling in its intensity and suddenness, as great an effect being produced in one month as in six months at Tintinallogy. The manager of Murtie is reported to have said that in one month (February) 80 per cent. of the rabbits died.

According to Dr. Butcher, the course of the disease is as follows:—The fur on the head stands up, the eyes are prominent, and there is a very slight discharge from the eyes and nose, lasting only three or four days. By the end of a week, emaciation is perceptible, the fur stands up all over the body, power is lost in the hind legs, so that when the rabbit tries to sit up, it falls over. Weakness and emaciation become more and more marked, and the animal dies in a kind of convulsion in about twenty or twenty-one days.

In the course of a large number of post-mortem examinations, Dr. Butcher found slight increase of serous fluid in the abdominal cavity; the liver blackish and friable, but not increased in size; the mesenteric glands swollen, and infiltrated with jelly-like fluid; and the glands above the kidneys (supra-renal glands) enlarged and altered in colour from dull white, the natural colour, to blood-red or black. He had found little nodules containing pulp in the liver in many cases, but these were absent in a large number of affected rabbits.

Dr. Ellis, in his evidence given at Sydney, said he had not noticed enlargement of the mesenteric glands, that the supra-renal bodies were red instead of white, and that points like tubercular abscesses were scattered over the surface and in the substance of the liver.

In examining diseased rabbits at Dr. Ellis' residence, the Commission noted chiefly the great emaciation, and the presence in the liver of lines and nodules of yellow pulpy matter, due to the growth in the bile ducts of a gregarinoid animal parasite, called *coccidium oviforme.*

During

During their visit to Tintinallogy, Dr. Bancroft and Dr. Wilkinson made examinations (post-mortem) of several rabbits suffering from the disease. The chief appearances were general emaciation of the body and darkening in colour of the liver. Dr. Wilkinson examined a number of rabbits suffering from the same disease at Albemarle station. He found emaciation, excess of fluid in the abdominal cavity, the liver dark-blue or black, and very friable, the supra-renal capsules, spleen and kidneys healthy; but there was invariable evidence of catarrhal inflammation of the stomach, with small patches of hæmorrhage in the lining membrane, and in many cases erosions, or even ulcerations of the surface. Signs of chronic inflammation were present in other parts of the alimentary canal.

Dr. Butcher found a scabby skin disease prevalent among the rabbits. and also, in constant association with this skin disease, cheesy deposits in the muscles. But in the great majority of the rabbits suffering from the so-called Tintinallogy disease the skin was healthy. The skin disease had been known in the district for some considerable time.

Dr. Butcher's experiments concerning the transmission of the disease from affected rabbits to healthy rabbits are described with great fulness in the detailed report (pp. 73 to 79). Blood-clot, blood serum, and the substance of the liver or the supra-renal glands mashed up in water, were used to communicate the disease. The infective matter was introduced into other rabbits by injection beneath the skin with a hypodermic syringe, by inoculation into a vein, and by the passage of a seton steeped in infective matter beneath the skin. In all these ways the disease was reproduced. A few animals operated on died from septic poisoning in a few days, others from various accidents, but in the great majority of cases the disease was produced and ran its regular course, death ensuing usually on or about the 16th or 17th day. Control rabbits, kept under similar conditions, but not inoculated, did not die. The rabbits experimented on were well cared for in every way. Infected rabbits having been kept in a certain crate, other rabbits placed in the empty crate contracted the disease. A rabbit suffering from the natural disease was put with sixteen rabbits in a yard measuring 10 ft. x 12 ft.; all the rabbits died between the 18th and 23rd day. One inoculated rabbit was placed in a crate with six other rabbits; after 24 hours the inoculated rabbit was removed; the six rabbits died on the 19th and 20th days. A diseased rabbit caught in the bend was placed in a yard 20 ft. x 24 ft. with thirty-eight other rabbits; the bend rabbit died in 9 days, all the other rabbits died between the 19th and 24th days, the one remaining rabbit was lost sight of. In each case, some kind of control experiment was conducted. Thus, in the last instance, ten rabbits were kept in a similar yard under similar conditions, and these all remained alive. Diseased rabbits caught in the bend were nursed and fed; but they died in the usual way. A number of sheep, a horse and a calf, variously inoculated, remained healthy. The carcasses of rabbits lying dead from the disease in various parts of the run were eaten by dogs, cats, pigs, fowls, crows and hawks. None of these animals died except cats. The cats died in great numbers. When the Executive Committee visited Tintinallogy, the bodies of eighteen cats were seen on the bank of the river. Two of these cats were examined by Dr. Bancroft and Dr. Wilkinson. They died fat; inflammation with exudation was present in part of the small intestine.

The witnesses examined before the Commission at Silverton, and by the Executive Committee, varied greatly in their views concerning the cause of the great mortality among the rabbits at Tintinallogy. Thus, Mr. Sadlier, the general manager of the Albemarle station, on which, also, the disease made its appearance, believed that it was produced by the food. He remarked that "A very similar disease to the present one—in fact, identical, so far as I can observe—has displayed itself on this station during the summer in previous years; but as these seasons were unusually good, and the feed abundant, it did not last long, and the rabbits seemed to get quite healthy again. . . . At the present time, since the rain a fortnight ago, the rabbits are becoming quite active, and getting quite strong." Mr. Vindin, Superintending Inspector of the Rabbit Department of New South Wales, was at Tintinallogy from the 5th to the 9th March. He came to the

conclusion

conclusion that the rabbits were dying of some disease, and that the disease was caused by the dryness and poverty of the feed. Over a large part of his district, since the beginning of March, there had been great mortality among the rabbits, which he ascribed to the condition of the feed. His general conclusion was, that the rabbits at Tintinallogy died through eating dry feed and astringent barks, and through want of nourishing food; and that, as the feed improved, the disease would disappear to a great extent, and the rabbits would recover. Mr. Brown, manager and part-owner of Kallara Station, visited Tintinallogy on behalf of the Wilcannia Pastoral Association. He held that the disease was Nature's remedy for the plethora of rabbits; but he thought that it was closely connected with the condition of the feed—"Where the rabbits are very thick, and feed very scarce, there this disease appears." The theory that the mortality was directly due to the rabbits eating bark, through want of other succulent food, was not supported by the general tenor of the evidence given before the Commission. It was stated, on the contrary, that the rabbits died in the open country as well as where scrub was abundant, and that the rabbits were not dying in some parts where the barking of the shrubs had been extreme.

Amidst these diversities of opinion, it was all-important that the experimental results should be placed beyond question. But the experiments conducted by Dr. Butcher cannot be regarded as conclusive. They were not watched by any competent independent observer. The rabbits used in them were obtained from the run, on which vast numbers of rabbits were dying naturally from the so-called disease. Hence, comparatively little weight can be attached to Dr. Butcher's results unless they be confirmed by a disinterested expert, working with rabbits obtained from a district where no unusual mortality prevails. Why, then, were such experiments not performed under the direction of the Commission? For the simple reason that Drs. Butcher and Ellis would not, or, at all events, did not, furnish diseased rabbits to the Commission, though repeatedly requested to supply them.

The history of the correspondence between the Commission and Drs. Butcher and Ellis may be shortly stated as follows:—The Commission, having heard the evidence of Dr. Ellis on April 17th, resolved on the 23rd that experiments be at once made on behalf of the Commission with the disease suggested by Drs. Butcher and Ellis. On April 24th, a schedule of experiments was adopted for the testing of the so-called Tintinallogy disease. On April 26th, the Commission advised that licenses to prosecute their experiments with the said disease might be granted to Drs. Butcher and Ellis, with safety to the public health. It was then clearly understood that Dr. Ellis would forward to the Commission rabbits suffering from the so-called disease. On May 28th, the evidence of Dr. Butcher was taken at Silverton. On June 21st, as fears were expressed that the control of the disease would be lost, owing to the limited number of rabbits obtainable at Tintinallogy, the Commission advised that Drs. Butcher and Ellis be granted permission to employ the so-called Tintinallogy disease among rabbits in such districts as they may desire, provided that the places in which the disease is being employed be notified to the Commission. It was further resolved, that Dr. Ellis be requested to forward to Dr. Katz as soon as possible fifty rabbits suffering from the so-called disease; or if fifty were not quickly available, to send, in the first instance, such number as might be forthcoming. On August 18th, the Chairman of the Experiment Committee reported that no further communication had been received from Drs. Butcher and Ellis; that no experiments with the Tintinallogy disease had been conducted, owing to rabbits not having been supplied; and that he was unable to say when rabbits affected with the disease would be forthcoming. It was resolved that a communication be addressed both to Dr. Butcher and to Dr. Ellis, asking whether their experiments were being conducted in new country in accordance with the permission granted on 21st June, and enquiring when they would be able to provide twenty rabbits, suffering from the said disease, for the purpose of experiments under the direction of the Commission; that Messrs. Butcher and Ellis be also reminded that the permission granted to them to establish this so-called disease in fresh country was merely intended to prevent the disease from being lost, and did

did not involve approval of their scheme by the Commission. On October 13th, a letter from Dr. Butcher was read, complaining that his account for expenses for his attendence at Silverton had not been attended to, and intimating that no infected rabbits would be forwarded until such account was paid, and a guarantee given to refund the cost of the carriage of such rabbits to Sydney. A scale of payment for the expenses of witnesses was adopted; provision was made for the payment of Dr. Butcher's expenses according to this scale; and it was resolved that Drs. Butcher and Ellis be again requested as speedily as possible to forward to Sydney fifty rabbits suffering from the so-called Tintinallogy disease, or such less number as may be forthcoming—the Commission undertaking to defray the expenses of conveying such rabbits to Sydney. Dr. Butcher intimated that, being at considerable expense through his experiments, he had closed his camp at the bend and could not provide rabbits, but that, on receipt of his expenses as already applied for, he would re-open the camp. The Commission regards the neglect by Drs. Butcher and Ellis to supply rabbits suffering from the disease as highly unsatisfactory. The failure to supply such rabbits was of long standing, before any difficulty arose concerning expenses.

The Commission finds it hard to believe that the abandonment of this scheme by its promoters was due to the alleged illiberality of the official scale of expenses. The Commission is not in a position to state whether, independently of conditions arising directly from starvation, any disease, and especially any communicable disease, existed at Tintinallogy. The balance of the very imperfect evidence at present available appears to incline to the negative.

Bladder Worm and Coccidial Diseases in New Zealand.

Section IV of the detailed report, pages 115 to 123, consists of the evidence of Mr. Coleman Phillips, concerning the disappearance of rabbits from the South Wairarapa district of the North Island of New Zealand. This district contains over a million acres, and the rabbits, which a few years ago were swarming in the country, have almost entirely disappeared. According to Mr. Phillips, the poisoning operations conducted in 1883–4 were not successful; and in the South Island, where millions of rabbits have been destroyed by poison, the plague is as severe as ever. He attributes the success in the Wairarapa district to the ravages of the bladder worm, which is an encysted parasite, forming a bladder-like tumour in the muscles of rabbits. The mature form of the parasite is a tape worm, found in the intestines of dogs. Segments of these tape worms, or the eggs thereof, pass from the intestines of the dogs, and, when eaten by rabbits with their food, produce the bladder worm; just as the little echinococcus tape worm in the dog leads to the hydatid cyst in man. In this bladder worm, heads of new worms develop in large numbers. Dogs in turn feed on the flesh of rabbits containing bladders, and the heads thus swallowed form new tape worms in the intestines of the dogs. This cycle is constantly being repeated. Mr. Coleman Phillips therefore recommends that all dogs at stations where rabbits abound be fed on rabbit flesh till they get thoroughly infested with these worms, so as to become thin and mangy in appearance; that they then receive doses of areca nut, so that the worms may be expelled. The segments with their myriads of contained eggs will then infect the grass. Rabbits will eat the grass and develop the bladder worm. Mr. Phillips thinks that other natural enemies of rabbits, such as ferrets, stoats, weasels, cats, and hawks may also harbour the parasite in its tape worm stage, and thus assist in propagating the bladder worm among rabbits. He maintains that these natural enemies of rabbits slay by the parasites contained in their excreta, and not by directly killing the rabbits; that the process is slow, but effectual.

Professor Thomas, of University College, Auckland, made an inquiry into the causation of the disappearance of rabbits from the Wairarapa district, and his Report to the Honorable the Minister of Lands of New Zealand will be found reprinted in full in Appendix VIII. The Commission regards this Report by Professor Thomas as most valuable. He concludes that the decrease

of

of rabbits in the Wairarapa has, in the first place, been due to the measures adopted by man, especially the winter poisoning; but that certain parasitic diseases have appeared in the district, have been widely but unequally prevalent, and have assisted, to a small extent, in keeping down the rabbits. These parasitic diseases include—(1) the bladder worm (*cœnurus*) of which Professor Thomas gives an excellent history, and the smaller bladder worm (*Cysticercus pisiformis*); (2) the *coccidia** or gregarinoid animals which have already been referred to in connection with the so-called Tintinallogy disease; (3) the rabbit mange, itch, or scab; and (4) the rabbit louse. The little mite which causes the scab disease is distinct from the *Sarcoptes cuniculi* experimented upon by Professor Watson; it lives on the surface of the skin and is comparatively harmless. In the opinion of Professor Thomas, the effects of this mite, and of the larger louse, are seldom so serious as to lead to the death of a rabbit infested with them. Professor Thomas found comparatively few rabbits affected with the bladder worm, but rabbiters told him that 20 per cent. were not uncommonly infested. Infested rabbits usually contained only one bladder, some had two, and in one instance of the natural disease Professor Thomas found three bladders. The bladder-like cyst is usually situated among the muscles in one of the limbs, the trunk, or the head, but may be in the internal parts of the body. It may reach the size of an orange, and consists of a gelatinous membranous sac full of clear fluid, and supported externally by the thickened tissues of the part in which it lies. The inner surface is dotted with minute heads of future worms.

"Avoiding unnecessary details," (writes Professor Thomas) "we may say that the effect of a single bladder-worm will, as a rule, hardly be shown during the first three or four months, but that afterwards, as it continues to increase in size, it may be a source of weakness to the rabbit; but I have not been able to find any evidence that a rabbit affected with a single bladder-worm only might not live till death came to it from some other natural cause. But with the increase of the number of parasites the tax on the strength of the rabbit becomes greater than it can bear, and it succumbs to the burden, sometimes directly, sometimes indirectly, being brought into a low and weak condition, in which it readily falls a victim to other adverse influences, such as weather, scarcity of food, or enemies."

The presence of one, or at most two, bladder-cysts indicates that as a rule the rabbit swallows isolated eggs of the tape-worm; but Professor Thomas' experiments showed that when whole segments were swallowed, little bladder-cysts grew in multitudes in the tissues, and death followed from the disturbance so caused. It is difficult to estimate how often such an event occurs in the natural process of infection.

The researches of Professor Thomas prove that the bladder worm of rabbits and the tape worm of the dog from which it is derived are perfectly distinct from the *cœnurus* which sometimes proves fatal to sheep. Stock of all kinds that fed on the same ground with the diseased rabbits remained in good condition. A few experiments on ferrets and cats gave Professor Thomas no reason to think that any animals except dogs could be the bearers or hosts of the adult tape-worm.

The smaller bladder-worm of the rabbit (*Cysticercus pisiformis*) was found by Professor Thomas in only two of the rabbits from the Wairarapa district, but it was present almost constantly in rabbits caught in the Waikato, each rabbit usually containing one to ten specimens. This bladder-worm is round, about the size of a pea, and is found free in the abdominal cavity, or, at a later stage of development, adherent to the lining membrane, usually in that part forming the great omentum or that covering the rectum. "When present in small numbers it causes very little injury to the rabbit . . . . It must be seldom, however, that this parasite can, under conditions obtaining in nature, cause the death of a rabbit."

Professor

* Further information concerning *coccidia*, with magnified representations of the lesions caused by them, will be found in Appendices V and VI.

Professor Thomas found *coccidia* in the liver more prevalent than the bladder worm, and apparently productive of more serious mischief. *Coccidia* spread from infested rabbits to healthy rabbits through the droppings of the former falling on to the food which is eaten, or being carried into water which is drunk by the latter.

Immediately before summarizing his general results, Professor Thomas writes as follows on parasitic diseases generally:—

"One of the most prominent characteristics of parasitic diseases is their unequal development in different localities and in different seasons. So, with reference to the diseases due to the bladder-worm and liver coccidia, we may expect in some localities a more extensive development and useful results, whilst in other localities the diseases may not meet with the necessary conditions, and little or no good may result. Further, we have seen that moisture is favourable to the spread of these diseases; we may expect them therefore to be more prevalent in moist or ill-drained localities, and to be more useful in wet seasons and climates than in dry ones. Hence, over a great part of Australia the diseases would be less effective than in New Zealand.

"When animals of the same kind are densely crowded together on the same ground, as is the case with the rabbits in the infected districts, one of the conditions for the spread of a parasitic or infectious disease is best fulfilled. When the number of animals is reduced, the danger of infection will diminish."

Professor Thomas summarizes his conclusions as follows:—

"1. The reduction of rabbits in the Wairarapa has been chiefly due to measures adopted by man. The most valuable of these measures has been the winter poisoning, which has been followed up during the rest of the year by trapping, &c. Cats and ferrets, too, seem to have done good work.

"2. Certain parasitic diseases have appeared in the district, and have been widely, though unequally, prevalent.

"3. Of these parasitic diseases two only—those due to bladder-worm and liver coccidia—deserve special notice as being capable of destroying rabbits. There is reason to believe that these have assisted to a small extent in destroying rabbits in the district.

"4. The employment of the liver coccidia for the destruction of rabbits cannot be advocated, as in rare instances the parasites have been known to attack man. They are, however, present in the district, and it would probably be impossible to suppress them. Fortunately the danger to human beings is very small indeed, and the disease may prove of further use in killing rabbits.

"5. The bladder-worm may be usefully employed against the rabbit pest; but it must not be expected that it will destroy more than a small percentage of the rabbits in the district. Like all parasitic diseases, it is variable and apparently capricious in its distribution, and its propagation is limited by conditions which will vary with the locality and season. It would be more useful in a moist climate than in one which is hot and dry. It assuredly cannot be regarded as furnishing alone a sufficient means of dealing with the rabbit pest, nor will it render unnecessary the ordinary methods of the destruction of rabbits, but must be looked upon as simply a minor and auxiliary means of destruction."

A rabbit suffering from bladder worm was brought from New Zealand by Sir James Hector, for examination by the Commission. It was received at the station on June 16th. Since then the bladder has increased in size, but otherwise the rabbit seems in a normal state.

Mr. Hawkins, of North Wairarapa, in a letter recently addressed to the Commission, states that, during the past seven years, rabbits have not decreased in numbers in his district, though the bladder worm has been prevalent. He states that ferrets throve exceedingly well in South Wairarapa, but did not multiply freely in the North. He holds that the great diminution of the rabbit

pest

pest in South Wairarapa has been due, not to the bladder worm disease, but to the great multiplication of ferrets. His letter will be found in Appendix IX.

In the opinion of the Commission, the receipt of Professor Thomas' full report renders it unnecessary that the Commission should make any further inquiry concerning the bladder worm disease.

Sarcoptes Cuniculi or Rabbit Scab.

In March 1887, Professor Watson, of the University of Adelaide, succeeded in importing from Germany six rabbits suffering from the *Sarcoptes cuniculi* or rabbit scab. He placed them in an enclosure about 50 feet square with a number of Australian wild rabbits. The latter contracted the same disease and died, some in two, some in three, and some in six months. The *Sarcoptes cuniculi* is the itch-mite of the rabbit, an animal parasite which lives in the fur, the female burrowing and depositing eggs in the skin. The insect is only a quarter of the size of the scab insect in sheep. It causes great irritation of the skin, and enlargement of the lymphatic or absorbent glands. The affected animals die of wasting and exhaustion. In Germany, where the *sarcoptes* has been chiefly studied, septic poisoning usually occurs, with suppuration in the absorbent glands; but this complication was absent in the rabbits subjected to experiment in Adelaide. The fur of rabbits infested with the *sarcoptes* was repeatedly inserted in the wool of sheep without any ill effect. Attempts to communicate the rabbit scab to man, and to a dog and cat, failed. It thus appeared probable that the *sarcoptes* could be utilised for the wholesale destruction of rabbits. But the spread of the parasite from infested rabbits to healthy rabbits, and the fatal development of the disease, occurred in the wet season. As soon as the dry season set in, the infested rabbits, which had been suffering severely, proceeded to recover in the most thorough manner. Professor Watson satisfied himself that the *sarcoptes* would not be of any practical utility for the destruction of rabbits in the dry parts of Australia, but he is not satisfied whether it might not be of service in districts which possess a moist climate. While the results were still favourable, Professor Watson sold all his stock of infested rabbits. The subsequent history of these rabbits, as described by several witnesses, did not encourage any hope that material assistance in dealing with the rabbit plague would be obtained by use of the *Sarcoptes cuniculi*, at all events in the dry districts of Australia.

Other Schemes for the Destruction of Rabbits by Disease.

Suggestions for the destruction of rabbits by disease were submitted by one hundred and fifteen correspondents for consideration by the Commission. Of these, 26 were from New South Wales, 8 from Victoria, 3 from South Australia, 3 from Queensland, 6 from New Zealand, 2 from Tasmania, 1 from Fiji, 15 from England, 4 from Scotland, 1 from Ireland, 12 from France, 3 from Belgium, 2 from Germany, 2 from Switzerland, 2 from Spain, 1 from Italy, 1 from Austria, 1 from Roumania, 17 from the United States, 1 from Canada, 1 from India, 1 from Netherlands India, and 2 from South Africa. Most of these schemes were classified and reported upon by a special committee, and the results of the labours of that committee are recorded in Appendix 1, pages . The remaining schemes came under the notice of the Commission at a later date, and were classified by Mr. Pearson, whose report appears in the supplement to Appendix I, page . According to these reports, in which the Commission fully concurs, many of the schemes are vague, no specific disease being mentioned, or merely "a disease" said to be peculiar to rabbits. In many instances the use of diseases dangerous to man or to domestic animals is recommended, such as small-pox, syphilis, glanders, hydrophobia, tuberculosis, &c. Other correspondents suggest the employment of nasal catarrh, which is mentioned by Leuckart as peculiar and fatal to rabbits; of the liver-worm, which is said to have killed great numbers of rabbits in Colorado; of diseases which have decimated the wallabies and opossums in certain districts, &c. In all cases in which there seemed to be any possibility that the disease mentioned would prove useful, letters asking for further information were sent

sent to the correspondents concerned. Communications were also addressed to Professor Ribbert, of Bonn, and Professor Loeffler, of Greifswald, requesting fuller details concerning diseases recently described by them as peculiar to rabbits. In two instances replies were received stating that the original correspondents had disappeared. A letter from M. Laplanche, of Fismes, was unfortunately lost in transit, and a request for a copy of the same has been forwarded. One proposal was that as disease always breaks out when animals are crowded together, rabbits should be placed in an enclosure, fed well, and encouraged to breed freely, and that when any disease manifested itself among them attempts should be made to spread it widely.

The Commission has found no evidence to warrant the belief that any known disease can be so employed as to exterminate rabbits. Probably many diseases will be found useful auxiliaries in reducing the rabbit plague within manageable proportions. Further inquiry by competent observers into the epidemic and parasitic diseases of rabbits should be encouraged. But even when much fuller information concerning these diseases shall have been obtained, it will still be necessary, in the opinion of this Commission, to continue the methods of suppressing the pest which are now generally adopted, subject to such improvements in detail as may from time to time be discovered.

Schemes for the Destruction of Rabbits otherwise than by Disease.

About fourteen hundred schemes for the destruction of rabbits by means other than disease have been referred to this Commission. It was intended that the schemes should be classified and reported upon by a special committee prior to the publication of this Report, but the mass of the correspondence has rendered it impossible to complete this labour. The Commission trusts to be able, within the space of six weeks, to submit this classified list of schemes, with notes on the merits of the several proposals.

On certain points, however, the Commission has arrived at definite conclusions, the chief of which may be formulated as follow:—

(1.) That the responsibility for the destruction of rabbits, whether on freehold or on leasehold land, must rest on the landholder. That, with respect to unoccupied Crown lands, the State must accept similar responsibility.

(2.) That the rabbit pest has made the continuance of the system of annual leases of Crown lands impossible.

(3.) That no finality in rabbit destruction will be obtained without making the erection of rabbit-proof fences compulsory.

(4.) That there are very large areas of land so poor that the erection of rabbit-proof fences around individual holdings might cause financial failure. That the Department administering the Rabbit Destruction Acts should be empowered to permit the fencing of such poor holdings in groups. That in dealing with land of very poor carrying capacity the State should show special consideration to the lessees in respect of tenure.

(5.) That in all infested country, but especially in such poor districts, simultaneous operations for the destruction of rabbits should be made compulsory.

(6.) That netting fencing, 3 feet high, with a mesh of $1\frac{5}{8}$ inch, forms a practically efficient barrier against the incursions of rabbits.

(7.) That the system of compulsory trapping, with professional trappers and State bonuses, is radically bad.

(8.) That legislative measures should be taken compelling land owners or lessees in districts infested by rabbits to join, subject to the above provisions, in payment of the cost of rabbit-proof netting fences or in the addition of such netting to existing fences.

In the opinion of the Commission these propositions require little explanation or argument in their favour. Responsibility for the destruction of rabbits must be placed somewhere. To whom can it be assigned but to the holder of the land, whether owner or lessee? Boundary fences would then be paid for jointly by neighbours. The State must take all the responsibilities of ownership with reference to unoccupied Crown lands, both as to destruction of rabbits and joint payment of the cost of boundary fences. In infested country the leasehold occupiers of Crown lands must have certainty that, if they expend the money necessary for the destruction of rabbits and for the protection of their lands, they will enjoy for a fair term the fruit of their labours. The contest with rabbits is most difficult in the huge resumed areas of poor land now held under ordinary squatting tenure. To break up these large holdings at once into small blocks is to postpone the adoption of effective measures for the destruction of rabbits. The first work in saving these lands must be done by large holders; and the necessary expenditure will not be incurred unless there is a reasonable security of return. In every large leasehold of this character it should be arranged that at intervals a certain fraction of the whole should be open for resumption. There would then be no sound reason for complaint either by the State, the lessee, or the selector. The necessity for rabbit-proof fencing scarcely needs demonstration. However stringent supervision may be, action on adjoining holdings will fail in certain cases to be simultaneous, and the holder who acts promptly will find in the absence of fencing that the respite from the plague is but temporary, while the holder whose lands abut on unoccupied hilly or scrubby country will see all his operations futile. When once rabbit-proof fences are erected the reduction of the pest within manageable proportions is a question simply of time and money. Yet, with large areas of land of very poor carrying capacity, the erection of rabbit-proof fencing around individual holdings may not be financially practicable. These areas must be fenced off from the better land around, and the *simultaneous* pursuance of the best known methods of rabbit destruction must be made compulsory. The Commission, realizing that the cost of netting fencing was a great difficulty, made careful inquiry concerning the minimum height and the maximum mesh which would prove effective. Abundant evidence will be found in the proceedings in favour of the decision of the Commission: that netting fencing 3 feet high, with $1\frac{5}{8}$ inch mesh, is for all practical purposes an effective barrier. Such was the almost unvarying testimony of those witnesses who had practical experience with netting of this width and mesh. Rabbits die of starvation when their warrens are encircled with this netting; gardens protected by it are free from invasion, though the infested country around is dry and bare. Little weight can be attached to the opinions of witnesses who never used such netting, and still less to experiments in which rabbits are chased in small enclosures.

The system of compulsory trapping, with professional rabbitters and State bonuses, is radically bad. Rabbitting parties settle down in thickly-infested country and speedily kill multitudes of rabbits; as soon as the numbers are greatly thinned, a longer stay is unremunerative. No attempt at extermination is made. The party moves on to another place favourable for its operations, leaving the remaining rabbits to multiply ready for its next visit. Large sums are paid to such parties *per capita*. The station hands are demoralised. The State treasury is depleted of hundreds of thousands of pounds, and with what result? The rabbits are as numerous as ever; the operations of the trappers simply drive them more and more widely over the country; the landholders are disgusted at being forced to assist in a practice which they condemn; and no good whatever is done except to the rabbitters themselves, who fatten on a pernicious system. The Commission expresses its satisfaction that the Rabbit Department of New South Wales has resolutely turned its back upon this wasteful policy. It must not be inferred that the Commission objects to traps and trapping parties *per se*. Trapping is, without doubt, a useful method, but should be carried out by station hands, and with a view to the extermination of rabbits, not to profitable employment.*

It

* This limited recommendation of trapping must be held to apply only to areas enclosed by wire-netting fences, and in which the propagation of natural enemies of rabbits is not being encouraged.

It remains only to record that the first-appointed President of the Commission, Dr. MacLaurin, was able to attend but few of the meetings; that Professor Allen, as acting-Chairman, undertook the general direction of the business of the Commission; that on August 18 it was notified to the Commission that Dr. MacLaurin's resignation of membership had been received, and that at the repeated request of the Commission, Professor Allen finally accepted the office of President.

Certified under our hands and seals this third day of April, 1889,—

DISSENT I.

In opposition to the majority of my colleagues I submit that M. Pasteur's representatives should not be permitted to make experiments with chicken-cholera microbes in infested inland country protected only by netting-fencing.

The experiments made under the direction of the Commission show that chicken-cholera has very little tendency to spread from infected to healthy rabbits. This result agrees with the fact that in France and elsewhere the disease has not been known to prevail among rabbits when it was devastating the poultry farms. Hence, if used for the destruction of rabbits, the microbes of chicken-cholera must owe almost all their value to their action as direct poisons to the rabbits which eat them. A certain quantity of a broth culture of these microbes will kill a rabbit, but so also will a certain dose of phosphorus, arsenic, or strychnine. For the preparation of cultures and their maintenance in full virulence the services of experts are necessary. The cultures lose their virulence on drying at ordinary temperatures or on short exposure to the sun's rays on a warm summer day. Hence as a direct poison the microbes must be more expensive, less stable, less manageable, than the poisons now in use. So far as this paragraph is concerned I believe that my statements have the concurrence of my colleagues.

In my opinion, a small experiment with chicken-cholera on an inland area is of no service, except as a preliminary to the wide dissemination of the microbes through the huge areas of infested country. Such dissemination would entail risk to wild birds, though the experiments of the Commission show that the risk is not so great as might have been anticipated. The chief risk is the remote one to domestic fowls. It has not been shown that chicken-cholera exists among fowls in Australasia. The introduction of any new disease should be forbidden unless some decided benefit is clearly to be secured; the wide dissemination of a new disease is specially objectionable. In face of the final conclusion of the Commission that chicken-cholera should not be disseminated broadcast in the infested parts of Australia, I regard any limited experiment in open country as useless and not devoid of danger.

3 April, 1889. (L.S.) H. B. ALLEN.

DISSENT II.

I dissent from the decision arrived at by the majority of my colleagues to withdraw opposition to the introduction of fowl-cholera microbes into the country; and the following are the reasons for my dissent:—

The action of the Commission as set forth in this resolution is opposed to their past action, as especially set forth in the proceedings, and report of the Experiment Committee, page 130 at the top, and page 135, 23rd line from the top.

The chain or reasoning by which my colleagues endeavour to link the present with the former action of the Commission may be briefly presented as follows:—

Although the experiments at Rodd Island have throughout indicated that chicken-cholera has so low a degree of contagion amongst rabbits that there is next to no probability of its possessing any special merits as a means of destroying these pests, yet, it is just possible that there may be in the open country some condition, not existing at Rodd Island, which would operate in favour of the contagiousness of the disease. And, because this is possible, it would be more conclusive to have the experiment tried under entirely natural conditions.

The original objection to admitting the microbes into the interior for the purposes of experiment in the open was that there might perhaps be danger to the public health, to sheep, cattle, and other domesticated beasts, and that there certainly was danger to poultry, and perhaps to many useful wild birds. The experiments at Rodd Island are held to have shown that there is no danger to the public health, nor to domesticated beasts, and that the danger to birds is much less than was anticipated, that, in fact it is so small as to be practically out of the reckoning. Therefore these objections having been removed, there is no reason why an experiment in the interior should not be allowed.

To

To me, however, this chain of reasoning appears seriously imperfect. Leaving out of consideration the danger to man and to beast (which, for general reasons, may be regarded as *nil*) the true logical position is as follows:—

(1.) The contagion amongst rabbits at Rodd Island was less than desired.

(2.) The danger to birds at Rodd Island was less than anticipated.

(3.) In the open country the contagion amongst rabbits may be greater than at Rodd Island.

Here the argument of my colleagues ends. But to complete the chain the following is necessary:—

(4.) In the open country the danger to birds may be greater than at Rodd Island.

Whatever line of reasoning be applied to the question of contagion amongst rabbits must just as rigorously be applied to the question of danger to birds, and indeed also to the danger to stock and to the public health.

If, however, the position be abandoned, and it be admitted that no hope whatever can be entertained of there being greater contagion in the open country than there was at Rodd Island, then it must be asked, what is the object of introducing the disease at all? The only answer which can be given is that it is out of courtesy to M. Pasteur, and that his agents may be allowed to perform the experiments of demonstration, which they came to perform. But, as a matter of fact, the experiment which the majority of the Commissioners have decided not to oppose, is not the experiment which these gentlemen came to perform. It is in substance an experiment on a large scale, which the Commission have repeatedly requested to have performed, but which M. Pasteur's agents have strenuously declined to carry out. And even supposing that the experiment were precisely that which M. Pasteur has laid down, it seems to me entirely unjustifiable to permit, out of mere courtesy to anyone, and with no practical object, the introduction of a disease into the country, when that introduction, as shown by the Rodd Island experiments, will undoubtedly, in a degree, be dangerous to poultry, and to some other birds.

If it be said that the probabilities of any real danger to birds are so small as to be practically out of the reckoning, I cannot agree with the statement. By arguing from probabilities, it is easy to arrive at any conclusion which may be desired. The conclusion where possible should be based, not on probabilities, but on known facts. And what are the known facts? They are, on the one hand, that chicken-cholera has never been known to prevail, or even to occur, naturally amongst rabbits; and that in the experiments at Rodd Island, the contagion was so small as to be of no practical utility; and these experiments it is important to bear in mind were specially devised so as to be eminently favourable to contagion amongst rabbits; devised not only by the Commission but also by M. Pasteur himself. Then, on the other hand, the facts are, that chicken-cholera, according to M. Pasteur's own statements, has prevailed naturally as a virulent, devastating, and highly infectious disease in poultry-yards; and that, according to the experiments at Rodd Island, birds do contract the disease from rabbits. If then the disease be once admitted into the country, there is a risk that it may become established amongst birds, and by slow degrees be carried about both by birds and by insects, until at last it reaches the poultry-yards. To attempt to estimate the amount of this risk is useless, whether that attempt be in the direction of exaggerating it or of minimising it. But one thing is clear, while the disease is not in the country there is no risk; if it be introduced there will be risk.

If, finally, it be said that fowl-cholera already exists in the colonies, then it is to be answered that the investigations of the Commission all go to show that the disease now in the colonies is not the same as M. Pasteur's *choléra des poules;* and it is undesirable to supplement one disease by the importation of another.

For these reasons, and as being officially interested in poultry farming, I am obliged to dissent from this resolution.

In all the rest of the report I concur.

(L.S.) A. N. PEARSON,
per H. MAHON.

NOTE

7.38

NOTE BY THE COMMISSION ON DISSENT II.

The Commission has decided to print Mr. Pearson's dissent with its Report, although such dissent did not reach the Commission till a few minutes before the hour appointed for the signing of the Report, Mr. Pearson having already left Sydney. It is absolutely necessary to state that the general opinions, arguments, and conclusions attributed by Mr. Pearson to the Commission have never been entertained for a moment, so far as the Commission is aware, by a single member; at any rate the Commission utterly repudiates them. The Commission has already given its final judgment against M. Pasteur's scheme. Its position with regard to an experiment with chicken-cholera in the open is simply that no sufficient reason exists why M. Pasteur's representatives should be forbidden to perform such an experiment if they so desire. In development of this position, the Commission has briefly indicated, for the guidance of the Government, if it should be decided to permit any such experiment, certain leading conditions, which would be indispensable if the experiment is to be worthy of the slightest attention. The Commission is of opinion that no advantage can be gained by such an experiment, other than that M. Pasteur's representatives would not be able to complain that any part of the demonstration which they were sent to perform had been prohibited by Government.

Inserted by order of the Commission,—

(L.S.) H. B. ALLEN,
President.

3 April, 1889.

NOTE ON NETTING-FENCING BY MR. BELL (NEW ZEALAND).

While (as a member of a mixed Australian and New Zealand Commission) I do not dissent from the emphatic declarations made in the Report with regard to the value of "rabbit-proof" fences as an aid to rabbit destruction, I desire to say that I do not consider this part of the Report to be entirely applicable to the circumstances of New Zealand. My Australian experiences in connection with the work of the Commission have satisfied me that wire-netting is an agent of considerable value in Australia, where there are no heavy snow-drifts, no mountain torrents, no great streams and rivers changing their course with every flood, no extensive landslips, glaciers, mountain crags thousands of feet high, and so on. In New Zealand, where all these special conditions prevail, its usefulness must, I think, be proportionately less. Moreover, there are few districts in New Zealand where the country is not considerably intersected by road lines, which introduce obvious difficulties into the wire-netting question. This is not the case in Australia, where vast tracts of infested country are traversed by at most two or three lines of road. I do not dwell upon the well-known danger of the wilful introduction of wild rabbits into netted areas by persons interested in the maintenance of the pest, because such a practice could scarcely be carried out on a scale of serious magnitude in the case of an already infested district subdivided into netted enclosures. Where, on the other hand, what is called a "barrier" is attempted, by the erection of a "rabbit-proof" fence between an infested district and a clean one, this practice of dropping rabbits over the fence from the infested side must certainly be taken into account in weighing the probabilities as to the efficacy of the plan.

(L.S.) A. D. BELL.

NEW SOUTH WALES.

RABBIT NUISANCE ACT.

(PETITION FROM TENTERFIELD PASTURES AND STOCK PROTECTION AND SHEEP BOARD, CONDEMNING.)

Received by the Legislative Assembly 17 *April*, 1889.

Petition from the Tenterfield Pastures and Stock Protection Board to the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled,—

HUMBLY SHOWETH:—

That your Petitioners would respectfully urge the justice and necessity of the immediate repeal of the "Rabbit Nuisance Act of 1883" (46 Vic. No. 14), on the ground that it has, ever since it became law, worked most unsatisfactorily, and instead of bringing about the destruction of the vermin, it has conduced to their spread over a large tract of country formerly free from the pest.

Your Petitioners would also humbly pray your Honorable House that in any future legislation on this subject, the principle of local self-government and the compelling of each district to destroy the pests within its boundaries be, as far as possible, enforced.

And your Petitioners will ever pray.

On behalf of the Board,
AUGUSTUS R. FRASER,
Chairman,
Tenterfield P. & S. P. & Sheep Board.

30th March, 1889.

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RABBIT NUISANCE ACT.

(PETITION FROM CHAIRMAN OF GRAFTON PASTURES AND STOCK PROTECTION AND SHEEP BOARD.)

Received by the Legislative Assembly, 14 *May*, 1889.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the Pastures and Stock Protection Board, Grafton,—

HUMBLY SHOWETH:—

That your Petitioners would respectfully urge the justice and necessity of the immediate repeal of the "Rabbit Nuisance Act of 1883" (46 Vic. No. 14), on the ground that it has ever since it became law worked most unsatisfactorily, and instead of bringing about the destruction of the vermin it has conduced to its spread over a large tract of country formerly free from the pest.

Your Petitioners would also humbly pray your Honorable House that in any future legislation on this subject the principle of local self-government, and the compelling of each district to destroy the pests within its boundaries, be as far as possible enforced.

And your Petitioners, as in duty bound, will ever pray, &c., &c.

WILLIAM SMALL,
Chairman, Grafton Pastures and Stock Protection and Sheep Boards.

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RABBIT NUISANCE ACT.

(PETITION FROM A. T. LAURIE, CHAIRMAN OF THE PORT STEPHENS PASTURES AND STOCK PROTECTION BOARD.)

Received by the Legislative Assembly, 22 *May*, 1889.

Petition from the Port Stephens Pastures and Stock Protection Board.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled,—

YOUR PETITIONERS HUMBLY SHOWETH:—

That the repeal of the Rabbit Act of 1883, 46 Vic. No. 14, would be an act of justice to the general public and the contributors under the Act, forasmuch that such Act in its working is universally admitted to be a failure, as the vermin are spread by the working of the Act, while each hour of delay must aggravate the evil.

Your Petitioners are aware that a Bill has been drafted dealing with the question on the lines suggested by the delegates from the various Pastures and Stock Boards who met for its consideration.

Your Petitioners therefore humbly pray that an Act repealing the present Act may be speedily passed, and that another better fitted to meet the exigencies of the case may be called into existence without delay.

And your Petitioners, as in duty bound, will ever pray.

On behalf of the Board,
A. T. LAURIE,
Chairman.

[3*d*.] 300—

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RABBIT NUISANCE ACT.

(PETITION FROM J. M. ANTILL, CHAIRMAN OF THE PICTON PASTURES AND STOCK PROTECTION BOARD.)

Received by the Legislative Assembly, 28 *May*, 1889.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the Picton Pastures and Stock Protection Board,—

HUMBLY SHOWETH:—

That the Rabbit Nuisance Act of 1883 (46 Vic. No. 14) has worked most unsatisfactorily ever since it became law, and that instead of bringing about the destruction of the vermin, it has been the means of spreading the pest over a large extent of country, formerly free from rabbits. Your Petitioners therefore pray that the Act may be immediately repealed, and that, in any future Legislation on the subject the principle of local administration may be adopted as far as practicable.

And your Petitioners, will ever pray, &c.

For and on behalf of the Board,—

J. M. ANTILL,
Chairman.

Pastures and Stock Protection Board, Picton, May 22nd, 1889.

NEW SOUTH WALES.

FIRST ANNUAL REPORT

OF THE

BOARD OF WATER SUPPLY AND SEWERAGE,

BEING FOR THE YEAR

1888.

Presented to Parliament by Command.

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER.

1889.

[1s. 3d.] 79—a

[1,400 copies—Approximate cost of printing (labour and material), £30 17s. 1d.]

1889.

NEW SOUTH WALES.

BOARD OF WATER SUPPLY AND SEWERAGE.

(FIRST ANNUAL REPORT FOR 1888.)

Presented to Parliament by Command.

To the Honorable the Secretary for Public Works.

Sir,

The Board of Water Supply and Sewerage have the honor to submit to you their first annual Report.

2. The notification appointing the following gentlemen members of the Board was published in the *Government Gazette*, 26th March, 1888 :—

Thomas Rowe, Esq., F.R.I.B.A., President;
William Christopher Bennett, Esq., M. Inst., C.E.;
Cecil West Darley, Esq., M. Inst., C.E.;
Benjamin Palmer, Esq., J.P.;
John Douglas Young, Esq.;
George William Lander, Esq., J.P.;
Joseph Graham, Esq., J.P.

3. The first meeting of the Board was held 9th April, 1888, when Mr. Palmer was elected Vice-President. The Board met twice a week to overcome the great amount of work consequent on starting a new Department, for though some of the chief executive officers were the same as had been at the Town Hall in charge of the waterworks, yet the system adopted by the Board was, to some extent, new to them.

4. The Board, during the first few weeks of their office, determined to make themselves perfectly acquainted with all the works entrusted, and which would become ultimately entrusted, to their charge, and with this object in view they visited the source of the present water supply at Pheasant's Nest, on the Nepean River, and the Cataract River, where the tunnel enters into it from the Pheasant's Nest, and then viewed the canal for several miles, and at all points of interest above and below Campbelltown. They also visited the Prospect reservoir, which covers an area, when full, of over 1,200 acres, and holds 10,000,000,000 gallons. The Board were much interested in the works at the off-take which regulate the quantity of water being discharged from the dam to Sydney, &c. They also inspected the open canal and pipe line to the Pipe Head.

5. The Board visited the sewerage works at Botany, and inspected the main sewer duct from Belmore Park to Bondi, walking through it from end to end.

6. The arrears of water rates to 30th June, which the Board had to collect, and which were handed over to them by the City Corporation, extended over two and more years, and amounted to £52,650 6s. 4d. Of this sum, £46,638 9s. 1d. was collected or accounted for by 31st December. This collection was not made without very great difficulty on the part of the Board; in fact, 2,059 summonses were issued, of which only seven were given against the Board. Notwithstanding the Board having had to call in the aid of the Police Courts to such a large extent, the fact has to be recorded that at the end of the year a sum of £41,739 13s. 3d. was still outstanding of uncollected rates for the half-year ending 31st December.

7. A great deal of trouble was experienced with builders who in many instances neglected to pay the required fees before using the water necessary for building purposes. Six licensed plumbers had their licenses suspended for various breaches of the by-laws.

8. The mode and scale of rating for water adopted by the City Council was at 5s. per room, no difference being made as to the size of the room, and consequently of the building. The amount raised by this charge was barely sufficient to pay the working expenses and material for maintenance, and a certain quantity of material for new works per year. The Governmeut having remitted the Corporation certain debts, and taken over from that body £85,000 of debentures, which they raised to meet extraordinary expenses, the City Corporation lowered the rate to 3s. 6d. When the Board took control they found themselves with a debt on the Nepean scheme, with accumulated interest to date, of £2,499,970, and £85,000 worth of debentures; to meet the interest on these sums and provide a sum for working expenses, including material for maintenance, and a sinking fund to replace the pipes (as they wore out) that were already in the ground, they found it necessary to raise over £150,000 per annum. In accordance with the Act, they altered the mode of rating per room to so much per £ of the assessed annual value, which is the mode adopted by all other water companies, with the exception of those who sell the water exclusively by meter. This mode, selling exclusively by meter, the Board rejected, as it would entail every householder affixing a meter, which with its connections, costs from £6 to £10, and this charge on the smaller preperties, which are a large majority in the number of tenements, would be out of all proportion to the amount of water they consumed, besides making necessary an army of meter-readers and workshops for testing and repairing meters. Water companies in England and Scotland charge as much as 1s. and 2s. in the £ without a sliding scale. The water sold by measure was fixed by the Board at 1s. 6d. per 1,000 gallons.

The scale of rates adopted by the Board—a maximum of 6d. in the £, and then a sliding scale to 2d.—did not prove as remunerative as was expected, but they determined to give it a fair trial for twelve months. This scale of rates is very much cheaper than Melbourne, which is 8d. in the £, with a sliding scale to 3d., and Adelaide, which is 1s. in the £, the same as Parramatta, without a sliding scale.

9. At first complaints were made by the public at this change in the mode of rating, as it bore heavily in comparison on the larger and more valuable properties, but at the same time it cheapened it on those under £80 annual value; the public had been accustomed to a rating which was manifestly unfair, and no fairer scheme than the mode adopted has been found by large experience in other countries to be practicable; it bears heavily in individual cases, but the community at large is treated on an equitable basis, and is therefore benefited by it.

10. The expenses of the Department, including wages and material for maintenance, for the nine months were £19,205 14s., equivalent to £25,607 12s. per annum, compares very favourably with the Glasgow waterworks; for though the Department supervised and laid 53½ miles of new mains in nine months, the Glasgow waterworks expended in 1886 (latest returns to hand) £31,805 13s. 7d., and only laid 9½ miles in twelve months.

11. When the sewerage works are ultimately transferred to the Board the cost of the Department, which now is entirely borne by the water fund, will to some great extent be divided with the sewerage fund.

12. The Board considered it was their duty to work the Department on as near a commercial basis as possible, and the following statement will show in a few entries their transactions for the year:—It is proposed to provide sinking funds to extinguish the £85,000 of debentures, also for any sums that may be raised by loans for new works, so that after a few years the works will be self-supporting; the Board have not yet contemplated making any sinking fund for the money expended on the Nepean scheme, as the works have not yet been handed over to them.

BOARD OF WATER SUPPLY AND SEWERAGE.

Cash Statement, December 31st, 1888.

RECEIPTS.	£	s.	d.	EXPENDITURE.	£	s.	d.
To transfer from City Corporation..	15,000	0	0	By Nepean scheme—4 per cent. interest on £2,499,970 for seven months 6 days	59,976	7	3
„ Rates, &c., collected	75,089	9	11	„ Interest on £85,000 debentures	4,300	0	0
				„ Sinking fund, to repay £315,300 in thirty years at 4 per cent. (original cost of pipes laid to 12 May, 1888)	5,625	0	0
				„ Refunds	957	14	6
				Received from Colonial Treasurer on Vote 1888, for general expenses	16,160	0	0
				Colonial Treasurer, balance at credit to meet outstanding liabilities...	3,130	8	2
	£90,089	9	11		£90,089	9	11

	£	s.	d.
Rates outstanding on 31 December, 1888	21,391	9	4
Meter accounts	20,348	3	11
	£41,739	13	3

13. From which it will be seen that the whole cost of the Nepean water supply to date, with interest added, is debited to the account; also, that a sinking fund for replacing the pipes, &c., which were laid underground before the Board took over the control, has been provided, and that after providing for this, paying interest on the Water Supply scheme, interest on debentures and loans, and working expenses, the Board have a credit balance of £3,130 8s. 2d. to carry forward to next year, with assets of uncollected rates amounting to £41,739 13s. 3d. This happy state of things, it must be borne in mind, is brought about by the receipt of rates extending over a period of three or four years, and cannot be looked upon as revenue belonging to the year; the excess which there must be in 1889 of expenditure and liabilities over revenue—as Sinking Funds will have to be provided as already mentioned—will to a great extent be met by the uncollected balance of rates standing over from 1888.

The

The Board consider it their duty to make their revenue meet their expenditure and liabilities, and hope to be able to effect this without raising the rates, which course they will only resort to if greater necessity arises than is at present apparent.

14. The population supplied with water, by the Board having laid 53½ miles of mains, according to the proportion mentioned in the Report on Sewerage of Western Suburbs, viz., 339 persons per mile for City and Suburbs, and 254 per mile for Western Suburbs, and taking the lower estimate, 254 persons per mile, is equivalent to 13,589 souls, or a total for the year of 68¼ miles, equivalent to 17,336 souls.

15. Frequent complaints have been made by the public with regard to the situation of the offices of the Board, which are placed in a most inconvenient position, far away from the business parts of the city. The Board have been trying to obtain suitable accommodation in a more central situation, but have not yet been able to attain their object.

16. The amount of water pumped from Crown-street to Paddington shows an increase of one-eighth, and from Crown-street to Woollahra an increase of over one-third of the amount of water pumped the previous year to these reservoirs. The average daily amount of water flowing into Sydney from the Prospect Reservoir was about 9,000,000 gallons.

17. The Board have in contemplation the advisability of having stored in the high levels of Sydney sufficient water for a day's consumption, and also extending the present low-level reservoir with the same object, so that if any accident occurs to the pipe-line, the city would not be inconvenienced as it would be as at present, as the storage of the Crown-street reservoirs is only equal to a third of a day's consumption.

18. During the nine months forty-nine meetings of the Board were held, at which the attendance was as follows:—

	Present.	Absent.
President (T. Rowe)	49	Nil.
Vice-President (B. Palmer)	46	3
W. C. Bennett	48	1
*C. W. Darley	13	36
J. D. Young	48	1
G. W. Lander	48	1
J. Graham	46	3

* Mr. Darley was absent from the Colony through ill-health from 20th May; previous to that time he attended each meeting, and during his stay in England has been exceedingly useful to the Board on various important matters.

19. The report of the Board Engineer, Mr. Trevor Jones, C.E., is enclosed herewith, covering a report of Mr. Robertson, inspector, and Mr. Fyfe, engineer of pumping, also the balance-sheet by Mr. Green, accountant.

REGINALD BLOXSOME,
Secretary.

THOMAS ROWE,
President.

MELBE. GREEN,
Accountant.

B.

Initiatory proceedings of the Board.

Initiatory.

The Board was met at its inception by more than the usual difficulties which beset the inauguration of a Commission to conduct the business of a Department already in full swing, so far as operations were concerned, but to which it was necessary to appoint nearly all the officers and operatives, a small nucleus only of those previously conducting the work having been retained.

State of affairs when Board was called into existence.

The state of affairs, when the Board took office, was as follows:—An unprecedented drought prevailed, to which all previous droughts were mild by comparison; residents of outlying districts who had up to that time been able, with economy, to tide over all previous seasons, now were soliciting water to stave off actual water famine. To aggravate the evil the stock of pipes was exhausted, and, moreover, the markets in all the Colonies were completely stripped in this respect.

The Board had bought in every available pipe, and were forced into comparative inaction though anxious to afford relief.

This difficulty was made more exasperating by the fact that owing to the partial completion of the trunk mains, the Prospect dam, together with the partial filling of the latter, an ample store of water was available in the City reservoirs, but could not be distributed to the outlying suburbs requiring it for want of pipes.

Pipes ordered.

About July consignments of pipes previously ordered by the City Council began to arrive, and the Board earnestly and sedulously furthered the work of laying the same in all directions.

Letting pipe-laying by yearly contract.

Early in the existence of the Board it was decided that the work of pipe-laying should be effected by contract, after due consideration having been given to two other methods practised previously by the City Council, viz., by "day labor" and "piecework."

I was at first a little distrustful lest this mode should prove costly, and that possibly troublesome litigation might arise from it.

I am now glad to be able to state that, by adding to my own specification such experience as had been brought together in the Harbours and Rivers Department, the present specification is such as to have achieved excellent results without a serious dispute, and at a cost a little below that entailed by other methods. The Board is, I think, to be congratulated on the result of the experiment.

This system enabled the Board to amplify their operations to any extent, when required, without enlarging their staff of operatives.

A considerable amount of work has been carried on, more or less, in connection with the City and Suburban Councils, and it is gratifying to be able to record that the Board has always received from these bodies every courtesy as well as facilities for the conduct of mutual business.

Below I have arranged, under their respective headings, an account of the several works undertaken, proposed, or executed by the Board during the year 1888. I also append a report from the inspector of pipe-laying upon the operations of his branch, and a schedule of streets, lanes, &c., in which pipes have been laid by the Board, and the cleansing of mains as carried out under his superintendence.

This last work is one that deserves more than a passing notice, being a system whereby mains that are all but stopped by internal incrustation are rendered equal in efficiency to new, by the introduction of an instrument and forcing it through the pipes.

I had the honor of introducing this practice into Sydney, having witnessed its effect as practised by the hydraulic engineer in Melbourne, W. Davidson, Esq.; by its use a saving of at least 90 per cent. is effected over the practice that previously obtained of renewing the mains when they became ineffectual.

Campbelltown water supply.

The drought was so protracted and severe that petitions for water supplies poured in on the Board from unexpected quarters; localities situated along the line of canal, as Campbelltown, Liverpool, Parramatta, Granville, and Auburn, were among the number.

Campbelltown's wants, appearing the most urgent and being the first applicants, received immediate attention, and, in order to accelerate the work, a plan, already prepared in the Harbours and Rivers Department, having been modified so as to bring it within the community's means, was adopted.

The Board had at the time no pipes wherewith to carry out the work, but in order to allay the great want of water in the town, a sufficient quantity were bought in Sydney at an advanced rate, to lay the 6-inch trunk main from the canal to the standpipe in the centre of the town.

The work was so far completed by last Christmas as to permit of the water being turned on as promised, and would have proved a well-appreciated boon but for a copious rain that fell a few weeks previously, which relieved the wants of the residents. When pipes arrive the town will be reticulated.

Liverpool.

The Municipal Council of this town, having had the matter of water supply under consideration for many years, and had several schemes submitted to them, favored one prepared in the Harbours and Rivers Department, which consisted of erecting an earthen dam at Hinchinbrook, near the upper extremity of the Cecil Hill tunnel, filling the same from the canal and bringing the water by a 6-inch main to the town for distribution by a reticulation system.

The mayor and aldermen of Liverpool designed to take the whole cost of the proposed work on themselves, and waited on the Board with the request that if such works were carried out the Board should grant water for filling the reservoir at a trifling charge, the Council undertaking the distribution and management, and the collection of rates. This proposal could not be entertained by the Board, there being legal and other difficulties in the way.

The Board ultimately agreed to give the town a water supply on the same terms as were agreed to for Campbelltown; the nature of the works is decided on, but for the want of pipes cannot immediately be put in execution.

Parramatta.

The Town Council of Parramatta, having a working scheme of their own for many years, have requested the Board to grant water when required to fill their local dam, at 1s. 6d. per 1,000 gallons, and also they paying for the line of trunk main from Granville to the local reservoir.

The Board looked favorably on the proposal, but timely rains as well as want of pipes have interfered to delay any further action for the present.

Granville.

Granville is already provided with a trunk main laid along the Woodville Road from the canal to the town, and, as soon as pipes arrive, it is to be reticulated by order of the Board, if suitable financial arrangements can be determined on between the Board and the Council.

Water for irrigation.

Many proprietors and tenants of land which is commanded by the canal are petitioning the Board to be supplied with water for irrigation direct from the canal.

This is a question with which it behoves the Board to deal very circumspectly, bearing in mind that a concession once made is difficult to recall; water for irrigation for large areas, to be of any good use, should be available in very great quantities, and the supply as at present laid out, though adequate for many years to supply fairly large quantities, will by degrees be required for the use of the city, but which, unless stringent provisions accompany the concession, could not be withdrawn from the irrigationists.

Adequacy of Nepean scheme to provide for irrigation with proper arrangements.

The Nepean scheme, however, is capable with proper arrangements of being developed into an irrigation scheme, and was designed with the intention of being so utilized, because the large quantity of water that the canal is capable of conveying when running full during the time the Nepean is in flood, enables it to replenish lateral reservoirs which are proposed to be constructed along its course, and which might thereafter be used for irrigation.

Salt-water mains.

During the early existence of the Board, while its officers were determining the assets of the Board, it was found that about £7,000 remained unpaid by the City Council for work done and materials supplied by the Water Branch of the City Engineer's Department in laying salt-water mains in and about the city during 1883-4-5.

These salt-water mains were handed over to the City Council by the Board as they were deemed to be doing good work in watering the streets with salt water, thereby saving the water of the Board.

Hudson Brother's pipes.

When the Nepean scheme was so far completed as to be in a position to take up the whole supply of Sydney and suburbs, the temporary line of wrought-iron pipes and the flumes forming the scheme, known as Hudson Bros., were no longer wanted, and as the pipes and flumes had an intrinsic value the Board decided to offer them for sale to the highest bidder.

When inquired into it was found that some complication existed as to some of them being on private land, also that the Government wanted to retain a portion of them, which, together with other considerations now in process of being settled, caused delay in disposing of them.

New outlets from Paddington Reservoir.

For the last few years it has been becoming evident that the branches on the pumping main from Crown-street to Paddington Reservoir (which also serves as supply main) were too restricted to afford a free supply to the localities they were feeding. It had also been in contemplation for some time to give the centre of the city the benefit of the high-level supply when the pumping power should be adequate.

For these and other reasons it was decided to form new outlet works to the Paddington Reservoir; these outlet works should have been completed during 1888, but owing to unreasonable delay in procuring castings at local foundries the completion has been deferred for several weeks.

The work consists of a 24-inch outlet pipe from each compartment joining into one in a chamber just outside the reservoir, fitted with a complete set of outlet and reflux valves, air-vessels, &c.; the main proceeds through a tunnel across Oxford-street and along Begg-street as a 24-inch main; at the intersection of Begg-street with Glenmore Road it bifurcates into a 20-inch main towards the city and a 15-inch towards Double Bay. The city branch continues along Glenmore Road and Liverpool-street as far as Darlinghurst Road, where the present contract terminates, and which when completed to this point will at once do away with complaints of precarious or turbid supply in Darlinghurst and Surry Hills.

Another contract will then be let to continue the main, 18 inches in diameter, along Liverpool-street to its intersection with College-street, where it will bifurcate and discharge into the 15 and 12 inch mains already laid for the more liberal distribution of high level water to meet the growing requirements caused by the lofty buildings lately becoming so numerous in Sydney.

It is satisfactory to be able to state that the Board's operations of pipe-laying have exceeded all previous experience in Sydney in point of speed, 53½ miles having been laid since the Board's formation, and that no defects in joints or pipes have shown themselves. Moreover that complaints of improper restoration of street surface have been very few.

North Shore pumping scheme.

Early in the year it became my duty to report the great want of water that existed on the higher levels of North Shore, and to submit a scheme for raising water temporarily for the benefit of the residents pending the arrival of the permanent scheme from Potts' Hill *via* Ryde.

The Board approved the scheme, accepted tenders for the same, and on the 1st October water was given to the higher levels, and operations of pipelaying were vigorously pushed ahead in response to the many urgent petitions received by the Board.

The

The pumps are a pair of Blake's duplex direct acting, guaranteed to lift 10,000 gallons per hour through a 6-inch pipe, to an elevation of 150 feet, into a pair of buckled plate tanks, containing together 40,000 gallons, procured from the Roads and Bridges Department.

The whole plant acts admirably, developing considerably more power than the guarantee, moreover working so silently and smoothly as to cause no nuisance to the populous neighbourhood.

Ashfield Heights supply.

Since the Board was formed the bulk of the parts of the western suburbs, the reticulation of which remained incomplete, has been accommodated, especially the part most urgently in want of water, but a portion of Ashfield is so elevated that the head of water in the grand trunk main from Potts' Hill is not adequate to reach to the dwellings in these localities.

There are also parts of Petersham and Newtown that receive but a precarious supply owing to their elevation.

To remedy this want only one course is open, viz., to raise water by pumping.

To this end a plan was submitted to the Board during 1888 to erect a small engine at Petersham to fill elevated iron tanks erected at Ashfield; this work was approved, and tenders received for the same under the emergency that the locality was at the time suffering from a water famine, and consequently the wants of Ashfield only received consideration.

Seeing that the recent rains have nearly altogether mitigated all water scarcity in the locality, it seems now that it would be advisable to combine the consideration of the Petersham and Newtown claims, as the same pumping plant will do for all, as all the above requirements are permanent in character.

With the above view a plan is being prepared for submission to the Board, embracing a provision for all the places named, as well as a balance tank for Balmain, which latter is considered as part of the Balmain supply, and necessary in order to conserve the water from the 15-inch trunk main when the pressure is good, and to give it out during the day when the consumption is at its maximum.

Utilizing Busby's Bore.

It has always appeared a matter to be regretted, that on account of the elevation of the ground intervening between Crown-street reservoir and the low-lying localities of Rushcutters' Bay, Double Bay, and Rose Bay, the gravitation water could not reach them, and it was necessary to give to those places water, which had been pumped partly to Paddington and partly to Woollahra.

When Busby's Bore became disused, in casting about for some useful purpose to put the tunnel to, it occurred to me that it is at precisely the level necessary for passing the Crown-street water by means of a pipe laid through it to the levels in question, and that it is also in the proper direction.

At an early date a scheme having the above object will be submitted to the Board, and if approved will considerably reduce pumping operations.

Duplication of pumping mains.

Since the consumption of water has begun to rise rapidly a want of constancy has been felt in the water at the higher levels, which I attribute to the fact that the old pumping plant is not able to keep the Paddington reservoir full against the increased consumption, on account of there being only a single rising main for part of the distance whereby only one set of pumps can work at the same time.

In 1886 I represented this to the City Council, who in August, 1887, ordered large pipes for duplicating the pumping mains from Crown-street to the corner of Moore Park, whence it is already double—one branch to Paddington the other to Woollahra.

This line of pipes would also, under the terms of the contract, have been finished by the end of the year, but has been delayed through want of castings, and is only now drawing towards completion.

When finished these mains will enable both pumps to work simultaneously, instead of as hitherto, one set having to stop while the other was working, and will also enable a better head of water to be kept up at both Paddington and Woollahra reservoir, thus giving a continuous good pressure to all the mains charged from these reservoirs.

The new pumping plant.

It has been made known to the Board that when they took office the pumping plant at Crown-street was in a very precarious condition. I had in several reports represented the same to the City Council. As soon as the Board was formed I urged the necessity of immediately procuring a pumping plant, such that if accident happened to the existing engines their work could be performed by the new.

The type of engines recommended were the Worthington direct acting duplex compound condensing, fitted with compensating cylinders of 150 horse-power to be accompanied with a battery of Babcock and Wilcox boilers.

My report was referred to Mr. Darley, who—in an exhaustive memorandum—while agreeing as to the type of both engines and boilers, advised that they should be of larger dimensions, and more powerful.

The Board agreed on account of the urgent necessity of immediately replacing the old and worn-out plant, and to obviate the inconvenience that would be entailed by a break-down to order the larger type engines and boilers direct from the makers through the Agent-General, the same to be inspected and approved by Sir John Fowler, the Government consulting engineer in England.

A letter was afterwards received from the latter gentleman highly approving of the Board's selection with reference to both engines and boilers.

The plant is now well under way, the engine and boiler-houses designed, the design for the superstructure having been actively supervised by the President of the Board, and it is confidently hoped that the foundations for engines and boilers will probably be ready for the arrival of the engines and boilers.

It is anticipated that for effectiveness and economy of working, economy of space occupied, they excel anything of the kind in Australia.

Work

Work being carried on by Harbours and Rivers Department.

A great amount of work for the extension of the supply to fresh districts is contemplated by the Harbours and Rivers Department, viz., the duplication of the trunk mains from Potts' Hill to Crown-street, the laying of a trunk main from Potts' Hill to the southern and south-eastern districts, viz., Canterbury, Kogarah, Hurstville, &c.; also a trunk main from the same place, *via* Burwood and Ryde, to Chatswood supply reservoir (into which the water is to be pumped by a plant located near Ryde), whence the water will gravitate to Hunter's Hill and North Shore.

Extent of water-mains in city and suburbs.

The estimated extent of trunk and reticulation water-mains laid in the city and suburbs at the end of 1888, exclusive of mains laid by the Government under Sydney Water Supply Act of 1880, is 382⅝ miles.

J. TREVOR JONES, C.E.,
Board Engineer.

The Secretary, Board of Water Supply and Sewerage.

C.

Sir, Water Supply and Sewerage Department.

I have the honor to submit the Annual Report of work done for the year ending 31st December, 1888, which includes work done by the City Council prior to the Water Board assuming control:—

Main laying.

Prior to the Board's control there were laid 8,446 pipes, extending over 26,127 yards, in 1888. Under Board's control 30,399 pipes, extending over 94,173 yards, making in all 38,845 pipes of total measurement of 120,300 yards, or 68 miles 620 yards. The contract system adopted by the Board appears in every respect to be a success, the work being more economically and expeditiously executed than under the old system of day labour. As evidence of the faithful manner in which it has been carried out there has not been a single instance of leakage through defective workmanship. During the latter portion of the year the rate of laying has been about 3½ miles per week, which could be increased to and maintained at 4 miles, without any addition to the present staff, if a sufficient supply of materials were available.

Main cleaning.

For the year a length of 5 miles 1,417 yards of mains has been cleaned; some of which have been down between fifteen and twenty years and were practically closed up, have been made as efficient as new.

There are still a great number of mains require cleaning, but owing to the great consumption of water that takes place during the present hot weather, it is a work that could be more advantageously prosecuted in the winter months, when it would be advisable to have as much as possible done.

Fire-plugs, &c.

Since the principle of laying mains upon footways has been adopted a marked difference in the cost of maintenance of hydrants and plugs has been shown. Those on footway rarely require any repairs, and are conspicuous, whilst those in the roadway, owing to the heavy traffic, are constantly requiring attention, and sometimes found with difficulty, which, in case of fire, is a matter of vital importance. There is also a greater liability to pollution, as when the plugs are drawn in low positions, and the water in the main becomes exhausted, the hydrant falls upon the higher portions of the main fall, and a rush of air into the main ensues, which in its course carries with it the accumulated substances within the cases.

Much trouble is experienced in dealing with the present style of hydrant and wooden fire-plug, and I would suggest the adoption, if available, of an improved hydrant which would not be so difficult to deal with in case of fire, &c.

Water supply.

Although there has been such a large addition made to the length of mains, and the consumption proportionately increased, there have been less complaints made of the insufficiency of supply than for some years past, which is attributable to some important alterations that have been made in the reticulation and a more equable distribution of water.

I have much pleasure in testifying to the harmonious and creditable manner in which the various officers under my supervision have worked, to which much of the successful working of the Department is attributable.

I have, &c.,
D. C. ROBERTSON,
Inspector.

The Board Engineer.

D.

Sir, The Waterworks, Crown-street, 11 February, 1889.

I have the honor, in accordance with instructions of the 7th instant, to make the following Report upon the working of all the pumping engines, &c., during the year 1888.

The main pumping engines at the Crown-street works, which were erected about ten years ago, were in daily work throughout the year pumping to the Paddington Reservoir, and performed the work satisfactorily. During the year they have only required the usual examinations and repairs consistent with the constant running of the machinery. With respect to the flaw in the main shaft which I reported to the Board some time ago, I may mention that I examined the same carefully last week, and found that although the flaw was certainly more visible, showing that there was some slight deflection, yet the cracks had not extended longitudinally. Of course there is no certainty that the straps, which were put on about sixteen months ago, are sufficient to hold it together till the new machinery takes up the pumping. Still, taking in consideration the time that would be taken up in fitting the new shaft, it would not, in my opinion, be wise to interfere with the supply of water to the city and suburbs. During the year the quantity of water pumped to Paddington by these pumps was 724,914,200 gallons, showing an increase of 90,633,470 gallons on the previous year.

The Blake pumps which have been in use about seven years were in daily work throughout the year pumping to the Woollahra Reservoir. These pumps are of a design which is quite out of date. They are very much worn, and consequently require very careful handling, and are very troublesome to keep in order. The central valve chamber is liable at any time to give way, and to do away with any unnecessary delay in case of any accident, I have in readiness a duplicate chamber to replace the present one when necessary. Under the circumstances the pumps are in as fair order as they possibly can be kept, and worked during the year as satisfactorily as their dilapidated condition would permit. These pumps should be thrown out as soon as possible. During the year the quantity of water pumped by these pumps to the Woollahra Reservoir was 300,112,240 gallons, showing an increase of 110,249,540 gallons on the previous year. From the increase in the quantities of water pumped it is evident that more pumping power will shortly be required to keep up a sufficient supply.

There are three boilers at the Crown-street works supplying the main pumping engines and Blake pumps. Those boilers, with the connections, were in good working order throughout the year, only requiring repairs of a very limited nature, and worked very satisfactorily.

The pump at the Woollahra works is a geared pump, and was in almost daily work throughout the year pumping to the Waverley reservoir, and performed the work satisfactorily. The repairs to this pump during the year were of the ordinary nature necessary to maintain its efficiency. The boiler in connection with this pump was in good working order.

The pumps and boiler at the North Shore pumping works were only erected towards the latter end of the year, and consequently were working only two months of the year as required. They performed the work during that time satisfactorily.

I have, &c.,
J. FYFE,
Mechanical Engineer.

J. Trevor Jones, Esq., Board Engineer.

COMMISSION OF INQUIRY

INTO THE

CONDITION OF THE PROSPECT DAM.

REPORT

OF THE

COMMISSIONERS,

GEORGE GORDON, ESQ., M. INST. C.E.,
RICHARD L. MESTAYER, ESQ., M. INST. C.E.

Appointed by the Hon. The Secretary for Public Works on 4th December, 1888.

ORDERED BY THE LEGISLATIVE ASSEMBLY TO BE PRINTED,
17 *April*, 1889.

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER.

1889.

[2*s*. 9*d*.] 80—A

PROSPECT RESERVOIR INQUIRY.

MINUTES OF PROCEEDINGS.

MONDAY, 3 *DECEMBER*, 1888.

The Hon. J. Sutherland verbally instructed Mr. R. L. Mestayer to undertake an investigation into all the circumstances attending the failure of the embankment at the Prospect Reservoir, and to report fully upon the same, in accordance with detailed instructions which would be forwarded to him.

TUESDAY, 4 *DECEMBER*, 1888.

Mr. Mestayer attended at the Public Works Office to obtain particulars of works executed, &c., and arranged with the Under Secretary and the Resident Engineer to make the first visit to the works on the following day.

WEDNESDAY, 5 *DECEMBER*, 1888.

Mr. Mestayer proceeded to Prospect, and examined generally the whole of the works, plans, specifications, &c.

THURSDAY, 6 *DECEMBER*, 1888.

Mr. Mestayer attended at the Public Works Office, and obtained further information, plans, &c.

Letter received from Under Secretary for Public Works enclosing copy of instructions.

Letter written to Under Secretary for Public Works in reply, and asking for certain information, plans, and sections of embankment.

FRIDAY, 7 *DECEMBER*, 1888.

Mr. Mestayer proceeded to Prospect Dam.

Put down Borehole No. 1.

MONDAY, 10 *DECEMBER*, 1888.

Mr. Mestayer proceeded to Prospect Dam.

Put down Borehole No. 2.

TUESDAY, 11 *DECEMBER*, 1888.

Mr. Mestayer and Mr. Gordon met at the Public Works Office to confer upon the mode of carrying out their investigations, and afterwards at Mr. Mestayer's office, where Mr. Gordon was informed of all particulars relating to the inquiry which had been ascertained up to that date.

WEDNESDAY, 12 *DECEMBER*, 1888.

Mr. Gordon and Mr. Mestayer proceeded to the Prospect Dam.

Put down borehole No. 3.

THURSDAY, 13 *DECEMBER*, 1888.

Mr. Gordon and Mr. Mestayer attended at the Public Works Office, and were informed by the Honorable the Secretary for Public Works that, if it became necessary, steps would be taken to appoint them a Royal Commission for the purposes of the inquiry.

Mr. Gordon and Mr. Mestayer afterwards met at the latter gentleman's office, Beresford Chambers, 52, Castlereagh-street, to consider the best means of obtaining evidence.

FRIDAY, 14 *DECEMBER*, 1888.

Mr. Gordon and Mr. Mestayer proceeded to Prospect Dam, and had trenches opened up for the examination of the puddle-wall at various sections.

Observations were taken of the level, position, and condition of the puddle-wall at each place.

SATURDAY,

SATURDAY, 15 *DECEMBER*, 1888.

Mr. Gordon attended at the Australian Club, and examined Lewis P. Moline, Esq., Engineer for the Contractors, and Robert Shand, Esq., Manager for the Contractors.

Mr. Mestayer attended at his office, 52, Castlereagh-street, and examined Robert Shand, Esq., Manager for the Contractors, and Lewis P. Moline, Esq., Engineer for the Contractors.

Letters were written to Mr. Henry Murray, Contractor, requesting him to attend at Mr. Mestayer's office and give evidence respecting the work; also to Alfred Bennett, Esq., Proprietor of the *Evening News*.

Mr. Mestayer and Mr. Gordon waited on Mr. Alfred Bennett, who promised to reply by letter on Monday, the 17th instant.

It was decided to proceed to Prospect Reservoir on Monday morning, leaving Redfern by train at 8 o'clock.

Telegram forwarded to Mr. George Robinson, Forest Lodge, instructing him to meet Messrs. Gordon and Mestayer, at Redfern Railway Station, on Monday morning, at 7·45, to proceed to Prospect and take evidence of witnesses.

MONDAY, 17 *DECEMBER*, 1888.

Mr. Gordon and Mr. Mestayer, accompanied by Mr. George Robinson, Secretary and Shorthand-writer, met at the Railway Station, Redfern, at 7·45 a.m., and proceeded to Prospect Reservoir, where they had Borehole No. 5 put down.

Mr. Robert Cameron, Diver, attended and went down at section 19.

The following witnesses were examined:—Robt. H. Ryan, Esq., Government Resident Engineer; Mr. Wm. Nicholas, Government Inspector of Earthwork; Mr. Robt. Cameron, Government Diver, Harbours and Rivers Department.

A careful inspection was made of the outer slope of the embankment.

Instructions were given for the diver to be ready to go down again at another section on Wednesday next, the 19th instant, at 10 a.m., and for further borings to be taken.

TUESDAY, 18 *DECEMBER*, 1888.

Mr. Gordon and Mr. Mestayer met at the office of the latter at 9 a.m.

Letters received from Under Secretary for Public Works enclosing copies of correspondence with the proprietors of the *Eveniug News*.

Letter received from Editor of *Evening News re* appointment.

Proceeded to *Evening News* office and examined James A. Hogue, Esq., Editor of *Evening News*.

Afterwards attended at Public Works Office, and were informed by the Under Secretary that Mr. G. A. Bramston and Mr. Edwin Limond desired to be examined.

Mr. Henry Murray, Contractor, attended at Mr. Mestayer's office and was examined.

Letters were written to Messrs. Bramston; Limond; Ives, M.L.A.; F. B. Gipps, C.E.; Hon. John Davies, M.L.C.; J. Weston; and J. Rutherford, asking their attendance to give evidence; also to the Editor of the *Evening News*, for certain information.

Telegram sent to Mr. John Norton, Newcastle, asking his attendance to give evidence.

WEDNESDAY, 19 *DECEMBER*, 1888.

Mr. Gordon and Mr. Mestayer proceeded to Prospect Reservoir, where they inspected the borings ordered to be put down on Monday, and afterwards examined:—Mr. Edward Jackson, Inspector of Brickwork and Masonry; Mr. George Davis, Inspector of Puddle and Earthwork; Mr. W. Stewart Wearne, Reporter for the *Evening News;* Mr. R. Cameron, Diver, Harbours and Rivers Department.

Mr. Cameron, the diver, went down at section 44 and examined the bank and ground in the neighbourhood of the second slip, and reported result. Instructions were given for him to go down again at section 47, and also at section 16, and report at Mr. Mestayer's office on Saturday next, 22nd instant.

THURSDAY, 20 *DECEMBER*, 1888.

Messrs. Gordon and Mestayer met at Mr. Mestayer's office, Beresford Chambers, Castlereagh-street, at 9 a.m., and examined Mr. G. A. Bramston and Mr. E. Limond.

Mr. John Norton called and stated that he had not come down in response to the telegram, and that he was too busy to give evidence this week, but would write a letter stating the time when he would be disengaged and forward it this evening.

Telegram received from Mr. James Rutherford.

Telegram sent to Mr. James Rutherford.

Memo. received from Editor, *Evening News*, with information.

Letter received from Mrs. Gipps, ststing that Mr. Gipps was at present in Melbourne.

Letter received from Mr. Ives, M.P.

FRIDAY, 21 *DECEMBER*, 1888.

Mr. Gordon and Mr. Mestayer met at Mr. Mestayer's office, Beresford Chambers, at 9 a.m., and examined Mr. R. Cameron and Mr. Jas. Rutherford.

Mr. John Norton called at Mr. Mestayer's office and stated that he was too busy at present to give any evidence, but would send in a letter stating his terms and when he would be prepared to attend.

Letter received from Mr. Weston, giving information of character of work executed when he was engaged on the works at Prospect.

SATURDAY, 22 *DECEMBER*, 1888.

Mr. Gordon and Mr. Mestayer met at Mr. Mestayer's office to receive evidence from Mr. Gipps and Mr. Norton, neither of whom attended.

Letter written to Mr. Gipps, asking him to attend at the earliest possible moment.

Drafting Report, and preparing copies of evidence and other information.

MONDAY, 24 *DECEMBER*, 1888.

Mr. Mestayer attended at his office.

Letter written to Mr. R. H. Ryan for information.

Letter received from the Under Secretary for Public Works, asking for detailed estimate.

Drafting Report, &c.

THURSDAY, 27 *DECEMBER*, 1888.

Mr. Mestayer attended at his office and examined F. B. Gipps, Esq., C.E.

Mr. Mestayer afterwards called on the Under Secretary for Public Works, and was informed that Mr. Secretary Sutherland had telegraphed to Mr. Norton, and also to Mr. Maher, to attend on Saturday morning, 29th instant.

FRIDAY, 28 *DECEMBER*, 1888.

Letter written to Mr. Hogue, *Evening News* office.

Mr. Mestayer proceeded to Prospect, where he re-examined Mr. Ryan, Mr. Nicholas, and Mr. Davis.

SATURDAY, 29 *DECEMBER*, 1888.

Mr. J. J. Maher, of West Maitland, attended at Mr. Mestayer's office, and was examined by Mr. Mestayer.

Letter received from Secretary for Public Works, enclosing one from Mr. Maher.

Letter received from Secretary for Public Works, enclosing extract from *Evening News*.

Letter received from Under Secretary wishing Mr. Mestayer's attendance.

Letter written to Under Secretary for Public Works *re* Mr. Maher.

Letter written to Mr. Ryan for information.

Letter written to Editor, *Evening News*, for information.

Information received from the Secretary for Public Works that Mr. John Norton could not attend until next Saturday.

MONDAY, 31 *DECEMBER*, 1888.

Letters written to J. A. Hogue, Esq., *Evening News*.

Letters written to G. Gordon, Esq., Melbourne, with copies of evidence of witnesses examined by Mr. Mestayer.

Telegram received from G. Gordon, Esq., Melbourne.

Telegram sent to G. Gordon, Esq., Melbourne.

WEDNESDAY, 2 *JANUARY*, 1889.

Mr. Mestayer proceeded to Prospect, where he examined Mr. J. Buckett, Mr. Ryan, and Mr. Davis.

THURSDAY, 3 *JANUARY*, 1889.

Memo. written to Secretary for Works in reply to *Evening News*' leading article.

Letter received from Under Secretary for Public Works, with evidence.

Letter received from Chief Clerk for Public Works to call at Public Works Office.

Letter written to Mr. Ryan for information.

Letter written to Mr. Gordon, Melbourne, with copies of evidence taken by Mr. Mestayer.

FRIDAY, 4 *JANUARY*, 1889.

Letter written to Mr. Gordon, Melbourne, with copies of evidence taken by Mr. Mestayer, &c.

Letter written to Mr. Ryan asking information.

Letter received from D. C. M'Lachlan, Esq., Chief Clerk, Public Works Department, to examine Mr. Mackay.

SATURDAY, 5 *JANUARY*, 1889.

Mr. Mestayer attended at the Public Works Office at 10 a.m., and examined Mr. A. Mackay, F.C.S.

Letter written to Mr. Ryan *re* evidence.

Drafting Report, and preparing copies of evidence, and other information.

WEDNESDAY, 9 *JANUARY*, 1889.

Letter received from the Under Secretary for Public Works, with cutting from *Daily Telegraph*.

Letter written to Under Secretary for Public Works in reply.

FRIDAY,

FRIDAY, 11 *JANUARY*, 1889.

Letter written to Mr. W. A. Harper, requesting him to give evidence.
Letter written to Under Secretary, with report.

SATURDAY, 12 *JANUARY*, 1889.

Estimate given to the Under Secretary for Public Works.
Letter written to Mr. Ryan, for further information.

MONDAY, 14 *JANUARY*, 1889.

Telegram to Mr. Ryan, for further information.
Letter to the Under Secretary for Public Works, with Appendices to Report.

TUESDAY, 15 *JANUARY*, 1889.

Letter to the Under Secretary for Public Works, *re* Mr. Harper's evidence.
Mr. Harper, junior, called at Mr. Mestayer's office, and stated that his brother was too ill to attend at present.

THURSDAY, 17 *JANUARY*, 1889.

The Honorable the Secretary for Public Works sent for Mr. Mestayer, and verbally informed him that he wished him to confer with Mr. G. Gordon, and discuss the various matters referred to in their reports, and to submit, so far as they could do so, a joint recommendation as to the measures which should be adopted.

TUESDAY, 22 *JANUARY*, 1889.

Letter received from Under Secretary for Public Works, enclosing report and diagram from the Government Geologist suggesting possibility of a slip in the strata causing the slips at the Prospect embankment.
Letter written to Mr. Wilkinson, requesting him to call on Mr. Mestayer at his office on Thursday next.

THURSDAY, 24 *JANUARY*, 1889.

C. S. Wilkinson, Esq., F.G.S., Government Geologist, called at Mr. Mestayer's office, and discussed the possibility of the slip at Prospect having been caused by faults in the strata, and to compare the facts ascertained during the inquiry with what might have been expected to take place under such circumstances.
Letter written to Under Secretary for Public Works, *re* analysis of water from foot of embankment.

FRIDAY, 25 *JANUARY*, 1889.

Mr. Gordon and Mr. Mestayer met at the latter gentleman's office to discuss their reports and prepare a joint recommendation as to the measures they would recommend for adoption.

MONDAY, 28 *JANUARY*, 1889.

Mr. Gordon and Mr. Mestayer proceeded to Prospect to examine the works.

TUESDAY, 29 *JANUARY*, 1889.

Mr. Gordon and Mr. Mestayer met at the latter gentleman's office to consider their joint recommendation.

WEDNESDAY, 30 *JANUARY*, 1889.

Mr. Gordon and Mr. Mestayer met at the latter gentleman's office, and drew up their reports upon the works they recommended for immediate adoption.
Reports sent in to the Honorable the Secretary for Public Works.
Proofs of evidence sent to the gentlemen who had given evidence.

WEDNESDAY, 6 *FEBRUARY*, 1889.

Mr. Mestayer attended at Public Works Office with regard to Minutes of Evidence. Instructions received to write to W. E. Dunn, Esq., contractor's engineer at Prospect, and F. A. Franklin, Esq., to give evidence.
Letters written to F. A. Franklin, Esq., W. E. Dunn, Esq., and the Under Secretary for Public Works.

FRIDAY, 8 *FEBRUARY*, 1889.

Letter written to C. S. Wilkinson, Esq., *re* his evidence.

SATURDAY,

SATURDAY, 9 *FEBRUARY*, 1889.

Letter received from F. A. Franklin, Esq., stating that when he returned to town he would call.

TUESDAY, 12 *FEBRUARY*, 1889.

Message received from P.W. Office requiring attendance of Mr. Mestayer.

WEDNESDAY, 13 *FEBRUARY*, 1889.

At Public Works Office in answer to message, and saw the Under Secretary for Public Works.

THURSDAY, 14 *FEBRUARY*, 1889.

Letter written to G. Gordon, Esq., M.I.C.E., Melbourne, with information.

FRIDAY, 15 *FEBRUARY*, 1889.

Letter written to Superintendent of Telegraphs enclosing Mr. Gordon's letter.

Letter written to Mr. Bramston *re* evidence.

R. Shand, Esq., contractor, Prospect, called and arranged for Mr. Dunn to attend next week for further examination.

WEDNESDAY, 20 *FEBRUARY*, 1889.

Called on Mr. Harper *re* giving his evidence this week.

Telegram sent to Mr. Ryan and Mr. Shand, saying, "Will be at Prospect Dam to-morrow morning."

THURSDAY, 21 *FEBRUARY*, 1889.

Proceeded to Prospect, where Mr. Mestayer examined Mr. W. E. Dunn and Mr. J. Rothery.

FRIDAY, 22 *FEBRUARY*, 1889.

Letter received from Mr. Harper, saying that he would call to-day and give evidence.

Letter written to Under Secretary for Public Works, enclosing report on analysis of water from the foot of embankment at Prospect Dam.

SATURDAY, 23 *FEBRUARY*, 1889.

Letter written to Mr. Harper, appointing 10 a.m. on Tuesday to receive his evidence.

Letter written to Mr. Gordon, Melbourne, forwarding copies of the evidence of Mr. Dunn and of Mr. Rothery, taken on Thursday.

TUESDAY, 26 *FEBRUARY*, 1889.

Attended and examined W. A. Harper, Esq., C.E.

WEDNESDAY, 27 *FEBRUARY*, 1889.

Letter received from Mr. Gordon *re* Mr. Dunn's evidence.

Letter to Mr. R. H. Ryan *re* Mr. Dunn's evidence.

Telegram to Mr. Ryan requesting him to see Mr. Dunn, and ask him to call at this office one morning this week.

THURSDAY, 28 *FEBRUARY*, 1889.

Letter to Mr. Gordon with copy of Mr. Harper's evidence.

Letter to The Under Secretary for Public Works *re* Mr. Franklin.

FRIDAY, 1 *MARCH*, 1889.

Minute received from the Under Secretary for Public Works, enclosing letter from Mr. District Court Judge Murray *re* chemical changes of the clays.

Letter to Under Secretary for Public Works, acknowledging its receipt, and asking for analyses made by Mr. Mackay.

Analyses received.

SATURDAY, 2 *MARCH*, 1889.

Letter to Mr Gordon, with copies of Mr. Mackay's analyses and of Judge Murray's letter.

Letter to Mr. Dunn *re* not calling this morning.

MONDAY,

MONDAY, 4 *MARCH*, 1889.

Waited on Mr. Franklin *re* his evidence.

TUESDAY, 5 *MARCH*, 1889.

Letter from Mr. Dunn *re* his inability to attend on Saturday last.
Letter to Mr. Dunn in reply.
Letter to Mr. Ryan, coming up on Thursday.
Letter to Mr. Shand *re* Mr. Dunn.
Letter to Mr. Franklin, asking him to call on Friday.

WEDNESDAY, 6 *MARCH*, 1889.

Attended at Public Works Office *re* printing the fresh matter now ready.

Mr. Franklin, C.E., attended and informed Mr. Mestayer that, having been engaged as the professional adviser to the contractors, he was not prepared to give any evidence until he had received a reply from the contractors to a letter which he had sent them.

Preparing report on Judge Murray's letter; also on Mr. Mackay's analysis of the soils at Prospect.

THURSDAY, 7 *MARCH*, 1889.

Proceeded to Prospect, where Mr. Mestayer re-examined Mr. Dunn, Mr. Ryan, and Mr. Davis *re* shale peeling up.

SATURDAY, 9 *MARCH*, 1889.

Letter to Mr. Gordon, with copies of evidence of Mr. Dunn, Mr. Ryan, and Mr. Davis, taken on Thursday.

Mr. F. A. Franklin called and stated that he declined to give any evidence, as his clients, the contractors, did not see that any good would result from re-opening the subject.

MONDAY, 11 *MARCH*, 1889.

Letter to the Under Secretary for Public Works regarding Mr. Franklin's refusal to give evidence, and asking for instructions.

TUESDAY, 12 *MARCH*, 1889.

Letter to Under Secretary for Public Works, *re* printing evidence, &c.

MONDAY, 25 *MARCH*, 1889.

Letter to the Under Secretary for Public Works, enclosing report on analysis of soils, and Mr. District Court Judge Murray's letter on the effect of chemical changes in the material forming the Prospect embankment.

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SYDNEY WATER SUPPLY.

(REPORTS, &c., ON THE PROSPECT DAM BY MESSRS. GORDON AND MESTAYER.)

Ordered by the Legislative Assembly to be printed, 15 *January*, 1889.

[*Laid upon the Table of the House, further reports, minutes, and correspondence in connection with the Prospect Dam.*]

PROSPECT DAM.

15 January, 1889.

I HAVE carefully read and considered the reports which have been furnished by Messrs. Gordon and Mestayer in connection with this important matter. A perusal of all the correspondence will, I think, show that I have neglected no opportunity of obtaining information from every source which has been open to me in relation thereto.

I have from the first been fully impressed with the necessity of ascertaining all the facts of the case, and making them public without a single reserve, and this, I think, I have accomplished.

A perusal of the reports obtained will, I think, show that if the measures recommended by the two able engineers which I have employed are carried out no fears need be apprehended of the ultimate success of this great work. I have now to direct Mr. Hickson to carry out as quickly as possible the works recommended by these gentlemen, and if I have not an opportunity of doing it myself, I would urge my successor to place all the papers on the Table of the House at his earliest convenience. With regard to the termination of the contract recommended by Mr. Gordon, I have taken steps to secure this, but I have been met with the statement on the part of the contractors that there are outstanding claims unsettled, amounting to something like £33,000. This is the first time I have heard of their existence, and upon making inquiries of the Harbours and Rivers Department I am told that they are also unaware of it. The whole matter requires careful investigation.

JOHN SUTHERLAND.

Report on the Prospect Dam.

By G. Gordon, M. Inst., C.E., 7 January, 1889.

The points on which I am desired by the Honorable the Secretary for Public Works to report are :—

I. On the dam and subsidiary works as a whole; whether the design is in accordance with the best engineering knowledge, and whether the work has been faithfully carried out according to the design.

II. The present condition of the dam.

III. The kind of material of which it is composed, and its adaptability to the purpose for which it has been used.

IV. The cause of the movements, and their significance as bearing on the stability of the dam.

V. The best course to pursue under the circumstances.

2. Having made a personal inspection of the dam, and had levels, measurements, and borings, and an examination by a diver made in my presence, and having examined the persons named in Appendix II, and inspected original drawings, &c., I have given the subject my most careful consideration, and I now have the honor to report as follows:—

I.—The Dam and Subsidiary Works as a whole.

3. Assuming the scheme of bringing the Nepean water into Sydney, of which the Prospect Dam forms an important part, to have been, after full consideration, finally adopted as the best, I am of opinion that the general design of the dam and its subsidiary works leaves nothing to be desired. It is in full accordance with examples of similar structures by some of the most eminent engineers in England, and in some particulars, I think, it is in advance of several important modern works in Europe. It seems to me complete in all its parts, simple in design, and therefore easily worked. As far as the general design is concerned, it seems to me to have been departed from in constructing the works only in two particulars; the connecting main has been laid on the lower instead of the upper side of the dam, and the brickwork stop in the tunnel has been purposely left out. Both are, I think, improvements.

4. I shall have occasion to refer to the specification again under III; I would here remark that so far as it applies to the dam it seems to me to be rather too strict and explicit for a work of this magnitude, the conditions of which had in part to be ascertained as the work proceeded, and not to leave enough latitude to the engineer. At the same time I admit that high authorities could be cited in favour of every clause in it. But for such a work the specification should be made applicable according to the spirit or intention and object of the design, rather than to its literal expression in the specification and plan, and it seems to me that in some particulars it would under this specification have been difficult to exercise a desirable latitude without coming into collision with the contractors. Judging by the evidence, I am of opinion that the contractors carried out the work as nearly as possible according to the specification, and in fact that they were very strictly kept to it, although Mr. Ryan, the executive engineer, and other witnesses, say there was a constant battle going on between the officers of the Department and the contractors. This is by no means an unusual state of affairs on large works. All the evidence, both of contractors and others goes to prove that Mr. Ryan was unremitting in his attention to the work and scrupulously exacting as to the conditions of the specification. There are on every work some occasions on which deviations from the specification are unavoidable, owing to the weather or other accidental causes.

5. As to the tower, tunnel, and outlet works generally, I had an opportunity of seeing them in progress in August, 1884, and was impressed by their substantial character and the care that was being taken in their construction. As they seem now to be in perfect order I shall not need to refer to them again.

II.—The Present Condition of the Dam.

6. The first slip at No. 54, which began in April last and continued up to November 12th, appears now to have been very nearly stopped in its horizontal movement by the deposit of stone on and outside the lower part of the slope in the middle portion of the slip. While the filling up of the slip went on in July and up to August 6th, the forward horizontal movement was as much as 1 foot per diem. After the 7th August it averaged 1·08 inches per diem to the 31st, and during the whole of September it only moved 1 inch. In October and part of November the movement was dependent on the work of filling and trimming going on on the inner slope, the aggregate movement up to November 12th being 20 inches. Since that date sometimes no movement has been detected for days together, but the bank has not yet quite attained a state of equilibrium, inasmuch as movements of $\frac{1}{8}''$ to $1\frac{1}{8}''$ in a day have been measured, amounting in the aggregate to $6\frac{1}{2}''$ from November 12th to December 20th. The forward movement of the stone filling which was observable for some time in the axis of the slip, and which reached a total observed amount of $10\frac{1}{2}''$, has almost ceased, no motion being detected from the 27th November to the 18th December, except $\frac{3}{8}''$ on the 11th December. There is still some forward movement at the ends of the slip where the stone filling is incomplete.

7. From the sections shown to me that had been taken from time to time it is evident that this slip has a forward rolling motion, the toe having apparently resisted for some time any tendency there may have been in the lower part of the bank to slip forward. The motion is roughly indicated by arrows on the section at 54 on plan No. 1 attached.

8. As the front bank slipped away from the nearly vertical puddle wall, it is probable—indeed it may be said to be certain—that the latter subsided under its own weight into the space thus formed in front of it. It is extremely plastic, and it is recorded that the level of the top was found on the 2nd May, 1888, to have gone down 5 feet. After being remade, it went down 3 feet to 21st June, and 6 feet and upwards to 22nd September, when it was again fully rebuilt, but had subsided about 5 feet up to the 20th ultimo.

The Second Slip.

9. The second slip at T.S., No. 44, was first observed in November last, and observations of the daily movement were begun on the 23rd of that month. Before my arrival Mr. Mestayer had put down two bores, called No. 1 and No. 2, on the 7th and 10th December, respectively, at the reduced levels of 185·87 and 186·50, the water level in the reservoir being 178·79 and 178·75. On the 14th December

December I put down a bore, called No. 4, in the axis of this slip, at the R.L. of 179·517, near the water's edge, the water level being 178·72. This bore was put down to the original bottom at about 26 feet. At 14 feet (R.L. 165·57) water was met with which rose 4 ft. 6 in. in the bore (to R.L. 170·0); below that, at 16 feet, we found stiff dry yellow clay. At 20 feet it was slightly sandy. The water then rose to 1 ft. 5 in. below W.L. of reservoir or R.L. 177·22. On examining the same day No. 1 bore, the water was met (in the shape of thick slurry) at R.L. 172·62, and in No. 2 (clean water), at R.L. 177·42, with slurry at 174·25. On again trying the level of the water in No. 4 it was found at 174·24. As, in boring, this level was pierced in dry clay, and as the level of water first struck was considerably lower, also because in boring Nos. 1 and 2 no water was met with, although it afterwards rose in the bores to the heights above-mentioned, I conclude that there is no wet stratum on which the bank slides, but that the movement is in the whole mass, and the excess water is distributed through it. In all these bores the clay was generally similar, being of various colours, with a considerable admixture of white clay; in general it was stiff and dry, sometimes hard, and evidently, from the water not percolating into No. 4 from the reservoir, quite water-tight from the outside, although there is water higher up in the bank which finds its way into the bore-holes.

10. A bore, No. 3, was put into the puddle wall at the top of this slip. The puddle was thoroughly well worked, and very smooth and plastic, but to my mind not stiff enough. On the augur being withdrawn the bore-hole partly collapsed before the tool could be put down again. It is said by Inspector Davis that this was put in harder than that in the lower parts.

11. The puddle wall has subsided vertically 14·82 feet, or 12·73 below the intended ultimate level. The horizontal movement of the puddle wall has not yet been ascertained at this place, but it must have moved forward with the inner slope. The total horizontal movement of the face from 22nd November to 20th December is stated at 4·46 feet, and it was pretty uniform, averaging nearly 2 inches a day.

12. On the 19th December I sent Mr. Cameron, diver, down the slope at this place to examine the face of the bank and the toe. As well as could be measured with a steel tape down the slope from a mark above water, it was found that the top of the stone dyke had moved forward about 3 feet. The diver reported that the form of this slip is quite different from that at 54. There is no steep face to the bank and pitching near the bottom, but the toe appears to have been pushed out horizontally, the outer slope of the dyke being flatter, and the original surface of the bottom being forced forward and raised like a blister. This action extends both ways from section 44 as far as he could go, probably 200 feet on each side, but it diminishes each way, and there is more disturbance towards the east than towards the west. The broken stone between the dyke and the pitching is not thrown up or disturbed; the slope seems to the diver to be pushed out bodily, and the stones of the dyke are displaced There were a good many loose stones which seemed to have come from the rough stone above the dyke, but they may have come from the dyke itself. The top of it is not of a uniform height, being 2 or 3 feet higher in some places than in others. The diver shifted the gear to section 47, and found the toe similar to the last place, but there was less bulge in the ground. In some places the dyke is twisted. Going from section 47 towards the first slip the action seemed to die out, but there were still indications of it. The results of the diver's examination are sketched on section 44, where the disturbance is at its greatest. See sketch on drawing, Appendix E. Plan 2.

13. Although the section of this slip is quite different from that of the first, it is, I think, probable that the movement of the bank began in the same way, and is due to the same cause; but in the first slip the foundation and the toe offered greater resistance, and caused the slipping clay to rise and roll over the dyke, while in the second the toe offered comparatively no resistance to the greater weight behind it, the bank being nearly one and a half times as high as at the first slip. In both cases the bank is seeking a flatter slope.

At and near Section 18.

14. On the 14th December I desired that a bore, No. 5, should be put down next day at section 18, which is nearly the highest part of the dam, and the cores kept for inspection on the 17th. They showed that the bore went through similar clay to the former bores. The bore was about a foot above the water level. Muddy water was struck at 10 ft. (about 168 R.L.), which in about three minutes rose to the top of the hole. When the men left off on Saturday the water was about 11 in. below the surface of the reservoir. On removing the plug on Monday the water rose and ran over. At 8 to 10 ft. soft clay was met with, "as soft as the puddle in No. 3 bore," which at 4 ft. I found like soft putty, and at 6 ft. rather softer. On Monday the 17th the bore was put down to 42 ft. (the length of the rods), and finished in very stiff brown and gray clay. When the rod was taken out from 42 ft. depth the water stood at 3 ft. 6 in. from the top of the hole, or 2 ft. 7 in. below the reservoir water. I have shown this bore on drawing No. 3, as also the two additional bores Nos. 6 and 7 put down by Mr. Mestayer after I had left, in order to show the different levels at which water was struck, and at which it settled afterwards in the bores (see paragraphs 9 above and 26 below).

15. On the 17th the diver was sent down at No. 19, and reported that the toe was intact, and just the same as when he was down last for Mr. Bishop in May; but in about 12 ft. of water he came on a step or ridge in the rough stone which seemed to have been disturbed and had a wavy appearance. On the 20th the diver went down (by my instructions) at No. 17. At the bottom he found some loose stones which were not there when he was down in May last, they seem to have come from the rough stone; there are also some very loose stones in the dyke itself. Between 16 and 17 there is a great oozing out of white clay, of which the diver brought a specimen, extending some distance, and completely covering the slope. It runs over the bank "like paste" in some places, and extends pretty well up to shallow water. He noticed very little spuing at No. 19 when he was down on the 17th. He does not think this spuing runs down to the bottom. At 19 he got on the clean original bottom, and at that point there was no disturbance. He found places where there was some spuing when he was down for Mr. Bishop, but cannot remember where they are, as he made no notes at the time. At Nos. 16 and 17 he also found the ridge or step which he found at 19; it is not continuous but irregular, and not in a straight line. He did not find it where the spuing had taken place. None of this spuey material is found at the second slip, or between it and the first.

16. The puddle wall at No. 18 has subsided 4 ft. 7 in., or to 9 in. below the intended ultimate level. It has moved forward 2 ft. 4½ in. It is evident, therefore, that the bank at this place is not quite stable, although the movement is as yet very much less than at the slips. The curb at this section is

75 ft. 6 in. from the centre line, and it was intended to be 73 ft., and the line of curb seems to the eye to be somewhat bulged outward from the north end of the dam all along, but this cannot be verified by instrumental measurement, as no exact records exist of its original position. There is a curve in the rough stone toward the water side looking from the east bank, where it leaves the solid, but this is also subject to the remark just made.

At Section 5.

17. The puddle-wall is here in its right position—horizontally. It has subsided 1 ft. 9 in., that is to say, it is not yet quite down to the ultimate level, so that there is nothing to show that any undue movement has taken place at this place.

18. The rear slope of the dam seems to be in perfect order. The contractors were engaged at the time of my visits in soiling the slopes, but I could see nothing to cause any suspicion of undue or unequal settlement, nor has such, so far as I have been able to learn, ever been stated to exist.

19. The dam is at its present level quite water-tight, the leaks that have been said to exist are entirely imaginary.

20. I do not believe that the puddle-wall is fractured or cracked in any part, or that it is possible it should be.

III.—The kind of material of which the dam is composed, and its adaptability to the purposes for which it has been used.

21. The two materials we have to deal with under this head are the puddle in the middle of the dam and the clay of which the inner slope of the dam is built up. The former is made of the best, indeed the only clay available; and it has been well worked and made into a perfectly water-tight puddle. It is to my thinking not quite stiff enough; but as it is a "short" or friable clay, not in the least tough, it is better that it should be rather too soft than too stiff. I believe it would be found sufficiently dense in the lower parts of the wall. One of the difficulties the resident engineer says he had with the contractors was the too great quantity of water used in its manufacture. On the other hand, the contractors say the clay was of such a sticky and adhesive nature that the cutting and cross-cutting with spades specified and insisted on could not be done without a large quantity of water. In addition to this, the trench was subject to be flooded by leakage from the pipes supplying the water on the dam, and by the rainfall on the inner slope, which, according to specification, had a reverse slope of 1 in 12, and from which the surplus water had to be carried across the puddle before it could reach the drains in the outer slope. The contractor's engineer, Mr. Moline, also says that owing to the puddle being brought up in perfectly horizontal layers (longitudinally) it was difficult or impossible to thoroughly drain off surplus water. In July, 1885, the resident engineer wrote strongly to the contractor respecting the too lavish use of water. Although this is the only written objection on the subject, the letter implies, I think, that this had been the subject of verbal complaints. (Appendix III.)

22. I believe that though it may be liable to greater subsidence than was reckoned on in its higher parts, and may in this way give trouble, it is perfectly safe in regard to being watertight.

23. The inner slope is principally, if not entirely, composed of clay from the flat behind the reservoir. Wherever bores have been put down they show a similar material—brown, yellow, red, and white clay. It cannot be said to be a good material for a bank, even if the most objectionable part (the white clay) had been excluded; and I am informed it was so mixed up with the other that it would not have been possible to exclude it from the dam. There is better material in Prospect Hill, and a good deal of it has been used apart from that required to bare the stone in the quarry. Some of it is mixed with stone, but some is free from it. These seem to be the only materials available.

24. Had these different materials been put in alternately in thicknesses of, say 3 feet each (3 layers of 12 in.), they would I think have made a very good bank. The evidence is somewhat conflicting on the question why only clay was used. Mr. Ryan says the contractors were at liberty to use earth from any of the places mentioned in the specification. Mr. Moline, while admitting that Mr. Ryan objected to pure clay being used, says he would not allow the earth from Prospect Hill to be brought on the work in trucks, or any stony or gravelly material to be used in the inner slope, relying on clause 17 of the specification. This is one case in which I think the specification binds the Resident Engineer too much, although Mr. Ryan says his chief allowed him every reasonable liberty. There are difficulties in modifying the contract *vis-á-vis* of the contractors.

25. I think the plan of depositing the material in the bank in layers sloping inwards, 1 in 12, is not suitable to this material, because, as the outer part of the embankment was always higher than the part next the trench, all the water falling on the bank in storms, as well as that specified to be used, is confined between the puddle wall and the slope, and cannot escape except to a small extent by evaporation. The practice of engineers differs in this respect, as well as regards the use of water in consolidating earth work. I think it would have been impossible to avoid the use of white clay entirely in this bank, and, therefore, I think alternating horizontal layers of clay and a more free material should have been adopted. (See para. 24.)

IV.—The cause of the movements and their significance as bearing on the stability of the Dam.

26. I think the causes of the movements are:—First, the character of the material employed in the inner slope, which will not stand at a slope of 3 to 1. Secondly, an excess of water used or allowed to accumulate in the inner slope of the dam—its presence in excess of what the clay will retain being shown by the filling of the bore-holes from a higher level than that of the reservoir water—and the excess tending to cause the material to take a flatter slope and to do this irregularly, and, so to say, in patches. There exists an erroneous impression that the water in the reservoir is destroying the bank, and that therefore its entire disappearance or dissolution is only a matter of time. The material is not washed out (except to a small extent in the case of white clay, see para. 15), but it is shifting in order to obtain a flatter slope. I think more vertical subsidence will take place in the puddle wall than has been allowed for in the higher parts, and also generally, because it is said that the bank was not so well consolidated by carting and rolling for 3 feet or so on the inner side of the trench under the water-pipes, thus giving an opportunity for the puddle to squeeze laterally and compress this wet and ill-rammed

ill-rammed ground. Near the first slip the progress section shows that there was a deep depression here in the puddle wall, and I was informed that the water in the trench had to be dammed back in steps on the puddle, and that it sometimes got into the trench where it was being put in; and although it is possible to attach too great importance to this fact, I believe that this circumstance has increased at this place the over-saturation of the inner slope. I consider the rear slope of the dam perfectly stable; the inner slope is not so, nor is the puddle wall at present, but I think the inner slope can be brought to a state of stability, when it will serve its purpose of supporting the puddle wall.

27. In the meantime I do not think there is any risk of the dam breaking, even under a considerably greater depth of water than there is at present, or of any loss of water and consequent scarcity in Sydney.

V.—The best course to adopt under the circumstances.

28. What seems to me most urgently needed at present is the stoppage of the second slip, the first having been nearly brought to a stand-still. In my opinion this can only be done by reducing the slope of the bank, and opposing weight to its present tendency to slip. The broken stone used at the first slip would, I think, have been better deposited from a staging outside the toe, and clear of the shifted material, and I believe this is recognised by the engineers, but they were without the necessary appliances. Immediate action was needed, and it was not anticipated that new slips would take place. In deeper water I think barges or rafts towed by small steamers should be employed. It is impossible to say at present how much of this work will be needed, seeing that the place where the toe is most perfect is in the deepest part of the dam, where the work is oldest, and the greatest opportunities of slipping have existed; but there seems no doubt at all that it will be required from T.S., thirty-five, or so nearly up to the first slip, a distance of 1,600 feet, and for this part of the dam I would recommend *that the work be put in hand at once*, if it has not already been begun. I fear it will be necessary for a much greater length, for in whatever way the now slight movement at 18, and the oozing out of bad material at 16 and 17 will develop themselves. A flattening of the slope above L.W. to 4 to 1 will be necessary, and to do this under water a deposit of heavy material to form the foot of the new slope seems indispensable.

29. I regard the drawing off of the water in the reservoir as out of the question altogether; and even were it not so as regards the supply to Sydney, any incipient slip would be encouraged and new ones started—while, in all probability, the cheaper rate at which a new toe could be formed with dry materials would be more than balanced by the additional amount of damage to be made good.

30. The outer mound of stone of all sizes mixed being formed, the space between it and the present slope could be filled with a cheaper material—such as quarry-chips or screenings and strong earth deposited in bags and covered with broken stone. I have sketched the plan I would recommend on plan No. 4 attached to this report.

31. The precise mode of dealing with the bank from 15 to 20 can only be decided after the nature of the movements now beginning there have been ascertained. If the toe-dyke remains unmoved, and no bulge appears in the bank under the curb, I think the oozing can be stopped by a deposit of screenings; the slope above L.W. (170·0) to be flattened to 4 to 1, in the manner shown on plan 5 by red lines; the screenings covered with quarry rubbish and earth in bags supported by a mound of rubble 10 feet high and 6 feet wide on top; but if the bank shows a tendency to slip in the same way as at 44 or 54, then a much larger mound and a flattening of the slope under L.W. will be necessary. This I have shown on the same drawing in blue lines, and it will be seen that if it is ever found necessary it will be an addition to the deposit of screenings, which I would recommend to be put on at once unless the oozing out of clay is found to have ceased. In making this new slope of 4 to 1 above L.W. it may be possible to avoid taking up much of the pitching by giving it time to settle. It will be well not to raise the water in the reservoir higher than will give an ample reserve for Sydney, because, if raised, the water would, in my opinion, retard any movement that may be going on with the water at its present level, and make its true character more difficult to determine, while, if the movement were altogether checked by the rise of the water, it would certainly reappear on its being lowered again in summer; neither is it necessary to permanently finish off the crest of the dam. The width of the crest is reduced in front by 8 feet, but if it be desired to keep the 30-feet width on top, which, I think, is more than is necessary, it may still be got by adding to the rear slope at the top without making the slope too steep.

32. A slight movement in a high part of the dam would probably be best detected by the horizontal movement of the puddle wall, for the longitudinal cracks along the top might be caused by its vertical subsidence, especially where the trench was very deep, the added percentage having only been reckoned on the height from the base of the bank, and not for the whole height of the puddle; and I would therefore recommend that trenches be cut across the dam at every alternate T section at least, and the position of the puddle wall both as to level and horizontal position with reference to the centre line be observed daily, as also the position and levels of a series of pegs on the slope at each trench down to the curb measured and recorded in the accurate and careful manner adopted by Mr. Jacobs in observing the present slips. Beyond the water lines soundings should be taken. By this means any movement in the body of the dam, apart from subsidence, can hardly fail to be detected. (It should be stated that neither the contractors or their engineer, nor the resident engineer, suspected any slipping while the dam was being constructed. Mr. Davis, inspector, says he noticed that the inner slope took more filling than the outer, but he does not appear to have attached much importance to this.) Further, that if the services of Mr. Cameron, diver, are available, he should examine the face of the dam below water, going down at such distances as would allow him to cover the whole of the length, and reporting fully what he finds each time, and to do the whole work at least twice, and oftener if any change is observed the second time.

33. The setting of the pitching and other work on the dam should be discontinued, and I would suggest that the present contract should be terminated by mutual agreement. The work remaining to be done by the contractors is neither important nor of much value, and the bank should, while these investigations are going on, be entirely in the hands of the officers of the Department; indeed if my recommendations are adopted it would be necessary to stop traffic on account of the trenches.

34. When cracks appear they should be dug out so as to allow of their being filled in and well rammed from the bottom to the top, but I do not think this work is of very great urgency in dry weather until the slipping has stopped. It is well however to prevent any more rain-water getting into the dam.

Where

Where the cracks are caused by the subsidence of the puddle wall, *i.e.*, when they occur between it and the earth filling front or rear, I think they should be filled up by forcing the puddle to expand laterally by weighting it on the top.

35. With such a watertight material as is used in the front slope I do not think there is any necessity for the puddle wall going higher than the H.W.L. or R.L. 195·00.

Estimate.

36. An estimate of the cost of the remedial measures must necessarily be contingent on the behaviour of those parts of the dam in which the movement is as yet uncertain (see paragraph 28 above). I therefore divide the estimate into five parts, of which the first, amounting to £12,050, refers to the work I have designated as urgent (paragraph 28). The second and third are contingent on the state the dam is found in. If it slips as it has done at 44, No. 3 must be added to No. 2, not substituted for it, and that part may cost from £23,850 to £42,400. No. 4 is not urgently needed at present; No. 5 is.

37. I would state while in order to save time Mr. Mestayer and I conducted this inquiry together, as regards borings, diving operations, and also in taking some of the evidence, our joint work stopped there; and we have not conferred together on any of points III, IV, or V, referred for our separate and independent reports.

38. I have much pleasure in saying that all the persons to whom I applied for information, who were more immediately connected with the work, whether as engineers or contractor, seemed to be anxious to give all the information in their power, and I have to thank them for their willing co-operation with me in this inquiry.

Summary.

39. It may be convenient if I state briefly the results of my inquiry under the different heads.

I. *The general design of the Dam* and subsidiary works is in accordance with the best engineering knowledge, and the only ways in which the spirit of the original general design have been departed from are, in my opinion, 1st, a too close following of high authorities in the construction of such works, and 2nd, the choice of material.

II. *The present state of the Dam.*—The only part of the dam which seems to be perfectly stable is a short length at each end, and while the amount of movement in the highest part of the dam is as yet slight, it requires most careful watching. The slip at No. 54 seems to be now at rest, and that at No. 44 approaching that condition, but if the bank were made up, or the water lowered, it would probably again begin to move.

III. *The material* composing the inner slope of the dam is too clayey and, while quite water-tight, will probably cause a good deal of trouble and expense before it finally assumes a permanent form. The puddle in the wall is highly plastic and quite water-tight, but rather soft.

IV. *The prime cause of the movement* is the too clayey nature of the material forming the inner slope and the imprisonment of *an excessive quantity of water* in the bank during construction. This, I believe, can be remedied, but at a considerable cost. The state of the dam need not cause any alarm for its ultimate safety or stability, or any apprehension of a scarcity of water in Sydney, but prompt action is necessary.

V. *The best course to pursue.*—To terminate the present contract in order to allow of a thorough examination of the bank which should be undertaken *at once*; to stop the pitching of the slope; to construct at once a rubble bank from No. 35 to No. 51, or thereabouts, outside the toe and fill in behind it with suitable heavy material to a slope of not less than 4 to 1 below low-water and to reduce slope above low-water also to 4 to 1. To begin a similar rubble wall wherever there is any sign of the toe moving or of the slope bulging, and to continue in such places the treatment recommended at 35 to 51; to load the puddle wall; to let the treatment of the portions of the bank, where white clay is oozing out on the surface, depend on the movement or stability of the bank, and where there is any considerable amount of this oozing to cover it with screenings immediately; to allow the water to rise in the reservoir sufficiently to afford a proper reserve, but not higher, until the movement of the bank is checked; to use the greatest dispatch in carrying on the repairs.

G. GORDON,
M. Inst. C.E.

Appendix I.—Estimates.

Estimate No. 1.

For repairs from T.S. 35 to T.S. 51, recommended at once (para. 28).

	£	s.	d.
Rubble mound, 25,718 cubic yards, at 6s.	7,715	8	0
Screenings, 1,185 „ „ 7s.	414	15	0
Filling, 9,130 „ „ 4s. 6d.	2,054	5	0

Appendix II to Report of 7th January, 1889.

NOTES of Evidence taken *in re* Prospect Dam by G. Gordon.

1. I examined the following persons, and I give below the substance of the information obtained from them:—

1. Mr. Moline, engineer to the contractors.
2. Mr. Shand, manager for the contractors.
3. Mr. William Nicholas, who was in charge of the borings made by my orders, and was an inspector on the works.
4. Mr. Ryan, resident engineer.
5. Mr. J. A. Hogue, editor *Evening News*.
6. Mr. Stewart Wearne, correspondent of the *Evening News*.
7. Mr. Rutherford.
8. Mr. E. Jackson, brick and masonry inspector.
9. Mr. Davis, inspector.
10. Mr. Limond.
11. Mr. Weston (by letter).
12. Mr. Murray (examined by Mr. Mestayer in my absence).
13. Mr. Cameron, diver.
14. Mr. Bramston.
15. Mr. F. B. Gipps, C.E. (examined by written questions).
16. Mr. Buckett.
17. Mr. Maher.

2. The evidence, except in the case of Mr. Weston, was taken down by Mr. George Robinson, Shorthand writer, and written out in duplicate for Mr. Mestayer and myself (except that of Messrs. Moline and Shand, whose evidence was taken down by another shorthand writer). I examined Messrs. Moline, Shand, and Ryan separately from Mr. Mestayer. The others we examined together, except Mr. Murray, who was examined by Mr. Mestayer only, and Mr. Gipps, whose evidence I got in answer to written questions put through Mr. Mestayer.

3. Mr. Louis Moline, 15/12/88, stated that he took charge of the works for the contractors about August, 1884, and was there till February, 1887; when he took charge there had been a great flood, and the puddle-trench got filled with water; the same year the flume in the lowest part of the valley burst, and the trench was again filled with water; it was baled out and all the slush taken out before work was resumed; a second flume at a higher level by 14 feet was put in at sections 24 to 25; after that the bank was kept high enough to collect any storm-water that might come in; the second flume was kept in for a considerable time afterwards, the trench and bank being properly stepped down, leaving an opening for an approach to the flume; a trench was dug in the solid and filled in in 6-in. layers when the flume was removed;

removed; the channel through the rear half was filled with stone; the material for the bank was chiefly got from the flat below the dam; none was taken from the upper or water side of the dam; there was not a sign of a slip; the material varies a good deal; Mr. Ryan objected to pure clay being used, but the whole country is clay, and the contractors could not help themselves; the bank was always watered as specified; it was watered by means of water-carts; a line of pipes was laid on the inner (or north) side of the puddle-wall, and the puddle was watered by hose from them; these pipes leaked or burst sometimes; the puddle would hold water "like a cup"; the frequent storms of rain did more than anything else to put water on the bank, and after rain it would lodge in the bank; sometimes the horses could not travel over it for a day or so; Mr. Ryan insisted on the clay in the puddle-wall being brought up in quite level steps, longitudinally, thus  ; this made it difficult to drain off surplus water from long lengths; Mr. Ryan often urged that less water should be used in the puddle, but it could not be chopped with less; the centre (middle) part of the dam is harder than that put on more recently; in 1886 cracks 2 inches wide occurred, owing to the subsidence of the puddle-wall; a deep part at No. 54 was pumped out after a heavy flood; does not think that has anything to do with the slip; the filling was both rolled and carted over; the specification was adhered to—"we could not get away from it"; considers the clay chopping needless, and that more water was put into the clay than was needed; the work was nearly all day-work; the clay-puddle was all day work; contractors objected to the water being let into the reservoir so fast; thinks that if the dam had not been filled so quickly there would have been a better chance for the water to get out of the bank; thinks there was less friction than usual between the engineer and the contractors; occasionally had to appeal to the chief engineer, who upheld the decision of his officer.

4. Mr. Robert Shand managed for Mr. M'Guigan (the contractor); after his death acted as executor; previously to this had never managed a contract for M'Guigan, but was more a confidential clerk; had charge of correspondence, pay, &c.; does not know that any part of the dam is different from any other part; so far as he knows the specification was adhered to to the letter; Mr. Ryan was very strict as regards that; the bulk of the material of the bank was got from the flat; it was all pretty much the same, and it was pretty well distributed; had a scheme for running a line into the hills and bring material down on to the bank; drained the surplus water into the stone drains in the rear half of the bank; was warned to give plenty of water both to puddle and bank; unless closely watched men will put more water on than ordered for ease in chopping; there was a man (now dead) who had nothing to do but to regulate the supply of water (Barge); puddle put in under his and Davis's inspection; both men were brought out from home; contractors had only to follow their directions; the men were entirely under their orders; the weather varied—1887 was very wet, last year dry; in 1884 or 1885 were stopped for want of water; got on very well with the engineer until lately, and carried out instructions; now there is a dispute about extras; often complained of undue strictness.

5. William Nicholas, inspector, took charge, first, at the 162-foot level; was on the trench, not on the bank, on the wet season; the contractors got rid of most of the water by draining into the stone drains; sometimes work had to wait, principally in the trench work.

6. Mr. Ryan, resident engineer (from beginning of work): Did not make the design of the work it was made in the office, as also the specification. Work was carried out as far as possible according to the specification. The material of the dam at No. 18, where the flume was, is the same as the rest, and the puddle was brought up the same way; had a constant battle with the contractors; sometimes puddle was too wet; sometimes layers of banks too thick; sometimes surface soil was brought on to bank. After heavy rain men did not run water off as soon as possible. Complained of rainwater and of constant bursting of pipes flooding the work, but only once in writing (copy of memo. of July 20, 1885, attached). The slip was first noticed (22/4/88) nearly at No. 54, and bulging was noticed on the 24th; communicated with Mr. Moriarty. It was decided to change the section of the puddle-wall at the top where it was not at its full height, by making a set off of 4 feet on the inner side at 195 R.L. The puddle-wall, where settlement had long been going on, was opened on 2nd May, 1888, and found at 194·65; refilled it to 199·57; reopened again June 21st, when it was 196·39; rebuilt it then, and afterwards at different dates between September 5th and 22nd, when it was 182·70; rebuilt to 199·41; stone filling in front of slip was begun on 28th August, 1888; measurements of slip were made from nearly the commencement; no movement of stone since 26th November at middle of slip; still putting stone at ends of slip, where there is a slight movement. About 5,800 cubic yards of stone has been deposited up to 20th November; saw no sign of movement during construction of dam; were stopped for want of water previous to heavy rains in 1885 there was nothing unusual at any time; there was at 54 a quantity of water that had to be dammed back.

7. The Honorable the Secretary for Public Works forwarded to Mr. Mestayer and myself copies of correspondence that had passed between him and Mr. Bennett, proprietor of the *Evening News*, and we called on him to ask if he had any information he could furnish us with. Mr. Bennett referred us to the Editor, Mr. J. A. Hogue, and we saw him on the 18th December. Mr. Hogue informed us that Mr. J. Norton, now no longer connected with the paper, had furnished most of the information that had appeared in the *Evening News*. Mr. W. Stewart Wearne, now at Prospect, had also written several of the later reports. Mr. Hogue also gave us the names of Mr. Buckett, publican, near Prospect, Mr. Rutherford, who was a sub-contractor on the works, Mr. Ives, M.L.A., Mr. Davies, M.L.C., and Mr. Gipps, C.E., as persons who could supply information. Mr. Rutherford furnished the information in *Evening News* of 3rd December, and predicted collapse of dam. Mr. F. B. Gipps gave information on which it was stated (2nd May, 1888) that portions of the puddle-wall consisted of rubble and rubbish. Mr. J. Norton wrote all the articles up to end of June. All the information supplied had appeared in the *Evening News* of April 23rd, 24th, 25th, 28th, 30th; May 2nd, 10th, 11th, 12th, 25th (report by Mr. Gipps); June 8th, 9th, 15th, 21st; July 31st; August 1st. It was found afterwards, on going through the file of the *Evening News*, that on July 28th, November 26th, 29th, December 1st, 3rd, 7th, 10th, 12th, 13th, and 14th the subject was treated of.

8. Mr. Norton.—I sent a telegram to Mr. Norton, asking him if he were disposed to give evidence, but I received no reply until on the 21st he came to Mr. Mestayer's office. He said he was too busy to give any information until about the end of the next week, but he would send a letter and state when and on what terms he would do so. As I left Sydney on the 22nd, I have no evidence from Mr. Norton.

9.

9. Mr. Mestayer and I also wrote to Messrs. Ives and Davies; Mr. Ives replied, but he had no definite information to give as to the mode of construction of the dam; Mr. Davies did not reply.

10. Mr. S. Wearne.—On the 19th December, Mr. Mestayer and I examined Mr. Stewart Wearne at Prospect, and it appeared that most of the reports given by him to the *Evening News* were founded on information given him by Mr. Buckett, publican, and Mr. Rutherford, sub-contractor, and that he could not speak to many of the alleged occurrences from personal observation. Some of the statements, as, for instance, that the water was undermining the dam, were only expressions of his own opinion; he made no measurements of the slips, but "judged approximately"; he saw that some of the pitchers were displaced through the bulging; some dimensions (in article of August 1st) were given him by Mr. Rutherford; the statement that "the embankment was commenced straight off without cutting the natural surface" was information supplied to him (there is direct evidence to the contrary); in the paper of December 1st "leaks in the dam" were mentioned; Mr. Wearne stated that at this time a small stream of water appeared which had not appeared before (on this see Mr. Rutherford, page 22); he did not ascertain whether the small stream came from the stone drains; is not an engineer, and he wished the proprietors of the paper to send up a professional man, but this was not considered necessary. The article of December 3rd, in which it was stated that there was a small stream of water coming from the dam, was written by Mr. Norton; he is not an engineer, and knows less about the subject than he (Mr. Wearne) does; with regard to the disappearance of a horse and dray in the dam, Mr. Wearne did not see it; the horse sank up to the shoulder.

11. Mr. Wearne did not give Mr. Rutherford's name at this time, but said he would write to him for permission to do so; he had other informants.

12. Mr. Rutherford, Mr. Wearne's informant, was examined on the 21st; he was a sub-contractor, and did the pitching of the dam; he knows nothing of the construction of the dam; he did not notice anything wrong with the dam when he started the pitching; there was no bulging of the slope then; does not remember the date when he first noticed the slip; he told Mr. Copeland, one of the Inspectors, who disbelieved him; the pitching there was not finished, and he was shifted to another place; he had nothing to do with the construction of the dam, and only saw it when he rode past it; he did not see the earlier portion constructed; he did not, as stated in the *Evening News*, predict the collapse of the dam; what he said was that there would be a slip; it had begun, and he thought it would increase; has been about a year on the bank; has noticed the water very muddy for about a chain out all along the bank, when a breeze was blowing on to the bank; thinks the clay is too "soapy"; knows Mr. Wearne, of the *Evening News*, and corrected some information for him which he had got from a publican near Prospect; the information was very inaccurate; the "tunnels" spoken of are cracks, 8 or 9 feet deep; the extreme width he saw was 18 in. at the top; if anything of any greater size had opened he would have been sure to see or hear of it; has never heard of a horse and cart going down into one of the cracks, and if it had happened he must have seen or heard of it. Mr. Wearne asked him, some time ago, about the water flowing from the back of the embankment; told him he did not think it was from the dam; "it cannot be a leak"; the articles in the *Evening News* were certainly very highly coloured; they were what might be expected from a reporter wanting to create a sensation; while he was there about 20 feet of the bank (in height) was constructed, and it appeared to be done very thoroughly in 6-inch layers; nothing to lead him to believe there was anything wrong done; there were rows between the contractors and inspectors about not having sufficient water in the dry weather; there was not sufficient water in the puddle; has been on two or three dams in Victoria; never saw a bank so well constructed as this; the whole fault is in the clay; is sure the curb is not in the same position that he laid it in; thinks it fully a foot nearer the water; it was set out sometimes by Mr. Jacobs, sometimes by the contractors; thinks the contractors were compelled to do their work well, there were so many inspectors; Mr. Ryan and the contractors were always quarrelling.

13. Mr. E. Jackson, brick and masonry inspector:—The stone dyke at the toe was built simultaneously with the bank; they grew together; the embankment was made up against the dyke.

14. Mr. Davis, Inspector:—Came to the work in October, 1881; was specially brought out from England, where he had had experience in dam-making; has tested the puddled clay here under a small stream of water 1 foot high for twenty-four hours; it had then a slight dish in it; the contractors did everything we wanted, and they seemed willing to abide by the specification; we could not find much fault with them; after heavy rain the water used to lie about, but the contractors brought it into stone drains and ran it off; the (inner) bank is a watertight bank; the bank is moving; about eighteen months ago I found the bank had settled a good deal; when water got accidentally into the puddle-trench it was completely taken out; Mr. Moriarty thought we were getting the puddle too soft, but "I showed him that as the trench was rough it was necessary to be soft in order to fill in thoroughly"; his orders were to get the puddle so that the men could barely stand on it, and it was brought up soft "so that you could not sink into it with your boots"; it was made harder as it approached the top.

15. Mr. Limond was examined on the 20th December; he was on the dam from the beginning to the finish of the trench; drove the engine of the contractor's sawmill. (He afterwards said he left on 14th July, 1883.) Mr. Limond made a long statement in support of a theory of his that the puddle-trench should not have been put down lower than the water level in the ground, and that the damage is caused by this water causing the puddle to swell and lift the top; that water level was 15 feet from the surface; the water in the trial shafts was salt; thinks the puddle at the bottom of the trench is like soup; did not see how it was worked in the trench; puddle-wall and bank were about 12 or 13 feet high when he left; the puddle-wall was about a foot below the bank; saw no sign of water working up when puddle was put in; the salt water never came to the surface; it was 15 feet below it.

16. Mr. Weston stated in a letter that he was employed on the tunnel works from 1883 until their completion; he had nothing to do with the puddle-trench, but has often heard contractors complain of the strictness of the engineer as to the preparation and placing of the puddle; has had considerable experience on public works in England, and never was under an engineer so strict and attentive to his duties as Mr. Ryan.

17. Mr. Weston's name was given us by Mr. Murray, another sub-contractor on the tunnel works; I was not able to be present when Mr. Murray was examined by Mr. Mestayer; many of his statements are directly contradicted by the evidence of all the other witnesses who speak to these points; I attach no importance whatever to Mr. Murray's evidence on this account; Mr. Ryan had to request the contractors to dismiss him from the work.

18. Mr. Cameron, diver, attended on the 21st and recapitulated his report of the first two days' operations, and reported what he had found on the 20th December; I have stated fully the result of his examination of the work in paragraphs of my report, and shown it on plans 1 to 3.

Mr. Bramston attended to offer a suggestion of a mode of supporting the dam, a modification of one which, he said, had been successfully applied to a miners' dam at Eaglehawk, Victoria; he proposed a breakwater of screw-piles and cylinders or concrete blocks on the inside of the dam, and near it, but not touching it (instead of the log breakwaters used at Eaglehawk). It was explained to him that the circumstances being quite different the plan would not be applicable in this case, and he expressed himself as satisfied.

19. Mr. F. B. Gipps, C.E., was in Victoria when I was in Sydney, and I wrote to him saying I would leave with Mr. Mestayer a number of questions which I would have put to him. To these and others put by Mr. Mestayer I received Mr. Gipps' replies on the 7th instant. He had visited the dam occasionally, perhaps two or three times in the year from the beginning; he saw the puddle put into the trench; he denies entirely Mr. Hogue's statement (*see* page 16 *ante*) that he was responsible for the statement in the *Evening News* that portions of the puddle-wall consisted of "rubble and rubbish"; he never made such a statement, and says it is incorrect, having seen the puddle-wall from its inception; considers the puddle well made, and of good material; thinks decidedly that the material in the inner slope was inferior; it was almost entirely clay or soluble shale; never saw on the inner slope any layers of any great extent entirely of white clay; considers the dark clay from Prospect Hill worse than the white clay; has seen layers of both these clays in the dam, but cannot say that they extend to any great width or depth; the clays appear to be intimately intermixed; never saw the bank or puddle in a wet or sloppy condition; thought too little water was used; never noticed any tendency in the bank to slide before the first slip took place; has noticed all along the bank that the wash caused by the wind makes the water very thick; has seen nothing to lead him to suppose that the contractors had not carried out their work properly. Mr. Gipps goes on to state his theory of the cause of the slips, viz., that the ground water rises under hydrostatic pressure between the puddle-wall and the bank; this is inconsistent with the facts that water is sometimes found in the bank at a higher level than the water in the reservoir, and that on the other hand most of the bores were put down through dry clay.

20. Mr. Buckett, publican, was examined by Mr. Mestayer. Mr. Buckett's name was given to us by Mr. Hogue, of the *Evening News*. He objects to his name appearing in the papers; Mr. Buckett says that what he has to say is only what he heard from the workmen; he knows nothing about "rubble and rubbish" in the puddle-wall, and never heard of it; has seen nearly the whole of the work, but did not watch it closely; sometimes he was not on the bank for a month, sometimes two or three times a week; tells only what has been told to him; knows nothing of the work, and cannot say anything as to the truth or otherwise of what was told him; he thought the dam was unsafe when the first slip took place; he says the ground at the front too, near the second slip, was very spuey; could not ride over it in wet weather; saw trenches opened in the bank at the first slip; in some places the stuff was dry and had no solidity; thinks soakage coming from the outer toe is from the drains; never saw or heard of a stream of muddy water coming away from it; while the work was in progress the bank was often flooded, and also the puddle-trench; the puddle was so soft that the men could barely walk on it.

21. Mr. Maher was also examined by Mr. Mestayer. He knew nothing about the dam but what he had read in the papers, and had never seen it; he attended to suggest a remedy, which consisted in the application to the face of the slope of a layer of ti-tree confined between ironbark balks, kept in place by means of wood or iron "girders," and covered with ironbark slabs, 2 inches apart. Mr. Maher's suggestion is applicable to the protection of a slope from the wash of water, but would not in any way counteract the internal movement of the dam.

G.G., 7/1/89.

Appendix III to Report of 7/1/89.

MEMORANDUM from R. H. Ryan to R. Shand, Esq., for Contractor.

Harbours and Rivers Department, Prospect Reservoir Works, 20 July, 1885.

I WISH to direct the serious attention of contractor to the manner in which the puddle in embankment is at present prepared and finished. The disposition to have it imperfectly cut and the tendency to use too large a quantity of water is clearly manifest.

For contractor's information and guidance as to what is required I may inform him that the puddle, when finished in place, should be of the consistency and compactness, as nearly as may be, of well-prepared brick-clay as same is placed in the mould in the process of hand brick-making, should not be left sloppy or miry, but to finish in a tough, dense, and somewhat putty-like condition. As this is the portion of the work which must keep back the water, any divergence of the puddle from this state may have a result totally disastrous to you as also to others concerned in the undertaking.

Prospect Reservoir.

REPORT on the Embankment of the Prospect Reservoir, and Works in connection therewith, made in pursuance of instructions received from the Honorable the Secretary for Public Works, by R. L. MESTAYER, M. Inst. C.E., Hydraulic Engineer.

R. L. Mestayer, Esq., M.I.C.E., to The Secretary for Public Works.

Sir,

I have the honor to report that, upon receiving your instructions, I made immediate arrangements to inspect the Prospect Reservoir embankment, and undertake the investigation with which you had entrusted me.

These instructions (*Appendix A*) may conveniently be resolved into the following divisions, viz.:—

I. To visit the Prospect Dam and report upon its present condition.

II. To ascertain the kind of material that has been used in its construction, and its adaptability to the purpose for which it has been employed.

III. To point out:—
- (*a*) The cause of the movements that have taken place.
- (*b*) Their significance as bearing on the stability of the structure.
- (*c*) What will be the best course to take under the circumstances.

IV. To report on the construction of the dam and subsidiary works as a whole, whether the design is in accordance with the best engineering knowledge on the subject and whether the works have been faithfully carried out according to the design.

I propose to consider each division separately in the order named, and it may not be amiss for me to mention in this place that, having visited these works in March, 1887, and again early in June of last year, I had, prior to undertaking this investigation, some personal knowledge of the character of the work and the manner in which it had been executed.

I.—The present condition of the Dam.

On the 5th of December last, I visited the works, and after a careful examination of the plans, sections, and specifications of the reservoir and subsidiary works—especially of the plans and sections that had been prepared of those portions of the embankment that had given way, and the records of observations that had been taken up to that time—I went carefully over the ground with the resident engineer, Mr. R. H. Ryan, and took note of all the information he had obtained relating to the movements.

My last visit to the works was made on the 2nd instant, and the report which I now have the honor to present, is based entirely upon information and evidence obtained at various times, and from many different sources, during this period.

I found on examining the embankment, that considerable movement had occurred at three different positions, which were altogether in excess of anything which could have been produced by natural subsidence of the materials of which the embankment had been formed, viz.:—

(*a.*) The first slip between sections 51 and 55, where a large section of the water slope, about 300 feet long, had moved bodily forward 27 feet.
This forward movement was naturally accompanied by extensive subsidence of the top portion of the embankment between the puddle-wall and inner slope, and the formation of extensive fissures running longitudinally above the puddle-wall which (owing to the support from the embankment being withdrawn) had subsided about 17 feet and followed the moving portion of the embankment.

(*b.*) A second slip between sections 42 and 46, which had at that time reached a total forward movement of 1·52 feet, accompanied by subsidence of the inner portion of the top of the embankment and the formation of fissures running longitudinally over the outer and inner edges of the puddle-wall, similar, but to a much lesser extent to those formed at the site of the first slip.

(*c.*) Extensive subsidence of those portions of the top of the embankment between the puddle-wall and the water slope from sections 4 to 30, accompanied by the opening of fissures varying from a few feet to several chains in length, some of them being from 10 to 14 feet in depth, and from 1 to 18 inches in width.

The subsidence of the earth at this point, had, up to the time of my first official visit to the works, been ascribed to natural settlement of the material.

This being the deepest portion of the embankment, the results of the natural settlement would necessarily be more strongly defined than at the more shallow portions of the embankment; but, although recognizing the force of this argument, I was struck by the similarity between the fissures that had opened here and those at the other points, where decided slips had taken place, and finding that up to that date no regular observations had been taken at this latter point to ascertain whether any forward movement was taking place, I instructed Mr. Ryan to have daily observations taken for this purpose, similar to those being made at the site of the two first-mentioned movements. This has been done regularly since that date, and the result is that no movement has been detected during the last four weeks; but, in order to ascertain whether any movement other than subsidence had taken place previously at this—the deepest—portion of the dam, I have had sections taken and plotted upon the original sections to which the work was constructed, and these show clearly that a forward movement has taken place, amounting to a maximum of 18 inches at section 18, and extending right and left of this, the total length moved lying between sections 15 and 21.

The fact of this movement having occurred is further confirmed by the examination of the bank under water by the diver.

In

In order to ascertain the condition of the interior of the bank, I have had borings put down at eleven different points, and in Appendix B is given the results in detail. Generally speaking, they indicate that the bulk of the embankment is solid and dry; but in most cases there are indications of the presence of moisture in some one portion or other of the embankment in quantities more than sufficient to exercise a most injurious influence upon the materials of which the bank is composed.

As the depth of water on the inner toe of the embankment varied from 20 to 50 feet, I could not personally examine it, but the services of a diver were placed at my disposal, and with his assistance a careful examination has been made of that portion of the embankment under water, extending from section 16 to section 50.

This examination has fully confirmed the fact of a forward movement having taken place at section 18, a bulge occurring on the slope about 36 feet from the waters edge, as though the upper portion of the bank had slid forward upon the lower. No movement of the stone dyke at toe of embankment was observable at this point.

The examination of the water slope of the embankment by the diver also revealed the fact of the slip at section 44 being different in character from those at section 18 and section 54. In these two latter cases the upper portion of the bank has moved forward upon the lower portion, the plane of movement lying apparently at a point about 40 feet below the top of the embankment at section 18, and about 29 feet below the top of the embankment at section 54, the stone dyke at the toe of the embankment retaining its original position at both these sections, but at the former place (section 44) the stone dyke has been forced from its position, driving the ground before it and opening cracks of many feet in length in the solid ground in front of the moving portion, some of the cracks being, the diver states "large enough to take in the whole of a man's leg."

The stone dyke all along this portion was very much distorted, many of the stones displaced, and several of them forced completely out of the dyke, which appeared from its form to be gradually overturning.

Between sections sixteen and seventeen—almost the deepest portion of the embankment—a large amount of soft material had spued out of the bank. Samples of this were brought up by the diver, and consisted principally of white and pale yellow clay of the consistency of stiff paste.

The diver reports having seen a little of this in one or two other places, but not in noticeable quantity, as at this particular portion of the embankment.

In order to ascertain the condition of the puddle-wall I have had the ground opened and the puddle-wall exposed at different points. The original line of the puddle-wall was then set out, and measurements carefully taken to the inner edge. It was thus found that the puddle-wall at section 18 had moved inwards (towards the water) about 2 feet 4 inches and had subsided 4·59 feet, being 7 inches more than had been originally allowed for.

At section 5 it had subsided 1·73 feet, being 7 inches less than the 5 per cent. allowed for, and the centre of the puddle-wall was in its original position, showing that no movement other than natural subsidence had taken place at this point.

At section 24 the puddle had subsided 3 ft. 9 in., being 4½ inches more than allowed for in the construction of the wall.

This excess of subsidence of the puddle-wall beyond the percentage allowed, is just what might have been expected, and will go on for some time yet, as it appears from the evidence given by Mr. Ryan that the 5 per cent. addition was made only on the height of the puddle-wall above the ground line, and that no allowance was made for subsidence of the material in the trench.

This I consider an error of judgment, the portion of puddle-wall in the trench being very moist, and exposed to a pressure from the material above ground of from 2 to 5 tons per square foot, will certainly be compressed to a greater or lesser extent, especially where the strata passed through are at all porous.

Samples of the puddle-wall were taken out at each place and carefully examined. The whole of them were very uniform, and showed every indication of the puddle being of first-class quality, thoroughly well worked, but of a softer consistency than I should have considered advisable.

I have carefully examined the back of the embankment, but can find no indication in any portion of it, of any movement other than natural subsidence. Particular attention was given to the lower portion of this side of the embankment owing to rumours that had been circulated of a leak having occurred at or near the deepest portion; but there is nothing to justify any such statement—in fact everything goes to prove the direct opposite; and I have no hesitation in asserting positively that there is not the slightest leak through the puddle-wall up to the present time, nor is there anything to indicate the slightest probability of such an occurrence in the future. Dry stone drains were built in this portion of the embankment to remove the surplus water from it during the time of its formation, and to serve as outlets for the portion of rainfall absorbed after its completion. The water now trickling from the foot of the back slope at two or three places in every case issues from the outlets of these stone drains, and is not more than would naturally be looked for, considering the large area of bank exposed to the weather, and the heavy rains which have lately fallen.

When I first examined the embankment on the 5th of December last there was no flow of water from any of these drains, but on the 19th of December there was a slight stream from the two draining the deepest portion of the embankment.

The whole of the ground at the foot of the embankment, except at the outlet of these drains, is perfectly dry and firm; and none of the witnesses whom I have examined have been able to indicate any point—except the outlets of these drains—where any moisture has at any time been noticed.

When the back slope of the embankment is turfed, very little, if any, water will find its way down these drains.

In Appendix C is given the total movement at each of the places where any slip has occurred, and also the daily movement since I have had the work under observation.

II.—The kind of material that has been used in the construction of the embankment, and its adaptability to the purpose for which it has been used.

This division of my investigations has a most important bearing upon the questions I have afterwards to consider, viz., the causes of the movements and their significance—and has consequently received my most careful attention.

I have spared no pains to obtain the fullest information from all sources, and all the evidence I have obtained from persons totally unconnected with either the Government Department or the contractors, goes to confirm the particulars given me by the Resident Engineer and by Mr. Shand the contractors' representative. There is consequently no conflict of evidence so far as regards the materials used.

The puddle-wall consists of carefully-selected yellow and red clays, excavated from the flat immediately below the embankment.

That portion of the embankment next to the puddle-wall consists of selected material taken from the same place as the puddle, and consists principally of yellow and red clays, similar to that of which the puddle was formed, worked in 6-inch layers.

The remainder of the embankment has been formed of somewhat similar materials, from the same site, together with a large amount of earth from the hill at the east end of the embankment and the material excavated from the puddle-trench.

This was all carefully inspected before being deposited, the finer material being deposited on the water side of the embankment, and the stone and coarser material at the back, all of it being worked in 12-inch layers, and every endeavour appears to have been made to thoroughly consolidate each layer by rolling and diverting the traffic over every portion of it in turn.

These layers were all formed with an inclination of 1 in 12 towards the puddle-wall.

The puddle is of a quality fully equal to any I have seen in the colonies. It is not quite as tough as puddle is usually made in England; but that is to be accounted for by the different character of the clay, none of the clays that I have yet seen in the colonies being as strong or suitable for puddle as the majority of the clays found in England.

The material, however, employed here is undoubtedly of very good quality, and quite suitable for forming a sound and perfectly water-tight puddle-wall.

I have taken samples from the puddle-wall, both by means of open cuttings and by boring into the heart of it; and all the samples, although taken from very different points and from various depths, are remarkably uniform, and prove that the puddle is of exceedingly good quality; but it has been put in softer than I consider necessary.

It is with very great regret that I find myself unable to speak as well of the material used for the embankment, especially for that side of it next the water.

The bulk of this portion is clay, taken from the same site as the clay for the puddle, and all the material which was not considered suitable for puddle was brought into the bank.

I do not consider that clay alone ever makes a good bank. It would be much better if mixed with an equal bulk of coarse gravel. In this particular case a considerable portion of the material consisted of inferior clay and decomposed shale, whilst the earth from the hill at the east end of the embankment contained a quantity of what appeared to be a dark, almost black, clay, resulting apparently from the decomposition of the diorite rocks; both this and the inferior light-coloured clay from the flat are unsuitable for the water-face of the embankment, as in the presence of water they run down to slurry of a specially slippery nature.

The borings which I have taken fail to show the presence of these inferior materials in beds or patches of any depth, and from the care that has unquestionably been taken to ensure complete mixture and thorough consolidation of the whole of the materials, I should not have anticipated anything different; but as these materials form a by no means small proportion—in some places amounting to one-fourth of the whole—I cannot but believe that they have appreciably affected the water-resisting capability of the remainder of the material, and in the presence of any large quantity of water the mixed material would not naturally stand at a slope of 3 to 1.

So far as the back of the embankment is concerned, I consider the materials quite suitable for the purpose, as even if the grey and black clays existed there in a much larger proportion than in the water-side of the embankment no evil result could ensue, owing to the draining of the bank by the stone drains and the admixture of rougher and coarser materials, which would have a tendency to prevent the formation of any plane of movement such as appears to have been formed where the slips have occurred.

All other materials that have been used in the construction of these works are, in my opinion, of the very best quality, and in every way suitable for the purposes for which they have been employed.

III.—(*a*) The causes of the movements. (*b*) Their significance as bearing upon the stability of the structure. (*c*) The best course to take under the circumstances.

(a) I have no doubt that the principal cause of the movements is excess of water in the embankment, which has acted upon the inferior materials (the white and black clays already referred to), disintegrating and decomposing them, and forming a slippery surface, inclined to the horizon at an angle insufficient to support the upper portion of the embankment.

This water can have obtained access to the embankment in three different ways, viz.:—

1stly. Upwards from the ground, as suggested by Mr. Gipps, in consequence of the puddle-wall having blocked the passage for the flow of the underground water through the porous strata intersected by it, and causing an accumulation of water at a pressure sufficient to enable it to force its way between the puddle-wall and the side of the trench, or through the ground underneath the embankment.

2ndly. By percolation of the water in the reservoir through the water-face of the embankment.

3rdly. By the accumulation in the embankment of rain falling upon the working-faces during the progress of the work, and sinking into the subjacent layers, partly also from the excess of water used in forming the puddle, and leakage from pipe supplying the puddlers.

It

It was asserted by one of the witnesses (Mr. Limond) that the movement was caused by water in the ground which rose and fell as though subject to *tidal influence*, and he considered that this water was acting upon the puddle-wall, converting it into "soup," and causing the whole mass to settle down bodily. A direct settlement, however, will not account for the movements which have occurred, and would, moreover, have affected the back of the embankment quite as much as the front portion.

The oscillations of water-level referred to by Mr. Limond have not been observed by other witnesses, not even by the man who had charge of the trial-shafts, and even if existing could not have had the effect suggested by Mr. Limond.

If the movements are due to water in porous strata underlying the reservoir breaking through the ground under the embankment owing to the action of the puddle-wall in arresting the natural flow, one would expect that the movements would in all cases be alike, and that the planes upon which motion has taken place would be at or near the same level as compared with the natural surface of the ground; also that borings put down through the embankment would all strike water at the junction of the bank with the original ground surface; but so far from this being the case, the bottom is in all cases where it has been reached by boreholes, hard and dry, water being met with many feet above the surface.

If the water were finding its way up through the puddle-trench, it would be found in greater abundance in the boreholes nearest to the puddle; the exact reverse is, however, the case.

Also, at the site of the slips at sections forty-four and fifty-four, where the greatest movement has occurred, no water-bearing strata were cut through, the puddle-trench being exceptionally dry at this part.

The gravel bed in which only was any quantity of water encountered underlies the deeper portion of the embankment, where the movement has been but small; and the water in the embankment at this part is 47 feet 6 inches above the original surface.

I conclude, therefore, that the water is not coming from the ground, nor is it coming up the puddle-trench.

If the water is finding its way into the embankment from the reservoir, it would necessarily follow that the level of the water in the different boreholes would stand at the same level which should correspond with that of the water in the reservoir; also that of two boreholes on the same section, one near the water and the other near the puddle-wall, if any difference did occur, the water should stand at a lower level in the hole near the puddle-wall than in that near the water, owing to the frictional resistance of the material through which the water had to pass.

Here, again, however, the facts show the exact opposite; the boreholes on section eighteen giving a water-level in the hole nearest the puddle-wall of 9 inches *above* that in a hole 25 feet nearer the water. Again, in sinking the first borehole on section eighteen (Appendex B, Bore No. 5), the water rose above the surface of the ground, continued flowing for some minutes, and the following morning, when the plug closing the hole was removed, the water rose above the ground and overflowed, although the ground at this point was 9 inches above the level of the water in the reservoir.

This fully proves that the water met with is not forcing its way into the embankment from the reservoir.

The only remaining alternative is that the water has accumulated in the embankment during its construction, and all the facts observed in connection with the movements, together with the results obtained from the boreholes, which I have put down, can be completely explained on this hypothesis; while the evidence given by different witnesses fully establishes the fact of a very large amount of water—chiefly due to the wet season of 1887—having fallen on the exposed work.

The natural disadvantage of having such an exceptionally wet season had undoubtedly been aggravated by the unsuitable nature of some portions of the material, and also by the manner in which the embankment was formed, viz., in layers sloping inwards to the puddle-trench, in consequence of which the whole amount of rainfall was thrown inwards to find its way into the puddle-trench, or downwards into the lower portions of the embankment by absorption and percolation through surface cracks and irregularities, which were bound to exist in spite of the means taken to consolidate the material.

The difference in the height of the different planes of sliding would, in this way, be accounted for, since different lengths of the embankment having been carried up at different times, the water would manifestly settle at different levels, especially as the varying quality of the materials employed would result in the formation of layers of varying resistance to the passage of the water, and varying also very much in their capacity for absorbing it.

During the very dry weather immediately succeeding the wet season of 1887 the work on the embankment was pushed forward very rapidly, 21 feet being made up during the first seven months of 1888 at section 15 and other portions at similar speed.

This rapid piling on of pressure has squeezed the super-saturated portions of the embankment comparatively dry, forcing the water away from near the puddle-wall—where, the embankment being highest, the pressure of course is greatest—towards the water-face of the embankment. This water, forced in all directions through the material composing the embankment, under considerable pressure, has disintegrated and decomposed the weaker and inferior clays and decomposed shale; and where many of these waterways—small individually—intersected or even traversed the same plane, the cohesion of the mass of earth has been reduced to such an extent as to render it incapable of supporting the strain thrown upon it, and a forward movement has taken place.

The water having been gradually driven from the puddle-wall to the water-face is to a certain extent retained there by the pressure of the water rising in the reservoir, and that portion of the bank would consequently become more disintegrated and softened than that nearer to the puddle-wall, and its effective resistance to the thrust behind it proportionately reduced.

The mechanical action of the water has, I believe, been the principal cause of the movements that have taken place, but the evidence given by Mr. Mackay goes to indicate that this action has probably been much intensified by the chemical decomposition of some portions of the material, notably the white and black clays, which under the influence of moisture rapidly oxidise, and in so doing increase considerably in bulk. My own observations on the behaviour of these materials when exposed to the influence of water and air entirely confirm this, and the expansion of the clays, due to their chemical decomposition, would call into action a force tending to move the bank bodily towards the water, even if the angle of repose were more than has been provided for. If the movement is due to this action alone it will soon cease, and when that occurs the bank will rapidly consolidate.

From a careful consideration of all the facts I have gathered, and the evidence obtained, I conclude that the movements have been occasioned by the combined action of six different causes, none of which alone would, under ordinary conditions, have injuriously affected the stability of the embankment, but which, when found united at any particular section, would have been sufficient to overcome the natural cohesion of the material and produce a greater or lesser amount of motion, depending primarily upon the amount of moisture present, and, in a secondary degree, upon the relative intensity of the different causes, more especially upon the proportion which the inferior white and black clays bear to the bulk of the material, and the consequent energy of the action occasioned by their disintegration and decomposition.

This conclusion is, I consider, materially strengthened by the fact of the greatest movement having occurred at the site of the first slip. During December, 1887, and January, 1888, there was a large accumulation of water at this point, owing to the damming back of the water from the excavation for the puddle-trench between sections 57 and 59; this water being prevented from reaching the puddle-trench could not be drained off at all, and the whole of it had to sink into the bank or dry up. That the greater portion of it sank into the bank is certain, and I have not the slightest doubt that the magnitude of the slip, which has occurred at this point, is due entirely to the excessive saturation received by this portion of the embankment at that time.

Causes operating to effect the movements, arranged in the order which I consider best represents their relative effect.

1st. The large amount of water contained in the water-face of the embankment, arising principally from exceptional rainfall during 1887, and to a smaller extent from excess of water used in puddling.
2nd. The inferior character of some of the materials employed, more especially the white clay from the flats below the embankment, and the dark decomposed diorite from Prospect Hill.
3rd. The chemical decomposition of these materials under influence of excess of moisture.
4th. The inclination of the formation layers towards the puddle-wall by which the rainfall was directed into the work.
5th. The rapid construction of the embankment during 1888, by which the pressure was brought too rapidly upon the wetter portions of the interior.
6th. The rising of the water in the reservoir, which, preventing the gradual draining of the embankment, has increased the decomposing and disintegrating action of the contained water.

(b.) The significance of the movements as bearing on the stability of the structure.

If the view I have taken of the causes of the movements is correct there is evidently ample scope for very wide divergence of opinion as to their significance and the greater or lesser probability of their creating a permanent source of weakness of the whole of the embankment. Very much depends upon the comparative influence of each cause, and more especially upon the result of the prolonged action of water upon the inferior materials.

Before forming any definite opinion on the subject, I endeavoured to collect all the facts that could be obtained in any way bearing upon the subject, and although the time which has been occupied in this investigation has not been sufficient to enable me to assert positively that there is not the slightest fear of the movements rendering the structure insecure, there is the greatest probability, short of actual certainty, that no further movements will take place, and that no serious injury has been caused to the embankment by the present movements which will imperil its safety.

I do not consider that there is any reason to anticipate further movement through increasing the depth of water in the reservoir; on the contrary, the increased pressure brought to bear on the water-face of the embankment will be in a direction opposed to the present line of movement, and, while checking this, will also tend to compress the material, and—provided that all forward movement is arrested—will bring together the drier surfaces immediately above and below the present planes of movement, thus rendering the whole more homogeneous.

All the borings indicate that the great bulk of the material is firm and comparatively dry, so much so that it would bear the addition of much more water than can by any possibility exist in it at the present time, if only the water were uniformly distributed instead of being concentrated at a few places as at present.

I believe that this uniform distribution of the water will be effected by gradually increasing the pressure upon the water slope of the embankment, and that the excess of moisture now present at the sites of the slips, and probably also to a lesser extent in other portions of the work will, under the influence of continued pressure be disseminated throughout the drier portions of the material and gradually absorbed. There is not, in my opinion, the slightest probability of the water penetrating the embankment to any depth, the material is of too compact and non-absorbent a nature for this to be possible, and the surface being protected by the broken stone, and pitching from all wave action will be proof against the greatest pressure that can be brought to bear upon it when the reservoir is filled to its utmost capacity.

When I visited the works on the 2nd instant, a strong wind was blowing, causing a considerable wash all along the face of the inner slope. Two witnesses—Mr. Gipps and Mr. Rutherford—have stated that under similar circumstances they found the water near the bank so thick and cloudy from suspended clay that it was quite unfit to drink. I made a careful inspection of the water and did not at any place find any indication of this, the water being as clear at the edge of the bank as it was in the centre of the reservoir, showing that the lighter portions of the material which had caused the cloudiness observed by these witnesses having been washed away the surface was now quite unaffected by the wash of the water.

The spueing out of the white clay observed by the diver between sections 16 and 17, and to a lesser extent in other places, is, in my opinion, the result of the surface action of the water, owing to a larger proportion of this material being immediately underneath the broken stone at these points; and this material being the most readily acted upon by the water, has expanded and forced its way through the stones.

This action will certainly occur at all places where any of the white clay will come to the surface of the inner slope, but will not in any way affect the strength of the embankment.

That

That the movements of the embankment have not injured the puddle-wall is certain, the material of which it is composed being in such a plastic condition that it will adapt itself readily to the varying pressure without cracking.

The only portion of it which has given way to any extent is at the site of the first slip, where it has subsided and filled up the space left by the forward movement of that portion of the embankment. When this is filled up solid and the puddle-wall carried up again to its proper height, the wall will be as strong here as at any other part of the work.

Most of the longitudinal cracks and fissures that have been observed along the top of the embankment, have doubtless been occasioned by the forward movement of portions of the embankment, many however, especially those over the back edge of the puddle-wall, are due solely to natural subsidence.

The material of which this dam has been constructed is about the very worst that could have been used if a perfectly regular and uniform subsidence were to have been attained. The puddle-wall will settle gradually and comparatively uniformly, not so the embankment. The rolling, watering, and kneading it has received from the traffic has so far consolidated it that it will allow the puddle-wall to shrink completely away from it before settling.

As this occurs, gaps will be formed under the surface and down the back and front edges of the puddle-wall for many feet in depth, when suddenly, owing perhaps to rain softening the surface, perhaps to a little heavier traffic than usual, the crust of earth overlying the fissure breaks down and a crack opens of greater or lesser extent.

There is nothing to fear from this so long as the cause of the cracking is subsidence only, and since the nature of the material forbids any hope of the bank settling completely for many years, it necessarily follows that the appearance of the cracks along the top of the embankment must be expected for some time to come

Under ordinary circumstances the formation of surface cracks should not occasion any anxiety. Seeing, however, that a large portion of this embankment is in a condition of unstable equilibrium, or at all events very closely approximating thereto, any formation of surface cracks must be carefully watched, and accurate instrumental observations maintained to determine whether they are due to subsidence only, or whether they must be considered as indications of further movement in the bank.

(*c.*)—*The best course to take under the circumstances.*

In considering the various means which might be adopted to stop any existing movements, prevent others from taking place, and make good the injuries which the embankment may have sustained by those that have already occurred, it is necessary to determine first of all whether existing circumstances will permit of lowering the water in the reservoir sufficiently to expose the whole of the embankment where the disturbances have occurred.

To do this would mean practically emptying the reservoir, so far as its functions of supplying the city is concerned.

If the quantity of water coming down the aqueduct was considerably in excess of the daily consumption in Sydney—ten million gallons in twenty-four hours—this might have been done, the 30-inch main below the reservoir being capable of delivering nearly 50 per cent. more than this; but on examining the records of the intake I found that the daily supply from the aqueduct had frequently fallen below 1,000,000 gallons in twenty-four hours.

I concluded therefore that lowering the water was out of the question, and that the *best course to take under the circumstances* must be such as can be carried out successfully, without interfering with the present supply to the city.

This latter condition has largely influenced the recommendations which I have the honor to make, as, could the water have been drawn off, I should have advocated a very different method of dealing with the work.

At the site of the first slip, sections 51·50 to 55·50, the present distorted embankment should be at once cut down to an uniform slope from the top inside edge to the horizontal bench formed by the stone which has been tipped over the lower portion, the water slope to be finished to the original section down to this level; the horizontal benching, where of exposed earth, to have a 3-in. layer of stone, broken to a 3-in. gauge punned into the earth, a final layer of 12 in. of broken stone, similar to that now on the water slope, being spread over the surface.

The top of the embankment to be carefully examined, all unsound and loose parts opened up by trenches, which must be refilled with the gravelly soil from the Prospect Hill excavation, mixed with the material excavated from the trenches and from the slope of the bank, the filling to be in 6-in. layers, watered and rammed as solid as possible.

The puddle-wall where it has sunk to be brought up to the 200-feet level, thus allowing a slightly larger margin for settlement than before.

I do not consider it necessary to tip any more stone at the toe of the bank, as movement has ceased for some weeks, and the recent borings show that dry material now exists in places which were wet when the first borings were made in July last by Mr. Bishop.

The bank itself has consequently a greater resisting power than it had at that time. Added to this, the weight of stone already deposited is largely in excess of any thrust that can theoretically be brought upon it, although, owing to its being loosely packed, its effective resistance is far less than that of masonry of equal weight, or even of carefully-built dry rubble.

I do not consider that carrying up the embankment to its full height will cause any further movement other than that due to fully consolidating those portions of the embankment which have been loosened, and possibly a slight amount due to settling and compacting the stone.

At the site of the second slip, section 42 to 46, I do not think a more efficient system can readily be adopted for arresting the movement than depositing stone in front of the dyke and upon the toe of the embankment.

This stone, however, must not be tipped from the bank, but taken in boats or rafts and deposited directly on the place it is to occupy. By this means fully three-fourths of the quantity that would otherwise be required will be saved, time and expense largely economized, and the weight concentrated at the spot where it will be most effective. The quantity required will not, I believe, exceed 3,000 cubic yards, but in order to allow for the difficulty of depositing it in position I have taken the quantity at 4,000 yards in preparing the estimate of cost.

About

About 400 square yards of the pitching will have to be taken up and relaid and the top of the embankment treated similarly to that at the site of the first slip.

The movement at section 18 has not been sufficient to render any readjustment of the pitching necessary, and unless some further movement does take place—which I do not consider probable—I should not advise any interference with the present slope, but simply make up the embankment to its proper level, and open out all fissures and unsound places, making them up solid with similar material, and in the same manner as already described.

If, however, any further movement occurs at this point it will have to be dealt with in quite a different manner from that adopted in the other two cases; the plane of disturbance is about 10 feet below the present water-level, and could be reached by a trench which would allow of the water causing the slip being pumped out.

This operation would be both difficult and costly, although from the small depth at which the fault occurs it could, I am satisfied, be executed without danger. The water once removed there would be no chance of the slip recurring, and the trench could be filled in as solid as any portion of the embankment.

I have not given an estimate of this work, as it forms no part of my proposals for dealing with the embankment in its present condition, but it is put forward as the probable solution of a possible but very remote contingency.

I consider it of importance that the top of the embankment should be made sound without delay; the cracks now existing being merely blinded with loose material serve as channels to convey the rain falling on the surface into the interior of the bank, where it is not required, and can be productive of nothing but harm. A careful watch should be kept for any indications of cavities forming in future from the unequal subsidence of the materials, and immediate steps should be taken to fill them up solid with suitable materials.

This being a duty distinctly devolving upon the contractors, under Clause 24 of the general conditions of the specification, and in no sense to be considered as arising out of the movements upon which I have been instructed to report, I have not taken its cost into account in preparing my estimate. (*Appendix F.*)

IV.—To report on the construction of the dam and subsidiary works as a whole, whether the design is in accordance with the best engineering knowledge on the subject, and whether the works have been faithfully carried out according to the design.

The design of these works is undoubtedly in accordance with the best engineering knowledge on the subject, and, taken as a whole, they could not be better calculated to serve the purpose for which they are intended.

I have carefully studied the specification and contract drawings, and closely examined every portion of the works.

The specification is clear and precise in its terms, and taken in conjunction with the contract drawings, contains provision to meet any contingency liable to arise, and every particular necessary for the satisfactory carrying out of the contract.

The contractors have carried out their portion of the work in a thoroughly sound and substantial manner, and the serious disturbances which have occasioned so much anxiety and apprehension regarding the stability of the structure, are most certainly not due to any laxity of supervision on the part of the engineers, nor to any attempt on the part of the contractors to evade their responsibility.

When discussing the causes of the movements, I stated that sloping the layers of material of which the embankment is composed, inwards towards the puddle trench was, in my opinion, one of the causes which had to some extent operated in inducing them. It is but right that I should mention here that some of the first engineers in this branch of the profession advocate this particular method of forming embankments, while others of equal standing prefer to form them in horizontal layers. Taken by itself there is nothing to object to in this mode of construction, and with some soils it has decided advantages.

The special conditions which have combined to render this mode of construction so unsuitable in this present instance could not have been foreseen at the time the work was commenced.

It would, in my opinion, have been preferable to fill the deeper portions of the puddle trench with cement concrete up to an uniform level; the puddle wall would then have been of an uniform height throughout the work, instead of varying from 20 to 75 feet in depth below the ground surface as at present.

The method of working the puddle also by cutting and cross-cutting, is not, in my opinion, so well adapted as pugging to produce a puddle of first-class quality. Much more water has to be used, and there is great risk, especially with some kinds of clay, of the material becoming injured by the excess of water, and its toughness and consequent suitability for the intended purpose materially impaired.

The strict supervision on the Prospect Works appears to have been sufficient to guard against this; but the samples of puddle I examined were decidedly softer than any I have used in my own practice, and judging from them there can be no doubt that the puddle in the lower portions of the trench must be softer still.

This is to some extent an advantage in this particular case, the additional plasticity of the puddle allowing it to follow the movements of the bank without cracking, and so long as the puddle wall remains unbroken, it will be impossible for water from whatever source it may arise to penetrate to the outer slope of the embankment.

The whole of the work in connection with the outlet tunnel, valve tower, and waste weir, is of the very best description, and could not, in my opinion, be improved upon either in design or execution.

It has been my aim in the foregoing Report to comply as closely as possible with the instructions of the Honorable the Secretary for Public Works, to give "a plain unvarnished statement of all the facts," I have ascertained respecting the construction and execution of these works; and to state as concisely as possible the opinions I have arrived at upon the several points submitted to me.

I cannot conclude this report without acknowledging the great assistance I have received in making this investigation from the officers in the Public Works and the Harbours and Rivers Departments. All the resources of these Departments were placed unreservedly at my disposal, and any application I made for information, plans, or documents in their possession was fully and promptly responded to.

My special acknowledgments are due to those gentlemen who—some of them at considerable personal inconvenience—attended to give evidence on various matters coming within their personal knowledge, and it is matter for congratulation that although evidence has been obtained from so many and such varied sources, and from persons whose interests were in some instances diametrically opposed, the discrepancies are so few and unimportant in character.

I have, &c.,
R. L. MESTAYER.

11th January, 1889.

APPENDICES.

J. Barling, Esq., J.P., Under Secretary for Works,—

Sir, Beresford Chambers, 52, Castlereagh-street, Sydney, 13 January, 1889.

Re Prospect Dam, I have the honor to forward herewith the complete appendices referred to in my report on the above work, including the estimate, Appendix F, a copy of which was forwarded to the Honorable the Secretary for Public Works on Saturday morning.

I have, &c.,
R. L. MESTAYER.

APPENDICES.

A.—Instructions.
B.—Copies of Borings.
C.—Table showing Daily Movements.
D.—Section at T.S. 54.
E.—Section at T.S. 44.
F.—Estimate.

(A.) Instructions.

Minute by The Secretary for Public Works.

Subject:—Slip at Prospect Dam.

Department of Public Works, Sydney, 3 December, 1888.

With reference to the correspondence I have had with Mr. Mestayer, M.I.C.E., this afternoon, at which I requested him to visit the Prospect Dam, and make a report to me on its present condition, and to his acceptance of the Commission, I now wish to give specific instructions for his guidance. He will notice from reading the papers, and from the information which I have given him, that further movements have taken place in the Prospect embankment which have been the subject of many newspaper articles, and have caused a considerable amount of apprehension in the public mind. I have already instructed Messrs. Bennett and Whitton to report on the subject, and they have visited the dam and are now engaged in preparing their report.

As the matter, however, is so important that it would not be right for me to leave one stone unturned in arriving at the true facts of the case, I have thought it desirable to call in the aid of experts who are unconnected with the Department. I understand that Mr. Mestayer is an engineer of considerable standing, especially in matters appertaining to hydraulic engineering.

I wish him, therefore, to at once visit the Prospect Dam, and carefully examine its present condition, and also to ascertain the kind of material that has been used in its construction, and its adaptability to the purpose for which it has been used. I wish him to point out the movements which have taken place, their significance as bearing on the stability of the structure, and what, in his opinion, will be the best course to take under the circumstances.

I wish him to give me a report on the construction of the dam and subsidiary works as a whole, and whether, in his opinion, the design is in accordance with the best engineering knowledge on the subject, and whether also the works have been faithfully carried out according to the design.

In carrying out these duties, as I wish to get an entirely unbiassed opinion on the subject, he will consider himself quite independent of either the officers of the Harbours and Rivers Department or of the engineers outside the Department who have previously reported on the subject.

Mr. Hickson and all the officers of the Department will be so good as to give Mr. Mestayer every assistance in the way of answering questions he may put to them, and will place at his disposal any plans and other information which they may possess, or which may be in the Departmental records.

I wish Mr. Mestayer to undertake this work at once, and shall be glad if he will as quickly as possible take in hand the duties confided to him, in the carrying out of which I desire especially to impress upon him their great importance, and the necessity for giving a plain unvarnished recital of the facts as they present themselves to his investigation.

JOHN SUTHERLAND.

(B.)

BORE-HOLE No. 1.—Borings taken at T.S. 44, 7th December, 1888.

Hole 58 ft. 9 in. from centre of puddle trench. Reduced level of ground 185·87 ; reduced level of water in reservoir, 178·79.

	3 ft. yellow clay.
	5 ft. do shales.
	7 ft. do and blue clay
	9 ft. do do
	11 ft. do red, and blue clay.
	13 ft. do do
	15 ft. do do
	17 ft. do and red clay.
Wet clay level ...	19 ft. do do showing wet.
	20 ft. do do
	21 ft. do do
	23 ft. do do
	25 ft. do clay.
	28 ft. do do
	31 ft. do and blue clay.
	33 ft. red clay and gravel bottom.

NOTE.—At 19 ft. a narrow band of what appeared to be a dark sandy clay was met in which was moisture. December 8th, at 11·30, I put a rod down this hole and found 24 feet of slurry and water.

BORE-HOLE No. 2.—Borings taken at T.S. 44·25, December 10th, 1888.

Hole 58 ft. from centre of puddle trench, 7 ft. 9in. above W.L. Reduced level of ground 186·50; reduced level of water in reservoir, 178·75.

	2 ft. 6 in. red clay.
	4 ft. yellow and white sandy clay.
	6 ft. red and blue clay.
	8 ft. yellow and blue clay.
	10 ft. do do
	12 ft. yellow, blue, and white clay.
	14 ft. do do
	15 ft. yellow and blue clay.
	16 ft. yellow and blue clay ; particles of dark clay through.
	17 ft. yellow and blue clay.
	18 ft. yellow clay.
	19 ft. do
20 ft. 9 in. wet clay level ...	20 ft. do
	21 ft. do
	22 ft. do
	23 ft. do
	24 ft. do

NOTE.—At 20 ft. 9 in. there appeared to be wet clay showing on the rods, which did not show itself until we had bored to the 23 ft. level.

BOREHOLE No. 3—Borings taken at T.S. 44. 13th December, 1888.

Hole *on* centre line of puddle-trench; reduced level of ground, 198·77 ; reduced level of water in reservoir, 178·72.

	4 ft. yellow and blue clay, dry and loose.
	6 ft. do do do
	8 ft. do do do
13 ft. 6 in. level of puddle	10 ft. yellow sandy shale and clay, dry and loose.
	14 ft. puddle.
	15 ft. do
	16 ft. do
	18 ft. do
	20 ft. do

BOREHOLE No. 4.—Borings taken at T.S. 44. 13th December, 1888.

Hole 80 ft. 5 in. from centre of puddle-trench; reduced level of ground, 179·57; reduced level of water in reservoir, 178·72.

		3 ft. yellow and red clay.
		6 ft. do do
		8 ft. do do
		10 ft. yellow clay.
		12 ft. do and shale.
Struck water ...	———	14 ft. do (water).
		16 ft. yellow sandy clay and shale.
		18 ft. red shale and clay.
		20 ft. yellow and white sandy clay.
		22 ft. yellow, red and white.
		24 ft. yellow and blue clay and shale.
		26 ft. yellow clay and gravel (surface).

NOTE.—The water rushed in at the 14-ft. level when the rods were put down the second time.

BOREHOLE No. 5.—Borings taken at T.S. 18. 15th December, 1888.

Hole 79 ft. 1in. from centre of puddle-trench; reduced level of ground, 179·44; reduced level of water in reservoir, 178·71

		4 ft. dark black clay.
		6 ft. yellow sandy clay.
		8 ft. do (wet).
Water level ...	———	10 ft. yellow and black clay and ironstone gravel water.
		11 ft. red and blue clay and gravel.
		14 ft. red, blue, and yellow sandy clay.
		16 ft. yellow and blue sandy clay.
		18 ft. do do
		20 ft. yellow, blue, and white clay.
		22 ft. yellow, red, and brown clay and shale.
		24 ft. do do
		26 ft. do do
		28 ft. do do
		30 ft. do do
		32 ft. do do
		34 ft. yellow and blue sandy clay and gravel.
		36 ft. yellow and blue sandy clay.
		38 ft. do do
		40 ft. do do
		42 ft. yellow and sandy clay and gravelly loam.

NOTE.—At 10 ft. upon drawing the rods the water rose with a rush, ran over the surface of the hole, and continued running about 3 minutes. Dec. 17.—Upon drawing plug the water ran over surface of hole and rose about 9 in. from 1 o'clock to 2 p.m.

BORE-HOLE No. 6.—Borings taken at T.S., 18, December 27th, 1888.

Hole 30 ft. from centre of puddle trench. Reduced level of ground, 196·56; reduced level of water in reservoir, 180·79.

		4 ft. yellow clay and gravel.
		7 ft. do and brown clay.
		10 ft. brown sandy clay.
		12 ft. do gravelly clay.
		14 ft. do clay.
Wet clay level	———	16 ft. do and yellow clay and gravel.
		18 ft. do do do
		20 ft. yellow sandy clay.
		22 ft. do do
		24 ft. do do
		26 ft. do do
		28 ft. do do
		30 ft. do do

December 28th.—At 15′ 6″ upon putting the auger down brought up soft mud and water which rose to 15′ 7″.

December 31st.—Slurry 15′ 4″ from surface.

January 2nd, 1889.—Slurry 15′ 9″ from surface.

January 3rd.—Slurry 15′ 8″ from surface.

BORE-HOLE No. 7.—Borings taken at T.S. 18, December 27th, 1888.

Hole 55 ft. from centre of puddle trench. Reduced level of ground, 187·73. Reduced level of water in reservoir, 180·79.

		3 ft. yellow and black clay.
		5 ft. do do
		7 ft. do do sandy clay.
		9 ft. do sandy clay.
		11 ft. do do
		13 ft. do and black sandy clay.
		15 ft. do sandy clay.
		17 ft. do do
		19 ft. do do
Wet clay level		20 ft. do do

December 27th.—Cut the water at 19′ 6″, and it rose to 8 feet from the surface.
„ 28th.—Water 7 feet 10 inches from surface.
„ 31st.—Do 7 „ 3 „ do do
Jan. 2nd, 1889.—Do 7 „ 1 „ do do
„ 3rd. „ Do 7 „ 1 „ do do

BORE-HOLE No. 8.—Borings taken at T.S. 24, December 28th, 1888.

Hole *on* centre line of puddle trench. Reduced level of ground, 195·17. Reduced level of water in Reservoir, 180·79. This boring was put down to determine the depth of puddle. Puddle was struck at 8 ft. 6 in.

BORE-HOLE No. 9—Borings taken at T.S. 24, December 28th, 1888.

Hole 30 ft. from centre of puddle trench; reduced level of ground, 195·17; reduced level of water in reservoir, 180·79.

		4 ft. yellow sandy clay.
		6 ft. yellow and black clay.
		8 ft. yellow clay.
		10 ft. do do
		12 ft. do do
		14 ft. yellow and blue clay sandy.
		16 ft. do do
		18 ft. yellow clay sandy.
		20 ft. do do
		22 ft. do do
		24 ft. do do
		26 ft. do do
		28 ft. do do
		30 ft. do do

BORE-HOLE No. 10.—Borings taken at T.S. 54. 2nd January, 1889.

Hole 73 feet from centre line of puddle trench; reduced level of ground 188·20; reduced level of water in reservoir 180·89.

		3 ft. red clay.
		5 ft. yellow, red, and white clay.
		7 ft. yellow, red, white, clay, and shale.
		9 ft. yellow, and blue clay.
		11 ft. yellow, red, and blue clay.
		13 ft. red clay and gravel.
		15 ft. red clay and gravel.
		17 ft. yellow and red clay and gravel.
		19 ft. yellow and brown clay.
Water		20 ft.
		21 ft. yellow, red, and blue clay.
		22 ft. yellow and red clay and gravel.

Height of water in hole at 73 feet.
January 2nd, at 2 p.m. = 12′ 6″
„ „ „ 5 p.m. = 12′ 3″
„ 3rd, „ 10 a.m. = 12′ 3″
„ „ „ 4·45 p.m. = 12′ 3″

BORE-HOLE

BORE-HOLE No. 11. Boring taken at T.S. 54. 2nd January, 1889.

Hole, 46 ft. 6 in. from centre line of puddle trench; reduced level of ground, 190·71; reduced level of water in reservoir, 180·89.

	3 ft.	yellow and blue clay.
	5 ft.	do do
	7 ft.	do do
	9 ft.	do do and shale.
	11 ft.	do do
	13 ft.	do do
	15 ft.	do do
	17 ft.	do do and shale.
	18 ft.	do do
	20 ft.	do do
Bottom ...	21 ft.	red clay and gravel.
	22 ft.	do do

This clay was quite dry.

SYDNEY WATER SUPPLY—PROSPECT RESERVOIR.

MINUTES OF EVIDENCE.

SATURDAY, 15 *DECEMBER*, 1888.

Lewis P. Moline, Esq., Engineer to the Contractors, examined by Mr. Gordon :—

L. P. Moline, Esq. 15 Dec., 1888.

1. When did you take charge? About August, 1884. I was there till February, 1887.
2. Was the puddle trench filled in when you took charge? There had been a great flood and the puddle trench was filled with water. The contractors were in a fix. Mr. McGuigan died, and the contract was transferred on account of the flood upsetting the whole of the arrangements. In the same year the flume burst and filled the trench with water. We had to bail out and take out the slush before commencing operations. A flume at a higher level was constructed to provide against future storms. The water was running 18 inches deep and 40 feet wide for a considerable time through the second flume.
3. Was that second flume above the surface or just at it? It was 2 or 3 feet below the surface at section 24·50—just 14 feet above the last level. After that we could keep the bank high enough to collect any storm-water that might come.
4. At that time the bank must have been in its deepest part about 14 feet? Yes. The flume at peg 25 was left open for a considerable time after the bank was raised and a depression was left. We were at the bank for months—after the gully was formed. It was about 15 or 20 feet. The natural surface rose pretty rapidly about the flume.
5. As a rule, was the specification strictly carried out except in the case of the horizontal layers being stopped by gap at flume? Yes; except at that place.
6. There were proper steps I suppose? Yes. There was a depression at that flume before it was removed.
7. Was there any hurrying in making up that? No; we had lots of time. There was a trench 24 inches deep cut in the solid, and they were putting in 6-inch layers in that trench. The channel through the outer slope was filled up entirely with stone.
8. Was the material chiefly got from the lower excavation, *i.e.*, below the flat? Yes, where the excavation is. There was none above the water side. I know the bottom was untouched, unless it was to do what was necessary for grubbing, &c., but not for the purpose of making the dam.
9. Is the material from below the dam pretty much of the same character? It varies very considerably, and is mostly shale and clay.
10. Dark clay? Yes. But Mr. Shand could give you more information about that.
11. Who is Mr. Shand? He was virtually the contractor. He was in charge of the works throughout. He was in entire charge of the work when Mr. McGuigan died.
12. During the progress of the work were there any slips beyond the ordinary subsidence? Not a sign or shadow of anything. Since this occurred I have been unable to explain why some of the pegs* did not agree with the measures I put them into. I could not understand the difference. It never struck me that such a thing was likely to occur. I never noticed anything during the progress of the work.
13. Was the result of the bore a fair sample of the material of the inner slope (Borehole No. 4)? It varies a good deal. Mr. Ryan objected to pure clay, and rightly too. The whole country is clay; we could not help ourselves. It was principally yellow clay in the last bore I saw nearly opposite the first bend—deep excavation.
14. Was it specified that the bank was to be watered? Yes, clearly so, and it was done invariably.
15. Was a row of pipes laid along the puddle trench? The pipes were laid first resting on timbers. The bank itself was watered by means of water-carts. The puddle wall was watered by hose from the main pipe which ran along from end to end.
16. Did you have any bursts? Yes; the pipes would give way occasionally. We got the water into these pipes by pumps, and the water that could come out was only what was in the pipes if it occurred at night. If it occurred at daytime we stopped it at once. I ought to say we connected our line of pipes with the 30-inch main afterwards. Then they were always charged, and if a burst happened at night more water would get in. The puddle-wall would hold water like a cup. The rainfall did more than anything to put water on the bank. There were frequent storms. When the rain fell it would lodge on the clay. Mr. Ryan insisted on the puddle-wall being level longitudinally.
17. Did you notice whether the bank was boggy or not during these heavy rains? The horses could trample very well over it generally, but in some places they could not. The new material put on would be soft. The centre part is harder than that made more recently.
18. What was the subsidence in the puddle trench? We could not tell what subsidence there might have been, during the progress of the works, in the clay puddle.
19. When was that? In 1886. A deep part of the trench at section 54 was pumped out after heavy flood. I do not think it has anything to do with the trouble that has taken place.
20. Was the clay rolled or carted over? Both; but not over the puddle trench.
21. Was it done according to specification? Yes; we could not get away from it. The clay-chopping business I considered a farce. There was more water put into the clay than was needed. In 1885 we had to stop, there being no water.

22.

* Mr. Moline afterwards said he was rather uncertain about this, and did not attach much importance to this recollection of his.

L. P. Moline, Esq. 15 Dec., 1888.

22. Where did you get your sand from? Liverpool, on the Southern Railway line. There was no sand near the dam.

23. Did you sub-let the work? It was almost all day work. The contract was sub-let for driving the tunnel. We objected to water being let in at the rate it was. If the dam had not been filled so quickly there would have been a better chance for the water in the bank getting out.*

Lewis P. Moline, Esq., Engineer for the Contractor, examined by Mr. Mestayer:—

24. During what time were you engaged on this work? From August, 1884, to February, 1887.

25. What was your position? That of Contractor's Engineer.

26. During the time that you were there was the work carried out strictly in accordance with the specification? Yes; in all cases the Government Inspectors were exceedingly strict, far more so than I thought was necessary.

27. Was there any exceptionally wet weather during the time you were on the works? No; nothing sufficient to interfere in any way with carrying on the work.

28. Was any provision made for carrying or draining the water off the embankment? I do not remember any instance of difficulty having occurred by rainfall, and which required special drainage.

29. Do you remember any suggestion being made by the contractors for using the refuse from the quarry and the gravel in forming the embankment? The refuse from the quarry was allowed to be put in the outer slope; but I prepared a plan showing the tramway we proposed to put in to bring the material to the bank. We proposed to tip the dirt on each side of the bank out of the waggons and then cart it over the bank in the usual way, but we were not allowed to put rails on the bank.

30. This was not approved of by the Department I believe? No; I know that they refused to allow it to be done, but I do not remember any reason having been given.

31. With regard to the puddle wall; there having been many statements made as to the enormous quantities of water used for the puddle, can you give me any information on this point? No more water was used than was necessary to make the puddle in the manner provided for in the specification. If pugging had been allowed, as suggested by the contractors the puddle could have been put in much drier; but the whole of the clay had to be cut and cross-cut by spades. Less water was used at first, but it was found necessary to increase the quantity as the men could not draw the spades clean from the clay. There was consequently much loss of time and labour besides the work could not be properly done. The quantity of water was increased until the spades could be drawn out quite clean.

32. How was the embankment worked up? The excavated material was brought up the sides in drays, there inspected by the Government officials, who would reject any they considered unsuitable, and either have it taken off the work altogether, or if it were suitable for any other part of the bank, they would have it taken there. All the material when approved by the Government officials was deposited in layers never exceeding the specified thickness, and the traffic was diverted from time to time by timber and other means so as to ensure every portion of the bank being thoroughly traversed and worked down. Water carts were kept constantly working backwards and forwards over the whole embankment to moisten the material and ensure its thorough consolidation.

33. Were all the layers of material put in sloping towards the puddle wall? Yes.

34. In wet weather did not this cause a large accumulation of water in the puddle trench? I do not remember any accumulation of water occurring from this cause for more than a day.

35. Did you at any time see the embankment, more especially at the water side, too wet for traffic to be carried on? No; immediately after heavy rain it might have been difficult to work the traffic, but I do not remember any stoppage occurring from this cause.

36. If any such accumulation of water had occurred at the puddle trench in consequence of the slope of the layers towards it, could the accumulated water have got down the side of the puddle wall to the lower portions of the embankment? No; I consider this would have been impossible, the puddle being thoroughly consolidated and driven into the banks at each side.

37. How was the stone dyke at the toe formed? It was built of dry rubble masonry, and the embankment worked up to it.

38. Have you any other information that you can give us, or any suggestions that you can make respecting this work? I think not.

Robert Shand, Esq., Manager for the Contractor, examined by Mr. Mestayer:—

R. Shand, Esq. 15 Dec., 1888.

39. Were you the contractors' representative on this work? Yes.

40. How long have you been here? From the commencement of the work.

41. Have you any statement which you would wish to make as to the manner in which the work has been carried out? The contractors have throughout endeavoured to carry out the work in the very best manner, and any instructions of the Government Resident Engineer were immediately attended to.

42. With regard to the material employed in the embankment, did not disputes occur between the contractor and the Government representative with regard to its quality? None of any importance. Occasionally a load of material brought on to the work would be rejected by the Inspectors as being unfit for the work, and it was then taken away. Sometimes the material which had been brought up by the contractors for one portion of the bank was rejected as not being sufficiently good for that portion, but it was allowed on the back of the bank or on some other position, and no objection was taken by the contractors to its disposal in this way. The contractors had suggested to the Government representative that it would be better to mix refuse from the quarry and coarse gravel which was removed from the bank in opening up the quarry, with the material of which the embankment was being composed, but the suggestion was not accepted.

43. It has been suggested that one cause of the slip is a layer of the white clay having been deposited in a portion of the bank; can you inform me whether at any time this white clay has been deposited in bulk at any one portion of the bank? No, I am certain that in no instance was any quantity of this white clay deposited

* In my own notes I have also "Ryan often insisted on less water being used, but it could not be chopped without.' "Left the work in February, 1887." "Less friction than usual (between engineer and contractor) occasionally appealed to the chief."—G.G.

R. Shand, Esq.
15 Dec., 1888.

deposited in any one place. There is more or less white clay throughout the whole of the embankment; but as it came out of the excavation mixed with the other red and yellow clays it could not possibly have been put in any one place by itself in the bank.

44. Was the embankment carried up strictly in accordance with the specification? Yes; and the Government Inspectors took very good care that we should not deviate from the specification in the smallest particular.

45. After wet weather did the material in the embankment become somewhat boggy? No; we drained the water off over the embankment across the puddle trench into drains in the opposite side of the bank. It was contrary to our own interests to allow water to lie sufficiently long to render the embankment boggy, as it would have cost us so much more in working the traffic over the softened earth.

46. Was any provision made for draining the bank on the water side, other than what you have already mentioned? No; and there was no possibility of draining this part of the bank properly, because water was allowed to rise in the reservoir and so prevent the escape of any water that might have lodged in the bank.

47. Some articles which have appeared in the papers allude to an excessive quantity of water having been used in forming the puddle and putting it in the trench,—will you describe the manner in which this puddle was formed? The clay after having been excavated, turned over, and sufficiently exposed to the weather, was brought to the puddle trench, it was then cut and cross-cut by spades and well worked with water by the men until there was the proper consistency to satisfy the Government Inspectors. No more water was used than was really necessary for the purpose. The contractors suggested that the clay should be worked in a pugmill; but this suggestion was not approved of by the department. Working it in the manner required—that is, cutting and cross-cutting it with spades—involved the use of much more water than if it had been pugged, as unless excess of water was used, it was impossible to draw the spade clean from the clay.

48. Was any exception taken by the department at any time to the quantity of water that was being used in the puddle trench? No; the Government wished to have the puddle well watered.

49. Was any difficulty experienced in rolling and thoroughly consolidating the embankment right up to the puddle trench? It was very difficult to ensure this part of the bank being thoroughly consolidated, in consequence of the formation of the puddle wall, but a special gang of men were engaged ramming the earth all along the puddle trench. The carts, also, that brought the puddle, in all cases were close up to the trench, and were backed right up to it when depositing the clay. I do not think that this part of the work is less consolidated than any other part of the embankment.

50. You have had assistants at work for some time taking levels and sections of the bank at different points. Do your observations agree with those taken by the officers of the department as to the amount of the movement and its character? Yes; generally there is no discrepancy between our observations so far as I can ascertain.

51. Have you ascertained from your own observations whether there has been any movement in other parts of the bank—other than the two slips at sections forty-four and fifty-four? The observations we have taken do not indicate any movement on the top of the bank except settlement over the puddle, which has taken place more or less along the whole length of the bank; but I am under the impression that a movement has taken place along the straight, as the kerb is not in the same position as when it was put in.

52. Is there no means of checking the present position of the kerb to ascertain whether it has shifted at all? Yes; the kerb was put in to pegs at a fixed distance from centre line of puddle trench. Many of these pegs are still standing, and the distance shows an increase of between 2 feet and 3 feet;—that is, these pegs have moved waterwards by this amount.

53. Have you any further remarks to make for our information, as to the construction, the slips, or anything? No; I have no further information to give you. I have given you all I can think of at present.

Robert Shand, Esq., Manager for the Contractors, examined by Mr. Gordon:—

54. You were manager for Mr. M'Guigan? Yes; I acted under Power of Attorney for him.

55. Were you there at the beginning of the work? Yes; I acted for him while he lived.

56. What were you after his death? I managed for a while as executor.

57. You were still in charge of the works? Yes.

58. Had you ever been in charge of similar works before for Mr. McGuigan? I was never looked upon as manager; I was a sort of confidential clerk, managing corespondence, pay, &c., &c., on other contracts.

59. Is there anything in connection with the construction of the dam you would like to mention? I do not know that any particular part is different to any other part.

60. Was the specification adhered to as closely as possible? So far as I know, to the letter. We trusted to dray traffic more than to rolling. Mr. Ryan was careful to see that the work was properly carried out, even if further expense were incurred by the contractor.

61. As regards material, it was practically all got from the excavation on the lower side? The bulk of it was got from the flat.

62. Was the material all pretty much the same? Yes, and it was pretty well distributed.

63. What system did you wish to adopt with regard to material? We had a scheme under which it could be run on level instead of climbing up the roads. Our idea was to run straight into the hills. In fact, we went to the trouble of sinking shafts for a certain distance. We have had no suspicion of a movement We never dreamt of such a thing happening.

64. There was an allowance for subsidence? No; it was to the contractor's interest to avoid that sort of thing. There has been a difference of opinion as to whether the chopping could not be done with less water. Unless very closely watched a man may be inclined to put more water on than ordered. There was somebody to regulate the water.

65. Who was that? He was a man from England who is now dead, and also Mr. Davis. We had nothing more to do with him than to carry out his instructions more or less.

66. What sort of weather had you? The first year was very dry. In 1887 we were troubled with very wet weather. On an average we did not work half-time then. As far as I can remember we had a lot of rain in 1886.

67. Was this year (1888) a dry one? Yes; the preceding one was a wet one.

R. Shand, Esq. 15 Dec., 1888.

68. One year you had not sufficient water to go on with? That would be very early. We had to stop some work for want of water.
69. I suppose there is no sand in the neighbourhood? Nothing suitable for mortar in connection with the masonry. It is only good for blinding purposes. There is a coarse kind of sand in the quarry. We were allowed to use that sometimes for joints of rough pitching.
70. Is there any schedule price of this kind of work? For blinding 3 inches deep 1s. square yard (12s. per cubic yard).
71. Then the puddle was constructed as nearly as possible level right across the length of the dam? Yes, it was perfectly level.
72. Had you any trouble to get the water out on the occasion of a flood at one time? If any water came in we lifted it out with a crane. At peg 15 we had to use a pump. We have had flood waters, but it was only a matter of a day or two to bail it out.
73. Did you get on harmoniously? Up to now we have got on very quietly, and have carried out instructions. Now we are asked to do something beyond the contract. We consider we have finished, and what we are now asked to do we consider an extra.
74. You have no reason to complain of undue strictness? We have complained often enough, and appealed to the Engineer-in-Chief, but the only reply we could get was that the work was to be carried out to his satisfaction. We thought money was being thrown away in cutting and cross cutting clay so often.

MONDAY, 17 *DECEMBER*, 1888.

Mr. William Nicholas, Inspector of Earthworks, was called and examined :—

Mr. W. Nicholas. 17 Dec., 1888.

75. Were you Inspector in charge of the bank? Yes.
76. When did you take charge? When the work was at the 162 feet level.
77. What sort of weather did you have at that time? I believe it was rather a dry season. I was not on the bank in the wet season, but in the tunnel.
78. Did the contractors take any measures to get rid of the rainfall that collected on the work? They got rid of a portion of it by draining.
79. Were the works stopped through the water not being drained off? Once or twice we had to stop work until the water got away;—this was in the trench work.
80. How did the contractors remove the water from the bank? The water was led across the puddle trench into stone drains built in the embankment on the back or land side of the puddle wall.

Robert H. Ryan, Esq., Resident Engineer, called and examined by Mr. Gordon :—

R. H. Ryan, Esq. 17 Dec., 1888.

81. *Mr. Gordon.*] You have been here from the beginning of the work? Yes; from the commencement.
82. Did you make the design of the dam or did the office? It was made in the office, but I was in and out during the time it was being made.
83. The specification was made in the office as well? Yes.
84. The specification was adhered to as closely as possible? Yes.
85. There were very slight deviations, and only such as could not be avoided? Yes.
86. Except these slight deviations which could not be helped, there were no alterations made? As far as we possibly could do so we adhered to the specification, and carried out the work according to it.
87. At the time water was let off was the puddle in the trench up to the surface? The low level flume was fixed across before the trench was opened, and it was kept so until the puddle was brought up to it underneath.
88. It was a large flume? About 60 feet wide.
89. At what section was this? At section 18. A second flume was fixed across the trench at a later date, and on higher ground; that is, at section 24.
90. Was there any difference between that part of the dam and any other? No; it was the same material that was used.
91. The puddle was brought up the same way? Yes.
92. Then you began at the toes? Yes; we commenced to build the embankment at the toe.
93. Did you find the contractors as willing as they generally are to carry out work according to specification? It was a constant battle right through from beginning to end.
94. What were they principally remiss in. Did they put in too little or too much water? The puddle was sometimes too wet; the layers of the banks at times were too high above that allowed by the specification. They sometimes brought surface-soil on to the bank; after heavy rain it was some time before the water would go off the centre. My directions were to have the men, during the time of rainfall, to run the water off as soon as possible. This they never carried out, so far as I know.
95. Did you ever complain of the excessive amount of water? I complained of the rain water, and of their pipes constantly bursting and flooding the ground and puddle, frequently, verbally, but I think only once in writing. They were mostly verbal complaints; but I have a memorandum I wrote in July, 1885, about the puddle.

Harbours and Rivers Department, 20th July, 1885.
Prospect Reservoir Works,

Memorandum from R. H. Ryan to R. Shand, (for Contractor).

I WISH to direct the serious attention of contractor to the manner in which the puddle in embankment is at present prepared and finished. The disposition to have it imperfectly cut, and the tendency to use too large a quantity of water, is clearly manifest. For contractor's information and guidance as to what is required, I may inform him that the puddle, when finished in place, should be of the consistency and compactness, as nearly as may be, of well prepared brick-clay as same is placed in the mould in the process of hand brick-making; should not be left sloppy or miry; but to finish in a tough, dense, and somewhat putty-like condition. As this is the portion of the work which must keep back the water, any divergence of the puddle from this state may have a result totally disastrous to you, as also to others concerned in the undertaking.

96. That implies that you had frequently spoken to them about it? Yes, frequently.
97. Then about that part of the bank immediately along the puddle wall, under the pipes, not having sufficient rolling, do you think there is much water there? I think a piece about 3 feet in width did not

R. H. Ryan, Esq. 17 Dec., 1888.

not get the same amount of rolling as the outside. About 20 feet of the upper part was put in during the dry weather. I am under the impression that the 3 feet at the side accounts, to some extent, for the puddle wall going over on the main portion of the embankment; being of a light material would also affect it.

98. About getting rid of the water after heavy rains, did they do it well? They cut drains across the puddle-wall into stone drains at the back. In the heavy section, they put in 21 feet between December and August, that is, in about eight months; up to July, about the deepest part, they put in 20 feet in seven months (from December, 1887, to July, 1888). Over 15 feet was put in in six months; and 12 feet in five months. This was the heaviest section.

99. What is about the present water level? 179·28 this morning.

100. Can you show me the progress section (longitudinal)? [*Working plans shown*].

101. Where was the movement first noticed? As near as possible at section 54.

102. And when? On Sunday, April 22nd, 1888. This was the top settlement but no bulge apparently visible.

103. When did you first notice the bulge? On the following Tuesday (the 24th), and I sent a telephone message to Mr. Moriarty.

104. What did you do then? Mr. Moriarty and Mr. Darley came up, and we decided to change the upper section of the puddle-wall. In some places the puddle-wall was at its full height, and covered up; but where it was not at its full height the section was changed. We made a set-off of 4 feet at 195 feet R.L., but where the wall was above that level we did not cut it down. The set-off is at the near or water side of the puddle-wall.

105. There is another section? That is another section at the same place, 54 section shown. I got authority to open it up and inspect the puddle. We found it considerably down, and we started two set-offs, so that the puddle-wall would be 8 feet wide all the way down.

106. How much did you find it had come down, and at what point? We opened it on May 2nd, 1888, to the deepest point, 194·55 R.L., refilled it to the original height, R.L., 199·41; it had subsided again, when we reopened it to 196·39 R.L. on June 21st; rebuilt it, and afterwards at different times, extending over a fortnight (between September 5th and 26th) when it was 182·70 R.L., we re-built it to 199·41 feet.

107. What is it now? It is covered up now, and we have not taken it since that date.

108. When was the stone-filling at toe of section 54 commenced? On August 28th, 1888.

109. When did you commence to make your measurements of the horizontal movement? From the commencement cross-sections were at once taken to determine the extent of movement, and daily observations were commenced on 4th May, 1888. [Copy of measurements read. *See Appendix.*]

110. Does that include the movement of the stone? Yes, when we got our points fixed on the stone.

111. Are you still putting stone on? No; it is about three weeks ago since we put any stone on, as we had to remove our railway. There is no movement of the stone now—not since 26th November. I was still putting stone at the end of the slip, where there is a slight movement, before this work had to be stopped, as above-mentioned.

112. *Mr. Mestayer.*] Is this an extra? Yes.

113. How much does each truck carry? 23 cubic feet, about.

114. Do you take it just as it comes? Yes; small stones fill up the spaces between the large ones.

115. Will you show the plan of the spot where the material was taken from for the dam? (This spot was shown on working plan).

116. You have not detected any movement lately at section 54? No.

117. There was no sign of movement while the dam was going on? None that we could see.

118. Do you remember what season it was when you were stopped for the want of water? It was previous to heavy rain falling in June, 1885.

119. Did you notice anything unusual at any time? No; at section 54 there was a quantity of water which was dammed back by the contractor to prevent it getting into the trench further on. It did not extend up to the second slip.

Mr. Robert Cameron, Diver in the Harbours and Rivers Department, called and examined:—

Mr. R. Cameron. 17 Dec., 1888.

120. *Mr. Gordon.*] What did you find in your examination this time? I went down at section 19 and carefully examined the bank in various directions. The condition of the toe of the embankment is just the same as when I went down before for Mr. Bishop. There has been no displacement or movement of the dyke. There are a few loose stones about, which appear to have come from the spalling, but no loose stones in the dyke itself, nor any bulging of the dyke. There is about an inch of mud on the ground at the bottom.

121. How does the face of the embankment look? On the face of the embankment where the water is about 12 feet deep, there is a bulge, as though the upper portion were sliding over the lower portion, similarly to the slip at section 54. It forms a ridge about 2 feet high on the face of the embankment.

TUESDAY, 18 *DECEMBER*, 1888.

James A. Hogue, Esq., Editor of the *Evening News*, examined:—

J. A. Hogue, Esq. 18 Dec., 1888.

122. We have been instructed by the Honorable the Secretary for Public Works to examine and report on the alleged defective state of the Prospect Dam, and wish to know if you would have any objection to giving the names of those who wrote the various articles in your paper? Mr. John Norton, who is not now in our employ or under our control, knows more about the work during its progress than any other person who has been in our employ, and he wrote the greater portion of the reports. Mr. W. Stuart Wearne, who is now at Prospect, has written some of the later reports; Mr. Buckett, publican at Prospect, I am informed also knows a good deal about the work; he was there almost every day during its progress, and I understand is very much concerned about its safety, as if the dam gives way he expects to suffer very severely; Mr. Rutherford, who was a sub-contractor there, and is now a contractor for Mr. Bennett, at

J. A. Hogue, Esq. 18 Dec., 1888.

at Mundarrah, Little Coogee, can give information, as he was on the job nearly all the time. He gave some information at one time and said that his name might be given up to the Government as the authority if it were necessary to do so. It did not, however, become necessary to divulge the informant's name. Mr. Ives, M.P., who lives up that way, and Mr. John Davies, M.L.C., might also be able to give some information which might be useful. Mr. F. B. Gipps, C.E., is another who examined and reported on the dam for this paper. The whole of the information which we have obtained at various times has been published in the *Evening News* on the following dates:—April 23 and 24, April 25, April 30; May 2, 10, 11, 12, 25; June 8, 9, 15, 21; July 31; August 1; of this year.

Mr. Henry Murray, Contractor, examined by Mr. Mestayer:—

Mr. H. Murray. 18 Dec., 1888.

123. When were you on the works? At the time I was there the tunnel which brings the water through to the syphon was being built. It is of the horse-shoe shape.
124. What were you doing on the work? I had a sub-contract from Messrs. Shand & Co., for the brick-work of the tunnel.
125. Do you remember the date? No; but I can give it to-morrow. I think it was about the end of 1883 or beginning of 1884. While I was there I looked about me all over the place. The puddle-wall was always a long way below the bank.
126. How much below? Sometimes between 30 and 40 feet.
127. Was it not kept slightly below the bank? It never got as high as the bank, and was generally about the depth mentioned below the bank.
128. What was your opinion of the work put in the puddle-wall? My idea of puddle was very different from their idea, for I considered the clay should have been milled.
129. Do you think that too much or too little water was used in the puddle trench? The puddle trench was one floating mass of mud, and the men had to work in long boots. There were millions of gallons of water constantly in the trench.
130. Were you the contractor for this tunnel? No, there were two or three contracts for building this tunnel, and I had one of them.
131. The specification provided for the puddle to be cut by spades? Yes, I believe so.
132. We are informed that a suggestion was made to mill the clay? I know nothing about that.
133. The statement that I have from one witness is, that a great deal more water than usual was necessary for the spades? Yes, and the way it was done would require a much greater amount of water. The inspectors insisted on its being used.
134. Did you ever hear the inspectors complain about so much water being used? No, I never heard them.
135. Do you know as a fact that a great quantity of water was used in the trench? I do, and I was constantly wondering what would become of it.
136. Did you notice any means that were taken for draining the bank, in the event of heavy falls of rain? No, only cuts. There was nothing done to take away the soakage.
137. Was the water rising in the dam? It was rising when I came away.
138. Did it come in from the aqueduct? No; I do not think that any water came in except from the water-shed.
139. The bank would not be very high then? Oh, yes, the bank was about 30 or 40 feet, and I reckon the dam was a long way on towards completion before the Nepean came into it.
140. That relates to the puddle trench? Yes.
141. Do you know anything about the material the bank was made of, and the way it was worked up? What I saw of it was in no way different to the ordinary railway bank.
142. Did they use rollers? Sometimes they did, but very seldom, as the traffic of the drays was supposed to dispense with the roller. I do not think there is enough slope in the bank.
143. How was this (Prospect) work done? The earth was simply tipped on the top and lowered down into the trench without having undergone any process before being let down, and the puddle was manufactured in the trench and, of course, required much more water than if it had been pugged before being lowered into the trench.
144. The specification provides for the puddle being cut and turned over; was this not done? It may have been done; but it appeared to be simply raw clay when it was put down the trench, for the water had all escaped from it when it was tipped on the bank, and very little, if any, of the gases had escaped out of it.
145. Did you notice the material which was put in? It was principally clay.
146. There has been a theory advanced that this white clay has been put in as a bed by itself? I did not notice it myself, and I cannot see how they could do it. There is a little pipeclay in the cutting; it is a horizontal bed, and they could not separate it.
147. Mr. Ryan says that in this bank somewhere about one-quarter of the material is pipeclay? I think he is about right there; in fact, it is very difficult to get any clay in this country without getting pipeclay in it.
148. You say you were employed on the Loch Katrine works; what material was that? I saw the material put into that bank. It was so rich that they had to mix loam with it.
149. Did they mix any gravel with it? Yes, and also turfed the outside as they went along.
150. Did you notice whether the bank (at Prospect) was thoroughly consolidated right up to the puddle trench? Well, you could hardly see the face of it, because the puddle trench was so thickly timbered inside.
151. How long was this puddle trench kept so much below the bank? All the time I was there. For a time the contractors were not allowed to put any more on the bank until the puddle came up.
152. How was the puddle trench timbered? It was a mass of timber, and the timber was too light to give the strength to work up to. I consider the puddle trench should never have been more than 3 or 4 feet below the bank.
153. Now, in your statement, it was not kept only a little below the bank, but between 30 and 40 feet? Yes.
154. Then, this part of the specification was not worked up to? No.

Mr. H. Murray. 18 Dec., 1888.

155. And you think that this accounts for the puddle-wall leaving the bank as it sets? Quite so.
156. What sort of weather was it when you were there? It was variable weather. Sometimes we had heavy rains.
157. Did the bank become slippery after these rains? Yes; and there was great difficulty in working the traffic over it owing to its being so slippery.
158. The contractors say that the wet on the water side was drawn across to the stone drains which were let to drain the water from the back of the bank? I never saw any stone drains, and only saw it run across the top by cuts. The water would have to go down 40 feet before they could take it away.
159. During that time the water could only flow into the trench? Yes.
160. You know for a fact that a great deal more water got into the puddle trench than was necessary? Oh, yes; I should reckon four times as much as was necessary.
161. Is there anything else you know of in connection with the work that went wrong? No; I took notice of the lightness of the timber propping, and they could not roll up to it properly owing to this lightness.
162. Do you know when the toe was put in? The toe was put in after the bank was up between 30 and 40 feet, or possibly 50 feet. When I was there nobody would walk about at night for fear of falling into the puddle trench.
163. The whole of the time the bank was being brought up to this height the puddle was kept at this great depth below it? Yes.
164. Were there many disputes between the contractors and the engineers at that time? Yes; they were continually wrangling.
165. What was generally the difficulty? I could never get to know. It seemed always centred upon the puddle. There was a line of inspectors always on the bank finding fault.
166. Who were the principal inspectors? I almost forget their names. There was a Mr. Davis from England who had a son there also; Mr. Jackson, over the tunnel; Mr. Ryan, the resident engineer, and his assistants, besides others whose names I cannot recollect.
167. Was there any difficulty about the tunnel work? Occasionally there was, but nothing of any moment. I think if the work were all as good as the tunnel there would be nothing to fear.
168. The tunnel is well done? I think they threw away too much money on it in concrete.
169. Do you know any one who can give us information? There is a man named M'Coy who was on the works much longer than I was on them.
170. What was he doing? He was in the tunnel, and also kept a boarding-house.
171. Do you know where he is to be found? I have no idea where he is now.
172. That is a very important statement of yours about the puddle trench being kept so much below the bank? I knew a great many of the men who were working in the trench by sight but not by name, and they could tell you the same. I think the contractor had a great deal to put up with from the Engineer and his assistants. Nothing was right, they seemed to be always at loggerheads. Whenever they put any earth down the inspectors would inspect it and try to find fault. They would worry the contractors over trifles, whilst they neglected important things. Mr. Ryan was also on the same line to find fault with things that were of little consequence; Inspector Lackey was there but left. There were one or two broken legs caused by the boxes in which the clay for puddle was being lowered coming down by the run.
173. Will you let me have the date when you were on the works? I will send it to you.

WEDNESDAY, 19 *DECEMBER*, 1888.

Mr. Edward Jackson, Inspector of Brick and Masonry, was called and examined :—

Mr. E. Jackson. 19 Dec., 1888.

174. Was the dyke built up with the bank? Yes; the dyke and the embankment were built simultaneously. The embankment was made up against the dyke.
175. Do you know a man named Murray who was on the works? Yes.
176. What was he doing? I had always thought and understood that he was a foreman bricklayer; but we found out after sometime that he was a sub-contractor. It was difficult for us to know who were workmen and who were not. The contractors dismissed him at Mr. Ryan's request. The specification gave us the power to have a person dismissed although we could not dismiss him ourselves.

Mr. George Davis, Inspector of Puddle and Bank, was called in and examined :—

Mr. G. Davis. 19 Dec., 1888.

177. When did you come on the work? I came here in October, 1881. I was specially brought out from England for this job.
178. Where had you been before? I was in the employ of the Corporation of Huddersfield for eleven years, and made three dams during that time,
179. What were you employed at? I was looking after the clay, making the embankment, and doing anything else that I was instructed. Mr. Stanway was engineer, and Mr. Crowther head engineer.
180. How was that embankment formed? The Huddersfield work was quite different to this.
181. Did you see the specifications? No; I had to work by the engineer's orders.
182. How did you put the clay into the trench? We put it in in 3 feet tips, right up to the puddle-wall on both sides. The puddle was put in, chopped, and cut. We could take the puddle out of the field, and bring it on to the platform. It was put in to the trench just as it came from the field. I have tested this clay by placing it under a small stream of water, a foot high, for twenty-four hours, and then found that it had a little bit of a dish. That was after it had been soaked. It was what I would call finished clay.
183. *Mr. Mestayer.*] What sort of material was the bank at Huddersfield formed of? It was composed of stone, shale, clay, and anything that we could get, mixed with earth, or we could not have got it to stand.
184. What kind of stone did you use? The stone was exactly similar to what we are getting here, and the quarry was in about the same position as this one.
185. What kind of a tunnel did they put in? They would not have masonry put in, but made a brick conduit.
186. *Mr. Gordon.*] Have you made any other dams besides that of which you have spoken? I helped to make one near my home in a similar way at Colay for the Bristol waterworks.
187. *Mr. Mestayer.*] How far is that from Bristol? About 14 miles. The material for it was brought in carts. We took the facing out of the lower bank at the water side. It was run out of the drays on to the bank. There was no consolidation except the traffic from the sides.
188. Was the puddle brought to the bank line? Yes, as far as possible.

Mr. G. Davis. 19 Dec., 1888.

189. How was it put in? It was put in in foot layers and thoroughly rolled, and we shifted the rollers in every way.
190. *Mr. Gordon.*] In this work did the contractors seem willing to do what was required? Yes; they did everything that we wanted, and they seemed willing to abide by the specification.
191. Had you any fault to find with them? We could not find much fault with them. We always have trouble with contractors. In England they do not take contractors without they (the contractors) can prove that they have had previous experience in the particular kind of work.
192. Was the puddle often very wet (say) after heavy rains? After heavy rains the water used to lie about but they always brought it into the stone drains and ran it away. The bank is a perfectly water-tight bank.
193. *Mr. Mestayer.*] Then how do you account for water being found in the bores put down? I account for it because I say the bank is moving. If you take the solid bank you will not find water; it is perfectly water-tight. I found about eighteen months ago that the bank had settled a good deal.
194. *Mr. Gordon.*] Have you ever worked under Bateman, in England? Not directly. I was at Marsden Tunnel, at Holmforth, and I would not live under it for a £1,000 a year.
195. When they accidentally got water in the puddle trench was it taken out again? Yes; every bucket was taken out. Mr. Moriarty thought we were getting the puddle too soft; but, as I showed him, our puddle trench being very rough, it was necessary to be soft in order to fill in thoroughly. My orders were to get the puddle so that we could barely stand on it, and it was brought up soft but so that you would not sink into it with your boots. We made it harder as we came to the top.

Mr. W. Stewart Wearne, Reporter for the *Evening News*, examined:—

Mr. W. S. Wearne. 19 Dec., 1888.

196. *Mr. Gordon.*] In the *Evening News* of July 28th last a paragraph appears, which says: "The section of the near half of the dam, extending some 70 yards in length, subsided bodily a depth of over 4 feet." Did you write that? Yes; I saw that it had gone down. I may as well tell you that a person gave us information, and I was simply sent up here to verify by my own observation what was stated.
197. Can you tell us who gave this information? It was given by a person who was in daily observation of the work. He is a good and thoroughly practical man.
198. Did the report appear before you came up here? No; it did not appear in the newspaper until after I had seen that it was correct.
199. Did you see it subside? No; I did not see any actual perceptible progress of the subsidence though it was going on during the time I was there.
200. But the report would make it appear to have subsided suddenly. How long did it take? I think the largest amount of subsidence took place within twelve hours.
201. Can you give us the name of your informant? No; I am not at liberty to give his name without his permission, as it might be injurious to him in his occupation. I spoke to my superiors in the office about giving his name, but I cannot give it until I see him, for at present he would not care to have it known.
202. But if he does not wish his name published we can withhold it? I do not think he would have any objection to giving evidence, though at present he may not wish his name known. I also have other informants.
203. The article says further on: "Cause of subsidence—water undermining the bank?" Yes; that was the theory he and I believed correct.
204. Again: "Pitchers bulging out and some coming out completely." Did you see these yourself? I saw the pitchers about 8 feet from the water-level.
205. Did you measure their height? I made no actual measurement, but judged from careful observation I saw the position they were in, and they were raised so much that, though actually not burst out, very little would have turned them over.
206. They were out of their places then? Yes; very much so indeed.
207. The article of August 1st gives certain dimensions of the slip. Did you give them? No; but the dimensions are fairly accurate, and were given by my informant.
208. "The puddle-wall had gone in"—how? It had gone in towards the water—subsided towards the water's edge.
209. How did you know this? Because when they tried to find the puddle it could not be found in its proper place and distance.
210. "A gully is said to be at this point, &c., &c." How did you get this? It is actually known that between these two places there was a watercourse. It is between the extreme limits of the two slips; so people who were working here at the time told me. It was presumed that the slip was at this point.
211. "Construction of the embankment was commenced straight off without cutting the natural surface level?" This was information supplied to me. So far as I can recollect no objection has been taken to the contractor's work by the *Evening News*.
212. By the same informant? Yes.
213. The article of December 1st, "about leaks in the dam." This was soakage, I suppose, after rain? At this time there had been no rain for a long time, and there appeared a stream of water flowing from the back of the dam which had not appeared before.
214. *Mr. Mestayer.*] Did you ascertain whether it came from the stone drains? I would have to get that information from an interested party. I am not an engineer, and I wanted them to send up a professional man; but they did not consider it necessary to do so. My examinations were undertaken just when I was sent up, and were not continuous.
215. The article of December 3rd said "there was a small drain of water coming from the bank," and suggested driving piles? I know nothing about that. It was written by Mr. Norton, I believe.
216. *Mr. Gordon.*] Was this his own idea? No, it was not. It was suggested to him. He is not an engineer, and possibly has less knowledge of the subject than I, as I had a good amount of experience in surveying.
217. *Mr. Mestayer.*] Did you write the leading article of December 7th? No; I do not write leading articles.
218. *Mr. Gordon.*] Was the article meant to convey the meaning that the dam was not built strong enough to bear a greater pressure of water than was then in it? I think so. It had 12 feet of water in it; and instead of increasing it to 15 feet they reduced it to 9 feet, which was indisputable evidence of its weakness.

Mr. W. S. Wearne. 19 Dec., 1888.

219. Do you think that was the reason of the reduction in the water level? Yes.
220. *Mr. Mestayer.*] But is not indisputable rather a strong word to use? I cannot say so. I judge from the information I gathered, and cannot argue whether the word is strong or not.
221. *Mr. Gordon.*] Why do you think that the subsidence would increase? This was the opinion of my informant. With respect to the horse and cart, it sunk up to its shoulders. I did not see it myself.
222. *Mr. Mestayer.*] Will you see your informant and ask him to communicate with me? Yes.

Mr. Robert Cameron, Diver, Harbour and Rivers Department, called and further examined, after having been down at section 44:—

Mr. R. Cameron. 19 Dec., 1888.

On coming up he reported as follows:—"I went as far as I could on each side. The face of the bank is not disturbed but the dyke has been forced out from its original position, and is pushing the ground before it; in some places the ground has been raised 6 feet; it is hollow at the bottom and then comes up as if lifted by a spade."
223. *Mr. Mestayer.*] Is the spalling shifted? No; the bank appears to have gone straight out.
224. *Mr. Gordon.*] The face of the bank has not bulged as at the other slip? No; it is totally different. There are large cracks in the ground, some of them large enough to take the whole of a man's leg.
225. *Mr. Mestayer.*] Are these cracks in the solid ground in front of the dyke? Yes. The dyke has moved forward pushing the ground up before it, cracking it in all directions as if a charge of dynamite had been exploded.
226. *Mr. Gordon.*] Has the dyke gone over? No; but in some places the top appears to be curling over; the dyke is very much twisted and many of the stones are so loose I could take them out with my hand.

[Mr. Cameron was instructed to go down again at section 47, also at section 16 and report at Mr. Mestayer's office on Saturday, the 22nd inst.]

THURSDAY, 20 *DECEMBER*, 1888.

Mr. G. A. Bramston called and examined:—

Mr. G. A. Bramston. 20 Dec., 1888.

227. *Mr. Gordon.*] We have been informed that you have some information which you wish to give us respecting the Prospect Dam? Yes; it is simply an idea that I have that the dam could be made more secure than it is at present. I think I know what would stop the slip and make the bank perfectly secure.
228. Your information, then, does not relate to the construction of the work? No; I do not know anything of the construction of the dam. I am not an engineer, but have had some experience with dams on the gold-fields—at Eaglehawk, near Sandhurst, in Victoria, and at other places. I think the remedy for this dam will be to relieve the water pressure on the face.
229. How do you propose to do that? By making a breakwater of timber some little distance from the bank. We had a lot of trouble at Eaglehawk, and this is how we cured it.
230. How was the breakwater made? It was made funnel-shaped to guide the water to the outlet and keep the pressure off the face. In the case of the Prospect Dam I would make the breakwater of timber secured to screw piles or cylinders filled with cement concrete built inside the dam and near the bank, but not touching it. This would prevent any more slipping.
231. *Mr. Mestayer.*] Then, if I understand you aright, you think that the pressure of water in the reservoir is causing the bank to slip, and that if the pressure of the water be kept off the face of the embankment, there would be no further movement? Yes; and I would keep it off by a timber breakwater.
232. Your idea, then, would be to put this timber breakwater the whole length of the dam? No; only where the heaviest portion of the water is.
233. *Mr. Gordon.*] You do not propose to prevent the water from getting between the breakwater and the embankment? No; but to fix the breakwater so as to take the pressure off the water.
234. *Mr. Mestayer.*] Were these breakwaters put in to prevent slips? Yes; in the early days of sluicing we had a great deal of trouble with dams slipping; but after we constructed these breakwaters we never had any slips.
235. *Mr. Gordon.*] But if any water space exists between the two, the pressure will be the same as if there were no breakwater there; the breakwater would only check the wave action, not reduce the pressure? I thought the breakwater would take the pressure off the bank altogether. It certainly answered at the dam I referred to at Eaglehawk.

Mr. Edwin Limond called and examined:—

Mr. E. Limond. 20 Dec., 1888.

236. You were on the Prospect Reservoir works, I believe? Yes; I was there from the commencement to the finish of the trench.
237. What were you doing? I was foreman and manager at the saw-mill for Mr. M'Guigan.
238. We are informed that you can give some important information with regard to the dam. How long were you there? About nine months.
239. Were you there when the trench was commenced? Yes, I was there before the trench was commenced. I cut the timber for it while it was being built.
240. Where was the saw-mill situated? Close to the trench.
241. We understand that you can give us the reason for the defect in the dam? Yes, I can tell you what causes the failure of the dam. People have been looking for the cause at the top, but it is not there, it is below. I went up to Prospect last week, was on the top of the dam at 4 o'clock on Sunday morning, and saw that it was just as I had predicted five years and a half ago—that it would not stand. I have had a lot of work of this kind in New Zealand.
242. What caused you to predict that it would not stand? I could see from the first, when they went down 15 feet further than the original specification level, that it would not stand.
243. From what original level? Before the trench was commenced there were trial shafts sunk from 30 to 60 feet deep, and in every one of these shafts water rose to about 15 feet from the surface, the original level of bottom of puddle trench was above this water. I built the mill near one of these shafts, close to

Mr. E. Limond. 20 Dec., 1888

the place where the by-wash is now, with the intention of using the water for the engine; but I found, after working a couple of days the water was so salt that I could not use it, and had to stop until they carted fresh water for me. I noticed also that the water in these shafts, during the day, would rise and fall, and we would have to lower or raise our pump as required to get the water.

244. How did it rise and fall? It rose and fell like a tidal water, and there must be some influence working on it to cause this rising and falling. The original specification was that the puddle trench should be sunk 15 feet.

245. The specification says 15 feet or more [*specification read*], so that it was optional how much deeper he went in order to find a solid bottom? Yes; but if they had not gone below the 15 feet the dam would have stood, as they would have had a dry bottom. In the first contract the specification said it was to be sunk 15 feet.

246. There was only this specification which says 15 feet or more? There was another specification which said 15 feet.

247. Did you see that specification? No; but Mr. M'Guigan told me that it was all it had to be sunk. As it was they sunk (say) 10 feet below the water level on to a rotten reef, and on that reef the water comes.

248. What was the clay like that was put in? The clay was not all totally wet or pugged in as you make bricks; and as soon as this water got to the puddle clay it would swell considerably.

249. *Mr. Mestayer.*] Did you see the puddle-wall put in? Yes; and when I left the wall and bank were a considerable height above the surface.

250. It was level with the bank? It was a good deal higher than level. I spoke to Mr. M'Guigan one evening about the depth they were sinking the puddle trench, and he said that he did not think it would stand; but, he added, there is the specification for it.

251. Was the puddle put down on a wet bed? It was put down on as dry a bed as it was possible to obtain.

252. *Mr. Gordon.*] How do you account for the bank slipping? I know that it is this water coming upon the rotten reef that causes the bank to slip. You can find it out by putting a bore in, and you will find the puddle at the bottom like soup. The clay is expanding through this water getting into it, and it is lifting the whole of the top bodily.

253. But it is sinking down instead of lifting up? Yes; the bottom is sinking down whilst the clay is still lifting up.

254. How do you account for the top sinking, then? The moisture from the top comes in, and then it shrinks again.

255. *Mr. Mestayer.*] If a bore were put right down in the centre of the bank you would expect to find water? Yes.

256. I have put some bores down in the bank without finding water, how do you account for that? Yes; but there is water there. I know it.

257. *Mr. Gordon.*] What did you see in the puddle trench; how was it done? The material was carted in from the flat, and partly taken out of the trench itself, was it not? The clay was ploughed and dug and carted into the trench.

258. *Mr. Mestayer.*] Did you see how it was worked in the trench? No; I did not.

259. You say you thought at the time by the depth of the water rising in these shafts, that the puddle would never stand? Yes; I did.

260. *Mr. Gordon.*] Were you there when the flume broke? Yes; my engine was taken to work the pump that pumped the water out.

261. Had they not engines on the trench? Yes; they had two small engines; but I do not know what kind of pumps they had.

262. How long did it take you to pump the water out? It took twenty hours.

263. What kind of a pump did you use? A Tangye pump.

264. Do you know what kind of pumps they were using in the trenches before this break took place? No; I do not.

265. When did you leave the works? I left there on the 14th July, 1883.

266. Was that before or after Mr. M'Guigan died? It was before he died.

267. Do you know if there were any complaints about the size of the timber for the trench? There were complaints at first that the timber was too small.

268. What size was it? It was cut five by three, the proper size, but they wanted it bigger.

269. Did you cut the props? No; I did not. They used bush timber for the props. The reason the row took place over the timber was because I was making too much money and they wanted me to reduce my price. They afterwards gave me weekly wages.

270. Do you know of any accidents having taken place? There were none at the mill, but there was a man killed in the tunnel, in the chamber underneath the tower.

271. It has been said that men had their legs broken by the buckets in which the puddle was lowered into the trench—do you know of any such accidents? No; I never heard of any accidents except at the tower. I know of no broken legs or other accidents at any other place. In the tunnel where the man was killed they opened up for some distance without timbering the ground, and the man who was killed was picking overhead when about a ton of stuff came down on him.

272. *Mr. Mestayer.*] You say that all this water was extremely salt, and you could not use it? Yes; after two days the engine was in a fearful state owing to the water. Mr. John Rothery, engineer, of 158 Harris-street, Pyrmont, and Mr. Price, overseer of works, can confirm this. Mr. Price said at the time when they sunk into this drift that the dam would never stand.

273. Did you say that the men in the lower tunnel were working upwards instead of downwards? Yes; they were opening up the chamber and picking the roof down.

274. What height was the embankment when you left? The embankment was, along the flat, about as high as this room, and the puddle about the same height.

275. How far did they keep the puddle trench from the surface? About a foot.

276. Did you see any sign of water working up through the bed when they put the puddle in? The bed was always wet.

277. *Mr. Gordon.*] Did you see the pipes burst in the trench? The pipes used to burst sometimes.

278. How did they get the water away? They have stone drains in the back part of the bank, and the water

water was taken across to the drains. The mistake that has been made was in sinking the trench to the depth they did. Mr. E. Limond. 20 Dec., 1888.

279. *Mr. Mestayer.*] Did the salt water come up to the surface? No, it remained at from 12 to 15 feet below the surface.

280. Did you ever see it rise higher than 15 feet? No, it remained at about that height.

281. *Mr. Gordon.*] Were you there when the embankment was built? Yes.

282. Do you think it was well rolled? They had drays on it to carry the material, and I think it was pretty well trampled all over with the number of drays they used.

283. Did they use rollers? The drays were much better than rollers.

284. Do you think the contractors did their work properly? I consider that the contractors did their work, as far as I could see, well and to the best of their ability. All that I can say is that if the original depth of 15 feet had been adhered to the dam would have been perfectly safe.

285. Was Mr. M'Guigan laid up much before he died? Well, I may say he was always ailing, and was often very bad. If ever they get a heavy rain, and a great pressure of water by the dam filling up it will go like a pile of salt.

286. Then you consider that the bank is not safe? I am sure the dam is not safe. We may expect heavy rains, and they cannot let the water off fast enough, so the dam must fill up and give way.

287. Have you any further information you can give us, or suggestions that you can make? No; I gave information to the *Evening News* on Monday last, but they did not publish it.

FRIDAY, 21 *DECEMBER*, 1888.

Mr. Robert Cameron, Diver, Harbours and Rivers Department, called and examined:—

[I have been down at sections 47 and 16, and have come to report myself.]

288. *Mr. Gordon.*] You went straight down the slope with the chain on Wednesday? Yes. Mr. R. Cameron. 21 Dec., 1888.

289. The first measurement you gave us was to the top of the dyke? Yes.

290. The second was to the foot of the dyke? Yes; on the bed as it were.

291. Was that part of the dyke altered in shape? No, it seemed to be cutting into the lake; burst up, I may say. It has come out more flat, and great big rents appear for about 14 feet in the solid ground. It rises 2 or 3 feet. It went down the outer slope.

292. How did you measure it? It was a little more than two lengths of the pricker, and the pricker is 6 feet long.

293. Where is the hump you spoke of? On the outer slope of the bulge, it felt as if it were a blister. I followed it and found the dyke as if it were curling over, and the stones were displaced. It seemed as if the bottom of the dyke was going away ahead of the top. There were a good many loose stones lying about.

294. Where do you think these stones came from? They probably came from the shingle. The top of the dyke is not of an uniform height. It is pretty flat on the top as if it had sunk down. In some places it was just as it had been built. In some places the dyke is 2 or 3 feet higher than in other places.

295. How far do you think this irregularity extended? It extended as far as I went at that time. It got less as I went along. It was not so much as I got near the solid where it apparently died out. I could feel indications of it all the way along. The bulge extended to a little beyond where I could get from section 41½. It seemed to taper away, and there was more of it to the right than to the left. On the valve tower side it was worst, but it extends to the other side. I then shifted the gear along to section 47, went down again and found that it tapered out somewhat like the other. In some places it was hard to find the place where the toe was. There is not so much bulge there as at other places. There were some stones in this place which had fallen in or sunk. In some places the dyke is much higher and twisted. Going away from the tower, from section 47 to the breakwater the bulging seemed to die out, though I could feel some indications of it. It was so dark that I could not see whether it disappeared or not. I was down during that heavy thunderstorm. The gully spoken of is a good distance out from the bank and is said to have been a creek. It is near section 19. The shingle slope seemed to have been disturbed—it seemed wavy and in some places was very rough. There is a sort of steps as though it were moving. I saw that on Wednesday. I shifted the gear yesterday to section 17. Down at the bottom there is a quantity of loose stones. I found this stuff [*stuff produced*] up the bank, it seems to have oozed out of the bank. This was between sections 17 and 16, and extends some distance. I did not go to the end of it. There are other places in the dam which are oozing out.

296. Did you see them yesterday? No; I saw them when I was down before, but I cannot recollect where, because I took no notes at the time. [*The specimen shows nearly all white clay, mixed with a little yellow.*] This was spewed out in many places, and runs over the bank like paste in some places. It extends pretty well up to shallow water. The water was higher in May than it is now. When I went down for Mr. Bishop there was no displacement near the spot where I saw the stones yesterday. There were no stones there on my previous visit.

297. Are there many loose stones? There are not a great number now, but there are more than when I was down before. They are more like round stones used for the slopes. There are some loose stones on the dyke which I could pull out with my hands. I went from section 47 as near as possible to, and examined the dyke; but I did not go as far as I would have done, on account of the severe thunderstorm which caused me to come up as the men were exposed.

298. Was there any spewing out at this point? There was no spewing up from section 45 towards the first slip. Going from the bank you can find a little puddle, but nothing to speak of.

299. Did you examine the step referred to in your former evidence? Yes. I came across it again and went along it. The bottom seems pretty sound. It is between sections 17 and 16 that the oozing is seen. The step runs along to section 17, and in some places was more defined than in others.

300. Did it run straight along? It did not appear to run straight but diagonally along the bank. I found the ridge at section 17 very irregular; it is either curling over or it is very uneven.

301. Do you know how far it extends? I have no idea how far along the bank it extends, but I found it as far as I went.

302. Were the stones on the slope displaced? I found none of the stones loose in walking down the bank itself. They seemed bedded in the bank.

303.

Mr. R. Cameron. 21 Dec., 1888.

303. Was there any spewing at section 19 when you went down? I noticed very little on Monday but there was a greater quantity nearer in, and I saw it the whole distance I travelled. At section 19 I got on the clean, original bottom, and at that point there is no sign of any disturbance.
304. How far does the spewing extend? It runs a good way down from the shallow water (say) 5 or 6 feet downwards. There was some spew at about that distance from the surface, and it became worse in deeper water.
305. Was there any ridge where you brought this stuff from? No; it was quite smooth all the way along. In some places it is like light ironstone gravel, in others like paste. I do not think the stuff runs to the bottom. I know there are other places where spewing is taking place but I have not been near these places this time. I found them when I was down for Mr. Bishop, but I cannot remember where they were as I took no notes at the time.

Mr. James Rutherford, Contractor, called and examined :—

Mr. J. Rutherford. 21 Dec., 1888.

306. *Mr. Gordon.*] We have been informed that you can give us some information respecting the Prospect Dam, and shall be glad to receive it. What were you doing there? I am a sub-contractor for the pitching of the dam.
307. When did you first go on the work? I was on the work from the beginning, and did the pitching of some sections of the aqueduct.
308. Do you know how the dam was constructed? No; I know nothing of its construction.
309. Were you at work there in the year 1883? I was in No. 10 and No. 1, and afterwards in No. 8 and No. 9 sections.
310. Who did you take the pitching sub-contract from? From Mr. Shand.
311. *Mr. Mestayer.*] Are you doing the pitching now? I am doing the pitching of the embankment now.
312. *Mr. Gordon.*] Did I understand you to say that you had been there from the beginning of the work? From the beginning of the pitching.
313. Does your contract include the loose work? No; it does not include the putting on of the loose work. I did the pitching from the kerb upwards.
314. You had to put the layer of spalls in? Yes, 6 inches of metal and spalls.
315. Did you notice anything wrong in the slope of the bank when you started the pitching? No; the pitching was done before there was any slip.
316. Was there any bulging of the slope? No; there was no trace of the bank shifting then. When I first noticed the slip I told Mr. Copeland, one of the inspectors, that there was a slip and he laughed at me, and told me I was mad. I then told Mr. Davis, another of the inspectors. He went to Mr. Ryan who was ready to eat him. The slip however increased.
317. Do you recollect the date on which you first noticed this slip? No, I do not; but the pitching was not finished and we were shifted to another part of the bank.
318. Do you think it would be in April? Probably it was in April.
319. What we particularly wanted to know was whether you knew anything about the construction of the dam itself. No; I was not there at that time. I was not working at it, and only saw it as I rode past it.
320. *Mr. Mestayer.*] I think what you have said throws a little light on an article which appeared in the *Evening News*, and said that a correspondent had predicted the collapse of the dam. I wrote to the editor and he gave me your name as the correspondent alluded to? That is not correct. It was before the slip really occurred that I told them that a slip would occur. It had begun to slip and I thought it would increase.
321. Where did the cloudiness of the water principally occur in windy weather? The water was very thick for about a chain all the way along the bank whenever a breeze was blowing. I consider the clay was too good for the purpose, and a rougher material would have done.
322. *Mr. Gordon.*] How much do you think was made after you went on to the work? 15 or 20 feet were made. The pitching was begun rather late. We have shifted the tram line twice since I began; it was on what was the top of the bank first, now it is on the finished portion. I did not see anything of the construction of the earlier portion of the bank.
323. *Mr. Mestayer.*] You can notice the water quite thick even now after rain or when it blows? Yes; especially when the wind blows towards the bank. There has been very little rain since I have been there.
324. How long have you been on the bank? About a year.
325. Did you consider that the material used in the bank was unsuitable? I think the clay was too soapy, and when wet would go away to nothing.
326. How is the pitching laid in the aqueduct? The pitching in section 1 this side of the reservoir is pitched for a slope of one to one. It is laid on clay footed against the bottom of the excavation. The bed is coarse gritty sand and rotten rock, and the pitchers are first set on the puddle.
327. Do you know Mr. Wearne? Yes; Mr. Wearne is a reporter for the *Evening News*, and I corrected some information for him which he had received from a publican living at Prospect. The information was very inaccurate.
328. Mr. Wearne informed us that he had received some important information from a gentleman, but that he could not disclose the name of his informant because of certain circumstances which made it inadvisable at present; but in a month or two there might be no objection. He, however, would call on his informant and endeavour to get consent. Are you the gentleman? and have you any objection to your name appearing in print in evidence? No; it was not I, and I have no objection to my name appearing in connection with this information.
329. Do you know of a horse and cart falling into one of these fissures? I have not known or heard of any horse or cart going into one of the cracks, and if it had I would either have seen or heard of it. In various places there were cracks 8 or 9 feet deep, and extending 200 or 300 yards. I have seen them working at these.
330. *Mr. Gordon.*] What do you think was the width of these cracks? 18 inches was the extreme width. I saw the bank go down at least 6 feet on the morning after the slip had taken place. They commenced at the top of the slope and shot the ballast out of the truck to strengthen the toe of the bank. They have put some thousands of yards of metal there. It was the bank that went down. I think they should have commenced from the bottom and worked upwards with their ballast.
331. *Mr. Mestayer.*] There is a statement made in one of the *Evening News*' articles that the banks were honeycombed

honeycombed with tunnels large enough for a man to walk through? I never saw any fissure more than 18 inches wide, except at the slip. If anything of any size had opened I was sure to have seen or heard of it. I saw some of Mr. Wearne's articles in the paper, and they were certainly slightly coloured. Mr. J. Rutherford. 21 Dec., 1888.

332. *Mr. Gordon.*] Then you think these articles were somewhat exaggerated, and were what might be expected from a reporter wanting to create a sensation? Yes; if they got hold of a word or two they made much more of it.

333. What height has the bank been raised while you were there? The bank was raised about 20 feet whilst I was there, and everything appeared to have been done thoroughly. It was done in 6-inch layers.

334. *Mr. Mestayer.*] Did you see anything to lead you to believe that the contractors did not do their work properly or according to specification? There was nothing to lead me to believe that anything wrong was done.

335. Do you know if the inspectors had any trouble with the contractors about the quantity of water used? There were rows between them about not having sufficient water.

336. Did you think there was sufficient water used? Well, really there was not sufficient water used for the dry weather.

337. Do you think the bank is well made? I have never seen a bank so well constructed as this one. It was all put in in 6-inch layers next the puddle-wall, and the rest in 12-inch layers.

338. Was there any distinction made between the forming of the slopes? I saw no distinction between the inner and the outer slope. It was all well carted over and rolled.

339. You have had some experience in dam construction? Yes; I have been on two or three dams in Victoria, amongst them the Gong Gong, Kirk's Dam, &c. I do not think there is any fault to be found with the construction of the dam. I think the whole fault is in the clay, and the spall packing not being heavy enough. It is only 12 inches thick. The contractors were up to the specification in every case.

340. This scarcity of water to which you alluded would be in watering the bank? Yes.

341. What sort of condition was the puddle-wall kept in? I do not think they had sufficient water in it. They did not keep bags on it, as is generally done in such cases, but they simply had men told off to give it a watering. Young Mr. Davis, a son of the inspector, was looking after the water on the puddle-wall, and they had the water in accordance with the specification and under his orders.

342. We have heard that the water-pipe conveying the water alongside the puddle-wall was very leaky, and kept the place constantly in a state of slush? I have never seen that. It was only a 2-inch pipe of wrought-iron, and it had to supply water for everything—men, horses, bank, &c.

343. Then in your opinion there is nothing to justify the statement that the puddle was kept in a state of flood? The puddle, in my opinion, was not kept sufficiently damp.

344. *Mr. Gordon.*] Did you do the puddle-wall at Gong Gong? No; I only carried out the pitching.

345. *Mr. Mestayer.*] Did you ever say anything to Mr. Wearne, or to any one else, about the water flowing from the back of the embankment? Mr. Wearne asked me some time ago about it and I told him I did not think it came from the dam. We tasted the water, which is bitter, and tastes of cement; so it cannot be a leak from the reservoir or it would taste like the water in the reservoir.

346. *Mr. Gordon.*] How do you think the contractors did their work? I think the contractors were compelled to do their work well. There were so many inspectors about that it was almost impossible for them to do the work badly. They had to do it all well, or there would have been a row.

347. How did you get on with the contractors? I got on very well with the contractors except that we were always quarrelling about the measurement. They quarried the stones and I set them. I put all the kerb in except about 300 feet near the towers. It is put in parallel to the centre line of the puddle-wall.

348. *Mr. Mestayer.*] Have you seen anything which would lead you to believe that the kerb is not in the same position as that in which you laid it? I am sure that it is not in the same position. Three weeks ago I looked at it, and it had shifted about a foot outwards at the site of the second slip.

349. Which way has it gone? It has come out towards the water.

350. How long ago is it since it was put in? About five months ago. The kerb was put in about the commencement of my work.

351. Has the water been any higher than it is at present? I think it was about 3 or 4 feet higher.

352. Did it come over the kerb? It has been over the kerb and some 6 feet up the slope.

353. How much nearer do you think the kerb is now? I think it is fully a foot nearer the water line than it was at site of second slip.

354. During the last three weeks daily observations have been taken, and no movement has been detected. Can you indicate the exact position in which you placed it? No; Mr. Jacob gave me the centre line sometimes, and sometimes the contractor; and there was frequently a difference of 6 inches in the pegs.

THURSDAY, 27 DECEMBER, 1888.

F. B. Gipps, Esq., C.E., was called and examined by Mr. Mestayer :—

355. In connection with this inquiry into the condition of the Prospect Reservoir, Mr. Gordon, who has had to leave again for Melbourne, has given me a few questions in writing to which he would like your answers, and which I will forward to him? I will answer to the best of my ability; but I have only visited the Prospect Dam now and again during its progress—perhaps two or three times a year. Mr. F. B. Gipps. 27 Dec., 1888.

356. You have visited it occasionally during the time it was being built? Yes; two or three times a year.

357. You visited the dam several times during its construction? Yes, from nearly the inception of the work.

358, At what stages of its construction? At various stages.

359. Did you see the puddle put into the trench? I saw it being put in, and again when it was half full. I saw it before the embankment was being raised above the original surface.

360. In what respect do you think the puddle is faulty? In no respect so far as I could see. It appeared to me to consist of good clay, and was well puddled. Perhaps I would have adopted a different method in filling it in, that is to say, filling in the trench. It was filled by throwing the puddle down from a great height. Still I believe it was well worked after being put down into the trench.

Mr. F. B. Gipps. 27 Dec., 1888.

361. Where is the place, or where are the places (referred to in a leading article of the *Evening News* of the 2nd May last, and for which Mr. Hogue says you are responsible) at which the puddle-wall is composed of rubble and rubbish? Did you see any rubbish or rubble put in? I did not say that. I never gave Mr. Hogue any authority whatever for making that statement. I deny the statement entirely. I have seen the puddle-wall from its inception, and I distinctly say that the statement is incorrect.
362. This article appeared on the 2nd May, and your report appeared about the same time? The *Evening News* asked me to give them a report on the dam; I accordingly visited and examined it, prepared my report, and handed it in to the *Evening News* about the 3rd or 4th of May; but there was not a word about the puddle-wall being composed of rubble and rubbish, and I am not responsible for that statement in any way.
363. Do you think the first slip is due to the caving in of the puddle-wall owing to its bad construction? The puddle-wall was not of bad construction, but the material in the front face of the dam I decidedly think was inferior.
364. Did you visit the dam while the inner slope was being constructed? Not often. I visited the dam only about two or three times during the year.
365. You mention in the report published in the *Evening News* of the 25th May that the inner slope is composed almost entirely of clay? I saw the inner slope from its very start, and I was very much surprised at the light material being put in. I noticed that after being sprinkled with water, when it dried it blew off with even a light wind as very fine dust, showing that there was very slight cohesion in it.
366. That is the clay in the slope? Yes.
367. Where was the large quantity of earth put that was excavated from the hill at the east end of the works? I do not know where it may have been put. I cannot say of my own knowledge where it was put.
368. When you were there the material made use of in the embankment was clay? It was almost entirely clay or it was soluble shale.
369. Was the clay well levelled and carted over in forming the dam? That I cannot say because at no time was I long enough on the dam to form any opinion. I have certainly seen on one occasion shortly after the commencement that the slope was being brought up in layers of from 18 to 24 inches at a time, but these layers may have been levelled out thinner before being rolled.
370. Was that at the back or front? The front.
371. Was that close up to the puddle wall? No.
372. The specification provides that one portion may be laid in 6-inch layers and another in 12-inch layers and the whole is to be well rolled. The general tendency of the evidence of what you have seen would lead you to think the contractors had done their work properly? I have seen nothing to lead me to suppose that they had not carried out their work properly.
373. Did you ever observe any tendency to slide in any part of the dam prior to the slip at the bend? No.
374. Did you see the puddle-wall being made, and of what consistency was the clay when put into the trench of the puddle-wall? It was of the consistency of pretty thick pug.
375. It did not go in a very thin state? No; it was more like a thick pug as far as I saw it. I was only there on different occasions and did not stop long.
376. Do you consider the puddle-wall well made and of good material? Yes.
377. Did you ever see in the inner slope any layers of white clay entirely? No layers of any great extent. On the occasion when I visited the dam on May 1st, I took samples of the different clays which I saw on the front slope. I noticed a thin layer of white clay and one of dark clay like that on the side of Prospect Hill, which is, of course, detritus of diorite rocks, and is more unreliable than the white clay. When I tested it in water I found the capillary action as strong nearly as in very porous sandstone, and it quickly melted away like sugar.
378. Did these layers extend over half the width of the bank? I saw layers of both white and dark brown clay; but I cannot say that they extended to any great width or depth.
379. There were patches of both kinds of clay? Yes; simply patches.
380. There were no layers of (say) 300 feet in length? No, I cannot say that I saw any of that length.
381. You have seen no layer of that size? I have seen no layer of such an extent as you suggest. At the same time whenever I visited the dam the clays and shale alluded to appeared to be intimately intermixed with and to form part of the material in the water face of the dam.
382. Was the slope of the layers from the face downward toward the bank maintained? I cannot tell, as I was not on the work except on different occasions for a short time.
383. Did you ever see the bank after heavy rain? I have seen it after rain.
384. Did the workmen lead the surplus water across the puddle-wall to the drains in the rear half-width? I did not notice and cannot say.
385. Did you ever notice the work in a wet or sloppy condition? I did not notice it.
386. Did you ever see the bank or the puddle while the work was going on in a wet or sloppy condition? No. In fact as I saw it in the beginning, I particularly noticed that there seemed to be too little water, and they did not seem to be able to get sufficient water for the work.
387. That would leave the bottom part in a very porous condition? Yes.
388. And when they got heavy rain in 1887, the water would naturally accumulate in that part? Yes.
389. Are there any points respecting the mode of construction of the bank, or respecting the materials employed in any part of the work, that came under your own observation, and that you think of interest in this inquiry, and that you could mention? The chief points which came under my notice were the characters of the clays on the front face. I found that the white clay was soluble, and the dark-brown clay, which they looked on as a heavy clay, and was expected to give weight, was very porous, and when broken up it had no cohesion at all. This appeared to me, when I visited the dam in May, to be the cause of the slips, but from a recent examination I think I may have been somewhat premature in attributing the slips wholly to the clay, and I am now inclined to think that it was due as well to leakage from the puddle trench, which is, so to speak, curling or blowing up the dam. [*Plan shown.*] This puddle-trench cuts right across the natural flow of the water in the strata which has only a dip varying from 20 to 35 feet per mile, and this flow being stopped by the impervious puddle-wall the water from the porous strata is accumulating, inducing a constantly increasing pressure which is gradually forcing its way up the side of the puddle-wall or through the ground immediately connected with it, and is undermining portions of the embankment.

390.

Mr. F. B. Gipps. 27 Dec., 1888.

390. You consider that this water is forcing the clay up then, and is throwing the whole bank out? Yes. My impression is that these slips will continue, because I do not think there is sufficient weight to overcome them.
391. What then is your idea of the slip? I am inclined to think, as in my first report, that the slips are greatly due to the clays, which are very easily soluble and have melted away, leaving no weight to overcome the pressure of water as aforementioned. The dam is largely kept in its place by the water in the reservoir. If that were withdrawn the embankment would probably fail. The clays in front are very weak, more especially the dark ones.
392. You think then that the water which is in the strata cut across by the puddle trench is now pushing itself up in the puddle trench? Yes, the crust of the original surface has been broken, and the front face being the weaker side, it is being blown up.
393. Then you would expect that when any bores were put down into the sides of the slope you would get a large quantity of water? Yes, at the bottom.
394. But if the puddle-wall were properly made and compressed the puddle should seal out the water? Yes; but we know that in several instances of coffer-dams, water has forced its way right up through weak or broken surface strata through puddle. In this case a good deal of the rock was blasted with heavy blasts, and this would tend to break up or disturb the super strata.
395. Then you contend that putting in the puddle-wall has stopped the natural flow of water through the porous strata intersected by the dam, and the water is accumulating behind it? Yes.
396. But a head of even 40 feet should not produce any effect on a properly made puddle-wall. I have never known it to do so, and I have put them down in all varieties of porous and water-bearing strata. If the puddle were bad I could understand it, but the samples we have taken out are of very good quality? No doubt of it; but I contend that the ground and super-strata have been broken and shaken by blasting, and that the hydrostatic pressure of the water in the large area drained by the porous sandstone intersected by the puddle trench is sufficient to force its way up through the ground and attack the clays in the front embankment. Of course if the front embankment had sufficient weight it would overcome this, but it has not nearly sufficient weight. In California, in the San Francisco Water Supply Works, the Pillarcitos reservoir went in a very similar way, and there it was found to be due to a leak just between the inner face of the puddle-wall and the trench.
397. When you saw the embankment being put in was it put in with layers sloping in towards the puddle-wall? Yes.
398. Did you ever see the face of the dam being brought up to any considerable height above the puddle-wall? Yes; I forget to what depth I saw it, but it was a good depth.
399. The specification states that the embankment may be kept a little above or a little below the surface of the puddle-wall, and we would like to find out exactly what was done? When I saw the light clay aforementioned the inner face of the embankment was going up, and the puddle-trench was not anything like filled up. The embankment on that occasion was started before the puddle-wall was near the surface.
400. One witness we had before us said he had seen the top of the bank 30 or 40 feet above the level of the puddle? I suppose when I was there the puddle in trench was nearly that depth below the surface slope.
401. But was the embankment carried up right to the edge of the trench while the puddle was so low? That I could not say.
402. So far as the construction of the trench and the slope are concerned, did you see anything to lead you to think that there was any bad workmanship in it? Decidedly not.
403. Did you see the stone-dyke at the inner toe of the embankment being put in? No; I saw the stone dyke, but I did not see it put in.
404. We have been told that the embankment was built some 30 or 40 feet high before the toe was put in? That is nonsense.
405. The dyke was put in and the embankment worked up to it? Yes; it was one of the first things I noticed at one of my visits.
406. There is no doubt that these clays are very poor? No doubt whatever.
407. You took some samples of the clay to try them yourself? Yes.
408. How did you test them? I tested them with different quantities of water, and noticed their conditions. The white clay melted away to a paste, and the brown or dark clay absorbed a large quantity of water, and then caved and fell to pieces as fine sand.
409. Did you try to mix the white and yellow clays? No; but I tried the yellow and the red, and found they were the only clays that could be trusted. The white goes into a thin paste, but the dark-brown clay is much worse than the white. It is very sandy and rotten, which may be imagined by the slips to be seen on Prospect Hill. It is not a true clay, but only detritus from the diorite rock above it.
410. I believe you have said that sometimes when the winds was blowing towards the embankments the water gets so thick that it cannot be used? That is not in my report. I have, however, noticed it myself.
411. At which part of the bank? It was very near the first slip that I took notice of it.
412. That would be around the bend? Yes.
413. Have you noticed it any other place? Yes, I have noticed it in other places all along the embankment.
414. Was that after rain? No, it was in dry weather. It was due to the wash caused by the wind. The wind always induces a current right along the face of the dam.

FRIDAY, 28 *DECEMBER*, 1888.

Robert H. Ryan, Esq., Resident Engineer, was called and re-examined :—

R. H. Ryan, Esq. 28 Dec., 1888.

415. When was the stone-dyke put in relatively to the bank? The toe was put in first and the bank worked to it and carried up uniformly with it.
416. How far was the puddle-wall allowed to be kept below the bank? That portion alongside the puddle-wall was never more than a few inches. The banks outside the select material were allowed occasionally to be ahead about 2 feet in advance.
417. Was the puddle-wall at any time 30 feet below the surface of the embankment? Never. 418.

R. H. Ryan, Esq. 28 Dec., 1888.

418. Was the timber of the puddle trench sufficient for the purpose? Yes, generally. At times its insufficiency had to be brought under contractor's notice.
419. In adding 5 per cent. for the subsidence, was the depth of the puddle trench below the ground level taken into account? No, only the height above the ground was considered when the 5 per cent. was added.
420. Did the water in the reservoir have access to the bank before the broken stone was put on? No; but the contractors did not carry on the spalling as fast as I wished, and I had to write and hurry them on with it. At times the waves washed over the top of the stoning.
421. Did you ever notice a rise and fall of the water in the trial shafts on the site of the works? No; but Mr. Nicholas, who had a great deal more to do with these trial shafts, would be in a better position to give you any information on that point.
422. When the puddle trench was excavated did any considerable amount of water come through the rock? No; generally it was exceedingly dry. It was only where the gravel bed was cut through that we had any considerable quantity of water to deal with in the puddle trench.
423. Did the gravel bed occur at either point where the slips have taken place? No; the strata cut through in this case had no gravel, and the rock was not of a porous nature and did not give out any water.

Mr. William Nicholas, Inspector of Earthwork, called and re-examined :—

Mr. W. Nicholas. 28 Dec., 1888.

424. Did you notice the water in the trial shafts and the depth it stood below the surface? I cannot remember exactly, but as near as I can recollect, the surface of the water was about 14 feet below the ground; not less.
425. During the time these trial shafts were open did you ever observe any rise and fall (like a tidal influence) of the water? No, I am sure that no such rise and fall took place or I should have seen it.

Mr. George Davis, Inspector of Earthwork, called and re-examined :—

Mr. G. Davis. 28 Dec., 1888.

426. When excavating the puddle trench from about section 40 past and round the bends where the slips have taken place, did you find any water coming in from the rocks that were cut through? No; this part of the trench was very dry, no water whatever came in through the rocks.

SATURDAY, 29 *DECEMBER*, 1888.

Mr. James J. Maher was called and examined by Mr. Mestayer, who first showed Mr. Maher, the drawings of the Prospect Dam in order that he (Mr. Maher) should understand the subject :—

Mr. J. Maher. 29 Dec., 1888.

427. Will you make a statement, as you propose, and I can afterwards question you? Yes; I think that may be the best way of proceeding. With respect to the dam, I have not seen it and am not acquainted with it, nor have I any knowledge of the clay which is used. I saw several articles in the paper on the subject, and one very sensational article. This induced me to write on the subject, as I have had a large practical experience in making dams, and I fully believe that I have found out the defect. I believe that I found it out through the loss of a shaft; in fact, I have proved it. We lost a shaft, and when we lose a shaft we sink another. In doing so, we draw the timber of the lost one. The first shaft we had was about 4 ft. 6 in. by 2 ft. 6 in., and required puddle clay to keep the water back. Slabs were laid down level, with two holes in each side, and the puddle was well rammed. In this the back water rose and drove us out, and when drawing our timber we found that both above and below the puddle the slabs were safe, but on the puddle they were bent. This was owing to the clay swelling. I recollect a river embankment being built, where they were putting in a puddle-wall. I asked them what facing they were going to put on it, and was told clay and stone. I said it would not do, as the first flood that would come would sweep it away. Since that time it has been swept into the river five times, and they have now repaired it with rubble stone shot over the face.
428. What was this embankment for? To stop the overflowing of a river when flooded. The bank kept slipping away, and they put up a puddle-wall and faced it with rubble stone.
429. It was an embankment to a river? Yes, but it keeps slipping, and is now being repaired for about the tenth time.
430. Do you not think puddle is a good thing to keep water back? I do not think it is the best. If I were doing it I would ram the clay well and allow it to puddle afterwards, with the face protected.
431. Where do you think the defect in the Prospect Dam lies? It is in my opinion under water that the slip takes place and not at the toe of the bank. If the clay is not well rammed it will absorb water. It is wonderful how much it will absorb. When the clay has been dry and gets wet again it will shoot out like a gun and break everything in its way.
432. The puddle is not wet, the water has not yet got into it. We have opened the puddle-wall in several places and have had excavations made in the sides with a view of ascertaining what condition it is in, and we find that wherever we have taken the clay from it it is like pug-clay both above and below? Well I looked at the bursting of our slabs as evidence that water getting into the puddle will cause expansion of the clay. I believe that this slip takes place from the saturated clay expanding straight out. It throws out from the centre although for 20 or 30 feet above and below it may be perfect. In this case it will be impossible to test the toe of the bank except by diver or by running all the water out of the dam.
433. We have had the diver at work on various occasions and he has made a report [*explained.*] *Mr. Maher*: When I wrote the letter in June last to the *Evening News* I said that it would always be a source of danger, and I then maintained that unless the face was secured it would slip again. You cannot tell where the slip may occur; but in my mind it is under water, and this of course brings the chasm at the top in view. I know of a waterworks which was constructed with a puddle-wall and whilst it was being built I said if ever there is a heavy rain or flood it will bulge the stone out. This has actually occurred.
434. Was that an embankment? It was in a waterworks lately constructed.
435. You have had a good deal of experience with puddle clay? Yes; I have had so much experience with

Mr. J. Maher. 29 Dec., 1888.

with it, to my cost, that I know its capacity in these cases. In some cases in my experience it bent the slabs, in others it not only bent but burst them, sending the whole face out, and even closing the shaft.
436. That was puddle behind the slabs? Yes; for instance, in ramming ordinary puddle you will ram 10 feet of it into a space of 3 feet.
437. The method adopted here was this: The clay was cut and left on the surface for a few days; then cut again and put into the trench where it was cut and cross-cut with spades? Yes; but I look upon it that the heavy stamping and treading down of the puddle is injurious, because when the puddle becomes dry and then wet again it will absorb more water.
438. Then you think that the treading down of the clay has injured it? Yes; I think so.
439. The object of this was, of course, to bring it down to an uniform consistency? Yes; but it has always proved a failure. I was at Snowy River, which had its course turned by bags of sand, and there was no leak. Yellow clay is an excellent material, but must be restrained.
440. About 50 per cent. of this puddle is yellow clay? Yes. In the place of which I was speaking we were working perfectly safely until the water flooded us, and in about a fortnight the yellow clay had bursted our slabs and closed our shaft.
441. Was this rammed? It was worked up with a rammer just as we would ram a post-hole. I feel perfectly convinced that if puddled clay is rammed as tight as possible, and then water is put on it, it will burst up anything that comes in its way. In my letter to the Honorable the Secretary for Public Works, I also said that I felt convinced that this was the case in the Prospect Dam, and I also felt convinced that I could suggest a remedy.
442. We shall be glad to receive any suggestion you can make, our object being to obtain the widest information as to the cause of the defect, and any suggestions that may be made will receive every consideration? I have not seen the dam, and do not know whether my suggestion would be practicable or not. I have only formed my opinion from what I have read in the newspapers.
443. We will receive your suggestions, and even if they cannot be made use of in their present form they shall receive careful consideration? May I ask what is the depth of the water.
444. The deepest part is 85 feet from the top of ground line? Well, I would propose, and I am fully convinced that I can save the dam at a very small cost, that ironbark girders be laid from top to bottom on the face of the dam, across these I would fix either wood or iron girders grooved.
445. You would place them longitudinally? Yes. This would leave a cavity between them which I propose to fill up with ti-tree scrub.
446. What depth would you make you girders? About a foot deep. I would fill all the cavity between the ironbark girders with ti-tree, and then place the iron girders over them with planks over the ti-tree resting in the grooves of the iron girders.
447. Along the top of the ironbark beams? Yes; the iron girders would be fastened to the ironbark beams in order to retain them in their places. I would then cover the whole with ironbark slabs about 2 inches apart.
448. Then you would first lay down ironbark beams, fill in the spaces with ti-tree scrub, covered longitudinally with iron girders and finally cover the whole with ironbark slabs? Yes; so that no debris could come out. It would then form a drum.
449. But this would be simply covering up the moving mass? No; it cannot move any further as it is constrained. It cannot then force the face out.
450. It would carry the foot with it? No; it cannot, for there is a foot allowed for the expansion of the clay, and it cannot shift the face.
451. If this were done the timber would actually be fastened to a place which is moving? No; it would fasten itself just in the same manner as a brick arch binds a chimney face.
452. How would you fasten the ironbark beams to the dam? I would not fasten them to the dam. The girders would fasten the beams as they went round and would become a drum, and I think that this would render the face secure. I have proved ti-tree to be a perfect pulverizer. It strains the water and collects the dirt, so that it soon becomes like a cement. I have used it in turning the Snowy River. When casually going along we would thrust ti-tree into the little holes which were seen between the upright timber and the bags of sand, and after a flood it was that hard that it required a pick to break and remove it.
453. How thick did you use them? The upright timber to hold the ti-tree scrub was only about as thick as my arm, and I believe it is all there now. There were three or four well-known men in the company which diverted the Snowy River.
454. Have you any idea of the cost of such an arrangement as you suggest? No; I have not. It is more a question for the engineer who may carry out the work; but I do not think it would cost very much. I would, however, stake my life that it would be a perfect cure for the dam.
455. But the plan you suggest involves emptying the reservoir, and that is a thing which cannot be done, as Sydney is depending entirely on this reservoir. It very often happens, however, that there are more ways than one to accomplish the same object, and we must look for the best means to adopt as well as the least expensive? Yes; of course, it might be done by divers, but it would be expensive. I think the girders might be brought up and laid down without the divers, but they would have to go down and fasten them.
456. In the deepest portion there is about 50 feet of water over the toe of the embankment, and it would be very difficult to lay these girders under water even at a lesser depth, by divers? Yes; it would be difficult; but I do not think that they would have to be laid by the diver, although they would have to be secured by him. At the same time I think that the work could be done for £100,000 less than another scheme which I saw proposed. Wherever there is puddle clay it must be constrained, as there is rain water from the back, from the top, and many other ways, always liable to get into it.
457. In fact the object of your arrangement would be to tie the face in one solid mass? Yes; it would be like a drum and bind itself. I believe they have found ironbark timber in wells, and perfectly sound after one hundred years. It would require a skilled engineer to say what size the beams should be, and also the size and weight of the slabs.
458. The ironbark girders and slabs you propose to use are such as are usually in the market? Yes; you can get them in the mills at any time. I should suppose that the slabs required would be about 4 inches thick, and they would make a very pretty face. The size of the slabs would depend upon the length they were laid upon the face—20, 30, or 40 feet in length, as might be arranged.
459. How would you fix the slabs? The top beam could be made with a groove, so that the top of the slabs would be encased in them, and the iron girders I know can be got at any engineering shop.

Mr. J. Maher. 29 Dec., 1888.

460. There would be no difficulty about the material, as it is of every day use? It is in general use, and for the constraining of the wall I would depend upon the ti-tree, simply because I have proved it to be almost as good as a filter, and it retains the dirt. It gathers the dirt as it washes up and down, and retains it.

461. There is an exceedingly small quantity of sediment to be found in these waters; the water comes from such a long distance that the sediment is deposited before it reaches the reservoir? Yes; but windy weather will make it rise a little.

462. Yes; but it does not affect the clay sufficiently to cause a deposit such as you would require. I have never seen the water in any state but that you could dip it up at any spot and drink it at once. If you saw the dam you would be able to judge for yourself? I do not think that, after the reports I have seen in the papers, even a sight of the dam would alter my opinion. In one claim in which I was engaged the clay had actually closed the shaft completely after bursting up. Several of my mates in this claim can testify to this fact.

463. With regard to the river bank which you mentioned a short time back? Some persons maintained that the water in this case was coming from the bottom and so causing the slip; others maintained that the water actually came from the swamps some 4 miles away, sunk down perpendicularly to a certain distance whence it found its way horizontally to the bank of the river. I opposed this idea and offered to prove that they were wrong by sinking a shaft at any place or places they would point out, and show them that there was no water between these swamps and the bank of the river. In the early days we would often sink alongside of a river and then drive right under it without getting water. I would here draw your attention to a paragraph in the *Evening News*, which says "the plan will have to be adopted which we suggested." Now, in no article that I have seen do they suggest any plan until after my letter appeared, on the 9th June last, in their columns.

464. We wish to get any suggestions or information from anybody, and we shall be glad of any further information or suggestion you may be able to give us. You must understand that we went to Mr. Hogue, the editor of the *Evening News*, and asked him for any names of his various informants, and though he gave us a number, your name was not one of them. It was through the Honorable the Secretary for Public Works that we got your name?

Mr. Maher: In the letter I wrote to the *Evening News* I did not sign my name, only the initials. I am not an engineer, and hope it will not be considered presumptuous in me to give my opinion.

Mr. Mestayer: We would rather have the experience of a practical man in this class of work than we would have a dozen theories, so you need not think yourself presumptuous in placing your own experience and practical work before us.

Mr. Maher: I thank you. I contend, as I have already explained, that the dry clay rammed hard would have been far better than any puddle in building this dam. With face of dam constrained as I propose dry earth rammed would be sufficient.

Mr. Mestayer here explained the form of the puddle-wall, &c.

Mr. Maher: I am very pleased with the very courteous manner in which you have received me, and the kind way in which you have examined and listened to my explanations. It gave me more confidence in making my views plain to you, and I still feel that I have stated the true cause of the defect and also the remedy.

WEDNESDAY, 2 JANUARY, 1889.

Mr. John Buckett, jun., Publican, was called and examined by Mr. Mestayer:—

Mr. J. Buckett, jun. 2 Jan., 1889.

465. Your name has been mentioned to us in connection with the dam, and we are told that you can give us some information respecting it? What I have to say is only what I obtained from the workmen who were working on the dam, and I have not made it my business to follow it up.

466. Have you seen the cracks yourself? Yes; I have frequently seen them, and I have gone some scores of times on to the dam.

467. Did you hear anything or did you see anything at any of these visits which would lead you to believe that there was any defective workmanship in the work? No, I have not, but I have heard experienced men say that a mistake had been made in not stepping the rise to bind it.

468. That is to say it has been worked on the flat instead of having steps put in? Yes; steps put in on the rise. I heard this from a man who has worked on some of the largest dams and reservoirs in the old country, and who was a ganger here.

469. There was a statement made in the *Evening News* a short time ago that some portions of the puddle were made of "rubble and rubbish." Do you know who gave this information? No; I know nothing about that. I know that the Government inspectors have condemned puddle which I thought was quite good enough, and better than some which they put in.

470. You have heard nothing of this "rubble and rubbish"? No.

471. Where did they put the condemned stuff? They put it on the water side. I do not think they gave it sufficient time to drain first.

472. You think that the moisture from this condemned stuff has been draining into the bank? Yes; I do think so.

473. And you think that it should not have been put there whilst it was so wet? No; it should not.

474. How long have you been here, from the commencement of the work? No; I have been here about five years.

475. Then you have been a close and constant observer of the work all that time? I have seen nearly the whole of the work done during that time, but I have not watched it closely. Sometimes I have not been on the bank for a month; sometimes two or three times a week when I have taken friends or visitors on to explain and show them the work.

476. Do you know Mr. Wearne, of the *Evening News?* Yes.

477. He told us, in his examination, that he had obtained a lot of his information from a gentleman who did not wish his name to be published; is that gentleman yourself? No; it is not.

478. Have you any objection to your name appearing, as it has been decided to print all the evidence given during this investigation? I do not care to have my name appearing in the papers, as it might injure my business. What I have told you is just what I have been told by the men working on the job. I have not much knowledge of public works, and cannot say anything as to the truth or otherwise of their tales. I followed mining chiefly when at work. 479.

Mr. J. Buckett, jun. 2 Jan., 1889.

479. What have you heard, or seen, which led you to believe that the dam is unsafe? The shrinkage of the water side and the bursting up of the cubes. When the slip first took place it burst the cubes up everywhere, just like an explosion, then after earth had been put on them they would drop down again bodily.
480. Was this at the first slip? Yes; at the first slip. This dropping down continued, but nothing serious occurred until the second slip took place.
481. Did you notice many cracks between the first and second slips? Yes, they extended from the top right down the bank. There were cavities 10 to 12 feet each way, in which men could walk. No later than yesterday a driver told me that he had let a man down a crack which was 10 or 12 feet deep.
482. Was that yesterday? No, it was some weeks ago, but it was yesterday the driver told me of it.
483. These are the cracks in the side of the first slip? Yes; those caused by soakage.
484. These cracks are all at the site of the first slip? Yes; from near the hospital to the first slip it is like a rotten layer and was constantly giving way.
485. The shafts which were put down into the rotten layer were in the bank? Yes.
486. Was that after the slip had occurred? Yes, about a month ago when they opened up the bank to find the puddle-wall and they could find no puddle.
487. Were not these trenches; not shafts? They were trenches cut in on the batter side. This information I got from the men who were working there. When the toe was put in I said it would not resist any great weight.
488. The toe is just a rubble bank? Yes, and the ground all around the front is very spewy. I have often seen horses bogged in this rotten soil.
489. That would be round about the deepest portions of the bank? Yes, and more so toward the top end of where the second slip has occured. There was a gully there.
490. It was at that point that the ground was so bad? Yes; I have had to get off my horse when riding there, owing to the spewy nature of the ground.
491. The ground would be really boggy in wet weather? Yes; a man would sink down to his knees if walking on some parts of it.
492. Did you see any of the trial shafts put down? No; I have seen the trenches put down near the cracks. I have known them to be 17 or 18 feet deep, and they were rammed up with clay again.
493. Was that at the site of the slips or at this end? At the site of the slip, and a great part along the bank.
494. And those cracks which went down 17 or 18 feet were at the site of the slip? Yes; they opened the ground up right along to see how far the cracks went. In some places they were only 5 or 6 feet deep, and in others from 10 to 20 feet deep. The stuff was dry and powdered and had no solidity at all. They had to keep the trenches closely timbered to keep the sides up as it was always on the move.
495. Have you seen any movement on this side? There has been no movement at all on this side except a very little which was caused by the shrinkage.
496. That was on the water side, and there has been none on this side? Nothing of any consequence.
497. Have you noticed the soakage on the bank at this side? Yes; but I think that is through the drain wells on this side.
498. The soakage that I meant was that coming from the toe of the embankment? Yes.
499. Have you ever seen a muddy stream running? No; I was only one day there and I saw the soakage.
500. We have heard that some person saw a muddy stream coming away? I have never seen or heard of it coming through in that form.
501. So far as you know there has been no soakage except this from the drain? No; this is how they account for it.
502. Have you ever seen it coming from any place except the drains? No.
503. Do you know a man named Price, who was one time a mason on the works? There was a man here of that name.
504. Do you know what is become of him? My brother-in-law saw him some nine months ago in Sydney. He was superintending some stone work there.
505. You do not know where he is to be seen or heard of now? No.
506. Did you ever see any wide cracks at this end? No; none wider than would admit your leg—say 18 inches or so.
507. At the deep part of the bank? Yes; they said that the extent of the cracks could be seen better in the early morning than later on, and I have gone across in the early morning and lain down to look down the cracks. The inspectors used to go along and kick the dirt into the cracks in order to blind them.
508. Did you see the dyke being built up? Yes.
509 Was it built up before the bank? Yes; it was built up before the bank.
510. Did you ever notice any great quantity of water lying about the work whilst it was in progress? Yes; it was often flooded. There has been 20 or 30 feet of water in the puddle trench, and right along the bank, and it could not be got out until after the rain ceased. They then used a Tangye engine to pump the water out of the trench.
511. Then I suppose all the water was carefully taken out before the puddle was put in? Yes, as far as they could get it out; but the puddle was always wet and I think there was a little too much water used in working the puddle. They would puddle it in the flat, and when cutting it the hose would be going all the time and the men would be standing up to their knees in mud or slush.
512. It was so soft that they could hardly walk over it? Yes.
513. I understand you to say that there was often a lot of water on the bank? It was not left on any longer than whilst it was raining.
514. It was very soft sometimes? I had drays at work for me, and sometimes the men would bring them home and say that it was too soft to work. I have gone over and seen horses sink up to their bellies.
515. On the water side of the bank? Yes; where all the selected stuff was put, and it was two or three weeks before they could work it properly.
516. Do you from your own personal knowledge know that water was soaking down? Yes; there must have been a large quantity of water soaking down.
517. Was the water rising in the reservoir at the time? Yes; it has been rising between three and four years.

Mr. J. Buckett, jun. 2 Jan., 1889.

518. The water was actually rising in the reservoir while this water was soaking down into the work? Yes.
519. Do you know a Mr. Norton who was up here for a newspaper? Yes.
520. Did he stay here with you? Yes; he always stopped here, sometimes a week or two at a time.
521. Did he get his information from you or from the men? From the men and from what he saw himself.
522. Have you anything else to tell us with regard to the work, as I do not think I have any more questions to ask you? I think I have told you, in reply to your questions, all that I have either heard from others or that I have seen myself.
523. Do you know what reason was given for the prediction that the dam would never stand? They reckoned that the clay was too soluble; that the dam was filled up too quickly; was not given sufficient time to consolidate; when they got fine weather they put the material in too quickly for it to become solid, and it was not of a sufficiently binding nature. In fact at one time they talked of stopping the work owing to its being put in so fast.
524. When was it that they talked of stopping the work? About twelve or eighteen months ago.
525. They were getting near the top and making more progress? They made more progress in the last eighteen months than in the whole of the previous three years.
526. You say the reasons given for the prediction that the dam would not stand were that the material used was not of a sufficiently binding nature; that it had no time to consolidate; that the dam was filled up too quickly, and that the material was put in too fast to allow it to become solid? Yes.
527. So far as your opinion goes these are the causes which led to the prediction? I got these opinions from two or three of the "bosses" who had had good experience in England and other places. Some of them had worked on the same jobs as Mr. Davis had been on in England. These men are now scattered all over the colonies, some in Queensland and some in Victoria.
528. So far as your own knowledge goes the work has been well done? Oh, yes; so far as I could judge. They worked very strictly to the plans, and the men told me that they worked very closely to the specifications, but they thought that the stuff was not sufficiently binding in its nature, and that steps should have been put in. In large railway embankments they cut steps on the rise and fall of the ground to keep them from slipping. The man who told me about the stepping has been all his lifetime working at this kind of work, as was his father before him.

Robert H. Ryan, Esq., Resident Engineer, recalled, and further examined :—

R. H. Ryan, Esq. 2 Jan., 1889.

529. Was there any stepping done for the bank to work on on the hill side? No, the bank was simply worked up to the hill.
530. How far did the selected material come back? About 22 or 23 feet at ground level.
531. Were the trenches, which were opened in order to see the extent of the cracks, rammed when making the ground good? Yes, they were well rammed, and they took more material than had come out of them. G. Davis, Inspector, had charge of this work.
532. Have you filled in the cracks which have not been wide enough to open up by trenches? I have not made them good yet. The bank at these places has been left until the time comes to open them up. In filling up the cracks a little water was used; the material placed on top, and well rammed; then more water and another layer of material and well rammed. Much more material was used to fill these trenches than had come out of them.
533. One witness spoke of your going down 20 feet or more to find these cracks? No, we did not go down more than 14 or 15 feet at the most. We followed them down till they disappeared; then we commenced and filled the trench in again.

Mr. George Davis, Inspector of Earthwork, recalled, and re-examined :—

Mr. G. Davis. 2 Jan., 1889

534. When you opened the trenches along the deeper parts of the dam did you, when filling them in again, see that the earth was thoroughly well rammed? Yes, it was all thoroughly well rammed.
535. Were the trenches on the cracks filled up again as solid as you could make them? Yes, they were well rammed and much more filling was put into them than came out of the cracks.
536. It was watered and rammed? Yes; we had two rammers to every filler, and the men on top filling in were sometimes stopped in order to allow the ramming to be completely done. The water was put on first, then a layer of 6 inches of stuff was put on and well rammed; then more water on the top of this and another layer of stuff well rammed before each alternate watering and layer of material was put down.
537. Your son had charge of part of the puddle trench? Yes; he had charge of the puddle and the work of the bank as well. He has been at this work along with me some sixteen or seventeen years.

SATURDAY, 5 JANUARY, 1889.

A. Mackay, Esq., F.C.S., examined by Mr. Mestayer in regard to the chemical nature of the clay and soil used in the formation of the Prospect Dam, taken at the Public Works Office.

A. Mackay, Esq. 5 Jan., 1889.

Mr. MESTAYER pointed out to Mr. MACKAY that there were one or two points in connection with his report, in reference to which he would be pleased to be furnished with further information.
538. *Mr. Mestayer.*] Is the clay to which you refer as being of a poor character as illustrated by its contact with water of a gray or pale yellow colour? Yes, it is a peculiar clay of the Wianamatta shale formation.
539. Did you see the excavation from which it came? Yes; it is on the flat below the outside embankment. I consider the trouble of a chemical before it becomes of a mechanical nature.
540. Do you consider the yellow and the red material of a poor character? It depends upon the amount of oxidization that has taken place.
541. Having observed their action with water I have had an opportunity of watching their behaviour. I found that they settled quickly, forming a tough impervious mass? Yes, because they have not been oxidized or changed by contact with air and water. 542.

542. A similar portion mixed between the fingers was of a greasy character? The best way is to grind them down; and if we were in a laboratory I would illustrate to you that the material would give way under the action of water. A. Mackay, Esq. 5 Jan., 1889.
543. Then you think when water has access to the material, decomposition would take place? Yes; the water would cause a complete separation.
544. Have you considered how the water could reach the clay? Yes; it is bound to reach the clay under the process of oxidization going on, and especially in the earth embankment facing the water.
545. But would there be sufficient water under this process to cause such mischief? Yes; in time there will be. If water come into contact with the clay, it is bound to swell and break everything it comes into contact with.
546. There is no doubt in view of the evidence taken that a large quantity of rain fell on to the bank, and has never got thoroughly removed, the material then in the bank being of a non-absorbent nature. During the year 1888, the bank was erected very rapidly, and was very nearly at its full height when the slip began to occur. Do you not think that the pressure of this dry portion of the bank upon the moist, and in some parts sloppy, material down below would have a tendency to accelerate the decomposition? Decidedly.
547. And under the influence of the water there would be a tendency of the upper portion of the bank outwards? Yes, and the movement is increased by the chemical changes going on below.
548. We have ascertained by borings where the movements are, but the principal one has stopped altogether for some time? The mischief in the embankment is increasing by the oxidization of the clay. The swelling taking place under these natural agencies is what nothing as a rule will stop. I could show at once that, on the clay being exposed, by being alternately dried and moistened by the weather, it can be knocked to pieces with a stick. The first rain that comes will wash the lighter, the true clay part of it, away.
549. Then you agree with me that the upper portion of the embankment has a tendency to slide owing to the mechanical effect of the contained water? The chemical action below the water-line is causing the trouble. The tendency of the heavy silicious material separated by decomposition of the clays will be to sink downwards. I calculate the weight of the heavier matter to be 130lb. to the cubic foot. There should be no greater pressure put on the top of the embankment than can be helped. To protect the bank, I think the stone-pitching should be removed, and hardwood slabs substituted until all action has ceased, and the material has completely consolidated by natural action. It would then be permanent and never move again.
550. Have you examined samples of the puddle? The puddle is an impervious mass, and cannot be affected by either air or water. The change of the colour of the clay from white to yellow and red, and ultimately black, is due to the presence of iron. There is a continual alteration taking place where the stuff has not been puddled, as the case is in the sloping embankment next the water, so that any weight presses the lighter material outwards. That lighter stuff is scarcely heavier than water. It weighs about 70 lb. per cubic foot.
551. Have you noticed the black or very dark material found on the Prospect Hill where the excavation took place? Yes; it is of volcanic formation. The same process of oxidization can be seen going on in the blue metal, but the soil is oxidized completely, and should be perfect material for an earthwork into which water penetrated.
552. Twenty feet below the surface there is not a drop of water to be found. From your knowledge of the character of these clays do you think it is at all probable that the water in the reservoir has got through the face? Yes, I am perfectly certain it has. It must of necessity. I do not think it is impervious to water. The swelling is increasing. If there is pressure enough, the heavier portions will tend downwards and the lighter portions work out under the chemical action. I would suggest adopting the natural plan of keeping the bank damp. When once it settles it will never move. When the two firm portions unite it will form a completely solid stratified mass.
553. Do you then not think it would be advisable to stop the action? It cannot be stopped.
554. Then you would encourage oxidization by artificially moistening the bank? Yes. The chemical action is at the bottom of the whole thing; this chemical action causes expansion.
555. We have it in evidence that when there is a heavy wind blowing the water becomes so cloudy as to be undrinkable. On one occasion when it was very rough I went along the bank and found that the water was perfectly clear. My explanation of this is that the inferior clay has been washed off leaving a purified bank? Yes; but the oxidization is not yet complete. By removing the pressure, the oxidization is allowed to go on in its natural way. The more it is pressed the more the lighter clay matter will be pressed outwards. The silica will never become so hard as when the separated material comes together. The best thing to do is to bring about a natural amalgamation of the material. I would suggest that the bank should be kept moist with water, without pressure, thus encouraging oxidization in the most natural manner, which in my opinion will improve the general condition of the bank and prevent cracking in wide gaps or rents.

PROSPECT DAM.

MINUTES of evidence given by Mr. Limond, at the Public Works Office, on 3rd January, 1889.

Present:—Mr. Barling, Under Secretary for Public Works; Mr. Bennett, Commissioner and Engineer-in-Chief for Roads and Bridges.

556. MR. BARLING, addressing Mr. Limond, said:—You have expressed your willingness to give evidence to the Minister on the subject of the slip which has occurred at the Prospect Dam, where I believe you have been working, and you have attended before Messrs. Gordon and Mestayer for the purpose, but not being satisfied with the way you were treated by those gentlemen, you have attended, at the request of Mr. Sutherland, to give your evidence here. I may mention that Mr. Sutherland has been called away to the Executive Council, and is, therefore, unable to examine you personally, so he has asked me to take your evidence, which he will read after it has been transcribed. Mr. Bennett is here to ask you any questions upon engineering matters. I may add that any expenses incurred by you in coming here will be cheerfully paid. Will you now be good enough to state what you know about the matter. Mr. Limond. 3 Jan., 1889.

Mr.

Mr. Limond. 3 Jan., 1889.

Mr. Limond said:—Here is the reference I received from Mr. McGuighan, for whom I went to work at the Prospect Dam about Christmas, 1882. The puddle-trench was then about being commenced. I was engaged to build a saw-mill for cutting timber, required for the trench and the buildings. I chose a site for the mill about 2 chains from the puddle-trench, in order that I might get water from one of the trial-shafts that was there, several of these shafts being about 50 feet deep, so I was told. In all these shafts there was water about 15 feet from the surface. I got the engine in position and started to work, but was unable to use the water for more than a week, as I found it was salt; but during the time we did use it we had to raise and lower the pump by which it was obtained several times, as the water rose and fell, as if under tidal influence. I then stopped using the water, and had fresh water brought to me for the engine. They kept sinking the puddle-trench. I was told by Mr. McGuighan the depth was to be 15 feet, but I was astonished afterwards to see them sinking deeper and below the water-line in the trial-shafts. One day I spoke to Mr. McGuighan about it, and asked him if they were not doing wrong going so deep; he answered and said he thought so too, but he was going according to the specifications. So they sunk to about 30 feet, some parts more than this, down to the silicate reef, engines being kept all the time pumping to keep the trench clear of water. Having got to the reef, the puddle was put in with clay, carted in with drays. When I left in July, 1883, the wall or embankment was up to a considerable height above the level of the ground. Therefore, I say, the puddle-trench was made too deep; the bottom is like soup, being thoroughly impregnated with the water which is there, and the moisture rising through the heavy dry clay, upwards, is causing it to swell and shift; it is that which is moving the whole of the bank. Any working-man who has worked upon clay-works will see in a moment that what I am stating is a fact. The only way to prove it is to sink a trial-shaft in the side of the by-wash, and drive in the level of the puddle-trench to the bottom of it, and see if my words are not true. If they are not true, I will forfeit my life. I am positive that, allowing for soakage and drainage, there is at least 10 feet of water standing at each side of the walls. I also noticed that in the heaviest rains the water never rose in the shafts to the surface.

EDWIN LIMOND,
4/1/89.

557. *Mr. Bennett.*] What were you engaged at previous to your going to work at the Prospect Dam? I was previously, for fifteen years, in New Zealand, on the diggings, and on water-works, road-making, and bridge-building.

558. What big dams were you employed upon? Waimea Water-race and Reservoir, the Leviathan Dam and Water-race, and Hohnnui Water-race and Dam. At the Waimea Water-race one of the dams was over 100 feet high and built of stone, and another was considerably higher. The other two were of clay and about 60 ft. or 80 ft. in height, the facings of the dams being of piles with clay thrown on the surface.

559. What have you been doing since you left the dam? I left to manage a mill, and in the interval I went to Spears', at Woolloomooloo Bay, where I lost two of my fingers. I then went 'bus-driving. Afterwards I was with Hudson Brothers for about four or five months. Since then I have been driving a cab, which I am now doing.

560. With reference to the rise and fall of the water in the trial-shafts you spoke of, did you attribute it to tidal influence? Yes.

561. Did you observe any alteration in the time of the rise and fall? Yes; it shifted every day like the tide. Others observed it besides me. One was Mr. Rothery, an engineer and fitter, who is still on the works.

562. *Mr. Barling.*] You were saying to me this morning that you considered the shingle met with in sinking the puddle-trench to be the bed of an old river or creek? Yes.

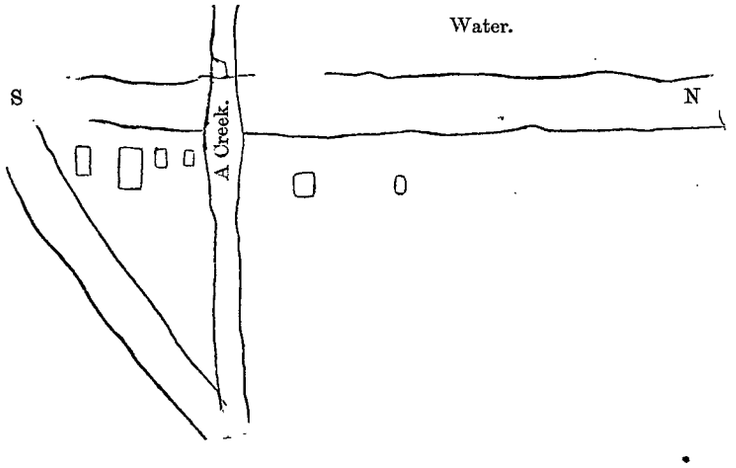
563. What was the width of it? The width of the old creek-bed was about 5 or 6 chains, cutting the dam at right-angles.

564. What do you consider should be done to remedy the matter? In my opinion nothing can be done to save the old wall. I suggest that a wall 8 or 10 feet thick be built 30 or 40 feet in front of the present embankment, the outside of stone and the inside of concrete, the foundations to be sunk 10 or 12 feet; it should be built at an angle of 1 in 4 or 1 in 5, and be well backed up with earthwork. I estimate the cost of this at from £70,000 to £80,000. I am positive that the influx of water after a heavy rainfall will cause the bank to give way, as the outlets are not sufficient, and before the by-wash could be reached the dam would be gone.

MINUTES of further evidence respecting the Prospect Dam, given by Mr. Limond before the Honorable the Secretary for Public Works and the Under Secretary for Public Works, at the Public Works Office, on Monday, 7th January, 1889.

Mr. Limond. 7 Jan., 1889.

565. *Mr. Sutherland.*] Since giving your evidence in regard to the slip at the Prospect Dam you have visited the dam, and you now wish to correct some of the evidence that you gave. Will you now state what you wish to correct, or desire to add to your previous statement? In stating the depth of the trench I made an error; I said 35 feet, but I find from the plans in the possession of Mr. Shand, which have been shown to me by that gentleman, that the depth varies from 45 feet to 75 feet, and a depth of 45 feet at the bed of the old creek of which I have spoken.



With

Mr. Limond. 7 Jan., 1889.

With regard to the wall I suggested should be built, I desire to say that I abandon that idea altogether, unless it is carried the whole length of the embankment. I think the securing would be better done from the inside. When I was at the dam yesterday I found that water was oozing from the embankment near the scouring outlet close to the bed of the old creek. I took a bottle of the water, which I have brought with me.

EDWIN LIMOND.

By the directions of the Minister, an officer of the Department was instructed to accompany Mr. Limond to Prospect, and obtain a properly-certified bottle of the water he referred to as oozing from the embankment. This was done on the 8th January, and the water so obtained was sent to Mr. Hamlet for analysis on the 9th January.

THURSDAY, 21 *FEBRUARY*, 1889.

William E. Dunn, Esq., Engineer to the Contractors, called and examined by Mr. Mestayer:—

W. E. Dunn, Esq. 21 Feb., 1889.

566. Your name is? William Edward Dunn.
567. You are engineer to the contractors? Yes.
568. Have you been on the works from their commencement? No; I have been here since January, 1887.
569. Was that the year in which there was so much rain? Yes
570. With respect to the rain which fell on the bank during this wet weather, we understand that this water was conducted from the water-slope across the puddle-trench and into drains on the land side? Yes, that is so.
571. Was the work stopped at any time in consequence of the ground being too wet or soft to work on? Several days after heavy rains it was more or less soft on the surface, and we occasionally stopped for a day or two owing to its being so wet.
572. Then we may take it as a fact that there was a great deal of water which could not be carried away? Yes, a large quantity.
573. You have seen our reports which have been published? Yes; I have read them over very carefully.
574. You have seen the conclusion to which we have come? Yes.
575. From your own knowledge of things here, do you think the conclusion is sound? Yes, very largely so. I attach much importance to the fact that the water was rising in the reservoir during the progress of the works, and that to my mind is one of the principal causes of the defect or slips which have occurred.
576. When you came, what was the height of the bank and the height of the water? The bank was up to the 175-foot contour, and the water at 166 feet.
577. When you came the bank was nearly finished? There was about 28 feet to be added to the height throughout.
578. And the water continued steadily rising with it? Yes—in fact, in some cases it rose quicker than the stone pitching could be put on, and washed over the top of it.
579. During the progress of the work, did anything come under your notice which would give you the slightest idea of a slip at any place? No; I do not think there was anything that came under my notice, but there was one thing which I took notice of, and made me wonder if we had come to a water-tight bottom: In one short length of the puddle trench, after the puddle had been put in a day or two, the bottom of the trench flaked up, and we had to take the puddle out and remove the loose bottom.
580. What was the cause of this? I could see no exact cause for it, but it might give a reason for something. It had also occurred during the time of some of my predecessors. The only place that this occurred within my own knowledge was at pegs 71 and 72. It was supposed to be a perfectly sound rock on which we laid the puddle. After it stood for two or three days we found that the bottom had peeled, and we had to lift some 3 chains of the puddle. As a matter of fact, it was lifted back 50 or 60 feet. It came off in flakes.
581. Did you notice any water breaking through at this point? None whatever.
582. It was from pegs 71·5 to 72 that the bottom lifted about 60 feet, and had to be reformed? Yes.
583. About what time did this occur? I think the date was in September, 1887.
584. Was that the only case which came under your personal observation? Yes, but others had noticed it previously.
585. Was there much remaining to be done when you came on to the works? When I came here the trench was nearly completed, so that there was only about 1,000 feet to finish.
586. There was no water coming up at any spot? None whatever.
587. Not where the clay peeled? No; it simply peeled off.
588. Did you consider any serious consequences would happen from this peeling? I have not considered whether anything could happen from it.
589. Have you had any previous experience with other puddle-walls? No; I have always been engaged in railway works.
590. So you have had no practical experience in puddle work before? None.
591. You have taken a good deal of interest in the leak on the land side, I believe? Yes, I have.
592. What is the general result of your observation? That there has been a steady flow of water for some time, irrespective of rain or saturation of the bank.
593. What is your opinion of the cause of this steady flow? It appears to me very much like a spring, and I know as a fact that there was a spring for some months on the flat outside the dam altogether where the gravel bed crops out. A ganger first drew my attention to it, but I think it is dry now.
594. At any rate this flow has not increased? No.
595. Has the flow increased at any other point? No; it is smaller at the other places.
596. When did you take your observations? I took the first on September 10th, 1888.
597. The water had been running for some time? It ran all through the year.
598. How did you test the flow? I had a gallon measure, and it took 1 minute 34 seconds to fill it, or by calculation 919 gallons in twenty-four hours.
599. When did you take the next observation? The next time was on 7th December, when the flow seemed to have decreased. In this case I used a larger measure, and I made 672 gallons in twenty-four hours. Since then I have taken, on the 24th January, an observation which gave 696 gallons in twenty-four hours.

600.

W. E. Dunn, Esq. 21 Feb., 1889.

600. What measure did you use in your later trials? A 5-gallon measure. The discrepancy between my first and the later experiments may be accounted for by the first not having been so accurately timed, as a difference of a second in the smaller measure would give a larger result.
601. Was this water clear? Yes, perfectly clear; just as you have it from a spring.
602. You do not think that this water was percolating down the bank? As far as I can see, any water which percolated from the bank would not be like that.
603. You do not consider that this water is leaking through the puddle from the reservoir? No.
604. If it were a leak from the reservoir it would increase in volume instead of remaining at a steady rate? I do not look upon it as a leak from the reservoir, but as a percolation from some other source, yet I cannot account for it.
605. Is it not drainage from the bank itself? It is certainly not drainage, as it is constant during dry weather. I have watched it for a long time, and while other drains are just dry, or weeping, this one is continually running.
606. This is from one drain only? Yes. We have one at peg 11, and another at peg 15.
607. And where is this drainage? At peg 14.
608. Have you noticed any flow at the other drains? Nothing at any of them, except a slight weeping.
609. Have you noticed the other drains after rain? Yes. I have watched particularly after rains, and there is generally some soakage; but the extra water does not seem to have any particular effect on this particular flow.
610. Are they all equally affected by the rain? No, they are not.
611. Then you cannot account for the running? I cannot think that it is anything but a spring; and I do not think it possible for water to come through the puddle-trench.
612. In your opinion, this water does not come through the puddle? It is impossible that it can be coming through the puddle. It has been running for twelve months, and I do not think it is from rain and soakage, nor can it be from the puddle-trench.
613. One of the newspapers referred to a stream of muddy water which was seen flowing from the back of the bank;—did this refer to the flow mentioned by you? I think not. I have never seen it dirty. It has always been quite clear when I have seen it. They have been confusing it with some of the others.
614. There was a newspaper paragraph to the effect that a horse and dray had sunk almost out of sight—up to the horse's shoulder;—do you know anything about that? The statement is incorrect. We had a water-cart which got one of its wheels into a crack and sunk up to its axle, but that was all.
615. You have taken very careful observations along the bank? Yes, for the last six months.
616. Have you detected any movement along the deep part of the bank? I apparently detected a movement in January, but I afterwards came to the conclusion it was from the heavy rainfall.
617. When did you put in your pegs? On the 29th December pegs were put in, and on the 4th of January I found a small difference. Since then I have not found any difference—in fact, it appears to have gone back, and leads me to think that the heavy rain had soaked between the stones, causing the ground to swell slightly, and thus giving the pitchers a little apparent forward movement, and the dry weather has caused them to come back again. Of course, in this hot weather it is very difficult to get perfectly accurate sights owing to the intense glare.
618. Was that the only time that you noticed any movement in the face, and that was surface movement only? Yes; but the pegs I put in for the pitching have moved, some of them bodily 2 or 3 feet from where they were put in.
619. When were they put in? In October, 1887, and a few of them are in existence still.
620. What are the movements? One at 15 moved 2 ft. 4½ in.; at 18, moved 2 ft. 10 in.; at 22, moved 2 ft. 1½ in.; and there were two or three others.
621. When did you take measurements? On December the 5th, 1888.
622. Were all the pegs put in at once? Those from 14 to 26 were put in last, and all the others at the end of the bank were put in six months before. I should like to mention here that the report stated that the kerb was not put in from a fixed line. This is not quite correct, as the line was ranged out from a fixed point on the solid ground.
623. Were any of the pegs put in from the solid? I did put some in from the solid, and afterwards I put them in from the centre of puddle-trench. Poles were put in true after the 20th of each month.
624. Where did you put in your pegs? All my pegs were put in on the 180-foot level, and I assume that none were more than an inch or two out.
625. Did you check them at all? I checked them all through before the pitching was put on.
626. When you checked them, how did you find them? They were all perfectly true.
627. There is no evidence so far as we can see at present as to when these movements first occurred. Had you noticed any signs of movement before the slips occurred? No; but for a long time before the slip occurred we were putting in more puddle than we thought we should require to put in, and we found after the slip occurred, by checking it in many ways, that we were putting in more puddle than we were getting paid for.
628. When was this? It was just after the slip occurred. I can show you where we stopped for a fortnight, and the puddle sank down 1 foot to 18 inches.
629. Where was this? It was between pegs 6 and 30 [*shown on plan*], and sank within the fortnight mentioned.
630. How long ago is it since this occurred? It was about June last.
631. That is since the first slip occurred? Yes.
632. You have not since noticed the apparent movement of January? That movement, or what I thought was a movement, has gone back again.
633. Is there any other point in connection with the work to which I have not alluded or on which you can give us any information? No; I do not know of anything. The particulars and notes which I have given you were taken simply for my own information, but I thought they might be of use to you in this investigation.

Mr.

Mr. John Rothery, Engineer and Fitter, examined by Mr. Mestayer :—

Mr. J. Rothery. 21 Feb., 1889.

634. Your name is? John Rothery.
635. You have been here since the commencement of the work, I believe? Yes.
636. What are you? I am a fitter and engineer.
637. What were you doing here at the commencement of the work? I was erecting a saw-mill.
638. Was it the same saw-mill that Mr. Limond was engaged on? Yes; I erected it.
639. You drew the water for use in the engines from one of the trial-shafts, I believe? Yes.
640. One of the witnesses said that the water was so salt that you could not use it;—is that correct? No; it was brackish, but not so salt as to be unusable.
641. Had you to knock off using it altogether owing to its saltness? No; it was always used.
642. Did you ever notice any rise and fall of the water in the shafts? Only when we pumped it out.
643. How was that accounted for? We used to pump it down about 4 feet during the day, and next morning when we commenced working it might or might not be up to the same level as when we commenced the previous morning.
644. Then it depended on the weather whether it was up again or not? Yes, greatly: sometimes it was and at other times it was not.
645. Then, irrespective of the pumping, you saw no rise and fall similar to tidal influence? No; I never saw any rise and fall in these trial-shafts other than that caused by our pumping.
646. One of the witnesses, Mr. Limond, said you had been on the works some time and could corroborate his statement of the rise and fall of the water? There was no rise and fall of the water further than what I have already explained.
647. It was stated that after working two days the engine was in such a state from the salt water that it could not be worked, and it had to stop until fresh water was brought for use? That is not correct. We did not stop, and we used the same water right through.
648. In what state did you find your boiler after the first week's use of this water? Quite clean.
649. Was there any salt on your tubes? No; there was neither sediment nor scale.
650. Had the water been salt, as Mr. Limond stated, what state would your boiler have been in? It would have scale on similar to a sea-boiler in a steamship.
651. As a matter of fact the statement about the saltness of the water is incorrect? There was no salt on the tubes; they were perfectly clean, and I ran for a month before I blew the boiler down again.

TUESDAY, 26 *FEBRUARY*, 1889.

W. A. Harper, Esq., C.E., called and examined by Mr. Mestayer :—

W. A. Harper, Esq., C.E. 26 Feb., 1889.

652. I saw the Minister for Works some time ago, and he was anxious that I should see you on the subject of your Report on the Prospect Dam before the whole of the evidence was printed; and, notwithstanding that our reports have been sent in, he is still anxious to get all the information possible on the subject in order to assist in forming an idea of the exact cause of these slips, and to guide us in our opinions. Had you any personal knowledge of the work prior to receiving instructions from Messrs. Want, Johnson, & Co., to report on the works in September? I had been up twice in the early part of the work, but was not out afterwards until September.
653. Had you any knowledge of the way the work was going on? I had no personal knowledge of the way it was being carried out.
654. Had you examined the work subsequently to September? I saw it twice soon after the work was started; once afterwards, and then in September. I saw it first about twelve months after it started; again about eighteen months after; on another occasion at about three years; and then within the last twelve months.
655. Is the report that has been published in the *Daily Telegraph* of the 5th January a fair reprint of your report? Yes.
656. You say you consider the puddle-wall is as good as possibly could be formed from the materials available? Yes.
657. Did you examine anything more than the surface of the puddle? I saw the material as it was being put into the trench.
658. Have you had any personal experience in the construction of large dams of this description? I have only built one.
659. Where was that? In New Zealand, under almost the exact conditions as the Prospect Dam, only it was much shorter.
660. What height? About 80 or 90 feet.
661. Of what consistency did you use the puddle—was it hard and firm like stiff brick-clay, or was it soft like putty? More like putty. It was a specially good blue clay, and was carted about 5 miles. All the blue clay was good, but this was especially good. I have never seen any clay here equal to it, and I have been a good deal about the Colonies. All the clays here which I have seen have a good percentage of sand in them.
662. That is the case in all the Colonies? No, not in New Zealand, and near Newcastle there is some very good clay.
663. Was your puddle in New Zealand formed by chopping and cutting with spades? Yes; it was chopped up small with spades and all the lumps broken; it was then dropped in loads and spread out fairly thin, worked up with water, and cut and cross-cut with spades.
664. You employed a method then similar to that adopted at the Prospect Dam? Yes.
665. The evidence which we have obtained in our investigations seems to show that the puddle, especially in the trench, was put in very soft—like putty? Yes, I know it was. I drew attention to that in one part of my report—that is, I said it was in a semi-solid condition.
666. When was that? In 1887, I know for a fact that it was always too wet.
667. In speaking of the work done at the time you visited the dam you say there were a series of parallel cracks at some places, clearly indicating a subsidence of the lower layers since the admission of the water; at what parts of the embankment did you notice these parallel cracks? They were at the southern end of the dam.

W. A. Harper, Esq., C.E. 26 Feb., 1889.

668. Where the slip occurred? No—where the valve tower is.
669. Were they on the surface or on the slope? Some were on the surface, others on the slope.
670. Was that in August and September, 1888? Yes; they were filling them up. A number were pointed out to me as being nearly filled up again.
671. Did you consider they were of a very serious nature? No, I did not. They were not large, and only like the ordinary cracks of an embankment.
672. The material was thoroughly carted over and pressed in every way. You examined the material thoroughly and saw how hard it was? Yes.
673. The puddle-wall would shrink away from this material and leave a hole in its place? Yes. I think the material was very bad; it was like sand. I have had some experience with similar stuff on the Southern Line, at Clifton, which slipped. The clay had a soapy look, but was really very sandy.
674. It was a soapy blue colour? Yes.
675. The material you allude to as seeming loamy clay is what you refer to in the article? Yes; I had the same kind of bad material in the dam which I constructed, and I used a puddle lining. I then had no further trouble with it.
676. You ascribe these parallel cracks to the subsidence of the lower layers caused by the water percolating the material? Yes.
677. Do you consider that the water was finding its way from the reservoir up to the puddle-wall? Yes.
678. In what way? Do you think it forced itself through the porous material, or was it by absorption? It found its way by absorption, like a sponge.
679. The material forming the bank is chiefly clay, being kept wet and well carted over, should not the face of the bank be watertight? It should.
680. There was no other slip than that at section 54 when you were up in September? No.
681. You say in your report that you cannot see any reason why the embankment should have gone at this spot more than at any other;—have you since then heard or seen anything to account for this movement? No, I have not; and I have not been able to understand how any mass of particular material could get into one place, when it was so regularly distributed in the site from where it was taken.
682. So far as construction is concerned, it was applicable to the whole of the bank? Yes.
683. Did you hear that in December, 1887, and January, 1888, this part of the embanknent was constantly flooded owing to the necessity for keeping the water away from part of the puddle-trench which was being excavated at that time? No.
684. Do you think this would have any effect in causing the slip? No doubt it would.
685. The contractors stated that they drained the bank by taking the water across to the stone drains in the back bank, but it happened at times that for some reason the water could not be taken away; it therefore soaked in and had to take its chance? I should think if that were the case it would be a good way to account for the slip. I did not know this at the time when I made my report.
686. Then the fact of our finding water in the bank at a higher level than that of the water in the reservoir goes to show this? Yes. I was always under the impression that the puddle-wall was not dry enough, but I did not know that it was confined to any one particular spot. One of my old contractors was out there while this work was going on, and he came to me one day and said, "I never saw such stuff in my life; they are making the puddle-wall of mud and water." So I had an idea that at times they were using too much water.
687. In your report you take exception to the manner in which the repairing work was being done, and you consider it worse than useless;—does this refer to the stone being thrown down on the slope of the bank? Yes. I could see that they were making it slip.
688. That is to say, they were throwing the weight on to the slipping surface, and so causing it to slip more? Yes. They might have piled it up from the foot, but even that I do not consider of much use.
689. Then, if it had been built from the toe, it would overcome your objection a good deal? Yes. I pointed this out to Mr. Shand, and I think he suggested it to the Government. Mr. Shand and I talked over the matter several times, but I thought that, before they did anything at all, they should have cut the trench.
690. In suggesting to cut the trench, did you mean to cut right through the embankment or simply up to the puddle-wall? Up to the puddle-wall.
691. You suggested lowering the water—not necessarily below the outlet level;—did you mean the inlet of the supply to Sydney? What I meant was that they should try as low as they could get before cutting off any of the supply. If this would not do, then cut it off if necessary.
692. What was this level? I think the water was at 12 feet at the time.
693. If this lowering of the water did not expose the fault, what good purpose would it have served? From what I could see then the slip only seemed to go a little below the water-level.
694. If it were known that the plane of disturbance was at such a level that to expose it by lowering the water would have prevented Sydney being supplied from the reservoir, would you still recommend it? No. When I went up the Department insisted that this cracking was only the ordinary occurrences in large dams, and they ridiculed the idea that they were anything out of the common.
695. As I understand your report, you do not recommend definitely any remedy for the fault, but merely suggest a searching examination of the bank where the slip occurred? I was not asked to recommend anything. I was simply asked to report whether it was usual subsidence or not, and to give a general statement on it.
696. You recommend in your report protecting the bank by a layer of puddle laid on the water face 18 inches thick;—would you use this lining of clay all the way along the bank, and of uniform thickness, irrespective of the depth of water? Yes; it was only that thickness in the dam to which I have alluded, and we had no further trouble.
697. If you found that the material itself is not taking up the water, and is not being injured by the water, would you still go to this expense? No; the present conditions, as now known, alter my opinions. I did not consider that the material was good enough, and that it was overcharged with water.
698. The object then of your suggestion of the puddle lining would be to protect the wall if it were shown that the water was injuriously affecting it? Exactly.
699. I think our investigations show very clearly that the bank is practically non-absorbent? In that case I would not recommend the puddle lining.

700.

W. A. Harper, Esq., C.E. 26 Feb., 1889.

700. Have you prepared any estimate of the cost of what you recommend? No.
701. The puddle alone would cost £10,000? Well that would be only a trifle when compared with the present cost of the embankment. In the case of the New Zealand dam the material was very bad, being principally sandy gravel, but the puddle lining had the desired effect.
702. About two-thirds of this bank is a firm and thoroughly tough clay, well worked over, and has a fairly impervious surface? In that case it really amounts to a puddle.
703. Are there any other points in connection with the dam which you would like to mention, now that you know more of what has actually been found out during our investigations? I do not think there is anything else. I think the idea of boring is the proper course to adopt in order to obtain the required information.

THURSDAY, 7 MARCH, 1889.

R. H. Ryan, Esq., Resident Engineer, further examined by Mr. Mestayer:—

R. H. Ryan, Esq. 7 March, 1889.

704. In Mr. Dunn's evidence he mentioned that a portion of the bottom of the puddle-trench had to be taken up between sections 71 and 72 in consequence of the shale having lifted; is this a fact? Yes; about $7\frac{1}{2}$ feet.
705. Was there any other length on the bottom, in addition to this $7\frac{1}{2}$ feet to which you refer, which had to be remade in consequence of this peeling up of the shale? Not at that place.
706. As a matter of fact, it was only between section 71 and 72 that this occurred to this extent? Yes; but there were other places of small extent.
707. Was this lifting due solely to the action of the weather on the shale? Yes.
708. Was there any signs of water where this peeling up took place? No; we had to sink deeper than we at first anticipated, in order to get a sound bottom.
709. When you sunk at first the shale seemed hard and sound? Yes; it was hard and sound.
710. Mr. Dunn mentioned that he had heard of this same thing having occurred at other places? Yes; I cannot point out the places, but I know there were some few places where it had to be taken up.
711. How was this? The shale had been exposed for some considerable time to the air, and we took it up.
712. Were there any unsound places? All the unsound pieces were always taken out.
713. What unsound places there were was, I presume, simply surface disintegration of the shale caused by exposure to the atmosphere? Yes; merely superficial, caused by the action of the air.
714. Did the lifting of the shale raise the puddle at all where it had been put on? No; we always put on a good depth of clay to keep a weight on the bottom to protect it from the action of the air.
715. It was when there was no clay on the shale that it lifted? Yes; it was only where there was no clay that it lifted, but the flaking of the shale extended a few feet under the clay sometimes.
716. In every case where this peeling up occurred, was it the same shale? Yes; the same shale. It was principally on the centre line of the trench, where the channel was cut, that the bottom usually lifted.
717. When you cut through the shale it was perfectly sound, but after exposure to the atmosphere it lifted? Yes. As far as I know the sides never lifted. It was in the centre it showed most, especially where the channel was cut.
718. In any instance where this has occurred was it due to water on the bottom? In no instance.
719. Then, as I understand you, this was simply the ordinary disintegration of surface exhibited by all shales when exposed to the atmosphere? Yes; nothing more than that.
720. It was solely in consequence of the exposure to the air? Yes; in fact from about section 27 up to the end we met with little or no water whatever.
721. With regard to the stream from the back of the embankment—I understand you cut through some gravel-beds? Yes.
722. If any of these were now giving out water the probabilities are that this water would find its way to the drains below? Yes; and that portion under the back part of the bank would most likely discharge some water below.
723. The particulars given by Mr. Dunn of this flow would seem to show that it is something more than that due to the ordinary drainage of the bank, owing to its great evenness of volume? Yes; I have always thought so.
224. What do you think is the reason of this? I think it is due to the soakage from the gravel-beds and shale, together with the ordinary soakage from the bank.
725. Is this at the place where most water was found? Yes.

A. F. Jacob, Esq., Assistant Engineer, called and examined by Mr. Mestayer:—

A. F. Jacob, Esq. 7 March, 1889.

726. Mr. Gordon, in a letter to me, says he would like to know whether the line of kerbing was set out with a theodolite from the solid, or was it measured from the centre line of the bank? It was set out from the centre line of the puddle-trench, which had been ranged from the solid with the theodolite.
727. Speaking of the movements on the face in the deep part, Mr. Dunn said some of the kerb pegs were put in from the solid;—did you range the line out? No; he must be referring to his own work.
728. That was not the line you fixed? No; we fixed no line there.
729. Did you give them the line of the trench? Yes; the centre line was set out from the solid by us.
730. Did you give them the line of the kerb? No; we gave them the centre line of the trench and gave our inspectors the distance of the kerb from the centre line of the trench, but we did not range any line out for the kerbing.
731. To a certain extent the kerb was governed by a line ranged out from the solid? Yes.
732. There was no other independent line? No; we put in no actual line for the kerb, our inspectors ranged it with poles.
733. Mr. Dunn appears to have worked from the centre line of the puddle-trench? Yes.
734. Did you give them any points on the slope? No; we considered it was not our place to do so. When we had given them the centre line of puddle-trench and toes of slopes we considered we had done all that was necessary, though we occasionally checked the slopes for our own satisfaction.

A. F. Jacob, Esq. 7 March, 1889.

735. You contend that in giving them the line of the puddle-trench you gave them sufficient to work upon? Yes; but with regard to putting in the kerb, we never laid down a true line; we simply kept our inspectors provided with distance from the centre line of the puddle-trench.
736. When the kerbing was being put in, did you check it from time to time from the centre line? No.
737. So, really, it would be impossible to say whether the kerb is in exactly the same line now or not? Yes. We have no records to fall back on.
738. Did you take the measurement of the puddle that was shifted when the bottom of the trench flaked up owing to exposure? No; I took the level of the bottom of the trench on 27th July, 1887, at peg 72, and it was then 29 feet from the surface. Inspector Davis informed me a few days after that the depth had been altered to 35 ft. 6 in., and I altered my notes accordingly.
739. Did you take actual measurements? No; I did not take actual measurements the second time, but the bottom had been altered to 6½ feet additional in depth at 72.
740. That was in consequence of the rock being unsound? Yes.
741. How much do you think was taken up owing to this "flaking up" of the bottom? There could not possibly be more than 25 feet. I did not get a note of the exact amount at the time, but I am sure it could not exceed 25 feet.
742. The actual surface taken up could not have exceeded 25 feet? No; but Mr. Davis can tell you more exactly.
743. You did not see the actual amount taken up? No.
744. There were other places which had to be taken up owing to the flaking? Yes; there were a few potholes which were taken up. Every part of the trench was carefully sounded immediately before the clay was put on the bottom, and all unsound pieces taken up.

William E. Dunn, Esq., Engineer to the Contractors, called and re-examined by Mr. Mestayer:—

W. E. Dunn, Esq. 7 March, 1889.

745. Mr. Gordon has written to me asking me to put one or two more questions to you. He wishes to know how you knew that the bottom had "flaked up" when it had been covered in for two or three days? [*This I explained to him by letter.* See page 84.]
746. Did the puddle rise in the trench? That is a thing we could hardly ascertain. We simply saw it begin to flake at the exposed end of the puddle, and we were told to remove it.
747. What depth of puddle was there in it at this time? About 1 foot at one end up to 4 feet at the other end. The shale at this place had peeled all the way along.
748. Where it flaked up it was from 1 to 4 feet deep? Yes.
749. Did you take the level as well as the position horizontally of the pegs which moved and went back again? I took the levels in the first instance, but after I found that there was no movement I took no more levels.
750. You do not know whether there was any variation or not? No.
751. When did you take your levels? On 5th December, 1888. Levels were taken along the kerb 73 feet from the centre line of trench. [*Levels shown and explained.*]
752. When was this? Shortly after I put the transverse line in. In many places it runs 9 to 12 inches lower than where originally put in.
753. Is that the kerbing? Yes; taking the level at the exact point where the pegs should have been had they not moved on the 73-foot contour. [*Levels produced.*]
754. These levels are compared with the actual levels of the kerb as put in originally? Yes.
755. What is the actual difference in level? About 6 inches above at peg 15.
756. So that point on the kerb has moved 2 ft. 4½ in. towards the water, and is 0·4 lower than it was? Yes.
757. What is it at peg 18? At present it is 182·04, and should be 182·73.
758. At peg 22 it is 2 ft. 1½ in. nearer the water? Yes.
759. These were measurements taken to the original pegs? Yes; this was the line run through on the 73-foot contour. Wherever I could find an old peg I took the distance of it.
760. How was this 73-foot contour set out? It was offsetted from the centre line of puddle trench. We then compared the pegs to see if any were out of line, and checked them.
761. Did you find any out of line? A few were, but none more than 2 inches out of line.
762. Was it set off with the theodolite? With the exception of the first two or three pegs, which we set off from the solid; we set the others from the centre of puddle trench.
763. Was the alleged movement entirely horizontal or was there any slipping down shown at the same time? I can hardly say.
764. Did you report the discrepancies at 15, 18, 22, and other places to the contractors? Yes.
765. Was it mentioned to the inspectors that there were these discrepancies. I do not think so.
766. It was not considered at the time of sufficient importance to make a formal report about? No.
767. Mr. Ryan says that the distance taken up owing to the shale peeling could not be more than 25 feet? I think it was about 60 feet.
768. Did you not make a complaint about it? No; we found we had been overpaid previously, and we did not take any notice of this.
769. Were you not paid for this? We were only paid for 25 feet, but as far as I can remember there was about 50 feet taken up.
770. Did you take up the bottom all along? When we took up the clay there was more bottom taken but, and the contractor asked me to see that we got paid for this extra measurement.
771. Did you get paid for the extra? No; we found that some extra measurement had been paid for oefore, and so we made no claim for this.
772. Do you think this is a matter of any importance? No; it is not.

The differences of level on the 7th, 8th, and 12th are the most reliable.—W.E.D., 6/3/89.

Mr. George Davis, Inspector of Puddle and Earthwork, recalled and further examined by Mr. Mestayer :—

Mr. G. Davis. 7 March, 1889.

773. Do you recollect the flaking up of the shale at the bottom of the puddle-trench between sections 70 and 71? Yes; there was a piece flaked there.

774. Were you present at the time it was taken up? Yes; it was my duty to be there.

775. Was the whole of the unsound part taken up? Yes.

776. What was the length of this unsound part? The greatest length between pegs 70 and 71 was 7 to 8 feet.

777. You are sure that it was not more than 7 feet? I go by our needles, which are 10 feet long, and it never exceeded that.

778. You are certain it was not 10 feet? I am certain, perfectly certain. I can get three or four men who were working at this place putting the clay in who will tell you the same. There are two Italians working here now who put in this clay.

779. Where are they working? They have just gone home again. They were down here half-an-hour ago, and were told there was nothing for them to do this morning, consequently they have returned home.

780. We are told it was 60 feet? There was not 60 feet in the whole amount taken up.

781. Not in the whole of the "flaking up" taken together? Not in the lot.

782. There were other places where it "flaked up"? Yes; we came to a hole occasionally. Any shale, whether rock or not, when exposed to rain, air, or the weather, will lift a little.

783. Was it not lifted by water? No; there was no water.

784. It was simply exposure that caused it? Yes; simply exposure to the air.

785. Where were the other places? At section 40. I showed Mr. Ryan some that had lifted.

786. Was it of great extent? No; two men lifted it in a day. It did not take them all the day.

787. Then the whole of the "flaking up" did not exceed 60 feet? Taking the whole length of the bank it did not exceed 1 chain all added together.

Correspondence.

Treasury Minute.

Subject:—The Dam at Prospect.

The Treasury, New South Wales, Sydney, 28 November, 1888.

SOME doubt having been expressed in Parliament as to the safety of the dam at Prospect, I would submit, for the consideration of Mr. Sutherland, the desirability of his appointing some officer or officers to inspect and report on the state of the dam. J.F.B.

The Under Secretary for Public Works.—G.E., B.C., 28/11/88. Submitted.—J.B., 28/11/88.

I can assure my honorable colleague the matter he refers to is causing me a great deal of anxiety; and previous to the date of his minute the Acting Engineer-in-Chief for Harbours and Rivers had visited the dam, and placed me in possession of the latest information on the subject. Subsequently I have been in close consultation with Messrs. Whitton and Bennett. These gentlemen have concurred in what they consider the best course to pursue under the circumstances, but previous to taking any action they are to visit the dam in company to-morrow, and on Monday I shall have the result of their conference before me, when I shall immediately place the matter before the Cabinet. I may also mention that Mr. Williams, one of the Assistant Engineers for Harbours and Rivers, has visited the dam alone, and his report will also be placed before the Cabinet.—JOHN SUTHERLAND, 30/11/88. Under Secretary, Finance and Trade.—J.B., B.C., 30/11/88. Seen.—J.F.B., 30/11/88.

The Under Secretary for Public Works to R. L. Mestayer, Esq.

Sir, Department of Public Works, Sydney, 4 December, 1888.

I am directed by Mr. Secretary Sutherland to enclose copy of his instructions touching your commission to examine and report upon the present condition of the Prospect Dam, and I am to request that you will be so good as to enter upon the duties and furnish your report at the earliest possible moment.

I have, &c.,
J. BARLING,
Under Secretary.

R. L. Mestayer, Esq., to The Under Secretary for Public Works.

Sir, Beresford Chambers, 52, Castlereagh-street, Sydney, 6 December, 1888.

I have the honor to acknowledge the receipt of your letter of the 4th instant, enclosing a copy of the instructions drawn up by Mr. Secretary Sutherland for my guidance in examining into and reporting upon the slips at the Prospect Dam.

The matter shall receive immediate and most careful attention, and I will submit a report at the earliest date consistent with the thorough examination necessary to enable me to comply with the instructions.

I visited the dam yesterday, and in company with Mr. Ryan, the Resident Engineer, went carefully over the works. As, however, some information must be obtained as to the condition of the interior of the bank, I requested Mr. Ryan to arrange to put down a bore into the bank at a point which I indicated to him; and I shall be present to see this work carried out.

To enable me to properly estimate the character and importance of the causes which have produced the movement in the bank, I shall be obliged if you will give instructions to be supplied to me:—

1. Plan of dam, showing positions and extent of all movements noticed up to present date.
2. Longitudinal section of dam along puddle-trench, giving particulars of geological sections of ground at sites of movements.
3. Cross-sections of bank at centres of movements, showing:—
   (*a*) Original sections.
   (*b*) Altered outline caused by slip up to the time the first steps were taken to arrest the movement by weighting the toe.
   (*c*) Present outline of bank and stone thrown in to arrest the movement.
4. Copies of particulars obtained by boring up to the present time.
5. Specification under which the work has been constructed.

The specification is necessary to enable me to comply with the clause of my instructions in which I am directed to "report on the construction of the dam and subsidiary works as a whole . . . . . and whether the works have been carried out according to the design."

I have, &c.,
R. L. MESTAYER.

The Under Secretary for Public Works to G. Gordon, Esq.

Sir, Department of Public Works, Sydney, 10 December, 1888.

I am directed by the Secretary for Public Works to forward herewith for your information and guidance, a copy of the instructions which have been given to Mr. Mestayer, A.M.I.C.E., who as you are aware has also been appointed to inquire into, and report upon the condition of the Prospect Dam, and to request that you will be good enough to take them as referring to the inquiry entrusted to you. The object of Mr. Sutherland is to obtain a full and impartial statement of the facts of the matter as they appear to you as an engineer of experience, altogether unconnected with the Department having charge of the work.

I am to add that Mr. Hickson has been instructed to place everything required at your service, including original plans and documents, and all officers of the Department have been enjoined to give you all possible information, and to reply to any inquiries you may desire to make in the course of your investigations.

I have, &c.,
J. BARLING,
Under Secretary.

Copy of instructions to Mr. Mestayer which were forwarded herewith were laid on the Table of the House on the 6th December, 1888.

G. Gordon, Esq., to The Under Secretary for Public Works.

Dear Sir, 13 December, 1888.

I visited the Prospect Dam yesterday and examined the second slip and two boreholes put down by Mr. Mestayer on the 7th and 10th inst.

I should like to put down another bore in the same line, *i.e.*, in the axis of the slip near the water's edge, and another in the puddle-wall on the same line, and still another in the part of the dam that has not shown any inclination to slip. In order to save time I asked Mr. Ryan to have the places prepared for these, and also to have a trench dug across the top of the bank at a place I pointed out, so as to be ready for my putting down the bores to-morrow. Mr. Hickson says he can get me the services of a diver and I ask permission to employ one to examine the toe of the bank, and I ask authority for the works mentioned above and leave to examine the plans of the accessory works, and to get some tracings made.

Yours, &c.,
G. GORDON.

Mr. Hickson,—Please attend to this.—J.B., B.C., 13/12/88. Submitted.—J.B. Appd. I give Mr. Gordon the fullest authority to carry out his investigation in the way he thinks best.—J.S., 14/12/88. I have arranged for these matters as instructed by the Minister.—R.H., B.C., 18/12/88. Under Secretary for Public Works. Put with papers.—J.B. 19/12/88.

R. L. Mestayer, Esq., to Mr. H. Murray.

Dear Sir, Beresford Chambers, 52, Castlereagh-street, Sydney, 15 December, 1888.

I understand from Mr. Dempsey that you can give me some information concerning the way the work was carried on at Prospect. I shall be extremely glad of any such information, and shall be much obliged if you can call here to see me on Tuesday afternoon, about 3 o'clock p.m.

Yours truly,
R. L. MESTAYER.

R. L. Mestayer, Esq., to A. Bennett, Esq., *Evening News* Office.

Dear Sir, Beresford Chambers, Sydney, 52, Castlereagh-street, 15 December, 1888.

We are informed by Mr. Secretary Sutherland that you are willing to place at our disposal any information in your possession relating to the Prospect Dam. If you could mention a time on Tuesday morning which would be convenient to you, we shall be happy to wait on you to receive any particulars you can supply.

We are, &c.,
G. GORDON.
R. L. MESTAYER.

The Under Secretary for Public Works to R. L. Mestayer, Esq.

Sir, Department of Public Works, Sydney, 15 December, 1888.

I am directed to enclose for your information copies of correspondence, which has taken place between the Secretary for Public Works, and Mr. Alfred Bennett, proprietor of the *Evening News*, and have to request that you will be so good as to put yourself in communication with that gentleman, with a view to obtaining any information he may have at his disposal with regard to the Prospect Dam.

I have, &c.,
J. BARLING,
Under Secretary.

The Under Secretary for Public Works to G. Gordon, Esq.

Sir, Department of Public Works, Sydney, 15 December, 1888.

I am directed to enclose for your information copies of correspondence, which has taken place between the Secretary for Public Works and Mr. Alfred Bennett, proprietor of the *Evening News*, and have to request that you will be so good as to put yourself in communication with that gentleman, with a view to obtaining any information he may have at his disposal with regard to the Prospect Dam.

I have, &c.,
J. BARLING,
Under Secretary.

[*Enclosures.*]

Department of Public Works,
My dear Mr. Bennett, Sydney, 11 December, 1888.

You will have observed from the papers which have been laid upon the Table of the House that I have appointed two engineers outside the Department—one having only recently come to the Colony, and the other a resident of the sister Colony of Victoria—for the purpose of inquiring into the present state of the Prospect Dam. I have given them the utmost freedom of action, and have instructed them as far as possible to keep themselves from the influence of the Department, and report to me the true facts of the case whatever they may indicate. My

My object, however, in writing to you is to ask you to be so kind as to assist me in this matter. From the interest your paper has taken on the subject of the Prospect Dam it is clear that you must have obtained a great deal of information given you by various informants on the subject, and I have now to ask that you will be so good as to place this information, so far as you are able, at the disposal of the two gentlemen who have been appointed for the inquiry, namely, Mr. Mestayer, late Hydraulic Engineer to the South Australian Government, and Mr. George Gordon, an engineer of eminence in Victoria.

I have instructed these gentlemen to obtain information from every possible source, and it is for this reason that I ask you to be so good as to place any information you may have at their disposal.

I feel sure that from a national point of view you will accede to my request, and if you will furnish me with the names of those who have supplied you with information, I will take care that their evidence shall be taken and considered. My only object is to elicit the truth.

I am, &c.,

Alfred Bennett, Esq., *Evening News* Office. JOHN SUTHERLAND.

P.S.—To show the extent of the power entrusted to these gentlemen, I enclose you copy of the instructions to Mr. Mestayer, in similar terms to which instructions are being prepared for Mr. Gordon.

Town and Country Journal and *Evening News* Office,

Dear Sir, Market-street, Sydney, 12 December, 1888.

Mr. Bennett desires me to acknowledge receipt of your letter and enclosure of yesterday, and to say that he will be only too happy to supply your officers with any information in his power in reference to the condition of the Prospect Dam, in the security of which he takes a deep interest. Such members of the staff of the *Evening News* as have reported upon the dam will willingly see Mr. Mestayer and Mr. Gordon, and afford these gentlemen whatever assistance they can to facilitate their investigations. At the same time I should mention that all information which representatives of the *Evening News* have obtained has been published in that journal and commented upon, and I assume that such information and comments, touching a subject of such great importance, have been preserved in your Department. Should that, however, not be the case, I have an index by me that will enable me to lay my finger at any time upon the various reports, &c., that have appeared on the subject in the *Evening News*. These I will be glad to point out to any accredited officer of your Department who may desire to see them.

I may add that it is very gratifying to Mr. Bennett and myself, as it must be to the public, to observe the steps you have taken to have a thoroughly independent examination made by competent engineers of the dam, with a view to ascertaining its actual condition, and so set the public mind at rest, if possible, as to its stability.

I have, &c.,

JAMES A. HOGUE,

The Secretary for Public Works. ——— Editor, *Evening News*.

Answered. See letters sent to Messrs. Gordon and Mestayer on the subject.—J.B., 15/10/88. Put away.

Dear Sir, Parliament, New South Wales, Sydney, 12 December, 1888.

I have to thank you for your letter of this date, in which you offer to place your services at the disposal of the engineers I have appointed to inquire into the present state of the Prospect Dam, and I shall take care to request them to avail themselves of your kind offer.

My only object is to get at the true facts of the case from whatever source I can obtain them.

I have from the first been fully impressed with the necessity of the most searching investigation.

Yours, &c.,

The Editor, *Evening News*. JOHN SUTHERLAND.

Town and Country Journal and *Evening News* Office,

Dear Sir, Sydney, 17 December, 1888.

Mr. Alfred Bennett desires me to say, in answer to your note of the 15th instant, that he will be glad if you will call on the editor of the *Evening News*, at the office of the *Sydney Morning Herald*, any time on Tuesday forenoon.

Yours, &c.,

JAMES A. HOGUE,

Messrs. Gordon & Mestayer. Editor, *Evening News*.

Dear Sir, Beresford Chambers, 52, Castlereagh-street, 18 December, 1888.

Mr. Secretary Sutherland has been informed that you can give some information to Messrs. Gordon and Mestayer, who are conducting an inquiry about the Prospect Dam. Will you be so good as to say in what it consists, and whether you can state any facts bearing on the construction of the dam from your own observation.

Yours truly,

Mr. G. A. Bramston, 717, George-street. R. L. MESTAYER.

Dear Sir, Beresford Chambers, 52, Castlereagh-street, 18 December, 1888.

Messrs. Gordon and Mestayer, who are taking evidence about the Prospect Dam, have been informed by Mr. Secretary Sutherland that you can give information as to the construction of the dam. Can you attend at Mr. Mestayer's office, Beresford Chambers, Castlereagh-street, at 12 o'clock on Thursday next?

Yours truly,

Mr. Edwin Limond, 63, Church-street, Newtown. R. L. MESTAYER.

Dear Sir, Beresford Chambers, 52, Castlereagh-street, Sydney, 18 December, 1888.

Messrs. Gordon and Mestayer, who are taking evidence about the Prospect Dam, have been informed by Mr. Hogue, of the *Evening News*, that you can give information as to the construction of the dam. Can you attend at Mr. Mestayer's office, Beresford Chambers, Castlereagh-street, Sydney, at 11 o'clock, on Thursday next?

Yours truly,

Mr. Rutherford, Mundarra Towers, Little Coogee. R. L. MESTAYER.

R.

R. L. Mestayer, Esq., to I. Ives, Esq.

Dear Sir, Beresford Chambers, 52, Castlereagh-street, Sydney, 18 December, 1888.

Mr. G. Gordon, C.E., of Victoria, and myself have been instructed by the Honorable the Secretary for Public Works to report upon the condition and construction of the Prospect Dam.

We have been informed that you might be in a position to give us some information as to the character of the work. If that is the case, we shall be very glad to be put in possession of any facts you may be willing to communicate, and shall be happy to wait upon you at any time on Thursday afternoon which may be convenient to you.

I am, &c.,

R. L. MESTAYER.

Copy of Telegram addressed to Mr. John Norton, "Terminus Hotel," Newcastle.

18 December, 1888.

I AM informed you can give evidence as to Prospect Dam. Can you attend at Beresford Chambers, 52, Castlereagh-street.

G. GORDON,
Australian Club.

R. L. Mestayer, Esq., to The Hon. J. Davies, M.L.C., C.M.G.

Dear Sir, Beresford Chambers, 52, Castlereagh-street, Sydney, 18 December, 1888.

Mr. G. Gordon and myself have been instructed by the Honorable the Secretary for Public Works to report upon the condition and construction of the Prospect Dam.

We have been informed that you might be in a position to give us some information as to the character of the work. If that is the case, we shall be glad to be put in possession of any facts you may be willing to communicate, and shall be happy to wait upon you at any time on Thursday afternoon which may be convenient to you.

I am, &c.,

R. L. MESTAYER.

NOTE.—Up to the present date, 30 March, 1889, no reply has been received from Mr. Davies.—R.L.M.

R. L. Mestayer, Esq., to J. A. Hogue, Esq.

Beresford Chambers, 52, Castlereagh-street, Sydney, 18 December, 1888.

Dear Sir, *Re* Prospect Dam.

I shall be obliged if you can give me particulars on the following points, viz.:—

1. An article in the *Evening News* of the 3rd instant refers to a correspondent who seven months ago predicted the collapse of the dam. Can you give me the name of this correspondent?
2. A leading article in the *Evening News* of 2nd May, 1888, refers to an article published in the *Evening News* three years previously in which it was stated that portions of the puddle-wall consisted of rubble and rubbish. Can you give me the name of the person responsible for this statement?
3. Can you give me the dates of the articles written by Mr. Norton?

I am, &c.,
R. L. MESTAYER.

R. L. Mestayer, Esq., to Mr. J. Weston.

Dear Sir, Beresford Chambers, 52, Castlereagh-street, Sydney, 18 December, 1888.

I have been instructed by the Honorable the Secretary for Public Works to inquire into and report upon the work of the Prospect Dam.

I understand that you were engaged upon the works for some time during 1883 and 1884, and shall feel obliged if you will give me any information as to the manner in which the work was executed, and the depth at which the puddle-wall was kept below the level of the bank.

I am, &c.,
R. L. MESTAYER.

Memo. from Mr. J. A. Hogue, *Evening News* Office, to Mr. Mestayer, C.E.

Dear Sir, Sydney, 19 December, 1888.

In answer to your first question,—Mr. Rutherford, contractor; 2nd—Mr. Gipps, C.E.; 3rd—Mr. Norton wrote all the reports up to the end of June.

J. A. HOGUE.

Agnes Gipps to Geo. Gordon, Esq.

Dear Sir, "Maida," Chandos-street, Ashfield, 19 December, 1888.

Mr. Gipps is at present in Melbourne. In a letter that I received from him yesterday he said that all being well he would leave Melbourne for Sydney on Thursday. On his arrival here I will lose no time in giving him your letter.

Yours, &c.,
AGNES GIPPS.

I. E. Ives, Esq., to R. L. Mestayer, Esq.

Sydney, 19 December, 1888.

Dear Sir,

I am not aware that I can give you any information as to the character of the work at the Prospect Dam.

I visited the dam on Tuesday morning the 4th instant, arriving there at 6 a.m., and as work does not commence until 8 a.m. I had a good opportunity of seeing the amount of settlement during the previous night. In one place, a crack of some considerable length widened considerably as I looked on.

On Monday, 10th instant, I again visited the dam, in company with Mr. Kelly, M.L.A., arriving at about 10·30 a.m. At this hour most of the cracks had been covered, but in one place three or four men with picks were loosening the solid sides of a crevice fully a foot wide, and filling in with stuff so obtained. Another man was using a long iron rod in the crevice, apparently with a view of inducing the small stuff to go further down.

Yours, &c.,

I. E. IVES.

Telegram from J. Rutherford, Esq., to R. L. Mestayer, Esq.

Mundarra Towers, Coogee, 20 December, 1888.

Just received letter. Will attend to-morrow, if required.

JAS. RUTHERFORD.

Telegram from R. L. Mestayer, Esq., to J. Rutherford, Esq.

20 December, 1888.

Shall be glad if you will call here to-morrow morning about 11.

R. L. MESTAYER,
Beresford Chambers,
Castlereagh-street.

Mr. R. J. Weston to R. L. Mestayer, Esq.

Marrickville Road, Marrickville, 20 December, 1888.

Dear Sir,

In reply to your request, I beg to inform you that I was engaged on the Prospect Reservoir works from August, 1883, to August, 1885, as manager of the tunnel works until completed. I can vouch for all material and workmanship used for the construction of the said works being first class. All bricks used were culled out from the stock before they were allowed to be taken into the tunnel for use. The man who performed this task was subject to the approval of the Government Inspector. Only the best brands of cement were used; and on receiving a fresh supply of cement it had to be weighed, measured, and tested, by order of the District Engineer, and in his presence or his assistant, often both of them; an inspector in the tunnel to see the work faithfully performed; an inspector outside to see all concrete and cement mortar properly mixed, &c.; and during the construction of the above works the District Engineer was through the tunnel almost daily.

In reference to the puddle-trench, I had nothing whatever to do with that portion of the work; but I know the engineer was very determined to have the trench sunk down to a good solid formation, and that for some distance it was upwards of 40 feet deep.

I have repeatedly heard our firm complain of the strict attention of the District Engineer to the fixing of the puddle in the trench, also to the getting and preparing of the same for use, and many other matters connected with the works.

In conclusion, I have had considerable experience on general public work in Great Britain and other parts of the world, and can honestly and truthfully say that I never was managing works under the supervision of an engineer so *strict* and attentive to his duties as Mr. Ryan, District Engineer of the Reservoir Works, Prospect.

I have, &c.,

R. J. WESTON.

Mr. E. Limond to The Secretary for Public Works.

63, Church-street, Newtown, 21 December, 1888.

Dear Sir,

I waited on Messrs. Gordon and Mestayer yesterday, 12 noon, when not only my statement was unbelieved, but I was told it was all lies about water being under the puddle. I cannot rest under this imputation, but shall take other steps to prove to the public that my assertions are correct. The *Evening News* has not published my evidence as yet.

Yours, &c.,

EDWIN LIMOND.

I have seen Mr. Gordon about this, and he absolutely denies the truth of these allegations.—J.S., 21/12/88. Resubmit.

Tell him to call at 11 a.m., Monday, and the Minister will then take his evidence.—J.B., 29/12/88.

Edwin Limond, Esq., 29/12/88.

New South Wales Electric Telegraph, 29 December, 1888.

J. Barling, Esq., Public Works Office.

Your message of to-day to Edwin Limond, 63, Church-street, Newtown, is undelivered. Address is vacant.

H.J.S.P., Manager.

Shall we search for him?—J.B., 31/12/88. Find him.—J.S., 31/12/88.

Telephone message from Newtown Police, 2nd January, 1889, 3 p.m., to Inspector-General of Police.

Mr. Edwin Limond resides at No. 73, Church-street, Newtown. He is a most respectable man, and lately worked at the Prospect Reservoir.

Telegraphed to Limond, 2/1/89.

R.

R. L. Mestayer, Esq., to F. B. Gipps, Esq., C.E.

Prospect Dam.

Dear Sir, Beresford Chambers, 52, Castlereagh-street, Sydney, 22 December, 1888.

Mr. Gordon wrote to you on Tuesday last, asking if you would be good enough to give us any information you could regarding the above work. Mr. Gordon has been obliged to return to Victoria, but has left with me the questions he intended to put to you, and I shall be much obliged if you will kindly let me know when it will be convenient for you to call here and see me respecting it. I shall be here up to 1 o'clock on Monday, but not on Tuesday or Wednesday.

If Monday morning will not suit your convenience, please send me a line to my private address—Symington, Parramatta Road, Ashfield.

Yours, &c.,
R. L. MESTAYER.

The Under Secretary for Public Works to R. L. Mestayer, Esq.

Sir, Department of Public Works, Sydney, 22 December, 1888.

With reference to the instructions which have been given to you in regard to the work of reporting upon the Prospect Dam, I am desired by the Secretary for Public Works to request that you will be so good as to give a detailed estimate of any works which you may recommend should be carried out.

I am to add that Mr. Gordon has been similarly instructed.

I have, &c.,
J. BARLING,
Under Secretary.

R. L. Mestayer, Esq., to R. T. Ryan, Esq.

Beresford Chambers, 52, Castlereagh-street, Sydney, 24 December, 1888.

Dear Sir, Prospect Dam.

I wish to find out how far the movement that we found at section 18 has extended, and shall be glad if you will have similar sections taken at each 100 feet, right and left of section 18, until the present and original face-lines are found to correspond.

I also wish two more boreholes to be put down at section 18—30′ and 35′ respectively from the centre of puddle-wall. They should go down about 35 feet deep. I shall come out on Thursday or Friday, but the holes can be sunk without waiting for me.

Yours, &c.,
R. L. MESTAYER.

Copy of Telegram addressed to J. Norton, Esq., on 27/12/88.

MINISTER will be glad if you can give your evidence respecting the Prospect Dam at once. Can you call at the office of Mr. Mestayer, Beresford Chambers, 52, Castlereagh-street, for this purpose, on Saturday morning at 10 o'clock. Any expense incurred will be paid by the Department.

J. BARLING,
Under Secretary for Public Works.

Telegram from Mr. J. Norton to The Under Secretary for Public Works.

IN reply to your telegram, could not possibly come to Sydney to give evidence, *re* Prospect Dam, before to-morrow, Saturday, week.

J. NORTON,
"Terminus Hotel."

Telegraph that I will instruct Mr. Mestayer to proceed to Newcastle to take his evidence at any early time which may suit his convenience.—JOHN SUTHERLAND, 29/12/88. Wired, 29/12/88.

Copy of further Telegram addressed to J. Norton, Esq., on 29/12/88.

MINISTER will instruct Mr. Mestayer to proceed to Newcastle to take your evidence at an early time which may suit your convenience. Reply.

J. BARLING,
Under Secretary for Public Works.

J. Norton, Esq., to The Under Secretary for Public Works.

Newcastle, 31 December, 1888.

USELESS to send Mestayer here for my evidence, *re* Prospect Dam, as I decline to afford information before present Board, being doubtful of its utility and impartiality.

Seen. I regret that Mr. Norton refuses to give evidence, as we offered to pay all expenses.—JOHN SUTHERLAND, 31/12/88.

The Under Secretary for Public Works to J. Norton, Esq.

Sir, Department of Public Works, Sydney, 2 January, 1889.

I am directed by the Secretary for Public Works to acknowledge the receipt of your telegram of the 31st ultimo, in which you say it is useless to send Mr. Mestayer for your evidence in regard to the Prospect Dam, as you decline to afford information on the subject. Mr. Sutherland very much regrets that you should have come to this conclusion. He is most anxious to obtain all the particulars possible, and will be obliged if you will consent to give evidence before himself at any convenient time which may be named by you.

I am to point out that the matter is of great national importance, and Mr. Sutherland thinks he is justified in appealing to your patriotism as a public man to give him all the information you can, as it is clear you have devoted very considerable attention to the subject, and have collected a mass of evidence which he thinks may be very useful.

I have, &c.,
J. BARLING,
Under Secretary.

Up to this date no answer has been received from Mr. Norton.—D.C.M'L., 15/1/89.

R. L. Mestayer, Esq., to Mr. G. Robinson.

Dear Sir, Beresford Chambers, 52, Castlereagh-street, 27 December, 1888.

Please be at my office by 9·30 a.m. on Saturday, and I shall be glad if you can go through the *Evening News* files to-morrow, and note down any assertions in the articles written by Mr. Norton. Mr. Secretary Sutherland has telegraphed to him to come to my office on Saturday to give evidence, and also to Mr. Maher, of West Maitland, who has written to the *Evening News*.

Yours, &c.,
R. L. MESTAYER.

The Under Secretary for Public Works to R. L. Mestayer, Esq.

My dear Sir, Department of Public Works, Sydney, 27 December, 1888.

Mr. Sutherland desires me to enclose for your information an extract of a leading article from the *Evening News* of this day's date upon the subject of the Prospect Dam.

I am further desired to point out to you the extreme importance of taking any evidence which may present itself to you in connection with the subject of your inquiry, however trivial or absurd it may appear to you as an engineer—because it is largely on statements of this character that the public mind has been exercised of late, and it is desirable to get at the source of the many statements which have been spread abroad with regard to the state of the dam.

I am, &c.,
J. BARLING.

The Under Secretary for Public Works to G. Gordon, Esq.

My dear Sir, Department of Public Works, Sydney, 27 December, 1888.

Mr. Sutherland desires me to enclose for your information an extract from the *Evening News* of this date, bearing on the subject of the Prospect Dam, and to ask that you will be so good as to come to Sydney again before sending in your final report. Mr. Sutherland further wishes me to point out to you the extreme importance of taking any evidence which may present itself, no matter how trivial or absurd it may seem to you as an engineer—because it is by such statements that a great deal of the uneasiness now existing in the public mind with regard to the dam has been raised.

I am, &c.,
J. BARLING.

[*Enclosure.*]

[Extract from the *Evening News* of Thursday, 27th December, 1888.]

THE PROSPECT DAM.

THE coming event of Messrs. Gordon and Mestayer's report on the Prospect dam has cast its shadow before, and the foreshadowing is not a pleasant one to contemplate. Though the report has not been drawn up, the Minister for Works was able to tell the Assembly on Friday what the most important part of it will be when it does come. The *Hansard* report of what the honorable gentleman said contains the following:—

> There are two gentlemen now holding a very serious inquiry into the state of the Prospect Dam, from its first foundation till the time they took evidence on the subject. They will not be prepared to give in their report before some time next week. I sent for Mr. Gordon to-day, and he assured me that there was not the slightest danger of the dam giving way. Alterations and a large expenditure of money will have to take place; and I have given instructions to those gentlemen, not only to make recommendations but also to state what will be the cost of carrying out the recommendations.

It appears from Mr. Sutherland's remarks that Mr. Mestayer agrees with Mr. Gordon, for speaking of the two gentlemen, he concluded by saying,—

> They are certain that there is not the slightest foundation for the fear of the dam going.

This remarkable communication to the Assembly can have no other effect than that of destroying the confidence of the public in the report of Messrs. Gordon and Mestayer when it is produced. Their instructions to hold the investigation were issued on the 13th December, and assuming that they commenced work the following day, their inquiries into the state of the Prospect Dam from its foundation had extended over a week and a day when they assured Mr. Sutherland that there was not the slightest fear of it collapsing. It is true that, according to the Minister for Works, the investigation was not concluded when he saw Mr. Gordon; but what is of most importance is to know on what evidence Mr. Gordon and Mr. Mestayer came to the conclusion that the dam is in no danger. It may be taken for granted that they went out to see it; but for the practical purpose of their commission, looking at the embankment was, comparatively speaking, a waste of time. The Department has been taxing its resources during the last eight or nine months to patch the work up, and most probably when Mr. Gordon and Mr. Mestayer were taken to see it most of the cracks had been filled up, and unless it had burst through again the stream of thick yellowish water our reporter saw running from the base of the embankment on its lower side was stopped up. Looking at the work in its patched-up condition would therefore give the two gentlemen only a very imperfect idea of what has been going on in the way of cracks, slips, subsidences, and the actual flow of water through the embankment. What they required to do was to take the evidence of disinterested men who had been carefully watching the dam since the first slip was discovered, and if they have not done this the investigation on which they guarantee the soundness of the work is useless, and their opinions are not worth one penny of the money they will cost. An application was made to us by Mr. Mestayer a few days since for the names of those who had written certain reports in the *Evening News*, and also the names of those persons who had given our reporters the information upon which some of their statements were founded; but so far as we know, not one of those who may be termed the *Evening News* witnesses has been examined. If there has been any examination of witnesses at all, it has been carried on in a remarkably secret manner; and it is perfectly certain that during the few days that elapsed between the appointment of the two gentlemen and Mr. Gordon's statement to Mr. Sutherland it would have been impossible to take all the evidence necessary to enable them,

them to give a definite opinion respecting the stability of the dam; but what is that opinion, as stated by Mr. Sutherland, worth? In the first place, it contradicts those of Mr. Hickson and Mr. Williams, two officers of the Department, who recently reported upon the condition of the embankment. The only interpretation to be put upon the opinions of those two gentlemen is that the dam is in a dangerous condition, so that the statement of Mr. Gordon that there is not the slightest fear of it giving way is in direct opposition on this particular point to the opinions of Mr. Hickson and Mr. Williams. Even the Engineer-in-Chief for Railways, who guaranteed the soundness of the work six or seven months ago as confidently as Mr. Gordon and Mr. Mestayer do now, reported to Mr. Sutherland the week before last that the dam now requires to be "carefully watched." Messrs. Gordon and Mestayer not only contradict Mr. Hickson, Mr. Williams, and Mr. Whitton, but, if Mr. Sutherland reported Mr. Gordon correctly, they contradict themselves. They say that "there is not the slightest danger of the dam giving way," but that alterations and a large expenditure of money will have to take place. If the dam is in no danger, what will this money have to be spent for? The fact is that every shilling Mr. Gordon and Mr. Mestayer may recommend to be expended will be for securing the dam, and will therefore be a contradiction of the statement that it is not in the slightest danger. We are dealing with the two professional gentlemen entirely on the basis of the speech made by Mr. Sutherland in the Assembly. The honorable gentleman may have misunderstood Mr. Gordon, but if he did not, and the verbal report submitted to the House is a correct one, the engagement of Mr. Gordon and Mr. Mestayer will only add another unsatisfactory chapter to the record of extravagance and blundering connected with the Prospect Dam.

The Under Secretary for Public Works to R. L. Mestayer, Esq.

Sir, Department of Public Works, Sydney, 27 December, 1888.

I am directed by Mr. Secretary Sutherland to forward herewith a letter which has been received from Mr. James J. Maher on the subject of the Prospect Dam, and to inform you that a telegram has been sent to the writer requesting him to be good enough to attend at your office on Saturday morning at 10 o'clock, in order that you may take any evidence on the subject that he has to give.

I am to inform you that Mr. J. Norton, late of the staff of the *Evening News*, has also been requested to attend at your office on Saturday morning at 10 o'clock to give evidence on the same subject.

Mr. Sutherland desires that the fullest information possible should be obtained from these gentlemen, and will be glad if you will take whatever evidence they are prepared to give.

I have, &c.,
J. BARLING,
Under Secretary.

[*Enclosure.*]

Hon. Sir, 26 December, 1888.

I take the liberty of forwarding you a letter of mine which, as you will observe, appeared in the *Evening News*, *in re* the Prospect Dam at the time of the first breakage.

I am sorry to say that my prognostications have been realised, and not one of the gentlemen connected with its construction or inspection seems able to account for the cause, which, to my mind, is very simple indeed.

I would have communicated with our worthy Member, Mr. Thompson, or our esteemed citizen and Minister for Lands, Mr. Brunker, but, upon second consideration, I thought you, sir, the fountain-head, would be the most advisable to forward my information to.

My knowledge has been obtained in deep sinking on the gold-fields, where the batter is much used in keeping back the water. I simply offer my advice in the interests of the citizens of my native city, and hoping, hon. sir, that you will accept my observations in the same spirit in which they are written; and if you or any of your advisers would desire an interview on the subject from my point of view, I am willingly at your service. I may add that Mr. Williams seems to possess the best knowledge of any of the experts or professionals that I have read. You will also find that the cause of the slip has not been occasioned at the toe of the dam. The diver will prove my words correct. He may be deceived if a large quantity of the debris is lodged at the bottom, but a remedy most efficacious is very simple indeed.

Hoping, hon. sir, that you will excuse the liberty I have taken in addressing you on this subject,

Yours obediently,
JAMES J. MAHER,
Eastview, Church-street, West Maitland.

[*Sub-Enclosure.*]

THE PROSPECT DAM.

To the Editor.

SIR,—The warning note of danger sounded by you in the *Evening News in re* the above proves to be of very great value to the citizens of Sydney; for any person reading the report of the visit to the works, which appeared in the *Evening News* of the 9th, of the officials of the Water and Sewarage Board, will see at a glance that a great calamity is imminent, for not one of the gentlemen present seemed to give a satisfactory opinion as to the cause of the fissure. I possess not the educational attainments of an engineer, but have had considerable experience with puddled clay, therefore feel no diffidence in offering an opinion on the subject. The Prospect Dam as constructed will ever be a source of danger, for as the water recedes and rises a fissure will occur in some part or other of the work. The expansion of puddled clay is almost incredible when exposed to the action of water, and cannot be consolidation or settling down, as so expressed by Mr. Rowe. Now, my opinion is, however impertinent it may be considered, that the face of the dam, where puddled clay has been used, must be protected by a facial of heavy masonry, or ironbark timbering well secured. Then, and then only, can a calamity be averted. Thanking you in anticipation.

Yours, &c.,
J.J.M.

Maitland, June 9, 1888.

R.

R. L. Mestayer, Esq., to J. A. Hogue, Esq.

Dear Sir, Beresford Chambers, 52, Castlereagh-street, 28 December, 1888.

You referred Mr. Gordon and myself to Mr. Wearne as one of the authorities who could give information respecting the Prospect Dam.

Mr. Wearne, in replying to questions from us, stated that much of the information he had supplied to you was given to him by someone whose name he declined to mention, as he (Mr. Wearne's informant) had particular reasons for wishing his name not to be made known.

I told Mr. Wearne that if his informant would come to my office I should be glad to take any evidence or receive any information he would give me, and would see that his name did not appear. As this has failed to induce Mr. Wearne's informant to visit me, I have thought it as well that you should know how the matter stands, more especially as Mr. Wearne said he had referred the matter to his superiors in the office.

If you can persuade this or any other person in possession of any information respecting work at Prospect to communicate with me I shall be only too glad to take their information.

Yours, &c.,
R. L. MESTAYER.

Up to present date no information has been received from Mr. Wearne or his informant.—R.L.M., 25/4/89.

R. L. Mestayer, Esq., to J. Barling, Esq.

Dear Sir, Beresford Chambers, 52, Castlereagh-street, Sydney, 29 December, 1888.

The bearer, Mr. J. J. Maher, has called upon me this morning in accordance with the telegram sent to him by you, and given me his evidence as to what he considers the cause of the slip, and the remedy he proposes.

As I understood from you that Mr. Maher's expenses would be paid by your Department, I have given him this note to certify to the fact of his having attended as requested.

I am, &c.,
R. L. MESTAYER.

Submitted.—J.B., 30/12/88. Give him three days at 30/- per diem and his travelling fares, and say that if any part of his recommendation is adopted a substantial recognition will be awarded.—JOHN SUTHERLAND, 31/12/88. Mr. Mestayer,—What expenses do you recommend?—J.B., B.C., 31/12/88. See voucher 88–4,704 for £6 1s.—T.J.C., 10/1/89. Mr. Maher informed, 31/12/88. Maher has been paid.—*Per* A. Eng.-in-Chief, J.S., B.C., 12/1/89. Under Secretary for Public Works. Place with others papers.—D.C.M'L., 14/1/89. Attach to voucher.—J.S., 4/1/89. Mr. Cremen.

The Under Secretary for Public Works to A. Bennett, Esq., *Evening News* Office.

Sir, Department of Public Works, Sydney, 29 December, 1888.

With reference to your leader of the 27th instant, on the subject of the Prospect Dam, in which the following statement appears, viz. :—"An application was made to us by Mr. Mestayer a few days since for the names of those who had written certain reports in the *Evening News*, and also the names of those persons who had given our reporters the information on which some of their statements were founded; but so far as we know, not one of those, who may be termed the *Evening News* witnesses, has been examined." I am directed by Mr. Secretary Sutherland to ask if you will be so good as to mention the names of the witnesses you refer to, and whom you think have not been examined by the engineers appointed to inquire into the matter.

I am to say that Mr. Sutherland read the paragraph with very great surprise, as he has given the most emphatic instructions that all information obtainable should be considered; and if you will kindly give the names of the gentlemen you refer to, care will be taken that their evidence shall be received in the fullest possible manner, as it is the desire of the Minister to exhaust every channel of information on the subject that is available.

I am to add that Mr. Sutherland will consider it an especial favour if you will at your earliest convenience comply with this request.

I have, &c.,
J. BARLING,
Under Secretary.

G. Gordon, Esq., to The Under Secretary for Public Works.

Dear Sir, Colonial Chambers, 86, Collins-street West, Melbourne, 29 December, 1888.

I said I thought I would send in my report about the end of this week. That was before I knew I was to send an estimate. As I have not yet received the cross-section I want for this purpose, it will be next week before I can be ready. I have finished the draft of my report, but I will not write it out till I get Mr. Gipps' evidence, which I expect daily; not that I think it will induce me to alter the report, as I know from the report in the *Evening News* what his views are, but there may be something in his evidence requiring attention. If some of my recommendations are adopted the closing of the contract will be a necessity.

With the compliments of the season.

Yours, &c.,
G. GORDON.

The cross-sections will be sent to you to-day.—*Pro* A. Engineer-in-Chief, J.S., B.C., 31/12/88. Under Secretary, Public Works. Please see that they go without fail to-day.—J.B., 31/12/88. Sent, 31/12/88.

R.

R. L. Mestayer, Esq., to J. A. Hogue, Esq.

Beresford Chambers, 52, Castlereagh-street, 31 December, 1888.

Dear Sir, *Re* Prospect Dam.

On the 18th inst. I wrote to you asking for the name of your correspondent responsible for the assertion that the puddle-wall was in places composed of rubble and rubbish. You replied that Mr. F. B. Gipps had given you the information. Mr. Gipps, however, in his evidence most strongly denies ever having made any such statement, and asserts that you are mistaken in ascribing it to him. I shall be very glad if you can ascertain whether any mistake has arisen, and, if so, who is the person responsible for the statement, as I should like to take his evidence on that point and any other information he is willing to give.

I am, &c.,

R. L. MESTAYER.

J. Hogue, Esq., *Evening News* Office, to The Under Secretary for Public Works.

Town and Country Journal and *Evening News* Office,

Dear Sir, Market-street, Sydney, 31 December, 1888.

In reference to your letter of 29th instant, I desire to point out that in the *Evening News* article you quote from, the expression occurs, "So far as we know not one of those," &c., &c., "has been examined." I furnished to Mr. Mestayer, as far as I can now remember, the following names:—Mr. J. Wearne, Mr. J. Norton, Mr. F. B. Gipps, C.E.; Mr. Rutherford, contractor; Mr. Buckett, hotelkeeper; Mr. Ives, M.L.A.; and the Hon. John Davies, M.L.C.

Yours, &c.,

JAS. A. HOGUE.

(N.B.—*Vide* reply from Under Secretary for Public Works, p. 65.)

J. A. Hogue, Esq., to R. L. Mestayer, Esq.

Town and Country Journal and Evening News Office,

Dear Sir, Market-street, Sydney, 31 December, 1888.

When I gave you the name of Mr. F. B. Gipps as our authority for the statement "*re* rubble and rubbish," I wrote from memory and must have been mistaken, Mr. Gipps having denied it. I was under the impression at the time that it was he who made the statement. I will endeavour to obtain the information you require, but you must see how difficult it is to obtain it after the lapse of time that has taken place since the statement was published.

Yours, &c.,

JAS. A. HOGUE.

A. Mackay, Esq., to The Secretary for Public Works.

Technical College, Sydney, 31 December, 1888.

Re Prospect Dam.

Dear Sir,

As coming within the scope of investigations I have been making into the soils of the Colony, considerable attention has been given to the nature of the clay and soil used for forming the puddle-wall and for making up the sloping embankments of the Prospect Dam; and as I now feel certain of having discovered the cause of the fretting away or weathering of the material used in the earthwork, and the consequent alarms which have arisen concerning the safety of the whole structure, I take the liberty of submitting the following for your consideration.

You will see that the cause of disturbance is more of a chemical than a mechanical nature.

On examination of the stuff used for building up the earth embankment on the reservoir or inside slope of the work, I find it to be made up very largely of a peculiar species of clay, common to the Wainamatta shale formations of the metropolitan district. This clay is largely composed of silicates of iron, and is acted on rapidly and visibly by exposure to air, rain, or water. It shrinks in bulk as a first change, it then cracks and oxidizes rapidly, changing to yellowish and reddish clay loam, of a character different essentially from the original clay. These are some of the chemical changes that occur, as I have had frequent and minute occasion for observing in connection with the cultivation, trenching, and draining of the Wainamatta shale soils—the clays especially, for orcharding and other purposes.

The mechanical effect of the chemical changes have become very visible at the Prospect Dam Works. As the shrinking and oxidization proceeds, the silicious or sandy portion of the clay matter tends downwards, it being very much the heaviest; while the oxidized and loamy portions of the clay earth become so lively, especially when saturated with water, that they float or wash away. This is, in reality, what has been going on at the Prospect Dam, ever since water was brought into contact with the clay soils of the inside slope of the work; and the process must continue to go on until the oxidization and chemical change is complete, and the soil settles down into regular loamy strata or layers.

The question then is, how can these consequences be met? And this, I have not a doubt, will be found a much less troublesome matter than at first sight appears. It will be seen that if any extra heavy material, such as stone, is placed on top of earth undergoing the chemical changes, and under the conditions mentioned, the result will be to press out the lighter portion of the material—which analyses, in this case, let me see, is nearly one-half of the whole—the stone sinking downwards by the displacement. Where the soil is in contact with water, as in the case where slips outwards have occurred at the Prospect Dam, the process is very rapid, the light stuff being literally strewed out upon the water, where it is forming ugly blemishes upon the magnificent proportions of the huge earthwork.

I would suggest that, as the changes going on in the embankment cannot be stopped, the better course would be to meet the alterations as they go on, and so aid in the process of absolute solidity. This can be done by using water from the reservoir to soak—not to saturate—the soil. This would increase the process of oxidization, the sinkage and shrinkage being met by applying loamy soil, which would be washed into any small cracks or crevices. Large gaps and slips could not occur under this course of treatment. Thus the material of the embankment would solidify gradually downwards upon the solid earth below and against the puddle-wall behind. The said puddle-wall is, to every visible appearance, a most solid and perfect work.

Examination

Examination of the whole earth embankment along the inside face of the dam shows that the changes mentioned have occurred most rapidly where the greater proportion of loose clay matter has been deposited, and where the westerly winds have had fullest opportunity for exerting their influences. This is just what might be expected. If all the bank facing the water had been of loamy earth no such rapid changes would have been likely to occur; and it might be worthy of consideration whether, where such masses of material have to be dealt with, it would not be a desirable course to have chemical analyses made, in order to have a knowledge of the changes which must occur when the stuff is moved and placed under different conditions from its natural state. Where clay has to be dealt with, so intricate and obscure is much of it in composition, that investigation of the kind seems to me a very necessary proceeding to ensure safety.

In order to meet the fretting or withering action upon the earthwork slope by the water in the reservoirs, when moved into wavelets by the winds, I would suggest that slabs of colonial hardwood—which does not float, being more dense or heavier than water—would answer the purposes of protecting the moving earth below. They would be fastened so as to lie upon, without pressing or shifting, the material under them; and as the stuff settled down solid the stone cubes could be laid in position, as being the very best material for the purpose.

I have now the pleasure of submitting the foregoing for your attention and consideration in such manner as you may consider most fitting, either in a private or public sense. I do not intend doing anything more in the matter. My desire has been to try and help to get at the cause of the troubles at Prospect Dam. The leisure of a brief holiday and the use of the apparatus in the Agricultural Department here have made the investigations possible and pleasant. I will be glad to give any further information in my power either to yourself or to any of the professional gentlemen concerned whom you may entrust with the same. I will be in Sydney during Wednesday, Friday, Saturday, and Sunday, January 2, 4–6. I leave for Port Macquarie, Monday.

I have, &c.,
ANGUS MACKAY, I.C.S.,
Inst. Agriculture, B.T.E.

The Under Secretary for Public Works to R. L. Mestayer, Esq.

My dear Sir, Department of Public Works, Sydney, 2 January, 1889.

I have to-day received from Mr. Gordon the notes of evidence taken from Messrs. Moline and Shand. Mr. Gordon says he gave a promise that the information should not be made public, and by direction of Mr. Sutherland I have written to Mr. Gordon asking him to obtain the permission of the witnesses to have their evidence printed and placed with the reports.

Mr. Sutherland desires me to say that he wishes all evidence taken to be made public, as he thinks it is of the utmost importance to expose everything to the public view with regard to the Prospect Dam.

Yours, &c.,
J. BARLING,
Under Secretary.

P.S.—The evidence is enclosed herewith.

G. Gordon, Esq., to The Under Secretary for Public Works.

Dear Sir, Colonial Chambers, 86, Collins-street West, Melbourne, 31 December, 1888.

I enclose evidence of Messrs. Moline and Shand. I thought it better to send the original, and I have kept a copy. The pencil notes are mine, as some of the evidence would not be quite intelligible to any one who did not hear it and the questions that were put.

Yours, &c.,
G. GORDON.

P.S.—I told all the witnesses connected with the works whom I examined that the information they gave was for my own use only, and not for publication.—G.G.

R. L. Mestayer, A.M.I.C.E. Geo. Gordon, Esq., M.I.C.E., 2/1/89. Register and place with other papers.—J.S., 7/1/89.

The Under Secretary for Public Works to G. Gordon, Esq.

Dear Sir, Department of Public Works, Sydney, 2 January, 1889.

I have to acknowledge the receipt of your letter of the 31st ultimo with the notes of evidence of Messrs. Moline and Shand. I also note your postcript, in which you state that you informed the witnesses that the evidence they gave was for your use only, and not for publication. With reference to this, Mr. Sutherland desires me to say that he wishes any evidence taken in connection with the subject of your inquiry made public, and he will thank you if you will have the goodness to obtain the permission of the witnesses to have this done in the present case.

I presume we shall have the pleasure of seeing you in Sydney again in the course of a few days. There are matters Mr. Sutherland will be glad to see you upon.

Yours, &c.,
J. BARLING.

D. C. M'Lachlan, Esq., to R. L. Mestayer, Esq.

Sir, Department of Public Works, Sydney, 2 January, 1889.

I am desired by the Secretary for Public Works to ask you to be good enough to call at this office at 11 o'clock to-morrow (Wednesday) morning, in reference to the Prospect Dam.

Yours, &c.,
D. C. M'LACHLAN.

The

The Under Secretary for Public Works to A. Mackay, Esq.

Sir, Department of Public Works, Sydney, 2 January, 1889.

I have the honor to acknowledge the receipt of your valuable and interesting letter of the 31st ultimo, in regard to the nature of the clay and soil used for forming the puddle-wall, and for making up the sloping embankments of the Prospect Dam, and to convey to you the thanks of the Secretary for Public Works.

I am desired to say that Mr. Sutherland will be glad to avail himself of your offer to give evidence on this important subject, and to ask you to be so good as to call at this office at 2 o'clock p.m. to-morrow (Wednesday), in reference thereto.

I have, &c.,
J. BARLING,
Under Secretary.

The Under Secretary for Public Works to J. A. Hogue, Esq., *Evening News* Office.

Dear Sir, Department of Public Works, Sydney, 3 January, 1889.

Mr. Sutherland desires me to acknowledge receipt of your letter of the 31st ultimo, in which, at his request, you gave the names of the witnesses whom you supposed had not been examined in regard to the Prospect Dam. I have only had an opportunity of seeing Mr. Mestayer to-day, and he has given me the enclosed memorandum with respect to the matter, from which you will see that your supposition that the *Evening News* witnesses had not been examined, is incorrect. With regard to Mr. Norton, every endeavour has been made to obtain his evidence, but as yet without result, as will be seen from the attached copies of correspondence that has taken place, but Mr. Sutherland hopes that the letter sent him yesterday will have the desired effect.

I can assure you that Mr. Sutherland is leaving no stone unturned in obtaining information on the subject, no matter from what source it is to be derived, and where witnesses object to give their evidence to either Mr. Mestayer or Mr. Gordon he is prepared to take it himself.

I am, &c.,
J. BARLING.

[*Enclosure.*]

Copy of Memorandum by Mr. Mestayer on letter from Mr. Hogue, of 31st December.

All the gentlemen mentioned were written to the same day that Mr. Hogue gave me their names, and they were asked to give evidence in the course of the three following days. Mr. Rutherford came as requested; Mr. Wearne was examined by us at Prospect the following day; Mr. Gipps was in Melbourne, but called and gave his evidence as soon as he came back; Mr. Ives replied to the letter stating he had no evidence to give; the Hon. J. Davies has not replied to the letter, and Mr. Norton has refused to give any evidence. Mr. Buckett's evidence was only taken yesterday owing to a misunderstanding about the name, this not being the name given me by Mr. Hogue.

Be seen that they are all examined.—J.S., 3/1/89. Resubmit Wednesday morning.—J.B., 3/1/89.

D. C. M'Lachlan, Esq., to R. L. Mestayer, Esq.

Dear Sir, Department of Public Works, Sydney, 4 January, 1889.

I am desired by the Secretary for Public Works to ask you to be good enough to call here to-morrow morning at 10 o'clock to meet Mr. Angus Mackay, of the Technical College, Sydney, who has arranged to be at the office at that time, in regard to the nature of the clay and soil used for forming the Prospect Dam.

Yours, &c.,
D. C. M'LACHLAN.

G. Gordon, Esq., to The Under Secretary for Public Works.

Dear Sir, Colonial Chambers, 86, Collins-street West, Melbourne, 4 January, 1889.

I have written to Messrs. Ryan, Moline, and Shand, asking their permission to have the evidence published. I have no doubt about their being quite willing. I have asked Mr. Ryan and Mr. Shand to inform you direct. I do not remember to have told the other witnesses whom I examined in company with Mr. Mestayer that the evidence was only for my own information.

I had not expected to be wanted so soon again in Sydney, and I have an engagement for next week in Gippsland—a water supply or irrigation scheme,—but I shall be glad to go over on my return. By that time Mr. Sutherland will have read my report, and if there is anything in it needing explanation I shall be glad to afford it. If the matters on which Mr. Sutherland wishes to see me refer to anything other than the dam will you kindly mention what they are, that I may be prepared.

Yours, &c.,
G. GORDON.

I wish to see Mr. Gordon chiefly about the dam, but when he is here will consult him about locking the Darling, concerning which we have further information. The time mentioned by Mr. Gordon will suit.—JOHN SUTHERLAND, 7/1/89. Write.—J.B., 7/1/89. Geo. Gordon, Esq., C.E., 8/1/89.

R. L. Mestayer, Esq., to G. Gordon, Esq., C.E.

Dear Sir, 4 January, 1889.

I forward you herein the results of two boreholes put down on sec. 18, behind the one put down when you were here. The movements have decreased lately, and I give below the daily record at sec. 44, from December 20th till yesterday.

Yours, &c.,
R. L. MESTAYER.

Minute

Minute by The Under Secretary for Public Works.

Subject :—Prospect Dam.

Department of Public Works, Sydney, 5 January, 1889.

It was suggested by Mr. Mestayer, M.I.C.E., before whom Mr. Angus Mackay, F.C.S., of the Technical College, Sydney, gave evidence to-day in regard to the nature of the clay and soil used for the formation of the Prospect Dam, respecting which he had submitted a report, that it was desirable Mr. Mackay should officially visit the dam for the purpose of taking samples of the material used in connection therewith, and making an analysis thereof. Mr. Mackay intimated that he could not be released from his engagements for a period of six weeks. Mr. Mestayer, however, expressed the opinion that, notwithstanding this lapse of time, it would be better to have the result of that gentleman's analysis in order that the investigation into the whole matter may be complete.

J.B., 8/1/89.

Appd.—J.S., 7/1/89. Write.—J.B., 8/1/89. Angus Mackay, Esq., F.C.S., 9/1/89. Seen. Resubmit on 16 Feb., 1889.—R.H., 12/1/89.

Extract from *Telegraph*, Saturday, 5th January, 1889.

The Prospect Reservoir.

The following report on the Prospect Dam, by Mr. W. A. Harper, A.M. Inst. C.E., was made at the request of Messrs. Want, Johnson, & Co. on September 20, after the first slip. Mr. Harper was asked to furnish an entirely independent report, he being hampered with no conditions whatever :—

"I do myself the honor to inform you that in accordance with your instructions I visited the works on Wednesday, September 6, with Mr. Chapman, to report on the present state of the embankment, and the following will give you my views on the character of the works :—

"First puddle-wall.—This work has been perfectly constructed of the finest clay throughout of the best quality in the district, and under the most rigid supervision. I have no hesitation in saying that (with the reservation that the best clays procurable are not of first-class description) the construction of the wall is such that no fears of its safety need ever be entertained, providing the bank which supports it remains intact. I examined portions of the wall now exposed, which show it to be a concreted mass of impervious clays so well laid and wrought that no pressure would cause the slighest percolation through it. It is homogeneous in density, and considerably exceeds the theoretical thickness required for a wall constructed of first-class materials, deposited on the most approved principles. With this fact laid down, viz., that the construction of the puddle-wall is perfect, it is surprising to find that in one portion of the bank the wall has subsided over 6 ft., and in order to understand the reason of this very serious depression one must direct his attention to other causes which have so disturbed the continuity of its mass in this one particular locality.

"Second embankment.—The outside mass is composed in all reservoir dams of any ordinary materials, in many cases entirely of surface loams ; in the case of the Prospect the material used is procured from large cuttings in the adjacent hills, and is the inferior or second-class earth of quite suitable character for the work. No slips or extraordinary subsidence occurs throughout its whole length ; in fact it remains, as it should, seeing the number of years it has taken to deposit, almost at its permanent level.

"The inside mass presents quite a different appearance ; it is cracked in many places for a chain in length, and in some cases a series of parallel cracks occur at the same place, clearly indicating a gradual subsidence of the lower layers since the admission of the water. This I do not consider of serious importance, for undoubtedly the whole of the lower layers, as the superincumbent mass becomes more saturated, will gradually consolidate, and in such a huge body of material it is not surprising that local surface disturbances may appear from time to time, becoming less frequent until the whole mass becomes charged with the maximum quantity of moisture it will absorb. At the same time I consider a properly-laid embankment where the deposition has extended over a number of years should not subside essentially after completion, if the material is suitable, laid in thin layers, thoroughly saturated when laid, and well consolidated by continuous wheeling and pulverising.

"At a point where the height of the dam is comparatively small, about a quarter of a mile from its northern end, a very serious disturbance has taken place. The whole inner face of the embankment (for a distance of about 300 ft.) has been violently projected into the reservoir, and also the whole of the inner portion of the bank at this point has slipped, and now bulges out at least 8 ft. beyond the line of the present water-level. This slip has caused the portion of the bank opposite it to subside at least 6 ft., and has so torn away the puddle-wall, which is still evidently in a semi-consolidated condition in its lower portions, that the wall itself has also subsided, with bank, some 6 ft. in the centre.

"The diagrams appended hereto illustrate the present condition of bank at this point. I consider this slip a very serious misfortune; I cannot see any special reason (in the meantime) why this particular spot should have given way ; and consider it quite as probable that any portion of the inner mass may act in a similar way ; in fact, the deeper portion of the bank should be more liable to slip at a lower level, on account of the greater weight it carries. The same conditions apply to the whole work, similar material, and the same process of laying along its whole length. The system of depositing the material in continuous layers prevents the accumulation of any particular class of earth in one place, and insures homogeneity in character over the whole surface.

"The problem to solve is, why this particular part of the bank should act in this manner while the balance remains, with the exception of the surface cracks before mentioned, in apparently a stable condition. I hold that there is no reason for the disturbance being peculiar to this locality, and must draw the conclusion that any part of the remainder may, at any time, while the process of saturation is proceeding, begin to act in a similar manner ; and without fearing any immediate danger to the structure on account of the superior nature of the puddled core, I consider the method being carried out of repairing the breach is most unjustifiable and dangerous. The first duty was undoubtedly to lower the water as much as possible, not necessarily below the outlet level, and carefully investigate the cause of the mishap by cutting a cross-sectional trench through the dam at the centre of the slip.

"This could have been done without much expense and carried down to the necessary level, and the line of slip carefully ascertained, to enable a reliable conjecture as to the cause being formed.

"The

"The work now being done I consider worse than useless, viz., the tipping of most expensive stones pell-mell over the projecting portion into the water—it may be literally termed throwing money into the sea; and in addition to its uselessness in preventing a continuation of the slip, I consider it the very best way to assist such depression by extending it further and sinking more rapidly. Had the stones been systematically deposited from the toe upwards, they would have assisted matters materially, but I doubt then even their efficacy in holding back a slipping bank. The cause of this depression and its line of fracture still remains unknown. The bank is still slipping, the subsidence being fully 9 inches during the twenty-four hours prior to my inspection, as clearly shown by the levels on the surface drains cut the day before.

"Time alone will prove how much further this subsidence may still extend. It is possible that the complete saturation of the mass may soon cause it to assume its permanent angle of repose; but this in no way undervalues the urgent necessity for at once determining the secret cause of this unnatural bulging out.

"One naturally directs his attention in attempting to conjecture the possible reasons of the fault to the class of materials employed and the work of the contractor. As to the latter, all doubts of bad workmanship may be at once set aside, for there is a permanent resident engineer-in-charge, with a full staff of assistant engineers and inspectors, so that each load of material deposited has been most rigidly supervised. The onus of construction is thus thrown entirely on the engineer-in-charge, who has undoubtedly adhered strictly to the instructions laid down in his specifications.

"As to the quality of the material, I have serious misgivings. It is an inferior loamy clay, subject, on account of its composition, to very great expansion and contraction, according to the quantity of moisture allowed to enter it.

"It is most unstable, and has no plasticity, becoming semi-liquid with the addition of a very small quantity of moisture, and porous when dry. I consider it one of the worst materials that could possibly be used in a bank, and, in my opinion, should have been protected from the possibility of absorbing too much moisture by a puddled lining of approved clay between it and the layer of broken metal on which the pitchers are laid. The cost of this layer would have been small, and I have used a puddle lining 18 inches thick to protect similar material, with the result that no water ever entered the main body of the bank.

"The metal layer and pitching is carried out in a most superior manner—better I have never seen. The stone is of first-class quality, and the pitchers are larger than I have ever seen used.

"A proper investigation at the point before-mentioned would probably at once prove beyond all doubt the agencies at work, and dispose of the unpleasant uncertainty existing as to the future of the structure. In addition, the original lines of the work might be still adhered to, the protuberance removed and restored to its original shape, and the everlasting eyesore dispensed with, which, under the present scheme of patching, will remain as a permanent stigma on the engineers of a work which, on account of its magnitude, would otherwise be classed as one of the great undertakings of modern engineering."

NOTE.—We are informed that 42 to 44 has slipped, as predicted by Mr. Harper, who indicates that the remainder may at any time, while the process of saturation is proceeding, begin to act in a similar manner.

Refer to Mr. Mestayer, who, I understand, will examine Mr. Harper.—J.B., 7/1/89.

G. Gordon, Esq., to The Under Secretary for Public Works.

Sir, Colonial Chambers, 86, Collins-street West, Melbourne, 8 January, 1889.

I have the honor to forward, under separate cover, sealed and addressed to the Honorable the Secretary for Public Works, my report on the Prospect Dam; also in separate cover, five plans to illustrate it and Appendices II and III to Report, being an abstract of the evidence. I had already prepared the greater part of this before I knew that the evidence was to be printed, and I intended it for the information of the Honorable the Minister, and not for publication. Although superseded by the evidence itself, it may yet be convenient.

Mr. Moline has no objection to his evidence being published.

I purpose, in accordance with your letter of the 2nd instant, to go to Sydney on my return from Gippsland, unless I hear from you to the contrary. Please telegraph.

I have, &c.,
G. GORDON.

Received this day and handed unopened to Mr. Sutherland.—J.B., 10/1/89. Specially submitted for instructions.—J.B., 10/1/89. I do not think it will be necessary now for Mr. Gordon to come to Sydney.—JOHN SUTHERLAND, 11/1/89. Telegraph to above effect.—J.B., 11/1/89. Telegram sent.—11/1/89. Put with papers.—J.B., 11/1/89.

R. L. Mestayer, Esq., to The Under Secretary for Public Works.

Dear Sir, Beresford Chambers, 52, Castlereagh-street, Sydney, 9 January, 1889.

I have just received the cutting from *Daily Telegraph* of 5th instant sent from your office. I saw this report of Mr. Harper's at the time, but did not think it called for any special action such as examining Mr. Harper as a witness, seeing that the report itself contains Mr. Harper's views very fully and clearly stated. If you still think, however, that it would be advisable to examine Mr. Harper, I will write and ask him to call on me as soon as possible.

I am, &c.,
R. L. MESTAYER.

I am so anxious to obtain information from any and every source which is open to me that I think the evidence of this gentleman should be obtained, as it is the only way to give it a proper bearing on the subject of Messrs. Gordon and Mestayer's inquiry and investigation.—JOHN SUTHERLAND, 9/1/89.

Write.—J.B., 9/1/89. R. L. Mestayer, Esq., M.I.C.E., 10/1/89. Put all the papers together.—J.B., 10/1/89.

The

The Under Secretary for Public Works to Angus Mackay, Esq., F.C.S.

Department of Public Works, Sydney, 9 January, 1889.

Sir,

With reference to your call at this office on the 5th instant, when you expressed your willingness to officially visit the Prospect Dam as soon as you could be released from your engagement, in order that you may take samples of the material used in connection with its formation, and make an analysis thereof, I am directed to inform you that the Secretary for Public Works will be glad if you will proceed to the dam as soon as you can make it convenient to do so, and furnish him with the result of your investigation.

I have, &c.,
J. BARLING,
Under Secretary.

The Under Secretary for Public Works to R. L. Mestayer, Esq., M.I.C.E.

Department of Public Works, Sydney, 10 January, 1889.

Sir,

With reference to your letter of the 9th instant, enclosing a report made by Mr. W. A. Harper, A.M.I.C.E., on the condition of the Prospect Dam, which appeared in the Sydney *Daily Telegraph* of the 5th instant, and inquiring whether that gentleman should be called to give evidence in connection with the inquiry now being conducted by Mr. Gordon and yourself, I have the honor to inform you that Mr. Secretary Sutherland is very anxious that every possible item of information in respect of the Prospect Dam procurable shall be obtained and considered by you when drawing up your report, and to request that you will be so good as to place yourself in communication with Mr. Harper accordingly.

I have, &c.,
J. BARLING,
Under Secretary.

R. L. Mestayer, Esq., to W. A. Harper, Esq.

11 January, 1889.

Dear Sir,

I have been desired by the Honorable the Secretary for Public Works to write and ask if you will be good enough to call here on Tuesday morning next, the 15th instant, at 10 o'clock, in order to give me any information you may have regarding the Prospect Reservoir.

Yours truly,
R. L. MESTAYER.

R. L. Mestayer, Esq., to The Under Secretary for Public Works.

Beresford Chambers, 52, Castlereagh-street, Sydney, 11 January, 1889.

Sir,

I have the honor to forward herewith my report on the Prospect Dam. The estimate and other appendices will be forwarded to you to-morrow.

I have, &c.,
R. L. MESTAYER.

R. L. Mestayer, Esq., to R. H. Ryan, Esq.

Beresford Chambers, Castlereagh-street, Sydney, 12 January, 1889.

Dear Sir,

Re Prospect Embankment.

Please send me result of observations as to movements up to date; the latest I have is up to January 3rd. I could not get up last week as arranged; the Minister wished to have the reports in this week, and my time has been quite taken up with that, but I shall be up next week most probably, and bring the proofs of evidence to be signed.

Yours truly,
R. L. MESTAYER.

P.S.—What about results from the other sections I asked for at 16 and 20? I have not seen them yet, and if you can send them on Monday I shall be glad. They may necessitate an appendix to my report.

R. L. Mestayer, Esq., to The Under Secretary for Public Works.

Beresford Chambers, 52, Castlereagh-street, Sydney, 14 January, 1889.

Sir,

Re Prospect Dam.

I have the honor to forward herewith the complete appendices referred to in my report on the above work, including the estimate (Appendix F), a copy of which was forwarded to the Honorable the Secretary for Public Works on Saturday morning.

I have, &c.,
R. L. MESTAYER.

Telegram from R. L. Mestayer to R. H. Ryan, Esq.

14 January, 1889.

WHAT is the reduced level of inlet to pipes supplying Sydney? If water in reservoir were lowered below this, could supply be continued, and how?

R. L. MESTAYER,
Beresford Chambers, 52, Castlereagh-st.

R.

R. L. Mestayer, Esq., to The Under Secretary for Public Works.

Beresford Chambers, 52, Castlereagh-street, Sydney, 15 January, 1889.

Dear Sir, *Re* Prospect Dam.—Mr. W. A. Harper's evidence.

Mr. W. A. Harper is ill, and, for the present, confined to his bed. His brother called this morning and promised to let me know as soon as he was well enough to come to town, so that an appointment might be made, when he would attend and give any information in his power.

I am, &c.,

R. L. MESTAYER.

Submitted.—J.B., 15/1/89. Seen.—J.S.

Telegram from The Under Secretary for Public Works to Geo. Gordon, Esq.

Sydney, 18 January, 1889.

MINISTER desires you to come to Sydney immediately, if possible, to confer with Mr. Mestayer, *re* Prospect Dam.

J. BARLING,
Under Secretary Public Works.

The Government Geological Surveyor to The Minister for Mines.

Geological Survey Branch, Department of Mines,
Sydney, 16 January, 1889.

Sir,

In reference to the cause of the sinking of portions of the Prospect Dam, it may be desirable to point out that it is probable that the Wainamatta shale-beds upon which the dam has been constructed may have moved owing to "faults" in the strata.

There are numerous faults in the Wainamatta formation, as may be well seen in the railway-cuttings between Sydney and Penrith.

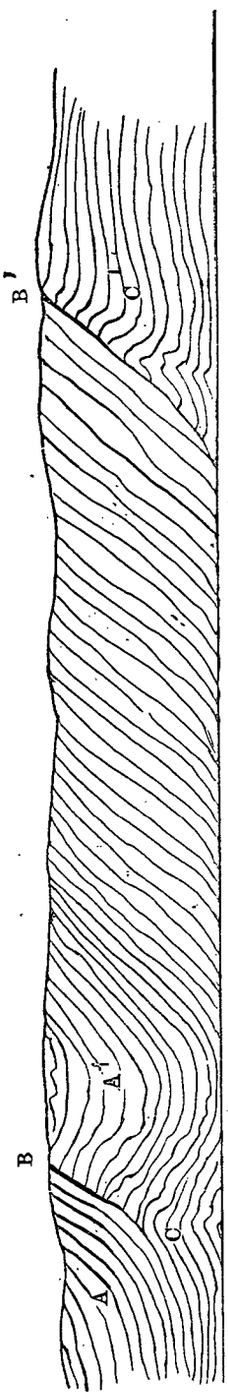
Should the dam happen to have been built upon one such as that of which I enclose a sketch section, which occurs near the Ashfield Railway Station, the present sinking would not be surprising.

In this section the beds A A,' owing to lateral pressure, have moved horizontally, and B B' upwards, upon the beds C C.'

A great pressure vertically upon the beds at A A,' might cause a compression and force them up at B B. The effect would show itself in waves or raised portions of the ground in front of the dam, and the remedy for further movement would be to heavily load these raised portions, and not to put more weight upon the dam itself, beyond what is necessary for its repair.

I have, &c.,

C. S. WILKINSON,
Geological Surveyor in Charge.



This might, perhaps, be sent to the Works Department for the information of the Minister.—H.W., 16/1/89. Submitted.—Approved, F.A., 17/1/89. The Under Secretary for Public Works, B.C., 18 Jan., 1889. Refer for the consideration of Messrs. Gordon and Mestayer.—J.B., 21/1/89.

R. L. Mestayer, Esq., to The Government Geological Surveyor.

Beresford Chambers, 52, Castlereagh-street,
Sydney, 22 January, 1889.

Dear Sir, *Re* Prospect Dam.

Your letter of the 16th inst. to the Under Secretary has been referred to me for consideration in connection with the instructions I have received to inquire fully into all matters in connection with the Prospect Reservoir.

If you could make it convenient to call here on Thursday morning, at any time after 10 a.m., I shall be glad to show you the information I have obtained, and you would be in a better position to judge whether the results accord with the suggestions you have made.

I am, &c.,

R. L. MESTAYER.

C. S. Wilkinson, Esq., to R. L. Mestayer, Esq., C.E.

Dear Sir, Department of Mines, N.S.W., 23 January, 1889.

I beg to thank you for your letter of this date. I will, if possible, call upon you shortly after 10 a.m. on Thursday (to-morrow).

I am, &c.,

C. S. WILKINSON.

Returned to the Under Secretary for Public Works. In accordance with request contained in my letter of 22nd January, Mr. Wilkinson called at my office, and I showed him the plans and sections of the embankment where disturbances had occurred, and gave him particulars of all the movements so far as they had been determined by the investigations made by myself and Mr. Gordon. This information satisfied Mr. Wilkinson that there was not evidence of any slip in the strata, and that the movements in the embankment could be accounted for without assuming any movement of the strata to have occurred.—R. L. MESTAYER, 23 March, 1889.

The

The Under Secretary for Public Works to R. L. Mestayer, Esq.

Sir, Public Works Department, Sydney, 23 January, 1889.

I am directed to inform you that a telegram has been received from Mr. Gordon, dated Melbourne, 22nd instant, stating that he was unable to undertake the overland journey, but that he intended to come by the "Orizaba," in order to confer with you in reference to the Prospect Dam.

I have, &c.,
J. BARLING,
Under Secretary.

Minute by The Under Secretary for Public Works.

Subject:—Analysis of Water from Prospect.

Department of Public Works, Sydney, 9 Jannary, 1889.

THE Minister would be greatly obliged if Mr. Hamlet would kindly cause an analysis to be made of the sample of water which is forwarded herewith. It has been taken from the foot of the embankment at Prospect, and is required in connection with evidence which has been taken in regard to the slip at that place.

The Government Analyst. J. BARLING.

The Government Analyst to The Medical Adviser to the Government.

Sir, Government Laboratory, Sydney, 16 January, 1889.

I have the honor to report that I have made a chemical analysis of the sample of water taken from the foot of the embankment of the Prospect Dam, on the 8th January, by Edwin Limond, in the presence of T. W. Holliman, of the Department of Public Works.

The sanitary-chemical analysis, which accompanies the present report, shows that the water is unfit for domestic purposes.

The water was found to contain 156 grains of solid matter per gallon, equivalent to 22¼ lb. per 1,000 gallons. This solid matter was found on analysis to have the following composition:—

Sodium chloride (common salt)	121·05 grains.
Silica...	1·05 „
Oxide of iron and alumina	0·70 „
Sulphuric acid	4·95 „
Lime	8·93 „
Magnesia	2·59 „
Loss on ignition = organic matter, carbon dioxide, and nitrogen oxide	17·18 „
	156·45 grains.

I have, &c.,
WILLIAM M. HAMLET, F.I.C., F.C.S.,
Government Analyst.

Analysis.

Government Laboratory, Sydney, 16 January, 1889.

ANALYSIS of a sample of water received from the Hon. the Minister for Public Works, 10/1/1889, labelled, "Samples taken from foot of embankment, Prospect Dam."

	Results expressed in— Grains per gallon.	Parts per 100,000.
Appearance in 2-foot tube	Clear on standing.	
Odour on heating to 100° Fah....	None.	
Chlorine as chlorides	73·5	105·0
Phosphoric acid in phosphate	trace.	
Nitrogen in nitrates and nitrites	0·19	0·25
Do equivalent in nitric acid	0·85	1·12
Do existing as free ammonia	0·0042	0·006
Organic nitrogen or albuminoid ammonia	0·56	0·08
Oxygen absorbed in fifteen minutes at 80° Fah.	.....	.....
Do do four hours do	0·28	0·40
Poisonous metals	None.	
Total solid residue dried at 220° Fah.	156·45	223·5

General observations on the character of the water:—Unfit for domestic use. For further particulars see report herewith.

WILLIAM M. HAMLET, F.I.C., F.C.S.,

Beresford Chambers, 52, Castlereagh-street, Sydney, 24 January, 1889.

Re Prospect Dam—Analysis of water trickling from embankment.

Sir,

I beg to acknowledge the receipt of the above analysis, and your minute referring it to Mr. Gordon and myself for consideration. I will bring the matter under Mr. Gordon's notice as soon as he arrives. In the meantime, if any analysis of water taken direct from the reservoir has been made I should like to have it for comparison. If no such analysis has been taken, it would, I think, be advisable to have one made now, and the results attached to the one now sent.

I am, &c.,
R. L. MESTAYER.

Analysis.

Government Laboratory, Sydney, 3 February, 1888.

ANALYSIS of a sample of water received from Prospect Reservoir. Taken by R. H. Ryan, 14/1/88, 30/1/88. Labelled R. H. R., &c.

	Results expressed in— Grains per gallon.	Parts per 100,000.
Appearance in 2-ft. tube...	Bright and clear.	
Odour on heating to 100° Fah.	None.	
Chlorine as chlorides	2·4	3·42
Phosphoric acid in phosphates	None.	
Nitrogen in nitrates and nitrites	Minute trace.	
Do equivalent in nitric acid		
Do existing as free ammonia	·011	·016
Organic nitrogen, or "albuminoid ammonia"	·018	·026
Oxygen absorbed in 15 minutes at 80° Fah.	.....	.....
Do 4 hours do	·086	·124
Hardness in degrees, Clark's scale, before boiling	Not a hard water.	
Do do after do		
Poisonous metals...	None.	
Total solid residue, dried at 220° Fah....	6·53	9·34

Culture examination for pathogenic organisms—negative results. Moving organisms formed.
General observations on the character of the water. *See* Report.

WILLIAM M. HAMLET, F.C.S.,
Government Analyst.

SUPPLEMENTARY REPORTS.

R. L. Mestayer, Esq., to The Under Secretary for Public Works.

Beresford Chambers, 52, Castlereagh-street, Sydney, 31 January, 1888.

Sir,

Re Prospect Dam.

I have the honor to forward, herein enclosed, my second report on the above work, detailing the works upon which Mr. Gordon and myself are agreed should be at once carried out.

I am, &c.,
R. L. MESTAYER.

R. L. Mestayer, Esq., to The Secretary for Public Works.

Beresford Chambers, 52, Castlereagh-street, Sydney, 30 January, 1889.

Sir,

Re Prospect Dam.

I have the honor to inform you that, in accordance with your instructions, I have conferred with Mr. Gordon, M. Inst. C.E., respecting our reports on the above work, and I now submit a statement of the various points upon which we agree as to the course which should be adopted to ensure the stability of the embankment, and also of the differences of opinions we hold as to the work which we consider advisable.

1. We agree that lowering the water in the reservoir below the level required to ensure an ample reserve to the city supply is out of the question, and that any measure to be adopted must be carried out whilst the water is at or about the reduced level of 180 feet.
2. We agree that an ultimate level of 195 feet is sufficient for the top of the puddle-wall, and that in restoring the wall where it has sunk it is unnecessary to bring it to a higher level than will be required to provide for the subsidence which may be expected to occur.
3. We agree as to the urgent necessity of maintaining the upper portion of the bank so far as to prevent the percolation of water into the interior, at whosesoever cost this may have to be done.
4. We agree as to the necessity of a thorough and systematic examination of the whole of the embankment, both above and below the water-level, and that trenches exposing the upper portion of the puddle-wall should be opened at every alternate transverse section in order to ascertain whether the wall is still moving at any portion of its length.

This work we consider of the utmost importance, and should be proceeded with immediately.

5. We agree that there is no immediate necessity to complete the pitching and the crest of the embankment; and that it will be advisable to terminate the present contract by mutual consent, if possible.
6. We agree that until all movements have ceased it is advisable not to raise the level of the water in the reservoir above that necessary to ensure an ample reserve for the city supply.
7. We consider that the apparent divergence of opinion as to the measures necessary to be taken between the first and second slips may, and probably will, disappear when the full extent of the movement has been accurately determined by the systematic examination recommended in paragraph 4. We agree that all movement at this point must be stopped by means of a rubble-stone mound deposited from boats or rafts, and that as movement is undoubtedly taking place between transverse sections 41 and 46 this portion should be put in hand immediately; but that it will not be necessary to extend this rubble mound between transverse sections 42 and 51, if the embankment is completely at rest.
8. We agree that the same course should be adopted to deal with any movement that may be detected in other portions of the embankment, except at the deeper part between transverse sections 15 and 25.
9. We agree that it will be unnecessary to take any steps to cover the oozing out of the white clay reported by the diver, if this action has ceased; if, however, further examination should prove that this is still continuing, and is not merely due to the surface action of the water in the reservoir, we consider it can be best dealt with by a deposit of screenings, as suggested by Mr. Gordon, in his first report.

The foregoing nine paragraphs cover almost the whole of the work described in our first report as being immediately required, the principal exception being the alteration of the water-face of the bank from its present slope of 3 to 1 to that of 4 to 1 proposed by Mr. Gordon.

This I do not agree with, as I consider that the work above described will of itself be sufficient to effectually arrest all movement, and that the water contained in the embankment—which is undoubtedly the present active cause of the disturbances—will gradually be diffused, and thus rendered inoperative.

Whether any further work will be necessary at the deep portion of the dam, viz., between transverse sections 15 and 25, can only be determined when the results of the examination recommended in paragraph 4 are known; should there be any doubt of the stability of the bank at this portion, I consider it could most easily be ensured by the method indicated in my first report, *i.e.*, by opening a trench between these sections and removing the water which will be met with; further borings will, however, be necessary to determine the best position of such trench. This would, in my opinion, be much less costly than the method proposed by Mr. Gordon, and equally effective.

The difference between our estimates is more apparent than real, and is due principally to the fact that Mr. Gordon's estimate provided for the work that he considers *may be found to be required* when the complete examination of the bank has been made, whereas I have included only such work as I considered *was proved to be necessary* by the movements that have occurred and by the examination that we have already made.

After a careful reconsideration of the subject, I still consider that about £6,000 will be found sufficient to remedy the evils occasioned by the disturbances which have occurred, and that the systematic examination of the bank, which we have recommended, will prove that no further movements other than natural subsidence will have to be provided against.

I have, &c.,
R. L. MESTAYER,
M. Inst. C.E.

R. L. Mestayer, Esq., to The Secretary for Public Works.

Beresford Chambers, 52, Castlereagh-street, Sydney, 31 January, 1889.

Sir, *Re* Prospect Dam.

I should like to add to the report I had the honor to forward to you this morning that in restoring the puddle-wall the puddle should be worked in a pug-mill, and not *in situ*, as provided in specification, as I consider it a matter of importance to prevent access of any water to the embankment more than is absolutely necessary to the completion of the work.

I have, &c.,
R. L. MESTAYER.

Does Mr. Gordon concur.—J.B., 1/2/89. [Urgent.] I do not think pugging is at all essential, as puddle can be worked quite well without it, and without excess of water, but I have no objection to the pugging, if the proper precautions against an excess of water are taken with it; such excess is just as probable in pugging as in working the puddle by hand. Probably pugging would be cheaper if a pug-mill is on hand.—G. GORDON, 2/2/89.

G. Gordon, Esq., to The Secretary for Public Works.

Sir, Sydney, 30 January, 1889.

In compliance with the request conveyed to me by Mr. Barling's telegram of the 18th instant, I have conferred with Mr. Mestayer on the subject of our respective reports on the Prospect Dam, and I have now the honor to state that Mr. Mestayer and I are agreed on the following points, viz. :—

(*a*) That the emptying of the reservoir is out of the question.

(*b*) That the puddle-wall should be continually kept up to full height, and that the ultimate height need not exceed R.L. 195.

(*c*) The necessity of the maintenance of the crest of the dam only so far as to prevent the accumulation of water within it, no matter at whose expense this may have to be done.

(*d*) The necessity of a thorough examination of the bank from end to end, in the manner recommended in paragraph 32 of my report, and that this should be begun immediately, and continued without interruption.

(*e*) That there is no immediate necessity for finishing the pitching and the crest of the dam, and that it is desirable that the present contract should be terminated by mutual agreement.

(*f*) That the water should be allowed to rise in the reservoir, but only to such a level as will give an undoubtedly sufficient supply to Sydney until the repairs have been completed below H.W.L.

2. We think that an apparent difference of opinion as to the measures recommended in my report to be taken between sections 35 and 51 will disappear when the exact extent of the movement of the dam shall have been ascertained, for we are quite agreed that it is absolutely necessary to arrest any forward movement, by means of a stone mound deposited from barges, wherever and as soon as any such movement is detected. We both think this work should begin at once from section 41 to 46. While Mr. Mestayer hopes that nothing will need to be done between 46 and 51, or to the east of 41, I am less sanguine, and I provide for the whole length from 35 to 51 being similarly treated; but I shall be happy to agree with Mr. Mestayer on this point also, if the examination mentioned above should show that there is no forward movement of the puddle wall or inner slope at those parts of the dam.

3. In the same way Mr. Mestayer has reckoned nothing for the treatment of the slope where the oozing out of the white clay showed itself, believing this to be only a temporary symptom. Should this prove to be the case, and should there be no movement of slope or of puddle wall traceable above L.W., as there seems at present to be none below that level, I would agree that nothing need be done at that place, but as there is undoubtedly a movement in the neighbourhood, I can hardly hope that the work I proposed between sections 5 and 35 (Estimate No. 2) can be dispensed with for the whole distance.

4. I am still of opinion that a flattening of the slope above L.W. to 4 to 1 is necessary wherever there is any tendency to slip, but, as stated in paragraph 36 of my report, nothing definite can be said as to the exact course to be taken with the high part of the dam, or the expense likely to be incurred, until after a thorough examination on the lines laid down in paragraph 32 of my report, because the exact nature of the slight movement that has taken place in that part is not yet ascertained.

5. Mr. Mestayer and I are both very strongly of opinion that the examination should be begun without any delay; and also that the repairs near 44 should be carried out as rapidly as possible.

I have, &c.,
G. GORDON,
M. Inst. C.E.

R. L. Mestayer, Esq., to R. Shand, Esq.

Beresford Chambers, 52, Castlereagh-street, 6 February, 1889.

Dear Sir, *Re* Prospect Dam.

In the *Daily Telegraph* of the 2nd instant, in an article on the Prospect Dam, two gentlemen are referred to as capable of giving valuable evidence in this inquiry. I have discussed the matter with the Under Secretary for Public Works, who is of opinion that, as the inquiry is not yet closed, any further evidence likely to be of service should be taken, and, if necessary, dealt with in an Appendix to the Reports. If you will kindly inform me where Mr. Dunn—one of the gentlemen referred to—can be communicated with, I will arrange to take his evidence at the earliest possible date. Should there be anyone else whose evidence you would wish to be taken, if you will let me have their names, I will communicate with them at once.

I am, &c.,
R. L. MESTAYER.

R. L. Mestayer, Esq., to The Under Secretary for Public Works.

Beresford Chambers, 52, Castlereagh-street, Sydney, 6 February, 1889.

Dear Sir, *Re* Prospect Dam.

In accordance with your suggestions made this morning at our conversation respecting the articles in last Saturday's *Telegraph*, I have written to Mr. F. A. Franklin, and asked him to call here to-morrow morning; also to Mr. Shand for Mr. Dunn's address.

I am, &c.,
R. L. MESTAYER.

R. L. Mestayer, Esq., to F. A. Franklin, Esq., C.E.

Beresford Chambers, 52, Castlereagh-street, Sydney, 6 February, 1889.

Dear Sir, *Re* Prospect Dam.

The author of an article in the *Daily Telegraph* mentioned you as being in a position to give evidence of importance in the inquiry being held *re* the above work.

I was previously unaware that you had been in any way connected with the work, or I would have taken an earlier opportunity of asking you for any information you can afford on the subject.

I discussed the matter with the Under Secretary for Works this morning, and he is of opinion that, as the inquiry has not yet terminated, any information likely to be of service should be at once obtained, and could, if necessary, be dealt with as a Supplementary Report.

If it will be convenient for you to call at my office to-morrow morning between 10 and 12·30, or in the afternoon between 3 and 4, to give me any information you may have respecting the work, I shall be much obliged. Should these hours not be convenient for you, kindly let me know what times will suit you best.

I am, &c.,
R. L. MESTAYER.

F. A. Franklin, Esq., C.E., to R. L. Mestayer, Esq., C.E.

Re Prospect Dam.

Sunny Corner, 9 February, 1889.

Dear Sir,

Yours of the 6th instant reached me here this morning. It is so well known to the authorities I have been connected with the Prospect Dam works on the contractor's behalf that I am at a loss to understand why my name was not submitted to you at the outset of the inquiry.

I will call upon you upon my return to Sydney.

I am, &c.,

FREDK. A. FRANKLIN.

R. L. Mestayer, Esq., to The Under Secretary for Public Works.

Re Prospect Dam Enquiry—Analysis of Water flowing from drain at foot of embankment.

22 February, 1889.

Sir,

I have carefully compared the analysis of this water with the analysis of the water taken from the reservoir in January, 1888.

The comparison of the analyses, however, taken alone, does not afford any information of value to determine whether the water is due to a leak, a spring under the embankment, or to drainage from the bank.

The character and composition of the water is totally different from that of the water in the reservoir; but if the latter could escape through a crack in the puddle-wall it, would, on issuing from the rear of the embankment, have a very different composition from that which it possessed when in the reservoir, owing to the soluble salts in the soil through which it would have passed.

If analyses only are taken into account therefore, it would be unsafe to conclude that this water did not come from the reservoir.

To obtain definite data sufficient to enable one to decide positively the origin of this water, it would be necessary to determine accurately:—

1. The soluble matter which would be dissolved by water passing through the soils of which the embankment is composed;
2. The analysis of subsoil water at this point in addition to that of the effluent, and of the reservoir water;
3. The daily flow from the drain, as compared with that of the adjacent drains, and the effects of variations in the weather upon the flow;
4. The temperature of the effluent at this and the adjacent drains, and of the water in the reservoir;
5. The effect of the rise or fall of the water in the reservoir upon the flow from the drain.

I do not consider that there is the remotest possibility of this water being due to a leak, and in that opinion Mr. Gordon fully concurs.

It may be due to a spring, as when the dam was commenced it was found that the gravel bed underlying this portion of the embankment contained a large amount of water, and at a point on the flat two or three hundred yards below the dam where an outcrop of the gravel bed occurs, water has regularly been noticed. Mr. Dunn, the Contractor's engineer, has roughly gauged the flow from this drain, and has found it to amount to about 700 or 800 gallons a day, and his latest measurements indicate less than those taken first. This is very strong proof that it is no leak, as in that case the flow would unquestionably have increased instead of diminished.

Seeing that this drain is cut in the deepest portion of the embankment, it is quite possible that the water may be due solely to the rainfall during construction, and that which has fallen since the outer slope has been completed; but supposing that subsequent examination proves that this water is due to a spring under the embankment, no apprehension need exist as to the effect of a spring in this position, especially when the discharge is so small, as in this case. I may instance the Hope Valley Reservoir, in Adelaide, in proof of this: there are several springs under the embankment, which is about 60 feet high at the deepest part, and at one time the whole of the ground at the toe of the embankment was saturated with the water from these springs. By sinking drainage wells at various points, and connecting them by open jointed earthenware pipes, the water was drained to one central point, and carried away in a 12-inch pipe: the flow from this pipe amounts to several thousand gallons daily, but the embankment is in no respect injured, nor is the stability of the foundation in the slightest degree impaired. Mr. Dunn, in his evidence, states positively that this water is always perfectly clear, and this shows that it is not affecting the embankment at all.

I have, &c.,

R. L. MESTAYER.

Mr. District Court Judge Murray to The Secretary for Public Works.

Mittagong, 22 February, 1889.

Sir,

Some weeks ago I wrote a letter from Grafton for insertion in the *Sydney Morning Herald*, touching a question of great public interest. I could never find it in print; probably—almost certainly—it never was published. May I take the liberty of writing to you on the subject, as it is just possible that some good may come out of the suggestion which it has struck me to make? It is this: I notice that the chemical or mineralogical aspect of the Prospect Dam difficulty does not appear to have been gone into by your Department. Not pretending to be in any way an expert, but having some small superficial knowledge of the subject, I am strongly of opinion that the slimy nature of the clay, which has apparently caused the difficulty, is due to its containing a soluble salt, *i.e.*, carbonate of iron.

It is a matter of common observation that the white clays resulting from the decomposition of the Wianamatta shales generally turn red on exposure to the air. This change is caused by the decomposing of the carbonate of iron—a colourless salt—contained in the clay; the result is red oxide of iron. This oxide is almost absolutely insoluble. Consequently it may be expected that a clay which, when it contains the soluble carbonate, is easily made pasty and slimy ("slurry," I believe, is the term used by navvies) by the action of water, will, when the insoluble red oxide is substituted for the carbonate, become stiff and tenacious, suitable for the body of a dam.

Supposing

Supposing I am correct, the instability of the water face of the dam is due to the presence of layers or masses of this unripe material, that required a long exposure to convert it into what it ought to have been before being used—what remedy should be adopted? As to this I speak with very great diffidence; the practical difficulty may be too great. But, theoretically, there is one way of quickly causing the required change. This is by the introduction of a solution of lime. Lime at once decomposes carbonate of iron—the result being oxide of iron and carbonate of lime—the latter salt, of course, being almost insoluble. Whether by the judicious cutting of longitudinal trenches in the dam, and introduction of lime (to be covered, so as to prevent carbonation by the air), the trenches being taken down to the plain of percolation, lime water might be induced to work through the clay.

The depth of covering over the faulty clays will probably prevent the required change from taking place for a quite indefinite time unless something is done to assist the chemical action; it is therefore well worth going into this question. I would suggest the consulting of a thoroughly good chemist, such as my old friend, Mr. Charles Watt. At any rate, the chemical aspect of this important matter should not be ignored. Perhaps all I have said has been already considered.

Yours, &c.,
C. E. R. MURRAY,
D.C. Judge.

If I mistake not this aspect of the case has been fully considered in Mr. Mackay's report.—J.B., 27/2/89. Mr. Mestayer.

R. L. Mestayer, Esq., to G. Gordon, Esq.

Beresford Chambers, 52, Castlereagh-street, Sydney, 23 February, 1889.

Dear Sir, *Re* Prospect Dam.

I enclose copy of additional evidence taken on Thursday from Mr. Dunn, the present engineer to the contractors, and Mr. Rothery, whose name was mentioned by Mr. Limond as able to corroborate his absurd statements about the tidal influences. The Government have completed arrangements to take the work over, and are building a couple of boats for the stone; trenches have been opened up every 200 feet, but regular observations have not yet been made.

Believe me, &c.,
R. L. MESTAYER.

G. Gordon, Esq., to R. L. Mestayer, Esq.

Colonial Chambers, 86, Collins-street West, Melbourne, 25 February, 1889.

Dear Sir, Prospect Dam.

I have received your letter of the 23rd with some additional evidence. I should like to ask Mr. Ryan and Mr. Davis if they can say anything about the peeling of the rock mentioned in No. 579 to 588. Did Mr. Dunn say how they knew the bottom had flaked up when it had been covered in for two or three days? Did the puddle rise in the trench; if so, what depth of puddle was there in it, and what was the nature of the rock which flaked up? Did Mr. Dunn take the level, as well as the position horizontally, of the pegs which he says *moved and went back again?* Can he give the actual measurements of the pegs that have moved two or three feet? Was the line of the pitching set out with a theodolite from the solid (622), or was it measured from the centre line of the bank? Was the alleged movement entirely horizontal, or was there any slipping down the slope at the same time? Did he report the discrepancy he found at 15, 18, 22, and other places to the contractors? Did he mention it to the inspectors? What did he do about it? Are you taking any more evidence?

Yours, &c.,
G. GORDON.

R. L. Mestayer, Esq., to R. H. Ryan, Esq.

Beresford Chambers, 52, Castlereagh-street, Sydney, 27 February, 1889.

Dear Sir, *Re* Prospect Dam.

When Mr. Dunn was examined by me last week he mentioned that when the puddle was being put in the trench between pegs 71 and 72, part of it had to be taken up again because the bottom peeled up; that when the bottom of the trench was prepared for the puddle it appeared to be perfectly sound, but after the puddle had been on it for two or three days the bottom peeled up. Mr. Dunn said that after about three feet of puddle had been put on they had to stop for some reason, and it was when resuming work that this peeling of the bottom was noticed. In consequence of this he said a length of about 60 feet was taken up and all the unsound rock removed. Did you know of this; if not, please ask Mr. Jacob and Mr. Davies to let me know if they knew of it, or if they knew of anything of the sort occurring at any other part of the puddle trench.

I have wired you to day asking you to tell Mr. Dunn I should be glad if he could call at my office; I did not send to him direct as I did not know whether he was still on the works.

Yours, &c.,
R. L. MESTAYER,

Telegram

Telegram from R. L. Mestayer, Esq., to R. H. Ryan, Esq.

Sydney, 27 February, 1889.

If Mr. Dunn is still at Prospect, please ask him if he can call at my office one morning this week, between 10 and 1. If he has left please send me his address.

R. L. MESTAYER.

R. H. Ryan, Resident Engineer, Prospect Reservoir Works, Prospect.

R. L. Mestayer, Esq., to G. Gordon, Esq.

Beresford Chambers, 52 Castlereagh-street, Sydney, 28 February, 1889.

Dear Sir, *Re* Prospect Dam.

I have received your letter of the 25th instant, and have asked Mr. Dunn to call at my office; when he does so I will ask him for the particulars referred to by you. There was only about 2 feet of puddle in the greater part of the trench, where the bottom had flaked up, after this had been put in the work at that point was stopped for a day or two, and on resuming work the contractors noticed that the puddle had lifted at the end; the bottom of the trench was found to have flaked up for a total length of about 60 feet.

I forward you herewith copy of Mr. Harper's evidence. The only witness remaining to be examined is Mr. Franklin, who was mentioned by the writer of the article in the *Daily Telegraph*, as having been connected with the work as consulting engineer to the contractors. I have had a letter from Mr. Franklin at Sunny Corner, and he will call here as soon as he returns to town.

Yours, &c.,

R. L. MESTAYER.

R. L. Mestayer, Esq., to The Under Secretary for Public Works.

Beresford Chambers, 52, Castlereagh-street, Sydney, 28 February, 1889.

Sir, *Re* Prospect Dam.

I have not been able to take Mr. Franklin's evidence, owing to his absence from town. I have sent to his office this morning again and hear that he is expected back on Saturday.

Do you propose to have the supplementary reports sent in by Mr. Gordon and myself printed with the other reports, evidence, and correspondence? If so, will you let me have copies of them to arrange for the printer.

There were several errors in the printed copies of the original reports, but the printers decline to correct and take fresh proofs until they have the whole of the revises. These I have now obtained.

I am, &c.,

R. L. MESTAYER.

R. L. Mestayer, Esq., to The Under Secretary for Public Works.

Beresford Chambers, 52, Castlereagh-street, Sydney, 1 March, 1889.

Sir, *Re* Prospect Dam—Mr. Murray's Letter.

I have the honor to acknowledge receipt of your minute, dated 27th ultimo, with Mr. Murray's letter respecting the probable effect of the decomposition of the clays composing the embankment of the Prospect Reservoir. Mr. Mackay dealt with a portion of the probabilities of the effect of the decomposition of these clays, but his argument was quite different from Mr. Murray's, and before dealing with this latter letter I should be glad to have a copy of the analyses of the clays which Mr. Mackay was directed to make.

I understood from Mr. Mackay about three weeks ago that the analyses were nearly finished, and you will probably have received them by now. If not, I would suggest that Mr. Mackay should be asked to complete them at once and let you have the results this week.

I have, &c.,

R. L. MESTAYER.

A. Mackay, Esq., to The Under Secretary for Public Works.

Technical College, Sydney, 28 February, 1889.

Sir, *Re* Prospect Dam.

In response to request conveyed in your communication of January 9th, I proceeded to the Prospect Reservoir in order to get specimens of the clay and other material of which the Dam is constructed.

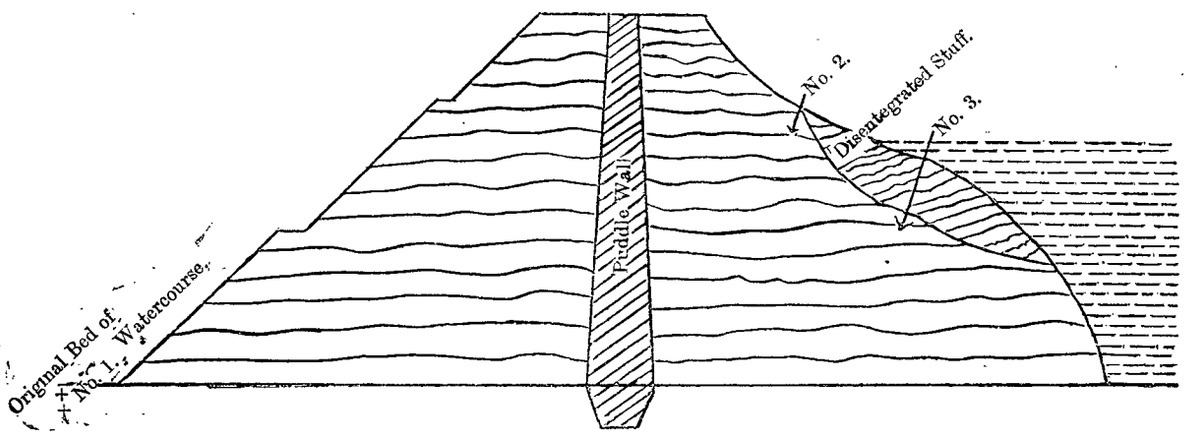
The Engineer in Charge, Mr. Ryan, promptly placed the necessary facilities at my disposal, and by means of auger rods (bores having been put down in parts of the work where the process of disintegration is going on, and again where the stuff has "slipped" or moved forward by gravitation from its original position in the bank) I got the material dealt with in the analyses as Nos. 2 and 3.

The No. 1 material is the raw unworked clay taken from the bed of the water shed, from which, as I am informed, was got the bulk of the clay for forming the puddle wall, and a large proportion of the stuff used in the protecting embankment which faces the Reservior, and which is now in contact with the water.

The No. 4 is the loamy earth which covers and faces the Prospect Quarry, and is of the type of which is formed that portion of the embankment facing the water which has given the least, if any, trouble. This latter material is of volcanic origin; it is true, thoroughly oxidised earth that is not likely to move or separate were it placed in masses of any conceivable size. It affords all the properties which should make perfect, reliable material for an earth embankment formed on correct lines, and which has to resist disturbing atmospheric effects, or from being in contact with, or possibly saturated with, water. This latter material does not alter—in a mechanical sense—on exposure to the weather, air, or water, and is thus the very opposite of the clay material of No. 1.

The

The following sketch will show from where Nos. 1, 2, and 3 were taken:—



In order to get at the real character of the substances in operation they have been tested by mechanical and chemical analysis, by microscopic examination, by weight, and specific gravity, with the following result:—

No. 1. Mechanical analysis of clay matter from the Wainamatta shale series—already described in a former report—yellowish-white in appearance, as taken from the natural bed, where it lies unaltered by air exposure. It weighs 165 lb. per cubic foot; when dry, 143¾ lb. per cubic foot. It yields 31 per cent. of very fine sandy matter which, under the microscope, appears as rounded grains of quartz sand, white in colour, and which weighs 170 lb. per cubic foot. 69 per cent. of the whole is very fine silicate of alumina plastic, and which, for ordinary purposes, is true clay matter of very fine quality. For making puddle it is not easy to find anything better.

Chemical analysis shows:—

	Per cent.
Moisture of combination and organic matter (the latter fractional)	9·7
Sandy and dry matter, insoluble in strong acid	86·755
Alumina and iron	2·37
Sulphuric acid	0·11
Lime	0·22
Magnesia	0·12
Undetermined matter (alkaline)	0·725
	100·000

This material, owing to its close density, the weight of other clays over it, and the enormous proportion of fine clay matter present in its composition, would remain unaltered for all time in its natural bed, but, when moved and exposed to the air and the changes of contraction and expansion, arising from drying winds and wet weather, it alters in a remarkable manner, as we see from the next analysis of the stuff (No. 2) taken from the inner face of the embankment where the "slip" had occurred, and from below the water level in the reservoir.

No. 2. Plastic clay-like material, showing reddish veins and streaks. Weight, 172 lb. per cubic foot; when dry, 151 lb. Masses of particles of hard oxide of iron are visible under the microscope. Oxidation, or separation of the sandy from the fine clay matter is going on rapidly in this material. 14 per cent. of sandy matter, separates freely; the remainder, 86 per cent., is coarse clay, coloured by the oxidised iron, and is still undergoing separation.

Chemical analysis shows:—

	Per cent.
Moisture of combination and organic matter	9·31
Sandy and clay matter, insoluble in strong acid	83·257
Alumina and iron (peroxide)	5·857
Sulphuric acid	0·11
Lime	0·22
Magnesia	0·095
Undetermined matter (alkaline mostly)	1·151
	100·

That a great change has taken place in this material, in comparison with the raw stuff from the undisturbed bed below, is very evident. The increase of weight and presence of nearly 6 per cent. of alumina, and oxidised iron, show what has been going on, and what must go on till the oxidation is complete.

No. 3. Matter got from below the level of the water in the reservoir, and outside of the original slope of the embankment.

It is, in reality, part of the stuff that has "slipped," or moved forward, because of the chemical changes brought about by contact with the water in the reservoir, which movement is increased by the pressure of heavy material above.

As taken from the boring tool, it weighs 120 lb. per cubic foot; when dry 93 lb.

Further separation gave 47 per cent. of very fine clay matter, weighing 70 lb. per cubic foot—which is, but slightly heavier than water. This stuff really floats in water for several days before it settles.

It

It seems very likely that if further tests are applied, and the matter that has moved furthest into the water can be reached, it will be found to be still lighter; indeed, that the mass there is but very little heavier than water, and therefore, most difficult stuff to retain in position in the presence of water in a state of movement—as the case is in the reservoir at Prospect. Under the microscope, it is seen to be a mass of very fine aluminous matter, with but little sandy or silicious stuff.

Chemical analysis shows:—

	Per cent.
Moisture of combination and organic matter	14·50
Clay and sandy matter, insoluble in strong acid	75·10
Alumina and iron	10·00
Traces only of sulphuric acid and magnesia. The lime has all disappeared ...	.....
Undetermined matter	0·40
	100·

No. 4. Earth from the surface embankment of bluestone quarry, from which broken metal and cubes are got for facing the inside embankment of the reservoir.

This is very decided volcanic material, and which shows the process of oxidation still going on very rapidly in the rock. In the soil the change is practically completed, and hence, that part of the embankment made up largely of stuff of this kind, is not influenced by the weather changes or contact with the water.

Mechanical analysis gives 48 per cent. of very fine silicious matter, which the microscope discovers to be coated with oxidised iron. The remainder is fine aluminous earth. As gathered during a dry day, the earth weighs 119 lb. per cubic foot. By drying at an even temperature of 212°, 25 lb. of water per cubic foot of soil is evaporated.

Chemical analysis shows:—

	Per cent.
Organic matter and combined water	22·50
Sandy matter	23·80
Alumina and iron	47·00
Lime	·60
Magnesia	Traces.
Chlorine = Salt	·90
Potash...	·20
Phosphoric acid and loss	4·75
	100·

Several minute tests were applied to this soil, as also to the others, in order to get at any changes likely to occur by saturation with water. The only observable change in No. 4 was that it gave off distinct traces of chloride, sodium (salt), and magnesia, which affected the water and made it sweetish.

The violent changes observable in connection with Nos. 1, 2, and 3, and which are referred to fully in the former report, I had the honor of submitting to your Department, do not affect this earth (No. 4.) Hence my reasons for recommending it and other earths in which oxidation has been completed for the formation of such works as those at Prospect, where in process of time the earth facing the water must become saturated.

It will be seen that, when tested closely, the driest of the clays (No. 2), and which in general observation is supposed to be dry, actually contains 21 lb. of water per cubic foot.

I think it will be seen by the foregoing analyses that the cause of disturbance in the embankment is due to the character of, and the consequent oxidation of the large masses of clay matter (No. 1) lodged there. When saturated, the heavier portions of the mass separate rapidly and gravitate downward. In the face of any movement in the mass, which may arise from wind, storms, and agitation of the water of the reservoir, the movement must be very rapid, and where there is pressure above the mass, either of stone, earth, or lodgments of rain-water, the change will be accellerated, and accounts in full, as it appears to me, for the changes that are going on in the work referred to, and which may have the effect of loosening the puddlewall behind, by the removal of its support.

The state of No. 3 proves further that the lighter portions of the material have been pressed, or floated, outward in large masses, thus tending to still further remove the support the embankment was erected to give.

I can but reiterate the suggestion made after the first investigations, and submitted in the former report, that, as oxidation of this huge mass of matter cannot now be prevented, the better course is to humour it, and to encourage the whole mass to settle in natural strata or layers. Oxidation of the character and dimensions mentioned may be controlled, it cannot be stopped. No human agency can do it; but much mischief may be done by attempting to force this natural manifestation of nature.

In conclusion, I would again suggest the desirability of having chemical examination and analyses made of clay and other materials that have to be moved in masses, in order to make those in charge of the works acquainted with the changes which must take place when such matter is moved and exposed to the influences of the weather under conditions which differ essentially from that of their natural state.

I have, &c.,
ANGUS MACKAY, F.C.S.

R. H. Ryan, Esq., to R. L. Mestayer, Esq.

Department of Public Works, Harbours and Rivers Branch,
Prospect, 1 March, 1889.

Dear Sir,

I have your letter *re* Mr. Dunn's examination. In sinking the trench near the extreme south-western end, it was found necessary to get down considerably deeper than anticipated, the clay having been placed on the bottom close to where the drop commenced, the latter being exposed to the action of the atmosphere for some considerable time, lifted in the ordinary way, and in removing it subsequently, it was found that the lift extended for a distance of 7½ feet (about) under the clay, which necessitated the temporary removal of the latter for that length, and the taking up of the unsound bottom.

You,

You, of course, know that the puddle-wall for its entire length was founded on the dry close blue shale, and that it was one of the best bottoms that could be got, goes without speaking, provided that it was covered immediately after it was finished and ready for use. This was invariably done; for, as soon as possible after a section of the trench was completed, it was covered up immediately after with the clay, as it would not bear exposure for any time, and would lift in parts, more especially the centre, where the channel was cut.

Anyone with a practical experience of this work and in this material, could easily understand how, in removing the unsound slope, which was exposed for some time, it would be possible for a small portion of the shale bottom under the clay, the latter being of little depth to get injured, and therefore, and quite properly, it was followed up and removed. This is as nearly as possible what happened. I may mention that all through, from the commencement to the finish, I have myself, accompanied by the inspectors, examined and sounded with a pick every foot of the trench-bottom immediately before the puddle-wall was started.

Very truly yours,
R. H. RYAN.

R. H. Ryan, Esq., to R. L. Mestayer, Esq.

Department of Public Works, Harbours and Rivers Branch,

Dear Sir, Prospect, 2 March, 1889.

I think it may be necessary, from the tone of the evidence given by Mr. Dunn, and mentioned to me in your letter of the 27th ultimo, that myself and my assistants and inspectors would require to be examined again.

Yours, &c.,
R. H. RYAN.

R. L. Mestayer, Esq., to W. E. Dunn, Esq.

Beresford Chambers, 52, Castlereagh-street, Sydney, 2 March, 1889.

Dear Sir, *Re* Prospect Dam.

I understood from Mr. Ryan that you would be at my office to-day between 10 and 1 o'clock, and I remained in on purpose. Please let me know when you will be here. I have had a letter from Mr. Gordon, who has asked me for some further information from you.

Yours, &c.,
R. L. MESTAYER.

R. L. Mestayer, Esq., to G. Gordon, Esq.

Dear Sir, Beresford Chambers, 52, Castlereagh-street, Sydney, 2 March, 1889.

Enclosed I forward you copies of a letter sent to the Secretary for Public Works by Mr. Murray, District Court Judge at Mittagong, which Mr. Barling sent to me yesterday; and also the analyses of soils from Prospect, made by Mr. Mackay.

I have asked Mr. Ryan about the peeling of the trench bottom, and he says that although the bottom was hard, dry, and apparently quite free from flaws of any description, if it were left exposed to the air for a few days after being prepared for the puddle, the surface would lift, and that this did occur as mentioned by Mr. Dunn; but Mr. Ryan gives 7 or 8 feet as the length of the puddle that was moved. The whole of the bottom was hard shale, a material which we know is very readily affected by exposure to air.

I do not think that this would have any effect on the stability of the dam, as even if the unsound piece had not been discovered the weight of the puddle above it would have kept it in place, and as no water was met with, there was nothing to injure the puddle, even supposing that the disintegration of the shale that had peeled had proceeded so far as to reduce it to powder. Mr. Dunn was to have called here this morning to see me respecting his evidence, but has not yet come. When he does, I will ask him the questions raised by you in your letter of the 25th ultimo.

Yours, &c.,
R. L. MESTAYER.

W. E. Dunn, Esq., to R. L. Mestayer, Esq.

Dear Sir, Prospect Reservoir, 4 March, 1889.

In answer to yours of Saturday *re* my not having called on you as arranged on that day. This was brought about by Messrs. Shand and Chapman demurring to my leaving the works unless the contractors were reimbursed for the loss of my services to them while away. However, Mr. Shand, who was in Sydney on the Friday, told me he would see you about it himself; but I found, on his return that evening, that he had not done so, and as I had not a man about me to send a telegram by on the following morning, I was unwillingly obliged to allow you to remain in ignorance of my change of plans. As I have no say in this matter, being a salaried servant of the contractors, it might be as well, if you still wish to take further evidence from me, to see Mr. Shand on the subject, who will probably be in Sydney until Wednesday, and whose whereabouts could be ascertained by applying to Mr. J. Chapman, Bank of New Zealand, Pitt-street.

Yours, &c.,
WILLIAM E. DUNN,
Engineer for Contractors.

R. L. Mestayer, Esq., to R. Shand, Esq.

Beresford Chambers, 52 Castlereagh-street, Sydney, 5 March, 1889.

Dear Sir, *Re* Prospect Dam.

As it appears to be inconvenient to you for Mr. Dunn to call at my office, I have arranged to be at the works at 10 a.m. on Thursday, and I shall be obliged if you will arrange for him to be there.

I should not have asked him to call at my office, but for your own offer that he should do so at any time I might wish it.

Yours, &c.,
R. L. MESTAYER.

R. L. Mestayer, Esq., to F. A. Franklin, Esq.

Beresford Chambers, 52, Castlereagh-street, Sydney, 5 March, 1889.

Dear Sir, *Re* Prospect Dam.

Shall you be able to call and see me *re* the above matter, either to-morrow (Wednesday), or Friday between 10 and 1 o'clock? I shall be out of town on Thursday.

Yours, &c.,
R. L. MESTAYER.

R. L. Mestayer, Esq., to W. E. Dunn, Esq.

Beresford Chambers, 52, Castlereagh-street, 5 March, 1889.

Dear Sir, *Re* Prospect Dam.

I was very much surprised on receiving your letter this morning, as when I first mentioned to Mr. Shand that I wished to ask you some questions he said you should come to my office at any time I might require you.

Relying on that promise, I asked you to come on Saturday; however, to save any further trouble, I will come to Prospect on Thursday morning, and I have written to Mr. Shand to that effect. I shall be there about 10 a.m., and shall see you as soon as I arrive.

Please be at the office about that time.

Yours, &c.,
R. L. MESTAYER.

R. L. Mestayer, Esq., to R. H. Ryan, Esq.

Beresford Chambers, 52, Castlereagh-street, 5 March, 1889.

Dear Sir, *Re* Prospect Dam.

As you wish to be more fully examined as to the peeling of the shale in the puddle trench, I will be at the Works on Thursday morning about 10 o'clock for that purpose.

Yours truly,
R. L. MESTAYER.

R. L. Mestayer, Esq., to G. Gordon, Esq.

Beresford Chambers, 52, Castlereagh-street, Sydney, 9 March, 1889.

Dear Sir, *Re* Prospect Dam.

I enclose copies of some further evidence given by Mr. Ryan, Mr. Dunn and Mr. Davis *re* the flaking up of the shale in the puddle trench, and on the water flowing from the rear of the embankment. I do not see that anything of importance has been elicited, as the flaking up referred to seems to have been very trifling, and nothing more than is always found with all classes of shale when exposed to the air.

Yours, &c.,
R. L. MESTAYER.

R. L. Mestayer, Esq., to The Under Secretary for Public Works.

Beresford Chambers, 52, Castlereagh-street, Sydney, 11 March, 1889.

Sir, *Re* Prospect Dam.

In accordance with your instructions given to me by you on the 6th ultimo, I wrote to Mr. F. A. Franklin, C.E., and asked him to attend at my office and give evidence in the above enquiry. Owing to Mr. Franklin's absence from town the matter had been in abeyance until the beginning of this month, when, hearing that Mr. Franklin had returned to town, I again wrote to him. In reply to my letter, Mr. Franklin called here on Wednesday and stated that having been engaged by the contractors to advise them professionally during the progress of the work, he did not feel at liberty to give any evidence in the matter without first obtaining their consent, but that he had written to Mr. Shand and would see me again as soon as he had received a reply to that letter.

On Saturday morning Mr. Franklin called here and stated that he had received a reply from Mr. Shand, who did not think it advisable to reopen the matter, as the Government had effected an arrangement with the contractors.

Mr. Franklin stated that he considered himself bound to respect the opinion of his clients, and must, in consequence, decline to give any evidence.

Under these circumstances I shall be glad if you will instruct me whether any further action is to be taken.

I have, &c.,
R. L. MESTAYER.

R. L. Mestayer, Esq., to The Under Secretary for Public Works.

Prospect Dam.

Dear Sir, Beresford Chambers, 52, Castlereagh-street, Sydney, 25 March, 1889.

Re Mr. Mackay's analysis of soils at Prospect, and his report thereon, also letter from C. E. R. Murray, Esq., on the probable effect of the changes in the chemical constitution of the materials forming the Prospect embankment,—I have very carefully considered these papers, and in order the better to give a decided opinion I have made special examinations of the materials in question. Although not professing perfect knowledge of analytical chemistry, I am well acquainted with both the theory and practise of analysis, and my own examinations of these soils agrees practically with Mr. Mackay's results. I, however, dissent altogether from his conclusions.

The differences between analyses Nos. 1 and 2, upon which Mr. Mackay lays so much stress, do not, in my opinion, prove anything, because Mr. Mackay has omitted to prove that the material operated upon for analysis No. 2 had the composition given in analysis No. 1 *before it was put in the embankment.*

The embankment is a mixture of clays and soils taken not only from the flat but also from the Prospect Hill, and the composition of these soils differs one from the other much more widely than analysis No. 1 from No. 2.

Seeing how the work was carried on, and the measures taken to thoroughly incorporate all the materials, no matter whence received, into one homogeneous mass, it would be practically impossible to take a sample of material from the bank and be certain of its being the same as was brought from any given site, with the exception perhaps of some isolated lumps of white clay, which, still retaining their original colour, can be identified and compared with similar material in its original bed.

The very existence of a considerable quantity of this white clay, unaltered in colour after months of exposure both on the bank and on the excavations on the flat, is a refutation of the theory deduced by Mr. Mackay from the analysis alone.

Analysis No. 3 corresponds nearly with the composition of this white clay, excepting that it contains the merest trace of iron, and has evidently been taken from a portion of the bank where this material was in excess.

Analysis No. 4 fully bears out the opinion I had already advanced in my report as to the suitability of this earth for filling the fissures and completing the embankment.

The theory advanced by Mr. Murray is not borne out by the results of my examinations nor by Mr. Mackay's analyses. I have failed to find any soluble salts of iron in any of the clays; carbonates also were entirely absent; and the white clay contains the merest trace of iron, but runs into a thin "slurry" directly water has access to it.

After a very careful reconsideration of the whole matter, and further examination of the embankment since the opening of the transverse trenches, I am firmly convinced that the mechanical action of the contained water is the active cause of the disturbances, and that there is no reason to modify in any way the opinion I have already expressed in my reports.

I am, &c.,

R. L. MESTAYER,
M. Inst., C. E.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION OF LAND, PARISH OF NEWCASTLE, COUNTY OF NORTHUMBERLAND, REQUIRED AS A SITE FOR RESIDENCE OF CARETAKER, RESERVOIR, NEWCASTLE.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16.

NOTIFICATION OF RESUMPTION OF LAND UNDER 44 VICTORIA No. 16.

NEW SOUTH WALES, to wit. } By His Excellency The Right Honourable CHARLES ROBERT, BARON CARRINGTON, a Member of Her Majesty's Most Honourable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

(L.S.) CARRINGTON, *Governor.*

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the erection of a cottage at Newcastle, for and towards the completion of which said works public funds are available under the provisions of the "Appropriation Act of 1888;" and whereas the land hereinafter described is required for the construction of the said works: Now I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do by this notification published in in the Gazette and in a newspaper, that is to say, in the "Newcastle Morning Herald and Miners' Advocate," circulated in the Police District wherein the said land is situated, declare that the land hereinafter described has been resumed for the public purposes hereinafter mentioned, that is to say, for and in connection with the erection of a cottage for the caretaker of the reservoir at Newcastle, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee-simple in possession, freed and discharged from all trusts, obligations, estate, interest, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent further that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee with the powers stated in the said last-mentioned Act. And I declare that the following is the description of the land hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the parish of Newcastle, county of Northumberland, and Colony of New South Wales, being part of allotment 318 of the subdivision of the city of Newcastle, originally purchased by H. W. Tomkins: Commencing at the intersection of the east side of Terrace-street with the north side of Pitt-street; and bounded thence by the east side of Terrace-street bearing north 12 degrees 30 minutes west 90⅔ links; thence by a line bearing north 78 degrees 6 minutes east 2 chains 16½ links; thence by a line bearing south 6 degrees 51 minutes west 1 chain 55⅔ links to the north side of Pitt-street; thence by said north side of Pitt-street bearing north 83 degrees 1 minute west 1 chain 74¾ links, to the point of commencement,—containing by admeasurement 37½ perches, owner unknown.

In witness whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this twelfth day of February, in the year of our Lord one thousand eight hundred and eighty-nine, and in the fifty-second year of Her Majesty's Reign.

By His Excellency's Command,

JAMES FLETCHER.

GOD SAVE THE QUEEN!

1889.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION OF LAND, PARISH OF ROSET, FOR THE SUPPLY OF WATER TO THE TOWN OF NYMAGEE.)

Presented to Parliament pursuant to Act 44 Vic. No. 16.

NOTIFICATION OF RESUMPTION OF LAND UNDER 44 VICTORIA No. 16.

NEW SOUTH WALES, to wit. } By His Excellency The Right Honourable CHARLES ROBERT, BARON CARRINGTON, a Member of Her Majesty's Most Honourable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

(L.S.) CARRINGTON, *Governor.*

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the supply of water to the town of Nymagee, in the said Colony, for and towards the completion of which said works public funds are available, and whereas the land hereinafter described is required for the construction of the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification published in the Gazette and in a newspaper, that is to say, in the "Cobar and Louth Herald," circulated in the Police District wherein the said lands are situated, declare that the lands hereinafter described have been resumed for the public purposes hereinafter mentioned, that is to say, for and in connection with the supply of water to the said town of Nymagee, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever, and to the intent further that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee with the powers stated in the said last-mentioned Act: And I declare that the following are the descriptions of the lands hereinbefore referred to, that is to say:—

1st. All that piece or parcel of land situate in the town of Nymagee, parish of Roset, county of Mouramba, Colony of New South Wales, being portion 28: Commencing on the southern side of a road 3 chains wide at the north-western corner of portion 27 of 6 acres and 33 perches; and bounded thence on the north by that road dividing it from portion 21 of 8 acres 18 perches bearing about south 86 degrees 43 minutes west 5 chains 6¾ links; on the west by a road 1 chain 50 links wide dividing it from part of portion 3 of 40 acres bearing south 11 chains 84 links; on the south by a road 1 chain 50 links wide dividing it from portion 29 of 12 acres 23 perches bearing east 5 chains 6 links; and on the east by the western boundary of portion 27 aforesaid, bearing north 12 chains 13 links, to the point of commencement,—containing 6 acres and 10 perches, and said to be in the possession and occupation of D. Thomas.

2nd. All that piece or parcel of land situate in the town of Nymagee, parish of Roset, county of Mouramba, Colony of New South Wales, being portion 26: Commencing at the southern side of a road 3 chains wide at the north-western corner of portion 25 of 6 acres 2 roods 2 perches; and bounded thence on the north by that road dividing it from portion 23 of 7 acres 3 roods 11 perches bearing about south 86 degrees 43 minutes west 5 chains 6¾ links; on the west by the eastern boundary of portion 27 of 6 acres 33 perches bearing south 12 chains 42 links; on the south by a road 1 chain 50 links wide dividing it from part of portion 30 of 12 acres 24 perches bearing east 5 chains 6 links; and on the east by the western boundary of portion 25 aforesaid bearing north 12 chains 71 links to the pomt of commencement,—containing 6 acres 1 rood 17 perches, and said to be in the possession and occupation of J. Bray.

3rd. All that piece or parcel of land situate in the town of Nymagee, parish of Roset, county of Mouramba, and Colony of New South Wales, being portion 27: Commencing on the southern side of a road 3 chains wide at the north-eastern corner of portion 28 of 6 acres 10 perches; and bounded thence on the north by that road dividing it from portion 22 of 7 acres 3 roods 34 perches bearing about north 86 degrees 43 minutes east 5 chains 6¾ links; on the east by the western boundary of portion 26 of 6 acres 1 rood 17 perches bearing south 12 chains 42 links; on the south by a road 1 chain 50 links wide dividing it from part of portion 29 of 12 acres 23 perches bearing west 5 chains 6 links; and on the west by the eastern boundary of portion 28 aforesaid bearing north 12 chains 13 links to the point of commencement,—containing 6 acres and 33 perches, and said to be in the possession and occupation of May Thomas.

In witness whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this thirteenth day of April, in the year of our Lord one thousand eight hundred and eighty-nine, and in the fifty-second year of Her Majesty's Reign.

By His Excellency's Command,
BRUCE SMITH.

GOD SAVE THE QUEEN!

1889.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION, IN CONNECTION WITH THE SUPPLY OF WATER TO THE VILLAGE OF RYDE.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.

NOTIFICATION OF RESUMPTION OF LAND UNDER 44 VICTORIA No. 16.

NEW SOUTH WALES, to wit. } By His Excellency The Right Honourable CHARLES ROBERT, BARON CARRINGTON, a Member of Her Majesty's Most Honourable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

(L.S.) CARRINGTON, *Governor*

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the supply of water to the village of Ryde, for and towards the completion of which said works public funds are available; and whereas the land hereinafter described is required for the construction of the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do by this notification, published in the Gazette and in a newspaper, that is to say, in the "Sydney Morning Herald," circulated in the Police District wherein the said land is situated, declare that the land hereinafter described has been resumed for the public purposes hereinafter mentioned, that is to say, for and in connection with the supply of water to the village of Ryde, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee-simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent, further, that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee, with the powers stated in the said last-mentioned Act: And I declare that the following is the description of the land hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the parish of Concord, county of Cumberland, and Colony of New South Wales, being part of a grant of 256 acres to J. H. Potts: Commencing at the intersection of the eastern boundary of the aforesaid grant with the southern boundary fence of the Great Southern and Western Railway; and bounded thence by the said boundary of grant bearing south 23 minutes west 20 feet 10 inches; thence by a line bearing south 73 degrees 50 minutes west 267 feet 2 inches and south 80 degrees 12 minutes west 369 feet; thence by the western boundary of the aforesaid grant bearing north 18 degrees 23 minutes east 22 feet 8 inches; thence by the southern boundary of the Great Southern and Western Railway bearing generally north-easterly, to the point of commencement,—containing 1 rood 6½ perches, and said to be in the possession of Coates and Whitty.

In witness whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this first day of June, in the year of our Lord one thousand eight hundred and eighty-nine, and in the fifty-second year of Her Majesty's Reign.

By His Excellency's Command,

BRUCE SMITH.

GOD SAVE THE QUEEN!

1889.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION OF LAND FOR THE SUPPLY OF WATER TO ASHFIELD, PARISH OF PETERSHAM.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.

NOTIFICATION OF RESUMPTION OF LAND UNDER 44 VICTORIA No. 16.

NEW SOUTH WALES, to wit. } By His Excellency The Right Honourable CHARLES ROBERT, BARON CARRINGTON, a Member of Her Majesty's Most Honourable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

(L.S.) CARRINGTON, *Governor.*

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the supply of water to the district of Ashfield, in the county of Cumberland, in the said Colony, for and towards the completion of which said works public funds are available; and whereas the land hereinafter described is required for the construction of the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification published in the Government Gazette and in a newspaper, that is to say, in the "Sydney Morning Herald," circulated in the Police District wherein the said land is situated, declare that the land hereinafter described has been resumed for the public purposes hereinafter mentioned, that is to say, for and in connection with the construction and erection of a reservoir, tanks, water pipe depôt, and other works for such supply of water as aforesaid, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever, and to the intent further that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a Trustee with the powers stated in the said last-mentioned Act: And I declare that the following is the description of the land hereinbefore referred to, that is to say:—

All that piece or parcel of land situate at Ashfield, in the parish of Petersham, county of Cumberland, and Colony of New South Wales, containing by admeasurement three roods and thirty-one and a half perches, a little more or less, and which said land is part of 10 (ten) acres conveyed by Arthur Frederick Jeffreys to Donald Robertson, and held by the said Donald Robertson under certificate of title No. 120,280, dated the ninth day of July, 1887; and which said ten acres form portion of two hundred and fifty-five (255) acres held by the said Arthur Frederick Jeffreys by certificate of title, application No. 4,533, dated 15th November, 1878: Commencing on the north-western side of Holden-street, one chain wide, on the northern side of a road one chain wide dividing it from the remainder of the said 255 acres, and distant one (1) chain from the south-east corner of the said ten (10) acres; and bounded thence on the south-east by the north-western side of Holden-street bearing north two (2) degrees thirty-one (31) minutes east two hundred and seventy-five (275) feet and three (3) inches to the south-western side of a lane twenty (20) feet wide dividing it from another portion of the said ten (10) acres; thence on the north east by the south-western side of that lane bearing north eighty-seven (87) degrees twenty (20) minutes west one hundred and fifty (150) feet; thence on the north-west by a line bearing south two (2) degrees thirty-one (31) minutes west two hundred and seventy-five (275) feet six (6) inches to the north-eastern side of the said road one (1) chain wide; and thence on the south-west by the said north-eastern side bearing south eighty-seven (87) degrees twenty-eight (28) minutes east one hundred and fifty feet, to the point of commencement,—being part of one hundred (100) acres originally granted to John Clepham by Crown Grant dated the 11th day of November, A.D. 1794, of which said land Donald Campbell is said to be owner.

In witness whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this twenty-seventh day of June, in the year of our Lord one thousand eight hundred and eighty-nine, and in the fifty-third year of Her Majesty's Reign.

By His Excellency's Command,

BRUCE SMITH.

GOD SAVE THE QUEEN!

1889.

NEW SOUTH WALES.

COUNTRY TOWNS WATER AND SEWERAGE ACT OF 1880.

(MUNICIPAL DISTRICT OF BALRANALD—BY-LAWS.)

Presented to Parliament, pursuant to Act 44 Vic. No. 14 sec. 13.

Colonial Secretary's Office,
Sydney, 2nd July, 1889.

MUNICIPAL DISTRICT OF BALRANALD.—BY-LAWS.

THE following By-laws, relating to the management and regulation of Water Supply, made by the Council of the Municipal District of Balranald, under the power conferred by the "Country Towns Water and Sewerage Act of 1880," having been confirmed by His Excellency the Governor, with the advice of the Executive Council, are published in accordance with the requirements of the above-cited Act.

HENRY PARKES.

BY-LAWS FOR THE MANAGEMENT AND REGULATION OF WATER SUPPLY.

THE Mayor and Aldermen of the Municipal District of Balranald, pursuant to and in exercise and execution of the powers and authorities conferred on such Council by the Country Towns Water and Sewerage Act of 1880, make the following By-laws:—

Rates and Charges.

1. The following rates and charges are those which the owners and occupiers of land and tenements shall pay in respect of water supplied by the Council, that is to say,—

2. On every house or tenement of £10 assessed annual value and under, ten shillings per annum.

3. On every house or tenement above the annual value of £10, a rate of one shilling for each pound sterling on the amount of the assessed Municipal valuation.

4. Water supplied for other than domestic purposes, such as stables, gardens, ornamental grounds, manufactories, or other purposes, shall be by meter or by special agreement with the Council.

5. Public-house troughs, twenty shillings per annum; water carts from stand-pipes, 6d. per load of not exceeding 200 gallons.

6. Unimproved town allotments and suburban lands, if not distant more than 150 feet from any main or pipe of the Council's, shall be charged at the rate of one shilling in the pound on the annual value, as assessed in the Municipalities Act.

7. For water supplied temporarily to buildings in course of progress, 20s. per centum on the amount of the contract for stonework, brickwork, and plastering, or the Council may require a meter to be fixed, the charge to be the ordinary one in use for water supplied by measure or agreement.

8. Water required for market gardens or purely agricultural purposes may be supplied by measurement at such times and at such charges as the Council may agree to.

9. For water supplied by the Council by measurement the charge will be, except in cases referred to in preceding sections, at the rate of two shillings per 1,000 gallons.

10. The minimum quantity of water to be charged in each case where water is supplied by measure, except by agreement, shall be not less than at the rate of 25,000 gallons per quarter, even should this quantity not be consumed.

11. For water supplied to any lands, tenements, or premises not before specified, and not chargeable with or paying Municipal rates, shall be supplied by measure at the rate of 4s. per 1,000 gallons, or by special agreement.

12. No meter shall be allowed to be affixed unless the dial of the same is capable of registering 1,000,000 gallons, except by special consent in writing of the said Council; the meter to be of approved kind.

13. If any meter shall cease registering, or be out of repair, or registering inaccurately, the said Council shall estimate the charge for water consumed during the period such meter was not in working order and until it is repaired and refixed either by taking an average of the quantity used during the previous quarter or during the corresponding period of the previous year, or the said Council may insert a check meter on the service-pipe.

14. Any person supplied with water by the said Council wilfully allowing water to run to waste, or using it in a wanton and extravagant manner, shall be subject to a penalty not exceeding five pounds for each offence, and to a further penalty of two pounds for each day after receiving notice from the said Council.

15. Before any person shall affix any service-pipe to any pipe of the said Council, or alter or repair, or in any manner interfere with any pipe of the said Council, or any service-pipe, cock, or fitting connected with the pipes of the said Council, he shall obtain from the said Council a license in that behalf to execute such works; and any unlicensed person affixing, altering, repairing, or in any manner interfering with such pipe, service-pipe, cock, or fitting as aforesaid, shall be liable to a penalty not exceeding ten pounds.

16. Before any license shall be granted by the said Council, the person applying for the same shall satisfy the said Council that he is a competent plumber, and before obtaining his license, he shall deposit £5 as security for faithful performance of all his work in connection with the water supply; also pay an annual fee of £1 1s.

17. Any person, whether licensed as aforesaid or not, who shall offend by opening any ground so as to uncover any pipe or pipes, the property of the said Council, without giving two days' notice to the said Council of his intention so to do, or who shall in any way tamper with or alter any pipe, the property of the said Council, without the permission in writing of the said Council being first obtained, or who shall wilfully or carelessly break, injure, or open any lock, cock, valve-pipe, work, or engine, the property of the said Council, shall be liable for each such offence to a penalty not exceeding twenty pounds. In cases of leakage or emergency the Council may dispense with the two days' notice as aforesaid,—in such cases application to be made to the Council Clerk.

18. Any person, whether licensed or not as aforesaid, who shall lay any pipe to communicate with the pipes of the said Council without giving two days' notice of the day and hour when such pipe is intended to be made to communicate with the pipes of the said Council, or who shall make such communication except under the superintendence and according to the directions of some officer of the said Council, or shall lay any leaden or other pipe to communicate with the pipe of the said Council, of a strength and material not sanctioned by the said Council, shall be liable for each such offence to a penalty not exceeding five pounds, and in the event of continuing the offence to a further penalty of two pounds for each day after the notice of the offence from the said Council.

19. Lead piping to be of the following weights:—

Diameter of pipe.	Weight of pipe per yard.
⅜″	5 lbs.
½″	6 „
⅝″	7½ „
¾″	9 „
1″	12 „
1¼″	16 „
1½″	20 „

and galvanized iron piping of approved quality only will be allowed for external and internal services; ordinary connections with sub-mains must be made with proper ferules, to which for iron service a length of not less than 2 feet of lead pipe must be attached.

20. If any person shall neglect to repair any service-pipe conveying water from the pipes of the said Council into the premises of such person after having received notice from any officer of the said Council that such service-pipe requires repairing, the said Council may stop the water from flowing into such premises either by cutting off the service-pipe or otherwise as the said Council may see fit until the necessary repairs shall have been effected. The service-pipes from the main being the property of the owners or occupiers of the tenements supplied by such service-pipes, the occupier (if any), and if none the owner, shall in every instance in which any damage shall be caused by reason of such service-pipe being leaky or otherwise, out of repair or broken, be liable to a penalty not exceeding five pounds, and in the event of continuing the offence to a further penalty of two pounds for each day after notice of the offence from the Council.

21. Any person, whether licensed as aforesaid or not, connecting any service-pipe or branch service-pipe with any steam-boiler for the purpose of supplying the same with water without first affixing a self-acting valve for preventing the pressure of the steam reversing or affecting the dial of the meter, shall be liable to a penalty not exceeding five pounds, and in the event of continuing the offence to a further penalty of two pounds for each day after notice of the offence from the said Council.

22. Any person not having agreed to be supplied with water by the said Council who shall take or carry away any water from any drinking tap, or through a private or public service-pipe, shall be liable to a penalty not exceeding five pounds.

23. All charges for water supplied by measure or under special agreement must be paid on the first days in April and October in each year, or as may be agreed on by the said Council.

24. In the construction of these By-laws, the word "person" shall be deemed to extend to and include a corporation whether aggregate or sole, and the words "said Council" shall mean the Council of the Municipality of Balranald.

25. No water-closet or urinal whatsoever shall be connected directly with the service-pipe, but shall be supplied by means of a cistern of an approved kind; any person so offending shall be liable to a penalty not exceeding twenty pounds and a further sum of twenty shillings for each day, if more than one, that such an offence continues.

26. In the case of any lands or tenements becoming liable to be rated for water during the currency of a half-year, the rate shall be immediately payable, but so much thereof only as is proportionate to the unexpired portion of the half-year.

MEMORANDUM OF AGREEMENT this day of 188 , between of of the one part and the Council of the Municipality of Balranald of the other part, whereby the said agrees to take water by measure supplied by the said Council at the rate of per 1,000 gallons, or for the lump sum of £ for the term of twelve months from date hereof, to be used in or upon the land, tenements, or premises in the occupation of the said situated in and such water shall be used for the purposes of only, and the said agrees to pay the said Council for the water so supplied on the first days of April and October in each year; and the said Council agrees to supply such water at the rate aforesaid, provided always and it is hereby agreed, that the said Council shall not be liable to any penalty or damages for not supplying such water, if the want of such supply arises from drought or other unavoidable cause or accident, and the said Council may terminate this agreement at any time by giving the said three weeks' notice in writing to that effect.

As witness the hands and common seal of the said parties hereto, given under our common seal this day of 188 .

The foregoing By-laws were made and passed by the Municipal Council of Balranald; and the seal of the said Council was hereunto affixed the eighth day of November, one thousand eight hundred and eighty-eight.

(L.S.) JOHN GRINHAM,
Mayor.

RICHARD BEATY,
Council Clerk.

Sydney: Charles Potter, Government Printer.—1889.

1889.

NEW SOUTH WALES.

COUNTRY TOWNS WATER AND SEWERAGE ACT EXTENSION ACT OF 1887.

(NOTIFICATION OF LOAN OF £8,000 TO MUNICIPAL COUNCIL OF WILCANNIA.)

Presented to Parliament, pursuant to Act 51 Vic. No. 18.

NEW SOUTH WALES, to wit. } Proclamation by His Excellency The Right Honourable CHARLES ROBERT, BARON CARRINGTON, a Member of Her Majesty's Most Honourable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies.

(L.S.) CARRINGTON, *Governor.*

WHEREAS by the "Country Towns Water and Sewerage Act Extension Act of 1887" it was amongst other things enacted that it should be lawful for the Governor, by notification in the Gazette, to declare that any of the special provisions contained in Part V of the "Country Towns Water and Sewerage Act of 1880" should apply to the Council of any Borough or Municipal District in respect of any loan authorized to be made by the Colonial Treasurer to such Council, pursuant to the first-mentioned Act, and that upon the publication of such notification the enactments specified in such notification, with such necessary modifications as the Governor might think fit to make, should apply to the Council and to the Water-works therein referred to with as full effect as if the said enactments had been embodied in that Act and specifically applied to such Council and Works: And whereas by an agreement dated the fourteenth day of January, one thousand eight hundred and eighty-nine, made between the Council of the Municipal District of Wilcannia, in the Colony of New South Wales, of the one part, and The Honorable John Sutherland, Minister for Public Works of the said Colony, of the other part, it was agreed that the amount of the loan to be made to the said Council, pursuant to the provisions of the said first-mentioned Act, should be the sum of eight thousand pounds, and that such loan should be made upon the terms and conditions contained in the said agreement now in recital: And whereas by a bond under the seal of the said Council, dated the fourteenth day of January, one thousand eight hundred and eighty-nine, being a bond given pursuant to the provisions of section five of the said first-mentioned Act, the said Council bound themselves in the penal sum of sixteen thousand pounds well and truly to perform and fulfil the terms, conditions, and provisions contained in the said agreement: Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, in pursuance of the power and authority so vested in me by the first-mentioned Act, do by this notification hereby direct that the provisions of section one hundred and twenty-five of the "Country Towns Water and Sewerage Act of 1880," with such modifications (if any) as are contained in the said recited agreement, shall apply to the said Council in respect of any loan authorized to be made by the Colonial Treasurer to such Council, pursuant to the "Country Towns Water and Sewerage Act Extension Act of 1887."

Given under my Hand and Seal, at Government House, Sydney, this sixth day of April, in the year of our Lord one thousand eight hundred and eighty-nine, and in the fifty-second year of Her Majesty's Reign.

By His Excellency's Command,

BRUCE SMITH.

GOD SAVE THE QUEEN!

1889.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MURRAY RIVER.

(REPORT OF MR. D. M'MORDIE ON THE DIVERSION OF WATER FROM.)

Ordered by the Legislative Assembly to be printed, 28 *May*, 1889.

[*Laid upon the Table by the Honorable the Minister for Mines.*]

D. M'Mordie, Esq., B.E., M. Inst. C.E., to The Secretary for Lands.

Sir, Roads and Bridges Department, Sydney, April 30, 1889.

With reference to the minutes of the Hon. W. J. Lyne, M.P., then Secretary for Lands, dated 27th and 28th February, appointing "Mr. M'Mordie, C.E. (late Member of the Water Commission), to visit Victoria as soon as possible and ascertain whether the reports which have gained currency as to the diversion of the Murray waters are correct. Whether these waters are being used by persons, companies, or trusts in Victoria, and for what purposes, if any. Mr. M'Mordie will report upon these matters and upon any others which may appear to him of sufficient importance in connection with the same question" I have the honor to report that Mr. W. C. Bennett, Commissioner for Roads, &c., &c., having relieved me temporarily of my duties in his department, and having been provided by the Hon. the Colonial Secretary with a letter of introduction to the Government of Victoria, I left for Melbourne on 5th March, and having in due course presented my letter of introduction, I was afforded by the Hon. the Minister of Water Supply every facility for pursuing my inquiries, and on the 12th March I was supplied by Mr. Stuart Murray, Chief Engineer of Water Supply, with the following schedule:—

SCHEDULE of Diversions of Water from the River Murray by Waterworks and Irrigation Trusts in the Colony of Victoria.

Name of Trust, &c., Diverting Water.	Means employed to divert Water.	Quantity diverted per twenty-four hours.	Purpose applied to.	Remarks.
Mildura Irrigation Colony	Pumping	Given elsewhere	Irrigation, stock, & domestic supply.	
(Castle Donnington) Swan Hill Waterworks Trust.	Pumping	30,000 gallons	Domestic supply.	
Benjeroop and Murrabit Irrigation Trust.	Natural effluent deepened.	A portion of the flood-waters, quantity not determined.	Domestic and stock supply.	Can only obtain supply when river is above 14 feet on Echuca gauge.
(Direct Cut) Swan Hill Waterworks Trust.	Small channel from river to Gunbower Creek.	A portion of the flood-waters, quantity not determined.	Domestic and stock supply.	Can only obtain supply when river is above 6½ feet on Echuca gauge.
Echuca Boro' Waterworks Trust.	Pumping	200,000 gallons	Domestic supply.	
Yarrowonga Waterworks Trust.	Pumping	50,000 gallons	Domestic supply.	

In a footnote accompanying this schedule are mentioned four Irrigation and Water Supply Trusts, to be supplied from the Murray River, in various stages of development, but not yet in working order, viz.:—

1. Tarrumberry, commanding about 14,000 acres irrigable land.
2. Cohuna, „ 80,000 „ „
3. Koondrook, „ 8,000 „ „
4. Swan Hill, „ 14,000 „ „

and it was estimated that about one-third of these areas would be irrigated annually.

I was also informed that there were, no doubt, private pumping plants along the river, of which the Government had no official knowledge.

I then proceeded to Echuca to commence an examination of the river diversions on the Victorian side.

The first place visited was Mr. O'Shaughnassy's Madowla Park Station, 16 miles up the river from Echuca, where I found a pumping plant erected in a barge, which can be moved about so as to pump water at any point where it may be required on the station or other property along the river. The pump is a 20-inch centrifugal one, and throws when at work 1,600 cubic feet per minute, but the actual diversion by this plant would probably not exceed an average of 1,000 cubic feet per minute during the irrigation seasons. At one place the water is pumped into a large earthen channel 45 feet in width between top of banks at the head. For a distance of 1 mile along the course of this channel the country falls toward the river, and it was therefore necessary to carry the channel in embankment, and it was explained that the earth for forming the banks was taken from inside the channel, and the width was thus fixed by the width of ground required to get sufficient earth to form the banks with shallow excavation.

It was also explained that owing to the large capacity of the channel it could be used as a reservoir from which irrigation could be carried on for a time when, from any cause, it might be found desirable or necessary to stop the pump.

A little down stream from this place there is another pumping station where the water is pumped into an iron flume carried on timber tressels, and is conveyed in this flume across low-lying undulating country a distance of 3,000 feet, and thence along the higher ground in earthen channels. The higher parts of the low undulating ground (called sand hills) are watered from the flume by means of 10-inch canvas hose, of which a length of 1 mile is provided in 1 chain lengths.

Proceeding down the river from Madowla Park the next diversion of water from the river is at a small farm belonging to Mr. Jeffrey, 1½ miles up stream from Echuca. The size of the holding is 25 acres, of which about half is irrigated annually by means of a 4-inch centrifugal pump. Mr. Jeffrey pays a license of five pounds (£5) a year to the Victorian Government for permission to erect and work his pumping plant on the Government reserve along the river bank, and he is allowed to pump 12 cubic feet a minute.

In Echuca the quantity of water being pumped from the river, at the time of my visit, for the town supply, including water used for irrigating gardens and watering streets, was close on half a million gallons a day. The Council Clerk informed me that the quantity used in winter is not so great, but at the time of my visit the quantity being pumped for the town supply and railway requirements may be taken at 55 cubic feet a minute.

On Wharparilla Station, a few miles down the river from Echuca, the erection of a large and substantial timber fluming was commenced a few years ago. It was intended to carry a stream of water, about 15 square feet in section to a distance of 6 miles back from the river, where the high ground would be commanded; but a length of only about 400 yards was actually constructed, and the work was then abandoned, although pumping plant had been purchased. It is still intended to irrigate this property, but I understand it is to be irrigated from the Goulburn River, and the original scheme abandoned.

On the Turrumberry Estate there is a 25 horse-power pumping plant, but the estate was lately sold to a syndicate, which has acquired irrigable property there amounting to 16,000 acres, and they have formed a trust, comprising about 19,000 acres. It is proposed (but not yet decided) to erect a pumping plant of 125 horse-power (indicated) at once, and to duplicate it when a sufficient demand for the water arises. The diversion sanctioned here is 1,800 cubic feet a minute.

Further down the river, near the head of the Gunbower Creek, there is a 10 horse-power 9-inch Tangye pump belonging to Mr. Roberts, with which he irrigates about 160 acres, and the diversion by this plant may be estimated at 50 cubic feet a minute.

Adjacent to Mr. Roberts' pumping plant is that of Messrs. Hayes and Barker, who own irrigable land to the extent of about 2,000 acres. The diversion by this plant may be taken approximately at 225 cubic feet a minute.

Immediately below Messrs. Hayes and Barker's pumping plant the Gunbower Creek takes off from the river, and I may here mention that in March, 1881, Messrs. G. Gordon and A. Black prepared a scheme for taking an increased supply from the river into Gunbower Creek, and for distributing it by various channels through the Gunbower district for domestic and stock supply, and they pointed out how, from the abundance and permanency of the supply obtainable from the river Murray and the favourable nature of the country, the scheme could be easily extended for irrigation on a systematic and extensive scale, and for the supply of water to the Loddon, above Kerang, and to Reedy Lake, Lake Charm, and the numerous natural basins to the westward of the Loddon.

I found trial shafts being sunk across the Gumbower Creek, near its head, which I was informed were to test foundations for the construction of head works of a channel for diverting water to the Loddon *via* Kow Swamp, and, on my return to Melbourne, I was courteously supplied with a blue book, giving particulars of this scheme, which has received the approval of the Government.

It was found that the Loddon could not afford a supply for irrigation to all those claiming to share in its use, and in May, 1887, it was recommended by the Chief Engineer of Water Supply "That the lower portion of the Loddon River, from a point some miles above Kerang, should be supplied from the Murray, by way of Kow Swamp, and that the parties interested in this part of the river, and in the country dependent upon it, be invited to take steps to give effect to this recommendation."

The required steps appear to have been taken, and the execution of the work is likely to be quickly proceeded with. The head of the Gunbower Creek does not admit water from the river until the surface has risen to over 15 feet above summer level at Echuca, and the bed is to be lowered to admit water when the river rises 6½ feet above summer level at Echuca. The bottom width of the new channel is to be 60 feet, and the side slopes 1½ to 1. It is reckoned that in ordinary years this channel will give a supply from the beginning of July till the end of December which, after providing for current wants, will leave an available storage for irrigation in the Kow Swamp basin of 1,267 millions of cubic feet; and the total diversion by gravitation may be reckoned as averaging 7,000 cubic feet a minute for those six months. The area proposed to be irrigated annually by gravitation is 20,000 acres in summer and 10,000 acres in winter, the total irrigable area comprised in the scheme being estimated at 90,000 acres. A portion of the supply is to be delivered into the Loddon above M'Ravey's weir, 6 or 8 miles above the town of Kerang, and another portion into the Loddon above the weir at the junction of the Pyramid Creek, just below Kerang, thus affording means for diverting the Murray water, among other places, into the numerous natural basins, including Reedy Lake and Lake Charm, west of the Lodden, so that there appear to be great facilities for extending this scheme at a future time.

The existing works for diverting Murray water by gravitation into the Gunbower Creek, and thence by various channels through the district for domestic and stock supply, and also for supplying water for irrigation by pumping are the deepened and improved Deep Creek and Bagots Creek, and the channel known as the Direct Cut. The natural level of Deep Creek was considerably lowered, and formed into a channel of 10 feet bottom width, and 10 feet in depth and side slopes of 1 to 1 at the head, and in this improved state it admits water when the river rises above 6½ feet on the Echuca gauge. At the time of my visit, the inlet to Bagots Creek was closed by an earthen dam. This inlet has a bottom width of about 15 feet, and depth of 6 feet. The principal off take however is the Direct Cut. It is provided with a timber bridge and regulator with 4 spans of 10 feet each. The canal or channel below the regulator is 15 feet wide at bottom, 13½ feet deep with side slopes of 1 to 1, and water begins to flow in when the river

river rises above 6½ feet on the Echuca gauge. I could not find sufficient data for calculating the quantity of water diverted by these outlets, but at 13½ feet on the Echuca gauge they would be capable of diverting 40,000 cubic feet a minute, and this may be taken as a moderate estimate.

The next important diversion is that to be made by the Cohuna Irrigation Trust, for which the work is in an advanced state. The main channel is 21 feet wide at bottom, with side slopes 1½ to 1. The main channel bifurcates at 5 miles 25 chains, and the total length of main channels provided for in the scheme is about 80 miles, and of subsidiary channels about 40 miles. The bed level at head corresponds with the level of the water in the river when the Echuca gauge reads 11½ feet. Flood-water above this level will be admitted by iron pipes of 50 inches diameter, two of which are now laid, and the scheme provides for laying two more of the same size when required. There is to be a pumping well sunk to 4 feet below summer level, now in progress, and a pumping plant of 250 horse-power (indicated) is being erected. The scheme provides for duplicating this pumping power when required as demand for water developes. It is proposed at present to divert 6,000 cubic feet a minute for summer irrigation, and 5,000 cubic feet a minute for winter irrigation, but the ultimate sanctioned diversion, when the scheme becomes developed, is reckoned at 9,000 cubic feet a minute for summer irrigation, and 7,500 cubic feet a minute for winter irrigation.

A great deal of irrigation is done by private pumping plants on the Gunbower and other creeks, but these plants need not be further noticed for the purposes of this report, as the water supplying them is included in the diversions already enumerated.

The next diversion is that made by the Koondrook Irrigation Trust, near the township of Koondrook. The channel is 15 feet in width, and a portable pumping plant is brought to pump water when required. I failed to get any definite information about this work, but the diversion is on a small scale, and it will be a sufficiently accurate approximation to estimate the diversion here at 400 cubic feet a minute for summer and winter.

A natural effluent has been deepened for the supply of the Benjeroop and Murrabilt Irrigation Trust, but as it does not divert waters until the river rises above 14 feet on the Echuca gauge it is not of much importance so long as pumping is not resorted to.

Between Koondrook and Swan Hill (Castle Donnington) the diversion by private pumping plants may be taken, at a low estimate, at 600 cubic feet a minute for summer irrigation.

The water pumped for the town supply of Swan Hill is only 4 or 5 cubic feet a minute.

The head work of the Swan Hill Irrigation Trust, now being constructed, is about 1 mile down stream from the town. The main channel has a bottom width of 10 feet; side slopes 2 to 1, fall of 11 inches to the mile; and the bed of the channel is 11 feet 4 inches above summer level. One pumping plant of 16-horse power is being erected, and another of equal power will be provided when required. The inlet to the pump well is 2½ feet below summer level. The quantity of water which the trust is authorized to divert is 1,500 cubic feet a minute for summer irrigation, and 900 cubic feet a minute for winter irrigation.

Some of the works for the diversion of water above described, especially the proposed Kow Swamp scheme, the Cohuna scheme, and the Swan Hill scheme, are of a costly and permanent character.

Between the last-named work at Swan Hill and the South Australian border there is no important diversion of water from the river except that at Mildura. Mildura is situated on the river 18 miles by road upstream from the junction of the Darling River at Wentworth. About two years ago Mr. George Chaffey and Mr. W. B. Chaffey, who had had experience of irrigation in California, acquired under an agreement with the Government of Victoria, a right to occupy, and ultimately to acquire in fee simple, under conditions and stipulations set out in the agreement, an area of land amounting to 250,000 acres at Mildura, and a license to take water from the river Murray, under certain regulations, sufficient for the irrigation of this area, *so far as the Government could authorize them to do so.* The place is known as the Mildura Irrigation Colony, and the business has been converted into a limited liability company under the title of "Chaffey Brothers (Limited)." Some settlement has already taken place. The population at the time of my visit, including settlers on the land, tradesmen, workmen, women and children, was variously estimated at from 400 to 500, and I was told that it had previously reached a much higher figure. 500 acres had been planted with vines and various kinds of fruit trees, and 1,100 acres more had been cleared and prepared for planting. Pumping plant had been erected, and channels constructed, sufficient to supply water for all present requirements, and a further pumping plant, capable of delivering 32,000 gallons a minute to a height of 35 feet, was in course of erection, and altogether the company may be said to have achieved fair results for the time it has been at work.

A great deal has been done in the way of keeping this Mildura irrigation settlement prominently under public attention, and it seems to be sometimes assumed that a great experiment is being tried, by which the value of irrigation in these colonies is to be tested and its progress in the future in a large measure decided. It would be a grievous mistake if any such idea got hold of the public mind, or if the value of the Murray water to this Colony should be estimated on such a basis. The degree of success or failure which settlers (not the licensees) at Mildura may attain can be no more than a measure of how far those people underrated or overrated the possibilities of irrigation in all the circumstances of soil, climate, position as regards markets, cost of land, &c., &c., which to so large an extent must have, in the face of competition, which is sure to arise in other localities more or less favoured, a determining influence on the ultimate financial result of their ventures.

The prices paid for land by settlers and others at Mildura are as follows:—

For horticultural land, £20 an acre.
For agricultural land, £15 an acre.
Town lots, 33 ft. by 155 ft., £20 each.
Villa sites, of 2½ acres, £100 each.

Purchasers at the above prices have to prepare the land for cultivation, fence it, plant it, &c., at their own expense, and to pay a yearly charge per acre for water sufficient to defray the working expenses of the irrigation machinery and works, and maintaining and keeping the same in good order and condition. Every purchaser of land acquires an interest or part ownership in the property of the general irrigation works proportional to the area owned by him, and transferable with the land or each acre of the land.

I have gone into some detail with regard to this place, as the water right conditionally ceded by the Government of Victoria, is of great magnitude, and one which might possibly lead to difficulty in arriving at an agreement between the two Colonies on the general question, if there should appear to be any reasonable probability of the right ever being claimed or claimable to its full extent. The

The agreement sets out that "Her Majesty doth hereby grant unto the licensees their executors administrators and assigns subject to the restrictions and conditions hereinafter contained and to the provisions for determination and resumption hereinafter expressed license and authority to divert and take water from the River Murray at any point or points between the boundaries of the said portion of two hundred and fifty thousand acres as far as Her Majesty can authorize the licensees their executors administrators and assigns to divert and take the same" and then follows a lengthy statement of the maximum quantities which may be diverted month by month subject to certain minimum quantities being allowed to flow past and also limited to a certain water duty for the area under irrigable culture. The terms and provisoes of this license I have for brevity and clearness put into tabular form.

TABULAR STATEMENT showing the maximum quantity of water which may be diverted each month at Mildura, subject to the provisoes stated.

1. Name of Month.	2. Minimum quantity of water which must be allowed to pass down the river below Mildura, stated in cubic feet per minute.	3. Quantity of water diverted must not exceed the rate of 1 cubic foot per minute for the number of acres stated in this column.	4. Maximum quantity of water which may be diverted, subject to the provisoes of columns 2 and 3, stated in cubic feet per minute.
January	30,000	8	30,000
February	24,000	10	24,000
March	20,000	12	20,000
April	24,000	10	24,000
May	30,000	8	30,000
June	60,000	6	40,000
July	60,000	5	48,000
August	100,000	5	48,000
September	200,000	4	60,000
October	240,000	4	60,000
November	150,000	4	60,000
December	60,000	6	40,000

It is further provided in the agreement that the license to divert this water from the river is granted subject to the right of Her Majesty at any time hereafter to make, or to authorize others to make, such diversions from the river, or from the Victorian tributaries of the river above Mildura, as shall still leave sufficient waters flowing through and below Mildura for the purposes of irrigation and water supply within the limitations contained in the license. This proviso I understand to mean, among other things, that the Government of Victoria shall not at any time hereafter make or authorize others to make such diversions from the river, or from the Victorian tributaries of the river, above Mildura as shall not still leave sufficient waters flowing through and below Mildura for the purposes of irrigation and water supply, within the limitations contained in the license, so that the water-right described seems to be fully secured to the licensees as far as the Government of Victoria could secure it.

The limitation expressed in column 3 of the tabular statement as regards the rights of the licensees is a very important one. It will be seen that the quantities stated in column 4 cannot be diverted in any month until an area of 240,000 acres is under irrigable culture. It must, however, be assumed that such a time may arrive, and that the quantities noted in column 4 may ultimately be diverted.

It will be convenient to recapitulate here, in a tabular form, the diversions described.

Name of Authority or Scheme diverting.	Means employed for diversion.	Quantity diverted stated in cubic ft. per min.		Remarks.
		Summer.	Winter.	
1. Mr. O'Shaughnessy, Mudowla Park.	Pumping	1,000	1,000	Plant on barge, and can be employed on any part of river.
2. Mr. Jeffrey	do	12	12	Pays license to Government of Victoria.
3. Echuca Town	do	55	30	
4. Turrumberry Trust	do	1,800	1,800	Sanctioned by Government but the plant not yet erected.
5. Mr. Roberts	do	50	50	Plant at work.
6. Messrs. Hayes and Barker	do	225	225	Plant at work.
7. Kow Swamp Scheme	Gravitation by artificial cut taking off at low flood.	.....	7,000	Sanctioned, but new scheme not yet carried out.
8. Direct Cut and Deep Creek	Artificial cut and natural effluent deepened.	.....	40,000	Supplies water for stock and for irrigation by pumping from Gunbower and other Creeks. Quantity estimated.
9. Cohuna Irrigation Trust	Pumping and gravitation	9,000	7,500	Works far advanced. Quantities sanctioned by Government.
10. Koondrook Irrigation Trust.	do	400	400	At work. Quantity estimated.
11. Benjeroop and Murrabit Irrigation Trust.	Flood water by deepened natural outlet.	.....	2,000	Do do
12. Private Plant between Koondrook and Swan Hill.	Pumping	600	600	Do do
13. Swan Hill Irrigation Trust	Pumping and gravitation	1,500	900	Works far advanced, but not yet working. Quantities sanctioned by Government.
14. Mildura	Pumping	20,000 to 40,000	150,000	Limit of license to Chaffey Bros. (Limited), for diversion.
	Totals	34,642 to 65,502	211,517	

I may add that a proposal has been matured for diverting water at Koonoomoo, near Tocumwal, to the extent of 14,500 cubic feet a minute in winter and 6,000 cubic feet a minute in summer; and another proposal for diverting water near Albury has received a good deal of attention on behalf of the Government of Victoria. As neither of these proposals has, however, yet received the final sanction of the Government, I shall not refer to them further than to say that they are proposals of great importance as affecting the interests of this Colony.

In order to illustrate the significance of the figures in the foregoing tabular statement, I may mention that Mr. George Gordon, C.E., of Melbourne, in his evidence before the late New South Wales Water Commission, in August, 1884, stated that he had had the discharge of the Murray, gauged at Koondrook, in the summer of 1881–82, and that it then fell as low as 50,000 cubic feet a minute, a quantity not sufficient to provide water for licenses already granted by the Government of Victoria without allowing any water for New South Wales. This is a startling result but it is not arrived at by any overstatement or straining of facts.

It may be urged by Victoria, that a discharge so low as that quoted occurs but seldom, but even with a discharge 50 per cent. higher, viz.:—75,000 cubic feet a minute, there would be comparatively little or no water left for New South Wales after providing for the present arrangements of Victoria, and it must further be borne in mind that owing to the wholesale diversion of the Goulburn River and other Victorian tributaries of the Murray, carried out since 1881 or now being carried out, a discharge such as 50,000 cubic feet a minute must be expected to be less exceptional in the future than it may have been in the past.

The arrangements made by Victoria for the disposal of moderate flood waters, are also of very serious import as regards the rights and interests of this Colony. To illustrate this, I append a statement showing what would be the effect of the appropriations authorized by Victoria on the flow of the river in such a year as 1884.

Month.	Mean discharge at Echuca in cub. ft. per min.	Quantity which would be diverted in Victoria above Mildura, under existing arrangements, in cub. ft. per min.	Quantity which Victoria has engaged to pass down for use at Mildura and compensation water below Mildura, in cub. ft. per min.	Balance available above Mildura not appropriated by Victoria.	Remarks.
1884.					
January	199,650	14,637	60,000	125,013	
February.....	186,816	14,637	48,000	124,179	
March	94,756	14,637	40,000	40,119	
April	79,979	14,637	48,000	17,342	
May.....	133,680	14,637	60,000	59,043	
June.....	213,758	14,637	100,000	99,121	
July	251,558	14,637	108,000	128,921	Kow Swamp channel and Direct Cut, &c., not flowing perceptibly.
August.....	286,119	14,637	148,000	123,482	
September.....	381,875	30,000	260,000	91,875	
October	377,437	30,000	300,000	47,437	Kow Swamp channel and Direct Cut flowing.
November.....	349,835	26,500	210,000	113,325	
December.....	281,337	21,500	100,000	159,837	

It will be seen from this statement that the water above Mildura not disposed of by Victoria, in such a year as 1884, is less than 50 per cent. of the entire flow during eight months of the year—being 42 per cent. in March, 22 per cent. in April, 44 per cent. in May, 46 per cent. in June, 43 per cent. in August, 24 per cent. in September, 13 per cent. in October, and 32 per cent. in November; while at the same time the supply to Kow Swamp and Gunbower schemes during the winter period would be from 46,000 to 30,000 cubic feet a minute short of what would be diverted in a higher state of the river.

I find from public records which I have consulted in the preparation of this report, that the value of the Murray waters for purposes of irrigation was forcibly pointed out by Mr. W. C. Bennett, Commissioner for Roads, more than twenty-two years ago in evidence given by him before the Deniliquin-Echuca Railway Commission; but the question of irrigation seems to have secured little or no public attention in this Colony until the time of the appointment of the New South Wales Water Commission, five years ago, under the Presidency of the Honorable W. J. Lyne, M.P., and this brings me to the concluding part of this report. Being a member of that Commission I had the privilege of hearing the question of the utilization of the Murray waters discussed as an intercolonial question at conferences between the New South Wales Commission, and a similar Commission which had been appointed in Victoria under the Presidency of the Honorable A. Deakin, now Chief Secretary and Minister of Water Supply in that Colony.

At the first Conference, held in Melbourne on 22nd and 23rd January, 1886, the members of the N. S. W. Commission had to recognize amongst themselves that New South Wales by insisting to the full on what was thought to be its legal rights, would not—even if it succeeded in making good the contention—place itself in a position to make the most profitable use of the Murray waters in the interests of the Colony, and the conviction forced itself upon all the members of that Commission present that the only way in which New South Wales could succeed in making the most profitable use of the waters would be by making judicious concessions to some of the claims put forward by the Victorian Commissioners, if Victoria would make correspondingly valuable concessions to New South Wales.

The Commissioners sitting in conference did not on that occasion succeed in arriving at an agreement, but a good deal was done to clear the ground in the way of moderating the claims originally put forward by either side, and at a further conference held in Sydney on 5th and 6th May of the same year, a series of resolutions were agreed to for submission to the Governments of the two Colonies with a recommendation that they should form the basis of an intercolonial treaty on the subject of the Murray River. These resolutions were published in the second report of the New South Wales Commission, but I append them here:—

They are as follows:—

"1. That a joint Trust shall be constituted, equally representative of the Colonies of New South Wales and Victoria, in which shall be vested the control of the whole of the Murray River and

its tributaries from its source to Howlong, to be known as the Upper Murray; and of the whole of the Murray River from Howlong to the eastern boundary of the Colony of South Australia, to be known as the Lower Murray; and such Trust shall have power to regulate all diversions of water from the river and tributaries within its jurisdiction.

2. That the waters of the tributaries of the Lower Murray, except such proportions thereof as shall, under the direction of the Trust, be required as compensation water for the main river, may be diverted and used by the respective Colonies through which they flow.
3. The whole of the waters of the Upper Murray and its tributaries, and the whole of the waters of the Lower Murray, shall be deemed to be the common property of the Colonies of New South Wales and Victoria. And, subject to the reservation of such compensation water as the Trust may from time to time determine, each of the said Colonies shall have the right to take and divert one-half of such water at such point or points as may, with the sanction of the Trust, be fixed on as most suitable for the requirements of such Colony. Provided always that the totals of the quantities so diverted by the two Colonies, when the whole surplus (after providing compensation water as above) is utilized, shall be equal.
4. That all natural diversions of water from the Murray shall be gauged under the direction of the Trust, and the portion of such diversions not returned to the channel of the main river shall be debited to the Colony into which such water is diverted, in the same manner as if such diversion had been made under the last preceding section.
5. That the Trust may fix and determine levels to be known as the high-flood levels of the Murray, and may make such regulations for the disposal of water flowing above such levels as to it shall seem expedient.
6. That works for the storage and regulation of the waters of the Murray may, under the supervision of the Trust, be constructed at the joint cost of the Colonies of New South Wales and Victoria, such cost to be borne by each Colony in proportion to the benefits derived by it from such works.
7. That, so far as possible, the two Colonies shall take united action in respect of all works intended to provide for the utilization of the Murray waters.
8. That the Trust shall consist of not more than six members, three of whom may be appointed by the Government of New South Wales and three by the Government of Victoria, such members to hold office for terms of not more than five years. The expenses of the Trust and its officers to be defrayed by the two Colonies in equal proportions.
9. That a Bill, embodying the above resolutions, shall be prepared under the supervision of the Water Supply Commissions, for submission to the Parliaments of New South Wales and Victoria. The Government of each Colony, having approved of the measure, shall be requested to secure for it the earliest possible consideration by its Legislature.
10. That the Governments of the respective Colonies of New South Wales and Victoria shall be requested to hold themselves bound, *ad interim*, by the provisions of the above resolutions until they shall be dealt with by the Legislatures of both Colonies."

As regards Resolution No. 9, no action was taken by the Commissioners.

As regards the question of "compensation water," I would here point out that as the action already taken by Victoria in the matter of diverting water without consulting this Colony must seriously affect the navigation of the river above Wentworth, it seems to me that this Colony may consider itself relieved from any obligation to maintain navigation in the interests of Victoria at any future time. I mention this as it will certainly be found to the interest of New South Wales not to waste water on navigation when means are afforded for using it for irrigation. In this connection I may quote a reply given by Mr. W. C. Bennett in his examination before the late Water Commission where he said he considered the question of navigation entirely secondary to that of water supply; that the navigation of the rivers would be superseded in a few years by railways, and that in future the rivers would be utilized for the purpose of water supply, and in producing something to transport rather than in transporting it.

Among the papers handed to me is some correspondence with the Government of South Australia in which a right is claimed for that Colony to have a voice in any settlement arrived at as regards the Murray River before it reaches South Australian territory. It appears to me that the recognition of any such right would give South Australia a voice in the disposal of the waters of the Darling, the Murrumbidgee, and any other rivers joining the Murray, and ultimately flowing through South Australian territory; but at the same time, having regard to views which may be taken of the law of riparian rights, I would venture to suggest that it would be advisable to have an Intercolonial Conference as regards a final settlement of this very important question, at which South Australia would be represented, as such a course would afford the readiest means of discussing the question and removing possible misapprehension as to supposed rights.

I think it advisable to point out how highly desirable it is in the interests of this Colony that steps should be taken to give effect to a recommendation made by the Water Commissions of Victoria and New South Wales to their respective governments in these words:—"That the Governments of New South Wales and Victoria are invited to take joint and immediate action for a thorough examination of the Murray River and its tributaries, and the accurate gauging of the discharge at various points."

Another matter which attracted my attention in connection with the Murray River seems to me so important that I think it right here to refer to it briefly, and that is the disposal of the liquid sewage of the towns along the banks of the river, which I believe finds its way in most, if not in all, cases to the river in an unpurified condition. As these towns and residents generally along the river use the water of the river for domestic purposes, the importance of the question will be at once recognised.

I have already stated that the Minister of Water Supply in Victoria and the Chief Engineer of Water Supply kindly assisted me in every way possible in the prosecution of my enquiries, and I wish here to add that I met like courtesy from all the gentlemen along the Murray, whether chairmen, or members of trusts, owners of private pumping plants, or their managers, or others with whom the prosecution of my enquiries brought me in contact.

I have the honor to be,
Sir,
Your most obedient servant,
D. M'MORDIE, B.E., M. Inst. C.E.

2

The Government Medical Officer, Gunnedah, to The Medical Adviser to the Government.

Sir, Gunnedah, 19 December, 1888.

In consequence of many complaints being made to me of the filthy state of the water in the river here, which is being sold to the inhabitants, I made an examination, the result of which is contained in report attached herewith.

I may add here that at a very small expense water could be obtained good and in sufficient quantity by sinking a well on the bank of the river, and which could be pumped by the Government engine, which is close at hand.

The only action the Council have taken is to make known that filtered water can be obtained at the railway tanks at 4d. per load of 100 gallons. Now, I may state that the place from which this water called filtered water, is taken, is situated in the bed of the river, and from which a drowned man was taken some few weeks ago. At this place an iron cylinder is embedded, the mouth of which is on a level with the river-bed, so that when the river is a few inches higher than it is at present it flows in the top. It is not filtered water.

There are two slaughter-houses here, from which, in wet weather, refuse collects in the river, and at this time dead cattle and sheep are rotting in the waters of the river.

In conclusion, I may state that there are numbers of private wells in town from which water could be obtained, if the Council only took the matter in hand.

In the interest of the public I think carriers should be prevented from selling this river water. The police inform me that they have no power to act, and the Council will not interfere.

I am, &c.,
E. J. A. HAYNES.

[*Enclosure.*]

THE RIVER WATER.

DR. E. J. A. HAYNES, Government Medical Officer, to his Worship the Mayor of Gunnedah, reporting on the state of the water now in the Namoi River, and which is being supplied to the inhabitants of the town of Gunnedah.

On the 13th December, 1888, I personally inspected the water which is being taken from that part of the river just behind Mr. Cohen's store. The water is stagnant, dirty, and full of animal life, such as is found in impure water. There is also an enormous quantity of decayed animal and vegetable matter suspended in the water, which is to be seen in great quantity when a water-cart backs into the river to be filled.

I give it as my medical opinion that this part of the river water is thoroughly unfitted for human consumption, and that unless immediate steps are taken to prevent it being sold to the inhabitants we will soon have an outburst of fever of the worst kind, viz., typhoid.

I have inspected the river up and down for about a mile, and I find everywhere that the water is in an impure state, full of decaying animal and vegetable matter.

I suggest that steps be at once taken to stop the further sale of the water, and that a well be sunk somewhere near the engine-shed below the bridge ; for I feel sure that there is a current of water at a depth of not more than 30 feet, and which water, although it may be a little hard, is better than the present soft water of the river, which is wholly unfitted for human food. I am personally aware of the beautiful water contained in the wells of Mr. Cohen and Mr. Matthias.

The advantage of the well being near the engine-shed is that arrangements could be made with the Government to pump water into iron tanks situated in the town, and could be supplied to the carters at about 2d. a load.

I send a copy of this report to the local papers, so that the subject be brought before the inhabitants of the town.

This report is drawn up in consequence of several complaints having been made to me as to the state of the river water.

The Government Medical Officer, Gunnedah, to The Medical Adviser to the Government.

Sir, Gunnedah, 22 December, 1888.

I am sending by to-day's mail-train sample of river water which is being sold to inhabitants. I drove into the river in my buggy to the place where water is obtained for sale, and filled the bottle.

I might add that at this place all the town horses are watered and vehicles are washed. On the shores of the river black looking mud is stirred up, and a smell of sulphuretted hydrogen liberated.

In private wells, sunk on the banks of the river, good and wholesome water is obtained ; so that at the outlay of about £30 the Council, if they wished, could obtain water by sinking, and could easily fix thereto a common town pump.

Every day from this out the water will get worse, and we are hardly yet into summer heat, and you may imagine at our temperature of from 106 to 112 degrees in the shade and bad water what the result will be in about a month's time.

Diarrhœa is now very prevalent here, and I look on that as the forerunner of typhoid (enteric) fever.

I have, &c.,
E. J. A. HAYNES.

Urgent. Will Mr. Hamlet kindly examine and report on this water as soon as possible.—E.S. (for the Medical Adviser), B.C., 28/12/88. The Government Analyst.

Culture examination for pathogenic organisms:—Full of organic life.

General observations on the character of the water:—An exceedingly bad water and totally unfit for domestic purposes.

WILLIAM M. HAMLET, F.I.C., F.C.S.,
Government Analyst.

Inform Mayor of Gunnedah and Government Medical Officer in terms of this report. And inform Dr. Haynes that the Municipality have been communicated with.—H.N.M., 2/1/99.

The Secretary, Board of Health, to The Mayor of Gunnedah.

Sir, Board of Health Office, 127, Macquarie-street, Sydney, 3 January, 1889.

The Government Medical Officer for the Gunnedah District having drawn the attention of this department to the condition of the water of the Namoi River, which is being used for drinking purposes by the residents of your Municipal District, a sample of the water was duly obtained and subjected to analysis.

The analyst's report discloses that this water is full of organic life, an exceedingly bad water and totally unfit for domestic purposes. I have therefore the honor to request you to take such action as may be possible to prevent the public from using this river water.

I have, &c.,
EDMUND SAGER,
Secretary.

The Secretary, Board of Health, to The Government Medical Officer, Gunnedah.

Sir, Board of Health Office, 127, Macquarie-street, Sydney, 3 January, 1889.

I have the honor, by direction of the Medical Adviser to the Government, to acknowledge receipt of your letters of the 21st and 22nd ultimo, and also a sample of water from the river Namoi, which was immediately handed to the Government Analyst for examination and report.

The analyst's report discloses that this water is full of organic life, an exceedingly bad water, and totally unfit for domestic purposes. His Worship the Mayor has been informed accordingly and requested to take such action as may be possible to prevent the public from using the river water.

I have, &c.,
EDMUND SAGER,
Secretary.

The Mayor of Gunnedah to The Secretary, Board of Health.

Sir, Council Chambers, Gunnedah, 9 January, 1889.

I have the honor to acknowledge the receipt of your communication of the 3rd instant, *re* the condition of the water in the Namoi River, and beg to enclose a copy of the sub-committee's report appointed to examine the water in the tanks in the railway yard. I am also sending, by to-day's train, a bottle of water from the railway tanks for analysis, and shall anxiously wait the result.

I have, &c.,
JOHN J. SMYTH,
Mayor.

[*Enclosure.*]

[*Enclosure.*]

To the Municipal Council, Gunnedah,— Gunnedah, 18 December, 1888.

We, the Sub-committee appointed to make inquiry *re* water supply for the inhabitants, and to ascertain if water can be procured at the railway tank, and upon what conditions and terms, have to report :—

We waited upon the Stationmaster (Mr. G. Beal) to-day, and he informed us the water-carters and others can obtain water from the railway tanks at the rate of 2d. per hogshead of 56 gallons, or (say) 4d. per 100 gallons, and is procurable between the hours of 6 a.m. and 3 p.m., and no doubt, if necessary, more convenient arrangements might be made, upon application to the Department. This arrangement has been in existence since 1883, and the average demand has been less than 1s. per month, of which Mr. Curll was the largest consumer, having used the tank when making bricks. Mr. Beal informs us that more than 200 miles on the line are being supplied with this water, and he has not heard a single complaint, or heard of any individual suffering from the use of it.

We visited the tank, and found it nearly full, looking clear, and without any appearance of vegetable or other objectionable matter. The water is pumped from the river every day, and the supply-pipe at the river passes into a perforated iron cylinder sunk in the river.

We find the Department has gone to heavy expense connecting the tank by tubing attached to a stand-pipe on the side of the street, where the carts can be conveniently and expeditiously supplied.

Following up our inquiries, we authorized the Council Clerk to make the fact known, through the local papers, that water can be obtained at the railway tank at 4d. per 100 gallons, and we think the ratepayers that do not approve of the water being carted from the river have the matter in their own hands, by refusing to accept other than the tank water.

We are, &c.,
JOHN SMYTH (Mayor).
J. L. CUSHAN.
ROBERT DOOLAN.

Perhaps Mr. Hamlet will kindly examine and report upon this sample.—E.S., B.C., 11/1/89.
The Government Analyst.

Government Laboratory, Sydney, 16 January, 1889.

Analysis of a sample of water received from the Mayor and Municipal Council of Gunnedah, 11th January, 1889 :—

	Results expressed in	
	Grains per gallon.	Parts per 100,000.
Appearance in 2-foot tube	Bright and clear.	
Odour on heating to 100° Fah.	none.	
Chlorine as chlorides...	2·2	3·14
Phosphoric acid in phosphates	none.	
Nitrogen in nitrates and nitrites	none.	
Do equivalent in nitric acid	none.	
Do existing as free ammonia	none.	
Organic nitrogen, or "albuminoid ammonia"	·002	·003
Oxygen absorbed in 15 minutes at 80° Fah.	.....	.....
Do 4 hours do	·028	·04
Hardness in degrees, Clark's scale, before boiling... ...	9·0	.....
Do do do after do	.....	.....
Poisonous metals	none.	
Total solid residue dried at 220° Fah.	28·98	41·4

Culture examination for pathogenic organisms :—Negative results.

General observations on the character of the water :—A good drinking water, suitable for domestic purposes.

WILLIAM M. HAMLET, F.C.S.,
Government Analyst.

A copy of this certificate should be forwarded to the Mayor of Gunnedah.—H.N.M., 17/1/89.

The Secretary, Board of Health, to The Mayor of Gunnedah.

Sir, Board of Health Office, 127 Macquarie-street, Sydney, 17 January, 1889.

I have the honor to acknowledge receipt of your letter of the 9th instant, forwarding a sample of water from the railway tanks in your town and in reply thereto to forward you, herewith, a copy of analysis of the water.

I have, &c.,
EDMUND SAGER,
Secretary.

[Copy of Government Analyst's certificate dated 16 January, forwarded herewith.]

The Government Medical Officer, Gunnedah, to The Medical Adviser to the Government.

Sir, Gunnedah, 26 March, 1889.

Last Christmas I wrote you *re* the supply of water to this town and also sent you a bottle of the water on which the Government analyst reported as unfit for human consumption.

I am again compelled to write you, and you may well imagine in what state the water of the river is now after three months drought and a continued temperature of about 108° in the shade. The water now is simply filthy, and the inhabitants are using this for all the ordinary purposes, and that typhoid has not broken out, I attribute the excessive temperature, which I maintain is too high for its development, but this

the last few days we have had a fall in temperature, and as a consequence an enormous amount of dysenteric diarrhœa, which I accept as the forerunner of an outbreak of enteric fever. No doubt, should an outbreak of typhoid take place, Government aid will have to be applied for, as in the case of Balranald, and I submit that the Board of Health should devise some means of compelling the town Council of Gunnedah to prohibit the sale of this river water, and compel the water-carriers to take the water from the railway tanks. These are the tanks from which some water taken by the town clerk and sent to you and reported as wholesome, but you should also be aware that, always presuming that this water was taken from the railway tanks by the town clerk, the inhabitants here say the tank water is worse than the river water. That the people admit this the sergeant of police here can testify to. I pointed out in my report last December that the water conveyed to these railway tanks was taken from an iron cylinder sunk in the bed of the river, the mouth of which was flush with the river-bed.

I have pointed out to the Council that a well sunk on the high bank of the river some 60 feet deep would reach well below the river bed, and natural drainage would take place from the bed of the river, and that we had proof of this in the existence of several wells sunk on private property. If a town pump were fixed to the well so sunk it would meet all requirements in drought and in flooded states of the river. This opinion is also endorsed by several competent judges amongst whom I can refer you to Mr. Dewhurst, district surveyor.

I wish also to point out that on the bank of the river, about 500 yards above the watering place, there is situated a slaughter-house; this is also within the municipal boundary. The river water flows from this place towards the town, and the stream is always small, about 10 feet wide and about 2 to 3 feet deep. I have myself seen pigs after rolling in the filth of the slaughter-house go into the river and bogey. The natural consequence of this is that all offal and usual filth of the slaughter-house is carried down and so contaminates the drinking water the town depends on. I have pointed this out to the mayor, but nothing has been done, and may also mention that the owners of this slaughter-house are in the Council, one being an alderman and the other town clerk. I have been applied to frequently by the township above the place, so I now place the matter of this slaughter-house in your hands, as I am powerless.

I am constantly annoyed by people calling on me to take action as Government Medical Officer, or to have the Board of Health in Sydney take action in the matter of water supply, but I see nothing further I can do than I did last December, and that which I am doing now by bringing the matter under your notice. I understand that an indignation meeting is to be held, when resolutions will be forwarded to the Government.

Trusting that you will, in the interests of the public here, make this matter urgent.

I have, &c.,
E. J. A. HAYNES, L.R.C.P., Lond., M.R.C.S., Eng.,
Government Medical Officer.

Letters forwarded to the Mayor and the Government Medical Officer of Gunnedah as instructed.—E.S., 30/3/89.

The Secretary, Board of Health, to The Mayor of Gunnedah.

Sir, Board of Health Office, 127, Macquarie-street, Sydney, 30 March, 1889.

I have the honor to inform you that the Government Medical Officer for Gunnedah has directed the attention of the Board of Health to the fact that water is still being taken from the river for domestic purposes at a point below the spot where the refuse from a slaughter-yard enters the river.

I am directed to draw your attention to the certificate of analysis forwarded to you on the 3rd of January last, wherein it is shown that at that time the river water was "exceedingly bad, and totally unfit for domestic purposes," and to urge upon your Council the desirability of taking immediate steps to cause a discontinuance of this and to obtain a supply from some other source.

I would specially point out the great danger arising from taking water from the river below the point where the refuse from a slaughter-yard enters it.

I have, &c.,
EDMUND SAGER,
Secretary.

The Secretary, Board of Health, to The Government Medical Officer, Gunnedah.

Sir, Board of Health Office, 127, Macquarie-street, Sydney, 30 March, 1889.

I have the honor, by direction, to acknowledge receipt of your letter of the 26th instant, drawing attention to the river water used by the inhabitants of Gunnedah for domestic purposes.

In reply, I am instructed to inform you that the Board of Health has at present no power to compel the Municipal Council of Gunnedah to prohibit the sale of river water, but that a letter has this day been forwarded to the Council pointing out the objectionable character of the river water, as shown by analysis and the special danger arising from taking it below the point where the refuse from a slaughter-yard enters the river, and urging the desirability, in the interests of the public health, of obtaining some other supply.

I have, &c.,
EDMUND SAGER,
Secretary.

The Mayor of Gunnedah to The Secretary, Board of Health.

Sir, Council Chambers, Gunnedah, 2 April, 1889.

I have the honor to acknowledge the receipt of your communication of the 30th ultimo *re* water being taken from the river for domestic purposes, and beg to inform you that a supply of good water can be obtained from the railway tank, a sample of which was forwarded to you for analysis, and to request that you will be good enough to forward me a copy of the Government Medical Officer's report.

I have, &c.,
JOHN SMYTH,
Mayor.

Extract forwarded with letter, 5/4/89.—E.S.

The

6

The Secretary, Board of Health, to The Mayor of Gunnedah.

Sir, Board of Health Office, 127, Macquarie-street, Sydney, 5 April, 1889.

I have the honor to acknowledge receipt of your letter of the 2nd instant, and to forward you herewith an extract from a report by Dr. Haynes, Government Medical Officer for Gunnedah, dated 26th March, containing a suggestion for the better supply of water to your town.

I have, &c.,
EDMUND SAGER,
Secretary.

[*Enclosure.*]

EXTRACT.

I HAVE pointed out to the Council that a well sunk on the high bank of the river, some 60 feet deep, would reach well below the river bed, and natural drainage would take place from the bed of the river, and that we had proofs of this in the existence of several wells sunk in private property. If a town-pump were fitted to the well so sunk it would meet all requirements in drought and in flooded states of the river. This opinion is also endorsed by several competent judges, among whom I can refer you to Mr. Dewhurst, District Surveyor."

The Mayor of Gunnedah to The Secretary, Board of Health.

Sir, Council Chambers, Gunnedah, 8 April, 1889.

I have the honor, by resolution of this Council, to forward you by to-day's train two bottles of water, numbered 1 and 2, taken from the river, for separate analysis.

Waiting for the report.

I have, &c.,
JOHN J. SMYTH,
Mayor.

Will Mr. Hamlet kindly analyse and report on these samples as soon as possible.—F.N.M., 9/3/89. The Government Analyst.

The Government Analyst to The Medical Adviser to the Government.

Sir, Government Laboratory, Sydney, 12 April, 1889.

I have the honor to report the following results of my analyses of the two samples of water taken from the river at Gunnedah, the details of which are given on the accompanying forms.

Both specimens are heavily charged with organic matter, some of which, being in a state of suspension, may be readily removed by suitable means; but after such removal the amount of organic impurity is still excessive.

Owing to the small proportion of chlorine it may be inferred that the nature of the pollution is of a vegetable rather an animal character. No. 2 is on all points more polluted than No. 1.

In their present condition, I am of opinion that both are unfit for drinking purposes, but that No. 1 may be rendered sufficiently pure for ordinary domestic use by subsidence and efficient filtration.

I have, &c.,
WILLIAM M. HAMLET, F.C.S., F.I.C.,
Government Analyst.

Copy to Municipal Council of Gunnedah.—F.N.M., 12/4/89.

WILLIAM M. HAMLET, F.C.S., F.I.C.,
Government Analyst.

The Secretary, Board of Health, to The Council Clerk, Gunnedah.

Sir, Board of Health Office, 127 Macquarie-street, Sydney, 13 April, 1889.

Referring to your letter of the 2nd instant, I have the honor to forward you enclosed copies of report and certificates of analyses of samples of water forwarded therewith.

I have, &c.,
EDMUND SAGER,
Secretary.

[Copies of Analyst's report and two certificates of the 12th April were forwarded herewith.]

The Mayor of Gunnedah to The Secretary, Board of Health.

Sir, Council Chambers, Gunnedah, 16 April, 1889.

I have the honor to acknowledge the receipt of your letter of the 5th instant, conveying an extract from a report by Dr. Haynes, Government Medical Officer for Gunnedah, and to request, in accordance with a resolution of this Council, that you will be good enough to forward me a copy of the full report by the Government Medical Officer for Gunnedah, dated 26th March last.

Yours, &c.,
JOHN SMYTH,
Mayor.

Request cannot be complied with.—F.N.M., 18/4/89.

The Secretary, Board of Health, to The Council Clerk, Gunnedah.

Sir, Board of Health Office, 127 Macquarie-street, Sydney, 18 April, 1889.

I have the honor, by direction of the Medical Adviser to the Government, to acknowledge receipt of yours of the 16th instant, in which you request that a full copy of the Government Medical Officer's report may be supplied, and in reply to inform you that your request cannot be complied with.

I have, &c.,
EDMUND SAGER,
Secretary.

The Mayor of Gunnedah to E. W. Turner, Esq., M.P.

Sir, Council Chambers, Gunnedah, 2 May, 1889.

I have the honor, by a resolution of this Council, to respectfully request you to obtain a full copy of the report sent by the Government Medical Officer for Gunnedah to the Board of Health, dated 26th March last.

Yours, &c.,
JOHN SMYTH,
Mayor.

The Secretary, Board of Health,—May I ask that you will kindly comply with this request at an early date.—E. W. TURNER, M.P., 8/5/89.

The Secretary, Board of Health, to E. W. Turner, Esq., M.P.

Sir, Board of Health Office, 127, Macquarie-street, Sydney, 10 May, 1889.

In reply to yours of the 8th instant, requesting that a copy of the report of the 26th March last from the Government Medical Officer for Gunnedah might be furnished to the Gunnedah Municipal Council, I have the honor, by direction, to inform you that such parts of the report as appeared necessary for the information of the Council with regard to sanitary matters have already been forwarded.

I have, &c.,
EDMUND SAGER,
Secretary.
